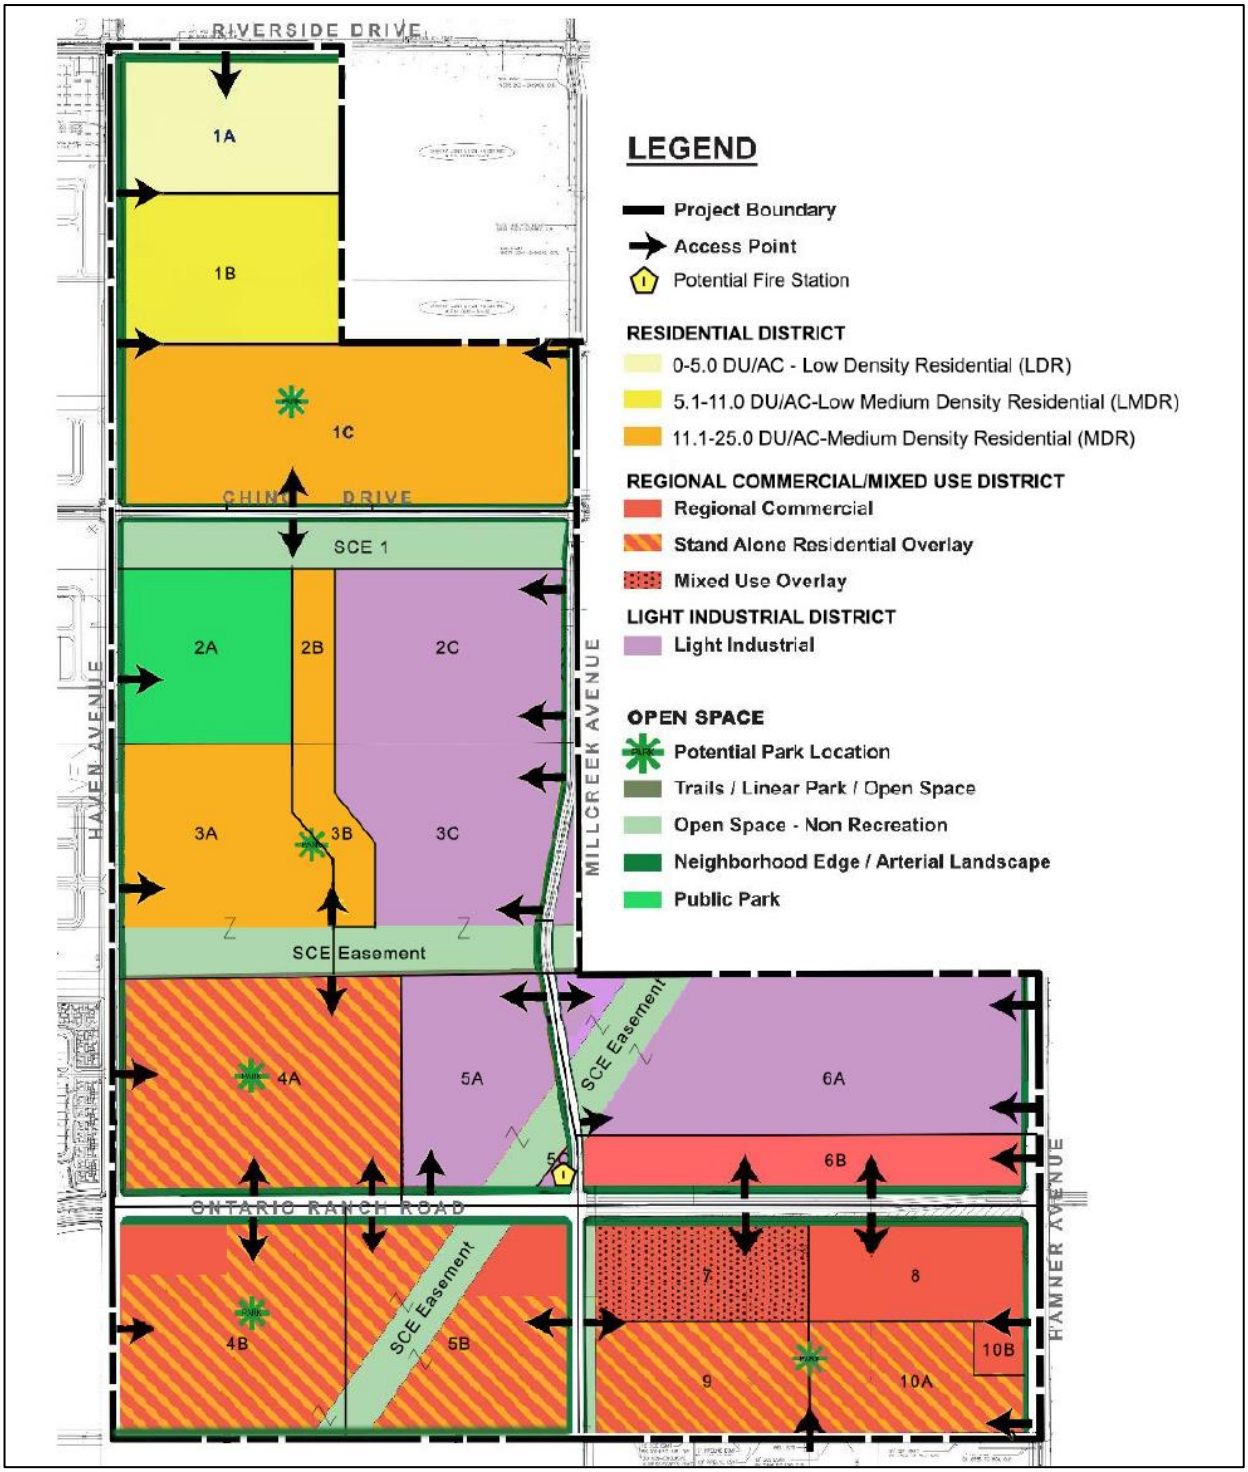
The term of the Agreement is for 10 years, with a 5-year option to renew. The main points of the Agreement address funding for all new City expenses created by the Project, which includes: Development Impact Fees (DIF) for construction of public improvements (i.e. streets and bridges, sewer, water, storm drain and Fiber); and the creation of a Community Facilities District (CFD) for the maintenance of public facilities.

In considering the Agreement at their meeting on February 25, 2025, the Planning Commission found the Agreement to be consistent with State law, The Ontario Plan, and the City's Development Agreement policies. As a result, the Planning Commission adopted Resolution No. PC25-010 with a 4 to 0 vote, recommending City Council approval of the Agreement.

ENVIRONMENTAL REVIEW: The environmental impacts of this Project were previously reviewed in conjunction with File No. PSP05-004, the Rich-Haven Specific Plan for which an Environmental Impact Report (SCH# 2006051081) was previously adopted by the City Council on December 4, 2007. This Application introduces no new significant environmental impacts. All previously adopted mitigation measures are a condition of Project approval and are incorporated herein by this reference.

Exhibit A:
Rich-Haven SPECIFIC PLAN LAND USE MAP (File No. PSP05-004)



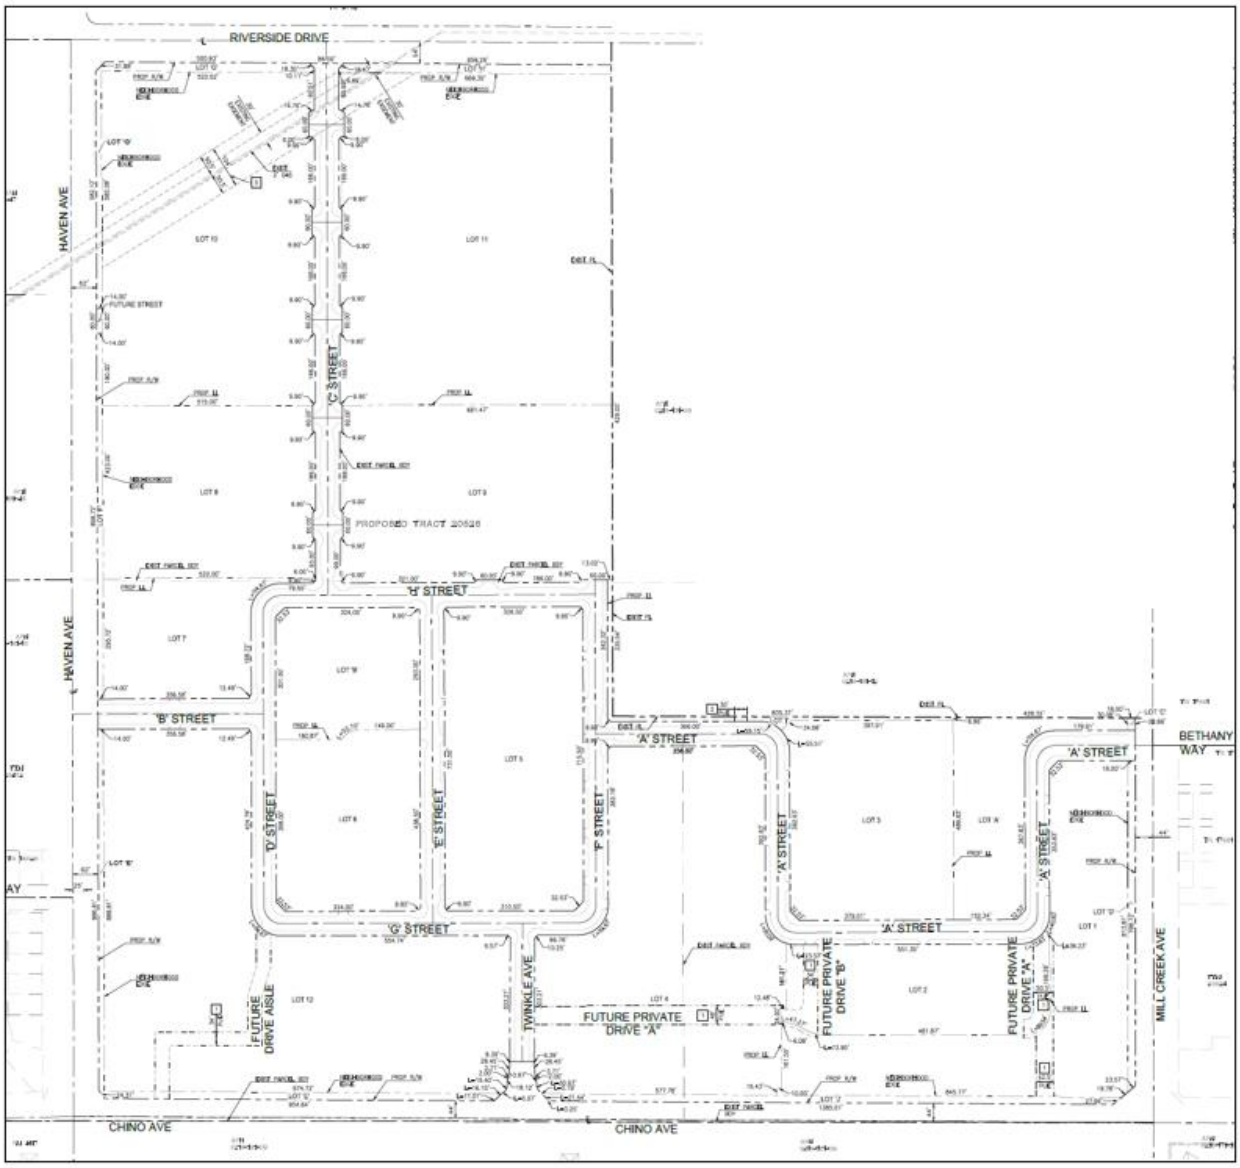


Exhibit B:
TENTATIVE TRACT MAP NO. 20526

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, FILE NO. PDA22-004, A DEVELOPMENT AGREEMENT BETWEEN THE CITY OF ONTARIO AND, ROSEVILLE INVESTMENTS, LLC AND AMERICAN SUPERIOR LAND, LLC, TO ESTABLISH THE TERMS AND CONDITIONS ASSOCIATED WITH TENTATIVE TRACT MAP 20526 (FILE NO. PMTT22-012), LOCATED AT THE SOUTHEAST CORNER OF HAVEN AVENUE AND RIVERSIDE DRIVE, WITHIN PLANNING AREAS 1A, 1B, AND 1C OF THE RICH-HAVEN SPECIFIC PLAN (FILE NO. PSP05-004). (APNS: 0218-161-11, 0218-161-04, 0218-161-05, AND 0218-161-10).

WHEREAS, Richland Developers, Inc ("Applicant") has filed an Application for the approval of a Development Agreement, File No. PDA22-004, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 106.1 gross acres of land, located at the southeast corner of Haven Avenue and Riverside Drive, within Planning Areas 1A, 1B, and 1C of the Rich-Haven Specific Plan (File No. PSP05-004); and

WHEREAS, the Applicant submitted Tentative Tract Map No. 20526 (File No. PMTT22-012), subdividing 106.1 gross acres of land into 12 numbered lots and 10 lettered lots for residential uses, a public school, private drives, landscape edges, and common open space purposes; and

WHEREAS, the environmental impacts of this Project were previously reviewed in conjunction with File No. PSP05-004, the Rich-Haven Specific Plan for which an Environmental Impact Report (SCH# 2006051081) was previously adopted by the City Council on December 4, 2007. This Application introduces no new significant environmental impacts; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on February 25, 2025, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date, voting to issue Resolution No._____ recommending the City Council approve the Application; and

WHEREAS, on March 18, 2025, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending authority for the Project, the City Council has reviewed and considered the information contained in the previous Certified EIR and supporting documentation. Based upon the facts and information contained in the previous Certified EIR and supporting documentation, the City Council finds as follows:

(1) the environmental impacts of this Project were previously reviewed in conjunction with File No. PSP05-004, the Rich-Haven Specific Plan for which an Environmental Impact Report (SCH# 2006051081) was previously adopted by the City Council on December 4, 2007. This Application introduces no new significant environmental impacts; and

(2) The previous Certified EIR contains a complete and accurate reporting of the environmental impacts associated with the Project; and

(3) The previous Certified EIR was completed in compliance with CEQA and the Guidelines promulgated thereunder; and

(4) The previous Certified EIR reflects the independent judgment of the City Council; and

(5) The proposed project will introduce no new significant environmental impacts beyond those previously analyzed in the previous Certified EIR, and all mitigation measures previously adopted with the Certified EIR, are incorporated herein by this reference.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending authority for the Project, the City Council finds that based on the facts

and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan. The project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

SECTION 4: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending authority for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, is will be consistent with the policies and criteria set forth within the ONT ALUCP; and

(2) On August 2, 2022, the City Council of the City of Ontario approved and adopted a Development Code Amendment to establish the Chino Airport ("CNO") Overlay Zoning District ("OZD") and Reference I, Chino Airport Land Use Compatibility Plan ("CNO ALUCP"). The CNO OZD and CNO ALUCP established the Airport Influence Area for Chino Airport, solely within the City of Ontario, and limits future land uses and development within the Airport Influence Area, as they relate to safety, airspace protection, and overflight impacts of current and future airport activity. The CNO ALUCP is consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the CNO ALUCP. As the recommending authority for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the CNO ALUCP compatibility factors, including Safety, Airspace Protection, Overflight. As a result, the City Council,

therefore, finds and determines that the Project is consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the Chino ALUCP.

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 4, above, the City Council hereby concludes as follows:

(1) The Development Agreement applies to 106.1 gross acres of land located at the southeast corner of Haven Avenue and Riverside Drive, within Planning Areas 1A, 1B, and 1C of the Rich-Haven Specific Plan (File No. PSP05-004); and

(2) The Development Agreement establishes parameters for the development of land within the Rich-Haven Specific Plan. The Development Agreement also grants the Applicant, the right to develop, the ability to quantify the fees; and establish the terms and conditions that apply to those projects. These terms and conditions are consistent with The Ontario Plan Policy Plan (General Plan), design guidelines and development standards for the Rich-Haven Specific Plan; and

(3) The Development Agreement grants the Applicant a vested right to develop Tentative Tract Map 20526 (File No. PMTT22-012) as long as the Applicant complies with the terms and conditions of the Rich-Haven Specific Plan and EIR. Tentative Tract Map 20526 is located at the southeast corner of Haven Avenue and Riverside Drive, within Planning Areas 1A, 1B, and 1C of the Rich-Haven Specific Plan, and proposes to subdivide 106.1 gross acres of land into 12 numbered lots and 10 lettered lots for residential uses, a public school, private drives, landscape edges, and common open space purposes; and

(4) The Development Agreement has been prepared in conformance with the goals and policies of The Ontario Plan Policy Plan (General Plan); and

(5) The Development Agreement does not conflict with the Land Use Policies of The Ontario Plan Policy Plan (General Plan) and will provide for development, within the district, in a manner consistent with the Policy Plan and with related development; and

(6) This Development Agreement will promote the goals and objectives of the Land Use Element of the Policy Plan; and

(7) This Development Agreement will not be materially injurious or detrimental to the adjacent properties and will not have a significant impact on the environment or the surrounding properties for which a Subsequent Environmental Impact Report (SCH# 2006051081) was previously adopted by the City Council on December 4, 2007; and

(8) This Application introduces no new significant environmental impacts. All previously adopted mitigation measures are a condition of project approval and are incorporated herein by this reference.

SECTION 6: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 5, above, the City Council hereby APPROVES the Development Agreement (File No. PDA22-004), attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 7: **City Manager Administrative Authority.** The City Council acknowledges that refinements and further development of the Ontario Ranch development area may demonstrate that changes are appropriate with respect to the details and performance of the parties under the Development Agreement. The City Council desires to retain a certain degree of flexibility with respect to the details of the Ontario Ranch developments, and with respect to those items covered in general terms under the Development Agreement. If and when the City Manager (or designee) and the Developer mutually find that changes, adjustments, or clarifications are appropriate to further the intended purposes of the Development Agreement, and such are not materially inconsistent with the Development Agreement, they may, unless otherwise required by law, effectuate such changes, adjustments, or clarifications by written amendment to this Agreement, or through one or more memoranda which are mutually approved by the City Manager on behalf of the City and by the Developer, and, after execution, shall be attached to the Development Agreement and become a part thereof. Unless otherwise required by law, no such changes, adjustments, or clarifications shall require prior notice or hearing before the City Council. The City Manager, with the approval of the City Attorney, shall have the authority but not the obligation to execute amendments, memoranda or other documents, and may take any action necessary to implement the Development Agreement.

SECTION 8 ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 9: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 10: ***Severability.*** If any section, sentence, clause or phrase of this Ordinance or the application thereof to any entity, person or circumstance is held for any reason to be invalid or unconstitutional, such invalidity or unconstitutionality shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this Ordinance are severable. The People of the City of Ontario hereby declare that they would have adopted this Ordinance and each section, sentence, clause or phrase thereof, irrespective of the

fact that any one or more section, subsections, sentences, clauses or phrases be declared invalid or unconstitutional.

SECTION 11: ***Effective Date.*** This Ordinance shall become effective 30 days following its adoption.

SECTION 12: ***Publication and Posting.*** The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within fifteen (15) days of the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

PASSED, APPROVED, AND ADOPTED this _____ day of _____ 2025.

DEVELOPMENT AGREEMENT PDA22-004

This Development Agreement (hereinafter "Agreement") is entered into effective as of the ____ day of _____, 2025 by and among the City of Ontario, a California municipal corporation (hereinafter "CITY"), and, Roseville Investments, LLC, American Superior Land, LLC, (hereinafter "OWNER"):

RECITALS

WHEREAS, CITY is authorized to enter into binding development agreements with persons having legal or equitable interests in real property for the development of such property, pursuant to Section 65864, et seq. of the Government Code; and

WHEREAS, OWNER has requested CITY to enter into a development agreement and proceedings have been taken in accordance with the rules and regulations of CITY; and

WHEREAS, by electing to enter into this Agreement, CITY shall bind future City Councils of CITY by the obligations specified herein and limit the future exercise of certain governmental and proprietary powers of CITY; and

WHEREAS, the terms and conditions of this Agreement have undergone extensive review by CITY and the City Council and have been found to be fair, just and reasonable; and

WHEREAS, the best interests of the citizens of the CITY and the public health, safety and welfare will be served by entering into this Agreement; and

WHEREAS, all of the procedures of the California Environmental Quality Act have been met with respect to the Project and the Agreement in that Rich Haven Specific Plan (State Clearinghouse No. 2006051081 (the "FEIR"). The City Council found and determined that the FEIR was prepared in accordance with the requirements of the California Environmental Quality Act and adequately describes the impacts of the project described in the FEIR, which included consideration of this Agreement; and

WHEREAS, this Agreement and the Project are consistent with the CITY's Comprehensive General Plan and the Rich Haven Specific Plan; and

WHEREAS, all actions taken and approvals given by CITY have been duly taken or approved in accordance with all applicable legal requirements for notice, public hearings, findings, votes, and other procedural matters; and

WHEREAS, development of the Property in accordance with this Agreement will provide substantial benefits to CITY and will further important policies and goals of CITY; and

WHEREAS, this Agreement will eliminate uncertainty in planning and provide for the orderly development of the Property, ensure progressive installation of necessary

improvements, provide for public services appropriate to the development of the Project, and generally serve the purposes for which development agreements under Sections 65864 et seq. of the Government Code are intended; and

WHEREAS, OWNER has incurred and will in the future incur substantial costs in excess of the generally applicable requirements in order to assure vesting of legal rights to develop the Property in accordance with this Agreement.

WHEREAS, the Property is located in an area of the City of Ontario that has been known as the "New Model Colony" area and the New Model Colony area has now been renamed as "Ontario Ranch."

COVENANTS

NOW, THEREFORE, in consideration of the above recitals and of the mutual covenants hereinafter contained and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

1. DEFINITIONS AND EXHIBITS.

1.1 Definitions. The following terms when used in this Agreement shall be defined as follows:

1.1.1 "Agreement" means this Development Agreement.

1.1.2 "CITY" means the City of Ontario, California, a California municipal corporation.

1.1.3 "Construction Agreement" means that certain Agreement for the Financing and Construction of Phases I and II Infrastructure Improvements to Serve an Easterly Portion of the New Model Colony, entered into between the CITY and NMC Builders as of the 4th day of October, 2005, and all amendments thereto and "Construction Agreement Amendment" means that First Amended and Restated Agreement for the Financing and Construction of Limited Infrastructure Improvements to Serve and Easterly Portion of the New Model Colony entered into between the CITY and NMC Builders as of the 21st day of August 2012.

1.1.4 "Development" means the improvement of the Property for the purposes of completing the structures, improvements and facilities comprising the Project including, but not limited to: grading; the construction of public infrastructure and public facilities related to the Project whether located within or outside the Property; the construction of buildings and structures; and the installation of landscaping. "Development" does not include the maintenance, repair, reconstruction or redevelopment of any building, structure, improvement or facility after the construction and completion thereof.

1.1.5 "Development Approvals" means all permits and other entitlements for use subject to approval or issuance by CITY in connection with development of the Property including, but not limited to:

(a) specific plans and specific plan amendments;

(b) tentative and final subdivision and parcel maps;

(c) development plan review;

(d) conditional use permits (including model home use permits), public use permits and plot plans;

(e) zoning;

(f) grading and building permits.

1.1.6 “Development Exaction” means any requirement of CITY in connection with or pursuant to any Land Use Regulation or Development Approval for the dedication of land, the construction of improvements or public facilities, or the payment of fees in order to lessen, offset, mitigate or compensate for the impacts of development on the environment or other public interests.

1.1.7 “Development Impact Fee” means a monetary exaction, other than a tax or special assessment, whether characterized as a fee or a tax and whether established for a broad class of projects by legislation of general applicability or imposed on a specific project on an ad hoc basis, that is charged by a local agency to the applicant in connection with approval of a development project for the purpose of defraying all or a portion of the cost of public facilities related to the development project, and, for purposes of this Agreement only, includes fees collected under development agreements adopted pursuant to Article 2.5 of the Government Code (commencing with Section 65864) of Chapter 4, For purposes of this Agreement only, "Development Impact Fee" shall not include processing fees and charges imposed by CITY to cover the estimated actual costs to CITY of processing applications for Development Approvals or for monitoring compliance with any Development Approvals granted or issued, including, without limitation, fees for zoning variances; zoning changes; use permits; building inspections; building permits; filing and processing applications and petitions filed with the local agency formation commission or conducting preliminary proceedings or proceedings under the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000, Division 3 (commencing with Section 56000) of Title 5 of the Government Code; the processing of maps under the provisions of the Subdivision Map Act, Division 2 (commencing with Section 66410) of Title 7 of the Government Code; or planning services under the authority of Chapter 3 (commencing with Section 65100) of Division 1 of Title 7 of the Government Code, fees and charges as described in Sections 51287, 56383, 57004, 65104, 65456, 65863.7, 65909.5, 66013, 66014, and 66451.2 of the Government Code, Sections 17951, 19132.3, and 19852 of the Health and Safety Code, Section 41901 of the Public Resources Code, and Section 21671.5 of the Public Utilities Code, as such codes may be amended or superceded, including by amendment or replacement.

1.1.8 “Development Plan” means the Existing Development Approvals and the Existing Land Use Regulations applicable to development of the Property.

1.1.9 “Effective Date” means the date that the ordinance approving this Agreement goes into effect.

1.1.10 “Existing Development Approvals” means all Development Approvals approved or issued prior to the Effective Date. Existing Development Approvals includes the Approvals incorporated herein as Exhibit “C” and all other Approvals which are a matter of public record on the Effective Date.

1.1.11 “Existing Land Use Regulations” means all Land Use Regulations in effect on the Effective Date. Existing Land Use Regulations includes the Regulations incorporated herein as Exhibit “D” and all other Land Use Regulations that are in effect and a matter of public record on the Effective Date.

1.1.12 “General Plan” means the General Plan adopted on August 16, 2022.

1.1.13 “Improvement” or “Improvements” means those public improvements required to support the development of the Project as described in the Tract Map conditions for Tract No.20526 as further described in Exhibit “F” (the “Infrastructure Improvements Exhibit”).

1.1.14 “Land Use Regulations” means all ordinances, resolutions, codes, rules, regulations and official policies of CITY governing the development and use of land, including, without limitation, the permitted use of land, the density or intensity of use, subdivision requirements, timing and phasing of development, the maximum height and size of buildings, the provisions for reservation or dedication of land for public purposes, and the design, improvement and construction standards and specifications applicable to the development of the Property. “Land Use Regulations” does not include any CITY ordinance, resolution, code, rule, regulation or official policy, governing:

(a) the conduct of businesses, professions, and occupations;

(b) taxes and assessments;

(c) the control and abatement of nuisances;

(d) the granting of encroachment permits and the conveyance of similar rights and interests that provide for the use of or the entry upon public property;

(e) the exercise of the power of eminent domain.

1.1.15 “Mortgagee” means a mortgagee of a mortgage, a beneficiary under a deed of trust or any other security-device lender, and their successors and assigns.

1.1.16 “Model Units” includes model units, private common recreation facilities and sales facilities constructed by OWNER prior to the construction of any Production units and not offered for sale and occupancy for a period of time after the issuance of permits for Production Units.

1.1.17 “Net MDD” means net maximum daily water demand.

1.1.18 “NMC Builders” means the consortium of investors and developers responsible for the construction of infrastructure within the New Model Colony incorporated as NMC Builders, LLC.

1.1.19 “OWNER” means the persons and entities listed as owner on page 1 of this Agreement and their permitted successors in interest to all or any part of the Property.

1.1.20 “Phase 2 Water EDUs” means the number of equivalent dwelling units or non-residential square footage assigned to OWERN upon payment to CITY of the Phase 2 Water Participation Fee for the Project and evidenced by the issuance by CITY of a Certificate of Phase 2 Net MDD Availability in the form attached as Exhibit “G”. 1.1.21 “Phase 2 Water Improvements” means the future water infrastructure Improvements required for the issuance by CITY of the “Water Availability Equivalents” (WAE) for the Project.

1.1.21 “Phase 2 Water Participation Fee” means the fee paid to City upon City approval of the first Development Entitlement for the Project, to fund the Property’s respective share of the projected costs of the design and construction of the Phase 2 Water Improvements by City. The Phase 2 Water Participation Fee shall be the calculated amount of the Regional Water DIF for the Project based upon the number of units, and land use category for residential units or the number of square feet, and land use category for non-residential square footage of the Project.

1.1.22 “Production Unit(s)” means all units constructed for sale and occupancy by OWNER and excludes the specified number of Model Units constructed by OWNER for promotion of sales.

1.1.23 “Project” means the development of the Property contemplated by the Development Plan, as such Plan may be further defined, enhanced or modified pursuant to the provisions of this Agreement.

1.1.24 “Property” means the real property described on Exhibit “A” and shown on Exhibit “B” to this Agreement.

1.1.25 “Reservations of Authority” means the rights and authority excepted from the assurances and rights provided to OWNER under this Agreement and reserved to CITY under Section 3.6 of this Agreement.

1.1.26 “Specific Plan” means that certain specific plan adopted by the City Council, and entitled, “Rich Haven Specific Plan.”

1.1.27 "Storm Water Treatment Capacity Availability” means a designated portion of the total Storm Water Treatment Capacity Availability made available through the completion of construction of a Phase of regional storm water treatment facilities by the NMC Builders LLC as described in the Construction Agreement Amendment. The amount, in acres, of Storm Water Treatment Capacity Availability required for the

issuance of a grading permit shall be based upon the factors and assumptions listed in the Construction Agreement Amendment.

1.1.28 "Subsequent Development Approvals" means all Development Approvals required subsequent to the Effective Date in connection with development of the Property.

1.1.29 "Subsequent Land Use Regulations" means any Land Use Regulations adopted and effective after the Effective Date of this Agreement.

1.1.30 "Water Availability Equivalent (WAE)" means a designated portion of the total Net MDD made available through the construction of each Phase described in the Water Phasing Plan of the Construction Agreement. The number of Water Availability Equivalents (of portions thereof) required for the issuance of each building permit shall be based upon water demand factors and assumptions listed in the Construction Agreement and Construction Agreement Amendment as "Water Availability Equivalents by Land Use" for each land use category.

1.1.31 "Amendment to the Construction Agreement" means the amendment to the Construction Agreement modifying the boundaries of the property in Exhibit A of such Construction Agreement to include the Property covered by this Agreement and to provide for the additional funds required for CITY's future construction of the "Phase 2 Water Improvements" described in a modification to Exhibit C-3 of the Construction Agreement.

1.2 Exhibits. The following documents are attached to, and by this reference made a part of, this Agreement:

Exhibit "A" — Legal Description of the Property.

Exhibit "B" — Map showing Property and its location.

Exhibit "C" — Existing Development Approvals.

Exhibit "D" — Existing Land Use Regulations.

Exhibit "E" — Description of Required Infrastructure Improvements

Exhibit "F" — Depiction of Required Infrastructure Improvements and Phasing

Exhibit "G" - Form of Certificate of Net MDD to be issued by CITY

Exhibit "H" – Form of Certificate of DIF Credit to be issued by CITY

Exhibit "I-1" – Ontario Ranch Water Supply Phasing Plan

Exhibit "I-2" - Water Demand Equivalents by Land Use

Exhibit "J" - Form of Plume Disclosure Letter

2. GENERAL PROVISIONS.

2.1 Binding Effect of Agreement. The Property is hereby made subject to this Agreement. Development of the Property is hereby authorized and shall be carried out only in accordance with the terms of this Agreement.

2.2 Ownership of Property. OWNER represents and covenants that it is the owner of the fee simple title to the Property or a portion thereof, or has the right to acquire fee simple title to the Property or a portion thereof from the current owner(s) thereof. To the extent OWNER does not own fee simple title to the Property, OWNER shall obtain written consent from the current fee owner of the Property agreeing to the terms of this Agreement and the recordation thereof.

2.3 Term. The term of this Agreement shall commence on the Effective Date and shall continue for an initial term of ten (10) years thereafter unless this term is modified or extended pursuant to the provisions of this Agreement. The term of this Agreement may be extended for an additional five (5) years following expiration of the initial ten (10) year term, provided the following have occurred:

(a) OWNER provides at least 180 days written notice to CITY prior to expiration of the initial term; and

(b) In non-mixed use and residential use only projects, the OWNER shall have obtained, as applicable, building permits for at least seventy percent (70%) of the actual number of residential units permitted under this Agreement; and

(c) OWNER is not then in uncured default of this Agreement.

2.4 Assignment.

2.4.1 Right to Assign. OWNER shall have the right to sell, transfer or assign the Property in whole or in part (provided that no such partial transfer shall violate the Subdivision Map Act, Government Code Section 66410, et seq.), to any person, partnership, limited liability company, joint venture, firm or corporation at any time during the term of this Agreement; provided, however, that any such sale, transfer or assignment shall include the assignment and assumption of the rights, duties and obligations arising under or from this Agreement and be made in strict compliance with the following:

(a) No sale, transfer or assignment of any right or interest under this Agreement shall be made unless made together with the sale, transfer or assignment of all or a part of the Property. OWNER may be required to provide disclosure that the Property is within the South Archibald Trichloroethylene (TCE) Plume. OWNER may wish to provide the attached Disclosure Letter (Exhibit G) as part of the Real Estate Transfer Disclosure requirements under California Civil Code Section 1102 et seq.(b)

(b) Concurrent with any such sale, transfer or assignment, or within fifteen (15) business days thereafter, OWNER shall notify CITY's City Manager, in writing, of such sale, transfer or assignment and shall provide CITY with: (1) an executed

agreement, in a form reasonably acceptable to CITY, by the purchaser, transferee or assignee and providing therein that the purchaser, transferee or assignee expressly and unconditionally assumes all the duties and obligations of OWNER under this Agreement with respect to the portion of the Property so sold, transferred or assigned; and (2) the payment of the applicable processing charge to cover the CITY's review and consideration of such sale, transfer or assignment.

(c) Any sale, transfer or assignment not made in strict compliance with the foregoing conditions shall constitute a default by OWNER under this Agreement. Notwithstanding the failure of any purchaser, transferee or assignee to execute the agreement required by Paragraph (b) of this Subsection 2.4.1, the burdens of this Agreement shall be binding upon such purchaser, transferee or assignee, but the benefits of this Agreement shall not inure to such purchaser, transferee or assignee until and unless such agreement is executed. The City Manager shall have the authority to review, consider and either approve, conditionally approve, or deny any proposed sale, transfer or assignment that is not made in compliance with this section 2.4.

2.4.2 Release of Transferring Owner. Notwithstanding any sale, transfer or assignment, a transferring OWNER shall continue to be obligated under this Agreement unless such transferring owner is given a release in writing by CITY, which release shall be provided by CITY upon the full satisfaction by such transferring owner of the following conditions:

(a) OWNER no longer has a legal or equitable interest in all or any part of the portion of the Property sold, transferred or assigned.

(b) OWNER is not then in default under this Agreement.

(c) OWNER has provided CITY with the notice and executed agreement required under Paragraph (b) of Subsection 2.4.1 above.

(d) The purchaser, transferee or assignee provides CITY with security equivalent to any security previously provided by OWNER to secure performance of its obligations hereunder.

2.4.3 Effect of Assignment and Release of Obligations. In the event of a sale, transfer or assignment pursuant to the provisions of Section 2.4.2 above:

(a) The assignee shall be liable for the performance of all obligations of OWNER with respect to transferred property, but shall have no obligations with respect to the portions of the Property, if any, not transferred (the "Retained Property").

(b) The owner of the Retained Property shall be liable for the performance of all obligations of OWNER with respect to Retained Property, but shall have no further obligations with respect to the transferred property.

(c) The assignee's exercise, use and enjoyment of the Property or portion thereof shall be subject to the terms of this Agreement to the same extent as if the assignee were the OWNER.

2.4.4 Subsequent Assignment. Any subsequent sale, transfer or assignment after an initial sale, transfer or assignment shall be made only in accordance with and subject to the terms and conditions of this Section 2.4.

2.4.5 Termination of Agreement with Respect to Individual Lots Upon Sale to Public and Completion of Construction. The provisions of Subsection 2.4.1 shall not apply to the sale or lease (for a period longer than one year) of any lot which has been finally subdivided and is individually (and not in "bulk") sold or leased to a member of the public or other ultimate user. Notwithstanding any other provisions of this Agreement, this Agreement shall terminate with respect to any lot and such lot shall be released and no longer be subject to this Agreement without the execution or recordation of any further document upon satisfaction of both of the following conditions:

(a) The lot has been finally subdivided and individually (and not in "bulk") sold or leased (for a period longer than one year) to a member of the public or other ultimate user; and,

(b) A certificate of occupancy has been issued for a building on the lot, and the fees set forth under Section 4 of this Agreement have been paid.

2.4.6 Partial Assignment and Assumption. CITY and OWNER agree OWNER may partially assign its obligations and rights under this Agreement, and all amendments hereto, to a purchaser, transferee or assignee of a lot, which has been subdivided subject to provisions of a partial assignment and assumption agreement in a form approved by CITY. Any such complete and executed partial assignment and assumption of this Agreement shall be submitted to CITY for approval pursuant to Section 2.4.1 of this Agreement. CITY shall review, and if the above conditions, including but not limited to, those conditions in Section 2.4.2, are satisfied, CITY may approve the partial assignment and release and notify the purchaser, transferee or assignee in writing thereof. No such release approved pursuant to this Subsection 2.4.6 shall cause, or otherwise affect, a release of OWNER from the duties and obligations under this Agreement that are retained by OWNER and excluded from the transfer or assignment.

2.5 Amendment or Cancellation of Agreement. This Agreement may be amended or cancelled in whole or in part only in the manner provided for in Government Code Section 65868.1. Any amendment of this Agreement, which amendment has been requested by OWNER, shall be considered by the CITY only upon the payment of the applicable processing charge. This provision shall not limit any remedy of CITY or OWNER as provided by this Agreement. Either Party or successor in interest, may propose an amendment to or cancellation, in whole or in part, of this Agreement. Any amendment or cancellation shall be by mutual consent of the parties or their successors in interest except as provided otherwise in this Agreement or in Government Code Section 65865.1. For purposes of this section, the term "successor in interest" shall mean

any person having a legal or equitable interest in the whole of the Property, or any portion thereof as to which such person wishes to amend or cancel this Agreement. The procedure for proposing and adopting an amendment to, or cancellation of, in whole or in part, this Agreement shall be the same as the procedure for adopting and entering into this Agreement in the first instance. Notwithstanding the foregoing sentence, if the CITY initiates the proposed amendment to, or cancellation of, in whole or in part, this Agreement, CITY shall first give notice to the OWNER of its intention to initiate such proceedings at least sixty (60) days in advance of the giving the public notice of intention to consider the amendment or cancellation.

2.5.1 Amendment to Reflect Consistency With Future Amendments to the Construction Agreement. To the extent any future amendment to the Construction Agreement provides for modifications to rights or obligations that differ from or alter the same or similar rights or obligations contained in this Development Agreement, OWNER reserves the right to request an amendment to the Development Agreement to reflect any or all of such modifications.

2.5.2 Minor Modification. Upon the written application of OWNER, minor modifications and changes to the Development Plan including modifications to building design or footprint (not affecting minimum setbacks), parking layout and design, and landscape area design may be approved by the Director of the Planning Department without the need to amend this Development Agreement. Other changes in the Development Plan shall be processed pursuant to the City Zoning Ordinance. It is also contemplated by CITY and OWNER that OWNER may, from time to time, seek amendments to one or more of the Development Approvals. Any such amendments are contemplated by CITY and OWNER as being within the scope of this Agreement as long as they are consistent with the Land Use Regulations and shall, upon approval by CITY, continue to constitute the Development Approvals as referenced herein. The parties agree that any such modifications or amendments shall not constitute an amendment to this Agreement nor require an amendment to this Agreement.

2.6 Termination. This Agreement shall be deemed terminated and of no further effect upon the occurrence of any of the following events:

(a) Expiration of the stated term of this Agreement as set forth in Section 2.3. (b) Entry of a final judgment setting aside, voiding or annulling the adoption of the ordinance approving this Agreement.

(c) The adoption of a referendum measure overriding or repealing the ordinance approving this Agreement.

(d) Completion of the Project in accordance with the terms of this Agreement including issuance of all required occupancy permits and acceptance by CITY or applicable public agency of all required dedications.

Termination of this Agreement shall not constitute termination of any other land use entitlements approved for the Property. Upon the termination of this Agreement,

no party shall have any further right or obligation hereunder except with respect to any obligation to have been performed prior to such termination or with respect to any default in the performance of the provisions of this Agreement which has occurred prior to such termination or with respect to any obligations which are specifically set forth as surviving this Agreement. Upon such termination, any public facilities and services mitigation fees paid pursuant to Section 4.2 of this Agreement by OWNER to CITY for residential units on which construction has not yet begun shall be refunded to OWNER by CITY.

2.7 Notices.

(a) As used in this Agreement, "notice" includes, but is not limited to, the communication of notice, request, demand, approval, statement, report, acceptance, consent, waiver, appointment or other communication required or permitted hereunder.

(b) All notices shall be in writing and shall be considered given either: (i) when delivered in person, including, without limitation, by courier, to the recipient named below; or (ii) on the date of delivery shown on the return receipt, after deposit in the United States mail in a sealed envelope as either registered or certified mail with return receipt requested, and postage and postal charges prepaid, and addressed to the recipient named below. All notices shall be addressed as follows:

If to CITY:
Scott Ochoa, City Manager
City of Ontario
303 East "B" Street
Ontario, CA 91764

with a copy to:
Ruben Duran, City Attorney
Best Best & Krieger, LLP
2855 E Guasti Road
Ontario, CA 91761

If to OWNER:
Richland
Attn: Craig Cristina, Vice President
3161 Michelson Drive, Suite 425
Irvine, CA 92612

with a copy to:
Richland
Attn: Legal Department
3161 Michelson Drive, Suite 425
Irvine, CA 92612

(c) Either party may, by notice given at any time, require subsequent notices to be given to another person or entity, whether a party or an officer or representative of a party, or to a different address, or both. Notices given before actual receipt of notice of change shall not be invalidated by the change.

3. DEVELOPMENT OF THE PROPERTY.

3.1 Rights to Develop. Subject to the terms of this Agreement including the Reservations of Authority, OWNER shall have a vested right to develop the Property in accordance with, and to the extent of, the Development Plan. The Project shall remain subject to all Subsequent Development Approvals required to complete the Project as contemplated by the Development Plan. Except as otherwise provided in this Agreement,

the permitted uses of the Property, the density and intensity of use, the maximum height and size of proposed buildings, and provisions for reservation and dedication of land for public purposes shall be those set forth in the Development Plan.

3.2 Effect of Agreement on Land Use Regulations. Except as otherwise provided under the terms of this Agreement including the Reservations of Authority, the rules, regulations and official policies governing permitted uses of the Property, the density and intensity of use of the Property, the maximum height and size of proposed buildings, and the design, improvement and construction standards and specifications applicable to development of the Property shall be the Existing Land Use Regulations. In connection with any Subsequent Development Approval, CITY shall exercise discretion in accordance with the same manner as it exercises its discretion under its police powers, including the Reservations of Authority set forth herein; provided however, that such discretion shall not prevent development of the Property for the uses and to the density or intensity of development set forth in this Agreement.

3.3 Timing of Development. The parties acknowledge that OWNER cannot at this time predict when or the rate at which phases of the Property will be developed. Such decisions depend upon numerous factors which are not within the control of OWNER, such as market orientation and demand, interest rates, absorption, completion and other similar factors. Since the California Supreme Court held in Pardee Construction Co. v. City of Camarillo (1984) 37 Ca1. 3d 465, that the failure of the parties therein to provide for the timing of development resulted in a later adopted initiative restricting the timing of development to prevail over such parties' agreement, it is the parties' intent to cure that deficiency by acknowledging and providing that OWNER shall have the right to develop the Property in such order and at such rate and at such times as OWNER deems appropriate within the exercise of its subjective business judgment.

3.4 Requirement for Public Infrastructure Improvements. Development of the Property is contingent in part on the phasing of area-wide infrastructure improvements over which the OWNER has control. The issuance of building permits by CITY for Model Units and Production Units is, in general, contingent on OWNER's completion of needed infrastructure improvements and the availability of improvements and services to serve the Property.

3.4.1 Attached hereto as Exhibit "F" is a description of the infrastructure improvements needed for the development of the Property ("the Infrastructure Improvement Exhibit").

3.4.2 Construction of Model Units, private common recreation facilities, and sales facilities is subject to plan submittal by OWNER and approval by CITY. Said plan shall illustrate that adequate public infrastructure is available to serve these uses, and shall describe the utilities and other infrastructure necessary to provide sufficient fire protection and other public health and safety requirements.

3.5 Changes and Amendments. The parties acknowledge that refinement and further development of the Project will require Subsequent Development Approvals and

may demonstrate that changes are appropriate and mutually desirable in the Existing Development Approvals. In the event OWNER finds that a change in the Existing Development Approvals is necessary or appropriate, OWNER shall apply for a Subsequent Development Approval to effectuate such change, and CITY shall process and act on such application in accordance with the Existing Land Use Regulations, except as otherwise provided by this Agreement including the Reservations of Authority. If approved, any such change in the Existing Development Approvals shall be incorporated herein as an addendum to Exhibit "C" and may be further changed from time to time as provided in this Section. Unless otherwise required by law, as determined in CITY's reasonable discretion, a change to the Existing Development Approvals shall be deemed "minor" and not require an amendment to this Agreement provided such change does not:

(a) Alter the permitted uses of the Property as a whole; or,

(b) Increase the density or intensity of use of the Property as a whole; or,

(c) Increase the maximum height and size of permitted buildings; or,

(d) Delete a requirement for the reservation or dedication of land for public purposes within the Property as a whole; or,

(e) Constitute a project requiring a subsequent or supplemental environmental impact report pursuant to Section 21166 of the Public Resources Code.

3.6 Reservations of Authority.

3.6.1 Limitations, Reservations and Exceptions. Notwithstanding any other provision of this Agreement, the CITY shall not be prevented from applying new rules, regulations and policies upon the OWNER, nor shall a development agreement prevent the CITY from denying or conditionally approving any subsequent development project application on the basis of such new rules, regulations and policies where the new rules, regulations and policies consist of the following:

(a) Processing fees by CITY to cover costs of processing applications for development approvals or for monitoring compliance with any development approvals;

(b) Procedural regulations relating to hearing bodies, petitions, applications, notices, findings, records and any other matter of procedure;

(c) Regulations, policies and rules governing engineering and construction standards and specifications applicable to public and private improvements, including all uniform codes adopted by the

CITY and any local amendments to those codes adopted by the CITY; provided however that, OWNER shall have a vested right to develop the Property in accordance with, and to the extent of, the standards and specifications that are expressly identified in the Specific Plan;

(d) Regulations that may conflict with this Agreement and the Development Plan but that are reasonably necessary to protect the residents of the project and/or of the immediate community from a condition perilous to their health or safety;

(e) Regulations that do not conflict with those rules, regulations and policies set forth in this Agreement or the Development Plan;

(f) Regulations that may conflict but to which the OWNER consents.

3.6.2 Subsequent Development Approvals. This Agreement shall not prevent CITY, in acting on Subsequent Development Approvals, from applying Subsequent Land Use Regulations that do not conflict with the Development Plan, nor shall this Agreement prevent CITY from denying or conditionally approving any Subsequent Development Approval on the basis of the Existing Land Use Regulations or any Subsequent Land Use Regulation not in conflict with the Development Plan.

3.6.3 Modification or Suspension by State or Federal Law. In the event that State or Federal laws or regulations, enacted after the Effective Date of this Agreement, prevent or preclude compliance with one or more of the provisions of this Agreement, such provisions of this Agreement shall be modified or suspended as may be necessary to comply with such State or Federal laws or regulations, provided, however, that this Agreement shall remain in full force and effect to the extent it is not inconsistent with such laws or regulations and to the extent such laws or regulations do not render such remaining provisions impractical to enforce. In the event OWNER alleges that such State or Federal laws or regulations preclude or prevent compliance with one or more provisions of this Agreement, and the CITY does not agree, the OWNER may, at its sole cost and expense, seek declaratory relief (or other similar non-monetary remedies); provided however, that nothing contained in this Section 3.6.3 shall impose on CITY any monetary liability for contesting such declaratory relief (or other similar non-monetary relief).

3.6.4 Intent. The parties acknowledge and agree that CITY is restricted in its authority to limit its police power by contract and that the foregoing limitations, reservations and exceptions are intended to reserve to CITY all of its police power which cannot be so limited. This Agreement shall be construed, contrary to its stated terms if necessary, to reserve to CITY all such power and authority which cannot be restricted by contract.

3.7 Public Works; Utilities. If OWNER is required by this Agreement to construct any public works facilities which will be dedicated to CITY or any other public agency upon completion, and if required by applicable laws to do so, OWNER shall perform such work in the same manner and subject to the same requirements as would be applicable to CITY or such other public agency should it have undertaken such construction. As a condition of development approval, OWNER shall connect the Project to all utilities necessary to provide adequate water, recycled water, sewer, gas, electric, and other utility service to the Project. As a further condition of development approval, OWNER shall contract with the CITY for CITY-owned or operated utilities for this purpose, for such price and on such terms as may be available to similarly situated customers in the CITY.

3.7.1 OWNER agrees that development of the Project shall require the construction of Storm Drain facilities as described in Exhibit E and depicted in Exhibit F. OWNER shall be responsible for the construction of the necessary extension of master planned Storm Drain facilities.

3.7.2 OWNER agrees that development of the Project shall require the construction of street improvements as described in Exhibit E and depicted in Exhibit F.

3.7.3 OWNER agrees that development of the Property shall require the extension of permanent planned water and recycled water utility infrastructure as described in Exhibit E and depicted in Exhibit F consisting generally of the construction of the extension of permanent water and recycled water utility improvements to serve the Property. OWNER agrees that no building permits shall be issued by CITY for Production Units within a development phase prior to completion of the water and recycled water Improvements as described in Exhibit E and depicted in Exhibit F. OWNER also agrees that recycled water shall be available and utilized by OWNER for all construction-related water uses including prior to, and during, any grading of the Property.

3.7.4 OWNER agrees that development of the Property shall require the extension of permanent sewer improvements, at OWNER's sole cost and expense, as described in the attached Exhibit F consisting generally of the construction of the extension of sewer infrastructure to serve the Property.

3.7.5 OWNER agrees that development of the Property shall require the extension of permanent master planned fiber optic communications infrastructure, at OWNER's sole cost and expense, as described in the attached Exhibit F consisting generally of the construction of the extension of fiber optic communications infrastructure to serve the Property.

3.7.6 OWNER agrees that development of the project shall require the design and construction of three (3) non-DIF traffic signals at Haven Avenue and "Future Street", Haven Avenue and Street "B", and Bethany Way and Mill Creek Avenue; and one (1) DIF credit eligible traffic signal at Haven Avenue and Chino Avenue.

Modification of one (1) existing DIF credit eligible traffic signals at Haven Avenue and Riverside Drive, as described in the attached Exhibit E and depicted in Exhibit F consisting generally of the construction of the signal modifications to serve the Property. OWNER shall complete traffic signals prior to the fiftieth (50^{th}) percentile building permit within a development phase in which the signal is required.

3.8 Acquisition of Offsite Provision of Real Property Interests. In any instance where OWNER is required by any Development Approval or Land Use Regulation and the Construction Agreement to construct any public improvement on land not owned by OWNER ("Offsite Improvements"), the CITY and OWNER shall cooperate in acquiring the necessary legal interest ("Offsite Property") in accordance with the procedures set forth in Section 2.4 of the Construction Agreement. This section 3.8 is not intended by the parties to impose upon the OWNER an enforceable duty to acquire land or construct any public improvements on land not owned by OWNER, except to the extent that the OWNER elects to proceed with the development of the Project, and then only in accordance with valid conditions imposed by the CITY upon the development of the Project under the Subdivision Map Act or other legal authority.

3.8.1 CITY Acquisition of Non-Construction Agreement Offsite Property. In the event OWNER is required to construct any public improvements on land not owned by OWNER, but such requirement is not based upon the Construction Agreement, Sections 3.8.1 and 3.8.2 shall control the acquisition of the necessary property interest(s) ("Non-Construction Agreement Offsite Property"). If the OWNER is unable to acquire such Non-Construction Agreement Offsite Property and following the written request from the OWNER to CITY, CITY agrees to use reasonable and diligent good faith efforts to acquire the Non-Construction Agreement Offsite Property from the owner or owners of record by negotiation to the extent permitted by law and consistent with this Agreement. If CITY is unable to acquire the Non-Construction Agreement Offsite Property by negotiation within thirty (30) days after OWNER'S written request, CITY shall, initiate proceedings utilizing its power of eminent domain to acquire that Non-Construction Agreement Subject Property at a public hearing noticed and conducted in accordance with California Code of Civil Procedure Section 1245.235 for the purpose of considering the adoption of a resolution of necessity concerning the Non-Construction Agreement Offsite Property, subject to the conditions set forth in this Section 3.8. The CITY and OWNER acknowledge that the timelines set forth in this Section 3.8.1 represent the maximum time periods which CITY and OWNER reasonably believe will be necessary to complete the acquisition of any Non-Construction Agreement Offsite Property. CITY agrees to use reasonable good faith efforts to complete the actions described within lesser time periods, to the extent that it is reasonably able to do so, consistent with the legal constraints imposed upon CITY.

3.8.2 Owner's Option to Terminate Proceedings. CITY shall provide written notice to OWNER no later than fifteen (15) days prior to making an offer to the owner of the Non-Construction Agreement Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease all acquisition proceedings with respect to that Non-Construction

Agreement Offsite Property, whereupon CITY shall cease such proceedings. CITY shall provide written notice to OWNER no later than fifteen (15) days prior to the date of the hearing on CITY'S intent to consider the adoption of a resolution of necessity as to any Non-Construction Agreement Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease condemnation proceedings, whereupon CITY shall cease such proceedings. If OWNER does not notify CITY to cease condemnation proceedings within said fifteen (15) day period, then the CITY may proceed to consider and act upon the Non-Construction Agreement Offsite Property resolution of necessity. If CITY adopts such resolution of necessity, then CITY shall diligently institute condemnation proceedings and file a complaint in condemnation and seek an order of immediate possession with respect to the Non-Construction Agreement Offsite Property.

3.9 Regulation by Other Public Agencies. It is acknowledged by the parties that other public agencies not within the control of CITY possess authority to regulate aspects of the development of the Property separately from or jointly with CITY and this Agreement does not limit the authority of such other public agencies. CITY agrees to cooperate fully, at no cost to CITY, with OWNER in obtaining any required permits or compliance with the regulations of other public agencies provided such cooperation is not in conflict with any laws, regulations or policies of the CITY.

3.10 Tentative Tract Maps; Extension. With respect to applications by OWNER for tentative subdivision maps for portions of the Property, CITY agrees that OWNER may file and process tentative maps in accordance with Chapter 4.5 (commencing with Section 66498.1) of Division 2 of Title 7 of the California Government Code and the applicable provisions of CITY's subdivision ordinance, as the same may be amended from time to time. In accordance with the provisions of Section 66452.6 of the Government Code, each tentative subdivision map or tentative parcel map, heretofore or hereafter approved in connection with development of the Property, shall be deemed to have been granted an extension of time to and until the date that is five (5) years following the Effective Date of this Agreement.; The CITY's City Council may, in its discretion, extend any such map for an additional period of up to five (5) years beyond its original term, so long as the subdivider files a written request for an extension with the City prior to the expiration of the initial five (5) year term.

4. PUBLIC BENEFITS.

4.1 Intent. The parties acknowledge and agree that development of the Property will result in substantial public needs that will not be fully met by the Development Plan and further acknowledge and agree that this Agreement confers substantial private benefits on OWNER that should be balanced by commensurate public benefits. Accordingly, the parties intend to provide consideration to the public to balance the private benefits conferred on OWNER by providing more fully for the satisfaction of the public needs resulting from the Project.

4.2 Development Impact Fees.

4.2.1 Amount of Development Impact Fee. Development Impact Fees (DIF) shall be paid by OWNER. The Development Impact Fee amounts to be paid by OWNER shall be the amounts that are in effect at the time such amounts are due. Nothing contained in this Agreement shall affect the ability of the CITY to impose new Development Impact Fees or amend the amounts of existing Development Impact Fees. Additionally, nothing contained in this Agreement shall affect the ability of other public agencies that are not controlled by CITY to impose and amend, from time to time, Development Impact Fees established or imposed by such other public agencies, even though such Development Impact Fees may be collected by CITY.

4.2.2 Time of Payment. The Development Impact Fees required pursuant to Subsection 4.2.1 shall be paid to CITY prior to the issuance of building permit for each applicable residential or other unit, except for the Open Space and Habitat Acquisition Development Impact fee, which shall be paid by OWNER to CITY prior to the issuance of a grading permit. Deferral of the payment of Development Impact Fees may be granted pursuant to a separate agreement approved by City pursuant to City policy.

4.2.3 Parkland and Quimby Act Fees. Pursuant to the General Plan (Ontario Plan) Goal PR1, Policy PR1-5 (achievement of a park standard of 5 acres of parkland per 1,000 residents) OWNER shall provide improved parks, developed in accordance with the City's park standards in an amount equal to two (2) acres per 1,000 of projected population without credit, reimbursement, offset or consideration from City. Such areas shall either be dedicated to the City or transferred to a homeowners' association. If approved by the City Manager, OWNER may satisfy this requirement through the development of non-public recreation facilities such as private recreational clubhouses or pool facilities. Credit for such private recreational facilities areas shall be limited to a maximum of 50% of the foregoing park development requirement. If OWNER's Project does not provide dedicated and developed park acreage equal to two (2) acres per 1,000 projected population, OWNER shall pay a fee in-lieu equal to the per acre estimated costs of acquisition and development of parkland in the City's Development Impact Fee for the calculated park acreage deficiency. Such in-lieu fee shall be due and payable prior to the issuance of the first building permit for Production Units issued to OWNER. Any park dedication and/or improvements in excess of such two (2) acres per thousand standard, provided such park has been developed in accordance with the City's park standards and is open to the public generally, shall entitle OWNER to a credit toward its obligations under the Quimby Act (Gov. Code, § 64477) and the City's implementing ordinance and/or resolution (collectively "**Quimby Act Obligations**"), and to the extent OWNER's Quimby Act Obligations are satisfied, OWNER shall be entitled to have the City acquire such developed and publicly available parks as Non-Program Interests in accordance with Section 4.3.3 below. **(Other provisions will be added that are Project-specific, if applicable).**

4.2.4 Additional Parkland Development Requirements. OWNER is responsible for construction of the 2.20-acre and 2.53-acre parks designated as Lots A and B, respectively, of Tentative Tract Map No. 20526, including any related recreational facilities to be provided therein. OWNER shall submit the design of the park for approval along with the first B-map entitlement within the A-map area. OWNER shall begin construction of the park no later than the issuance of the 315th production building permit for occupancy within the A-map area; and (iii) complete construction prior to issuance of the 500th production building permit for occupancy within the A-map area. The above thresholds are based on current density projections and may be adjusted proportionally upon approval of subsequent B-maps, considering actual densities and phasing. Any modifications to these milestones must be mutually agreed upon by CITY and OWNER and documented in subsequent written agreements or entitlements.

4.3 Responsibility for Construction of Public Improvements.

4.3.1 Timely Construction of Public Infrastructure. The phasing of the areawide infrastructure construction within the New Model Colony will be as approved by the CITY. OWNER shall be responsible for the timely construction and completion of all public infrastructure required for the Project as shown on the attached Exhibit "F" and any and all tentative tract map conditions. Unless otherwise specified in the Subdivision Agreement/Tract Map conditions, all other required Improvements for each Tract Map, shall be completed and operational prior to, and as a condition precedent to, OWNER requesting and CITY's granting of the first building permit for production units for each such Tract Map. All Infrastructure and Improvements shall be completed as required by the Subdivision Agreement/Tract Map conditions for Tract No. 20526**.**

4.3.2 Construction of DIF Program Infrastructure (Construction Agreement). To the extent OWNER is required to construct and completes construction of public improvements that are included in CITY's Development Impact Fee Program and the Construction Agreement between CITY and NMC Builders LLC, CITY agrees that CITY shall issue DIF Credit in accordance with the provisions of the Construction Agreement and any amendments thereto. Use of DIF Credit issued to OWNER as a member of NMC Builders LLC to offset OWNER's DIF payment obligations shall also be subject to the provisions of the Construction Agreement and any amendments thereto.

4.3.3 Construction of DIF Program Infrastructure (Non-Construction Agreement). To the extent OWNER is required to construct and completes construction of public improvements that are included in CITY's Development Impact Fee Program and such public improvements are not included the Construction Agreement between CITY and NMC Builders LLC, CITY agrees that CITY shall issue DIF Credit and DIF Reimbursement in accordance with the provisions of a separate Fee Credit Agreement between CITY and OWNER. Limitation on the use of DIF Credit issued to OWNER to offset OWNER's DIF payment obligations shall also be subject to the provisions of a separate Fee Credit Agreement. OWNER may also be eligible

to receive reimbursement from DIF collected by CITY and paid by other development that benefits from OWNER's construction of DIF Program Infrastructure. Any such DIF Reimbursement shall be subject to a Fee Credit Agreement between CITY and OWNER. CITY and OWNER agree that the Fee Credit Agreement between CITY and OWNER shall comply with CITY's adopted policies applicable to such agreements.

4.3.4 Availability and use of Recycled Water. OWNER agrees that recycled water shall be available and utilized by OWNER for all construction-related water uses including prior to, and during, any grading of the Property.

4.4 Affordable Housing Requirement.

4.4.1 Affordable Housing- Number of Units. OWNER shall provide a minimum number of affordable housing units, equivalent to 10% of the OWNER's total approved residential units within the Project, that are affordable to very low-, low- and moderate-income households. Such requirement for affordable housing shall be met through one, or a combination of one or more, of the options provided in the following Sections 4.3.2.1 through 4.3.2.1. For the purposes of this Section, any term not defined in this Agreement shall be as defined by California Community Redevelopment Law (California Health and Safety Code Section 33000 et seq.).

4.4.2 Affordability Spread. Of the total number of residential dwelling units specified in Section 4.4.1, to be constructed or rehabilitated pursuant to Sections 4.4.2.1 or 4.4.2.2 respectively, thirty percent (30%) shall be available to very low income, thirty percent (30%) shall be available to low income and forty percent (40%) shall be available to moderate income households. "**Households**" shall be as defined by California Health and Safety Code Section 50053.

4.4.2.1 New Construction. If OWNER elects to fully or partially satisfy the affordable housing requirement by the construction of new residential units, it shall construct and restrict the affordability of residential dwelling units within its Project or, at OWNER's option and with the approval of the City, within another project elsewhere within the City. The affordable units constructed shall be intermingled with other units as part of the Project, and shall be built to the same construction, design and aesthetic standards, as well as number of rooms, as other units constructed as part of that OWNER's Project. In addition, the percentage ratio of affordable units offered for sale versus those offered for rent shall equal the percentage ratio of other units offered for sale versus for rent within OWNER's Project. Such construction shall be completed no later than the date that is five (5) years following the issuance of the first building permit for OWNER's Project; provided however that to the extent OWNER has not constructed the required percentage of units, based on the number of building permits for non-restricted units, OWNER shall, prior to the issuance of such building permits, provide security

(in the form and substance approved by the City Manager and City Attorney) to City in order to ensure the faithful completion of such required percentage of construction of affordable units. If OWNER elects the option of constructing new affordable units, a detailed Affordable Housing Agreement specifying terms for the allowable monthly housing costs or rents (as applicable) and maintenance and occupancy standards shall be prepared, executed and recorded against such units as a condition to the issuance of a building permit. The Affordable Housing Agreement shall hold a recorded priority position senior to any other non-statutory lien or encumbrance affecting the unit.

4.4.2.2 Rehabilitation. If OWNER elects to fully or partially satisfy the affordable housing requirement by the substantial rehabilitation of existing residential units in the City, it shall substantially rehabilitate and restrict the affordability of the number of residential units specified in Section 4.4.1, provided that such units shall be provided elsewhere within the City. The rehabilitation work shall be substantial and of high quality and shall also address any deferred property maintenance issues on the property. "**Substantial rehabilitation**" shall mean rehabilitated multi-family rented dwelling units with three or more units and the value of the rehabilitation constitutes 25 percent of the after rehabilitation value of the dwelling, inclusive of land value pursuant to Health and Safety Code Section 33413(b)(2)(A)(iii-iv) as such section exists as of the Effective Date of this Agreement. If OWNER chooses the option of rehabilitation of existing housing units within the City, a detailed Affordable Housing Agreement specifying the terms for the allowable month housing costs or rents (as applicable) and maintenance and occupancy standards shall be prepared, executed and recorded against such units as a condition to the issuance of a building permit. Such rehabilitation shall be completed no later than the date that is five (5) years following the issuance of the first building permit for OWNER's Project; provided however that to the extent OWNER has not rehabilitated the required percentage of units, based on the number of building permits, OWNER shall, prior to the issuance of such building permits, provide security (in the form and substance approved by the City Manager and City Attorney) to the City in order to ensure the faithful completion of such required percentage of rehabilitation.

4.4.2.3 In-Lieu Fee. If OWNER has not fully complied with the requirements of Section 4.4.1 by providing the minimum number of affordable units through the construction of new affordable units or by the substantial rehabilitation of existing units, shall pay an "**Affordability In-Lieu Fee**". If OWNER has not provided any affordable residential units by construction or rehabilitation, the Affordability In-Lieu fee shall be equal to Three Dollars Thirty-Seven Cents ($3.37) per square foot of residential development within OWNER's Project or, if pre-paid as set forth below, Two Dollars Ninety-Six ($2.96) per square foot of residential development within OWNER's Project. If OWNER has partially complied with the requirements of Section 4.4.1 by

construction or rehabilitation of less than the minimum number of units, then the Affordability In-lieu Fee shall be recalculated and reduced in consideration of the number and type of affordable units provided. The Affordability In-Lieu Fee shall be paid by OWNER to City no later than prior to the issuance of each building permit within OWNER's Project based on the square footage of the residential unit for which such building permit is sought; provided however that OWNER may, at OWNER's election, pre-pay such Affordability In-Lieu Fee by paying such Affordability In-Lieu Fee within thirty (30) days following the earliest discretionary approval by the City for OWNER's Project, including, but not limited to, any general plan amendment, specific plan adoption, development agreement, tentative map approval, variance, conditional use permit, or resolution of intention to form any public financing mechanism. The Three Dollars Thirty-Seven Cents ($3.37 Two Dollars Ninety-Six ($2.96) per square foot amounts shall automatically be increased annually, commencing on July 1, 2024, and automatically each July 1 thereafter. Such adjustment shall be based on the percentage increase (but no decrease) in the Consumer Price Index (Riverside - San Bernardino - Ontario, CA) (December 2017=100) over the preceding year. The pre-paid Affordability In-Lieu Fee shall be calculated based on the maximum floor area ratio (FAR) permitted within the General Plan and any applicable FAR contained within the applicable specific plan, whichever is greater, and the Maximum Development Density. For purposes of this Agreement, "**Maximum Development Density**" shall be determined by multiplying the OWNER's Project's density for residential development potential as set forth in the General Plan or the applicable Specific Plan, whichever is less, by the net acreage of land within OWNER's Project. All "Affordability In-Lieu Fees" collected by the City shall be used to promote the construction of affordable housing within the City.

4.4.2.4 Affordability Covenants. Prior to the issuance of the first building permit for any affordable unit, the City and OWNER shall enter into an Affordable Housing Agreement Affordability shall be assured for a period of forty-five (45) years for for-sale units and fifty-five (55) years for rentals. For rental units, base rents shall be established by the City and rental adjustments required by the City shall be performed on an annual basis. In addition, the Affordable Housing Agreement shall impose maximum occupancy limits of 2 occupants per bedroom plus 1 additional occupant per dwelling unit, and a requirement for the owner or tenant to properly maintain each dwelling unit.

4.4.2.5 Transfer of Affordable Project. No transfer of title to any affordable housing project shall occur without the prior written consent of the City. In the event OWNER transfers title to any affordable housing project required to be constructed pursuant to this Agreement to a non-profit entity, or other entity, that receives an exemption from ad valorem real property taxes, the City shall be required to assure payment of an annual in lieu fee to the City on July 1 of each year equal to one-tenth of one percent (0.1%) of the

assessed value of such project. The City may permit OWNER to satisfy this obligation by recorded covenants against the property and enforceable against said entity by the City. Any such covenants shall be approved by the Planning Director and the City Attorney.

4.5 Schools Obligations.

4.5.1 Written Evidence of Compliance with Schools Obligations. OWNER shall, either through joint or individual agreements between OWNER and the applicable school district(s), shall satisfy its new school obligations. The new school obligations for the Mountain View School District in the Ontario Ranch area have been projected to include the acquisition or dedication of school sites for, and construction of, up to eight (8) schools. Of these eight (8) schools, six (6) are to be elementary (K-5) grade schools and two (2) are to be middle grade schools. The new school obligations for the Chaffey Joint Union High School District in the Ontario Ranch area have been projected to include the dedication of a school site for, and construction of, an additional high school. The new school obligations for the applicable school district shall be met by a combination of the following: (1) designating and dedicating school site(s) within the Property as set forth in the General Plan, and/or (2) paying school impact fees, (3) entering into a joint mitigation agreement or individual mitigation agreements, or (4) any combination of the foregoing. Written evidence of approval by the applicable school district that OWNER has met their school obligations may be required by the City as the condition to the issuance by the City of any entitlements for OWNER's Project. In the event OWNER is unable to provide such written evidence from the applicable school district(s), the City shall have the right to decline to honor any DIF Credit, Certificates of MDD Availability, Certificates of Storm Water Treatment Capacity Availability, or any combination thereof, presented by such OWNER, without liability to the City. To the extent that a joint mitigation agreement is approved by the applicable school district(s), and OWNER is a participant in good standing in such mitigation agreement, OWNER shall be deemed to have mitigated its new school obligations under this Section 4.4.1.

4.6 Net MDD/Water Availability Equivalents.

4.6.1 Effectiveness of Agreement. Notwithstanding anything else set forth in this Agreement, CITY and OWNER each acknowledge, confirm, and agree, that (i) the City approval of this Agreement and (ii) the effectiveness of this Agreement, in each case, is conditioned upon OWNER's admission to NMC Builders as a "Member" thereof pursuant to the terms and conditions of the operating agreement of NMC Builders. OWNER and CITY agree that OWNER shall become a Member of NMC Builders within 30 days of the effective date of this Agreement.

4.6.1 Assigned Net MDD/Water Availability Equivalents. The City has agreed with NMC Builders LLC to reserve exclusively for Members of NMC Builders, including OWNER, Net MDD made available through the construction of water system improvements funded by NMC Builders LLC. NMC Builders has assigned

to OWNER its allocable share of the Net MDD issued by City. The provisions of the Construction Agreement Amendment requires that the City shall not approval a final tract map or issue building permits or certificates of occupancy for the area of development within the New Model Colony served by the water system improvements funded by NMC Builders LLC, except to the bearer of an Assignment of Net MDD Water Availability.

4.6.2 Requirement of NMC Builders, LLC Membership as a Phase 2 Water Member. OWNER and CITY agree that OWNER's' payment to CITY required by Section 4.6.3 below represents OWNER's contribution to the funding required for the future construction of the Phase 2 Water Improvements and the availability of additional Net MDD Water Availability required for the development of the Property described in Exhibit A of this Agreement.

4.6.3 CITY issuance of Water Availability Equivalents. Within 30 days after the effectiveness of this Development Agreement OWNER shall pay or have paid to City the applicable Phase 2 Water Participation Fee. The Phase 2 Water Participation Fee shall be the calculated based on the amount of the Regional Water DIF for the applicable land use category and the square footage of the applicable buildings. The calculated amount of the Phase 2 Water Participation Fee shall be paid to City within 30 days after the effective date of this Agreement or, at OWNER's option, the Phase 2 Water Participation Fee may be paid to City in two (2) installments. The first installment shall be fifty percent (50%) of the total Phase 2 Water Participation Fee and such first installment shall be due and payable to City within 30 days after the effective date of this Development Agreement. The second installment shall be the remaining amount of the Phase 2 Water Participation Fee and such second installment shall be due and payable to City within one (1) year after the payment of the first installment, or prior to, and as a condition precedent to, the recording of any final Parcel Map for the Project, whichever occurs first. Upon OWNER's complete payment to CITY of the Phase 2 Water Participation Fee CITY shall issue a Certificate of Water Availability Equivalents in the form attached hereto as Exhibit G. Such Water Availability Equivalents Certificate shall be issued by CITY within thirty (30) days of the receipt of such required payment. CITY and OWNER agree that the amount of Water Availability Equivalents issued to OWNER shall be based on the maximum projected need for Water Availability Equivalents required for the Property based upon water demand factors and assumptions listed in Exhibit C-2R of the Phase 2 Water Amendment to the Construction Agreement "Water Demand Equivalents by Land Use" for each land use category. Additionally, within five (5) business days of CITY's receipt of OWNER's payment as required under this Section 4.6.3, CITY shall issue a certificate of DIF Credit against OWNER's DIF obligations in the Regional Water DIF Category.

4.6.2 Use of Assigned Net MDD Water Availability. OWNER shall provide evidence of sufficient Net MDD Water Availability Equivalents (or portions thereof) prior to and as a condition precedent to, the City's approval of any and all tract maps for the Property. The amount of Net MDD Water Availability Equivalents

required for City's approval of a tract map shall be based upon water demand factors and assumptions listed in Exhibit C-2R of the Construction Agreement Amendment as "Water Demand Equivalents by Land Use" for each land use category.

4.6.3 Requirement for other Water System Improvements. A Certificate of Net MDD Availability is evidence only of available water capacity and does not satisfy any other conditions applicable to an OWNER's Project, including those relating to design and construction of planned potable water and recycled water transmission and distribution system for the respective pressure zone and other public infrastructure requirements.

4.7 Storm Water Capacity Availability.

4.7.1 Requirement for Storm Water Treatment Capacity Availability. OWNER shall provide evidence of sufficient Storm Water Treatment Capacity Availability as reserved in a Certificate of Storm Water Treatment Capacity Availability the same manner and subject to the same limitations as provided for the assignment of Certificates of Net MDD Availability in Section 4.7 of this Agreement.

4.7.2 Use of Storm Water Treatment Capacity Availability. The amount of Storm Water Treatment Capacity Availability required for the issuance of a grading permit to OWNER shall be based upon the Net Residential Acreage of the area to be graded regardless of the corresponding use.

4.7.3 Requirement for other Storm Water Improvements. The Certificate of Storm Water Treatment Capacity Availability is evidence only of available storm water treatment capacity and does not satisfy any other conditions applicable to a particular development project, including those relating to on-site water treatment, water quality, connection to the storm water collection system, or other public infrastructure requirements.

4.8 Maintenance of Open Space. OWNER shall provide for the ongoing maintenance of all park, common areas and open space areas within the Project as more particularly set forth in the Specific Plan, through a homeowners' association as approved by the CITY. Covenants, conditions and restrictions establishing any homeowners' association shall be approved by the Planning Director and City Attorney.

4.9 Compliance with Public Benefits Requirements.

4.9.1 Failure to Provide Public Benefits. In the event OWNER fails or refuses to comply with any condition referenced in Section 4.1 through 4.9, or challenges (whether administratively or through legal proceedings) the imposition of such conditions, OWNER shall be deemed in default of this Agreement pursuant to Section 8.4 hereof, thereby entitling the City to any and all remedies available to it, including, without limitation, the right of the City to withhold OWNER's Project-

related building permits, certificates of occupancy, or discretionary approvals, without liability.

5. FINANCING OF PUBLIC IMPROVEMENTS.

5.1 Financing Mechanism(s). In accordance with the Memorandum of Agreement between the CITY and NMC Builders, CITY will cooperate with OWNER in the formation of a CFD, or CFDs, to include all of the Project, to provide a financing mechanism to reimburse the OWNER for funds paid to NMC Builders LLC for OWNER's share of the costs of public infrastructure pursuant to the Construction Agreement and to acquire other public facilities constructed by OWNER subject to the provisions of the Memorandum of Agreement between CITY and NMC Builders LLC. Notwithstanding such reimbursements and acquisitions, OWNER shall remain entitled to DIF Credits as provided for in Article 3 of the Construction Agreement and/or as provided for in a separate Fee Credit Agreement between CITY and OWNER. OWNER agrees that, prior to the recordation of any Tract Map for the Property, the Property shall be included in a CFD to finance City services through annual special taxes that will initially be $1,371.52 per Single Family Detached Dwelling Unit, $1,188.58 per Multiple-Family Dwelling Unit, $996.75 per Gated Apartment Community Dwelling Unit, and $.25 per square foot for Non-Residential buildings. These amounts shall be subject to an automatic increase at a rate not to exceed four (4%) percent per year, unless modified by CITY. CITY shall be the sole and exclusive lead agency in the formation of any CFD, assessment district or other public financing mechanism within the Property; provided however, that the proceeds of any such CFD, assessment district, or financing mechanism may be used, subject to restrictions that may be imposed by applicable law, for the purposes of acquiring, constructing or maintaining public facilities to be owned or operated by other public agencies, including, without limitation those facilities owned or operated by a school district. In addition to the rights of the CITY pursuant to section 5.2 hereof, CITY shall have the right, but not the obligation, to condition the formation of any CFD, assessment district or other public financing mechanism within the Property on the OWNER mitigating all Project-related impacts to the applicable school district(s) as required by such school district(s). Written evidence by such school district(s) may be required by the CITY as the condition to the formation of any CFD, assessment district or other public financing mechanism within the Property, or any steps preliminary thereto, including, without limitation, the adoption of any resolution of intention to form such CFD, assessment district or other public financing mechanism within the Property. It is not the intent of the parties hereto, by this provision, to prohibit or otherwise limit the City's ability to take any and all necessary steps requisite to the formation of the CFD to finance City services through annual special taxes as set forth in this Section 5.1. Formation of any CFD, assessment district or other public financing mechanism within the Property, shall be subject to CITY's ability to make all findings required by applicable law and complying with all applicable legal procedures and requirements including, without limitation, CITY's public financing district policies as such policies may be amended from time to time. Notwithstanding the foregoing, it is acknowledged and agreed by the parties that nothing contained in this Agreement shall be construed as requiring CITY or the City Council to form any such district or to issue and sell bonds.

6. REVIEW FOR COMPLIANCE.

6.1 Periodic and Special Reviews.

6.1.1 Time for and Initiation of Periodic Review. The CITY shall review this Agreement every twelve (12) months from the Effective Date in order to ascertain the good faith compliance by the OWNER with the terms of this Agreement. The OWNER shall submit an Annual Monitoring Report to CITY, in a form acceptable to the City Manager, along with any applicable processing charge within ten (10) days after each anniversary date of the Effective Date of this Agreement. Within fifteen (15) days after the receipt of the Annual Monitoring Report, CITY shall review the Annual Monitoring Report. Prior to the expiration of the fifteen (15) day review period, CITY shall either issue a notice of continuing compliance or a notice of non-compliance and a notice of CITY's intent to conduct a Special Review pursuant to Sections 6.1.2 through 6.1.6. Issuance of a notice of continuing compliance may be issued by the City Manager or his designee.

6.1.2 Initiation of Special Review. A special review may be called either by agreement between the parties or by initiation in one or more of the following ways:

(1) Recommendation of the Planning staff;

(2) Affirmative vote of at least four (4) members of the Planning Commission; or

(3) Affirmative vote of at least three (3) members of the City Council.

6.1.3 Notice of Special Review. The City Manager shall begin the special review proceeding by giving notice that the CITY intends to undertake a special review of this Agreement to the OWNER. Such notice shall be given at least ten (10) days in advance of the time at which the matter will be considered by the Planning Commission.

6.1.4 Public Hearing. The Planning Commission shall conduct a hearing at which the OWNER must demonstrate good faith compliance with the terms of this Agreement. The burden of proof on this issue is upon the OWNER.

6.1.5 Findings Upon Public Hearing. The Planning Commission shall determine upon the basis of substantial evidence whether or not the OWNER has, for the period under review, complied in good faith with the terms and conditions of this Agreement.

6.1.6 Procedure Upon Findings.

(a) If the Planning Commission finds and determines on the basis of substantial evidence that the OWNER has complied in good faith with the terms and conditions of this Agreement during the period under review, the review for that period is concluded.

(b) If the Planning Commission finds and determines on the basis of substantial evidence that the OWNER has not complied in good faith with the terms and conditions of this Agreement during the period under review, the Planning Commission may recommend to the City Council to modify or terminate this Agreement.

(c) The OWNER may appeal a determination pursuant to paragraph (b) to the City Council in accordance with the CITY's rule for consideration of appeals in zoning matters generally.

6.2 Proceedings Upon Modification or Termination. If, upon a finding under Section 6.1.6(b), the CITY determines to proceed with modification or termination of this Agreement, the CITY shall give notice to the property OWNER of its intention so to do. The notice shall contain:

(a) The time and place of the hearing;

(b) A statement as to whether or not the CITY proposes to terminate or to modify this Agreement; and

(c) Other information that the CITY considers necessary to inform the OWNER of the nature of the proceeding.

6.3 Hearing on Modification or Termination. At the time and place set for the hearing on modification or termination, the OWNER shall be given an opportunity to be heard. The OWNER shall be required to demonstrate good faith compliance with the terms and conditions of this Agreement. The burden of proof on this issue shall be on the OWNER. If the City Council finds, based upon substantial evidence in the administrative record, that the OWNER has not complied in good faith with the terms and conditions of the agreement, the City Council may terminate or modify this Agreement and impose those conditions to the action it takes as it considers necessary to protect the interests of the CITY. The decision of the City Council shall be final, subject only to judicial review pursuant to Section 1094.5 of the Code of Civil Procedure.

6.4 Certificate of Agreement Compliance. If, at the conclusion of a Periodic or Special Review, OWNER is found to be in compliance with this Agreement, CITY shall, upon written request by OWNER, issue a Certificate of Agreement Compliance ("Certificate") to OWNER stating that after the most recent Periodic or Special Review and based upon the information known or made known to the Planning Director and City Council that (1) this Agreement remains in effect and (2) OWNER is not in default. The Certificate shall be in recordable form, shall contain information necessary to communicate constructive record notice of the finding of compliance, shall state whether the Certificate is issued after a Periodic or Special Review and shall state the anticipated date of commencement of the next Periodic Review. OWNER may record the Certificate

with the County Recorder. Whether or not the Certificate is relied upon by assignees or other transferees or OWNER, CITY shall not be bound by a Certificate if a default existed at the time of the Periodic or Special Review, but was concealed from or otherwise not known to the Planning Director or City Council.

7. [RESERVED]

8. DEFAULT AND REMEDIES.

8.1 Remedies in General. It is acknowledged by the parties that CITY would not have entered into this Agreement if it were to be liable in damages under this Agreement, or with respect to this Agreement or the application thereof.

In general, each of the parties hereto may pursue any remedy at law or equity available for the breach of any provision of this Agreement, except that CITY shall not be liable in damages to OWNER, or to any successor in interest of OWNER, or to any other person, and OWNER covenants not to sue for damages or claim any damages:

(a) For any breach of this Agreement or for any cause of action which arises out of this Agreement; or

(b) For the taking, impairment or restriction of any right or interest conveyed or provided under or pursuant to this Agreement; or

(c) Arising out of or connected with any dispute, controversy or issue regarding the application or interpretation or effect of the provisions of this Agreement.

8.2 Specific Performance. The parties acknowledge that money damages and remedies at law generally are inadequate and specific performance and other non-monetary relief are particularly appropriate remedies for the enforcement of this Agreement and should be available to all parties for the following reasons:

(a) Money damages are unavailable against CITY as provided in Section 8.1 above.

(b) Due to the size, nature and scope of the project, it may not be practical or possible to restore the Property to its natural condition once implementation of this Agreement has begun. After such implementation, OWNER may be foreclosed from other choices it may have had to utilize the Property or portions thereof. OWNER has invested significant time and resources and performed extensive planning and processing of the Project in agreeing to the terms of this Agreement and will be investing even more significant time and resources in implementing the Project in reliance upon the terms of this Agreement, and it is not possible to determine the sum of money which would adequately compensate OWNER for such efforts.

8.3 Release. Except for nondamaged remedies, including the remedy of specific performance and judicial review as provided for in Section 6.5, OWNER, for itself, its successors and assignees, hereby releases the CITY, its officers, agents and

employees from any and all claims, demands, actions, or suits of any kind or nature arising out of any liability, known or unknown, present or future, including, but not limited to, any claim or liability, based or asserted, pursuant to Article I, Section 19 of the California Constitution, the Fifth Amendment of the United States Constitution, or any other law or ordinance which seeks to impose any other liability or damage, whatsoever, upon the CITY because it entered into this Agreement or because of the terms of this Agreement.

8.4 Termination or Modification of Agreement for Default of OWNER. Subject to the provisions contained in Subsection 6.3 herein, CITY may terminate or modify this Agreement for any failure of OWNER to perform any material duty or obligation of OWNER under this Agreement, or to comply in good faith with the terms of this Agreement (hereinafter referred to as "default"); provided, however, CITY may terminate or modify this Agreement pursuant to this Section only after providing written notice to OWNER of default setting forth the nature of the default and the actions, if any, required by OWNER to cure such default and, where the default can be cured, OWNER has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has failed to commence the actions necessary to cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

8.5 Termination of Agreement for Default of CITY. OWNER may terminate this Agreement only in the event of a default by CITY in the performance of a material term of this Agreement and only after providing written notice to CITY of default setting forth the nature of the default and the actions, if any, required by CITY to cure such default and, where the default can be cured, CITY has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has failed to commence the actions necessary to cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

9. THIRD PARTY LITIGATION.

9.1 General Plan Litigation. CITY has determined that this Agreement is consistent with its Comprehensive General Plan, as such General Plan exists as of the Effective Date ("General Plan"), and that the General Plan meets all requirements of law. OWNER has reviewed the General Plan and concurs with CITY's determination. CITY shall have no liability in damages under this Agreement for any failure of CITY to perform under this Agreement or the inability of OWNER to develop the Property as contemplated by the Development Plan of this Agreement as the result of a judicial determination that on the Effective Date, or at any time thereafter, the General Plan, or portions thereof, are invalid or inadequate or not in compliance with law.

9.2 Third Party Litigation Concerning Agreement. OWNER shall defend, at its expense, including attorneys' fees, indemnify, and hold harmless CITY, its agents, officers and employees from any claim, action or proceeding against CITY, its agents,

officers, or employees to attack, set aside, void, or annul the approval of this Agreement or the approval of any permit granted pursuant to this Agreement. CITY shall promptly notify OWNER of any such claim, action or proceeding, and CITY shall cooperate in the defense. If CITY fails to promptly notify OWNER of any such claim, action or proceeding, or if CITY fails to cooperate in the defense, OWNER shall not thereafter be responsible to defend, indemnify, or hold harmless CITY. CITY may in its discretion participate in the defense of any such claim, action or proceeding.

9.3 Indemnity. In addition to the provisions of 9.2 above, OWNER shall indemnify and hold CITY, its officers, agents, employees and independent contractors free and harmless from any liability whatsoever, based or asserted upon any act or omission of OWNER, its officers, agents, employees, subcontractors and independent contractors, for property damage, bodily injury, or death (OWNER's employees included) or any other element of damage of any kind or nature, relating to or in any way connected with or arising from the activities contemplated hereunder, including, but not limited to, the study, design, engineering, construction, completion, failure and conveyance of the public improvements, save and except claims for damages arising through the sole active negligence or sole willful misconduct of CITY. OWNER shall defend, at its expense, including attorneys' fees, CITY, its officers, agents, employees and independent contractors in any legal action based upon such alleged acts or omissions. CITY may in its discretion participate in the defense of any such legal action.

9.4 Environment Assurances. OWNER shall indemnify and hold CITY, its officers, agents, and employees free and harmless from any liability, based or asserted, upon any act or omission of OWNER, its officers, agents, employees, subcontractors, predecessors in interest, successors, assigns and independent contractors for any violation of any federal, state or local law, ordinance or regulation relating to industrial hygiene or to environmental conditions on, under or about the Property, including, but not limited to, soil and groundwater conditions, and OWNER shall defend, at its expense, including attorneys' fees, CITY, its officers, agents and employees in any action based or asserted upon any such alleged act or omission. CITY may in its discretion participate in the defense of any such action.

9.5 Reservation of Rights. With respect to Sections 9.2, 9.3 and 9.4 herein, CITY reserves the right to either (1) approve the attorney(s) which OWNER selects, hires or otherwise engages to defend CITY hereunder, which approval shall not be unreasonably withheld, or (2) conduct its own defense, provided, however, that OWNER shall reimburse CITY forthwith for any and all reasonable expenses incurred for such defense, including attorneys' fees, upon billing and accounting therefor.

9.6 Survival. The provisions of this Sections 9.1 through 9.6, inclusive, shall survive the termination of this Agreement.

10. MORTGAGEE PROTECTION.

The parties hereto agree that this Agreement shall not prevent or limit OWNER, in any manner, at OWNER's sole discretion, from encumbering the Property or any portion

thereof or any improvement thereon by any mortgage, deed of trust or other security device securing financing with respect to the Property. CITY acknowledges that the lenders providing such financing may require certain Agreement interpretations and modifications and agrees upon request, from time to time, to meet with OWNER and representatives of such lenders to negotiate in good faith any such request for interpretation or modification. CITY will not unreasonably withhold its consent to any such requested interpretation or modification provided such interpretation or modification is consistent with the intent and purposes of this Agreement. Any Mortgagee of the Property shall be entitled to the following rights and privileges:

(a) Neither entering into this Agreement nor a breach of this Agreement shall defeat, render invalid, diminish or impair the lien of any mortgage on the Property made in good faith and for value, unless otherwise required by law.

(b) The Mortgagee of any mortgage or deed of trust encumbering the Property, or any part thereof, which Mortgagee, has submitted a request in writing to the CITY in the manner specified herein for giving notices, shall be entitled to receive written notification from CITY of any default by OWNER in the performance of OWNER's obligations under this Agreement.

(c) If CITY timely receives a request from a Mortgagee requesting a copy of any notice of default given to OWNER under the terms of this Agreement, CITY shall provide a copy of that notice to the Mortgagee within ten (10) days of sending the notice of default to OWNER. The Mortgagee shall have the right, but not the obligation, to cure the default during the remaining cure period allowed such party under this Agreement.

(d) Any Mortgagee who comes into possession of the Property, or any part thereof, pursuant to foreclosure of the mortgage or deed of trust, or deed in lieu of such foreclosure, shall take the Property, or part thereof, subject to the terms of this Agreement. Notwithstanding any other provision of this Agreement to the contrary, no Mortgagee shall have an obligation or duty under this Agreement to perform any of OWNER's obligations or other affirmative covenants of OWNER hereunder, or to guarantee such performance; provided, however, that to the extent that any covenant to be performed by OWNER is a condition precedent to the performance of a covenant by CITY, the performance thereof shall continue to be a condition precedent to CITY's performance hereunder, and further provided that any sale, transfer or assignment by any Mortgagee in possession shall be subject to the provisions of Section 2.4 of this Agreement.

11. MISCELLANEOUS PROVISIONS.

11.1 Recordation of Agreement. This Agreement and any amendment or cancellation thereof shall be recorded with the San Bernardino County Recorder by the City Clerk within the ten (10) days after the CITY executes this Agreement, as required by Section 65868.5 of the Government Code. If the parties to this Agreement or their successors in interest amend or cancel this Agreement as provided for herein and in Government Code Section 65868, or if the CITY terminates or modifies the agreement as provided for herein and in Government Code Section 65865.1 for failure of the applicant

to comply in good faith with the terms or conditions of this Agreement, the City Clerk shall have notice of such action recorded with the San Bernardino County Recorder.

11.2 Entire Agreement. This Agreement sets forth and contains the entire understanding and agreement of the parties, and there are no oral or written representations, understandings or ancillary covenants, undertakings or agreements which are not contained or expressly referred to herein. No testimony or evidence of any such representations, understandings or covenants shall be admissible in any proceeding of any kind or nature to interpret or determine the terms or conditions of this Agreement.

11.3 Severability. If any term, provision, covenant or condition of this Agreement shall be determined invalid, void or unenforceable, the remainder of this Agreement shall not be affected thereby to the extent such remaining provisions are not rendered impractical to perform taking into consideration the purposes of this Agreement. Notwithstanding the foregoing, the provision of the Public Benefits set forth in Section 4 of this Agreement, including the payment of the fees set forth therein, are essential elements of this Agreement and CITY would not have entered into this Agreement but for such provisions, and therefore in the event such provisions are determined to be invalid, void or unenforceable, this entire Agreement shall be null and void and of no force and effect whatsoever.

11.4 Interpretation and Governing Law. This Agreement and any dispute arising hereunder shall be governed and interpreted in accordance with the laws of the State of California. This Agreement shall be construed as a whole according to its fair language and common meaning to achieve the objectives and purposes of the parties hereto, and the rule of construction to the effect that ambiguities are to be resolved against the drafting party shall not be employed in interpreting this Agreement, all parties having been represented by counsel in the negotiation and preparation hereof.

11.5 Section Headings. All section headings and subheadings are inserted for convenience only and shall not affect any construction or interpretation of this Agreement.

11.6 Singular and Plural. As used herein, the singular of any word includes the plural.

11.7 Joint and Several Obligations. Subject to section 2.4, if at any time during the term of this Agreement the Property is owned, in whole or in part, by more than one owner, all obligations of such owners under this Agreement shall be joint and several, and the default of any such owner shall be the default of all such owners. Notwithstanding the foregoing, no owner of a single lot which has been finally subdivided and sold to such owner as a member of the general public or otherwise as an ultimate user shall have any obligation under this Agreement except as provided under Section 4 hereof.

11.8 Time of Essence. Time is of the essence in the performance of the provisions of this Agreement as to which time is an element.

11.9 Waiver. Failure by a party to insist upon the strict performance of any of the provisions of this Agreement by the other party, or the failure by a party to exercise its

rights upon the default of the other party, shall not constitute a waiver of such party's right to insist and demand strict compliance by the other party with the terms of this Agreement thereafter.

11.10 No Third Party Beneficiaries. This Agreement is made and entered into for the sole protection and benefit of the parties and their successors and assigns. No other person shall have any right of action based upon any provision of this Agreement.

11.11 Force Majeure. Neither party shall be deemed to be in default where failure or delay in performance of any of its obligations under this Agreement is caused by floods, earthquakes, other Acts of God, fires, wars, riots or similar hostilities, strikes and other labor difficulties beyond the party's control, (including the party's employment force), government regulations, court actions (such as restraining orders or injunctions), or other causes beyond the party's control. If any such events shall occur, the term of this Agreement and the time for performance by either party of any of its obligations hereunder may be extended by the written agreement of the parties for the period of time that such events prevented such performance, provided that the term of this Agreement shall not be extended under any circumstances for more than five (5) years.

11.12 Mutual Covenants. The covenants contained herein are mutual covenants and also constitute conditions to the concurrent or subsequent performance by the party benefited thereby of the covenants to be performed hereunder by such benefited party.

11.13 Successors in Interest. The burdens of this Agreement shall be binding upon, and the benefits of this Agreement shall inure to, all successors in interest to the parties to this Agreement. All provisions of this Agreement shall be enforceable as equitable servitudes and constitute covenants running with the land. Each covenant to do or refrain from doing some act hereunder with regard to development of the Property: (a) is for the benefit of and is a burden upon every portion of the Property; (b) runs with the Property and each portion thereof; and, (c) is binding upon each party and each successor in interest during ownership of the Property or any portion thereof.

11.14 Counterparts. This Agreement may be executed by the parties in counterparts, which counterparts shall be construed together and have the same effect as if all of the parties had executed the same instrument.

11.15 Jurisdiction and Venue. Any action at law or in equity arising under this Agreement or brought by a party hereto for the purpose of enforcing, construing or determining the validity of any provision of this Agreement shall be filed and tried in the Superior Court of the County of San Bernardino, State of California, and the parties hereto waive all provisions of law providing for the filing, removal or change of venue to any other court.

11.16 Project as a Private Undertaking. It is specifically understood and agreed by and between the parties hereto that the development of the Project is a private development, that neither party is acting as the agent of the other in any respect hereunder, and that each party is an independent contracting entity with respect to the

terms, covenants and conditions contained in this Agreement. No partnership, joint venture or other association of any kind is formed by this Agreement. The only relationship between CITY and OWNER is that of a government entity regulating the development of private property and the owner of such property.

11.17 Further Actions and Instruments. Each of the parties shall cooperate with and provide reasonable assistance to the other to the extent contemplated hereunder in the performance of all obligations under this Agreement and the satisfaction of the conditions of this Agreement. Upon the request of either party at any time, the other party shall promptly execute, with acknowledgment or affidavit if reasonably required, and file or record such required instruments and writings and take any actions as may be reasonably necessary under the terms of this Agreement to carry out the intent and to fulfill the provisions of this Agreement or to evidence or consummate the transactions contemplated by this Agreement. The City Manager may delegate his powers and duties under this Agreement to an Assistant City Manager or other management level employee of the CITY.

11.18 Eminent Domain. No provision of this Agreement shall be construed to limit or restrict the exercise by CITY of its power of eminent domain.

11.19 Agent for Service of Process. In the event OWNER is not a resident of the State of California or it is an association, partnership or joint venture without a member, partner or joint venturer resident of the State of California, or it is a foreign corporation, then in any such event, OWNER shall file with the Planning Director, upon its execution of this Agreement, a designation of a natural person residing in the State of California, giving his or her name, residence and business addresses, as its agent for the purpose of service of process in any court action arising out of or based upon this Agreement, and the delivery to such agent of a copy of any process in any such action shall constitute valid service upon OWNER. If for any reason service of such process upon such agent is not feasible, then in such event OWNER may be personally served with such process out of this County and such service shall constitute valid service upon OWNER. OWNER is amenable to the process so served, submits to the jurisdiction of the Court so obtained and waives any and all objections and protests thereto. OWNER for itself, assigns and successors hereby waives the provisions of the Hague Convention (Convention on the Service Abroad of Judicial and Extra Judicial Documents in Civil or Commercial Matters, 20 U.S.T. 361, T.I.A.S. No. 6638).

11.20 Estoppel Certificate. Within thirty (30) business days following a written request by any of the parties, the other party shall execute and deliver to the requesting party a statement certifying that (i) either this Agreement is unmodified and in full force and effect or there have been specified (date and nature) modifications to the Agreement, but it remains in full force and effect as modified; and (ii) either there are no known current uncured defaults under this Agreement or that the responding party alleges that specified (date and nature) defaults exist. The statement shall also provide any other reasonable information requested. The failure to timely deliver this statement shall constitute a conclusive presumption that this Agreement is in full force and effect without modification except as may be represented by the requesting party and that there are no uncured

defaults in the performance of the requesting party, except as may be represented by the requesting party. OWNER shall pay to CITY all costs incurred by CITY in connection with the issuance of estoppel certificates under this Section 11.20 prior to CITY's issuance of such certificates.

11.21 Authority to Execute. The person or persons executing this Agreement on behalf of OWNER warrants and represents that he or she/they have the authority to execute this Agreement on behalf of his or her/their corporation, partnership or business entity and warrants and represents that he or she/they has/have the authority to bind OWNER to the performance of its obligations hereunder.

11.22 Prevailing Wage. OWNER, for itself, its successors, and assigns, agrees, covenants, and warrants that the development of the Property, if any, shall comply with all applicable federal and state labor laws (including, without limitation, the requirement under California law to pay prevailing wages and hire apprentices), and all obligations as set forth herein.

11.22.1 CITY makes no representations concerning prevailing wages in compliance with California Labor Code Section 1770 et seq.

11.22.2 OWNER acknowledges and agrees that it shall be independently responsible for reviewing the applicable laws and regulations with respect to the payment of prevailing wages and complying therewith. OWNER shall bear all risks of payment or non-payment of prevailing wages under California law and/or the implementation of Labor Code Section 1781, as the same may be amended from time to time, and/or any other similar law.

11.22.3 The foregoing indemnity shall survive termination of this Agreement and shall continue after completion of the construction and development of the Property by OWNER, its successors or assigns. OWNER shall be solely responsible for determining and effectuating compliance with such laws.

11.22.4 OWNER, ON BEHALF OF ITSELF, ITS SUCCESSORS, AND ASSIGNS, WAIVES AND RELEASES CITY FROM ANY RIGHT OF ACTION THAT MAY BE AVAILABLE TO OWNER PURSUANT TO LABOR CODE SECTION 1781 OR THE DAVIS BACON ACT. RELATIVE TO THE WAIVER AND RELEASE CONTAINED IN THIS SECTION 11.22, OWNER ACKNOWLEDGES THE PROTECTIONS OF CIVIL CODE SECTION 1542, WHICH READS AS FOLLOWS: A GENERAL RELEASE DOES NOT EXTEND TO CLAIMS THAT THE CREDITOR OR RELEASING PARTY DOES NOT KNOW OR SUSPECT TO EXIST IN HIS OR HER FAVOR AT THE TIME OF EXECUTING THE RELEASE, WHICH IF KNOWN BY HIM OR HER MUST HAVE MATERIALLY AFFECTED HIS OR HER SETTLEMENT WITH THE DEBTOR OR RELEASED PARTY.

INITIALS. BY INITIALING BELOW, OWNER KNOWINGLY AND VOLUNTARILY WAIVES THE PROVISIONS OF SECTION 1542 SOLELY WITH THE MATTERS WHICH ARE THE SUBJECT OF THE FOREGOING WAIVERS AND RELEASES:

EXHIBIT "A"
TO DEVELOPMENT AGREEMENT

Legal Description of Property

Real property in the City of Ontario, County of San Bernardino, State of California, described as follows:

PARCEL 1: (APN: 0218-161-11-0-000)

The East 35 acres of the South one-half of the Northwest one-quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian, in the County of San Bernardino, State of California, according to the official plat thereof.
Except any portion within the North 10 acres of the Southeast 1/4 of the Northwest 1/4 of said section conveyed to Chaffey Joint Union High School District, a political subdivision of State of California in grant deed recorded January 6, 2000 as Instrument No. 2000-0005735 of Official Records.
Also excepting therefrom that portion of the land described in the grant deed to City of Ontario, a municipal corporation recorded July 24, 2008 as Instrument No. 2008- 0338801 of Official Records.

PARCEL 2: (APN: 0218-161-04-0-000)

The West one-half of the Northwest one-quarter of the Northwest one-quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian, in the County of San Bernardino, State of California, according to the official plat thereof.

Except therefrom all public streets and highways.
Also excepting therefrom that portion of the land described in the grant deed to City of Ontario, a municipal corporation recorded July 24, 2008 as Instrument No. 2008- 0338803 of Official Records.

PARCEL 3: (APN: 0218-161-05-0-000)

The East one-half of the Northwest one-quarter of the Northwest one-quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian, in the County of San Bernardino, State of California, according to the official plat thereof. Except therefrom all public streets and highways.
Also excepting therefrom that portion of the land described in the grant deed to City of Ontario, a municipal corporation recorded July 24, 2008 as Instrument No. 2008- 0338803 of Official Records.

PARCEL 3A: (APN: PORTION OF 0218-171-22-0-000)

An undivided 1/3rd interest in the well-site described as the West 5.00 feet of the South
8.00 feet of the North 72.50 feet of the Northeast one-quarter of the Northeast one- quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian and the East 5.00 feet of the South 8.00 feet of the North 72.50 feet of the Northwest one- quarter of the Northeast one-quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian, in the County of San Bernardino, State of California, according to the official plat thereof.

PARCEL 3B:

A non-exclusive easement right-of-way per that document recorded March 10, 1976 in Book 8880, page 113 of Official Records to construct, maintain, operate, remove, replace and repair water pipeline together with valves and other equipment over, under, along and across the certain strip of land located within the lines of the property described as follows:
The South 4 feet of the North 34 feet of the Northwest one-quarter of the Northeast one- quarter and the Northeast one-quarter of the Northwest one-quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian, also the South 48.50 feet of the North 82.50 feet of the East 30.00 feet of the Northwest one-quarter of the Northeast one-quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian, in the County of San Bernardino, according to the official plat thereof.

PARCEL 4: (APN: 0218-161-10-0-000 AND PORTION OF 0218-171-22-0-000)

The Southwest one-quarter of the Northwest one-quarter and the West 5 acres of the Southeast one-quarter of the Northwest one-quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian, in the County of San Bernardino, State of California, according to the official plat thereof.
Together with an undivided 1/6 interest in the well-site described as the West 5.00 feet of the South 8.00 feet of the North 72.50 feet of the Northeast one-quarter of the Northeast one-quarter of Section 12, Township 2 South, Range 7 West San Bernardino Meridian and the East 5.00 feet of the South 8.00 feet of the North 72.50 feet of the Northwest one-quarter of the Northeast one-quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian, in the County of San Bernardino, State of California, according to the official plat thereof. Except any portion within the North 10 acres of the Southeast 1/4 of the Northwest 1/4 of said section.

EXHIBIT "C"
TO DEVELOPMENT AGREEMENT

Existing Development Approvals

On October 23, 2007 the Planning Commission:

a) Issued Resolution No. PC07-125 recommending City Council certification of the Rich-Haven Specific Plan EIR (SCH#2006051081).
b) Issued Resolution No. PC07-127 recommending to City Council approval of the Rich-Haven Specific Plan (File No. PSP05-004).

On December 4, 2007, the City Council:

a) Issued Resolution No. 2007-145 certifying the Rich-Haven Specific Plan EIR (SCH#2006051081).
b) Adopted Ordinance No. 2884 approving the Rich-Haven Specific Plan.

On February 23, 2016, the Planning Commission:

a) Issued Resolution No. PC16-003 recommending City Council adoption of an Addendum to the Rich-Haven EIR.
b) Issued Resolution PC16-004 recommending approval of the Rich-Haven Specific Plan Amendment (File No. PSPA16-001).

On March 15, 2016, the City Council:

a) Issued Resolution No. 2016-024 for the adoption of an Addendum (File No. PSPA16-001) to the Rich-Haven Specific Plan EIR.
b) Issued Resolution No. 2016-025 approving an Amendment (File No. PSPA16-001) to the Rich-Haven Specific Plan.

On January 23, 2018, the Planning Commission:

a) Issued Resolution No. PC18-014 recommending City Council adoption of an Addendum to the Rich-haven EIR.
b) Issued Resolution No. PC18-015 recommending to City Council adoption of the Rich-Haven Specific Plan Amendment (File No. PSPA16-005).

On February 20, 2018, the City Council:

a) Issued Resolution No. 2018-017 for the adoption of an Addendum (File No. PSPA16-005) to the Rich-Haven Specific Plan EIR.
b) Issued Resolution No. 2018-018 approving an Amendment (File No. PSPA16-005) to the Rich-Haven Specific Plan.

EXHIBIT "G"
TO DEVELOPMENT AGREEMENT

FORM OF CERTIFICATE OF NET MDD AVAILABILITY

Pursuant to Section ___ of this Agreement between the City of Ontario, a California municipal corporation, and _____, a _____ company, hereinafter called "OWNER", the terms and definitions of which are hereby incorporated herein by this reference and hereinafter called "Agreement", the City of Ontario hereby certifies based on CITY receipt of payment of OWNER's share of the funding for the Phase 2 Water Improvements, that OWNER is entitled to the following Net MDD Water Availability.

Amount of Net MDD _____ gpm

_____
Scott Ochoa, City Manager

Dated:_____

EXHIBIT "H"
TO DEVELOPMENT AGREEMENT

FORM OF CERTIFICATE OF REGIONAL DIF CREDIT

Pursuant to Section 4.5.2 of this Agreement by and between the City of Ontario and _____, dated _____, 201_, the terms and definitions of which are hereby incorporated herein by this reference and hereinafter called the "Development Agreement', the City of Ontario hereby certifies that OWNER is entitled to the following amount and nature of DIF Credits in the Regional Water DIF Infrastructure Category:

Amount of Credit: $_____

_____
Scott Ochoa, City Manager

Dated: _____

Exhibit "I-1"

ONTARIO RANCH
WATER SUPPLY PHASING PLAN

Phase 2	Water Availability Equivalency	Estimated Net MDD Available[1]
Phase 2 A		
Supply & Storage		
1. 1 - Additional Ground Water Well and Collection lines - Design and Construction	8,250 gpm[2]	**7,750 gpm**[2]
Pipelines (Transmission & Distribution)[2]		
2. 925 Zone Transmission lines – Design and Construction		
3. Temporary Pressure Reducing Station[3] – Design and Construction		
Phase 2B		
Supply & Storage		
4. 1 – Additional Ground Water Well and Collection lines – Design and Construction	10,500 gpm[2]	**9,860 gpm[2]**
5. 1 – 6 million gallon Reservoir – 925 Zone – Design and Construction		

(1) Upon Completion of the construction of all of the improvements described for each Phase a Certificate of Net MDD Availability shall be issued to Developer for the corresponding amount of Net MDD. Net MDD means the maximum daily demand on the potable water supply, net of the water requirements for public schools and parks. The Water Availability Equivalency includes the estimated requirements for public schools and parks. The amount of Net MDD specified is the cumulative amount for which building permits may be issued upon funding of the corresponding and all preceding Phases of improvements.

(2) The ability of a particular development to utilize Net MDD assigned to it by the Developer will require the completion of design and construction of Master-planned potable and recycled water transmission and distribution pipelines for the respective pressure zone. Other factors may include its location, the particular land use and Water Availability Equivalents assigned to it as specified in Exhibit C-2.

(3) Pressure reducing stations are a component of the pipeline transmission and distribution system.

EXHIBIT "I-2"

Available Water Supply - See Exhibit C-1R for Net MDD Available

Table A - Water Demand Equivalents By Land Use

The Ontario Plan	Potable Water			Recycled Water	
Land Use	Water Demand Factor (ADD)		Water Demand Equivalents (WDE)[2]	Recycled Water Demand Factor[1] (ADD)	Recycled Water Demand Of Total Water Demand
	(gpd/du)	(gpd/ac)	(gpm/unit)	(gpd/ac)	(%)
Detached Dwellings (less than 5 units per acre)	544		0.57	900	28%
Detached or Attached Dwellings (between 5 and 11 units per acre)	464		0.48	1,000	21%
Attached Dwellings (between 11 and 25 units per acre)	323		0.34	1,500	18%
High Density Dwellings (25+ units per acre)	152		0.16	1,500	27%
Commercial Lodging	150		0.16	1,700	50%
Retail/Services Uses		2,200	2.29	2,300	51%
Office Uses		3,400	3.54	2,300	40%
Business Park Uses		2,200	2.29	2,200	50%
Industrial Uses		2,000	2.08	2,200	52%
Institutional Use		2,200	2.29	1,600	42%
Parks		1,000	1.04	1,400	58%
Schools		3,500	3.65	1,600	31%

[1]Recycled Water Demands include irrigation for right-of-way (medians and parkways), neighborhood edge, pocket parks, and common areas.

[2] The WDE is based on the Maximum Day Demand (MDD) with a peaking factor of 1.5 in the NMC for all land use categories.

Table B - Example Water Supply Calculation

Land Use	Acres[1] (gross)	Residential Units	WDE Factor (gpm)	Potable MDD (gpm)	Recycled Water ADD (gpm)
Development					
Detached Dwellings (less than 5 units per acre)	1,284	5,061	0.57	2,868	803
Detached or Attached Dwellings (between 5 and 11 units per acre)	369	2,530	0.48	1,223	256
Attached Dwellings (between 11 and 25 units per acre)	194	3,410	0.34	1,147	202
Retail/Services Uses (per acre)[2]	104		2.29	239	166
TOTAL	**1,950**	**11,001**		**5,477**	**1,428**

Three (3) Wells Are required to Support this example, assuming each well produces 2,000 gpm and connection to the Recycled Water System maximizing Recycled Water Use.

[1] Residential Acres are estimated based on the weighted average derived from the average number of units per land use category.

[2] Commercial acreage is calculated from a total square footage of 1,361,000 SF with an average Floor to Area Ratio (FAR) of 0.30 for commercial services in The Ontario Plan.

DISCLOSURE NOTICE
SOUTH ARCHIBALD TRICHLOROETHYLENE PLUME

Dear Property Owner/Developer/Applicant:

The City of Ontario ("City") has approved or will be approving development in the Ontario Ranch area in the next few years, subject to the appropriate and required statutory process. This letter is intended to serve as notice to all potential property owners of the existence of a groundwater plume, known as the South Archibald Trichloroethylene (TCE) Plume which may exist in, under or near owner's property.

The groundwater plume is in an area in the central Chino Basin south of the Pomona Freeway, west of Turner Avenue, east of Grove Avenue, and north of Kimball Avenue. The plume primarily consists of TCE, a discontinued industrial solvent, and is subject to a clean-up under the oversight and direction of the Santa Ana Regional Water Quality Control Board ("Regional Board").

The Regional Board's approved clean-up procedure involves the removal and treatment of groundwater containing TCE via groundwater wells to reduce the plume concentrations and control its migration. In addition, the City is providing potable water supplies for domestic purposes to residences with private domestic wells affected by the plume. Finally, the Regional Board will continue to monitor all impacted areas and private domestic wells to ensure that residents' health and the environment are properly safeguarded. These remedial actions are documented in a Remedial Action Plan approved by the Regional Board in September 2016.

Further and current information may be found on the Regional Board's Geotracker website at https://geotracker.waterboards.ca.gov/profile_report?global_id=T10000004658.

Property owners may wish to include this letter as a part of a Real Estate Transfer Disclosure under California Civil Code Section 1102 et seq.

CITY OF ONTARIO PLANNING DEPARTMENT

PLANNING COMMISSION STAFF REPORT

February 25, 2025

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

FILE NO: PDA22-004

SUBJECT: A public hearing to consider a Development Agreement between the City of Ontario and Roseville Investments, LLC and American Superior Land, LLC, to establish the terms and conditions associated with Tentative Tract Map 20526 (File No. PMTT22-012), located at the southeast corner of Haven Avenue and Riverside Drive, within Planning Areas 1A, 1B, and 1C of the Rich-Haven Specific Plan (File No. PSP05-004). (APNs: 0218-161-11, 0218-161-04, 0218-161-05, and 0218-161-10); **submitted by Richland Developers, Inc. City Council action is required.**

PROPERTY OWNER: Roseville Investments, LLC and American Superior Land, LLC.

RECOMMENDED ACTION: That the Planning Commission consider and recommend City Council adopt an Ordinance approving the Development Agreement (File No. PDA22-004) between the City of Ontario and Roseville Investments, LLC and American Superior Land, LLC, pursuant to the facts and reasons contained in the staff report and attached Resolution.

BACKGROUND: On January 27, 2010, the Ontario City Council certified The Ontario Plan Environmental Impact Report in conjunction with File No. PGPA06-001 (City Council Resolution No. 2010-006), and on August 16, 2022, the Ontario City Council certified The Ontario Plan 2050 Update Supplemental Environmental Impact Report in conjunction with File No. PGPA20-002 (City Council Resolution No. 2022-129). The Ontario Plan and associated Environmental Impact Report analyzed the Project site and established guidelines for development, including but not limited to, general land use: Low Density Residential (LDR) – 2.1-5.0 du/ac; Low-Medium Density Residential (LMDR) – 5.1-11.0 du/ac; and Medium Density Residential (MDR) – 11.1-25.0 du/ac).

On March 4, 2022, the Applicant applied for Tentative Tract Map No. 20526 (File No. PMTT22-012) to subdivide106.1 gross acres of land into 12 numbered lots and 10 lettered lots to facilitate future residential development.

The Ontario Ranch financial commitments required for construction of properties within a specific plan are substantial. Therefore, to adequately forecast these costs and gain assurance that the project may proceed under the existing policies, rules, and regulations, Roseville Investments, LLC and American Superior Land, LLC ("Owner"), have

Case Planner:	Pablo De Lara – Project Manager

CC	4/1/2025		Final

requested that the City enter into negotiations to create a Development Agreement ("Agreement").

In accordance with California Government Code Section 65865, which in part states that any city… may enter into a Development Agreement with any person having a legal or equitable interest in real property for the development of such property…" and California Government Code Section 65865.52, which in part states that "a Development Agreement shall specify the duration of the Agreement, the permitted uses of the property… and may include conditions, terms, restrictions…," the City of Ontario adopted Resolution No. 2002-100 setting forth the procedures and requirements for consideration of Development Agreements. Pursuant to these procedures and requirements, staff entered into negotiations with the Applicant to create a Development Agreement for consideration by the Planning Commission and City Council.

The proposed Agreement is based on the model Development Agreement that was developed in coordination with the City Attorney and legal counsel for NMC Builders. This model Development Agreement is consistent with the provisions of the Construction Agreement. The terms of the agreement between NMC Builders' members requires that members of the LLC enter into Development Agreements that are consistent with the provisions of the Construction Agreement and are consistent with the commitments to assure that adequate public infrastructure improvements are constructed by the Owner.

PROJECT SETTING: The project site is located at the southeast corner of Haven Avenue and Riverside Drive, within Planning Areas 1A, 1B, and 1C of the Rich-Haven Specific Plan and is depicted in Figure 1: Project Location.

PROJECT ANALYSIS: The Agreement proposes to include 106.1 gross acres of land within Planning Areas 1A, 1B, and 1C land use districts of the Rich-Haven Specific Plan, as shown on the attached Exhibit A. The Agreement grants the Applicant a vested right to develop Tentative Tract Map 20526 (the "Map"), provided that the Owner complies with the terms and conditions of the Specific Plan and related EIR.

The Map (see attached Exhibit B) is located at the southeast corner of Haven Avenue and Riverside Drive and proposes to subdivide 106.1 gross acres of land into 12 numbered lots and 10 lettered lots for residential uses, a public school, private drives, landscape edges, and common open space purposes.

The term of the Agreement is for 10 years, with a 5-year option to renew. The main points of the Agreement address funding for all new City expenses created by the project, which includes: Development Impact Fees ("DIF") for construction of public improvements (i.e. streets and bridges, sewer, water, storm drain and fiber); Public Service Funding to ensure adequate provisions of public services (police, fire and other public services); and the creation of a Community Facilities District ("CFD") for the maintenance of public facilities.

Staff finds that the Agreement is consistent with State law, The Ontario Plan, and the City's Development Agreement policies. As a result, staff is recommending approval of the application to the Planning Commission. If the Planning Commission finds the Agreement is acceptable, a recommendation of approval to the City Council would be appropriate.

PUBLIC NOTIFICATION: The subject Agreement was advertised as a public hearing in at least one newspaper of general circulation in the City of Ontario (the Inland Valley Daily Bulletin newspaper). In addition, notices were mailed to all owners of real property located within a minimum of 300 feet of the exterior boundaries of the property that is the subject of the hearing, as shown on the records of the County Assessor.

CORRESPONDENCE: As of the preparation of this Resolution, Planning Department staff has not received any written or verbal communications from the owners or occupants of properties surrounding the Project site or from the public in general, regarding the subject Agreement.

AGENCY/DEPARTMENT REVIEWS: Each City agency/department has been provided the opportunity to review and comment on the subject Agreement and recommend requirements to be imposed upon the Project. At the time of the Resolution preparation, infrastructure requirements were provided and are included within the subject Agreement to the attached Resolution as "Attachment A."

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission, therefore, finds and determines that the Project, is consistent with the policies and criteria set forth within the ONT ALUCP.

On August 2, 2022, the City Council of the City of Ontario approved and adopted a Development Code Amendment to establish the Chino Airport ("CNO") Overlay Zoning District ("OZD") and Reference I, Chino Airport Land Use Compatibility Plan ("CNO

ALUCP"). The CNO OZD and CNO ALUCP established the Airport Influence Area for Chino Airport, solely within the City of Ontario, and limits future land uses and development within the Airport Influence Area, as they relate to safety, airspace protection, and overflight impacts of current and future airport activity. The CNO ALUCP is consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the CNO ALUCP. As the recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the CNO ALUCP compatibility factors, including Safety, Airspace Protection, Overflight. As a result, the Planning Commission, therefore, finds and determines that the Project is consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the Chino ALUCP.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (general plan), and City Council Priorities components of The Ontario Plan ("TOP"). More specifically, the goals and policies of TOP that are furthered by the proposed Project are as follows:

(1) City Council Goals.

- Invest in the Growth and Evolution of the City's Economy
- Operate in a Businesslike Manner
- Focus Resources in Ontario's Commercial and Residential Neighborhoods
- Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)
- Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in the New Model Colony

(2) Vision.

Distinctive Development:

- Commercial and Residential Development

➢ Development quality that is broadly recognized as distinctive and not exclusively tied to the general suburban character typical of much of Southern California.

(3) Governance.

Decision Making:

- Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

➢ G 1-2. Long-term Benefit. We require decisions to demonstrate and document how they add value to the community and support the Ontario Vision.

(4) Policy Plan (General Plan)

Land Use Element:

- Goal LU-1 Balance: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

➢ LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

➢ LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

- Goal LU-2 Compatibility: Compatibility between a wide range of uses and a resultant urban patterns and forms.

➢ LU-2.6 Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character.

Housing Element:

- Goal H-2 Housing Supply & Diversity: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

➢ H-2.4 Ontario Ranch. We support a premier lifestyle community in the Ontario Ranch, distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.

➢ H-2.5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.

Community Economics Element:

- Goal CE-1 Complete Community: A complete community that provides for all incomes and stages of life.

- CE-1.6 Diversity of Housing. We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.

- Goal CE-2 Placemaking: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.

- CE-2.1 *Development Projects*. We require new development and redevelopment to create unique, high-quality places that add value to the community.

- CE-2.2 *Development Review*. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.

- CE-2.4 *Protection of Investment*. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.

- CE-2.5 *Private Maintenance*. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

Community Design Element:

- Goal CD-2 Design Quality: A high level of design quality resulting in neighborhoods, public spaces, parks, and streetscapes that are attractive, safe, functional, human-scale, and distinct.

- CD-2.7 *Sustainability*. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping, and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials, and construction techniques.

- CD-2.13 *Entitlement Process*. We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.

- Goal CD-5 Protection of Investment: A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the property values and encourages additional public and private investments.

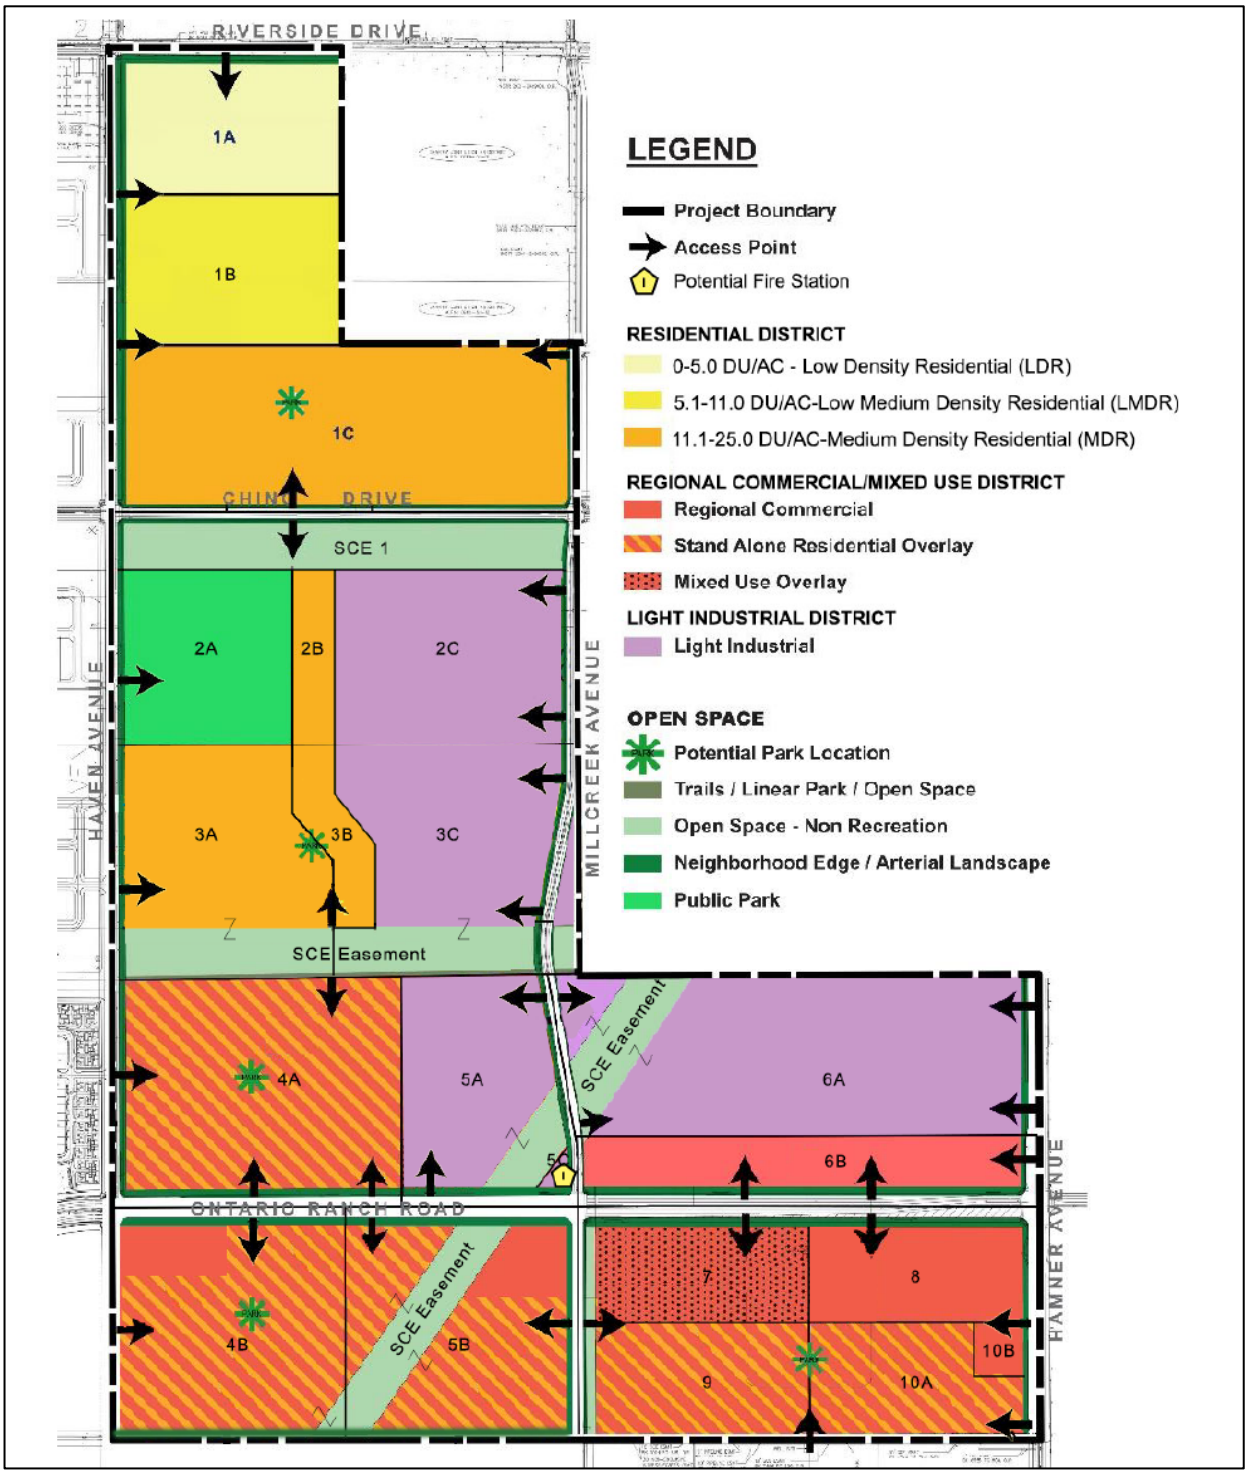
- CD-5.1 *Maintenance of Buildings and Property*. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.

- CD-5.2 *Maintenance of Infrastructure*. We require the continual maintenance of infrastructure.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (general plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

ENVIRONMENTAL REVIEW: The environmental impacts of this Project were previously reviewed in conjunction with File No. PSP05-004, the Rich-Haven Specific Plan for which an Environmental Impact Report (SCH# 2006051081) was previously adopted by the City Council on December 4, 2007. This Application introduces no new significant environmental impacts. All previously adopted mitigation measures are a condition of Project approval and are incorporated herein by this reference.

Exhibit A:
RICH-HAVEN SPECIFIC PLAN LAND USE MAP (File No. PSP05-004)



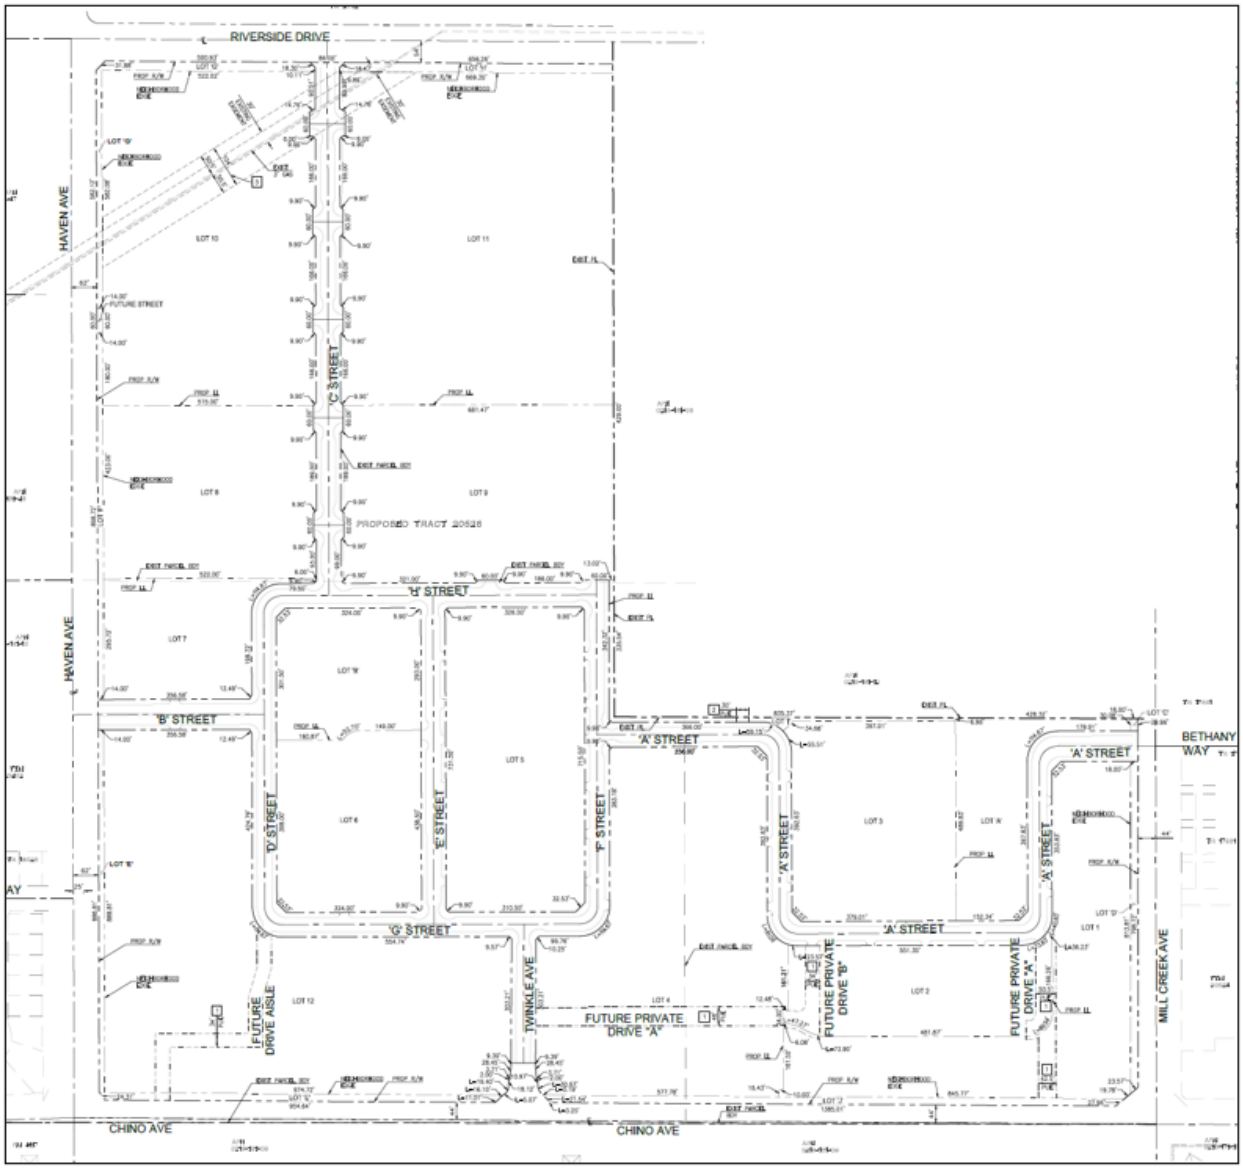


Exhibit B:
TENTATIVE TRACT MAP NO. 20526

RESOLUTION NO. PC25-010

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING CITY COUNCIL APPROVE FILE NO. PDA22-004, A DEVELOPMENT AGREEMENT BETWEEN THE CITY OF ONTARIO AND, ROSEVILLE INVESTMENTS, LLC AND AMERICAN SUPERIOR LAND, LLC, TO ESTABLISH THE TERMS AND CONDITIONS ASSOCIATED WITH TENTATIVE TRACT MAP 20526 (FILE NO. PMTT22-012), LOCATED AT THE SOUTHEAST CORNER OF HAVEN AVENUE AND RIVERSIDE DRIVE, WITHIN PLANNING AREAS 1A, 1B, AND 1C OF THE RICH-HAVEN SPECIFIC PLAN (FILE NO. PSP05-004). (APNS: 0218-161-11, 0218-161-04, 0218-161-05, AND 0218-161-10).

WHEREAS, Richland Developers, Inc ("Applicant") has filed an Application for the approval of a Development Agreement, File No. PDA22-004, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 106.1 gross acres of land, located at the southeast corner of Haven Avenue and Riverside Drive, within Planning Areas 1A, 1B, and 1C of the Rich-Haven Specific Plan (File No. PSP05-004); and

WHEREAS, the Applicant submitted Tentative Tract Map No. 20526 (File No. PMTT22-012), subdividing 106.1 gross acres of land into 12 numbered lots and 10 lettered lots for residential uses, a public school, private drives, landscape edges, and common open space purposes; and

WHEREAS, the environmental impacts of this Project were previously reviewed in conjunction with File No. PSP05-004, the Rich-Haven Specific Plan for which an Environmental Impact Report (SCH# 2006051081) was previously adopted by the City Council on December 4, 2007. This Application introduces no new significant environmental impacts; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make recommendations to the City Council on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element

law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on February 25, 2025, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending authority for the Project, the Planning Commission has reviewed and considered the information contained in the previous Certified EIR and supporting documentation. Based upon the facts and information contained in the previous Certified EIR and supporting documentation, the Planning Commission finds as follows:

(1) the environmental impacts of this Project were previously reviewed in conjunction with File No. PSP05-004, the Rich-Haven Specific Plan for which an Environmental Impact Report (SCH# 2006051081) was previously adopted by the City Council on December 4, 2007. This Application introduces no new significant environmental impacts; and

(2) The previous Certified EIR contains a complete and accurate reporting of the environmental impacts associated with the Project; and

(3) The previous Certified EIR was completed in compliance with CEQA and the Guidelines promulgated thereunder; and

(4) The previous Certified EIR reflects the independent judgment of the Planning Commission; and

(5) The proposed project will introduce no new significant environmental impacts beyond those previously analyzed in the previous Certified EIR, and all mitigation measures previously adopted with the Certified EIR, are incorporated herein by this reference.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending authority for the Project, the Planning Commission finds that based on the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan. The project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

SECTION 4: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending authority for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the PLANNING COMMISSION, therefore, finds and determines that the Project, is will be consistent with the policies and criteria set forth within the ONT ALUCP; and

(2) On August 2, 2022, the City Council of the City of Ontario approved and adopted a Development Code Amendment to establish the Chino Airport ("CNO") Overlay Zoning District ("OZD") and Reference I, Chino Airport Land Use Compatibility Plan ("CNO ALUCP"). The CNO OZD and CNO ALUCP established the Airport Influence Area for Chino Airport, solely within the City of Ontario, and limits future land uses and development within the Airport Influence Area, as they relate to safety, airspace protection, and overflight impacts of current and future airport activity. The CNO ALUCP

is consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the CNO ALUCP. As the recommending authority for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the CNO ALUCP compatibility factors, including Safety, Airspace Protection, Overflight. As a result, the Planning Commission, therefore, finds and determines that the Project is consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the Chino ALUCP.

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 4, above, the Planning Commission hereby concludes as follows:

(1) The Development Agreement applies to approximately 106.1 gross acres of land located at the southeast corner of Haven Avenue and Riverside Drive, within Planning Areas 1A, 1B, and 1C of the Rich-Haven Specific Plan (File No. PSP05-004); and

(2) The Development Agreement establishes parameters for the development of land within the Rich-Haven Specific Plan. The Development Agreement also grants the Applicant, the right to develop, the ability to quantify the fees; and establish the terms and conditions that apply to those projects. These terms and conditions are consistent with The Ontario Plan Policy Plan (General Plan), design guidelines and development standards for the Rich-Haven Specific Plan; and

(3) The Development Agreement grants the Applicant a vested right to develop Tentative Tract Map 20526 (File No. PMTT22-012) as long as the Applicant complies with the terms and conditions of the Rich-Haven Specific Plan and EIR. Tentative Tract Map 20526 is located at the southeast corner of Haven Avenue and Riverside Drive, within Planning Areas 1A, 1B, and 1C of the Rich-Haven Specific Plan, and proposes to subdivide 106.1 gross acres of land into 12 numbered lots and 10 lettered lots for residential uses, a public school, private drives, landscape edges, and common open space purposes; and

(4) The Development Agreement has been prepared in conformance with the goals and policies of The Ontario Plan Policy Plan (General Plan); and

(5) The Development Agreement does not conflict with the Land Use Policies of The Ontario Plan Policy Plan (General Plan) and will provide for development, within

the district, in a manner consistent with the Policy Plan and with related development; and

(6) This Development Agreement will promote the goals and objectives of the Land Use Element of the Policy Plan; and

(7) This Development Agreement will not be materially injurious or detrimental to the adjacent properties and will not have a significant impact on the environment or the surrounding properties for which a Subsequent Environmental Impact Report (SCH# 2006051081) was previously adopted by the City Council on December 4, 2007; and

(8) This Application introduces no new significant environmental impacts. All previously adopted mitigation measures are a condition of project approval and are incorporated herein by this reference.

SECTION 6: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 through 5, above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVE the herein described Application, subject to each and every condition set forth in the Development Agreement (File No. PDA22-004 attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a special meeting thereof held on the 25th of February, 2025, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

DEVELOPMENT AGREEMENT PDA22-004

This Development Agreement (hereinafter "Agreement") is entered into effective as of the ____ day of _____, 2025 by and among the City of Ontario, a California municipal corporation (hereinafter "CITY"), and, Roseville Investments, LLC, American Superior Land, LLC, (hereinafter "OWNER"):

RECITALS

WHEREAS, CITY is authorized to enter into binding development agreements with persons having legal or equitable interests in real property for the development of such property, pursuant to Section 65864, et seq. of the Government Code; and

WHEREAS, OWNER has requested CITY to enter into a development agreement and proceedings have been taken in accordance with the rules and regulations of CITY; and

WHEREAS, by electing to enter into this Agreement, CITY shall bind future City Councils of CITY by the obligations specified herein and limit the future exercise of certain governmental and proprietary powers of CITY; and

WHEREAS, the terms and conditions of this Agreement have undergone extensive review by CITY and the City Council and have been found to be fair, just and reasonable; and

WHEREAS, the best interests of the citizens of the CITY and the public health, safety and welfare will be served by entering into this Agreement; and

WHEREAS, all of the procedures of the California Environmental Quality Act have been met with respect to the Project and the Agreement in that Rich Haven Specific Plan (State Clearinghouse No. 2006051081 (the "FEIR"). The City Council found and determined that the FEIR was prepared in accordance with the requirements of the California Environmental Quality Act and adequately describes the impacts of the project described in the FEIR, which included consideration of this Agreement; and

WHEREAS, this Agreement and the Project are consistent with the CITY's Comprehensive General Plan and the Rich Haven Specific Plan; and

WHEREAS, all actions taken and approvals given by CITY have been duly taken or approved in accordance with all applicable legal requirements for notice, public hearings, findings, votes, and other procedural matters; and

WHEREAS, development of the Property in accordance with this Agreement will provide substantial benefits to CITY and will further important policies and goals of CITY; and

WHEREAS, this Agreement will eliminate uncertainty in planning and provide for the orderly development of the Property, ensure progressive installation of necessary

improvements, provide for public services appropriate to the development of the Project, and generally serve the purposes for which development agreements under Sections 65864 et seq. of the Government Code are intended; and

WHEREAS, OWNER has incurred and will in the future incur substantial costs in excess of the generally applicable requirements in order to assure vesting of legal rights to develop the Property in accordance with this Agreement.

WHEREAS, the Property is located in an area of the City of Ontario that has been known as the "New Model Colony" area and the New Model Colony area has now been renamed as "Ontario Ranch."

COVENANTS

NOW, THEREFORE, in consideration of the above recitals and of the mutual covenants hereinafter contained and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

1. DEFINITIONS AND EXHIBITS.

1.1 Definitions. The following terms when used in this Agreement shall be defined as follows:

1.1.1 "Agreement" means this Development Agreement.

1.1.2 "CITY" means the City of Ontario, California, a California municipal corporation.

1.1.3 "Construction Agreement" means that certain Agreement for the Financing and Construction of Phases I and II Infrastructure Improvements to Serve an Easterly Portion of the New Model Colony, entered into between the CITY and NMC Builders as of the 4th day of October, 2005, and all amendments thereto and "Construction Agreement Amendment" means that First Amended and Restated Agreement for the Financing and Construction of Limited Infrastructure Improvements to Serve and Easterly Portion of the New Model Colony entered into between the CITY and NMC Builders as of the 21st day of August 2012.

1.1.4 "Development" means the improvement of the Property for the purposes of completing the structures, improvements and facilities comprising the Project including, but not limited to: grading; the construction of public infrastructure and public facilities related to the Project whether located within or outside the Property; the construction of buildings and structures; and the installation of landscaping. "Development" does not include the maintenance, repair, reconstruction or redevelopment of any building, structure, improvement or facility after the construction and completion thereof.

1.1.5 "Development Approvals" means all permits and other entitlements for use subject to approval or issuance by CITY in connection with development of the Property including, but not limited to:

(a) specific plans and specific plan amendments;

(b) tentative and final subdivision and parcel maps;

(c) development plan review;

(d) conditional use permits (including model home use permits), public use permits and plot plans;

(e) zoning;

(f) grading and building permits.

1.1.6 "Development Exaction" means any requirement of CITY in connection with or pursuant to any Land Use Regulation or Development Approval for the dedication of land, the construction of improvements or public facilities, or the payment of fees in order to lessen, offset, mitigate or compensate for the impacts of development on the environment or other public interests.

1.1.7 "Development Impact Fee" means a monetary exaction, other than a tax or special assessment, whether characterized as a fee or a tax and whether established for a broad class of projects by legislation of general applicability or imposed on a specific project on an ad hoc basis, that is charged by a local agency to the applicant in connection with approval of a development project for the purpose of defraying all or a portion of the cost of public facilities related to the development project, and, for purposes of this Agreement only, includes fees collected under development agreements adopted pursuant to Article 2.5 of the Government Code (commencing with Section 65864) of Chapter 4, For purposes of this Agreement only, "Development Impact Fee" shall not include processing fees and charges imposed by CITY to cover the estimated actual costs to CITY of processing applications for Development Approvals or for monitoring compliance with any Development Approvals granted or issued, including, without limitation, fees for zoning variances; zoning changes; use permits; building inspections; building permits; filing and processing applications and petitions filed with the local agency formation commission or conducting preliminary proceedings or proceedings under the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000, Division 3 (commencing with Section 56000) of Title 5 of the Government Code; the processing of maps under the provisions of the Subdivision Map Act, Division 2 (commencing with Section 66410) of Title 7 of the Government Code; or planning services under the authority of Chapter 3 (commencing with Section 65100) of Division 1 of Title 7 of the Government Code, fees and charges as described in Sections 51287, 56383, 57004, 65104, 65456, 65863.7, 65909.5, 66013, 66014, and 66451.2 of the Government Code, Sections 17951, 19132.3, and 19852 of the Health and Safety Code, Section 41901 of the Public Resources Code, and Section 21671.5 of the Public Utilities Code, as such codes may be amended or superceded, including by amendment or replacement.

1.1.8 "Development Plan" means the Existing Development Approvals and the Existing Land Use Regulations applicable to development of the Property.

1.1.9 “Effective Date” means the date that the ordinance approving this Agreement goes into effect.

1.1.10 “Existing Development Approvals” means all Development Approvals approved or issued prior to the Effective Date. Existing Development Approvals includes the Approvals incorporated herein as Exhibit “C” and all other Approvals which are a matter of public record on the Effective Date.

1.1.11 “Existing Land Use Regulations” means all Land Use Regulations in effect on the Effective Date. Existing Land Use Regulations includes the Regulations incorporated herein as Exhibit “D” and all other Land Use Regulations that are in effect and a matter of public record on the Effective Date.

1.1.12 “General Plan” means the General Plan adopted on August 16, 2022.

1.1.13 “Improvement” or “Improvements” means those public improvements required to support the development of the Project as described in the Tract Map conditions for Tract No.20526 as further described in Exhibit “F” (the “Infrastructure Improvements Exhibit”).

1.1.14 “Land Use Regulations” means all ordinances, resolutions, codes, rules, regulations and official policies of CITY governing the development and use of land, including, without limitation, the permitted use of land, the density or intensity of use, subdivision requirements, timing and phasing of development, the maximum height and size of buildings, the provisions for reservation or dedication of land for public purposes, and the design, improvement and construction standards and specifications applicable to the development of the Property. “Land Use Regulations” does not include any CITY ordinance, resolution, code, rule, regulation or official policy, governing:

(a) the conduct of businesses, professions, and occupations;

(b) taxes and assessments;

(c) the control and abatement of nuisances;

(d) the granting of encroachment permits and the conveyance of similar rights and interests that provide for the use of or the entry upon public property;

(e) the exercise of the power of eminent domain.

1.1.15 “Mortgagee” means a mortgagee of a mortgage, a beneficiary under a deed of trust or any other security-device lender, and their successors and assigns.

1.1.16 “Model Units” includes model units, private common recreation facilities and sales facilities constructed by OWNER prior to the construction of any Production units and not offered for sale and occupancy for a period of time after the issuance of permits for Production Units.

1.1.17 “Net MDD” means net maximum daily water demand.

1.1.18 “NMC Builders” means the consortium of investors and developers responsible for the construction of infrastructure within the New Model Colony incorporated as NMC Builders, LLC.

1.1.19 “OWNER” means the persons and entities listed as owner on page 1 of this Agreement and their permitted successors in interest to all or any part of the Property.

1.1.20 “Phase 2 Water EDUs” means the number of equivalent dwelling units or non-residential square footage assigned to OWERN upon payment to CITY of the Phase 2 Water Participation Fee for the Project and evidenced by the issuance by CITY of a Certificate of Phase 2 Net MDD Availability in the form attached as Exhibit “G”. 1.1.21 “Phase 2 Water Improvements” means the future water infrastructure Improvements required for the issuance by CITY of the “Water Availability Equivalents” (WAE) for the Project.

1.1.21 “Phase 2 Water Participation Fee” means the fee paid to City upon City approval of the first Development Entitlement for the Project, to fund the Property’s respective share of the projected costs of the design and construction of the Phase 2 Water Improvements by City. The Phase 2 Water Participation Fee shall be the calculated amount of the Regional Water DIF for the Project based upon the number of units, and land use category for residential units or the number of square feet, and land use category for non-residential square footage of the Project.

1.1.22 “Production Unit(s)” means all units constructed for sale and occupancy by OWNER and excludes the specified number of Model Units constructed by OWNER for promotion of sales.

1.1.23 “Project” means the development of the Property contemplated by the Development Plan, as such Plan may be further defined, enhanced or modified pursuant to the provisions of this Agreement.

1.1.24 “Property” means the real property described on Exhibit “A” and shown on Exhibit “B” to this Agreement.

1.1.25 “Reservations of Authority” means the rights and authority excepted from the assurances and rights provided to OWNER under this Agreement and reserved to CITY under Section 3.6 of this Agreement.

1.1.26 “Specific Plan” means that certain specific plan adopted by the City Council, and entitled, “Rich Haven Specific Plan.”

1.1.27 "Storm Water Treatment Capacity Availability” means a designated portion of the total Storm Water Treatment Capacity Availability made available through the completion of construction of a Phase of regional storm water treatment facilities by the NMC Builders LLC as described in the Construction Agreement Amendment. The amount, in acres, of Storm Water Treatment Capacity Availability required for the

issuance of a grading permit shall be based upon the factors and assumptions listed in the Construction Agreement Amendment.

1.1.28 "Subsequent Development Approvals" means all Development Approvals required subsequent to the Effective Date in connection with development of the Property.

1.1.29 "Subsequent Land Use Regulations" means any Land Use Regulations adopted and effective after the Effective Date of this Agreement.

1.1.30 "Water Availability Equivalent (WAE)" means a designated portion of the total Net MDD made available through the construction of each Phase described in the Water Phasing Plan of the Construction Agreement. The number of Water Availability Equivalents (of portions thereof) required for the issuance of each building permit shall be based upon water demand factors and assumptions listed in the Construction Agreement and Construction Agreement Amendment as "Water Availability Equivalents by Land Use" for each land use category.

1.1.31 "Amendment to the Construction Agreement" means the amendment to the Construction Agreement modifying the boundaries of the property in Exhibit A of such Construction Agreement to include the Property covered by this Agreement and to provide for the additional funds required for CITY's future construction of the "Phase 2 Water Improvements" described in a modification to Exhibit C-3 of the Construction Agreement.

1.2 Exhibits. The following documents are attached to, and by this reference made a part of, this Agreement:

Exhibit "A" — Legal Description of the Property.

Exhibit "B" — Map showing Property and its location.

Exhibit "C" — Existing Development Approvals.

Exhibit "D" — Existing Land Use Regulations.

Exhibit "E" — Description of Required Infrastructure Improvements

Exhibit "F" — Depiction of Required Infrastructure Improvements and Phasing

Exhibit "G" - Form of Certificate of Net MDD to be issued by CITY

Exhibit "H" – Form of Certificate of DIF Credit to be issued by CITY

Exhibit "I-1" – Ontario Ranch Water Supply Phasing Plan

Exhibit "I-2" - Water Demand Equivalents by Land Use

Exhibit "J" - Form of Plume Disclosure Letter

2. GENERAL PROVISIONS.

2.1 Binding Effect of Agreement. The Property is hereby made subject to this Agreement. Development of the Property is hereby authorized and shall be carried out only in accordance with the terms of this Agreement.

2.2 Ownership of Property. OWNER represents and covenants that it is the owner of the fee simple title to the Property or a portion thereof, or has the right to acquire fee simple title to the Property or a portion thereof from the current owner(s) thereof. To the extent OWNER does not own fee simple title to the Property, OWNER shall obtain written consent from the current fee owner of the Property agreeing to the terms of this Agreement and the recordation thereof.

2.3 Term. The term of this Agreement shall commence on the Effective Date and shall continue for an initial term of ten (10) years thereafter unless this term is modified or extended pursuant to the provisions of this Agreement. The term of this Agreement may be extended for an additional five (5) years following expiration of the initial ten (10) year term, provided the following have occurred:

(a) OWNER provides at least 180 days written notice to CITY prior to expiration of the initial term; and

(b) In non-mixed use and residential use only projects, the OWNER shall have obtained, as applicable, building permits for at least seventy percent (70%) of the actual number of residential units permitted under this Agreement; and

(c) OWNER is not then in uncured default of this Agreement.

2.4 Assignment.

2.4.1 Right to Assign. OWNER shall have the right to sell, transfer or assign the Property in whole or in part (provided that no such partial transfer shall violate the Subdivision Map Act, Government Code Section 66410, et seq.), to any person, partnership, limited liability company, joint venture, firm or corporation at any time during the term of this Agreement; provided, however, that any such sale, transfer or assignment shall include the assignment and assumption of the rights, duties and obligations arising under or from this Agreement and be made in strict compliance with the following:

(a) No sale, transfer or assignment of any right or interest under this Agreement shall be made unless made together with the sale, transfer or assignment of all or a part of the Property. OWNER may be required to provide disclosure that the Property is within the South Archibald Trichloroethylene (TCE) Plume. OWNER may wish to provide the attached Disclosure Letter (Exhibit G) as part of the Real Estate Transfer Disclosure requirements under California Civil Code Section 1102 et seq.(b)

(b) Concurrent with any such sale, transfer or assignment, or within fifteen (15) business days thereafter, OWNER shall notify CITY's City Manager, in writing, of such sale, transfer or assignment and shall provide CITY with: (1) an executed

agreement, in a form reasonably acceptable to CITY, by the purchaser, transferee or assignee and providing therein that the purchaser, transferee or assignee expressly and unconditionally assumes all the duties and obligations of OWNER under this Agreement with respect to the portion of the Property so sold, transferred or assigned; and (2) the payment of the applicable processing charge to cover the CITY's review and consideration of such sale, transfer or assignment.

(c) Any sale, transfer or assignment not made in strict compliance with the foregoing conditions shall constitute a default by OWNER under this Agreement. Notwithstanding the failure of any purchaser, transferee or assignee to execute the agreement required by Paragraph (b) of this Subsection 2.4.1, the burdens of this Agreement shall be binding upon such purchaser, transferee or assignee, but the benefits of this Agreement shall not inure to such purchaser, transferee or assignee until and unless such agreement is executed. The City Manager shall have the authority to review, consider and either approve, conditionally approve, or deny any proposed sale, transfer or assignment that is not made in compliance with this section 2.4.

2.4.2 Release of Transferring Owner. Notwithstanding any sale, transfer or assignment, a transferring OWNER shall continue to be obligated under this Agreement unless such transferring owner is given a release in writing by CITY, which release shall be provided by CITY upon the full satisfaction by such transferring owner of the following conditions:

(a) OWNER no longer has a legal or equitable interest in all or any part of the portion of the Property sold, transferred or assigned.

(b) OWNER is not then in default under this Agreement.

(c) OWNER has provided CITY with the notice and executed agreement required under Paragraph (b) of Subsection 2.4.1 above.

(d) The purchaser, transferee or assignee provides CITY with security equivalent to any security previously provided by OWNER to secure performance of its obligations hereunder.

2.4.3 Effect of Assignment and Release of Obligations. In the event of a sale, transfer or assignment pursuant to the provisions of Section 2.4.2 above:

(a) The assignee shall be liable for the performance of all obligations of OWNER with respect to transferred property, but shall have no obligations with respect to the portions of the Property, if any, not transferred (the "Retained Property").

(b) The owner of the Retained Property shall be liable for the performance of all obligations of OWNER with respect to Retained Property, but shall have no further obligations with respect to the transferred property.

(c) The assignee's exercise, use and enjoyment of the Property or portion thereof shall be subject to the terms of this Agreement to the same extent as if the assignee were the OWNER.

2.4.4 Subsequent Assignment. Any subsequent sale, transfer or assignment after an initial sale, transfer or assignment shall be made only in accordance with and subject to the terms and conditions of this Section 2.4.

2.4.5 Termination of Agreement with Respect to Individual Lots Upon Sale to Public and Completion of Construction. The provisions of Subsection 2.4.1 shall not apply to the sale or lease (for a period longer than one year) of any lot which has been finally subdivided and is individually (and not in "bulk") sold or leased to a member of the public or other ultimate user. Notwithstanding any other provisions of this Agreement, this Agreement shall terminate with respect to any lot and such lot shall be released and no longer be subject to this Agreement without the execution or recordation of any further document upon satisfaction of both of the following conditions:

(a) The lot has been finally subdivided and individually (and not in "bulk") sold or leased (for a period longer than one year) to a member of the public or other ultimate user; and,

(b) A certificate of occupancy has been issued for a building on the lot, and the fees set forth under Section 4 of this Agreement have been paid.

2.4.6 Partial Assignment and Assumption. CITY and OWNER agree OWNER may partially assign its obligations and rights under this Agreement, and all amendments hereto, to a purchaser, transferee or assignee of a lot, which has been subdivided subject to provisions of a partial assignment and assumption agreement in a form approved by CITY. Any such complete and executed partial assignment and assumption of this Agreement shall be submitted to CITY for approval pursuant to Section 2.4.1 of this Agreement. CITY shall review, and if the above conditions, including but not limited to, those conditions in Section 2.4.2, are satisfied, CITY may approve the partial assignment and release and notify the purchaser, transferee or assignee in writing thereof. No such release approved pursuant to this Subsection 2.4.6 shall cause, or otherwise affect, a release of OWNER from the duties and obligations under this Agreement that are retained by OWNER and excluded from the transfer or assignment.

2.5 Amendment or Cancellation of Agreement. This Agreement may be amended or cancelled in whole or in part only in the manner provided for in Government Code Section 65868.1. Any amendment of this Agreement, which amendment has been requested by OWNER, shall be considered by the CITY only upon the payment of the applicable processing charge. This provision shall not limit any remedy of CITY or OWNER as provided by this Agreement. Either Party or successor in interest, may propose an amendment to or cancellation, in whole or in part, of this Agreement. Any amendment or cancellation shall be by mutual consent of the parties or their successors in interest except as provided otherwise in this Agreement or in Government Code Section 65865.1. For purposes of this section, the term "successor in interest" shall mean

any person having a legal or equitable interest in the whole of the Property, or any portion thereof as to which such person wishes to amend or cancel this Agreement. The procedure for proposing and adopting an amendment to, or cancellation of, in whole or in part, this Agreement shall be the same as the procedure for adopting and entering into this Agreement in the first instance. Notwithstanding the foregoing sentence, if the CITY initiates the proposed amendment to, or cancellation of, in whole or in part, this Agreement, CITY shall first give notice to the OWNER of its intention to initiate such proceedings at least sixty (60) days in advance of the giving the public notice of intention to consider the amendment or cancellation.

2.5.1 Amendment to Reflect Consistency With Future Amendments to the Construction Agreement. To the extent any future amendment to the Construction Agreement provides for modifications to rights or obligations that differ from or alter the same or similar rights or obligations contained in this Development Agreement, OWNER reserves the right to request an amendment to the Development Agreement to reflect any or all of such modifications.

2.5.2 Minor Modification. Upon the written application of OWNER, minor modifications and changes to the Development Plan including modifications to building design or footprint (not affecting minimum setbacks), parking layout and design, and landscape area design may be approved by the Director of the Planning Department without the need to amend this Development Agreement. Other changes in the Development Plan shall be processed pursuant to the City Zoning Ordinance. It is also contemplated by CITY and OWNER that OWNER may, from time to time, seek amendments to one or more of the Development Approvals. Any such amendments are contemplated by CITY and OWNER as being within the scope of this Agreement as long as they are consistent with the Land Use Regulations and shall, upon approval by CITY, continue to constitute the Development Approvals as referenced herein. The parties agree that any such modifications or amendments shall not constitute an amendment to this Agreement nor require an amendment to this Agreement.

2.6 Termination. This Agreement shall be deemed terminated and of no further effect upon the occurrence of any of the following events:

(a) Expiration of the stated term of this Agreement as set forth in Section 2.3. (b) Entry of a final judgment setting aside, voiding or annulling the adoption of the ordinance approving this Agreement.

(c) The adoption of a referendum measure overriding or repealing the ordinance approving this Agreement.

(d) Completion of the Project in accordance with the terms of this Agreement including issuance of all required occupancy permits and acceptance by CITY or applicable public agency of all required dedications.

Termination of this Agreement shall not constitute termination of any other land use entitlements approved for the Property. Upon the termination of this Agreement,

no party shall have any further right or obligation hereunder except with respect to any obligation to have been performed prior to such termination or with respect to any default in the performance of the provisions of this Agreement which has occurred prior to such termination or with respect to any obligations which are specifically set forth as surviving this Agreement. Upon such termination, any public facilities and services mitigation fees paid pursuant to Section 4.2 of this Agreement by OWNER to CITY for residential units on which construction has not yet begun shall be refunded to OWNER by CITY.

2.7 Notices.

(a) As used in this Agreement, "notice" includes, but is not limited to, the communication of notice, request, demand, approval, statement, report, acceptance, consent, waiver, appointment or other communication required or permitted hereunder.

(b) All notices shall be in writing and shall be considered given either: (i) when delivered in person, including, without limitation, by courier, to the recipient named below; or (ii) on the date of delivery shown on the return receipt, after deposit in the United States mail in a sealed envelope as either registered or certified mail with return receipt requested, and postage and postal charges prepaid, and addressed to the recipient named below. All notices shall be addressed as follows:

If to CITY:
Scott Ochoa, City Manager
City of Ontario
303 East "B" Street
Ontario, CA 91764

with a copy to:
Ruben Duran, City Attorney
Best Best & Krieger, LLP
2855 E Guasti Road
Ontario, CA 91761

If to OWNER:
Richland
Attn: Craig Cristina, Vice President
3161 Michelson Drive, Suite 425
Irvine, CA 92612

with a copy to:
Richland
Attn: Legal Department
3161 Michelson Drive, Suite 425
Irvine, CA 92612

(c) Either party may, by notice given at any time, require subsequent notices to be given to another person or entity, whether a party or an officer or representative of a party, or to a different address, or both. Notices given before actual receipt of notice of change shall not be invalidated by the change.

3. DEVELOPMENT OF THE PROPERTY.

3.1 Rights to Develop. Subject to the terms of this Agreement including the Reservations of Authority, OWNER shall have a vested right to develop the Property in accordance with, and to the extent of, the Development Plan. The Project shall remain subject to all Subsequent Development Approvals required to complete the Project as contemplated by the Development Plan. Except as otherwise provided in this Agreement,

the permitted uses of the Property, the density and intensity of use, the maximum height and size of proposed buildings, and provisions for reservation and dedication of land for public purposes shall be those set forth in the Development Plan.

3.2 Effect of Agreement on Land Use Regulations. Except as otherwise provided under the terms of this Agreement including the Reservations of Authority, the rules, regulations and official policies governing permitted uses of the Property, the density and intensity of use of the Property, the maximum height and size of proposed buildings, and the design, improvement and construction standards and specifications applicable to development of the Property shall be the Existing Land Use Regulations. In connection with any Subsequent Development Approval, CITY shall exercise discretion in accordance with the same manner as it exercises its discretion under its police powers, including the Reservations of Authority set forth herein; provided however, that such discretion shall not prevent development of the Property for the uses and to the density or intensity of development set forth in this Agreement.

3.3 Timing of Development. The parties acknowledge that OWNER cannot at this time predict when or the rate at which phases of the Property will be developed. Such decisions depend upon numerous factors which are not within the control of OWNER, such as market orientation and demand, interest rates, absorption, completion and other similar factors. Since the California Supreme Court held in Pardee Construction Co. v. City of Camarillo (1984) 37 Ca1. 3d 465, that the failure of the parties therein to provide for the timing of development resulted in a later adopted initiative restricting the timing of development to prevail over such parties' agreement, it is the parties' intent to cure that deficiency by acknowledging and providing that OWNER shall have the right to develop the Property in such order and at such rate and at such times as OWNER deems appropriate within the exercise of its subjective business judgment.

3.4 Requirement for Public Infrastructure Improvements. Development of the Property is contingent in part on the phasing of area-wide infrastructure improvements over which the OWNER has control. The issuance of building permits by CITY for Model Units and Production Units is, in general, contingent on OWNER's completion of needed infrastructure improvements and the availability of improvements and services to serve the Property.

3.4.1 Attached hereto as Exhibit "F" is a description of the infrastructure improvements needed for the development of the Property ("the Infrastructure Improvement Exhibit").

3.4.2 Construction of Model Units, private common recreation facilities, and sales facilities is subject to plan submittal by OWNER and approval by CITY. Said plan shall illustrate that adequate public infrastructure is available to serve these uses, and shall describe the utilities and other infrastructure necessary to provide sufficient fire protection and other public health and safety requirements.

3.5 Changes and Amendments. The parties acknowledge that refinement and further development of the Project will require Subsequent Development Approvals and

may demonstrate that changes are appropriate and mutually desirable in the Existing Development Approvals. In the event OWNER finds that a change in the Existing Development Approvals is necessary or appropriate, OWNER shall apply for a Subsequent Development Approval to effectuate such change, and CITY shall process and act on such application in accordance with the Existing Land Use Regulations, except as otherwise provided by this Agreement including the Reservations of Authority. If approved, any such change in the Existing Development Approvals shall be incorporated herein as an addendum to Exhibit "C" and may be further changed from time to time as provided in this Section. Unless otherwise required by law, as determined in CITY's reasonable discretion, a change to the Existing Development Approvals shall be deemed "minor" and not require an amendment to this Agreement provided such change does not:

(a) Alter the permitted uses of the Property as a whole; or,

(b) Increase the density or intensity of use of the Property as a whole; or,

(c) Increase the maximum height and size of permitted buildings; or,

(d) Delete a requirement for the reservation or dedication of land for public purposes within the Property as a whole; or,

(e) Constitute a project requiring a subsequent or supplemental environmental impact report pursuant to Section 21166 of the Public Resources Code.

3.6 Reservations of Authority.

3.6.1 Limitations, Reservations and Exceptions. Notwithstanding any other provision of this Agreement, the CITY shall not be prevented from applying new rules, regulations and policies upon the OWNER, nor shall a development agreement prevent the CITY from denying or conditionally approving any subsequent development project application on the basis of such new rules, regulations and policies where the new rules, regulations and policies consist of the following:

(a) Processing fees by CITY to cover costs of processing applications for development approvals or for monitoring compliance with any development approvals;

(b) Procedural regulations relating to hearing bodies, petitions, applications, notices, findings, records and any other matter of procedure;

(c) Regulations, policies and rules governing engineering and construction standards and specifications applicable to public and private improvements, including all uniform codes adopted by the

CITY and any local amendments to those codes adopted by the CITY; provided however that, OWNER shall have a vested right to develop the Property in accordance with, and to the extent of, the standards and specifications that are expressly identified in the Specific Plan;

(d) Regulations that may conflict with this Agreement and the Development Plan but that are reasonably necessary to protect the residents of the project and/or of the immediate community from a condition perilous to their health or safety;

(e) Regulations that do not conflict with those rules, regulations and policies set forth in this Agreement or the Development Plan;

(f) Regulations that may conflict but to which the OWNER consents.

3.6.2 Subsequent Development Approvals. This Agreement shall not prevent CITY, in acting on Subsequent Development Approvals, from applying Subsequent Land Use Regulations that do not conflict with the Development Plan, nor shall this Agreement prevent CITY from denying or conditionally approving any Subsequent Development Approval on the basis of the Existing Land Use Regulations or any Subsequent Land Use Regulation not in conflict with the Development Plan.

3.6.3 Modification or Suspension by State or Federal Law. In the event that State or Federal laws or regulations, enacted after the Effective Date of this Agreement, prevent or preclude compliance with one or more of the provisions of this Agreement, such provisions of this Agreement shall be modified or suspended as may be necessary to comply with such State or Federal laws or regulations, provided, however, that this Agreement shall remain in full force and effect to the extent it is not inconsistent with such laws or regulations and to the extent such laws or regulations do not render such remaining provisions impractical to enforce. In the event OWNER alleges that such State or Federal laws or regulations preclude or prevent compliance with one or more provisions of this Agreement, and the CITY does not agree, the OWNER may, at its sole cost and expense, seek declaratory relief (or other similar non-monetary remedies); provided however, that nothing contained in this Section 3.6.3 shall impose on CITY any monetary liability for contesting such declaratory relief (or other similar non-monetary relief).

3.6.4 Intent. The parties acknowledge and agree that CITY is restricted in its authority to limit its police power by contract and that the foregoing limitations, reservations and exceptions are intended to reserve to CITY all of its police power which cannot be so limited. This Agreement shall be construed, contrary to its stated terms if necessary, to reserve to CITY all such power and authority which cannot be restricted by contract.

3.7 Public Works; Utilities. If OWNER is required by this Agreement to construct any public works facilities which will be dedicated to CITY or any other public agency upon completion, and if required by applicable laws to do so, OWNER shall perform such work in the same manner and subject to the same requirements as would be applicable to CITY or such other public agency should it have undertaken such construction. As a condition of development approval, OWNER shall connect the Project to all utilities necessary to provide adequate water, recycled water, sewer, gas, electric, and other utility service to the Project. As a further condition of development approval, OWNER shall contract with the CITY for CITY-owned or operated utilities for this purpose, for such price and on such terms as may be available to similarly situated customers in the CITY.

3.7.1 OWNER agrees that development of the Project shall require the construction of Storm Drain facilities as described in Exhibit E and depicted in Exhibit F. OWNER shall be responsible for the construction of the necessary extension of master planned Storm Drain facilities.

3.7.2 OWNER agrees that development of the Project shall require the construction of street improvements as described in Exhibit E and depicted in Exhibit F.

3.7.3 OWNER agrees that development of the Property shall require the extension of permanent planned water and recycled water utility infrastructure as described in Exhibit E and depicted in Exhibit F consisting generally of the construction of the extension of permanent water and recycled water utility improvements to serve the Property. OWNER agrees that no building permits shall be issued by CITY for Production Units within a development phase prior to completion of the water and recycled water Improvements as described in Exhibit E and depicted in Exhibit F. OWNER also agrees that recycled water shall be available and utilized by OWNER for all construction-related water uses including prior to, and during, any grading of the Property.

3.7.4 OWNER agrees that development of the Property shall require the extension of permanent sewer improvements, at OWNER's sole cost and expense, as described in the attached Exhibit F consisting generally of the construction of the extension of sewer infrastructure to serve the Property.

3.7.5 OWNER agrees that development of the Property shall require the extension of permanent master planned fiber optic communications infrastructure, at OWNER's sole cost and expense, as described in the attached Exhibit F consisting generally of the construction of the extension of fiber optic communications infrastructure to serve the Property.

3.7.6 OWNER agrees that development of the project shall require the design and construction of three (3) non-DIF traffic signals at Haven Avenue and "Future Street", Haven Avenue and Street "B", and Bethany Way and Mill Creek Avenue; and one (1) DIF credit eligible traffic signal at Haven Avenue and Chino Avenue.

Modification of one (1) existing DIF credit eligible traffic signals at Haven Avenue and Riverside Drive, as described in the attached Exhibit E and depicted in Exhibit F consisting generally of the construction of the signal modifications to serve the Property. OWNER shall complete traffic signals prior to the fiftieth (50^{th}) percentile building permit within a development phase in which the signal is required.

3.8 Acquisition of Offsite Provision of Real Property Interests. In any instance where OWNER is required by any Development Approval or Land Use Regulation and the Construction Agreement to construct any public improvement on land not owned by OWNER ("Offsite Improvements"), the CITY and OWNER shall cooperate in acquiring the necessary legal interest ("Offsite Property") in accordance with the procedures set forth in Section 2.4 of the Construction Agreement. This section 3.8 is not intended by the parties to impose upon the OWNER an enforceable duty to acquire land or construct any public improvements on land not owned by OWNER, except to the extent that the OWNER elects to proceed with the development of the Project, and then only in accordance with valid conditions imposed by the CITY upon the development of the Project under the Subdivision Map Act or other legal authority.

3.8.1 CITY Acquisition of Non-Construction Agreement Offsite Property. In the event OWNER is required to construct any public improvements on land not owned by OWNER, but such requirement is not based upon the Construction Agreement, Sections 3.8.1 and 3.8.2 shall control the acquisition of the necessary property interest(s) ("Non-Construction Agreement Offsite Property"). If the OWNER is unable to acquire such Non-Construction Agreement Offsite Property and following the written request from the OWNER to CITY, CITY agrees to use reasonable and diligent good faith efforts to acquire the Non-Construction Agreement Offsite Property from the owner or owners of record by negotiation to the extent permitted by law and consistent with this Agreement. If CITY is unable to acquire the Non-Construction Agreement Offsite Property by negotiation within thirty (30) days after OWNER'S written request, CITY shall, initiate proceedings utilizing its power of eminent domain to acquire that Non-Construction Agreement Subject Property at a public hearing noticed and conducted in accordance with California Code of Civil Procedure Section 1245.235 for the purpose of considering the adoption of a resolution of necessity concerning the Non-Construction Agreement Offsite Property, subject to the conditions set forth in this Section 3.8. The CITY and OWNER acknowledge that the timelines set forth in this Section 3.8.1 represent the maximum time periods which CITY and OWNER reasonably believe will be necessary to complete the acquisition of any Non-Construction Agreement Offsite Property. CITY agrees to use reasonable good faith efforts to complete the actions described within lesser time periods, to the extent that it is reasonably able to do so, consistent with the legal constraints imposed upon CITY.

3.8.2 Owner's Option to Terminate Proceedings. CITY shall provide written notice to OWNER no later than fifteen (15) days prior to making an offer to the owner of the Non-Construction Agreement Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease all acquisition proceedings with respect to that Non-Construction

Agreement Offsite Property, whereupon CITY shall cease such proceedings. CITY shall provide written notice to OWNER no later than fifteen (15) days prior to the date of the hearing on CITY'S intent to consider the adoption of a resolution of necessity as to any Non-Construction Agreement Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease condemnation proceedings, whereupon CITY shall cease such proceedings. If OWNER does not notify CITY to cease condemnation proceedings within said fifteen (15) day period, then the CITY may proceed to consider and act upon the Non-Construction Agreement Offsite Property resolution of necessity. If CITY adopts such resolution of necessity, then CITY shall diligently institute condemnation proceedings and file a complaint in condemnation and seek an order of immediate possession with respect to the Non-Construction Agreement Offsite Property.

3.9 Regulation by Other Public Agencies. It is acknowledged by the parties that other public agencies not within the control of CITY possess authority to regulate aspects of the development of the Property separately from or jointly with CITY and this Agreement does not limit the authority of such other public agencies. CITY agrees to cooperate fully, at no cost to CITY, with OWNER in obtaining any required permits or compliance with the regulations of other public agencies provided such cooperation is not in conflict with any laws, regulations or policies of the CITY.

3.10 Tentative Tract Maps; Extension. With respect to applications by OWNER for tentative subdivision maps for portions of the Property, CITY agrees that OWNER may file and process tentative maps in accordance with Chapter 4.5 (commencing with Section 66498.1) of Division 2 of Title 7 of the California Government Code and the applicable provisions of CITY's subdivision ordinance, as the same may be amended from time to time. In accordance with the provisions of Section 66452.6 of the Government Code, each tentative subdivision map or tentative parcel map, heretofore or hereafter approved in connection with development of the Property, shall be deemed to have been granted an extension of time to and until the date that is five (5) years following the Effective Date of this Agreement.; The CITY's City Council may, in its discretion, extend any such map for an additional period of up to five (5) years beyond its original term, so long as the subdivider files a written request for an extension with the City prior to the expiration of the initial five (5) year term.

4. PUBLIC BENEFITS.

4.1 Intent. The parties acknowledge and agree that development of the Property will result in substantial public needs that will not be fully met by the Development Plan and further acknowledge and agree that this Agreement confers substantial private benefits on OWNER that should be balanced by commensurate public benefits. Accordingly, the parties intend to provide consideration to the public to balance the private benefits conferred on OWNER by providing more fully for the satisfaction of the public needs resulting from the Project.

4.2 Development Impact Fees.

4.2.1 Amount of Development Impact Fee. Development Impact Fees (DIF) shall be paid by OWNER. The Development Impact Fee amounts to be paid by OWNER shall be the amounts that are in effect at the time such amounts are due. Nothing contained in this Agreement shall affect the ability of the CITY to impose new Development Impact Fees or amend the amounts of existing Development Impact Fees. Additionally, nothing contained in this Agreement shall affect the ability of other public agencies that are not controlled by CITY to impose and amend, from time to time, Development Impact Fees established or imposed by such other public agencies, even though such Development Impact Fees may be collected by CITY.

4.2.2 Time of Payment. The Development Impact Fees required pursuant to Subsection 4.2.1 shall be paid to CITY prior to the issuance of building permit for each applicable residential or other unit, except for the Open Space and Habitat Acquisition Development Impact fee, which shall be paid by OWNER to CITY prior to the issuance of a grading permit. Deferral of the payment of Development Impact Fees may be granted pursuant to a separate agreement approved by City pursuant to City policy.

4.2.3 Parkland and Quimby Act Fees. Pursuant to the General Plan (Ontario Plan) Goal PR1, Policy PR1-5 (achievement of a park standard of 5 acres of parkland per 1,000 residents) OWNER shall provide improved parks, developed in accordance with the City's park standards in an amount equal to two (2) acres per 1,000 of projected population without credit, reimbursement, offset or consideration from City. Such areas shall either be dedicated to the City or transferred to a homeowners' association. If approved by the City Manager, OWNER may satisfy this requirement through the development of non-public recreation facilities such as private recreational clubhouses or pool facilities. Credit for such private recreational facilities areas shall be limited to a maximum of 50% of the foregoing park development requirement. If OWNER's Project does not provide dedicated and developed park acreage equal to two (2) acres per 1,000 projected population, OWNER shall pay a fee in-lieu equal to the per acre estimated costs of acquisition and development of parkland in the City's Development Impact Fee for the calculated park acreage deficiency. Such in-lieu fee shall be due and payable prior to the issuance of the first building permit for Production Units issued to OWNER. Any park dedication and/or improvements in excess of such two (2) acres per thousand standard, provided such park has been developed in accordance with the City's park standards and is open to the public generally, shall entitle OWNER to a credit toward its obligations under the Quimby Act (Gov. Code, § 64477) and the City's implementing ordinance and/or resolution (collectively "**Quimby Act Obligations**"), and to the extent OWNER's Quimby Act Obligations are satisfied, OWNER shall be entitled to have the City acquire such developed and publicly available parks as Non-Program Interests in accordance with Section 4.3.3 below. **(Other provisions will be added that are Project-specific, if applicable).**

4.2.4 Additional Parkland Development Requirements. OWNER is responsible for construction of the 2.20-acre and 2.53-acre parks designated as Lots A and B, respectively, of Tentative Tract Map No. 20526, including any related recreational facilities to be provided therein. OWNER shall submit the design of the park for approval along with the first B-map entitlement within the A-map area. OWNER shall begin construction of the park no later than the issuance of the 315th production building permit for occupancy within the A-map area; and (iii) complete construction prior to issuance of the 500th production building permit for occupancy within the A-map area. The above thresholds are based on current density projections and may be adjusted proportionally upon approval of subsequent B-maps, considering actual densities and phasing. Any modifications to these milestones must be mutually agreed upon by CITY and OWNER and documented in subsequent written agreements or entitlements.

4.3 Responsibility for Construction of Public Improvements.

4.3.1 Timely Construction of Public Infrastructure. The phasing of the areawide infrastructure construction within the New Model Colony will be as approved by the CITY. OWNER shall be responsible for the timely construction and completion of all public infrastructure required for the Project as shown on the attached Exhibit "F" and any and all tentative tract map conditions. Unless otherwise specified in the Subdivision Agreement/Tract Map conditions, all other required Improvements for each Tract Map, shall be completed and operational prior to, and as a condition precedent to, OWNER requesting and CITY's granting of the first building permit for production units for each such Tract Map. All Infrastructure and Improvements shall be completed as required by the Subdivision Agreement/Tract Map conditions for Tract No. 20526.

4.3.2 Construction of DIF Program Infrastructure (Construction Agreement). To the extent OWNER is required to construct and completes construction of public improvements that are included in CITY's Development Impact Fee Program and the Construction Agreement between CITY and NMC Builders LLC, CITY agrees that CITY shall issue DIF Credit in accordance with the provisions of the Construction Agreement and any amendments thereto. Use of DIF Credit issued to OWNER as a member of NMC Builders LLC to offset OWNER's DIF payment obligations shall also be subject to the provisions of the Construction Agreement and any amendments thereto.

4.3.3 Construction of DIF Program Infrastructure (Non-Construction Agreement). To the extent OWNER is required to construct and completes construction of public improvements that are included in CITY's Development Impact Fee Program and such public improvements are not included the Construction Agreement between CITY and NMC Builders LLC, CITY agrees that CITY shall issue DIF Credit and DIF Reimbursement in accordance with the provisions of a separate Fee Credit Agreement between CITY and OWNER. Limitation on the use of DIF Credit issued to OWNER to offset OWNER's DIF payment obligations shall also be subject to the provisions of a separate Fee Credit Agreement. OWNER may also be eligible

to receive reimbursement from DIF collected by CITY and paid by other development that benefits from OWNER's construction of DIF Program Infrastructure. Any such DIF Reimbursement shall be subject to a Fee Credit Agreement between CITY and OWNER. CITY and OWNER agree that the Fee Credit Agreement between CITY and OWNER shall comply with CITY's adopted policies applicable to such agreements.

4.3.4 Availability and use of Recycled Water. OWNER agrees that recycled water shall be available and utilized by OWNER for all construction-related water uses including prior to, and during, any grading of the Property.

4.4 Affordable Housing Requirement.

4.4.1 Affordable Housing- Number of Units. OWNER shall provide a minimum number of affordable housing units, equivalent to 10% of the OWNER's total approved residential units within the Project, that are affordable to very low-, low- and moderate-income households. Such requirement for affordable housing shall be met through one, or a combination of one or more, of the options provided in the following Sections 4.3.2.1 through 4.3.2.1. For the purposes of this Section, any term not defined in this Agreement shall be as defined by California Community Redevelopment Law (California Health and Safety Code Section 33000 et seq.).

4.4.2 Affordability Spread. Of the total number of residential dwelling units specified in Section 4.4.1, to be constructed or rehabilitated pursuant to Sections 4.4.2.1 or 4.4.2.2 respectively, thirty percent (30%) shall be available to very low income, thirty percent (30%) shall be available to low income and forty percent (40%) shall be available to moderate income households. "**Households**" shall be as defined by California Health and Safety Code Section 50053.

4.4.2.1 New Construction. If OWNER elects to fully or partially satisfy the affordable housing requirement by the construction of new residential units, it shall construct and restrict the affordability of residential dwelling units within its Project or, at OWNER's option and with the approval of the City, within another project elsewhere within the City. The affordable units constructed shall be intermingled with other units as part of the Project, and shall be built to the same construction, design and aesthetic standards, as well as number of rooms, as other units constructed as part of that OWNER's Project. In addition, the percentage ratio of affordable units offered for sale versus those offered for rent shall equal the percentage ratio of other units offered for sale versus for rent within OWNER's Project. Such construction shall be completed no later than the date that is five (5) years following the issuance of the first building permit for OWNER's Project; provided however that to the extent OWNER has not constructed the required percentage of units, based on the number of building permits for non-restricted units, OWNER shall, prior to the issuance of such building permits, provide security

(in the form and substance approved by the City Manager and City Attorney) to City in order to ensure the faithful completion of such required percentage of construction of affordable units. If OWNER elects the option of constructing new affordable units, a detailed Affordable Housing Agreement specifying terms for the allowable monthly housing costs or rents (as applicable) and maintenance and occupancy standards shall be prepared, executed and recorded against such units as a condition to the issuance of a building permit. The Affordable Housing Agreement shall hold a recorded priority position senior to any other non-statutory lien or encumbrance affecting the unit.

4.4.2.2 Rehabilitation. If OWNER elects to fully or partially satisfy the affordable housing requirement by the substantial rehabilitation of existing residential units in the City, it shall substantially rehabilitate and restrict the affordability of the number of residential units specified in Section 4.4.1, provided that such units shall be provided elsewhere within the City. The rehabilitation work shall be substantial and of high quality and shall also address any deferred property maintenance issues on the property. "**Substantial rehabilitation**" shall mean rehabilitated multi-family rented dwelling units with three or more units and the value of the rehabilitation constitutes 25 percent of the after rehabilitation value of the dwelling, inclusive of land value pursuant to Health and Safety Code Section 33413(b)(2)(A)(iii-iv) as such section exists as of the Effective Date of this Agreement. If OWNER chooses the option of rehabilitation of existing housing units within the City, a detailed Affordable Housing Agreement specifying the terms for the allowable month housing costs or rents (as applicable) and maintenance and occupancy standards shall be prepared, executed and recorded against such units as a condition to the issuance of a building permit. Such rehabilitation shall be completed no later than the date that is five (5) years following the issuance of the first building permit for OWNER's Project; provided however that to the extent OWNER has not rehabilitated the required percentage of units, based on the number of building permits, OWNER shall, prior to the issuance of such building permits, provide security (in the form and substance approved by the City Manager and City Attorney) to the City in order to ensure the faithful completion of such required percentage of rehabilitation.

4.4.2.3 In-Lieu Fee. If OWNER has not fully complied with the requirements of Section 4.4.1 by providing the minimum number of affordable units through the construction of new affordable units or by the substantial rehabilitation of existing units, shall pay an "**Affordability In-Lieu Fee**". If OWNER has not provided any affordable residential units by construction or rehabilitation, the Affordability In-Lieu fee shall be equal to Three Dollars Thirty-Seven Cents ($3.37) per square foot of residential development within OWNER's Project or, if pre-paid as set forth below, Two Dollars Ninety-Six ($2.96) per square foot of residential development within OWNER's Project. If OWNER has partially complied with the requirements of Section 4.4.1 by

construction or rehabilitation of less than the minimum number of units, then the Affordability In-lieu Fee shall be recalculated and reduced in consideration of the number and type of affordable units provided. The Affordability In-Lieu Fee shall be paid by OWNER to City no later than prior to the issuance of each building permit within OWNER's Project based on the square footage of the residential unit for which such building permit is sought; provided however that OWNER may, at OWNER's election, pre-pay such Affordability In-Lieu Fee by paying such Affordability In-Lieu Fee within thirty (30) days following the earliest discretionary approval by the City for OWNER's Project, including, but not limited to, any general plan amendment, specific plan adoption, development agreement, tentative map approval, variance, conditional use permit, or resolution of intention to form any public financing mechanism. The Three Dollars Thirty-Seven Cents ($3.37 Two Dollars Ninety-Six ($2.96) per square foot amounts shall automatically be increased annually, commencing on July 1, 2024, and automatically each July 1 thereafter. Such adjustment shall be based on the percentage increase (but no decrease) in the Consumer Price Index (Riverside - San Bernardino - Ontario, CA) (December 2017=100) over the preceding year. The pre-paid Affordability In-Lieu Fee shall be calculated based on the maximum floor area ratio (FAR) permitted within the General Plan and any applicable FAR contained within the applicable specific plan, whichever is greater, and the Maximum Development Density. For purposes of this Agreement, "**Maximum Development Density**" shall be determined by multiplying the OWNER's Project's density for residential development potential as set forth in the General Plan or the applicable Specific Plan, whichever is less, by the net acreage of land within OWNER's Project. All "Affordability In-Lieu Fees" collected by the City shall be used to promote the construction of affordable housing within the City.

4.4.2.4 Affordability Covenants. Prior to the issuance of the first building permit for any affordable unit, the City and OWNER shall enter into an Affordable Housing Agreement Affordability shall be assured for a period of forty-five (45) years for for-sale units and fifty-five (55) years for rentals. For rental units, base rents shall be established by the City and rental adjustments required by the City shall be performed on an annual basis. In addition, the Affordable Housing Agreement shall impose maximum occupancy limits of 2 occupants per bedroom plus 1 additional occupant per dwelling unit, and a requirement for the owner or tenant to properly maintain each dwelling unit.

4.4.2.5 Transfer of Affordable Project. No transfer of title to any affordable housing project shall occur without the prior written consent of the City. In the event OWNER transfers title to any affordable housing project required to be constructed pursuant to this Agreement to a non-profit entity, or other entity, that receives an exemption from ad valorem real property taxes, the City shall be required to assure payment of an annual in lieu fee to the City on July 1 of each year equal to one-tenth of one percent (0.1%) of the

assessed value of such project. The City may permit OWNER to satisfy this obligation by recorded covenants against the property and enforceable against said entity by the City. Any such covenants shall be approved by the Planning Director and the City Attorney.

4.5 Schools Obligations.

4.5.1 Written Evidence of Compliance with Schools Obligations. OWNER shall, either through joint or individual agreements between OWNER and the applicable school district(s), shall satisfy its new school obligations. The new school obligations for the Mountain View School District in the Ontario Ranch area have been projected to include the acquisition or dedication of school sites for, and construction of, up to eight (8) schools. Of these eight (8) schools, six (6) are to be elementary (K-5) grade schools and two (2) are to be middle grade schools. The new school obligations for the Chaffey Joint Union High School District in the Ontario Ranch area have been projected to include the dedication of a school site for, and construction of, an additional high school. The new school obligations for the applicable school district shall be met by a combination of the following: (1) designating and dedicating school site(s) within the Property as set forth in the General Plan, and/or (2) paying school impact fees, (3) entering into a joint mitigation agreement or individual mitigation agreements, or (4) any combination of the foregoing. Written evidence of approval by the applicable school district that OWNER has met their school obligations may be required by the City as the condition to the issuance by the City of any entitlements for OWNER's Project. In the event OWNER is unable to provide such written evidence from the applicable school district(s), the City shall have the right to decline to honor any DIF Credit, Certificates of MDD Availability, Certificates of Storm Water Treatment Capacity Availability, or any combination thereof, presented by such OWNER, without liability to the City. To the extent that a joint mitigation agreement is approved by the applicable school district(s), and OWNER is a participant in good standing in such mitigation agreement, OWNER shall be deemed to have mitigated its new school obligations under this Section 4.4.1.

4.6 Net MDD/Water Availability Equivalents.

4.6.1 Effectiveness of Agreement. Notwithstanding anything else set forth in this Agreement, CITY and OWNER each acknowledge, confirm, and agree, that (i) the City approval of this Agreement and (ii) the effectiveness of this Agreement, in each case, is conditioned upon OWNER's admission to NMC Builders as a "Member" thereof pursuant to the terms and conditions of the operating agreement of NMC Builders. OWNER and CITY agree that OWNER shall become a Member of NMC Builders within 30 days of the effective date of this Agreement.

4.6.1 Assigned Net MDD/Water Availability Equivalents. The City has agreed with NMC Builders LLC to reserve exclusively for Members of NMC Builders, including OWNER, Net MDD made available through the construction of water system improvements funded by NMC Builders LLC. NMC Builders has assigned

to OWNER its allocable share of the Net MDD issued by City. The provisions of the Construction Agreement Amendment requires that the City shall not approval a final tract map or issue building permits or certificates of occupancy for the area of development within the New Model Colony served by the water system improvements funded by NMC Builders LLC, except to the bearer of an Assignment of Net MDD Water Availability.

4.6.2 Requirement of NMC Builders, LLC Membership as a Phase 2 Water Member. OWNER and CITY agree that OWNER's' payment to CITY required by Section 4.6.3 below represents OWNER's contribution to the funding required for the future construction of the Phase 2 Water Improvements and the availability of additional Net MDD Water Availability required for the development of the Property described in Exhibit A of this Agreement.

4.6.3 CITY issuance of Water Availability Equivalents. Within 30 days after the effectiveness of this Development Agreement OWNER shall pay or have paid to City the applicable Phase 2 Water Participation Fee. The Phase 2 Water Participation Fee shall be the calculated based on the amount of the Regional Water DIF for the applicable land use category and the square footage of the applicable buildings. The calculated amount of the Phase 2 Water Participation Fee shall be paid to City within 30 days after the effective date of this Agreement or, at OWNER's option, the Phase 2 Water Participation Fee may be paid to City in two (2) installments. The first installment shall be fifty percent (50%) of the total Phase 2 Water Participation Fee and such first installment shall be due and payable to City within 30 days after the effective date of this Development Agreement. The second installment shall be the remaining amount of the Phase 2 Water Participation Fee and such second installment shall be due and payable to City within one (1) year after the payment of the first installment, or prior to, and as a condition precedent to, the recording of any final Parcel Map for the Project, whichever occurs first. Upon OWNER's complete payment to CITY of the Phase 2 Water Participation Fee CITY shall issue a Certificate of Water Availability Equivalents in the form attached hereto as Exhibit G. Such Water Availability Equivalents Certificate shall be issued by CITY within thirty (30) days of the receipt of such required payment. CITY and OWNER agree that the amount of Water Availability Equivalents issued to OWNER shall be based on the maximum projected need for Water Availability Equivalents required for the Property based upon water demand factors and assumptions listed in Exhibit C-2R of the Phase 2 Water Amendment to the Construction Agreement "Water Demand Equivalents by Land Use" for each land use category. Additionally, within five (5) business days of CITY's receipt of OWNER's payment as required under this Section 4.6.3, CITY shall issue a certificate of DIF Credit against OWNER's DIF obligations in the Regional Water DIF Category.

4.6.2 Use of Assigned Net MDD Water Availability. OWNER shall provide evidence of sufficient Net MDD Water Availability Equivalents (or portions thereof) prior to and as a condition precedent to, the City's approval of any and all tract maps for the Property. The amount of Net MDD Water Availability Equivalents

required for City's approval of a tract map shall be based upon water demand factors and assumptions listed in Exhibit C-2R of the Construction Agreement Amendment as "Water Demand Equivalents by Land Use" for each land use category.

4.6.3 Requirement for other Water System Improvements. A Certificate of Net MDD Availability is evidence only of available water capacity and does not satisfy any other conditions applicable to an OWNER's Project, including those relating to design and construction of planned potable water and recycled water transmission and distribution system for the respective pressure zone and other public infrastructure requirements.

4.7 Storm Water Capacity Availability.

4.7.1 Requirement for Storm Water Treatment Capacity Availability. OWNER shall provide evidence of sufficient Storm Water Treatment Capacity Availability as reserved in a Certificate of Storm Water Treatment Capacity Availability the same manner and subject to the same limitations as provided for the assignment of Certificates of Net MDD Availability in Section 4.7 of this Agreement.

4.7.2 Use of Storm Water Treatment Capacity Availability. The amount of Storm Water Treatment Capacity Availability required for the issuance of a grading permit to OWNER shall be based upon the Net Residential Acreage of the area to be graded regardless of the corresponding use.

4.7.3 Requirement for other Storm Water Improvements. The Certificate of Storm Water Treatment Capacity Availability is evidence only of available storm water treatment capacity and does not satisfy any other conditions applicable to a particular development project, including those relating to on-site water treatment, water quality, connection to the storm water collection system, or other public infrastructure requirements.

4.8 Maintenance of Open Space. OWNER shall provide for the ongoing maintenance of all park, common areas and open space areas within the Project as more particularly set forth in the Specific Plan, through a homeowners' association as approved by the CITY. Covenants, conditions and restrictions establishing any homeowners' association shall be approved by the Planning Director and City Attorney.

4.9 Compliance with Public Benefits Requirements.

4.9.1 Failure to Provide Public Benefits. In the event OWNER fails or refuses to comply with any condition referenced in Section 4.1 through 4.9, or challenges (whether administratively or through legal proceedings) the imposition of such conditions, OWNER shall be deemed in default of this Agreement pursuant to Section 8.4 hereof, thereby entitling the City to any and all remedies available to it, including, without limitation, the right of the City to withhold OWNER's Project-

related building permits, certificates of occupancy, or discretionary approvals, without liability.

5. FINANCING OF PUBLIC IMPROVEMENTS.

5.1 Financing Mechanism(s). In accordance with the Memorandum of Agreement between the CITY and NMC Builders, CITY will cooperate with OWNER in the formation of a CFD, or CFDs, to include all of the Project, to provide a financing mechanism to reimburse the OWNER for funds paid to NMC Builders LLC for OWNER's share of the costs of public infrastructure pursuant to the Construction Agreement and to acquire other public facilities constructed by OWNER subject to the provisions of the Memorandum of Agreement between CITY and NMC Builders LLC. Notwithstanding such reimbursements and acquisitions, OWNER shall remain entitled to DIF Credits as provided for in Article 3 of the Construction Agreement and/or as provided for in a separate Fee Credit Agreement between CITY and OWNER. OWNER agrees that, prior to the recordation of any Tract Map for the Property, the Property shall be included in a CFD to finance City services through annual special taxes that will initially be $1,371.52 per Single Family Detached Dwelling Unit, $1,188.58 per Multiple-Family Dwelling Unit, $996.75 per Gated Apartment Community Dwelling Unit, and $.25 per square foot for Non-Residential buildings. These amounts shall be subject to an automatic increase at a rate not to exceed four (4%) percent per year, unless modified by CITY. CITY shall be the sole and exclusive lead agency in the formation of any CFD, assessment district or other public financing mechanism within the Property; provided however, that the proceeds of any such CFD, assessment district, or financing mechanism may be used, subject to restrictions that may be imposed by applicable law, for the purposes of acquiring, constructing or maintaining public facilities to be owned or operated by other public agencies, including, without limitation those facilities owned or operated by a school district. In addition to the rights of the CITY pursuant to section 5.2 hereof, CITY shall have the right, but not the obligation, to condition the formation of any CFD, assessment district or other public financing mechanism within the Property on the OWNER mitigating all Project-related impacts to the applicable school district(s) as required by such school district(s). Written evidence by such school district(s) may be required by the CITY as the condition to the formation of any CFD, assessment district or other public financing mechanism within the Property, or any steps preliminary thereto, including, without limitation, the adoption of any resolution of intention to form such CFD, assessment district or other public financing mechanism within the Property. It is not the intent of the parties hereto, by this provision, to prohibit or otherwise limit the City's ability to take any and all necessary steps requisite to the formation of the CFD to finance City services through annual special taxes as set forth in this Section 5.1. Formation of any CFD, assessment district or other public financing mechanism within the Property, shall be subject to CITY's ability to make all findings required by applicable law and complying with all applicable legal procedures and requirements including, without limitation, CITY's public financing district policies as such policies may be amended from time to time. Notwithstanding the foregoing, it is acknowledged and agreed by the parties that nothing contained in this Agreement shall be construed as requiring CITY or the City Council to form any such district or to issue and sell bonds.

6. REVIEW FOR COMPLIANCE.

6.1 Periodic and Special Reviews.

6.1.1 Time for and Initiation of Periodic Review. The CITY shall review this Agreement every twelve (12) months from the Effective Date in order to ascertain the good faith compliance by the OWNER with the terms of this Agreement. The OWNER shall submit an Annual Monitoring Report to CITY, in a form acceptable to the City Manager, along with any applicable processing charge within ten (10) days after each anniversary date of the Effective Date of this Agreement. Within fifteen (15) days after the receipt of the Annual Monitoring Report, CITY shall review the Annual Monitoring Report. Prior to the expiration of the fifteen (15) day review period, CITY shall either issue a notice of continuing compliance or a notice of non-compliance and a notice of CITY's intent to conduct a Special Review pursuant to Sections 6.1.2 through 6.1.6. Issuance of a notice of continuing compliance may be issued by the City Manager or his designee.

6.1.2 Initiation of Special Review. A special review may be called either by agreement between the parties or by initiation in one or more of the following ways:

(1) Recommendation of the Planning staff;

(2) Affirmative vote of at least four (4) members of the Planning Commission; or

(3) Affirmative vote of at least three (3) members of the City Council.

6.1.3 Notice of Special Review. The City Manager shall begin the special review proceeding by giving notice that the CITY intends to undertake a special review of this Agreement to the OWNER. Such notice shall be given at least ten (10) days in advance of the time at which the matter will be considered by the Planning Commission.

6.1.4 Public Hearing. The Planning Commission shall conduct a hearing at which the OWNER must demonstrate good faith compliance with the terms of this Agreement. The burden of proof on this issue is upon the OWNER.

6.1.5 Findings Upon Public Hearing. The Planning Commission shall determine upon the basis of substantial evidence whether or not the OWNER has, for the period under review, complied in good faith with the terms and conditions of this Agreement.

6.1.6 Procedure Upon Findings.

(a) If the Planning Commission finds and determines on the basis of substantial evidence that the OWNER has complied in good faith with the terms and conditions of this Agreement during the period under review, the review for that period is concluded.

(b) If the Planning Commission finds and determines on the basis of substantial evidence that the OWNER has not complied in good faith with the terms and conditions of this Agreement during the period under review, the Planning Commission may recommend to the City Council to modify or terminate this Agreement.

(c) The OWNER may appeal a determination pursuant to paragraph (b) to the City Council in accordance with the CITY's rule for consideration of appeals in zoning matters generally.

6.2 Proceedings Upon Modification or Termination. If, upon a finding under Section 6.1.6(b), the CITY determines to proceed with modification or termination of this Agreement, the CITY shall give notice to the property OWNER of its intention so to do. The notice shall contain:

(a) The time and place of the hearing;

(b) A statement as to whether or not the CITY proposes to terminate or to modify this Agreement; and

(c) Other information that the CITY considers necessary to inform the OWNER of the nature of the proceeding.

6.3 Hearing on Modification or Termination. At the time and place set for the hearing on modification or termination, the OWNER shall be given an opportunity to be heard. The OWNER shall be required to demonstrate good faith compliance with the terms and conditions of this Agreement. The burden of proof on this issue shall be on the OWNER. If the City Council finds, based upon substantial evidence in the administrative record, that the OWNER has not complied in good faith with the terms and conditions of the agreement, the City Council may terminate or modify this Agreement and impose those conditions to the action it takes as it considers necessary to protect the interests of the CITY. The decision of the City Council shall be final, subject only to judicial review pursuant to Section 1094.5 of the Code of Civil Procedure.

6.4 Certificate of Agreement Compliance. If, at the conclusion of a Periodic or Special Review, OWNER is found to be in compliance with this Agreement, CITY shall, upon written request by OWNER, issue a Certificate of Agreement Compliance ("Certificate") to OWNER stating that after the most recent Periodic or Special Review and based upon the information known or made known to the Planning Director and City Council that (1) this Agreement remains in effect and (2) OWNER is not in default. The Certificate shall be in recordable form, shall contain information necessary to communicate constructive record notice of the finding of compliance, shall state whether the Certificate is issued after a Periodic or Special Review and shall state the anticipated date of commencement of the next Periodic Review. OWNER may record the Certificate

with the County Recorder. Whether or not the Certificate is relied upon by assignees or other transferees or OWNER, CITY shall not be bound by a Certificate if a default existed at the time of the Periodic or Special Review, but was concealed from or otherwise not known to the Planning Director or City Council.

7. [RESERVED]

8. DEFAULT AND REMEDIES.

8.1 Remedies in General. It is acknowledged by the parties that CITY would not have entered into this Agreement if it were to be liable in damages under this Agreement, or with respect to this Agreement or the application thereof.

In general, each of the parties hereto may pursue any remedy at law or equity available for the breach of any provision of this Agreement, except that CITY shall not be liable in damages to OWNER, or to any successor in interest of OWNER, or to any other person, and OWNER covenants not to sue for damages or claim any damages:

(a) For any breach of this Agreement or for any cause of action which arises out of this Agreement; or

(b) For the taking, impairment or restriction of any right or interest conveyed or provided under or pursuant to this Agreement; or

(c) Arising out of or connected with any dispute, controversy or issue regarding the application or interpretation or effect of the provisions of this Agreement.

8.2 Specific Performance. The parties acknowledge that money damages and remedies at law generally are inadequate and specific performance and other non-monetary relief are particularly appropriate remedies for the enforcement of this Agreement and should be available to all parties for the following reasons:

(a) Money damages are unavailable against CITY as provided in Section 8.1 above.

(b) Due to the size, nature and scope of the project, it may not be practical or possible to restore the Property to its natural condition once implementation of this Agreement has begun. After such implementation, OWNER may be foreclosed from other choices it may have had to utilize the Property or portions thereof. OWNER has invested significant time and resources and performed extensive planning and processing of the Project in agreeing to the terms of this Agreement and will be investing even more significant time and resources in implementing the Project in reliance upon the terms of this Agreement, and it is not possible to determine the sum of money which would adequately compensate OWNER for such efforts.

8.3 Release. Except for nondamaged remedies, including the remedy of specific performance and judicial review as provided for in Section 6.5, OWNER, for itself, its successors and assignees, hereby releases the CITY, its officers, agents and

employees from any and all claims, demands, actions, or suits of any kind or nature arising out of any liability, known or unknown, present or future, including, but not limited to, any claim or liability, based or asserted, pursuant to Article I, Section 19 of the California Constitution, the Fifth Amendment of the United States Constitution, or any other law or ordinance which seeks to impose any other liability or damage, whatsoever, upon the CITY because it entered into this Agreement or because of the terms of this Agreement.

8.4 Termination or Modification of Agreement for Default of OWNER. Subject to the provisions contained in Subsection 6.3 herein, CITY may terminate or modify this Agreement for any failure of OWNER to perform any material duty or obligation of OWNER under this Agreement, or to comply in good faith with the terms of this Agreement (hereinafter referred to as "default"); provided, however, CITY may terminate or modify this Agreement pursuant to this Section only after providing written notice to OWNER of default setting forth the nature of the default and the actions, if any, required by OWNER to cure such default and, where the default can be cured, OWNER has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has failed to commence the actions necessary to cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

8.5 Termination of Agreement for Default of CITY. OWNER may terminate this Agreement only in the event of a default by CITY in the performance of a material term of this Agreement and only after providing written notice to CITY of default setting forth the nature of the default and the actions, if any, required by CITY to cure such default and, where the default can be cured, CITY has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has failed to commence the actions necessary to cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

9. THIRD PARTY LITIGATION.

9.1 General Plan Litigation. CITY has determined that this Agreement is consistent with its Comprehensive General Plan, as such General Plan exists as of the Effective Date ("General Plan"), and that the General Plan meets all requirements of law. OWNER has reviewed the General Plan and concurs with CITY's determination. CITY shall have no liability in damages under this Agreement for any failure of CITY to perform under this Agreement or the inability of OWNER to develop the Property as contemplated by the Development Plan of this Agreement as the result of a judicial determination that on the Effective Date, or at any time thereafter, the General Plan, or portions thereof, are invalid or inadequate or not in compliance with law.

9.2 Third Party Litigation Concerning Agreement. OWNER shall defend, at its expense, including attorneys' fees, indemnify, and hold harmless CITY, its agents, officers and employees from any claim, action or proceeding against CITY, its agents,

officers, or employees to attack, set aside, void, or annul the approval of this Agreement or the approval of any permit granted pursuant to this Agreement. CITY shall promptly notify OWNER of any such claim, action or proceeding, and CITY shall cooperate in the defense. If CITY fails to promptly notify OWNER of any such claim, action or proceeding, or if CITY fails to cooperate in the defense, OWNER shall not thereafter be responsible to defend, indemnify, or hold harmless CITY. CITY may in its discretion participate in the defense of any such claim, action or proceeding.

9.3 Indemnity. In addition to the provisions of 9.2 above, OWNER shall indemnify and hold CITY, its officers, agents, employees and independent contractors free and harmless from any liability whatsoever, based or asserted upon any act or omission of OWNER, its officers, agents, employees, subcontractors and independent contractors, for property damage, bodily injury, or death (OWNER's employees included) or any other element of damage of any kind or nature, relating to or in any way connected with or arising from the activities contemplated hereunder, including, but not limited to, the study, design, engineering, construction, completion, failure and conveyance of the public improvements, save and except claims for damages arising through the sole active negligence or sole willful misconduct of CITY. OWNER shall defend, at its expense, including attorneys' fees, CITY, its officers, agents, employees and independent contractors in any legal action based upon such alleged acts or omissions. CITY may in its discretion participate in the defense of any such legal action.

9.4 Environment Assurances. OWNER shall indemnify and hold CITY, its officers, agents, and employees free and harmless from any liability, based or asserted, upon any act or omission of OWNER, its officers, agents, employees, subcontractors, predecessors in interest, successors, assigns and independent contractors for any violation of any federal, state or local law, ordinance or regulation relating to industrial hygiene or to environmental conditions on, under or about the Property, including, but not limited to, soil and groundwater conditions, and OWNER shall defend, at its expense, including attorneys' fees, CITY, its officers, agents and employees in any action based or asserted upon any such alleged act or omission. CITY may in its discretion participate in the defense of any such action.

9.5 Reservation of Rights. With respect to Sections 9.2, 9.3 and 9.4 herein, CITY reserves the right to either (1) approve the attorney(s) which OWNER selects, hires or otherwise engages to defend CITY hereunder, which approval shall not be unreasonably withheld, or (2) conduct its own defense, provided, however, that OWNER shall reimburse CITY forthwith for any and all reasonable expenses incurred for such defense, including attorneys' fees, upon billing and accounting therefor.

9.6 Survival. The provisions of this Sections 9.1 through 9.6, inclusive, shall survive the termination of this Agreement.

10. MORTGAGEE PROTECTION.

The parties hereto agree that this Agreement shall not prevent or limit OWNER, in any manner, at OWNER's sole discretion, from encumbering the Property or any portion

thereof or any improvement thereon by any mortgage, deed of trust or other security device securing financing with respect to the Property. CITY acknowledges that the lenders providing such financing may require certain Agreement interpretations and modifications and agrees upon request, from time to time, to meet with OWNER and representatives of such lenders to negotiate in good faith any such request for interpretation or modification. CITY will not unreasonably withhold its consent to any such requested interpretation or modification provided such interpretation or modification is consistent with the intent and purposes of this Agreement. Any Mortgagee of the Property shall be entitled to the following rights and privileges:

(a) Neither entering into this Agreement nor a breach of this Agreement shall defeat, render invalid, diminish or impair the lien of any mortgage on the Property made in good faith and for value, unless otherwise required by law.

(b) The Mortgagee of any mortgage or deed of trust encumbering the Property, or any part thereof, which Mortgagee, has submitted a request in writing to the CITY in the manner specified herein for giving notices, shall be entitled to receive written notification from CITY of any default by OWNER in the performance of OWNER's obligations under this Agreement.

(c) If CITY timely receives a request from a Mortgagee requesting a copy of any notice of default given to OWNER under the terms of this Agreement, CITY shall provide a copy of that notice to the Mortgagee within ten (10) days of sending the notice of default to OWNER. The Mortgagee shall have the right, but not the obligation, to cure the default during the remaining cure period allowed such party under this Agreement.

(d) Any Mortgagee who comes into possession of the Property, or any part thereof, pursuant to foreclosure of the mortgage or deed of trust, or deed in lieu of such foreclosure, shall take the Property, or part thereof, subject to the terms of this Agreement. Notwithstanding any other provision of this Agreement to the contrary, no Mortgagee shall have an obligation or duty under this Agreement to perform any of OWNER's obligations or other affirmative covenants of OWNER hereunder, or to guarantee such performance; provided, however, that to the extent that any covenant to be performed by OWNER is a condition precedent to the performance of a covenant by CITY, the performance thereof shall continue to be a condition precedent to CITY's performance hereunder, and further provided that any sale, transfer or assignment by any Mortgagee in possession shall be subject to the provisions of Section 2.4 of this Agreement.

11. MISCELLANEOUS PROVISIONS.

11.1 Recordation of Agreement. This Agreement and any amendment or cancellation thereof shall be recorded with the San Bernardino County Recorder by the City Clerk within the ten (10) days after the CITY executes this Agreement, as required by Section 65868.5 of the Government Code. If the parties to this Agreement or their successors in interest amend or cancel this Agreement as provided for herein and in Government Code Section 65868, or if the CITY terminates or modifies the agreement as provided for herein and in Government Code Section 65865.1 for failure of the applicant

to comply in good faith with the terms or conditions of this Agreement, the City Clerk shall have notice of such action recorded with the San Bernardino County Recorder.

11.2 Entire Agreement. This Agreement sets forth and contains the entire understanding and agreement of the parties, and there are no oral or written representations, understandings or ancillary covenants, undertakings or agreements which are not contained or expressly referred to herein. No testimony or evidence of any such representations, understandings or covenants shall be admissible in any proceeding of any kind or nature to interpret or determine the terms or conditions of this Agreement.

11.3 Severability. If any term, provision, covenant or condition of this Agreement shall be determined invalid, void or unenforceable, the remainder of this Agreement shall not be affected thereby to the extent such remaining provisions are not rendered impractical to perform taking into consideration the purposes of this Agreement. Notwithstanding the foregoing, the provision of the Public Benefits set forth in Section 4 of this Agreement, including the payment of the fees set forth therein, are essential elements of this Agreement and CITY would not have entered into this Agreement but for such provisions, and therefore in the event such provisions are determined to be invalid, void or unenforceable, this entire Agreement shall be null and void and of no force and effect whatsoever.

11.4 Interpretation and Governing Law. This Agreement and any dispute arising hereunder shall be governed and interpreted in accordance with the laws of the State of California. This Agreement shall be construed as a whole according to its fair language and common meaning to achieve the objectives and purposes of the parties hereto, and the rule of construction to the effect that ambiguities are to be resolved against the drafting party shall not be employed in interpreting this Agreement, all parties having been represented by counsel in the negotiation and preparation hereof.

11.5 Section Headings. All section headings and subheadings are inserted for convenience only and shall not affect any construction or interpretation of this Agreement.

11.6 Singular and Plural. As used herein, the singular of any word includes the plural.

11.7 Joint and Several Obligations. Subject to section 2.4, if at any time during the term of this Agreement the Property is owned, in whole or in part, by more than one owner, all obligations of such owners under this Agreement shall be joint and several, and the default of any such owner shall be the default of all such owners. Notwithstanding the foregoing, no owner of a single lot which has been finally subdivided and sold to such owner as a member of the general public or otherwise as an ultimate user shall have any obligation under this Agreement except as provided under Section 4 hereof.

11.8 Time of Essence. Time is of the essence in the performance of the provisions of this Agreement as to which time is an element.

11.9 Waiver. Failure by a party to insist upon the strict performance of any of the provisions of this Agreement by the other party, or the failure by a party to exercise its

rights upon the default of the other party, shall not constitute a waiver of such party's right to insist and demand strict compliance by the other party with the terms of this Agreement thereafter.

11.10 No Third Party Beneficiaries. This Agreement is made and entered into for the sole protection and benefit of the parties and their successors and assigns. No other person shall have any right of action based upon any provision of this Agreement.

11.11 Force Majeure. Neither party shall be deemed to be in default where failure or delay in performance of any of its obligations under this Agreement is caused by floods, earthquakes, other Acts of God, fires, wars, riots or similar hostilities, strikes and other labor difficulties beyond the party's control, (including the party's employment force), government regulations, court actions (such as restraining orders or injunctions), or other causes beyond the party's control. If any such events shall occur, the term of this Agreement and the time for performance by either party of any of its obligations hereunder may be extended by the written agreement of the parties for the period of time that such events prevented such performance, provided that the term of this Agreement shall not be extended under any circumstances for more than five (5) years.

11.12 Mutual Covenants. The covenants contained herein are mutual covenants and also constitute conditions to the concurrent or subsequent performance by the party benefited thereby of the covenants to be performed hereunder by such benefited party.

11.13 Successors in Interest. The burdens of this Agreement shall be binding upon, and the benefits of this Agreement shall inure to, all successors in interest to the parties to this Agreement. All provisions of this Agreement shall be enforceable as equitable servitudes and constitute covenants running with the land. Each covenant to do or refrain from doing some act hereunder with regard to development of the Property: (a) is for the benefit of and is a burden upon every portion of the Property; (b) runs with the Property and each portion thereof; and, (c) is binding upon each party and each successor in interest during ownership of the Property or any portion thereof.

11.14 Counterparts. This Agreement may be executed by the parties in counterparts, which counterparts shall be construed together and have the same effect as if all of the parties had executed the same instrument.

11.15 Jurisdiction and Venue. Any action at law or in equity arising under this Agreement or brought by a party hereto for the purpose of enforcing, construing or determining the validity of any provision of this Agreement shall be filed and tried in the Superior Court of the County of San Bernardino, State of California, and the parties hereto waive all provisions of law providing for the filing, removal or change of venue to any other court.

11.16 Project as a Private Undertaking. It is specifically understood and agreed by and between the parties hereto that the development of the Project is a private development, that neither party is acting as the agent of the other in any respect hereunder, and that each party is an independent contracting entity with respect to the

terms, covenants and conditions contained in this Agreement. No partnership, joint venture or other association of any kind is formed by this Agreement. The only relationship between CITY and OWNER is that of a government entity regulating the development of private property and the owner of such property.

11.17 Further Actions and Instruments. Each of the parties shall cooperate with and provide reasonable assistance to the other to the extent contemplated hereunder in the performance of all obligations under this Agreement and the satisfaction of the conditions of this Agreement. Upon the request of either party at any time, the other party shall promptly execute, with acknowledgment or affidavit if reasonably required, and file or record such required instruments and writings and take any actions as may be reasonably necessary under the terms of this Agreement to carry out the intent and to fulfill the provisions of this Agreement or to evidence or consummate the transactions contemplated by this Agreement. The City Manager may delegate his powers and duties under this Agreement to an Assistant City Manager or other management level employee of the CITY.

11.18 Eminent Domain. No provision of this Agreement shall be construed to limit or restrict the exercise by CITY of its power of eminent domain.

11.19 Agent for Service of Process. In the event OWNER is not a resident of the State of California or it is an association, partnership or joint venture without a member, partner or joint venturer resident of the State of California, or it is a foreign corporation, then in any such event, OWNER shall file with the Planning Director, upon its execution of this Agreement, a designation of a natural person residing in the State of California, giving his or her name, residence and business addresses, as its agent for the purpose of service of process in any court action arising out of or based upon this Agreement, and the delivery to such agent of a copy of any process in any such action shall constitute valid service upon OWNER. If for any reason service of such process upon such agent is not feasible, then in such event OWNER may be personally served with such process out of this County and such service shall constitute valid service upon OWNER. OWNER is amenable to the process so served, submits to the jurisdiction of the Court so obtained and waives any and all objections and protests thereto. OWNER for itself, assigns and successors hereby waives the provisions of the Hague Convention (Convention on the Service Abroad of Judicial and Extra Judicial Documents in Civil or Commercial Matters, 20 U.S.T. 361, T.I.A.S. No. 6638).

11.20 Estoppel Certificate. Within thirty (30) business days following a written request by any of the parties, the other party shall execute and deliver to the requesting party a statement certifying that (i) either this Agreement is unmodified and in full force and effect or there have been specified (date and nature) modifications to the Agreement, but it remains in full force and effect as modified; and (ii) either there are no known current uncured defaults under this Agreement or that the responding party alleges that specified (date and nature) defaults exist. The statement shall also provide any other reasonable information requested. The failure to timely deliver this statement shall constitute a conclusive presumption that this Agreement is in full force and effect without modification except as may be represented by the requesting party and that there are no uncured

defaults in the performance of the requesting party, except as may be represented by the requesting party. OWNER shall pay to CITY all costs incurred by CITY in connection with the issuance of estoppel certificates under this Section 11.20 prior to CITY's issuance of such certificates.

11.21 Authority to Execute. The person or persons executing this Agreement on behalf of OWNER warrants and represents that he or she/they have the authority to execute this Agreement on behalf of his or her/their corporation, partnership or business entity and warrants and represents that he or she/they has/have the authority to bind OWNER to the performance of its obligations hereunder.

11.22 Prevailing Wage. OWNER, for itself, its successors, and assigns, agrees, covenants, and warrants that the development of the Property, if any, shall comply with all applicable federal and state labor laws (including, without limitation, the requirement under California law to pay prevailing wages and hire apprentices), and all obligations as set forth herein.

11.22.1 CITY makes no representations concerning prevailing wages in compliance with California Labor Code Section 1770 et seq.

11.22.2 OWNER acknowledges and agrees that it shall be independently responsible for reviewing the applicable laws and regulations with respect to the payment of prevailing wages and complying therewith. OWNER shall bear all risks of payment or non-payment of prevailing wages under California law and/or the implementation of Labor Code Section 1781, as the same may be amended from time to time, and/or any other similar law.

11.22.3 The foregoing indemnity shall survive termination of this Agreement and shall continue after completion of the construction and development of the Property by OWNER, its successors or assigns. OWNER shall be solely responsible for determining and effectuating compliance with such laws.

11.22.4 OWNER, ON BEHALF OF ITSELF, ITS SUCCESSORS, AND ASSIGNS, WAIVES AND RELEASES CITY FROM ANY RIGHT OF ACTION THAT MAY BE AVAILABLE TO OWNER PURSUANT TO LABOR CODE SECTION 1781 OR THE DAVIS BACON ACT. RELATIVE TO THE WAIVER AND RELEASE CONTAINED IN THIS SECTION 11.22, OWNER ACKNOWLEDGES THE PROTECTIONS OF CIVIL CODE SECTION 1542, WHICH READS AS FOLLOWS: A GENERAL RELEASE DOES NOT EXTEND TO CLAIMS THAT THE CREDITOR OR RELEASING PARTY DOES NOT KNOW OR SUSPECT TO EXIST IN HIS OR HER FAVOR AT THE TIME OF EXECUTING THE RELEASE, WHICH IF KNOWN BY HIM OR HER MUST HAVE MATERIALLY AFFECTED HIS OR HER SETTLEMENT WITH THE DEBTOR OR RELEASED PARTY.

INITIALS. BY INITIALING BELOW, OWNER KNOWINGLY AND VOLUNTARILY WAIVES THE PROVISIONS OF SECTION 1542 SOLELY WITH THE MATTERS WHICH ARE THE SUBJECT OF THE FOREGOING WAIVERS AND RELEASES:

TO DEVELOPMENT AGREEMENT

Legal Description of Property

Real property in the City of Ontario, County of San Bernardino, State of California, described as follows:

PARCEL 1: (APN: 0218-161-11-0-000)

The East 35 acres of the South one-half of the Northwest one-quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian, in the County of San Bernardino, State of California, according to the official plat thereof.
Except any portion within the North 10 acres of the Southeast 1/4 of the Northwest 1/4 of said section conveyed to Chaffey Joint Union High School District, a political subdivision of State of California in grant deed recorded January 6, 2000 as Instrument No. 2000-0005735 of Official Records.
Also excepting therefrom that portion of the land described in the grant deed to City of Ontario, a municipal corporation recorded July 24, 2008 as Instrument No. 2008- 0338801 of Official Records.

PARCEL 2: (APN: 0218-161-04-0-000)

The West one-half of the Northwest one-quarter of the Northwest one-quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian, in the County of San Bernardino, State of California, according to the official plat thereof.

Except therefrom all public streets and highways.
Also excepting therefrom that portion of the land described in the grant deed to City of Ontario, a municipal corporation recorded July 24, 2008 as Instrument No. 2008- 0338803 of Official Records.

PARCEL 3: (APN: 0218-161-05-0-000)

The East one-half of the Northwest one-quarter of the Northwest one-quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian, in the County of San Bernardino, State of California, according to the official plat thereof. Except therefrom all public streets and highways.
Also excepting therefrom that portion of the land described in the grant deed to City of Ontario, a municipal corporation recorded July 24, 2008 as Instrument No. 2008- 0338803 of Official Records.

PARCEL 3A: (APN: PORTION OF 0218-171-22-0-000)

An undivided 1/3rd interest in the well-site described as the West 5.00 feet of the South
8.00 feet of the North 72.50 feet of the Northeast one-quarter of the Northeast one- quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian and the East 5.00 feet of the South 8.00 feet of the North 72.50 feet of the Northwest one- quarter of the Northeast one-quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian, in the County of San Bernardino, State of California, according to the official plat thereof.

PARCEL 3B:

A non-exclusive easement right-of-way per that document recorded March 10, 1976 in Book 8880, page 113 of Official Records to construct, maintain, operate, remove, replace and repair water pipeline together with valves and other equipment over, under, along and across the certain strip of land located within the lines of the property described as follows:
The South 4 feet of the North 34 feet of the Northwest one-quarter of the Northeast one- quarter and the Northeast one-quarter of the Northwest one-quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian, also the South 48.50 feet of the North 82.50 feet of the East 30.00 feet of the Northwest one-quarter of the Northeast one-quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian, in the County of San Bernardino, according to the official plat thereof.

PARCEL 4: (APN: 0218-161-10-0-000 AND PORTION OF 0218-171-22-0-000)

The Southwest one-quarter of the Northwest one-quarter and the West 5 acres of the Southeast one-quarter of the Northwest one-quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian, in the County of San Bernardino, State of California, according to the official plat thereof.
Together with an undivided 1/6 interest in the well-site described as the West 5.00 feet of the South 8.00 feet of the North 72.50 feet of the Northeast one-quarter of the Northeast one-quarter of Section 12, Township 2 South, Range 7 West San Bernardino Meridian and the East 5.00 feet of the South 8.00 feet of the North 72.50 feet of the Northwest one-quarter of the Northeast one-quarter of Section 12, Township 2 South, Range 7 West, San Bernardino Meridian, in the County of San Bernardino, State of California, according to the official plat thereof. Except any portion within the North 10 acres of the Southeast 1/4 of the Northwest 1/4 of said section.

EXHIBIT "C"
TO DEVELOPMENT AGREEMENT

Existing Development Approvals

On October 23, 2007 the Planning Commission:

a) Issued Resolution No. PC07-125 recommending City Council certification of the Rich-Haven Specific Plan EIR (SCH#2006051081).
b) Issued Resolution No. PC07-127 recommending to City Council approval of the Rich-Haven Specific Plan (File No. PSP05-004).

On December 4, 2007, the City Council:

a) Issued Resolution No. 2007-145 certifying the Rich-Haven Specific Plan EIR (SCH#2006051081).
b) Adopted Ordinance No. 2884 approving the Rich-Haven Specific Plan.

On February 23, 2016, the Planning Commission:

a) Issued Resolution No. PC16-003 recommending City Council adoption of an Addendum to the Rich-Haven EIR.
b) Issued Resolution PC16-004 recommending approval of the Rich-Haven Specific Plan Amendment (File No. PSPA16-001).

On March 15, 2016, the City Council:

a) Issued Resolution No. 2016-024 for the adoption of an Addendum (File No. PSPA16-001) to the Rich-Haven Specific Plan EIR.
b) Issued Resolution No. 2016-025 approving an Amendment (File No. PSPA16-001) to the Rich-Haven Specific Plan.

On January 23, 2018, the Planning Commission:

a) Issued Resolution No. PC18-014 recommending City Council adoption of an Addendum to the Rich-haven EIR.
b) Issued Resolution No. PC18-015 recommending to City Council adoption of the Rich-Haven Specific Plan Amendment (File No. PSPA16-005).

On February 20, 2018, the City Council:

a) Issued Resolution No. 2018-017 for the adoption of an Addendum (File No. PSPA16-005) to the Rich-Haven Specific Plan EIR.
b) Issued Resolution No. 2018-018 approving an Amendment (File No. PSPA16-005) to the Rich-Haven Specific Plan.

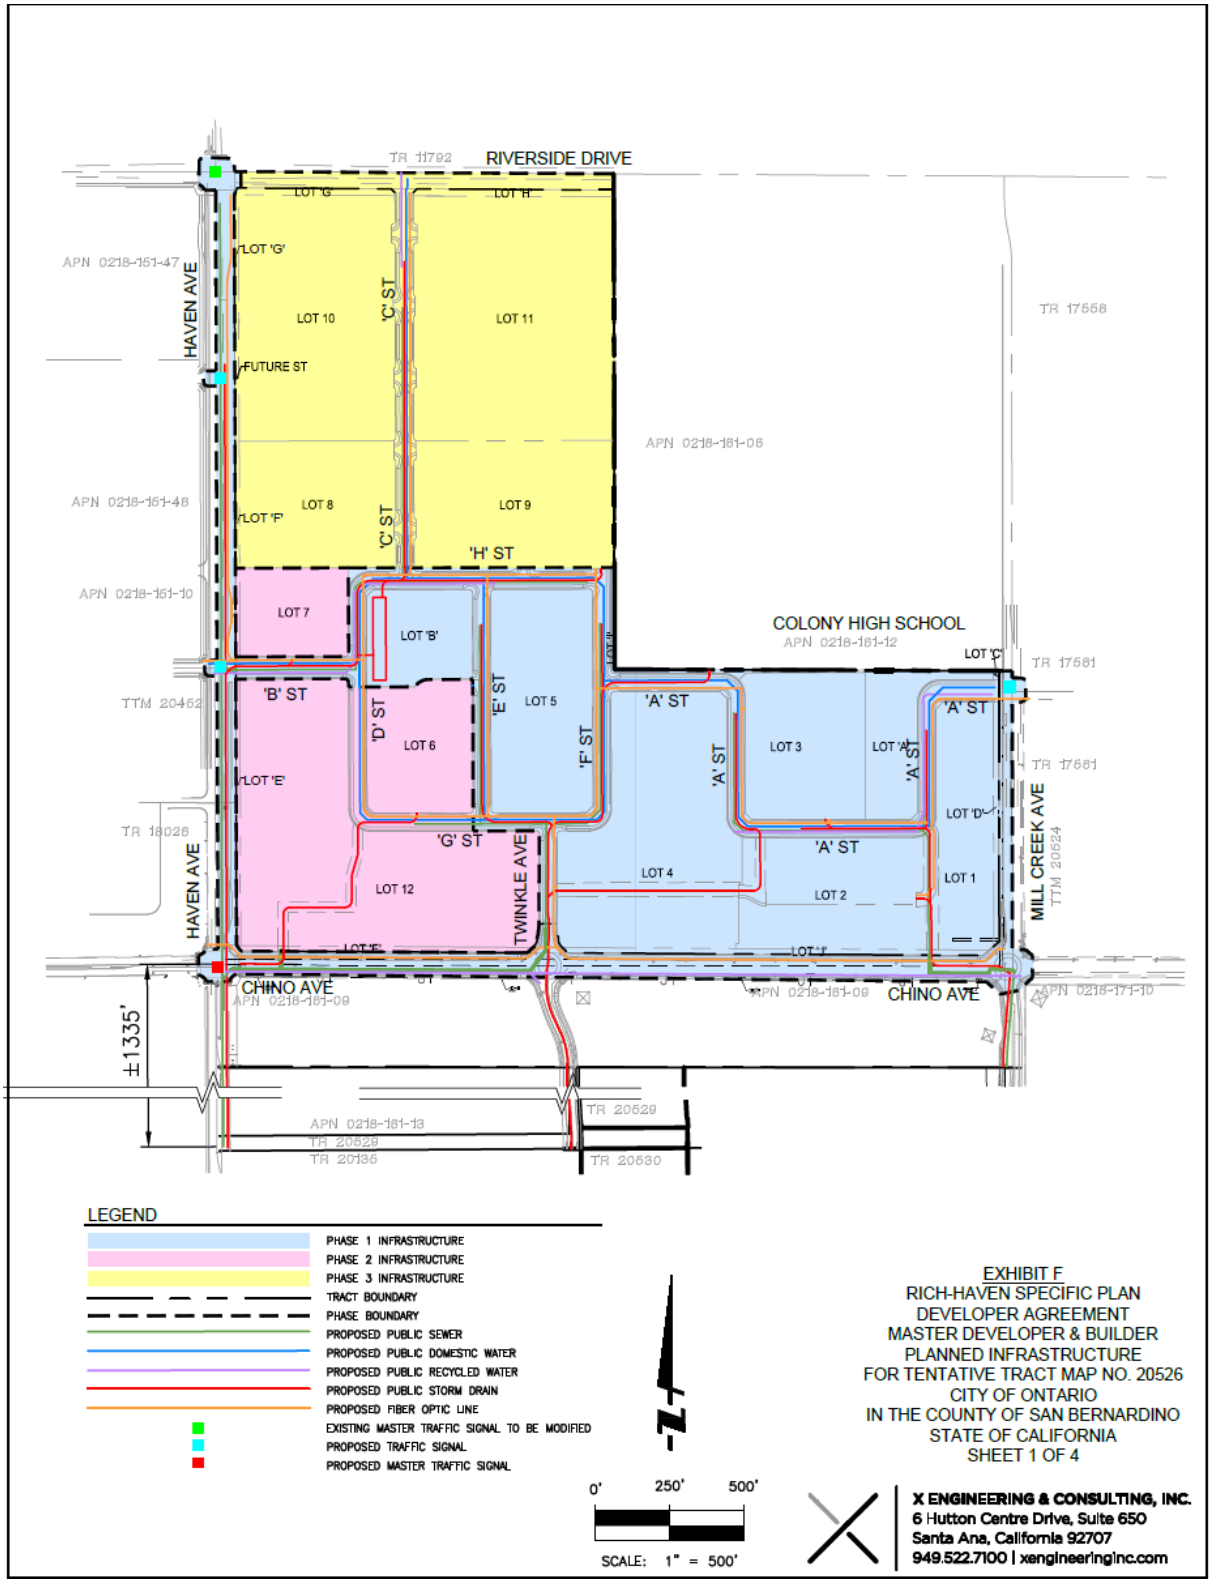
PHASE 1 IMPROVEMENTS

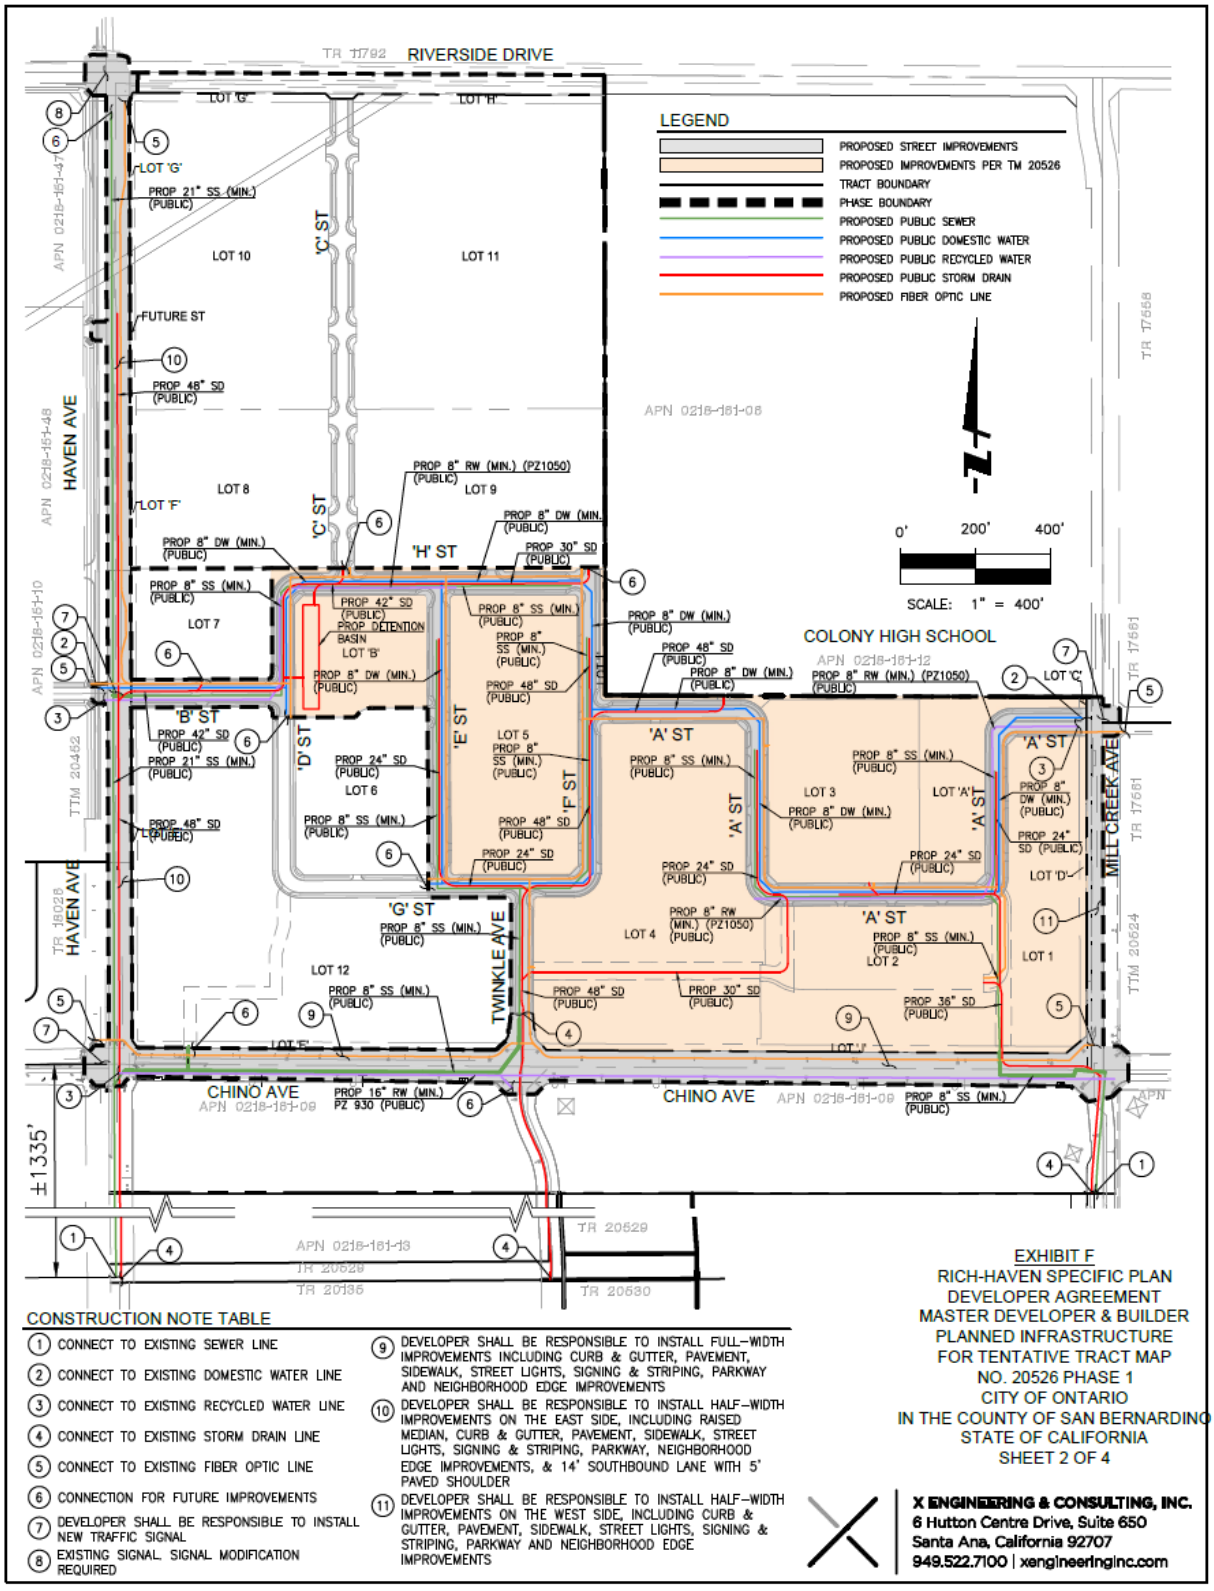
1. SW on Haven Avenue, between Riverside Drive and North of Nelson Drive.
2. SW on Twinkle Avenue, between Street “G” and Chino Avenue.
3. SW on Chino Avenue, between Haven Avenue and Twinkle Avenue.
4. SW on Chino Avenue, between Lots 1 and 2 and Mill Creek Avenue.
5. SW within Lots 1 and 2 between
6. SW on Streets “A”, “B”, “D”, “E”, “F”, “G”, and “H”.
7. PW on Streets “A”, “B”, “D”, “E”, “F”, “G”, and “H”.
8. RW on Chino Avenue, between Haven Avenue to Mill Creek Avenue.
9. RW on Streets “A”, “B”, “D”, and “H”.
10. SD on Haven Avenue, between Future Street and South of Chino Avenue.
11. SD on Twinkle Avenue, between Street “G” and South of Chino Avenue.
12. SD on Streets “A”, “B”, “D”, “E”, “F”, “G”, and “H”.
13. SD within Lots 1 and 2 between Street “A” and Chino Avenue.
14. SD on Chino Avenue between Lot 1 and Mill Creek Avenue to POC
15. SD within Lots 2 and 4 between Street “A” and Twinkle Ave.
16. FO on Haven Avenue, between Riverside Drive and Street “B”.
17. FO on Twinkle Avenue, between Street “G” and Chino Avenue.
18. FO on Chino Avenue, between Haven Avenue and Mill Creek Avenue.
19. FO on Streets “A”, “B”, “D”, “E”, “F”, “G”, and “H”.
20. ST improvements on Haven Avenue, between Riverside Drive and Chino Avenue.
21. ST improvements on Twinkle Avenue between Street “G” and Chino Avenue.
22. ST improvements on Chino Avenue, between Haven Avenue and Mill Creek Avenue.
23. ST improvements on Mill Creek Avenue between Bethany Way and Chino Avenue.
24. ST improvements on Streets “A”, “B”, “D”, “E”, “F”, “G”, and “H”.
25. Traffic Signal at Haven Avenue and Street “B”.
26. Traffic Signal at Haven Avenue and Chino Avenue.
27. Traffic Signal Modification at Haven Avenue and Riverside Drive.
28. Traffic Signal at Bethany Way and Mill Creek Avenue.

PHASE 2 IMPROVEMENTS

1. SW on Street “G”, between Street “D” and Street “E”.
2. PW on Streets “D” and “G”.
3. SD on Street “G”, between Street “D” and Street “E”.
4. SD within Lot 12 between Street “G” and Chino Ave.
5. SD on Chino Avenue between Lot 12 and Haven Avenue.
6. FO on Streets “D” and “G”.
7. ST improvements on Street “D” and “G”.



PHASE 3 IMPROVEMENTS



1. SW on Street “C”, between Riverside Drive and Street “H”.
2. PW on Street “C”, between Riverside Drive and Street “H”.
3. RW on Street “C”, between Riverside Drive and Street “H”.
4. SD on Street “C”, between Riverside Drive and Street “H”.
5. FO on Street “C” between Riverside Drive and Street “H”.
6. ST improvements on Riverside Drive, between Haven Avenue and easterly tract boundary.
7. ST improvements on Street “C”, between Riverside Drive and Street “H”.
8. Traffic Signal at Haven Avenue and Future Street.

TO DEVELOPMENT AGREEMENT

FORM OF CERTIFICATE OF NET MDD AVAILABILITY

Pursuant to Section ___ of this Agreement between the City of Ontario, a California municipal corporation, and _____, a _____ company, hereinafter called "OWNER", the terms and definitions of which are hereby incorporated herein by this reference and hereinafter called "Agreement", the City of Ontario hereby certifies based on CITY receipt of payment of OWNER's share of the funding for the Phase 2 Water Improvements, that OWNER is entitled to the following Net MDD Water Availability.

Amount of Net MDD _____ gpm

_____
Scott Ochoa, City Manager

Dated:_____

EXHIBIT "H"
TO DEVELOPMENT AGREEMENT

FORM OF CERTIFICATE OF REGIONAL DIF CREDIT

Pursuant to Section 4.5.2 of this Agreement by and between the City of Ontario and _____, dated _____, 201_, the terms and definitions of which are hereby incorporated herein by this reference and hereinafter called the "Development Agreement', the City of Ontario hereby certifies that OWNER is entitled to the following amount and nature of DIF Credits in the Regional Water DIF Infrastructure Category:

Amount of Credit: $_____

_____
Scott Ochoa, City Manager

Dated: _____

Exhibit "I-1"

ONTARIO RANCH
WATER SUPPLY PHASING PLAN

Phase 2	Water Availability Equivalency	Estimated Net MDD Available[1]
Phase 2 A		
Supply & Storage		
1. 1 - Additional Ground Water Well and Collection lines - Design and Construction	8,250 gpm[2]	**7,750 gpm**[2]
Pipelines (Transmission & Distribution)[2]		
2. 925 Zone Transmission lines – Design and Construction		
3. Temporary Pressure Reducing Station[3] – Design and Construction		
Phase 2B		
Supply & Storage		
4. 1 – Additional Ground Water Well and Collection lines – Design and Construction	10,500 gpm[2]	**9,860 gpm**[2]
5. 1 – 6 million gallon Reservoir – 925 Zone – Design and Construction		

(1) Upon Completion of the construction of all of the improvements described for each Phase a Certificate of Net MDD Availability shall be issued to Developer for the corresponding amount of Net MDD. Net MDD means the maximum daily demand on the potable water supply, net of the water requirements for public schools and parks. The Water Availability Equivalency includes the estimated requirements for public schools and parks. The amount of Net MDD specified is the cumulative amount for which building permits may be issued upon funding of the corresponding and all preceding Phases of improvements.

(2) The ability of a particular development to utilize Net MDD assigned to it by the Developer will require the completion of design and construction of Master-planned potable and recycled water transmission and distribution pipelines for the respective pressure zone. Other factors may include its location, the particular land use and Water Availability Equivalents assigned to it as specified in Exhibit C-2.

(3) Pressure reducing stations are a component of the pipeline transmission and distribution system.

EXHIBIT "I-2"

Available Water Supply - See Exhibit C-1R for Net MDD Available

Table A - Water Demand Equivalents By Land Use

The Ontario Plan	Potable Water			Recycled Water	
Land Use	Water Demand Factor (ADD)		Water Demand Equivalents (WDE)[2]	Recycled Water Demand Factor[1] (ADD)	Recycled Water Demand Of Total Water Demand
	(gpd/du)	(gpd/ac)	(gpm/unit)	(gpd/ac)	(%)
Detached Dwellings (less than 5 units per acre)	544		0.57	900	28%
Detached or Attached Dwellings (between 5 and 11 units per acre)	464		0.48	1,000	21%
Attached Dwellings (between 11 and 25 units per acre)	323		0.34	1,500	18%
High Density Dwellings (25+ units per acre)	152		0.16	1,500	27%
Commercial Lodging	150		0.16	1,700	50%
Retail/Services Uses		2,200	2.29	2,300	51%
Office Uses		3,400	3.54	2,300	40%
Business Park Uses		2,200	2.29	2,200	50%
Industrial Uses		2,000	2.08	2,200	52%
Institutional Use		2,200	2.29	1,600	42%
Parks		1,000	1.04	1,400	58%
Schools		3,500	3.65	1,600	31%

[1]Recycled Water Demands include irrigation for right-of-way (medians and parkways), neighborhood edge, pocket parks, and common areas.

[2] The WDE is based on the Maximum Day Demand (MDD) with a peaking factor of 1.5 in the NMC for all land use categories.

Table B - Example Water Supply Calculation

Land Use	Acres[1] (gross)	Residential Units	WDE Factor (gpm)	Potable MDD (gpm)	Recycled Water ADD (gpm)
Development					
Detached Dwellings (less than 5 units per acre)	1,284	5,061	0.57	2,868	803
Detached or Attached Dwellings (between 5 and 11 units per acre)	369	2,530	0.48	1,223	256
Attached Dwellings (between 11 and 25 units per acre)	194	3,410	0.34	1,147	202
Retail/Services Uses (per acre)[2]	104		2.29	239	166
TOTAL	**1,950**	**11,001**		**5,477**	**1,428**

Three (3) Wells Are required to Support this example, assuming each well produces 2,000 gpm and connection to the Recycled Water System maximizing Recycled Water Use.

[1] Residential Acres are estimated based on the weighted average derived from the average number of units per land use category.

[2] Commercial acreage is calculated from a total square footage of 1,361,000 SF with an average Floor to Area Ratio (FAR) of 0.30 for commercial services in The Ontario Plan.

DISCLOSURE NOTICE
SOUTH ARCHIBALD TRICHLOROETHYLENE PLUME

Dear Property Owner/Developer/Applicant:

The City of Ontario ("City") has approved or will be approving development in the Ontario Ranch area in the next few years, subject to the appropriate and required statutory process. This letter is intended to serve as notice to all potential property owners of the existence of a groundwater plume, known as the South Archibald Trichloroethylene (TCE) Plume which may exist in, under or near owner's property.

The groundwater plume is in an area in the central Chino Basin south of the Pomona Freeway, west of Turner Avenue, east of Grove Avenue, and north of Kimball Avenue. The plume primarily consists of TCE, a discontinued industrial solvent, and is subject to a clean-up under the oversight and direction of the Santa Ana Regional Water Quality Control Board ("Regional Board").

The Regional Board's approved clean-up procedure involves the removal and treatment of groundwater containing TCE via groundwater wells to reduce the plume concentrations and control its migration. In addition, the City is providing potable water supplies for domestic purposes to residences with private domestic wells affected by the plume. Finally, the Regional Board will continue to monitor all impacted areas and private domestic wells to ensure that residents' health and the environment are properly safeguarded. These remedial actions are documented in a Remedial Action Plan approved by the Regional Board in September 2016.

Further and current information may be found on the Regional Board's Geotracker website at https://geotracker.waterboards.ca.gov/profile_report?global_id=T10000004658.

Property owners may wish to include this letter as a part of a Real Estate Transfer Disclosure under California Civil Code Section 1102 et seq.

A. Resolution approving the use of an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (TOP 2050 SEIR);
B. Resolution approving File No. PSPA22-005, an Amendment to the Avenue Specific Plan to: 1) modify the land use designation of Planning Area 4 and apply density modifications to Planning Areas 1B, 2A, 3B, and 5 for consistency with the Ontario Plan 2050 land use plan; 2) apply general modifications throughout the document for clarity; and 3) make exhibit and text updates throughout the document to support the project, for land located at the northwest corner of Archibald Avenue and Ontario Ranch Road.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Operate in a Businesslike Manner
Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in Ontario Ranch

FISCAL IMPACT: There is not a direct fiscal impact associated with this action.

BACKGROUND & ANALYSIS: On February 16, 2007, the City Council approved The Avenue Specific Plan. On January 27, 2010, the Ontario City Council certified The Ontario Plan Environmental Impact Report in conjunction with File No. PGPA06-001 (City Council Resolution No. 2010-006), and on August 16, 2022, the Ontario City Council certified The Ontario Plan 2050 Update Supplemental Environmental Impact Report in conjunction with File No. PGPA20-002 (City Council Resolution No. 2022-129). The Ontario Plan 2050 and associated Environmental Impact Report analyzed the Project site and established guidelines for development, including but not limited to, general land use and intensity (Low-Density Residential – LDR, 2.1 to 5.0 du/ac, Medium-Density Residential – MDR, 11.1 to 25.0 du/ac, and Public School - PS).

On July 14, 2022, the Applicant submitted an application for an amendment to The Avenue Specific

Plan (File No. PSPA22-005), along with an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report. The Addendum document is appended to Attachment B: Addendum Resolution, and the proposed amended Specific Plan is appended to Attachment C: Resolution for File No. PSPA22-005. Lastly, the redlined version of the amended Specific Plan is available for reference and is appended to Attachment D: Planning Commission Back-up.

On February 25, 2025, the Planning Commission conducted a public hearing regarding the Project and related Addendum, and recommended City Council approval by a vote of (4-0).

ANALYSIS: The Specific Plan Amendment consists of exhibit, text changes to accommodate land use and density modifications to Planning Areas 4, 1B, 2A, 3B, and 5, and to bring the Specific Plan's Land Use Plan into consistency with The Ontario Plan 2050 Land Use Plan (see Exhibit B: Existing and Proposed Specific Plan Land Use Plan, Exhibit C: Existing The Ontario Plan 2050 Land Use Plan, and Exhibit D: Proposed Specific Plan Land Use Table, appended to this report as Attachment A: Agenda Report Exhibits).

Major changes to the Specific Plan Land Use Table are summarized as follows:

- Total gross acreage will remain the same and the net acreage has been updated to more accurately reflect existing conditions.
- Total number of dwelling units will increase from 2,981 to 3,753 units and commercial square footage will increase from 130,680 to 335,176 square feet.
- For clarity, each land use within a Planning Area has been provided a designated line on the land use table, whereas previously, no such distinctions were made.
- Adjustments have been made throughout the table to accurately reflect existing conditions and development information for built-out Planning Areas.
- The Land Use Table footnotes have been revised to provide further clarification on certain conditions and restrictions for development of the Specific Plan area, including:
- The realignment of Schaefer Avenue, which creates the need for Planning Area C, as it is under separate ownership from Planning Area 1A.
- The requirement for all acreages to be further defined through tract map surveys.
- The potential need for additional studies to transfer dwelling units between Planning Areas.
- The requirements for and ultimate allowance of density blending between Planning Areas at a rate no higher than 15 percent. If units are blended within a Planning Area or moved between Planning Areas, then Technical Studies for impacts to the Water and Sewer Master Plan Systems will be required as part of the entitlement process.

While the main goal of the Specific Plan Amendment is to bring the Land Use Plan into consistency with The Ontario Plan 2050 Land Use Plan and to provide document clean-up, the Specific Plan Amendment will facilitate the future development of the Specific Plan Area.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan 2050.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the

Policy Plan (general plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

On August 2, 2022, the City Council of the City of Ontario approved and adopted a Development Code Amendment to establish the Chino Airport (CNO) Overlay Zoning District (OZD) and Reference I, Chino Airport Land Use Compatibility Plan (CNO ALUCP). The CNO OZD and CNO ALUCP established the Airport Influence Area for Chino Airport, solely within the City of Ontario, and limits future land uses and development within the Airport Influence Area, as they relate to safety, airspace protection, and overflight impacts of current and future airport activity. The CNO ALUCP is consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the CNO ALUCP. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the CNO ALUCP compatibility factors, including Safety, Airspace Protection, Overflight. As a result, the City Council finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the Chino ALUCP.

ENVIRONMENTAL REVIEW: The Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) (CEQA) and an Addendum to The Ontario Plan 2050 Certified Subsequent Final Environmental Impact Report (SEIR, File No. PGPA) was prepared to determine possible environmental impacts. The addendum analyzed the following environmental categories: aesthetics, agriculture and forestry resources, air quality, biological resources, cultural resources, energy, geology and soils, greenhouse gas emissions, hazards and

hazardous materials, hydrology and water quality, land use and planning, mineral resources, noise, population and housing, public services, recreation, transportation, tribal cultural resources, utilities and service systems, wildfire, and mandatory findings of significance. The addendum compared Project impacts with those identified in the Certified SEIR and found that the Project would not result in: 1) substantially different or increased impacts when compared to those in the Certified SEIR; 2) any new significant impacts not already considered and addressed in the Certified SEIR; or 3) any substantial increase in the severity of, or substantial change in a previously-identified environmental impacts considered and addressed in the Certified SEIR. The Project was found to be consistent with the Certified SEIR and does not necessitate preparation of an additional subsequent or supplemental EIR.

The Addendum included an array of studies and assessments, including: air quality and energy assessment, greenhouse gas assessment, biological resources studies (vegetation, wildlife, Delhi Sands Fly), Phase 1 Environmental Site Assessment, noise analysis, traffic analysis, vehicle miles traveled analysis, and water supply assessment. These appendices are available for public review on the City website at https://www.ontarioca.gov/government/agendas/planning-commission

Notes:
* Realignment of Schaeffer Ave creates the need for PA 1C (APN 021-812-201) as it is owned separately from PA 1A (APN 0218-181-126).
- All acreages approximate- exact acreages will be defined through tract map surveys. Additional studies may be required to transfer these units. See Section 3.1.1 for additional information.
- Density blending will be allowed within Planning Areas within one TOP land use step (i.e. from LDR to LMDR) and between Planning Areas at a rate no higher than 15%. If units are blended within a PA or moved between PA's, then Technical Studies for Impacts to the Water and Sewer Master Plan Systems will be required as part of the entitlement process.

CITY OF ONTARIO PLANNING DEPARTMENT

PLANNING COMMISSION AGENDA REPORT

February 25, 2025

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Email: PlanningDirector@OntarioCA.gov

FILE NO: PSPA22-005

SUBJECT: An amendment to The Avenue Specific Plan to: 1) modify the land use designation of Planning Area 4 and apply density modifications to Planning Areas 1B, 2A, 3B, and 5 for consistency with The Ontario Plan 2050 Land Use Plan; 2) apply general modifications throughout the document for clarity; and, 3) make exhibit and text updates throughout the document to support the Project, for land located at the northwest corner of Archibald Avenue and Ontario Ranch Road; (APNs: 0218-191-04; 0218-191-14; 0218-191-15; 0218-191-16; 0218-191-05; 0218-191-22; 0218-191-20) **Submitted by Richland Communities. City Council action is required.**

PROPERTY OWNER: WSI Land Holdings LLC

RECOMMENDED ACTION: That the Planning Commission consider and adopt a Resolution recommending the City Council approve the use of an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (TOP 2050 SEIR) and adopt a Resolution recommending the City Council approve File No. PSPA22-005, pursuant to the facts and reasons contained in the staff report and attached Resolutions for the Addendum and the Specific Plan Amendment (Attachments A and B, respectively), and subject to the conditions of approval appended to the attached resolution for the Specific Plan Amendment as Attachment B.

BACKGROUND: On February 16, 2007, the City Council approved The Avenue Specific Plan. On January 27, 2010, the Ontario City Council certified The Ontario Plan Environmental Impact Report in conjunction with File No. PGPA06-001 (City Council Resolution No. 2010-006), and on August 16, 2022, the Ontario City Council certified The Ontario Plan 2050 Update Supplemental Environmental Impact Report in conjunction with File No. PGPA20-002 (City Council Resolution No. 2022-129). The Ontario Plan 2050 and associated Environmental Impact Report analyzed the Project site and established guidelines for development, including but not limited to, general land use and intensity (Low-Density Residential – LDR, 2.1 to 5.0 du/ac, Medium-Density Residential – MDR, 11.1 to 25.0 du/ac, and Public School - PS).

On July 14, 2022, the Applicant submitted an Application for an amendment to The Avenue Specific Plan (File No. PSPA22-005) to: 1) modify the land use designation of Planning Area 4 and apply density modifications to Planning Areas 1B, 2A, 3B, and 5 for consistency with The Ontario Plan 2050 Land Use Plan; 2) apply general modifications

throughout the document for clarity; and, 3) make exhibit and text updates throughout the document to support the Project. The Specific Plan Amendment was submitted in association with Tentative Tract Map No. 20572 (File No. PMTT23-002) and a Development Agreement (File No. PDA23-003). The Tentative Tract Map and Development Agreement are currently under review and will be considered separately by the appropriate hearing bodies.

On November 18, 2024, the Development Advisory Board conducted a public hearing regarding the related Tentative Tract Map No. 20572 (File No. PMTT23-002) and recommended Planning Commission approval, subject to the added condition that the Applicant work with Staff on required revisions to the Map and Development Agreement prior to Planning Commission consideration.

PROJECT SETTING: The Project site consists of land located within The Avenue Specific Plan area, which is bound by Schaefer Avenue to the north, Carpenter Avenue to the west, Ontario Ranch Road and Old Edison Road to the south, and Haven Avenue to the east, which is depicted in Exhibit A: Project Location Map. The site is comprised of a mix of developed residential and commercial land uses, vacant and unimproved land, and agricultural dairy and plant nursery uses.

The Project site is surrounded by agricultural, dairy, and residential land uses and vacant land to the north, agricultural uses and vacant land to the west, residential land uses and vacant land to the east, and agricultural and residential land uses and vacant land to the south. The existing surrounding land uses, zoning, and Policy Plan (general plan) and specific plan land use designations are summarized in Table 1: Surrounding Zoning & Land Uses.

PROJECT ANALYSIS:

The Specific Plan Amendment consists of exhibit and text changes to accommodate land use and density modifications to Planning Areas 4, 1B, 2A, 3B, and 5, to bring the Specific Plan's Land Use Plan into consistency with The Ontario Plan 2050 Land Use Plan (see Exhibit B: Existing and Proposed Specific Plan Land Use Plan, Exhibit C: Existing The Ontario Plan 2050 Land Use Plan, and Exhibit D: Proposed Specific Plan Land Use Table). The proposed changes to the Specific Plan document are appended to Attachment B: Resolution for File No. PSPA22-005 of this agenda report as Attachment A: File No. PSPA22-005 Redlined Specific Plan Document.

Major changes to the Specific Plan Land Use Table are summarized as follows:

- Total gross acreage will remain the same and the net acreage has been updated to more accurately reflect existing conditions.
- Total number of dwelling units will increase from 2,981 to 3,753 units and commercial square footage will increase from 130,680 to 335,176 square feet.

- For clarity, each land use within a Planning Area has been provided a designated line on the land use table, whereas previously, no such distinctions were made.
- Adjustments have been made throughout the table to accurately reflect existing conditions and development information for built-out Planning Areas.
- The Land Use Table footnotes have been revised to provide further clarification on certain conditions and restrictions for development of the Specific Plan area, including:

    - The realignment of Schaefer Avenue, which creates the need for Planning Area C, as it is under separate ownership from Planning Area 1A.
    - The requirement for all acreages to be further defined through tract map surveys.
    - The potential need for additional studies to transfer dwelling units between Planning Areas.
    - The requirements for and ultimate allowance of density blending between Planning Areas at a rate no higher than 15 percent. If units are blended within a Planning Area or moved between Planning Areas, then Technical Studies for impacts to the Water and Sewer Master Plan Systems will be required as part of the entitlement process.

While the main goal of the Specific Plan Amendment is to bring the Land Use Plan into consistency with The Ontario Plan 2050 Land Use Plan and to provide document clean-up, the Amendment will facilitate future development through forthcoming Tentative Tract or Parcel Maps and Development Agreements. To date, the Applicant has submitted Tentative Tract Map No. 20572, an "A Map" to subdivide Planning Area 5 into seven numbered lots and fourteen lettered lots to facilitate future subdivision and development. The Applicant has requested additional time to work with staff to address outstanding issues with the proposed map.

PUBLIC NOTIFICATION: The subject Application was advertised as a public hearing in at least one newspaper of general circulation in the City of Ontario (the Inland Valley Daily Bulletin newspaper). In addition, notices were mailed to all owners of real property located within a minimum of 600 feet of the exterior boundaries of the Project site, as shown on the records of the County Assessor.

CORRESPONDENCE: As of the preparation of this Agenda Report, Planning Department staff has not received any written or verbal communications from the owners or occupants of properties surrounding the Project site or from the public in general, regarding the subject Application.

AGENCY/DEPARTMENT REVIEWS: Each City agency/department has been provided the opportunity to review and comment on the subject Application and recommend conditions of approval to be imposed upon the Application. At the time of the Resolution preparation, recommended conditions of approval were provided and are appended

to the attached Specific Plan Amendment (File No. PSPA22-005) Resolution as Attachment A.

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

On August 2, 2022, the City Council of the City of Ontario approved and adopted a Development Code Amendment to establish the Chino Airport (CNO) Overlay Zoning District (OZD) and Reference I, Chino Airport Land Use Compatibility Plan (CNO ALUCP). The CNO OZD and CNO ALUCP established the Airport Influence Area for Chino Airport, solely within the City of Ontario, and limits future land uses and development within the Airport Influence Area, as they relate to safety, airspace protection, and overflight impacts of current and future airport activity. The CNO ALUCP is consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the CNO ALUCP. As the recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the CNO ALUCP compatibility factors, including Safety, Airspace Protection, Overflight. As a result, the Planning Commission finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the Chino ALUCP.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan

(General Plan), and City Council Priorities components of The Ontario Plan 2050 (TOP 2050). More specifically, the goals and policies of TOP 2050 that are furthered by the proposed Project are as follows:

(1) City Council Goals

- Operate in a Businesslike Manner
- Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in Ontario Ranch

(2) Governance

Decision Making

Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

- G1-1 Consistency with Policies. We require that staff recommendations to the City Council be consistent with adopted City Council Priorities (Goals and Objectives) and The Policy Pan.

- G1-2 Long-term Benefit. We require decisions to demonstrate and document how they add value to the community and support the Ontario Vision.

(3) Policy Plan (General Plan)

Land Use Element

Goal LU-1 Balance: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

- LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

- LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

Goal LU-2 Compatibility: Compatibility between a wide range of uses and a resultant urban patterns and forms.

- LU-2.1 Land Use Decisions. We minimize adverse impacts on adjacent properties when considering land use and zoning requests.

Housing Element

Goal H-2 Housing Supply & Diversity: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

- H-2.4 Ontario Ranch. We support a premier lifestyle community in the Ontario Ranch, distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.

Community Design Element

Goal CD-2 Design Quality: A high level of design quality resulting in neighborhoods, public spaces, parks, and streetscapes that are attractive, safe, functional, human-scale, and distinct.

- CD-2.2 Neighborhood Design. We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as:

    1. A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services;

    2. Varied parcel sizes and lot configurations to accommodate a diversity of housing types;

    3. Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access;

    4. Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and

    5. Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.

- CD-2.13 Entitlement Process. We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (general plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

ENVIRONMENTAL REVIEW: The Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) (CEQA) and an Addendum to The Ontario Plan 2050 Certified Subsequent Final Environmental Impact Report (SEIR, File No. PGPA) was prepared to determine possible environmental impacts. The addendum analyzed the following environmental categories: aesthetics, agriculture and forestry resources, air quality, biological resources, cultural resources, energy, geology and soils, greenhouse gas emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, noise, population and housing, public services, recreation, transportation, tribal cultural resources, utilities and service systems, wildfire, and mandatory findings of significance. The addendum compared Project impacts with those identified in the Certified SEIR and found that the Project would not result in: 1) substantially different or increased impacts when compared to those in the Certified SEIR; 2) any new significant impacts not already considered and addressed in the Certified SEIR; or 3) any substantial increase in the severity of, or substantial change in a previously-identified environmental impacts considered and addressed in the Certified SEIR. The Project was found to be consistent with the Certified SEIR and does not necessitate preparation of an additional subsequent or supplemental EIR.

The Addendum included an array of studies and assessments, including: air quality and energy assessment, greenhouse gas assessment, biological resources studies (vegetation, wildlife, Delhi Sands Fly), Phase 1 Environmental Site Assessment, noise analysis, traffic analysis, vehicle miles traveled analysis, and water supply assessment. These appendices are on available for public review on the City website at https://www.ontarioca.gov/government/agendas/planning-commission

TECHNICAL APPENDIX:

Table 1: Surrounding Zoning and Land Uses

	Existing Land Use	***Policy Plan Designation***	***Zoning Designation***	***Specific Plan Land Use***
Site	Residential, Commercial Agricultural, Dairy, Vacant Land	Low Density Residential (LDR, 2.1-5.0 du/ac), Low-Medum Density Residential (LMDR, 5.1-11 du/ac), Medium Density Residential (MDR, 11.1-25 du/ac), Public School (PS), General Commercial (GC), Neighborhood Commercial (NC), Open Space – Non Recreation (OS-NR)	The Avenue Specific Plan	Low Density Residential, Low Medium Density Residential, Medium Density Residential, Retail/Commercial, School, Park, SCE Easement, and Storm Drain Easement

Notes:
* Realignment of Schaeffer Ave creates the need for PA 1C (APN 021-812-201) as it is owned separately from PA 1A (APN 0218-181-126).
- All acreages approximate- exact acreages will be defined through tract map surveys. Additional studies may be required to transfer these units. See Section 3.1.1 for additional information.
- Density blending will be allowed within Planning Areas within one TOP land use step (i.e. from LDR to LMDR) and between Planning Areas at a rate no higher than 15%. If units are blended within a PA or moved between PA's, then Technical Studies for Impacts to the Water and Sewer Master Plan Systems will be required as part of the entitlement process.

Attachment B:
Resolution for File No. PSPA22-005

(Document to follow this page)

RESOLUTION NO. PC25-012

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO RECOMMENDING THE CITY COUNCIL APPROVE THE USE OF AN ADDENDUM TO THE ONTARIO PLAN 2050 SUPPLEMENTAL ENVIRONMENTAL IMPACT REPORT, PURSUANT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NO. PSPA22-005.

WHEREAS, RICHLAND COMMUNITIES (hereinafter referred to as "Applicant") has filed an Application for the approval of a Specific Plan Amendment, File No. PSPA22-005, which consists of an amendment to The Avenue Specific Plan to: 1) modify the land use designation of Planning Area 4 and apply density modifications to Planning Areas 1B, 2A, 3B, and 5 for consistency with The Ontario Plan 2050 Land Use Plan; 2) apply general modifications throughout the document for clarity; and, 3) make exhibit and text updates throughout the document to support the Project, for land located at the northwest corner of Archibald Avenue and Ontario Ranch Road, in the City of Ontario, California (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the City of Ontario certified the Environmental Impact Report prepared for The Ontario Plan and associated Statement of Overriding Considerations, and issued Resolution No. 2010-003; and

WHEREAS, the City of Ontario adopted the Policy Plan (General Plan) as part of the component framework for The Ontario Plan on January 27, 2010, and issued Resolution No. 2010-004; and

WHEREAS, the City of Ontario certified the Supplemental Environmental Impact Report (SEIR), for the General Plan Amendment for The Ontario Plan 2050 Technical Update on August 16, 2022; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the certified Supplemental Environmental Impact Report, an Addendum to the Certified SEIR (hereinafter referred to as "SEIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the SEIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified SEIR, and that the Certified SEIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified SEIR was appropriate; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the Planning Commission is the recommending authority for the requested approval to construct and otherwise undertake the Project; and

WHEREAS, the Planning Commission has reviewed and considered the SEIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent supplemental EIR have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the SEIR Addendum for the Project is on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, is available for inspection by any interested person at that location and is, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending authority for the Project, The Planning Commission has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of this Project were reviewed in conjunction with an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of Project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The SEIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the Project may result in significant environmental impacts.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified SEIR that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared, that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified SEIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified SEIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified SEIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 and 2, above, the Planning Commission hereby recommends the City Council finds that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified SEIR, and does hereby approve the SEIR Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 4: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the Applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 5: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 6: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 25th day of February 2025, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Nicola Ricci
Planning Commission Chairman

ATTEST:

Henry K. Noh
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA)
COUNTY OF SAN BERNARDINO)
CITY OF ONTARIO)

I, Gwen Berendsen, Secretary Pro Tempore of the Planning Commission of the City of Ontario, DO HEREBY CERTIFY that foregoing Resolution No. PC25-012, was duly passed and adopted by the Planning Commission of the City of Ontario at their regular meeting held on February 25, 2025, by the following roll call vote, to wit:

AYES: DeDiemar, Gage, Lampkin, Ricci

1.0 INTRODUCTION

1.0 INTRODUCTION

1.1 OVERVIEW

The Avenue Specific Plan was approved by the City of Ontario (City) in 2007, with subsequent Specific Plan Amendments approved in 2010, 2014, 2017, and 2020. The current (2020) The Avenue Specific Plan (2020 Specific Plan, Original Project) encompasses approximately 568.1 gross acres located within the City of Ontario. The Original Project site (the Specific Plan Area) is bound by Schaefer Avenue to the north, Haven Avenue to the east, Ontario Ranch Road to the south, and Carpenter Avenue to the west. Location and boundaries of the Original Project are presented at Figures 1.1-1 and 1.1-2, respectively.

Subsequent to approval of the Original Project, the City of Ontario adopted and implemented The Ontario Plan 2050 (TOP 2050) and TOP 2050 Policy Plan (the City General Plan). The Original Project Land Use designations are inconsistent with TOP 2050 Policy Plan Land Use designations for the subject site. The proposed Avenue Specific Plan, 2024 Amendment (Modified Project) evaluated herein brings the Original Project Land Uses into conformance with TOP 2050 Policy Plan Land Use Plan. Land Use designations for the subject site under the Original Project, TOP 2050 Policy Plan, and the proposed Modified Project are compared at Figure 1.1-3.

Figure 1.1-3
Land Use Plan Comparison

The Modified Project land uses and development concepts have been designed to be consistent with land uses and development concepts for the subject site reflected in TOP 2050. Impacts of TOP 2050 have been evaluated and addressed in *The Ontario Plan 2050 Certified SEIR* (TOP 2050 SEIR, Certified SEIR, SCH No. 2021070364). This Addendum compares and contrasts impacts of the Modified Project with impacts identified in the Certified SEIR. As substantiated herein, the Modified Project would not result in substantially different or substantially increased impacts when compared to impacts considered and addressed in the Certified SEIR.

This Addendum to the Certified SEIR substantiates that the proposed Modified Project evaluated herein would not result in any new significant impacts not considered and addressed in the Certified SEIR; nor would there be any substantial increase in the severity of, or substantial change in any previously-identified environmental impacts considered and addressed in the Certified SEIR.

1.1.2 Original Project and Modified Project Development Concepts Compared

The primary effect of the proposed Modified Project would be to increase the intensity, and total amount, of residential and commercial/retail development within the Specific Plan Area. More specifically:

- Under the Original Project, maximum residential development would total 2,981 dwelling units (all types). Under the Modified Project, maximum residential development would total 3,753 dwelling units[1] (all types), an increase of 772 dwelling units or approximately 26 percent.

- Under the Original Project, maximum commercial development would total 130,680 square feet (all types). Under the Modified Project, maximum commercial

[1] There is the potential for the 10.89-acre school site portion of Planning Area 5 to transition to residential uses, should the school district determine that this site is not needed for school development. If this is the case, these 10.89 acres would be developed with up to 50 residential units, bringing the total Specific Plan residential unit count to 3,803.

development would total 335,176 square feet (all types), an increase of 204,496 square feet or approximately 156 percent.[2]

It is noted here that the proposed Modified Project land use revisions and resulting residential and commercial development would affect only those portions of the Specific Plan Area located west of Archibald Avenue. East of Archibald Avenue, properties within the Specific Plan Area are fully developed or are currently under development.

Within this Addendum, the Modified Project is assumed to be completed and fully occupied by 2025 – the Modified Project Opening Year. This Addendum in all instances evaluates likely maximum impact scenarios. Should future development proposed within the Modified Project area differ substantially from the development concept analyzed herein, the Lead Agency would comply with CEQA in consideration of those proposals. Ultimate scope and configuration of the Modified Project uses would be as approved by the City.

1.2 CALIFORNIA ENVIRONMENTAL QUALITY ACT DOCUMENTATION

California Environmental Quality Act (CEQA) documentation for the Original Project is presented in *The Ontario Plan 2050* [TOP 2050] *Supplemental Environmental Impact Report,* State Clearinghouse No. 2021070364 (TOP 2050 SEIR, Certified SEIR). This Addendum to the Certified SEIR (Addendum) compares the impacts that were identified in the Certified SEIR with the anticipated impacts of the proposed Modified Project. This Addendum substantiates that the proposed Modified Project would not result in new significant impacts, substantially different impacts, or impacts that would be substantially more severe than those evaluated and addressed in the Certified SEIR.

1.3 ADDENDUM PURPOSE AND SUMMARY

The focus and purpose of this document is to determine if the Modified Project described herein would result in new or substantially different environmental impacts than those considered and addressed in the Certified SEIR. To these ends, this Addendum defines,

[2] For the purposes of analysis, all commercial uses are assumed to be operational 24 hours per day, 7 days per week.

describes, compares, and contrasts potential environmental impacts of the Modified Project in the context of the environmental impacts assessed in the Certified SEIR. In so doing, this Addendum substantiates consistency with applicable California Environmental Quality Act Guidelines (*CEQA Guidelines*) provisions addressing preparation of an Addendum to a previously-Certified EIR.

As presented at *CEQA Guidelines* Section 15164, an Addendum to a Certified EIR may be prepared if only minor technical changes or additions are necessary and none of the conditions described in Section 15162, calling for the preparation of a subsequent or supplemental EIR, have occurred. Further, Public Resources Code Section 21166 prohibits preparation of a subsequent or supplemental EIR for a Certified EIR unless substantial project changes are proposed requiring major revisions to the Certified EIR; a substantial change in circumstances has occurred requiring major revisions to the Certified EIR; or new information becomes available requiring major revisions to the Certified EIR. As supported by the information provided here, none of these conditions apply to the Modified Project. This Addendum to the Certified SEIR fulfills CEQA documentation requirements for the Modified Project.

1.4 INTENDED USE OF THIS ADDENDUM

The City of Ontario (City) is the Lead Agency for the purposes of CEQA because it has the principal responsibility and authority for consideration of discretionary actions and permitting for the Modified Project. As the Lead Agency, the City is also responsible for analyzing the Modified Project's potential environmental impacts.

The Lead Agency will employ this Addendum in its evaluation of potential environmental impacts resulting from, or associated with, approval and implementation of the Modified Project. This Addendum may also be used by various Responsible Agencies, e.g., Air Quality Management District(s), Regional Water Quality Control Board(s), *et al.*; as well as utilities and service providers when such entities issue discretionary permits necessary to carry out the Modified Project.

For example, if the Modified Project would require discretionary permits from the South Coast Air Quality Management District (SCAQMD), this Addendum would serve as the environmental assessment for such permits (please refer to California Code of Regulations, Section 15050).

This Addendum in all instances evaluates likely maximum impact scenarios. Should future development proposals within the Modified Project area differ substantially from the development concepts analyzed herein, the Lead Agency would comply with CEQA in consideration of those proposals. Ultimate scope and configuration of the Modified Project uses would be as approved by the City through the City development review processes.

1.5 DOCUMENT ORGANIZATION

This Addendum is presented in five sections, as follows:

- **Section 1.0**, *Introduction*, provides an overview of the Modified Project, its context, and environmental documentation applicable to the proposed development.

- **Section 2.0**, *Modified Project - Description*, presents the proposed Modified Project in greater detail.

- **Section 3.0**, *Environmental Checklist*, presents the analysis of potential environmental impacts of the Modified Project. The analysis considers potential environmental impacts of the Modified Project relative to impacts identified in the Certified SEIR.

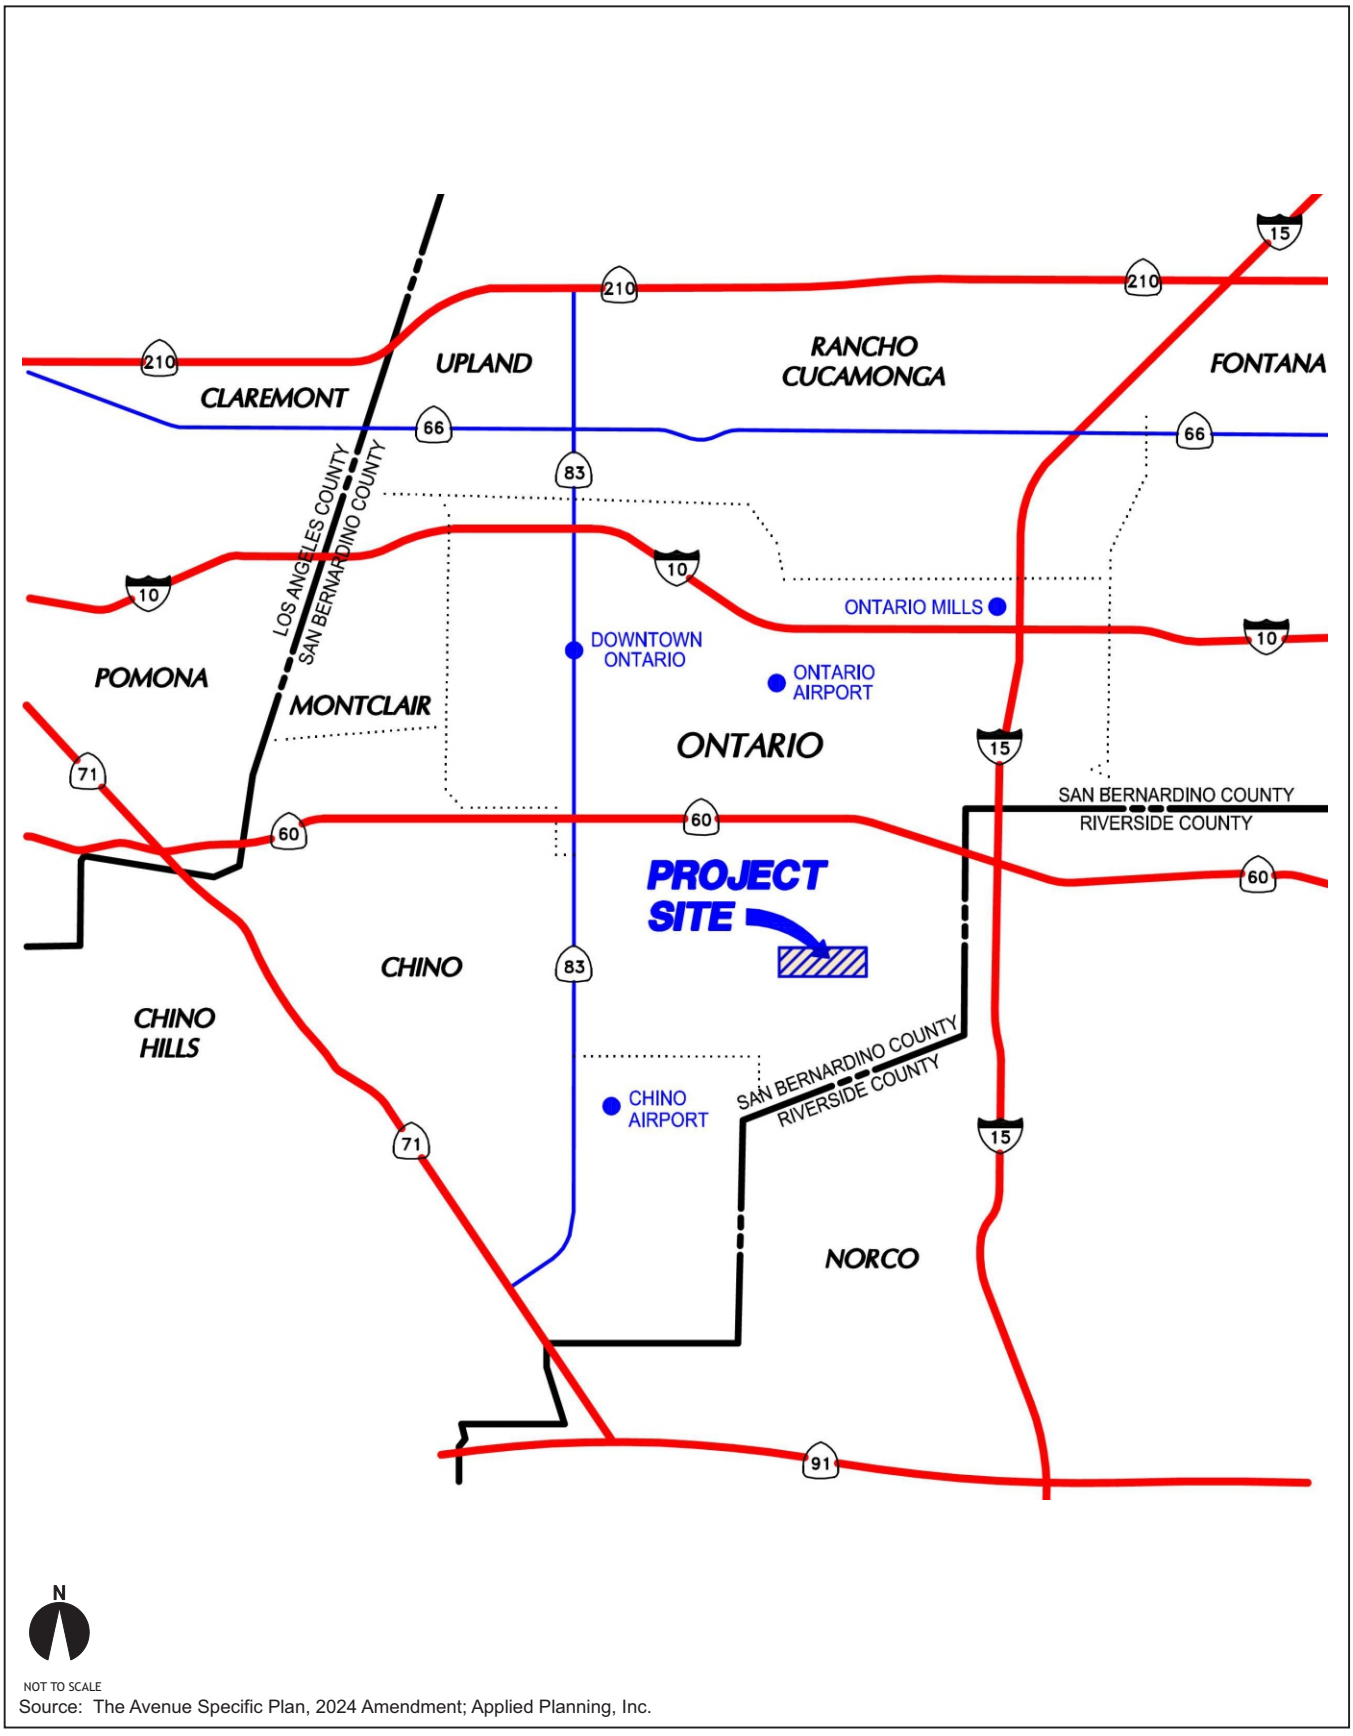
- **Section 4.0**, *Determination*, presents the determination regarding the appropriate environmental document for the Modified Project.

- **Section 5.0**, *Mitigation Summary*, summarizes mitigation from the Certified SEIR, and presents any newly required mitigation or modified mitigation.

1.6 CONCLUSION

This Addendum substantiates that implementation and operation of the proposed Modified Project described and evaluated herein would not result in any significant new, different, additional, or substantially increased environmental impacts than were previously considered and addressed in the Certified SEIR.

2.0 MODIFIED PROJECT - DESCRIPTION



2.0 MODIFIED PROJECT - DESCRIPTION

2.1 OVERVIEW

2.1.1 Original Project, Modified Project, and TOP 2050

The Avenue Specific Plan was approved by the City of Ontario (City) in 2007, with subsequent Specific Plan Amendments approved in 2010, 2014, 2017, and 2020. The current (2020) The Avenue Specific Plan (2020 Specific Plan, Original Project) encompasses approximately 568.1 gross acres located within the City of Ontario. The Original Project site (the Specific Plan Area) is bound by Schaefer Avenue to the north, Haven Avenue to the east, Ontario Ranch Road to the south, and Carpenter Avenue to the west. Location and boundaries of the Project are presented at Figures 2.1-1 and 2.1-2, respectively.

Subsequent to approval of the Original Project, the City of Ontario adopted and implemented The Ontario Plan 2050 (TOP 2050) and TOP 2050 Policy Plan (the City General Plan). The Original Project Land Use designations are inconsistent with TOP 2050 Policy Plan Land Use designations for the subject site. The proposed Modified Project evaluated herein brings the Original Project Land Uses into conformance with TOP 2050 Policy Plan Land Use Plan. Land Use designations for the subject site under the Original Project, TOP 2050 Policy Plan, and the proposed Modified Project are compared at Figure 2.1-3.

Figure 2.1-3
Land Use Plan Comparison

2.1.2 Original Project and Modified Project Development Concepts Compared

A comparison of the Original Project and Modified Project development concepts is presented at subsequent Table 2.1-1. As indicated at Table 2.1-1, the primary effect of the proposed Modified Project would be to increase the intensity, and total amount, of residential and commercial/retail development within the Specific Plan Area. More specifically:

- Under the Original Project, maximum residential development would total 2,981 dwelling units (all types). Under the Modified Project, maximum residential development would total 3,753 dwelling units[1] (all types), an increase of 772 dwelling units or approximately 26 percent.

- Under the Original Project, maximum commercial development would total 130,680 square feet (all types). Under the Modified Project, maximum commercial development would total 335,176 square feet (all types), an increase of 204,496 square feet or approximately 156 percent.[2]

It is noted here that the proposed Modified Project land use revisions and resulting residential and commercial development would affect only those portions of the Specific Plan Area located west of Archibald Avenue. East of Archibald Avenue, properties within the Specific Plan Area are fully developed or are currently under development.

2.1.3 Opening Year

For the purposes of this analysis, buildout of the Modified Project is assumed to be completed and fully occupied by 2026 – the Modified Project Opening Year.

[1] There is the potential for the 10.89-acre school site portion of Planning Area 5 to transition to residential uses, should the school district determine that this site is not needed for school development. If this is the case, these 10.89 acres would be developed with up to 50 residential units, bringing the total Specific Plan residential unit count to 3,803.

[2] For the purposes of analysis, all commercial uses are assumed to be operational 24 hours per day, 7 days per week.

2.1.4 TOP 2050 SEIR as Basis for Addendum Analysis

The Modified Project land uses and development concepts have been designed to be consistent with land uses and development concepts for the subject site reflected in TOP 2050. Impacts of TOP 2050 have been evaluated and addressed in *The Ontario Plan 2050 Certified SEIR* (TOP 2050 SEIR, Certified SEIR, SCH No. 2021070364). By extension, impacts of The Avenue Specific Plan as amended under the Modified Project would be consistent with impacts considered and addressed in TOP 2050 SEIR. As substantiated herein, development of The Avenue Specific Plan as amended under the Modified Project would not result in substantially different or substantially increased impacts when compared to impacts considered addressed in TOP 2050 SEIR. This analysis of potential environmental impacts of The Avenue Specific Plan, 2024 Amendment appropriately comprises an Addendum to TOP 2050 SEIR.

This Addendum in all instances evaluates likely maximum impact scenarios. Should future development proposals within the Modified Project area differ substantially from the development concepts analyzed herein, the Lead Agency would comply with CEQA in consideration of those proposals. Ultimate scope and configuration of the Modified Project uses would be as approved by the City through the City development review processes.

Sources: *The Avenue Specific Plan, 2024 Amendment;* City of Ontario Planning Department.
Notes: * There is the potential for the 10.89-acre school site portion of Planning Area 5 to transition to residential uses, should the school district determine that this site is not needed for school development. If this is the case, these 10.89 acres would be developed with up to 50 residential units, bringing the total Specific Plan residential unit count to 3,803.

2.2 Existing Conditions

2.2.1 Existing Land Uses and Land Use Designations

Existing land uses and land use designations for the Modified Project site and adjacent properties are summarized at Table 2.2-1. Existing land uses are illustrated at Figure 2.2-1. Existing Policy Plan Land Use and Zoning designations are illustrated at Figures 2.2-2 and 2.2-3, respectively.

Table 2.2-1
Existing Land Uses and Land Use Designations

	Existing Land Use	Policy Plan Designation(s)	Zoning Designation
Modified Project Site	**East of Archibald Avenue:** Developed/developing Specific Plan residential uses. **West of Archibald Avenue:** Agricultural and dairy farming uses; vacant disturbed property. Additionally, this area is traversed by the Cucamonga Creek flood channel (N – S alignment) and a Southern California Edison (SCE) easement (NE – SW alignment).	Low Density Residential, Low Medium Density Residential, Medium Density Residential, Public School, Commercial, Open Space-Parkland, Open Space: Non-Recreation	The Avenue Specific Plan (November 2020)
North	**East of Archibald Avenue:** Developed/developing Specific Plan residential uses. **West of Archibald Avenue:** Stormwater detention/groundwater recharge basins; Industrial uses; Cucamonga Creek flood channel (N – S alignment), Deer Creek flood control channel (NE – SW).	Low Density Residential, Open Space: Non-Recreation	West Haven Specific Plan, Countryside Specific Plan
East	Residential uses (existing and under construction); vacant/disturbed properties.	Mixed-Use	Rich Haven Specific Plan
South	Residential uses (existing and under construction); vacant/disturbed properties.	Low Density Residential, Medium Density Residential, Public School, Open Space: Non-Recreation	Parkside Specific Plan, Grand Park Specific Plan
West	Agricultural, dairy farming, and vacant disturbed properties.	Low Density Residential, Medium Density Residential, Open Space: Non-Recreation	Specific Plan with Agricultural and Affordable Housing Overlays

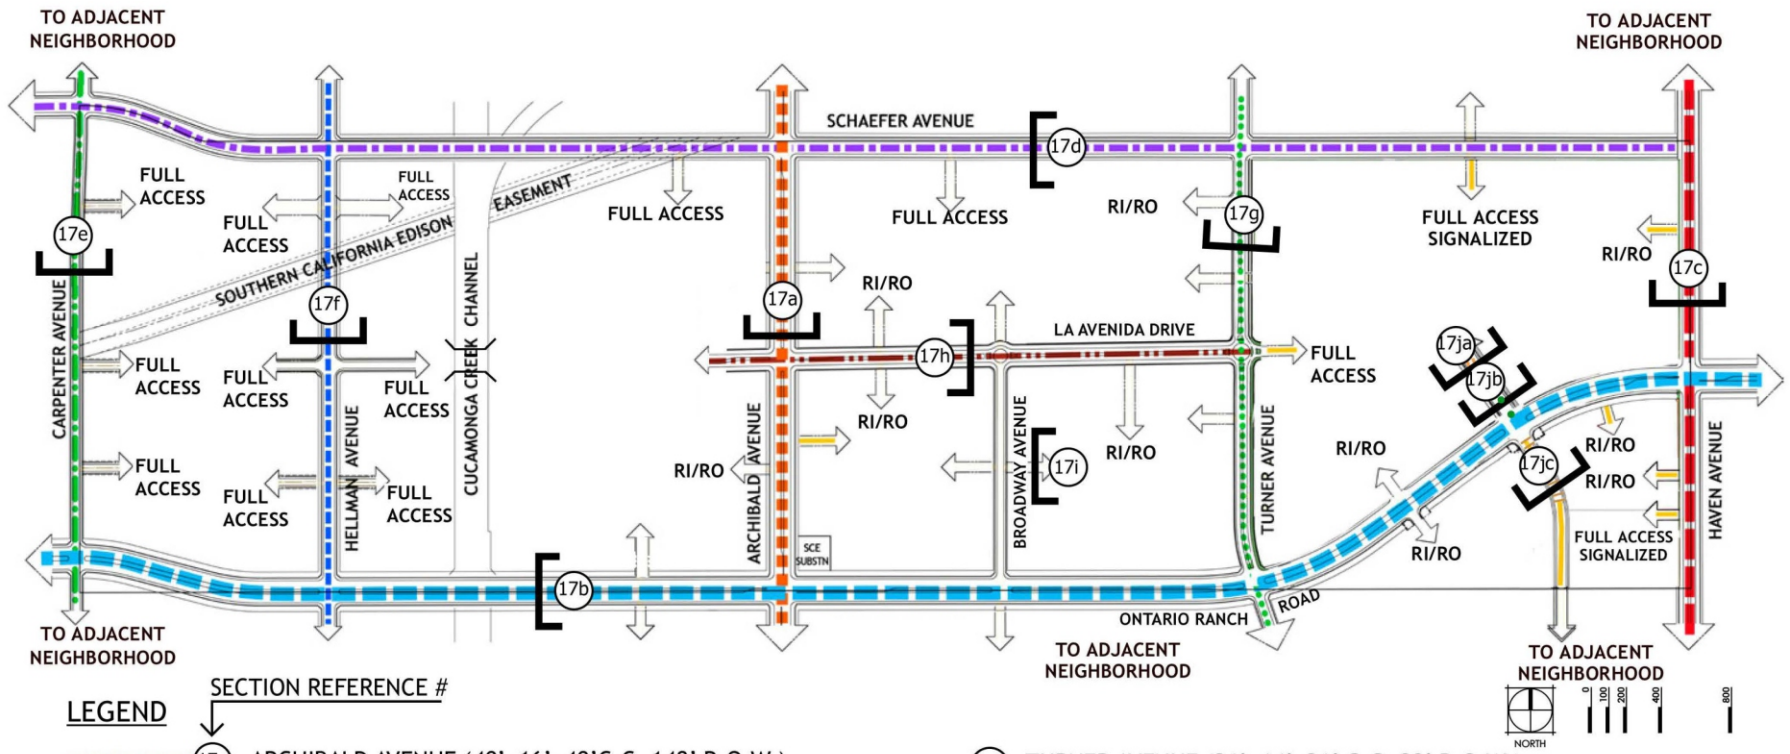
Existing Zoning Designations

2.3 DEVELOPMENT CONCEPT

Development implemented under the Modified Project would be required to conform to provisions of The Avenue Specific Plan, 2024 Amendment document (2024 SPA). The 2024 SPA is provided at Appendix A of this Addendum. In instances where the 2024 SPA is silent, development proposals would be required to conform to applicable provisions of the City Development Code.

2.3.1 Site Design/Architectural Concepts



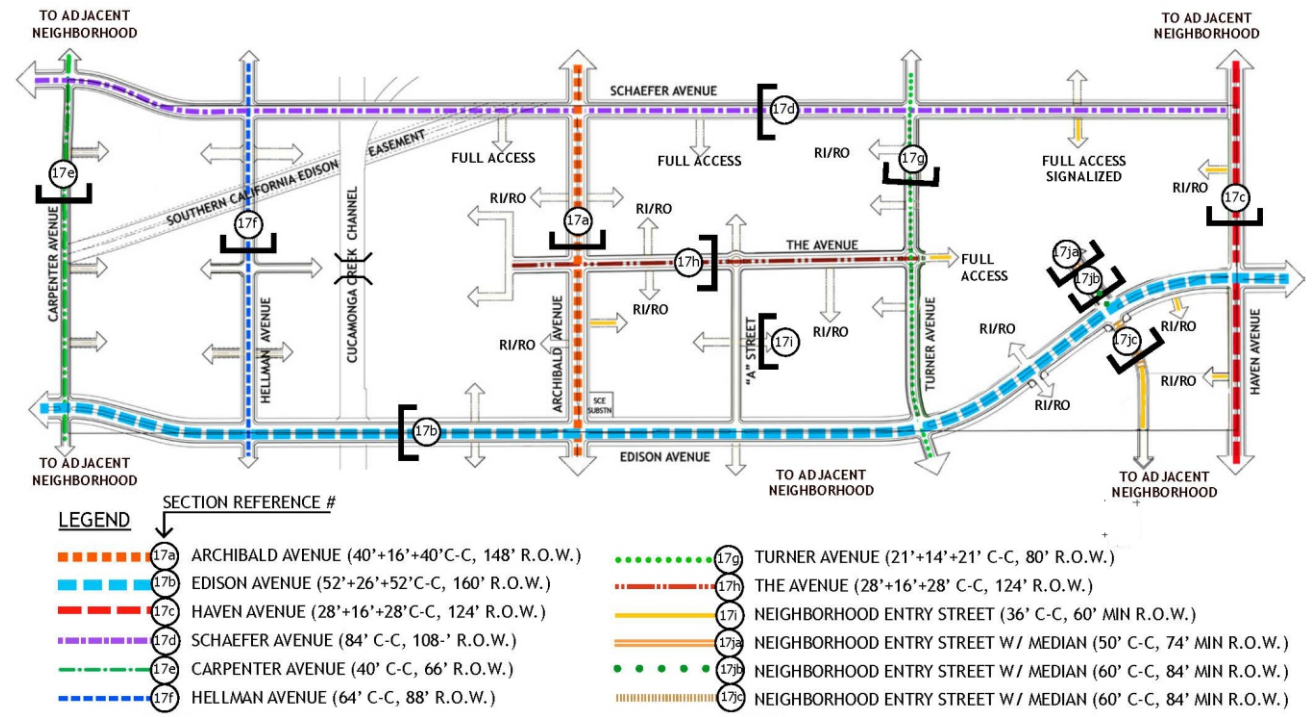
The Modified Project considered herein would implement residential, commercial/retail parks/open space, and public school uses. All Modified Project development proposals would be required to conform to requirements and implement guidance articulated at 2024 SPA Section 5, *Development Regulations*; and Section 6, *Design Guidelines*. All Modified Project final site plans and building designs would be subject to City review and approval, to include consistency analysis with applicable provisions of the 2024 SPA.

2.3.2 Access and Circulation

2.3.2.1 Area Roadways and Site Access

Regional access to the City and the Modified Project area is provided by State Route 60 (E – W) and Interstate 15 (N – S). State Route 60 (SR-60) interchanges with Interstate 15 (I-15) approximately 2.0 miles northeast of the Modified Project site. The Modified Project site is bounded by Schaefer Avenue to the north, Haven Avenue to the east, Ontario Ranch Road to the south, and Carpenter Avenue (alignment) to the west. Archibald Avenue traverses the western portion of the site along a north – south alignment.

Access within the Modified Project site would be provided by internal roads connecting the various land uses. Roadways providing access to and within the Modified Project would be constructed pursuant to the 2024 SPA specifications and consistent with City Conditions of Approval. The Modified Project Access and Circulation Concept is presented at Figure 2.3-1. For illustrative purposes, the Original Project and Modified Project Access and Circulation Concepts are compared at Figure 2.3-2. Please refer also to 2024 SPA Section 4.1, *Master Plan of Circulation*.



NOTE: C-C = Curb-to-Curb; R.O.W. = Right-of-Way; The location of access points is conceptual. Precise locations will be determined as part of the tract map process. The Neighborhood Entry Streets at the westerly termination of the Avenue adjacent to the school site shall be 40' C-C, 66' R.O.W. While the alignment of roads is conceptual, The Avenue shall maintain the straight, linear configuration. *The intersection legs to the north and south of Schaefer Avenue shall be aligned. Final location of the intersection shall be determined with approval of the maps for developments on the north and south of Schaefer Avenue. No sidewalk improvements on the north side of Schaefer Avenue between Haven Avenue and Hellman Avenue.

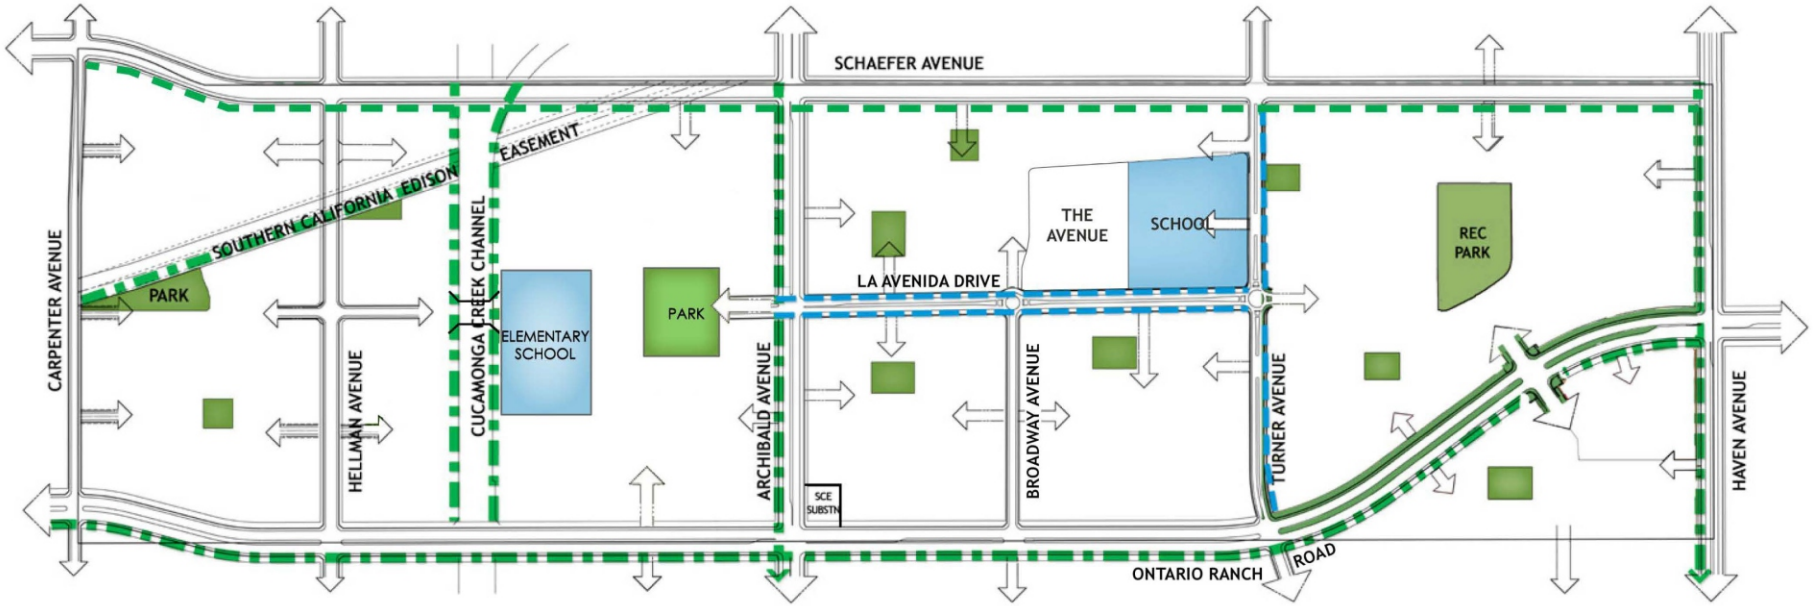
Figure 2.3-2
Circulation Plan Comparison

2.3.2.2 Alternative Transportation Modes

Bicycle and Pedestrian Access



The Modified Project would construct multipurpose trail improvements consistent with improvements proposed under the City of Ontario Multipurpose Trails and Bikeway Corridor Plan (Multipurpose Trails Plan). The Modified Project improvements would connect with the encompassing Multipurpose Trails Plan system.

Within the Modified Project site, enhanced pedestrian sidewalks would provide internal connection between land uses. Additionally, streets would be constructed with sidewalks, facilitating pedestrian access and inter-connectivity between land uses. Trails and pedestrian access improvements that would be constructed by the Modified Project are illustrated at Figure 2.3-3. For illustrative purposes, the Original Project and Modified Project Multipurpose Trails and Pedestrian Access Plans are compared at Figure 2.3-4. Please refer also to 2024 SPA Section 4.1, *Pedestrian/Bicycle Trails Connectivity.*

Bus Service

Bus service is available to the City via Omnitrans and the Riverside Transit Authority (RTA). Bus routes currently do not provide proximate service (within one-quarter mile) of the Modified Project site.

Transit service providers periodically review and update schedules and routes to address ridership, budget, and community demands. The Applicant and City would coordinate Project final designs with Omnitrans and RTA to evaluate the potential for provision of bus services and bus amenities serving the Modified Project site. Omnitrans bus routes and schedules can be accessed at: https://omnitrans.org/plan-a-trip/routes-schedules. RTA bus routes and schedules can be accessed at: https://www.riversidetransit.com/index.php/riding-the-bus/maps-schedules.

Trail Master Plan Comparison

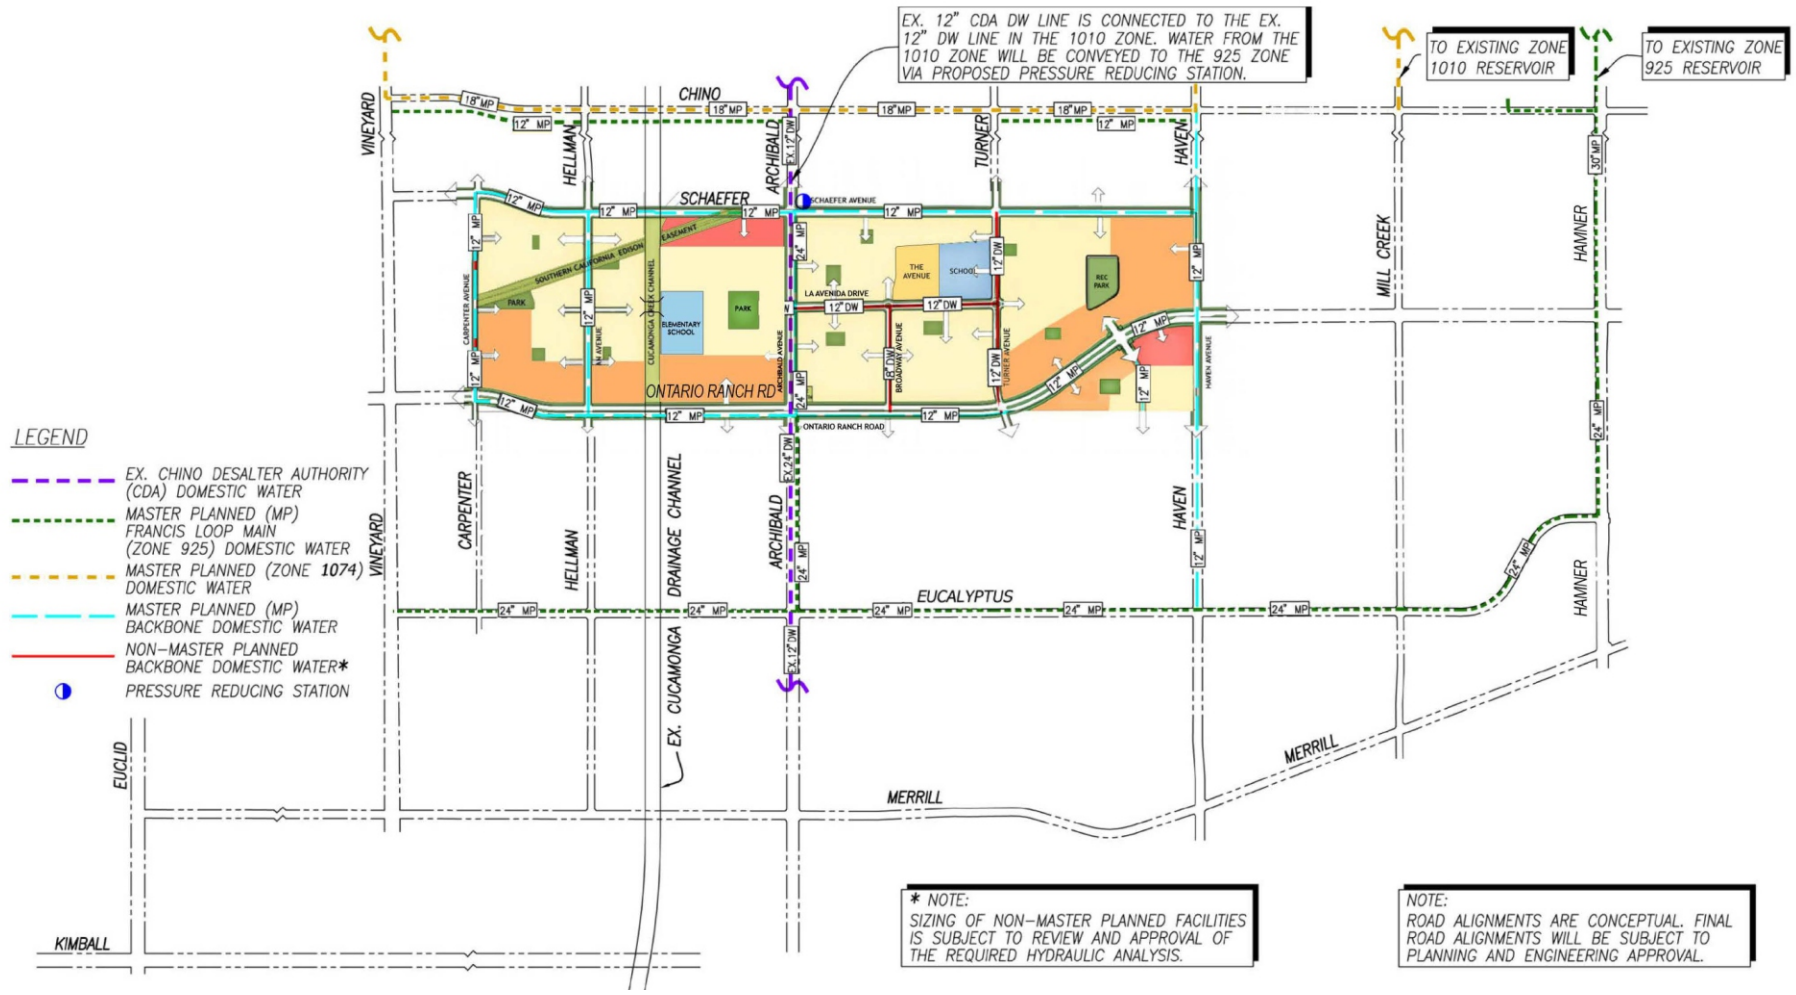
2.3.3 Parking

The Modified Project would be required to adhere to parking requirements established under the 2024 SPA and the City of Ontario Development Code. Parking assignments and design of parking areas within the site would be subject to City review and approval.

2.3.4 Landscape/Streetscape

All landscaping/streetscaping implemented under the Modified Project would be required to comply with applicable provisions of the 2024 SPA and the City Municipal Code. Landscape and streetscape elements would provide shade and visual interest, define entry/access points, and accentuate site and architectural features. Please refer also to 2024 SPA Section 6.6, *Landscape Design Guidelines*.

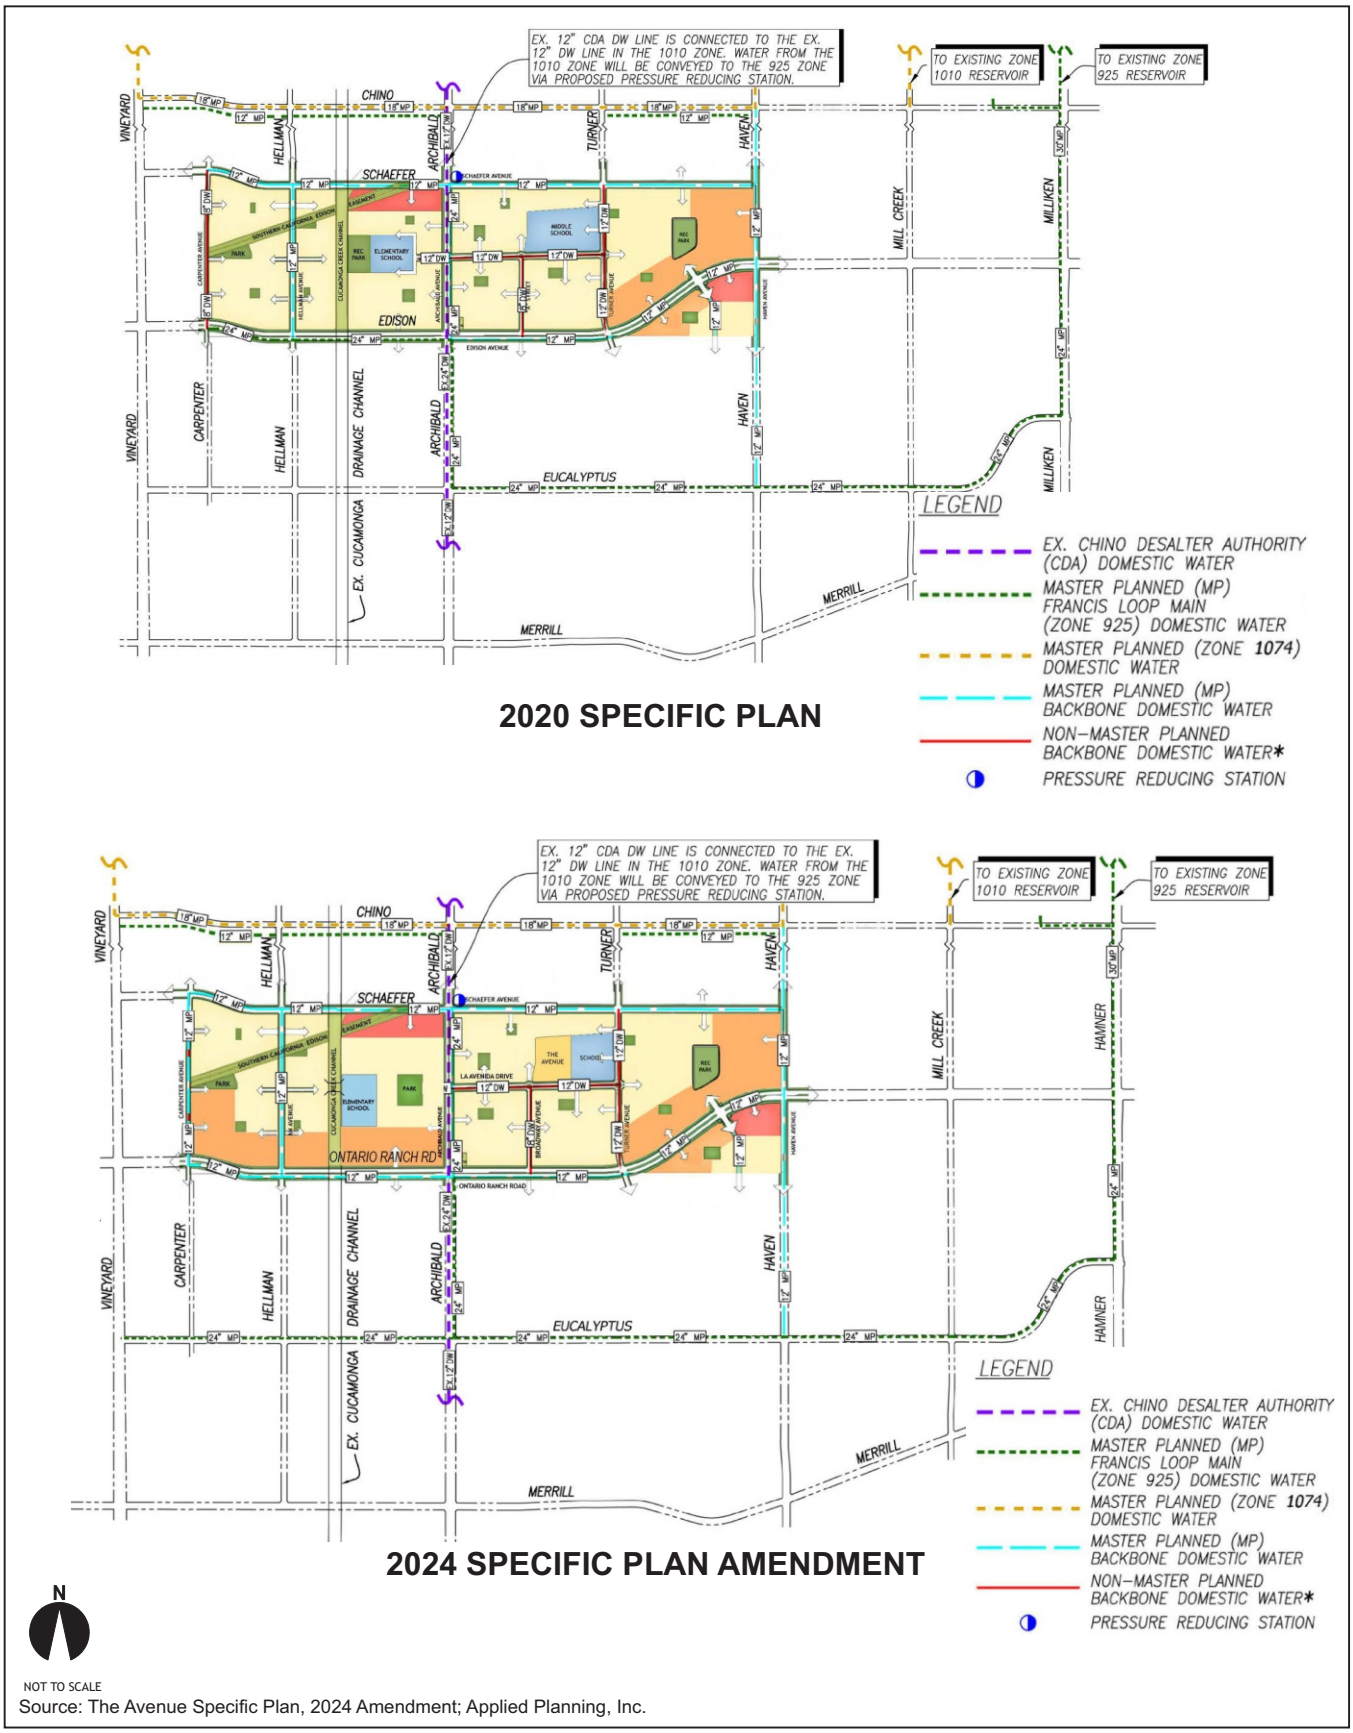
2.3.5 Infrastructure/Utilities



2.3.5.1 Water Service

Potable (Domestic) Water

Potable water would be provided by the Ontario Municipal Utilities Company (OMUC). The Modified Project would be served by existing and planned OMUC Master Planned domestic water system facilities.



Within the Modified Project site, water service would be provided by a system of 8-inch to 12-inch water mains constructed within the backbone roadway system. The on-site public water system sizing would be required to comply with provisions of a City-approved hydraulic analysis to be conducted at the project-level design stage. The hydraulic analysis would be required to demonstrate that the proposed water system would meet peak demands including maximum day plus fire demand and peak hour demand.

The Modified Project Domestic Water Plan Concept is illustrated at Figure 2.3-5. For illustrative purposes, the Original Project and Modified Project Domestic Water Plan Concepts are compared at Figure 2.3-6. Please refer also to 2024 SPA Section 4.2.1, *Water*.

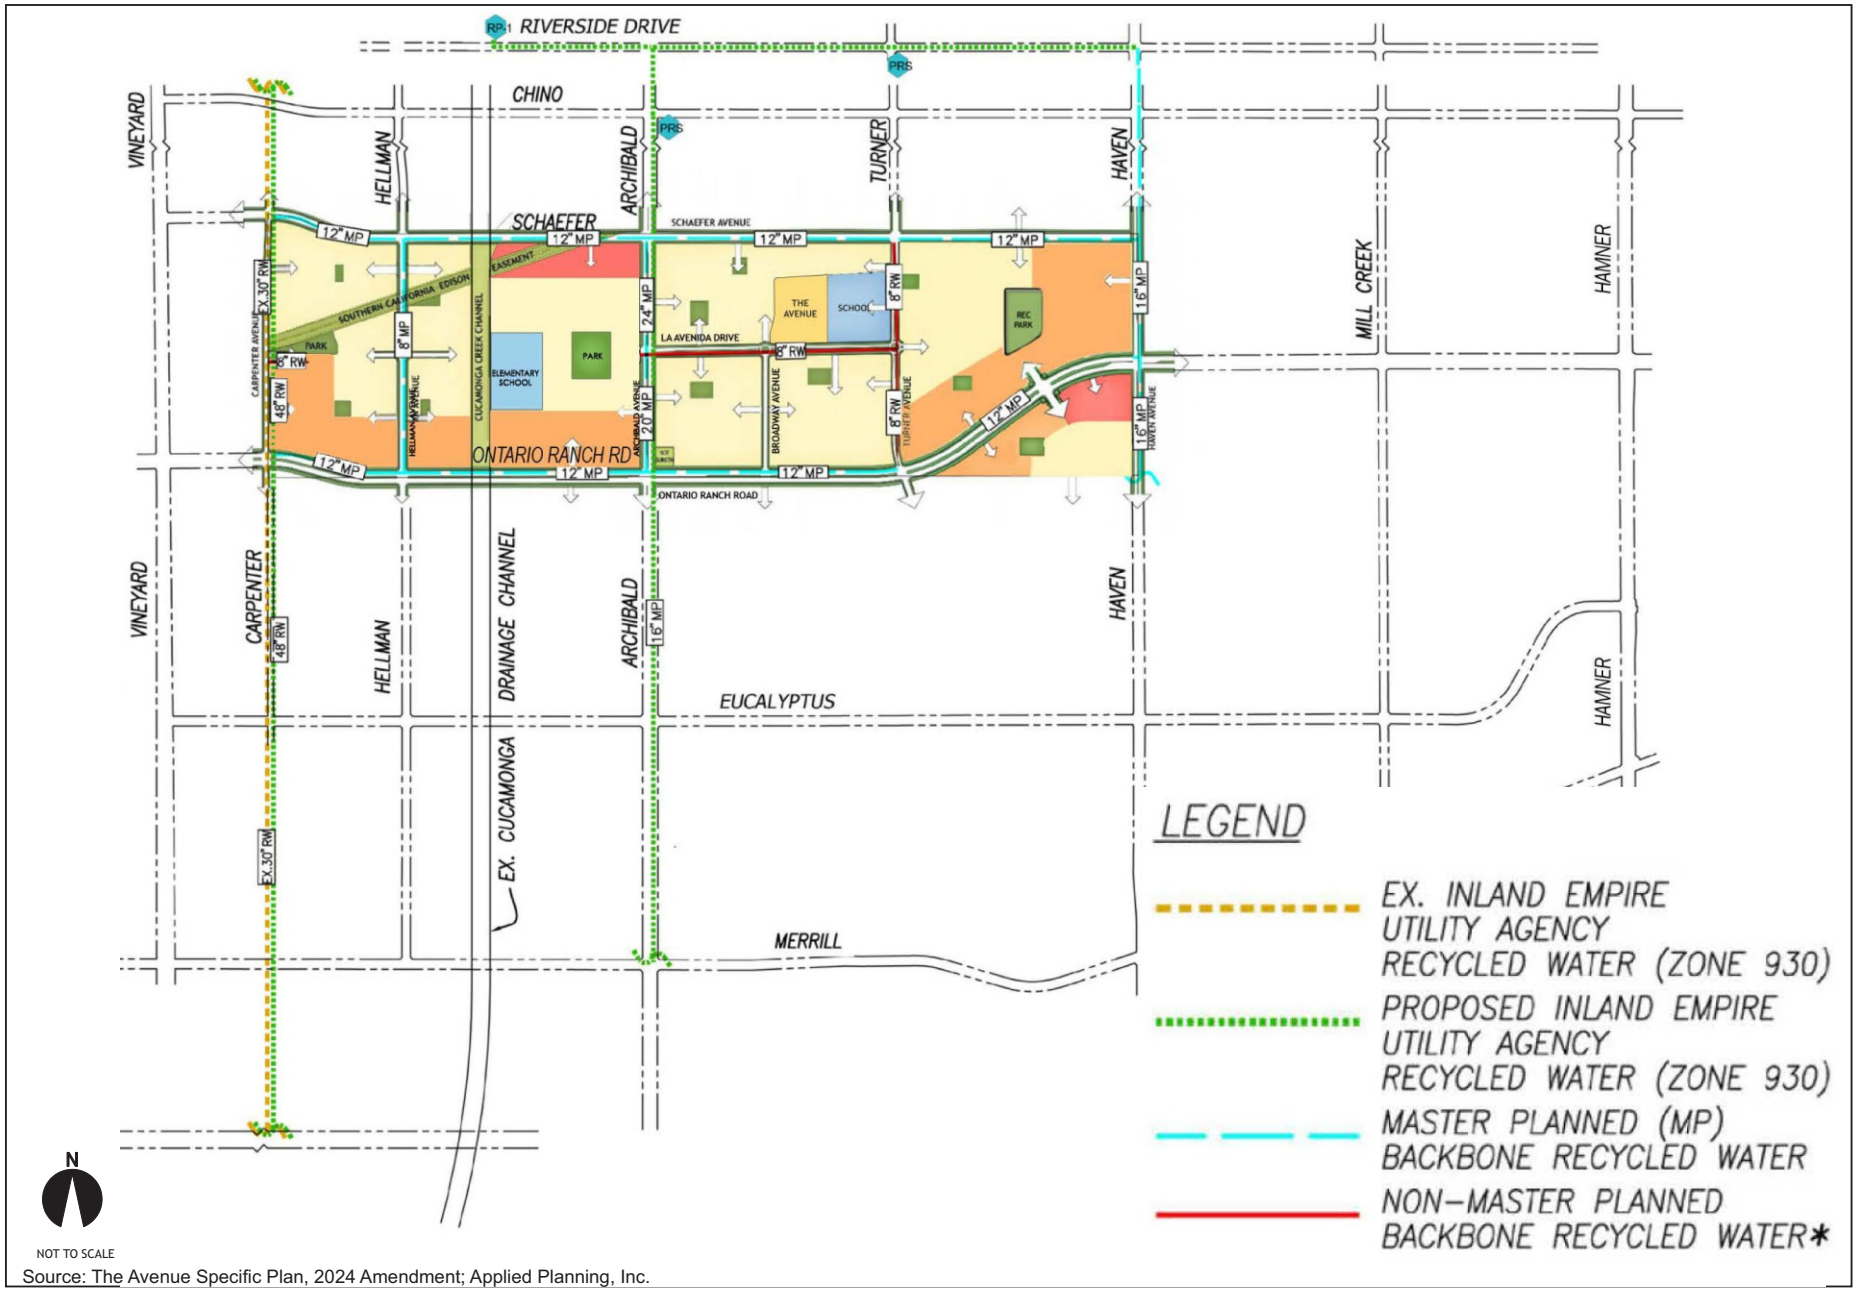
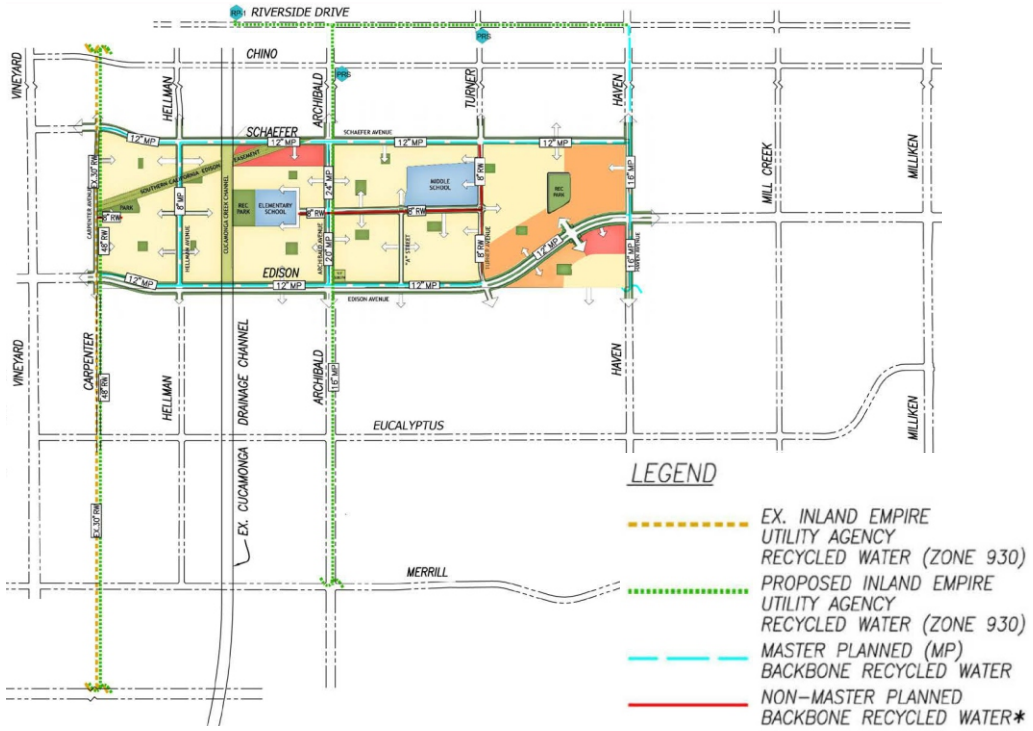
Figure 2.3-6
Domestic Water Master Plan Comparison



Recycled Water

Recycled water would be provided to the Modified Project by the Inland Empire Utility Agency (IEUA). The Modified Project would be required to comply with applicable provisions of City Municipal Code Chapter 8c: *Recycled Water Use*.[3] Recycled water would be used for all approved applications including, but not limited to, irrigation of parks, schools, street landscaping, recreational trails, HOA-maintained common areas, and landscaping. An engineering report approved by the City and the California Department of Public Health is required prior to the use of recycled water.

All recycled water improvements implemented to serve the Modified Project would be required to conform to the incumbent City Recycled Water Master Plan. Within the Modified Project site, the backbone recycled water system would comprise 8-inch lines and would be located in the backbone street system. In-tract recycled water system design would be provided at the time of subdivision.



The Modified Project Recycled Water Plan Concept is illustrated at Figure 2.3-7. For illustrative purposes, the Original Project and Modified Project Recycled Water Plan Concepts are compared at Figure 2.3-8. Please refer also to 2024 SPA Section 4.2.2, *Recycled Water*.

Recycled Water Master Plan Comparison

2.3.5.2 Sewer Services

Sewer service to the Modified Project would be provided by the City of Ontario. All Master Plan sewer improvements implemented to serve the Modified Project would be required to conform to the incumbent City Sewer System Master Plan.

Within the Modified Project site, wastewater conveyance would be provided by a system of 10-inch to 12-inch sewer mains constructed within the backbone roadway system. Connecting service lines (minimum 8-inch) would be provided to individual developments. The on-site public sewer system sizing would be required to comply with provisions of a City-approved hydraulic analysis to be conducted at the project-level design stage. In-tract sewer system design would be provided at the time of subdivision. Final designs of sewer systems serving the Modified Project site would be required to conform to City and OMUC requirements. The Modified Project Sewer Plan Concept is presented at Figure 2.3-9. For illustrative purposes, the Original Project and Modified Project Sewer Plan Concepts are compared at Figure 2.3-10. Please refer also to 2024 SPA Section 4.2.3, *Sewer*.

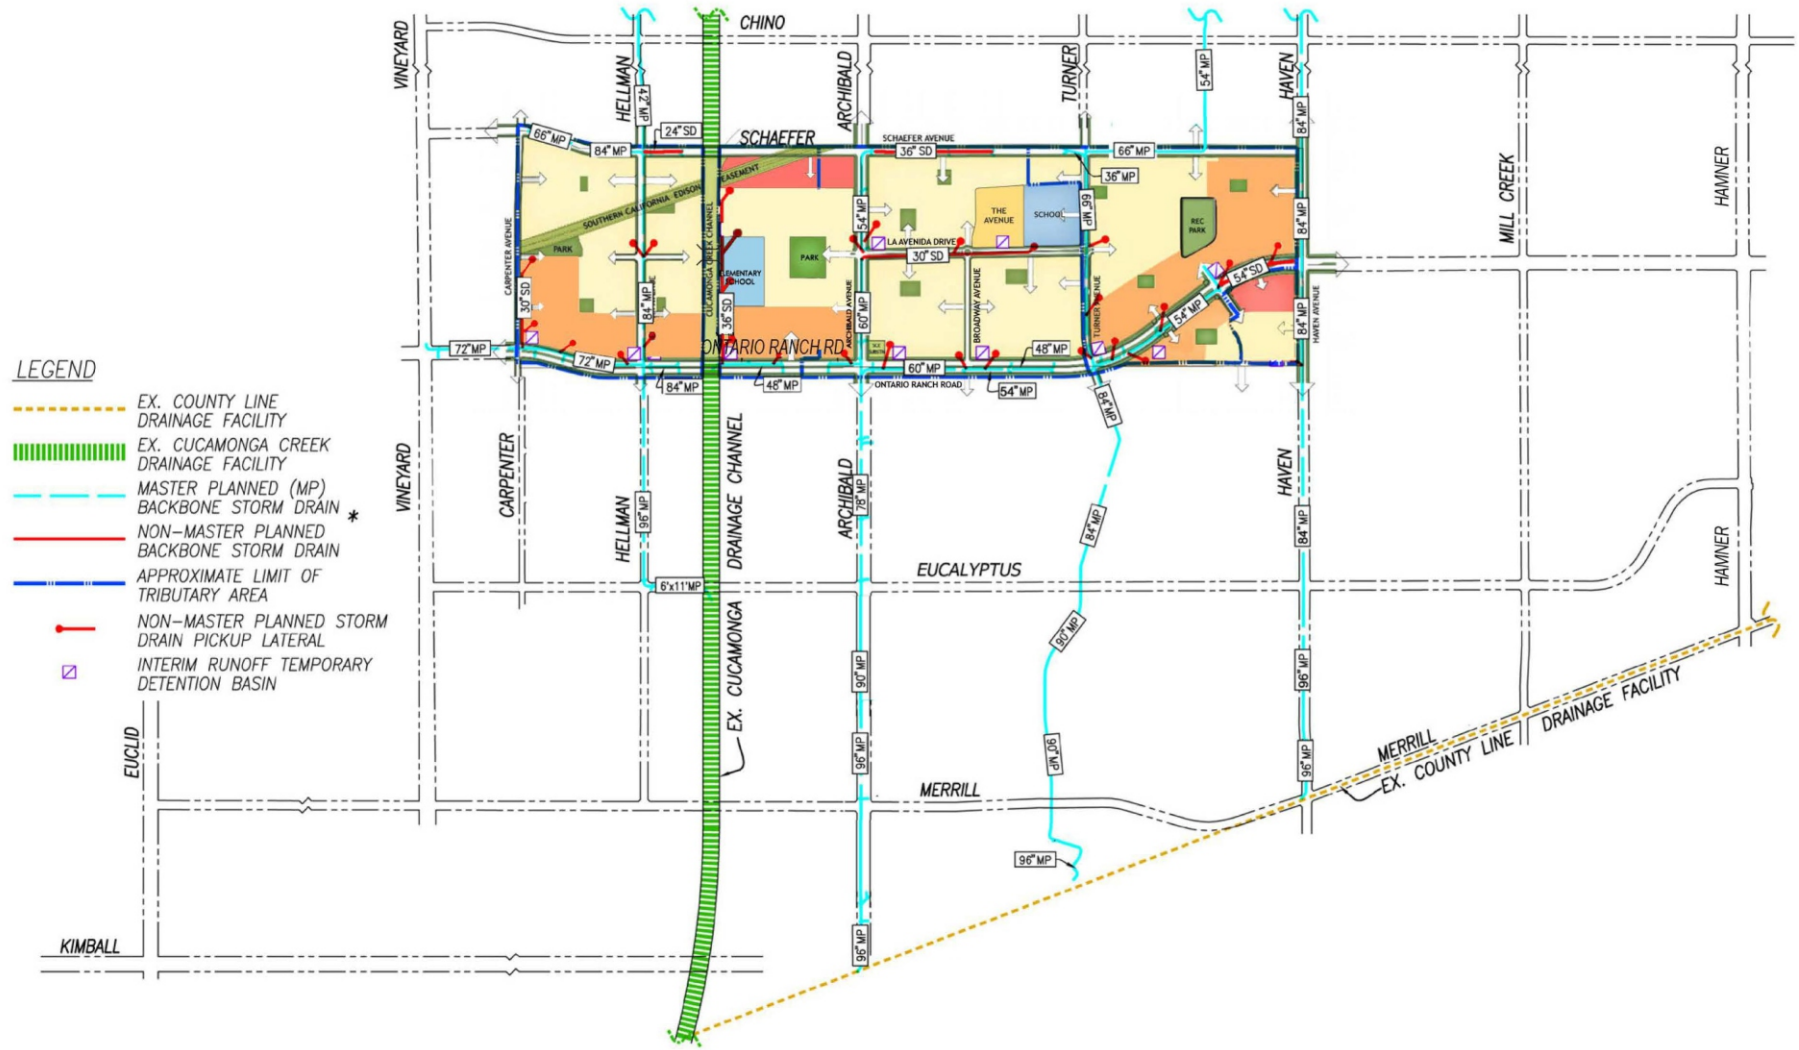
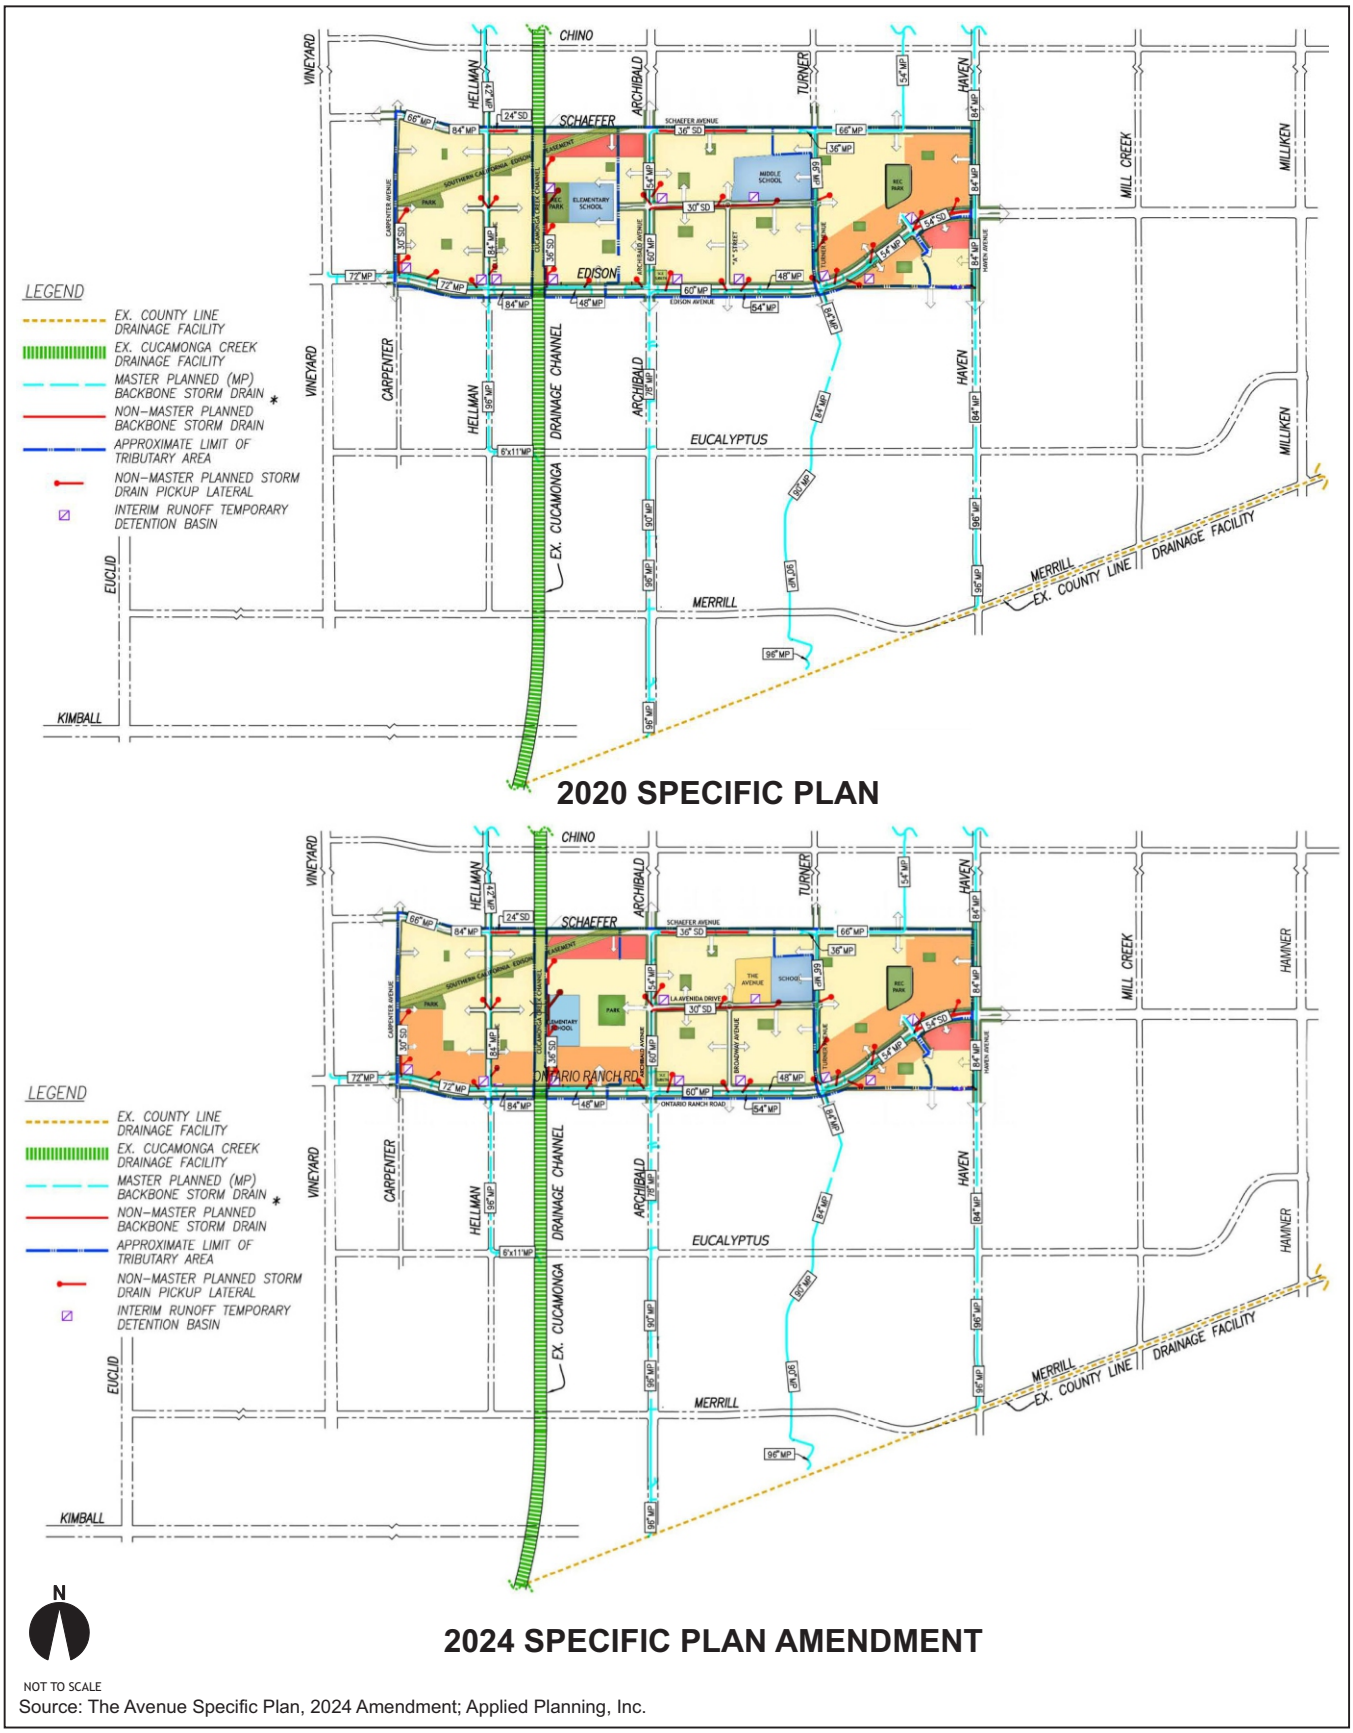
2.3.5.3 Stormwater Management System



Storm Drains

Multiple City Master Plan of Drainage storm drain facilities would serve the Modified Project site. All Master Plan stormwater management system improvements implemented to serve the Modified Project would be required to conform to the incumbent City Master Plan of Drainage.

Under post-development conditions, existing southerly trending on-site drainage patterns would be maintained. Within the Modified Project site, minimum 18-inch storm drain laterals would be constructed to convey stormwater runoff from developed areas to the Master Plan storm drain system. In-tract storm drain system designs would be provided at the time of subdivision. Final designs of stormwater management systems serving the Modified Project would be required to conform to City requirements. The Modified Project Stormwater Management System Concept is presented at Figure 2.3-11. For illustrative purposes, the Original Project and Modified Project Storm Drain System Concepts are compared at Figure 2.3-12. Please refer also to 2024 SPA Section 4.2.4, *Drainage*.



Water Quality Management Plan

The Modified Project would implement on-site stormwater management systems to detain and treat stormwater discharges. Stormwater discharges from the Modified Project would be required to comply with requirements and performance standards established under the incumbent San Bernardino County National Pollutant Discharge Elimination System (NPDES) Stormwater Program MS4 Permit and Water Quality Management Plan (WQMP). To these ends, developments within the Modified Project site would implement Low Impact Development (LID) Site Design Best Management Practices (BMPs) to reduce pollutant transport and increase on-site stormwater infiltration. Additionally, all Priority Land Use (PLU) areas within the Modified Project site would be required to comply with the statewide Trash Provisions adopted by the State Water Resources Control Board (SWRCB) and trash requirements in the most current San Bernardino County Area-Wide MS4 Permit.

Source: The Avenue Specific Plan, 2024 Amendment; Applied Planning, Inc.

Figure 2.3-11
Storm Drain Master Plan

NOT TO SCALE

Source: The Avenue Specific Plan, 2024 Amendment; Applied Planning, Inc.

Figure 2.3-12
Storm Drain Master Plan Comparison

Non-structural and structural Source Control BMPs would be documented in the Modified Project WQMPs. Final WQMPs, as approved by the City, would ensure that the Modified Project stormwater management systems have been designed to convey and treat stormwater discharges and limit the post-development peak flows consistent with available storm drain capacities.

Please refer also to 2024 SPA Section 4.2.6, *NPDES Compliance*.

2.3.5.4 Solid Waste Management

The City of Ontario provides solid waste collection services for the City and would service the Modified Project. Under the 2024 SPA, an integrated waste management plan for each subdivision is required prior to Development Advisory Board (DAB) approval. All developments within Modified Project would be required to comply with waste reduction and recycling standards and identified in the City Municipal Code and as specified in the incumbent *City of Ontario Solid Waste Department Refuse and Recycling Planning Manual*. Please refer also to 2024 SPA Section 4.2.7, *Solid Waste*.

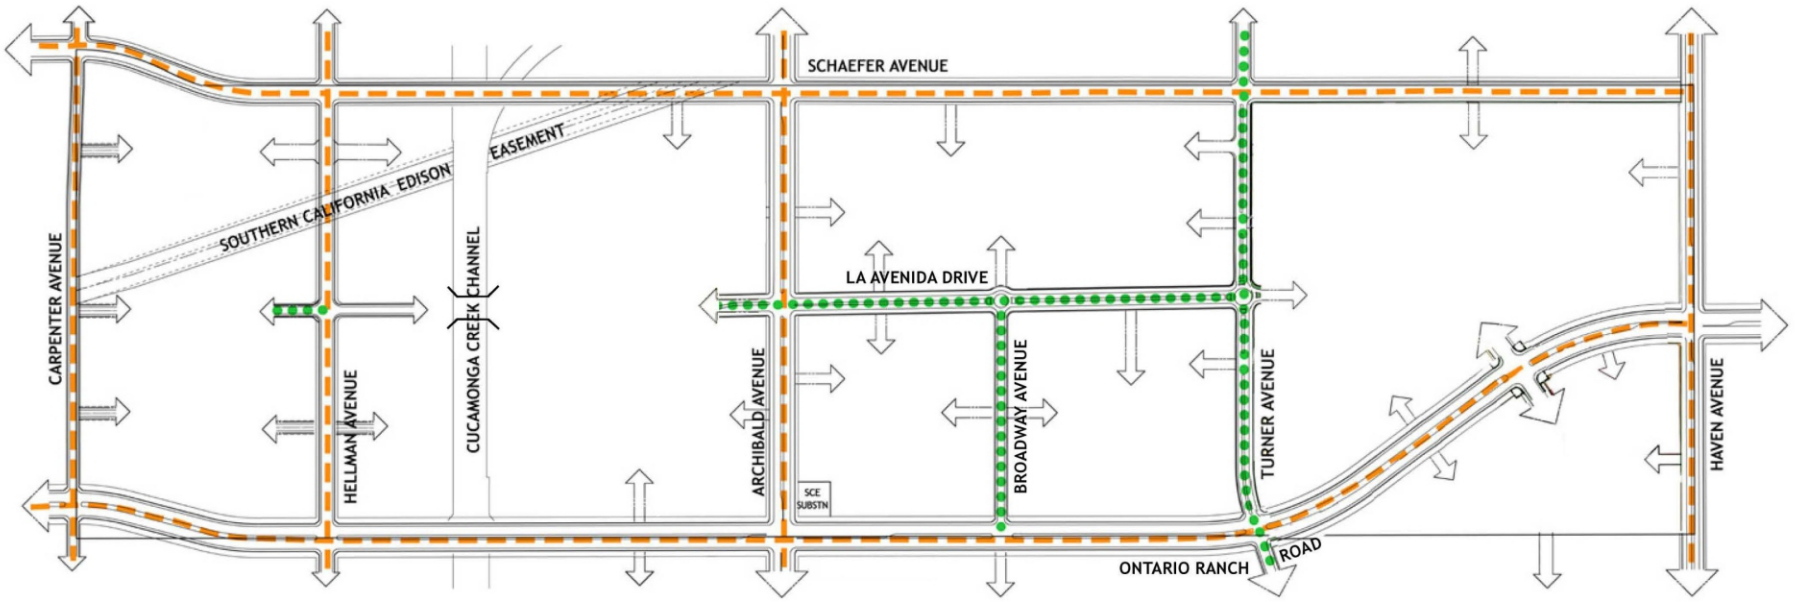
2.3.5.5 Electricity

SCE would provide electricity to the site from existing vicinity facilities. Facilities less than 34.5kV would be located underground if they are located adjacent to any streets proposed to be improved in conjunction with site improvements. All proposed connections and modifications to SCE facilities would conform to SCE and City requirements.

2.3.5.6 Natural Gas

The Gas Company would provide natural gas service to the site. All proposed connections and modifications to Gas Company facilities would be required to conform to Gas Company and City requirements.

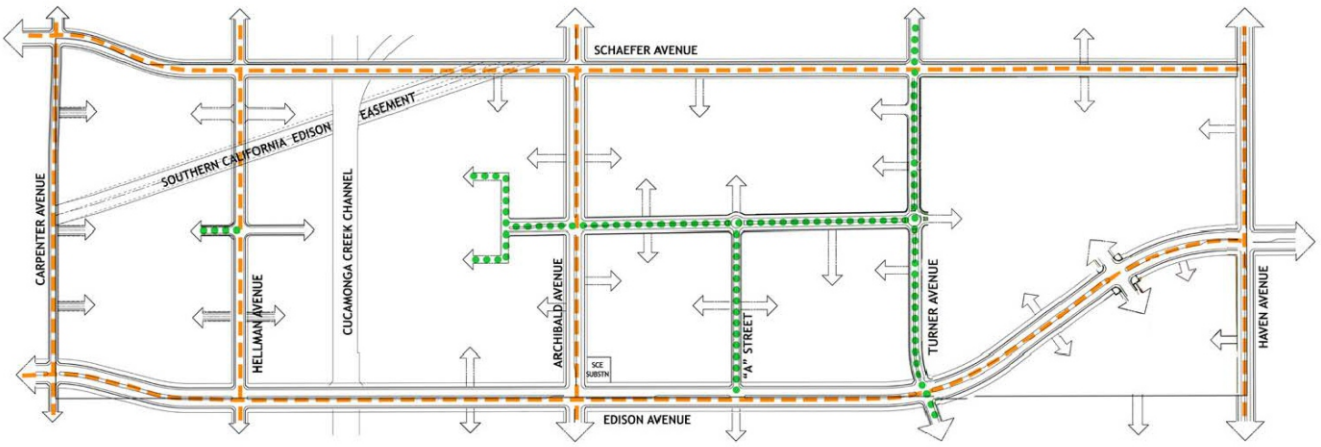
2.3.5.7 Fiber Optics System



A backbone fiber optics system (conduits and fiber) would be constructed within the Modified Project street system. Backbone fiber optic components (conduits and fiber) would be placed underground within a duct and structure system to be installed in a joint trench. In-tract fiber and conduit would be installed per the City's in-tract fiber optic design guidelines (see: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Information-Technology/2014-12-16_in-tract_designguidelines.pdf). The Modified Project Fiber Optic Plan is presented at Figure 2.3-13. For illustrative purposes, the Original Project and Modified Project Fiber Optic Plan Concepts are compared at Figure 2.3-14.

2.3.5.8 Communications Services

Communications services, including wired and wireless telephone and internet services, are available through numerous private providers and would be provided on an as-needed basis. To the extent practical and consistent with City Conditions of Approval, existing and proposed wires, conductors, conduits, raceways, and similar communications improvements within the Modified Project site would be installed underground. Any necessary surface-mounted equipment, e.g., terminal boxes, transformers, meters, service cabinets, etc., would be screened and would conform to City building setback requirements.



2.3.6 Energy Efficiency/Sustainability

Energy-saving and sustainable design features and operational programs would be incorporated in all facilities developed pursuant to the Modified Project. The Modified Project would be required to comply with incumbent energy efficiency and performance standards established under the CALGreen Code and the City of Ontario Community Climate Action Plan (CCAP).

Fiber Optics Comparison

2.3.7 Site Preparation

As an initial action, the Modified Project site would be cleared of vegetation and all on-site improvements associated with, or supporting, the existing on-site land uses would be demolished or removed. Debris generated by site preparation and demolition activities would be disposed of/recycled consistent with provisions of the California Integrated Waste Management Plan Act (AB 939) and the City's Integrated Waste Department *Refuse and Recycling Planning Manual*.[4]

Additionally, a total of 20 water wells are located within the Modified Project site. Locations of these wells are identified at Figure 2.3-15. All existing water wells within the Modified Project site would be destroyed consistent with San Bernardino County Health Department and California Department of Water Resources (DWR) requirements. See also: https://water.ca.gov/Programs/Groundwater-Management/Wells/Well-Standards/Combined-Well-Standards/Water-Destruction.

The natural topography of the Project site is relatively flat. No unusual grading conditions are present and substantial import or export of earth materials is not expected. Project grading would provide stable development pads for construction; balance cut and fill grading quantities on-site; and meet City of Ontario building standards and acceptable infrastructure gradient requirements.

2.3.8 Construction Area Traffic Management Plan

To avoid or minimize temporary construction-related traffic impacts throughout site preparation and construction activities, the Project Applicant would be required to prepare and implement a City-approved Construction Traffic Management Plan (Plan). Typical elements and information incorporated in the Plan would include, but not be limited to:

- **Name of on-site construction superintendent and contact phone number.**

[4] City of Ontario, California: *Solid Waste Department* [Integrated Waste Department] *Refuse and Recycling Manual*, Updated March 17, 2016. https://www.ontarioca.gov/omuc/integrated-waste.

Source: The Avenue Specific Plan, 2024 Amendment; Applied Planning, Inc.

Figure 2.3-15
Existing Wells

- **Identification of Construction Contract Responsibilities** - For example, for excavation and grading activities, describe the approximate depth of excavation, and quantity of soil import/export (if any).

- **Identification and Description of Truck Routes** - to include the number of trucks and their staging location(s) (if any).

- **Identification and Description of Material Storage Locations (if any).**

- **Location and Description of Construction Trailer (if any).**

- **Identification and Description of Traffic Controls** - Traffic controls shall be provided per the Manual of Uniform Traffic Control Devices (MUTCD) if the occupation or closure of any traffic lanes, parking lanes, parkways or any other public right-of-way is required. If the right-of-way occupation requires configurations or controls not identified in the MUTCD, a separate traffic control plan must be submitted to the City for review and approval. All right-of-way encroachments would require permitting through the City.

- **Identification and Description of Parking** - Estimate the number of workers and identify parking areas for their vehicles.

- **Identification and Description of Maintenance Measures** - Identify and describe measures taken to ensure that the work site and public right-of-way would be maintained (including dust control).

The Plan would be reviewed and approved by the City prior to the issuance of the first building permit. The Plan and its requirements would also be required to be provided to all contractors as one component of building plan/contract document packages.

2.3.9 Opening Year

For the purposes of this analysis, the Project Opening Year is defined as 2026, by which time all proposed uses are assumed to be complete, occupied, and operational.

2.4 PROJECT OBJECTIVES

The stated vision of the 2024 SPA is to establish "a truly walkable community, featuring pedestrian amenities that encourage walking and biking to schools, parks and basic commercial needs—all within five minutes, for the majority of residents" (2024 SPA, p. 1-1.) Supporting 2024 Specific Plan Amendment Objectives are listed below.

General

- Implement TOP 2050 Policy Plan Land Use Plan.
- Support TOP 2050 vision for urbanization of the Ontario Ranch area of the City.
- Implement Specific Plan developments providing additional long-term employment opportunities.
- Implement Specific Plan developments providing additional construction employment opportunities.
- Establish new development that would further the City's near-term and long-range fiscal goals.

Residential Land Uses

- Development of a variety of housing types into the land use plan addressing a wide variety of lifestyles and economic segments.
- Provide for both single family attached and detached housing in low density and low medium density residential districts.
- Plan for seamless transitions between housing product types in order to create cohesive neighborhoods that include a range of types and styles.
- Plan residential neighborhoods around a series of parks and open space areas, promoting outdoor activity and interaction among neighbors.
- Provide for connectivity between residential neighborhoods, recreational areas, and adjacent commercial land uses, as well as to the schools, by means of pedestrian and bicycle trail linkages along The Avenue and trails incorporated into

both the Southern California Edison Easement and the Cucamonga Creek Channel. Create a strong functional relationship between homes and schools.
- Create a hierarchy of parks, providing for active and passive recreation.
- Create residential neighborhoods with diverse architectural styles and traditional design elements reflecting some of the characteristics of older established Ontario neighborhoods.

Commercial Land Uses

- Develop retail and commercial uses to meet the needs of the residential community and larger surrounding market area, as well as implement Policy Plan policies.
- Provide trails and sidewalks to connect the residential community with the retail and commercial area.
- Consider the development of plazas and other public space amenities within the retail and commercial area providing space for social interaction.
- Orient retail and commercial buildings to the street, wherever possible, to create an urban edge and sense of arrival.

2.5 DISCRETIONARY APPROVALS and PERMITS

Discretionary actions, permits, and related consultation(s) necessary to approve and implement the Project include, but are not limited to, the following.

2.5.1 Lead Agency Discretionary Actions and Permits

- CEQA Compliance;
- Adoption of this Addendum;
- Approval of a Specific Plan Amendment;
- Approval of Tentative Parcel Maps;
- Approval of a Development Agreement; and
- Approval of Development Plans.

2.5.2 Other Consultation and Permits

Anticipated consultation and permits necessary to realize the Modified Project would or may include the following:

- Permitting by/through the Regional Water Quality Control Board (RWQCB) pursuant to requirements of the City's National Pollutant Discharge Elimination System (NPDES) Permit.

- Permitting by/through the South Coast Air Quality Management District (SCAQMD) for certain equipment or land uses that may be implemented pursuant to the Modified Project.

- Permitting (i.e., utility construction and connection permits) from affected utility purveyors, notably the City of Ontario, IEUA, and SCE.

- Permitting for destruction of on-site wells per San Bernardino County Health Department and Department of Water Resources requirements.

- Other ministerial permits necessary to realize all on- and off-site improvements related to the development of the site.

3.0 ENVIRONMENTAL CHECKLIST

ENVIRONMENTAL CHECKLIST

The Avenue Specific Plan, 2024 Amendment

Addendum to The Ontario Plan 2050 Certified SEIR (SCH No. 2021070364)

General Notes: *The Avenue Specific Plan, 2024 Amendment* (Modified Project, Project) land uses and development concepts have been designed to be consistent with land uses and development concepts for the subject site reflected in The Ontario Plan 2050 (TOP 2050). Impacts of TOP 2050 have been evaluated and addressed in *The Ontario Plan 2050 Certified SEIR (*TOP 2050 SEIR, Certified SEIR). This Addendum compares and contrasts impacts of the Modified Project with impacts identified in the Certified SEIR. As substantiated herein, the Modified Project would not result in substantially different or substantially increased impacts when compared to impacts considered and addressed in the Certified SEIR. The CEQA Initial Study Checklist categories and topics presented below conform to the suggested content presented at *CEQA Guidelines*, Appendix G. Certain of the Addendum Technical Studies are dated 2023. These Studies were prepared prior to the latest refinements reflected in the 2024 Specific Plan Addendum (2024 SPA). Findings and conclusions of these Studies are not affected by the 2024 SPA refinements.

1. AESTHETICS

Except as provided in Public Resources Code Section 21099, would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Have a substantial adverse effect on a scenic vista?					X	
b) Substantially damage visible scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?					X	
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?					X	
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?					X	

Substantiation:

a-d) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR recognizes that buildout of the City would alter the visual character of the City. The Certified SEIR concludes that compliance with the City Municipal Code and applicable TOP 2050 Policies would ensure that potential aesthetics impacts of development anticipated under TOP 2050 would be less-than-significant (Certified SEIR, pp. 5.1-4 – 5.1-10).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. Final designs of the Modified Project facilities including, but not limited to, the proposed buildings, landscape/hardscape features, and lighting configurations would be required to conform to the 2024 Specific Plan Development Regulations and Design Guidelines,[1] and applicable provisions of the City Municipal Code. Final designs of all uses would be subject to City review and approval. Conformance with the 2024 Specific Plan Development Regulations and Design Guidelines and City Municipal Code requirements would ensure that the Modified Project would not substantially degrade scenic vistas, substantially degrade scenic resources, adversely alter the existing visual character or quality of the area, or create a new source of substantial light or glare which would adversely affect day or nighttime views. Impacts of the Modified Project in these regards would be less-than-significant. On this basis, when compared to the Certified SEIR findings, no new or substantially increased aesthetic impacts would result from the Modified Project.

Modified Project Conditions of Approval: None.

[1] The 2024 Specific Plan Development Regulations and Design Guidelines have been amended to address new or revised uses proposed by the Modified Project.

Summary

When compared to the impacts identified in the Certified SEIR, no new significant, substantially increased, or substantially different aesthetics or light/glare impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022*; *The Avenue Specific Plan, 2024 Amendment*.

2. AGRICULTURE AND FORESTRY RESOURCES

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?					X	
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?					X	
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 1220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?					X	
d) Result in the loss of forest land or conversion of forest land to non-forest use?					X	
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use, or conversion of forest land to non-forest use?					X	

Substantiation:

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Under TOP 2050, the City Ontario no longer has land designated for agricultural uses. Because TOP 2050 is the baseline for the Certified SEIR, TOP 2050 would not result in the conversion of Prime Farmland, Unique Farmland, and Farmland of Statewide Importance to nonagricultural uses. TOP 2050 would therefore have no impact on land zoned for agricultural purposes (Certified SEIR, p. 5.2-12).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. As noted above, TOP 2050 would have no impact on land zoned for agricultural purposes. Because the Modified Project Land Uses are consistent with TOP 2050 land use designations, by extension, the Modified Project would similarly have no impact on land zoned for agricultural purposes.

Modified Project Conditions of Approval: None.

b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions:

Agricultural Zoning

The Certified SEIR concluded that implementation of the Land Use Plan would not adversely affect agriculturally-zoned properties (Certified SEIR, p. 5.2-12).

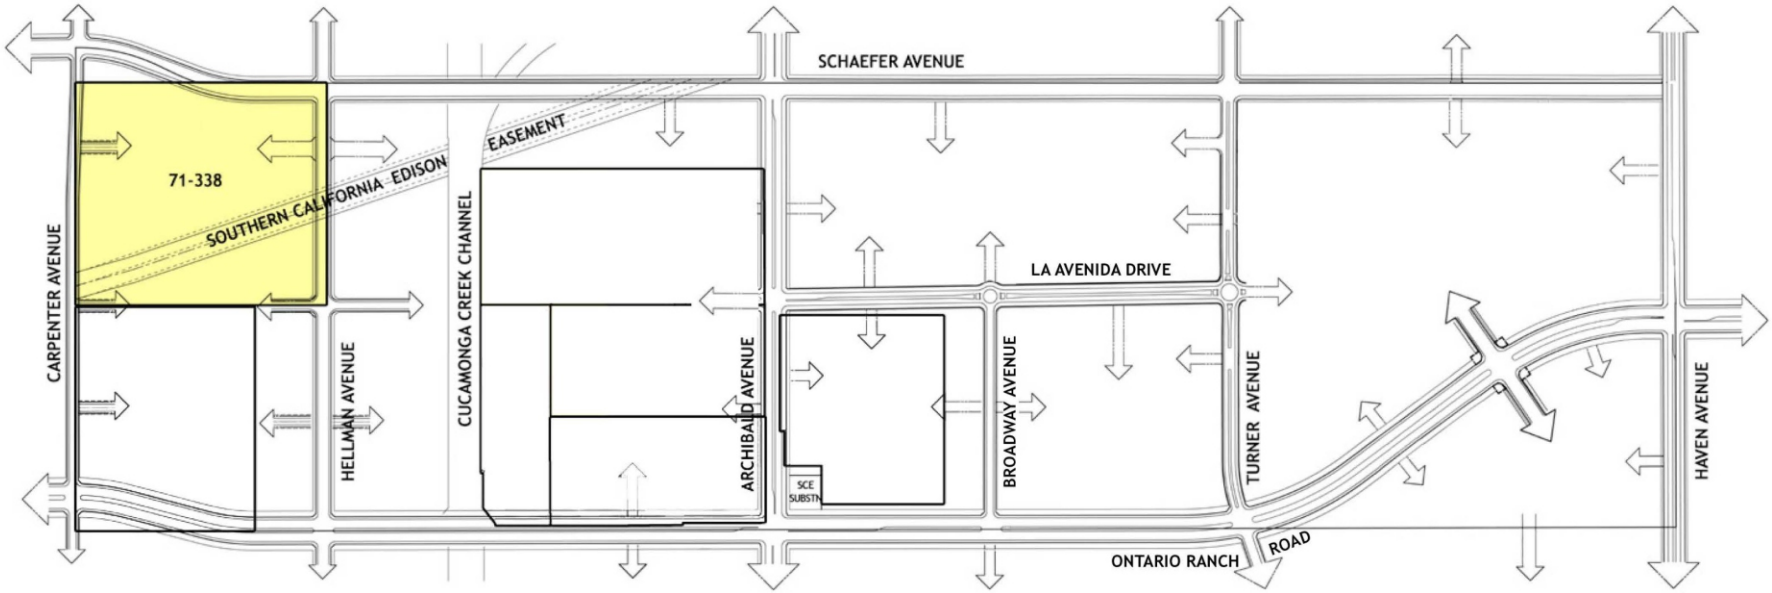
Williamson Act Contracts

Implementation of TOP 2050 would affect all active Williamson Act contracts within the City. The Certified SEIR concluded, however, that impacts to Williamson Act contract properties under TOP 2050 would not be greater than, or different than, would result

from TOP 2009. On this basis, the Certified SEIR concluded that TOP 2050 impacts to Williamson Act Contract properties would be less-than-significant (Certified SEIR, p. 5.2-13).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. Agricultural resources impacts discussed below are consistent with impacts of TOP 2050 as evaluated in the Certified SEIR.



Agricultural Zoning

The Modified Project site is Zoned "Specific Plan." The Modified Project does not propose or require uses or activities that would result in potentially adverse effects at agriculturally-zoned properties. Based on the preceding, the Modified Project's potential impacts related to a conflict with agricultural zoning would be less-than-significant.

Williamson Act Contracts

The California Land Conservation Act of 1965 (the Williamson Act, Government Code Sections 51200 through 51297.4) encourages the preservation of agricultural lands through tax incentives due to the increasing trend toward the conversion of agricultural lands to urban uses. The Act enables counties and cities to designate agricultural preserves (Williamson Act lands) and within these preserves offer preferential taxation to agricultural landowners based on the agricultural income-producing value of the property.

One active Williamson Act Contract property (Williamson Act Contract No 71-338) is located within the Modified Project site. The location of the subject Williamson Act Contract property is indicated at Figure 2-1. Contract No 71-338 will expire in 2026 and will not be renewed or extended. No development of the subject property would occur prior to expiration of Contract No 71-338. As such, the Modified Project would have no impact on an active Williamson Act Contract property.

Source: The Avenue Specific Plan, 2024 Amendment; Applied Planning, Inc.

Figure 2-1
Williamson Act Contracts

Under TOP 2050, the entire 2024 Specific Plan Area is anticipated to be developed with urban uses. The Certified SEIR concluded that under TOP 2050 buildout conditions, impacts to Williamson Act properties would be less-than-significant. The Modified Project land uses are consistent with TOP 2050 as evaluated in the Certified SEIR. Because the Modified Project Land Uses are consistent with TOP 2050 land use designations, by extension, the Modified Project would similarly have a less-than-significant impact on Williamson Act contract properties.

Based on the preceding, the potential for the Modified Project to conflict with a Williamson Act Contract would be less-than-significant.

Modified Project Conditions of Approval: None.

c) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: There are no City land uses zoned for forest land, timberland, or timberland zoned Timberland Production. There are no properties in the City considered to be forestland. As such, implementation of TOP 2050 would have no impact on land uses zoned for forest land, timberland, or timberland zoned Timberland Production; nor would TOP 2050 result in the loss or conversion of timberland or forest land to non-forest uses (Certified SEIR, p. 5.2-13).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project site is not zoned for forest land, timberland, or timberland zoned Timberland Production. There is no timberland or forest land within the Modified Project site. The Modified Project Land Uses are consistent with TOP 2050 land use designations. As noted above, TOP 2050 would have no impact on forest land, timberland, or timberland zoned Timberland Production; nor would TOP 2050 result in the loss or conversion of timberland or forest land to non-forest uses. Because the Modified Project Land Uses are consistent with TOP 2050 land use designations, by extension, the Modified Project

would similarly have no impact on forest land, timberland, or timberland zoned Timberland Production; nor would the Modified Project result in the loss or conversion of timberland or forest land to non-forest uses.

Modified Project Conditions of Approval: None.

d, e) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Under TOP 2050, the City Ontario no longer has land designated for agricultural uses. Because TOP 2050 is the baseline for the Certified SEIR, TOP 2050 would not result in the conversion of Prime Farmland, Unique Farmland, and Farmland of Statewide Importance to nonagricultural uses. TOP 2050 would therefore have no impact on land zoned for agricultural purposes (Certified SEIR, p. 5.2-12). See also Checklist Item 2 a.

There are no City land uses zoned for forest land, timberland, or timberland zoned Timberland Production. There are no properties in the City considered to be forestland. As such, implementation of TOP 2050 would have no impact on land uses zoned for forest land, timberland, or timberland zoned Timberland Production; nor would TOP 2050 result in the loss or conversion of timberland or forest land to non-forest uses (Certified SEIR, p. 5.2-13). See also Checklist Item 2 c.

TOP 2050 does not propose or require uses that would otherwise result in conversion of Farmland to nonagricultural use or conversion of forest land to non-forest use.

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. No forest land or farmland is located within the Modified Project site or in its vicinity. The Modified Project does not propose or require uses that would otherwise result in conversion of Farmland to nonagricultural use, or conversion of forest land to non-forest use. The Modified Project Land Uses are consistent with TOP 2050 land use designations. As noted above,

TOP 2050 would have no impact on forest land or farmland, nor would TOP 2050 result in the loss or conversion of timberland or forest land to non-forest uses. Because the Modified Project Land Uses are consistent with TOP 2050 land use designations, the Modified Project would similarly not result in the conversion of Farmland to nonagricultural use, or conversion of forest land to non-forest use.

Modified Project Conditions of Approval: None.

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different agriculture and forestry resources impacts would result from the Modified Project. No changed or new information has been identified to indicate that any impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022*; *The Avenue Specific Plan, 2024 Amendment*.

3. AIR QUALITY

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Conflict with or obstruct implementation of the applicable air quality plan?					X	
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?					X	
c) Expose sensitive receptors to substantial pollutant concentrations?					X	

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?					X	

Substantiation:

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

General Note: *The technical analyses referenced in this section reflect likely maximum impacts. Subsequent to preparation of these analyses, total residential development intensities allowed under the Modified Project have been reduced consistent with direction. Specifically, the technical analyses referenced herein assume residential development of the Modified Project totaling up to 3,807 dwelling units (see Project Traffic Analysis, p. 2 et al.). As subsequently modified, maximum allowed residential development under the Modified Project would not exceed 3,753 dwelling units (see Section 2.0, Project Description, Table 2.1-1).*

Certified SEIR Conclusions: Because air pollutant emissions associated with buildout of the City would cumulatively contribute to nonattainment conditions affecting the South Coast Air Basin (SoCAB), the Certified SEIR determined that TOP 2050 would be inconsistent with the Air Quality Management Plan (AQMP). For these reasons, the Certified SEIR concluded that TOP 2050 would result in significant AQMP consistency impacts (Certified SEIR, p. 5.3-40).

Certified SEIR Mitigation Measures: The Certified SEIR includes mitigation (listed below) that would generally reduce criteria pollutant emissions associated with buildout of TOP 2050. These measures include mitigation from the previous (2010) TOP EIR and new mitigation implemented under TOP 2050.

3-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project

applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario building department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:

- *Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:*
  - *Requiring use of nontoxic soil stabilizers to reduce wind erosion.*
  - *Applying water every four hours to active soil disturbing activities.*
  - *Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.*
  - *Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits.*
- *Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.*
- *Limiting nonessential idling of construction equipment to no more than five consecutive minutes.*
- *Using Super-Compliant VOC paints for coating architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: http://www.aqmd.gov/prdas/brochures/Super- Compliant_AIM.pdf.*

These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.

3-2 *The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g., sidewalks).*

New Mitigation

AQ-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following:

- *For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.*
- *Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use.*
- *Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485).*
- *Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures).*
- *Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).*
- *Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures).*
- *Provide facilities to support electric charging stations per Section A5.106.5.3 and*

Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).

Applicant-provided appliances shall be Energy Star-certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star-certified or equivalent appliances shall be verified by the City during plan check.

[TOP 2050] Policy ER4-9, Health Risk Assessments, would ensure mobile sources of TACs not covered under South Coast AQMD permits are considered during subsequent project-level environmental review by the City of Ontario; however, implementation of TOP 2050 would generate TACs that could contribute to elevated levels in the air basin (cumulative).

The Certified SEIR concluded however that no mitigation measures are available that would substantially reduce AQMP inconsistency impacts. On this basis, the Certified EIR concluded that even with application of mitigation, TOP 2050 inconsistency with the AQMP would be significant and unavoidable (Certified SEIR, p. 5.3-54).

Level of Significance After Mitigation: Significant and Unavoidable.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. In this respect, the Modified Project would not substantively increase aggregate development intensities beyond that currently anticipated for the subject site as reflected in the Certified SEIR analysis of AQMP consistency.

Based on the preceding, when compared to the Certified SEIR findings, no new or substantially increased AQMP consistency impacts would occur under the Modified Project.

Modified Project Conditions of Approval: The Modified Project would implement applicable Certified SEIR mitigation measures.

b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that buildout of TOP 2050 would generate short-term and long-term air pollutant emissions exceeding SCAQMD regional significance thresholds for VOC, CO, NOx, PM_{10}, and $PM_{2.5}$. These exceedances would cumulatively contribute to the SCAB nonattainment designations for O_3, PM_{10} and $PM_{2.5}$. Even with the implementation of mitigation measures, nonattainment air quality impacts resulting from buildout of TOP 2050 would be significant and unavoidable (Certified SEIR, pp. 5.3-54 – 5.3-57).

Certified SEIR Mitigation Measures: Please refer to previous Certified SEIR air quality mitigation measures listed at Checklist item 3 a).

Modified Project:

Construction-Source Emissions

Construction-source emissions resulting from the Modified Project are quantified in *The Avenue Specific Plan, 2023 Amendment - Air Quality & Energy Assessment* (Urban Crossroads, Inc.) May 8, 2024 (Modified Project AQIA, Addendum Appendix B). Modified Project construction activities would comprise site preparation, grading, building construction, paving, and architectural coating. Construction-source emissions would also be generated by construction worker commutes, heavy equipment transport, and construction material(s) vendor trips. Modified Project construction activities would generate emissions of carbon monoxide (CO), Volatile Organic Compounds (VOCs), Nitrogen Oxides (NOX), Sulfur Oxides (SOX), particulate matter ≤ 10 microns (PM_{10}), and particulate matter ≤ 2.5 microns ($PM_{2.5}$). Table 3-1 summarizes Modified Project maximum daily construction-source emissions.

As presented at Table 3-1, with the exception of VOC emissions, Modified Project construction-source emissions would not exceed applicable SCAQMD regional thresholds. Project construction-source VOC exceedances would represent a cumulatively considerable net increase in SCAB nonattainment conditions for O_3 (VOC is an Ozone precursor). Because the Project is consistent with land uses and development

evaluated in the Certified SEIR, Project construction-source VOC exceedances are already acknowledged and accounted for in the Certified SEIR.

Table 3-1
Maximum Daily Construction-Source Emissions

Source	Emissions (lbs./day)					
	VOC	**NOx**	**CO**	**SOx**	**PM_{10}**	**$PM_{2.5}$**
Summer						
2024	7.04	39.79	140.03	0.13	19.75	4.92
2025	6.63	31.64	132.00	0.10	19.75	4.92
Winter						
2024	6.65	39.85	114.31	0.13	19.75	5.70
2025	119.91	51.12	148.37	0.13	23.90	6.07
Total Maximum Daily Emissions	**119.91**	**51.12**	**148.37**	**0.13**	**23.90**	**6.07**
SCAQMD Regional Threshold	75	100	550	150	150	55
Threshold Exceeded?	YES	NO	NO	NO	NO	NO

Source: *The Avenue Specific Plan, 2023 Amendment - Air Quality & Energy Assessment* (Urban Crossroads, Inc.) May 8, 2024.

Operational-Source Emissions

Modified Project operational-source emissions would derive primarily from site/building maintenance (area sources), building energy consumption, and traffic (mobile sources). Operational-source emissions generated by the Modified Project land are summarized at Table 3-2. As indicated at Table 3-2, Project maximum daily operational-source emissions would exceed SCAQMD Regional Thresholds for VOC, NOx, CO, and PM_{10}. Project operational-source VOC, NOx, and PM_{10} exceedances would represent a cumulatively considerable net increase in SCAB nonattainment conditions for O_3 and PM_{10} (VOC and NO_x are Ozone precursors).

Because the Project is consistent with land uses and development evaluated in the Certified SEIR, the Project operational-source VOC, NOx, CO, and PM_{10} exceedances are already acknowledged and accounted for in the Certified SEIR.

Table 3-2
Maximum Daily Operational-Source Emissions

Source	Emissions (lbs./day)					
	VOC	**NO_X**	**CO**	**SO_X**	**PM_{10}**	**$PM_{2.5}$**
Summer						
Mobile Source	89.78	76.69	729.57	1.77	154.87	40.15
Area Source	80.59	34.64	143.12	0.22	2.78	2.76
Energy Source	0.70	12.02	5.61	0.08	0.97	0.97
Total Max. Daily Emissions	**171.07**	**123.34**	**878.29**	**2.06**	**158.61**	**43.88**
SCAQMD Regional Threshold	55	55	550	150	150	55
Threshold Exceeded?	**YES**	**YES**	**YES**	**NO**	**YES**	**NO**

Mobile Source	83.39	82.34	615.71	1.66	154.87	40.15
Area Source	68.04	33.41	14.22	0.21	2.70	2.70
Energy Source	0.70	12.02	5.61	0.08	0.97	0.97
Total Max. Daily Emissions	**152.13**	**127.76**	**635.54**	**1.94**	**158.53**	**43.82**
SCAQMD Regional Threshold	55	55	550	150	150	55
Threshold Exceeded?	**YES**	**YES**	**YES**	**NO**	**YES**	**NO**

Source: *The Avenue Specific Plan, 2023 Amendment - Air Quality & Energy Assessment* (Urban Crossroads, Inc.) May 8, 2024.

Modified Project Conditions of Approval: The Modified Project would implement applicable Certified SEIR mitigation measures.

Based on the preceding, when compared to the Certified SEIR findings, the Modified Project would not result in substantively different or substantively increased contributions to cumulative contributions to criteria pollutant non-attainment impacts.

c) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR notes that individual development projects within the City would be required to achieve the incremental risk thresholds established by SCAQMD, and on this basis, potential Toxic Air Contaminant (TAC) impacts from individual developments would be less-than-significant. TOP 2050 Policy ER4-9 *New Localized Air Pollution Sources Near Existing Sensitive Receptors*, ensures that mobile sources of TACs not covered under South Coast AQMD permits are considered

during subsequent project-level environmental review by the City of Ontario. Other air quality mitigation measures implemented under TOP 2050 would further reduce air pollutant emissions, thereby minimizing effects of pollutants at sensitive receptors.

The Certified SEIR nonetheless concludes that buildout of TOP 2050 would generate TACs that could contribute to elevated levels of TAC pollutants in the air basin. On this basis, the Certified SEIR concluded that TOP 2050 TAC emissions impacts at sensitive receptors would be cumulatively significant (Certified SEIR, p. 5.3-57).

Certified SEIR Mitigation Measures: Please refer to previous Certified SEIR air quality mitigation measures listed at Checklist item 3 a).

Modified Project: The Modified Project does not propose or require uses that would generate substantial levels of TACs. However, localized construction-source emissions generated by the Project have the potential to adversely affect proximate sensitive uses.[2] Accordingly, the potential for the Modified Project construction activities to generate or result in harmful concentrations of air pollutants at sensitive receptors is evaluated in the Modified Project AQIA.

LST Methodology

Localized construction-source impacts resulting from the Modified Project were evaluated consistent with methodologies and protocols presented in *Final Localized Significance Threshold Methodology* (SCAQMD) 2003 (LST Methodology). Per SCAQMD criteria, localized exceedances of the federal and/or state ambient air quality standards (NAAQS/CAAQS) would comprise potentially significant air quality impacts. Collectively, these are referred to as Localized Significance Thresholds (LSTs). LSTs represent the maximum localized emission concentrations that would not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard(s).

[2] LSTs would apply to the operational phase of a project, if that project includes stationary sources, or attracts mobile sources that may spend long periods queuing and idling at the site (e.g., transfer facilities and warehouse buildings). The Project does not propose or require such uses. Due to the lack of significant stationary source emissions, an LST analysis for the Modified Project operations is not required.

Sensitive Receptors

Persons that are especially sensitive to air pollution are accorded special consideration when evaluating air quality impacts. Collectively, these persons collectively comprise sensitive receptors, and include: children, the elderly, and individuals with pre-existing respiratory or cardiovascular illness. Structures that house these persons or places where they gather are defined as sensitive receptor locations. Such structures typically include: residences, hotels, hospitals or similar occupancies. Consistent with the LST Methodology, the analysis presented here evaluates potential effects of localized construction-source emissions at the nearest sensitive receptor locations where an individual could remain for 24 hours or more.

Based on an aerial imagery, sensitive receptor residential land uses are located within 25 meters of the Project boundaries. Per the LST Methodology, a minimum separation of 25 meters between receptors and emission sources has been assumed within this analysis.

Thresholds

The LST Methodology provides "Look-up Tables" establishing screening-level thresholds. Emissions that do not exceed the Look-up Table thresholds are presumptively considered less-than-significant. Emissions exceeding Look-up Table thresholds warrant further detailed modeling and analysis. Look-up Table thresholds applicable to the Project are presented below.

Table 3-3
Localized Significance Thresholds

Activity	Emissions Thresholds (lbs./day)			
	VOC	NO_X	PM_{10}	$PM_{2.5}$
Demolition	270	2,193	16	9
Site Preparation				
Grading				

Source: *The Avenue Specific Plan, 2023 Amendment - Air Quality & Energy Assessment* (Urban Crossroads, Inc.) May 8, 2024.

Localized Emissions

Maximum construction-source localized emissions received at the nearest sensitive receptors are presented at Table 3-4.

Table 3-4
Maximum Received Localized Emissions

	Emissions (lbs./day)			
	NO_x	**CO**	**PM_{10}**	**$PM_{2.5}$**
Demolition				
Maximum Daily Emissions	23.81	36.35	0.40	0.38
SCAQMD Localized Threshold	270	2,193	16	9
Threshold Exceeded?	NO	NO	NO	NO
Site Preparation				
Maximum Daily Emissions	29.47	56.62	11.52	5.57
SCAQMD Localized Threshold	270	2,193	16	9
Threshold Exceeded?	NO	NO	NO	NO
Grading				
Maximum Daily Emissions	38.87	70.70	5.70	2.31
SCAQMD Localized Threshold	270	2,193	16	9
Threshold Exceeded?	NO	NO	NO	NO

Source: *The Avenue Specific Plan, 2023 Amendment - Air Quality & Energy Assessment* (Urban Crossroads, Inc.) May 8, 2024.

As presented at Table 3-4, maximum Project construction-source localized emissions received at area sensitive receptors would not exceed applicable SCAQMD LSTs. On this basis, the potential for the Project to expose sensitive receptors to substantial pollutant concentrations would be less-than-significant.

Modified Project Conditions of Approval: None.

d) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR notes that development pursuant to TOP 2050 would be required to comply with SCAQMD Rule 402. SCAQMD Rule 402 acts to generally control and regulate odors and odor sources, thereby minimizing potential

effects of construction-source and operational-source odors from other than industrial land uses (Certified SEIR, p. 5.3-46).

The Certified SEIR also acknowledges that certain types of industrial land uses (e.g., compost facilities, landfills, solid-waste transfer stations, fiberglass manufacturing facilities, paint/coating operations, asphalt batch manufacturing plants, chemical manufacturing, and food manufacturing facilities) warrant focused odor impact analyses. The City would require site- and development-specific analyses to ensure that any odors generated by these types of land uses would not adversely affect a substantial number of people (Certified SEIR, p. 5.3-46).

Based on the preceding, the Certified SEIR concluded that the potential for TOP 2050 to create or result in odors that would adversely affect a substantial number of people would be less-than-significant.

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. Construction-source and operational-source odor impacts that may result from the Modified Project are controlled as a byproduct of hazardous/potentially hazardous materials handling plans and Best Management Practices implemented under SCAQMD Rule 402 et al. The Modified Project would be required to comply with all SCAQMD Rules regulating and controlling odors and odor sources.

The Modified Project does not propose or require land uses (e.g., compost facilities, landfills, solid-waste transfer stations, fiberglass manufacturing facilities, paint/coating operations, asphalt batch manufacturing plants, chemical manufacturing, and food manufacturing facilities) that would be substantial odor sources. Moreover, the Modified Project would remove existing agricultural odor sources and would act generally to improve ambient conditions related to odors.

Construction-source and operational-source odor impacts that may result from the Modified Project are controlled as a byproduct of hazardous/potentially hazardous materials handling plans and Best Management Practices implemented under SCAQMD Rule 402[3] et al. The Modified Project would be required to comply with all SCAQMD Rules regulating and controlling odors and odor sources. The Modified Project would therefore not create objectionable odors affecting a substantial number of people. The Modified Project does not propose or require uses that would generate other emissions that could adversely affect a substantial number of people. On this basis, when compared to the Certified SEIR findings, no new or substantially increased "other emissions" impacts would occur under the Modified Project.

On this basis, when compared to the Certified SEIR findings, no new or substantially increased odor impacts would occur under the Modified Project.

Modified Project Conditions of Approval: None.

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different air quality impacts would result from the Modified Project. No changed or new information has been identified to indicate that any impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

4. BIOLOGICAL RESOURCES

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Have a substantial adverse effect, either directly or through habitat modification, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?					X	
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies and regulations; or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?					X	
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?					X	
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?					X	
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?					X	
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?					X	

Substantiation:

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR recognizes that development in accordance with TOP 2050 could impact sensitive species. Projects considered for approval under TOP 2050 would be subject to independent CEQA review to determine whether there is potential habitat on-site for sensitive species. The Certified SEIR did not identify any significant impacts in this regard (Certified SEIR, pp. 5.4-28 – 5.4-34).

Certified SEIR Mitigation Measures: None.

Modified Project: TOP 2050 SEIR (Section 5.4) concluded that the area encompassing The Avenue Specific Plan may function as potential habitat for the federally-listed Delhi Sands Flower Loving Fly (DSFLF) and Burrowing Owl. No other potentially significant impacts to candidate, sensitive, or special status species were identified in the SEIR.

Potential Impacts to DSFLF

Potential Project impacts to DSFLF are substantiated in *Habitat Suitability Evaluation* (EnviroPlus Consulting, LLC) October 30, 2023 (Project DSFLF Study). Findings and conclusions of the Project DSFLF Study are presented below.

The Project site was surveyed for evidence of DSFLF, potentially viable DSFLF habitat, and general presence/absence biologic resources by a qualified professional biologist[4] on October 22, 2023. The survey was conducted under clear skies with temperatures ranging from 60 to 72 °F. Winds were light at 1 to 3 mph from the west (Project DSFLF Study, p. 4).

The survey noted general site conditions, soils types, surface conditions, vegetation types and conditions, and presence or evidence of insects and wildlife. The survey also documented past and present on-site disturbances and ongoing urban development

[4] Biologist permitted by the U.S. Fish and Wildlife Service (Section 10 (a) (1) (A) permit number TE-837439-8 expiring 6/24/2024).

affecting the site's potential suitability as habitat for biological resources (Project DSFLF Study, pp. 2 – 4).

The survey results indicate that although the survey area is in part mapped as Delhi series soils, "anthropogenic disturbances over decades have altered the natural topography, aeolian processes, vegetation and soil characteristics such that the site does not now meet the USFWS baseline requirement for conducting focused surveys, the presence of Delhi series soils. Additionally, surrounding areas are similarly highly disturbed and/or developed, so it would be highly unlikely that any dispersing DSFLF from a nearby DSFLF-occupied site would temporarily utilize the subject property for foraging or reproduction purposes. Since suitable Delhi series soils were not found, the site does not meet the baseline criterion to be considered for focused surveys as per the USFWS protocol (1996) and does not appear suitable for DSFLF occupation" (Project DSFLF Study, pp. 4, 5). Based on the preceding, the Project's potential impact to DSFLF and DSFLF habitat would be less-than-significant. **Note:** The January 2024 biological resources assessment update prepared for the Project confirms the above findings and conclusions. Please refer to *Biological Update for The Avenue Specific Plan (Planning Area 5) Project; City of Ontario, County of San Bernardino, California* (January 2024 Biological Update, VCS Environmental) January 16, 2024, Addendum Appendix C.

Potential Impacts to Burrowing Owl

During the October 2023 site DSFLF surveys, the presence of burrowing owl individuals and evidence of burrowing owl occupation within the site were also noted (Project DSFLF Study, p. 4). The January 2024 Biological Resources Update indicates that burrowing owl individuals were no longer present during a subsequent January 2024 site visit. As such, these individuals are deemed migrant and the site is not considered to be occupied by BUOW (January 2024 Biological Update, p. 5).

The Project site does however evidence burrows suitable for BUOW and suitable BUOW foraging habitat. A BUOW pre-construction survey is therefore required to ensure that potential impacts to BUOW are maintained at levels that would be less-than-significant. Please refer to Condition of Approval BIO-1.

Other Considerations

The Modified Project site serves generally as potential habitat for migratory birds. Development of the site could therefore result in impacts to any nesting migratory birds that may be present. Consistent with California Department of Fish and Wildlife requirements, Condition of Approval BIO-2 is included to ensure that impacts to nesting birds are maintained at levels that would be less-than-significant.

Additionally, areas of the Modified Project site not specifically addressed in the Project DSFLF Study and/or January 2024 Biological Update may warrant updated biological resources assessments to ensure that potential impacts to biological resources for these areas are maintained at levels that would be less-than-significant (please refer to Condition of Approval BIO-3).

Modified Project Conditions of Approval:

BIO-1 Avoidance of Nesting Burrowing Owls: No more than 72 hours prior to any site disturbances, focused surveys for the burrowing owl shall be conducted. If absence of this species is confirmed, project work can proceed. If, however, burrowing owl is located on site, the appropriate resource agencies (CDFW and USFWS) shall be contacted. The Applicant shall consult with the wildlife agencies regarding the most appropriate methods and timing for removal of owls. As necessary, owls will be actively evicted following agency approved protocols (i.e., placing a one-way door at the burrow entrance to ensure that owls cannot access the burrow once they leave). Any such active eviction shall occur outside of the breeding/nesting season. That is, if active eviction is required, eviction shall be accomplished between September 1 and February 15. If more than 30 days have elapsed between owl eviction and completion of clearing and grubbing activities, a subsequent survey for the burrowing owl shall be conducted to ensure that owls have not re-populated the site. Any reoccupation by owls will require subsequent protocol active eviction.

BIO-2 Avoidance of Nesting Migratory Birds: If possible, all vegetation removal activities shall be scheduled from August 1 to February 1, which is outside the general avian nesting season. This would ensure that no active nests would be disturbed, and that removal could proceed rapidly. If vegetation is to be cleared during the nesting season, all suitable habitat

will be thoroughly surveyed within 72 hours prior to clearing for the presence of nesting birds by a qualified biologist (Biologist). The Biologist shall be approved by the City and retained by the Applicant. The survey results shall be submitted by the Applicant to the City Planning Department. If any active nests are detected, the area of nesting shall be flagged and mapped on the construction plans along with a minimum 300-foot buffer, with the final buffer distance to be determined by the Project Biologist. The buffer area shall be avoided until, as determined by the Biologist, the nesting cycle is complete, or it is concluded that the nest has failed. In addition, the Biologist shall be present on the site to monitor the vegetation removal to ensure that any nests, which were not detected during the initial survey, are not disturbed.

BIO-3 To the extent not considered and addressed in prior biological resources assessments, the Project DSFLF Study, or the January 2024 Biological Update, and to properly assess and address potential biological resources impacts, Biological Resources surveys shall be prepared prior to approval of Tentative Tract Maps within the Modified Project site. If suitable habitat is determined present onsite, subsequent focused surveys shall be completed and no "take" of any protected species and/or their habitat shall occur without obtaining the requisite regulatory permits from State and Federal agencies.

b, c) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that individual projects subject to CEQA environmental review would be required to determine whether there is potential habitat onsite for sensitive species. The Certified SEIR did not identify any significant impacts in this regard (Certified SEIR, p. 5.4-28).

Certified SEIR Mitigation Measures: None.

Modified Project: TOP 2050 SEIR (Section 5.4) concluded that the area encompassing The Avenue Specific Plan may function as potential habitat for the federally-listed Delhi DSFLF and Burrowing Owl. No other potentially significant impacts to candidate, sensitive, or special status species or their habitats were identified.

Consistent with SEIR requirements, the Project site has been evaluated for the presence of potential habitat for sensitive species. The Project DSFLF Study substantiates that the Project site and surrounding areas are extensively disturbed as the result of current and historic human activities. Surveys conducted as part of the Project DSFLF did not indicate presence or potential presence of riparian habitat, other sensitive natural community, or protected wetlands. The Project does not propose or require facilities or activities that would result in potential adverse effects to off-site riparian habitat, other sensitive natural community, or protected wetlands. Project potential impacts to riparian habitat, sensitive natural communities, and protected wetlands is therefore considered less-than-significant.

Modified Project Conditions of Approval: None.

d) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR states that no regional wildlife movement corridors have been identified in the City, and most of the City is ill-suited for the purposes of wildlife movement. Additionally, compliance with existing policies and regulations ensures impacts in this regard would be maintained at levels that would be less-than-significant (Certified SEIR, p. 5.4-30).

Certified SEIR Mitigation Measures: None.

Modified Project: No wildlife corridors or linkages are located onsite. Further, the site is bounded on all sides by roads and/or urban development, diminishing its potential to function as a wildlife movement corridor. Consistent with the conclusion of the Certified SEIR, the Modified Project would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites.

Modified Project Conditions of Approval: None.

e, f) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR did not identify any conflicts with any local policies or ordinances protecting biological resources, adopted Habitat Conservation Plan, Natural Community Plan, or other approved local, regional, or state habitat conservation plan (Certified SEIR, pp. 5.4-30 – 5.4-31).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project would be required to comply with local policies and ordinances protecting biological resources. The Modified Project does propose or require development or activities that would conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

Modified Project Conditions of Approval: None.

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different biological resources impacts would result from the Modified Project. No changed or new information has been identified to indicate that any impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022*; *Habitat Suitability Evaluation* (EnviroPlus Consulting, LLC) October 30, 2023; *Biological Update for The Avenue Specific Plan (Planning Area 5) Project; City of Ontario, County of San Bernardino, California* (VCS Environmental) January 16, 2024; *The Avenue Specific Plan, 2024 Amendment*.

5. CULTURAL RESOURCES

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?					X	
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?					X	
c) Disturb any human remains, including those interred outside of formal cemeteries?					X	

Substantiation:

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Historic resources in the City include historic districts, historic landmarks or points of historical interest, and other buildings, structures, objects, and sites that appear eligible for listing on the National, California, or Local Registers of Historic Places. The Certified SEIR concluded that adoption of TOP 2050 would not itself directly affect any historical structures; however, identified and potential historic structures and sites may be vulnerable as development occurs. The Certified SEIR concluded this was a potentially significant impact (Certified SEIR, pp. 5.5-18 – 5.5-19).

Certified SEIR Mitigation Measure:

5-1 Historic or potentially historic resources in the City shall be evaluated for historic significance through the City's tier system prior to the issuance of plan or development approvals. Pursuant to City's Development Code (Chapter 7, Historic Preservation), each historic resource shall be fully documented and cataloged pursuant to Historic American Building Survey/Historic American Engineering Record (HABS/HAER) standards, to provide a record of the resource, including, but not limited to: [i] the preparation of site

plans, floor plans, exterior and interior elevations, and detail drawings of character defining features (such as moldings, stairs, etc.); and [ii] photographs of the resource, including the exterior, interior, and interior and exterior character defining features (such as moldings, light fixtures, trim patterns, etc.).

Even with the implementation of Mitigation Measure 5-1, the Certified SEIR concluded that impacts to historical resources would be significant and unavoidable (Certified SEIR, p. 5.5-23).

Modified Project: The Specific Plan area has been surveyed at least five times between 2004 and 2006, as follows.

- Stantec Consulting, Inc., *A Phase I Cultural Resources Inventory and Paleontological Assessment for the 111-Acre Avenue Specific Plan Project, City of Ontario, County of San Bernardino, California*, April 19, 2006.
- Chambers Group, Inc., *Phase I and II Cultural Resources Survey of a 169-Acre Former Dairy Farm, Ontario, San Bernardino County, California*, October 2005.
- Chambers Group, Inc., *Cultural Resources Survey of 13 Parcels Consisting of 173-Acres, Ontario, San Bernardino County, California*, October 2005.
- Chambers Group, Inc., *Cultural Resources Survey of a 58-Acres Former Dairy Farm, Ontario, San Bernardino County, California*, August 2004.
- Chambers Group, Inc., *Cultural Resources Survey of a 163-Acre Former Dairy Farm, Ontario, San Bernardino, California*, September 2005.

Additionally, a cultural resources records search of the City was completed in December 2021. No historical resources have been identified within the Specific Plan area.

The Modified Project would be required to conform to City Conditions of Approval providing for protection of potentially significant historic resources, and would implement above-noted Certified SEIR Mitigation Measure 5-1. No additional measures are required or proposed for the Modified Project.

With conformance to City Conditions of Approval, and implementation of mitigation, the potential for the Modified Project to adversely to result in cause a substantial adverse change in the significance of a historical resource would be less-than-significant. When compared to the Certified SEIR findings, no new or substantially increased impacts to paleontological resources would result from the Modified Project.

Modified Project Conditions of Approval: The Modified Project would implement applicable Certified SEIR mitigation measures.

b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Adoption of TOP 2050 would not of itself directly affect archaeological resources. However, buildout of TOP 2050 land use plan would allow development activities and ground disturbance affecting known and potential areas of archaeological sensitivity. These activities could potentially cause the disturbance of archeological resources. Therefore, future development that would be accommodated by TOP 2050 could potentially unearth previously unrecorded resources (Certified SEIR, p. 5.5-19).

Certified SEIR Mitigation Measure:

5-2 *In areas of documented or inferred from evident archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:*

a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.

b) Should any cultural/scientific resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director is satisfied that adequate provisions are in place to protect these resources.

c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including catalog with museum numbers.

With the implementation of Mitigation Measure 5-2, the Certified SEIR concluded that impacts to archaeological and/or paleontological resources would be less-than-significant. (Certified SEIR, p. 5.5-22).

Modified Project: No archeological resources have been identified within the Specific Plan area as part of the previously-listed archeological surveys or records search. The Modified Project would be required to conform to City Conditions of Approval providing for protection of potentially significant archeological resources, and would implement above-noted Certified SEIR Mitigation Measure 5-2.

With conformance to City Conditions of Approval, and implementation of mitigation, the potential for the Modified Project to adversely to result in cause a substantial adverse change in the significance of a historical resource would be less-than-significant. When compared to the Certified SEIR findings, no new or substantially increased impacts to archeological resources would result from the Modified Project.

Modified Project Conditions of Approval: The Modified Project would implement applicable Certified SEIR mitigation measures. Please refer also to Conditions of Approval that would be implemented under the topical heading "Tribal Cultural Resources."

c) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that compliance with existing regulations would ensure that the potential for TOP 2050 to disturb any human remains, including those interred outside of formal cemeteries was less-than-significant (Certified SEIR, p. 5.5-21).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project would be required to comply with all existing regulations, including the California Public Resources Code Section 5097.98, which would afford protection for any human remains discovered during development activities. On this basis, the potential for the Modified Project to result in disturbance of any human remains, including those interred outside of formal cemeteries would be less-than-significant. When compared to the Certified SEIR findings, no new or substantially increased impacts related to potential disturbance of human remains would result from the Modified Project.

Modified Project Conditions of Approval: None.

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different impacts to unique cultural resources would occur as a result of the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364* (Placeworks) August 2022*; Addendum to The Ontario Plan Environmental Impact Report, File Nos.: PGPA19-008, PSPA19-011, and PMTT19-015* (City of Ontario) 2020; *The Avenue Specific Plan, 2024 Amendment*.

6. ENERGY

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?					X	
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?					X	

Substantiation:

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that regulatory compliance under TOP 2050 buildout conditions would promote building energy efficiency and vehicle fuel efficiency and reduce building energy demand and transportation-related fuel usage. Additionally, TOP 2050 includes policies related to land use and transportation planning and design, energy efficiency, public and active transit, and renewable energy generation that would contribute to enhanced building and transportation-related energy efficiencies and thereby reduce demands on nonrenewable sources of energy. Implementation of TOP 2050 Policies, energy efficiency and conservation measures articulated in the Community Climate Action Plan (CCAP), and compliance with regulatory requirements would ensure that energy consumption resulting from TOP 2050 buildout would not be inefficient, wasteful, or unnecessary. On this basis, the potential for TOP 2050 to result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources would be less-than-significant (Certified SEIR, pp. 5.6-9 – 5.6-12).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project in total would be required to comply with incumbent performance standards established under the Building Energy Efficiency Standards contained in the California Code of Regulations (CCR), Title 24, Part 6 (Title 24, Energy Efficiency Standards). The Modified Project would be required to conform to applicable CALGreen provisions (CCR, Title 24, Part 11 – CALGreen). CALGreen supports the goals of the State's greenhouse gas reduction and building energy efficiency programs. The Modified Project would also implement applicable efficiency/conservation measures provisions of the CCAP and applicable CCAP updates.

Based on the preceding, the Modified Project would not result in or cause wasteful, inefficient, and unnecessary consumption of energy; and would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. When compared to impacts addressed in the Certified SEIR, no new or substantially increased energy impacts would occur under the Modified Project.

Modified Project Conditions of Approval: None.

b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR notes that TOP 2050 would comply with applicable provisions of the California Renewables Portfolio Standard Program (RPS); and current and future iterations of CALGreen. Additionally TOP 2050 includes policies supporting statewide goals to transition the electricity grid to renewable sources. Mandated compliance with the CCAP and its updates would also be required for all new development under TOP 2050. On this basis, the Certified SEIR concluded that the potential for TOP 2050 to conflict with or obstruct a state or local plan for renewable energy or energy efficiency would be less-than-significant (Certified SEIR, pp. 5.6-13, 5.6-14).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project would be required to comply with incumbent Building Energy Efficiency Standards contained in the California Code of Regulations (CCR), Title 24, Part 6, Energy Efficiency Standards including applicable CALGreen provisions. CALGreen supports the goals of the State's greenhouse gas reduction and building energy efficiency programs. The Modified Project would also be required to implement applicable energy efficiency/conservation measures of the CCAP and its updates.

Based on the preceding, the Modified Project would not result in or cause wasteful, inefficient, and unnecessary consumption of energy; and would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

Modified Project Conditions of Approval: None.

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different energy impacts would occur as a result of the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2024 Amendment*.

7. GEOLOGY AND SOILS

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:						
(i) rupture of a known earthquake fault;					X	
(ii) strong seismic ground shaking;					X	
(iii) seismic-related ground failure, including liquefaction; or					X	
(iv) landslides?					X	
b) Result in substantial soil erosion or the loss of topsoil?					X	
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?					X	
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?					X	
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?					X	
f) Directly or indirectly destroy a unique paleontological resource or site or unique geological feature?					X	

Substantiation:

a – d) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR recognizes existing geological conditions and location of the City within a seismically active area. The Certified SEIR concludes that compliance with California Building Code (CBC) regulations and standard City Conditions of Approval would ensure that potential geology/soils impacts related to earthquakes, seismic hazards, erosion, and adverse soils conditions, would be maintained at levels that would be less-than-significant (Certified SEIR, pp. 5.7-18 – 5.7-21).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. All development proposals within the Modified Project site would be required to comply with CBC regulations and standard City Conditions of Approval, acting to preclude potentially significant geology/soils impacts. All potential geology and soils impacts associated with development of the subject site would be less-than-significant based on compliance with the Uniform Building Code, California Building Code, the Ontario Municipal Code, and applicable TOP 2050 Policies.

There are no known or suspected faults or other adverse geology/soils conditions affecting the subject site (Certified SEIR, pp. 5.7-4 – 5.7-16).[5] As part of the City's standard review and approval processes, the Modified Project would be required to comply with provisions of Final City-approved geotechnical report(s). Design of the Modified Project facilities would also be required to comply with applicable provisions of the Uniform Building Code (UBC), California Building Code (CBC), City Municipal Code, and would be required to implement applicable Ontario Plan strategies. Compliance with these measures would ensure that potential geology and soils impacts remain at levels that would be less-than-significant. The Modified Project would therefore not result in new, additional, or different geological/soils impacts not considered and addressed in the Certified SEIR.

[5] This is also consistent with previous analysis prepared for the Project site. See: *The Avenue 2020 Addendum to the Ontario Plan Environmental Impact Report* [City File Nos. PGPA19-008, PSPA19-011, PMTT19-015] pp. 23 – 260).

Modified Project Conditions of Approval: None.

e) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Wastewater generated by new development pursuant to buildout of TOP 2050 would be conveyed to and treated at wastewater treatment facilities owned and operated by the Inland Empire Utilities Agency (Regional Plant No. 1 in the City of Ontario and Regional Plant No. 5 in the City of Chino).

The use of septic tanks for new development would be restricted to areas not "in practical proximity existing sewer mains . . ." (Certified SEIR, p. 5.7-22).

Based on the preceding, the Certified SEIR concluded that TOP 2050 would not result in adverse impacts related to use of septic tanks or alternative wastewater disposal systems and ability of soils to accept these systems.

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project site is fully served by existing and planned sewer service. The Modified Project does not propose or require use of septic systems.

Based on the preceding, there is no potential for the Modified Project to result in adverse impacts related to use of septic tanks or alternative wastewater disposal systems and ability of soils to accept these systems.

Modified Project Conditions of Approval: None.

f) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The geology underlying the City is common and typical within the region and is not considered unique (Certified SEIR, p. 5.7-20).

Adoption of TOP 2050 in itself would not directly affect paleontological resources. However, implementation of TOP 2050 land use plan could allow development and redevelopment of potentially sensitive areas. The Certified SEIR concluded this was a potentially significant impact (Certified SEIR, pp. 5.7-20, 5.7-21).

Certified SEIR Mitigation Measures:

5-2 *In areas of documented or inferred archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:*

a. Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.

b. Should any cultural resources be discovered no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.

c. Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including a catalog with museum numbers.

With application of mitigation, the Certified SEIR concluded that TOP 2050 impacts to paleontological resources would be less-than-significant (Certified SEIR, p. 5.7-25).

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Certified SEIR indicates that there is a possibility of finding paleontological resources within the City boundaries at depths of 10 feet or more below ground surface (Certified SEIR, p. 5.7-22). No known paleontological resources exist within the subject site or its vicinity. Moreover,

soils underlying the site comprise younger Quaternary Alluvium sediments. These soils typically do not contain significant vertebrate fossils (The Avenue 2020 Addendum, p. 25). Additionally, per City Conditions of Approval, should any unanticipated paleontological resources be encountered during excavation, construction activities would be halted or would be relocated to other unaffected areas of the subject site. Under such circumstances, a qualified paleontologist would be retained to evaluate any encountered find. If the find is determined to be significant, avoidance or other appropriate measures shall be implemented.

Modified Project Conditions of Approval: The Modified Project would be required to conform to City Conditions of Approval providing for protection of potentially significant paleontological resources, and would implement above-noted Certified SEIR Mitigation Measure 5-2. No additional measures are required or proposed for the Modified Project.

With conformance to City Conditions of Approval, and implementation of mitigation, the potential for the Modified Project to adversely to result in cause a substantial adverse change in the significance of a paleontological resource would be less-than-significant. When compared to the Certified SEIR findings, no new or substantially increased impacts to paleontological resources would result from the Modified Project.

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different geology and soils impacts would occur as a result of the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2024 Amendment*.

8. GREENHOUSE GAS EMISSIONS

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?					X	
b) Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?					X	

Substantiation:

a, b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR substantiates that TOP 2050 would yield a net decrease in GHG emission when compared to the previous General Plan (TOP 2009) GHG emissions forecasts. Further, under TOP 2050 and the CCAP, the City would achieve State emissions reductions targets and would progress toward attainment of the State's carbon neutrality goals. On this basis, the Certified SEIR concluded that the potential for TOP 2050 to generate greenhouse gas emissions, either directly or indirectly, that may have an adverse impact on the environment would be less-than-significant (Certified SEIR, pp. 5.8-25, 5.8-26).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. GHGs generated by the Modified Project are consistent with GHG emissions estimates reflected in the Certified EIR. For informational purposes, estimated GHGs generated by the Modified Project are presented at Table 8-1.

Table 8-1
Modified Project GHG Emissions

GHG Emissions Sources	Emission (lbs./day)				
	CO_2	CH_4	N_2O	R	Total CO_2e
Mobile Source	48,509.00	2.54	2.45	75.33	49,376.80
Area Source	983.99	0.02	0.00	0.00	985.20
Energy Source	9,705.56	0.89	0.06	0.00	9,745.98
Water	665.34	6.15	0.15	0.00	864.42
Waste	351.51	35.13	0.00	0.00	1,229.82
Refrigerants	0.00	0.00	0.00	6.34	6.34
Total CO_2e (All Sources)	62,208.56				

Source: *The Avenue Specific Plan, 2023 Amendment - Greenhouse Gas Assessment* (Urban Crossroads, Inc.) May 8, 2024.

The Modified Project would be required to implement applicable provisions of the incumbent City CAP, to include measures and design features necessary to achieve applicable CAP GHG emissions reduction performance standards. The City CAP supports and complies with state and regional plans, policies, and regulations adopted for the purpose of reducing GHGs. On this basis, the Modified Project would not conflict with plans, policies, and regulations adopted for the purpose of reducing GHGs. The Modified Project would therefore not result in new, additional, or different impacts regarding consistency with applicable GHG emissions reduction plans, policies, and regulations not considered and addressed in the Certified SEIR.

Modified Project Conditions of Approval: None.

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different GHG impacts would occur as a result of the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022*; *The Avenue Specific Plan, 2023 Amendment -*

Greenhouse Gas Assessment (Urban Crossroads, Inc.) May 8, 2024; *The Avenue Specific Plan, 2024 Amendment*.

9. HAZARDS AND HAZARDOUS MATERIALS

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?					X	
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?					X	
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within ¼ mile of an existing or proposed school?					X	
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?					X	
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?					X	
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?					X	
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?					X	

Substantiation:

a, b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR determined that buildout in accordance with TOP 2050 would involve the transport, use, and/or disposal of hazardous materials. However, federal and state regulations, City ordinances, and TOP 2050 Policies would appropriately control handling of hazardous substances to reduce potential releases; exposure; and risks of transporting, storing, treating, and disposing of hazardous materials and wastes. On this basis, the Certified SEIR concluded that the potential for TOP 2050 to result in adverse impacts related to transport, use, and/or disposal of hazardous materials; creation of significant hazards, or result in hazardous emissions affecting schools, would be less-than-significant (Certified SEIR, pp. 5.1-4 – 5.1-10).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project would not result in or cause exposure(s) to hazards or potentially hazardous conditions. That is, uses proposed by the Modified Project are not considered hazardous. Nor does the Modified Project propose or require facilities or operations involving inherent substantial hazards.

During the normal course of construction and operation activities, there would be limited transport of potentially hazardous materials (e.g., gasoline, diesel fuel, paints, solvents, fertilizer, etc.) to and from the Modified Project site. However, as presented within the Certified SEIR, the Modified Project would be required to comply with all City and County Hazardous Materials Management Plans and regulations addressing transport, use, storage and disposal of these materials. The Modified Project does not propose or require uses or activities that would result in atypical transportation, use, storage, or disposal of hazardous or potentially hazardous materials not addressed under current regulations and policies.

Further, any commercial/retail occupancies within the Modified Project that would store or use hazardous materials would be required to comply with California Hazardous Materials Business Plan (HMBP) requirements (*California Health & Safety Code*, Division 20, Chapter 6.95). The HMBP contains detailed information on the storage of hazardous materials at regulated facilities. The purpose of the HMBP is to prevent or minimize damage to public health, safety, and the environment, from a release or threatened release of a hazardous material. The HMBP also provides emergency response personnel with adequate information to help them better prepare and respond to chemical-related incidents at regulated facilities.

Existing Hazards/Hazardous Conditions

Previous Analyses

Hazardous or potentially hazardous conditions affecting the subject site have been extensively evaluated previously in Phase I/II Environmental Site Assessments (Phase I/II ESAs) as well as Methane Gas Investigation prepared in support of the Certified 2007 EIR for The Avenue Specific Plan (Certified 2007 EIR, SCH No. 2005071109). These Phase I/II ESAs and Methane Gas Investigation Studies are listed below and are incorporated here by reference. All of the listed documents are available through the City of Ontario.

Phase I Environmental Site Assessments

- Blasland, Bouck & Lee, Inc. *Phase I Environmental Site Assessment and Shallow Soil Sampling, Anderson Property APN No. 218-181-17 and 218-181-21 Ontario, California*, March 2001.

Phase II Environmental Site Assessment

- Lawson & Associates, *Phase II Soil Sampling Investigation, Del Amo Dairy, 13737 South Archibald Avenue, City of Ontario, San Bernardino County, California*, January 21, 2004.

Methane Gas Investigations

- Geokinetics, *Subsurface Methane Gas Investigation for The Koopman Property Ontario, California,* October 11, 2002.

- Geokinetics, Subsurface *Methane Gas Investigation for Schoneveld Property Ontario, California*, November 25, 2002.
- Geokinetics, *Subsurface Methane Gas Investigation for Harada Property Ontario, California*, January 3, 2003.
- Geokinetics, *Subsurface Methane Gas Investigation for Jongsma Property Ontario, California*, August 29, 2003.
- Geokinetics, *Subsurface Methane Gas Investigation for Hettinga Property Ontario, California,* June 5, 2004.
- Geokinetics, *Subsurface Methane Gas Investigation DeGroot Property 14080 Haven Avenue Ontario, California*, March 1, 2005.
- Geokinetics, *Preliminary Subsurface Methane Gas Investigation Kaplan Property 13923 Archibald Avenue Ontario*, California, March 16, 2005.
- Geokinetics, *Subsurface Methane Gas Investigation for Anderson-Dotson Property Ontario, California,* November 25, 2002.
- Lawson & Associates. *Preliminary Subsurface Methane Gas Investigation Ferreira Property Ontario, California,* February 18, 2005.
- Lawson & Associates. *Preliminary Methane Site Assessment, Proposed Residential Development, Dykstra Parcel, City of Ontario, California*, October 24, 2005.
- Petra Environmental Division, *Report of the Site History Relative to The Potential for Methane Generation, 60-Acre Parcel, Designated as (APN 0218-201-44 and 15) Located in the City of Ontario, County of San Bernardino, California*, August 9, 2004.

Modified Project Phase I ESA

Complementing the above-cited Phase I/II ESAs, a focused updated Phase I ESA (*Phase I Environmental Site Assessment - 13838, 13898, 14058 S. Archibald Avenue* [Hillmann Consulting] June 30, 2023, 2023 Phase I ESA) has been prepared in support of this Addendum. The 2023 Phase I ESA concluded that the evaluated properties are not adversely affected by any recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs) and/or significant data gaps (SDGs) (2023 Phase I ESA, p. 3).

Modified Project Conditions of Approval: The Modified Project would be required to implement federal and state regulations, City ordinances, and TOP 2050 Policies

addressing potential hazards or hazardous conditions that could result from construction and operation of the Project uses. Additionally, the Modified Project would be required to implement federal and state regulations, City ordinances, and TOP 2050 Policies. To ensure compliance with applicable regulations, ordinances, and policies, the following measures are included as Project Conditions of Approval.

HM-1 *Removal of structures, including, but limited to, under- and aboveground storage tanks, septic systems, and water wells shall conform to all Federal, State, and local agency regulations (specifically with those required by the City Building and Safety Department and the Hazardous Materials Division of the San Bernardino County Fire Department). Due to the extensive disposal requirements and protocols contained within these regulatory schemes, implementation and adherence to these various regulatory requirements will ensure that no significant impacts occur.*

HM-2 *Prior to grading activities for any areas not previously tested, a methane gas assessment shall be prepared by a licensed professional with expertise in soil gas assessments for subdivisions proposed on former dairies, poultry ranches, hog ranches, livestock feed operations and similar facilities to determine the presence of methane gas within the project boundary. The methane gas assessment shall identify monitoring and mitigation strategies and approaches. All mitigation measures/plans and specifications shall be reviewed and approved by the City of Ontario.*

Such an assessment may take two steps. A preliminary assessment will be done prior to grading to determine exactly where dairies have existed in the past so that the post grading assessment/mitigation measures can be focused on the portions of the Planning Areas that have included former agricultural activities. The second step will include actual testing of graded pads no sooner than 30 days after construction to determine if methane is detected above 5,000 ppm.

The following grading guidelines shall also be adhered to:

- *Careful clearing, grubbing, segregation, and stockpiling or disposal near surface, of organics-rich soils at the site prior to the initiation of mass grading activities.*

- *The identification and segregation/stockpiling or disposal of deeper soils which contain elevated levels of organic material. Soils with an organic content of 0.4% or higher shall be segregated for controlled placement that ensures that methane levels are below 5,000 ppm.*

- *Soils with organic content in excess of 0.4% shall not be placed as "deep" fill. Soils with organic contents in excess of this amount shall be placed in open areas within approximately two feet of the finished ground surface.*

HM-3 *To eliminate the risk of ground cracking, manure shall be removed from the site, such that the organic matter content of onsite soils shall not exceed 2% (a 2% total organic content is allowed, of which no more than 1% can be manure) in the building foundation areas when mixed with underlying clean soils and imported fill.*

HM-4 *To the extent not previously prepared and to properly assess and address potential hazardous materials, a Phase I Environmental Site Assessment (ESA) shall be performed by a registered environmental assessor (REA) prior to the approval of the Tentative Tract Map, site plan or other discretionary approval for a given phase of development. If potential hazardous materials or conditions are identified in the Phase I report, the recommendations of the ESA shall be implemented. Such recommendations shall include surficial sampling and chemical analysis within agricultural areas or where soil staining was observed. The Phase I ESA shall be provided to the City and shall be included in any CEQA analysis prepared in connection with the consideration of the discretionary approval for development.*

HM-5 *If, while performing any excavation as part of Project construction, material that is believed to be hazardous waste as defined in Section 25117 of the California Health and Safety Code is discovered, the developer shall contact the City Fire Department and the County of San Bernardino Fire Department Hazardous Materials Division. Excavation shall be stopped until the material has been tested and the absence of hazardous waste has been confirmed. If hazardous waste is determined to be present, the California Department of Toxic Substances control shall be contacted and the material shall be removed and disposed of pursuant to applicable provisions of California law.*

Conditions of Approval identified herein, implementation of federal and state regulations, compliance with City ordinances, and TOP 2050 Policies act to maintain potential hazards/hazardous materials impacts at levels that would be less-than-significant. On this basis, the potential for the Modified Project to adversely to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials; or create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment would be less-than-significant.

c) No Changes or New Information Requiring Preparation of an MND or EIR.

Certified SEIR Conclusions: The Certified SEIR determined that buildout in accordance with TOP 2050 would involve the transport, use, and/or disposal of hazardous materials. However, federal and state regulations, City ordinances, and TOP 2050 Policies would appropriately control handling of hazardous substances to reduce potential releases; exposure; and risks of transporting, storing, treating, and disposing of hazardous materials and wastes. On this basis, the Certified SEIR concluded that the potential for TOP 2050 to result in adverse impacts related to transport, use, and/or disposal of hazardous materials; creation of significant hazards, or result in hazardous emissions affecting schools, would be less-than-significant (Certified SEIR, pp. 5.1-4 – 5.1-10).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project does not propose or require uses that would handle hazardous or acutely hazardous materials, substances, or waste. The Modified Project would not result in potentially significant hazardous impacts at existing or proposed vicinity schools.[6]

Modified Project Conditions of Approval: None.

[6] Note: Any occupation of the potential school site within the SPA would occur subsequent to development of the SPA uses generally. As such, school occupants would not be subject to any SPA construction-source impacts.

d) No Changes or New Information Requiring Preparation of an MND or EIR.

Certified SEIR Conclusions: Development in accordance with TOP 2050 would involve redevelopment and reuse of some sites listed as hazardous materials sites on environmental databases. The environmental databases document the presence of hazardous materials on those sites, but do not document hazardous releases. Redevelopment of the affected sites could potentially expose future residents and workers to hazards from known hazardous materials releases on and near the sites. Should environmental database listed sites be proposed for development, site assessments for hazardous materials and remediation of hazardous materials releases would be required in accordance with TOP 2050 Policies, federal, state, and local regulations. On this basis, the Certified SEIR concluded that the potential for development pursuant to TOP 2050 to be located on hazardous materials sites, and thereby create adverse hazard impacts affecting the public or environment would be less-than-significant (Certified SEIR, pp. 5.9-38, 5.9-39).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project site is not affected by any recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs) and/or significant data gaps (SDGs). This would include potential listing as a hazardous material site pursuant to Government Code Section 65962.5. Additionally, as discussed in the Certified SEIR, the Modified Project would be required to comply with applicable TOP 2050 Policies, federal, state, and local regulations, ensuring that hazards/hazardous materials impacts are maintained at levels that would be less-than-significant. Therefore, the Modified Project would not create a hazard to the public or the environment and no impact is anticipated.

On this basis, there is no potential for the Modified Project to be located on a Government Code Section 65962.5-listed site, and thereby would not create adverse hazard impacts affecting the public or environment. When compared to the Certified SEIR findings, no

new or substantially increased impacts related to development affecting Government Code Section 65962.5-listed sites would result from the Modified Project.

Modified Project Conditions of Approval: None.

e) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Ontario International Airport (ONT), as well as a small portion of the Chino Airport property, is located within the City of Ontario. The Certified SEIR determined that TOP 2050 Policies and established processes for consistency reviews of new development with the appropriate Airport Land Use Compatibility Plan (ALUCP) would be sufficient to prevent significant impacts (Certified SEIR, p. 5.8-27).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. Location of area airports relative to the Modified Project site has not changed since preparation of the Certified SEIR – the site remains more than two miles distant from the nearest airport; the nearest airport is ONT, located approximately 3.3 miles north of the Modified Project site.

The Modified Project site is located within the area subject to provisions of The ONT Airport Land Use Compatibility Plan, ALUCP (July 2018). The ALUCP defines the ONT Airport Influence Area (AIA) as an area in which current and future airport-related noise, overflight, safety, and airspace protection factors may significantly affect land uses or necessitate restriction on those uses. The Modified Project site is located outside the ONT safety zones (see: TOP 2050 Policy Plan Figure LU-06, *Airport Safety Zones & Influence Areas*). As with the development anticipated under the Original Project and evaluated in the Certified SEIR, development implemented pursuant to the Modified Project would comply with all requirements set forth within the ALUCP. Based on the preceding, the potential for the Modified Project to result in airport-related safety hazard impacts or excessive noise impacts would be less-than-significant.

Modified Project Conditions of Approval: None.

f) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: In 2018, the City of Ontario prepared a Local Hazard Mitigation Plan (LHMP) to identify the City's hazards, review and assess past disaster occurrences, estimate the probability of future occurrences, and set goals to reduce or eliminate long-term risk to people and property from natural and man-made hazards. Wildfire hazard is rated the highest risk of the 23 hazards evaluated, followed by flooding. Under the LHMP, interstate highways would serve as major emergency response and evacuation routes. TOP 2050 Policies and local roadways are designed and constructed so as to facilitate access under normal and emergency conditions.

A review of emergency access is included as part of the standard City's Design Review process. Additionally, the Ontario Fire Department reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance.

Based on the preceding, the Certified SEIR concluded that buildout of the City in accordance with TOP 2050 would not impair implementation of, or physically interfere with, an adopted emergency response plan or emergency evacuation plan. Impacts in these regards would be less-than-significant (Certified SEIR, p. 5.9-41).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project does not propose or require permanent alteration of vehicle circulation routes, and would not interfere with any identified emergency response or emergency evacuation plan. Standard City design review processes include coordination with fire and police departments during pre-construction review of plans to ensure that potential interference with emergency response plans and evacuation plans are avoided. Based on the preceding, the Modified Project would not impair implementation of, or physically

interfere with, an adopted emergency response plan or emergency evacuation plan. Impacts in these regards would be less-than-significant.

Modified Project Conditions of Approval: None.

g) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR identifies available resources addressing wildland fires and associated potential impacts. These resources include: CAL FIRE *2019 Strategic Fire Plan for California*, the California Fire Code, County of San Bernardino Multi-jurisdiction Hazard Management Plan, the Ontario LHMP, and fire services from the Ontario Fire Department. The Certified SEIR determined that adherence to existing regulations and review of building plans by the Ontario Fire Department, development and infrastructure associated with TOP 2050 would not exacerbate risk or result in post-wildfire hazards. No significant impacts were identified (Certified SEIR, p. 5.9-41).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project site is located in an urbanized area, and no wildlands are located in the vicinity of the site. Fire protection services are provided by the Ontario Fire Department. Pre-construction coordination with Ontario Fire Department staff and adherence to local fire department regulations during construction and operation of the Modified Project would be required. As such, no new or substantially increased impacts related to wildland fire impacts would result from the Modified Project.

Modified Project Conditions of Approval: None.

Summary

When compared to the Certified SEIR findings, no new or substantially increased hazards or hazardous emission impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from

the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; Phase I Environmental Site Assessment - 13838, 13898, 14058 S. Archibald Avenue* (Hillmann Consulting) June 30, 2023; *The Avenue Specific Plan, 2024 Amendment*.

10. HYDROLOGY AND WATER QUALITY

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?					X	
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?					X	
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:					X	
(i) result in substantial erosion or siltation on- or off-site?					X	
(ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?					X	
(iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?					X	

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
(iv) impede or redirect flood flows?					X	
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?					X	
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?					X	

Substantiation:

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR recognizes that buildout of the City pursuant to TOP 2050 would increase concentrations of pollutants during construction and post-construction activities. To address potential water quality impacts resulting from project construction and operations, projects are required to comply with provisions of the City's National Pollutant Discharge Elimination System (NPDES) permit. NPDES permit requirements include, but are not limited to, mandated preparation of a Stormwater Pollution Prevention Plan (SWPPP) and Water Quality Management Plan (WQMP). Mandated SWPPPs and WQMPs are required to develop and implement Best Management Practices (BMPs) to reduce construction-source and operational-source stormwater pollutant discharges. Based on compliance with the City NPDES Permit and implementation of required SWPPPs and WQMPs, the Certified SEIR did not identify any significant water quality impacts (Certified SEIR, p. 5.10-21).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. Consistent with City

requirements, a WQMP and SWPPP would be prepared for development proposals under the Modified Project. City review and approval of these documents is required prior to issuance of Grading Permits. As with the Original Project, implementation of an approved SWPPP and WQMP would reduce the potential for the development under the Modified Project to violate water quality standards or otherwise adversely affect water quality to levels that would be less-than-significant.

Based on the preceding, the Modified Project's potential to violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality is considered less-than-significant. When compared to the Certified SEIR findings, no new or substantially increased water quality impacts would result from the Modified Project.

Modified Project Conditions of Approval: None.

b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: As discussed in the Certified SEIR, "[a]pproximately 46 percent of the City's water supply is groundwater pumped by the City from the Chino Groundwater Basin; groundwater pumping is managed by OMUC so that domestic demands do not exceed the safe yield for the basin, consistent with the Chino Basin Watermaster's Optimum Basin Management Program, commonly called the 'OBMP Peace Agreement'" (Certified SEIR, p. 5.10-22). The Certified SEIR notes further "the Chino Groundwater Basin is adjudicated and is considered by DWR to be a very low priority groundwater basin. Each water purveyor has an allotted amount of water that can be pumped from the basin so that the safe yield is not exceeded. The City has access to additional water supplies that can accommodate the proposed increase in growth with buildout of [TOP 2050] and would not interfere with sustainable management of the groundwater basin" (Certified SEIR, p. 5.10-22).

The Certified SEIR recognizes that development pursuant to TOP 2050 would increase the amount of impervious surface within the City. However, groundwater recharge efforts would not be hindered. To these ends, all development projects within the City

would be required to prepare project-specific hydrology studies, implement low impact development BMPs and comply with NPDES regulations supporting TOP 2050 Policies promoting infiltration of runoff and groundwater recharge.

Based on the preceding, TOP 2050 would not result in substantial adverse impacts affecting groundwater supplies, groundwater recharge, or groundwater sustainability (Certified SEIR, p. 5.10-23).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. Direct additions to or withdrawals of groundwater are not proposed or required by the Modified Project. Construction proposed by the Modified Project would not involve massive substructures at depths that would significantly impair or alter the direction or rate of flow of groundwater. The Modified Project does not propose or require uses or facilities that would affect designated groundwater recharge areas. All development proposals under the Modified Project would be required to prepare development-specific hydrology studies, implement low impact development BMPs and comply with NPDES regulations supporting TOP 2050 Policies promoting infiltration of runoff and groundwater recharge.

Based on the preceding, the Modified Project would not result in substantial adverse impacts affecting groundwater supplies, groundwater recharge, or groundwater sustainability.

Modified Project Conditions of Approval: None.

c) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Consistent with NPDES requirements, runoff quantities would not be permitted to substantially increase as a result of a development under TOP 2050. In this regard, projects would be required to prepare project-specific hydrology studies. Further, existing City policies encourage the use of low impact development

strategies to intercept runoff, reduce stormwater discharge rates, increase infiltration and ultimately reduce discharge volumes to traditional storm drain systems.

The Certified SEIR notes that while the amount of impervious surfaces would be increased under TOP 2050 (and thus surface water flows into drainage systems), existing City and County requirements would ensure significant impacts related to alteration of drainage patterns do not occur. Additionally, City policies and regulations act to minimize or avoid development or other actions that would potentially result in impedance or redirection of flood flows (Certified SEIR, pp. 5.10-23 – 5.10-27).

Based on the preceding, the potential for development under TOP 2050 to substantially alter existing drainage patterns resulting in erosion, flooding, polluted runoff, or impeded or redirected flood flows would be less-than-significant.

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. Per requirements of *The Avenue Specific Plan, 2024 Amendment*:

> The grading and drainage of The Avenue Specific Plan area shall be designed to detain, filter and treat surface runoff, in a manner and combination which is practical, to comply with the most recent requirements of the San Bernardino County NPDES Stormwater Program's Water Quality Management (WQMP) for significant new development projects. The objective of the WQMP for this project is to minimize the detrimental effects of urbanization on the beneficial uses of receiving waters, including effects caused by increased pollutants and changes in hydrology. These effects may be minimized through the implementation of site designs that reduce runoff and pollutant transport by minimizing impervious surfaces and maximizing on-site infiltration, Source Control Best Management Practices (BMPs) and/or either on-site structural Treatment Control BMPs, or participation in regional or watershed-based

Treatment Control BMPs. An alternative to the implementation of on-site Low Impact Development (LID) BMPs to retain/infilter and treat stormwater runoff is the utilization of the off-site, regional Mill Creek Wetland facility for accomplishing water quality improvements in residential project runoff from this master planned community. All non-residential planning area projects within The Avenue will incorporate all required on-site LID BMPs, pursuant to the requirements of the current San Bernardino County Water Quality Management Plan.

Prior to the issuance of a grading or construction permit, all projects greater than 1-acre in size shall apply for coverage under the California General Permit To Discharge Storm Water Associated with Construction Activity, obtain a WDID# from the State Water Resources Control Board and prepare a Stormwater Pollution Prevention Plan (SWPPP) on the CASQA 2009 Template form and upload it to the State SMART database system. A copy of each SWPPP document and [Waste Discharger Identification Number] WDID# Certification shall also be provided to the City of Ontario, prior to any construction permit issuance. The SWPPP will identify and detail all appropriate Best Management Practices (BMPs) to be implemented or installed during construction of the project.

In addition to the preparation of a SWPPP for construction-related activities, and as part of the approval of any grading plans within the Specific Plan Area, the applicant will be required to submit a Water Quality Management Plan (WQMP) on the regional model form provided by the City. The WQMP shall identify and detail all Site Design BMPs, Source

> Control BMPs and Treatment Control BMPs to be implemented or installed at this site in order to reduce storm water pollutants and site runoff.[7]
>
> All Priority Land Use (PLU) areas within the Specific Plan Area shall comply with the statewide Trash Provisions adopted by the State Water Resources Control Board (SWRCB) and trash requirements in the most current San Bernardino County Area-Wide MS4 Permit.
>
> [*The Avenue Specific Plan, 2024 Amendment*, pp. 4-29, 4-30]

Requirements of the Specific Plan Amendment outlined above in combination with City Conditions of Approval would ensure that the potential for development pursuant to the Modified Project to alter drainage patterns in a manner that would result in adverse erosion, siltation, flooding/flood flow or stormwater system capacity impacts would remain at levels that would be less-than-significant.

Modified Project Conditions of Approval: None.

d) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: As discussed in the Certified SEIR, "there are no large bodies of water that would result in a seiche during seismic activity. Additionally, the reservoirs/aboveground water tanks within the City are enclosed, thereby minimizing the possibility of a seiche. The [City] is inland and approximately 30 miles from the ocean and is not at risk of flooding due to tsunamis. Based on the preceding, the Certified SEIR concluded that TOP 2050 would not result in adverse impacts related to flood hazard, tsunami, or seiche zones, risk release of pollutants due to inundation (Certified SEIR, pp. 5.10-26, 5.10-27).

7 The Mill Creek Wetland Facility (Facility) has been constructed and functional since June 2014. The Facility serves as an alternative to on-site LID BMP implementation for residential tract developers that are members of the Ontario Ranch Builders, LLC consortium and which have adequate reserved capacity in the regional facility for those planning areas. Portions of the Project site acres developed by non-members, would be required to make other arrangements or utilize another, future regional water quality facility. All non-residential planning area projects within The Avenue, including Public Schools, will incorporate on-site LID BMPs, in accordance with the regional NPDES Permit and the current San Bernardino County Water Quality Management Plan, and shall not rely on the regional wetlands facility for retention and treatment of runoff water.

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. Conditions at the Modified Project site as regards flood hazard impacts, tsunami hazard impacts, or seiche hazard impacts have not changed since preparation of the Certified SEIR – the site remains unaffected by substantial potential flood hazards, tsunami hazards, or seiche hazards.

Further, any commercial/retail occupancies within the Modified Project that would store or use hazardous materials would be required to comply with California Hazardous Materials Business Plan (HMBP) requirements (*California Health & Safety Code*, Division 20, Chapter 6.95) The HMBP contains detailed information on the storage of hazardous materials at regulated facilities. The purpose of the HMBP is to prevent or minimize damage to public health, safety, and the environment, from a release or threatened release of a hazardous material, including potential release of materials in a flood event.

Based on the preceding the potential for the Modified Project to result in release of pollutants due to an inundation event would be less-than-significant.

Modified Project Conditions of Approval: None.

e) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: As discussed in the Certified EIR, "[p]rojects approved under TOP 2050 would be required to comply with the Santa Ana River Basin Plan and to control pollutants in discharges of stormwater from postconstruction activities under NPDES Permit No. CAS618036 through preparation of a WQMP identifying BMPs for prevention of stormwater pollution during the post-construction phase, including site-design, source-control, and/or treatment BMPs. Therefore, [TOP 2050] would not obstruct or conflict with the RWQCB's Basin Plan or any groundwater management plan, and impacts would be less than significant" (Certified SEIR, p. 5.10-27).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project does not propose or require uses or facilities that would conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. The Modified Project would have no impacts in these regards.

Modified Project Conditions of Approval: None.

Summary

When compared to the Certified SEIR findings, no new or substantially increased hydrology or water quality impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2024 Amendment*.

11. LAND USE AND PLANNING

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Physically divide an established community?					X	
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?					X	

***Substantiation*:**

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that implementation of TOP 2050 would not result in result in the physical division of an established community (Certified SEIR, p. 5.11-6).

Certified SEIR Mitigation Measures: None.

Modified Project: No established community is located within the Modified Project site. The Modified Project would not otherwise result in potential division of an established community. The Modified Project would have no impacts in these regards.

Modified Project Conditions of Approval: None.

b) No Changes or New Information Requiring Preparation of an MND or EIR.

Certified SEIR Conclusions: The Certified SEIR concluded that implementation of TOP 2050 would not result in significant land use impacts (Certified SEIR, p. 5.11-11).

Certified SEIR Mitigation Measures: None.

Modified Project: Land use plans, policies, or regulations adopted for the purpose of avoiding or mitigating environmental effects are established under the TOP 2050. The Modified Project amends the site's current land use designations to conform to TOP 2050 land use designations.

The Modified Project would be required to comply with applicable TOP 2050 Policies, applicable requirements of *The Avenue Specific Plan, 2024 Amend*ment and provisions of the City Development Code. Collectively, TOP 2050 Policies, the City Development Code, and *The Avenue Specific Plan, 2024 Amendment,* and act to minimize potential environmental effects that may result from the land uses implemented under the Modified Project. On this basis, the potential for the Modified Project to conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect is considered less-than-significant.

Modified Project Conditions of Approval: None.

Summary

When compared to the Certified SEIR findings, no new or substantially increased land use and planning impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2024 Amendment*.

12. MINERAL RESOURCES

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?					X	
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?					X	

***Substantiation*:**

a, b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that implementation of TOP 2050 would have no potential to result in the loss of a known mineral resource of value to the region or the state; or result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan (Certified SEIR, p. 5.12-6).

Certified SEIR Mitigation Measures: None.

Modified Project: Underlying conditions at the subject site have not changed since preparation of the Certified SEIR, and the site remains devoid of any potentially valuable or locally-important mineral resources. On this basis, the Modified Project would have no potential to result in the loss of a known mineral resource of value to the region or the state; or result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. No new or substantially increased mineral resources impacts would result from the Modified Project.

Modified Project Conditions of Approval: None.

Summary

Based on the preceding, when compared to impacts identified in the Certified SEIR, no new or substantially increased mineral resources impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2024 Amendment*.

13. NOISE

Would the project result in:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?					X	
b) Generation of excessive groundborne vibration or groundborne noise levels?					X	
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?					X	

General Note: *The technical analyses referenced in this section reflect likely maximum impacts. Subsequent to preparation of these analyses, total residential development intensities allowed under the Modified Project have been reduced consistent with direction. Specifically, the technical analyses referenced herein assume residential development of the Modified Project totaling up to 3,807 dwelling units (see Project Traffic Analysis, p. 2 et al.). As subsequently modified, maximum allowed residential development under the Modified Project would not exceed 3,753 dwelling units (see Section 2.0, Project Description, Table 2.1-1).*

***Substantiation*:**

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR determined that new development implemented pursuant to TOP 2050 would result in temporary noise increases at sensitive receptors during construction activities (Certified SEIR, p. 5.13-28). Certified

SEIR Mitigation Measure 12-4, below, would reduce construction noise but would not avoid this impact or reduce the impact to levels that would be less-than-significant.

Certified SEIR Mitigation Measure:

12-4 Construction activities associated with new development that occurs near sensitive receptors shall be evaluated for potential noise impacts. Construction contractors shall implement the following measures for construction activities in the City of Ontario. Construction plans submitted to the City shall identify these measures on demolition, grading, and construction plans. The City of Ontario Planning and Building Departments shall verify that grading, demolition, and/or construction plans submitted include these notations prior to issuance of demolition, grading, and/or building permits.

- *Construction activity is limited to the hours between 7:00 am and 6:00 pm Monday through Friday and 9:00 am to 6:00 pm Saturdays and Sundays, as prescribed in Municipal Code Section 5-29.09.*
- *During the entire active construction period, equipment and trucks used for project construction shall use the best-available noise control techniques wherever feasible (e.g., improved mufflers, equipment re-design, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds).*
- *Impact tools (e.g., jack hammers and hoe rams) shall be hydraulically or electrically powered wherever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools.*
- *Stationary equipment such as generators and air compressors shall be located as far as feasible from nearby noise-sensitive uses.*
- *Stockpiling shall be located as far as feasible from nearby noise-sensitive receptors.*
- *Construction traffic shall be limited, to the extent feasible, to approved haul routes established by the City Planning and Building Agency.*
- *At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint.*

If the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report the action to the City.

- *Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes.*
- *During the entire active construction period and to the extent feasible, the use of noise-producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level or switch off back-up alarms and replace with human spotters in compliance with all safety requirements and laws.*
- *Erect temporary noise barriers (at least as high as the exhaust of equipment and breaking line-of-sight between noise sources and sensitive receptors), as necessary and feasible, to maintain construction noise levels at or below the performance standard of 80 dBA Leq. Barriers shall be constructed with a solid material that has a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier and may be lined on the construction side with an acoustical blanket, curtain, or equivalent absorptive material.*

Modified Project: Potential noise impacts of the Modified Project are evaluated in *The Avenue Specific Plan, 2023 Amendment - Noise Impact Analysis* (Urban Crossroads, Inc.) May 8, 2024 (Noise Impact Analysis, Addendum Appendix E). Analysis and conclusions of the Noise Impact Analysis are summarized below.

Noise Standards

Noise impacts would be considered significant if any of the following criteria are exceeded, as shown in Table 13-1.

Table 13-1
Significance Criteria Summary

Analysis	Receiving Land Use	Condition(s)	Significance Criteria	
			Daytime	Nighttime
Off-Site Traffic	All	If ambient is < 60 dBA CNEL	≥ 5 dBA CNEL Project increase	
		If ambient is 60 - 64 dBA CNEL	≥ 3 dBA CNEL Project increase	

Table 13-1
Significance Criteria Summary

Analysis	Receiving Land Use	Condition(s)	Significance Criteria	
			Daytime	Nighttime
		If ambient is >= 65 dBA CNEL	≥ 1.5 dBA CNEL Project increase	
On-Site Traffic	All	See Exhibit 3-A of the Noise Impact Analysis.		
Operational	Noise-Sensitive	Exterior Noise Level Standards	65 dBA L_{eq}	45 dBA L_{eq}
		if ambient is < 60 dBA L_{eq}	≥ 5 dBA L_{eq} Project increase	
		if ambient is 60 - 65 dBA L_{eq}	≥ 3 dBA L_{eq} Project increase	
		if ambient is > 65 dBA L_{eq}	≥ 1.5 dBA L_{eq} Project increase	
Construction	Noise-Sensitive	Noise Level Threshold	80 dBA L_{eq}	
		Vibration Level Threshold	0.3 PPV (in/sec)	

Source: *The Avenue Specific Plan, 2023 Amendment - Noise Impact Analysis* (Urban Crossroads, Inc.) May 8, 2024.

Sensitive Receivers

The following receiver locations, shown at Noise Impact Analysis Exhibit 8-A, *Receiver Locations*, were identified as representative noise impact analysis locations.

R1: Location R1 represents the existing residence at 3141 E. Mt. Rainier Drive, approximately 1,523 feet southeast of the Project site. Receptor R1 is placed at the private outdoor living areas (backyards) facing the Project site.

R2: Location R2 represents the existing residence at 3970 S. Oasis Paseo, approximately 2,763 feet east of the Project site. Receptor R2 is placed at the private outdoor living areas (backyards) facing the Project site.

R3: Location R3 represents the existing residence at 3712 Ironwood Avenue, approximately 1,818 feet northeast of the Project site. Since there is no outdoor use area facing the Project site, Receptor R3 is placed at the nearest building façade facing the Project site.

R4: Location R4 represents the existing residence at 3092 East Wing Street, approximately 1,218 feet northeast of the Project site. Receptor R4 is placed at the private outdoor living areas (backyards) facing the Project site.

R5: Location R5 represents the existing residence at South Wangler Place, approximately 631 feet northeast of the Project site. Receptor R5 is placed at the private outdoor living areas (backyards) facing the Project site.

R6: Location R6 represents the existing residence at 9029 Schaefer Avenue, approximately 375 feet west of the Project site. Receptor R6 is placed at the private outdoor living areas (backyards) facing the Project site.

R7: Location R7 represents the existing residence at 9060 Edison Avenue, approximately 48 feet west of the Project site. Receptor R7 is placed at the private outdoor living areas (backyards) facing the Project site.

Construction-Source Noise Impacts

In the evaluation of construction-source noise impacts, the Noise Impact Analysis employs empirical reference noise measurements obtained from similar construction activities. Based on the reference construction noise levels, maximum received noise levels attributable to the Modified Project construction activities were calculated, and are summarized at Table 13-2. Compliance with applicable significance thresholds is also presented.

Table 13-2
Maximum Received Construction-Source Noise Levels

Receiver Location	Maximum Received Noise Level (dBA Leq)	Threshold (dBA Leq)	Threshold Exceeded?
R1	49.6	80	No
R2	45.1	80	No
R3	47.8	80	No
R4	50.3	80	No
R5	55.2	80	No
R6	54.8	80	No
R7	60.1	80	No

Source: *The Avenue Specific Plan, 2023 Amendment - Noise Impact Analysis* (Urban Crossroads, Inc.) May 8, 2024.

As shown at Table 13-2, received construction-source noise levels would not exceed the applicable threshold and would therefore be less-than-significant.

Operational-Source Noise Impacts

The Modified Project has not been designed at this stage of project development. The Avenue Specific Plan, 2024 Amendment development is not expected to include any

specific type of operational noise levels beyond the typical noise sources associated with similar residential and educational land uses in the Project study area, such as people and children, parking lot activity, garage doors, small air conditioners, and trash collection. The proposed residential uses would also be considered a noise-sensitive receiving land use.

The City would require future development within the Specific Plan area to conduct design-specific noise analyses to determine the precise operational noise impacts of each development project and identify any necessary noise abatement measures, if necessary.

Vehicular-Source Noise Impacts

Off-Site Vehicular-Source Noise

To assess the off-site transportation CNEL noise level impacts associated with development of the proposed Project, noise contours were developed based on the Modified Project Traffic Analysis. Noise contour boundaries represent the equal levels of noise exposure and are measured in CNEL from the center of the roadway. Noise contours were developed for the following traffic scenarios:

- Existing Conditions Without Project: This scenario refers to the existing present-day noise conditions without the proposed Project.
- Existing With Project: This scenario refers to the existing present-day noise conditions with the proposed Project.
- Opening Year 2026 Without the Project: This scenario refers to existing plus cumulative growth through 2026 noise conditions without the proposed Project.
- Opening Year 2026 Year With Project: This scenario includes existing plus cumulative growth through 2026 plus the proposed Project traffic volumes identified in the Traffic Impact Analysis.

Using the noise contours presented at Noise Impact Analysis Table 6-1 through 6-4, the following Tables 13-3 and 13-4 present the Project traffic noise level contributions under the Existing and Opening Year scenarios.

Table 13-3
Existing With Project Traffic Noise Level Increases

Source: *The Avenue Specific Plan, 2023 Amendment - Noise Impact Analysis* (Urban Crossroads, Inc.) May 8, 2024.

As shown above, based on the significance criteria for off-site traffic noise, land uses adjacent to the study area roadway segments would not be subjected to significant noise level increases due to Project-related traffic.

On-Site Vehicular-Source Noise

An on-site exterior noise impact analysis has been completed to determine the noise exposure levels that would result from adjacent transportation noise sources in the Project study area, and to identify potential noise attenuation measures that would achieve acceptable Project exterior and interior noise levels. The primary sources of transportation noise affecting the Modified Project site are anticipated to be from Archibald Avenue, Ontario Ranch Road/Edison Road, and Schaefer Avenue.

The expected future noise levels for the on-site land uses have been estimated, and are presented at Table 13-5.

Table 13-5

Source: *The Avenue Specific Plan, 2023 Amendment - Noise Impact Analysis* (Urban Crossroads, Inc.) May 8, 2024.

Table 13-5 shows that traffic noise levels received at the Project land uses would not exceed the City of Ontario 65 dBA CNEL exterior noise level standards for the noise sensitive residential land uses or schools.

For informational purposes, and to ensure that the interior noise levels comply with the interior noise level standards, future exterior noise levels were calculated at the estimated at the first and second floor building façade locations with planned residential areas

surrounding roadways. The interior noise level is the difference between the predicted exterior noise level at the building façade and the noise reduction of the structure. Typical building construction will provide a Noise Reduction (NR) of approximately 12 dBA with "windows open" and a minimum 25 dBA noise reduction with "windows closed." Tables 13-6 and 13-7 provide the first and second floor interior noise levels that can be expected within the planned residential areas.

Table 13-6

Source: *The Avenue Specific Plan, 2023 Amendment - Noise Impact Analysis* (Urban Crossroads, Inc.) May 8, 2024.

Tables 13-6 and 13-7 show that on-site interior traffic noise levels will not exceed the City of Ontario 45 dBA CNEL interior noise level standard for residential development under a windows-closed condition and a means of mechanical ventilation (e.g., air conditioning).

Although no significant on-site exterior or interior noise impacts are expected, the City will require use-specific noise studies for implementing projects within the Specific Plan area. These final noise studies would utilize any recommendations identified herein in combination with precise grading plans and actual building design specifications to identify any additional noise abatement measures, such as exterior noise barriers and/or building materials (e.g., sound transmission class ratings for windows and doors), if necessary.

Modified Project Conditions of Approval: None.

b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR determined that mobile-source and stationary/area-source vibration impacts associated with buildout of TOP 2050 would be less-than-significant. However, construction activities associated with buildout of the

individual land uses could expose sensitive uses to strong levels of groundborne vibration and would therefore be a potentially significant impact (Certified SEIR, pp. 5.13-38 – 5.13-41).

Certified SEIR Mitigation Measure:

12-2 *Prior to issuance of a building permit, individual projects that involve vibration-intensive construction activities, such as pile drivers, jack hammers, and vibratory rollers near sensitive receptors shall be evaluated for potential vibration impacts. For construction within 135 feet of fragile structures, such as historical resources, within 100 feet of nonengineered timber and masonry buildings (e.g., most residential buildings), or within 75 feet of engineered concrete and masonry (no plaster); or a vibratory roller within 25 feet of any structure, the project applicant shall prepare a noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to these activities. This noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed Federal Transit Administration (FTA) architectural damage thresholds (e.g., 0.12 inches per second [in/sec] peak particle velocity [PPV] for fragile or historical resources, 0.2 in/sec PPV for nonengineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses shall be used, such as drilling piles as opposed to pile driving and static rollers as opposed to vibratory rollers. If necessary, construction vibration monitoring shall be conducted to ensure vibration thresholds are not exceeded.*

The Certified SEIR concluded even with the implementation of Mitigation Measure 12-2, construction-source groundborne vibration impacts would be significant and unavoidable (Certified SEIR, p. 5.13-41).

Modified Project:

Construction activities can result in varying degrees of ground vibration, depending on the equipment and methods used, distance to the affected structures and soil type. Groundborne vibration from construction activities would cause only intermittent, localized intrusion.

In the evaluation of construction-source vibration impacts, the Noise Impact Analysis employs reference construction-source vibration data published by the Federal Transit Administration (FTA). Maximum received construction-source vibration levels are summarized at Table 13-8.

Table 13-8
Maximum Received Construction-Source Vibration Levels

Receiver Location	Maximum Received Vibration Level PPV (in/sec)	Threshold PPV (in/sec)	Threshold Exceeded?
R1	0.000	0.30	No
R2	0.000	0.30	No
R3	0.000	0.30	No
R4	0.000	0.30	No
R5	0.002	0.30	No
R6	0.002	0.30	No
R7	0.033	0.30	No

Source: *The Avenue Specific Plan, 2023 Amendment - Noise Impact Analysis* (Urban Crossroads, Inc.) May 8, 2024.

Table 13-8 shows the maximum received construction-source vibration levels would not exceed the acceptable 0.20 PPV (in/sec) criteria established by the FTA. Moreover, received vibration levels are unlikely to be sustained during the entire construction period. Rather, maximum vibration levels would be received only during times that heavy construction equipment is operating at the site perimeter. Based on the preceding, construction-source vibration impacts would be less-than-significant.

Modified Project Conditions of Approval: None.

c) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that Chino Airport does not significantly affect sensitive receptors within the City of Ontario. However, sensitive land uses within the 65 dBA CNEL noise contour of the Ontario International Airport would be exposed to substantial levels of airport-related noise. Even with the implementation

of Mitigation Measure 12-1, airport-related noise was deemed a significant and unavoidable impact of TOP 2050 (Certified SEIR, pp. 5.13-38 – 5.13-41).

Certified SEIR Mitigation Measure:

12-1 *Prior to the issuance of building permits for any project that involves a noise-sensitive use within the 65 dBA CNEL contour of the Ontario International Airport, the project property owner/developers shall retain an acoustical engineer to conduct an acoustic analysis and identify, where appropriate, site design features and/or required building acoustical improvements (e.g., sound transmission class rated windows, doors, and attic baffling), to ensure compliance with the City's Noise Compatibility Criteria and the California State Building Code and California Noise Insulation Standards (Titles 24 and 21 of the California Code of Regulations).*

Modified Project: The Modified Project site is located approximately 2.2 miles south of the Ontario International Airport (ONT). The Ontario International Airport Land Use Compatibility Plan was adopted by Ontario City Council on April 19, 2011 (amended 2018) to promote compatibility between the airport and the land uses that surround it. The Modified Project site is located within the ONT airport influence area, but is not located within a designated noise impact zone. The Modified Project would therefore not be exposed to excessive airport/airfield-source noise levels associated with ONT operations.

The Project site is located approximately 1.2 miles east of the Chino Airport (CNO). The Modified Project site is located within the CNO airport influence area, but is not located within a designated noise impact zone. At this distance, airport noise level impacts would be less-than-significant.

The Modified Project would not otherwise be exposed to potentially adverse airport/airfield-source noise levels, nor does the Modified Project propose or require uses that would contribute to or exacerbate airport-source noise impacts.

Based on the preceding, the Modified Project would not be adversely affected by airport/airfield noise, nor would the Modified Project contribute to or result in adverse airport/airfield noise impacts. When compared to the Certified SEIR findings, no new or substantially increased airport/airfield noise impacts would result from the Modified Project.

Modified Project Conditions of Approval: None.

Summary

When compared to the impacts identified in the Certified SEIR, no new significant, substantially increased, or substantially different noise impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2023 Amendment - Noise Impact Analysis* (Urban Crossroads, Inc.) May 8, 2024; *The Avenue Specific Plan, 2024 Amendment*.

14. POPULATION AND HOUSING

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?					X	
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?					X	

***Substantiation*:**

a, b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that, while development of the City pursuant to TOP 2050 would increase population, housing, and employment, it also would improve the job-housing balance and impacts would be less-than-significant (Certified SEIR, pp. 5.14-9 – 5.14-12).

Certified SEIR Mitigation Measures: None.

Modified Project:

Direct Population Growth Inducement

The Modified Project amends the site's current land use designations to conform to TOP 2050 land use designations. Under the Modified Project, maximum residential development would total 3,753 dwelling units[8] (all types). Because the Project land uses and residential development are consistent with buildout of the City anticipated and planned for under TOP 2050, the Project would not result in direct population growth not previously considered and addressed in the Certified SEIR.

Indirect Growth Inducement

Indirect population growth inducement could result from creation of additional jobs and the extension of infrastructure and services to areas not currently served, or substantial capacity/capability upgrades to existing systems and services.

In general terms, job creation furthers growth via wages, salaries and general fiscal benefits; increased demands for housing; and increased demand for consumer goods and services. Jobs created by or resulting from the Modified Project would be typical of area

[8] There is the potential for the 10.89-acre school site portion of Planning Area 5 to transition to residential uses, should the school district determine that this site is not needed for school development. If this is the case, these 10.89 acres would be developed with up to 50 residential units, bringing the total Specific Plan residential unit count to 3,803.

employment opportunities, and would be filled by the local residents with no substantial increase in population.

The Modified Project would implement infrastructure improvements that are consistent with the City and purveyor master plans. Because the Project land uses and development are consistent with buildout of the City anticipated and planned for under TOP 2050, the Project would not result in indirect growth not previously considered and addressed in the Certified SEIR.

Consistency with Regional Population Growth Projections

Regional population projections developed by SCAG reflect assumptions and development scenarios incorporated in local plans including City general plans. As demonstrated in the preceding discussions, the Modified Project would not induce or generate growth beyond that reflected in TOP 2050 and evaluated in the Certified SEIR. Accordingly, the Modified Project would not result in growth not already anticipated within SCAG population growth projections for the region.

As supported by the preceding discussions, the Modified Project would not induce substantial population growth; displace substantial numbers of existing housing; or displace substantial numbers of people. When compared to the Certified SEIR findings, no new or substantially increased population and housing impacts would result from the Modified Project.

The Modified Project would increase housing availability. The Modified Project does not propose or require uses or operations that would displace substantial numbers of existing people or housing. The potential for the Modified Project to displace substantial numbers of existing people or housing would be less-than-significant.

Modified Project Conditions of Approval: None.

Summary

Based on the preceding, when compared to impacts identified in the Certified SEIR, no new or substantially increased population and housing impacts would result from the

Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2024 Amendment*.

15. PUBLIC SERVICES

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any public service:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Fire protection?					X	
b) Police protection?					X	
c) Schools?					X	
d) Parks?					X	
e) Other public facilities?					X	

***Substantiation*:**

a – e) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Certified SEIR Section 5.15, *Public Services*, concluded that implementation of TOP 2050 would not result in potentially significant public services impacts (Certified SEIR, pp. 5.15-1 – 5.15-18).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project amends the site's current land use designations to conform to TOP 2050 land use designations. Uses proposed by the Modified Project

would not create substantive additional demands for school or park facilities beyond those reflected in TOP 2050 and evaluated in TOP 2050 SEIR. The Modified Project would be constructed within an already-developed urban environment. Fire protection and police protection services are currently available to the subject site via existing facilities. Development impact fees and sales tax revenues generated by the Modified Project would provide funding sources available for support and enhancement of public services commensurate with incremental demands of the development. By law, the Modified Project would be required to remit school impact fees.

Modified Project Conditions of Approval: None.

Summary

Based on the preceding, when compared to impacts identified in the Certified SEIR, no new or substantially increased public services impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2024 Amendment*.

16. RECREATION

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?					X	
b) Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?					X	

***Substantiation*:**

a, b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR determined that because new development would be required to provide sufficient public parkland or pay in-lieu fees, impacts to recreational facilities would be less-than-significant (Certified SEIR, pp. 5.16-12 – 5.16-14).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project amends the site's current land use designations to conform to TOP 2050 land use designations. Proposed residential and commercial uses implemented under the Modified Project would not increase demands on recreational facilities beyond those reflected in TOP 2050 and evaluated in TOP 2050 SEIR. When compared to the Certified SEIR findings, no new or substantially increased recreation impacts would result from the Modified Project.

Modified Project Conditions of Approval: None.

Summary

Based on the preceding, when compared to impacts identified in the Certified SEIR, no new or substantially increased recreational services or recreational facilities impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2024 Amendment*.

17. TRANSPORTATION

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?					X	
b) Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?					X	
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?					X	
d) Result in inadequate emergency access?					X	

General Note:

The technical analyses referenced in this section reflect likely maximum impacts. Subsequent to preparation of these analyses, total residential development intensities allowed under the Modified Project have been reduced consistent with direction. Specifically, the technical analyses referenced herein assume residential development of the Modified Project totaling up to 3,807 dwelling units (see Project Traffic Analysis, p. 2 et al.). As subsequently modified, maximum allowed residential development under the Modified Project would not exceed 3,753 dwelling units (see Section 2.0, Project Description, Table 2.1-1).

***Substantiation*:**

Transportation impact analyses of the Modified Project presented here are summarized in part from: *The Avenue Specific Plan Traffic Analysis* (Urban Crossroads, Inc.) April 19, 2024 (Modified Project Traffic Analysis, Traffic Analysis); and *The Avenue Specific Plan Amendment Vehicle Miles Traveled (VMT)* Analysis (Modified Project VMT Analysis, VMT Analysis) (Urban Crossroads, Inc.) March 17, 2024. The Modified Project Traffic Analysis and VMT Analysis are presented at Addendum Appendix F.

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Certified SEIR Section 5.17, *Transportation*, concluded that implementation of TOP 2050 would not conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities (Certified SEIR, pp. 5.17-18 – 5.17-23).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project does not propose elements or aspects that would conflict with adopted alternative transportation policies. Transit services are currently provided to the City and the Modified Project vicinity by Omnitrans. On a long-term basis, the Modified Project may result in increased demand for public transportation as increased employment opportunities become available onsite. Transit agencies routinely review and adjust their ridership schedules to accommodate shifts in demand for services. As part of the City's standard development review processes, the need for transit-related facilities, bicycle, and pedestrian access would be coordinated between the City and the Applicant.

The Modified Project would accommodate and would not interfere with the City *Multipurpose Trails and Bikeway Corridor Plan*. The Modified Project would provide internal and perimeter pedestrian and bicycle amenities consistent with provisions of *The Avenue Specific Plan, 2024 Amendment* and City Conditions of Approval.

Modified Project Conditions of Approval: None.

b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: *CEQA Guidelines* Section 15064.3, subdivision (b) was added to the *CEQA Guidelines* in 2019. The Vehicle Miles Traveled (VMT) metric established under Section 15064.3 is recognized. The VMT metric became effective in July 2020. The Certified SEIR concluded that even with application of mitigation VMT impacts of TOP 2050 would be significant and unavoidable (Certified SEIR, p. 5.17-34).

Certified SEIR Mitigation Measures:

New Mitigation

T-1 Prior to approval of discretionary projects subject to VMT reduction analysis, applicants shall demonstrate compliance with the City's VMT Guidelines for CEQA assessment of VMT impacts. For projects with VMT per Service Population exceeding the County's significance threshold, a mitigation plan shall be developed and implemented. Mitigation should consist of Transportation Demand Management (TDM) measures analyzed under a VMT-reduction methodology consistent with the California Air Pollution Control Officers Association's (CAPCOA) Final Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (2021) and approved by the City of Ontario (if applicable). Examples of measures include but are not limited to:

- *Pedestrian Network Improvements: constructing new sidewalks and/or improving damaged or substandard sidewalks that connect to a larger pedestrian network.*
- *Construct or Improve Bike Facilities: constructing new or enhancing a single existing Class I, II or IV bike facility that connects to a larger bike network.*
- *Construct or Improve Bike Boulevards: implementing a Class III bike boulevard on a local or collector street that is one travel lane in each direction, has a design speed of 25 mph or less and a design volume of 5,000 ADT or less.*
- *Expand Bikeway Networks: constructing a network of interconnected new Class I, II, or IV bike facilities.*
- *Provide End of Trip Bicycle Facilities: constructing facilities that support cyclists such as bike parking, lockers, and showers.*
- *Implement Transit-Supportive Roadway Treatments: funding infrastructure improvements such as traffic signal modifications and roadway signing and striping that are dedicated to improving transit travel times and reliability.*
- *Transit Passes: proving discounted or free transit fare to a specific geographic area, population group, or to the general public.*
- *Vanpool Program: providing groups of 5 to 15 people with direct shuttle service between their workplace and residence.*
- *Carshare Program (conventional or EV): providing access to a shared fleet of on-demand vehicles for short-term use/rental. Best practice is to discount carshare*

membership and provide priority parking for carshare vehicles to encourage use of the service.

- *Bikeshare Program (conventional or EV): providing access to a shared fleet of on-demand bicycles for short-term use/rental. Best practice is to discount bikeshare membership and dedicate bikeshare parking to encourage use of the service.*
- *Rideshare Program: providing access to and encouraging the use of a ridesharing platform or service. This could be an app, website, or other service that provides ride-matching coordination services.*
- *Community-Based Travel Planning (CBTP): CBTP is a residential based approach to outreach, performed by trained advisors, that provides households within a targeted geographic area with customized information, incentives, and support to encourage the use of transportation alternatives in place of single occupancy vehicles.*
- *Commute Trip Reduction (CTR) Program: CTR programs can be mandatory or voluntary, and involve providing information, coordination, services, infrastructure, and/or incentives for alternative modes such as ridesharing, vanpool, transit passes, and cycling.*

Modified Project: The California Environmental Quality Act (CEQA) requires all lead agencies to adopt VMT as the measure for identifying transportation impacts for land use projects. To comply with CEQA, in June of 2020 the City of Ontario developed and adopted their own VMT methodologies and thresholds (Resolution No. 2020-071) (City Guidelines). The VMT analysis presented here conforms to adopted City Guidelines. Projects that do not result in significant VMT impacts per City Guidelines would not conflict or be inconsistent with *CEQA Guidelines* Section 15064.3, subdivision (b).

Project generated VMT has been estimated using the origin/destination method and boundary method. Consistent with City Guidelines, VMT has been presented as total VMT and total VMT per Service Population (i.e., population and employees). Total VMT represents all VMT generated in the City of Ontario on a typical weekday. Total VMT per service population is an efficiency metric representing VMT generated on a typical weekday per person who lives and/or works in the City or travels to the City for another purpose (Project VMT Analysis, p. 2).

City Guidelines identifies the efficiency based metric VMT per Service Population (SP) (i.e., population and employees) is to be used to conduct project-level VMT analyses for land use projects in the City of Ontario. City Guidelines also identifies the following impact threshold for project-level VMT analyses:

- A significant impact would occur if the Project VMT per SP exceeds the Citywide average VMT per SP under General Plan Buildout Conditions.

The City of Ontario's average VMT per SP under General Plan Buildout conditions has been calculated using the TOP General Plan Buildout (2050) model. Table 17-1 presents the City of Ontario's Citywide average VMT per SP for General Plan Buildout (2050) conditions. As presented at Table 17-1, the City of Ontario's VMT per SP under General Plan Buildout (2050) conditions is estimated at 30.70 VMT per SP.

Table 17-1
TOP 2050 Buildout
Citywide VMT Per Service Population

Service Population	706,494
VMT	21,689,573
VMT per SP	30.70

Source: *The Avenue Specific Plan Amendment Vehicle Miles Traveled (VMT)* Analysis (Urban Crossroads, Inc.) March 17, 2024.

VMT impacts of the Project were evaluated employing both the Origin/Destination VMT Methodology and the Boundary VMT Methodology. Methodology details are presented at Project VMT Analysis pp. 3, 4.

VMT impacts of the Project employing the Origin/Destination VMT Methodology are presented at Table 17-2.

Table 17-2
Project VMT Impacts
Origin/Destination VMT Methodology

	Baseline	General Plan Buildout Year (2050)
Households	3,807	3,807
Population	13,325	13,325
Employment	957	957
Service Population	14,282	14,282
Total OD VMT	139,550	245,044
OD VMT/SP	19.4	17.2
City Threshold	30.7	30.7
Threshold Exceeded	No	No

Source: *The Avenue Specific Plan Amendment Vehicle Miles Traveled (VMT)* Analysis (Urban Crossroads, Inc.) March 17, 2024.

VMT impacts of the Project employing the Boundary VMT Methodology are presented at Table 17-3.

Table 17-3
Project VMT Impacts
Boundary VMT Methodology

	City Boundary		10-Mile Boundary	
Scenario	No Project	With Project	No Project	With Project
Service Population	706,494	708,515	2,172,176	2,174,197
Boundary VMT	9,602,250	9,600,990	34,288,519	34,291,339
VMT per SP	13.6	13.6	15.8	15.8
Change in VMT	0.0		0.00	
Threshold Exceeded	No		No	

Source: *The Avenue Specific Plan Amendment Vehicle Miles Traveled (VMT)* Analysis (Urban Crossroads, Inc.) March 17, 2024.

The analysis presented here supports the following findings:

- Consistent with City Guidelines, VMT estimates were prepared measuring both Project generated VMT per service population and Citywide boundary VMT.

- Project generated VMT per service population would not exceed City's adopted impact threshold of Citywide average VMT per SP under General Plan Buildout Conditions.

- Citywide boundary VMT was found to remain unchanged with the addition of the proposed Project.

Based on the preceding, the Modified Project VMT would not exceed applicable City VMT impact significance thresholds. On this basis, the potential for the Modified Project to conflict or be inconsistent with *CEQA Guidelines* Section 15064.3, subdivision (b) would be less-than-significant.

Modified Project Conditions of Approval: None.

c, d) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that buildout of the City pursuant to TOP 2050 would result in changes to the circulation network. Such changes would however be implemented consistent with City roadway classification and roadway design standards, acting to preclude potential design hazards. Additionally, City Design Review processes ensure that adequate emergency access is provided for all new development projects. On this basis, there would be no impacts related to hazardous design features, or emergency access provisions (Certified SEIR, pp. 5.17-25, 5.17-26).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project does not propose elements or aspects that would substantially increase transportation/traffic hazards. Moreover, all improvements under the Modified Project would be designed and implemented consistent with recommendations of the Traffic Analysis (see: Traffic Analysis Section 1.6, *Recommendations*; and *The Avenue Specific Plan, 2024 Amendment*, Section 4.1, *Master Plan of Circulation*), and City traffic engineering and safety standards, thereby minimizing the potential to result in or cause hazardous traffic/transportation conditions.

The Modified Project would generate urban traffic comparable to and compatible with the vehicle mix and vehicle categories present within the area roadway system. The Modified Project uses would therefore not cause or result in incompatible vehicle

movements or traffic that would substantively increase hazards. Further, based on the projected net decrease in trip generation under the Modified Project, the potential for the Modified Project to result in potential traffic hazards would likely be reduced when compared to the uses entitled under the Original Project and assumed within the Certified SEIR.

Additionally, pursuant to the Modified Project Construction Traffic Management Plan (please refer to Addendum Section 2, *Project Description*, 2.3.8 C*onstruction Area Traffic Management Plan*), the Modified Project would be required to maintain appropriate access during construction activities.

Modified Project Conditions of Approval: None.

Summary

Based on the preceding, when compared to impacts identified in the Certified SEIR, no new or substantially increased transportation impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

April 19, 2024; *The Avenue Specific Plan Amendment Vehicle Miles Traveled (VMT) Analysis* (Urban Crossroads, Inc.) March 17, 2024; *The Avenue Specific Plan, 2024 Amendment*.

18. TRIBAL CULTURAL RESOURCES

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or					X	
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.					X	

***Substantiation*:**

a, b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: With the implementation of mitigation, the Certified SEIR concluded that impacts to prehistoric archeological resources, which include TCRs, would be less-than-significant (Certified SEIR, pp. 5.18-8 – 5.18-11).

Certified SEIR Mitigation Measures:

5-3 Upon receipt of an application for a proposed project subject to CEQA and within the City's jurisdiction, the City's representative shall consult with the relevant tribe(s)' representative(s) to determine if the proposed project is within a culturally sensitive area

to the tribe. If sufficient evidence is provided to reasonably ascertain that the site is within a tribal culturally sensitive area, an archaeologist shall prepare a cultural resources assessment. The findings of the cultural resources assessment shall be incorporated into the CEQA documentation. A copy of the report shall be forwarded to the tribe(s). If mitigation is recommended in the CEQA document, the procedure described in Mitigation Measure 5-4 shall be followed.

5-4 *Prior to the issuance of grading permits for a proposed project for which the CEQA document defines cultural resource mitigation for potential tribal resources, the project applicant shall contact the designated tribe(s) to notify them of the grading, excavation, and monitoring program. The applicant shall coordinate with the City of Ontario and the tribal representative(s) to develop mitigation measures that address the designation, responsibilities, and participation of tribal monitors during grading, excavation, and ground-disturbing activities; scheduling; terms of compensation; and treatment and final disposition of any cultural resources, sacred sites, and human remains discovered on the site. The City of Ontario shall be the final arbiter of the conditions for projects within the City's jurisdiction.*

TCR-1 *Tribal Cultural Resources Monitoring. The project archaeologist, in consultation with interested tribes, the developer, and the City of Ontario, shall develop an archaeological monitoring plan (AMP) to address the details, timing, and responsibility of archaeological and cultural activities that will occur on the project site. Details in the AMP shall include:*

1. *Project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) and development scheduling;*

2. *The development of a rotating or simultaneous schedule in coordination with the developer and the project archeologist for designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all project archaeologists (if the tribes cannot come to an agreement on the rotating or simultaneous schedule of tribal monitoring, the Native American*

Heritage Commission shall designate the schedule for the onsite Native American Tribal Monitor for the proposed project);

3. *The protocols and stipulations that the developer, City, Tribes, and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.*

At least 30 days prior to application for a grading permit and before any brush clearance, grading, excavation, and/or ground disturbing activities on the site, the developer shall retain a tribal cultural monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources.

Pursuant to the AMP, a tribal monitor from the consulting tribe shall be present during the initial grading activities. If tribal resources are found during grubbing activities, the tribal monitoring shall be present during site grading activities.

TCR-2 Treatment and Disposition of Cultural Resources. In the event that Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., for the proposed project, the following procedures will be carried out for treatment and disposition of the discoveries:

1. *Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process;*

2. *Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and nonhuman remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Ontario with evidence of same:*

a. *Accommodate the process for on-site reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloging, basic analysis, other analyses as recommended by the project archaeologist and approved by consulting tribes, and basic recordation have been completed; all documentation should be at a level of standard professional practice to allow the writing of a report of professional quality;*

b. *A curation agreement with an appropriate qualified repository in San Bernardino County that meets federal standards per 36 CFR Part 79, and therefore the resource would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility in San Bernardino County, to be accompanied by payment of the fees necessary for permanent curation;*

c. *For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, materials shall be curated at the San Bernardino County Museum by default;*

d. *At the completion of grading, excavation, and ground-disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pregrade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the City, County Museum, and consulting tribes.*

Modified Project: Tribal scoping and outreach was previously undertaken for The Avenue Specific Plan in July 2021. At that time, responses from Agua Caliente Band of Cahuilla Indians, the Gabrieleno Band of Mission Indians – Kizh Nation, Quechan Tribe of the Fort Yuma Reservation, and the San Manuel Yuhaaviatam Band of Mission Indians were received, but no consultation was requested for the Specific Plan. The Kizh Nation and San Manuel Band requested consultation if/when a specific development project was to be built. Additionally, the Gabrieleno Band of Mission Indians – Kizh Nation provided a series of measures to be included as conditions of approval for future development projects. (see Conditions of Approval TR-1 through TR-3, below). These Conditions will apply to future project approvals within the Specific Plan Area.

Outreach for this Project occurred again in December 2022 with SB-18 notifications sent. Responses were received from San Manuel Band of Mission Indians - Serrano Nation, Gabrieleno Band of Mission Indians - Kizh Nation, Quechan Tribe of the Fort Yuma Reservation, Gabrieleno Band of Mission Indians - Tongva Tribe, Agua Caliente Band of Cahuilla Indians, Morongo Band of Mission Indians, and the San Manuel Yuhaaviatam Band of Mission Indians. Out of those responses, San Manuel Band of Mission Indians - Serrano Nation and Gabrieleno Band of Mission Indians - Kizh Nation provided comments, with both requesting consultation on future development projects.

With the implementation of the mitigation presented in the Certified SEIR, in addition to the Conditions of Approval listed below, the potential for the Modified Project to cause a substantial adverse change in the significance of a tribal cultural resource would be less-than-significant. When compared to the Certified SEIR findings, no new or substantially increased impacts to tribal cultural resources would result from the Modified Project.

Modified Project Conditions of Approval:

TR-1 Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities:

A. The project applicant/lead agency shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation. The monitor

shall be retained prior to the commencement of any "ground-disturbing activity" for the subject project at all project locations (i.e., both on-site and any off-site locations that are included in the project description/definition and/or required in connection with the project, such as public improvement work). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching.[9]

B. *A copy of the executed monitoring agreement shall be submitted to the lead agency prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity.*[10]

C. *The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the project applicant/lead agency upon written request to the Tribe.*

D. *On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Kizh from a designated point of contact for the project applicant/lead agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or (2) a determination and written notification by the Kizh to the project applicant/lead agency that no future, planned construction activity and/or development/construction phase at the project site possesses the potential to impact Kizh TCRs.*

[9] Tribal monitoring shall cease once all ground disturbance activities have been completed with respect to the property or portion thereof. Example: Once excavation, grading, trenching, etc. have occurred tribal monitoring shall cease.

[10] The extent of necessary manpower and hourly wage shall be subject to commercially reasonable standards. If there is a dispute as to scope of the necessary labor needs or wage rates, the City shall arbitrate any such disputes in accordance with commercially reasonable standards.

E. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Kizh monitor and/or Kizh archaeologist. The Kizh will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural and/or historic purposes.

TR-2 Unanticipated Discovery of Human Remains and Associated Funerary Objects:

A. Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code Section 5097.98, are also to be treated according to this statute.

B. If Native American human remains and/or grave goods discovered or recognized on the project site, then all construction activities shall immediately cease. Health and Safety Code Section 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and all ground-disturbing activities shall immediately halt and shall remain halted until the coroner has determined the nature of the remains. If the coroner recognizes the human remains to be those of a Native American or has reason to believe they are Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission, and Public Resources Code Section 5097.98 shall be followed.

C. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2).

D. Construction activities may resume in other parts of the project site at a minimum of 200 feet away from discovered human remains and/or burial goods, if the Kizh determines in its sole discretion that resuming construction activities at that distance is acceptable and provides the project manager express consent of that determination (along with any other mitigation measures the Kizh monitor and/or archaeologist deems necessary). (CEQA Guidelines Section 15064.5(f).)

E. Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods. Any historic archaeological material that is not Native American in origin (non-TCR) shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.

F. Any discovery of human remains/burial goods shall be kept confidential to prevent further disturbance.

TR-3 Procedures for Burials and Funerary Remains:

A. As the Most Likely Descendant ("MLD"), the Koo-nas-gna Burial Policy shall be implemented. To the Tribe, the term "human remains" encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the preparation of the soil for burial, the burial of funerary objects with the deceased, and the ceremonial burning of human remains.

B. If the discovery of human remains includes four or more burials, the discovery location shall be treated as a cemetery and a separate treatment plan shall be created.

C. The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered as associated funerary objects. Cremations will either be removed in bulk or by means as necessary to ensure complete recovery of all sacred materials.

D. In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make every effort to

recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that burials will be removed.

E. In the event preservation in place is not possible despite good faith efforts by the project applicant/developer and/or landowner, before ground-disturbing activities may resume on the project site, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects.

F. Each occurrence of human remains and associated funerary objects will be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the project site but at a location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.

G. The Tribe will work closely with the project's qualified archaeologist to ensure that the excavation is treated carefully, ethically, and respectfully. If data recovery is approved by the Tribe, documentation shall be prepared and shall include (at a minimum) detailed descriptive notes and sketches. All data recovery data recovery-related forms of documentation shall be approved in advance by the Tribe. If any data recovery is performed, once complete, a final report shall be submitted to the Tribe and the NAHC. The Tribe does NOT authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different impacts to tribal cultural resources would occur as a result of the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022*; *The Avenue Specific Plan, 2024 Amendment*.

19. UTILITIES AND SERVICE SYSTEMS

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment, storm water drainage, electric power, natural gas, or telecommunication facilities, the construction or relocation of which could cause significant environmental effects?					X	
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?					X	
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?					X	
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?					X	
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?					X	

***Substantiation*:**

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that, although buildout of TOP 2050 would generate additional wastewater, it would be adequately treated in accordance with Regional Water Quality Control Board and California Department of

Public Health requirements. City sanitary sewer systems, and stormwater management would be expanded to accommodate growth associated with the buildout of TOP 2050.

Other utilities systems would be extended and improved consistent with purveyor master plans and as warranted by market conditions. Compliance with regulatory requirements and standard conditions of approval acts to reduce impacts on utilities systems generally, improve system efficiencies, and reduce system maintenance requirements. Collectively, this diminishes the requirement to construct new systems or replace existing systems.

Construction of utilities systems serving the City under TOP 2050 buildout conditions would not result in substantially different impacts than would result from development of TOP 2050 land uses generally.

The Certified SEIR concluded that with implementation of regulatory requirements and standard conditions of approval, the potential for TOP 2050 to require or result in the relocation or construction of new or expanded utilities systems, the construction or relocation of which would result in adverse environmental impacts would be less-than-significant (Certified SEIR, p. 5.19-11).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project amends the site's current land use designations to conform to TOP 2050 land use designations. Proposed residential and commercial uses implemented under the Modified Project would not increase demands on utilities systems beyond those reflected in TOP 2050 and evaluated in TOP 2050 SEIR.

The Modified Project is fully-served by utilities and services systems including: water, wastewater treatment, storm water drainage, electric power, natural gas, and telecommunication facilities. Any localized modification of or connections to serving utilities systems implemented by the Modified Project would not result in substantially different impacts than would result from development of the Modified Project land uses

generally. These impacts would be no greater than or different than impacts considered and addressed in the Certified SEIR.

Modified Project Conditions of Approval: None.

b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: A foundational document for compliance with both SB 610 and SB 221 is the Urban Water Management Plan (UWMP). Both of these statutes repeatedly identify the UWMP as a planning document that, if properly prepared, can be used by a water supplier to meet the standards set forth in both statutes. Thorough and complete UWMPs will allow water suppliers to use UWMPs as a foundation to fulfill the specific requirements of these two statutes. Cities, counties, water districts, property owners, and developers will all be able to utilize this document when planning for and proposing new projects (Guidebook for Implementation of Senate Bill 610 and Senate Bill 221 of 2001).

The City of Ontario 2020 Urban Water Management Plan (UWMP) substantiates that there would be sufficient and reliable water supplies available to the City through 2045. The Certified SEIR concludes that buildout of the City under TOP 2050 would incrementally increase water demands. However, water demands of the City would remain below 2020 UWMP water demand projections. On this basis, there would be sufficient water supplies available to the City under TOP 2050 buildout conditions. The potential for there to be insufficient water supplies available to serve the City and reasonably foreseeable future development during normal, dry and multiple dry years is therefore considered less-than-significant (Certified SEIR, pp. 5.19-30, 5.19-31).

Certified SEIR Mitigation Measures: None.

Modified Project: Consistent with SB610 requirements, a Water Supply Assessment (WSA) has been prepared for the Modified Project (see: *Water Supply Assessment and Written Verification of Sufficient Water Supply, The Avenue Specific Plan, City Of Ontario* [Albert A. Webb Associates] January 24, 2024; Project WSA, Addendum Appendix G).

The Project WSA concludes that water demand of the Modified Project was not fully accounted for in the 2020 UWMP (Project WSA, p. 25). The WSA also concludes that "water supplies available to OMUC [Ontario Municipal Utilities Company] currently meet and exceed citywide water demands. Groundwater production by OMUC is currently less than their existing rights and within their production capacity. Regardless, OMUC has the means and right to exceed their groundwater allocation in the Chino Basin when required to meet demand pursuant to the Judgment. Further, OMUC has rights to water held in storage that would supply all City demands for more than two years. In addition to groundwater, OMUC can supply water to the Project purchased from the WFA that is within their existing entitlements and capacities" (Project WSA, p. 64). On this basis, the potential for the Modified Project to result in insufficient water supplies available to serve the City and reasonably foreseeable future development during normal, dry and multiple dry years would be less-than-significant.

Modified Project Conditions of Approval: None.

c) No Changes or New Information Requiring Preparation of an MND or EIR.

Certified EIR Conclusions: The Certified EIR recognizes that buildout of the City under TOP 2050 would result in increased wastewater treatment demands. However, existing wastewater treatment plants have excess capacity sufficient to meet these increased demands. Planned wastewater treatment plant expansion would provide additional capacity available to serve the City under TOP 2050 buildout conditions. Treated wastewater meets or exceeds RWQCB and NPDES standards and requirements. On this basis, the Certified EIR concluded that the potential for buildout of City under TOP 2050 to result in or cause insufficient or inadequate wastewater treatment would be less-than-significant.

Certified EIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. By extension, the Modified Project wastewater treatment demand is reflected in wastewater treatment

demand of the City under TOP 2050, as considered and addressed in the Certified SEIR. The Project proposes conventional urban residential/commercial development. Wastewater generated by the Modified Project would not require special or atypical treatment. Based on the preceding, the potential for the Modified Project to result in or cause insufficient or inadequate wastewater treatment would be less-than-significant.

Modified Project Conditions of Approval: None.

d, e) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that buildout of TOP 2050 would be served by landfills with sufficient permitted capacities to accommodate all solid waste disposal needs. Additionally, no conflicts with federal, state, and local management and reduction statutes and regulations related to solid waste were identified. The Certified SEIR determined that impacts related to solid waste would be less-than-significant (Certified SEIR, p. 5.17-31).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. By extension, the Modified Project solid waste management demand is reflected in solid waste management demand of the City under TOP 2050, as considered and addressed in the Certified SEIR. Moreover, the Modified Project would comply with applicable solid waste management and reduction statutes and regulations (summarized below), acting to further reduce solid waste management impacts of the Modified Project.

City of Ontario Construction & Demolition Recycling Plan (CDRP)

Pursuant to Ontario Municipal Ordinance (OMC) Sec. 6-3.602 *Construction & Demolition Recycling Plan* and the 2016 California Green Building Standards Code (CALGreen), all building and demolition permit applicants are required to prepare and submit a Construction & Demolition Recycling Plan (CDRP) and a CDRP Summary Report. OMC Sec. 6-3.602 and CALGreen require all construction and qualifying renovation and

demolition projects to divert at least 65% of all generated waste materials. The Modified Project would be subject to (OMC) Sec. 6-3.602 and CALGreen construction waste diversion mandates. The City oversees compliance with OMC Sec. 6-3.602 and CALGreen construction waste diversion mandates.

AB 939 - California Integrated Waste Management Act of 1989

Solid waste management is guided by the California Integrated Waste Management Act of 1989 (AB 939), which emphasizes resource conservation through reduction, recycling, and reuse of solid waste. AB 939 requires that localities conduct a Solid Waste Generation Study (SWGS) and develop a Source Reduction Recycling Element (SRRE), providing for a minimum 50 percent reduction in waste sent to landfills. Diversion rates are calculated and tracked by the California Integrated Waste Management Board (Board). Alternatively, the Board can determine that a jurisdiction's "good faith efforts" to implement comprehensive diversion programs have satisfied the requirement even if diversion levels are below 50 percent.

To reduce waste disposal, AB 939 requires every California city and county to divert 50 percent of its waste from landfills. Residential, commercial and governmental waste recycling programs in support of the SRRE have been implemented by the City.

The City is currently meeting or exceeding all AB 939 solid waste diversion targets. The Modified Project would be required to comply with AB 939 as implemented by the City.

AB 341 - Commercial Recycling

Assembly Bill 341 mandates recycling for businesses producing four or more cubic yards of solid waste per week, and multifamily dwellings of five units or more. Under the law, business must separate recyclables from trash and then either subscribe to City of Ontario recycling services, self-haul their recyclables, or contract with a permitted private recycler. The Modified Project would be subject to Assembly Bill 341 mandates.

AB 1826 - Commercial Organics Recycling

Under Assembly Bill 1826, businesses are required to arrange for organic recycling services. The Modified Project would be subject to Assembly Bill 1826 mandates.

The California Department of Resources Recycling and Recovery (CalRecycle) oversees both the mandatory commercial recycling program and the mandatory commercial organics recycling program. The City of Ontario supports both bills through public outreach, monitoring of recycling efforts, providing notification to non-compliant businesses, and periodic State reporting.

The Modified Project would be required to comply with the above solid waste management statutes and regulations. The City and CalRecycle would oversee and monitor compliance with applicable solid waste management statutes and regulations.

SB 1383 - Organic Waste Management Requirements

SB 1383 establishes targets to achieve a 50 percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75 percent reduction by 2025. The law grants CalRecycle the regulatory authority required to achieve the organic waste disposal reduction targets and establishes an additional target that not less than 20 percent of currently disposed edible food is recovered for human consumption by 2025.

The City is currently developing programs and strategies to address the requirements of SB 1383, the Modified Project would be required to ultimately abide by those requirements.

As stated in the Certified SEIR, impacts to solid waste services and facilities from new development are addressed through the payment of development impact fees as outlined in the City of Ontario Development Impact Fee Calculation and Nexus Fee Schedules. With the payment of required development impact fees and compliance with existing solid waste regulations, the Modified Project would not result in any new or substantially increased solid waste impacts not previously identified within the Certified SEIR.

Based on the preceding, the Modified Project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals would be less-than-significant. Additionally, the Modified Project would comply with applicable solid waste

management and reduction statutes and regulations. On this basis, the Modified Project would result in less-than-significant solid waste management impacts. The Modified Project would not result in solid waste management impacts substantially greater than or substantially than solid waste management impacts considered and addressed in the Certified SEIR.

Modified Project Conditions of Approval: None.

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different utilities and service systems impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; Water Supply Assessment and Written Verification of Sufficient Water Supply, The Avenue Specific Plan, City Of Ontario* (Albert A. Webb Associates) January 24, 2024*; The Avenue Specific Plan, 2024 Amendment*.

20. WILDFIRE

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?					X	
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?					X	

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?					X	
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?					X	

***Substantiation*:**

a – d) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: As discussed in the Certified SEIR, CAL FIRE has determined that the City contains no areas subject to very high wildfire risk. However, the City recognizes that even though fuel loading is light in Ontario and fire risk comes primarily from urban fires, not wildfires, there is some risk related to wildfires. There are many resources available to address wildland fires should they arise - CAL FIRE's *2019 Strategic Fire Plan for California*, the CFC, County of San Bernardino MJHMP, City of Ontario LHMP, and fire services from the City of Ontario Fire Department. With adherence to these building practices, development and infrastructure associated with TOP 2050 would not exacerbate risk or result in post-wildfire hazards (e.g., landslides, mudflows, and flooding). In addition, TOP 2050 incorporates policies to prevent wildfire hazards and support the community during wildfire events (Certified SEIR, pp. 5.20-15, 5.20-16). On this basis, the Certified SEIR concluded that potential wildfire impacts resulting from TOP 2050 would be less-than-significant.

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. By extension, potential wildfire impacts affecting the Modified Project are reflected in the assessment of wildfire impacts affecting the City under TOP 2050, as considered and addressed in the Certified SEIR. Per CAL FIRE "Fire Hazard Severity Zone Maps," the City and the Modified Project site are not located within or near a state responsibility area, or within an area classified as a very high fire hazard severity zone.

Fire protection services for the Modified Project site and vicinity are currently provided by the Ontario Fire Department (Fire Department). Adherence to Fire Department building and site design requirements, and compliance with codified fire protection and prevention measures during construction and operation of the Modified Project are required. On this basis, when compared to the Certified SEIR findings, no new or substantially increased wildfire impacts would result from the Modified Project.

Modified Project Conditions of Approval: None.

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different wildfire impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; SW San Bernardino County, Fire Hazard Severity Zones in SRA* (November 7, 2007); https://osfm.fire.ca.gov/media/6781/fhszs_map62.pdf; *The Avenue Specific Plan, 2024 Amendment.*

21. MANDATORY FINDINGS OF SIGNIFICANCE

Does the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?					X	
b) Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of the past projects, the effects of other current projects, and the effects of probable future projects.)					X	
c) Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?					X	

***Substantiation*:**

a – c) *No Changes or New Information Requiring Preparation of an MND or EIR.*

This Addendum defines, describes, compares, and contrasts potential environmental impacts of the Modified Project in the context of the environmental impacts assessed in the Certified SEIR. In so doing, this Addendum substantiates consistency with applicable *CEQA Guidelines* provisions addressing preparation of an Addendum to a previously-Certified SEIR.

As supported by the discussions presented herein, the Modified Project would not result in or cause any new significant impacts, substantively increased impacts, or substantively different environmental impacts than those previously considered and addressed in the Certified SEIR. Analysis beyond that presented in this Addendum is not required or warranted.

4.0 DETERMINATION

4.0 DETERMINATION

As supported by the analysis presented herein, the potential environmental effects of the development allowed by the Modified Project, and associated required discretionary actions, have been adequately addressed in the Certified EIR. As such, the development of any further information and analysis is not warranted. Pursuant to the requirements of *CEQA Guidelines* Section 15162 and 15164, the following determinations have been made.

Major Revisions to the Certified EIR Not Required

Based on the preceding analysis and information, there is no evidence that major changes to the Certified EIR are required. This Addendum indicates that there is no new significant or more severe environmental impact, and that the development of the Modified Project described herein would essentially have the same, or reduced, impacts as those considered and addressed in the Certified EIR.

No Substantial Change in Circumstances Requiring Major Revisions to the Certified EIR

No information exists in the record, or is otherwise available that indicates that there are substantial changes in circumstances that would require major changes to the Certified EIR.

No New Information Showing Greater Significant Effects than Identified in the Certified EIR

This Addendum has considered all available relevant information to determine whether there is new information, which was not available at the time the Certified EIR was prepared, that may indicate that a new significant effect may occur that was not reported in the Certified EIR. As supported by the analysis presented in this

Addendum, there is no substantial new information that was not available at the time of the Certified EIR, indicating that there would be a new, significant impact requiring major revisions of the Certified EIR.

No New Information Showing Ability to Reduce Significant Effects Identified in the Certified EIR

The Addendum analysis substantiates that there are no significant impacts requiring identification of alternatives to the Modified Project. The continued implementation of applicable mitigation from previous relevant CEQA documents, as incorporated in this Addendum, reduce the Project's potentially significant impacts to levels that are less-than-significant.

Summary

The analysis presented in this document substantiates that the analysis presented in the Certified EIR is sufficient to satisfy CEQA requirements for the proposed Modified Project. That is, with incorporation of mitigation, implementation of the Modified Project described and evaluated herein would not result in any significant new, different, additional, or substantially increased environmental impacts than were previously considered and addressed in the Certified EIR. As such, environmental assessment of the Modified Project does not require any major revision of the previously-approved Certified EIR, nor would development allowed by the Modified Project result in conditions that would require preparation of further analysis as described in the *CEQA Guidelines*.

5.0 MITIGATION SUMMARY

5.0 MITIGATION SUMMARY

5.1 OVERVIEW

The following Table 5.1-1, *Mitigation Summary Matrix*, presents relevant mitigation measures incorporated in the Certified SEIR, and Conditions of Approval proposed by the Modified Project described herein.

Certified SEIR mitigation measures that are no longer required are indicated by ~~strikeout font~~. New Conditions of Approval to be implemented under the Modified Project are indicated by ***bold italic text***. The "Remarks" column identifies status and applicability of all Mitigation Measures/Conditions of Approval. Required measures presented at Table 5.1-1 will be implemented through the Modified Project Conditions of Approval or as otherwise deemed appropriate by the City.

At the discretion of the City, any of the mitigation measures/conditions of approval identified at Table 5.1-1 may be modified to respond to incumbent conditions and context as they may apply to development proposed by the Modified Project. Any such modifications shall not result in any new significant environmental impacts. Rather, modifications (if any) would ensure compliance and consistency with current City goals, policies, regulations, and development programs/plans.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
Aesthetics	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all aesthetics impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.
Agriculture and Forestry Resources	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all agriculture and forestry resources impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.
Air Quality	
3-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario building department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:	Applicable. This Measure is carried forward from the Certified SEIR and would be implemented by the Modified Project. Consistent with this measure, a development-specific air quality impact analysis has been prepared for the Modified Project. Please refer to the Modified Project AQIA, Addendum Appendix B. The Modified Project would implement MM 3-1 emissions reductions/emissions control measures per City Conditions of Approval.

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks

• Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:
  ○ Requiring use of nontoxic soil stabilizers to reduce wind erosion.
  ○ Applying water every four hours to active soil disturbing activities.
  ○ Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.
  ○ Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits.
• Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.
• Limiting nonessential idling of construction equipment to no more than five consecutive minutes.
• Using Super-Compliant VOC paints for coating architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: http://www.aqmd.gov/prdas/brochures/Super-Compliant_AIM.pdf.
These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.	

3-2 The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g., sidewalks).	Applicable. This Measure is carried forward from the Certified SEIR and shall be implemented by the Modified Project.

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks
AQ-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following: • For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions. • Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use. • Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for	Applicable. This Measure is carried forward from the Certified SEIR and would be implemented by the Modified Project. Consistent with this measure, a development-specific air quality impact analysis has been prepared for the Modified Project. Please refer to the Modified Project AQIA, Addendum Appendix B. The Modified Project would implement MM AQ-1 emissions reductions/emissions control measures per City Conditions of Approval.

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks
loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485). • Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures). • Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures). • Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures). • Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures). Applicant-provided appliances shall be Energy Star-certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star-certified or equivalent appliances shall be verified by the City during plan check.	
Biological Resources	
BIO-1 Avoidance of Nesting Burrowing Owls: No more than 72 hours prior to any site disturbances, focused surveys for the burrowing owl shall be conducted. If absence of this species is confirmed, project work can proceed. If, however, burrowing owl is located on site, the appropriate resource agencies (CDFW and USFWS) shall be contacted. The Applicant shall consult with the wildlife agencies regarding the most appropriate methods and timing for removal of owls. As necessary, owls will be actively evicted following agency approved protocols (i.e., placing a one-way door at the burrow	Mitigation is not identified in the Certified SEIR. Condition of Approval BIO-1 is incorporated to ensure that impacts to the burrowing owl are maintained at levels that would be less-than-significant.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
entrance to ensure that owls cannot access the burrow once they leave). Any such active eviction shall occur outside of the breeding/nesting season. That is, if active eviction is required, eviction shall be accomplished between September 1 and February 15. If more than 30 days have elapsed between owl eviction and completion of clearing and grubbing activities, a subsequent survey for the burrowing owl shall be conducted to ensure that owls have not re-populated the site. Any reoccupation by owls will require subsequent protocol active eviction.	
BIO-2 Avoidance of Nesting Migratory Birds: If possible, all vegetation removal activities shall be scheduled from August 1 to February 1, which is outside the general avian nesting season. This would ensure that no active nests would be disturbed, and that removal could proceed rapidly. If vegetation is to be cleared during the nesting season, all suitable habitat will be thoroughly surveyed within 72 hours prior to clearing for the presence of nesting birds by a qualified biologist (Biologist). The Biologist shall be approved by the City and retained by the Applicant. The survey results shall be submitted by the Applicant to the City Planning Department. If any active nests are detected, the area of nesting shall be flagged and mapped on the construction plans along with a minimum 300-foot buffer, with the final buffer distance to be determined by the Project Biologist. The buffer area shall be avoided until, as determined by the Biologist, the nesting cycle is complete, or it is concluded that the nest has failed. In addition, the Biologist shall be present on the site to monitor the vegetation removal to ensure that any nests, which were not detected during the initial survey, are not disturbed.	Mitigation is not identified in the Certified SEIR. Condition of Approval BIO-2 is incorporated to ensure that impacts to the nesting migratory birds are maintained at levels that would be less-than-significant.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
BIO-3 To the extent not considered and addressed in prior biological resources assessments, the Project DSFLF Study, or the January 2024 Biological Update, and to properly assess and address potential biological resources impacts, Biological Resources surveys shall be prepared prior to approval of Tentative Tract Maps within the Modified Project site. If suitable habitat is determined present onsite, subsequent focused surveys shall be completed and no "take" of any protected species and/or their habitat shall occur without obtaining the requisite regulatory permits from State and Federal agencies.	Mitigation is not identified in the Certified SEIR. Condition of Approval BIO-3 is incorporated to ensure that impacts affecting areas of the Specific Plan that may not have been previously identified are resolved prior to the approval of Tentative Tract Maps for the affected areas.
Cultural Resources	
5-1 Historic or potentially historic resources in the City shall be evaluated for historic significance through the City's tier system prior to the issuance of plan or development approvals. Pursuant to City's Development Code (Chapter 7, Historic Preservation), each historic resource shall be fully documented and cataloged pursuant to Historic American Building Survey/Historic American Engineering Record (HABS/HAER) standards, to provide a record of the resource, including, but not limited to: [i] the preparation of site plans, floor plans, exterior and interior elevations, and detail drawings of character defining features (such as moldings, stairs, etc.); and [ii] photographs of the resource, including the exterior, interior, and interior and exterior character defining features (such as moldings, light fixtures, trim patterns, etc.).	Applicable. This Measure is carried forward from the Certified SEIR and shall be implemented by the Modified Project. Note: Previous surveys indicate there are no known or probable historic resources within the Modified Project site.
5-2 In areas of documented or inferred from evident archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed	Applicable. This Measure is carried forward from the Certified SEIR and shall be implemented by the Modified Project. Note: Previous surveys indicate there are no known or probable archaeological and/or paleontological resources within the Modified Project site. The Modified Project would implement MM 5-2 measures providing for

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements: a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities. b) Should any cultural/scientific resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director is satisfied that adequate provisions are in place to protect these resources. c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including catalog with museum numbers.	protection of unknown resources that may exist in a buried context. Please refer also to Conditions of Approval that would be implemented under the topical heading "Tribal Cultural Resources."
Energy	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all energy impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.
Geology and Soils	
Please refer to Mitigation Measure 5-2, presented previously.	Applicable. Mitigation is carried forward from the Certified EIR and shall be implemented by the Modified Project.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
Greenhouse Gas Emissions	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all GHG impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.
Hazards and Hazardous Materials	
HM-1 Removal of structures, including, but limited to, under- and aboveground storage tanks, septic systems, and water wells shall conform to all Federal, State, and local agency regulations (specifically with those required by the City Building and Safety Department and the Hazardous Materials Division of the San Bernardino County Fire Department). Due to the extensive disposal requirements and protocols contained within these regulatory schemes, implementation and adherence to these various regulatory requirements will ensure that no significant impacts occur.	Mitigation is not identified in the Certified SEIR. Condition of Approval HM-1 is incorporated to ensure compliance with applicable regulations, ordinances, and policies.
HM-2 Prior to grading activities for any areas not previously tested, a methane gas assessment shall be prepared by a licensed professional with expertise in soil gas assessments for subdivisions proposed on former dairies, poultry ranches, hog ranches, livestock feed operations and similar facilities to determine the presence of methane gas within the project boundary. The methane gas assessment shall identify monitoring and mitigation strategies and approaches. All mitigation measures/plans and specifications shall be reviewed and approved by the City of Ontario. ***Such an assessment may take two steps. A preliminary assessment will be done prior to grading to determine exactly where dairies have existed in the past so that the post grading***	Mitigation is not identified in the Certified SEIR. Condition of Approval HM-2 is incorporated to ensure compliance with applicable regulations, ordinances, and policies.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
assessment/mitigation measures can be focused on the portions of the Planning Areas that have included former agricultural activities. The second step will include actual testing of graded pads no sooner than 30 days after construction to determine if methane is detected above 5,000 ppm. ***The following grading guidelines shall also be adhered to:*** • ***Careful clearing, grubbing, segregation, and stockpiling or disposal near surface, of organics-rich soils at the site prior to the initiation of mass grading activities.*** • ***The identification and segregation/stockpiling or disposal of deeper soils which contain elevated levels of organic material. Soils with an organic content of 0.4% or higher shall be segregated for controlled placement that ensures that methane levels are below 5,000 ppm.*** • ***Soils with organic content in excess of 0.4% shall not be placed as "deep" fill. Soils with organic contents in excess of this amount shall be placed in open areas within approximately two feet of the finished ground surface.***	
HM-3 To eliminate the risk of ground cracking, manure shall be removed from the site, such that the organic matter content of onsite soils shall not exceed 2% (a 2% total organic content is allowed, of which no more than 1% can be manure) in the building foundation areas when mixed with underlying clean soils and imported fill.	Mitigation is not identified in the Certified SEIR. Condition of Approval HM-3 is incorporated to ensure compliance with applicable regulations, ordinances, and policies.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
HM-4 To the extent not previously prepared and to properly assess and address potential hazardous materials, a Phase I Environmental Site Assessment (ESA) shall be performed by a registered environmental assessor (REA) prior to the approval of the Tentative Tract Map, site plan or other discretionary approval for a given phase of development. If potential hazardous materials or conditions are identified in the Phase I report, the recommendations of the ESA shall be implemented. Such recommendations shall include surficial sampling and chemical analysis within agricultural areas or where soil staining was observed. The Phase I ESA shall be provided to the City and shall be included in any CEQA analysis prepared in connection with the consideration of the discretionary approval for development.	Mitigation is not identified in the Certified SEIR. Condition of Approval HM-4 is incorporated to ensure compliance with applicable regulations, ordinances, and policies.
HM-5 If, while performing any excavation as part of Project construction, material that is believed to be hazardous waste as defined in Section 25117 of the California Health and Safety Code is discovered, the developer shall contact the City Fire Department and the County of San Bernardino Fire Department Hazardous Materials Division. Excavation shall be stopped until the material has been tested and the absence of hazardous waste has been confirmed. If hazardous waste is determined to be present, the California Department of Toxic Substances control shall be contacted and the material shall be removed and disposed of pursuant to applicable provisions of California law.	Mitigation is not identified in the Certified SEIR. Condition of Approval HM-5 is incorporated to ensure compliance with applicable regulations, ordinances, and policies.
Hydrology and Water Quality	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all hydrology and water quality impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
	Modified Project.
Land Use and Planning	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all land use and planning impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.
Mineral Resources	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all mineral resources impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.
Noise	
~~12-1 Prior to the issuance of building permits for any project that involves a noise sensitive use within the 65 dBA CNEL contour of the Ontario International Airport, the project property owner/developers shall retain an acoustical engineer to conduct an acoustic analysis and identify, where appropriate, site design features and/or required building acoustical improvements (e.g., sound transmission class rated windows, doors, and attic baffling), to ensure compliance with the City's Noise Compatibility Criteria and the California State Building Code and California Noise Insulation Standards (Titles 24 and 21 of the California Code of Regulations).~~	Airport noise level impacts affecting the Modified Project site have been evaluated in this Addendum and are substantiated to be less-than-significant. Please refer also to the Modified Project Noise Impact Analysis presented at Addendum Appendix E.
~~12-2 Prior to issuance of a building permit, individual projects that involve vibration intensive construction activities, such as pile drivers, jack hammers, and vibratory rollers near sensitive receptors shall be evaluated for potential vibration impacts. For construction~~	Construction-source vibration impacts of the Modified Project have been evaluated in this Addendum and are substantiated to be less-than-significant. Please refer also to the Modified Project Noise Impact Analysis presented at Addendum Appendix E.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
~~within 135 feet of fragile structures, such as historical resources, within 100 feet of nonengineered timber and masonry buildings (e.g., most residential buildings), or within 75 feet of engineered concrete and masonry (no plaster); or a vibratory roller within 25 feet of any structure, the project applicant shall prepare a noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to these activities. This noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed Federal Transit Administration (FTA) architectural damage thresholds (e.g., 0.12 inches per second [in/sec] peak particle velocity [PPV] for fragile or historical resources, 0.2 in/sec PPV for nonengineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses shall be used, such as drilling piles as opposed to pile driving and static rollers as opposed to vibratory rollers. If necessary, construction vibration monitoring shall be conducted to ensure vibration thresholds are not exceeded.~~	
~~12-4 Construction activities associated with new development that occurs near sensitive receptors shall be evaluated for potential noise impacts. Construction contractors shall implement the following measures for construction activities in the City of Ontario. Construction plans submitted to the City shall identify these measures on demolition, grading, and construction plans. The City of Ontario Planning and Building Departments shall verify that grading, demolition, and/or construction plans submitted include these notations prior to issuance of demolition, grading, and/or building permits.~~ ~~• Construction activity is limited to the hours between 7:00 am~~	Construction-source noise impacts of the Modified Project have been evaluated in this Addendum and are substantiated to be less-than-significant. Please refer also to the Modified Project Noise Impact Analysis presented at Addendum Appendix E.

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks
~~and 6:00 pm Monday through Friday and 9:00 am to 6:00 pm Saturdays and Sundays, as prescribed in Municipal Code Section 5.29.09.~~ ~~• During the entire active construction period, equipment and trucks used for project construction shall use the best available noise control techniques wherever feasible (e.g., improved mufflers, equipment re-design, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds).~~ ~~• Impact tools (e.g., jack hammers and hoe rams) shall be hydraulically or electrically powered wherever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools.~~ ~~• Stationary equipment such as generators and air compressors shall be located as far as feasible from nearby noise sensitive uses.~~ ~~• Stockpiling shall be located as far as feasible from nearby noise sensitive receptors.~~ ~~• Construction traffic shall be limited, to the extent feasible, to approved haul routes established by the City Planning and Building Agency.~~ ~~• At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report the action to the City.~~ ~~• Signs shall be posted at the job site entrance(s), within the on site construction zones, and along queueing lanes (if any) to~~	

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
~~reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes.~~ ~~• During the entire active construction period and to the extent feasible, the use of noise-producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level or switch off back-up alarms and replace with human spotters in compliance with all safety requirements and laws.~~ ~~• Erect temporary noise barriers (at least as high as the exhaust of equipment and breaking line of sight between noise sources and sensitive receptors), as necessary and feasible, to maintain construction noise levels at or below the performance standard of 80 dBA Leq. Barriers shall be constructed with a solid material that has a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier and may be lined on the construction side with an acoustical blanket, curtain, or equivalent absorptive material.~~	
Population and Housing	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all population and housing impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.
Public Services	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all public services impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
Recreation	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all recreation impacts of the Modified Project would be less-than-significant. No mitigation is required of the Modified Project.
Transportation	
~~T-1 Prior to approval of discretionary projects subject to VMT reduction analysis, applicants shall demonstrate compliance with the City's VMT Guidelines for CEQA assessment of VMT impacts. For projects with VMT per Service Population exceeding the County's significance threshold, a mitigation plan shall be developed and implemented. Mitigation should consist of Transportation Demand Management (TDM) measures analyzed under a VMT-reduction methodology consistent with the California Air Pollution Control Officers Association's (CAPCOA) Final Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (2021) and approved by the City of Ontario (if applicable). Examples of measures include but are not limited to:~~ ~~• Pedestrian Network Improvements: constructing new sidewalks and/or improving damaged or substandard sidewalks that connect to a larger pedestrian network.~~ ~~• Construct or Improve Bike Facilities: constructing new or enhancing a single existing Class I, II or IV bike facility that connects to a larger bike network.~~ ~~• Construct or Improve Bike Boulevards: implementing a Class III bike boulevard on a local or collector street that is one travel lane in each direction, has a design speed of 25 mph or less and a design~~	Modified Project VMT impacts have been evaluated in this Addendum and are substantiated to be less-than-significant. Please refer also to the Modified Project VMT Analysis presented at Addendum Appendix F.

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks
~~volume of 5,000 ADT or less.~~ ~~• Expand Bikeway Networks: constructing a network of interconnected new Class I, II, or IV bike facilities.~~ ~~• Provide End of Trip Bicycle Facilities: constructing facilities that support cyclists such as bike parking, lockers, and showers.~~ ~~• Implement Transit-Supportive Roadway Treatments: funding infrastructure improvements such as traffic signal modifications and roadway signing and striping that are dedicated to improving transit travel times and reliability.~~ ~~• Transit Passes: proving discounted or free transit fare to a specific geographic area, population group, or to the general public.~~ ~~• Vanpool Program: providing groups of 5 to 15 people with direct shuttle service between their workplace and residence.~~ ~~• Carshare Program (conventional or EV): providing access to a shared fleet of on-demand vehicles for short term use/rental. Best practice is to discount carshare membership and provide priority parking for carshare vehicles to encourage use of the service.~~ ~~• Bikeshare Program (conventional or EV): providing access to a shared fleet of on-demand bicycles for short term use/rental. Best practice is to discount bikeshare membership and dedicate bikeshare parking to encourage use of the service.~~ ~~• Rideshare Program: providing access to and encouraging the use of a ridesharing platform or service. This could be an app, website, or other service that provides ride matching coordination services.~~ ~~• Community Based Travel Planning (CBTP): CBTP is a residential based approach to outreach, performed by trained advisors, that provides households within a targeted geographic area with customized information, incentives, and support to encourage the use of transportation alternatives in place of single~~	

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
~~occupancy vehicles.~~ ~~• Commute Trip Reduction (CTR) Program: CTR programs can be mandatory or voluntary, and involve providing information, coordination, services, infrastructure, and/or incentives for alternative modes such as ridesharing, vanpool, transit passes, and cycling.~~	
Tribal Cultural Resources	
5-3 Upon receipt of an application for a proposed project subject to CEQA and within the City's jurisdiction, the City's representative shall consult with the relevant tribe(s)' representative(s) to determine if the proposed project is within a culturally sensitive area to the tribe. If sufficient evidence is provided to reasonably ascertain that the site is within a tribal culturally sensitive area, an archaeologist shall prepare a cultural resources assessment. The findings of the cultural resources assessment shall be incorporated into the CEQA documentation. A copy of the report shall be forwarded to the tribe(s). If mitigation is recommended in the CEQA document, the procedure described in Mitigation Measure 5-4 shall be followed.	Applicable. This Measure is carried forward from the Certified SEIR and shall be implemented by the Modified Project.
5-4 Prior to the issuance of grading permits for a proposed project for which the CEQA document defines cultural resource mitigation for potential tribal resources, the project applicant shall contact the designated tribe(s) to notify them of the grading, excavation, and monitoring program. The applicant shall coordinate with the City of Ontario and the tribal representative(s) to develop mitigation measures that address the designation, responsibilities, and participation of tribal monitors during grading, excavation, and ground-disturbing activities; scheduling; terms of compensation; and treatment and final disposition of any cultural resources, sacred	Applicable. This Measure is carried forward from the Certified SEIR and shall be implemented by the Modified Project.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
sites, and human remains discovered on the site. The City of Ontario shall be the final arbiter of the conditions for projects within the City's jurisdiction.	
TCR-1 Tribal Cultural Resources Monitoring. The project archaeologist, in consultation with interested tribes, the developer, and the City of Ontario, shall develop an archaeological monitoring plan (AMP) to address the details, timing, and responsibility of archaeological and cultural activities that will occur on the project site. Details in the AMP shall include: 1. Project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) and development scheduling; 2. The development of a rotating or simultaneous schedule in coordination with the developer and the project archeologist for designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all project archaeologists (if the tribes cannot come to an agreement on the rotating or simultaneous schedule of tribal monitoring, the Native American Heritage Commission shall designate the schedule for the onsite Native American Tribal Monitor for the proposed project); 3. The protocols and stipulations that the developer, City, Tribes, and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources	Applicable. This Measure is carried forward from the Certified SEIR and shall be implemented by the Modified Project.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
evaluation. At least 30 days prior to application for a grading permit and before any brush clearance, grading, excavation, and/or ground disturbing activities on the site, the developer shall retain a tribal cultural monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources. Pursuant to the AMP, a tribal monitor from the consulting tribe shall be present during the initial grading activities. If tribal resources are found during grubbing activities, the tribal monitoring shall be present during site grading activities.	
TCR-2 Treatment and Disposition of Cultural Resources. In the event that Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., for the proposed project, the following procedures will be carried out for treatment and disposition of the discoveries: 1. Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process; 2. Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and nonhuman	Applicable. This Measure is carried forward from the Certified SEIR and shall be implemented by the Modified Project.

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks
remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Ontario with evidence of same: a. Accommodate the process for on-site reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloging, basic analysis, other analyses as recommended by the project archaeologist and approved by consulting tribes, and basic recordation have been completed; all documentation should be at a level of standard professional practice to allow the writing of a report of professional quality; b. A curation agreement with an appropriate qualified repository in San Bernardino County that meets federal standards per 36 CFR Part 79, and therefore the resource would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility in San Bernardino County, to be accompanied by payment of the fees necessary for permanent curation; c. For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, materials shall be curated at the San Bernardino County Museum by default;	

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
d. At the completion of grading, excavation, and ground-disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pregrade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the City, County Museum, and consulting tribes.	
TR-1 Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities: ***A. The project applicant/lead agency shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation. The monitor shall be retained prior to the commencement of any "ground-disturbing activity" for the subject project at all project locations (i.e., both on-site and any off-site locations that are included in the project description/definition and/or required in connection with the project, such as public improvement work). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching.*** ***B. A copy of the executed monitoring agreement shall be submitted to the lead agency prior to the earlier of the commencement of any***	In addition to mitigation carried forward as noted above, Condition of Approval TR-1 is incorporated to ensure that tribal cultural resource impacts are maintained at levels that would be less-than-significant.

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks
ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity. ***C. The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the project applicant/lead agency upon written request to the Tribe.*** ***D. On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Kizh from a designated point of contact for the project applicant/lead agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or (2) a determination and written notification by the Kizh to the project applicant/lead agency that no future, planned construction activity and/or development/construction phase at the project site possesses the potential to impact Kizh TCRs.*** ***E. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered***	

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
TCR has been fully assessed by the Kizh monitor and/or Kizh archaeologist. The Kizh will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural and/or historic purposes.	
TR-2 Unanticipated Discovery of Human Remains and Associated Funerary Objects: ***A. Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code Section 5097.98, are also to be treated according to this statute.*** ***B. If Native American human remains and/or grave goods discovered or recognized on the project site, then all construction activities shall immediately cease. Health and Safety Code Section 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and all ground- disturbing activities shall immediately halt and shall remain halted until the coroner has determined the nature of the remains. If the coroner recognizes the human remains to be those of a Native American or has reason to believe they are Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission, and Public Resources Code Section 5097.98 shall be followed.*** ***C. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2).***	In addition to mitigation carried forward as noted above, Condition of Approval TR-2 is incorporated to ensure that tribal cultural resource impacts are maintained at levels that would be less-than-significant.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
D. Construction activities may resume in other parts of the project site at a minimum of 200 feet away from discovered human remains and/or burial goods, if the Kizh determines in its sole discretion that resuming construction activities at that distance is acceptable and provides the project manager express consent of that determination (along with any other mitigation measures the Kizh monitor and/or archaeologist deems necessary). (CEQA Guidelines Section 15064.5(f).) ***E. Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods. Any historic archaeological material that is not Native American in origin (non-TCR) shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.*** ***F. Any discovery of human remains/burial goods shall be kept confidential to prevent further disturbance.***	
TR-3 Procedures for Burials and Funerary Remains: ***A. As the Most Likely Descendant ("MLD"), the Koo-nas-gna Burial Policy shall be implemented. To the Tribe, the term "human remains" encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the preparation of the soil for burial, the burial of funerary objects with the deceased, and the ceremonial burning of human remains.***	In addition to mitigation carried forward as noted above, Condition of Approval TR-3 is incorporated to ensure that tribal cultural resource impacts are maintained at levels that would be less-than-significant.

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks
B. If the discovery of human remains includes four or more burials, the discovery location shall be treated as a cemetery and a separate treatment plan shall be created.	
C. The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered as associated funerary objects. Cremations will either be removed in bulk or by means as necessary to ensure complete recovery of all sacred materials.	
D. In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that burials will be removed.	
E. In the event preservation in place is not possible despite good faith efforts by the project applicant/developer and/or landowner, before ground-disturbing activities may resume on the project site, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human	

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks
remains and/or ceremonial objects. ***F. Each occurrence of human remains and associated funerary objects will be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the project site but at a location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.*** ***G. The Tribe will work closely with the project's qualified archaeologist to ensure that the excavation is treated carefully, ethically, and respectfully. If data recovery is approved by the Tribe, documentation shall be prepared and shall include (at a minimum) detailed descriptive notes and sketches. All data recovery data recovery-related forms of documentation shall be approved in advance by the Tribe. If any data recovery is performed, once complete, a final report shall be submitted to the Tribe and the NAHC. The Tribe does NOT authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.***	
Utilities and Service Systems	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all utilities and service systems impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
Wildfire	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all wildfire impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.

RESOLUTION NO. PC25-013

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE FILE NO. PSPA22-005, AN AMENDMENT TO THE AVENUE SPECIFIC PLAN TO: 1) MODIFY THE LAND USE DESIGNATION OF PLANNING AREA 4 AND APPLY DENSITY MODIFICATIONS TO PLANNING AREAS 1B, 2A, 3B, AND 5 FOR CONSISTENCY WITH THE ONTARIO PLAN 2050 LAND USE PLAN; 2) APPLY GENERAL MODIFICATIONS THROUGHOUT THE DOCUMENT FOR CLARITY; AND, 3) MAKE EXHIBIT AND TEXT UPDATES THROUGHOUT THE DOCUMENT TO SUPPORT THE PROJECT, FOR LAND LOCATED AT THE NORTHWEST CORNER OF ARCHIBALD AVENUE AND ONTARIO RANCH ROAD, AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 0218-191-04; 0218-191-14; 0218-191-15; 0218-191-16; 0218-191-05; 0218-191-22; 0218-191-20

WHEREAS, RICHLAND COMMUNITIES (hereinafter referred to as "Applicant") has filed an Application for the approval of a Specific Plan Amendment, File No. PSPA22-005, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"). The full, redlined Specific Plan Amendment document is attached to this Resolution as “Attachment A: File No. PSPA22-005 Redlined Specific Plan Document”; and

WHEREAS, the Application applies to land located within The Avenue Specific Plan area, which is bound by Schaefer Avenue to the north, Carpenter Avenue to the west, Ontario Ranch Road and Old Edison Road to the south, and Haven Avenue to the east, and is presently improved with a mix of developed residential and commercial land uses, vacant and unimproved land, and agricultural dairy and nursery uses; and

WHEREAS, the property to the north of the Project site is within the Specific Plan – Agricultural Overlay (SP-AG), Countryside Specific Plan, West Haven Specific Plan, and Utility Corridor (UC) zoning district, and is developed with agricultural, dairy, and residential land uses and vacant land. The property to the east is within the Rich-Haven Specific Plan, and is developed with residential land uses and vacant land. The property to the south is within the Parkside and Grand Park Specific Plans, and is developed with agricultural and residential land uses and vacant land. The property to the west is within the Specific Plan – Agricultural Overlay (SP-AG) zoning district, and is developed with agricultural uses and vacant land; and

WHEREAS, the Specific Plan Amendment consists of various map and text changes to accommodate land use and density modifications to Planning Areas 4, 1B, 2A, 3B, and 5, to bring the Specific Plan’s Land Use Plan into consistency with The Ontario Plan 2050 Land Use Plan (see Exhibit A: Existing and Proposed Specific Plan

Land Use Plan and Exhibit B: Proposed Specific Plan Land Use Table, appended to this Resolution). Textual changes are summarized as follows:

- The net acreage has been updated to more accurately reflect existing conditions.

- The total number of dwelling units will increase from 2,981 to 3,753 units and commercial square footage will increase from 130,680 to 335,176 square feet.

- Each land use within a Planning Area has been provided a designated line on the land use table, whereas previously, no such distinctions were made.

- Adjustments have been made throughout the table to accurately reflect existing conditions and accurate development information for built-out Planning Areas.

- The following notes have been introduced to the table for further clarification:

    - Realignment of Schaefer Avenue creates the need for Planning Area C, as it is owned separately from Planning Area 1A.
    - All acreages are approximate – exact acreages will be defined through tract map surveys. Additional studies may be required to transfer these units. See Section 3.1.1 for additional information.
    - Density blending will be allowed within Planning Areas within one TOP land use step (i.e. from LDR to LMDR) and between Planning Areas at a rate no higher than 15 percent. If units are blended within a Planning area or moved between Planning Areas, then Technical Studies for impacts to the Water and Sewer Master Plan Systems will be required as part of the entitlement process; and

WHEREAS, the Specific Plan Amendment will facilitate future development through forthcoming Tentative Tract or Parcel Maps and Development Agreements, which shall be reviewed by the appropriate hearing bodies once deemed ready for public hearing; and

WHEREAS, The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) was certified on August 16, 2022 (hereinafter referred to as "Certified SEIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified SEIR (hereinafter referred to as "SEIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local

guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the environmental impacts of this Project were thoroughly analyzed in the SEIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified SEIR, and that the Certified SEIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an EIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make recommendation to the City Council on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan 2050, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, the proposed Project is located within the Airport Influence Area of Chino Airport, within the City of Ontario boundary, and is subject to, and must be consistent with, the policies criteria set forth in Reference I, Chino Airport Land Use Compatibility Plan (CNO ALUCP), which applies only to jurisdictions within City of

Ontario, and addresses the safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, as the first action on the Project, on February 25, 2025, the Planning Commission issued a Resolution recommending the City Council approve the use of the SEIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on February 25, 2025, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending body for the Project, the Planning Commission has reviewed and considered the information contained in the Addendum and the administrative record for the Project, including all written and oral evidence provided during the comment period. Based upon the facts and information contained in the Addendum and the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of the Project were reviewed in conjunction with an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The SEIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental

assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of Project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The SEIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the Project may result in significant environmental impacts.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the SEIR Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Certified SEIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified SEIR that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified SEIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified SEIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified SEIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending body for the Project, the Planning Commission finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan 2050, as the Project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 4: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission therefore finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

(2) On August 2, 2022, the City Council of the City of Ontario approved and adopted a Development Code Amendment to establish the Chino Airport (“CNO”) Overlay Zoning District (“OZD”) and Reference I, Chino Airport Land Use Compatibility Plan (“CNO ALUCP”). The CNO OZD and CNO ALUCP established the Airport Influence Area for Chino Airport, solely within the City of Ontario, and limits future land uses and development within the Airport Influence Area, as they relate to safety, airspace protection, and overflight impacts of current and future airport activity. The CNO ALUCP

is consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the CNO ALUCP. As the recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the CNO ALUCP compatibility factors, including Safety, Airspace Protection, Overflight. As a result, the Planning Commission therefore finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the Chino ALUCP.

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in the Sections above, the Planning Commission hereby concludes as follows:

(1) ***The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan 2050.*** The Specific Plan Amendment is intended to bring The Avenue Specific Plan's land use plan into consistency with The Ontario Plan 2050's land use plan and therefore will enable the Specific Plan to be consistent with and further implement the goals, policies, plans, and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan 2050.

(2) ***The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The Specific Plan Amendment is intended to bring The Avenue Specific Plan's land use plan into consistency with The Ontario Plan 2050's land use plan. The Ontario Plan 2050's land use plan was established to promote the public interest, safety, convenience, and general welfare of the City. The proposed Specific Plan land use plan modifications will be in keeping with the existing and anticipated land use patterns in and around the Specific Plan area.

(3) ***In the case of an application affecting specific property(ies), the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The Specific Plan Amendment is intended to bring The Avenue Specific Plan's land use plan into consistency with The Ontario Plan 2050's land use plan and the proposed modifications will be in keeping with the existing and anticipated land use patterns in and around the Specific Plan area. The proposed amendment will thus remain harmonious with the

surrounding residential, agricultural, and commercial land uses and will not adversely affect the adjacent properties and land uses.

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** The Specific Plan Amendment is intended to bring The Avenue Specific Plan's land use plan into consistency with The Ontario Plan 2050's land use plan, and no modifications are proposed that will impact property development regulations. The Ontario Plan 2050 analyzed potential impacts to utilities, and the Project Addendum found that there would be no additional impact as a result of this Project. Any future development shall be reviewed and approved through subsequent entitlements that will ensure that adequate parcel size, shape and access will be provided. Further, additional studies ensuring the adequate availability of utilities shall be required, should any future development deviate from the standards established by this Specific Plan Amendment.

SECTION 6: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in the Sections above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVES the herein described Application, subject to each and every condition set forth in the Department reports attached hereto as "Attachment B," and incorporated herein by this reference.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the Applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 25th day of February 2025, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Nicola Ricci
Planning Commission Chairman

ATTEST:

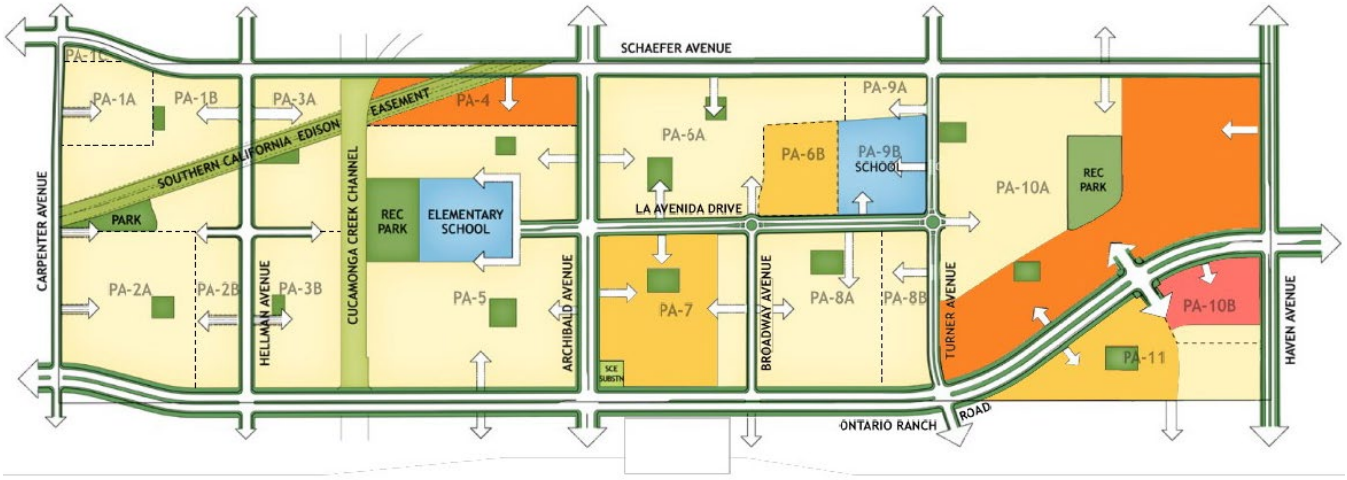
Henry K. Noh
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA)
COUNTY OF SAN BERNARDINO)
CITY OF ONTARIO)

I, Gwen Berendsen, Secretary Pro Tempore of the Planning Commission of the City of Ontario, DO HEREBY CERTIFY that foregoing Resolution No. PC25-013, was duly passed and adopted by the Planning Commission of the City of Ontario at their regular meeting held on February 25, 2025, by the following roll call vote, to wit:

AYES: DeDiemar, Gage, Lampkin, Ricci

NOES: None



ABSENT: Anderson

ABSTAIN: None

Notes:
* Realignment of Schaeffer Ave creates the need for PA 1C (APN 021-812-201) as it is owned separately from PA 1A (APN 0218-181-126).
- All acreages approximate- exact acreages will be defined through tract map surveys. Additional studies may be required to transfer these units. See Section 3.1.1 for additional information.
- Density blending will be allowed within Planning Areas within one TOP land use step (i.e. from LDR to LMDR) and between Planning Areas at a rate no higher than 15%. If units are blended within a PA or moved between PA's, then Technical Studies for Impacts to the Water and Sewer Master Plan Systems will be required as part of the entitlement process.

Section 1 - Introduction/Overview

1.1 Vision of The Avenue

The Avenue will be a truly walkable community, featuring pedestrian amenities that encourage walking and biking to schools, parks and basic commercial needs—all within five minutes, for the majority of residents. The Avenue is named after the central La Avenida Drive, a tree-lined street with one-way traffic on each side, and a continuous 13' parkway and 8' sidewalk on both sides without curb cuts or driveways to create an uninterrupted path. The Avenue will provide a connection from Archibald Avenue to the Recreation Area, Active Recreation Park, Schools, and adjacent neighborhood and pocket parks. With a diversity of housing types and styles, The Avenue will have something for everyone—providing a place for everyone to live, learn, play and shop.

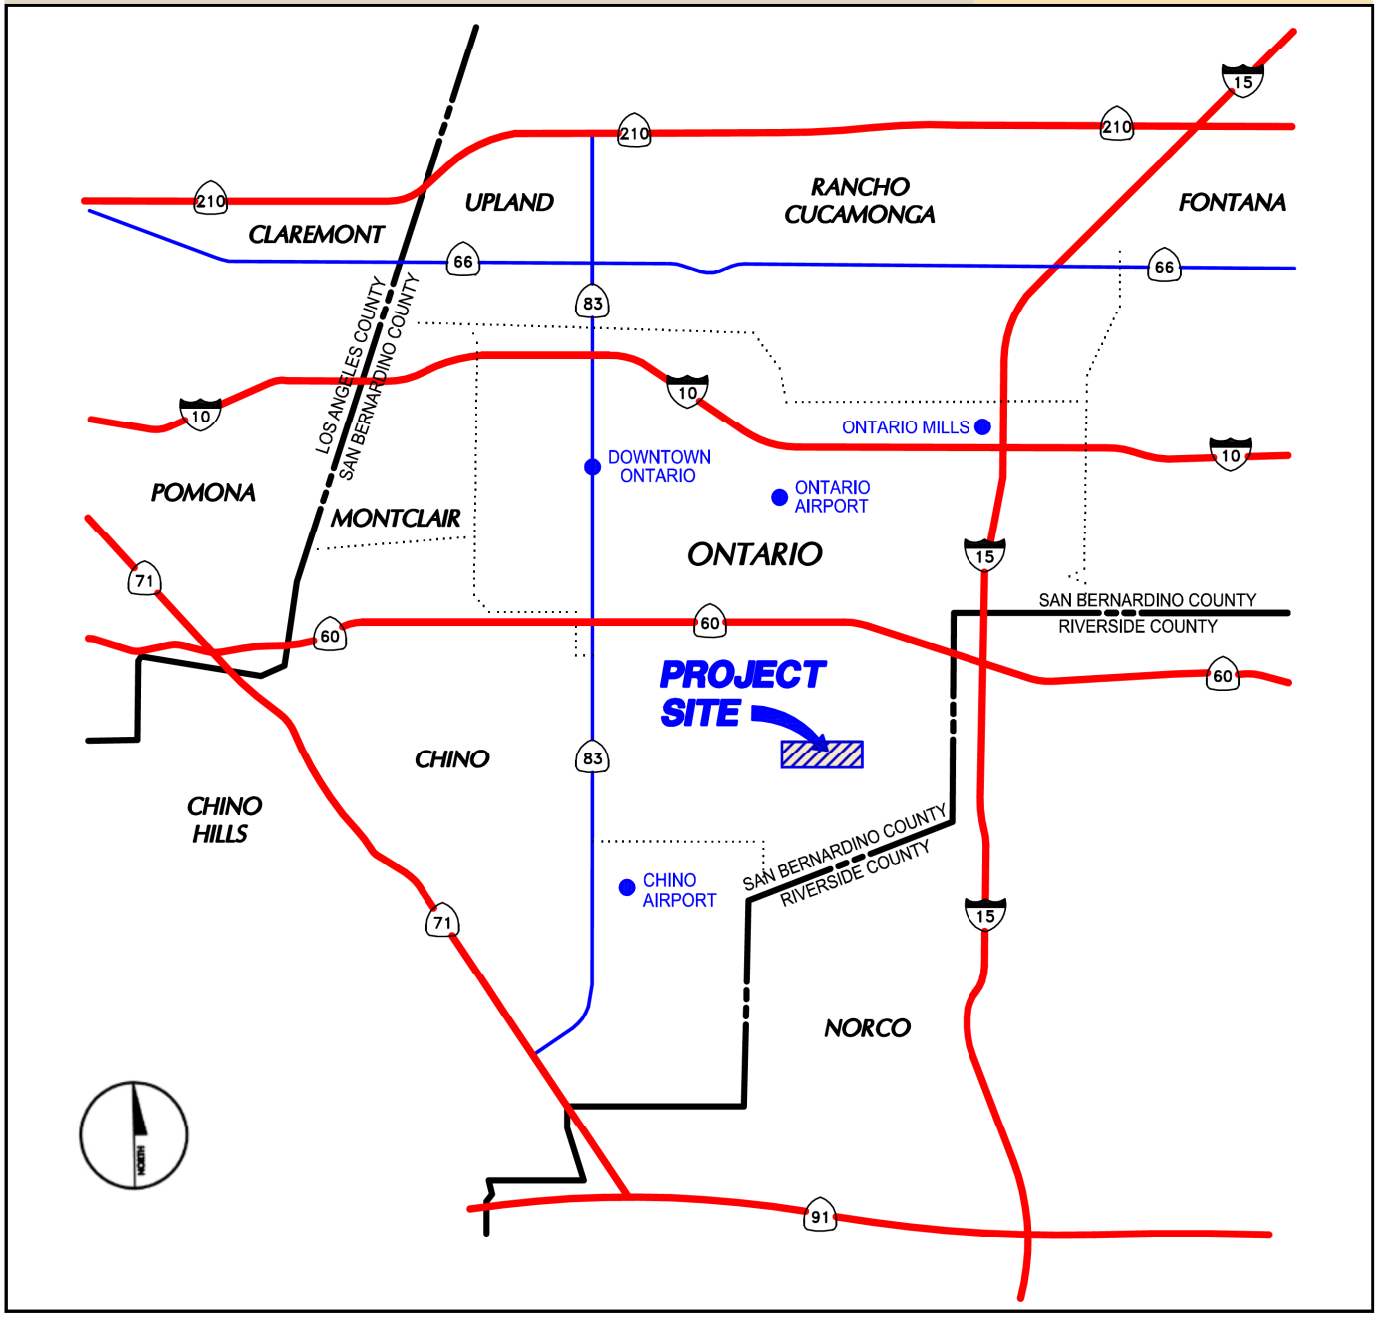
1.2 Project Location

The Avenue Specific Plan is comprised of approximately 568.1 gross acres. The project site is bounded by Schaefer Avenue to the north, Ontario Ranch Road to the south, Haven Avenue to the east, Carpenter Avenue to the west as illustrated in Exhibit 1, "Regional Map" and Exhibit 2, "Project Location".

The Avenue will offer a variety of residential housing types and neighborhoods within walking distance to parks, schools, and recreation facilities. The Land Use Plan, as illustrated in Exhibit 8, "Land Use Plan" is consistent with the goals and policies of ~~the New Model Colony~~ Ontario Ranch General Plan Amendment, combining walkable residential neighborhoods served by recreational spaces that offer opportunities for social interaction among residents. A Planned retail and commercial area is located within La Avenida Drive at Ontario Ranch Road and Haven Avenues to serve the commercial needs of the residents of The Avenue as well as surrounding neighborhoods.

The regional context and local setting of The Avenue (the Project Site) are illustrated in Exhibit 1, "Regional Map", and Exhibit 2, "Project Location Map".

Exhibit 1 - Regional Map



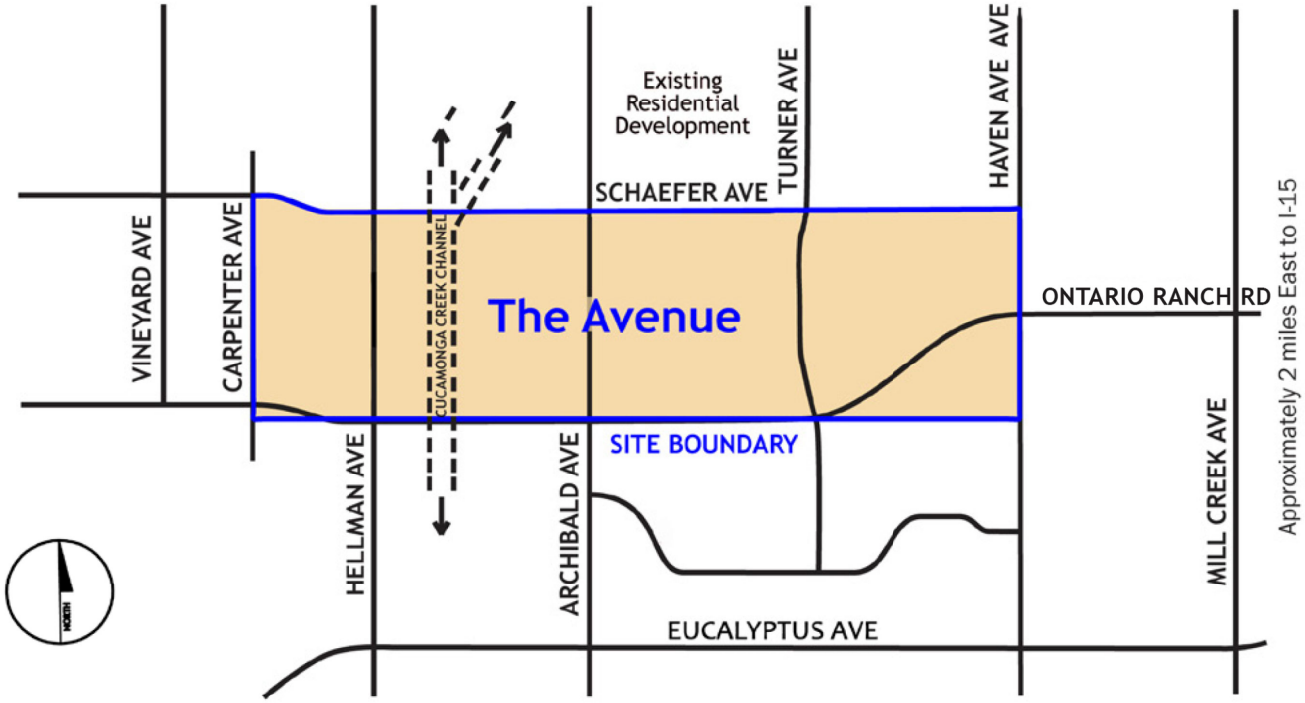


Exhibit 2 - Project Location Map

1.3 Project History and Background

After an extensive public participation program, the Ontario City Council adopted the Sphere of Influence General Plan Amendment for the 8,069 acre area known as the "The New Model Colony, now known as Ontario Ranch, on January 7, 1998. On November 30, 1999, the area was annexed into the City of Ontario. ~~The New Model Colony~~ Ontario Ranch General Plan provides the framework to create a high quality environment where residents will live, work and play. The area was divided into 30 subareas, each requiring the preparation of a specific plan reflecting the unique goals and qualities of each area. In this way, each subarea could be part of the overall ~~New Model Colony~~ Ontario Ranch, but retain a sense of individuality. The Avenue site has historically been used for agricultural operations, primarily dairy use. Those areas not in active agricultural production are occupied by rural residential housing, farm buildings, and other ancillary agricultural facilities. The natural vegetation and soil conditions that once occurred throughout La Avenida Drive have been significantly altered through agricultural uses, leaving little or no native vegetation.

On January 26th, 2010, the City of Ontario adopted The Ontario Plan (TOP) which serves as the City's new business plan and includes a long term Vision and a principle based Policy Plan (General Plan). The city's Policy Plan, which acts as the City's General Plan, designates (Policy Plan Exhibit LU-1 -Land Use Plan) the project site for development of Low Density Residential (2.1 -5.0 dwelling units per acre), Low Medium Residential (5.1 - 11 .0 dwelling units per acre), Medium Density Residential (11.1 - 25.0 dwelling units per acre), Neighborhood Commercial, Public Schools, and Open Space- Parkland.

The Avenue Specific Plan was amended on February 2, 2010, June 17, 2104, ~~and~~ March 21, 2017, and Novermber 17, 2020 to modify the Land Use Plan. The city of Ontario General Plan (The Ontario Plan – TOP) and The Avenue Specific Plan was amended concurrently and reflects the final language to convert a 10 acre portion of the 20 acre school site located west of Turner Road; identified as PA 6B to Low Medium Density Residential (5.1 – 11.0 dwelling units per acre).

1.4 Specific Plan Purpose

The Avenue Specific Plan serves to implement the City's Policy Plan for the project site and provides zoning regulations for development of the project site by establishing permitted land use, development standards, infrastructure requirements, and implementation requirements for development. A comprehensive set of design guidelines and development regulations are included to guide and regulate site planning, landscape and architectural character within the community ensuring that excellence in community design is achieved during project development. The Avenue Specific Plan establishes the procedures and requirements to approve new development within the project site.

Typical neighborhood pocket park

1.5 Specific Plan Objectives

The following objectives are established for The Avenue Specific Plan:

Residential Areas

1. Development of a variety of housing types into the land use plan addressing a wide variety of lifestyles and economic segments
2. Provide for both single family attached and detached housing in low density and low medium density residential districts
3. Plan for seamless transitions between housing product types in order to create cohesive neighborhoods that include a range of types and styles
4. Plan residential neighborhoods around a series of parks and open space areas, promoting outdoor activity and interaction among neighbors
5. Provide for connectivity between residential neighborhoods, recreational areas, and adjacent commercial land uses, as well as to the schools, by means of pedestrian and bicycle trail linkages along the Avenue and trails incorporated into both the Southern California Edison Easement and the Cucamonga Creek Channel

6. Create a strong functional relationship between homes and schools
7. Create an hierarchy of parks, providing for active and passive recreation
8. Create residential neighborhoods with diverse architectural styles and traditional design elements reflecting some of the characteristics of older established Ontario neighborhoods

Commercial Area

1. Develop retail and commercial uses to meet the needs of the residential community and larger surrounding market area, as well as implement Policy Plan Policies
2. Provide trails and sidewalks to connect the residential community with the retail and commercial area
3. Consider the development of plazas and other public space amenities within the retail and commercial area providing space for social interaction
4. Orient retail and commercial buildings to the street, wherever possible, to create an urban edge and sense of arrival

Commercial entry concept from adjacent neighborhood

1.6 Development Approval Components

The components of the development approval process for The Avenue are discussed below.

General Plan

The Ontario Plan establishes the direction and vision for the City of Ontario providing a single guidance system that will shape the Ontario community for the future. The Plan provides for policies to accommodate change over a 30 year period commencing in 2010, the beginning of the planning period. The Ontario Plan consists of a six part Component Framework: 1) Vision, 2) Governance Manual, 3) Policy Plan, 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback.

Specific Plan

The Policy Plan requires the approval of a Specific Plans for development of the project site to ensure that sufficient land area is included to achieve unified districts and neighborhoods. The City of Ontario has zoned the project site as AG-Specific Plan. The zoning designation of AG-Specific Plan requires that a Specific Plan be approved to guide development of the project site and to implement the goals and policies of the Policy Plan. The Specific Plan provides the zoning regulations to govern development of the project

site. The requirements of the Specific Plan shall take precedence over the City of Ontario Development Code. In instances where the Specific Plan is silent, the City of Ontario Development Code shall prevail.

Subdivision Maps

Tentative tract maps will be approved by the City of Ontario for the residential portion of The Avenue indicating the approximate location of lot lines, streets, and proposed grading. Following approval by the City of the tentative tract maps, final maps will be prepared. The final maps become legal documents that are recorded and define legal parcels and lots that can be sold for development. Parcel maps may be approved by the City of Ontario for development proposed within the commercial and business park/light industrial portions of The Avenue.

Development Plan Review

Following the approval of The Avenue Specific Plan, all development proposals for individual neighborhoods or product areas within the Specific Plan will be subject to the Development Plan Review process pursuant to Article 8 of the City's Development Code.

Development Agreement(s) Required

Unless done in a coordinated manner and with adequate fiscal planning, development projects within ~~the New Model Colony~~ Ontario Ranch are likely to present a challenge in their implementation because of the lack of existing public facilities including streets, sewerage, transportation, drinking water, school, and utility facilities. California law has established a mechanism for ensuring the adequate provision of such facilities, while at the same time providing assurances to applicants that, upon approval of the project, the applicants can proceed with their projects. Approval of this Specific Plan without development agreements may result in a waste of resources, escalate the cost of housing to the consumer, and discourage investment in and commitment to comprehensive planning, as envisioned by the City, which seeks to make maximum efficient utilization of resources at the least economic cost to the public.

Therefore, a single statutory development agreement, or multiple agreements, authorized pursuant to California Government Code sections 65864 et seq., shall be required as part of the approval of this Specific Plan. For the above-mentioned reasons, the development agreement(s) for this Specific Plan shall include, among other things, methods for financing acquisition and construction of infrastructure, acquisition and development of adequate levels of parkland, and schools, as well as the provision of adequate housing opportunities for various segments of the community consistent with the regional housing needs assessment. Such development agreements shall have been fully approved before the issuance of building permits for plans within this project.

1.7 Specific Plan Authority and Requirements

State of California Government Code, Title 7, Division 1, Chapter 3, Article 8, Section 65450-57 grants authority to cities to adopt Specific Plans for purposes of implementing the goals and policies of their

General Plans. The Government Code specifies that Specific Plans will be adopted by ordinance, and that the Specific Plan is required to be consistent with the General Plan. The City of Ontario will be adopting this Specific Plan, as with other ~~New Model Colony~~ Ontario Ranch Specific Plans, by ordinance, thereby establishing the zoning regulations for the development of The Avenue. The standards set by The Avenue Specific Plan shall take precedence over the City of Ontario Development Code, and in instances where The Avenue Specific Plan is silent, the City of Ontario Development Code shall prevail. California Government Code Section 65451 sets forth the minimum requirements and review procedures for specific plans as follows:

A Specific Plan shall include a text and a diagram or diagrams, which specify all of the following in detail:

1. The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan;
2. The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan;

Typical outdoor eating area - School

3. Standards and criteria by which improvements will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable, and a program of implementation measures including regulations, programs, public works projects and the financing measures necessary to carry out paragraphs 1 and 2 above. The Specific Plan shall include a statement of the relationship of the Specific Plan to the General Plan.

1.8 Relationship to General Plan, Airport Land Use Compatibility and Zoning

The City's Policy Plan, which acts as the City's General Plan, designates the project site for development as follows:

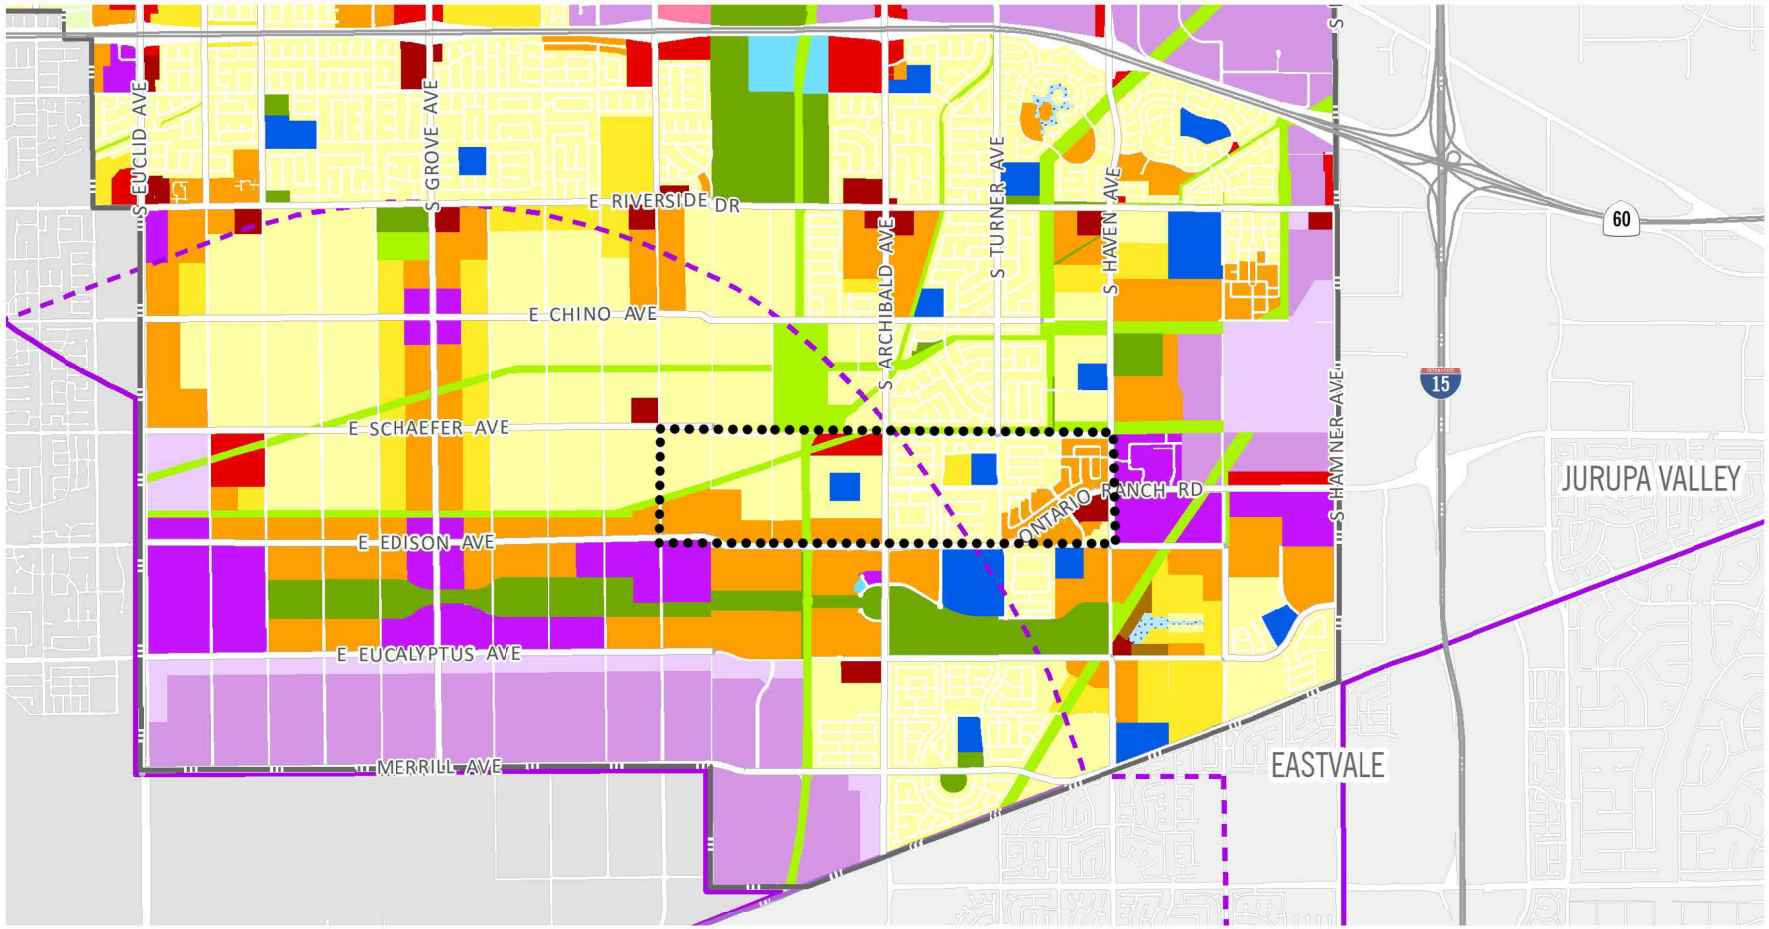
- Low Density Residential (2.1 -5.0 dwelling units per acre)
- Low Medium Residential (5.1 - 11 .0 dwelling units per acre)
- Medium Density Residential (11.1 - 25.0 dwelling units per acre)
- Neighborhood Commercial
- General Commercial
- Public Schools
- Open Space- Parkland.
- Open Space - Non-Recreation

On August 16, 2022, TOP was amended to accommodate the TOP 2050 Update, which made modifications to the Vision, Governance Manual, and Policy Plan components of TOP and established a General Commercial land use within PA-4 and Medium Density Residential land use areas within PAs 2A, 3B and 5. The Policy Plan (General Plan) establishes a development capacity of ~~4,010~~3,739 dwelling units and a maximum FAR of 0.40 for Neighborhood Commercial for a total of up to ~~172,240~~436,297 square feet of commercial uses for the Specific Plan Area. The Policy Plan residential capacity is further broken down as follows:

~~Gross~~ Net Acres	TOP Land Use Designation	Maximum Permitted Dwelling Units
~~391.72~~351.0	Low Density Residential	~~1,763~~ 1,580
~~29.9~~57.6	Low Medium Density Residential	~~254~~489
~~94.97~~75.9	Medium Density Residential	~~2,078~~1,670
Total ~~516.59~~484.5		~~4,095*~~3,739*

**Densities do not reflect maximum allowable densities by the Policy Plan and are based on TOP EIR densities (average) of 4.5 du/ac for Low Density, 8.5 du/ac for Low Medium Density and 22 du/ac for Medium Density.*

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65450-65457) permits the adoption and administration of specific plans as an implementation tool for elements contained in the local general plan. Specific plans must demonstrate consistency in regulations, guidelines, and programs with the goals and policies set forth in the general plan. The A venue Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario Policy Plan (General Plan). The policy analysis in located in the Appendix of this document, describes the manner in which the A venue Specific Plan complies with the Policy Plan policies applicable to the project.



The Avenue Specific Plan is located within the Airport Influence Area (AIA) of Chino Airport and Ontario International Airport and is required to be consistent with both Airport Land Use Compatibility Plans.

1.9 CEQA Compliance

An Environmental Impact Report (EIR) was prepared by the City of Ontario for The Avenue Specific Plan in accordance with the California Environmental Quality Act (CEQA), to address impacts associated with the Specific Plan. The EIR was prepared as a basis for the environmental review for all subsequent discretionary and ministerial actions. On December 19, 2006, the City Council certified the EIR for The Avenue Specific Plan.

Section 2 - Existing Conditions

2.1 Site History

The Avenue site has previously been extensively used for agricultural operations, including dairy use. Those areas not in active agricultural production are occupied by rural residential housing, farm buildings and other ancillary facilities. The natural vegetation and soils conditions that once occurred throughout the project area have been significantly altered through agricultural uses, leaving little or no native vegetation. Though still currently in the transitioning phase for development from agricultural uses, the Zoning Classification for parts of the site were once considered as (AG) Specific Plan Ag Preserve.

2.2 Existing Site Conditions

The Avenue has undergone a significant change in land use patterns replacing what was historically undeveloped, with agricultural operations scattered throughout the area with lower density urban land uses. Historically, improvements within The Avenue included single-family residences, feed storage areas, and various other farming or cattle raising facilities. Other agricultural-related facilities, such as above ground tanks and modular structures, were scattered throughout, and a commercial nursery was located on the easterly portion of the site. These agricultural uses are transitioning to residential uses, parks and recreational areas and neighborhood commercial development since the Avenue Specific Plan has been approved and has been implemented over the plan area.

Exhibit 4 - Site Aerial Photo

2.2.1 Site Area

The Avenue Specific Plan is approximately 568.1 gross acres in size. This includes street right-of-ways and all utility easements.

2.2.2 Topography

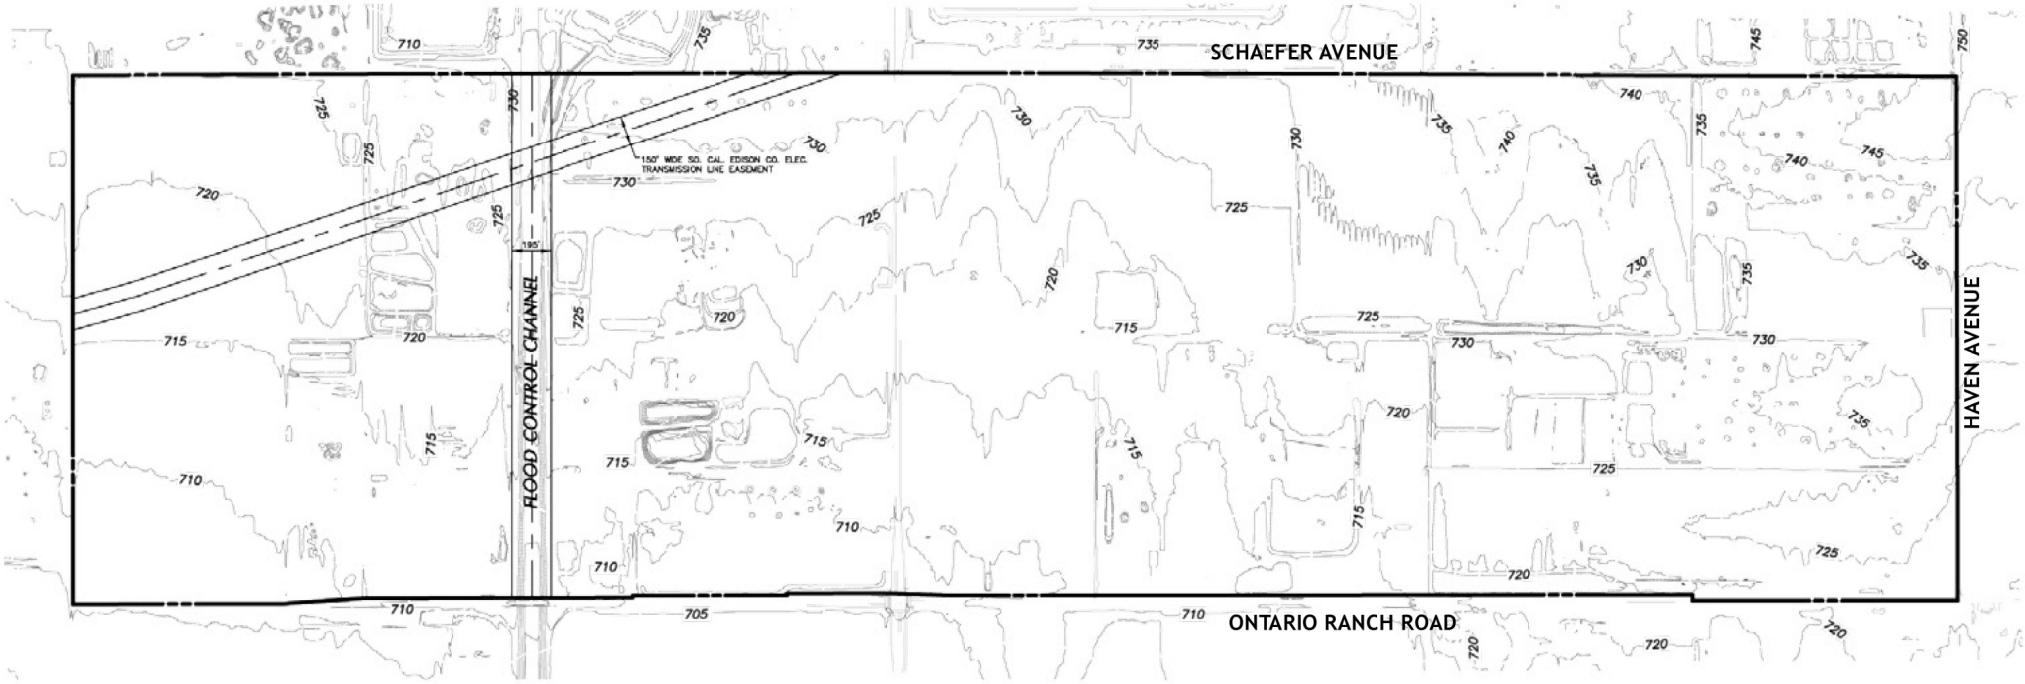
The Project Site is located on gently sloping undeveloped terrain with a relatively uniform slope as illustrated in Exhibit 5, “Existing Topography”. The existing ground on the site slopes southerly away from Schaefer Avenue at an approximately 1% grade.

2.2.3 Existing On-site Land Use

The Avenue Specific Plan currently comprises agricultural, dairy, farming, and other agricultural related land uses. There are utility uses such as the Cucamonga Creek flood control channel and the Southern California Edison utility easement traversing the site, as well as a one-acre Southern California Edison substation.

View of Dairy Farm that existed on the Project Site prior to the adoption of the original Avenue Specific Plan

Historic agricultural uses on the Project Site circa 2004



Street scene along La Avenida Drive

Turner Avenue and La Avenida Drive Intersection

VIEW OF THE AVENUE SPECIFIC PLAN AREA LOOKING WEST

Note: The existing site slopes southerly at approximately 2% grade.

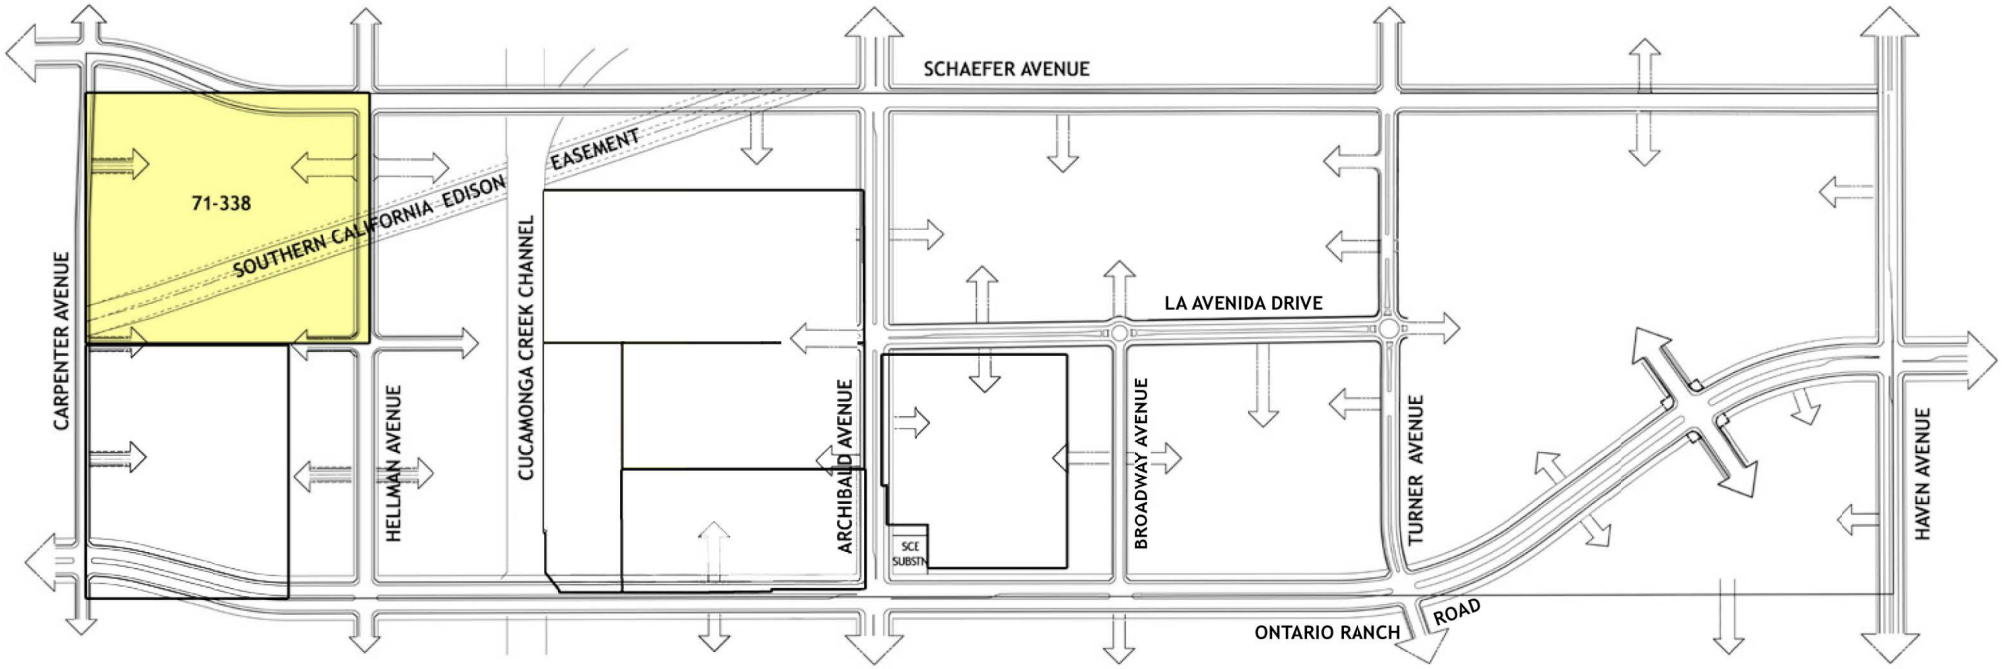
2.2.4 Surrounding Land Use

Land uses adjacent to The Avenue Specific Plan area include:

North: Existing residential community and SCE Easement.
East: New residential community, low and medium density developments, farm land and vacant land.
South: Existing residential community is currently under construction and future mixed use/residential development.
West: Farm land and vacant land.

~~The New Model Colony~~ Ontario Ranch General Plan designates the surrounding areas as:

North: Low Density Residential, Elementary School, Flood Control and Green Belt (Subareas 5 and 12)
East: Low Density Residential and Green Belt (Subarea 12)
South: Low, Medium and High Density Residential, Flood Control and Green Belt (Subarea 23)
West: Medium Density Residential, High Density Residential and Green Belt (Subarea 17)



La Avenida as viewed from Archibald looking East

2.2.5 Williamson Act Contracts

There ~~are~~ is currently ~~3~~ one Williamson Act Contract~~s~~ within the Specific Plan Area as shown in Exhibit 6, “Williamson Act Contracts”.

Revised Exhibit

Revised Exhibit

2.4 Existing Circulation

Access to The Avenue Specific Plan is currently provided from newly constructed arterial and collector roadways that are developed adjacent to and within The Avenue Specific Plan area. Ontario Ranch Road abuts the plan area on the south and is currently being improved in a phased manner from Haven Avenue westerly towards Carpenter Avenue.

Archibald Avenue has partially been improved to its ultimate condition and bisects the plan area through the center of the project. Schaefer Avenue has been fully constructed from Haven Avenue to Archibald Avenue. Haven Avenue has been fully constructed between Schaefer Avenue and Ontario Ranch Road (formerly Edison Avenue).

Existing intersection at Archibald and Ontario Ranch Road

LEGEND

Revised Exhibit

Assessors Parcel Numbers

2.5 Existing Infrastructure and Utilities

2.5.1 Water

There is an existing 12-inch main within Archibald. This is a Chino Desalter Authority (CDA) line which extends through La Avenida Drive. The source is well water, the zone is elevation 1010 and the line usage is for dairy lands in this vicinity. The private wells currently in use for this main will eventually be destroyed per DHS standards upon development of this Specific Plan. The location of existing wells are shown in Exhibit 24, "Existing Wells". Per the ~~NMC~~ Ontario Ranch Water Master Plan, new domestic facilities will be required to serve The Avenue Specific Plan area. Existing water facilities are shown on Exhibit 20, "Domestic Water Master Plan".

In compliance with the Chino Basin Water Master's Well Procedure for Developers, a well use/destruction plan and schedule for all existing private/agricultural wells shall be submitted to the City of Ontario for approval prior to the issuance of permits for any construction activity. If a private well is actively used for water supply, the Developer shall submit a plan to abandon such well and connect users to the City's water system (residential to the domestic water system and agricultural to the recycled water system) when available. Wells shall be destroyed/abandoned per the California Water Resource Guidelines and require permitting from County Health Department. The location of existing wells are shown in Exhibit 24, "Existing Wells". A copy of such permit and Form DWR 188 Well Completion Form shall be provided to the Engineering and Public Works Agency prior to issuance of grading and/or building permits. If the Developer proposes temporary use of an existing agricultural well for purposes other than agriculture, such as grading, dust control, etc., the developer shall make a formal request to the City of Ontario for such use prior to issuance of permits for any construction activity. Upon approval, the Developer shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by the agreement.

2.5.2 Recycled Water

There is an existing Chino Basin Municipal Water District 30-inch main within La Avenida Drive. The main is located within the existing and proposed alignment of Carpenter Street extending northerly and southerly of this Specific Plan area. This main will serve The Avenue project along with proposed ~~NMC~~ Ontario Ranch Master Plan facilities connecting to this 30-inch line as the source of recycled water. Existing recycled water facilities are shown on Exhibit 21, "Recycled Water Master Plan".

2.5.3 Sewer

Existing recently constructed IEUA 33-inch and 36-inch Eastern Trunk Sewer mains are located within Archibald Avenue. The Archibald trunk reach eventually joins the existing Kimball 54-inch Interceptor Trunk Sewer to the south of La Avenida Drive. The existing Archibald IEUA sewer will serve the easterly side of The Avenue Specific Plan via proposed ~~NMC~~ Ontario Ranch Master Plan facilities which will connect to it. La Avenida Drive west of the Cucamonga Flood Channel currently has no gravity sewer service. All other existing septic systems will be destroyed per DHS standards with the development of the Specific Plan. Existing sewer facilities are shown on Exhibit 23, "Sewer Master Plan".

2.5.4 Storm Drainage

The Avenue is presently in agricultural use; therefore, only a limited portion of the site is covered with impervious surfaces. Normal rainfall to the area is able to percolate through on-site soils and does not result in high volumes of surface runoff, as typically associated with urban areas. During periods of heavy rainfall when ground surfaces are saturated, surface runoff is collected in the existing drainage ditches and retention basins located within the site. Off-site flows are then directed into the existing storm drain system surrounding The Avenue which is generally unimproved and consists primarily of open earthen swales along area roadways or curbed roadway surfaces.

Cucamonga Creek Channel

An existing drainage channel bisects the site but does not collect off-site flows from La Avenida Drive. The channel is a major flood control facility that conveys water from much of the urbanized area located to the north of La Avenida Drive through the site and then to the Prado Basin in the south. Existing storm drain facilities are shown on Exhibit 22 “Storm Drain Master Plan”.
Master planned storm drain facilities have been installed along with development/implementation of the Specific Plan since it was originally approved.

2.5.5 Solid Waste

Solid Waste service is provided by the City of Ontario.

2.5.6 Gas

No gas is currently available within The Avenue. Individual propane units are currently being used.

2.5.7 Electric

Electricity is available from Southern California Edison.

2.5.8 Telephone

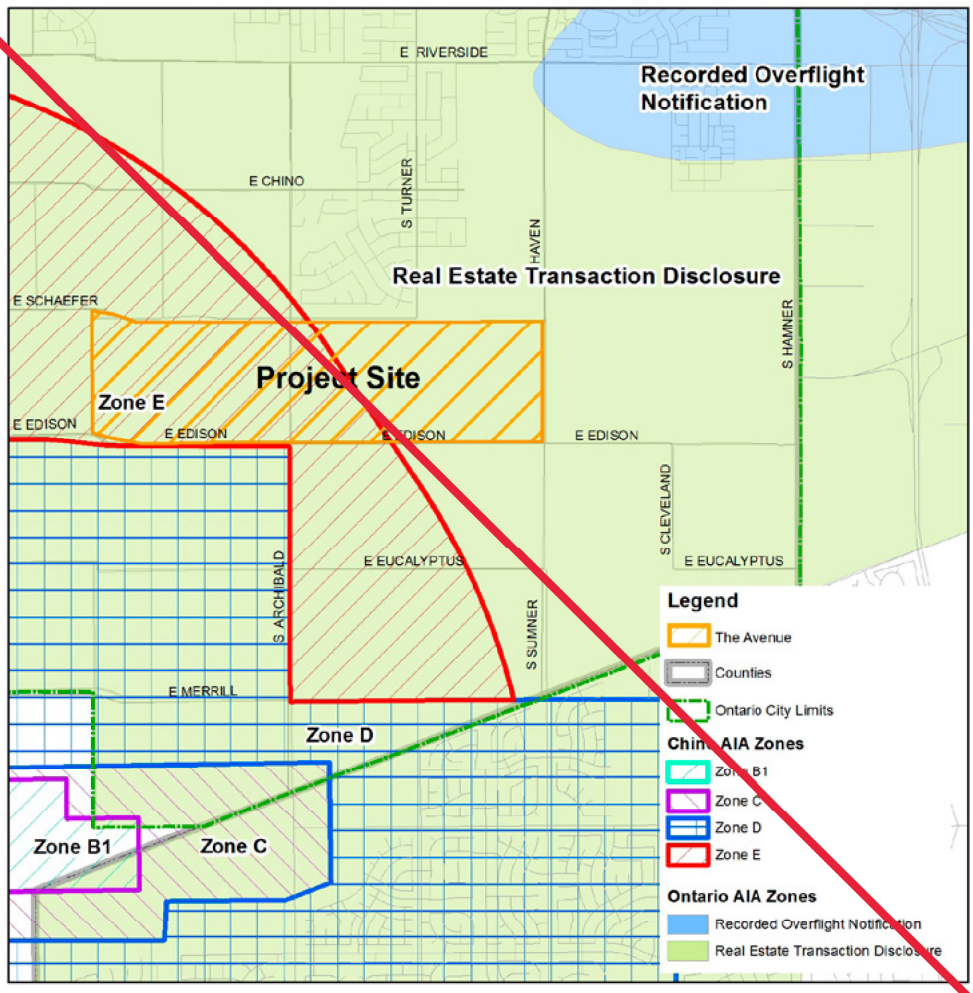
Telephone is currently available from Verizon.

2.5.9 Cable Television

Cable is available in the newly developed areas of The Avenue.

Schaefer Avenue looking west between Archibald and Haven

Ontario Ranch Road looking west



Northerly site boundary along Schaefer Avenue

2.6 Airport Influence Areas

The Avenue Specific Plan is located within the Airport Influence Areas of Chino Airport and Ontario International Airport. All development proposals or Specific Plan Amendments must be consistent with the Airport Land Use Compatibility Plans for both airports.

Section 3 - Land Use Plan

3.1 Land Use Concept

The proposed ~~569~~568.1-acre Avenue Specific Plan offers a traditional neighborhood lifestyle featuring a variety of residential housing types designed within easy walking distance to recreational amenities, retail and commercial uses, and school sites. Connectivity within The Avenue Specific Plan is provided through a system of pedestrian and bicycle trails linking residential neighborhood parks to the retail and commercial land use areas within the plan area.

The Avenue lies between two tree-lined avenues - Ontario Ranch Road to the south and Schaefer to the north. These arterials converge on one another at the eastern portion of the project. There are two additional dramatic tree-lined arterials, Archibald and Haven, that take advantage of the views of the San Bernardino Mountains to the north and the Santa Ana Mountains to the south. The vehicular circulation through the community provides a significantly different experience at each point of entry into the Colony. The Avenue's central element emphasizes pedestrian and recreational movement with wide sidewalks, tree-lined parkways and planted vehicular medians. The unifying elements include tree-lined streets and entry monuments coupled with drought tolerant flowering plant material.

Several key issues have been addressed in the design concept for The Avenue. They include the following:

- Development of an elegant, traditional style of landscape theming with generously landscaped common areas and strong, rich landscape materials that may include river rock, stone, brick, groves of trees, tree-lined streets, earth tone colors, and a diversity of other materials appropriate to the design theme
- Incorporation of a residential village and park program which is clear, identifiable and properly serves the needs of the community
- Pedestrian and non-motorized circulation throughout the community between recreational and educational elements
- Consideration of resources and long term maintenance efficiency in the selection of plant materials and placement helps create a strong "sense of community" through landscape design elements

Notable features of the proposed The Avenue Land Use Plan include the following:

- A variety of attached and detached housing opportunities
- Neighborhoods that serve retail and commercial locations
- Recreation Areas may feature shade trees, barbeques and turf play areas that may include pools, and tot lots

- Neighborhood pocket parks that will serve to integrate the neighborhoods
- Enhanced Roadways - La Avenida Drive and Turner Avenue - roadway, pedestrian and multi-use corridors linking each of the recreational sites and schools—providing connection between neighborhoods, featuring enhanced setbacks, multi-use paths, divided landscape medians, and front-on architecture
- Schools - One Elementary School (10 acres) ~~with an attached five-acre park~~ and one additional school site (10 acres) that will be pedestrian-accessible from all neighborhoods
- Trails - 5 to 10 minute walk or bike to community amenities

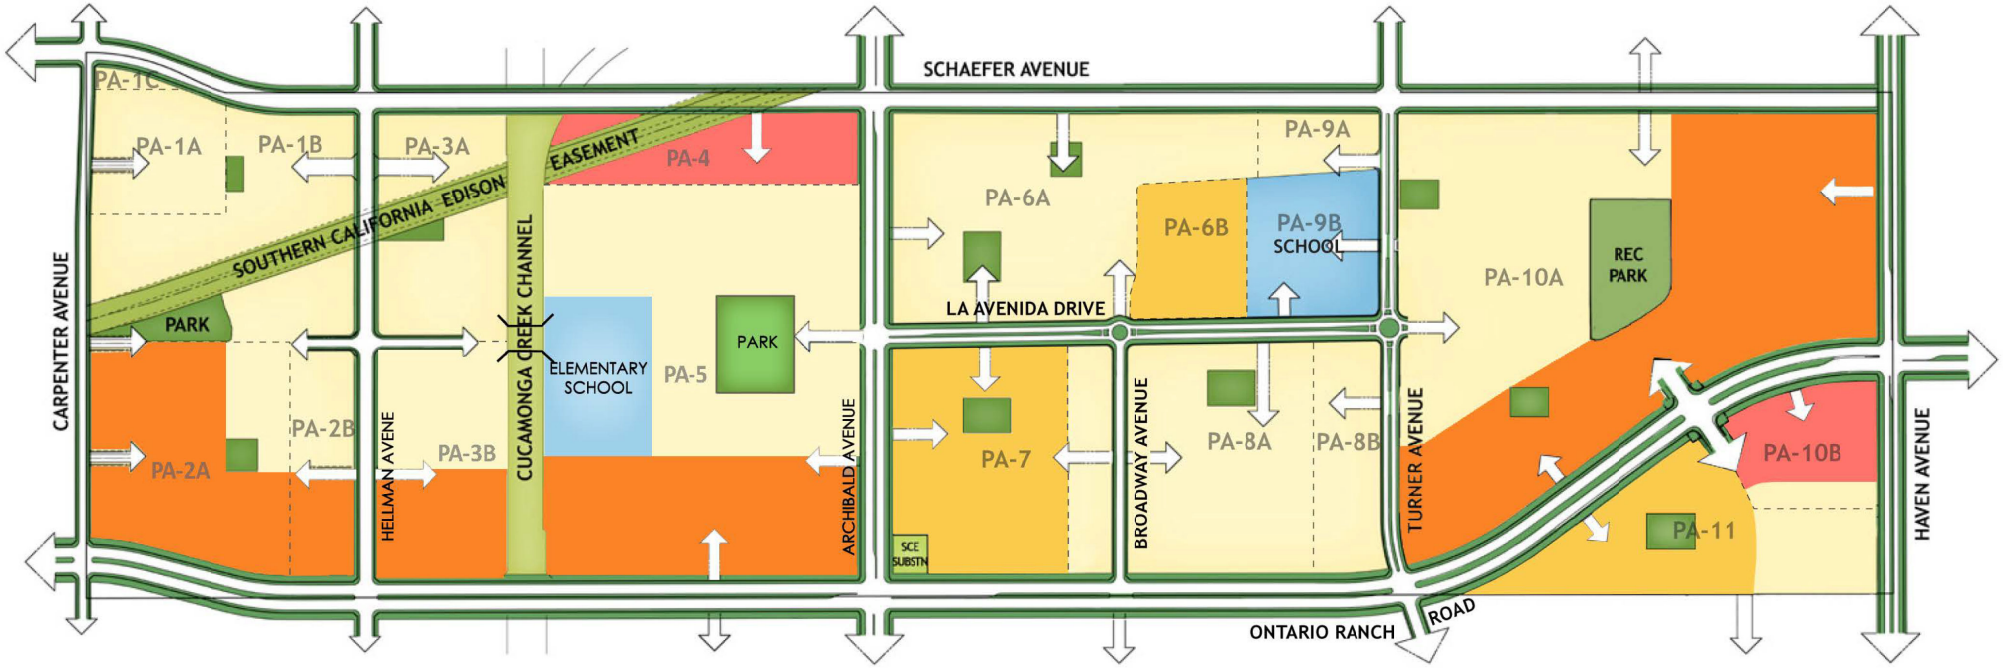
Residential development is designed to address a variety of lifestyles, such as singles, families, executives and "empty nesters". Housing types will include a variety of single family detached and attached homes. Attached housing may include duplex, triplex, row townhomes, senior and court-style residential.
Retail and commercial land uses are provided for in The Avenue Specific Plan for the development of one commercial site totaling 10 acres. The commercial site is located on the southwest corner of Haven Avenue and Ontario Ranch Road.

3.1.1 Residential Planning Areas/Housing Types

The Specific Plan will provide for development of a variety of residential housing types oriented toward open space amenities and designed to promote walkability and interaction among residents. Residential development on approximately ~~506~~ 484.5 net acres of the plan area will contain up to ~~2,875~~3,753 dwelling units, providing a mix of single family detached, single family attached and multifamily attached housing types. In determining the number of residential units for The Avenue Specific Plan area, SCE easements, schools and commercial areas have been removed from the gross in order to determine net acres as shown on Table 2, "Statistical Analysis".

A. Transferring or removing units within the Specific Plan Area are subject to the following requirements:

1. Water and Sewer Technical Studies shall be prepared to study how the transfers change the quantity and locations of sewer and water demands and how those changes impact the Water and Sewer Master Plan Systems and local sewer and water systems."
2. If unit transfers result in net changes to the overall projected water demands or the water demands are transferred between the 1010PZ and 925PZ, then the initializing project shall be responsible for processing an Amendment to the Water Master Plan as part of the entitlement process of Implementation."
3. If unit transfers result in net changes to the overall projected sewer demands or the sewer demands are transferred between different Master Plan Truck Sewer Tributary Areas, then the initializing project shall be responsible for processing an Amendment to the Sewer Master Plan as part of the entitlement process of Implementation."



3.1.2 Parks and Open Spaces

~~The Avenue Specific Plan will provides approximately 21.6 acres of parkland in a diverse hierarchy of evenly distributed parks. The maximum parkland dedication requirement for single family homes, based on 2,875 households at 3.997 persons per household, yields a parkland requirement of approximately 20 acres at 2 acres per 1,000 population. The city standard of 3.347 persons per household will be used in calculating park demand for Multi-family housing. Approximately twelve (12) Neighborhood Parks are evenly dispersed throughout the neighborhoods. A Recreation Area is also proposed as part of the project.~~

The Avenue Specific Plan will provide parkland in a diverse hierarchy of evenly distributed parks. Per city standard The Avenue Specific Plan will require a parkland dedication of 2 acres per 1,000 population The city standard of 3.997 persons per household for single family homes and 3.347 persons per household for multi-family homes will be use in calculating park demand. Per this Specific Plan each individual parcel will meet its park requirement based on standards mentioned above.

~~A five-acre Active Recreation Park is to be located adjacent to the ten (10) acre elementary school site to provide an extra play field during school hours and recreational opportunities to the residents after school hours~~

Approximately 14 acres of Southern California Edison (SCE) easement, located in the northwest portion of the plan area will be utilized for passive recreation and a trail, to the extent permitted by SCE. The multi-use path is designed to connect the regional trail in the SCE easement, Active Recreation Park, Schools, The Avenue and Recreation Area. The conceptual locations of parks are shown in Exhibit 10, the “Parks and Open Space” plan.

Notes:
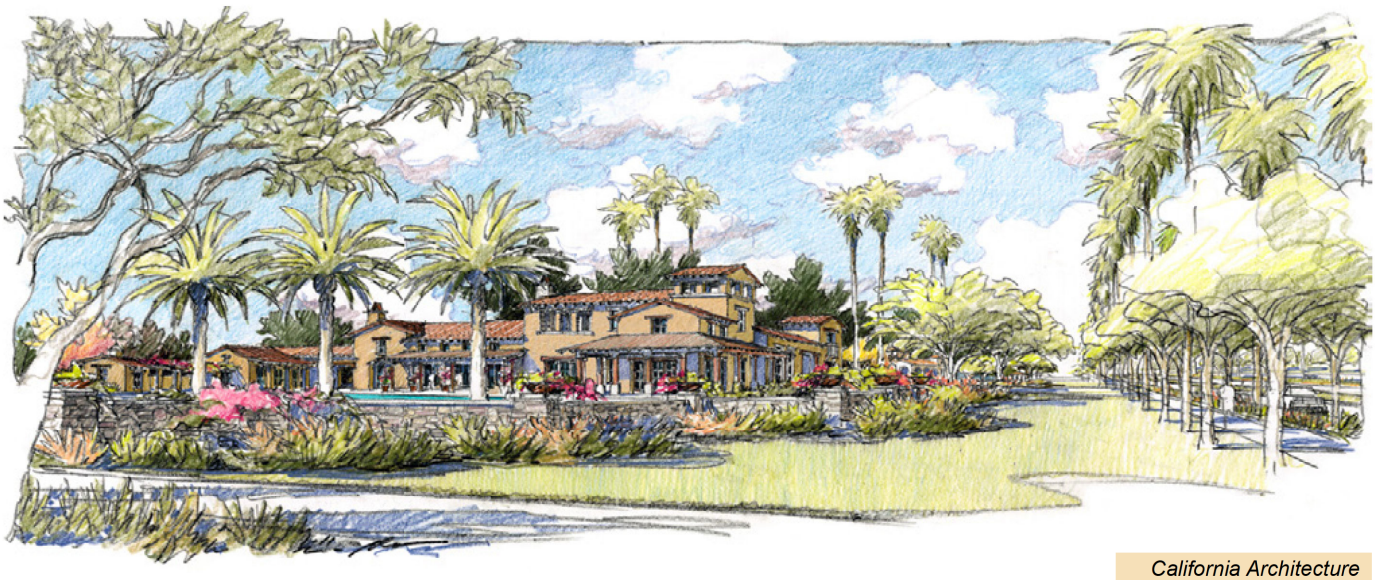
* Realignment of Schaeffer Ave creates the need for PA 1C (APN 021-812-201) as it is owned separately from PA 1A (APN 0218-181-126).
- All acreages approximate- exact acreages will be defined through tract map surveys. Additional studies may be required to transfer these units. See Section 3.1.1 for additional information.
- Density blending will be allowed within Planning Areas within one TOP land use step (i.e. from LDR to LMDR) and between Planning Areas at a rate no higher than 15%. If units are blended within a PA or moved between PA's, then Technical Studies for Impacts to the Water and Sewer Master Plan Systems will be required as part of the entitlement process.

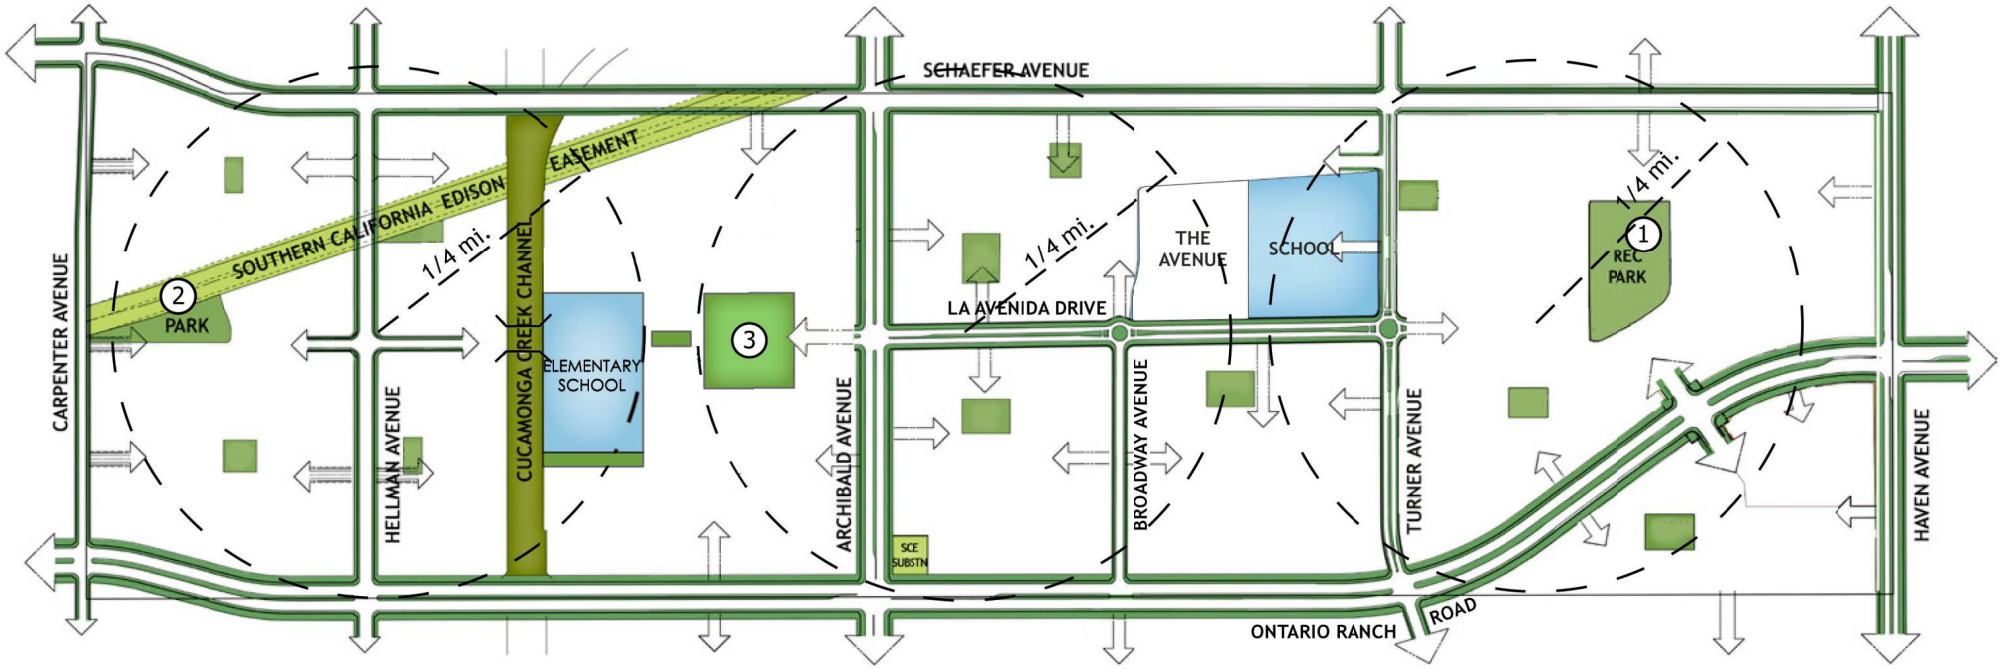


Revised Exhibit

Planning Areas/Developer Controlled/Ownership

Critical to the success of any community is the quality of the community spaces and proper integration into the community fabric. The Avenue's land plan is developed around a theme of recreation and open space amenities to enhance the quality of life. All parks (including the pool and splash play area) will be designed to meet all ADA and City accessibility standards. The Active Recreation Park site and recreation amenities will become more valuable in combination with the school sites as the synergy of active recreational, social and educational opportunities will address the diverse and changing needs of the community. The park and recreation design program has several major elements including multi use park sites, a recreation trail system and an aquatic sports facility.

The Avenue enjoys a well balanced plan of park locations interconnected by a clear pedestrian system. A majority of the residents can access the community parks and school sites with minimal vehicular road interface by utilizing the Avenue's pedestrian paths and parkways, the SCE easement, and flood control channel trails.



California Architecture

Neighborhood Park Sites

The park system includes approximately ~~twelve (12)~~Thirteen (13) Neighborhood Parks that range in size. These are private parks and conceptual designs may include the following elements:

- Restrooms
- Picnic facilities
- Barbecues
- Basketball courts
- Sand volleyball courts
- Tot lot and pre-teen areas
- Gazebo and/or trellis structures
- Shade tree plantings with open turf areas for informal sport activities
- Drinking fountains

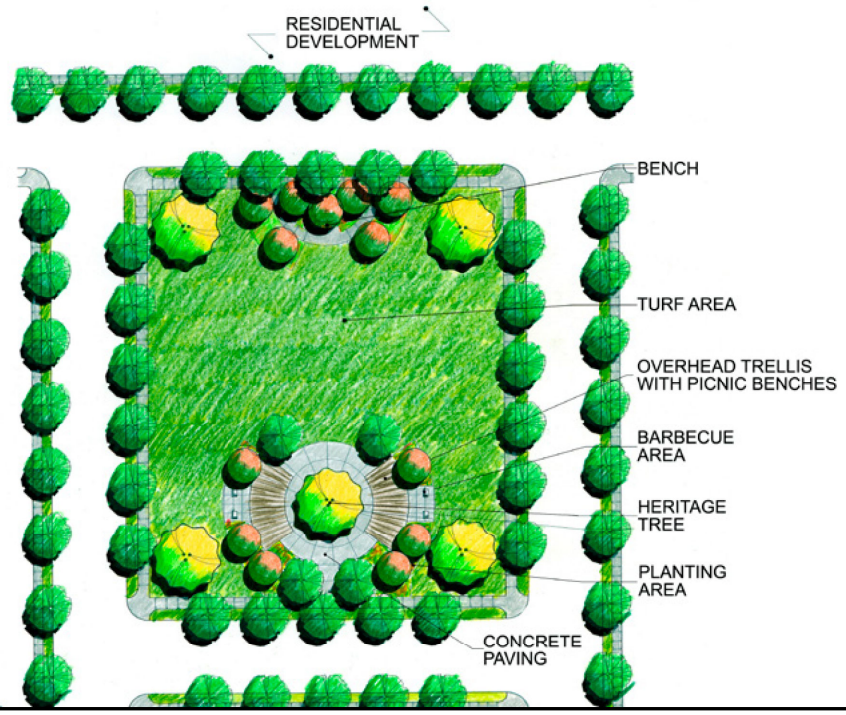
Revised Exhibit

Parks and Open Space

Exhibit 11 - Typical Neighborhood Park 1

Conceptual Plan



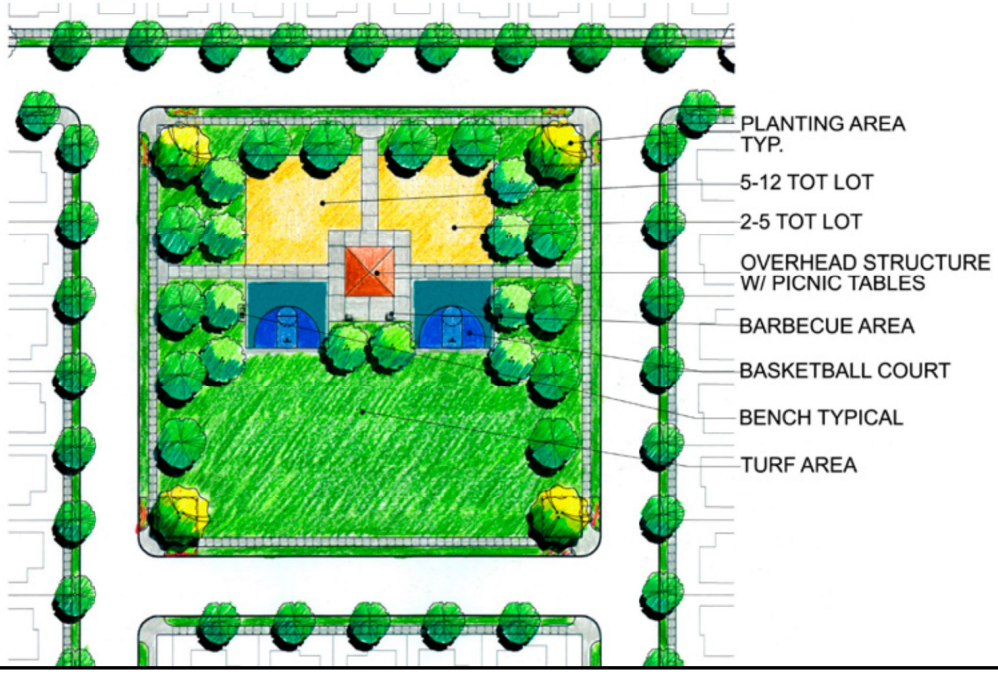


Exhibit 12 - Typical Neighborhood Park 2

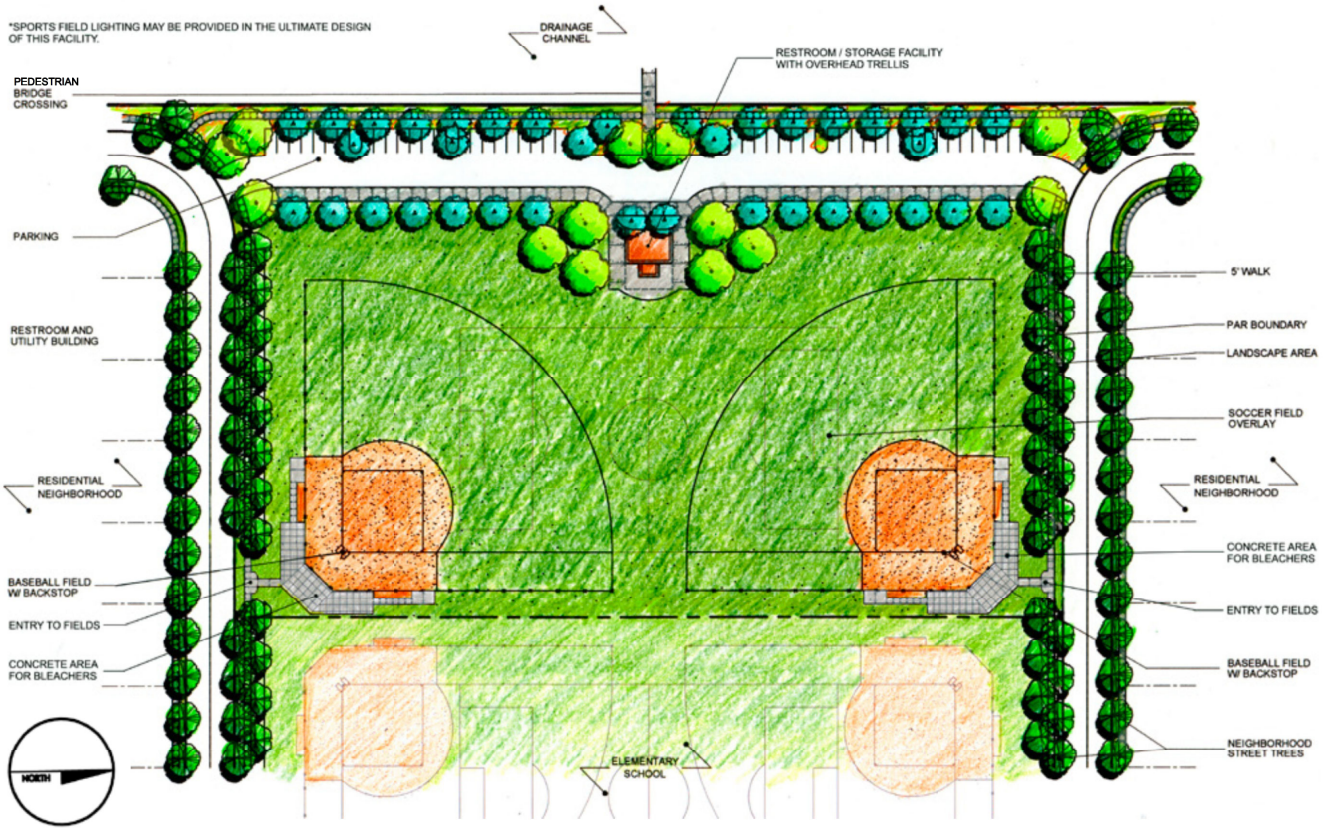
Conceptual Plan

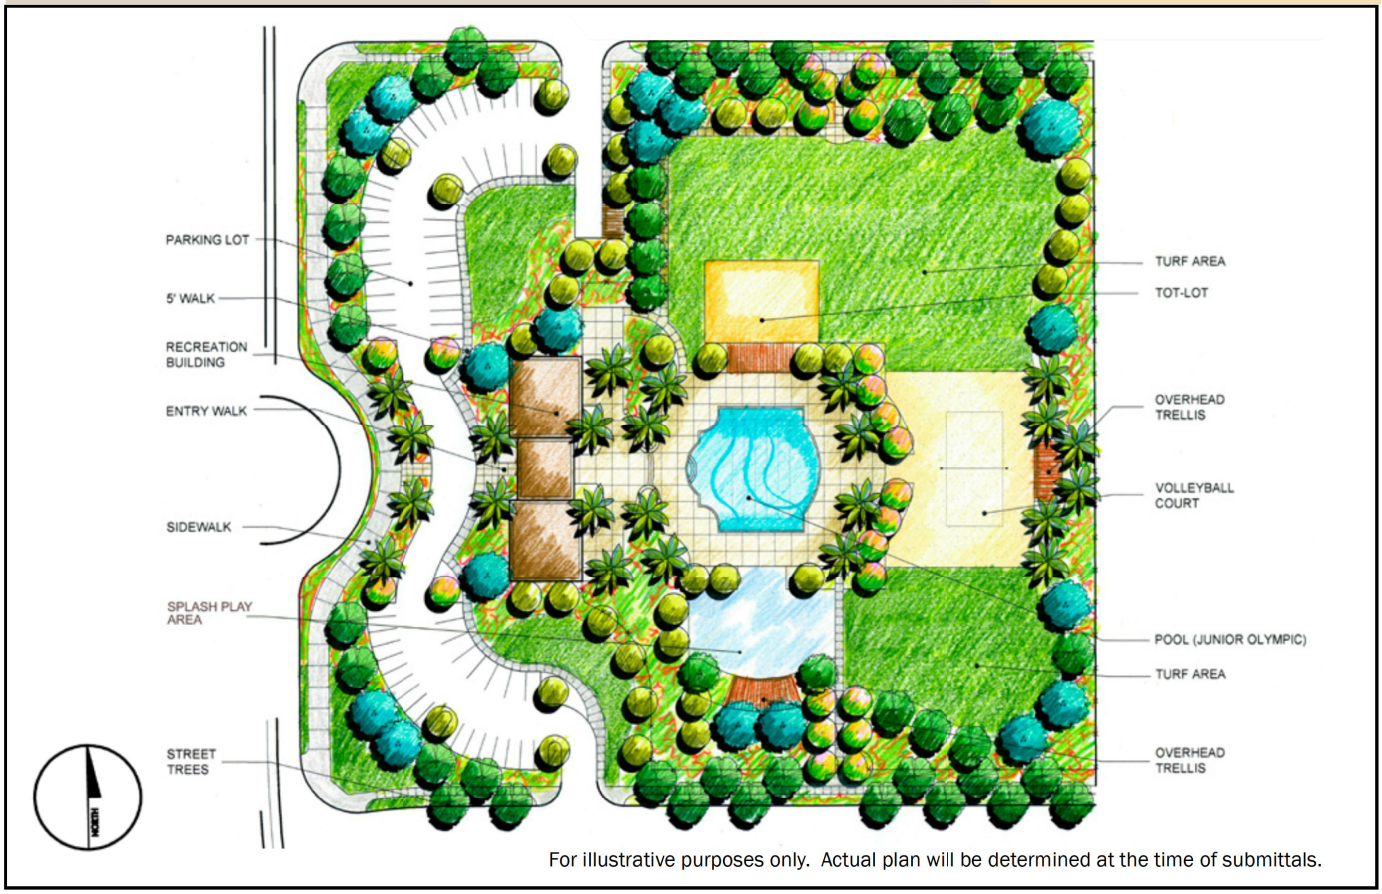


Active Recreation Park Site

The design maximizes the efficiency of organized sport league management by focusing, if feasible, on a particular field sport entity. As a public park, the school district will be encouraged to design site plans that complement park development to better meet community needs. The specific specialty sport uses provided in the park include a soccer/football field and baseball/softball fields that will be lit for security and evening use. Basketball and volleyball uses can be best accommodated on the school sites due to the large number of courts available.

Exhibit 13 - Typical Active Recreation Park

Conceptual Plan



Recreation Areas

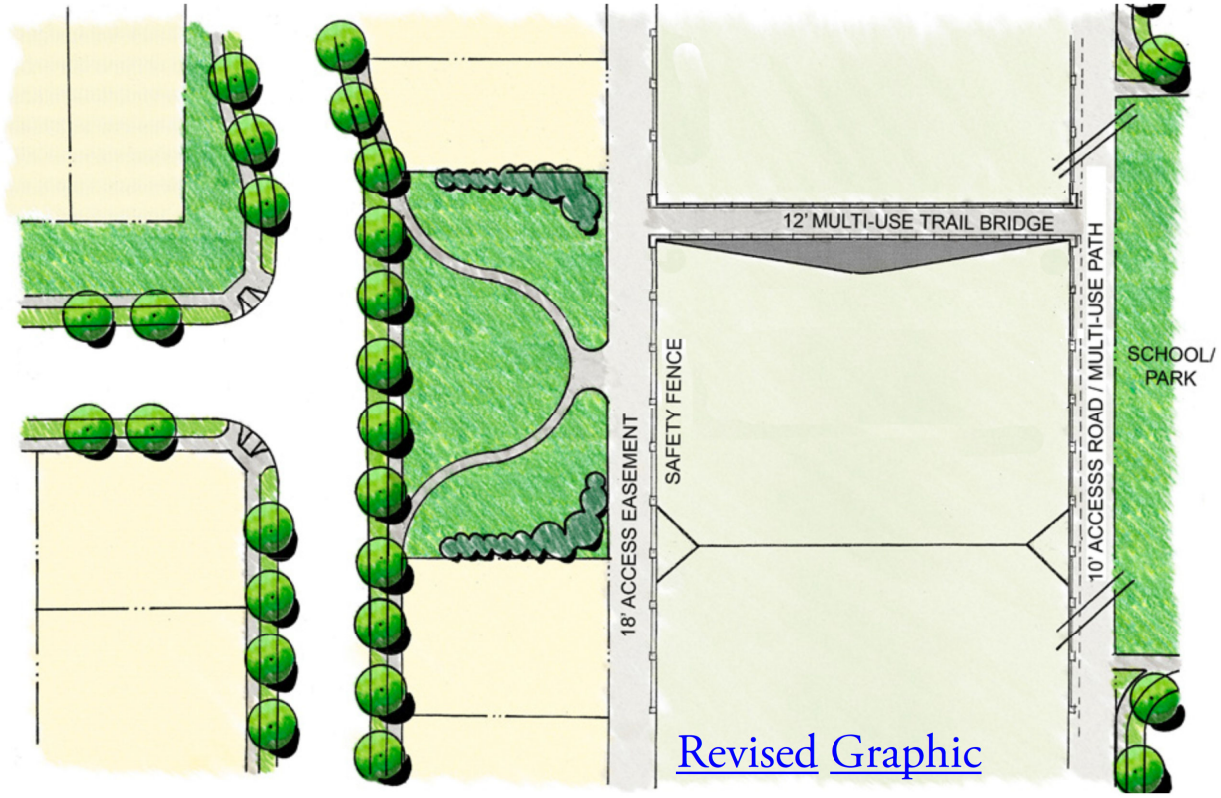
Opportunities for recreation centers will be provided within the Avenue. These recreation centers will be developed and maintained by the Homeowners Association, boundaries and location of which have yet to be determined.

The recreation centers may include, but not limited to, the following amenities:

- Clubhouse with Picnic facilities
- Gazebo and/or trellis structures
- Basketball courts
- Tot lot and pre-teen areas
- Shade tree plantings with open turf area for additional recreational activities
- Barbecues
- Swimming pool and splash park
- Sand volleyball courts
- Open play area
- Drinking fountains

Exhibit 14 - Typical Recreation Area

For illustrative purposes only. Actual plan will be determined at the time of submittals.



3.1.3 Schools

The Avenue Specific Plan provides two (2) school sites within the plan area to serve students both within the plan area and surrounding areas. A ten (10) acre elementary school site is centrally located west of Archibald Avenue in the western portion of the plan area ~~and adjacent to a neighborhood park~~. An additional ten (10) acre school site is located on the west side of Turner Avenue, south of Schaefer Avenue in the central portion of the plan area. Both school sites are easily accessible by multi-purpose path, sidewalks and interior roadways. The site plan will be determined by Mountain View School District. The school locations are shown in Exhibit 10, "Parks and Open Space" and in Exhibit 8, "Land Use Plan".

In the event that the Mountain View School District chooses to build an elementary school at a different location outside of Planning Area 5, the designated school site in Planning Area 5 may be developed with residential uses. An SPA and GPA will need to be filed, and appropriate CEQA action undertaken if and at such time that the school decides to sell off the property. Upon this occurring, the total number of dwelling units will be increased for the specific plan with the approval of a Specific Plan Amendment (SPA).

In order to develop residential uses in lieu of a school in Planning Area 5, the developer shall be required to obtain a written confirmation from the Mountain View School District that it will not utilize the school site in Planning Area 5 for development of a school. The written confirmation will be submitted to the City of Ontario Planning Department along with any development application for the school site, which would require an amendment to the Specific Plan and General Plan, in addition to appropriate CEQA review.

A multi-use bridge for crossing Cucamonga Creek is conceptually located near the school to facilitate non-vehicular access from the neighborhoods west of Cucamonga Creek to the school. Lots will be pulled back away from the trail landing on the west side of the bridge to allow for good visibility and, therefore, safety and security of trail users. The graphic on this page is a conceptual layout to show a potential method of access and can be relocated or incorporated into another bridge crossing. Final location and design will be subject to ~~City review~~ approval by Planning Director.

Conceptual layout for the bike and pedestrian access to the multi-use path over Cucamonga Creek

3.1.4 Commercial/Retail

The Avenue Specific Plan will provide for the development of a 10 acre and a 15.04 acre commercial sites totaling ~~130,682~~ 335,176 s.f. of commercial squarefootage. The 10 acre site is located on the southwest corner of Ontario Ranch Road and Haven Avenue. The 15.04 acre commercial site is located at the southwest corner of Schaefer Avenue and Archibald Avenue. The commercial sites have ~~has~~ been located to provide vehicular access off the major arterial streets, minimizing traffic through the residential neighborhoods. The commercial sites will include a mix of retail and high density residential in order to locate a high number of residents within a short walk of retail services.

The Avenue Main Street District Concept

The commercial center at The Avenue is located at the southwest corner of Ontario Ranch Road and Haven. It is envisioned as an inviting suburban destination, not your typical neighborhood center or strip mall. The idea behind this commercial center is to provide a memorable and walkable center with strong architectural elements, public spaces and a complementary and diverse mix of residential uses surrounding the site.

The Experience – Main Street

The Main Street is envisioned to have a traditional feel with storefronts adjacent to wide sidewalks, plenty of on-street parking and inviting outdoor plazas. The shops along Main Street will provide an eclectic mix of smaller retail stores, coffee houses and restaurants. There are also pad buildings proposed near the major arterials to provide opportunities for other uses including but not limited to larger restaurants, drug store, in-line shops or a bank.

The Residential Program

The residential areas adjacent to the commercial center will play a crucial role in the vitality of the center. An intensification of the residential density surrounding the commercial area will provide a strong local consumer base to support the commercial uses. The Ontario Ranch Road corridor east of Turner is envisioned by the city as a mixed-use, higher intensity corridor that will provide employment and shopping among typically higher residential densities than found elsewhere at The Avenue. The Main Street District is a complementary use to the higher density residential and the District's pedestrian environment encourages residents to walk, therefore reducing vehicle trips.

Potential Residential Uses:

- Townhomes & Flats
- Apartments
- Senior Housing

Section 4 - Infrastructure and Services

4.1 Master Plan of Circulation

The proposed circulation plan for The Avenue Specific Plan provides for safe and efficient movement of vehicular traffic through the project, while also providing a safe environment for pedestrian movement and bicycle traffic, reducing the reliance on the automobile as a means of travel.

Access to The Avenue Specific Plan from surrounding areas is provided by Archibald Avenue bisecting the site in a north and south direction; also running in a north to south direction is Haven Avenue on the eastern boundary and Carpenter Avenue on the western boundary; running in an east to west direction is Ontario Ranch Road on the southern boundary and Schaefer Avenue on the northern boundary. Hellman Avenue bisects the site in a north to south direction between Archibald and Carpenter in the western portion of the plan area. Bus turnouts will be provided on Ontario Ranch Road, Schaefer Avenue, Haven Avenue, and Archibald Avenue to the satisfaction of the City Engineer and Omnitrans.

A primary interior circulation element for The Avenue Specific Plan is the central “La Avenida Drive” which features enhanced setbacks and travel lanes to allow for vehicle, bicycle, and pedestrian access linking residential areas with retail and commercial, recreational, and the school sites within the plan area. Improvements to non-~~NMC~~ Ontario Ranch streets will be made by the developer/applicant based on the data from the Environmental Impact Report and traffic study. The traffic study will also determine the additional right of way that may be needed at critical intersections to accommodate additional right and left turn lanes. The “Circulation Plan”, Exhibit 15, establishes the hierarchy and general location of these roadways within the plan area.

Streetscapes within The Avenue are critical in maintaining the perception of community theming, unification and quality. These common landscape areas link vehicular and pedestrian traffic to neighborhoods and community elements.

The streetscapes in The Avenue are treated as critical community spaces providing quality pedestrian and vehicular circulation ways including jogging and bicycle paths and well-buffered pedestrian walks. For pedestrian and vehicle safety, reflective street signs will be provided on all proposed streets within the City. Shrubs and low groundcovers from ~~the New Model Colony~~ Ontario Ranch Streetscape Master Plan will be used to the greatest extent feasible to reduce maintenance, conserve resources and provide a buffered separation between pedestrian and vehicular traffic. The 8’ expanded sidewalks, at an enlarged width, are designed to provide a better travel way along La Avenida Drive.

Streetscape landscape treatments were developed to form a hierarchy of community importance and use characteristics. Landscaped parkways are enlarged beyond the city street right-of-way to reinforce this hierarchy consistent with the pathway system, residential orientation, and traffic volumes. These “landscape edges” are indicated on the streetscape sections.

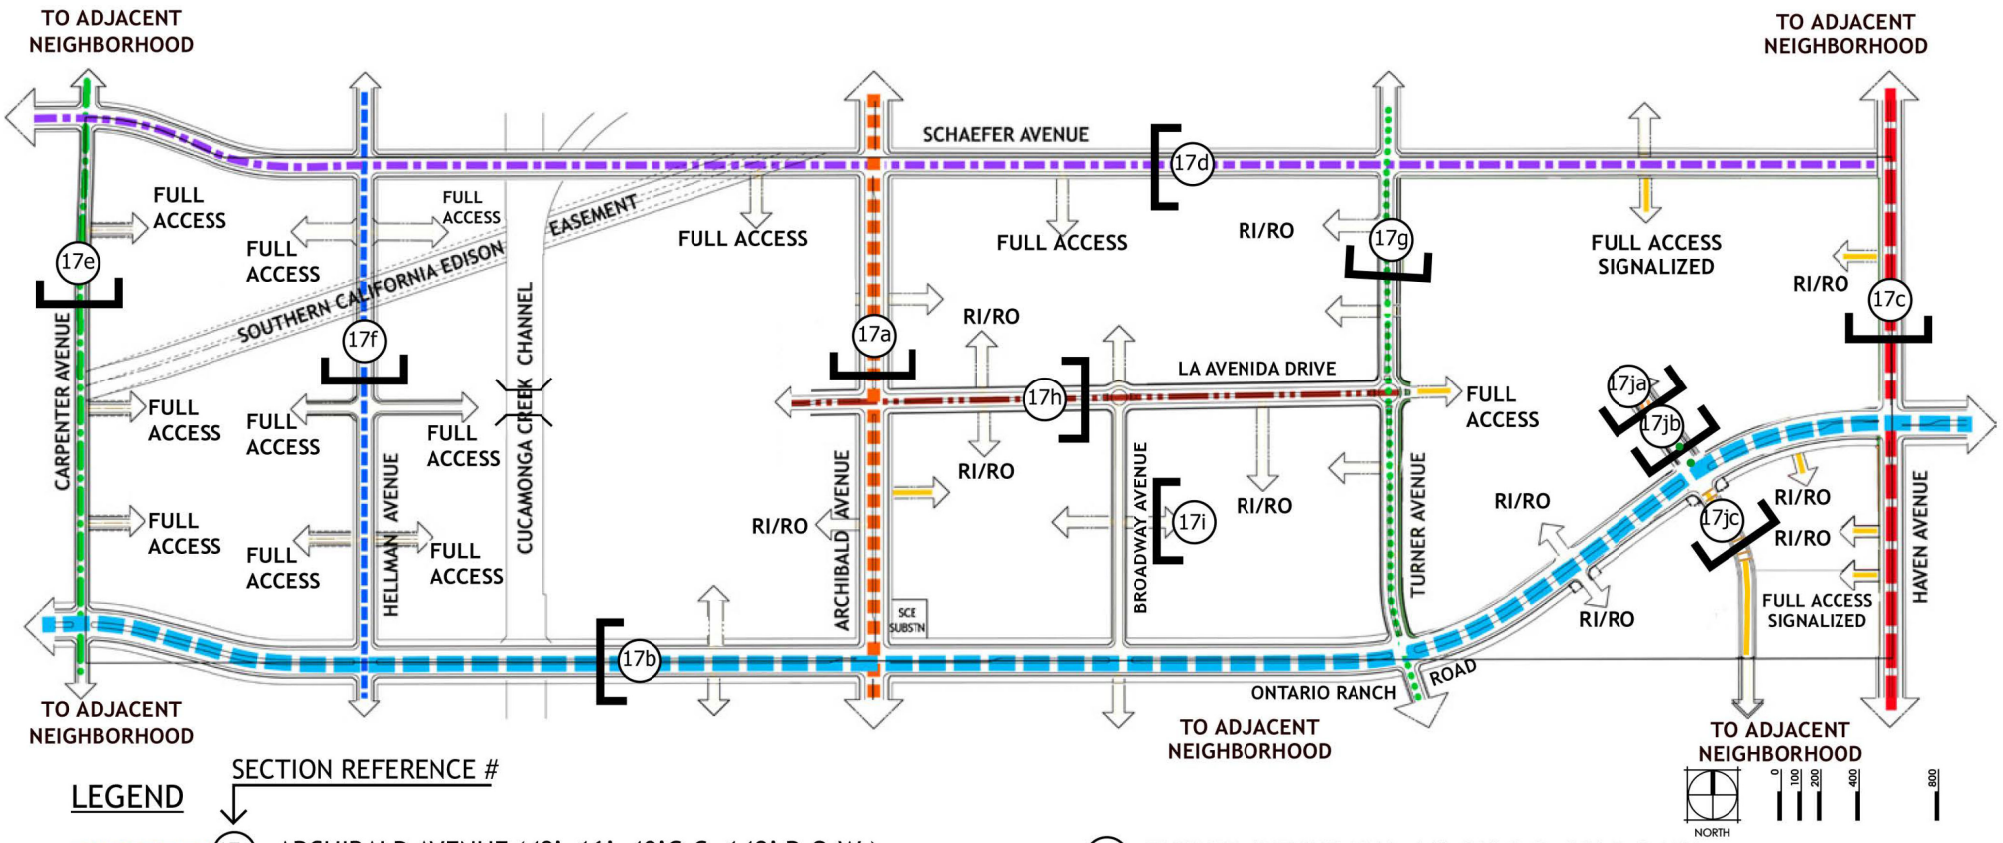
La Avenida Drive's design concept is focused on the use of earth tone materials and colors, meandering drifts and groves of plant material and trees and the limited but appropriate use of turf. Soldiered trees are at a uniform spacing reinforcing the linear design of the vehicular circulation system to provide a welcoming feel to those entering the community.

The unique and vital streetscape concept for La Avenida Drive is focused on the treatment of the divided collector streetscape cross section. The design of the streetscape provides a strong and significant landscape while providing pedestrian pathway choices for residents.

Although The Avenue is designed for maximum benefit of the community residents, the overall plan provides convenient access points to allow vehicles to maximize road travel on the perimeter urban arterials and neighborhood collectors instead of La Avenida Drive. This is intended to reduce interior traffic and maximize resident, pedestrian, and bicycle enjoyment of the streetscapes.

Ontario Ranch Road, Schaefer Avenue, Haven Avenue, and Archibald Avenue streetscapes are designed to provide additional landscape area beyond the street right-of-way. The Avenue is planned to focus internally. These perimeter streetscapes will allow reasonable buffering along with the appropriate landscape treatments to properly introduce the community while maintaining consistency along the overall arterial streetscape.

Carpenter Avenue and Hellman Avenues are north/south trending collectors while Turner Avenue is a north/ south trending divided collector all which contain relatively balanced landscape zones beyond their respective right-of-ways. These collectors provide access to community facilities, recreation areas, school sites, the retail center and the arterial avenues of Schaefer, Ontario Ranch Road, Haven, and Archibald.



4.1.1 Street Plans and Sections

Primary access to The Avenue Specific Plan is provided by seven (7) major Avenues: Ontario Ranch Road, Haven, Schaefer, Turner, Hellman, Carpenter and Archibald Avenues. Within the plan area public streets of varying design will provide access to the residential, commercial, school, and park areas.

Pedestrians on The Avenue

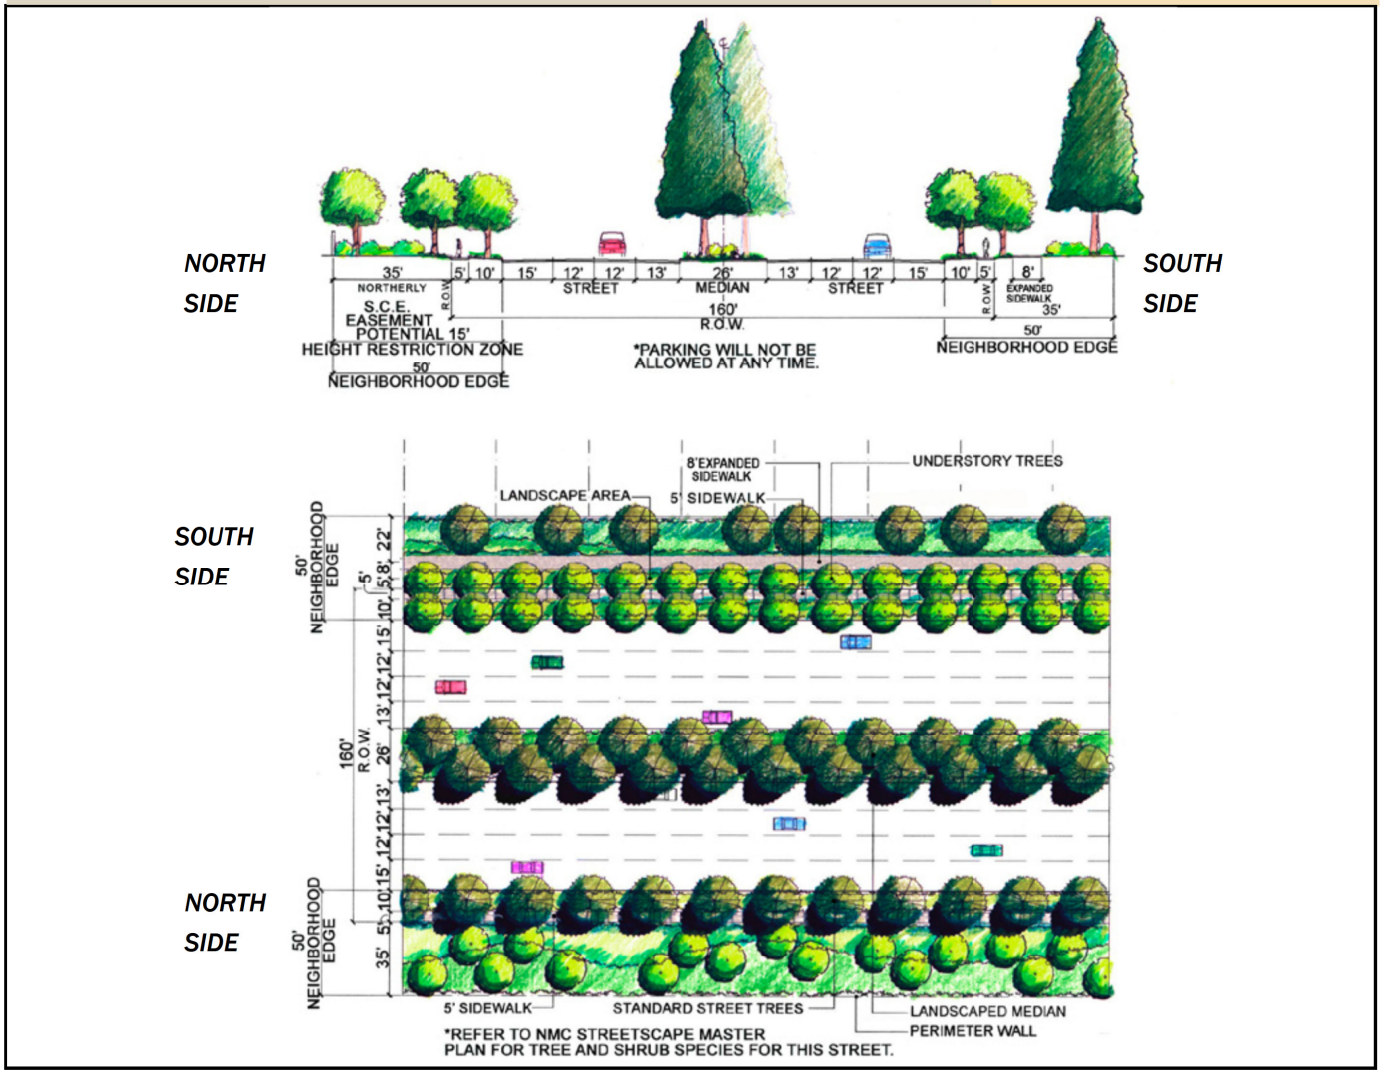
Entries and Signalization

Archibald Avenue

Archibald Avenue bisects The Avenue Specific Plan in a north/south direction in the central portion of the plan area. Archibald Avenue is designated as a "Principal Arterial" with a total right of way of 148 feet with 80 feet of paved travel area separated by a 16-foot wide raised median. There are 19-foot wide landscape lots on both sides of the street serving as a buffer between homes and the right-of-way. The west side of the street has a 13-foot multi-use path (5' sidewalk may be divided from the 8' expanded sidewalk at the discretion of the City) separated from the street by a 13-foot landscaped parkway. The east side of the street has a 5-foot sidewalk separated from the street by a 21-foot landscaped parkway. Along Archibald Avenue, bus turnouts will be located to the satisfaction of the City Engineer and Omnitrans. The developer will be responsible for those improvements to Archibald Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The Archibald Avenue cross-section is illustrated below:

Exhibit 17a - Archibald Avenue - Principal Arterial



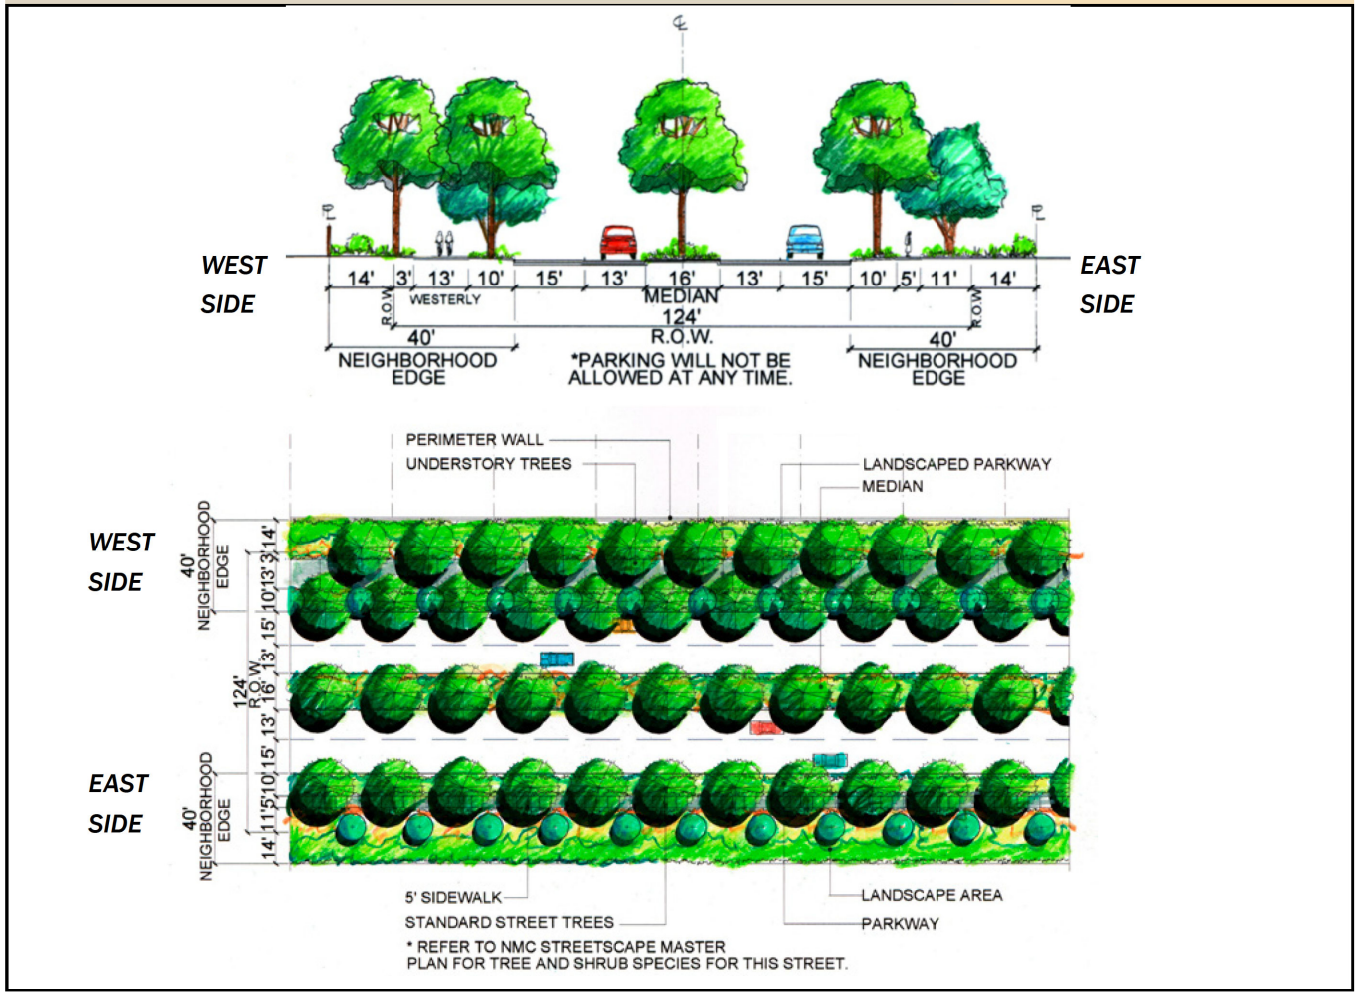
Note: This section and the 45' neighborhood edge for Archibald Avenue is applicable North of Ontario Ranch Road within the Avenue Specific Plan frontage only and neighborhood edge to the South of Ontario Ranch Road will remain at 50'

Ontario Ranch Road

Ontario Ranch Road is designated as "Principal Arterial" and borders the plan area on the south. Ontario Ranch Road has a total right-of-way of 160 feet with 104 feet of paved travel area separated by a 26-foot wide raised median.

Along Ontario Ranch Road, bus turnouts will be located to the satisfaction of the City Engineer and Omnitrans. A 50-foot landscape edge on both sides of the street contains a 35-foot landscape buffer with a 5-foot sidewalk separated from the street by a 10-foot landscaped parkway and a multi-use path on the south. The S.C.E. Easement exists within the northerly 50-foot Landscape Edge and may be relocated within the Landscape Edge in the future. The developer will be responsible for those improvements to Ontario Ranch Road as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The Ontario Ranch Road cross-section is illustrated below:

Exhibit 17b - Ontario Ranch Road - Principal Arterial



Haven Avenue

Haven Avenue is designated as "Principal Arterial" and borders the plan area on the east. Haven Avenue has a total right-of-way of 124 feet, with 56 feet of paved travel area separated by a 16-foot wide raised median.

The west side of the street has a 40-foot Neighborhood Edge with 14 feet of landscape buffer between the property line and the right-of-way. Along Haven Avenue, bus turnouts will be located to the satisfaction of the City Engineer and Omnitrans. A 13-foot multi-use path (5' sidewalk may be divided from the 8' expanded sidewalk at the discretion of the City) that is separated from the street by a 10-foot parkway and an additional 3 feet of landscape to the right-of-way edge. The east side of the street also has a 40-foot landscape edge with 14 feet of landscape buffer to the right-of-way. A 5-foot sidewalk is separated from the street by a 10-foot parkway and the right-of-way by an additional 11 feet of landscape. The developer will be responsible for those improvements to Haven Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The Haven Avenue cross-section is illustrated below:

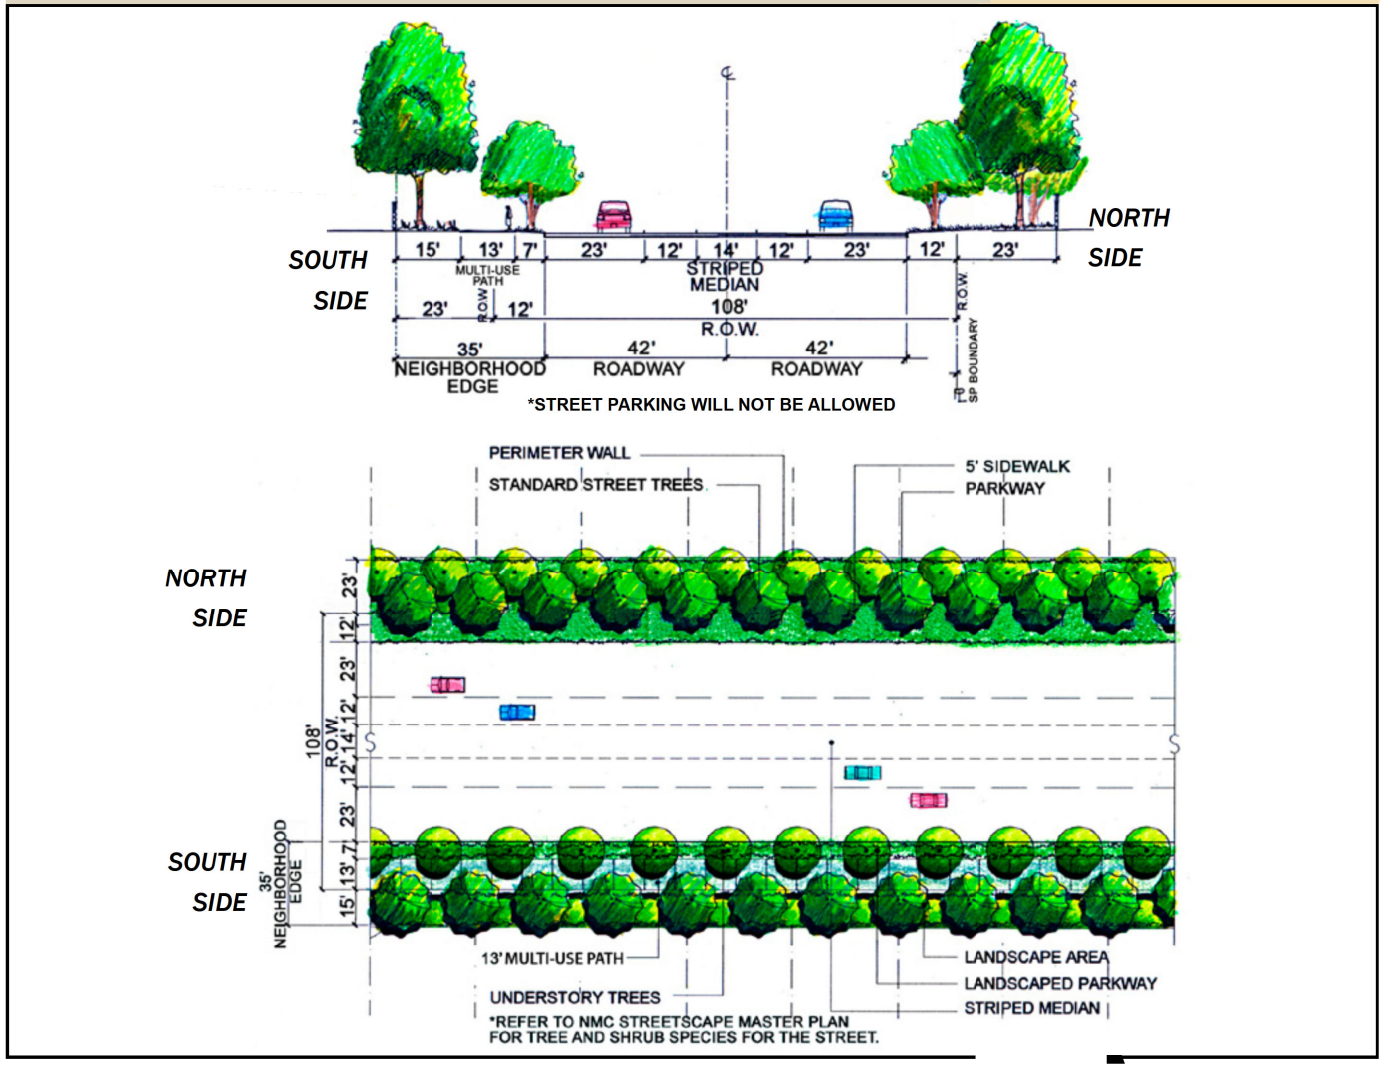


Exhibit 17c - Haven Avenue - Principal Arterial

Schaefer Avenue

Schaefer Avenue is designated as "Collector" and borders the plan area on the north. Schaefer Avenue has a total right-of-way of 108 feet with 84 feet of paved travel area. Along Schaefer Avenue, bus pads will be located to the satisfaction of the City Engineer and Omnitrans. The south side of Schaefer has a 35-foot neighborhood edge. The Neighborhood Edge is comprised of 12 feet of street right-of-way and an adjacent 23-foot wide landscape lot. The Neighborhood Edge includes a 13-foot multi-use path, including 5-foot sidewalk, separated from the street by a 7-foot parkway. The north side of Schaefer will have a 23 -foot wide landscape lot adjacent to a 12-foot parkway. The dedication and improvements of the 23 -foot wide landscape lot to the north of the Project boundary is not a part of The Avenue Specific Plan Requirements. The developer will be responsible for those improvements to Schaefer Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The Schaefer Avenue cross-section is illustrated below:

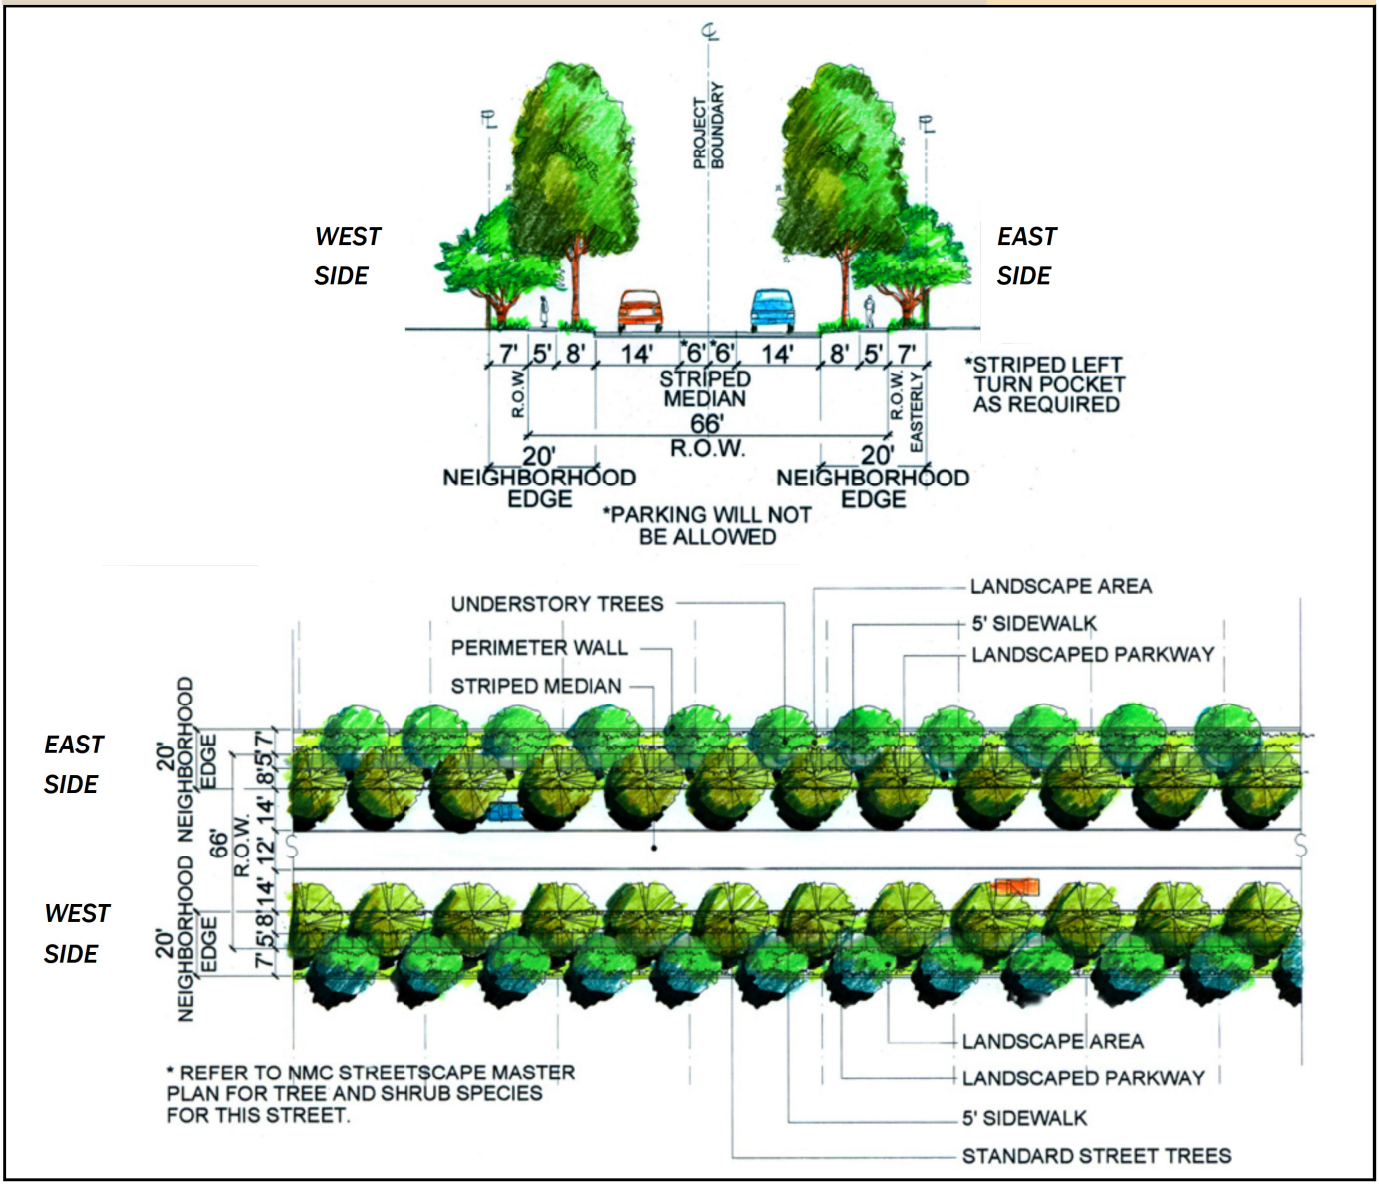

Exhibit 17d - Schaefer Avenue - Collector

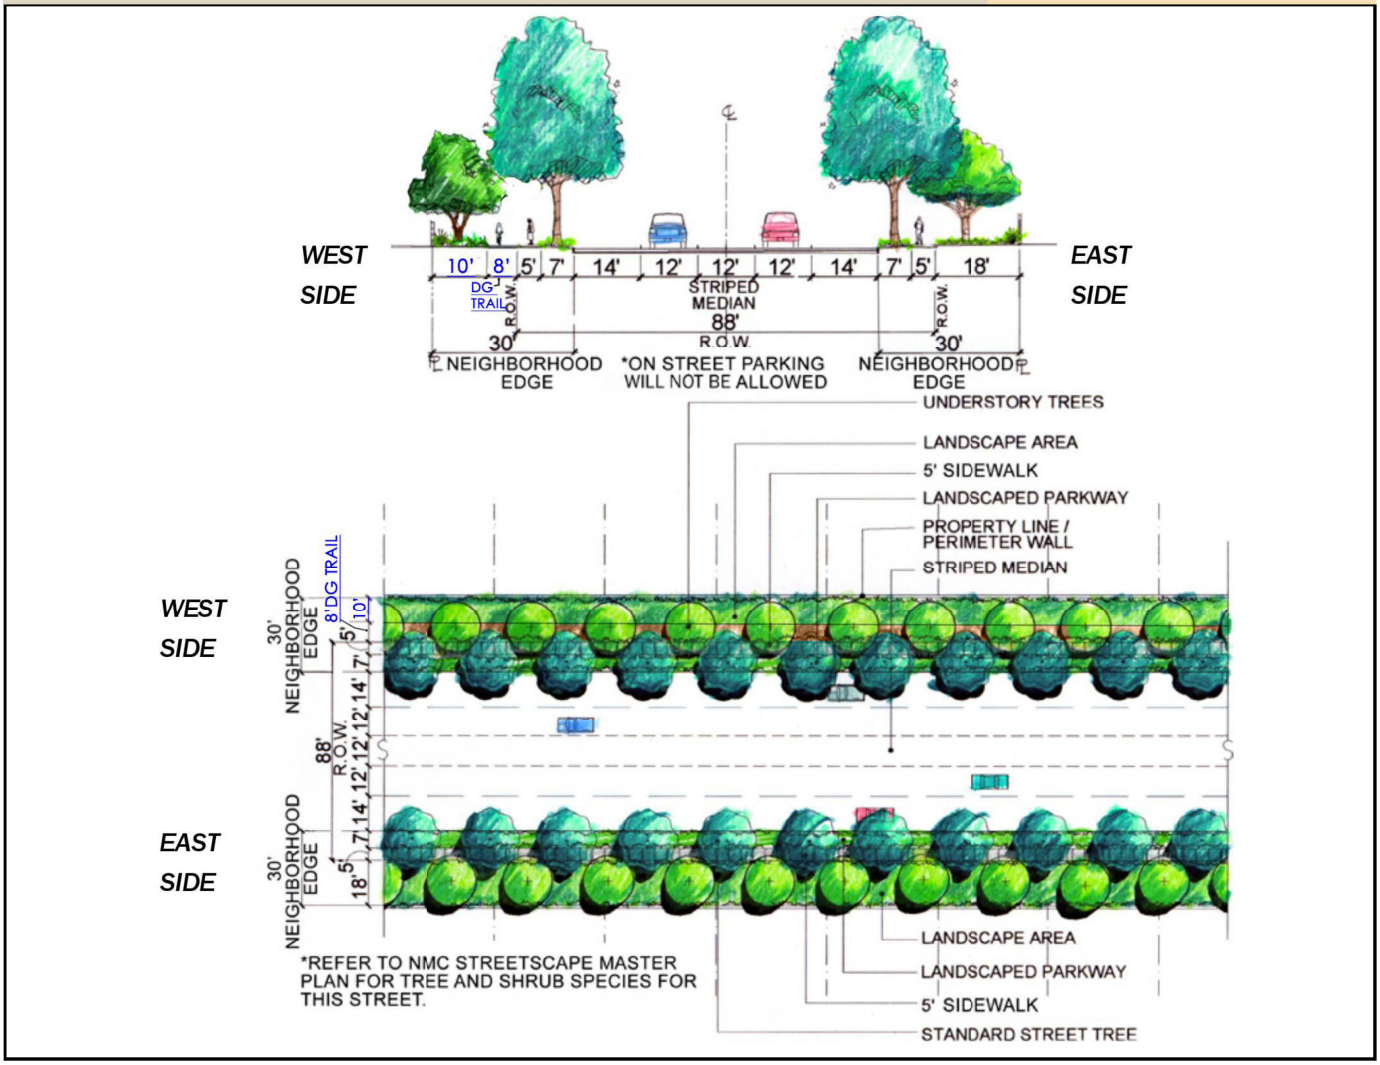
Carpenter Avenue

Carpenter Avenue is designated as a "Primary Local Street" running in a north/south direction whose centerline forms the western project boundary. It has a total right-of-way of 66 feet with 40 feet of paved travel area. There is a 5-foot sidewalk separated from the street by a 8-foot landscaped parkway on each side of the street. In addition, there is an 7-foot wide landscape lot adjacent to both sides of the street. The developer will be responsible for those improvements to Carpenter Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The Carpenter Avenue cross-section is illustrated below:

Exhibit 17e - Carpenter Avenue - Primary Local Street



Hellman Avenue

Hellman Avenue is designated as "Collector: and bisects the plan area in a north/south direction in the western portion. Hellman Avenue has a total right-of-way of 88 feet with 64 feet of paved travel area. There is a 12-foot parkway on each side of the street which includes a 5-foot sidewalk separated from the street by a 7-foot landscaped parkway. In addition, there is an 18-foot wide “landscaped lot” adjacent to both sides of the street. The "landscape lot" to the west side of Hellman Avenue will include a 8-foot decomposed granite trail.

The developer will be responsible for those improvements to Hellman Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The developer will be responsible for those improvements to Hellman Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The Hellman Avenue cross-section is illustrated below:

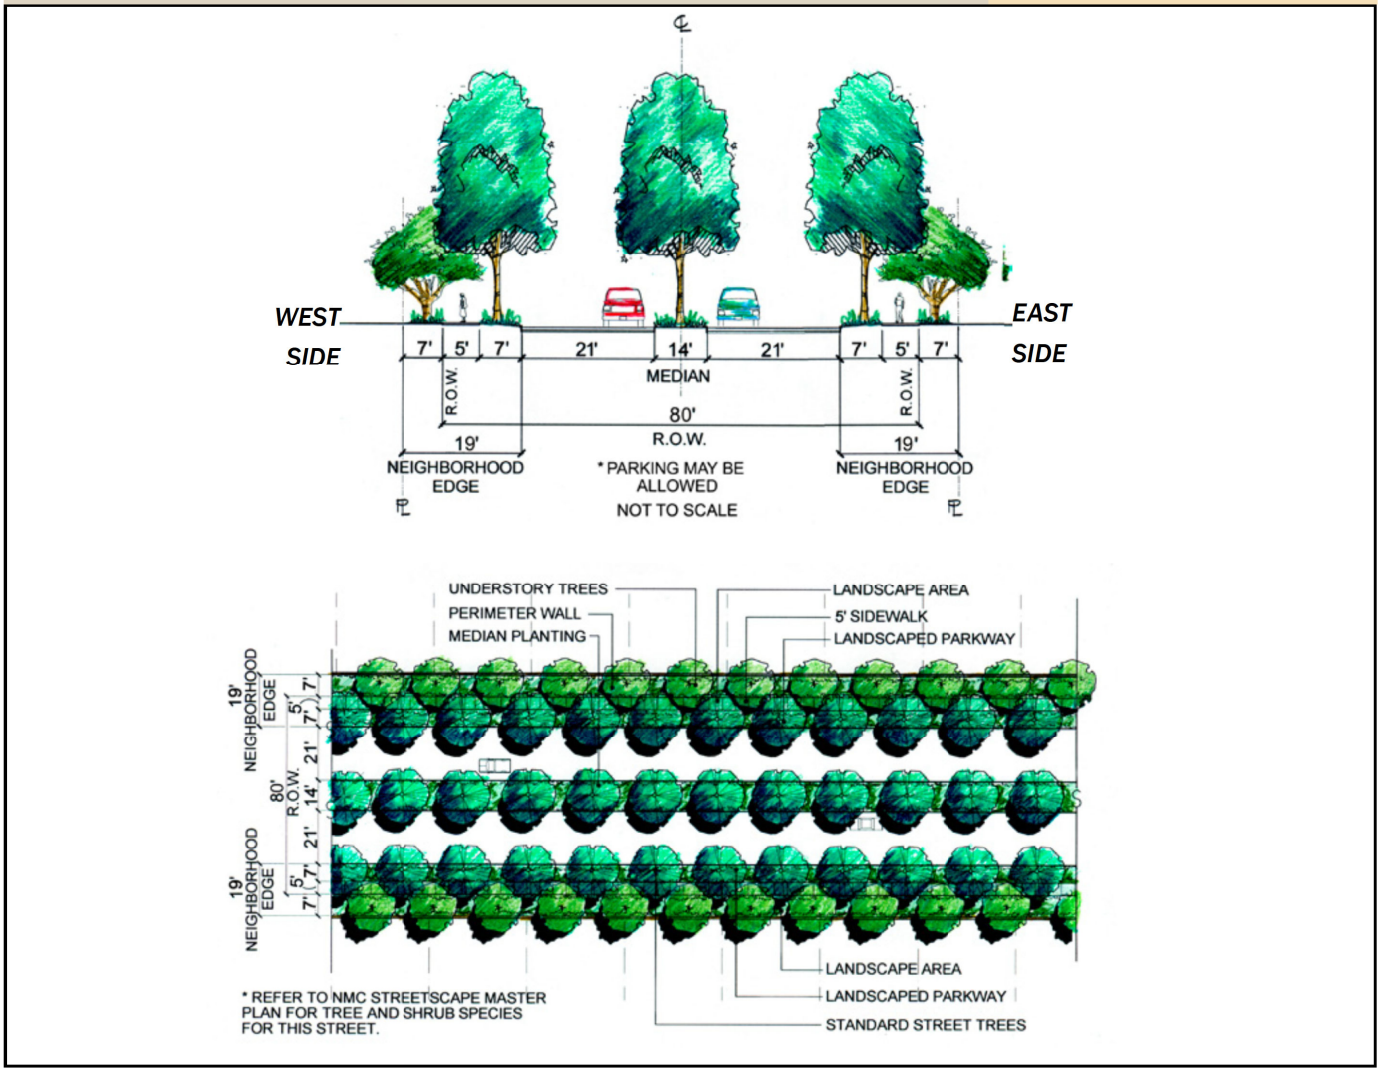


Exhibit 17f - Hellman Avenue - Collector

Turner Avenue

Turner Avenue is designated as "Divided Primary Local Street" and bisects the plan area in a north/south direction in the eastern portion. Turner Avenue has a total right-of-way of 80 feet through the Specific Plan Area, with a 14-foot landscaped median separating two paved 21-foot travel lanes. The east and west sides of the street includes a 5-foot sidewalk separated from the street by a 7-foot landscaped parkway. The final roadway section will be determined by the City Engineer. The developer will be responsible for those improvements to Turner Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. Turner Avenue shall be constructed such that the westerly curb and gutter shall be located completely off Assessor's Parcel Number 218-201-19 with the parkway and neighborhood edge on the west side to be deferred until such time APN: 218-201-19 develops in accordance with The Avenue Specific Plan.

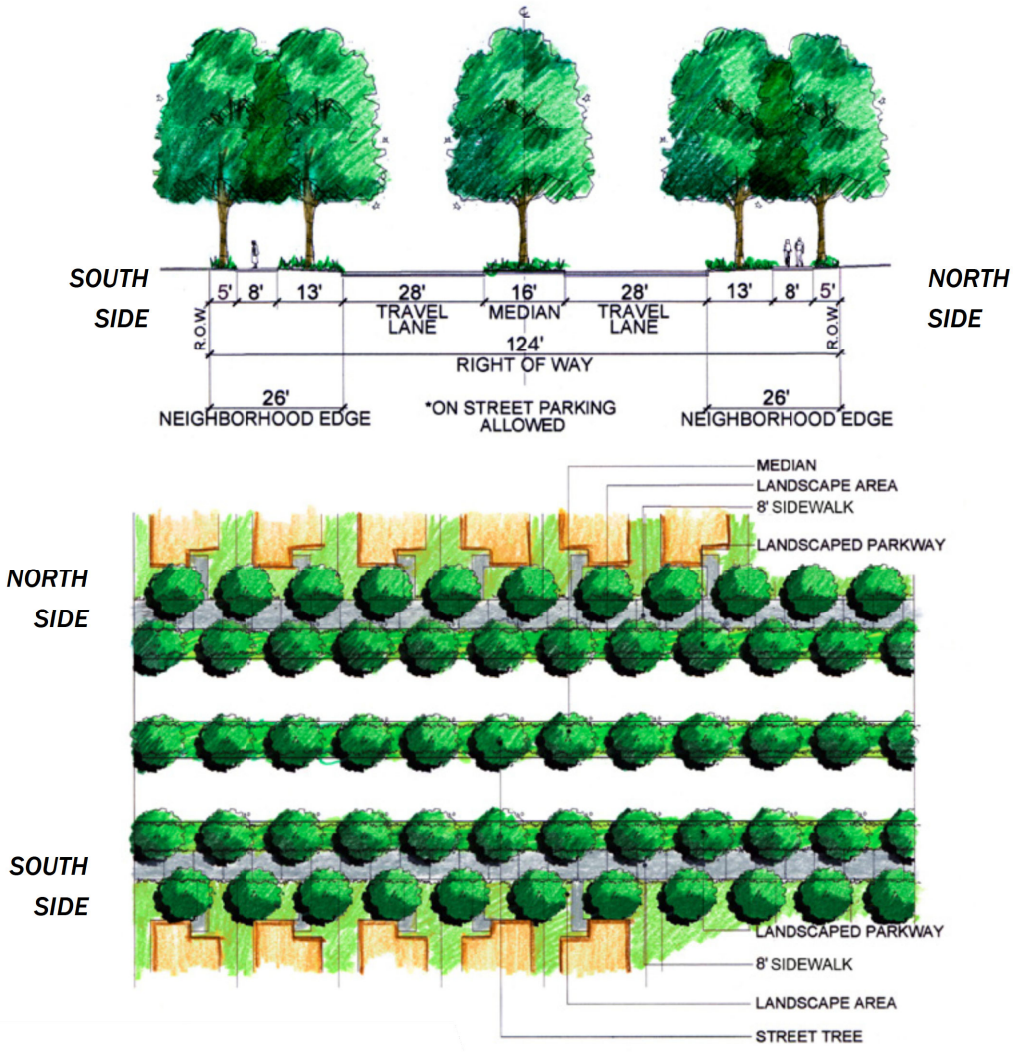

Exhibit 17g - Turner Avenue - Divided Primary Local Street

La Avenida Drive

La Avenida Drive, designated as a "Divided Primary Local Street", is a centrally-located avenue connecting community amenities to the residential neighborhoods. La Avenida Drive has a total right-of-way of 124 feet with two 28-foot one-way avenues with on-street parking, separated by a 16-foot wide raised median. This pedestrian oriented street, with generously landscaped median and parkways, links the recreation areas, schools and parks. La Avenida Drive presents a strong image, emphasizing homes fronting along the street with an 8-foot expanded sidewalk on both sides of the street separated by 13-foot landscaped parkways and 5-foot landscape lots. The developer will be responsible for those improvements to La Avenida Drive as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. No portion of La Avenida Drive right of way or neighborhood edge shall be located on the property identified as Assessor's Parcel Number 218-201-19.

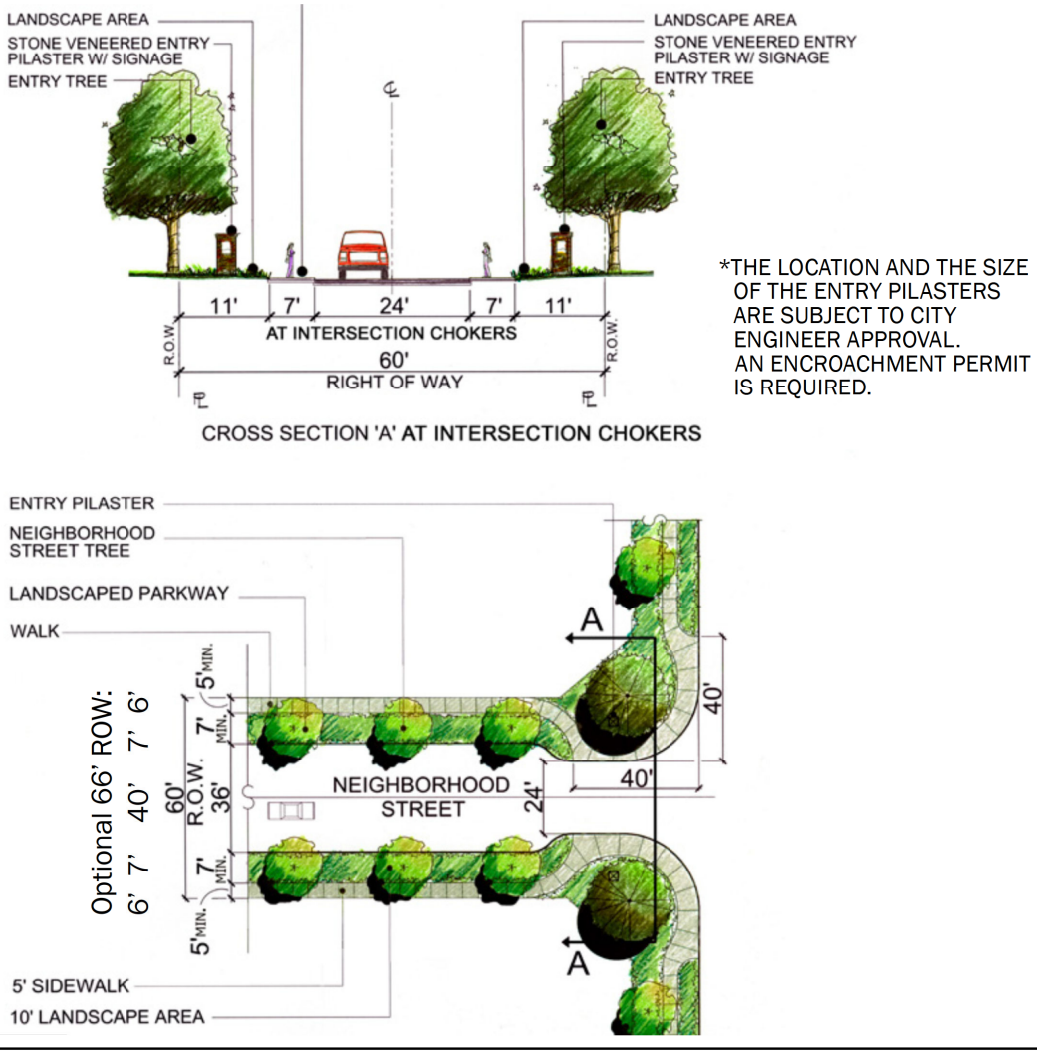

Exhibit 17h - La Avenida Drive - Divided Primary Local Street

Neighborhood Entry Street

Neighborhood Entry Streets are designed to distribute vehicular traffic from the arterial and collector streets into the residential neighborhoods. These streets have a 60 foot minimum total right-of-way with 36 feet of paved travel area. There is a 12-foot wide parkway within the right-of-way which provides for a minimum 5-foot wide sidewalk separated from the street by a minimum 7-foot wide landscaped area. The developer will be responsible for those improvements to Neighborhood Entry Streets as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The Neighborhood Entry Street cross-section is illustrated below:

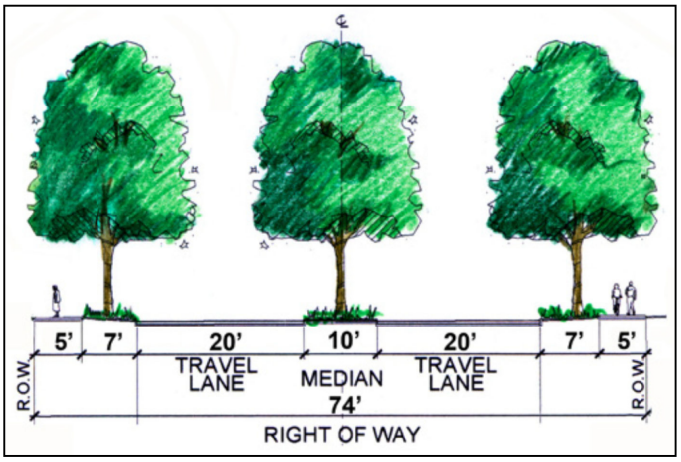

Exhibit 17i - Neighborhood Entry Street

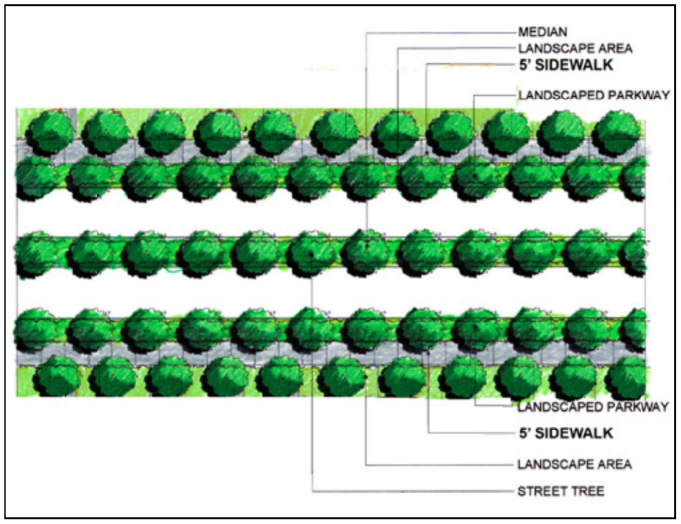


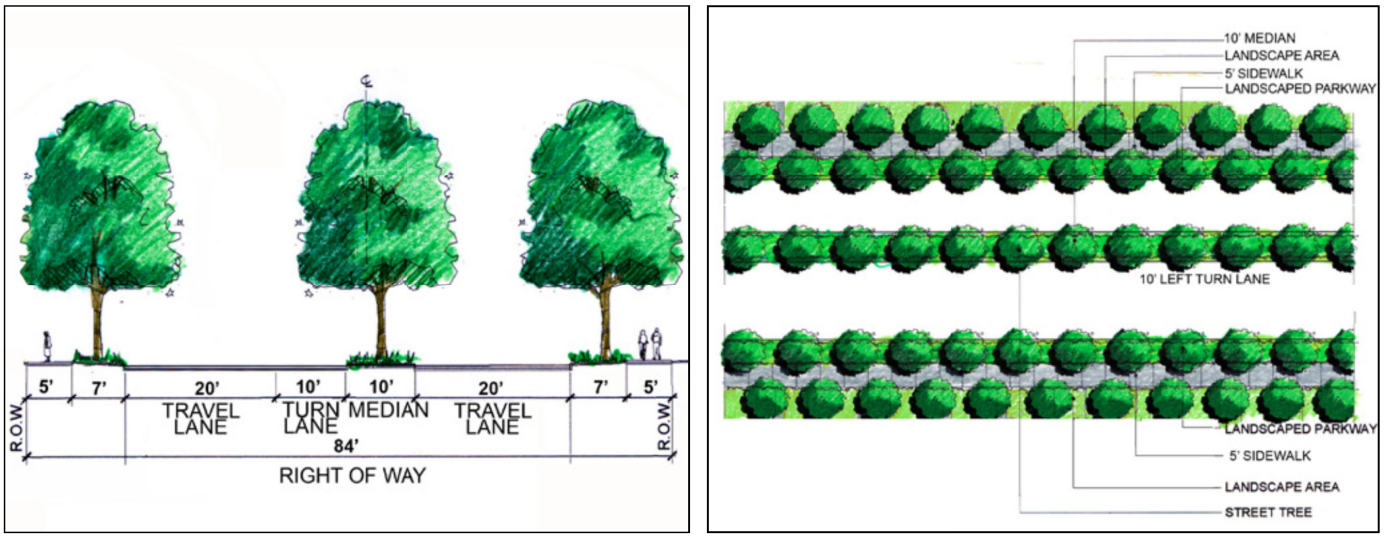
Neighborhood Entry Street With Median

The Neighborhood Entry Street With Median is designed to distribute vehicular traffic from Ontario Ranch Road into the residential neighborhood. Section 17ja has a 74 foot minimum total right-of-way with 40 feet of paved travel area split by a 10-foot landscaped median. There is a 12-foot wide parkway within the right-of-way which provides for a 5-foot wide sidewalk separated from the street by a 7-foot wide landscaped area. Section 17jb has an 84-foot right-of-way with two 20 foot travel lanes, split by a 10' landscaped median and 10 foot turn lane for southbound motorists wishing to turn left onto Ontario Ranch Road. Each side of Section 17jb contains a 5 foot sidewalk and 7 foot parkway. Section 17jc also has an 84 foot right-of-way containing two 20 foot travel lanes. There is a 10 foot turn lane for northbound motorist wishing to turn left onto Ontario Ranch Road. This 10 foot turn lane is flanked by a 4 foot landscape median and a 6 foot striped zone. Each side of Section 17jc also contains a 5 foot sidewalk and 7 foot parkway.

Exhibit 17ja - Neighborhood Entry Street with Median

The final roadway section widths will be determined by the City Engineer based on the need for intersection left and/or right turn lanes. The developer will be responsible for those improvements to Neighborhood Entries as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The Neighborhood Entry Street with Median cross-section is illustrated below:

Exhibit 17jb - Neighborhood Entry Street with Median - Southbound



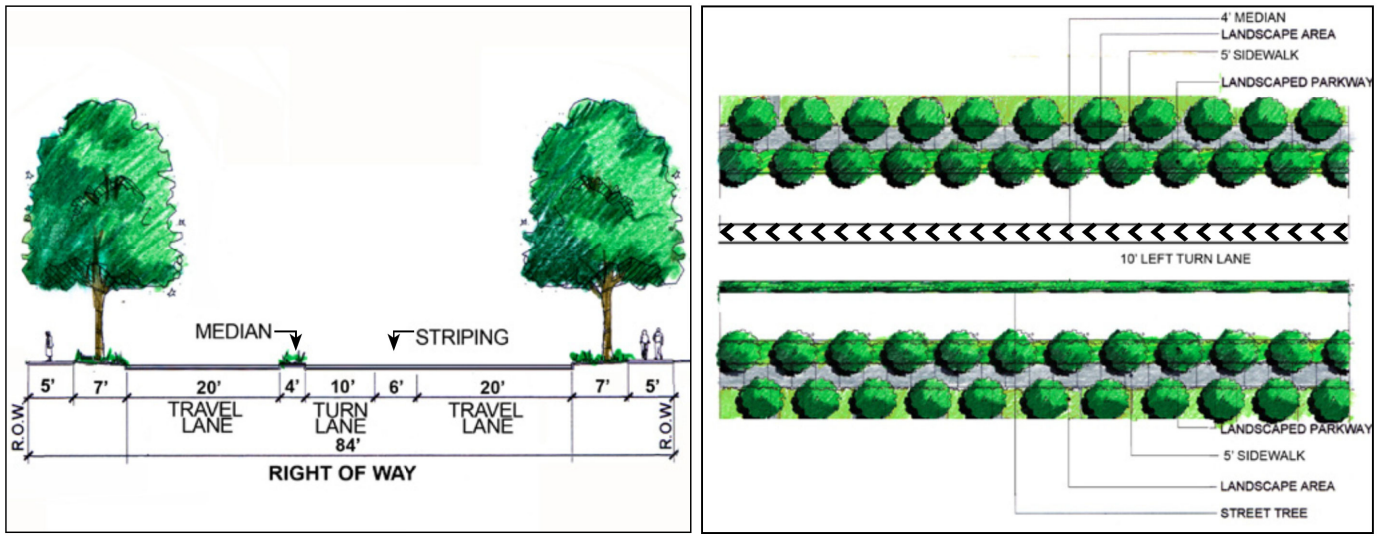


Exhibit 17jc - Neighborhood Entry Street with Median - Northbound *(South of Ontario Ranch Road)*

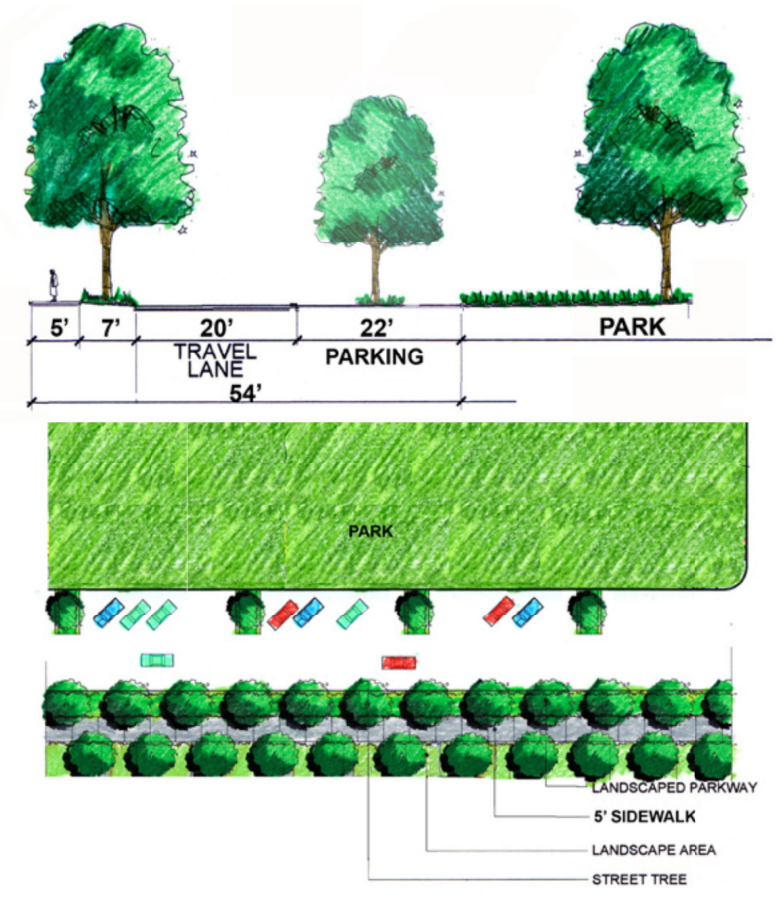
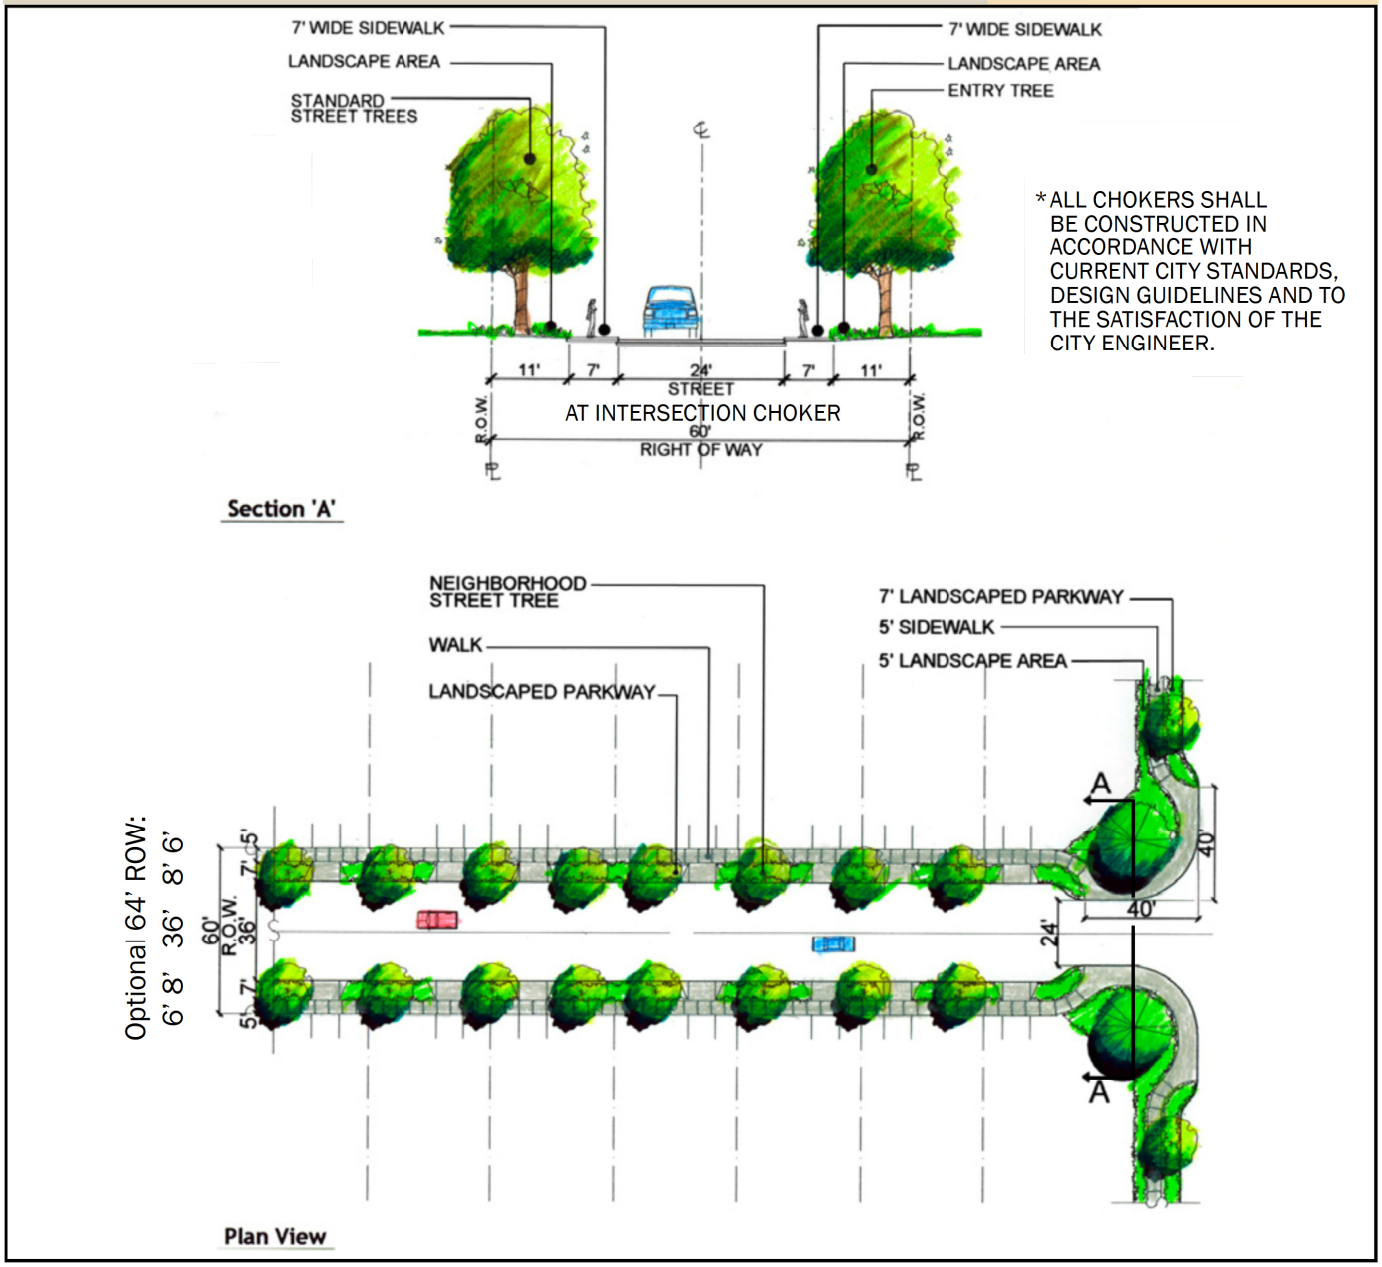


Neighborhood Park Adjacent Street

The Park adjacent street is a 20-foot clear paveway and 3-foot concrete gutter for one-way circulation around the park. This narrow section does not allow on-street parking in order to allow a clearer view from the homes to the park, better visibility of pedestrians and a minimum 20-foot clear for emergency vehicles. On the park side of the street angled parking is provided outside of the 20-foot right of way between the corners of the park.

Within each row of parking spaces, landscape islands shall be placed to prevent more than 10 vehicles from being parked side-by-side in an abutting configuration. Planter islands for a single row of parking spaces shall be landscaped with at least one (1) tree and vegetative groundcover. The side of the street adjacent to homes will have a 7-foot landscaped area and 5-foot sidewalk as indicated below and the developer will be responsible for those improvements to Neighborhood Streets as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. This street type applies to Planning Area 10A only. The Neighborhood Park Adjacent Street is illustrated below:

Exhibit 17k - Neighborhood Park Adjacent Street



NOTE: This concept applies to PA 10A only.

Neighborhood Streets With Intersection Chokers

Neighborhood intersection chokers are traffic calming devices to slow down vehicles when they reach the neighborhood street level. They also facilitate pedestrian crossings by shortening the crossing distance and make them safer. The developer will be responsible for those improvements to Neighborhood intersection chokers as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project.

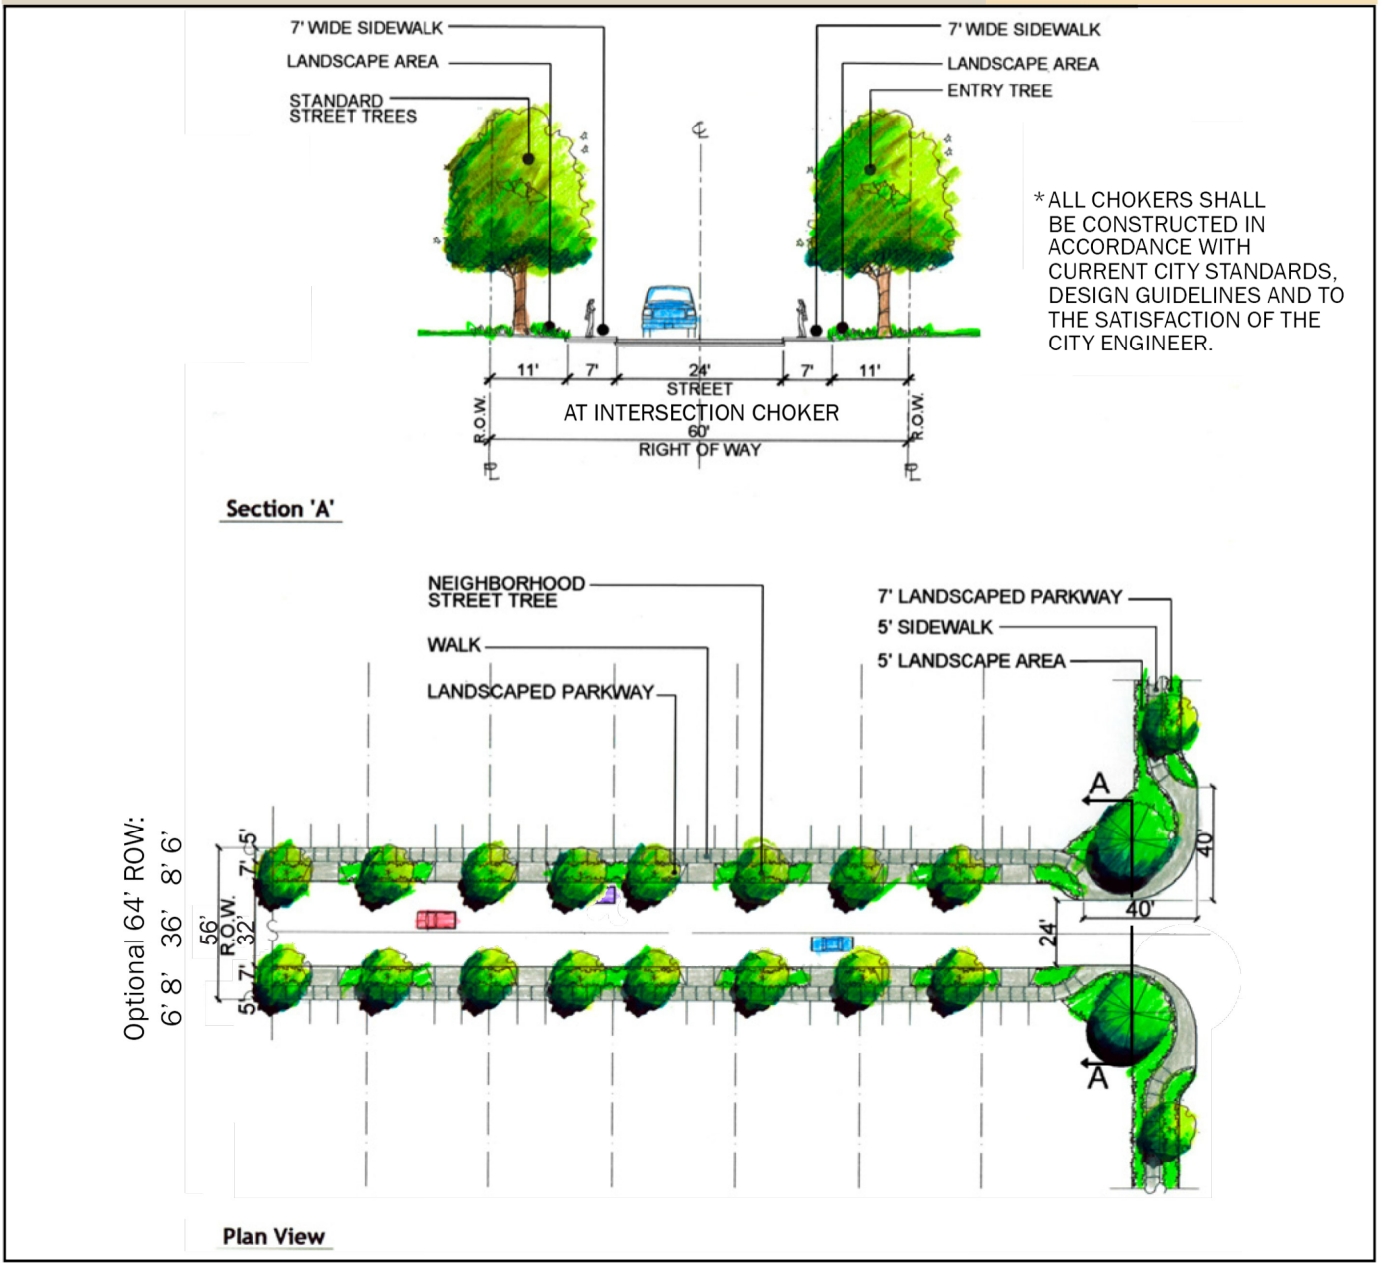


Exhibit 17I-1 - Neighborhood Streets With Intersection Chokers

Private Streets With Intersection Chokers

Private Street intersection chokers are traffic calming devices to slow down vehicles when they reach the neighborhood street level. They also facilitate pedestrian crossings by shortening the crossing distance and make them safer. The developer will be responsible for those improvements to private Street intersection chokers as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project.

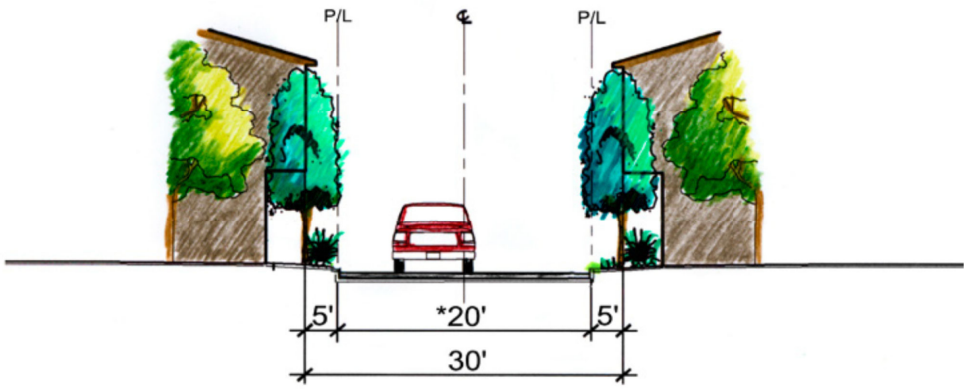

Exhibit 17I-2 - Private Streets With Intersection Chokers

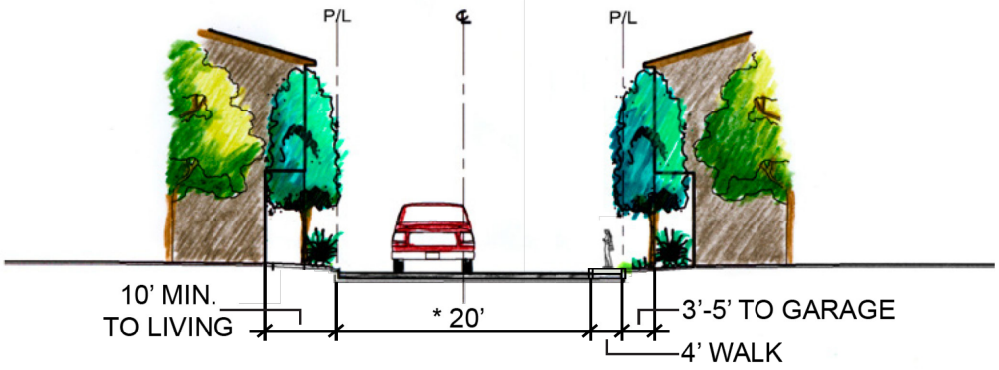
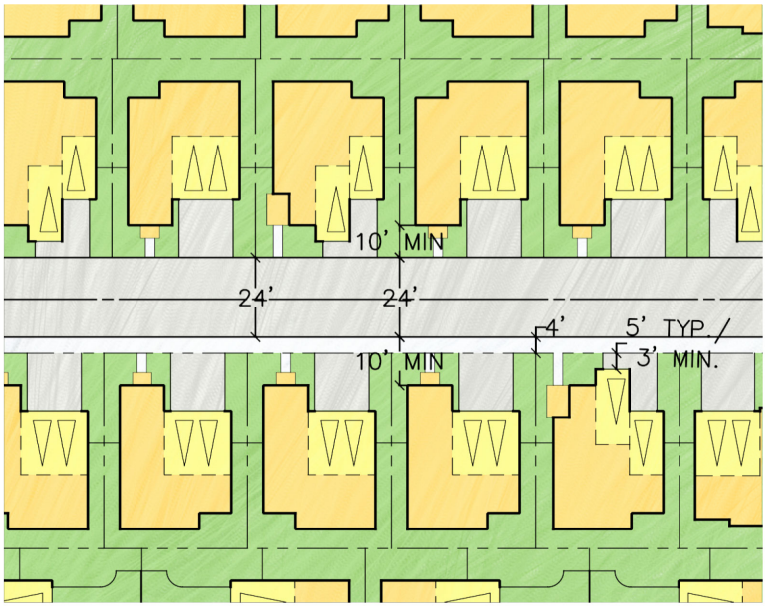
Alley

Alleys within the plan area will consist of 20 feet of paved travel area with 5 feet of landscape and apron on each side. The alleys will incorporate tapers at the entrance to alleys to slow traffic in these areas and to provide a visual element to discourage drivers from using alleys as a through street. Pavement may expand to 24 feet for Fire use with 3' landscape and apron on each side to maintain a 30' building separation. Final alley design shall be subject to review and approval by the Planning, Engineering, and Fire Departments. The developer will be responsible for those improvements to alleys as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project.

Exhibit 17m-1 - Alley (Cross-Section and Plan)



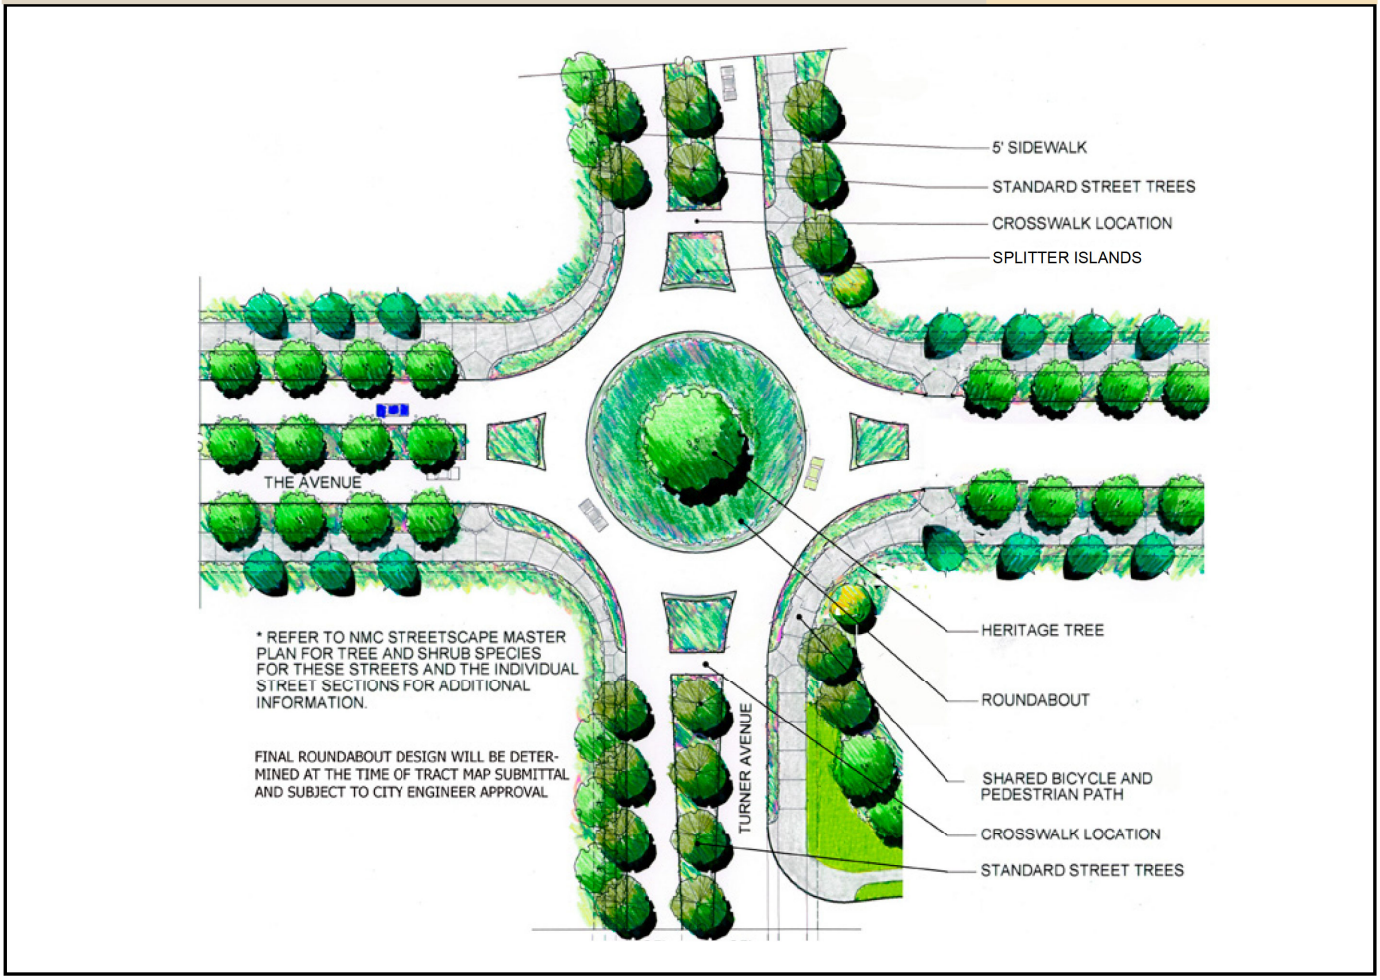
*PAVEMENT MAY EXPAND TO 24' FOR FIRE USES WITH 3' LANDSCAPE AND APRON EDGES ON BOTH SIDES TO MAINTAIN 30' BUILDING SEPARATION. FINAL PRIVATE DRIVE DESIGN SHALL BE SUBJECT TO REVIEW AND APPROVAL BY THE PLANNING, ENGINEERING AND FIRE DEPARTMENTS.



Private Alley

Private alleys within the plan area will consist of 20 feet of paved travel area with 5 feet minimum driveway aprons on each side. The private alleys will be paved per City Standards to encourage a street-like character. Pavement may expand to 24 feet for Fire use with 3' landscape and apron on each side. Final private alley design shall be subject to review and approval by the Planning, Engineering, and Fire Departments.The developer will be responsible for those improvements to Private Alleys as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project.

Exhibit 17m-2 - Private Drive (Cross-Section and Plan)



*PAVEMENT MAY EXPAND TO 24' FOR FIRE USES WITH 3' LANDSCAPE AND APRON EDGES ON BOTH SIDES TO MAINTAIN 30' BUILDING SEPARATION. FINAL PRIVATE DRIVE DESIGN SHALL BE SUBJECT TO REVIEW AND APPROVAL BY THE PLANNING, ENGINEERING AND FIRE DEPARTMENTS.

Typical Roundabout

Roundabouts have been strategically located throughout the plan to calm traffic through the center of the project, facilitate traffic movement and reduce air pollution by avoiding mandatory stops from all directions at the conceptual locations shown in Exhibit 17n, "Typical Roundabout". These roundabouts will follow the City adopted guidelines/standards and their final design will require City planning and engineering department approval as part of the tentative tract map review process. Utilities shall not be located under roundabouts. The developer will be responsible for those improvements to Roundabouts as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project.

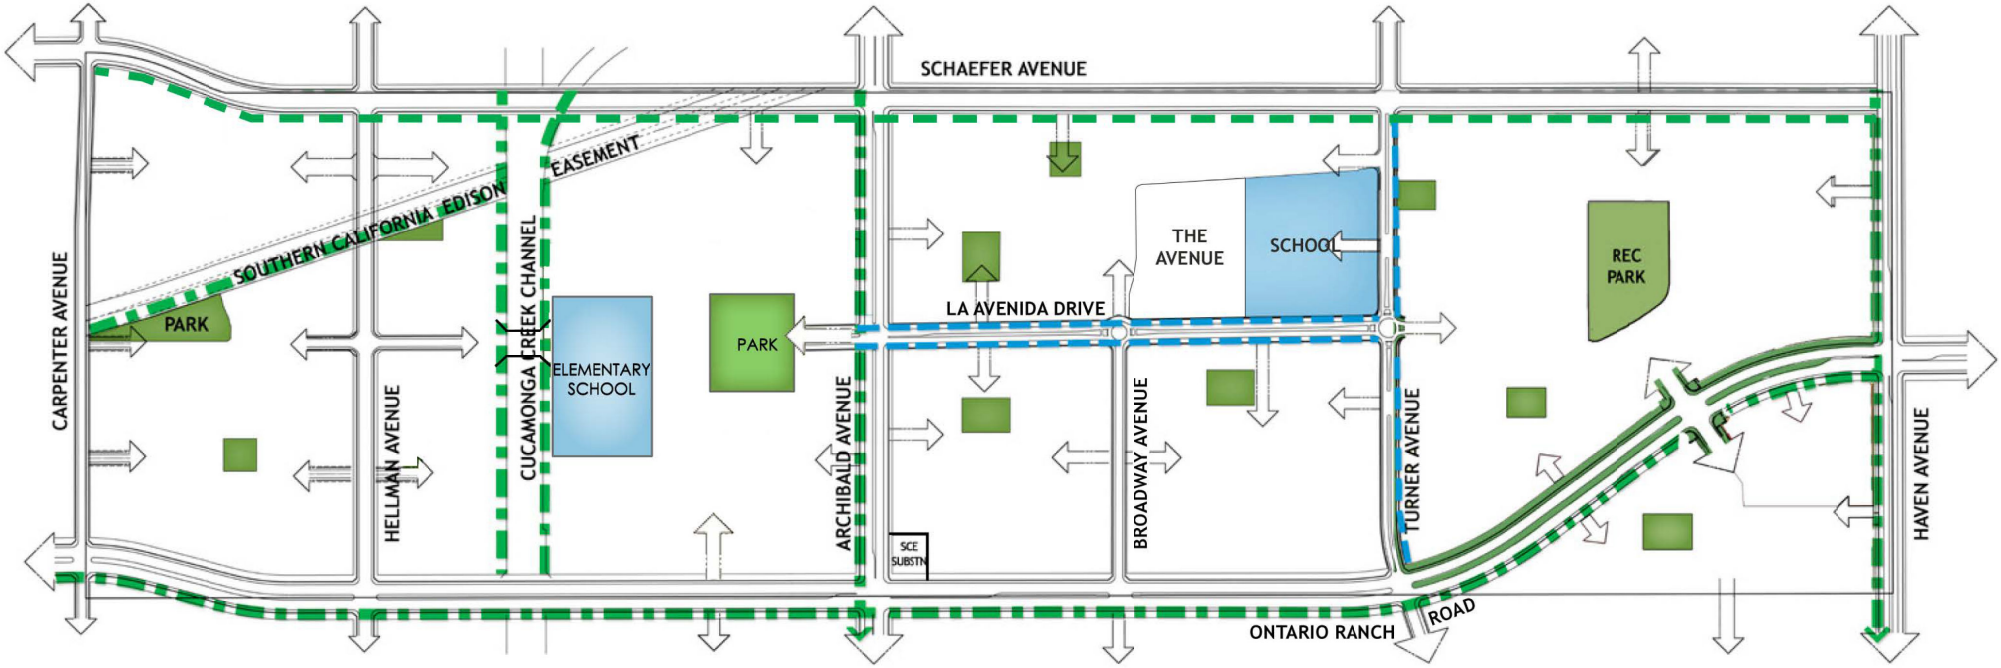
Exhibit 17n - Typical Roundabout (La Avenida Drive and Turner Avenue)

* ROUNDABOUTS ARE ONLY ALLOWED ON SINGLE LANE APPROACHES.
IF IT IS INTENDED THAT LA AVENIDA DRIVE OR TURNER AVENUE EVER BECOME A 4 LANE ROADWAY (2 APPROACH LANES) THE PROPOSED ROUNDABOUT AT THIS LOCATION SHALL BE REMOVED.

4.1.2 Traffic Calming

The Avenue Specific Plan provides for traffic calming within residential neighborhoods to contribute to safer and more livable neighborhoods in which to walk, bike and drive. According to the Federal Highway Administration (FHWA) document FHWA-HRT-06-047 HRTC-01/01-06(1M)E, Roundabouts Safety and Design, 2006 some of the benefits of roundabouts are:

- Crashes are less severe than other intersection crashes.
- Safer than traditional intersections.
- Cost-effective way to improve intersection safety.
- Increased traffic capacity and improved traffic flow.
- No signal equipment to maintain.
- Aesthetic benefits.



There are also environmental benefits to roundabouts. The FHWA Publication FHWA-RD-00-067 Roundabouts, An Informational Guide, June 2000 states that "The environmental benefits of a project are most readily quantified in terms of reduced fuel consumption and improved air quality. Of these, reductions in fuel consumption and the benefits associated with those reductions are typically the simplest to determine."

4.1.3 Pedestrian/Bicycle Trails and Connectivity

A primary recreational trail will be provided through the improvement of a portion of the SCE owned property (SCE Corridor) within the plan area as shown on Exhibit 18b, "SCE Easement Trail". The developers of the Specific Plan Area will be responsible for the construction of this trail. These improvements represent a part of the City's Master Planned multi-use path system planned for ~~the New Model Colony~~ Ontario Ranch. This SCE trail will extend from Vineyard Avenue, located west of the plan area to the Cucamonga Creek Channel. The trail will then head north along the west side of the Channel, where it will meet the Multi-Use path on Schaefer Avenue. This series of trails will provide access to Archibald Avenue and the trail on the East side of the Channel, which also runs north-south within the flood control right of way connecting Schaefer to Ontario Ranch Road. The trail also provides points of connection to parks, La Avenida Drive corridor, residential neighborhoods and the retail center.

The Specific Plan proposes a steel truss bicycle/pedestrian bridge crossing over the Cucamonga Creek Channel to connect the east and west sides of the channel and encourage school children west of the Channel to walk or bike to school. The Specific Plan shows a potential location for the bicycle/pedestrian bridge that may be relocated or incorporated into another bridge crossing. Final location and design will be subject to approval by Planning Director. The developer will be required to pay for the bridge and its construction. An encroachment permit will be needed from San Bernardino County Flood Control to construct the bridge crossing. A minimum 12-foot easement will need to be recorded to the City of Ontario in order to maintain the pedestrian bridge and provide public access across the channel. The SCE and flood control channel trails are important components in the overall trail system design of ~~the New Model Colony~~ Ontario Ranch and are an important component of the city's master plan trail system. The residential users will find that the trail is useful in reaching many of The Avenue's amenities, as well as the surrounding community. The improved trails will be landscaped with approved evergreen, deciduous, and flowering plant material. There will be several points in the trail system linking to secondary paths that will lead to The Avenue's retail/commercial areas, as well as to the neighborhoods.

Revised Exhibit

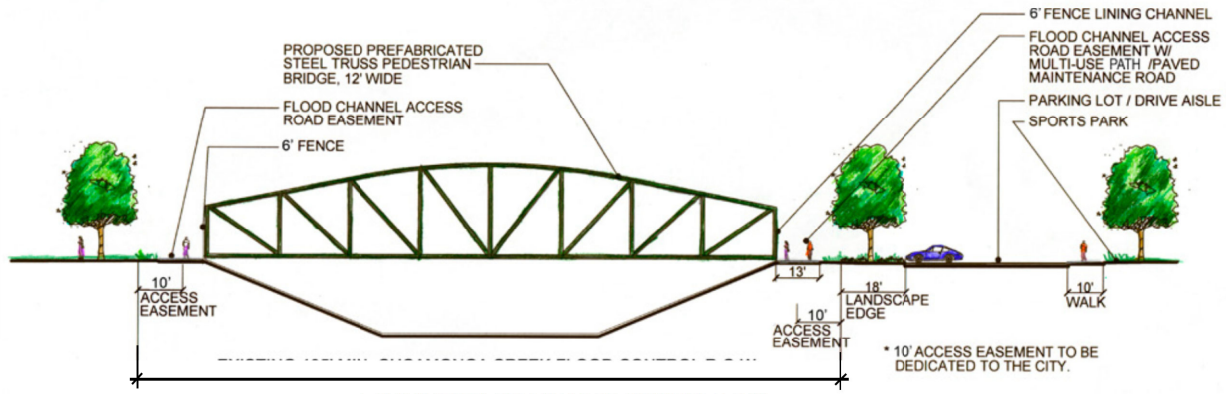
LEGEND

- NMC MASTER PLAN MULTI-USE PATH
- PROPOSED MULTI-USE BRIDGE ACROSS CHANNEL
- ENHANCED PEDESTRIAN SIDEWALK PER SPECIFIC PLAN (SEE SECTIONS 17G AND 17H)

NORTH

0 100 200 400 800

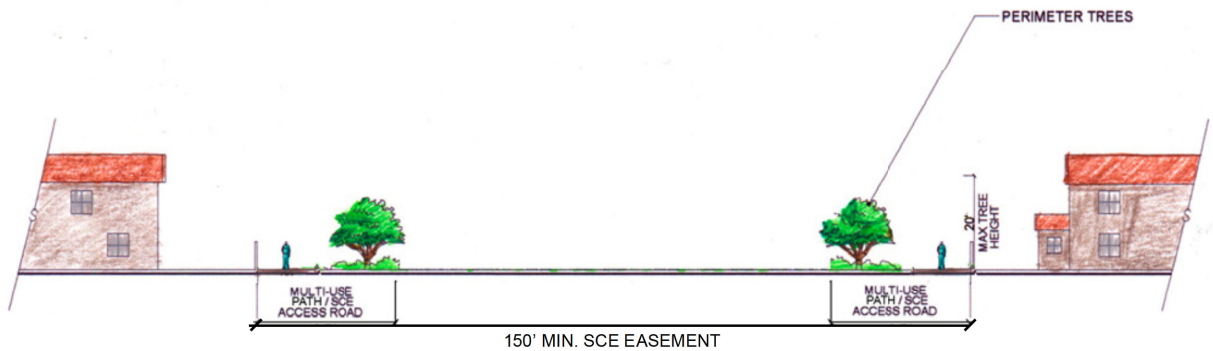
NOTE: The precise locations of the trails are conceptual and will be determined as part of the tract map approval process. The location of the proposed multi-purpose bridge is shown as conceptual and subject to Planning Department and Traffic Engineering Department review and approval.



Revised Exhibit Trail Master Plan

Multi-use paths are provided within the plan area along Archibald, Haven, Ontario Ranch Road and Schaefer Avenues. These paths are provided adjacent to the major drainage easement, along Hellman Avenue, and along the spine road (The "Avenue") which traverses the center of the plan area in an east-west direction.

Multi-use paths shall provide benches/seatwalls along path at appropriate locations with adequate lighting and trash receptacles at seating areas. In addition, these paths should provide clear directional signage (subject to Engineering and Planning Department approval) to facilitate movement to and from crosswalks and entry points.



Bike racks at destination locations serving as a point of departure to and from bike path will also be available on Class I bike paths. The bicycle trail system provides access and connectivity to the various land use components of the plan area (parks, schools, retail and commercial center, and residential neighborhoods) as shown in Exhibit 18, "Trail Master Plan". Class II on-street striped bike lanes shall be provided on roadways within The Avenue Specific Plan area as determined by the City Engineer.

Exhibit 18a - Cucamonga Creek Channel Trail

NOTE: The design and location of bridge is shown as conceptual and subject to Planning Department and Engineering Department review and approval.

Exhibit 18b - SCE Easement Trail

NOTE: The Landscape and Trail Design of the SCE Easement Trail shall comply with the landscape and trail design standards of NMC Streetscape Master Plan.

4.2 Infrastructure Plans

The improvement plans for the various infrastructure facilities, including water, recycled water, sewer, and storm drainage are intended to provide The Avenue Specific Plan with essential services in a safe and efficient manner. Infrastructure facilities shall comply with the latest approved Master Plans. The current ~~2012~~ Water Master Plan~~s~~ shall be referenced for design standards, sizing, alignment, etc. Water, recycled water and sewer utilities may be designated as "public utilities" if located within public or private streets. All public utilities within private streets shall be designed and constructed per City standards and contained within easements acceptable to the City. The CC&RS shall contain language that requires all proposed work by the HOA within said easements to be plan checked and inspected by the City, including applicable fees. Generally, utilities will not be accepted as public within alleys, parking areas or driveways.

Utilities within commercial and industrial parking lots and loading areas shall be designated as private. The extent to which said utilities will be accepted as public utilities for maintenance shall be determined, at the full discretion of the City, during final design plan review. The following sections describe each of the infrastructure facilities in detail.

4.2.1 Water

Domestic water will be provided by the City of Ontario. The Master Planned (MP) programs new potable water facilities to include: 30 and 24-inch Francis loop main extension from existing Zone 925 reservoir facilities within Milliken, Eucalyptus, and Archibald ~~and Ontario Ranch Road~~ Streets. The remainder of The Avenue will be served by a series of new Master Planned 12-inch mains as follows: Ontario Ranch Road extending to Haven, Schaefer from Carpenter to Haven, Haven from Eucalyptus to Schaefer, Turner from Ontario Ranch Road to Schaefer and Hellman from Ontario Ranch Road to Schaefer. Construction of the Master Planned water mains service network improvements is required prior to issuance of project related building permits for The Avenue. Master Planned domestic and recycled water main lines serving, surrounding and within the Specific Plan, as identified in the ~~2012~~ current Water Master Plan, shall be constructed prior to issuance of first occupancy. Sizing of non-master planned facilities is subject to City review and approval of the required Hydraulic Analysis. Requirements for Master Plan backbone water improvements for Phase 1A, 1B and 2 are subject to the NMC Builders' agreement.

New domestic water mains to be constructed as part of the development of The Avenue will include: 12-inch 925PZ mains within Carpenter Avenue, Hellman Avenue and Turner Avenue from Ontario Ranch Road to Schaefer, ~~and~~ within La Avenida Drive street from the proposed Elementary school site easterly of Archibald extending to Turner Avenue, within Ontario Ranch Road and Schaefer Avenue from Haven to Carpenter. These ~~two~~ 12-inch mains form the interior backbone loops connecting to Master Planned potable water facilities. The remainder of all interior streets within The Avenue project, ~~including Carpenter~~ and "A" Street located between Archibald and Turner will have 8-inch domestic mains. The construction on dead end water mains shall be avoided.

Higher fire flow demands for medium to high density residential and non-residential projects should be identified in accordance with the ~~2012~~ current Water Master Plan. Fire flow demands in excess of 1500 gpm for single family residential may require upsizing certain distribution to 12-inch pipelines as shown in Exhibit 20, "Domestic Water Master Plan". A hydraulic modeling analysis report is required to demonstrate that the proposed water system will meet peak demands including maximum day plus fire demand and peak hour demand.

4.2.2 Recycled Water

The ultimate sizing and alignment shall follow the most currently approved Master Plan. In order to assure conformance with Master Plan Design Criteria during the Implementation process: a Conceptual Technical Study shall be prepared and approved by the City prior to or concurrently with the entitlement submittal; and, a Final Technical Study shall be prepared and approved by the City prior to approval of Construction Drawings and Permits.

All new Master Planned recycled water mains will have the potential to interconnect to the proposed future 48-inch transmission facility within Carpenter. New recycled water facilities to be constructed as part of The Avenue will include: a 8-inch main within Turner from Ontario Ranch Road to Schaefer; a 8-inch main within La Avenida Drive from Archibald westerly to the Elementary school site and from Archibald to Turner. All remaining interior streets built with The Avenue project will connect to the Master Planned recycled water facilities and The Avenue backbone facilities to serve the project landscape edges, parkways, neighborhood, parks, street medians, etc. via 8-inch mains within the interior streets, as required, and irrigation sleeving at intersections and appropriate mid-block crossings to serve The Avenue landscaping improvements irrigation needs. Sizing of non-master planned facilities is subject to review and approval of the required Hydraulic Analysis. An initial Master Plan construction of recycled water improvements will be the construction of the 930 pressure zone (PZ) recycled water system in Archibald Avenue from southerly project limits to Riverside Drive, the Pressure Reducing Station (PRS) at Archibald & Chino Avenue, 1050 PZ pipes in Archibald, 1050 PZ pipes in Riverside Drive and on into RP-1. This above mentioned series of piping will tie into The Avenue via Schaefer, Ontario Ranch Road, etc. A recycled water loop must also be constructed in Haven Ave. from the southerly project limits to Riverside Dr. and in Riverside Dr. from Haven Ave, to RP-1 including the PRS stations per the Recycled Water Master Plan.

The Avenue (Subarea 18) Specific Plan shall comply with City Ordinance 2689 and make use of recycled water for all approved uses, including but not limited to irrigation of parks, schools, street landscaping, recreational trails, HOA maintained on-site common areas and commercial/industrial landscaping. An Engineering Report approved by the City and the California Department of Public Health is required prior to the use of recycled water.

4.2.3 Sewer

The ultimate sizing and alignment shall follow the most currently approved Master Plan. In order to assure conformance with Master Plan Design Criteria during the Implementation process: a Conceptual Technical Study shall be prepared and approved by the City prior to or concurrently with the entitlement submittal; and, a Final Technical Study shall be prepared and approved by the City prior to approval of Construction Drawings and Permits.

The 21-inch Haven Avenue Trunk Sewer line runs in Haven Avenue begins north of the Ontario Ranch Road intersection. The Ontario Ranch Road Trunk Sewer line (27-inch and 30-inch) runs in Ontario Ranch Road between Archibald Avenue and Haven Avenue. There is also a sewer line (21-inch and 24-inch) to be located within Carpenter Avenue which will connect to the Kimball Interceptor at the County line. The Carpenter Avenue Trunk Sewer will extend northerly to Schaefer Avenue and will serve the Avenue project development area from midway to Hellman to the east and Carpenter Avenue to the west ~~westerly of Cucamonga Channel and easterly of Vineyard Avenue~~. Sewer in Hellman Avenue will extend northerly to Chino Avenue and will serve areas to the Cucamonga Creek Channel to the west and midway to Carpenter Avenue to the east.

New sewer facilities to be constructed as part of The Avenue will include: 12-inch sewer in La Avenida Drive from Archibald easterly to Turner; 10-inch sewer in La Avenida Drive from Archibald westerly to the Elementary school site; 10 inch sewer in Broadway Avenue from Ontario Ranch Road terminating near La Avenida Drive intersection; 12-inch sewer in Turner from La Avenida Drive intersection northerly to Schaefer.

A 12-inch sewer will be constructed in Ontario Ranch Road from Hellman westerly to join the master plan sewer in Carpenter Avenue and 10 inch sewer in Hellman Avenue from Ontario Ranch Road terminating in Chino Avenue. All remaining interior streets within The Avenue, when developed, will have 8-inch minimum sewer main lines as shown in Exhibit 23, “Sewer Master Plan.” Master planned sewer main lines serving and surrounding the development shall be constructed prior to issuance of first occupancy. Initial sewer improvements shall be constructed between IEUA’s Archibald Trunk and the development limits, including constructing that portion of Ontario Ranch Road sewer between Archibald and Haven.

4.2.4 Drainage

~~The New Model Colony~~ Ontario Ranch Master Plan of Storm Drains report, prepared by LD King Engineers and updated ~~NMC~~ Ontario Ranch Improvements Hydrology Analysis provided by Stantec Engineers considered the entire Master Plan zoning area drainage analysis of which The Avenue (Planning Area 18) is included. The City of Ontario will be the maintenance agency for Master Planned and The Avenue storm drainage system facilities.

All Avenue drainage will eventually discharge into the existing Bellegrave County Line Drainage Channel facility located approximately 7,000-feet south of La Avenida Drive. The Master Planned improvements will utilize the existing Cucamonga Channel County of San Bernardino Flood Control facility, which drains north to south and joins the east-west Bellegrave County Line Drainage Channel. The Master Planned Storm Drain Improvements will construct a new network of storm drain lines within existing and proposed north-south streets extending northerly from the Bellegrave County Line Flood Control facility. Also, east-west storm drain lines will be built periodically joining the existing Cucamonga Channel Flood Channel facility. The Master Planned Storm Drain Improvements will include the following: an 84-inch storm drain

within Haven fronting the easterly edge of La Avenida Drive and extending southerly joining the Bellegrave Flood Channel with a 96-inch line; a 66-inch storm drain within Turner, the Turner storm drain will extend southerly eventually joining the Bellegrave Flood Channel with a 96-inch line; Archibald Avenue accepts flows from a 36-inch line within Schaefer easterly of the Archibald intersection.

The Archibald main extends southerly eventually joining the Bellegrave Flood Channel with a 96-inch line. The Hellman storm drain accepts flows from a 42-inch line north of Schaefer.

The Hellman storm drain extends southerly through The Avenue as an 42-inch line and joins an 84-inch line within Ontario Ranch Road. The Hellman storm drain extends southerly to future Eucalyptus Street as a 96-inch line, then travels easterly on Eucalyptus as a 6' x 11' box culvert to join the existing Cucamonga Flood Channel. Ontario Ranch Road west of the Cucamonga Flood Channel has an 84-inch storm drain easterly of the Hellman intersection and 72-inch lines extending from west to east from Vineyard to Hellman. Ontario Ranch Road, between Archibald Avenue and Turner Avenue, contains 60-inch, 54-inch and 48-inch storm drain. A 48-inch storm drain extends easterly from the existing Cucamonga Channel within Ontario Ranch Road terminating mid-block between the channel and Archibald intersection.

Cucamonga Creek Channel

Storm drain facilities to be constructed as part of The Avenue will include: a 30-inch line in Carpenter from Ontario Ranch Road northerly to mid-block between Schaefer; a 36-inch line paralleling the easterly side of the existing Cucamonga Flood Channel to serve the Park/Elementary school sites and extending northerly to serve the future retail site adjacent and southerly of Schaefer; a 30-inch line within La Avenida Drive– between Archibald and Turner to provide service to the 10 acre School site; the individual planning areas within The Avenue will have storm drain pick-up laterals (18-inch minimum) joining Master Planned Improvements and The Avenue backbone storm drain facilities.

Ultimate development of The Avenue requires construction of all proposed Master Planned Storm Drain Improvements. The existing Avenue site generally sheet flows form north to south. It is not anticipated that Grading of individual planning areas will be permitted, prior to completion of Master Planned Storm Drain Improvements due to the fact that the City of Ontario will not allow temporary stormwater runoff detention basins to be constructed for individual planning areas in The Avenue until downstream Master Planned storm drain facilities are constructed and functioning to provide necessary flood control for that tract map area.

4.2.5 Grading

Landscape Setback Swale System

The Avenue existing topography may be described as flatland terrain which gently slopes to the south varying from 0.6% to 1.1% across the site as shown in Exhibit 5, "Existing Topography". The high elevation is elevation 750 at the northeast corner of the site. The low elevation is 706 located at the intersection of Archibald and Ontario Ranch Road Streets. Existing land uses vary from vacant land to agricultural with the majority of land being existing or vacated dairy farm operation. The dairy farm operations contain many ponding areas for acceptance/ filtration of dairy livestock excrement runoff. The dairy farms on the site have varying thickness layers of manure which will require off-site disposal from The Avenue project. Due to the varied number of development ownership of The Avenue planning areas, it is anticipated that mass grading of the entire site will not occur. Individual planning area owners will be responsible for obtaining any rough grading and precise grading permits along with remedial grading, removal of manure deposits and dairy bog pond sediments disposal. If the Developer proposes temporary use of an existing agricultural well for purposes other than agriculture, such as grading, dust control, etc., the developer shall make a formal request to the City of Ontario for such use prior to issuance of permits for any construction activity. Upon approval, the Developer shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by the agreement.

4.2.6 NPDES Compliance

The grading and drainage of The Avenue Specific Plan area shall be designed to detain, filter and treat surface runoff, in a manner and combination which is practical, to comply with the most recent requirements of the San Bernardino County NPDES Stormwater Program's Water Quality Management (WQMP) for significant new development projects. The objective of the WQMP for this project is to minimize the detrimental effects of urbanization on the beneficial uses of receiving waters, including effects caused by increased pollutants and changes in hydrology. These effects may be minimized through the implementation of site designs that reduce runoff and pollutant transport by minimizing impervious surfaces and maximizing on-site infiltration, Source Control Best Management Practices (BMP's) and/or either on-site structural Treatment Control BMP's, or participation in regional or watershed-based Treatment Control BMP's. An alternative to the implementation of on-site Low Impact Development (LID) BMPs to retain/infilter and treat stormwater runoff is the utilization of the off-site, regional Mill Creek Wetland facility for accomplishing water quality improvements in residential project runoff from this master planned community. All non-residential planning area projects within The Avenue will incorporate all required on-site LID BMPs, pursuant to the requirements of the current San Bernardino County Water Quality Management Plan.

Prior to the issuance of a grading or construction permit, all projects greater than 1 acre in size shall apply for coverage under the California General Permit To Discharge Storm Water Associated with Construction

Activity, obtain a WDID# from the State Water Resources Control Board and prepare a Stormwater Pollution Prevention Plan (SWPPP) on the CASQA 2009 Template form and upload it to the State's SMART database system. A copy of each SWPPP document and WDID# Certification shall also be provided to the City of Ontario, prior to any construction permit issuance. The SWPPP will identify and detail all appropriate Best Management Practices (BMPs) to be implemented or installed during construction of the project.

In addition to the preparation of a SWPPP for construction-related activities, and as part of the approval of any grading plans within the Specific Plan Area, the applicant will be required to submit a Water Quality Management Plan (WQMP) on the regional model form provided by the City. The WQMP shall identify and detail all Site Design BMPs, Source Control BMPs and Treatment Control BMPs to be implemented or installed at this site in order to reduce storm water pollutants and site runoff.

The Mill Creek Wetland facility has been constructed and will be on line and functioning in June, 2014. The facility will serve as an alternative to on-site LID BMP implementation for residential tract developers that are members of the ~~NMC~~ Ontario Ranch Builders, LLC consortium and which have adequate reserved capacity in the regional facility for those planning areas. Out of a proposed 425 acres of residential development in The Avenue, 288 acres will be developed by ~~NMC~~ Ontario Ranch Builders members, 20 acres of land will be utilized for public schools and 107 acres will developed by non-members, who will be required to make other arrangements or utilize another, future regional water quality facility, downstream of the project area. All non-residential planning area projects within The Avenue, including Public Schools, will incorporate on-site LID BMPs, in accordance with the regional NPDES Permit and the current San Bernardino County Water Quality Management Plan, and shall not rely on the regional wetlands facility for retention and treatment of runoff water.

All Priority Land Use (PLU) areas within the Specific Plan Area shall comply with the statewide Trash Provisions adopted by the State Water Resources Control Board (SWRCB) and trash requirements in the most current San Bernardino County Area-Wide MS4 Permit.

4.2.7 Solid Waste

The City of Ontario will provide solid waste collection services to The Avenue Specific Plan area. The following addresses additional solid waste issues:

- An integrated waste management plan is required and shall be submitted prior to DAB approval of each subdivision.
- Commercial – Developer shall comply with Municipal Code Sec. 6-3.314 Commercial Storage Standards, and Sec. 6-3.601 Business Recycling Plan.
- Apartment – For apartments using commercial bin service developer shall comply with Municipal Code Sec. 6-3.314 Commercial Storage Standards and Sec. 6-3.601 Business Recycling Plan.
- Residential – For curbside automated container service developer shall comply with Municipal Code Sec. 6-3.308.9(a) and (d), Residential Receptacles, Placement.

- Recycling Requirements – Developer shall comply with Municipal Code Article 6. Recycling Requirements for Specified Business Activity, Sec. 6-3.601 Business Recycling Plan, and Sec. 6-3.602 Construction and Demolition Recycling Plan.
- All project sites shall be designed to meet all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Area, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types.
- Project shall follow the City of Ontario's latest "Solid Waste Department Refuse and Recycling Planning Manual".

4.2.8 Gas

The Gas Company will provide natural gas to the Project Site. Gas mains will be installed to the Project Site by the Gas Company, as necessary.

4.2.9 Electric

Southern California Edison will provide electricity to the plan area from existing facilities in the vicinity. Proposed new facilities to serve the project will be owned and operated by the City of Ontario and located underground.

4.2.10 Telephone

Verizon will provide telephone service to the plan area. The City will provide a fiberoptic network to the home, accommodating voice mail data, cable and video on demand. Proposed on-site facilities will be placed underground.

4.2.11 Cable Television

Adelphia will provide cable television service to the plan area. The City will provide coaxial/fiber cable to the home, accommodating cable television, internet services, voice mail data, cable and video on demand. Proposed on-site facilities will be placed underground.

4.2.12 Fiber Optics

Proposed Fiber Optics (conduits and fiber) will be placed underground within a duct and structure system to be installed by the Developer, as illustrated in Exhibit 19. The fiber and conduits along the backbone streets shall be installed in a joint trench by each Developer as the last lane improvements are completed. In-tract fiber and conduit shall be installed by the Developer in joint trenches where possible. Maintenance of the installed system will be the responsibility of the City/Special District. Development of the Project requires the installation by the Developer of all fiber optic infrastructure necessary to service the Project as a standalone Development.

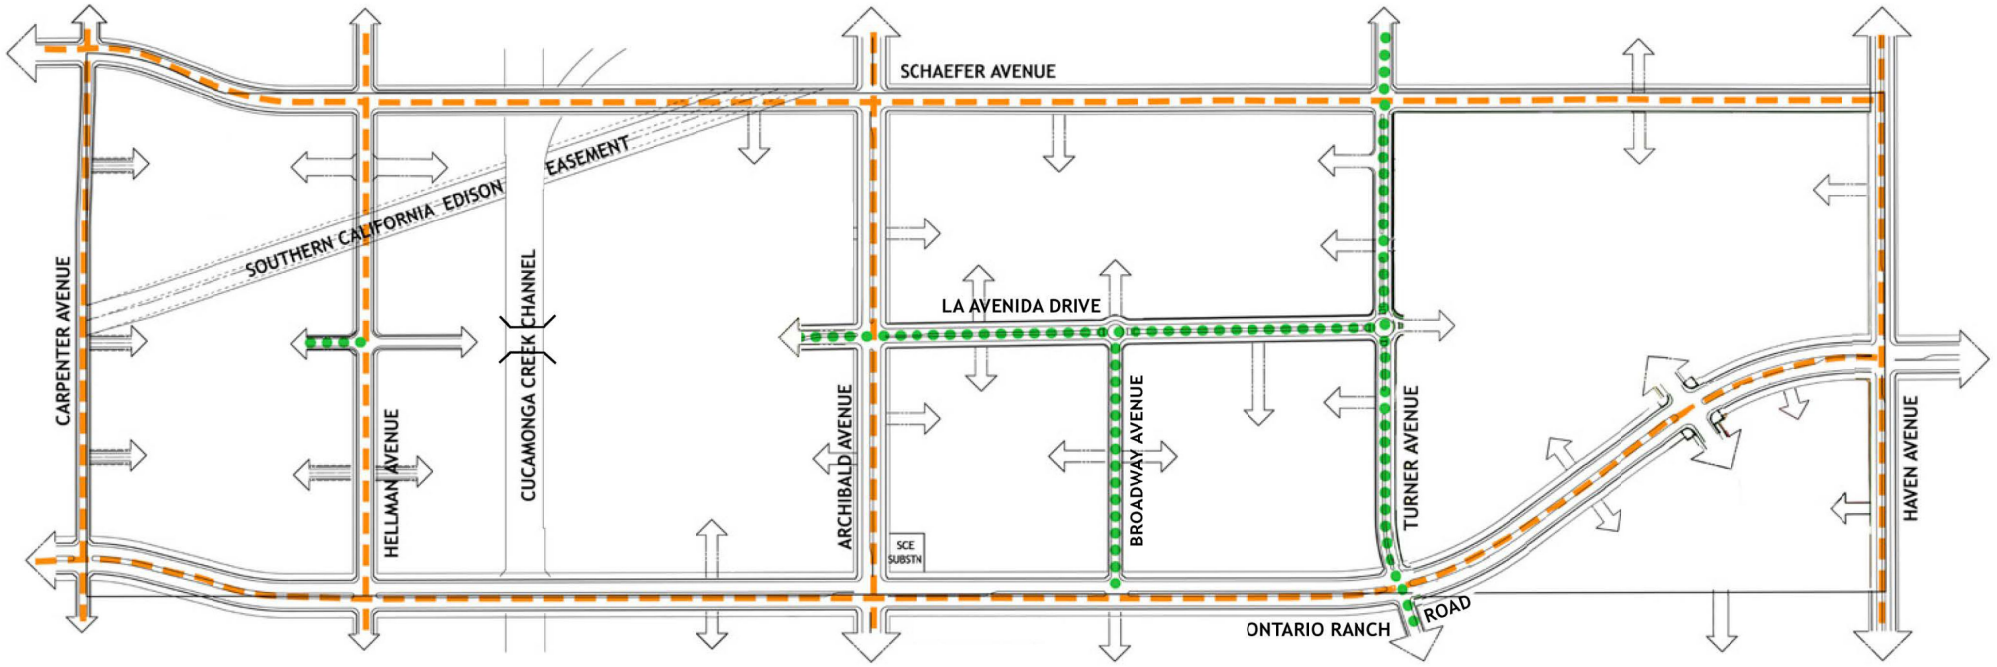
4.3 Community Facilities

4.3.1 Schools

The Mountain View School District serves the K-8 school's needs of the proposed The Avenue Specific Plan. The Chaffey Etiwanda Joint Union School District serves the school needs of grades 9-12 within the plan area. Colony High School is located to the north of the plan, for the high school students living in the plan area. In addition, the proposed The Avenue Specific Plan is providing sites for a ten (10) acre elementary school and an additional ten (10) acre school.

4.3.2 Library

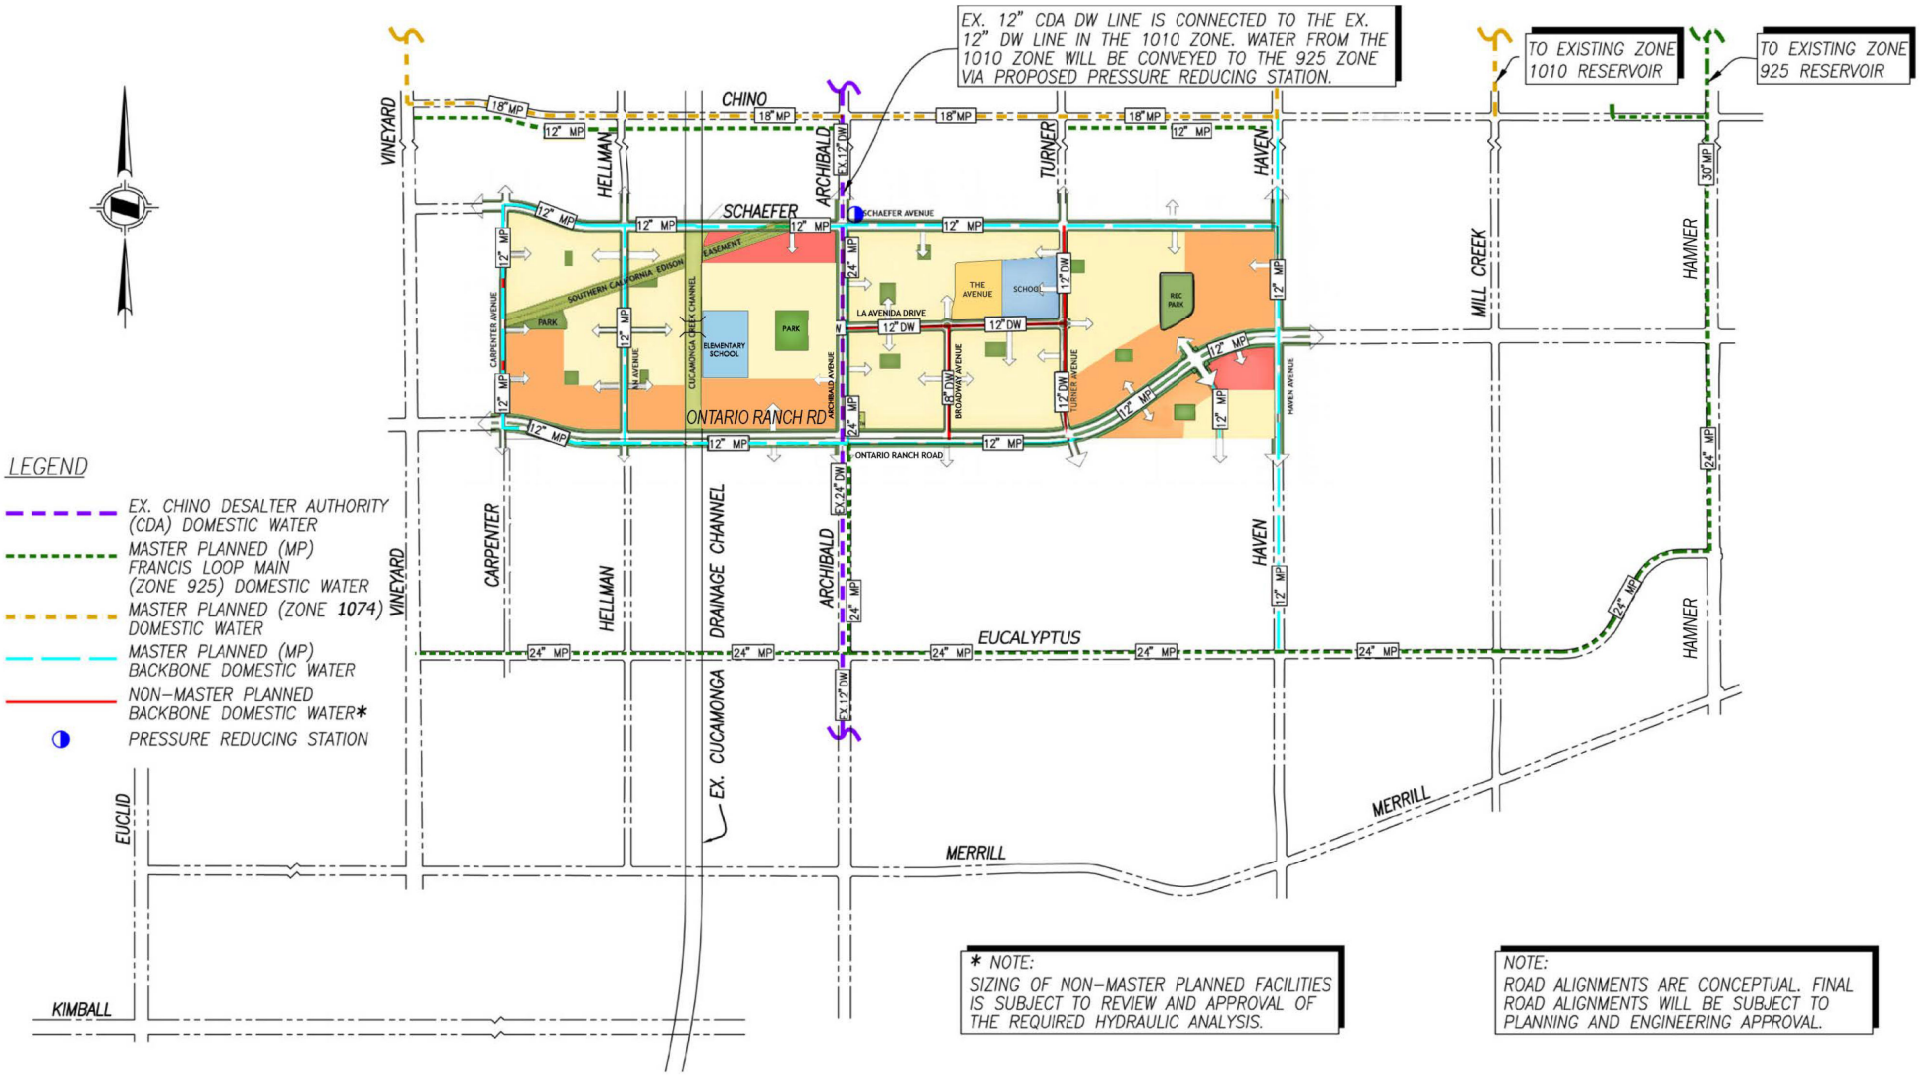
The City of Ontario will provide library services to The Avenue Specific Plan area.



4.3.3 Fire

The City of Ontario will provide fire protection services to The Avenue Specific Plan area.

4.3.4 Police



The City of Ontario will provide police services to The Avenue Specific Plan area.

Section 5 - Development Regulations

5.1 General Provisions

A. Development proposals within The Avenue Specific Plan shall be subject to the implementation procedures established herein. Whenever the provisions and development standards contained herein conflict with those contained in the City of Ontario Development Code, the provisions of The Avenue Specific Plan shall take precedence. On issues where the Specific Plan is silent the City of Ontario Development Code shall prevail.

B. Severability - If any portion of these regulations is declared to be invalid or ineffective in whole or in part, such decision shall not affect the validity of the remaining portions thereof. The legislative body hereby declares that they would have enacted these regulations and each portion thereof irrespective of the fact that any one or more portions be declared invalid or ineffective.

C. Unless otherwise provided, any ambiguity concerning the content or application of The Avenue Specific Plan shall be resolved by the Planning Director or his/her designee, hereinafter referred to as Director, in a manner consistent with the goals, policies, purpose and intent established in The Avenue Specific Plan.

D. Any major deviation from the Design Guidelines (Section 6) within The Avenue Specific Plan shall require a Specific Plan Amendment. The Director shall determine whether a proposed change constitutes a major deviation.

E. The meaning and construction of words, phrases, titles, and terms shall be the same as provided in the City of Ontario Development Code Article 2, “Definitions”, unless otherwise specifically provided herein.

5.2 Applicability

The development regulations contained herein provide specific standards for land use development within the proposed The Avenue Specific Plan. Regulations address residential, retail and commercial and open space land uses. General landscaping regulations are also provided. Application of the following regulations is intended to encourage the most appropriate use of the land, ensure the highest quality of development, and protect the public health, safety, and general welfare. The adoption of The Avenue Specific Plan by ordinance will supercede otherwise applicable City of Ontario zoning regulations unless stated herein to the contrary. Whenever the provisions and development standards contained herein conflict with those contained in the City of Ontario Development Code, the provisions of The Avenue Specific Plan shall take precedence. Where The Avenue Specific Plan is silent, City codes shall apply.

5.3 Development Review Process

All development projects within the proposed The Avenue Specific Plan shall be subject to the Development Plan Review Process as established in Article 8 of the City's Development Code. Adoption of The Avenue Specific Plan by the City includes adoption of the Design Guidelines contained within Section 6 of The Avenue Specific Plan and which provide direction for the design of development projects within the plan area. Where the Design Guidelines are silent, the applicable design guidelines contained within the City's Development Code shall apply. The Design Guidelines are intended to be flexible in nature while establishing basic evaluation criteria for the review by the City of developer projects during design review.

Pursuant to these provisions, the Development Permit process constitutes a design review of project architecture, site plans, and landscape plans. All development project applications shall include a landscape and irrigation plan describing plant materials and their growth habits, plant size and spacing, methods of irrigation and landscaping maintenance, site plans, architectural elevations, floor plans, grading plans and other requirements as specified by the City. Development permits are approved with conditions of approval.

As the Specific Plan is Phased, the following minimum criteria shall be met for each Subdivision and Development of each Phase:

- For Domestic Water, all the Master Plan, Regional and Local Infrastructure identified in Section 4 and the Conceptual Domestic Water Plan for the Water Pressure Zone that the Phase is within shall be completed as part of the Phase's infrastructure requirements. Also, any domestic water infrastructure necessary to provide primary looping, secondary looping, and meet all hydraulic criteria and fire flow shall be completed as part of the Phase's infrastructure requirements.
- For Recycled Water, all the Master Plan, Regional and Local Infrastructure identified in Section 4 and the Conceptual Recycled Water Plan for the Recycled Water Pressure Zone that the Phase is within shall be completed as part of the Phase's infrastructure requirements. Also, any recycled water infrastructure necessary to provide primary looping, secondary looping, and meet all hydraulic criteria shall be completed as part of the Phase's infrastructure requirements.
- For Sewer, all the Master Plan, Regional and Local Infrastructure identified in Section 4 and the Conceptual Sewer Plan for the Master Plan Sewer Tributary Area that the Phase is within and upstream of shall be completed as part of the Phase's infrastructure requirements. Also, any sewer infrastructure necessary to meet all hydraulic criteria shall be completed as part of the Phase's infrastructure requirements.

5.3.1 Additional Entitlement Requirements

In order to ensure orderly expansion of the City Utility Systems and other City Infrastructure, the following Additional Entitlement Requirements are imposed upon all Subdivision Maps and Developments within the Specific Plan area.

5.3.1.1 Conceptual Design Report:

Prior to approval of any entitlement application (subdivision maps, Development Plan Reviews, etc.), a conceptual design report shall be prepared and submitted to the Development Agency Engineering Department and the Utilities Engineering Department for review and approval for the established extent of all public improvements required for the project. The study shall identify existing and future rights-of-ways (ROW) and infrastructure improvements and establish all vertical and horizontal alignments for each utility. The report shall include cross-sections, profiles, and any supporting details needed to demonstrate that utilities can be adequately accommodated in the public ROW. The study shall account for all utility conflicts, right-of-way variations, existing obstructions, and the timing of utility installation. This shall also include Water Sub-Area Master Plans (WSAMP) and Sewer Sub-Area Master Plans (SSAMP) to assure compliance with all Master Plan Design Criteria, including Hydraulic Design Criteria. Utilities cannot be located along an alignment that conflicts with existing conditions (e.g. electrical poles, private property, etc.) unless that applicant is accepting the responsibility of modifying the existing conditions (e.g. undergrounding, relocation, ROW acquisition, etc.).

5.3.1.2 Preliminary Design Report:

As a condition of entitlements (subdivision maps, Development Plan Reviews, etc.) within the Specific Plan and prior to submittal of Infrastructure Improvements Plans, a Preliminary Design Report (PDR) for all public infrastructure shall be submitted and approved by the Development Agency Engineering Department and the Utilities Engineering Department. The PDR shall include the following:

Conceptual Design Compliance: A discussion modifying or confirming the conceptual design established with the Project's Conceptual Design Report. The study shall confirm all rights-of-ways (ROW), infrastructure improvements, and vertical and horizontal alignments for each utility.

Street Cross Sections and Profiles: Street Cross Sections and Profiles shall be provided for each public street, private street and Public Utility Easement (PUE) containing a public utility and at any points along the alignments where the ROW varies. The cross sections shall show the location and size of each utility and shall annotate the property/ROW lines, the type of finished surface material, the distance of each utility from centerline, the depth from finished surface to top of pipe, and the distance between utilities (outside wall to outside wall).

Constructability Review: The report shall include a discussion of the constructability issues along the proposed alignment and identify the recommended construction methods that may be utilized. The study shall perform field investigation (field survey and potholing) in order to identify potential utility conflicts, right-of-way variations, existing obstructions, and constructability issues created by the timing of utility installation.

Supporting Details: The PDR shall include any supporting details needed to demonstrate that utilities can be adequately accommodated in the public ROW, including the placement of large appurtenances, clearance from existing obstructions, etc.

30% Design Drawings: The PDR findings shall be incorporated into a 30% design plan set and included in the PDR.

5.3.1.3 Utilities Systems Map (USM):

Prior to approval of any entitlement application (subdivision maps, Development Plan Reviews, etc.), as part of the entitlement application a Conceptual Utilities Systems Map (USM) shall be prepared and submitted to the Development Agency Engineering Department and the Utilities Engineering Department for review and approval. The USM is a summary plan sheet exhibit that shows all the public off-site infrastructure requirements and demands for the Development Project (and/or Subdivision), the on-site private infrastructure improvements, and the interaction between the public and private utilities systems. As a Condition of Approval for the Development Project (and/or Subdivision), the Conceptual Utilities Systems Map shall be updated into a Final Utilities Systems Map to reflect the changes that occur between entitlement and Final Plan and Permit Approval. Reference the Ontario Municipal Utilities Company Utilities Engineering Department's Utilities Systems Map (USM) Requirements for details.

5.3.1.4 Integrated Waste Management Report (IWMR) and Solid Waste Handling Plan (SWHP):

Prior to approval of any entitlement application (subdivision maps, Development Plan Reviews, etc.), as part of the entitlement application a Conceptual Integrated Waste Management Report (IWMR) and a Conceptual Solid Waste Handling Plan (SWHP) shall be prepared and submitted to the Development Agency Engineering Department and the Utilities Engineering Department for review and approval. The SWHP summary plan sheet exhibit that demonstrates the project site's design conformance with the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Areas, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types. The IWMR is a report that presents project specific information that is not able to be demonstrated within the Solid Waste Handling Plan, including discussions on: project solid waste operations; project compliance with all applicable laws, statues, policies, and requirements; and, conformance with all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Areas, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types. As a Condition of Approval for the Development Project (and/or Subdivision), the Conceptual SWHP and the a Conceptual IWMR shall be updated into a Final SWHP and Final IWMR to reflect the changes that occur between entitlement and Final Plan and Permit Approval. The SWHP and IWMR may be required to be updated from whenever there are new occupants, new uses or changes to existing uses, Tenant Improvements, Business Licenses, and Certificates of Occupancy. Reference the Ontario Municipal Utilities Company Utilities Engineering Department's Integrated Waste Management Report (IWMR) and Solid Waste Handling Plan (SWHP) Requirements for details.

5.4 Development Regulations

The Avenue Specific Plan is adopted by ordinance and will serve as the implementation tool for the General Plan as well as the zoning for the Project Site. The Avenue Specific Plan Development Regulations address general provisions, permitted uses, and development standards for the plan area.

5.4.1 General Site Development Standards

The following general site development criteria shall apply to all land development proposed in The Avenue Specific Plan.

A. Gross Acres - Except as otherwise indicated, gross acres for all development areas are measured to the centerline of streets.

B. Grading - Development within the plan area shall utilize grading techniques as approved by the City of Ontario. Grading concepts shall respond to the Design Guidelines included in The Avenue Specific Plan which guide the development of land use toward the goal of providing for a livable community with streets and entries designed for walking and resident interaction. Additionally, the grading concepts should adhere to the following:

   1. Where slope conditions are present, the property shall be located at the top of a slope

   2. In areas adjacent to a ridge line or in moderate slope areas, dwelling units and structures should be sited to:
      a. Use the natural ridge line as a backdrop for structures
      b. Use landscape plant materials as a backdrop
      c. Use structure to maximize concealment of cut slope

C. Building Modification - Additions and/or projections into setback areas permitted by The Avenue Specific Plan shall match the architectural style of the primary unit and shall be constructed of the same materials and colors as the primary unit.

D. Utilities - All new and existing public utility distribution lines of 34.5 kV or less shall be subsurface throughout the plan area.

E. Technology - All homes and businesses shall accommodate the most modern technology for computer internet access, phone, fax, and television. Broadband fiber optics cable will be installed on all peripheral streets per the approved Master Plan.

F. Density - The Avenue Specific Plan Land Use Plan establishes a maximum gross density average for each residential land use designation as indicated in Table 2 “Statistical Analysis”. These densities are ~~4.6~~4.5 dwelling units per gross acres for the Low Density Residential designation, ~~10.25~~8.5 dwelling units per gross acres for the Low Medium Density Residential designation and ~~12.0~~ 22.0 dwelling units per gross acre for the Medium Density Residential designation.

G. Maximum Number of Dwelling Units - The maximum number of residential dwelling units permitted within The Avenue Specific Plan shall be ~~2,875~~3,753 dwelling units.

H. Retaining walls - Exposed walls and fences facing roadways shall be no greater than six feet in height, except as necessary for acoustical purposes to satisfy the intent of the noise ordinance. Where retaining walls or fences face roadways, they shall be built, when feasible, of decorative materials consistent with the wall theme of the neighborhood.

Northerly Site Boundary along Schaefer Avenue, looking east

I. Temporary Uses - Temporary Uses shall be consistent with the Development Code requirements of Article 13 (page 13-46).

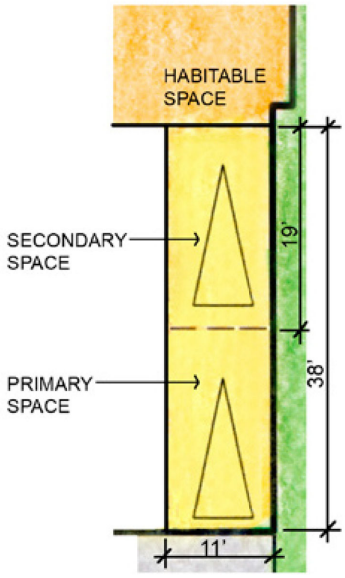
J. Satellite Dishes - Freestanding satellite dish antennas shall be in compliance with Article 32, Section 9.1.3289 of the Development Code.

K. Recreational Vehicle Storage - No recreational vehicle (RV) storage in front or corner side yards and no RV street parking for a period of more than 72 hours.

L. Dairy Separation Requirement for Residential District Development Standards Section – The following separation requirements from existing dairies/feed lots shall apply to new residential development or structures used for public assembly purposes from existing dairies/feed lots. A minimum 100' separation shall be required between new residential, commercial, or industrial development or structure used for public assembly and an existing animal feed trough, corral/pen or an existing dairy/feed lot including manure stockpiles and related wastewater detention basins. The 100-foot separation requirement may be satisfied by an off-site easement acceptable to the Planning Director with adjacent properties, submitted with the initial final map and recorded prior to or concurrent with the final map.

Typical single family detached residences

M. Product distribution requirements within Zones 1-~~5~~8 (as shown on Exhibit 26, "Conceptual Product Distribution") - Minimum number of product types per zone: 2. The following details the limitations on unit counts for products within a single zone or in a contiguous area of the same product(1). A contiguous area of one product type can not continue into an adjacent zone unless the unit count for that contiguous area conforms to the following limitations.



1. Single Family Detached (SFD):
   a. Minimum number of dwelling units per product: 25
   b. Maximum number of dwelling units per Product: 125

2. Single Family Attached (SFA):
   a. Minimum number of dwelling units per product: 36
   b. Maximum number of dwelling units per Product: 250

3. Multi-Family:
   a. Minimum number of dwelling units: 200(2)
   b. Maximum number of dwelling units: 400

N. Tandem Parking:

1. All vehicles must be registered with the HOA or management company. A copy of the registration for each vehicle showing the address, make model, vehicle year and color will be required upon registration.
2. No garage may be separately sold or assigned by an owner. A garage may be rented or leased to a non-owner solely in connection with the rental or lease of the respective unit.
3. All residents are required to use their garage space for parking their vehicles. Residents with more than two vehicles must register two vehicles for the garage spaces before a parking permit will be considered allowing parking on the private streets or parking bays within the project.
4. Anyone requesting a parking permit must also demonstrate that his/her garage is not being used for storage, or being used as a workshop or for any other purpose which would prevent the garage from being used to park two vehicles.

Tandem Parking

5. The secondary space (adjacent to habitable space) will be given 25% credit towards parking requirement.
6. Minimum size of tandem parking: 11'x38'.

O. Multi-family projects proposed within a gated neighborhood, may be subject to the following open space requirement, subject to review and approval of the Planning Department:

1. Ground Floor: A minimum contiguous area of 150 sq. ft. in area with no dimension less than 10 feet in any direction.
2. Balconies and Decks: Must have a minimum contiguous area of 50 sq. ft. in area with no dimension less than 5 feet in any direction.
3. Common Open Space: A minimum of 250 sq. ft. of common open space shall be provided per each unit. Common open space shall require a minimum contiguous area of 300 sq. ft. with no dimension less than 15 feet in any direction.

5.4.2 Residential Development Standards Tables

The development standards for proposed residential products at The Avenue are shown on the following pages (Table 3a-3~~n~~ l).

(2) Units of less than 200 may be approved with the review and approval of the Planning Director.

Table 3a - Product Type 1A Development Standards [11]

Typical lot sizes: 55'x105', 60'x100', 60'x110' (5,500+ SF Lots)

Lot Criteria

Min. Lot Width at Front PL for Standard Lot	55'
Min. Lot Width on Corner	65'
Min. Lot Depth on Standard Lot	100'
Min. Lot Depth on Corner Lot	100'
Min. Lot Size	5,500 S.F.

NOTE: Lots within cul-de-sacs, standard knuckles or modified knuckle configurations shall provide a minimum 35-foot lot width at front property line and shall meet the minimum lot width established for the Planning Area at the building setback. All minimum side and rear yard setbacks shall be maintained at all times.

Minimum Setbacks

All front and corner side setbacks are measured from the property line at back of sidewalk.
All other setbacks are measured from property line unless otherwise noted.

Front Setbacks

Living Area	20'
Porch with Single Story Plate Line [2]	12'
Front Entry Garage [3]	18'
Turn In Garage with Single Story Plate Line	10' (Street Facing 18')

Side Setbacks [4]

From Interior PL [1]	5'
From Residential Street - First Story [6]	10'
From Residential Street - Porch	8'
Side for Garages (Min. 10' Between Garages)	3'
Garage to Back-of-Sidewalk	18'
Patio Cover	3'

Rear Setbacks

Main Structure	15'
Garage (Single Story Plate Line)	5'
Patio Cover	5'
Second Story Deck	10'
Accessory Structure	3'

Lot Coverage

Maximum Coverage	55%

Maximum Building Height

Main Structure	35'
Accessory Structures	14'

Walls, Fences and Hedges

Maximum Height in "The Avenue" and/or front or corner side yard areas	3'
Maximum Height at all other Locations	6'
Maximum Height of Retaining Walls	3'
Maximum Height Solid Rear Yard Property Walls adjacent to Pocket Parks	3'

Parking Minimum Number of Parking Spaces Required: 2 Garage Spaces

Recreational Vehicle (RV) storage is prohibited in front or corner side yards. RV Street parking, over 72 hours, is prohibited.

Table 3b - Product Type 1B Development Standards[11]

Typical lot sizes: 60'x85', 50'x110', 55'X90', 50'/55'x100', 55'x105' (4,250 - 5,775 SF Lots)

Lot Criteria

Min. Lot Width at Front PL for Standard Lot	50'
Min. Lot Width on Corner	55'
Min. Lot Depth on Standard Lot	85'
Min. Lot Depth on Corner Lot	85'
Min. Lot Size	4,250 S.F.

NOTE: Lots within cul-de-sacs, standard knuckles or modified knuckle configurations shall provide a minimum 35-foot lot width at front property line and shall meet the minimum lot width established for the Planning Area at the building setback. All minimum side and rear yard setbacks shall be maintained at all times.

Minimum Setbacks

All front and corner side setbacks are measured from the property line at back of sidewalk.
All other setbacks are measured from property line unless otherwise noted.

Front Setbacks

Living Area	12'
Porch with Single Story Plate Line (2)	8'
Front Entry Garage (3)	18'
Turn In Garage with Single Story Plate Line	10' (Street Facing 18')

Side Setbacks (4)

Maximum Height at Retaining Walls (10)	3’

Parking Minimum Resident Parking Required:

1.75 spaces per one-bedroom unit including 1 in a garage, 2 spaces per two-bedroom unit including 1 in a garage and 2.5 spaces per three or more bedroom unit including 1 in a garage.

Minimum Guest Parking Required:

1 Space for each 4 units under 50 on the building lot.

1 Space for every 5 units between 51-100 units on the building lot. Public on-street parking may be counted toward guest requirement. Recreational Vehicle (RV) storage is prohibited in front or corner side yards. RV Street parking, over 72 hours, is prohibited.

~~Footnotes:~~ New page added for all footnotes after Table 3l

~~(1) Architectural projections may encroach a maximum of 3’ into setbacks~~
~~(2) The minimum depth of a porch shall be 7 feet with a minimum area of 70 S.F.~~
~~(3) If front entry garages are adjacent there shall be a minimum of 3’ garage face offset with the adjacent garage~~
~~(4) Side yard slopes may not encroach more than 50% into side yard setback areas~~
~~(5) Minimum 8’ setback from the back of the sidewalk~~
~~(6) Side setback measured from the property line at back of sidewalk excluding corner intersection cutoffs~~
~~(7) Second story on corner lots is 15’ average~~
~~(8) Articulation on rear elevations of alley loaded projects to be City approved~~
~~(9) Except at corner lot~~
~~(10) Stepped walls allowed~~

Table 3k - Product Type 8 Development Standards[11]

Typical product type: Autocourt-Greater than 20 Du/Ac

Lot Criteria	
Min. Project Area	3 acres
Minimum Perimeter Setbacks	
From Neighborhood Edge	15’
Internal Setbacks	
From Residential Street R.O.W. or parking area	10’
Building to sidewalk	3’
Driveway Apron	3’ min.
Minimum Building Separation	
Front to Front	25’
Front to Side	25’
Side to Side	15’
Porch to Porch	15’
Rear to Rear	30’
Side to Drive Aisle	15’
Front to parking stall	10’
Lot Coverage	
Maximum Coverage	55%
Dwelling Units Per Building	10 min.-55 max.
Maximum Building Height	
Main Structure	45’
Walls, Fences and Hedges	
Maximum Height in Traffic Safety-Site Areas and/or front or corner side yard areas	3’
Maximum Height at all other Locations	6’
Maximum Height at Retaining Walls (10)	3’

Parking

1.75 spaces per one-bedroom unit including 1 in a garage, 2 spaces per two-bedroom unit including 1 in a garage and 2.5 spaces per three or more bedroom unit including 1 in a garage.
Minimum Guest Parking Required:
1 Space for each 4 units under 50 on the building lot.
1 Space for every 5 units between 51-100 units on the building lot. Public on-street parking may be counted toward guest requirement. Recreational Vehicle (RV) storage is prohibited in front or corner side yards. RV Street parking, over 72 hours, is prohibited.

Any public street parking can not be counted towards meeting the parking requirement.
See Section 5.4.1.N. for Tandem Parking.

Open Space

Private open space per unit in balcony or patio- ground floor 150 S.F. with min. 8’ dimension and all other floors 50 S.F. with min. 5’ dimension.
Common open space per unit - 250 S.F. with min. 15’ dimension.
See section 5.4.1.0. for open space requirement for a gated multi-family projects.

Table 3I - Product Type 9A and 9B Development Standards(11)

Typical product type: Apartments max. 25 Du/Ac

Lot Criteria	
Min. Project Area	3 acres
Minimum Perimeter Setbacks	
From Neighborhood Edge	15’
To Carport or Garage	5’
Internal Setbacks	
From Residential Street R.O.W. or parking area	10’
Building to sidewalk	3’
Minimum Building Separation	
Front to Front	25’
Front to Side	25’
Side to Side	20’
Porch to Porch	20’
Rear to Rear	30’
Side to Drive Aisle	10’
Front to parking stall	10’
To Carport or Garage	10’
Lot Coverage	
Maximum Coverage	55%
Dwelling Units Per Building	10 min.-55 max.
Maximum Building Height	
Main Structure	45’
Walls, Fences and Hedges	
Maximum Height in Traffic Safety-Site Areas and/or front or corner side yard areas	3’
Maximum Height at all other Locations	6’
Maximum Height at Retaining Walls (10)	3’
Parking	
Minimum Resident Parking Required:	
1 space per bedroom (1 in garage per unit)	
Minimum Guest Parking Required:	
0.25 space per unit	
A parking study shall be completed and approved by the city for each community.	
Any public street parking can not be counted towards meeting the parking requirement.	
See Section 5.4.1.N. for Tandem Parking.	
Open Space	
Private open space per unit in balcony or patio- ground floor 100 S.F. with min. 10’ dimension and all other floors 50 S.F. with min. 10’ dimension.	
Common open space per unit -250 S.F. with min. 15’ dimension.	
See Section 5.4.1.O. for open space requirement for a gated multi-family projects.	

Footnotes:

(1) Architectural projections may encroach a maximum of 3' into setbacks

(2) The minimum depth of a porch shall be 7 feet with a minimum area of 70 S.F.

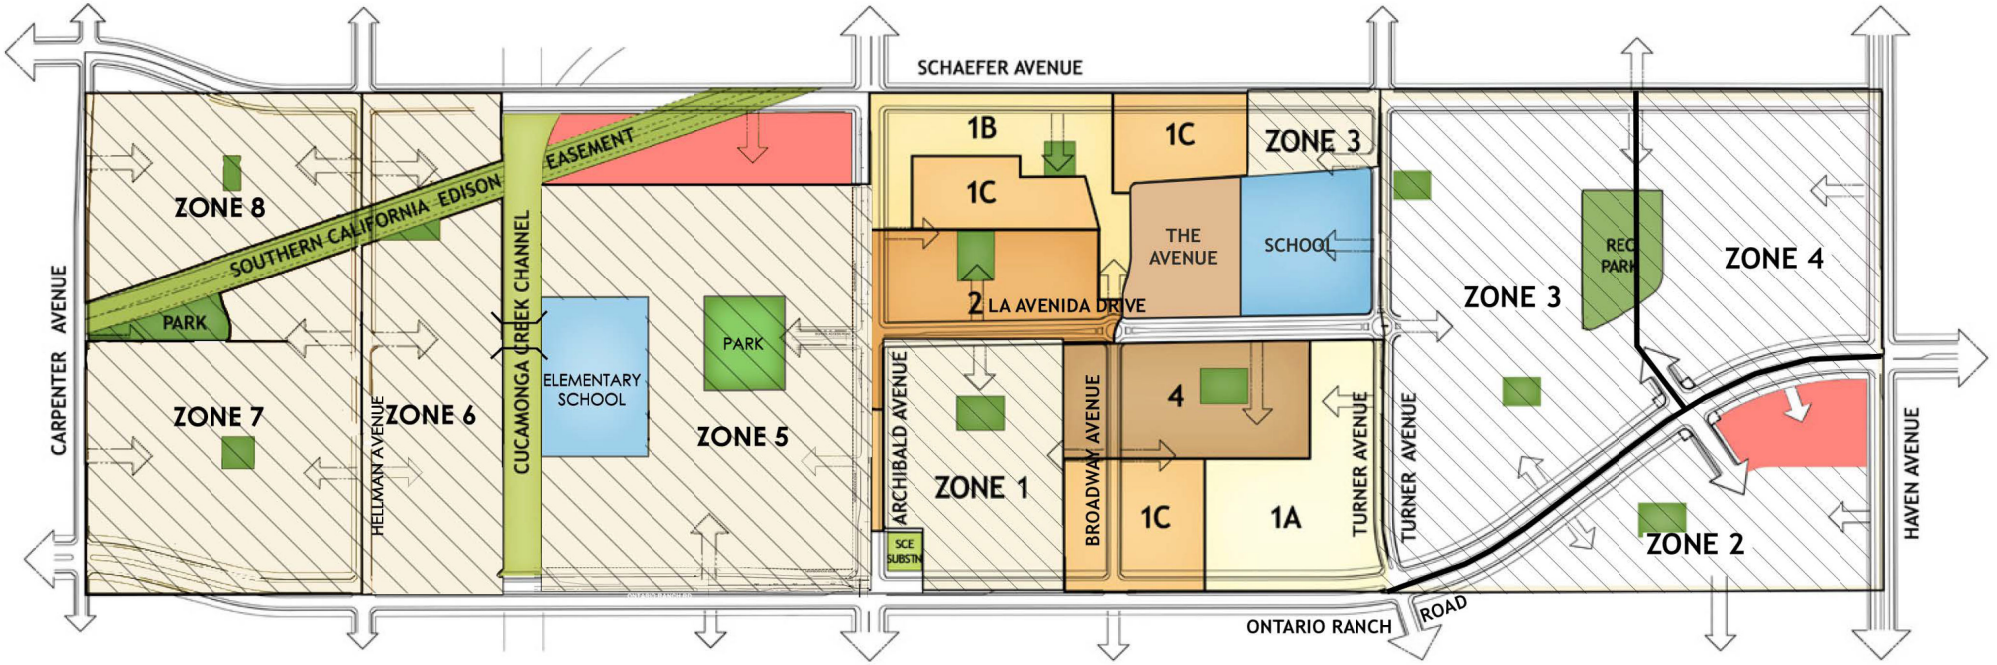
(3) If front entry garages are adjacent there shall be a minimum of 3' garage face offset with the adjacent garage

(4) Side yard slopes may not encroach more than 50% into side yard setback areas

(5) Minimum 8' setback from the back of the sidewalk

(6) Side setback measured from the property line at back of sidewalk excluding corner intersection cutoffs

(7) Second story on corner lots is 15' average



(8) Articulation on rear elevations of alley loaded projects to be City approved

(9) Except at corner lot

(10) Stepped walls allowed

(11) All new entitlements shall be subject to consultation with the Gabrieleno Band of Mission Indians – Kizh Nation and the San Manuel Band of Mission Indians - Serrano Nation

Revised Exhibit

Conceptual Product Distribution

The Avenue SPECIFIC PLAN

Ontario Ranch ▪ Ontario, California

Exhibit 26 - Conceptual Product Distribution

5.4.3 Low Density Residential Permitted and Conditional Uses

This category includes the development of single family detached dwelling units. The purpose of the residential standards for single family detached housing is to establish the minimum criteria for the development of these product types on individual lots within the neighborhoods specified within the plan area.

A. Permitted Uses

1. Single family detached dwellings including live/work units and their accessory uses
2. Single family attached dwellings
3. Public or private parks
4. Recreational buildings including swimming pool
5. Child day care facilities serving up to seven (7) children (per State guidelines)
6. Schools
7. Accessory uses to include the following:
    a. Garages
    b. Granny Flats (i.e. Second Dwelling Units, in accordance the City's Zoning Code)
    c. Home occupations
    d. Swimming pools, spas, sports courts, and other similar outdoor recreational amenities
    e. Patios and patio covers
    f. Storage, garden structures, cabanas, and greenhouses
    g. Monument signs
    h. Temporary uses such as model home and subdivision sales trailers, temporary construction parking, offices, and facilities, real estate signs, signage indicating future development and directional signage
    i. Second story additions to single family dwelling units

B. Conditionally Permitted Uses

1. Places of worship including but not limited to churches and synagogues
2. Child day care facilities serving eight (8) to 14 children (per State guidelines)

5.4.4 Low Medium Density Residential Permitted and Conditional Uses

This category includes the development of single-family and multi-family attached type dwelling units.

A. Permitted Uses

1. Single family detached dwellings including Cluster SFD and Mews SFD, single-family attached and multi-family attached dwellings
2. Public or private parks
3. Recreational buildings including swimming pool
4. Child day care facilities serving up to seven (7) children (per State guidelines)
5. Schools
6. Accessory uses to include the following:
    a. Garages
    b. Granny Flats (i.e. Second Dwelling Units, in accordance with City Zoning Code)
    c. Home occupations
    d. Swimming pools, spas, tennis courts, sports courts, and other similar outdoor recreational amenities
    e. Patios and patio covers
    f. Mailboxes
    g. Community center buildings
    h. Maintenance storage buildings
    i. Monument signage
    j. Temporary uses such as model units, sales offices, and subdivision sales trailers, temporary construction offices and facilities, real estate signs, signage indicating future
    k. Second story additions to single dwelling units

B. Conditionally Permitted Uses

1. Places of worship including but not limited to churches and synagogues
2. Child day care facilities serving eight (8) to 14 children (per State guidelines)

5.4.5 Medium Density Residential Permitted and Conditional Uses

This category includes the development of single-family and multi-family attached type dwelling units.

C. Permitted Uses

1. Single family attached and multi-family attached dwellings
2. Public or private parks
3. Recreational buildings including swimming pool
4. Child day care facilities serving up to seven (7) children (per State guidelines)
5. Schools
6. Accessory uses to include the following:
    a. Garages
    b. Home occupations
    c. Swimming pools, spas, tennis courts, sports courts, and other similar outdoor recreational amenities
    d. Patios and patio covers
    e. Mailboxes
    f. Community center buildings
    g. Maintenance storage buildings
    h. Monument signage
    i. Temporary uses such as model units, sales offices, and subdivision sales trailers, temporary construction offices and facilities, real estate signs, signage indicating future

B. Conditionally Permitted Uses

1. Places of worship including but not limited to churches and synagogues
2. Child day care facilities serving eight (8) to 14 children (per State guidelines)
3. Age-restricted/Senior Housing and apartments (MDR only)

5.4.6 Commercial Development Standards[(1)]

Minimum Lot Area

Minimum lot size shall be large enough to accommodate the proposed use and meet all Development Standards as specified within the Specific Plan. Minimum site area shall be 4 acres; however, the site area may be less when developed as part of an integrated commercial center.

Building Setbacks

Building setbacks shall be determined by the hierarchy of streets (major arterial and local streets) and measured from PL for local streets and RW for Major Arterials. All setback areas are to be landscaped. These landscape area setbacks are:

From Ontario Ranch Road Right-Of-Way	35 feet
From Haven Avenue Right-Of-Way	14 feet
Archibald Avenue Right-Of-Way	19 feet
Schaefer Avenue Right-Of-Way	10 feet
From Private or Local Street (from required 5' min. sidewalk)	10 feet
From Interior Property Line	0 feet
From Interior Property Line Adjacent to Residential District	25 feet ~~(if adjacent to loading areas)~~

Maximum Development Floor Area Ratio (FAR) shall be 0.35.
Maximum Height shall be 35 feet, excluding architectural projections and focal elements such as towers and cupolas.

Loading Areas

All loading areas shall be screened from adjacent public streets, residential and open space use through the use of landscaping, earthen berms, and/or decorative walls or fencing. All storage including cartons, containers, materials, or trash shall be shielded from view within a building or area enclosed by a solid fence or wall not less than six feet in height.

Parking Setbacks

All parking setback areas are to be landscaped as follows:

From Ontario Ranch Road Right-Of-Way	35 feet
From Haven Avenue Right-Of-Way	14 feet
Archibald Avenue Right-Of-Way	19 feet
Schaefer Avenue Right-Of-Way	10 feet
From Private or Local Street	10 feet
From Interior Property Line	5 feet
From Interior Property Line Adjacent to Residential District	5 feet

Footnote:
(1) All new entitlements shall be subject to consultation with the Gabrieleno Band of Mission Indians - Kizh Nation and the San Manuel Band of Mission Indians - Serrano Nation

Wall and Fences

When a non-residential use adjoins a residential district, a 6-foot high decorative masonry wall shall be required at the interior side and/or rear property lines. Proposed walls in excess of 6 feet in height shall be designed to retain up to a maximum of 3 feet of earth. In no case, however shall a wall exceed an overall height of 9 feet (maximum 6-foot high wall on top of a maximum 3-foot height retaining wall).

5.4.7 Commercial Permitted and Conditional Uses

List of Permitted uses in the Commercial Zone:

Administrative, Professional, and Other Offices

Advertising Agency

Animal Hospital/Veterinarian

Antique Stores

Art Galleries and Art Supply Store

Auditoriums and Other Public Assembly Facilities

Automotive Parts and Accessories Stores (Retail Sales Only)

Automotive Services (i.e. tune-up, emission tests, batteries, etc. — no use of impact wrenches or other equipment that could create noise impacts)

Bakery

Banks, Credit Unions and other Depository Institutions

Barber Shop and Beauty/Nail Salon

Beauty Supply Store

Book Stores

Camera and Photographic Supply Store

Catering establishments

Charitable, Philanthropic, Service and other Non-Profit Organization Offices

Cigar and other Tobacco Products Store

Clothing and Accessory Stores

Communications equipment — Refer to Development Code Section 9-1.3289

Computer and Home Electronic Stores

Computer, Home Electronics, and Small Home Appliances (when ancillary to another use)

Convenience Market (per Development Code Section 9-1.1305)

Dance/Studio (Instructional)

Delicatessen

Discount Variety Store

Dry Cleaners

Fast Food

Florist

General Merchandise Stores

Grocery Store/Supermarket

Hardware Store

Health Club/Gymnasium — less than 2,000 square feet

Hobby, Toy and Game Store

Jewelry and Watches/Clocks

Jewelry Store

Laundry Self Serve

Library Locksmith/Key Shop

Luggage and Leather Goods

Medical Office

Minor Auto Repair (i.e. brakes, tires, radiators, electrical, etc)

Money Transmitting

Music and Video Stores

Office Supply, Stationery and Gift Stores

Other Financial Services

Pet and Pet Supply Store

Pet Grooming — Commercial

Pharmacies and Drug Stores w/o drive thru facilities

Photocopying and Duplicating Services

Photography Studio

Police Storefront/Substation

Police/Fire Station

Restaurants (sit down/full service)

Shoe Repair or Shoe Store

Specialty Food Stores

Sporting Goods Store

Tailor

Thrift and Second Hand Store

Travel Agency

List of Conditionally-Permitted uses in the Commercial Zone:

Alcoholic Beverage Sales

Ambulance Service (Office Only — No Storage of Vehicles)

Assisted Living/Congregate Care

Banks, Credit Unions and other Depository Institutions (with drive thru, see Development Ordinance Section 9-101305 D)

Banquet Facilities

Bar/Cocktail Lounge

Billiard Parlor/Pool Hall

Bowling Alley

Building Materials and Garden Supply

Car Wash — Full

Car Wash Self Service (Ancillary)

Charitable Distribution Services (i.e. food banks, etc.)

Check Cashing, Check/Payday Advance

Church

Commercial Day care

Convalescent Care Facility (w/continuous skilled nursing care)

Exterminating Service per Development Ordinance Section 9-1.1305 E

Fast Food with Drive-through (per Development Code, Section 9-10305D) Funeral Parlor, Mortuary

Gas Stations (per Section 9-1.1305 G)

Health Club Gymnasium — over ~~2,000~~ 10,000 square feet

Home Appliance Store

Liquor Store

Live Entertainment

Pawnshop/Pawnbroker

Pharmacies and Drug Stores with drive thru facilities

Public Storage (PA-4 Only)

Simulated Shooting Games (Indoor)

Skating Rink

Substance Abuse Clinics/Facilities

Theater

Tire Stores

Video/Electronic Game Arcades (per Development Code Section 9-101305V)

Vocational/Trade Schools

5.5 Maintenance

The public and private improvements constructed within The Avenue Specific Plan will be maintained through a combination of public and private entities as described below and in Table 4, "Maintenance Responsibility Matrix".

5.5.1 Public Maintenance

1. All residential development areas will be dedicated as public streets (excluding private drive ways) to the City of Ontario and will be maintained by the City.
2. The SCE Corridor Trail within the SCE owned property will be constructed by the developers of the Specific Plan Area and maintained by the City.
3. The City will maintain landscaping of master-planned arterial streets and "curb-to-curb" on internal streets through the creation of an Operations and Maintenance Community Facilities District. Parkway improvements within the right-of-way of residential areas along interior streets and private drives shall be maintained by Homeowners Associations. Parkway improvements along interior streets and driveways within the retail and commercial center shall be maintained by the property owners of each respective center.
4. Public storm drain, sewer, and water easements shall be dedicated to the City as deemed necessary by the City.
5. All on-site water, sewer, and storm drains within public streets or easements dedicated to the City shall be constructed by the developer and, upon acceptance, shall be maintained by the City.
6. Off-site infrastructure improvements such as water, sewer and storm drain facilities, will be constructed/installed by the developer and maintained by the City.
7. During the course of maintenance of public utilities (including storm drain) within private and public streets, the City will pave the streets and restore landscaping per City standards. Restoration of any enhancements above and beyond City standards, including but not limited to architectural, hardscaping and landscaping enhancements shall be the responsibility of the HOA or other entity maintaining those enhancements. This applies to all areas where public utilities are located including but not limited to public and private streets, gated communities, private drives, etc.

8. Project Financing – The financing of construction, operation, and maintenance of public improvements and facilities ("the facilities"), and public services will include funding through a combination of financing mechanisms. Final determination as to the facilities to be constructed and as maintenance responsibilities, whether publicly or privately maintained, will be made prior to recordation of the final maps. In order for the project to be fiscally self-sufficient, the following financing options can be considered for implementation:

Facilities and Services

- Private capital investment for the construction of facilities.
- Community Facilities District (CFD) established pursuant to the Mello-Roos Community Facilities District Act of 1982, or other special district, to provide funding for the construction of a variety of public facilities and the provision of public services.

Operation and Maintenance

- By individual private property owner.
- By private, Property Owners or Home Owners Association.
- By Community Facilities District (CFD) established pursuant to the Mello-Roos Community Facilities District Act of 1982, or other special district.

5.5.2 Private Maintenance

A Master Homeowner association will be established for the maintenance of common area landscape improvements within the residential portion of The Avenue Specific Plan. Private improvements to be maintained by the homeowner association include:

- Private alleys and adjacent landscaping within the residential development areas
- Courts, parkways and landscaping within the residential areas
- Streets and Landscape areas that have architectural enhancements
- Walkways and common areas distinct to individual residential types and neighborhoods
- Recreational facilities including the country market
- Internal slopes fronting streets and slope areas in the rear of homes
- All internal open spaces, parks, and common areas at neighborhood entries
- Drives and on-site circulation within the retail and commercial areas

5.5.3 Maintenance Responsibility

Table 4 - Maintenance Responsibility Matrix

	City and/or Special District	Private Homeowners Association or Property Owners Association	Private Homeowners	Utility Entity
Master Plan Roadways (Ontario Ranch Road, Haven, Schaefer, Hellman, Archibald Avenue)	X			
Interior Public Streets - Curb to Curb (Primary Entry St., Secondary Entry Streets, Neighborhood Streets)	X			
Traffic Signals and Street Lights in the public street right-of-way	X			
Traffic Control Signs	X			
Alleys including pavement area improvements between curb improvements		X		
Interior public streets-behind the curb improvements (sidewalk, parkway and monument signs)		X		
Parkways and Neighborhood Edges of Master Plan Roadways	X			
Off-site and on-site public water, sewer and storm drain improvements (excluding laterals) (Only those facilities in public roads and those in private streets within public utilities easements that meet public improvement design criteria) (1)	X			
On-site water, sewer, and storm drain improvements (improvements that are: private, laterals, and lines behind meters and/or DCDAs, improvements serving only one lot/ parcel, not within public or private roads, not within public utility easements, or not meeting public improvement design criteria)		X	X	
Private Recreation Areas		X		
Pocket Parks		X		
Linear Parks		X		
Community Trail (SCE Corridor Trail)	X			
Front Yard/Corner Streetside Landscaping Areas (LDR)			X	
Front Yard/Corner Streetside Landscaping Areas (MDR)		X		
Private Interior Yard Walls		X	X	
Community Theme Wall (Outside Face for Graffiti Removal and Paint)	X			

Table 4 - Maintenance Responsibility Matrix (continued)

	City and/or Special District	Private Homeowners Association or Property Owners Association	Private Homeowners	Utility Entity
Community Theme Wall on Master Planned Roadways: Surface (interior) opposite streetside (Structural Integrity and Face Repair)		X		
Interior Tract Graffiti Removal		X		
Community/Neighborhood Entries (within the right-of-way)	X			
Parkways and Neighborhood Edge of all Master Plan Roadways	X			
Neighborhood Edge on all non-Master Plan Roadways		X		
Parkways of all Interior Project Streets (Including Landscaping, Medians, and Sidewalks) (2)		X		
Alley Landscaping and Lighting		X		
Monument Signs (within Neighborhood edges on Master Plan Roadways)		X		
Monument Signs within tract entry		X		
Electricity and Natural Gas				X
Communications Systems	X			X
Police and Fire	X			
Fiber Optic Conduit (in ~~NMC~~ Ontario Ranch streets)	X			
Fiber Optic Conduit (in-tract streets)	X			
NPDES Facilities (off-site)/W.Q.M.P (1)	X			

(1) Only those facilities in public roads or easements

(2) Only those facilities on private property

(3) Including restoration work following public street repairs

5.6 Modifications and Plan Amendment Process

5.6.1 Minor Modifications

The following constitute minor modifications to The Avenue Specific Plan, not requiring a Specific Plan Amendment, and are subject to review and approval by the Zoning Administrator. The Zoning Administrator shall have the discretion to refer any such request for modification to the Planning Commission or the City Council.

A. Change in utility and/or public service provider

B. Adjustment of a neighborhood boundary provided the total acreage of the affected area does not increase or decrease by more than 15% the total acreage stated in the approved The Avenue Specific Plan

C. Minor changes to landscape materials, wall materials, wall alignment, entry design, and streetscape design which are consistent with the conceptual design set forth in the design guidelines contained within The Avenue Specific Plan

D. Minor changes to the Design Guidelines, which are intended to be conceptual in nature only, and are intended to be flexible in implementation

E. Other modifications of a similar nature to those listed above, which are deemed minor by the Director, which are in keeping with the purpose and intent of the approved The Avenue Specific Plan and which are in conformance with the General Plan

F. The Avenue Specific Plan land use plan allocates density to each Planning Area. Variations in allocation of density between the Planning Areas of The Avenue Specific Plan is permitted provided the variation does not exceed a net of 15% and the maximum dwelling unit count of 2,875 units established for the Specific Plan is not exceeded.

5.6.2 Specific Plan Amendments

Amendments to The Avenue Specific Plan may be requested by the applicant or by the City at any time pursuant to Section 65453(a) of the Government Code. Amendments shall be processed pursuant to the provisions of the Government Code for Specific Plan Amendments. In the event the proposed amendment requires supplemental environmental analysis pursuant to the California Environmental Quality Act (CEQA), the applicant(s) will be responsible for preparing the necessary CEQA documentation.

5.7 Airport Land Use Compatibility Planning Consistency

All development proposals or Specific Plan Amendments are required to be consistent with the Airport Land Use Compatibility Plans of Chino Airport and Ontario International Airport. The Project Site is located within the Airport Influence Areas of Chino Airport and Ontario International Airport (ONT). The ALUCP for ONT was adopted in April of 20II and the project site is located outside noise and safety impact zones but is located within the Real Estate Transaction Disclosure zone due to overflight and does not place development restrictions on the property but does require disclosure to new property owners.

The Business and Professions Code Section II010 and Civil Code Sections 1102.6, 1103.4, and 1353 require that, as part of many residential real estate transactions, information be disclosed regarding whether the property is situated within an AIA. The Business and Professions Code applies the disclosure requirement to the sale or lease of newly subdivided lands and condominium conversions and to the sale of certain existing residential property. The Civil Code applies the disclosure requirement to existing residential property transfers only when certain natural conditions (earthquake, fire, or flood hazards) warrant disclosure. State Law provides the following disclosure language:

"NOTICE OF AIRPORT IN VICINITY: This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors).
Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you."

Section 6 - Design Guidelines

6.1 Introduction

All residential master planned communities seek to create a unique identity for their residents and the surrounding community. There are four main components in developing this character for The Avenue. These include:

- A strong, well defined and memorable site plan, emphasizing La Avenida Drive streetscape as a defining element
- Appropriate community amenities and facility design
- Attractive and timeless landscape architecture
- Complementary and purely themed residential architectural styles

In addition to quality site planning and facility design, the residential architectural design concept for The Avenue seeks to blend the traditional architectural styles found in the Pacific Southwest with contemporary lifestyles, building methods and technologies. The specific styles selected for this community include Spanish, Bungalow, California Ranch, Monterey and Cottage. The design aspects of each of these styles will be further described in the following guidelines.

As the individual architectural styles for each home are developed for the various neighborhoods, it is important that the underlying lifestyle defined by each architectural style is considered in the development of the floor plans to help maintain architectural authenticity. The creation of successful floor plans and elevations will always be a function of good design, coupled with the incorporation of contemporary lifestyles and building standards.
Builders may submit home designs using alternative architectural styles to those listed, provided they are consistent with the Specific Plan, and appropriate to the region, environment, and setting.

The architectural character of The Avenue should provide:

- A unique and interesting architectural heritage as the community develops
- Compatible and complementary styles, colors, materials and detailing
- Massing, setbacks and articulation which are appropriate and fundamentally sound
- Historical relevance and timelessness
- Adaptable and flexible to changing market desires

The following design guidelines address site design issues, and key elements of each architectural style.

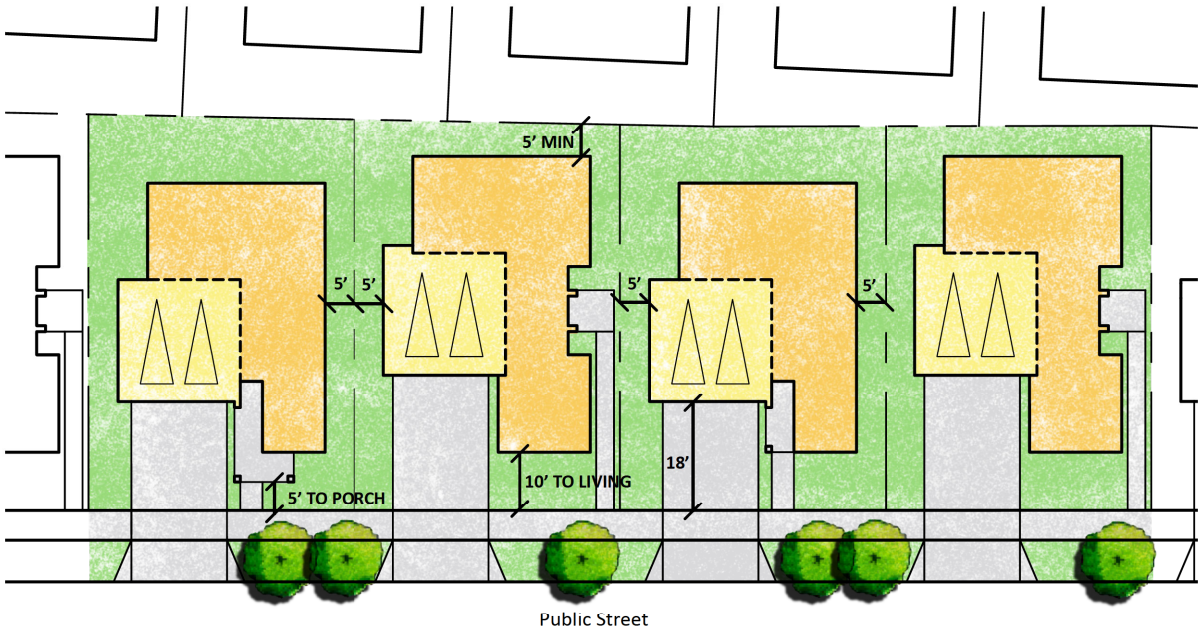
6.2 Site Planning and Design

The first critical aspect of creating an attractive and successful residential community is proper site planning. Important components of site planning include building setbacks and plotting, architectural massing and articulation, roof forms and garage placement. These components must be successfully addressed regardless of the architectural styles selected

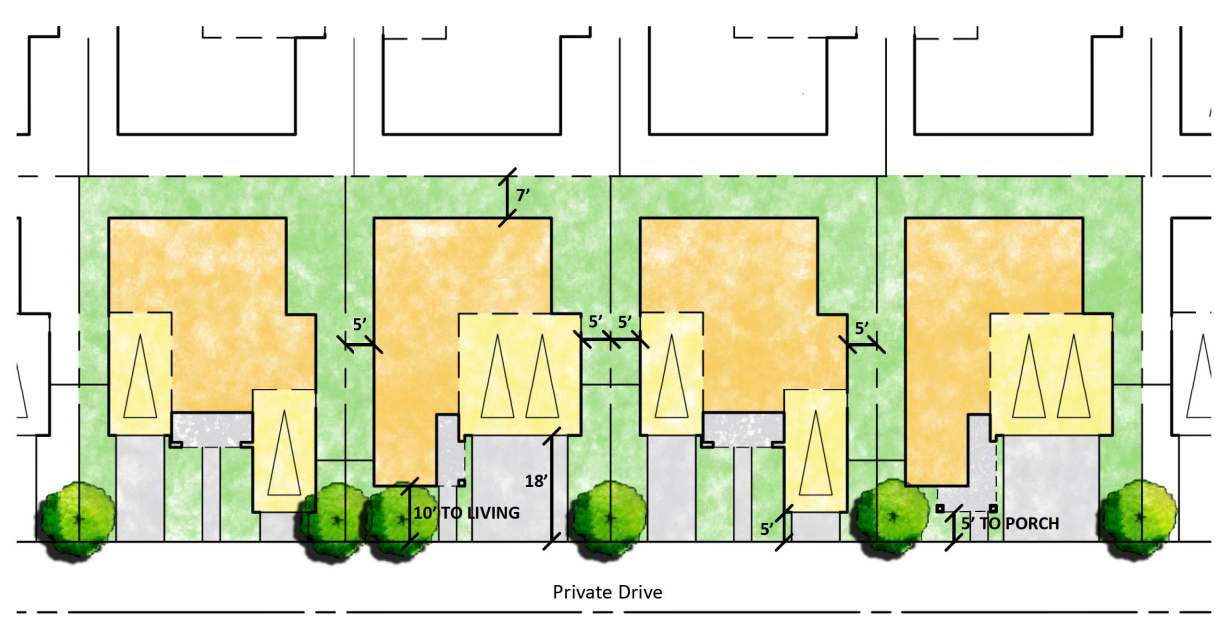
6.2.1 Setbacks and Plotting

The relationship of each building to the property lines, street frontages and to adjacent buildings should be carefully considered within each neighborhood. In addition to the minimum setback standards, variable front and rear setbacks should be incorporated into the plotting of each product type. Corner lots and critical edge conditions shall have increased setbacks to soften the impact of the architecture on the streetscape. These plot prototypes are for illustrative purposes. The Residential Development Standards (Table 3a-3j) will serve as zoning for the project upon adoption of The Avenue Specific Plan.

Lot Demonstration Plotting 5,500+ SF Lot (Product Type 1A)

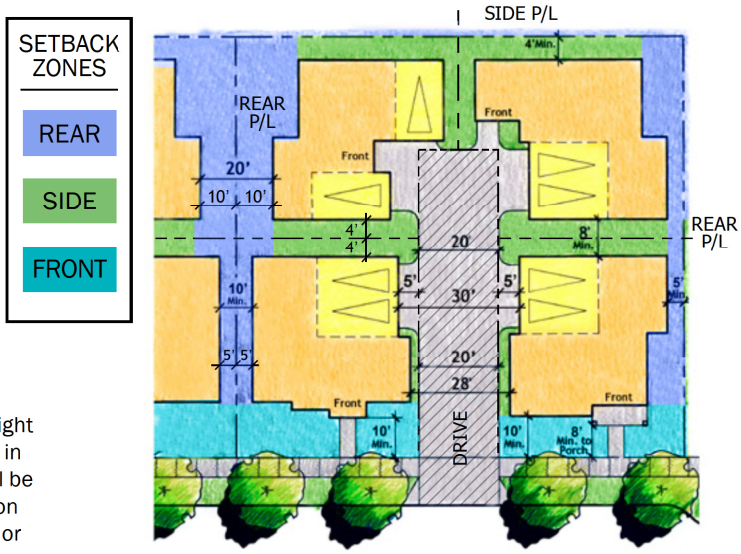


Lot Demonstration Plotting 4,250-5,775 SF Lot (Product Type 1B)



Lot Demonstration Plotting 3,200 - 5,600 SF Lot (Product Type 1C)

Lot Demonstration Plotting ~~0,000 - 0,000~~ 2,700 - 3,500 SF Lot (Product Type 1D) - Public Street



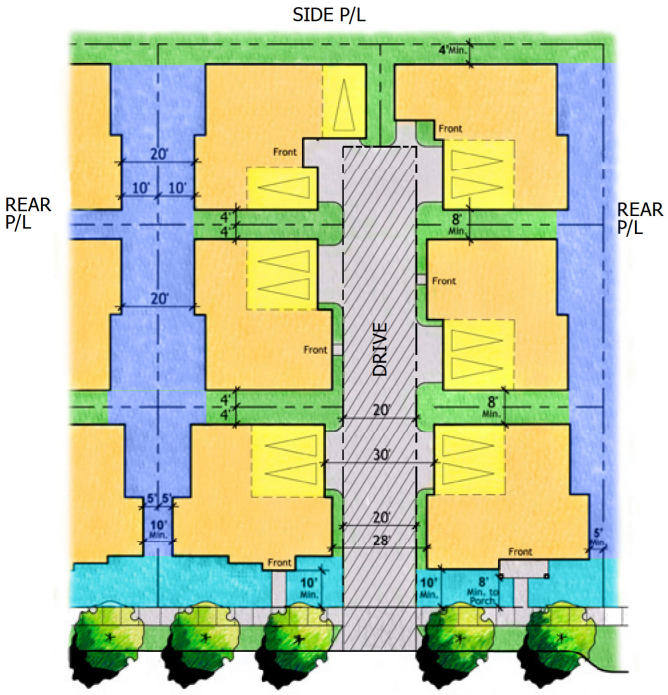
Lot Demonstration Plotting ~~0,000 - 0,000~~ 2,700 - 3,500 SF Lot (Product Type 1D) - Private Drive

Lot Demonstration Plotting 2,380 - 3,600 SF Lot (Product Type 2)

SFD 4/6 Cluster Demonstration Plotting (Product Type 3a)

NOTE: The setback zones shown in the Cluster Demonstration Plotting graphics above and to the right refer to the zones identified in Table 3e. Private lanes shall be enhanced with a combination of pavers, colored concrete or similar decorative material, subject to the review of and approval by the Planning Director.

SFD 4/6 Cluster Demonstration Plotting (Product Type 3b)



SETBACK ZONES

REAR

SIDE

FRONT

NOTE: The setback zones shown in the Cluster Demonstration Plotting graphics above and to the right refer to the zones identified in Table 3e. Private lanes shall be enhanced with a combination of pavers, colored concrete or similar decorative material, subject to the review of and approval by the Planning Director.

SIDE

FRONT

NOTE: The setback zones shown in the Cluster Demonstration Plotting graphics above and to the right refer to the zones identified in Table 3e. Private lanes shall be enhanced with a combination of pavers, colored concrete or similar decorative material, subject to the review of and approval by the Planning Director.

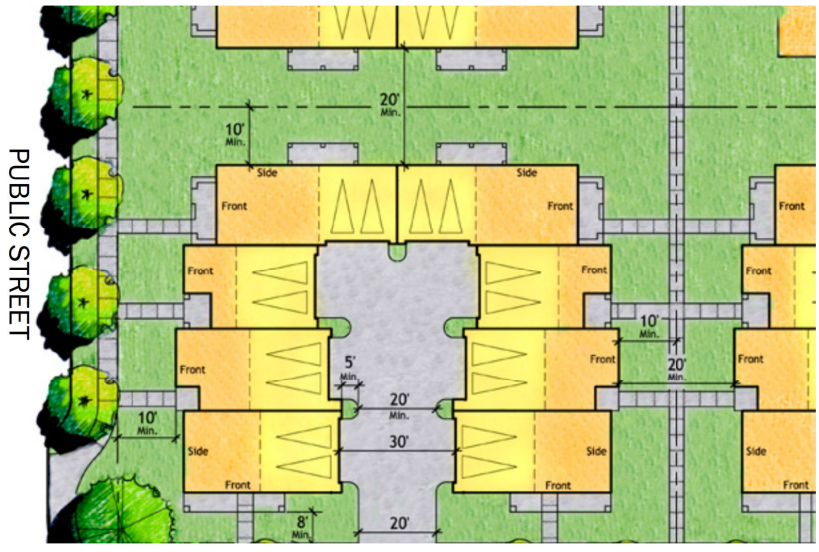
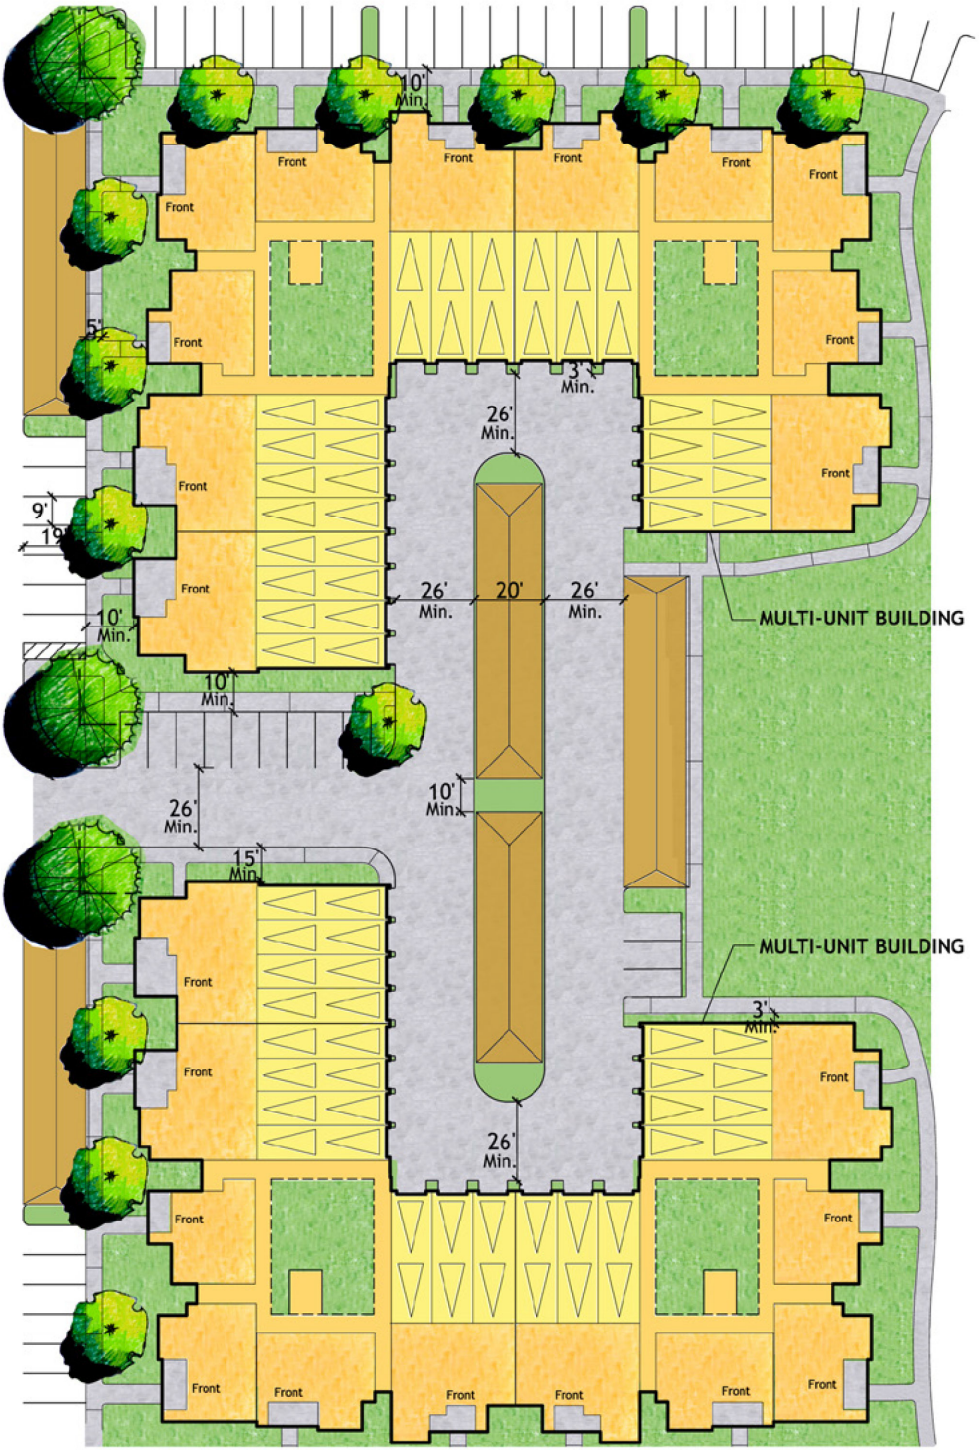
Duplex Demonstration Plotting (Product Type 4)

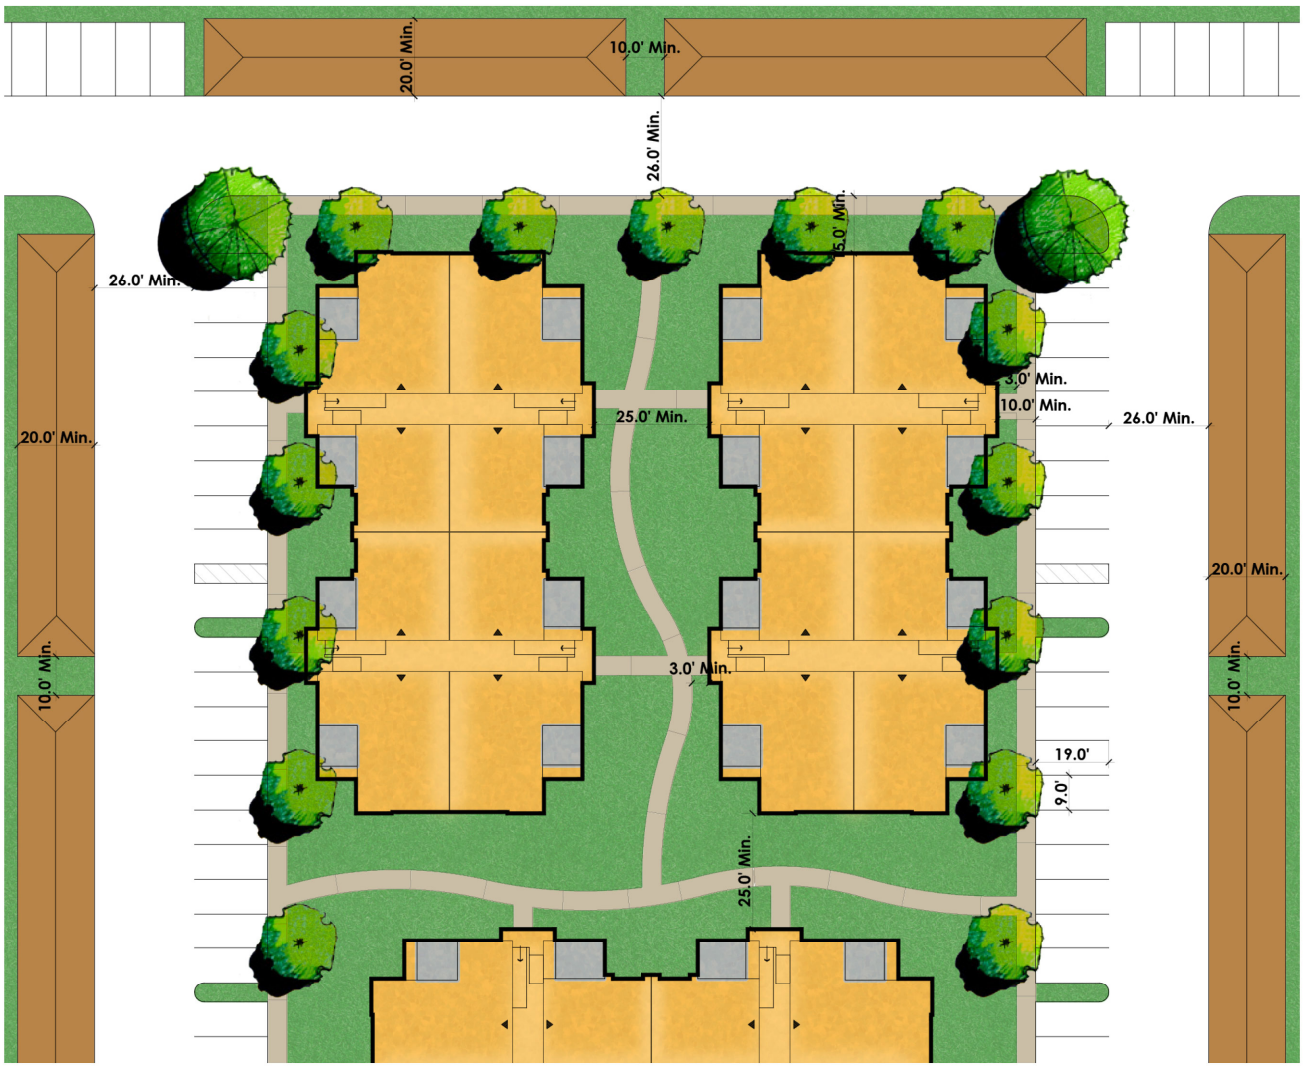


Triplex Demonstration Plotting (Product Type 5)

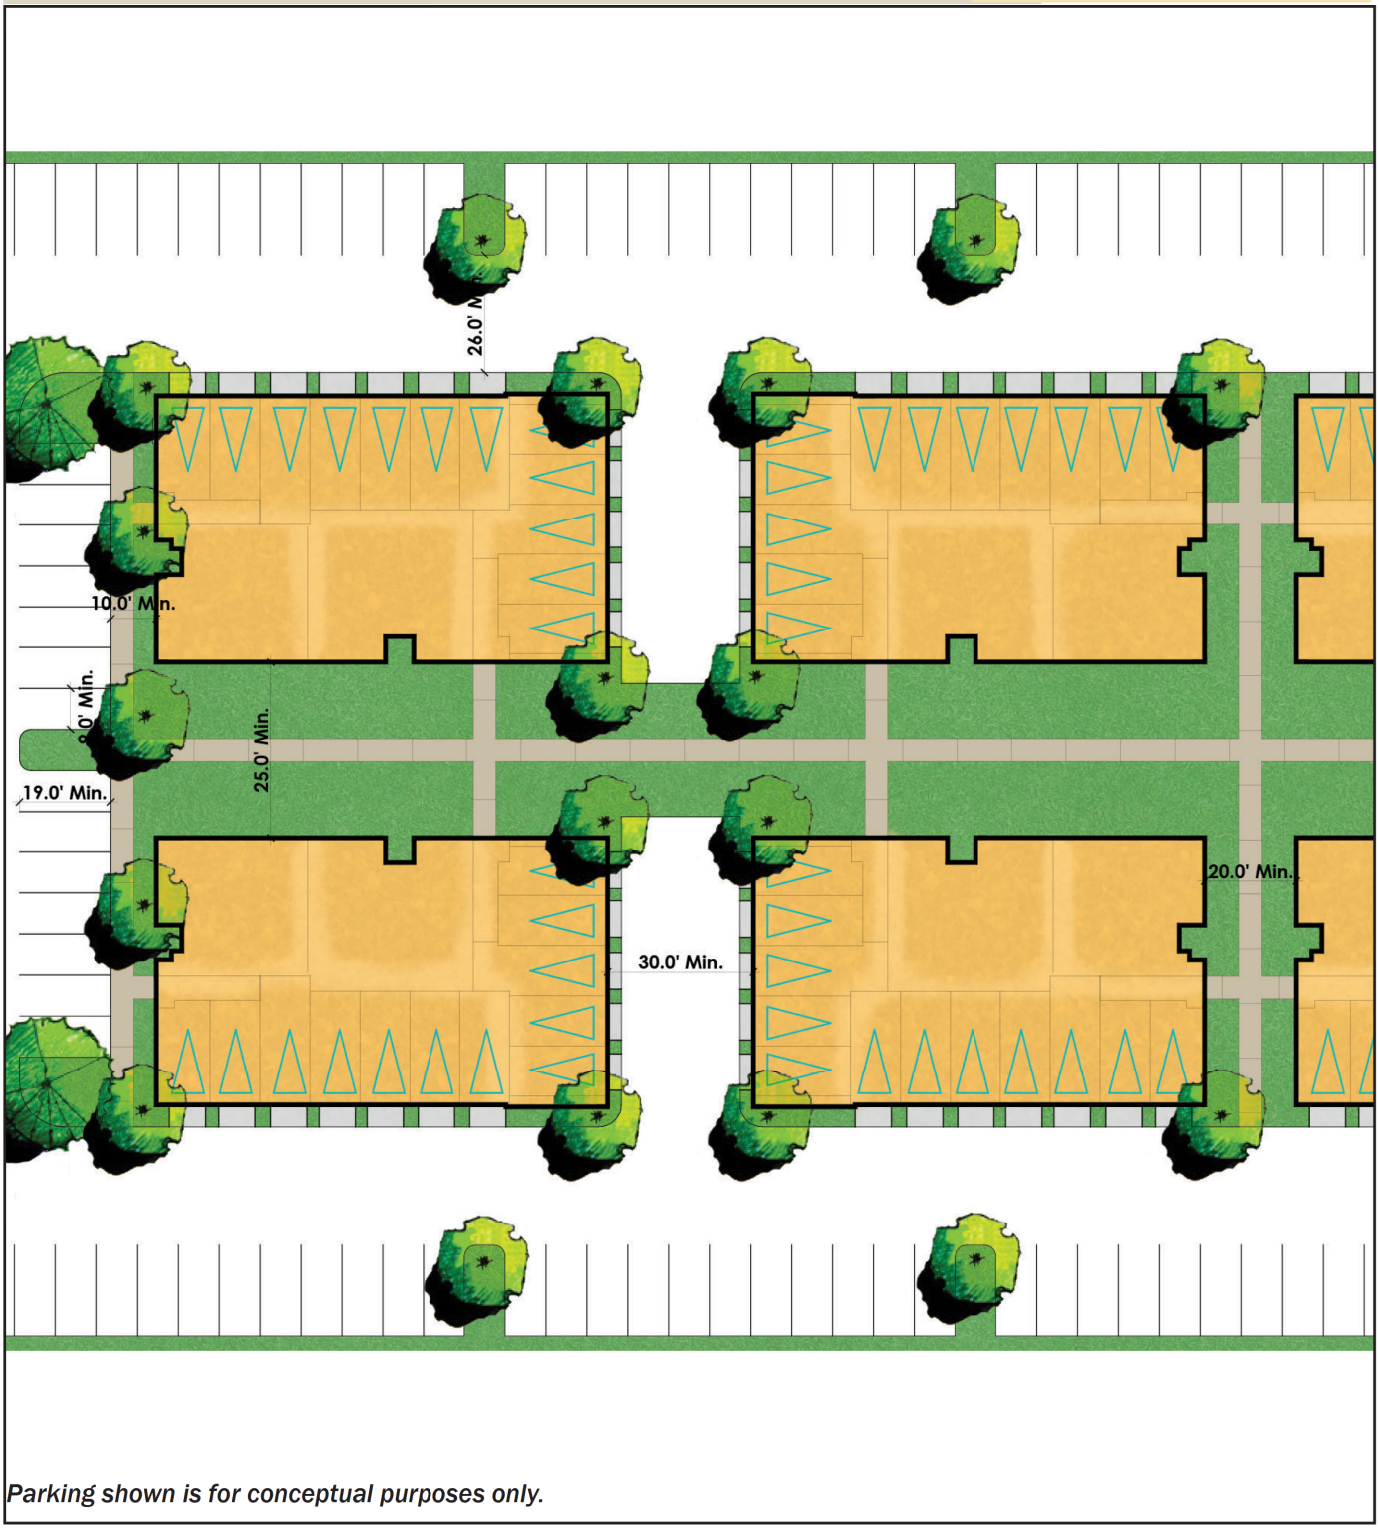


Rowtown Demonstration Plotting (Product Type 6)

Autocourt Demonstration Plotting (Product Type 7)



Autocourt (Greater than 20 DU/Ac) Demonstration Plotting (Product Type 8)



Parking shown is for conceptual purposes only. Tandem parking standards currently under review by the City of Ontario.

Apartments (Max. ~~30~~ 25 DU/Ac) Demonstration Plotting (Product Type 9A)

Parking shown is for conceptual purposes only.

Apartments (Max. ~~30~~ 25 DU/Ac) Demonstration Plotting (Product Type 9B)

Parking shown is for conceptual purposes only.

6.2.2 Architectural Massing

Building volumes shall be appropriately scaled to the individual lot sizes. The composition of the building mass shall include the incorporation of single- story elements into two-story buildings, variable setbacks along building elevations for porches, living and garage areas, the minimization of shear two- story façades, and the development of four-sided elevations through articulation and detailing.

Garage and Roof Articulation

Autocourt - Garage and Roof Articulation with Single Story Elements

6.2.3 Corner Home Placement

Special attention must be made to the treatment of architectural massing on corner lots and critical edge conditions.

Architectural elements such as porches, single story elevations, special façade materials and architectural fenestration should wrap around from front to side in these conditions whenever possible.

Wrap Around Porch and Architecture with Side Entry

Wrap Around Porch and Architecture with Side Entry

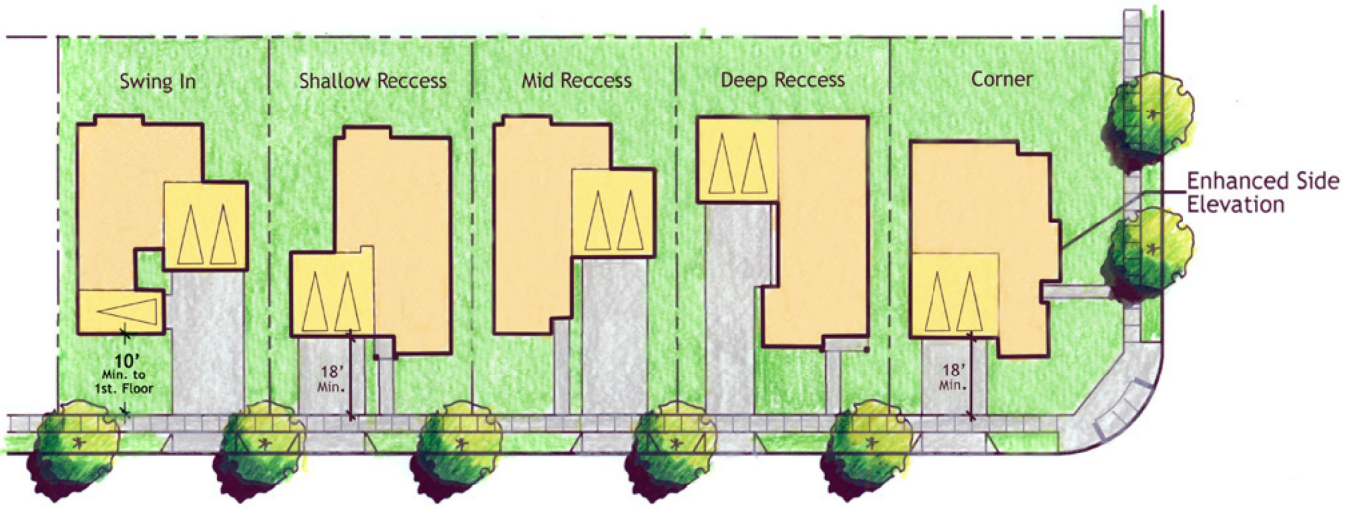
6.2.4 Roof Lines, Forms

Roof forms are critical in creating interest to the building mass. Roof forms and material finishes help blend the structures into the landscape through shadow patterns, texture, color variations and visual interruption of vertical walls and planes.

The roof forms, lines and ridges should be fenestrated and varied. Architectural features, roof intersections and roof pitches consistent with each style should be incorporated whenever possible.

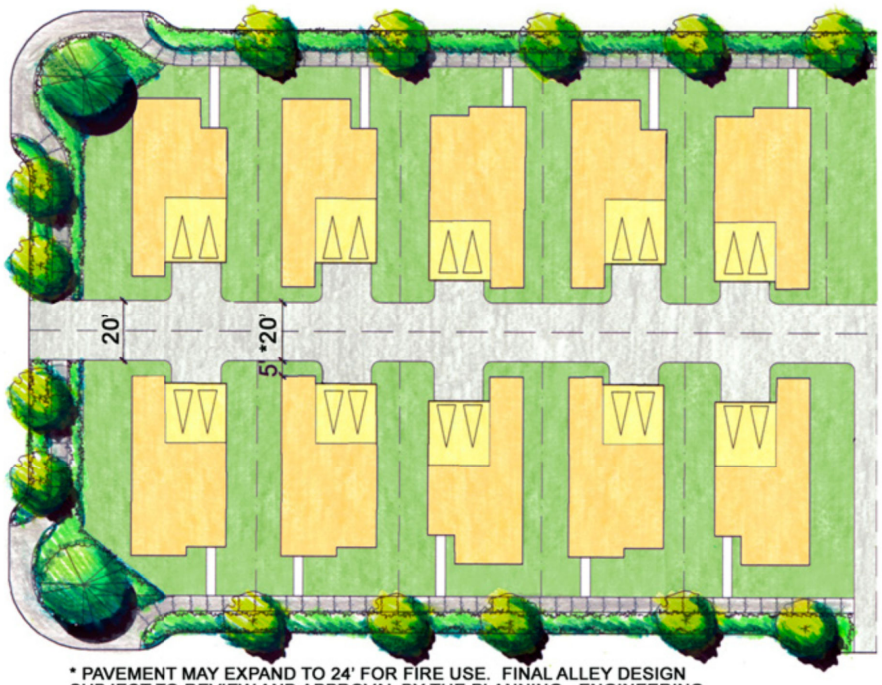
Side Entry with Wrap Around Architecture

Side Entry with Wrap Around Architecture



6.2.5 Garage Placement

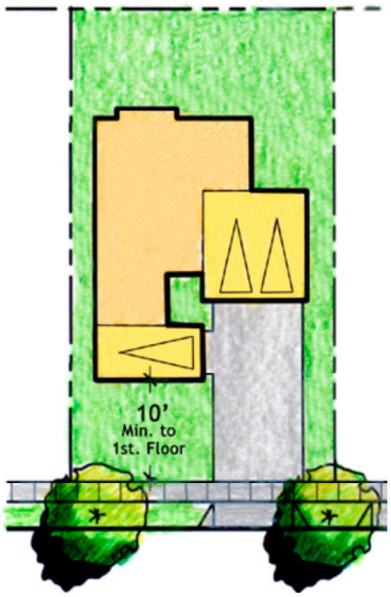
The location, configuration and orientation of the garage on each lot are an important design element, both for the composition of the dwelling and its contribution to the streetscape.



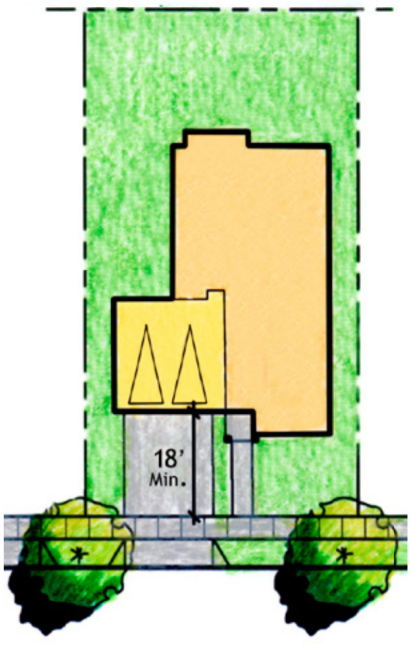
De-emphasizing the garage is important to community design. The goal is to emphasize the living areas of the home as they address the street. Placing living areas forward in lieu of a garage dominant front elevation encourages “eyes on the street” for neighborhood safety and security while establishing neighborhood orientation to the pedestrian as opposed to the automobile. Garage door patterns are encouraged to be varied among elevation types, and to reinforce the architectural theme of the dwelling.

The number of homes with the shallow recess garage condition should be limited to 25% of the total number of units in each builder’s plan package and shall be setback a minimum of 18-feet from property line.

Demonstration Plotting

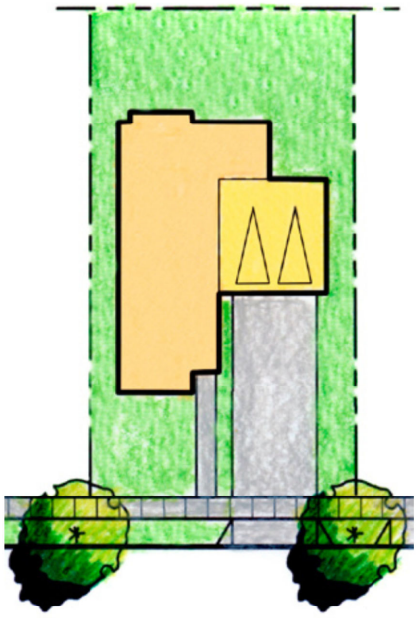


Alley Demonstration Plotting

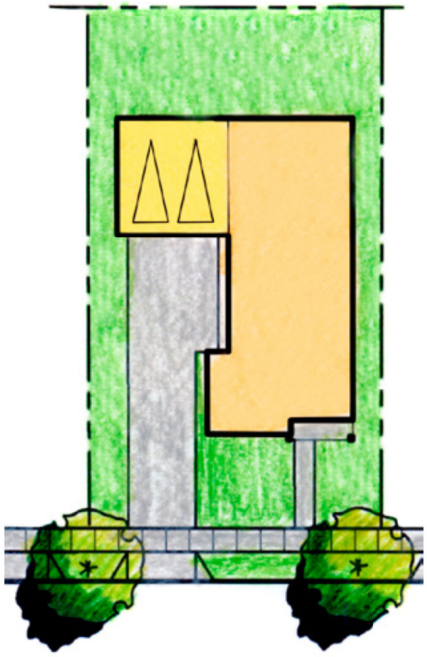


* PAVEMENT MAY EXPAND TO 24' FOR FIRE USE. FINAL ALLEY DESIGN SUBJECT TO REVIEW AND APPROVAL BY THE PLANNING , ENGINEERING, AND FIRE DEPARTMENTS.

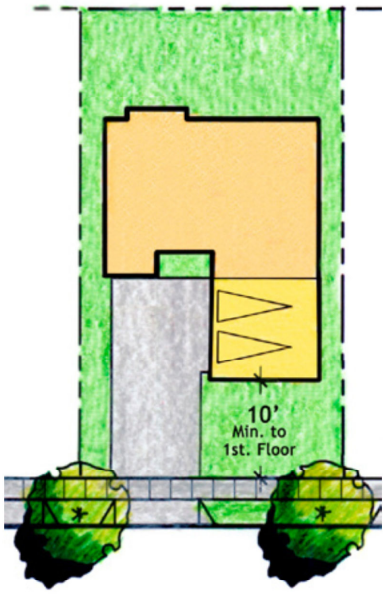
Three Car Swing-In



Shallow Recessed



Mid Recessed



Deep Recessed

Two Car Swing-In

6.3 Miscellaneous Architectural Elements

Each selected style of architecture has attributes specific to that style. There are architectural features that are particularly important from both a standpoint of helping define the architectural style and from providing lifestyle benefits. These items include porches, trellises and arbors and balconies.

Wrap Around Style

6.3.1 Porches

Sufficiently sized porches (minimum depth: 7', minimum area: 70 square feet) become key elements in creating active, social neighborhood, through the visual and conversational interaction that occurs between these elements and the streetscape.

They provide interest, shadow lines and architectural fenestration to the building.

Porches should be provided for various homes in each product area whenever feasible and should have the following attributes:

- Porches should be integrated into the architectural elevation and floor plan consistent with the particular design style
- At corner conditions, porches should wrap around or be designed into two sides of the building
- Porches should be of sufficient depth to allow chair and table placement (seven foot minimum depth at ground level is preferred but can be modified if necessary at side elevations)
- Porches should relate to the streetscape consistent with traditional design aspects

Stucco Detailing

Wood Detailing

6.3.2 Balconies

Balconies are part of many styles of architecture and can range in size from small decorative balustrades to large inviting verandas. Balconies are more flexible in size than porches and can serve many uses from more decorative, offering visual detail and architectural fenestration to accessible congregation spaces which become important outdoor rooms and overlooks.

Balconies are encouraged elements of the architecture but should adhere to the following principals:

- Balcony design and detailing should be consistent with the architectural style
- Balcony placement is encouraged towards the front of homes whenever feasible
- Balcony placement at rear or sides of homes should consider site plan and adjacent lot privacy issues

Balcony on a Multi-Family Building

Wood Detailing

6.3.3 Window Treatments

Window treatment is an important element in defining architectural styles and providing detail to buildings. Whether it is recessed or protruding, multi-paned or single paned, rectangular or arched, framed or not, all make a difference in the building character. The window treatment should be consistent with the style of architecture.

Window sizing and scale must be consistent with the architectural enframement. Use of shutters as window detailing and design style elements is encouraged but shutters should be properly sized to the window opening for authenticity.

Iron Detailing

Recessed Window Detail

Window Surround

6.3.4 Trellises and Arbors

Trellises and arbors are valuable architectural features for softening building façades, extending indoor rooms into the exterior landscape, and creating shelter from harsh sun and glare. Trellises are also encouraged in the design of each building but must also be consistent with the architectural style, be appropriately sized and scaled, and be constructed of material that will survive the harsh inland sun and hot, dry wind conditions.

Wood Trellis Over Entry Drive

6.4 Architectural Styles and Elements

The architectural character of The Avenue shall consist of the traditional styles found in the Pacific Southwest. These styles were developed over time as reactions to prevailing climate, locally available material, historical tradition and/ or architectural trends of the early twentieth century. Over time, these styles have often become blended in part with new interpretations and in response to modern technologies. While the community infrastructure, architecture, site planning, land design, and landscape architecture are the key factors in creating a unique and special place for The Avenue, the interpretation and execution of the individual architectural styles and residential product types will provide lasting value.

Simple Iron Trellis of Driveway

Each style has aspects relating to massing, articulation, roof form, and garage placement. The development of these styles in an appropriate manner requires incorporation of specific elements of each style.

The chosen styles complement one another through overall scale, massing, proportions, details, and the ability to establish a charming architectural backdrop that will age gracefully over time. The materials and colors of these home styles shall complement the overall landscape design of the neighborhoods. Each style shall be developed appropriate to the region, and address the needs and lifestyles of the residents.

Acceptable architecture styles for The Avenue homes include:

- Monterey
- Bungalow
- Spanish
- California Ranch
- Cottage
- Farmhouse
- Transitional

Note: Additional styles proposed by the homebuilder may be deemed acceptable by the City and Community Design Team.

The following guidelines have been developed by The Avenue Community Design Team in order to create a community with an appropriate diversity of architectural styles and design:

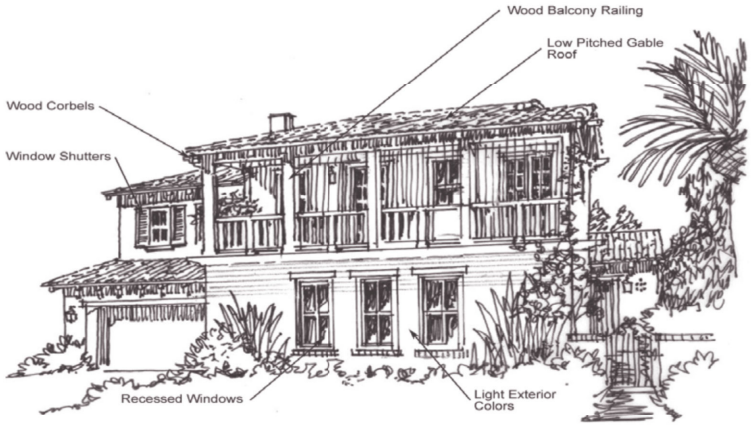
- A variety of styles and plans is encouraged
- The adjacent plotting of the same plan, either standard or reverse, should be discouraged
- A variety of plan orientations is encouraged
- No two adjacent homes shall utilize the same architectural styles

The styles on the following pages will provide the builder and their design consultants the tools to create architectural designs appropriate and authentic to each style.

6.4.1 Monterey

Single Family

History and Character:



The Monterey style is a combination of Spanish Colonial construction methods and the basic two-story New England Colonial house.

Architects in the 1920's began to reintroduce the style and modify the elements to suit the period preferences. The signature cantilevered balcony on the front of the house may be a prelude to the porch that often surrounds or defines a private courtyard in the back of the house. The original houses used adobe wall construction. Detailing of the porches and the cornice is extremely simple. Rafters are often exposed, gable or hipped roofs are used, chimneys often anchor one end of the house, and flat paneled doors are used both on the ground floor and on the balcony, in addition to a more solid entry door.

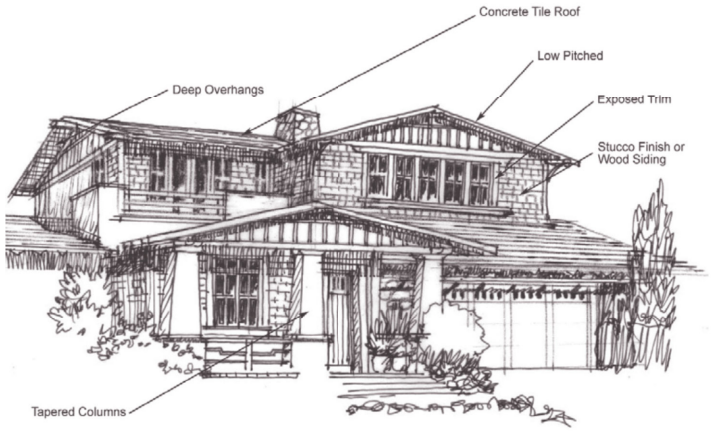
Autocourt Example

General Attributes:

- Simple-box plan form
- Front-to-back gable roof
- Stucco finished walls
- Colonial-style windows with shutters and door trim
- Wrought iron or wood balcony railing
- Light exterior colors
- White or dark trim colors

6.4.2 Bungalow

History and Character:

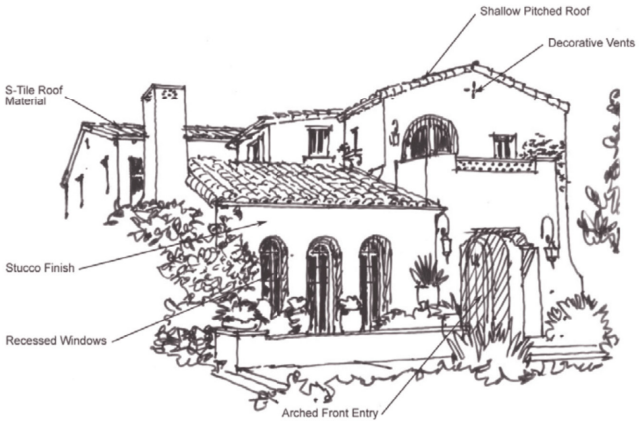


The Bungalow with its variations of the Craftsman style home evolved form the late 19th century American Arts and Crafts movement. These moderately detailed buildings are characterized by the use of hand-finished materials with a rusticated texture. Open porches, sloping roofs with deep overhangs, multiple gables, asymmetrical compositions, oversized first floor windows, expressive trim, rafters, brackets and porches characterize the Bungalow style.

General Attributes:

- Simple plan form massing and simple roof
- Intersecting gable roofs with overhang
- Stucco and/or horizontal siding
- Vertical multi-paned windows at front elevation
- Large picture window at front
- Porches with simple wood columns and railing
- Corbels
- White or dark stucco color
- White or dark color trim

6.4.3 Spanish



History and Character:

Spanish inspired homes began appearing at the turn of the 20th century in the form of the Mission Style, reflecting a loose adaptation of features often found in detailing from various influences, including Moorish and Spanish Colonial. Spanish Style is a catalog of styles unified by the order of arches, courtyards, strong form and mass, plain wall surfaces and tile roofs all derived from Mediterranean architectural styles. The Spanish style is most often characterized by an informal plan arrangement and massing. This informality reflects the natural composition of the farmhouses and small estates of Spain, which were not symmetrically composed.

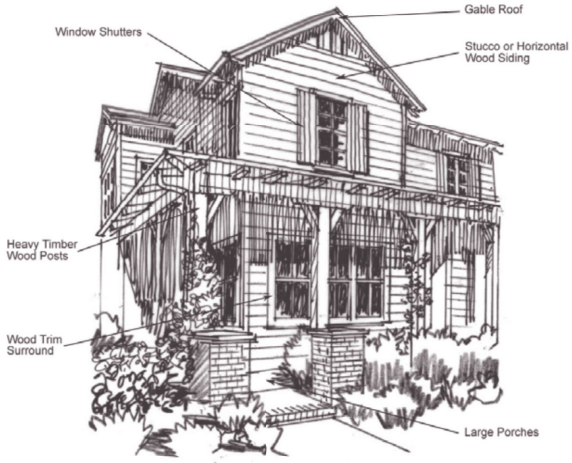
General Attributes:

Some identifying features of this style are large distinctive (sometimes arched) windows on the front façade, red clay roofs and light colored stucco walls.

- Two story massing with one story element
- Simple hip or gable roof
- Barrel or 'S' shape concrete tile
- Stucco Finish
- Vertically hung multi-paned windows at front elevation
- Arched stucco column
- Light colors with dark trim
- Wrought iron accent

6.4.4 California Ranch

History and Character:

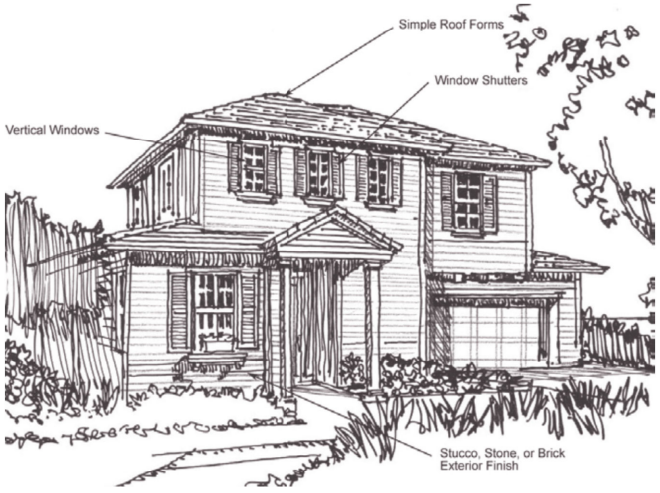


Reminiscent of the early ranchers and farmers of Southern California, the California Ranch Style was developed in response to their lifestyle, available materials and environmental considerations. The strong indoor/outdoor relationship is ideal for the temperature climate of the region and incorporates sliding glass doors, picture windows, terraces and secluded patios. These homes were influenced by Colonial, Spanish Colonial, Stick, Monterey, and Spanish Eclectic architecture; however, the detailing was simplified when adapted to the California Ranch Style.

General Attributes:

- Simple rectilinear form
- Gabled roof
- Long horizontal gable roofs
- Stucco or horizontal wood siding
- Simple column and railing at porches
- White or dark stucco colors
- White or dark color accent trim

6.4.5 Cottage



History and Character:

The Cottage style is based upon early twentieth century American interpretations of English architecture. The source for design originates from medieval English and French cottages, as well as from the country estates of Brittany and Normandy, larger manor homes, and rural village vernacular houses. The Cottage style captures a romantic and picturesque architecture, and American interpretations include houses with simple volumes most often with front facing gables that have steeply pitched roofs.

General Attributes:

- Asymmetrical massing
- Large simple roof planes
- Stucco finish
- Vertical windows
- Decorative stone or brick veneer
- White, off-white, light earth tone shades

6.4.6 Farmhouse

History and Character:

The Farmhouse style is based upon regional American interpretations of agrarian architecture. The source for design originates from rural residential homes in the early settlements in Midwestern and Southwestern areas of America. The Farmhouse style establishes a pastoral character, and recent interpretations include houses with simple building designs, gabled roof forms characterized by a moderate to steep pitch.

General Attributes:

- Simple rectangular massing
- Large simple roof planes
- Siding or Stucco building materials
- Vertical windows with decorative accent shutters
- Entry porches with low sloping shed roofs
- White or light earth tone shades with contrasting design elements

6.4.7 Transitional

History and Character:

The Transitional style is an interpretive style based upon historic European and American architecture. The design inspiration uses modern building forms and construction materials to develop more contemporary designs that reflect earlier period styles. The Transitional style incorporates clean lines and simplified architectural detailing to reinforce the intended character. This style includes interpretations of Spanish, Monterey, California Ranch and Farmhouse architecture.

General Attributes:

- Building massing to reinforce the intended period style
- Large simple roof planes, including asymmetrical roof forms and limited flat roofs.
- Horizontal siding or smooth stucco finish
- Square or vertically proportioned windows with simple or no trim details.
- Light exterior building shades with contrasting details such as wood trim/ fascias, window frames, doors and simple window shutters.

6.5 Commercial Design Guidelines

6.5.1 Introduction

The Avenue Specific Plan area includes one (1) neighborhood center. This 10-acre center is at the southwest corner of Ontario Ranch Road and Haven Avenues. A 15.04-acre self-storage is planned at the southwest corner of Archibald and Schaefer. ~~This~~The neighborhood center will allow the homeowners of The Avenue access to shopping and employment opportunities nearby. Residents will have the ability to access services by foot, or ride their bicycles to work via pedestrian trails connecting the community to the neighborhood center.

Throughout the neighborhood center, appropriate landscaping, site planning and architectural design should be considered to create friendly and welcoming places to shop and work and shall continue the vision established in the residential community, including integrating pedestrian-friendly design.

In order to maintain the character of The Avenue, the neighborhood center is expected to be developed with a compatible and harmonious quality. These Avenue Commercial Design Guidelines will help direct the development of the area to enhance the pedestrian experience that positively contributes to the character of The Avenue Specific Plan area. These guidelines are not intended to be strictly enforced rules, but a tool in aiding the design process and are therefore general in nature. Developers of the neighborhood center will be required to submit their own supplemental design guidelines for City approval. These commercial design guidelines are organized into the following:

- Site Planning
- Building Design
- Architectural Details
- Open Space and Landscaping

Pedestrian-friendly Commercial Retail

A. Guiding Principles

Guiding Principles for commercial design for The Avenue are:

Buildings should contribute to a qualitative nature of the overall neighborhood.

- Proper scale and proportions in massing and details should be used
- Pedestrian open spaces should be provided
- Massing and articulation should be varied
- Buildings shall be designed at a human-scale

Buildings should have an enduring quality.

- Design should draw inspiration from the rich and diverse Southern California architectural heritage
- Materials and colors typical to Southern California should be used
- Details and ornamentation should be authentic
- Design shall create an inviting place to shop and work

B. Review Process

The Commercial Design Guidelines are to be used as a general tool to guide the development of the neighborhood center within The Avenue. Final designs will be subject to the City of Ontario's approval. Additionally, more detailed design guidelines for each development will be required by the City prior to final approval. Refer to the City of Ontario Development Code or the Planning Department for further information regarding the review process.

6.5.2 Commercial Design Guidelines

C. Introduction

The Neighborhood Center within The Avenue is intended to continue the pedestrian-friendly character established in the residential community. Appropriate site planning can de-emphasize the vehicle, creating a safe outdoor environment without ignoring the necessary needs of vehicular circulation. Through well executed planning, architecture, and landscape design, the Neighborhood Center can complement and integrate the residential community. Images within this section are for illustrative purposes and final plans must be submitted to, and approved by, the City.

Design shall create an inviting place to shop and work

D. Site Planning

Orientation

Buildings should be oriented for optimal visibility from the street. Windows and entries should face the street avoiding blank walls dominating public views. Stores with entries not visible from the street may be oriented towards pedestrian open space and all primary entries should face onto a street or a connecting walkway.

Building clusterings are recommended to help define parking lot areas and encourage walking between stores. Building entries and storefronts should be positioned close to one another to reduce walking distances between them.

Driveways and Sidewalks

The site shall be provided with an adequate number of driveways to facilitate circulation and also reduce the traffic impact along the surrounding arterials. Pedestrian crossing distances should be minimized at driveways. All driveways and sidewalks shall be constructed per City Standards and to the satisfaction of the City Engineer. No decorative paving will be allowed in the public right of way unless otherwise approved by theCity Engineer.

Street Frontage and Buildings

Streetside buildings, or those with no parking separating them from the street, should use windows and entry features to soften the building's appearance to the street.

Streetside Setbacks and Buildings

The sides of buildings along street edges shall be landscaped within the setback to soften the building's appearance as well as designed with windows or design elements.
Refer to the City of Ontario Development Code for specific setback requirements.

Street Frontage and Parking Lots

Parking lots should generally be placed away from streets. Street frontages shall be broken up with buildings, landscaping, plazas, and other pedestrian features. Continuous parking lots along the street frontage should be avoided. Any parking along street edges shall be set back with a landscaped buffer which can be used to filter parking lot runoff. Continuous parking stalls shall be interrupted by landscaped islands no more than 10 stalls apart.
Parking lots are encouraged to be interconnected rather than separated for each building. Separated parking lots encourage customers to drive from store to store.

Retail Orientation to Vehicular Travel Lanes and Parking

Service and Storage Areas

Loading docks, garages and storage areas are to be located behind or to the side of buildings siting onto secondary access and not primary streets. These features must be screened with walls and landscaping as much as possible from public view of streets, residences, pedestrians walkways and connecting trails. Loading docks and storage areas should not conflict with pedestrian walkways.

Refuse Containers, Utility and Mechanical Equipment

Refuse containers and equipment shall be easily accessed by service vehicles. They shall be screened from view of the streets, parking lots, and connecting walkways through roof forms, walls and/or landscaping.
Screening details should incorporate elements that are compatible to the architecture style of the buildings. Proper landscaping, including trellises, may also help to screen these elements. Equipment and enclosures shall not be located near pedestrian walkways. Roof-mounted equipment shall be screened by the roof/ parapet.

Sidewalks

Sidewalks shall be located along natural pedestrian travel paths. Sidewalks should be a minimum of 6' wide along pedestrian pathways and a minimum of 8' wide along more heavily traveled commercial areas.

E. Building Design

Massing

With larger buildings, appropriate massing becomes more important to maintain the human-scale of the development and create a visually pleasing environment. Bay windows, stepped buildings, height changes and setback variations between stores help to break up large buildings as well as indicate entries and store locations to customers. Tower elements or monumental features are encouraged at focal points, such as corners, plazas, major entrances, or where walkways meet streets.

Architectural Massing and Materials

Varying setbacks along the front façade of buildings are recommended to create small outdoor public spaces for pedestrians to gather and sit.

Roof Forms

Hipped and gable roofs are encouraged. Roof pitches shall be compatible to the architectural style of the buildings. Flat roofs should vary in height and be accompanied by cornice, trim or other accent features.

Arcades and Awnings

Outdoor arcades along store fronts are encouraged over pedestrian walkways. Arcades may be used to connect separate buildings providing a more pleasing experience for pedestrians. Trellises or awnings may also be used to create a covered walkway to protect pedestrians from the sun and rain.

Entry Design

Building entries shall be prominent and easily identified. Various elements can be used to enhance the entry features including massing variation, materials and color change, change in roof form, and awnings. For smaller retail buildings, part of a cluster or strip, arcades, awnings and simple signage may be acceptable as entries.
No signs shall be placed in the public right-of-way and shall be in accordance with City standards regarding corner site distance.

Commercial Retail Massing, Material Change, Entry Design

Design Flexibility

Retail spaces exceeding 30,000 SF should be designed with the flexibility to be divisible into smaller retail spaces should future market demand change.

F. Architectural Details

Architectural Styles

A variety of compatible architectural styles should be used throughout the Neighborhood Center to create a sense of continuity and visual interest between the buildings. Related elements, such as trellises, planters, light-standards, windows, doors, etc. shall also adopt detailing that is compatible to the selected architectural styles. The selected styles of the Neighborhood Center do not necessarily need to be of any one of those specified for the residential community but shall be compatible with them.

Architectural styles shall derive from southern California and Ontario historic precedents. Modern and "high- tech" styles are not acceptable style choices. Acceptable styles generally respond to the region's climate including such features as outdoor circulation, outdoor courtyards or plazas, recessed window frames, awnings, arcades, loggias, and trellises.

Building Wall Treatment

No wall should have a blank, uninterrupted length exceeding 20 feet without including one of the following:

- Change in texture
- Change in material
- Change in plane
- Lattice
- A tree or equivalent element

Façades that are visible from adjacent streets or walkways should display even greater visual interest by using architectural elements that break up the massing of large buildings, such as windows, arcades, awnings, porticos, and other architectural features.

Base And Top Treatments

Base and top treatments help to balance the "weight" of the building visually. Bases should appear to "ground" the building, while tops create a defined edge to the roofline. Possible treatment techniques are as follows:

Base:

- Natural materials
- Pre-cast materials
- Thicker walls
- Enriched landscaping with a mature height of at least 18"
- Other decorative, durable materials as approved by the City

Special materials, such as ceramic tile, granite and marble are encouraged at major entries.
Tops:

- Cornice treatments
- Stepped parapets
- Roof overhangs with brackets
- Textured materials

Colored "stripes" are not acceptable as the only treatment.

Exterior Materials

Recommended materials include, but are not limited to stucco, exterior plaster, brick, wood siding, tile, pre-cast concrete or stone. Exterior materials that appear pre-fabricated are not recommended. Selected materials and detailing should have an enduring appearance. Foam products should be avoided at the pedestrian level.

Roof Materials

Roofing materials that are generally acceptable include standing metal seam, concrete tile, tile and slate or slate-like materials. Asphalt or wood shingles are prohibited.

Colors

Color selection shall be consistent with the selected architecture style.

G. Commercial Site Landscape Requirements

The Neighborhood Center site will be developed both architecturally and through landscape treatments as an extension of The Avenue. The land plan encourages integration of the Neighborhood Center by providing for frontage on Ontario Ranch Road and Haven Avenues, while also incorporating a major community entry. Commercial uses appropriate to and compatible with The Avenue's residential community will be encouraged.

Minimum Landscape Requirements

- Builder/developer shall refer to City of Ontario standards for the percentage of gross commercial site acreage required to be landscaped.
- All areas of the site not occupied by buildings, parking or otherwise utilized shall be landscaped with groundcover, turf or tree materials from the community plant list.
- Appropriate street trees should be utilized adjacent to street frontage integrating the site into the overall community setting.
- Side yard and rear service yard use areas should be screened with a combination of a six foot (6') wall and dense landscape buffer. Tubular steel fencing and gates should be used adjacent to interior residential streets to control access points.
- Accent tree entry planting should be incorporated at the site's vehicular access points.
- No shrubs higher than 3 feet and no tree canopy lower than 7 feet as to allow officers on patrol the ability to view the business, without obstructing their view.
- Plants by low-lying windows may have thorns as a deterrent.

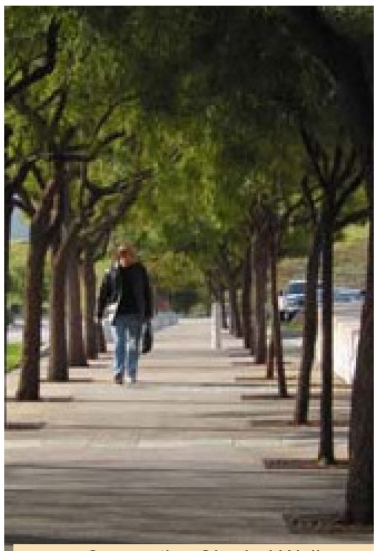
Parking Areas

- Where a parking lot contains 10 or more parking spaces and is visible from a street, not less than 10-15% of the total area (excluding any perimeter landscaping), shall be landscaped. Such landscaping shall not be concentrated in any one location. A minimum of 50% of the plant material shall be canopy or shade trees and shrubs shall be 3' or less to provide clear visibility.
- All rows of parking spaces shall be provided with landscape islands at each row terminus to protect parked vehicles, ensure visibility, confine moving traffic to drive aisles and driveways, and provide space for landscaping. Within each row of parking spaces, landscape islands shall be placed to prevent more than 10 vehicles from being parked side-by-side in an abutting configuration. These landscape islands shall measure a minimum of five (5) feet in width, exclusive of curbs. Creation of large planting islands (tree groves) are encouraged as opposed to small pockets of individual trees.

Retail Plaza

- Planter islands for a single row of parking spaces shall be landscaped with at least one (1) tree and vegetative groundcover or turf. Planter islands for a double row of parking spaces shall contain not less than two (2) trees and vegetative groundcover or turf.
- Landscaped areas shall be delineated with a concrete curb which may have curb cuts to facilitate sheet flow runoff from parking lots to infiltrate the landscape planters.
- Parking area landscaping is required for the screening of large parking areas to limit their visual impact.
- When parking is located adjacent to a public street or interior residential street, a combination of landscaped berms and/or planting totaling three feet (3') high is to be used to screen views or parked cars.

- Wherever possible, pedestrian traffic should be separated from vehicular traffic by additional sidewalks. The parking lot should have crosswalks highlighted with decorative or varied texture paving.



H. Open Space and Landscaping

Site Accessories

Site accessories, such as recycling bins, bike racks, litter cans, planters, benches and transit shelters, should use materials and have an architectural character consistent with the overall project. These accessories should be graffiti-resistant with materials that are easy to clean and paint.

Connecting Walkways

Walkways throughout The Avenue's neighborhood center shall connect the various buildings to each other and to the sidewalks along adjacent arterials. Use of trellises, landscaping, seating areas and building placement adjacent to one another will encourage pedestrian activity within the center. A typical walkway shall be a minimum of 6' wide. In large parking lots, pedestrian walkways shall be provided within the median of at least one parking aisle for eight aisles of 20 stalls or more.

Connecting Shaded Walkway

Pedestrian walkways that may also be used for emergency access must allow minimum clearance of 26' wide and 14' vertical clearance. Off-site connections will be provided from the neighborhood center to The Avenue's residential development.

Plazas

Plazas are encouraged to emphasize a pedestrian-friendly environment by creating locations within the Neighborhood Center that allow for people to gather. Plazas create a more inviting feeling for pedestrians, allowing them to feel safe from the vehicular-dominated parking lot. These outdoor places may include water features, landscaping, and other elements to create a comfortable place to sit. Plazas are encouraged where high levels of pedestrian activity are expected. Major entrances and nearby uses that allow for more interaction with the plaza such as delis, cafes, restaurants, bakeries and other food services are a few key examples.

Landscaping

Landscaping helps to soften the feel of the buildings and parking lot while enhancing the visual aspect of the site. The following landscaping techniques may be used:

1. Provide special landscaping treatment at all project and building entries.
2. Provide shade/canopy trees within parking areas.

3. Use plants to define outdoor spaces such as along edges, outdoor plazas, or pathways between parking and building entrances.
4. Plantings shall provide a continuity of form across the entire project.

Outdoor Storage Areas

Outdoor storage areas should be incorporated into the design of a project to avoid visual impacts on the site. Outdoor storage areas shall be located away from the street, behind or to the side of buildings. Walls and landscaping shall be used to screen stored materials. Materials placed on palettes in front of buildings are not permitted.

Transit Shelters

Transit shelters should be incorporated into the design of neighborhood center. The design of transit related structures shall be integrated architecturally with the project through its color, materials and architectural style. Walkways shall be provided for easy accessibility by pedestrians moving to and from transit stops to the Neighborhood Center.

Fence and Wall Design

Chain-link fencing, barbed wire, corrugated metal fencing and tennis windscreens are not permitted. Fences and walls should be built with attractive, durable materials, including (but not limited to) wrought iron, textured concrete block, or formed concrete with reveals. Fences or walls should be consistent with architectural style, materials and designs used throughout the project.

Adjacent to residential areas walls and fences should not exceed a height of six feet (6') without being made of textured concrete block, interlocking "diamond" blocks, formed concrete with reveals, or similar materials to a maximum of eight feet (8') from grade.

Along streets, walls and fences should not exceed 36" in height and long expanses of uninterrupted fences and walls should be avoided. Use of openings, planter boxes, material changes, pilasters or posts are acceptable. Openings shall be provided to connect walkways directly to the street avoiding long, inconvenient walking paths. These pedestrian portals should be announced by pilasters, trellis, special landscaping, or other features.

Lighting

On-site lighting standards shall provide adequate illumination throughout the site during the nighttime hours. Lighting fixtures shall be designed to be compatible with the architectural styles selected for the project. All light standards should have an attractive base and top; overhead "cobrahead" standards are not permitted.

Along pedestrian walks, lighting fixtures should not exceed 12' in height and may include lighting within bollards. Pedestrian lighting shall provide appropriate illumination at a human scale without too much glare. Lighting within larger parking lots shall not exceed 25' in height providing enough visibility for customers

and employees to walk safely to their vehicles. The same bulb type shall be used for all parking lot and pedestrian lighting fixtures within the development. Service area lighting should be positioned so no bulbs can be seen from public view. Any street light within the public right-of-way shall be per City standards and to the satisfaction of the City Engineer.

G. Main Street Design Guidelines

Building Form and Massing:

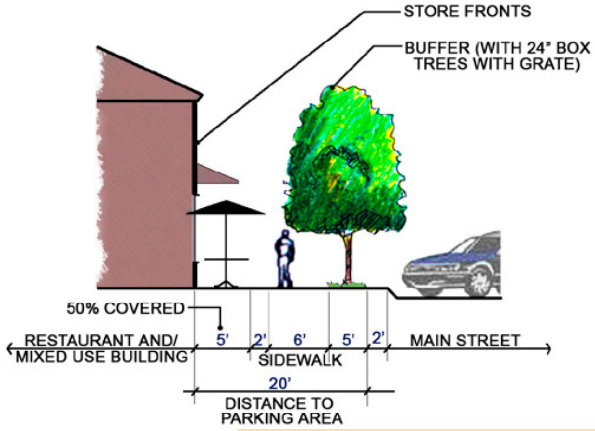
- Building heights shall consist of a mix of building heights to provide visual interest.
- Tower elements and other vertical/prominent building features should be used to accentuate key elements such as building entries, pedestrian nodes, plazas or courtyards.
- Modulation and variation of building masses between adjacent buildings. Three and four story elevations should have varied massing and architecture, both in height and depth along the façade.

Materials and Colors:

- Materials and colors should be applied to create obvious and identifiable delineation between uses.
- All materials shall wrap architectural elements in their entirety, on primary elevations and where exposed to public spaces.
- Materials applied to any elevations shall turn the corner of a minimum of 8 feet, or to a logical termination point in relation to architectural features or massing.
- Rough cut, rustic appearances through the use of stone, brick, or siding is encouraged. Only finished materials are allowed, no exposed or untreated concrete masonry materials, unless consistent with the architectural style.

Main Street architecture, walkway and outdoor seating

Exterior Design:



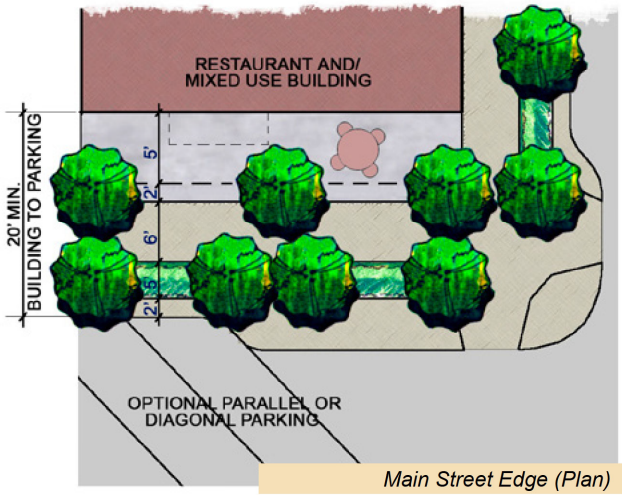
Building shall have articulation along auto and pedestrian corridors to generate pedestrian scaling and visual interest along the streetscape.

- No single building shall have a singular wall plane or building height on the primary elevation.
- Front wall planes of commercial/mixed-use buildings, including retail/shop space veneer configurations, shall be articulated.
- Articulation can include, but is not limited to: 1) Vertical and horizontal offsets, 2) Color blocking and 3) appropriate use of detail elements.

- Mixed-use buildings, multi-tenant shop buildings with more than one ground floor tenant: no more that 66% of the front elevation may consist of a single contiguous wall plane on a tenant by tenant basis.

Primary exposures/elevations shall be appropriately detailed and articulated consistent with the architectural style and character of the development, as established by these guidelines.

- First-story pedestrian scale character and commercial retail exposure is crucial to business viability. In-line retail/commercial/service space shall be designed to optimization of space, exposure and aesthetic articulation.
- No adjacent mixed-use buildings shall have identical architectural appearance, or use of materials, or color palette unless pairing is integral feature of the project design theme.
- Projections, overhangs and recesses may be used to provide shadow articulations and scale to building elevations.
- At least 40% of ground floor of the primary exposure of an in-line/shop-space/free standing show use, excluding restaurants pads, shall be devoted to transparent windows and/or doors.



Main Street Edge (Section)

Roof Form and Slope:

Building height shall be varied to provide interest to the "Main Street" as viewed from community streets, open space, or other public spaces.

- Variety in roof forms, ridge heights and direction of gables is required.
- Although the majority of commercial roof area may be flat, visible elevations should be treated with sloping roof elements, including hips or gables forms (as appropriate to the primary architectural style) or parapet treatments.
- Architectural exposed roof materials shall be consist of flat, barrel, or "S" tile concrete or slate tiles or shakes. Metal roofs are permitted as feature elements consistent with the architectural style.

Main Street Edge (Plan)

Patio Dining:

Outdoor seating, in conjunction with business, shall be encouraged to enliven the street scene along commercial edges. Patio dining along retail storefronts have the dimensions:

- A minimum 20-foot area from building to parking area/drive aisle/interior Street. Patio seating area must have an internal minimum dimension of 5 feet clear, with an additional 2-foot buffer area (plant hedge or low fence.
- Minimum 6-foot sidewalk
- Minimum 5-foot landscape buffer or tree well
- Minimum 2-foot paving edge (Along parking area/drive aisle/interior Street).

Signage Guidelines:

A sign guideline section should be incorporated to promote an overall “sense of place” through signage that is architecturally integrated and visually interesting while conforming to applicable code requirements. The guidelines should include the following criteria:

- Signage Design Objectives
- General Sign Design and Limits
- Identity Signs
- Directional Signs
- Information Signs
- Regulation Signs
- Amenity Signs (Banners on light fixtures, etc..)
- Commercial, Retail and Residential Design Guidelines.
- Fabrication and Installation
- Sign Maintenance
- Sign Location
- Temporary Signs
- Sign Illumination

Landscape Design Guidelines:

To create a distinct and unified landscape character for “Main Street”, specific landscape design guidelines should be incorporated. The guidelines should include the flowing criteria:

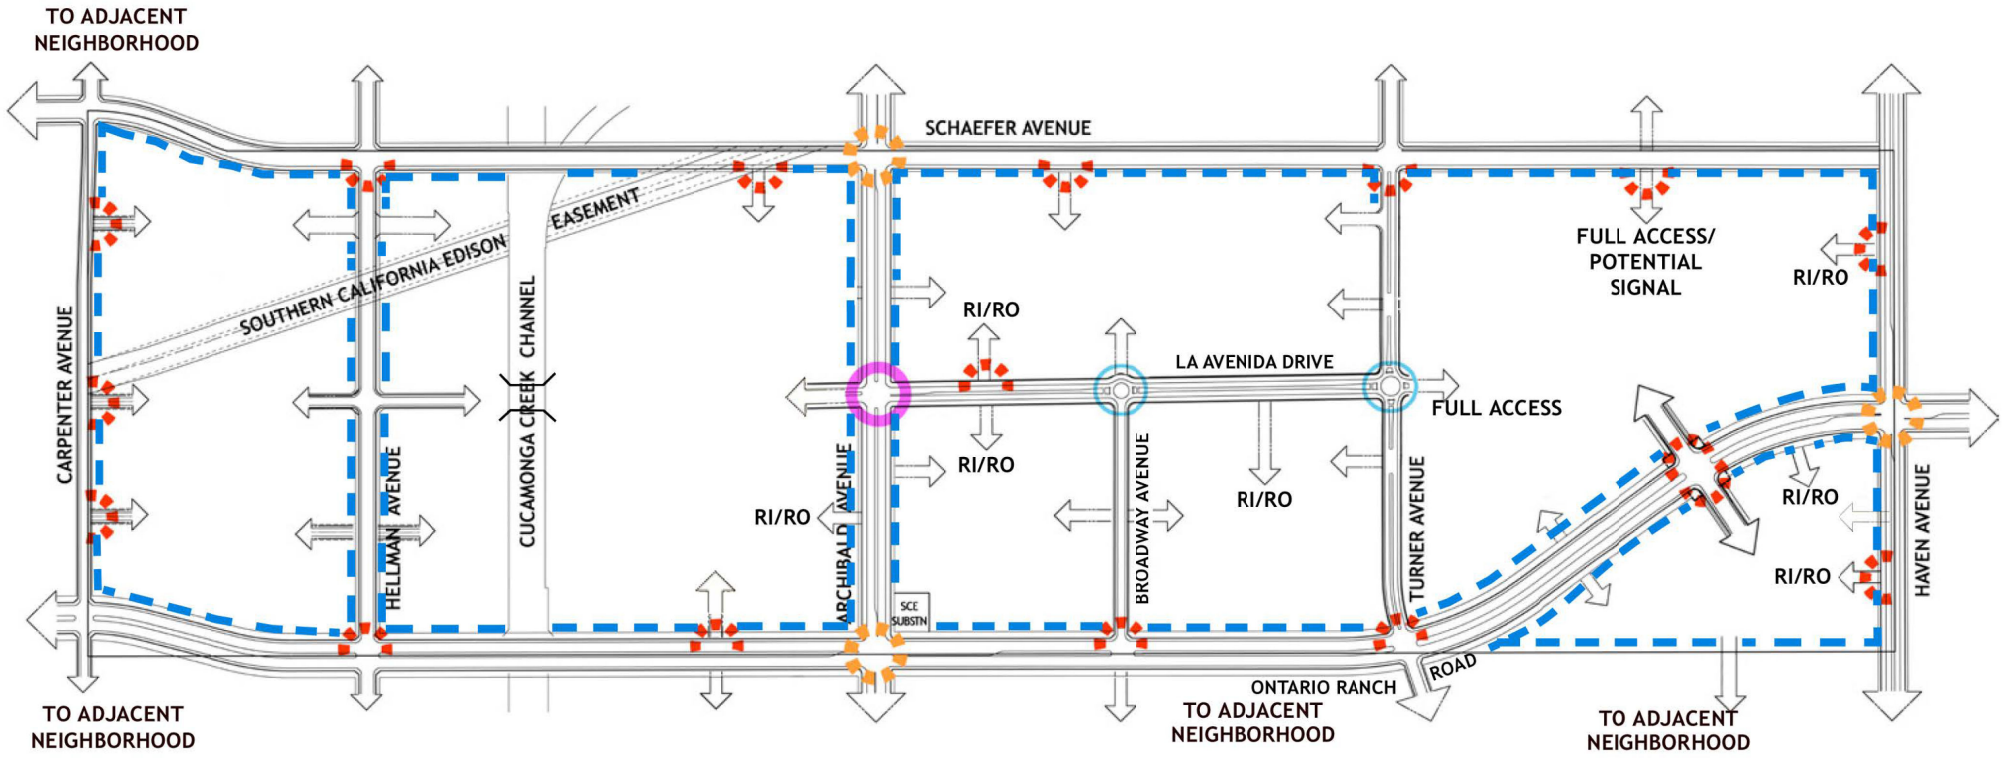
- Parking/Shopping Interface: To provide a safe and comfortable pedestrian experience and reduce the presence of the parking area from shoppers with buffer planting.
- Retail Plazas: To provide active and passive pedestrian spaces that encourage user interaction; Fountains, stages, public art is encouraged for these spaces.
- To provide shaded and non shaded restaurant/outdoor eating and dining areas, use of awnings or umbrellas in west or south facing building exposures, planting as a way to provide a comfortable barrier and also allow for people watching (a 2-foot minimum plant barrier can be substituted for a rail.
- Building Edge/Retail Shops: Planting areas to create a buffer zone between the parking lot and promenade.

6.6 Landscape Design Guidelines

The Landscape Design Guidelines describe the key elements of the proposed landscape treatments within The Avenue Specific Plan area, which will develop over several years. These guidelines will help maintain a consistent design theme in a high quality, visually attractive and resource efficient framework.
The objectives of the Design Guidelines are:

- To provide guidance to developers and builders, as well as to engineers, architects, landscape architects and other professionals, as to the quality and character of the community and development of each planning area.
- To assure the City of Ontario that The Avenue will develop in accordance with the guidelines provided herein.
- To provide guidance to City decision makers in the review of future development projects in The Avenue.
- To provide guidance in formulating Covenants, Conditions and Restrictions.

These Landscape Design Guidelines are intended to be flexible and are, therefore, illustrative in nature. As a flexible document, the guidelines can, over time, accommodate changing community desires, economic conditions and the marketplace.



The General Landscape Guidelines address typical areas of importance and concern with regards to landscape architecture such as resource conservation, landscape lighting impacts and maintenance issues. The Plant Material Guidelines provide a specific list of plants compatible with the community design theme and ~~the New Model Colony~~ Ontario Ranch Streetscape Master Plan. The lists are organized by community elements and streetscape themes.

Although a great deal of specific design information is provided in these Landscape Design Guidelines, there will at times be a need for interpretation of the intent of the guidelines in keeping with the spirit of The Avenue's design theme. It is critical that these guidelines are followed in a manner consistent with this design theme, in order to create a unified landscape, while providing the opportunities for diversity and visual interest that are so apparent in the most successful residential communities in the City of Ontario.

6.6.1 Community Fences and Walls

Community fences and walls are a major visual element and help unify the appearance of the community. Community walls and fences have been carefully designed to complement the overall theme. They will be easy to maintain and provide a durable, long term edge enclosure defining "private" and "public" spaces. Community walls and fences shall not encroach into the public right-of-way unless permitted. The size and location of any monument, fence or wall that encroach into the public right-of-way shall require approval by the City Engineer.

An encroachment permit shall be obtained to construct any monument, fence or wall in the public right-of-way. Exhibit ~~26~~27, "Entries, Intersections, and Community Walls" shows the conceptual location of community walls.

LEGEND

- ROUNDABOUT
- MAIN ENTRY
- PRIMARY ENTRY
- SECONDARY ENTRY
- RI/RO — RIGHT IN/RIGHT OUT ONLY
- COMMUNITY WALL

NORTH

0 100 200 400 800

NOTE: The locations of entry points is conceptual. Precise locations will be determined as part of the tract map process.

NOTE: If a wall is proposed along the east side of Carpenter Avenue where the homes are plotted to rear onto Carpenter Avenue, a 10-foot wide landscape buffer shall be incorporated along the street frontage. The 10-foot landscape buffer shall be measured from back of sidewalk (ROW) (13-foot parkway + 10 foot landscape buffer = total 23-foot edge measured from curb face).

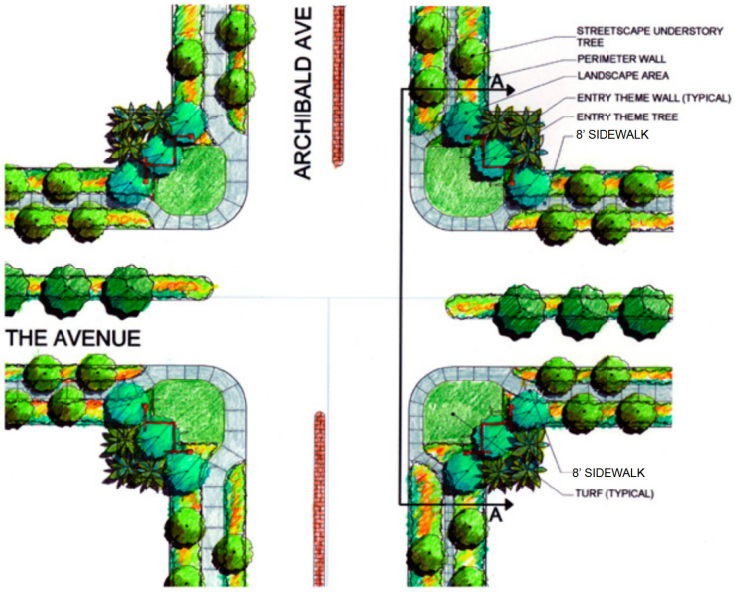
NOTE: No monuments or walls will be allowed in the public street right-of-way along backbone streets.

Revised Exhibit

Entries, Intersections and Community Walls

6.6.2 Entries

The entries and intersections within The Avenue establish the design theme for the community while reinforcing the design hierarchy and providing a reassurance of the community areas and boundaries. These features are created through a thematic blend of hardscape and planting schemes, and become the first impressions on all visitors and residents entering the colony. No monuments or walls will be allowed in the public street right-of-way along backbone streets. See Exhibit 27, "Entries, Intersections, and Community Walls" for specific locations of monumentation.

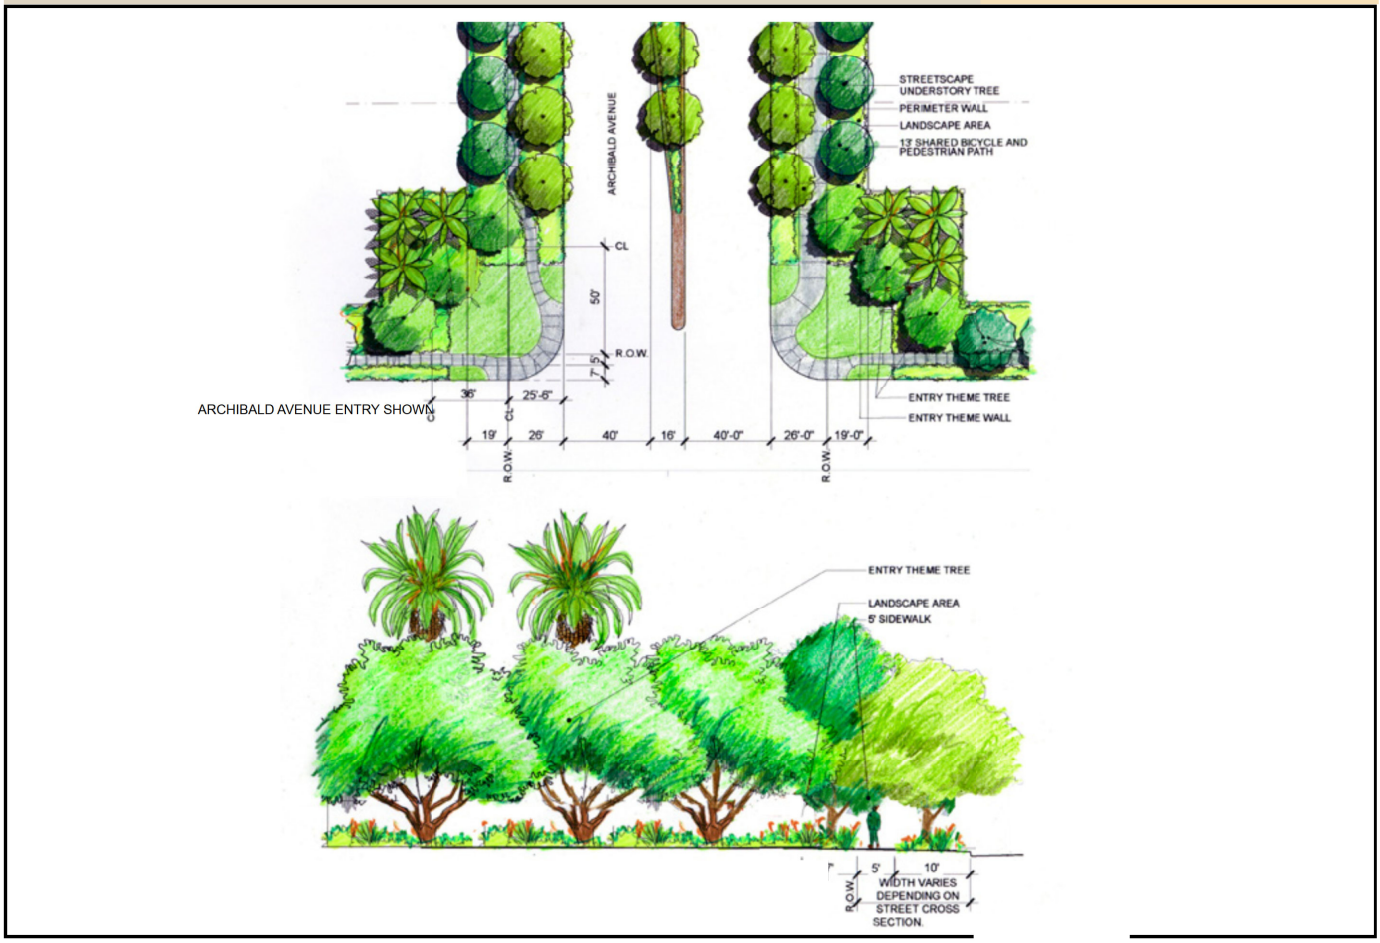


Main Entry

The Avenue is bordered by urban arterials on three sides. This allows easy access to neighborhoods throughout the community but also requires a carefully considered hierarchy and treatment of colony entries. The Main Entry provides a relaxed but strong sense of arrival and identity by utilizing soft open turf leading to stone veneered pilasters and a low planter wall. Clustered palms mixed with evergreen foliage trees and flowering shrubs will evoke the image of a classic Ontario community scene. The developer will be responsible for those improvements to the Main Entry as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project.

Exhibit 27a - Main Entry

Main Entry Section View

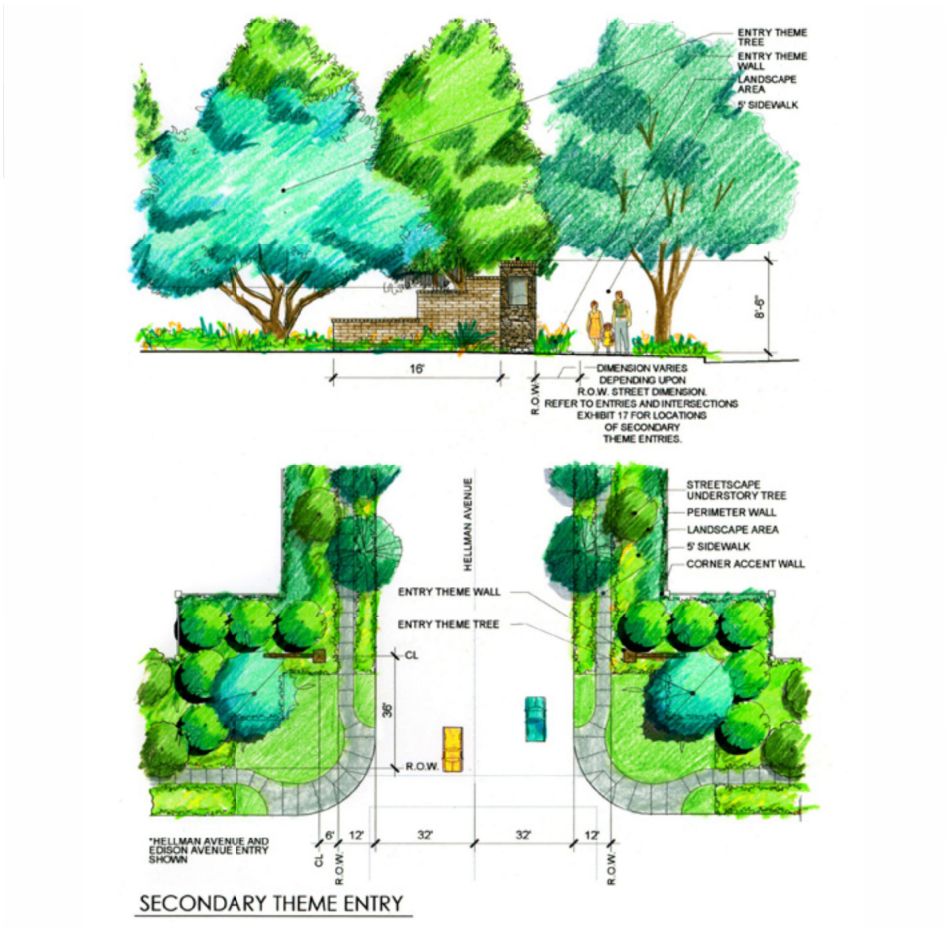


Main Entry Plan View

Primary Entries

These entries occur along the urban arterial and collectors throughout the community as shown in Exhibit 27, “Entries, Intersections and Community Walls”. They will be smaller scale versions of the main entry and will contain minor sign monuments, theme walls and pilasters, simple attractive evergreen and deciduous tree planting and accent shrubs set behind a simple turf area. These entries will provide an important outlet and inlet for colony traffic to most efficiently access residential enclaves and other community elements. The developer will be responsible for those improvements to the Primary Entries as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project.

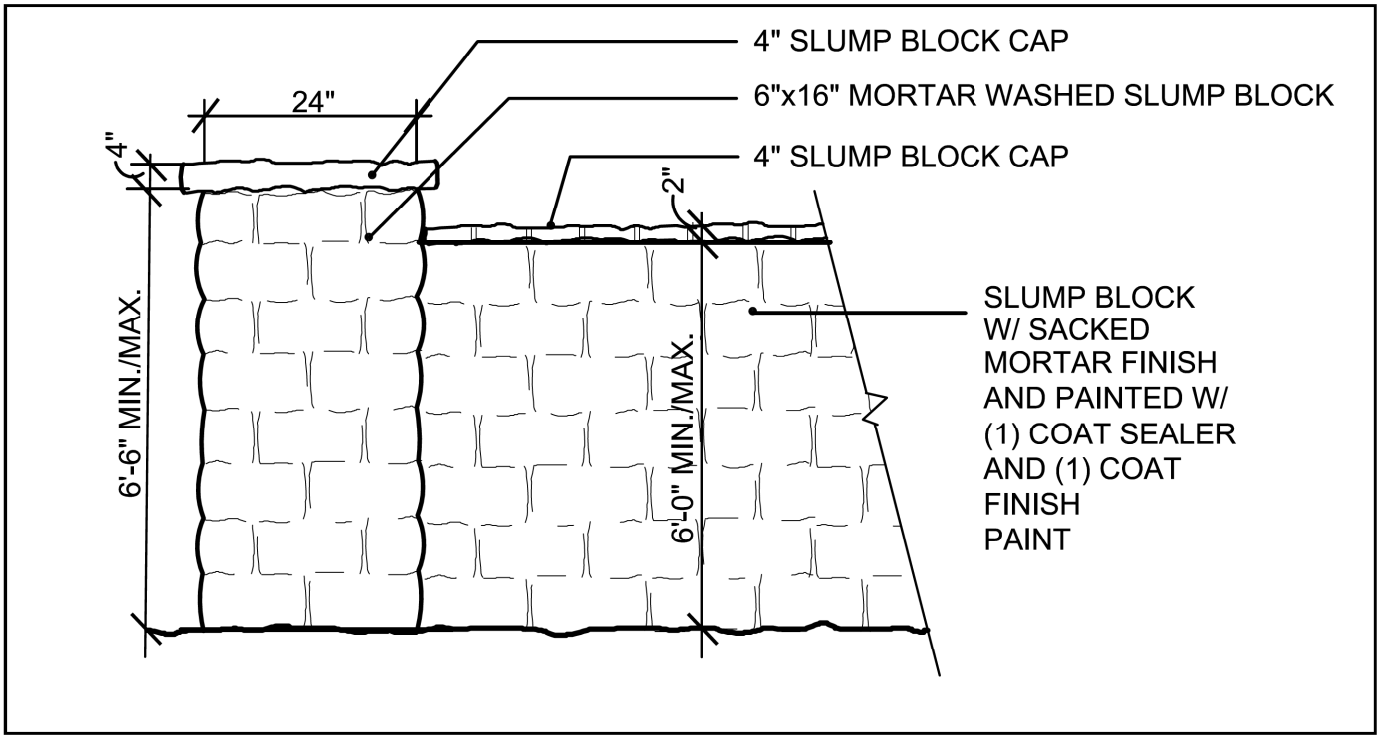
Exhibit 27b - Primary Entries



Secondary Entries

These entries will be the primary marketing and residential enclave access for the separate residential products within The Avenue as shown in Exhibit 27, “Entries, Intersections and Community Walls”. These entries occur from the internal road system and will be determined through the separate future planning of each enclave per the City of Ontario’s planning design standards and this Specific Plan document.

Simple identification signage and individualized landscape theming will be allowed. Signage may be permanent or temporary and is subject to review and approval by the master community developer. The signage and landscape materials must be compatible and complementary to The Avenue’s landscape design theme. Flexibility within this framework will allow visual diversity and individualization of the residential neighborhoods.

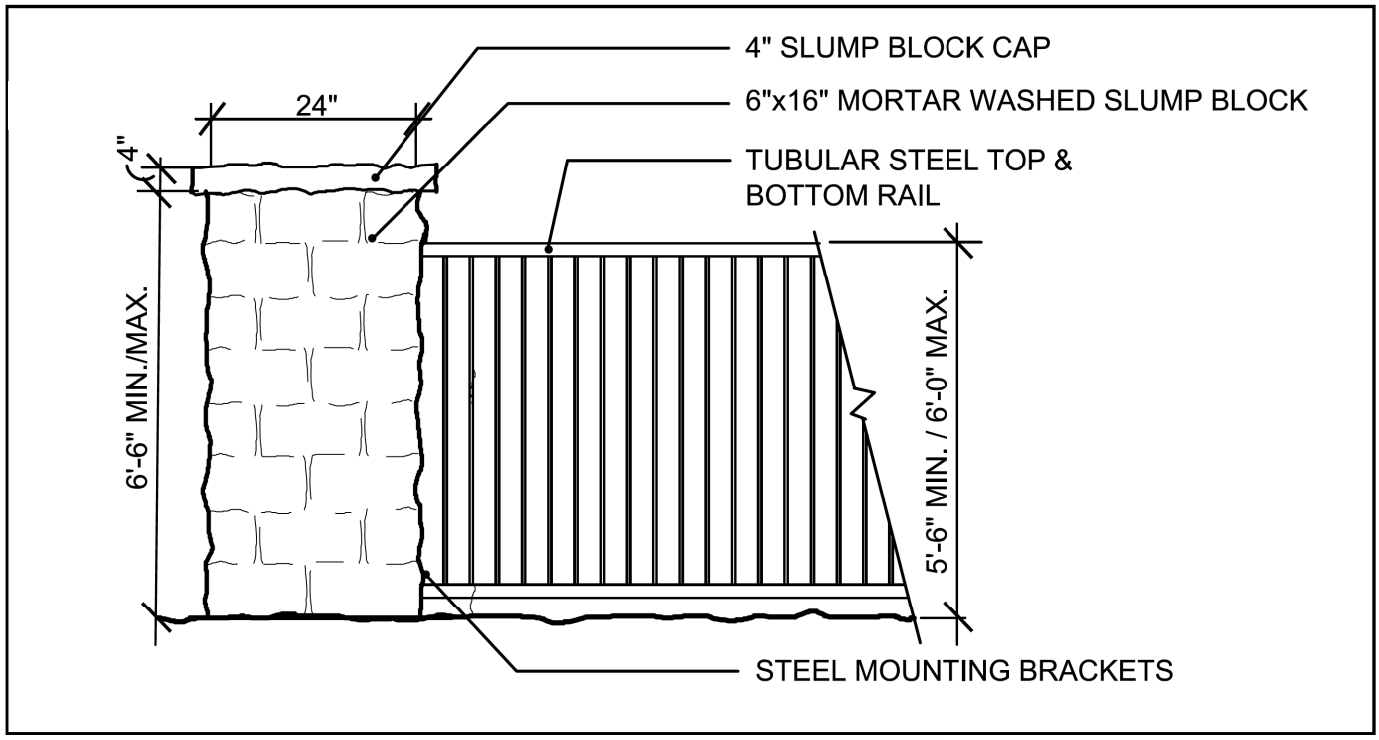


The developer will be responsible for those improvements to Archibald Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project.

Exhibit 27c - Secondary Entries

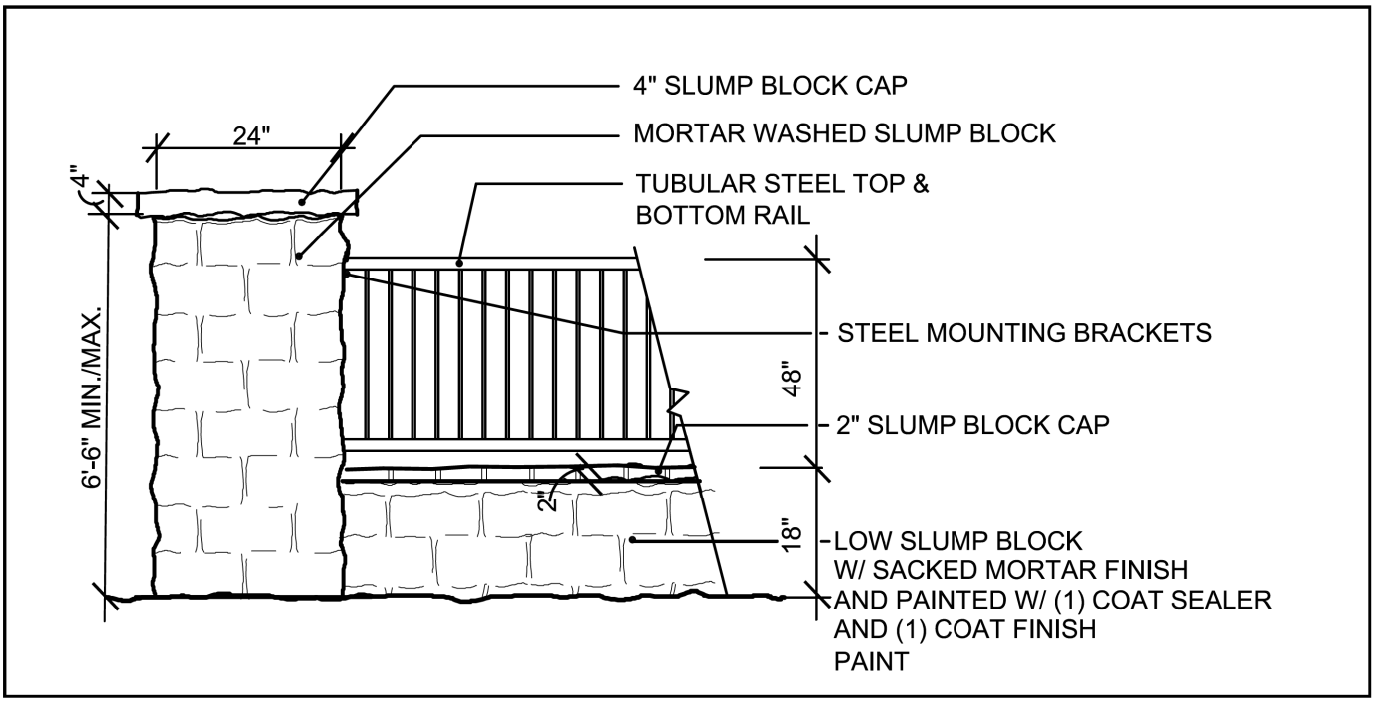
Solid Masonry Theme Wall

Solid masonry walls will be provided as rear and side yard enclosures where privacy is desired such as adjacent to streetscapes. The solid theme wall used within The Avenue will be a mortar washed painted slump block masonry unit. Pilasters will be placed at wall terminus points and as determined to be necessary for visual benefit.



Open Tubular Steel Fence

Tubular steel fencing will be used at residential interfaces to allow maximum view retention. Tubular steel fencing may also be used where an attractive open enclosure is necessary at park sites or recreation facilities.



Where feasible, the tubular steel fence will be interspersed with thematic community stone or masonry pilasters.

Combination Fence/Wall

This combination enclosure of a tubular steel fence mounted on a low solid masonry theme wall occurs where partial privacy is necessary, but permits some view opportunity. Pilasters shall occur at the intersections of rear and side property lines and shall be constructed of solid masonry theme wall materials.

Community Wood Fence

Wood fencing is acceptable when not adjacent to common open spaces such as school sites, parks or commercial sites. Wood fencing is allowed for front yard low (3'-6" high max.) decorative fencing. Wood fencing will not be permitted in rear or sides (masonry block only). Wood fence materials must be of sufficient quality to accept solid and semi-transparent stains required to help prevent rotting and weathering. No transparent stains will be allowed.

Interior Neighborhood Streetscene Walls

- Walls adjoining any interior neighborhood streetscene shall have a perimeter streetscene solid community theme treatment.
- The community solid theme wall shall be utilized at all residential corner lot side yards which parallel or are viewed from public streets.
- Wood fencing is permitted within the individual neighborhood provided the fencing is not readily visible from the community streetscenes, except as located behind the front yard setback.

Commercial, Institutional and Other Uses

Screen and security fences and walls are encouraged only in rear or side yards. Trash deposit areas shall be enclosed within a six foot (6') high gated trash enclosure wherever located.

Wall and Fence Heights

Residential, Institutional and Commercial Uses:

- Front yard wall heights must be compatible with the visual appearance and integrity of the front yard streetscene. Fences and walls in the front setback and street side setback shall not exceed three and one-half feet (3 ½') above grade. However, security fencing may be approved if there is a demonstrated need for security. The maximum height for this fencing shall be six feet (6') above grade. In this instance a combination wall/open fence enclosure shall be encouraged.
- Side and rear fences or walls shall not exceed a height of six feet (6').
- Pool Code: All fencing shall conform to the applicable City of Ontario pool code fencing requirements.

Wall and Fence Materials and Colors

All fences and walls within the private residential lots shall be designed and constructed as part of the overall architectural site design. All materials shall be durable and finished in textures and colors complementary to the overall architectural design.

- Permitted Wall Materials: Stone veneer, stucco (including stucco covered block), masonry, brick, slump block, block and wrought iron combination are acceptable.
- Conditionally Acceptable Wall and Fence Materials: Glass and/or heavy, break-resistant plastic are acceptable for use in fences and walls when necessary to preserve views while providing protection against winds, etc., if used in conjunction with the community solid theme wall.
- Prohibited Wall and Fence Materials: Barbed wire, wire, electrically charged fences, plain exposed precision block; plastic materials, corrugated metal, chain link and grape stake fencing are prohibited.
- Color and Special Wall and Fence Treatments: Walls may be left natural or covered with stucco, except plain precision block must be covered with stucco. Brick or slump block walls may be painted or covered with stucco, if desired. Stone surfaces shall remain natural or unpainted.
- Special Wall and Fence Regulations: A six foot (6') high minimum masonry wall shall be constructed on each property line prior to development of any commercial, industrial or business related use that adjoins any parcel specifically zoned for residential use or destined for open space or as a school site.

Special Wall and Fence Regulations

- A six foot (6') high masonry wall shall be constructed on each property line prior to development of any commercial/office related use that adjoins any parcel specifically zoned for residential use, or designed for open space or as a school site.
- All fences and walls connecting two (2) separate residential dwelling units shall be constructed of the same color and material and shall be compatible with the color and material of the architecture.
- Long walls should be broken up with landscaping, alignment offsets and material changes to relieve visual monotony. When possible, a three foot (3') minimum space should be left between paved areas and walls and fences to allow for vines and espaliers.
- All walls and/or fencing in commercial areas shall be planted with vines or screened by dense shrubbery.
- Brick walls or screening walls should have climbing plants or anti-graffiti elements such as anti-graffiti paint to prevent walls from being vandalized.
- If a wall is proposed along the east side of Carpenter Avenue where the homes are plotted to rear onto Carpenter Avenue, a 10-foot wide landscape buffer shall be incorporated along the street frontage. The 10-foot landscape buffer shall be measured from back of sidewalk (ROW) (13-foot parkway + 10 foot landscape buffer: Total 23-foot edge measured from curb face).

Typical residential streetscene

6.6.3 Local Streets/Residential Lot Frontage and Private Lot Landscaping

The local roads within The Avenue consist of private front or side yards of single family residences. Street trees and front and exterior side yards will be required to be installed by the residential enclave builder, however, the rear and interior side yards will be the responsibility of each individual homeowner.

Residential Lot Landscape Requirements

Each single-family dwelling/lot shall be provided with front yard landscaping and a permanent automatic irrigation in the front yard of each lot. At a minimum, a seeded turf lawn, appropriate shrubs and trees and an automatic irrigation system shall be provided. Furthermore, a variety of typical landscape designs shall be provided for use on each lot within the subdivision.

Multiple-family residential projects shall be provided with full landscape improvements throughout the development. At a minimum, a seeded turf lawn, appropriate shrubs and trees, and a permanent automatic irrigation system shall be provided.

Landscape and irrigation drawings of the entire project site must be submitted to the Building department in conjunction with construction plans. The plans shall be approved by the Planning Department and the ~~Public Facilities Development Department~~ Landscape Planning Division prior to the issuance of building permits.

Those portions of a property which are not used for drive entries, parking, or approved outdoor uses shall be fully landscaped; all unpaved areas shall be landscaped; and all future development phase areas shall be hydroseeded.

Per City of Ontario's landscape Development Standards, each residential lot shall receive minimum of one (1) - 24" box size street tree planted in the right-of-way. Corner lots shall receive two (2) -24" box size street trees also planted in the right-of-way. Street trees planted in the right-of-way shall be thirty feet (30') maximum on center. Tree varieties shall be chosen from The Avenue's Plant Palette contained herein. Trees should be clustered near property lines to maximize their buffering effect and streetscene impact. One (1) species of tree shall be selected and approved for each residential street to maximize visual neighborhood identity. Deciduous or flowering evergreen accent trees which contrast with the chosen street trees are encouraged at cul-de-sacs, knuckles and intersections to provide seasonal emphasis and interest.

Residential Front Yard Requirements

A maximum of ~~fifty~~ twenty five percent (~~50~~25%) of the front yard, excluding driveways and sidewalks may be seeded or sodded turf. A minimum of ten (10) 5 gallon shrubs, twenty (20) 1 gallon shrubs and an automatic irrigation system shall be installed by the builder/developer in the front yard of each residential lot. The turf, shrubs and irrigation shall be installed up to a property line from the curb face to the front of house and side yards. Side yard slopes over 3:1 surface gradient and three feet (3') in height should be planted with ground cover. Low slopes may be graded out to a less than 3:1 surface gradient and planted with turf.

A minimum of one (1) ~~15 gallon size~~ 24" box tree shall be planted in the front yard of each residential lot in addition to the required street tree. These trees may match the street trees planted in the right-of-way and be located in proximity to said street trees in order to create a more harmonious effect. The trees may also contrast with the street tree and form backdrop tree clusters. Overall, the front yard scheme shall create a streetscene appearance of tree clusters meandering through the project and across streets.

6.6.4 General Landscape Guidelines

Individual homeowners shall be responsible for the maintenance of public street landscape frontage or side of their property unless otherwise identified within their legal ownership documents. Private homeowners shall also be responsible for all maintenance within their private lot area as well as fences and wall faces on their internal boundaries. For public and common area landscape maintenance responsibility refer to Table 4, “Maintenance Responsibility Matrix”.

Outdoor Lighting

All street and commercial developments within The Avenue shall have uniform lighting standards with regard to style, materials and colors in order to ensure consistent design. Each residential development may develop its own lighting standards, provided that the selected lighting fixture style is used consistently throughout the project. Lighting fixtures shall be well integrated into the visual environment and the appropriate architectural theme. All lighting fixtures within The Avenue project area shall comply with the following regulations and provisions.

- All outdoor lighting, including spotlights, floodlights, electrical reflectors and other means of illumination for signs, structures, landscaping, parking, loading, unloading and similar areas shall be focused, directed and arranged to minimize glare and illumination of streets or adjoining property. Low intensity, energy conserving night lighting is preferred.
- Lights shall be unbreakable plastic, recessed or otherwise designed to reduce the problems associated with damage and replacement of fixtures. Fixtures shall be vandal proof.
- Neon and similar types of lighting are prohibited in all areas of The Avenue except in retail commercial developments.
- All exterior lighting designs should develop a sense of hierarchy by varying fixtures and illumination levels. Proper lighting helps to define the organization of streets and plazas; and also distinguishes vehicular and pedestrian circulation patterns. Community entry areas (both pedestrian and vehicular), public plazas, community facilities and highly used recreation areas shall be creatively lit to develop a sense of place and arrival.
- All exterior lighting designs shall address the issue of security. Parking lots, pedestrian walkways and building entrances shall be well lighted for security reasons.

- Street lighting should be metal halide to project true colors and clear visibility for safety and security reasons.
- All lighting is required to have anti-vandalism fixtures.
- Residential units will be required to have their addresses illuminated on their home as close to the front door as possible. In addition, an illuminated address on the garage door should be present if the garage door faces a private drive. Also, the address numbers should be painted on the curb with white reflective paint on a black background. Each homeowner will be responsible for the maintenance of these numbers.
- All exterior lights should be shielded where feasible and focused to minimize spill light into the night sky or adjacent properties.
- No freestanding lighting fixtures shall exceed twenty-five feet (25') in height.
- Service area lighting shall be contained within the service yard boundaries and enclosure walls.
- The lighting concept of the entry monumentation features is to illuminate the sign graphics and to gently wash the walls and pilasters with light. Trees and other landscape features should be illuminated by concealed uplight fixtures.
- All electrical meter pedestals and light switch/control equipment shall be located with minimum public visibility if possible or shall be screened with appropriate plant materials.
- The level of on-site lighting as well as lighting fixtures, shall comply with any and all applicable requirements and policies of the City of Ontario. Energy conservation, safety and security should be emphasized when designing any light system.
- All community landscape common areas, public facilities, commercial sites, streetscapes, parks, schools and other areas may, at the discretion of the project developer or builders, contain area, accent sports or other night lighting entities.

Irrigation

All landscaped areas shall be watered with a permanent underground irrigation system. Irrigation systems which adjoin a separate maintenance responsibility area shall be designed in a manner to ensure complete water coverage between the areas.

Proper consideration of irrigation system design and installation in the climate extremes of The Avenue area is critical to the success of the landscape investment. In particular, the combined summer elements of heat and wind must be carefully considered in proper irrigation design and equipment selection.

Overhead spray irrigation systems shall be designed with head to head 100 percent double coverage at a minimum. Native and drought tolerant shrub areas will use a combination of spray (temporary) and drip or bubbler irrigation to shrubs and trees. All trees shall have a bubbler or spray irrigation system separate from shrubs and groundcovers. In addition, all irrigation systems shall run by an automatic irrigation controller operated by a centralized computer system with manufacturer to be selected by the Parks and maintenance Department.

Irrigation backflow prevention devices and controllers shall be located with minimum public visibility or shall be screened with appropriate plant materials.

- Reclaimed Water: Irrigation systems designed for use with both domestic and reclaimed water are encouraged (Refer to the city's ~~New Model Colony~~ Ontario Ranch Recycled Water Master Plan for additional information). All irrigation systems shall be designed for the eventual use of reclaimed water and/or conversion when available per current applicable standards.

Water Conservation Measures

- Drip and/or bubbler irrigation will be used where appropriate.
- Use of moisture sensors and/or central control irrigation systems may be incorporated where appropriate and feasible.
- Irrigation systems will be designed per AB 325 guidelines and/or the City of Ontario's Water Conservation Ordinance.
- Irrigation systems and plans will be prepared per landscape maintenance district or the City of Ontario's Landscape Development Standards.

Farming next to Flood Control Channel

- Place plants in similar hydro zone groupings to maximize efficient water use. Do not mix drought tolerant or native plants with ornamental plants that have dissimilar water requirements

6.6.5 Plant Material Guidelines

The Avenue will have a vastly different appearance from initial planting to several years into development. The quality of that appearance will depend on many factors including the initial selection of the plant material palette, soil preparation and installation, irrigation management and care and maintenance. All of these issues have been addressed in the preparation of the planting design theme and plant palette selection. A brief discussion of the planting approach and key issues follows:

General Landscape Requirements

- All areas required to be landscaped shall be planted with turf, groundcover, shrub or tree materials selected from the plant palette contained in these guidelines or other drought-tolerant or regionally appropriate species subject to the approval of ~~Public Facilities Development~~ Landscape Planning Division.
- The owners of parcels which require landscape development shall consider any existing common landscape areas adjoining their property. Where feasible, landscape development shall reinforce or be compatible with such existing common area setting.

- Cut slopes equal to or greater than eight feet (8') in vertical height and fill slopes equal to or greater than five feet (5') in vertical height shall be planted with an erosion ground cover to protect the slope from erosion and instability. Slopes exceeding fifteen feet (15') in vertical height shall be planted with shrubs, spaced not more than ~~ten~~ seven feet (~~10'~~7') average on center or trees spaced not to exceed thirty feet (30') average on center or a combination of shrubs and trees at equivalent spacings, in addition to the groundcover. The plants selected and planting methods shall be suitable for the soil and climatic conditions.
- Reference should be made to the City of Ontario Landscape Development Standards for erosion control methods for slopes and other landscaped areas.
- Parkway Tree Planting: All street or parkway trees shall be planted so as to maintain adequate distance and shall maintain the following planting distances:
- Ten feet (10') from all water and sewer lines, fire hydrants, light standards and power poles.
- Five feet (5') from all flat hardscape (sidewalks, curbs, vaults, etc.) except as otherwise approved by the City.
- Twenty-five feet (25') from street intersection beginning of curb returns (BCR).

Climate Constraints

Plant material palettes for The Avenue contained herein are compatible with the climatic setting of the area. The utilization of some materials, depending upon their site location, exposure and relationship to other influential factors may not be appropriate.

Planting Time

Due to the climate extremes of the area, the installation of plant materials during the coldest winter months (December through March) and the hottest summer/fall months (July through September) can be difficult. Container plant materials not acclimated to the area can easily suffer from damage or sun/heat exposure resulting in partial or entire foliage loss even through such materials are perfectly suited to the temperature ranges once established. If planting must be done during these difficult periods, plant establishment may be difficult and require a prolonged period of time, as well as additional replacement plants.

Horticultural Soils Test Requirements

Soil characteristics within The Avenue project may be variable. The owners of parcels which require landscape development shall procure a horticultural soils report in order to determine proper planting and maintenance requirements for proposed plant materials. Such a soils test shall be performed by a qualified agricultural laboratory and shall include a soil fertility and agricultural suitability analysis with pre-planting and post-planting recommendations.

Topography

The Avenue lies across a flat plain. There may be extreme cold conditions occurring during winter months. This will be affected by the development patterns of the community and are difficult to predict. The plant palette proposed may, on occasion, suffer adverse affects in certain areas of the community. Adjustments may need to be made at that time and other drought-tolerant or regionally appropriate species may be substituted subject to the approval of ~~Public Facilities Development~~ Landscape Planning Division.

Drought Tolerance/Water Conserving Plant Material

Although a plant may be considered as drought tolerant or water conserving, that plant requires proper care, installation, watering and maintenance to maintain an optimum healthy condition.

- Degrees of Drought Tolerance/Water Conservation: There are degrees of drought tolerance with some plants able to withstand or go without water for a greater period of time than others. Water conserving plant material may not be drought tolerant but can thrive on low water amounts throughout the year once established.

Deer Grass

- Plant Installation Water Demand: Drought tolerant plants like other plants, require more watering during the initial installation period and for at least a three month maintenance period following to become established. Therefore, if drought tolerant plants are installed in the warmer months more supplemental water will be required until the plant is established.

Manzanita

- Deep Watering Practices: Drought tolerant plants like most plants need the proper deep watering practices to encourage deep root system development. Drought tolerant plants with a shallow root system resulting from frequent light applications of water will not be drought tolerant. Checking the depth of water penetration into the soil with a soil probe or spade and adjusting irrigation run times enhance plant vigor and prevents plant loss from drought stress over saturation.

- Warmer Months Water Application: Although a plant is labeled drought tolerant, that does not necessarily mean it can survive without summer water, the plant may have low water requirements. Depending upon the plant, drought tolerant plants will have a better appearance and health during the warmer months with infrequent deep watering. Do not water during the heat of the day and avoid overhead watering; prolonged leaf wetting can promote disease.

- Full Season Plant Water Requirements: After drought tolerant plants have grown a full season, the water application rate should be diminished and the drought tolerant plant allowed to survive on less water.

- Maintenance: Drought tolerant and California native plants still need regular maintenance such as pruning, fertilizing, deep watering and checking for pests and diseases.

Invasive Species

Non-native invasive plant species shall not be used in landscape plans. Controlled invasive non-native species shall include the following:

Non-native Acacia's (Acacia spp.)
Tree of Heaven (Ailanthus altissima)
Giant reed (Arundo donax)*
Hottentot-fig (Carpobrotus edulis)
Garland chyrsanthemum (Chrysanthemum coronarium)*
Pampas grass (Cortaderia atacamensis)*
French broom (Cytisus monspessulans)
Scotch broom (Cytisus scoparius)
Crystal ice plant (Mesembryanthemum crystallinum)
Small-flowered ice plant (Mesembryanthemum nodiflorum)
Bermuda buttercup (Oxalis pes-caprae)*
German ivy (Senecio mikanoides)
Pink periwinkle (Vinca major)
Tamarisk (Tamarix spp.)*
Gorse (Ulex europaeus)

Ailanthus altissima

** Indicates a species that may not be used in any plant palettes, regardless of location in the development, due to its ability to readily spread via airborne seeds, rather than vegetatively.*

Plant Pest and Disease Control

A consistent problem in ornamental and native planting schemes is the disease and pests which have affected trees and shrubs often in significant visual patterns through a community. Recent well documented problems include oleander scorch blight and several eucalyptus and olive problems, however, a series of other problems have occurred on an annual basis. There is no way to predict the occurrence of new pests or diseases, however, there are useful methods to limit the impact of outbreaks. These include the following:

- Maintain optimum plant health through soil preparation, water management and nutrient monitoring.
- Review community plant material on a regular basis to observe health problems due to disease or pest infestation and take appropriate action.
- Place plant material in appropriate planting areas and provide proper spacing consistent with the requirements of the plant species.
- Provide good cultural practices to maintain plant health and disease resistance with adequate mulch, sufficient air circulation and protection from mechanical injury from mowers and edgers.

The following Plant List is to provide design guidance and intent. While this list is not a comprehensive list of suitable plants for The Avenue, other drought-tolerant or regionally appropriate species, preferably from the low and moderate species of the WUCOLS (Water Use Classification of Landscape Species) classification system, may be substituted subject to the approval of ~~Public Facilities Development~~ Landscape Planning Division.

Turfgrass and Seed:

Year round turf grass mixes as follows:

General turf areas:

100% Dwarf tall fescue blend - 10 lbs. per 1,000 s.f.

Park Site and Athletic areas:

Hybrid bermuda (seeded or stolonized)

Bermuda grass must be planted and mature prior to the dormant season.

General Plan Consistency

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65450-65457) permits the adoption and administration of specific plans as an implementation tool for elements contained in the local general plan. Policy plans must demonstrate consistency in regulations, guidelines, and programs with the goals and policies set forth in the general plan. The Avenue Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario Policy Plan. The policy analysis in Table 7-1, "Policy Plan Consistency," describes the manner in which the Avenue Specific Plan complies with The Ontario Plan (TOP) policies applicable to the project.

Plan Policy	Specific Plan Consistency
Land Use Element	
GOAL LU-1: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.	
LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.	The Specific Plan outlines pedestrian sidewalk and multi-use trail network connecting neighborhoods to open space, schools and future commercial land use.
LU-1.2 Sustainable Community Strategy. We integrate state, regional, and local Sustainable Community/Smart Growth principles into the development and entitlement process.	Sustainable Community/Smart Growth principles are incorporated into the Avenue Land Use Plan. Pedestrian sidewalks and bicycle paths to be constructed as part of the project throughout the community provide connectivity among residential planning areas and schools to help reduce vehicle trips and miles traveled. The design of residential areas incorporates tree-lined parkways providing shade for pedestrians and parked cars. Safe and efficient pedestrian and bicycle connectivity is provided throughout the project. The Avenue architectural design guidelines allow for a variety of architectural styles that respond to local climate conditions. Some styles allow the incorporation of flat roofs that facilitate the use of solar collectors. All new construction will utilize design features, fixtures, appliances, and heating and cooling controls to conserve energy and water. The landscape concept for The Avenue incorporates a plant palette of drought tolerant materials and requirements that the development implement planting and irrigation systems designed to conserve water. Park and recreation areas will include shaded areas, bicycle racks, and other amenity features to encourage pedestrian and other non-vehicular activities.

Plan Policy	Specific Plan Consistency
LU-1.3 Adequate Capacity. We require adequate infrastructure and services for all development.	The Avenue Specific Plan establishes an infrastructure and public facilities plan to ensure that adequate roadways and public utilities including sewer, water, and drainage facilities along with schools, parks, and other public facilities are provided to serve the project.
LU-1.4 Multimodal Mobility. We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on active transportation, transit, electric vehicles, and multimodal transportation opportunities	The Avenue Specific Plan requires the construction of Class 1 Bike Paths, which are an integral element to creating accessibility and mobility and Class II on-street striped bike lanes shall be provided on roadways within The Avenue Specific Plan area as determined by the City Engineer. Bus turnouts will be provided on Ontario Ranch Road, Schaefer Avenue, Haven Avenue, and Archibald Avenue to the satisfaction of the City Engineer and Omnitrans.
LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.	The Avenue provides for development of up to 3,753 residential dwelling units in a variety of residential single-family detached and multi-family attached housing types oriented toward open space amenities.
GOAL LU-2: Compatibility between a wide range of uses and resultant urban patterns and forms.	
LU-2.6 Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character.	Arterial streets within Avenue will be uniformly landscaped in an aesthetically pleasing manner with 8-10-foot wide landscaped parkways on each side of the street and 16-26 foot wide landscaped medians in each street. A planting buffer area varying in width from 40-50 feet in width will be provided adjacent to sidewalks within the project adjacent to all arterial roadways. Decorative project monuments will be constructed at key project entries providing community identification and establishing a sense of arrival and a welcoming feeling for the community.
LU-2.9 Methane Gas Sites. We require sensitive land uses and new uses on former dairy farms or other methane-producing sites be designed to minimize health risks.	The project will comply with appropriate mitigation measures identified in the project EIR for soil remediation and proper venting to address the potential existence of methane gases within the project.

Plan Policy	Specific Plan Consistency
GOAL LU-4: Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.	
LU-4.3 Infrastructure Timing. We require that the necessary infrastructure and services be in place prior to or concurrently with development.	Approval of the Avenue Specific Plan is accompanied by an application for approval of a development agreement. The development agreement shall include, but not be limited to, methods for financing, acquisition, and construction of infrastructure, acquisition, and development of adequate levels of parkland and schools, as well as the provision of adequate housing opportunities for various segments of the community consistent with the City's regional housing needs assessment. The Avenue development agreement shall be fully approved before the issuance of the first building permits for the project.
GOAL LU-5: Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.	
LU-5.2 Airport Planning Consistency. We coordinate with airport authorities to ensure The Ontario Plan is consistent with state law, federal regulations, and/or adopted master plans, and airport land use compatibility plans for ONT and Chino Airport.	The Specific Plan will comply with the ALUCP requirements for Ontario Airport (ONT) and Chino Airport as outlined in The Avenue Specific Plan Section 2-6.
LU-5.7 ALUCP Consistency with Land Use Regulations. We comply with state law that requires general plans, specific plans, and all new development to be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public-use airport.	The Specific Plan will comply with the ALUCP requirements for Ontario Airport (ONT) and Chino Airport as outlined in The Avenue Specific Plan Section 2-6.
Housing Element	
GOAL H-2 Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.	

Plan Policy	Specific Plan Consistency
H-2.4 Ontario Ranch. We support a premier lifestyle community in the Ontario Ranch, distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.	The Avenue Specific Plan allows for the development of up to 3,753 residential dwelling units comprised of a variety of single-family detached and multi-family attached homes. Residential land use areas are linked by a network of street- separated sidewalks and bicycle trails connecting all neighborhoods to parks and schools. Residential development is designed to address a variety of lifestyles and economic segments of the marketplace, such as singles, families, executives and "empty nesters."
H-2.5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.	The Specific Plan includes architectural design guidelines to encourage development of diverse neighborhoods with the use of varied architectural styles articulated with elements true to the architectural characteristics of each style.
GOAL H-5 A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age, or other status.	
H-5.2 Family Housing. We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation, and other amenities.	The Specific Plan allows for the development of condominium and multi-family home types designed to accommodate families with children. The Specific Plan requires that all condominium and multi-family developments within the project provide private recreational areas and/or pocket parks for residents of the development.
Parks & Recreation Element	
GOAL PR-1: A system of safe and accessible parks that meets the needs of the community.	
PR-1.5 Acreage Standard. We strive to provide 5 acres of parkland (public and private) per 1,000 residents.	The project will comply with the City requirement for the payment of an in-lieu fee in amount equivalent to three acres of parkland per 1,000 residents to fund the development of public parks and the requirement that each new development provide park acreage on-site equivalent to 2 acres per 1,000 residents. The Specific Plan includes the provision of private pocket parks in each Planning Area.

Plan Policy	Specific Plan Consistency
PR-1.6 Private Parks. We expect development to provide a minimum of 2 acres of developed private park space per 1,000 residents.	The Specific Plan includes the provision of private pocket parks in each Planning Area with a total acreage provided equivalent to 2 acres of developed private park per 1,000 residents.
PR-1.9 Phased Development. We require parks be built in new communities before a significant proportion of residents move in.	Development within the Specific Plan is required to be reviewed and approved pursuant to the City's Subdivision Ordinance, which requires the approval of tentative and final subdivision maps for the project. Conditions of approval associated with the City's approval of tentative subdivision maps will provide for the timing of construction of parks as part of the development.
PR-1.11 Environmental Function of Parks. We require new parks to meet environmental management objectives.	The Specific Plan requires all new development to be reviewed and approved pursuant to the provisions of the City's Subdivision Ordinance and Development Plan Review process, which provides for review by the City's Planning Department which may require the development to incorporate environmental management objectives into the design of parks.
PR-1.12 Trails. We promote connections between parks and local trails including those managed by other public agencies.	The Specific Plan is designed for bicycle and pedestrian accessibility provided throughout the community through a network of off-street bike and pedestrian trails within the plan area along Archibald, Haven, Ontario Ranch Road and Schaefer Avenues. Connectivity to this network of off-street trails from all residential Planning Areas is provided through the local street system.
PR-1.14 Multi-family Residential Developments. We require that new multi-family residential developments of five or more units provide recreational facilities or open space, in addition to paying adopted impact fees.	The Specific Plan requires that all condominium and multi-family developments within the project provide private recreational areas and/or pocket parks for residents of the development in addition to the payment by the developer of adopted impact fees.
Environmental Resources Element	
GOAL ER-1: A reliable and cost-effective system that permits the City to manage its diverse water resources and needs.	

Plan Policy	Specific Plan Consistency
ER-1.3 Conservation and Sustainable Water Supply. We work with regional water providers and users to conserve water and ensure sustainable local water supplies as more frequent droughts reduce long term local and regional water availability.	The Specific Plan requires all public and common area landscaping within the project to utilize plant materials listed on the approved Specific Plan Landscape Plant Matrix, which is comprised of drought tolerant and California Friendly plant materials. The Specific Plan requires that irrigation systems for both public and private landscaped areas be designed to be as water-efficient as possible and includes the following minimum requirements. • Use of moisture sensors and/or central control irrigation systems may be incorporated where appropriate and feasible. • Drip and/or bubbler irrigation will be used where appropriate. • Irrigation systems will be designed per AB325 guidelines and/or the City of Ontario's Water Conservation Ordinance. • Irrigation systems and plans will be prepared per landscape maintenance district or the City of Ontario's Landscape Development Standards. • Place plants in similar hydro zone groupings to maximize efficient water use. Do not mix drought tolerant or native plants with ornamental plants that have dissimilar water requirements.
ER-1.5 Water Resource Management. Environmental justice areas are prioritized as we coordinate with local agencies to protect water quality, prevent pollution, address existing contamination, and remediate contaminated surface water and groundwater.	The Avenue Specific Plan requires that the developer obtain approval of a Strom Water Pollution Prevention Plan (SWPPP) prior to issuance of grading or construction permits. All projects greater than 1 acre in size shall apply for coverage under the California General Permit To Discharge Storm Water Associated with construction activity, obtain a WDID# from the State Water Resources Control Board and prepare a Stormwater Pollution Prevention Plan (SWPPP) on the CASQA 2009 Template form and upload it to the State's SMART database system.

Plan Policy	Specific Plan Consistency
	In addition to the preparation of a SWPPP for construction-related activities, and as part of the approval of any grading plans for the project, the developer is required to submit a Water Quality Management Plan (WQMP) on the regional model form provided by the City. The WQMP shall identify and detail all Site Design BMP's, Source Control BMP's and Treatment Control BMP's to be implemented or installed as part of the project in order to reduce storm water pollutants and site runoff.
ER-1.6 Urban Run-off Quantity. We encourage the use of low impact development strategies, including green infrastructure, to intercept run-off, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.	The Specific Plan requires that grading and drainage for the project be designed to retain, filter, and/or treat surface runoff to the maximum extent practicable, to comply with the requirements of the current San Bernardino County NPDES Stormwater Program's MS4 Permit and Water Quality Management Plan (WQMP) for significant new development projects. These effects may be minimized through the implementation of site designs that reduce runoff and pollutant transport by minimizing impervious surfaces and maximizing on-site infiltration, Source Control Best Management Practices (BMP's) and/or either on-site structural Treatment Control BMP's, or participation in regional or watershed-based Treatment Control BMP's. An alternative to the implementation of on-site Low Impact Development (LID) BMPs to retain/infilter and treat stormwater runoff is the utilization of the off-site, regional Mill Creek Wetland facility for accomplishing water quality improvements in residential project runoff from this master planned community. All non-residential planning area projects within The Avenue will incorporate all required on-site LID BMPs, pursuant to the requirements of the current San Bernardino County Water Quality Management Plan.

Plan Policy	Specific Plan Consistency
ER-1.7 Urban Run-off Quality. We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.	The Specific Plan requires that the project comply with the most recent requirements of the San Bernardino County NPDES Storm Water Program's Quality Management (WQMP) for significant new development projects. A final WQMP is required to be submitted by the developer for approval by the City prior to the issuance of any grading and construction permits for the project.
ER-1.8 Wastewater Management. We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.	The Specific Plan requires the construction of a wastewater system consistent with City requirements and also requires that the project obtain approval of a WQMP for the project prior to the issuance of any grading or construction permit.
Community Economics Element	
GOAL ER-3: Cost-effective and reliable energy system sustained through a combination of low impact buildings, site and neighborhood energy conservation, and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.	
ER-3.1 Conservation Strategy. We require conservation as the first strategy to be employed to meet applicable energy-saving standards.	The Specific Plan requires all public and common area landscaping within the project to utilize plant materials listed on the approved Specific Plan Landscape Plant Matrix, which is comprised of drought tolerant and California Friendly plant materials. The Specific Plan requires that irrigation systems for both public and private landscaped areas be designed to be as water-efficient as possible. The Specific Plan requires the construction of separate water mains for the use of recycled water in public and common areas of the project. The Specific Plan includes architectural styles that respond to local climate conditions and allow for the incorporation of flat roofs that facilitate the use of solar collectors. All new construction will utilize fixtures, appliances, and heating and cooling controls to conserve water and energy.

Plan Policy	Specific Plan Consistency
ER-3.2 Green Development– Communities. We encourage the use of the LEED Neighborhood Development rating system, or similar mechanism, to guide the planning and development of all new communities.	The Specific Plan includes architectural guidelines, which allow for a variety of styles that respond to local climate conditions. Some styles allow the incorporation of flat roofs that facilitate the use of solar collectors. All new construction will utilize design features, fixtures, appliances, and heating and cooling controls to conserve energy and water. The landscape concept for The Avenue incorporates a plant palette and a planting and irrigation system designed to conserve water. Park and recreation areas will include shaded areas, bicycle racks, and other amenity features to encourage pedestrian and other non-vehicular activities.
ER-3.3 Building and Site Design. We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.	The Specific Plan includes architectural design guidelines, which allow for styles that respond to local climate conditions. Some styles allow for flat roofs that facilitate the use of solar collectors.
GOAL ER-4: Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.	
ER-4.4 Indoor Air Quality. We will comply with State Green Building Codes relative to indoor air quality. We seek funding to improve indoor air quality for households with poor indoor air quality, with priority for lower income households in environmental justice areas.	All development within the Specific Plan will be required to comply with the State Green Building Code as implemented by the City.
GOAL ER-5 Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.	
ER-5.2 Entitlement and Permitting Process. We comply with state and federal regulations regarding protected species.	The project will comply with all mitigation measures identified in the project EIR with regard to biological resources.
ER-5.3 Right to Farm. We support the right of existing farms to continue their operations within the Ontario Ranch.	The Specific Plan requires a minimum 100-foot wide agricultural buffer be provided by the development between any new residential structure and any existing animal feed trough, corral/pen or an existing dairy/feed lot.

Plan Policy	Specific Plan Consistency
ER-5.4 Transition of Farms. We protect both existing farms and sensitive uses around them as agricultural areas transition to urban uses.	The Specific Plan requires a minimum 100-foot wide agricultural buffer be provided by the development between any new residential structure and any existing animal feed trough, corral/pen or an existing dairy/feed lot.
Community Economics Element	
GOAL CE-1: A complete community that provides for all incomes and stages of life.	
CE-1.6 Diversity of Housing. We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.	The Specific Plan allows for the development of 3,753 residential dwelling units comprised of single-family detached and multi-family attached homes. A network of street-separated sidewalks and Multipurpose Trails connecting all neighborhoods to parks and schools links residential land use areas. Residential development is designed to address a variety of lifestyles and economic segments of the marketplace, such as singles, families, executives and "empty nesters."
GOAL CE-2: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.	
CE-2.1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.	The Specific Plan includes architectural and landscape design guidelines.
CE-2.2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.	The Specific Plan requires all new development to be reviewed and approved pursuant to the provisions of the City's Subdivision Ordinance and Development Plan Review process which provides for review by the City's Planning Department which may require the development to demonstrate how the project will create appropriately unique, functional and sustainable places.
CE-2.5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.	The Specific Plan includes a Maintenance Responsibility Matrix defining the private responsibilities for maintenance of private roadways, parkways, trails, common areas, parks, yards, walls, and monuments within the project.

Plan Policy	Specific Plan Consistency
CE-2.6 Public Maintenance. We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm whether on private land, in rights-of-way, or on publicly-owned property.	The Specific Plan includes a Maintenance Responsibility Matrix defining the responsible public entities, including special districts, for maintenance of roadways, sidewalks, traffic signals, off site and on site public water, sewer, and storm drain infrastructure facilities.
Safety Element	
GOAL S-1: Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by earthquake-induced and other geologic hazards.	
S-1.1 Implementation of Regulations and Standards. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.	All development within the Specific Plan will be required to comply with the State of California Building Code as adopted and implemented by the City.
GOAL S-3: Reduced risk of death, injury, property damage and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.	
S-3.8 Fire Prevention through Environmental Design. We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open spaces, and buildings.	The Specific Plan requires new development to be reviewed and approved pursuant to the City's Subdivision Ordinance and Development Plan Review process, allowing for the Fire Department review, and requiring the incorporation of any required fire prevention design elements in streetscapes, open spaces and buildings.
GOAL S-4: An environment where noise does not adversely affect the public's health, safety, and welfare.	
S-4.1 Noise Mitigation. We utilize the City's Noise Ordinance, building codes, and subdivision and development codes to mitigate noise impacts.	All development within the Specific Plan will be required to comply with City's Noise Ordinance, building codes, and subdivision and development codes to mitigate noise impacts.
GOAL S-5: Minimize the risk of injury, property damage, and economic loss resulting from windstorms and wind-related hazards.	
S-5.1 Dust Control Measures. We require the implementation of Best Management Practices for dust control at all excavation and grading projects.	Construction within the Specific Plan will comply with a City approved construction management plan and all mitigation measures identified in the project EIR with regard to dust control.

Plan Policy	Specific Plan Consistency
GOAL S-6: Reduced potential for hazardous materials exposure and contamination.	
S-6.9 Remediation of Methane. We require development to assess and mitigate the presence of methane, per regulatory standards and guidelines.	The project will comply with all mitigation measures identified as part of the project EIR for soil remediation and proper venting to address the potential existence of methane gases within the project.
GOAL S-7: Residential neighborhoods, commercial areas, and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, and community involvement in public safety.	
S-7.4 Crime Prevention through Environmental Design (CPTED). We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces, and buildings.	The Specific Plan requires all new development to be reviewed and approved pursuant to the provisions of the City's Subdivision Ordinance and Development Plan Review process which provides for review by the City's Police Department, which may require the development to incorporate CPTED in the design of streetscapes, sites, open spaces and buildings.
Mobility Element	
GOAL M-1: A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.	
M-1.1 Roadway Design and Maintenance. We require our roadways to: • Comply with federal, state, and local design and safety standards; • Meet the needs of multiple transportation modes and users; • Handle the capacity envisioned in the City of Ontario Master Plan of Streets and Highways; • Be maintained in accordance with best practices; • Be compatible with the streetscape and surrounding land uses; and • Promote the efficient flow of all modes of traffic through the implementation of intelligent transportation systems and travel demand management strategies	The Specific Plan requires the construction of a network of Master Plan Roadways designed consistent with the requirements of the City's Functional Roadway Classification Plan and the New Model Colony Streetscape Master Plan. The roadway system is designed to maintain a peak hour Level of Service (LOS) E or better at all intersections as discussed in the project EIR. Site design, source control, and treatment BMP's for the project are required to be submitted by the developer for approval by the City prior to issuance of permits for the project.

Plan Policy	Specific Plan Consistency
GOAL M-2: A system of trails and corridors that facilitate and encourage active modes of transportation.	
M-2.3 Pedestrian Walkways. We require streets to include sidewalks and visible crosswalks at major intersections where necessary to promote safe and comfortable mobility between residential areas, businesses, schools, parks, recreation areas, and other key destination points.	The Specific Plan requires the developer of the project to coordinate with the local mass transit provider, Omnitrans, to accommodate adequate area for any bus turnouts within the Master Plan Roadways as required by Omnitrans.
Community Design Element	
GOAL CD-1: A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.	
CD-1.2 Place Types. We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.	The Specific Plan includes design guidelines to guide the physical character of all future residential development and all community and neighborhood features, including the overall landscape treatment within the project. The proposed community character establishes a unified aesthetic treatment and design theme. The community vision for The Avenue is based upon the architectural and landscape influences found in Ontario and throughout Southern California. The architectural styles and landscape concept chosen for the community have been selected in order to be reflective of older neighborhoods of historic Ontario as well as to accommodate innovative transitional influences. Together, the architectural styles and landscape concept are designed to create a neighborhood character for The Avenue that will be sustainable over time.
CD-1.5 View Corridors. We require all major north-south streets be designed and redeveloped to feature views of the San Gabriel Mountains, which are part of the City's visual identity and a key to geographic orientation. Such views should be free of visual clutter, including billboards and may be enhanced by framing with trees.	The major north south streets in The Avenue are designed to frame the views of the San Gabriel Mountains. The Specific Plan requires the construction of extensive landscaping on both sides of each street and in the median of each street. All new utility lines will be placed underground.

Plan Policy	Specific Plan Consistency
GOAL CD-2: A high level of design quality resulting in neighborhoods, commercial areas, public spaces, parks, and streetscapes that are attractive, safe, functional, human- scale, and distinct	
CD-2.1 Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through: • Building volume, massing, and height to provide context-appropriate scale and proportion; • A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and • Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.	The Specific Plan includes design guidelines to guide the construction of the project by requiring building massing to address the street and the pedestrian experience, the use of selected architectural styles to be implemented in a comprehensive manner throughout each neighborhood around all building elevations, and the use of building materials and architectural features and elements which are true to each selected style.
CD-2.2 Neighborhood Design. We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as: • A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services; • Varied parcel sizes and lot configurations to accommodate a diversity of housing types; • Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access; • Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and • Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.	The Avenue is designed as a walkable community of traditional residential neighborhoods organized around a simple grid street system offering a variety of home types within an open space setting. Residents can walk or bike to parks and schools via an interconnected network of sidewalks and trails throughout the community. Traditional site planning elements, varied residential product design and architecture, well-landscaped streets and enhanced entries combine to create welcoming neighborhoods within the community with aesthetic and functional harmony. Streets are linked together in a grid pattern with sidewalks separated from the street by landscaped parkways providing a simple and understandable system for pedestrian and vehicular travel connecting neighborhoods, open space amenities, public facilities, and recreational areas. A variety of housing types, including detached single-family homes, attached single-family homes, and multifamily homes are planned for Avenue, all of which are located close to schools, parks, and open space amenities.

Plan Policy	Specific Plan Consistency
	Residential development standards and design guidelines contained in the Specific Plan ensure that homes are designed at a human scale emphasizing architecture fronting the street. Residential development standards are designed to minimize views of garage doors through use of alternating garage configurations. Traffic calming features incorporated into neighborhood streets include a traditional grid pattern with sidewalks separated by landscaping on either side of the street, and the use of intersection chokers and roundabouts where appropriate.
CD-2.5 Streetscapes. We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right-of-way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.	The Specific Plan is designed with a comprehensive street system to accommodate the safe and efficient movement of automobiles as well as bike trails and a multi-purpose trail to accommodate bicycle and pedestrian mobility and connectivity throughout the community. Streets are designed as a grid system of short blocks allowing for various access points and travel routes. Streets are designed with sidewalks separated from the street to create an inviting environment for walking. Streets connect neighborhoods, parks and schools through a variety of travel paths. There will be several points in the trail system linking to secondary paths that will lead to The Avenue's retail/commercial areas, as well as to the neighborhoods. Multi-use paths are provided within the plan area along Archibald, Haven, Ontario Ranch Road and Schaefer Avenues. These paths are provided adjacent to the major drainage easement, along Hellman Avenue, and along the spine road which traverses the center of the plan area in an east-west direction. Connectivity to this network of off street bike trails from all residential Planning Areas is provided through the local street system.

Plan Policy	Specific Plan Consistency
CD-2.6 Connectivity. We promote development of local street patterns, multimodal networks, and connected public spaces that create and unify neighborhoods, rather than divide them, and create cohesive and continuous corridors, rather than independent "islands" through the following means: • Local street networks that provide access both between subdivisions and within neighborhoods and discourage through traffic; • A local street system that is logical and understandable for the user. A grid system is preferred to avoid circuitous and confusing travel paths between internal neighborhood areas and adjacent arterials and to provide adequate emergency and evacuation access; and • Pedestrian and bicycle networks that provide convenient access to neighborhoods and nearby destinations, such as schools, parks, other public spaces, commercial areas, and transit stops.	Off-street pedestrian circulation is available throughout The Avenue by means of the interconnected, paved sidewalk system within the roadway right-of-way, separated from travel lanes by a landscaped parkway and within off-street Multipurpose Trails. The Project pedestrian system provides connectivity among residential neighborhoods to pocket parks and the schools within The Avenue. Streets are designed in a simple grid system with short blocks promoting a sense of small neighborhoods.
CD-2.8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.	Residential development standards and design guidelines contained within the Specific Plan require home designs with fronts of homes, not garages, oriented toward the street to ensure that "eyes are on the street" in each neighborhood. Residences are oriented around open space, parks, and trails. Parking areas and garages are located to the rear of residences to avoid dominance of the streetscape by automobiles and to enhance a pedestrian environment on all streets.
CD-2.9 Landscape Design. We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.	The landscape concept for The Avenue incorporates the use of durable landscaping materials, a drought tolerant plant palette, and a planting and irrigation system designed to conserve water. Park and recreation areas will include shaded areas, bicycle racks, and other amenity features to encourage pedestrian and other non-vehicular activities. All materials utilized in private and public common areas will be durable landscaping materials.

Plan Policy	Specific Plan Consistency
CD-2.11 Entry Statements. We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.	Signage and landscaping will be provided at neighborhood entries within The Avenue. Community and neighborhood entry monumentation is required by the Specific Plan and is designed to establish a hierarchy for each Planning Area of the community. At key entries a monumentation program will be utilized to help identify the community as well as convey a sense of arrival and a welcoming feel for both vehicular and pedestrian traffic. These monuments and "gateways" are to be designed with durable, lasting materials approved by the City of Ontario.
CD-2.12 Site and Building Signage. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.	The Avenue Specific Plan requires identification signage and individualized landscape theming. Signage may be permanent or temporary and will be subject to review and approval by the master community developer. The signage and landscape materials must be compatible and complementary to The Avenue's landscape design theme.
GOAL CD-3: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.	
CD-3.1 Unique Identity. We promote development that heightens the unique character and identity of each Place Type by requiring compatible land uses and land planning, site design, and building design that promotes an active public realm.	The Specific Plan includes architecture and landscape design guidelines to enrich the community landscape and architectural style for The Avenue. The design guidelines are organized to define the basic landscape design principles for the project, to guide the implementation of the "design vision," and to ensure the design integrity of the project. All landscape plans, streetscape plans, and graphic designs with regard to community identity, neighborhood identity, or entry monumentation within the project are required to conform to the landscape design guidelines as set forth in the Specific Plan and are subject to review and approval by the City of Ontario.

Plan Policy	Specific Plan Consistency
CD-3.3 Complete and Connected Network. We require that pedestrian, vehicular, and bicycle circulation on both public and private property be coordinated to provide connections internally and externally to adjacent neighborhoods and properties (existing and planned) through a system of local roads and trails that promote walking and biking to nearby destinations (including existing and planned parks, commercial areas, and transit stops) and are designed to maximize safety, comfort, and aesthetics.	The Specific Plan is designed for bicycle and pedestrian accessibility throughout the community through a network of off-street bike and pedestrian trails or multi-use paths within Ontario Ranch Road, Archibald, Haven, Schaefer and Hellman Avenues. Connectivity to this network of off street trails from all residential Planning Areas is provided through the local street system.
CD-3.5 Active Frontages. We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).	The Specific Plan includes architectural design guidelines, which promote street facing front entries and architectural elements visible from adjacent streets, sidewalks, and parks within the project.
GOAL CD-5: A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the property values and encourages additional public and private investments.	
CD-5.1 Maintenance of Buildings and Property. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.	The Specific Plan includes a Maintenance Responsibility Matrix defining the public, private, and utility entities responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, parks, yards, walls and monuments, traffic signals, infrastructure, and utilities within the project.
CD-5.2 Maintenance of Infrastructure. We require the continual maintenance of infrastructure.	The Specific Plan includes a Maintenance Responsibility Matrix defining the responsible entities for continual maintenance of roadways, sidewalks, traffic signals, off site and on site public water, sewer, and storm drain infrastructure facilities.

Plan Policy	Specific Plan Consistency
Social Resources Element	
GOAL SR-2: A range of educational and training opportunities for residents and workers of all ages and abilities that improves their life choices and provides a skilled workforce for our businesses.	
SR-2.4 Access to Schools. We work with local and regional partners to improve the safety in and around schools and to improve access for citizens of all ages and abilities to schools and community services, such as after school and other programs.	The Avenue Specific Plan lists creating a strong functional relationship between homes and schools and providing for connectivity between residential neighborhoods, recreational areas, and to the schools, by means of pedestrian and bicycle trail linkages, as part of the Specific Plan Objectives.
GOAL SR-5: Local heritage, entertainment, and cultural experiences that enrich the lives of Ontario's residents, workers, and visitors and serve to attract residents and businesses to the City.	
SR-5.3 Public Art. We encourage public art in buildings, parks, open spaces, and other public and private spaces.	The Avenue Specific Plan Landscape Design Guidelines includes provision of active and passive pedestrian spaces that encourage user interaction; Fountains, stages, public art is encouraged for these spaces.

LAND DEVELOPMENT DIVISION CONDITIONS OF APPROVAL

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

Date Prepared: 1/2/2025

File No: PSPA22-005

Email: avaughn@ontarioca.gov

The Planning Department, Land Development Section, conditions of approval applicable to the above-described Project are listed below. The Project shall comply with each condition of approval as listed:

1.0 Standard Conditions of Approval. The project shall comply with the *Standard Conditions for New Development*, adopted by City Council Resolution No. 2017-027 on April 18, 2017. A copy of the *Standard Conditions for New Development* may be obtained from the Planning Department or City Clerk/Records Management Department.

2.0 Special Conditions of Approval. In addition to the *Standard Conditions for New Development* identified in condition no. 1.0, above, the project shall comply with the following special conditions of approval:

2.1 Specific Plan Amendment. The following shall be submitted to the Planning Department within 30 days following City Council approval of the Specific Plan Amendment:

(a) Two hard copies of the final Specific Plan document (bound, double-sided, color);

(b) One flash drive containing:

(i) A complete Microsoft Word or equivalent copy of the final Specific Plan document, including all required revisions;

(ii) A complete PDF copy of the final Specific Plan document, including all required revisions; and

(iii) A complete electronic website version (PDF, reduced size, OCR) of the final Specific Plan document, including all required revisions.

2.2 Signs.

(a) All Project signage shall comply with the requirements of Ontario Development Code Division 8.1 (Sign Regulations).

(b) On-site posting of public noticing shall be provided pursuant to Code Section 2.03.010.C.4, which consists of one or more large, 6-foot-tall, freestanding public notification signs. The sign face shall measure 4 feet tall by 8 feet wide, in a format approved by the Planning Director. The sign shall be posted no later than ten calendar days prior to the Planning Commission hearing date and removed no later than fourteen calendar days following the City Council hearing date, unless otherwise required by the Planning Director. The format is available on the City's website.

2.3 Additional Fees.

(a) Within 5 days following final application approval, the Notice of Determination ("NOD") filing fee shall be provided to the Planning Department. The fee shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act ("CEQA"). Failure to provide said fee within the time specified will result in the extension of the statute of limitations for the filing of a CEQA lawsuit from 30 days to 180 days.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING AN ADDENDUM TO THE ONTARIO PLAN 2050 SUPPLEMENTAL ENVIRONMENTAL IMPACT REPORT, PURSUANT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NO. PSPA22-005.

WHEREAS, RICHLAND COMMUNITIES (hereinafter referred to as "Applicant") has filed an Application for the approval of a Specific Plan Amendment, File No. PSPA22-005, which consists of an amendment to The Avenue Specific Plan to: 1) modify the land use designation of Planning Area 4 and apply density modifications to Planning Areas 1B, 2A, 3B, and 5 for consistency with The Ontario Plan 2050 Land Use Plan; 2) apply general modifications throughout the document for clarity; and, 3) make exhibit and text updates throughout the document to support the Project, for land located at the northwest corner of Archibald Avenue and Ontario Ranch Road, in the City of Ontario, California (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the City of Ontario certified the Environmental Impact Report prepared for The Ontario Plan and associated Statement of Overriding Considerations, and issued Resolution No. 2010-003; and

WHEREAS, the City of Ontario adopted the Policy Plan (General Plan) as part of the component framework for The Ontario Plan on January 27, 2010, and issued Resolution No. 2010-004; and

WHEREAS, the City of Ontario certified the Supplemental Environmental Impact Report (SEIR), for the General Plan Amendment for The Ontario Plan 2050 Technical Update on August 16, 2022; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the certified Supplemental Environmental Impact Report, an Addendum to the Certified SEIR (hereinafter referred to as "SEIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the SEIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified SEIR, and that the Certified SEIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified SEIR was appropriate; and

WHEREAS, on February 25, 2025, the Planning Commission of the City of Ontario conducted a hearing to consider the Addendum and concluded said hearing on that date, voting to issue Resolution No. PC25-012, recommending that the City Council concluded that none of the conditions requiring preparation of a subsequent or supplemental EIR have occurred, and further recommending that the City Council take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the City Council is the decision-making body for the requested approval to construct and otherwise undertake the Project; and

WHEREAS, the City Council has reviewed and considered the EIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent or supplemental EIR have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the EIR Addendum for the Project are on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, are available for inspection by any interested person at that location and are, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The environmental impacts of this Project were reviewed in conjunction with an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of Project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The SEIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the City Council; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the Project may result in significant environmental impacts.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified SEIR that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared, that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified SEIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified SEIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified SEIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 and 2, above, the City Council hereby finds that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified SEIR, and does hereby approve the SEIR Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 4: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 5: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 18th day of March, 2025.

1.0 INTRODUCTION

1.0 INTRODUCTION

1.1 OVERVIEW

The Avenue Specific Plan was approved by the City of Ontario (City) in 2007, with subsequent Specific Plan Amendments approved in 2010, 2014, 2017, and 2020. The current (2020) The Avenue Specific Plan (2020 Specific Plan, Original Project) encompasses approximately 568.1 gross acres located within the City of Ontario. The Original Project site (the Specific Plan Area) is bound by Schaefer Avenue to the north, Haven Avenue to the east, Ontario Ranch Road to the south, and Carpenter Avenue to the west. Location and boundaries of the Original Project are presented at Figures 1.1-1 and 1.1-2, respectively.

Subsequent to approval of the Original Project, the City of Ontario adopted and implemented The Ontario Plan 2050 (TOP 2050) and TOP 2050 Policy Plan (the City General Plan). The Original Project Land Use designations are inconsistent with TOP 2050 Policy Plan Land Use designations for the subject site. The proposed Avenue Specific Plan, 2024 Amendment (Modified Project) evaluated herein brings the Original Project Land Uses into conformance with TOP 2050 Policy Plan Land Use Plan. Land Use designations for the subject site under the Original Project, TOP 2050 Policy Plan, and the proposed Modified Project are compared at Figure 1.1-3.

Figure 1.1-3
Land Use Plan Comparison

The Modified Project land uses and development concepts have been designed to be consistent with land uses and development concepts for the subject site reflected in TOP 2050. Impacts of TOP 2050 have been evaluated and addressed in *The Ontario Plan 2050 Certified SEIR* (TOP 2050 SEIR, Certified SEIR, SCH No. 2021070364). This Addendum compares and contrasts impacts of the Modified Project with impacts identified in the Certified SEIR. As substantiated herein, the Modified Project would not result in substantially different or substantially increased impacts when compared to impacts considered and addressed in the Certified SEIR.

This Addendum to the Certified SEIR substantiates that the proposed Modified Project evaluated herein would not result in any new significant impacts not considered and addressed in the Certified SEIR; nor would there be any substantial increase in the severity of, or substantial change in any previously-identified environmental impacts considered and addressed in the Certified SEIR.

1.1.2 Original Project and Modified Project Development Concepts Compared

The primary effect of the proposed Modified Project would be to increase the intensity, and total amount, of residential and commercial/retail development within the Specific Plan Area. More specifically:

- Under the Original Project, maximum residential development would total 2,981 dwelling units (all types). Under the Modified Project, maximum residential development would total 3,753 dwelling units[1] (all types), an increase of 772 dwelling units or approximately 26 percent.

- Under the Original Project, maximum commercial development would total 130,680 square feet (all types). Under the Modified Project, maximum commercial

[1] There is the potential for the 10.89-acre school site portion of Planning Area 5 to transition to residential uses, should the school district determine that this site is not needed for school development. If this is the case, these 10.89 acres would be developed with up to 50 residential units, bringing the total Specific Plan residential unit count to 3,803.

development would total 335,176 square feet (all types), an increase of 204,496 square feet or approximately 156 percent.[2]

It is noted here that the proposed Modified Project land use revisions and resulting residential and commercial development would affect only those portions of the Specific Plan Area located west of Archibald Avenue. East of Archibald Avenue, properties within the Specific Plan Area are fully developed or are currently under development.

Within this Addendum, the Modified Project is assumed to be completed and fully occupied by 2025 – the Modified Project Opening Year. This Addendum in all instances evaluates likely maximum impact scenarios. Should future development proposed within the Modified Project area differ substantially from the development concept analyzed herein, the Lead Agency would comply with CEQA in consideration of those proposals. Ultimate scope and configuration of the Modified Project uses would be as approved by the City.

1.2 CALIFORNIA ENVIRONMENTAL QUALITY ACT DOCUMENTATION

California Environmental Quality Act (CEQA) documentation for the Original Project is presented in *The Ontario Plan 2050* [TOP 2050] *Supplemental Environmental Impact Report,* State Clearinghouse No. 2021070364 (TOP 2050 SEIR, Certified SEIR). This Addendum to the Certified SEIR (Addendum) compares the impacts that were identified in the Certified SEIR with the anticipated impacts of the proposed Modified Project. This Addendum substantiates that the proposed Modified Project would not result in new significant impacts, substantially different impacts, or impacts that would be substantially more severe than those evaluated and addressed in the Certified SEIR.

1.3 ADDENDUM PURPOSE AND SUMMARY

The focus and purpose of this document is to determine if the Modified Project described herein would result in new or substantially different environmental impacts than those considered and addressed in the Certified SEIR. To these ends, this Addendum defines,

[2] For the purposes of analysis, all commercial uses are assumed to be operational 24 hours per day, 7 days per week.

describes, compares, and contrasts potential environmental impacts of the Modified Project in the context of the environmental impacts assessed in the Certified SEIR. In so doing, this Addendum substantiates consistency with applicable California Environmental Quality Act Guidelines (*CEQA Guidelines*) provisions addressing preparation of an Addendum to a previously-Certified EIR.

As presented at *CEQA Guidelines* Section 15164, an Addendum to a Certified EIR may be prepared if only minor technical changes or additions are necessary and none of the conditions described in Section 15162, calling for the preparation of a subsequent or supplemental EIR, have occurred. Further, Public Resources Code Section 21166 prohibits preparation of a subsequent or supplemental EIR for a Certified EIR unless substantial project changes are proposed requiring major revisions to the Certified EIR; a substantial change in circumstances has occurred requiring major revisions to the Certified EIR; or new information becomes available requiring major revisions to the Certified EIR. As supported by the information provided here, none of these conditions apply to the Modified Project. This Addendum to the Certified SEIR fulfills CEQA documentation requirements for the Modified Project.

1.4 INTENDED USE OF THIS ADDENDUM

The City of Ontario (City) is the Lead Agency for the purposes of CEQA because it has the principal responsibility and authority for consideration of discretionary actions and permitting for the Modified Project. As the Lead Agency, the City is also responsible for analyzing the Modified Project's potential environmental impacts.

The Lead Agency will employ this Addendum in its evaluation of potential environmental impacts resulting from, or associated with, approval and implementation of the Modified Project. This Addendum may also be used by various Responsible Agencies, e.g., Air Quality Management District(s), Regional Water Quality Control Board(s), *et al.*; as well as utilities and service providers when such entities issue discretionary permits necessary to carry out the Modified Project.

For example, if the Modified Project would require discretionary permits from the South Coast Air Quality Management District (SCAQMD), this Addendum would serve as the environmental assessment for such permits (please refer to California Code of Regulations, Section 15050).

This Addendum in all instances evaluates likely maximum impact scenarios. Should future development proposals within the Modified Project area differ substantially from the development concepts analyzed herein, the Lead Agency would comply with CEQA in consideration of those proposals. Ultimate scope and configuration of the Modified Project uses would be as approved by the City through the City development review processes.

1.5 DOCUMENT ORGANIZATION

This Addendum is presented in five sections, as follows:

- **Section 1.0**, *Introduction*, provides an overview of the Modified Project, its context, and environmental documentation applicable to the proposed development.

- **Section 2.0**, *Modified Project - Description*, presents the proposed Modified Project in greater detail.

- **Section 3.0**, *Environmental Checklist*, presents the analysis of potential environmental impacts of the Modified Project. The analysis considers potential environmental impacts of the Modified Project relative to impacts identified in the Certified SEIR.

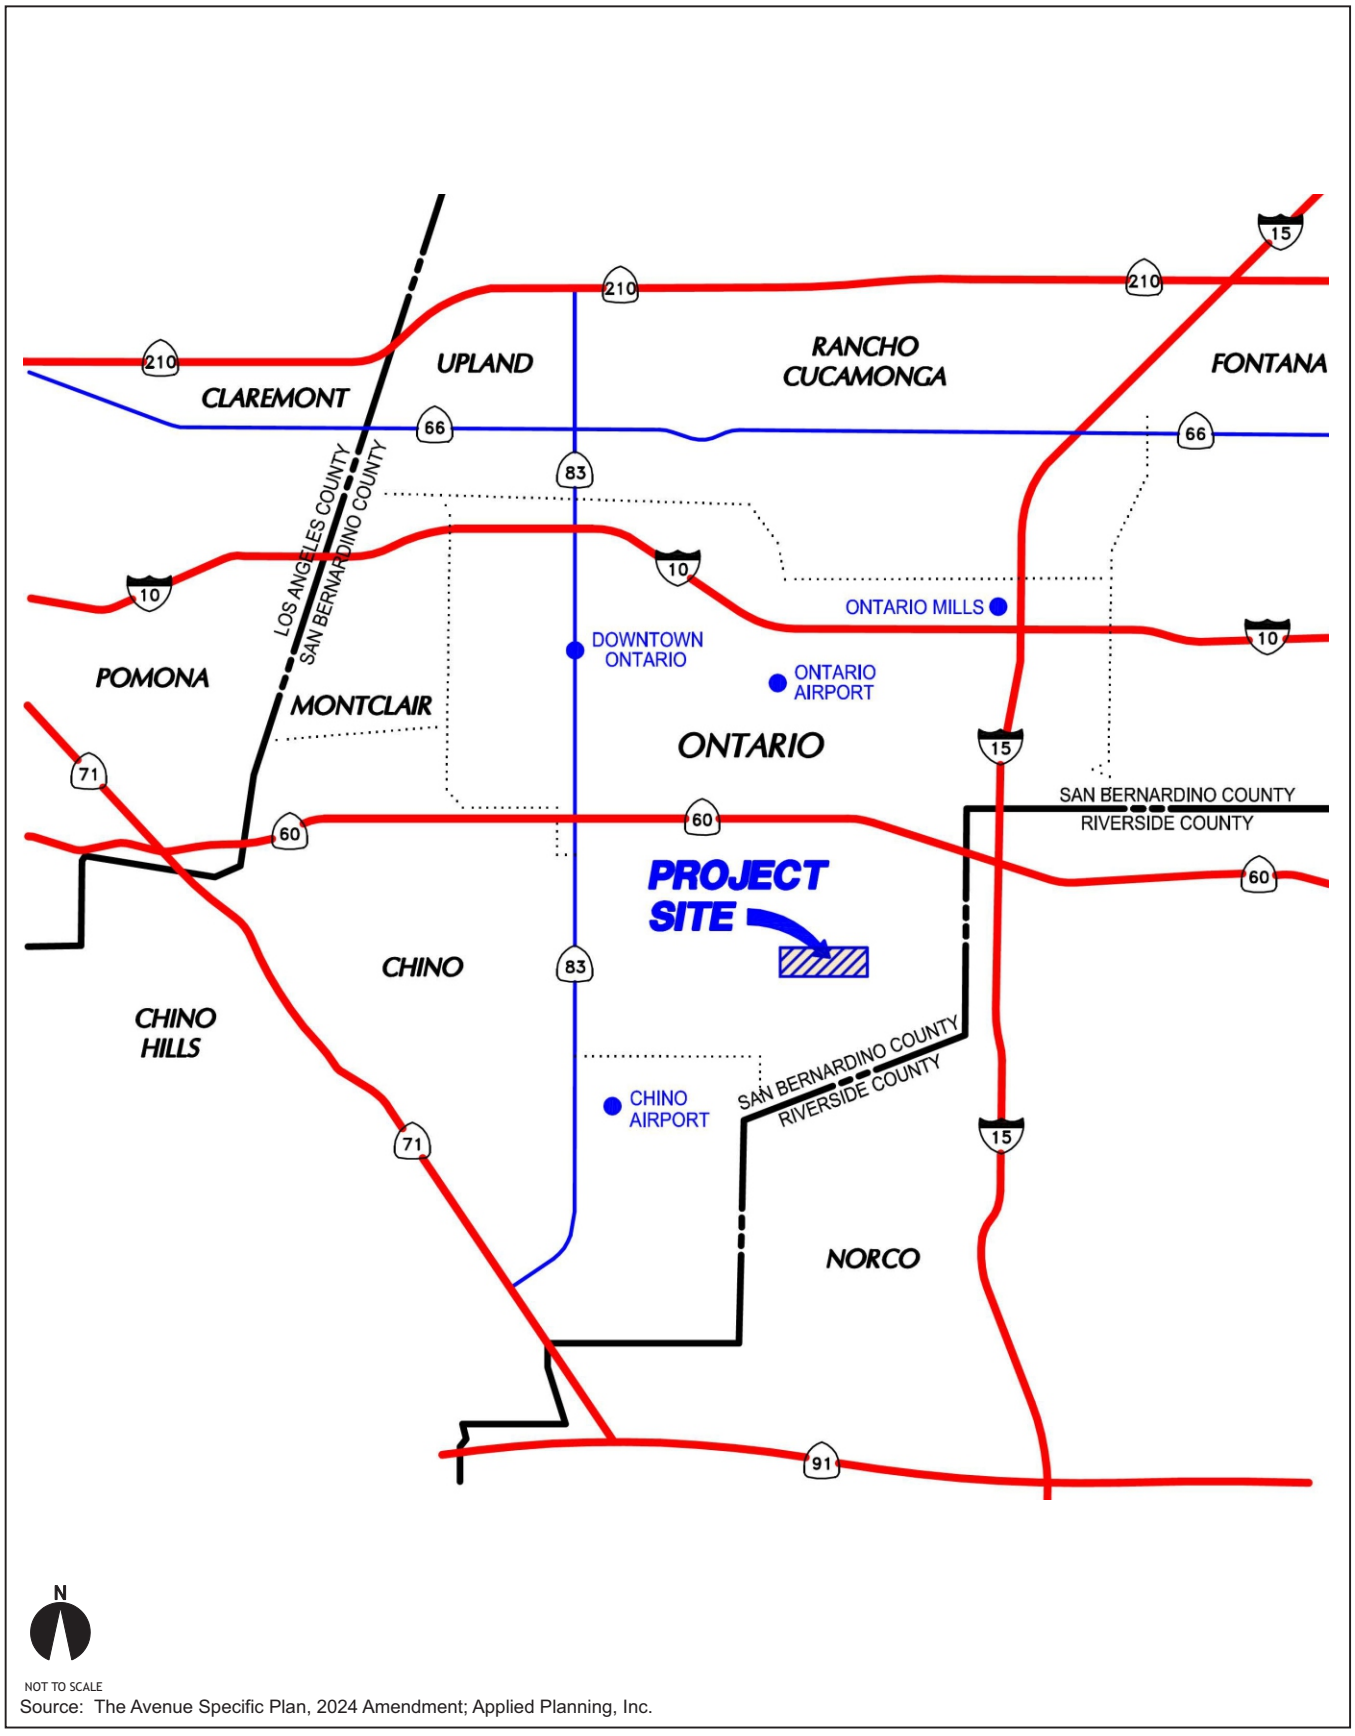
- **Section 4.0**, *Determination*, presents the determination regarding the appropriate environmental document for the Modified Project.

- **Section 5.0**, *Mitigation Summary*, summarizes mitigation from the Certified SEIR, and presents any newly required mitigation or modified mitigation.

1.6 CONCLUSION

This Addendum substantiates that implementation and operation of the proposed Modified Project described and evaluated herein would not result in any significant new, different, additional, or substantially increased environmental impacts than were previously considered and addressed in the Certified SEIR.

2.0 MODIFIED PROJECT - DESCRIPTION



2.0 MODIFIED PROJECT - DESCRIPTION

2.1 OVERVIEW

2.1.1 Original Project, Modified Project, and TOP 2050

The Avenue Specific Plan was approved by the City of Ontario (City) in 2007, with subsequent Specific Plan Amendments approved in 2010, 2014, 2017, and 2020. The current (2020) The Avenue Specific Plan (2020 Specific Plan, Original Project) encompasses approximately 568.1 gross acres located within the City of Ontario. The Original Project site (the Specific Plan Area) is bound by Schaefer Avenue to the north, Haven Avenue to the east, Ontario Ranch Road to the south, and Carpenter Avenue to the west. Location and boundaries of the Project are presented at Figures 2.1-1 and 2.1-2, respectively.

Subsequent to approval of the Original Project, the City of Ontario adopted and implemented The Ontario Plan 2050 (TOP 2050) and TOP 2050 Policy Plan (the City General Plan). The Original Project Land Use designations are inconsistent with TOP 2050 Policy Plan Land Use designations for the subject site. The proposed Modified Project evaluated herein brings the Original Project Land Uses into conformance with TOP 2050 Policy Plan Land Use Plan. Land Use designations for the subject site under the Original Project, TOP 2050 Policy Plan, and the proposed Modified Project are compared at Figure 2.1-3.

Figure 2.1-3
Land Use Plan Comparison

2.1.2 Original Project and Modified Project Development Concepts Compared

A comparison of the Original Project and Modified Project development concepts is presented at subsequent Table 2.1-1. As indicated at Table 2.1-1, the primary effect of the proposed Modified Project would be to increase the intensity, and total amount, of residential and commercial/retail development within the Specific Plan Area. More specifically:

- Under the Original Project, maximum residential development would total 2,981 dwelling units (all types). Under the Modified Project, maximum residential development would total 3,753 dwelling units[1] (all types), an increase of 772 dwelling units or approximately 26 percent.

- Under the Original Project, maximum commercial development would total 130,680 square feet (all types). Under the Modified Project, maximum commercial development would total 335,176 square feet (all types), an increase of 204,496 square feet or approximately 156 percent.[2]

It is noted here that the proposed Modified Project land use revisions and resulting residential and commercial development would affect only those portions of the Specific Plan Area located west of Archibald Avenue. East of Archibald Avenue, properties within the Specific Plan Area are fully developed or are currently under development.

2.1.3 Opening Year

For the purposes of this analysis, buildout of the Modified Project is assumed to be completed and fully occupied by 2026 – the Modified Project Opening Year.

[1] There is the potential for the 10.89-acre school site portion of Planning Area 5 to transition to residential uses, should the school district determine that this site is not needed for school development. If this is the case, these 10.89 acres would be developed with up to 50 residential units, bringing the total Specific Plan residential unit count to 3,803.

[2] For the purposes of analysis, all commercial uses are assumed to be operational 24 hours per day, 7 days per week.

2.1.4 TOP 2050 SEIR as Basis for Addendum Analysis

The Modified Project land uses and development concepts have been designed to be consistent with land uses and development concepts for the subject site reflected in TOP 2050. Impacts of TOP 2050 have been evaluated and addressed in *The Ontario Plan 2050 Certified SEIR* (TOP 2050 SEIR, Certified SEIR, SCH No. 2021070364). By extension, impacts of The Avenue Specific Plan as amended under the Modified Project would be consistent with impacts considered and addressed in TOP 2050 SEIR. As substantiated herein, development of The Avenue Specific Plan as amended under the Modified Project would not result in substantially different or substantially increased impacts when compared to impacts considered addressed in TOP 2050 SEIR. This analysis of potential environmental impacts of The Avenue Specific Plan, 2024 Amendment appropriately comprises an Addendum to TOP 2050 SEIR.

This Addendum in all instances evaluates likely maximum impact scenarios. Should future development proposals within the Modified Project area differ substantially from the development concepts analyzed herein, the Lead Agency would comply with CEQA in consideration of those proposals. Ultimate scope and configuration of the Modified Project uses would be as approved by the City through the City development review processes.

Notes: * There is the potential for the 10.89-acre school site portion of Planning Area 5 to transition to residential uses, should the school district determine that this site is not needed for school development. If this is the case, these 10.89 acres would be developed with up to 50 residential units, bringing the total Specific Plan residential unit count to 3,803.

2.2 Existing Conditions

2.2.1 Existing Land Uses and Land Use Designations

Existing land uses and land use designations for the Modified Project site and adjacent properties are summarized at Table 2.2-1. Existing land uses are illustrated at Figure 2.2-1. Existing Policy Plan Land Use and Zoning designations are illustrated at Figures 2.2-2 and 2.2-3, respectively.

Table 2.2-1
Existing Land Uses and Land Use Designations

	Existing Land Use	Policy Plan Designation(s)	Zoning Designation
Modified Project Site	**East of Archibald Avenue:** Developed/developing Specific Plan residential uses. **West of Archibald Avenue:** Agricultural and dairy farming uses; vacant disturbed property. Additionally, this area is traversed by the Cucamonga Creek flood channel (N – S alignment) and a Southern California Edison (SCE) easement (NE – SW alignment).	Low Density Residential, Low Medium Density Residential, Medium Density Residential, Public School, Commercial, Open Space-Parkland, Open Space: Non-Recreation	The Avenue Specific Plan (November 2020)
North	**East of Archibald Avenue:** Developed/developing Specific Plan residential uses. **West of Archibald Avenue:** Stormwater detention/groundwater recharge basins; Industrial uses; Cucamonga Creek flood channel (N – S alignment), Deer Creek flood control channel (NE – SW).	Low Density Residential, Open Space: Non-Recreation	West Haven Specific Plan, Countryside Specific Plan
East	Residential uses (existing and under construction); vacant/disturbed properties.	Mixed-Use	Rich Haven Specific Plan
South	Residential uses (existing and under construction); vacant/disturbed properties.	Low Density Residential, Medium Density Residential, Public School, Open Space: Non-Recreation	Parkside Specific Plan, Grand Park Specific Plan
West	Agricultural, dairy farming, and vacant disturbed properties.	Low Density Residential, Medium Density Residential, Open Space: Non-Recreation	Specific Plan with Agricultural and Affordable Housing Overlays

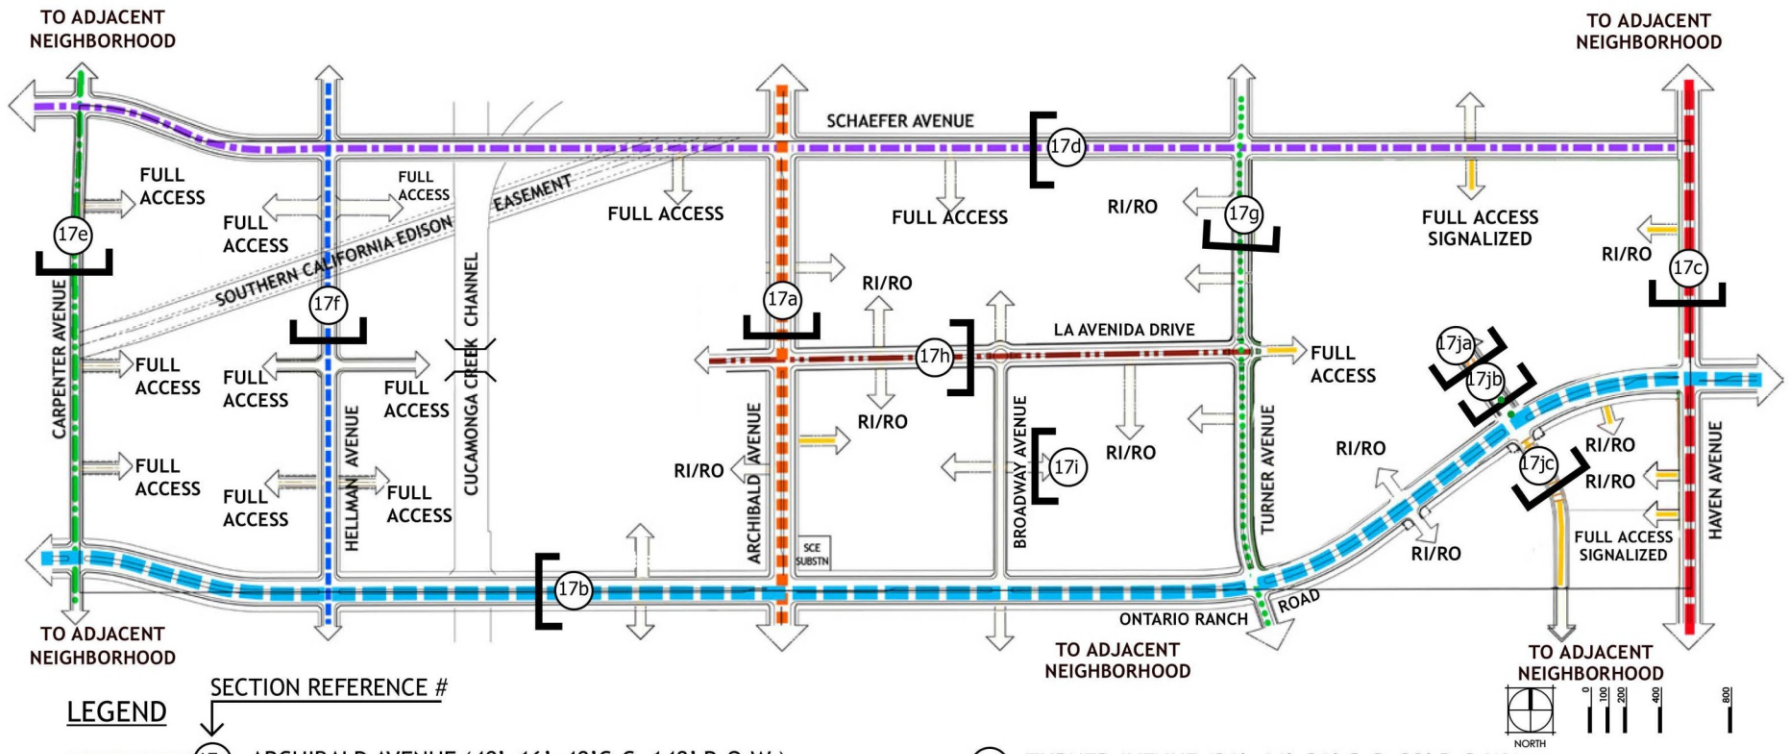
2.3 DEVELOPMENT CONCEPT

Development implemented under the Modified Project would be required to conform to provisions of The Avenue Specific Plan, 2024 Amendment document (2024 SPA). The 2024 SPA is provided at Appendix A of this Addendum. In instances where the 2024 SPA is silent, development proposals would be required to conform to applicable provisions of the City Development Code.

2.3.1 Site Design/Architectural Concepts



The Modified Project considered herein would implement residential, commercial/retail parks/open space, and public school uses. All Modified Project development proposals would be required to conform to requirements and implement guidance articulated at 2024 SPA Section 5, *Development Regulations*; and Section 6, *Design Guidelines*. All Modified Project final site plans and building designs would be subject to City review and approval, to include consistency analysis with applicable provisions of the 2024 SPA.

2.3.2 Access and Circulation

2.3.2.1 Area Roadways and Site Access

Regional access to the City and the Modified Project area is provided by State Route 60 (E – W) and Interstate 15 (N – S). State Route 60 (SR-60) interchanges with Interstate 15 (I-15) approximately 2.0 miles northeast of the Modified Project site. The Modified Project site is bounded by Schaefer Avenue to the north, Haven Avenue to the east, Ontario Ranch Road to the south, and Carpenter Avenue (alignment) to the west. Archibald Avenue traverses the western portion of the site along a north – south alignment.

Access within the Modified Project site would be provided by internal roads connecting the various land uses. Roadways providing access to and within the Modified Project would be constructed pursuant to the 2024 SPA specifications and consistent with City Conditions of Approval. The Modified Project Access and Circulation Concept is presented at Figure 2.3-1. For illustrative purposes, the Original Project and Modified Project Access and Circulation Concepts are compared at Figure 2.3-2. Please refer also to 2024 SPA Section 4.1, *Master Plan of Circulation*.

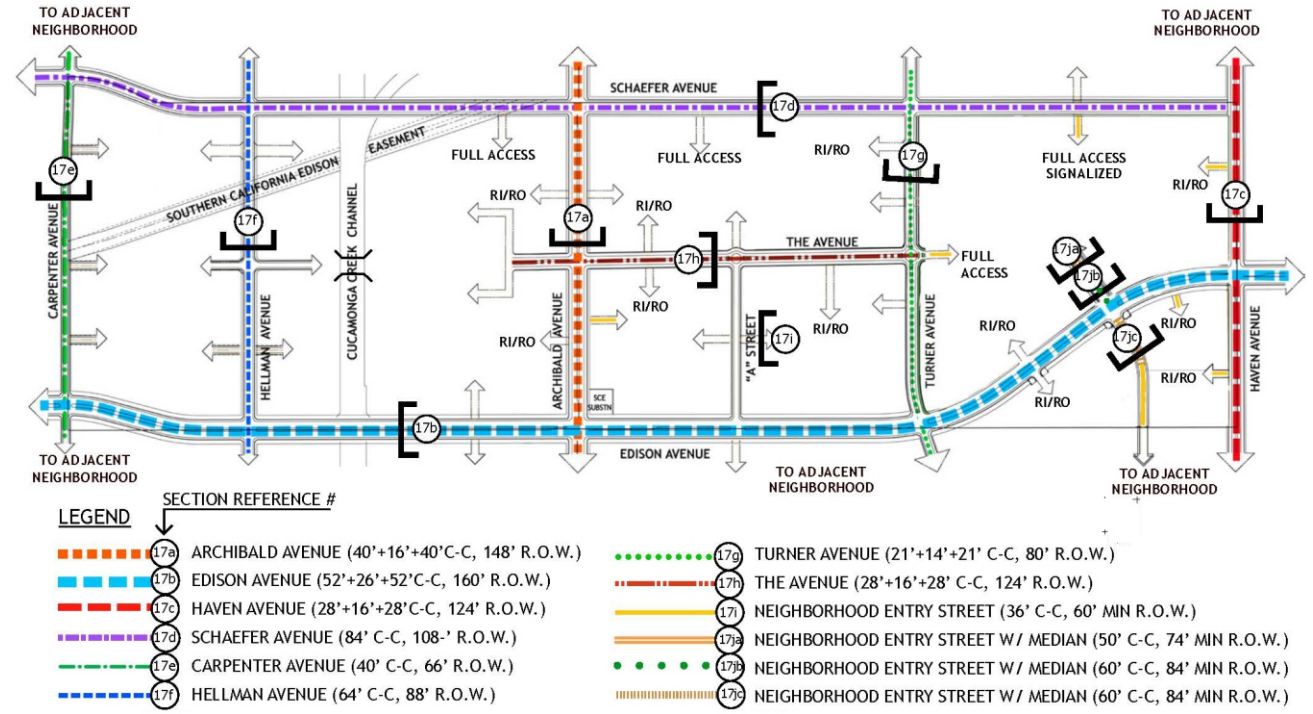
- 17jc NEIGHBORHOOD ENTRY STREET W/ MEDIAN (60' C-C, 84' MIN R.O.W.)



NOTE: C-C = Curb-to-Curb; R.O.W. = Right-of-Way; The location of access points is conceptual. Precise locations will be determined as part of the tract map process. The Neighborhood Entry Streets at the westerly termination of the Avenue adjacent to the school site shall be 40' C-C, 66' R.O.W. While the alignment of roads is conceptual, The Avenue shall maintain the straight, linear configuration. *The intersection legs to the north and south of Schaefer Avenue shall be aligned. Final location of the intersection shall be determined with approval of the maps for developments on the north and south of Schaefer Avenue. No sidewalk improvements on the north side of Schaefer Avenue between Haven Avenue and Hellman Avenue.

2024 SPECIFIC PLAN AMENDMENT

N

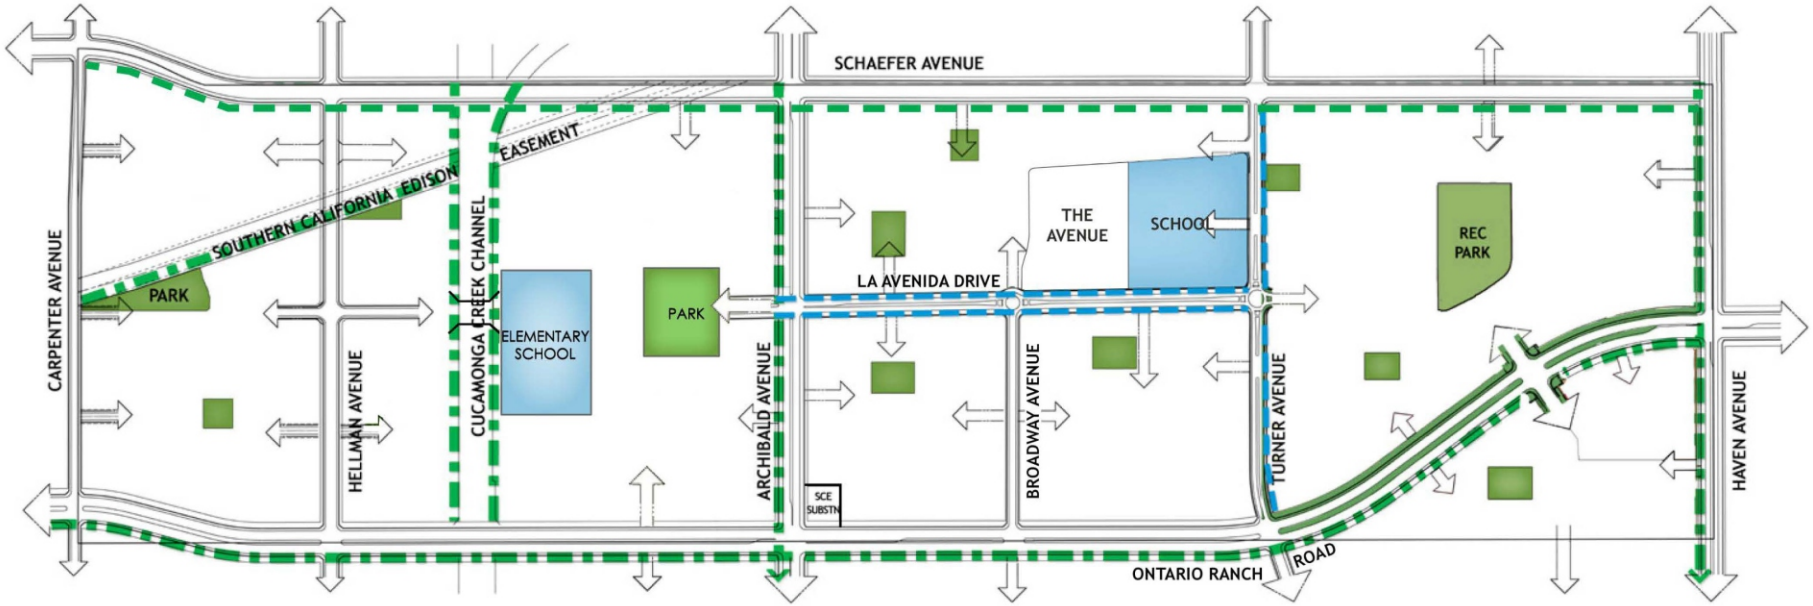
NOT TO SCALE

Source: The Avenue Specific Plan, 2024 Amendment; Applied Planning, Inc.

Figure 2.3-2
Circulation Plan Comparison

2.3.2.2 Alternative Transportation Modes

Bicycle and Pedestrian Access



The Modified Project would construct multipurpose trail improvements consistent with improvements proposed under the City of Ontario Multipurpose Trails and Bikeway Corridor Plan (Multipurpose Trails Plan). The Modified Project improvements would connect with the encompassing Multipurpose Trails Plan system.

Within the Modified Project site, enhanced pedestrian sidewalks would provide internal connection between land uses. Additionally, streets would be constructed with sidewalks, facilitating pedestrian access and inter-connectivity between land uses. Trails and pedestrian access improvements that would be constructed by the Modified Project are illustrated at Figure 2.3-3. For illustrative purposes, the Original Project and Modified Project Multipurpose Trails and Pedestrian Access Plans are compared at Figure 2.3-4. Please refer also to 2024 SPA Section 4.1, *Pedestrian/Bicycle Trails Connectivity.*

Bus Service

Bus service is available to the City via Omnitrans and the Riverside Transit Authority (RTA). Bus routes currently do not provide proximate service (within one-quarter mile) of the Modified Project site.

Transit service providers periodically review and update schedules and routes to address ridership, budget, and community demands. The Applicant and City would coordinate Project final designs with Omnitrans and RTA to evaluate the potential for provision of bus services and bus amenities serving the Modified Project site. Omnitrans bus routes and schedules can be accessed at: https://omnitrans.org/plan-a-trip/routes-schedules. RTA bus routes and schedules can be accessed at: https://www.riversidetransit.com/index.php/riding-the-bus/maps-schedules.

Figure 2.3-4
Trail Master Plan Comparison

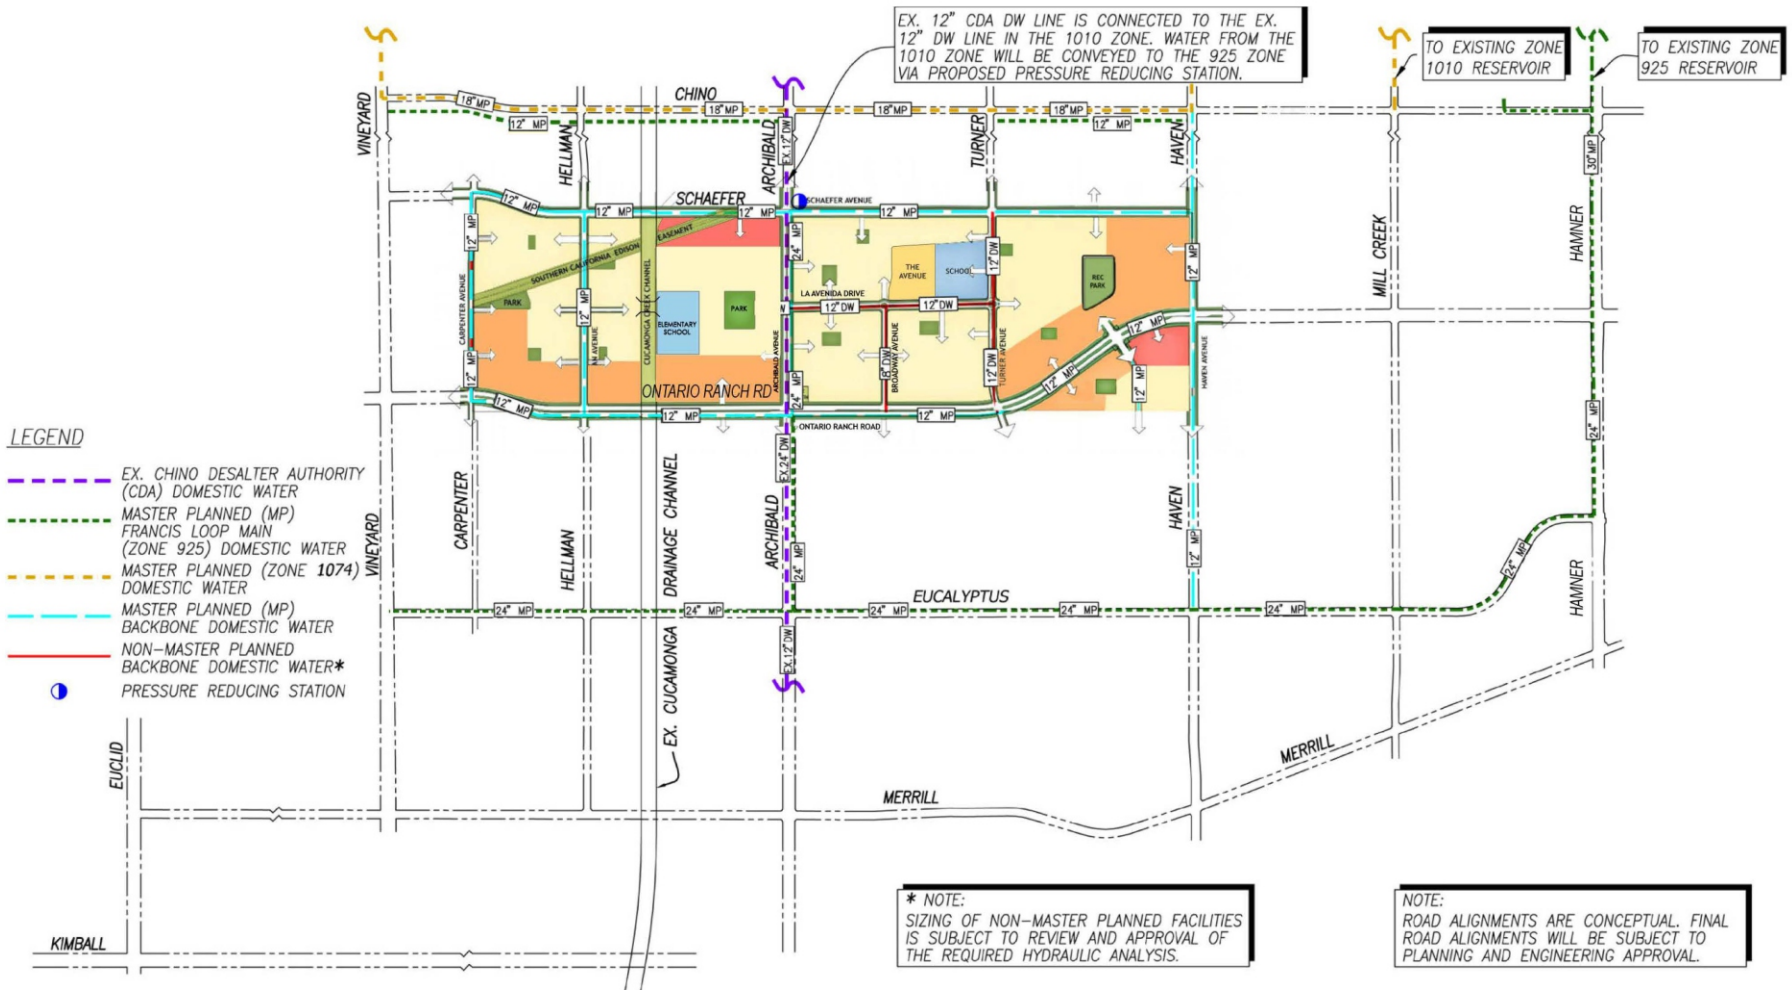
2.3.3 Parking

The Modified Project would be required to adhere to parking requirements established under the 2024 SPA and the City of Ontario Development Code. Parking assignments and design of parking areas within the site would be subject to City review and approval.

2.3.4 Landscape/Streetscape

All landscaping/streetscaping implemented under the Modified Project would be required to comply with applicable provisions of the 2024 SPA and the City Municipal Code. Landscape and streetscape elements would provide shade and visual interest, define entry/access points, and accentuate site and architectural features. Please refer also to 2024 SPA Section 6.6, *Landscape Design Guidelines*.

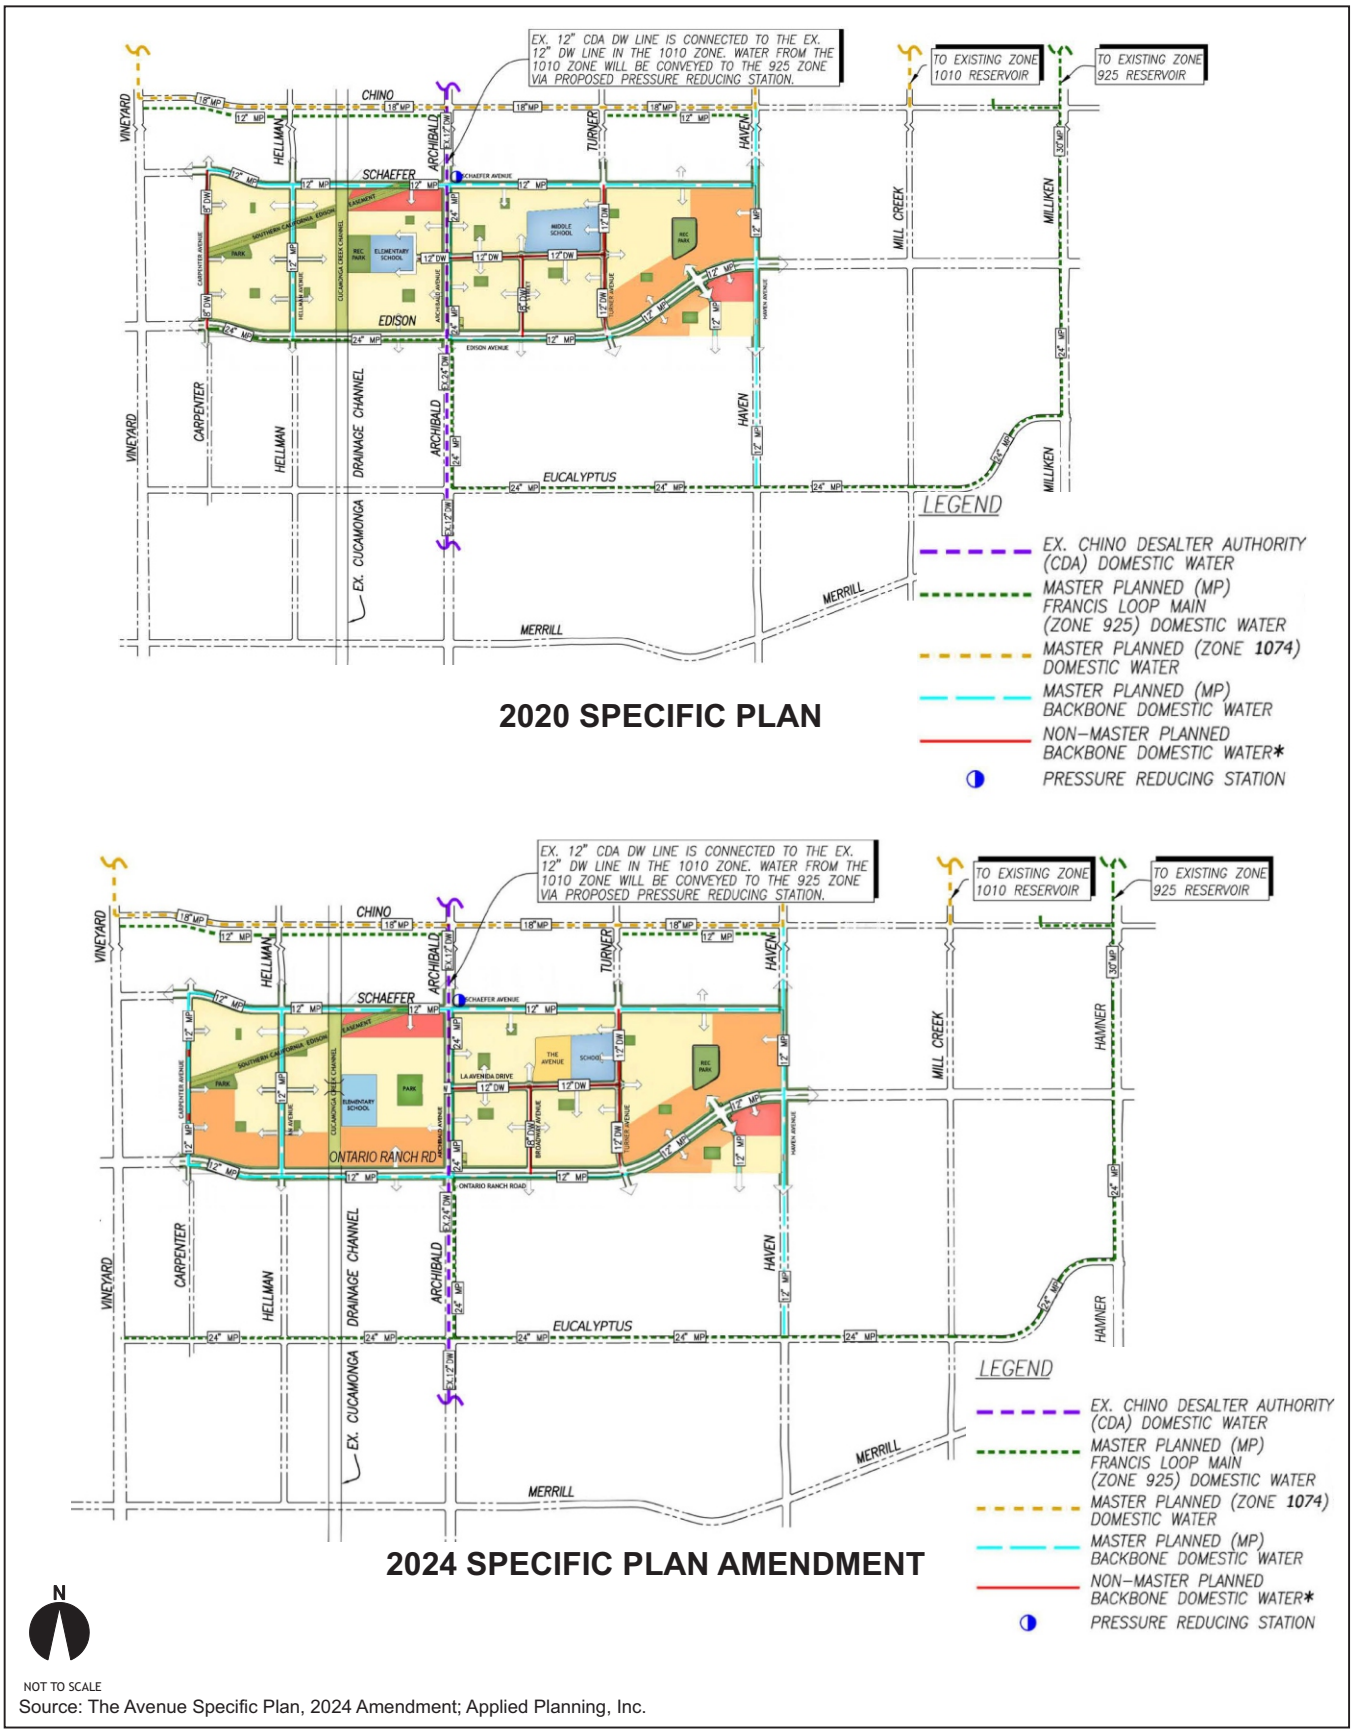
2.3.5 Infrastructure/Utilities



2.3.5.1 Water Service

Potable (Domestic) Water

Potable water would be provided by the Ontario Municipal Utilities Company (OMUC). The Modified Project would be served by existing and planned OMUC Master Planned domestic water system facilities.



Within the Modified Project site, water service would be provided by a system of 8-inch to 12-inch water mains constructed within the backbone roadway system. The on-site public water system sizing would be required to comply with provisions of a City-approved hydraulic analysis to be conducted at the project-level design stage. The hydraulic analysis would be required to demonstrate that the proposed water system would meet peak demands including maximum day plus fire demand and peak hour demand.

The Modified Project Domestic Water Plan Concept is illustrated at Figure 2.3-5. For illustrative purposes, the Original Project and Modified Project Domestic Water Plan Concepts are compared at Figure 2.3-6. Please refer also to 2024 SPA Section 4.2.1, *Water*.

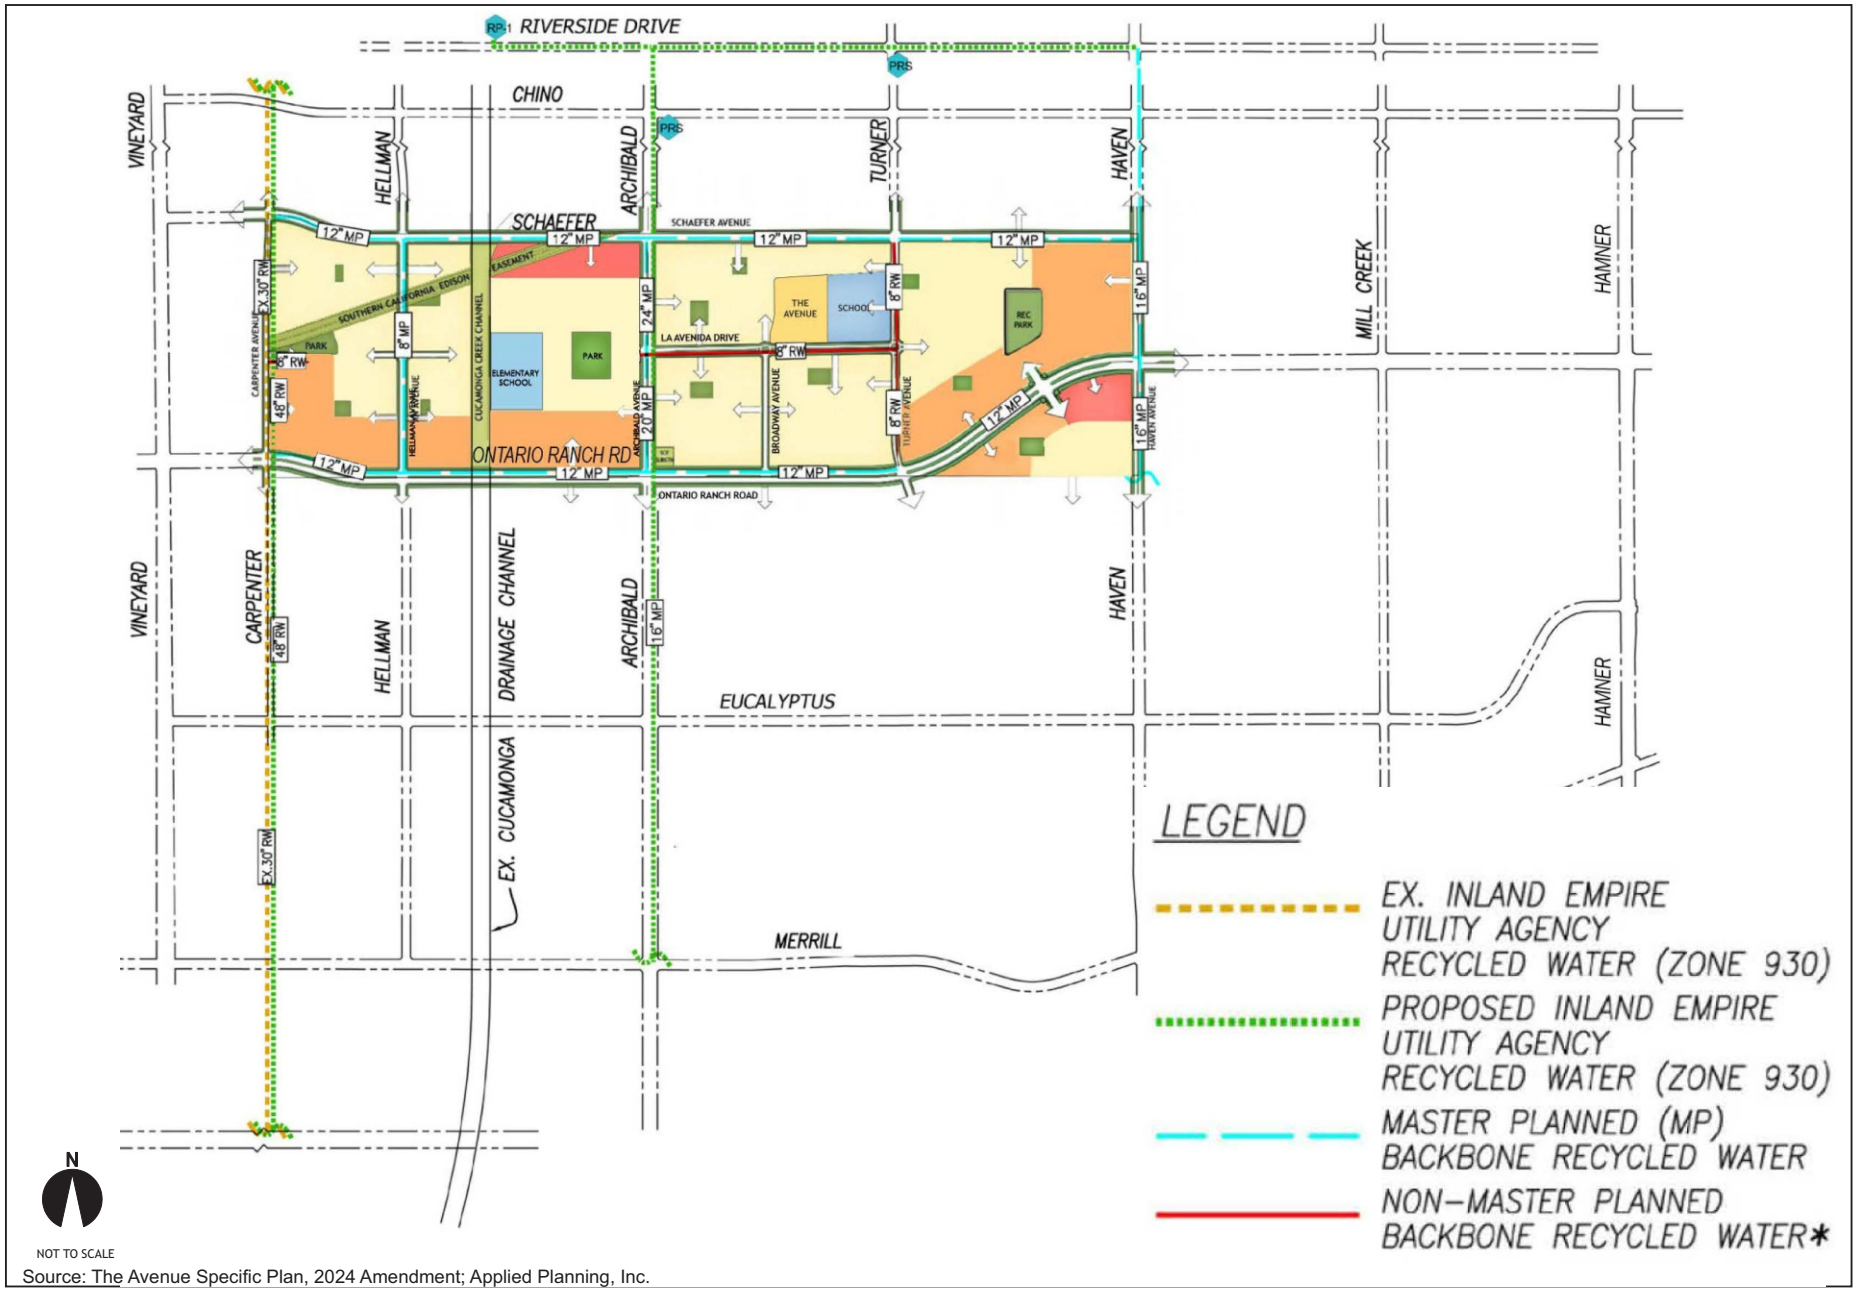
Figure 2.3-5
Domestic Water Master Plan

Source: The Avenue Specific Plan, 2024 Amendment; Applied Planning, Inc.

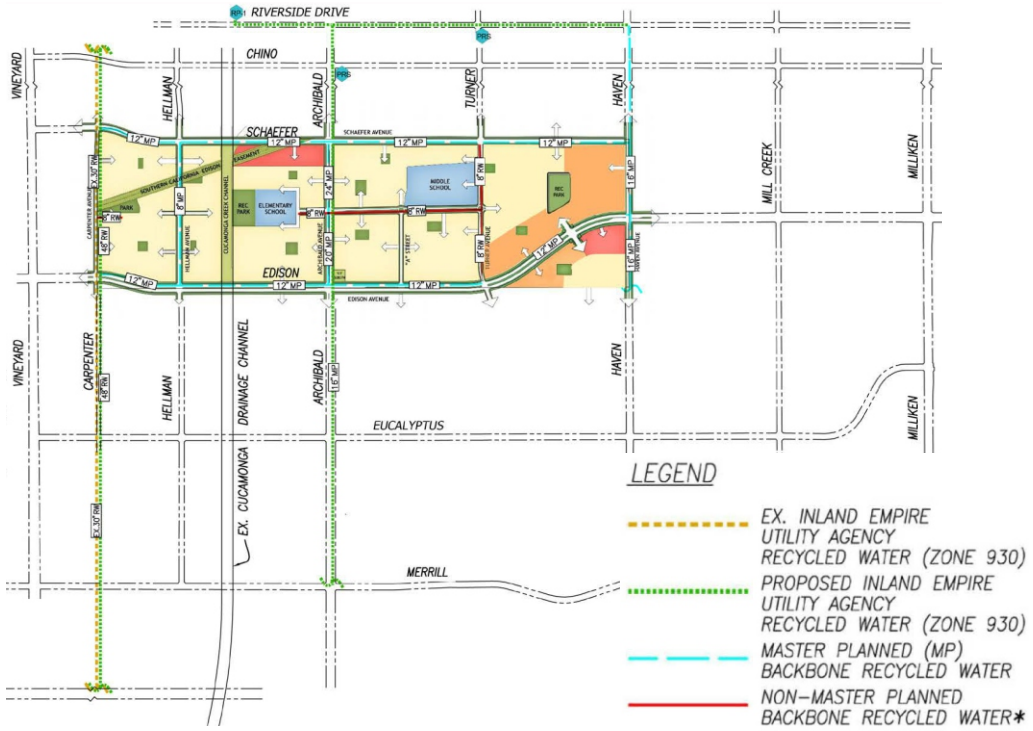
Figure 2.3-6
Domestic Water Master Plan Comparison



Recycled Water

Recycled water would be provided to the Modified Project by the Inland Empire Utility Agency (IEUA). The Modified Project would be required to comply with applicable provisions of City Municipal Code Chapter 8c: *Recycled Water Use*.[3] Recycled water would be used for all approved applications including, but not limited to, irrigation of parks, schools, street landscaping, recreational trails, HOA-maintained common areas, and landscaping. An engineering report approved by the City and the California Department of Public Health is required prior to the use of recycled water.

All recycled water improvements implemented to serve the Modified Project would be required to conform to the incumbent City Recycled Water Master Plan. Within the Modified Project site, the backbone recycled water system would comprise 8-inch lines and would be located in the backbone street system. In-tract recycled water system design would be provided at the time of subdivision.



The Modified Project Recycled Water Plan Concept is illustrated at Figure 2.3-7. For illustrative purposes, the Original Project and Modified Project Recycled Water Plan Concepts are compared at Figure 2.3-8. Please refer also to 2024 SPA Section 4.2.2, *Recycled Water*.

2.3.5.2 Sewer Services

Sewer service to the Modified Project would be provided by the City of Ontario. All Master Plan sewer improvements implemented to serve the Modified Project would be required to conform to the incumbent City Sewer System Master Plan.

Within the Modified Project site, wastewater conveyance would be provided by a system of 10-inch to 12-inch sewer mains constructed within the backbone roadway system. Connecting service lines (minimum 8-inch) would be provided to individual developments. The on-site public sewer system sizing would be required to comply with provisions of a City-approved hydraulic analysis to be conducted at the project-level design stage. In-tract sewer system design would be provided at the time of subdivision. Final designs of sewer systems serving the Modified Project site would be required to conform to City and OMUC requirements. The Modified Project Sewer Plan Concept is presented at Figure 2.3-9. For illustrative purposes, the Original Project and Modified Project Sewer Plan Concepts are compared at Figure 2.3-10. Please refer also to 2024 SPA Section 4.2.3, *Sewer*.

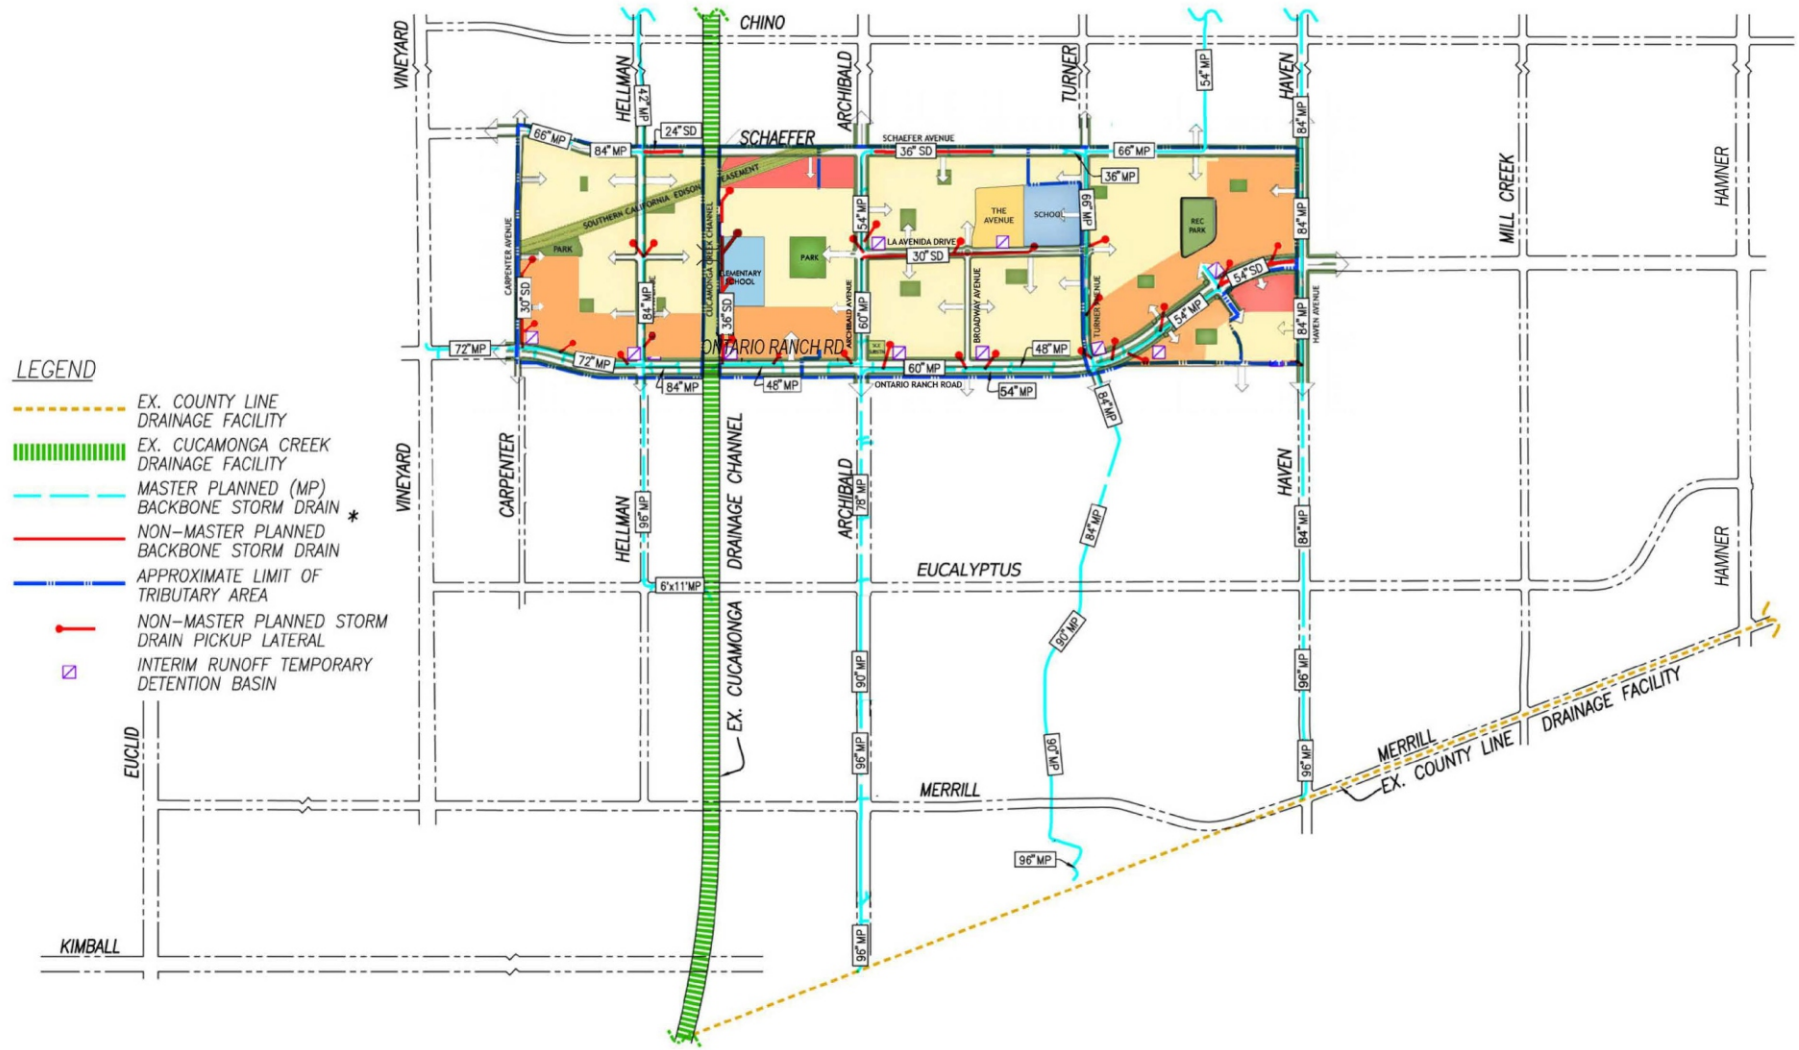
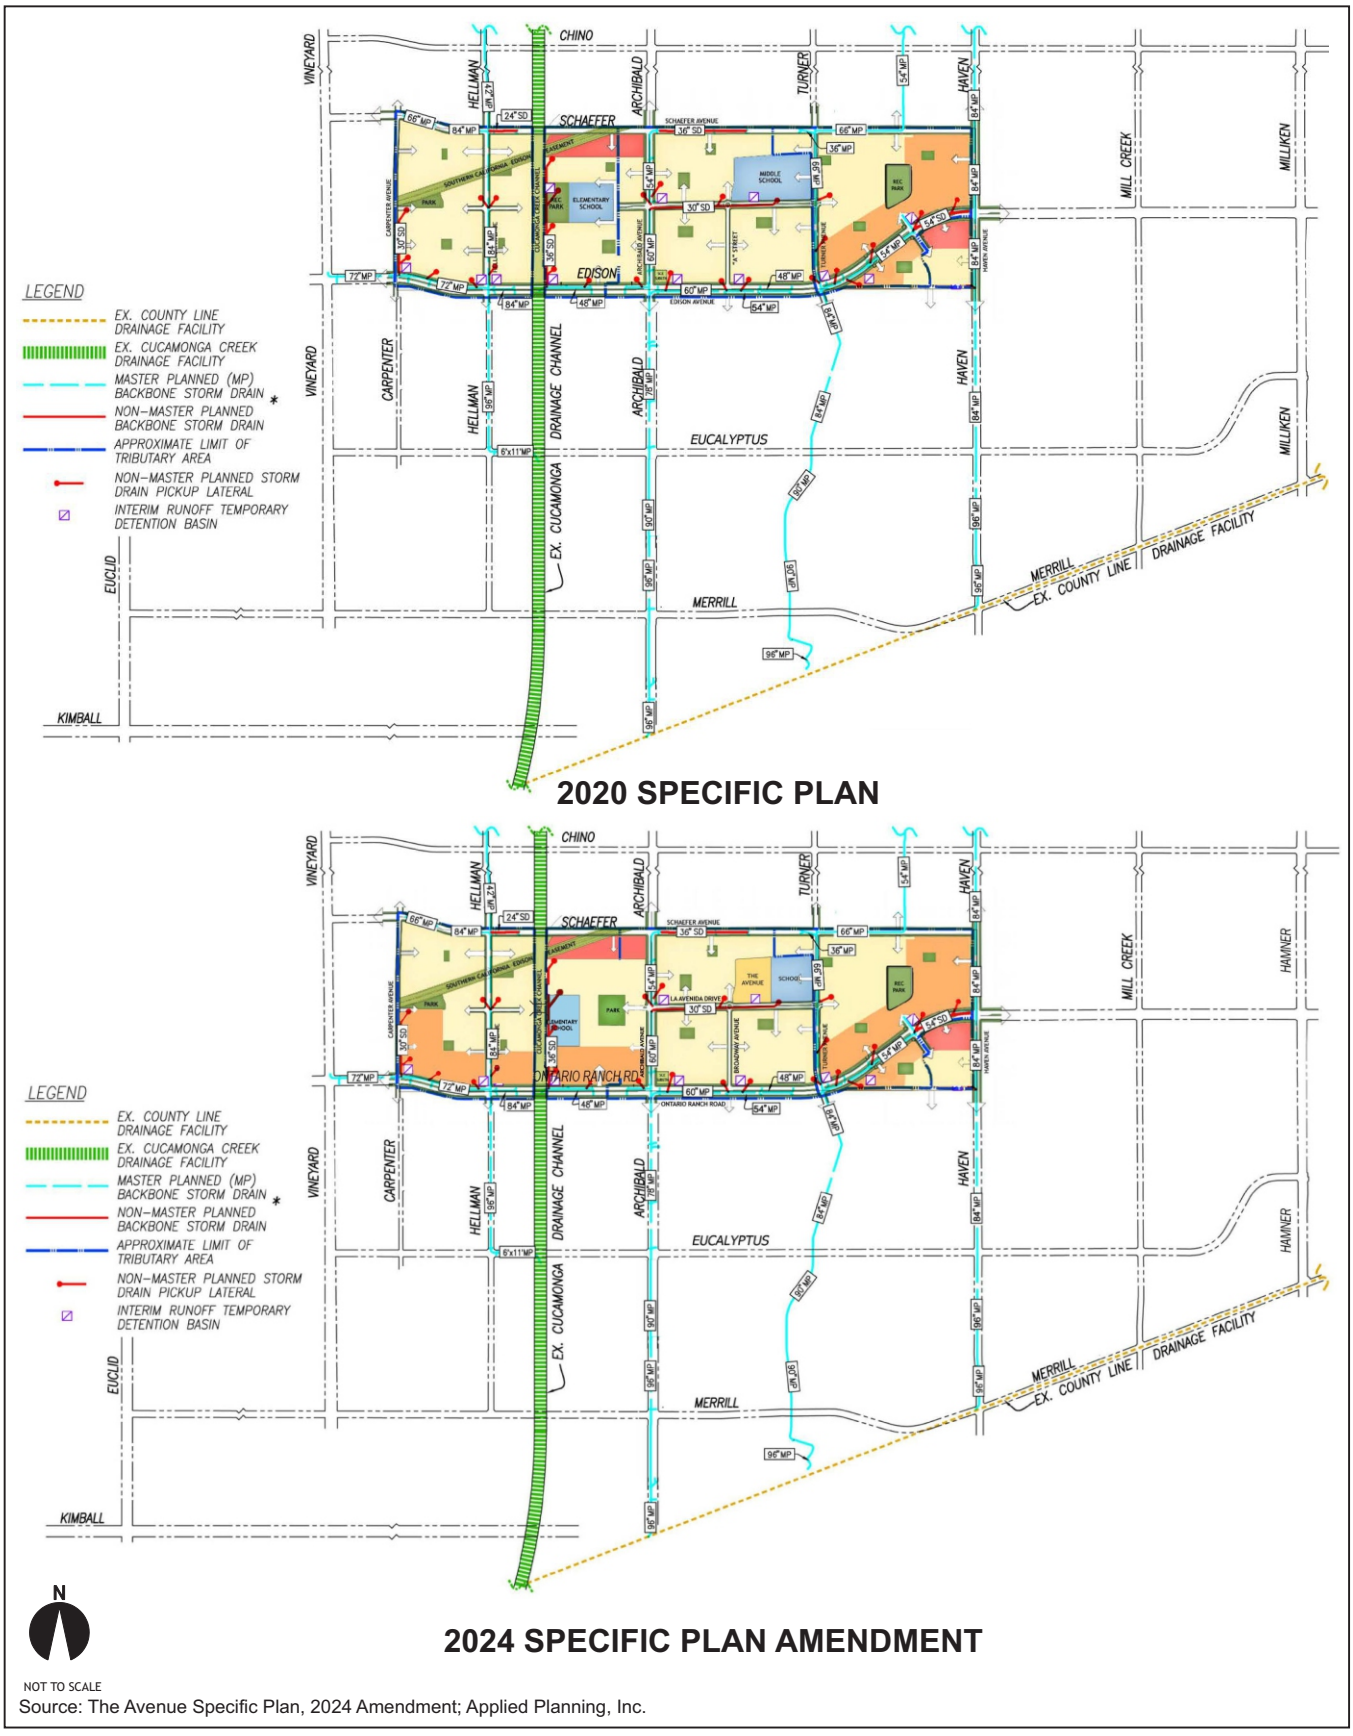
2.3.5.3 Stormwater Management System



Storm Drains

Multiple City Master Plan of Drainage storm drain facilities would serve the Modified Project site. All Master Plan stormwater management system improvements implemented to serve the Modified Project would be required to conform to the incumbent City Master Plan of Drainage.

Under post-development conditions, existing southerly trending on-site drainage patterns would be maintained. Within the Modified Project site, minimum 18-inch storm drain laterals would be constructed to convey stormwater runoff from developed areas to the Master Plan storm drain system. In-tract storm drain system designs would be provided at the time of subdivision. Final designs of stormwater management systems serving the Modified Project would be required to conform to City requirements. The Modified Project Stormwater Management System Concept is presented at Figure 2.3-11. For illustrative purposes, the Original Project and Modified Project Storm Drain System Concepts are compared at Figure 2.3-12. Please refer also to 2024 SPA Section 4.2.4, *Drainage*.



Water Quality Management Plan

The Modified Project would implement on-site stormwater management systems to detain and treat stormwater discharges. Stormwater discharges from the Modified Project would be required to comply with requirements and performance standards established under the incumbent San Bernardino County National Pollutant Discharge Elimination System (NPDES) Stormwater Program MS4 Permit and Water Quality Management Plan (WQMP). To these ends, developments within the Modified Project site would implement Low Impact Development (LID) Site Design Best Management Practices (BMPs) to reduce pollutant transport and increase on-site stormwater infiltration. Additionally, all Priority Land Use (PLU) areas within the Modified Project site would be required to comply with the statewide Trash Provisions adopted by the State Water Resources Control Board (SWRCB) and trash requirements in the most current San Bernardino County Area-Wide MS4 Permit.

Source: The Avenue Specific Plan, 2024 Amendment; Applied Planning, Inc.

Figure 2.3-11
Storm Drain Master Plan

Source: The Avenue Specific Plan, 2024 Amendment; Applied Planning, Inc.

Figure 2.3-12
Storm Drain Master Plan Comparison

Non-structural and structural Source Control BMPs would be documented in the Modified Project WQMPs. Final WQMPs, as approved by the City, would ensure that the Modified Project stormwater management systems have been designed to convey and treat stormwater discharges and limit the post-development peak flows consistent with available storm drain capacities.

Please refer also to 2024 SPA Section 4.2.6, *NPDES Compliance*.

2.3.5.4 Solid Waste Management

The City of Ontario provides solid waste collection services for the City and would service the Modified Project. Under the 2024 SPA, an integrated waste management plan for each subdivision is required prior to Development Advisory Board (DAB) approval. All developments within Modified Project would be required to comply with waste reduction and recycling standards and identified in the City Municipal Code and as specified in the incumbent *City of Ontario Solid Waste Department Refuse and Recycling Planning Manual*. Please refer also to 2024 SPA Section 4.2.7, *Solid Waste*.

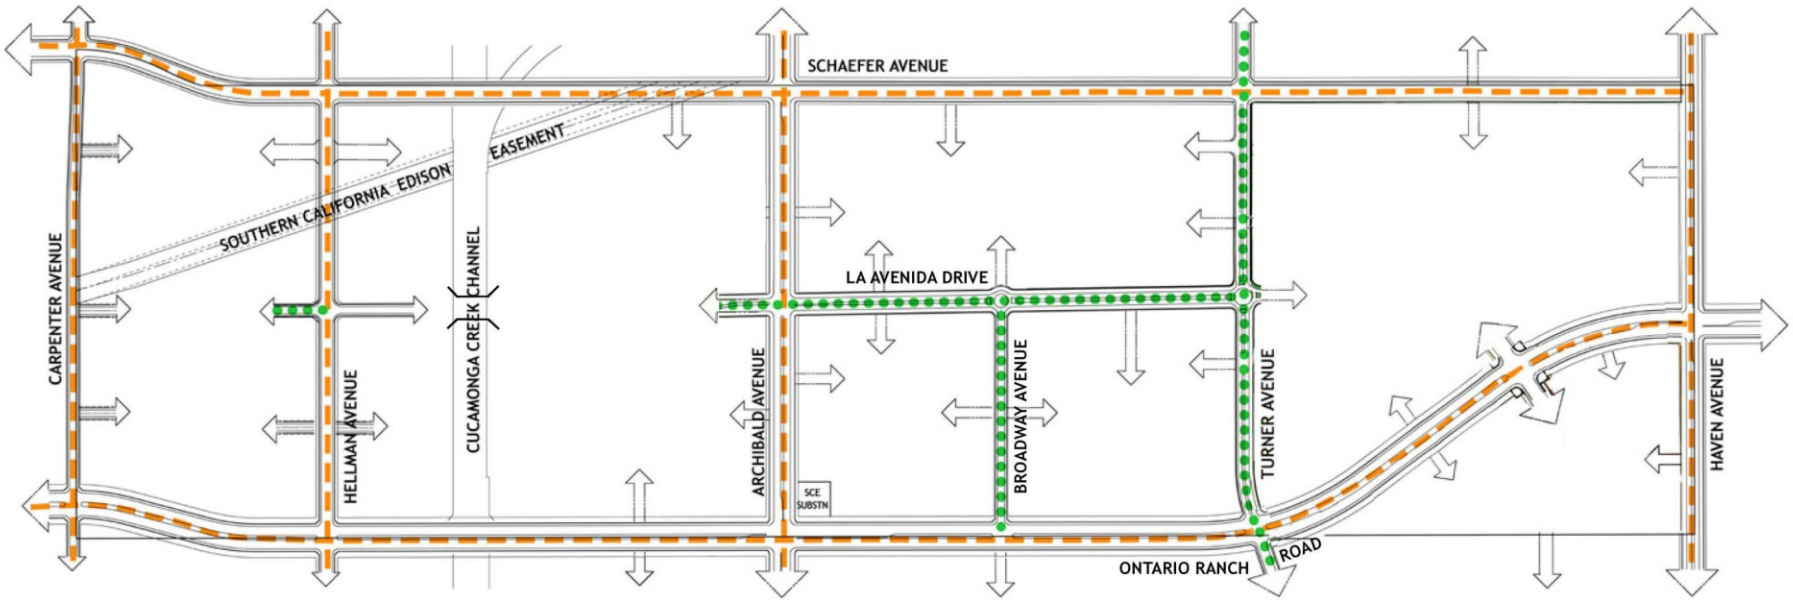
2.3.5.5 Electricity

SCE would provide electricity to the site from existing vicinity facilities. Facilities less than 34.5kV would be located underground if they are located adjacent to any streets proposed to be improved in conjunction with site improvements. All proposed connections and modifications to SCE facilities would conform to SCE and City requirements.

2.3.5.6 Natural Gas

The Gas Company would provide natural gas service to the site. All proposed connections and modifications to Gas Company facilities would be required to conform to Gas Company and City requirements.

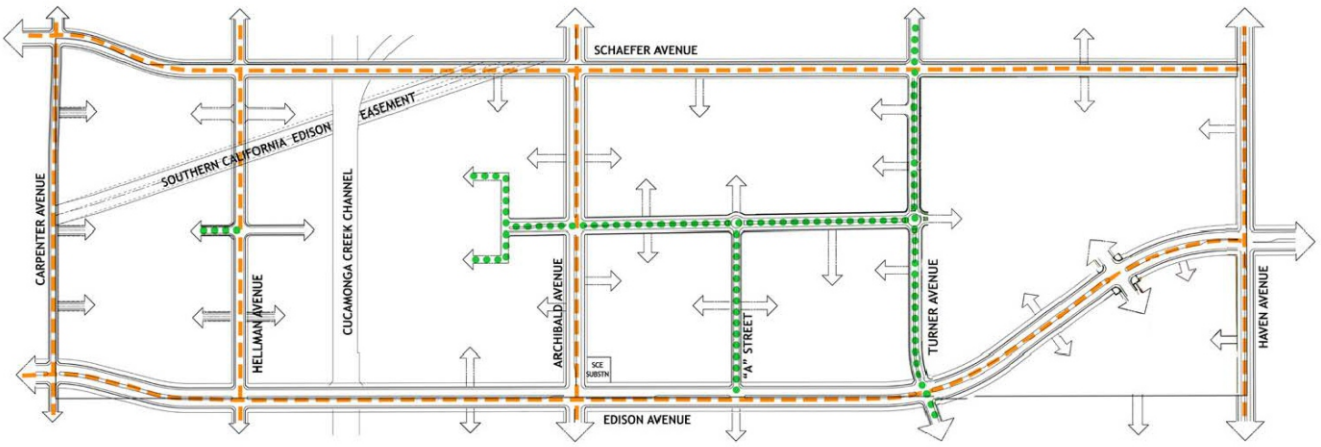
2.3.5.7 Fiber Optics System



A backbone fiber optics system (conduits and fiber) would be constructed within the Modified Project street system. Backbone fiber optic components (conduits and fiber) would be placed underground within a duct and structure system to be installed in a joint trench. In-tract fiber and conduit would be installed per the City's in-tract fiber optic design guidelines (see: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Information-Technology/2014-12-16_in-tract_designguidelines.pdf). The Modified Project Fiber Optic Plan is presented at Figure 2.3-13. For illustrative purposes, the Original Project and Modified Project Fiber Optic Plan Concepts are compared at Figure 2.3-14.

2.3.5.8 Communications Services

Communications services, including wired and wireless telephone and internet services, are available through numerous private providers and would be provided on an as-needed basis. To the extent practical and consistent with City Conditions of Approval, existing and proposed wires, conductors, conduits, raceways, and similar communications improvements within the Modified Project site would be installed underground. Any necessary surface-mounted equipment, e.g., terminal boxes, transformers, meters, service cabinets, etc., would be screened and would conform to City building setback requirements.



2.3.6 Energy Efficiency/Sustainability

Energy-saving and sustainable design features and operational programs would be incorporated in all facilities developed pursuant to the Modified Project. The Modified Project would be required to comply with incumbent energy efficiency and performance standards established under the CALGreen Code and the City of Ontario Community Climate Action Plan (CCAP).

Fiber Optics Comparison

2.3.7 Site Preparation

As an initial action, the Modified Project site would be cleared of vegetation and all on-site improvements associated with, or supporting, the existing on-site land uses would be demolished or removed. Debris generated by site preparation and demolition activities would be disposed of/recycled consistent with provisions of the California Integrated Waste Management Plan Act (AB 939) and the City's Integrated Waste Department *Refuse and Recycling Planning Manual*.[4]

Additionally, a total of 20 water wells are located within the Modified Project site. Locations of these wells are identified at Figure 2.3-15. All existing water wells within the Modified Project site would be destroyed consistent with San Bernardino County Health Department and California Department of Water Resources (DWR) requirements. See also: https://water.ca.gov/Programs/Groundwater-Management/Wells/Well-Standards/Combined-Well-Standards/Water-Destruction.

The natural topography of the Project site is relatively flat. No unusual grading conditions are present and substantial import or export of earth materials is not expected. Project grading would provide stable development pads for construction; balance cut and fill grading quantities on-site; and meet City of Ontario building standards and acceptable infrastructure gradient requirements.

2.3.8 Construction Area Traffic Management Plan

To avoid or minimize temporary construction-related traffic impacts throughout site preparation and construction activities, the Project Applicant would be required to prepare and implement a City-approved Construction Traffic Management Plan (Plan). Typical elements and information incorporated in the Plan would include, but not be limited to:

- **Name of on-site construction superintendent and contact phone number.**

[4] City of Ontario, California: *Solid Waste Department* [Integrated Waste Department] *Refuse and Recycling Manual*, Updated March 17, 2016. https://www.ontarioca.gov/omuc/integrated-waste.

Source: The Avenue Specific Plan, 2024 Amendment; Applied Planning, Inc.

Figure 2.3-15
Existing Wells

- **Identification of Construction Contract Responsibilities** - For example, for excavation and grading activities, describe the approximate depth of excavation, and quantity of soil import/export (if any).

- **Identification and Description of Truck Routes** - to include the number of trucks and their staging location(s) (if any).

- **Identification and Description of Material Storage Locations (if any).**

- **Location and Description of Construction Trailer (if any).**

- **Identification and Description of Traffic Controls** - Traffic controls shall be provided per the Manual of Uniform Traffic Control Devices (MUTCD) if the occupation or closure of any traffic lanes, parking lanes, parkways or any other public right-of-way is required. If the right-of-way occupation requires configurations or controls not identified in the MUTCD, a separate traffic control plan must be submitted to the City for review and approval. All right-of-way encroachments would require permitting through the City.

- **Identification and Description of Parking** - Estimate the number of workers and identify parking areas for their vehicles.

- **Identification and Description of Maintenance Measures** - Identify and describe measures taken to ensure that the work site and public right-of-way would be maintained (including dust control).

The Plan would be reviewed and approved by the City prior to the issuance of the first building permit. The Plan and its requirements would also be required to be provided to all contractors as one component of building plan/contract document packages.

2.3.9 Opening Year

For the purposes of this analysis, the Project Opening Year is defined as 2026, by which time all proposed uses are assumed to be complete, occupied, and operational.

2.4 PROJECT OBJECTIVES

The stated vision of the 2024 SPA is to establish "a truly walkable community, featuring pedestrian amenities that encourage walking and biking to schools, parks and basic commercial needs—all within five minutes, for the majority of residents" (2024 SPA, p. 1-1.) Supporting 2024 Specific Plan Amendment Objectives are listed below.

General

- Implement TOP 2050 Policy Plan Land Use Plan.
- Support TOP 2050 vision for urbanization of the Ontario Ranch area of the City.
- Implement Specific Plan developments providing additional long-term employment opportunities.
- Implement Specific Plan developments providing additional construction employment opportunities.
- Establish new development that would further the City's near-term and long-range fiscal goals.

Residential Land Uses

- Development of a variety of housing types into the land use plan addressing a wide variety of lifestyles and economic segments.
- Provide for both single family attached and detached housing in low density and low medium density residential districts.
- Plan for seamless transitions between housing product types in order to create cohesive neighborhoods that include a range of types and styles.
- Plan residential neighborhoods around a series of parks and open space areas, promoting outdoor activity and interaction among neighbors.
- Provide for connectivity between residential neighborhoods, recreational areas, and adjacent commercial land uses, as well as to the schools, by means of pedestrian and bicycle trail linkages along The Avenue and trails incorporated into

both the Southern California Edison Easement and the Cucamonga Creek Channel. Create a strong functional relationship between homes and schools.
- Create a hierarchy of parks, providing for active and passive recreation.
- Create residential neighborhoods with diverse architectural styles and traditional design elements reflecting some of the characteristics of older established Ontario neighborhoods.

Commercial Land Uses

- Develop retail and commercial uses to meet the needs of the residential community and larger surrounding market area, as well as implement Policy Plan policies.
- Provide trails and sidewalks to connect the residential community with the retail and commercial area.
- Consider the development of plazas and other public space amenities within the retail and commercial area providing space for social interaction.
- Orient retail and commercial buildings to the street, wherever possible, to create an urban edge and sense of arrival.

2.5 DISCRETIONARY APPROVALS and PERMITS

Discretionary actions, permits, and related consultation(s) necessary to approve and implement the Project include, but are not limited to, the following.

2.5.1 Lead Agency Discretionary Actions and Permits

- CEQA Compliance;
- Adoption of this Addendum;
- Approval of a Specific Plan Amendment;
- Approval of Tentative Parcel Maps;
- Approval of a Development Agreement; and
- Approval of Development Plans.

2.5.2 Other Consultation and Permits

Anticipated consultation and permits necessary to realize the Modified Project would or may include the following:

- Permitting by/through the Regional Water Quality Control Board (RWQCB) pursuant to requirements of the City's National Pollutant Discharge Elimination System (NPDES) Permit.

- Permitting by/through the South Coast Air Quality Management District (SCAQMD) for certain equipment or land uses that may be implemented pursuant to the Modified Project.

- Permitting (i.e., utility construction and connection permits) from affected utility purveyors, notably the City of Ontario, IEUA, and SCE.

- Permitting for destruction of on-site wells per San Bernardino County Health Department and Department of Water Resources requirements.

- Other ministerial permits necessary to realize all on- and off-site improvements related to the development of the site.

3.0 ENVIRONMENTAL CHECKLIST

ENVIRONMENTAL CHECKLIST

The Avenue Specific Plan, 2024 Amendment

Addendum to The Ontario Plan 2050 Certified SEIR (SCH No. 2021070364)

General Notes: *The Avenue Specific Plan, 2024 Amendment* (Modified Project, Project) land uses and development concepts have been designed to be consistent with land uses and development concepts for the subject site reflected in The Ontario Plan 2050 (TOP 2050). Impacts of TOP 2050 have been evaluated and addressed in *The Ontario Plan 2050 Certified SEIR (*TOP 2050 SEIR, Certified SEIR). This Addendum compares and contrasts impacts of the Modified Project with impacts identified in the Certified SEIR. As substantiated herein, the Modified Project would not result in substantially different or substantially increased impacts when compared to impacts considered and addressed in the Certified SEIR. The CEQA Initial Study Checklist categories and topics presented below conform to the suggested content presented at *CEQA Guidelines*, Appendix G. Certain of the Addendum Technical Studies are dated 2023. These Studies were prepared prior to the latest refinements reflected in the 2024 Specific Plan Addendum (2024 SPA). Findings and conclusions of these Studies are not affected by the 2024 SPA refinements.

1. AESTHETICS

Except as provided in Public Resources Code Section 21099, would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Have a substantial adverse effect on a scenic vista?					X	
b) Substantially damage visible scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?					X	
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?					X	
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?					X	

Substantiation:

a-d) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR recognizes that buildout of the City would alter the visual character of the City. The Certified SEIR concludes that compliance with the City Municipal Code and applicable TOP 2050 Policies would ensure that potential aesthetics impacts of development anticipated under TOP 2050 would be less-than-significant (Certified SEIR, pp. 5.1-4 – 5.1-10).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. Final designs of the Modified Project facilities including, but not limited to, the proposed buildings, landscape/hardscape features, and lighting configurations would be required to conform to the 2024 Specific Plan Development Regulations and Design Guidelines,[1] and applicable provisions of the City Municipal Code. Final designs of all uses would be subject to City review and approval. Conformance with the 2024 Specific Plan Development Regulations and Design Guidelines and City Municipal Code requirements would ensure that the Modified Project would not substantially degrade scenic vistas, substantially degrade scenic resources, adversely alter the existing visual character or quality of the area, or create a new source of substantial light or glare which would adversely affect day or nighttime views. Impacts of the Modified Project in these regards would be less-than-significant. On this basis, when compared to the Certified SEIR findings, no new or substantially increased aesthetic impacts would result from the Modified Project.

Modified Project Conditions of Approval: None.

[1] The 2024 Specific Plan Development Regulations and Design Guidelines have been amended to address new or revised uses proposed by the Modified Project.

Summary

When compared to the impacts identified in the Certified SEIR, no new significant, substantially increased, or substantially different aesthetics or light/glare impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022*; *The Avenue Specific Plan, 2024 Amendment*.

2. AGRICULTURE AND FORESTRY RESOURCES

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?					X	
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?					X	
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 1220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?					X	
d) Result in the loss of forest land or conversion of forest land to non-forest use?					X	
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use, or conversion of forest land to non-forest use?					X	

Substantiation:

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Under TOP 2050, the City Ontario no longer has land designated for agricultural uses. Because TOP 2050 is the baseline for the Certified SEIR, TOP 2050 would not result in the conversion of Prime Farmland, Unique Farmland, and Farmland of Statewide Importance to nonagricultural uses. TOP 2050 would therefore have no impact on land zoned for agricultural purposes (Certified SEIR, p. 5.2-12).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. As noted above, TOP 2050 would have no impact on land zoned for agricultural purposes. Because the Modified Project Land Uses are consistent with TOP 2050 land use designations, by extension, the Modified Project would similarly have no impact on land zoned for agricultural purposes.

Modified Project Conditions of Approval: None.

b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions:

Agricultural Zoning

The Certified SEIR concluded that implementation of the Land Use Plan would not adversely affect agriculturally-zoned properties (Certified SEIR, p. 5.2-12).

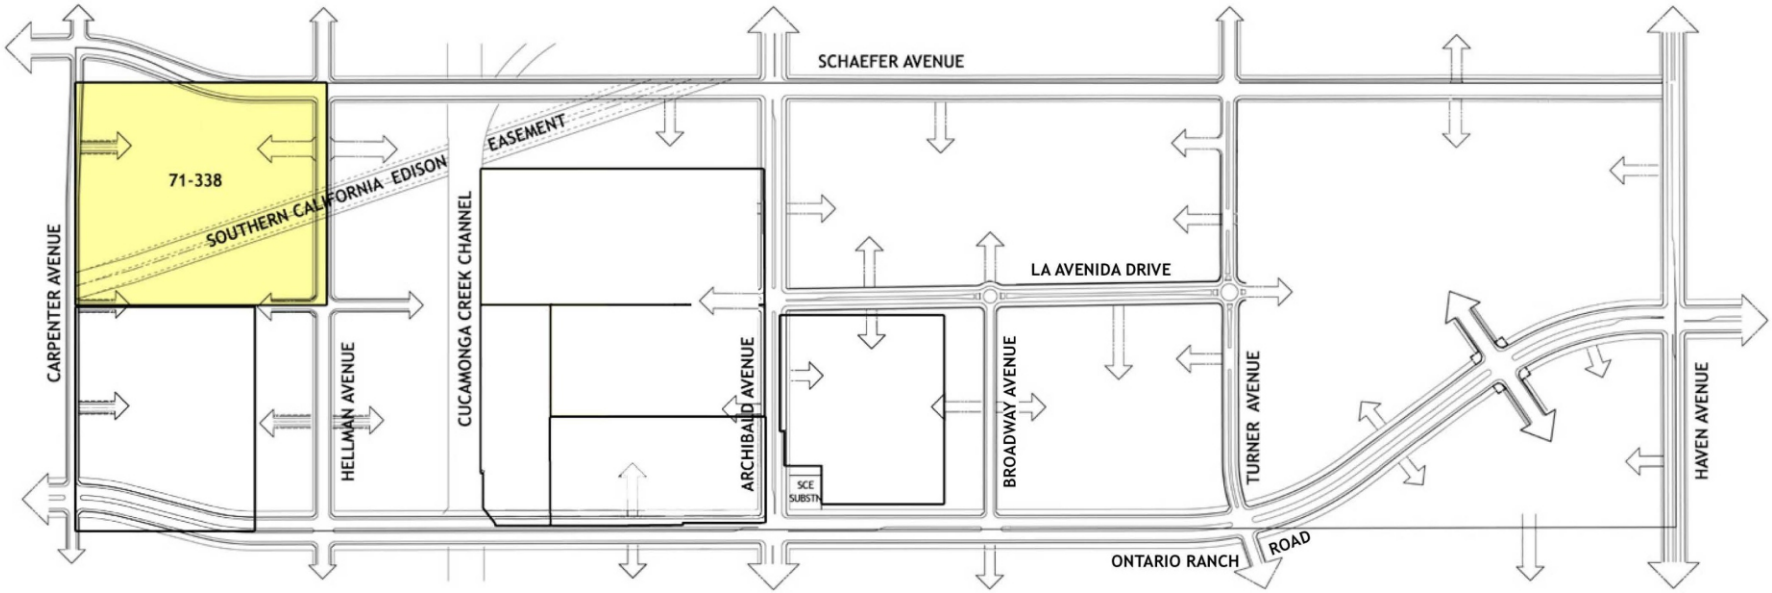
Williamson Act Contracts

Implementation of TOP 2050 would affect all active Williamson Act contracts within the City. The Certified SEIR concluded, however, that impacts to Williamson Act contract properties under TOP 2050 would not be greater than, or different than, would result

from TOP 2009. On this basis, the Certified SEIR concluded that TOP 2050 impacts to Williamson Act Contract properties would be less-than-significant (Certified SEIR, p. 5.2-13).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. Agricultural resources impacts discussed below are consistent with impacts of TOP 2050 as evaluated in the Certified SEIR.



Agricultural Zoning

The Modified Project site is Zoned "Specific Plan." The Modified Project does not propose or require uses or activities that would result in potentially adverse effects at agriculturally-zoned properties. Based on the preceding, the Modified Project's potential impacts related to a conflict with agricultural zoning would be less-than-significant.

Williamson Act Contracts

The California Land Conservation Act of 1965 (the Williamson Act, Government Code Sections 51200 through 51297.4) encourages the preservation of agricultural lands through tax incentives due to the increasing trend toward the conversion of agricultural lands to urban uses. The Act enables counties and cities to designate agricultural preserves (Williamson Act lands) and within these preserves offer preferential taxation to agricultural landowners based on the agricultural income-producing value of the property.

One active Williamson Act Contract property (Williamson Act Contract No 71-338) is located within the Modified Project site. The location of the subject Williamson Act Contract property is indicated at Figure 2-1. Contract No 71-338 will expire in 2026 and will not be renewed or extended. No development of the subject property would occur prior to expiration of Contract No 71-338. As such, the Modified Project would have no impact on an active Williamson Act Contract property.

Source: The Avenue Specific Plan, 2024 Amendment; Applied Planning, Inc.

Figure 2-1
Williamson Act Contracts

Under TOP 2050, the entire 2024 Specific Plan Area is anticipated to be developed with urban uses. The Certified SEIR concluded that under TOP 2050 buildout conditions, impacts to Williamson Act properties would be less-than-significant. The Modified Project land uses are consistent with TOP 2050 as evaluated in the Certified SEIR. Because the Modified Project Land Uses are consistent with TOP 2050 land use designations, by extension, the Modified Project would similarly have a less-than-significant impact on Williamson Act contract properties.

Based on the preceding, the potential for the Modified Project to conflict with a Williamson Act Contract would be less-than-significant.

Modified Project Conditions of Approval: None.

c) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: There are no City land uses zoned for forest land, timberland, or timberland zoned Timberland Production. There are no properties in the City considered to be forestland. As such, implementation of TOP 2050 would have no impact on land uses zoned for forest land, timberland, or timberland zoned Timberland Production; nor would TOP 2050 result in the loss or conversion of timberland or forest land to non-forest uses (Certified SEIR, p. 5.2-13).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project site is not zoned for forest land, timberland, or timberland zoned Timberland Production. There is no timberland or forest land within the Modified Project site. The Modified Project Land Uses are consistent with TOP 2050 land use designations. As noted above, TOP 2050 would have no impact on forest land, timberland, or timberland zoned Timberland Production; nor would TOP 2050 result in the loss or conversion of timberland or forest land to non-forest uses. Because the Modified Project Land Uses are consistent with TOP 2050 land use designations, by extension, the Modified Project

would similarly have no impact on forest land, timberland, or timberland zoned Timberland Production; nor would the Modified Project result in the loss or conversion of timberland or forest land to non-forest uses.

Modified Project Conditions of Approval: None.

d, e) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Under TOP 2050, the City Ontario no longer has land designated for agricultural uses. Because TOP 2050 is the baseline for the Certified SEIR, TOP 2050 would not result in the conversion of Prime Farmland, Unique Farmland, and Farmland of Statewide Importance to nonagricultural uses. TOP 2050 would therefore have no impact on land zoned for agricultural purposes (Certified SEIR, p. 5.2-12). See also Checklist Item 2 a.

There are no City land uses zoned for forest land, timberland, or timberland zoned Timberland Production. There are no properties in the City considered to be forestland. As such, implementation of TOP 2050 would have no impact on land uses zoned for forest land, timberland, or timberland zoned Timberland Production; nor would TOP 2050 result in the loss or conversion of timberland or forest land to non-forest uses (Certified SEIR, p. 5.2-13). See also Checklist Item 2 c.

TOP 2050 does not propose or require uses that would otherwise result in conversion of Farmland to nonagricultural use or conversion of forest land to non-forest use.

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. No forest land or farmland is located within the Modified Project site or in its vicinity. The Modified Project does not propose or require uses that would otherwise result in conversion of Farmland to nonagricultural use, or conversion of forest land to non-forest use. The Modified Project Land Uses are consistent with TOP 2050 land use designations. As noted above,

TOP 2050 would have no impact on forest land or farmland, nor would TOP 2050 result in the loss or conversion of timberland or forest land to non-forest uses. Because the Modified Project Land Uses are consistent with TOP 2050 land use designations, the Modified Project would similarly not result in the conversion of Farmland to nonagricultural use, or conversion of forest land to non-forest use.

Modified Project Conditions of Approval: None.

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different agriculture and forestry resources impacts would result from the Modified Project. No changed or new information has been identified to indicate that any impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022*; *The Avenue Specific Plan, 2024 Amendment*.

3. AIR QUALITY

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Conflict with or obstruct implementation of the applicable air quality plan?					X	
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?					X	
c) Expose sensitive receptors to substantial pollutant concentrations?					X	

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?					X	

Substantiation:

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

General Note: *The technical analyses referenced in this section reflect likely maximum impacts. Subsequent to preparation of these analyses, total residential development intensities allowed under the Modified Project have been reduced consistent with direction. Specifically, the technical analyses referenced herein assume residential development of the Modified Project totaling up to 3,807 dwelling units (see Project Traffic Analysis, p. 2 et al.). As subsequently modified, maximum allowed residential development under the Modified Project would not exceed 3,753 dwelling units (see Section 2.0, Project Description, Table 2.1-1).*

Certified SEIR Conclusions: Because air pollutant emissions associated with buildout of the City would cumulatively contribute to nonattainment conditions affecting the South Coast Air Basin (SoCAB), the Certified SEIR determined that TOP 2050 would be inconsistent with the Air Quality Management Plan (AQMP). For these reasons, the Certified SEIR concluded that TOP 2050 would result in significant AQMP consistency impacts (Certified SEIR, p. 5.3-40).

Certified SEIR Mitigation Measures: The Certified SEIR includes mitigation (listed below) that would generally reduce criteria pollutant emissions associated with buildout of TOP 2050. These measures include mitigation from the previous (2010) TOP EIR and new mitigation implemented under TOP 2050.

3-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project

applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario building department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:

- *Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:*
  - *Requiring use of nontoxic soil stabilizers to reduce wind erosion.*
  - *Applying water every four hours to active soil disturbing activities.*
  - *Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.*
  - *Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits.*
- *Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.*
- *Limiting nonessential idling of construction equipment to no more than five consecutive minutes.*
- *Using Super-Compliant VOC paints for coating architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: http://www.aqmd.gov/prdas/brochures/Super- Compliant_AIM.pdf.*

These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.

3-2 *The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g., sidewalks).*

New Mitigation

AQ-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following:

- *For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.*
- *Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use.*
- *Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485).*
- *Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures).*
- *Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).*
- *Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures).*
- *Provide facilities to support electric charging stations per Section A5.106.5.3 and*

Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).

Applicant-provided appliances shall be Energy Star-certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star-certified or equivalent appliances shall be verified by the City during plan check.

[TOP 2050] Policy ER4-9, Health Risk Assessments, would ensure mobile sources of TACs not covered under South Coast AQMD permits are considered during subsequent project-level environmental review by the City of Ontario; however, implementation of TOP 2050 would generate TACs that could contribute to elevated levels in the air basin (cumulative).

The Certified SEIR concluded however that no mitigation measures are available that would substantially reduce AQMP inconsistency impacts. On this basis, the Certified EIR concluded that even with application of mitigation, TOP 2050 inconsistency with the AQMP would be significant and unavoidable (Certified SEIR, p. 5.3-54).

Level of Significance After Mitigation: Significant and Unavoidable.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. In this respect, the Modified Project would not substantively increase aggregate development intensities beyond that currently anticipated for the subject site as reflected in the Certified SEIR analysis of AQMP consistency.

Based on the preceding, when compared to the Certified SEIR findings, no new or substantially increased AQMP consistency impacts would occur under the Modified Project.

Modified Project Conditions of Approval: The Modified Project would implement applicable Certified SEIR mitigation measures.

b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that buildout of TOP 2050 would generate short-term and long-term air pollutant emissions exceeding SCAQMD regional significance thresholds for VOC, CO, NOx, PM_{10}, and $PM_{2.5}$. These exceedances would cumulatively contribute to the SCAB nonattainment designations for O_3, PM_{10} and $PM_{2.5}$. Even with the implementation of mitigation measures, nonattainment air quality impacts resulting from buildout of TOP 2050 would be significant and unavoidable (Certified SEIR, pp. 5.3-54 – 5.3-57).

Certified SEIR Mitigation Measures: Please refer to previous Certified SEIR air quality mitigation measures listed at Checklist item 3 a).

Modified Project:

Construction-Source Emissions

Construction-source emissions resulting from the Modified Project are quantified in *The Avenue Specific Plan, 2023 Amendment - Air Quality & Energy Assessment* (Urban Crossroads, Inc.) May 8, 2024 (Modified Project AQIA, Addendum Appendix B). Modified Project construction activities would comprise site preparation, grading, building construction, paving, and architectural coating. Construction-source emissions would also be generated by construction worker commutes, heavy equipment transport, and construction material(s) vendor trips. Modified Project construction activities would generate emissions of carbon monoxide (CO), Volatile Organic Compounds (VOCs), Nitrogen Oxides (NOX), Sulfur Oxides (SOX), particulate matter ≤ 10 microns (PM_{10}), and particulate matter ≤ 2.5 microns ($PM_{2.5}$). Table 3-1 summarizes Modified Project maximum daily construction-source emissions.

As presented at Table 3-1, with the exception of VOC emissions, Modified Project construction-source emissions would not exceed applicable SCAQMD regional thresholds. Project construction-source VOC exceedances would represent a cumulatively considerable net increase in SCAB nonattainment conditions for O_3 (VOC is an Ozone precursor). Because the Project is consistent with land uses and development

evaluated in the Certified SEIR, Project construction-source VOC exceedances are already acknowledged and accounted for in the Certified SEIR.

Table 3-1
Maximum Daily Construction-Source Emissions

Source	Emissions (lbs./day)					
	VOC	**NOx**	**CO**	**SOx**	**PM_{10}**	**$PM_{2.5}$**
Summer						
2024	7.04	39.79	140.03	0.13	19.75	4.92
2025	6.63	31.64	132.00	0.10	19.75	4.92
Winter						
2024	6.65	39.85	114.31	0.13	19.75	5.70
2025	119.91	51.12	148.37	0.13	23.90	6.07
Total Maximum Daily Emissions	**119.91**	**51.12**	**148.37**	**0.13**	**23.90**	**6.07**
SCAQMD Regional Threshold	75	100	550	150	150	55
Threshold Exceeded?	YES	NO	NO	NO	NO	NO

Source: *The Avenue Specific Plan, 2023 Amendment - Air Quality & Energy Assessment* (Urban Crossroads, Inc.) May 8, 2024.

Operational-Source Emissions

Modified Project operational-source emissions would derive primarily from site/building maintenance (area sources), building energy consumption, and traffic (mobile sources). Operational-source emissions generated by the Modified Project land are summarized at Table 3-2. As indicated at Table 3-2, Project maximum daily operational-source emissions would exceed SCAQMD Regional Thresholds for VOC, NOx, CO, and PM_{10}. Project operational-source VOC, NOx, and PM_{10} exceedances would represent a cumulatively considerable net increase in SCAB nonattainment conditions for O_3 and PM_{10} (VOC and NO_x are Ozone precursors).

Because the Project is consistent with land uses and development evaluated in the Certified SEIR, the Project operational-source VOC, NOx, CO, and PM_{10} exceedances are already acknowledged and accounted for in the Certified SEIR.

Table 3-2
Maximum Daily Operational-Source Emissions

Source	Emissions (lbs./day)					
	VOC	**NO_X**	**CO**	**SO_X**	**PM_{10}**	**$PM_{2.5}$**
Summer						
Mobile Source	89.78	76.69	729.57	1.77	154.87	40.15

Source: *The Avenue Specific Plan, 2023 Amendment - Air Quality & Energy Assessment* (Urban Crossroads, Inc.) May 8, 2024.

Modified Project Conditions of Approval: The Modified Project would implement applicable Certified SEIR mitigation measures.

Based on the preceding, when compared to the Certified SEIR findings, the Modified Project would not result in substantively different or substantively increased contributions to cumulative contributions to criteria pollutant non-attainment impacts.

c) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR notes that individual development projects within the City would be required to achieve the incremental risk thresholds established by SCAQMD, and on this basis, potential Toxic Air Contaminant (TAC) impacts from individual developments would be less-than-significant. TOP 2050 Policy ER4-9 *New Localized Air Pollution Sources Near Existing Sensitive Receptors*, ensures that mobile sources of TACs not covered under South Coast AQMD permits are considered

during subsequent project-level environmental review by the City of Ontario. Other air quality mitigation measures implemented under TOP 2050 would further reduce air pollutant emissions, thereby minimizing effects of pollutants at sensitive receptors.

The Certified SEIR nonetheless concludes that buildout of TOP 2050 would generate TACs that could contribute to elevated levels of TAC pollutants in the air basin. On this basis, the Certified SEIR concluded that TOP 2050 TAC emissions impacts at sensitive receptors would be cumulatively significant (Certified SEIR, p. 5.3-57).

Certified SEIR Mitigation Measures: Please refer to previous Certified SEIR air quality mitigation measures listed at Checklist item 3 a).

Modified Project: The Modified Project does not propose or require uses that would generate substantial levels of TACs. However, localized construction-source emissions generated by the Project have the potential to adversely affect proximate sensitive uses.[2] Accordingly, the potential for the Modified Project construction activities to generate or result in harmful concentrations of air pollutants at sensitive receptors is evaluated in the Modified Project AQIA.

LST Methodology

Localized construction-source impacts resulting from the Modified Project were evaluated consistent with methodologies and protocols presented in *Final Localized Significance Threshold Methodology* (SCAQMD) 2003 (LST Methodology). Per SCAQMD criteria, localized exceedances of the federal and/or state ambient air quality standards (NAAQS/CAAQS) would comprise potentially significant air quality impacts. Collectively, these are referred to as Localized Significance Thresholds (LSTs). LSTs represent the maximum localized emission concentrations that would not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard(s).

[2] LSTs would apply to the operational phase of a project, if that project includes stationary sources, or attracts mobile sources that may spend long periods queuing and idling at the site (e.g., transfer facilities and warehouse buildings). The Project does not propose or require such uses. Due to the lack of significant stationary source emissions, an LST analysis for the Modified Project operations is not required.

Sensitive Receptors

Persons that are especially sensitive to air pollution are accorded special consideration when evaluating air quality impacts. Collectively, these persons collectively comprise sensitive receptors, and include: children, the elderly, and individuals with pre-existing respiratory or cardiovascular illness. Structures that house these persons or places where they gather are defined as sensitive receptor locations. Such structures typically include: residences, hotels, hospitals or similar occupancies. Consistent with the LST Methodology, the analysis presented here evaluates potential effects of localized construction-source emissions at the nearest sensitive receptor locations where an individual could remain for 24 hours or more.

Based on an aerial imagery, sensitive receptor residential land uses are located within 25 meters of the Project boundaries. Per the LST Methodology, a minimum separation of 25 meters between receptors and emission sources has been assumed within this analysis.

Thresholds

The LST Methodology provides "Look-up Tables" establishing screening-level thresholds. Emissions that do not exceed the Look-up Table thresholds are presumptively considered less-than-significant. Emissions exceeding Look-up Table thresholds warrant further detailed modeling and analysis. Look-up Table thresholds applicable to the Project are presented below.

Table 3-3
Localized Significance Thresholds

Activity	Emissions Thresholds (lbs./day)			
	VOC	NO_X	PM_{10}	$PM_{2.5}$
Demolition	270	2,193	16	9
Site Preparation				
Grading				

Source: *The Avenue Specific Plan, 2023 Amendment - Air Quality & Energy Assessment* (Urban Crossroads, Inc.) May 8, 2024.

Localized Emissions

Maximum construction-source localized emissions received at the nearest sensitive receptors are presented at Table 3-4.

Table 3-4
Maximum Received Localized Emissions

	Emissions (lbs./day)			
	NO_x	**CO**	**PM_{10}**	**$PM_{2.5}$**
Demolition				
Maximum Daily Emissions	23.81	36.35	0.40	0.38
SCAQMD Localized Threshold	270	2,193	16	9
Threshold Exceeded?	NO	NO	NO	NO
Site Preparation				
Maximum Daily Emissions	29.47	56.62	11.52	5.57
SCAQMD Localized Threshold	270	2,193	16	9
Threshold Exceeded?	NO	NO	NO	NO
Grading				
Maximum Daily Emissions	38.87	70.70	5.70	2.31
SCAQMD Localized Threshold	270	2,193	16	9
Threshold Exceeded?	NO	NO	NO	NO

Source: *The Avenue Specific Plan, 2023 Amendment - Air Quality & Energy Assessment* (Urban Crossroads, Inc.) May 8, 2024.

As presented at Table 3-4, maximum Project construction-source localized emissions received at area sensitive receptors would not exceed applicable SCAQMD LSTs. On this basis, the potential for the Project to expose sensitive receptors to substantial pollutant concentrations would be less-than-significant.

Modified Project Conditions of Approval: None.

d) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR notes that development pursuant to TOP 2050 would be required to comply with SCAQMD Rule 402. SCAQMD Rule 402 acts to generally control and regulate odors and odor sources, thereby minimizing potential

effects of construction-source and operational-source odors from other than industrial land uses (Certified SEIR, p. 5.3-46).

The Certified SEIR also acknowledges that certain types of industrial land uses (e.g., compost facilities, landfills, solid-waste transfer stations, fiberglass manufacturing facilities, paint/coating operations, asphalt batch manufacturing plants, chemical manufacturing, and food manufacturing facilities) warrant focused odor impact analyses. The City would require site- and development-specific analyses to ensure that any odors generated by these types of land uses would not adversely affect a substantial number of people (Certified SEIR, p. 5.3-46).

Based on the preceding, the Certified SEIR concluded that the potential for TOP 2050 to create or result in odors that would adversely affect a substantial number of people would be less-than-significant.

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. Construction-source and operational-source odor impacts that may result from the Modified Project are controlled as a byproduct of hazardous/potentially hazardous materials handling plans and Best Management Practices implemented under SCAQMD Rule 402 et al. The Modified Project would be required to comply with all SCAQMD Rules regulating and controlling odors and odor sources.

The Modified Project does not propose or require land uses (e.g., compost facilities, landfills, solid-waste transfer stations, fiberglass manufacturing facilities, paint/coating operations, asphalt batch manufacturing plants, chemical manufacturing, and food manufacturing facilities) that would be substantial odor sources. Moreover, the Modified Project would remove existing agricultural odor sources and would act generally to improve ambient conditions related to odors.

Construction-source and operational-source odor impacts that may result from the Modified Project are controlled as a byproduct of hazardous/potentially hazardous materials handling plans and Best Management Practices implemented under SCAQMD Rule 402[3] et al. The Modified Project would be required to comply with all SCAQMD Rules regulating and controlling odors and odor sources. The Modified Project would therefore not create objectionable odors affecting a substantial number of people. The Modified Project does not propose or require uses that would generate other emissions that could adversely affect a substantial number of people. On this basis, when compared to the Certified SEIR findings, no new or substantially increased "other emissions" impacts would occur under the Modified Project.

On this basis, when compared to the Certified SEIR findings, no new or substantially increased odor impacts would occur under the Modified Project.

Modified Project Conditions of Approval: None.

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different air quality impacts would result from the Modified Project. No changed or new information has been identified to indicate that any impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

[3] SCAQMD **Rule 402. Nuisance.**
"A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. The provisions of this rule shall not apply to odors emanating from agricultural operations necessary for the growing of crops or the raising of fowl or animals." http://www.aqmd.gov/docs/default-source/rule-book/rule-iv/rule-402.pdf

Quality & Energy Assessment (Urban Crossroads, Inc.) May 8, 2024; *The Avenue Specific Plan, 2024 Amendment*.

4. BIOLOGICAL RESOURCES

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Have a substantial adverse effect, either directly or through habitat modification, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?					X	
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies and regulations; or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?					X	
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?					X	
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?					X	
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?					X	
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?					X	

Substantiation:

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR recognizes that development in accordance with TOP 2050 could impact sensitive species. Projects considered for approval under TOP 2050 would be subject to independent CEQA review to determine whether there is potential habitat on-site for sensitive species. The Certified SEIR did not identify any significant impacts in this regard (Certified SEIR, pp. 5.4-28 – 5.4-34).

Certified SEIR Mitigation Measures: None.

Modified Project: TOP 2050 SEIR (Section 5.4) concluded that the area encompassing The Avenue Specific Plan may function as potential habitat for the federally-listed Delhi Sands Flower Loving Fly (DSFLF) and Burrowing Owl. No other potentially significant impacts to candidate, sensitive, or special status species were identified in the SEIR.

Potential Impacts to DSFLF

Potential Project impacts to DSFLF are substantiated in *Habitat Suitability Evaluation* (EnviroPlus Consulting, LLC) October 30, 2023 (Project DSFLF Study). Findings and conclusions of the Project DSFLF Study are presented below.

The Project site was surveyed for evidence of DSFLF, potentially viable DSFLF habitat, and general presence/absence biologic resources by a qualified professional biologist[4] on October 22, 2023. The survey was conducted under clear skies with temperatures ranging from 60 to 72 °F. Winds were light at 1 to 3 mph from the west (Project DSFLF Study, p. 4).

The survey noted general site conditions, soils types, surface conditions, vegetation types and conditions, and presence or evidence of insects and wildlife. The survey also documented past and present on-site disturbances and ongoing urban development

[4] Biologist permitted by the U.S. Fish and Wildlife Service (Section 10 (a) (1) (A) permit number TE-837439-8 expiring 6/24/2024).

affecting the site's potential suitability as habitat for biological resources (Project DSFLF Study, pp. 2 – 4).

The survey results indicate that although the survey area is in part mapped as Delhi series soils, "anthropogenic disturbances over decades have altered the natural topography, aeolian processes, vegetation and soil characteristics such that the site does not now meet the USFWS baseline requirement for conducting focused surveys, the presence of Delhi series soils. Additionally, surrounding areas are similarly highly disturbed and/or developed, so it would be highly unlikely that any dispersing DSFLF from a nearby DSFLF-occupied site would temporarily utilize the subject property for foraging or reproduction purposes. Since suitable Delhi series soils were not found, the site does not meet the baseline criterion to be considered for focused surveys as per the USFWS protocol (1996) and does not appear suitable for DSFLF occupation" (Project DSFLF Study, pp. 4, 5). Based on the preceding, the Project's potential impact to DSFLF and DSFLF habitat would be less-than-significant. **Note:** The January 2024 biological resources assessment update prepared for the Project confirms the above findings and conclusions. Please refer to *Biological Update for The Avenue Specific Plan (Planning Area 5) Project; City of Ontario, County of San Bernardino, California* (January 2024 Biological Update, VCS Environmental) January 16, 2024, Addendum Appendix C.

Potential Impacts to Burrowing Owl

During the October 2023 site DSFLF surveys, the presence of burrowing owl individuals and evidence of burrowing owl occupation within the site were also noted (Project DSFLF Study, p. 4). The January 2024 Biological Resources Update indicates that burrowing owl individuals were no longer present during a subsequent January 2024 site visit. As such, these individuals are deemed migrant and the site is not considered to be occupied by BUOW (January 2024 Biological Update, p. 5).

The Project site does however evidence burrows suitable for BUOW and suitable BUOW foraging habitat. A BUOW pre-construction survey is therefore required to ensure that potential impacts to BUOW are maintained at levels that would be less-than-significant. Please refer to Condition of Approval BIO-1.

Other Considerations

The Modified Project site serves generally as potential habitat for migratory birds. Development of the site could therefore result in impacts to any nesting migratory birds that may be present. Consistent with California Department of Fish and Wildlife requirements, Condition of Approval BIO-2 is included to ensure that impacts to nesting birds are maintained at levels that would be less-than-significant.

Additionally, areas of the Modified Project site not specifically addressed in the Project DSFLF Study and/or January 2024 Biological Update may warrant updated biological resources assessments to ensure that potential impacts to biological resources for these areas are maintained at levels that would be less-than-significant (please refer to Condition of Approval BIO-3).

Modified Project Conditions of Approval:

BIO-1 Avoidance of Nesting Burrowing Owls: No more than 72 hours prior to any site disturbances, focused surveys for the burrowing owl shall be conducted. If absence of this species is confirmed, project work can proceed. If, however, burrowing owl is located on site, the appropriate resource agencies (CDFW and USFWS) shall be contacted. The Applicant shall consult with the wildlife agencies regarding the most appropriate methods and timing for removal of owls. As necessary, owls will be actively evicted following agency approved protocols (i.e., placing a one-way door at the burrow entrance to ensure that owls cannot access the burrow once they leave). Any such active eviction shall occur outside of the breeding/nesting season. That is, if active eviction is required, eviction shall be accomplished between September 1 and February 15. If more than 30 days have elapsed between owl eviction and completion of clearing and grubbing activities, a subsequent survey for the burrowing owl shall be conducted to ensure that owls have not re-populated the site. Any reoccupation by owls will require subsequent protocol active eviction.

BIO-2 Avoidance of Nesting Migratory Birds: If possible, all vegetation removal activities shall be scheduled from August 1 to February 1, which is outside the general avian nesting season. This would ensure that no active nests would be disturbed, and that removal could proceed rapidly. If vegetation is to be cleared during the nesting season, all suitable habitat

will be thoroughly surveyed within 72 hours prior to clearing for the presence of nesting birds by a qualified biologist (Biologist). The Biologist shall be approved by the City and retained by the Applicant. The survey results shall be submitted by the Applicant to the City Planning Department. If any active nests are detected, the area of nesting shall be flagged and mapped on the construction plans along with a minimum 300-foot buffer, with the final buffer distance to be determined by the Project Biologist. The buffer area shall be avoided until, as determined by the Biologist, the nesting cycle is complete, or it is concluded that the nest has failed. In addition, the Biologist shall be present on the site to monitor the vegetation removal to ensure that any nests, which were not detected during the initial survey, are not disturbed.

BIO-3 To the extent not considered and addressed in prior biological resources assessments, the Project DSFLF Study, or the January 2024 Biological Update, and to properly assess and address potential biological resources impacts, Biological Resources surveys shall be prepared prior to approval of Tentative Tract Maps within the Modified Project site. If suitable habitat is determined present onsite, subsequent focused surveys shall be completed and no "take" of any protected species and/or their habitat shall occur without obtaining the requisite regulatory permits from State and Federal agencies.

b, c) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that individual projects subject to CEQA environmental review would be required to determine whether there is potential habitat onsite for sensitive species. The Certified SEIR did not identify any significant impacts in this regard (Certified SEIR, p. 5.4-28).

Certified SEIR Mitigation Measures: None.

Modified Project: TOP 2050 SEIR (Section 5.4) concluded that the area encompassing The Avenue Specific Plan may function as potential habitat for the federally-listed Delhi DSFLF and Burrowing Owl. No other potentially significant impacts to candidate, sensitive, or special status species or their habitats were identified.

Consistent with SEIR requirements, the Project site has been evaluated for the presence of potential habitat for sensitive species. The Project DSFLF Study substantiates that the Project site and surrounding areas are extensively disturbed as the result of current and historic human activities. Surveys conducted as part of the Project DSFLF did not indicate presence or potential presence of riparian habitat, other sensitive natural community, or protected wetlands. The Project does not propose or require facilities or activities that would result in potential adverse effects to off-site riparian habitat, other sensitive natural community, or protected wetlands. Project potential impacts to riparian habitat, sensitive natural communities, and protected wetlands is therefore considered less-than-significant.

Modified Project Conditions of Approval: None.

d) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR states that no regional wildlife movement corridors have been identified in the City, and most of the City is ill-suited for the purposes of wildlife movement. Additionally, compliance with existing policies and regulations ensures impacts in this regard would be maintained at levels that would be less-than-significant (Certified SEIR, p. 5.4-30).

Certified SEIR Mitigation Measures: None.

Modified Project: No wildlife corridors or linkages are located onsite. Further, the site is bounded on all sides by roads and/or urban development, diminishing its potential to function as a wildlife movement corridor. Consistent with the conclusion of the Certified SEIR, the Modified Project would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites.

Modified Project Conditions of Approval: None.

e, f) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR did not identify any conflicts with any local policies or ordinances protecting biological resources, adopted Habitat Conservation Plan, Natural Community Plan, or other approved local, regional, or state habitat conservation plan (Certified SEIR, pp. 5.4-30 – 5.4-31).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project would be required to comply with local policies and ordinances protecting biological resources. The Modified Project does propose or require development or activities that would conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

Modified Project Conditions of Approval: None.

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different biological resources impacts would result from the Modified Project. No changed or new information has been identified to indicate that any impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022*; *Habitat Suitability Evaluation* (EnviroPlus Consulting, LLC) October 30, 2023; *Biological Update for The Avenue Specific Plan (Planning Area 5) Project; City of Ontario, County of San Bernardino, California* (VCS Environmental) January 16, 2024; *The Avenue Specific Plan, 2024 Amendment*.

5. CULTURAL RESOURCES

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?					X	
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?					X	
c) Disturb any human remains, including those interred outside of formal cemeteries?					X	

Substantiation:

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Historic resources in the City include historic districts, historic landmarks or points of historical interest, and other buildings, structures, objects, and sites that appear eligible for listing on the National, California, or Local Registers of Historic Places. The Certified SEIR concluded that adoption of TOP 2050 would not itself directly affect any historical structures; however, identified and potential historic structures and sites may be vulnerable as development occurs. The Certified SEIR concluded this was a potentially significant impact (Certified SEIR, pp. 5.5-18 – 5.5-19).

Certified SEIR Mitigation Measure:

5-1 Historic or potentially historic resources in the City shall be evaluated for historic significance through the City's tier system prior to the issuance of plan or development approvals. Pursuant to City's Development Code (Chapter 7, Historic Preservation), each historic resource shall be fully documented and cataloged pursuant to Historic American Building Survey/Historic American Engineering Record (HABS/HAER) standards, to provide a record of the resource, including, but not limited to: [i] the preparation of site

plans, floor plans, exterior and interior elevations, and detail drawings of character defining features (such as moldings, stairs, etc.); and [ii] photographs of the resource, including the exterior, interior, and interior and exterior character defining features (such as moldings, light fixtures, trim patterns, etc.).

Even with the implementation of Mitigation Measure 5-1, the Certified SEIR concluded that impacts to historical resources would be significant and unavoidable (Certified SEIR, p. 5.5-23).

Modified Project: The Specific Plan area has been surveyed at least five times between 2004 and 2006, as follows.

- Stantec Consulting, Inc., *A Phase I Cultural Resources Inventory and Paleontological Assessment for the 111-Acre Avenue Specific Plan Project, City of Ontario, County of San Bernardino, California*, April 19, 2006.
- Chambers Group, Inc., *Phase I and II Cultural Resources Survey of a 169-Acre Former Dairy Farm, Ontario, San Bernardino County, California*, October 2005.
- Chambers Group, Inc., *Cultural Resources Survey of 13 Parcels Consisting of 173-Acres, Ontario, San Bernardino County, California*, October 2005.
- Chambers Group, Inc., *Cultural Resources Survey of a 58-Acres Former Dairy Farm, Ontario, San Bernardino County, California*, August 2004.
- Chambers Group, Inc., *Cultural Resources Survey of a 163-Acre Former Dairy Farm, Ontario, San Bernardino, California*, September 2005.

Additionally, a cultural resources records search of the City was completed in December 2021. No historical resources have been identified within the Specific Plan area.

The Modified Project would be required to conform to City Conditions of Approval providing for protection of potentially significant historic resources, and would implement above-noted Certified SEIR Mitigation Measure 5-1. No additional measures are required or proposed for the Modified Project.

With conformance to City Conditions of Approval, and implementation of mitigation, the potential for the Modified Project to adversely to result in cause a substantial adverse change in the significance of a historical resource would be less-than-significant. When compared to the Certified SEIR findings, no new or substantially increased impacts to paleontological resources would result from the Modified Project.

Modified Project Conditions of Approval: The Modified Project would implement applicable Certified SEIR mitigation measures.

b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Adoption of TOP 2050 would not of itself directly affect archaeological resources. However, buildout of TOP 2050 land use plan would allow development activities and ground disturbance affecting known and potential areas of archaeological sensitivity. These activities could potentially cause the disturbance of archeological resources. Therefore, future development that would be accommodated by TOP 2050 could potentially unearth previously unrecorded resources (Certified SEIR, p. 5.5-19).

Certified SEIR Mitigation Measure:

5-2 *In areas of documented or inferred from evident archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:*

a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.

b) Should any cultural/scientific resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director is satisfied that adequate provisions are in place to protect these resources.

c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including catalog with museum numbers.

With the implementation of Mitigation Measure 5-2, the Certified SEIR concluded that impacts to archaeological and/or paleontological resources would be less-than-significant. (Certified SEIR, p. 5.5-22).

Modified Project: No archeological resources have been identified within the Specific Plan area as part of the previously-listed archeological surveys or records search. The Modified Project would be required to conform to City Conditions of Approval providing for protection of potentially significant archeological resources, and would implement above-noted Certified SEIR Mitigation Measure 5-2.

With conformance to City Conditions of Approval, and implementation of mitigation, the potential for the Modified Project to adversely to result in cause a substantial adverse change in the significance of a historical resource would be less-than-significant. When compared to the Certified SEIR findings, no new or substantially increased impacts to archeological resources would result from the Modified Project.

Modified Project Conditions of Approval: The Modified Project would implement applicable Certified SEIR mitigation measures. Please refer also to Conditions of Approval that would be implemented under the topical heading "Tribal Cultural Resources."

c) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that compliance with existing regulations would ensure that the potential for TOP 2050 to disturb any human remains, including those interred outside of formal cemeteries was less-than-significant (Certified SEIR, p. 5.5-21).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project would be required to comply with all existing regulations, including the California Public Resources Code Section 5097.98, which would afford protection for any human remains discovered during development activities. On this basis, the potential for the Modified Project to result in disturbance of any human remains, including those interred outside of formal cemeteries would be less-than-significant. When compared to the Certified SEIR findings, no new or substantially increased impacts related to potential disturbance of human remains would result from the Modified Project.

Modified Project Conditions of Approval: None.

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different impacts to unique cultural resources would occur as a result of the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364* (Placeworks) August 2022*; Addendum to The Ontario Plan Environmental Impact Report, File Nos.: PGPA19-008, PSPA19-011, and PMTT19-015* (City of Ontario) 2020; *The Avenue Specific Plan, 2024 Amendment*.

6. ENERGY

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?					X	
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?					X	

Substantiation:

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that regulatory compliance under TOP 2050 buildout conditions would promote building energy efficiency and vehicle fuel efficiency and reduce building energy demand and transportation-related fuel usage. Additionally, TOP 2050 includes policies related to land use and transportation planning and design, energy efficiency, public and active transit, and renewable energy generation that would contribute to enhanced building and transportation-related energy efficiencies and thereby reduce demands on nonrenewable sources of energy. Implementation of TOP 2050 Policies, energy efficiency and conservation measures articulated in the Community Climate Action Plan (CCAP), and compliance with regulatory requirements would ensure that energy consumption resulting from TOP 2050 buildout would not be inefficient, wasteful, or unnecessary. On this basis, the potential for TOP 2050 to result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources would be less-than-significant (Certified SEIR, pp. 5.6-9 – 5.6-12).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project in total would be required to comply with incumbent performance standards established under the Building Energy Efficiency Standards contained in the California Code of Regulations (CCR), Title 24, Part 6 (Title 24, Energy Efficiency Standards). The Modified Project would be required to conform to applicable CALGreen provisions (CCR, Title 24, Part 11 – CALGreen). CALGreen supports the goals of the State's greenhouse gas reduction and building energy efficiency programs. The Modified Project would also implement applicable efficiency/conservation measures provisions of the CCAP and applicable CCAP updates.

Based on the preceding, the Modified Project would not result in or cause wasteful, inefficient, and unnecessary consumption of energy; and would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. When compared to impacts addressed in the Certified SEIR, no new or substantially increased energy impacts would occur under the Modified Project.

Modified Project Conditions of Approval: None.

b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR notes that TOP 2050 would comply with applicable provisions of the California Renewables Portfolio Standard Program (RPS); and current and future iterations of CALGreen. Additionally TOP 2050 includes policies supporting statewide goals to transition the electricity grid to renewable sources. Mandated compliance with the CCAP and its updates would also be required for all new development under TOP 2050. On this basis, the Certified SEIR concluded that the potential for TOP 2050 to conflict with or obstruct a state or local plan for renewable energy or energy efficiency would be less-than-significant (Certified SEIR, pp. 5.6-13, 5.6-14).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project would be required to comply with incumbent Building Energy Efficiency Standards contained in the California Code of Regulations (CCR), Title 24, Part 6, Energy Efficiency Standards including applicable CALGreen provisions. CALGreen supports the goals of the State's greenhouse gas reduction and building energy efficiency programs. The Modified Project would also be required to implement applicable energy efficiency/conservation measures of the CCAP and its updates.

Based on the preceding, the Modified Project would not result in or cause wasteful, inefficient, and unnecessary consumption of energy; and would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

Modified Project Conditions of Approval: None.

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different energy impacts would occur as a result of the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2024 Amendment*.

7. GEOLOGY AND SOILS

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:						
(i) rupture of a known earthquake fault;					X	
(ii) strong seismic ground shaking;					X	
(iii) seismic-related ground failure, including liquefaction; or					X	
(iv) landslides?					X	
b) Result in substantial soil erosion or the loss of topsoil?					X	
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?					X	
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?					X	
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?					X	
f) Directly or indirectly destroy a unique paleontological resource or site or unique geological feature?					X	

Substantiation:

a – d) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR recognizes existing geological conditions and location of the City within a seismically active area. The Certified SEIR concludes that compliance with California Building Code (CBC) regulations and standard City Conditions of Approval would ensure that potential geology/soils impacts related to earthquakes, seismic hazards, erosion, and adverse soils conditions, would be maintained at levels that would be less-than-significant (Certified SEIR, pp. 5.7-18 – 5.7-21).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. All development proposals within the Modified Project site would be required to comply with CBC regulations and standard City Conditions of Approval, acting to preclude potentially significant geology/soils impacts. All potential geology and soils impacts associated with development of the subject site would be less-than-significant based on compliance with the Uniform Building Code, California Building Code, the Ontario Municipal Code, and applicable TOP 2050 Policies.

There are no known or suspected faults or other adverse geology/soils conditions affecting the subject site (Certified SEIR, pp. 5.7-4 – 5.7-16).[5] As part of the City's standard review and approval processes, the Modified Project would be required to comply with provisions of Final City-approved geotechnical report(s). Design of the Modified Project facilities would also be required to comply with applicable provisions of the Uniform Building Code (UBC), California Building Code (CBC), City Municipal Code, and would be required to implement applicable Ontario Plan strategies. Compliance with these measures would ensure that potential geology and soils impacts remain at levels that would be less-than-significant. The Modified Project would therefore not result in new, additional, or different geological/soils impacts not considered and addressed in the Certified SEIR.

[5] This is also consistent with previous analysis prepared for the Project site. See: *The Avenue 2020 Addendum to the Ontario Plan Environmental Impact Report* [City File Nos. PGPA19-008, PSPA19-011, PMTT19-015] pp. 23 – 260).

Modified Project Conditions of Approval: None.

e) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Wastewater generated by new development pursuant to buildout of TOP 2050 would be conveyed to and treated at wastewater treatment facilities owned and operated by the Inland Empire Utilities Agency (Regional Plant No. 1 in the City of Ontario and Regional Plant No. 5 in the City of Chino).

The use of septic tanks for new development would be restricted to areas not "in practical proximity existing sewer mains . . ." (Certified SEIR, p. 5.7-22).

Based on the preceding, the Certified SEIR concluded that TOP 2050 would not result in adverse impacts related to use of septic tanks or alternative wastewater disposal systems and ability of soils to accept these systems.

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project site is fully served by existing and planned sewer service. The Modified Project does not propose or require use of septic systems.

Based on the preceding, there is no potential for the Modified Project to result in adverse impacts related to use of septic tanks or alternative wastewater disposal systems and ability of soils to accept these systems.

Modified Project Conditions of Approval: None.

f) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The geology underlying the City is common and typical within the region and is not considered unique (Certified SEIR, p. 5.7-20).

Adoption of TOP 2050 in itself would not directly affect paleontological resources. However, implementation of TOP 2050 land use plan could allow development and redevelopment of potentially sensitive areas. The Certified SEIR concluded this was a potentially significant impact (Certified SEIR, pp. 5.7-20, 5.7-21).

Certified SEIR Mitigation Measures:

5-2 *In areas of documented or inferred archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:*

a. Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.

b. Should any cultural resources be discovered no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.

c. Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including a catalog with museum numbers.

With application of mitigation, the Certified SEIR concluded that TOP 2050 impacts to paleontological resources would be less-than-significant (Certified SEIR, p. 5.7-25).

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Certified SEIR indicates that there is a possibility of finding paleontological resources within the City boundaries at depths of 10 feet or more below ground surface (Certified SEIR, p. 5.7-22). No known paleontological resources exist within the subject site or its vicinity. Moreover,

soils underlying the site comprise younger Quaternary Alluvium sediments. These soils typically do not contain significant vertebrate fossils (The Avenue 2020 Addendum, p. 25). Additionally, per City Conditions of Approval, should any unanticipated paleontological resources be encountered during excavation, construction activities would be halted or would be relocated to other unaffected areas of the subject site. Under such circumstances, a qualified paleontologist would be retained to evaluate any encountered find. If the find is determined to be significant, avoidance or other appropriate measures shall be implemented.

Modified Project Conditions of Approval: The Modified Project would be required to conform to City Conditions of Approval providing for protection of potentially significant paleontological resources, and would implement above-noted Certified SEIR Mitigation Measure 5-2. No additional measures are required or proposed for the Modified Project.

With conformance to City Conditions of Approval, and implementation of mitigation, the potential for the Modified Project to adversely to result in cause a substantial adverse change in the significance of a paleontological resource would be less-than-significant. When compared to the Certified SEIR findings, no new or substantially increased impacts to paleontological resources would result from the Modified Project.

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different geology and soils impacts would occur as a result of the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2024 Amendment*.

8. GREENHOUSE GAS EMISSIONS

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?					X	
b) Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?					X	

Substantiation:

a, b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR substantiates that TOP 2050 would yield a net decrease in GHG emission when compared to the previous General Plan (TOP 2009) GHG emissions forecasts. Further, under TOP 2050 and the CCAP, the City would achieve State emissions reductions targets and would progress toward attainment of the State's carbon neutrality goals. On this basis, the Certified SEIR concluded that the potential for TOP 2050 to generate greenhouse gas emissions, either directly or indirectly, that may have an adverse impact on the environment would be less-than-significant (Certified SEIR, pp. 5.8-25, 5.8-26).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. GHGs generated by the Modified Project are consistent with GHG emissions estimates reflected in the Certified EIR. For informational purposes, estimated GHGs generated by the Modified Project are presented at Table 8-1.

Table 8-1
Modified Project GHG Emissions

GHG Emissions Sources	Emission (lbs./day)				
	CO_2	CH_4	N_2O	R	Total CO_2e
Mobile Source	48,509.00	2.54	2.45	75.33	49,376.80
Area Source	983.99	0.02	0.00	0.00	985.20
Energy Source	9,705.56	0.89	0.06	0.00	9,745.98
Water	665.34	6.15	0.15	0.00	864.42
Waste	351.51	35.13	0.00	0.00	1,229.82
Refrigerants	0.00	0.00	0.00	6.34	6.34
Total CO_2e (All Sources)	62,208.56				

Source: *The Avenue Specific Plan, 2023 Amendment - Greenhouse Gas Assessment* (Urban Crossroads, Inc.) May 8, 2024.

The Modified Project would be required to implement applicable provisions of the incumbent City CAP, to include measures and design features necessary to achieve applicable CAP GHG emissions reduction performance standards. The City CAP supports and complies with state and regional plans, policies, and regulations adopted for the purpose of reducing GHGs. On this basis, the Modified Project would not conflict with plans, policies, and regulations adopted for the purpose of reducing GHGs. The Modified Project would therefore not result in new, additional, or different impacts regarding consistency with applicable GHG emissions reduction plans, policies, and regulations not considered and addressed in the Certified SEIR.

Modified Project Conditions of Approval: None.

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different GHG impacts would occur as a result of the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022*; *The Avenue Specific Plan, 2023 Amendment -*

Greenhouse Gas Assessment (Urban Crossroads, Inc.) May 8, 2024; *The Avenue Specific Plan, 2024 Amendment*.

9. HAZARDS AND HAZARDOUS MATERIALS

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?					X	
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?					X	
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within ¼ mile of an existing or proposed school?					X	
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?					X	
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?					X	
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?					X	
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?					X	

Substantiation:

a, b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR determined that buildout in accordance with TOP 2050 would involve the transport, use, and/or disposal of hazardous materials. However, federal and state regulations, City ordinances, and TOP 2050 Policies would appropriately control handling of hazardous substances to reduce potential releases; exposure; and risks of transporting, storing, treating, and disposing of hazardous materials and wastes. On this basis, the Certified SEIR concluded that the potential for TOP 2050 to result in adverse impacts related to transport, use, and/or disposal of hazardous materials; creation of significant hazards, or result in hazardous emissions affecting schools, would be less-than-significant (Certified SEIR, pp. 5.1-4 – 5.1-10).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project would not result in or cause exposure(s) to hazards or potentially hazardous conditions. That is, uses proposed by the Modified Project are not considered hazardous. Nor does the Modified Project propose or require facilities or operations involving inherent substantial hazards.

During the normal course of construction and operation activities, there would be limited transport of potentially hazardous materials (e.g., gasoline, diesel fuel, paints, solvents, fertilizer, etc.) to and from the Modified Project site. However, as presented within the Certified SEIR, the Modified Project would be required to comply with all City and County Hazardous Materials Management Plans and regulations addressing transport, use, storage and disposal of these materials. The Modified Project does not propose or require uses or activities that would result in atypical transportation, use, storage, or disposal of hazardous or potentially hazardous materials not addressed under current regulations and policies.

Further, any commercial/retail occupancies within the Modified Project that would store or use hazardous materials would be required to comply with California Hazardous Materials Business Plan (HMBP) requirements (*California Health & Safety Code*, Division 20, Chapter 6.95). The HMBP contains detailed information on the storage of hazardous materials at regulated facilities. The purpose of the HMBP is to prevent or minimize damage to public health, safety, and the environment, from a release or threatened release of a hazardous material. The HMBP also provides emergency response personnel with adequate information to help them better prepare and respond to chemical-related incidents at regulated facilities.

Existing Hazards/Hazardous Conditions

Previous Analyses

Hazardous or potentially hazardous conditions affecting the subject site have been extensively evaluated previously in Phase I/II Environmental Site Assessments (Phase I/II ESAs) as well as Methane Gas Investigation prepared in support of the Certified 2007 EIR for The Avenue Specific Plan (Certified 2007 EIR, SCH No. 2005071109). These Phase I/II ESAs and Methane Gas Investigation Studies are listed below and are incorporated here by reference. All of the listed documents are available through the City of Ontario.

Phase I Environmental Site Assessments

- Blasland, Bouck & Lee, Inc. *Phase I Environmental Site Assessment and Shallow Soil Sampling, Anderson Property APN No. 218-181-17 and 218-181-21 Ontario, California*, March 2001.

Modified Project Phase I ESA

Complementing the above-cited Phase I/II ESAs, a focused updated Phase I ESA (*Phase I Environmental Site Assessment - 13838, 13898, 14058 S. Archibald Avenue* [Hillmann Consulting] June 30, 2023, 2023 Phase I ESA) has been prepared in support of this Addendum. The 2023 Phase I ESA concluded that the evaluated properties are not adversely affected by any recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs) and/or significant data gaps (SDGs) (2023 Phase I ESA, p. 3).

Modified Project Conditions of Approval: The Modified Project would be required to implement federal and state regulations, City ordinances, and TOP 2050 Policies

addressing potential hazards or hazardous conditions that could result from construction and operation of the Project uses. Additionally, the Modified Project would be required to implement federal and state regulations, City ordinances, and TOP 2050 Policies. To ensure compliance with applicable regulations, ordinances, and policies, the following measures are included as Project Conditions of Approval.

HM-1 Removal of structures, including, but limited to, under- and aboveground storage tanks, septic systems, and water wells shall conform to all Federal, State, and local agency regulations (specifically with those required by the City Building and Safety Department and the Hazardous Materials Division of the San Bernardino County Fire Department). Due to the extensive disposal requirements and protocols contained within these regulatory schemes, implementation and adherence to these various regulatory requirements will ensure that no significant impacts occur.

HM-2 Prior to grading activities for any areas not previously tested, a methane gas assessment shall be prepared by a licensed professional with expertise in soil gas assessments for subdivisions proposed on former dairies, poultry ranches, hog ranches, livestock feed operations and similar facilities to determine the presence of methane gas within the project boundary. The methane gas assessment shall identify monitoring and mitigation strategies and approaches. All mitigation measures/plans and specifications shall be reviewed and approved by the City of Ontario.

Such an assessment may take two steps. A preliminary assessment will be done prior to grading to determine exactly where dairies have existed in the past so that the post grading assessment/mitigation measures can be focused on the portions of the Planning Areas that have included former agricultural activities. The second step will include actual testing of graded pads no sooner than 30 days after construction to determine if methane is detected above 5,000 ppm.

The following grading guidelines shall also be adhered to:

- *Careful clearing, grubbing, segregation, and stockpiling or disposal near surface, of organics-rich soils at the site prior to the initiation of mass grading activities.*

- *The identification and segregation/stockpiling or disposal of deeper soils which contain elevated levels of organic material. Soils with an organic content of 0.4% or higher shall be segregated for controlled placement that ensures that methane levels are below 5,000 ppm.*

- *Soils with organic content in excess of 0.4% shall not be placed as "deep" fill. Soils with organic contents in excess of this amount shall be placed in open areas within approximately two feet of the finished ground surface.*

HM-3 To eliminate the risk of ground cracking, manure shall be removed from the site, such that the organic matter content of onsite soils shall not exceed 2% (a 2% total organic content is allowed, of which no more than 1% can be manure) in the building foundation areas when mixed with underlying clean soils and imported fill.

HM-4 To the extent not previously prepared and to properly assess and address potential hazardous materials, a Phase I Environmental Site Assessment (ESA) shall be performed by a registered environmental assessor (REA) prior to the approval of the Tentative Tract Map, site plan or other discretionary approval for a given phase of development. If potential hazardous materials or conditions are identified in the Phase I report, the recommendations of the ESA shall be implemented. Such recommendations shall include surficial sampling and chemical analysis within agricultural areas or where soil staining was observed. The Phase I ESA shall be provided to the City and shall be included in any CEQA analysis prepared in connection with the consideration of the discretionary approval for development.

HM-5 If, while performing any excavation as part of Project construction, material that is believed to be hazardous waste as defined in Section 25117 of the California Health and Safety Code is discovered, the developer shall contact the City Fire Department and the County of San Bernardino Fire Department Hazardous Materials Division. Excavation shall be stopped until the material has been tested and the absence of hazardous waste has been confirmed. If hazardous waste is determined to be present, the California Department of Toxic Substances control shall be contacted and the material shall be removed and disposed of pursuant to applicable provisions of California law.

Conditions of Approval identified herein, implementation of federal and state regulations, compliance with City ordinances, and TOP 2050 Policies act to maintain potential hazards/hazardous materials impacts at levels that would be less-than-significant. On this basis, the potential for the Modified Project to adversely to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials; or create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment would be less-than-significant.

c) No Changes or New Information Requiring Preparation of an MND or EIR.

Certified SEIR Conclusions: The Certified SEIR determined that buildout in accordance with TOP 2050 would involve the transport, use, and/or disposal of hazardous materials. However, federal and state regulations, City ordinances, and TOP 2050 Policies would appropriately control handling of hazardous substances to reduce potential releases; exposure; and risks of transporting, storing, treating, and disposing of hazardous materials and wastes. On this basis, the Certified SEIR concluded that the potential for TOP 2050 to result in adverse impacts related to transport, use, and/or disposal of hazardous materials; creation of significant hazards, or result in hazardous emissions affecting schools, would be less-than-significant (Certified SEIR, pp. 5.1-4 – 5.1-10).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project does not propose or require uses that would handle hazardous or acutely hazardous materials, substances, or waste. The Modified Project would not result in potentially significant hazardous impacts at existing or proposed vicinity schools.[6]

Modified Project Conditions of Approval: None.

[6] Note: Any occupation of the potential school site within the SPA would occur subsequent to development of the SPA uses generally. As such, school occupants would not be subject to any SPA construction-source impacts.

d) No Changes or New Information Requiring Preparation of an MND or EIR.

Certified SEIR Conclusions: Development in accordance with TOP 2050 would involve redevelopment and reuse of some sites listed as hazardous materials sites on environmental databases. The environmental databases document the presence of hazardous materials on those sites, but do not document hazardous releases. Redevelopment of the affected sites could potentially expose future residents and workers to hazards from known hazardous materials releases on and near the sites. Should environmental database listed sites be proposed for development, site assessments for hazardous materials and remediation of hazardous materials releases would be required in accordance with TOP 2050 Policies, federal, state, and local regulations. On this basis, the Certified SEIR concluded that the potential for development pursuant to TOP 2050 to be located on hazardous materials sites, and thereby create adverse hazard impacts affecting the public or environment would be less-than-significant (Certified SEIR, pp. 5.9-38, 5.9-39).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project site is not affected by any recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs) and/or significant data gaps (SDGs). This would include potential listing as a hazardous material site pursuant to Government Code Section 65962.5. Additionally, as discussed in the Certified SEIR, the Modified Project would be required to comply with applicable TOP 2050 Policies, federal, state, and local regulations, ensuring that hazards/hazardous materials impacts are maintained at levels that would be less-than-significant. Therefore, the Modified Project would not create a hazard to the public or the environment and no impact is anticipated.

On this basis, there is no potential for the Modified Project to be located on a Government Code Section 65962.5-listed site, and thereby would not create adverse hazard impacts affecting the public or environment. When compared to the Certified SEIR findings, no

new or substantially increased impacts related to development affecting Government Code Section 65962.5-listed sites would result from the Modified Project.

Modified Project Conditions of Approval: None.

e) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Ontario International Airport (ONT), as well as a small portion of the Chino Airport property, is located within the City of Ontario. The Certified SEIR determined that TOP 2050 Policies and established processes for consistency reviews of new development with the appropriate Airport Land Use Compatibility Plan (ALUCP) would be sufficient to prevent significant impacts (Certified SEIR, p. 5.8-27).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. Location of area airports relative to the Modified Project site has not changed since preparation of the Certified SEIR – the site remains more than two miles distant from the nearest airport; the nearest airport is ONT, located approximately 3.3 miles north of the Modified Project site.

The Modified Project site is located within the area subject to provisions of The ONT Airport Land Use Compatibility Plan, ALUCP (July 2018). The ALUCP defines the ONT Airport Influence Area (AIA) as an area in which current and future airport-related noise, overflight, safety, and airspace protection factors may significantly affect land uses or necessitate restriction on those uses. The Modified Project site is located outside the ONT safety zones (see: TOP 2050 Policy Plan Figure LU-06, *Airport Safety Zones & Influence Areas*). As with the development anticipated under the Original Project and evaluated in the Certified SEIR, development implemented pursuant to the Modified Project would comply with all requirements set forth within the ALUCP. Based on the preceding, the potential for the Modified Project to result in airport-related safety hazard impacts or excessive noise impacts would be less-than-significant.

Modified Project Conditions of Approval: None.

f) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: In 2018, the City of Ontario prepared a Local Hazard Mitigation Plan (LHMP) to identify the City's hazards, review and assess past disaster occurrences, estimate the probability of future occurrences, and set goals to reduce or eliminate long-term risk to people and property from natural and man-made hazards. Wildfire hazard is rated the highest risk of the 23 hazards evaluated, followed by flooding. Under the LHMP, interstate highways would serve as major emergency response and evacuation routes. TOP 2050 Policies and local roadways are designed and constructed so as to facilitate access under normal and emergency conditions.

A review of emergency access is included as part of the standard City's Design Review process. Additionally, the Ontario Fire Department reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance.

Based on the preceding, the Certified SEIR concluded that buildout of the City in accordance with TOP 2050 would not impair implementation of, or physically interfere with, an adopted emergency response plan or emergency evacuation plan. Impacts in these regards would be less-than-significant (Certified SEIR, p. 5.9-41).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project does not propose or require permanent alteration of vehicle circulation routes, and would not interfere with any identified emergency response or emergency evacuation plan. Standard City design review processes include coordination with fire and police departments during pre-construction review of plans to ensure that potential interference with emergency response plans and evacuation plans are avoided. Based on the preceding, the Modified Project would not impair implementation of, or physically

interfere with, an adopted emergency response plan or emergency evacuation plan. Impacts in these regards would be less-than-significant.

Modified Project Conditions of Approval: None.

g) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR identifies available resources addressing wildland fires and associated potential impacts. These resources include: CAL FIRE *2019 Strategic Fire Plan for California*, the California Fire Code, County of San Bernardino Multi-jurisdiction Hazard Management Plan, the Ontario LHMP, and fire services from the Ontario Fire Department. The Certified SEIR determined that adherence to existing regulations and review of building plans by the Ontario Fire Department, development and infrastructure associated with TOP 2050 would not exacerbate risk or result in post-wildfire hazards. No significant impacts were identified (Certified SEIR, p. 5.9-41).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project site is located in an urbanized area, and no wildlands are located in the vicinity of the site. Fire protection services are provided by the Ontario Fire Department. Pre-construction coordination with Ontario Fire Department staff and adherence to local fire department regulations during construction and operation of the Modified Project would be required. As such, no new or substantially increased impacts related to wildland fire impacts would result from the Modified Project.

Modified Project Conditions of Approval: None.

Summary

When compared to the Certified SEIR findings, no new or substantially increased hazards or hazardous emission impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from

the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; Phase I Environmental Site Assessment - 13838, 13898, 14058 S. Archibald Avenue* (Hillmann Consulting) June 30, 2023; *The Avenue Specific Plan, 2024 Amendment*.

10. HYDROLOGY AND WATER QUALITY

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?					X	
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?					X	
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:					X	
(i) result in substantial erosion or siltation on- or off-site?					X	
(ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?					X	
(iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?					X	

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
(iv) impede or redirect flood flows?					X	
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?					X	
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?					X	

Substantiation:

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR recognizes that buildout of the City pursuant to TOP 2050 would increase concentrations of pollutants during construction and post-construction activities. To address potential water quality impacts resulting from project construction and operations, projects are required to comply with provisions of the City's National Pollutant Discharge Elimination System (NPDES) permit. NPDES permit requirements include, but are not limited to, mandated preparation of a Stormwater Pollution Prevention Plan (SWPPP) and Water Quality Management Plan (WQMP). Mandated SWPPPs and WQMPs are required to develop and implement Best Management Practices (BMPs) to reduce construction-source and operational-source stormwater pollutant discharges. Based on compliance with the City NPDES Permit and implementation of required SWPPPs and WQMPs, the Certified SEIR did not identify any significant water quality impacts (Certified SEIR, p. 5.10-21).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. Consistent with City

requirements, a WQMP and SWPPP would be prepared for development proposals under the Modified Project. City review and approval of these documents is required prior to issuance of Grading Permits. As with the Original Project, implementation of an approved SWPPP and WQMP would reduce the potential for the development under the Modified Project to violate water quality standards or otherwise adversely affect water quality to levels that would be less-than-significant.

Based on the preceding, the Modified Project's potential to violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality is considered less-than-significant. When compared to the Certified SEIR findings, no new or substantially increased water quality impacts would result from the Modified Project.

Modified Project Conditions of Approval: None.

b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: As discussed in the Certified SEIR, "[a]pproximately 46 percent of the City's water supply is groundwater pumped by the City from the Chino Groundwater Basin; groundwater pumping is managed by OMUC so that domestic demands do not exceed the safe yield for the basin, consistent with the Chino Basin Watermaster's Optimum Basin Management Program, commonly called the 'OBMP Peace Agreement'" (Certified SEIR, p. 5.10-22). The Certified SEIR notes further "the Chino Groundwater Basin is adjudicated and is considered by DWR to be a very low priority groundwater basin. Each water purveyor has an allotted amount of water that can be pumped from the basin so that the safe yield is not exceeded. The City has access to additional water supplies that can accommodate the proposed increase in growth with buildout of [TOP 2050] and would not interfere with sustainable management of the groundwater basin" (Certified SEIR, p. 5.10-22).

The Certified SEIR recognizes that development pursuant to TOP 2050 would increase the amount of impervious surface within the City. However, groundwater recharge efforts would not be hindered. To these ends, all development projects within the City

would be required to prepare project-specific hydrology studies, implement low impact development BMPs and comply with NPDES regulations supporting TOP 2050 Policies promoting infiltration of runoff and groundwater recharge.

Based on the preceding, TOP 2050 would not result in substantial adverse impacts affecting groundwater supplies, groundwater recharge, or groundwater sustainability (Certified SEIR, p. 5.10-23).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. Direct additions to or withdrawals of groundwater are not proposed or required by the Modified Project. Construction proposed by the Modified Project would not involve massive substructures at depths that would significantly impair or alter the direction or rate of flow of groundwater. The Modified Project does not propose or require uses or facilities that would affect designated groundwater recharge areas. All development proposals under the Modified Project would be required to prepare development-specific hydrology studies, implement low impact development BMPs and comply with NPDES regulations supporting TOP 2050 Policies promoting infiltration of runoff and groundwater recharge.

Based on the preceding, the Modified Project would not result in substantial adverse impacts affecting groundwater supplies, groundwater recharge, or groundwater sustainability.

Modified Project Conditions of Approval: None.

c) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Consistent with NPDES requirements, runoff quantities would not be permitted to substantially increase as a result of a development under TOP 2050. In this regard, projects would be required to prepare project-specific hydrology studies. Further, existing City policies encourage the use of low impact development

strategies to intercept runoff, reduce stormwater discharge rates, increase infiltration and ultimately reduce discharge volumes to traditional storm drain systems.

The Certified SEIR notes that while the amount of impervious surfaces would be increased under TOP 2050 (and thus surface water flows into drainage systems), existing City and County requirements would ensure significant impacts related to alteration of drainage patterns do not occur. Additionally, City policies and regulations act to minimize or avoid development or other actions that would potentially result in impedance or redirection of flood flows (Certified SEIR, pp. 5.10-23 – 5.10-27).

Based on the preceding, the potential for development under TOP 2050 to substantially alter existing drainage patterns resulting in erosion, flooding, polluted runoff, or impeded or redirected flood flows would be less-than-significant.

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. Per requirements of *The Avenue Specific Plan, 2024 Amendment*:

> The grading and drainage of The Avenue Specific Plan area shall be designed to detain, filter and treat surface runoff, in a manner and combination which is practical, to comply with the most recent requirements of the San Bernardino County NPDES Stormwater Program's Water Quality Management (WQMP) for significant new development projects. The objective of the WQMP for this project is to minimize the detrimental effects of urbanization on the beneficial uses of receiving waters, including effects caused by increased pollutants and changes in hydrology. These effects may be minimized through the implementation of site designs that reduce runoff and pollutant transport by minimizing impervious surfaces and maximizing on-site infiltration, Source Control Best Management Practices (BMPs) and/or either on-site structural Treatment Control BMPs, or participation in regional or watershed-based

Treatment Control BMPs. An alternative to the implementation of on-site Low Impact Development (LID) BMPs to retain/infilter and treat stormwater runoff is the utilization of the off-site, regional Mill Creek Wetland facility for accomplishing water quality improvements in residential project runoff from this master planned community. All non-residential planning area projects within The Avenue will incorporate all required on-site LID BMPs, pursuant to the requirements of the current San Bernardino County Water Quality Management Plan.

Prior to the issuance of a grading or construction permit, all projects greater than 1-acre in size shall apply for coverage under the California General Permit To Discharge Storm Water Associated with Construction Activity, obtain a WDID# from the State Water Resources Control Board and prepare a Stormwater Pollution Prevention Plan (SWPPP) on the CASQA 2009 Template form and upload it to the State SMART database system. A copy of each SWPPP document and [Waste Discharger Identification Number] WDID# Certification shall also be provided to the City of Ontario, prior to any construction permit issuance. The SWPPP will identify and detail all appropriate Best Management Practices (BMPs) to be implemented or installed during construction of the project.

In addition to the preparation of a SWPPP for construction-related activities, and as part of the approval of any grading plans within the Specific Plan Area, the applicant will be required to submit a Water Quality Management Plan (WQMP) on the regional model form provided by the City. The WQMP shall identify and detail all Site Design BMPs, Source

> Control BMPs and Treatment Control BMPs to be implemented or installed at this site in order to reduce storm water pollutants and site runoff.[7]
>
> All Priority Land Use (PLU) areas within the Specific Plan Area shall comply with the statewide Trash Provisions adopted by the State Water Resources Control Board (SWRCB) and trash requirements in the most current San Bernardino County Area-Wide MS4 Permit.
>
> [*The Avenue Specific Plan, 2024 Amendment*, pp. 4-29, 4-30]

Requirements of the Specific Plan Amendment outlined above in combination with City Conditions of Approval would ensure that the potential for development pursuant to the Modified Project to alter drainage patterns in a manner that would result in adverse erosion, siltation, flooding/flood flow or stormwater system capacity impacts would remain at levels that would be less-than-significant.

Modified Project Conditions of Approval: None.

d) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: As discussed in the Certified SEIR, "there are no large bodies of water that would result in a seiche during seismic activity. Additionally, the reservoirs/aboveground water tanks within the City are enclosed, thereby minimizing the possibility of a seiche. The [City] is inland and approximately 30 miles from the ocean and is not at risk of flooding due to tsunamis. Based on the preceding, the Certified SEIR concluded that TOP 2050 would not result in adverse impacts related to flood hazard, tsunami, or seiche zones, risk release of pollutants due to inundation (Certified SEIR, pp. 5.10-26, 5.10-27).

7 The Mill Creek Wetland Facility (Facility) has been constructed and functional since June 2014. The Facility serves as an alternative to on-site LID BMP implementation for residential tract developers that are members of the Ontario Ranch Builders, LLC consortium and which have adequate reserved capacity in the regional facility for those planning areas. Portions of the Project site acres developed by non-members, would be required to make other arrangements or utilize another, future regional water quality facility. All non-residential planning area projects within The Avenue, including Public Schools, will incorporate on-site LID BMPs, in accordance with the regional NPDES Permit and the current San Bernardino County Water Quality Management Plan, and shall not rely on the regional wetlands facility for retention and treatment of runoff water.

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. Conditions at the Modified Project site as regards flood hazard impacts, tsunami hazard impacts, or seiche hazard impacts have not changed since preparation of the Certified SEIR – the site remains unaffected by substantial potential flood hazards, tsunami hazards, or seiche hazards.

Further, any commercial/retail occupancies within the Modified Project that would store or use hazardous materials would be required to comply with California Hazardous Materials Business Plan (HMBP) requirements (*California Health & Safety Code*, Division 20, Chapter 6.95) The HMBP contains detailed information on the storage of hazardous materials at regulated facilities. The purpose of the HMBP is to prevent or minimize damage to public health, safety, and the environment, from a release or threatened release of a hazardous material, including potential release of materials in a flood event.

Based on the preceding the potential for the Modified Project to result in release of pollutants due to an inundation event would be less-than-significant.

Modified Project Conditions of Approval: None.

e) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: As discussed in the Certified EIR, "[p]rojects approved under TOP 2050 would be required to comply with the Santa Ana River Basin Plan and to control pollutants in discharges of stormwater from postconstruction activities under NPDES Permit No. CAS618036 through preparation of a WQMP identifying BMPs for prevention of stormwater pollution during the post-construction phase, including site-design, source-control, and/or treatment BMPs. Therefore, [TOP 2050] would not obstruct or conflict with the RWQCB's Basin Plan or any groundwater management plan, and impacts would be less than significant" (Certified SEIR, p. 5.10-27).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. The Modified Project does not propose or require uses or facilities that would conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. The Modified Project would have no impacts in these regards.

Modified Project Conditions of Approval: None.

Summary

When compared to the Certified SEIR findings, no new or substantially increased hydrology or water quality impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2024 Amendment*.

11. LAND USE AND PLANNING

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Physically divide an established community?					X	
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?					X	

***Substantiation*:**

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that implementation of TOP 2050 would not result in result in the physical division of an established community (Certified SEIR, p. 5.11-6).

Certified SEIR Mitigation Measures: None.

Modified Project: No established community is located within the Modified Project site. The Modified Project would not otherwise result in potential division of an established community. The Modified Project would have no impacts in these regards.

Modified Project Conditions of Approval: None.

b) No Changes or New Information Requiring Preparation of an MND or EIR.

Certified SEIR Conclusions: The Certified SEIR concluded that implementation of TOP 2050 would not result in significant land use impacts (Certified SEIR, p. 5.11-11).

Certified SEIR Mitigation Measures: None.

Modified Project: Land use plans, policies, or regulations adopted for the purpose of avoiding or mitigating environmental effects are established under the TOP 2050. The Modified Project amends the site's current land use designations to conform to TOP 2050 land use designations.

The Modified Project would be required to comply with applicable TOP 2050 Policies, applicable requirements of *The Avenue Specific Plan, 2024 Amend*ment and provisions of the City Development Code. Collectively, TOP 2050 Policies, the City Development Code, and *The Avenue Specific Plan, 2024 Amendment,* and act to minimize potential environmental effects that may result from the land uses implemented under the Modified Project. On this basis, the potential for the Modified Project to conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect is considered less-than-significant.

Modified Project Conditions of Approval: None.

Summary

When compared to the Certified SEIR findings, no new or substantially increased land use and planning impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2024 Amendment*.

12. MINERAL RESOURCES

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?					X	
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?					X	

***Substantiation*:**

a, b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that implementation of TOP 2050 would have no potential to result in the loss of a known mineral resource of value to the region or the state; or result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan (Certified SEIR, p. 5.12-6).

Certified SEIR Mitigation Measures: None.

Modified Project: Underlying conditions at the subject site have not changed since preparation of the Certified SEIR, and the site remains devoid of any potentially valuable or locally-important mineral resources. On this basis, the Modified Project would have no potential to result in the loss of a known mineral resource of value to the region or the state; or result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. No new or substantially increased mineral resources impacts would result from the Modified Project.

Modified Project Conditions of Approval: None.

Summary

Based on the preceding, when compared to impacts identified in the Certified SEIR, no new or substantially increased mineral resources impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2024 Amendment*.

13. NOISE

Would the project result in:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?					X	
b) Generation of excessive groundborne vibration or groundborne noise levels?					X	
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?					X	

General Note: *The technical analyses referenced in this section reflect likely maximum impacts. Subsequent to preparation of these analyses, total residential development intensities allowed under the Modified Project have been reduced consistent with direction. Specifically, the technical analyses referenced herein assume residential development of the Modified Project totaling up to 3,807 dwelling units (see Project Traffic Analysis, p. 2 et al.). As subsequently modified, maximum allowed residential development under the Modified Project would not exceed 3,753 dwelling units (see Section 2.0, Project Description, Table 2.1-1).*

***Substantiation*:**

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR determined that new development implemented pursuant to TOP 2050 would result in temporary noise increases at sensitive receptors during construction activities (Certified SEIR, p. 5.13-28). Certified

SEIR Mitigation Measure 12-4, below, would reduce construction noise but would not avoid this impact or reduce the impact to levels that would be less-than-significant.

Certified SEIR Mitigation Measure:

12-4 Construction activities associated with new development that occurs near sensitive receptors shall be evaluated for potential noise impacts. Construction contractors shall implement the following measures for construction activities in the City of Ontario. Construction plans submitted to the City shall identify these measures on demolition, grading, and construction plans. The City of Ontario Planning and Building Departments shall verify that grading, demolition, and/or construction plans submitted include these notations prior to issuance of demolition, grading, and/or building permits.

- *Construction activity is limited to the hours between 7:00 am and 6:00 pm Monday through Friday and 9:00 am to 6:00 pm Saturdays and Sundays, as prescribed in Municipal Code Section 5-29.09.*
- *During the entire active construction period, equipment and trucks used for project construction shall use the best-available noise control techniques wherever feasible (e.g., improved mufflers, equipment re-design, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds).*
- *Impact tools (e.g., jack hammers and hoe rams) shall be hydraulically or electrically powered wherever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools.*
- *Stationary equipment such as generators and air compressors shall be located as far as feasible from nearby noise-sensitive uses.*
- *Stockpiling shall be located as far as feasible from nearby noise-sensitive receptors.*
- *Construction traffic shall be limited, to the extent feasible, to approved haul routes established by the City Planning and Building Agency.*
- *At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint.*

If the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report the action to the City.

- *Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes.*
- *During the entire active construction period and to the extent feasible, the use of noise-producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level or switch off back-up alarms and replace with human spotters in compliance with all safety requirements and laws.*
- *Erect temporary noise barriers (at least as high as the exhaust of equipment and breaking line-of-sight between noise sources and sensitive receptors), as necessary and feasible, to maintain construction noise levels at or below the performance standard of 80 dBA Leq. Barriers shall be constructed with a solid material that has a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier and may be lined on the construction side with an acoustical blanket, curtain, or equivalent absorptive material.*

Modified Project: Potential noise impacts of the Modified Project are evaluated in *The Avenue Specific Plan, 2023 Amendment - Noise Impact Analysis* (Urban Crossroads, Inc.) May 8, 2024 (Noise Impact Analysis, Addendum Appendix E). Analysis and conclusions of the Noise Impact Analysis are summarized below.

Noise Standards

Noise impacts would be considered significant if any of the following criteria are exceeded, as shown in Table 13-1.

Table 13-1
Significance Criteria Summary

Analysis	Receiving Land Use	Condition(s)	Significance Criteria	
			Daytime	Nighttime
Off-Site Traffic	All	If ambient is < 60 dBA CNEL	≥ 5 dBA CNEL Project increase	
		If ambient is 60 - 64 dBA CNEL	≥ 3 dBA CNEL Project increase	

Table 13-1
Significance Criteria Summary

Analysis	Receiving Land Use	Condition(s)	Significance Criteria	
			Daytime	Nighttime
		If ambient is >= 65 dBA CNEL	≥ 1.5 dBA CNEL Project increase	
On-Site Traffic	All	See Exhibit 3-A of the Noise Impact Analysis.		
Operational	Noise-Sensitive	Exterior Noise Level Standards	65 dBA L_{eq}	45 dBA L_{eq}
		if ambient is < 60 dBA L_{eq}	≥ 5 dBA L_{eq} Project increase	
		if ambient is 60 - 65 dBA L_{eq}	≥ 3 dBA L_{eq} Project increase	
		if ambient is > 65 dBA L_{eq}	≥ 1.5 dBA L_{eq} Project increase	
Construction	Noise-Sensitive	Noise Level Threshold	80 dBA L_{eq}	
		Vibration Level Threshold	0.3 PPV (in/sec)

Sensitive Receivers

The following receiver locations, shown at Noise Impact Analysis Exhibit 8-A, *Receiver Locations*, were identified as representative noise impact analysis locations.

R1: Location R1 represents the existing residence at 3141 E. Mt. Rainier Drive, approximately 1,523 feet southeast of the Project site. Receptor R1 is placed at the private outdoor living areas (backyards) facing the Project site.

R2: Location R2 represents the existing residence at 3970 S. Oasis Paseo, approximately 2,763 feet east of the Project site. Receptor R2 is placed at the private outdoor living areas (backyards) facing the Project site.

R3: Location R3 represents the existing residence at 3712 Ironwood Avenue, approximately 1,818 feet northeast of the Project site. Since there is no outdoor use area facing the Project site, Receptor R3 is placed at the nearest building façade facing the Project site.

R4: Location R4 represents the existing residence at 3092 East Wing Street, approximately 1,218 feet northeast of the Project site. Receptor R4 is placed at the private outdoor living areas (backyards) facing the Project site.

R5: Location R5 represents the existing residence at South Wangler Place, approximately 631 feet northeast of the Project site. Receptor R5 is placed at the private outdoor living areas (backyards) facing the Project site.

R6: Location R6 represents the existing residence at 9029 Schaefer Avenue, approximately 375 feet west of the Project site. Receptor R6 is placed at the private outdoor living areas (backyards) facing the Project site.

R7: Location R7 represents the existing residence at 9060 Edison Avenue, approximately 48 feet west of the Project site. Receptor R7 is placed at the private outdoor living areas (backyards) facing the Project site.

Construction-Source Noise Impacts

In the evaluation of construction-source noise impacts, the Noise Impact Analysis employs empirical reference noise measurements obtained from similar construction activities. Based on the reference construction noise levels, maximum received noise levels attributable to the Modified Project construction activities were calculated, and are summarized at Table 13-2. Compliance with applicable significance thresholds is also presented.

Table 13-2
Maximum Received Construction-Source Noise Levels

Receiver Location	Maximum Received Noise Level (dBA Leq)	Threshold (dBA Leq)	Threshold Exceeded?
R1	49.6	80	No
R2	45.1	80	No
R3	47.8	80	No
R4	50.3	80	No
R5	55.2	80	No
R6	54.8	80	No
R7	60.1	80	No

Source: *The Avenue Specific Plan, 2023 Amendment - Noise Impact Analysis* (Urban Crossroads, Inc.) May 8, 2024.

As shown at Table 13-2, received construction-source noise levels would not exceed the applicable threshold and would therefore be less-than-significant.

Operational-Source Noise Impacts

The Modified Project has not been designed at this stage of project development. The Avenue Specific Plan, 2024 Amendment development is not expected to include any

specific type of operational noise levels beyond the typical noise sources associated with similar residential and educational land uses in the Project study area, such as people and children, parking lot activity, garage doors, small air conditioners, and trash collection. The proposed residential uses would also be considered a noise-sensitive receiving land use.

The City would require future development within the Specific Plan area to conduct design-specific noise analyses to determine the precise operational noise impacts of each development project and identify any necessary noise abatement measures, if necessary.

Vehicular-Source Noise Impacts

Off-Site Vehicular-Source Noise

To assess the off-site transportation CNEL noise level impacts associated with development of the proposed Project, noise contours were developed based on the Modified Project Traffic Analysis. Noise contour boundaries represent the equal levels of noise exposure and are measured in CNEL from the center of the roadway. Noise contours were developed for the following traffic scenarios:

- Existing Conditions Without Project: This scenario refers to the existing present-day noise conditions without the proposed Project.
- Existing With Project: This scenario refers to the existing present-day noise conditions with the proposed Project.
- Opening Year 2026 Without the Project: This scenario refers to existing plus cumulative growth through 2026 noise conditions without the proposed Project.
- Opening Year 2026 Year With Project: This scenario includes existing plus cumulative growth through 2026 plus the proposed Project traffic volumes identified in the Traffic Impact Analysis.

Using the noise contours presented at Noise Impact Analysis Table 6-1 through 6-4, the following Tables 13-3 and 13-4 present the Project traffic noise level contributions under the Existing and Opening Year scenarios.

Table 13-3

Source: *The Avenue Specific Plan, 2023 Amendment - Noise Impact Analysis* (Urban Crossroads, Inc.) May 8, 2024.

As shown above, based on the significance criteria for off-site traffic noise, land uses adjacent to the study area roadway segments would not be subjected to significant noise level increases due to Project-related traffic.

On-Site Vehicular-Source Noise

An on-site exterior noise impact analysis has been completed to determine the noise exposure levels that would result from adjacent transportation noise sources in the Project study area, and to identify potential noise attenuation measures that would achieve acceptable Project exterior and interior noise levels. The primary sources of transportation noise affecting the Modified Project site are anticipated to be from Archibald Avenue, Ontario Ranch Road/Edison Road, and Schaefer Avenue.

The expected future noise levels for the on-site land uses have been estimated, and are presented at Table 13-5.

Table 13-5
Exterior Noise Levels

On-Site Receiver Location	Roadway	Unmitigated Exterior Noise Level (dBA CNEL)		Land Use Compatibility
		Exterior without Wall	Exterior with Wall	
PA-1A	Schaefer Ave	64.8	58.7	*Clearly Acceptable*
PA-1B	Schaefer Ave	64.8	58.7	*Clearly Acceptable*
PA-3A	Schaefer Ave	64.8	58.7	*Clearly Acceptable*

Source: *The Avenue Specific Plan, 2023 Amendment - Noise Impact Analysis* (Urban Crossroads, Inc.) May 8, 2024.

Table 13-5 shows that traffic noise levels received at the Project land uses would not exceed the City of Ontario 65 dBA CNEL exterior noise level standards for the noise sensitive residential land uses or schools.

For informational purposes, and to ensure that the interior noise levels comply with the interior noise level standards, future exterior noise levels were calculated at the estimated at the first and second floor building façade locations with planned residential areas

surrounding roadways. The interior noise level is the difference between the predicted exterior noise level at the building façade and the noise reduction of the structure. Typical building construction will provide a Noise Reduction (NR) of approximately 12 dBA with "windows open" and a minimum 25 dBA noise reduction with "windows closed." Tables 13-6 and 13-7 provide the first and second floor interior noise levels that can be expected within the planned residential areas.

Table 13-6
First Floor Interior Noise Levels (CNEL)

Receiver Location	Roadway	Noise Level at Façade	Required Interior NR	Minimum Calculated Interior NR	Upgraded Windows	Interior Noise Level	Threshold	Threshold Exceeded?

Source: *The Avenue Specific Plan, 2023 Amendment - Noise Impact Analysis* (Urban Crossroads, Inc.) May 8, 2024.

Tables 13-6 and 13-7 show that on-site interior traffic noise levels will not exceed the City of Ontario 45 dBA CNEL interior noise level standard for residential development under a windows-closed condition and a means of mechanical ventilation (e.g., air conditioning).

Although no significant on-site exterior or interior noise impacts are expected, the City will require use-specific noise studies for implementing projects within the Specific Plan area. These final noise studies would utilize any recommendations identified herein in combination with precise grading plans and actual building design specifications to identify any additional noise abatement measures, such as exterior noise barriers and/or building materials (e.g., sound transmission class ratings for windows and doors), if necessary.

Modified Project Conditions of Approval: None.

b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR determined that mobile-source and stationary/area-source vibration impacts associated with buildout of TOP 2050 would be less-than-significant. However, construction activities associated with buildout of the

individual land uses could expose sensitive uses to strong levels of groundborne vibration and would therefore be a potentially significant impact (Certified SEIR, pp. 5.13-38 – 5.13-41).

Certified SEIR Mitigation Measure:

12-2 *Prior to issuance of a building permit, individual projects that involve vibration-intensive construction activities, such as pile drivers, jack hammers, and vibratory rollers near sensitive receptors shall be evaluated for potential vibration impacts. For construction within 135 feet of fragile structures, such as historical resources, within 100 feet of nonengineered timber and masonry buildings (e.g., most residential buildings), or within 75 feet of engineered concrete and masonry (no plaster); or a vibratory roller within 25 feet of any structure, the project applicant shall prepare a noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to these activities. This noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed Federal Transit Administration (FTA) architectural damage thresholds (e.g., 0.12 inches per second [in/sec] peak particle velocity [PPV] for fragile or historical resources, 0.2 in/sec PPV for nonengineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses shall be used, such as drilling piles as opposed to pile driving and static rollers as opposed to vibratory rollers. If necessary, construction vibration monitoring shall be conducted to ensure vibration thresholds are not exceeded.*

The Certified SEIR concluded even with the implementation of Mitigation Measure 12-2, construction-source groundborne vibration impacts would be significant and unavoidable (Certified SEIR, p. 5.13-41).

Modified Project:

Construction activities can result in varying degrees of ground vibration, depending on the equipment and methods used, distance to the affected structures and soil type. Groundborne vibration from construction activities would cause only intermittent, localized intrusion.

In the evaluation of construction-source vibration impacts, the Noise Impact Analysis employs reference construction-source vibration data published by the Federal Transit Administration (FTA). Maximum received construction-source vibration levels are summarized at Table 13-8.

Table 13-8
Maximum Received Construction-Source Vibration Levels

Receiver Location	Maximum Received Vibration Level PPV (in/sec)	Threshold PPV (in/sec)	Threshold Exceeded?
R1	0.000	0.30	No
R2	0.000	0.30	No
R3	0.000	0.30	No
R4	0.000	0.30	No
R5	0.002	0.30	No
R6	0.002	0.30	No
R7	0.033	0.30	No

Source: *The Avenue Specific Plan, 2023 Amendment - Noise Impact Analysis* (Urban Crossroads, Inc.) May 8, 2024.

Table 13-8 shows the maximum received construction-source vibration levels would not exceed the acceptable 0.20 PPV (in/sec) criteria established by the FTA. Moreover, received vibration levels are unlikely to be sustained during the entire construction period. Rather, maximum vibration levels would be received only during times that heavy construction equipment is operating at the site perimeter. Based on the preceding, construction-source vibration impacts would be less-than-significant.

Modified Project Conditions of Approval: None.

c) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that Chino Airport does not significantly affect sensitive receptors within the City of Ontario. However, sensitive land uses within the 65 dBA CNEL noise contour of the Ontario International Airport would be exposed to substantial levels of airport-related noise. Even with the implementation

of Mitigation Measure 12-1, airport-related noise was deemed a significant and unavoidable impact of TOP 2050 (Certified SEIR, pp. 5.13-38 – 5.13-41).

Certified SEIR Mitigation Measure:

12-1 *Prior to the issuance of building permits for any project that involves a noise-sensitive use within the 65 dBA CNEL contour of the Ontario International Airport, the project property owner/developers shall retain an acoustical engineer to conduct an acoustic analysis and identify, where appropriate, site design features and/or required building acoustical improvements (e.g., sound transmission class rated windows, doors, and attic baffling), to ensure compliance with the City's Noise Compatibility Criteria and the California State Building Code and California Noise Insulation Standards (Titles 24 and 21 of the California Code of Regulations).*

Modified Project: The Modified Project site is located approximately 2.2 miles south of the Ontario International Airport (ONT). The Ontario International Airport Land Use Compatibility Plan was adopted by Ontario City Council on April 19, 2011 (amended 2018) to promote compatibility between the airport and the land uses that surround it. The Modified Project site is located within the ONT airport influence area, but is not located within a designated noise impact zone. The Modified Project would therefore not be exposed to excessive airport/airfield-source noise levels associated with ONT operations.

The Project site is located approximately 1.2 miles east of the Chino Airport (CNO). The Modified Project site is located within the CNO airport influence area, but is not located within a designated noise impact zone. At this distance, airport noise level impacts would be less-than-significant.

The Modified Project would not otherwise be exposed to potentially adverse airport/airfield-source noise levels, nor does the Modified Project propose or require uses that would contribute to or exacerbate airport-source noise impacts.

Based on the preceding, the Modified Project would not be adversely affected by airport/airfield noise, nor would the Modified Project contribute to or result in adverse airport/airfield noise impacts. When compared to the Certified SEIR findings, no new or substantially increased airport/airfield noise impacts would result from the Modified Project.

Modified Project Conditions of Approval: None.

Summary

When compared to the impacts identified in the Certified SEIR, no new significant, substantially increased, or substantially different noise impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2023 Amendment - Noise Impact Analysis* (Urban Crossroads, Inc.) May 8, 2024; *The Avenue Specific Plan, 2024 Amendment*.

14. POPULATION AND HOUSING

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?					X	
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?					X	

***Substantiation*:**

a, b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that, while development of the City pursuant to TOP 2050 would increase population, housing, and employment, it also would improve the job-housing balance and impacts would be less-than-significant (Certified SEIR, pp. 5.14-9 – 5.14-12).

Certified SEIR Mitigation Measures: None.

Modified Project:

Direct Population Growth Inducement

The Modified Project amends the site's current land use designations to conform to TOP 2050 land use designations. Under the Modified Project, maximum residential development would total 3,753 dwelling units[8] (all types). Because the Project land uses and residential development are consistent with buildout of the City anticipated and planned for under TOP 2050, the Project would not result in direct population growth not previously considered and addressed in the Certified SEIR.

Indirect Growth Inducement

Indirect population growth inducement could result from creation of additional jobs and the extension of infrastructure and services to areas not currently served, or substantial capacity/capability upgrades to existing systems and services.

In general terms, job creation furthers growth via wages, salaries and general fiscal benefits; increased demands for housing; and increased demand for consumer goods and services. Jobs created by or resulting from the Modified Project would be typical of area

[8] There is the potential for the 10.89-acre school site portion of Planning Area 5 to transition to residential uses, should the school district determine that this site is not needed for school development. If this is the case, these 10.89 acres would be developed with up to 50 residential units, bringing the total Specific Plan residential unit count to 3,803.

employment opportunities, and would be filled by the local residents with no substantial increase in population.

The Modified Project would implement infrastructure improvements that are consistent with the City and purveyor master plans. Because the Project land uses and development are consistent with buildout of the City anticipated and planned for under TOP 2050, the Project would not result in indirect growth not previously considered and addressed in the Certified SEIR.

Consistency with Regional Population Growth Projections

Regional population projections developed by SCAG reflect assumptions and development scenarios incorporated in local plans including City general plans. As demonstrated in the preceding discussions, the Modified Project would not induce or generate growth beyond that reflected in TOP 2050 and evaluated in the Certified SEIR. Accordingly, the Modified Project would not result in growth not already anticipated within SCAG population growth projections for the region.

As supported by the preceding discussions, the Modified Project would not induce substantial population growth; displace substantial numbers of existing housing; or displace substantial numbers of people. When compared to the Certified SEIR findings, no new or substantially increased population and housing impacts would result from the Modified Project.

The Modified Project would increase housing availability. The Modified Project does not propose or require uses or operations that would displace substantial numbers of existing people or housing. The potential for the Modified Project to displace substantial numbers of existing people or housing would be less-than-significant.

Modified Project Conditions of Approval: None.

Summary

Based on the preceding, when compared to impacts identified in the Certified SEIR, no new or substantially increased population and housing impacts would result from the

Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2024 Amendment*.

15. PUBLIC SERVICES

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any public service:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Fire protection?					X	
b) Police protection?					X	
c) Schools?					X	
d) Parks?					X	
e) Other public facilities?					X	

***Substantiation*:**

a – e) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Certified SEIR Section 5.15, *Public Services*, concluded that implementation of TOP 2050 would not result in potentially significant public services impacts (Certified SEIR, pp. 5.15-1 – 5.15-18).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project amends the site's current land use designations to conform to TOP 2050 land use designations. Uses proposed by the Modified Project

would not create substantive additional demands for school or park facilities beyond those reflected in TOP 2050 and evaluated in TOP 2050 SEIR. The Modified Project would be constructed within an already-developed urban environment. Fire protection and police protection services are currently available to the subject site via existing facilities. Development impact fees and sales tax revenues generated by the Modified Project would provide funding sources available for support and enhancement of public services commensurate with incremental demands of the development. By law, the Modified Project would be required to remit school impact fees.

Modified Project Conditions of Approval: None.

Summary

Based on the preceding, when compared to impacts identified in the Certified SEIR, no new or substantially increased public services impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2024 Amendment*.

16. RECREATION

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?					X	
b) Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?					X	

***Substantiation*:**

a, b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR determined that because new development would be required to provide sufficient public parkland or pay in-lieu fees, impacts to recreational facilities would be less-than-significant (Certified SEIR, pp. 5.16-12 – 5.16-14).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project amends the site's current land use designations to conform to TOP 2050 land use designations. Proposed residential and commercial uses implemented under the Modified Project would not increase demands on recreational facilities beyond those reflected in TOP 2050 and evaluated in TOP 2050 SEIR. When compared to the Certified SEIR findings, no new or substantially increased recreation impacts would result from the Modified Project.

Modified Project Conditions of Approval: None.

Summary

Based on the preceding, when compared to impacts identified in the Certified SEIR, no new or substantially increased recreational services or recreational facilities impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan, 2024 Amendment*.

17. TRANSPORTATION

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?					X	
b) Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?					X	
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?					X	
d) Result in inadequate emergency access?					X	

General Note:

The technical analyses referenced in this section reflect likely maximum impacts. Subsequent to preparation of these analyses, total residential development intensities allowed under the Modified Project have been reduced consistent with direction. Specifically, the technical analyses referenced herein assume residential development of the Modified Project totaling up to 3,807 dwelling units (see Project Traffic Analysis, p. 2 et al.). As subsequently modified, maximum allowed residential development under the Modified Project would not exceed 3,753 dwelling units (see Section 2.0, Project Description, Table 2.1-1).

***Substantiation*:**

Transportation impact analyses of the Modified Project presented here are summarized in part from: *The Avenue Specific Plan Traffic Analysis* (Urban Crossroads, Inc.) April 19, 2024 (Modified Project Traffic Analysis, Traffic Analysis); and *The Avenue Specific Plan Amendment Vehicle Miles Traveled (VMT)* Analysis (Modified Project VMT Analysis, VMT Analysis) (Urban Crossroads, Inc.) March 17, 2024. The Modified Project Traffic Analysis and VMT Analysis are presented at Addendum Appendix F.

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: Certified SEIR Section 5.17, *Transportation*, concluded that implementation of TOP 2050 would not conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities (Certified SEIR, pp. 5.17-18 – 5.17-23).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project does not propose elements or aspects that would conflict with adopted alternative transportation policies. Transit services are currently provided to the City and the Modified Project vicinity by Omnitrans. On a long-term basis, the Modified Project may result in increased demand for public transportation as increased employment opportunities become available onsite. Transit agencies routinely review and adjust their ridership schedules to accommodate shifts in demand for services. As part of the City's standard development review processes, the need for transit-related facilities, bicycle, and pedestrian access would be coordinated between the City and the Applicant.

The Modified Project would accommodate and would not interfere with the City *Multipurpose Trails and Bikeway Corridor Plan*. The Modified Project would provide internal and perimeter pedestrian and bicycle amenities consistent with provisions of *The Avenue Specific Plan, 2024 Amendment* and City Conditions of Approval.

Modified Project Conditions of Approval: None.

b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: *CEQA Guidelines* Section 15064.3, subdivision (b) was added to the *CEQA Guidelines* in 2019. The Vehicle Miles Traveled (VMT) metric established under Section 15064.3 is recognized. The VMT metric became effective in July 2020. The Certified SEIR concluded that even with application of mitigation VMT impacts of TOP 2050 would be significant and unavoidable (Certified SEIR, p. 5.17-34).

Certified SEIR Mitigation Measures:

New Mitigation

T-1 Prior to approval of discretionary projects subject to VMT reduction analysis, applicants shall demonstrate compliance with the City's VMT Guidelines for CEQA assessment of VMT impacts. For projects with VMT per Service Population exceeding the County's significance threshold, a mitigation plan shall be developed and implemented. Mitigation should consist of Transportation Demand Management (TDM) measures analyzed under a VMT-reduction methodology consistent with the California Air Pollution Control Officers Association's (CAPCOA) Final Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (2021) and approved by the City of Ontario (if applicable). Examples of measures include but are not limited to:

- *Pedestrian Network Improvements: constructing new sidewalks and/or improving damaged or substandard sidewalks that connect to a larger pedestrian network.*
- *Construct or Improve Bike Facilities: constructing new or enhancing a single existing Class I, II or IV bike facility that connects to a larger bike network.*
- *Construct or Improve Bike Boulevards: implementing a Class III bike boulevard on a local or collector street that is one travel lane in each direction, has a design speed of 25 mph or less and a design volume of 5,000 ADT or less.*
- *Expand Bikeway Networks: constructing a network of interconnected new Class I, II, or IV bike facilities.*
- *Provide End of Trip Bicycle Facilities: constructing facilities that support cyclists such as bike parking, lockers, and showers.*
- *Implement Transit-Supportive Roadway Treatments: funding infrastructure improvements such as traffic signal modifications and roadway signing and striping that are dedicated to improving transit travel times and reliability.*
- *Transit Passes: proving discounted or free transit fare to a specific geographic area, population group, or to the general public.*
- *Vanpool Program: providing groups of 5 to 15 people with direct shuttle service between their workplace and residence.*
- *Carshare Program (conventional or EV): providing access to a shared fleet of on-demand vehicles for short-term use/rental. Best practice is to discount carshare*

membership and provide priority parking for carshare vehicles to encourage use of the service.

- *Bikeshare Program (conventional or EV): providing access to a shared fleet of on-demand bicycles for short-term use/rental. Best practice is to discount bikeshare membership and dedicate bikeshare parking to encourage use of the service.*
- *Rideshare Program: providing access to and encouraging the use of a ridesharing platform or service. This could be an app, website, or other service that provides ride-matching coordination services.*
- *Community-Based Travel Planning (CBTP): CBTP is a residential based approach to outreach, performed by trained advisors, that provides households within a targeted geographic area with customized information, incentives, and support to encourage the use of transportation alternatives in place of single occupancy vehicles.*
- *Commute Trip Reduction (CTR) Program: CTR programs can be mandatory or voluntary, and involve providing information, coordination, services, infrastructure, and/or incentives for alternative modes such as ridesharing, vanpool, transit passes, and cycling.*

Modified Project: The California Environmental Quality Act (CEQA) requires all lead agencies to adopt VMT as the measure for identifying transportation impacts for land use projects. To comply with CEQA, in June of 2020 the City of Ontario developed and adopted their own VMT methodologies and thresholds (Resolution No. 2020-071) (City Guidelines). The VMT analysis presented here conforms to adopted City Guidelines. Projects that do not result in significant VMT impacts per City Guidelines would not conflict or be inconsistent with *CEQA Guidelines* Section 15064.3, subdivision (b).

Project generated VMT has been estimated using the origin/destination method and boundary method. Consistent with City Guidelines, VMT has been presented as total VMT and total VMT per Service Population (i.e., population and employees). Total VMT represents all VMT generated in the City of Ontario on a typical weekday. Total VMT per service population is an efficiency metric representing VMT generated on a typical weekday per person who lives and/or works in the City or travels to the City for another purpose (Project VMT Analysis, p. 2).

City Guidelines identifies the efficiency based metric VMT per Service Population (SP) (i.e., population and employees) is to be used to conduct project-level VMT analyses for land use projects in the City of Ontario. City Guidelines also identifies the following impact threshold for project-level VMT analyses:

- A significant impact would occur if the Project VMT per SP exceeds the Citywide average VMT per SP under General Plan Buildout Conditions.

The City of Ontario's average VMT per SP under General Plan Buildout conditions has been calculated using the TOP General Plan Buildout (2050) model. Table 17-1 presents the City of Ontario's Citywide average VMT per SP for General Plan Buildout (2050) conditions. As presented at Table 17-1, the City of Ontario's VMT per SP under General Plan Buildout (2050) conditions is estimated at 30.70 VMT per SP.

Table 17-1
TOP 2050 Buildout
Citywide VMT Per Service Population

Service Population	706,494
VMT	21,689,573
VMT per SP	30.70

Source: *The Avenue Specific Plan Amendment Vehicle Miles Traveled (VMT)* Analysis (Urban Crossroads, Inc.) March 17, 2024.

VMT impacts of the Project were evaluated employing both the Origin/Destination VMT Methodology and the Boundary VMT Methodology. Methodology details are presented at Project VMT Analysis pp. 3, 4.

VMT impacts of the Project employing the Origin/Destination VMT Methodology are presented at Table 17-2.

Table 17-2
Project VMT Impacts
Origin/Destination VMT Methodology

	Baseline	General Plan Buildout Year (2050)
Households	3,807	3,807
Population	13,325	13,325
Employment	957	957
Service Population	14,282	14,282
Total OD VMT	139,550	245,044
OD VMT/SP	19.4	17.2
City Threshold	30.7	30.7
Threshold Exceeded	No	No

Source: *The Avenue Specific Plan Amendment Vehicle Miles Traveled (VMT)* Analysis (Urban Crossroads, Inc.) March 17, 2024.

VMT impacts of the Project employing the Boundary VMT Methodology are presented at Table 17-3.

Table 17-3
Project VMT Impacts
Boundary VMT Methodology

	City Boundary		10-Mile Boundary	
Scenario	No Project	With Project	No Project	With Project
Service Population	706,494	708,515	2,172,176	2,174,197
Boundary VMT	9,602,250	9,600,990	34,288,519	34,291,339
VMT per SP	13.6	13.6	15.8	15.8
Change in VMT	0.0		0.00	
Threshold Exceeded	No		No	

Source: *The Avenue Specific Plan Amendment Vehicle Miles Traveled (VMT)* Analysis (Urban Crossroads, Inc.) March 17, 2024.

The analysis presented here supports the following findings:

- Consistent with City Guidelines, VMT estimates were prepared measuring both Project generated VMT per service population and Citywide boundary VMT.

- Project generated VMT per service population would not exceed City's adopted impact threshold of Citywide average VMT per SP under General Plan Buildout Conditions.

- Citywide boundary VMT was found to remain unchanged with the addition of the proposed Project.

Based on the preceding, the Modified Project VMT would not exceed applicable City VMT impact significance thresholds. On this basis, the potential for the Modified Project to conflict or be inconsistent with *CEQA Guidelines* Section 15064.3, subdivision (b) would be less-than-significant.

Modified Project Conditions of Approval: None.

c, d) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that buildout of the City pursuant to TOP 2050 would result in changes to the circulation network. Such changes would however be implemented consistent with City roadway classification and roadway design standards, acting to preclude potential design hazards. Additionally, City Design Review processes ensure that adequate emergency access is provided for all new development projects. On this basis, there would be no impacts related to hazardous design features, or emergency access provisions (Certified SEIR, pp. 5.17-25, 5.17-26).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project does not propose elements or aspects that would substantially increase transportation/traffic hazards. Moreover, all improvements under the Modified Project would be designed and implemented consistent with recommendations of the Traffic Analysis (see: Traffic Analysis Section 1.6, *Recommendations*; and *The Avenue Specific Plan, 2024 Amendment*, Section 4.1, *Master Plan of Circulation*), and City traffic engineering and safety standards, thereby minimizing the potential to result in or cause hazardous traffic/transportation conditions.

The Modified Project would generate urban traffic comparable to and compatible with the vehicle mix and vehicle categories present within the area roadway system. The Modified Project uses would therefore not cause or result in incompatible vehicle

movements or traffic that would substantively increase hazards. Further, based on the projected net decrease in trip generation under the Modified Project, the potential for the Modified Project to result in potential traffic hazards would likely be reduced when compared to the uses entitled under the Original Project and assumed within the Certified SEIR.

Additionally, pursuant to the Modified Project Construction Traffic Management Plan (please refer to Addendum Section 2, *Project Description*, 2.3.8 C*onstruction Area Traffic Management Plan*), the Modified Project would be required to maintain appropriate access during construction activities.

Modified Project Conditions of Approval: None.

Summary

Based on the preceding, when compared to impacts identified in the Certified SEIR, no new or substantially increased transportation impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; The Avenue Specific Plan Traffic Analysis* (Urban Crossroads, Inc.) April 19, 2024; *The Avenue Specific Plan Amendment Vehicle Miles Traveled (VMT) Analysis* (Urban Crossroads, Inc.) March 17, 2024; *The Avenue Specific Plan, 2024 Amendment*.

18. TRIBAL CULTURAL RESOURCES

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or					X	
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.					X	

***Substantiation*:**

a, b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: With the implementation of mitigation, the Certified SEIR concluded that impacts to prehistoric archeological resources, which include TCRs, would be less-than-significant (Certified SEIR, pp. 5.18-8 – 5.18-11).

Certified SEIR Mitigation Measures:

5-3 Upon receipt of an application for a proposed project subject to CEQA and within the City's jurisdiction, the City's representative shall consult with the relevant tribe(s)' representative(s) to determine if the proposed project is within a culturally sensitive area

to the tribe. If sufficient evidence is provided to reasonably ascertain that the site is within a tribal culturally sensitive area, an archaeologist shall prepare a cultural resources assessment. The findings of the cultural resources assessment shall be incorporated into the CEQA documentation. A copy of the report shall be forwarded to the tribe(s). If mitigation is recommended in the CEQA document, the procedure described in Mitigation Measure 5-4 shall be followed.

5-4 *Prior to the issuance of grading permits for a proposed project for which the CEQA document defines cultural resource mitigation for potential tribal resources, the project applicant shall contact the designated tribe(s) to notify them of the grading, excavation, and monitoring program. The applicant shall coordinate with the City of Ontario and the tribal representative(s) to develop mitigation measures that address the designation, responsibilities, and participation of tribal monitors during grading, excavation, and ground-disturbing activities; scheduling; terms of compensation; and treatment and final disposition of any cultural resources, sacred sites, and human remains discovered on the site. The City of Ontario shall be the final arbiter of the conditions for projects within the City's jurisdiction.*

TCR-1 *Tribal Cultural Resources Monitoring. The project archaeologist, in consultation with interested tribes, the developer, and the City of Ontario, shall develop an archaeological monitoring plan (AMP) to address the details, timing, and responsibility of archaeological and cultural activities that will occur on the project site. Details in the AMP shall include:*

1. *Project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) and development scheduling;*

2. *The development of a rotating or simultaneous schedule in coordination with the developer and the project archeologist for designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all project archaeologists (if the tribes cannot come to an agreement on the rotating or simultaneous schedule of tribal monitoring, the Native American*

Heritage Commission shall designate the schedule for the onsite Native American Tribal Monitor for the proposed project);

3. *The protocols and stipulations that the developer, City, Tribes, and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.*

At least 30 days prior to application for a grading permit and before any brush clearance, grading, excavation, and/or ground disturbing activities on the site, the developer shall retain a tribal cultural monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources.

Pursuant to the AMP, a tribal monitor from the consulting tribe shall be present during the initial grading activities. If tribal resources are found during grubbing activities, the tribal monitoring shall be present during site grading activities.

TCR-2 Treatment and Disposition of Cultural Resources. In the event that Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., for the proposed project, the following procedures will be carried out for treatment and disposition of the discoveries:

1. *Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process;*

2. *Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and nonhuman remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Ontario with evidence of same:*

a. *Accommodate the process for on-site reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloging, basic analysis, other analyses as recommended by the project archaeologist and approved by consulting tribes, and basic recordation have been completed; all documentation should be at a level of standard professional practice to allow the writing of a report of professional quality;*

b. *A curation agreement with an appropriate qualified repository in San Bernardino County that meets federal standards per 36 CFR Part 79, and therefore the resource would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility in San Bernardino County, to be accompanied by payment of the fees necessary for permanent curation;*

c. *For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, materials shall be curated at the San Bernardino County Museum by default;*

d. *At the completion of grading, excavation, and ground-disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pregrade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the City, County Museum, and consulting tribes.*

Modified Project: Tribal scoping and outreach was previously undertaken for The Avenue Specific Plan in July 2021. At that time, responses from Agua Caliente Band of Cahuilla Indians, the Gabrieleno Band of Mission Indians – Kizh Nation, Quechan Tribe of the Fort Yuma Reservation, and the San Manuel Yuhaaviatam Band of Mission Indians were received, but no consultation was requested for the Specific Plan. The Kizh Nation and San Manuel Band requested consultation if/when a specific development project was to be built. Additionally, the Gabrieleno Band of Mission Indians – Kizh Nation provided a series of measures to be included as conditions of approval for future development projects. (see Conditions of Approval TR-1 through TR-3, below). These Conditions will apply to future project approvals within the Specific Plan Area.

Outreach for this Project occurred again in December 2022 with SB-18 notifications sent. Responses were received from San Manuel Band of Mission Indians - Serrano Nation, Gabrieleno Band of Mission Indians - Kizh Nation, Quechan Tribe of the Fort Yuma Reservation, Gabrieleno Band of Mission Indians - Tongva Tribe, Agua Caliente Band of Cahuilla Indians, Morongo Band of Mission Indians, and the San Manuel Yuhaaviatam Band of Mission Indians. Out of those responses, San Manuel Band of Mission Indians - Serrano Nation and Gabrieleno Band of Mission Indians - Kizh Nation provided comments, with both requesting consultation on future development projects.

With the implementation of the mitigation presented in the Certified SEIR, in addition to the Conditions of Approval listed below, the potential for the Modified Project to cause a substantial adverse change in the significance of a tribal cultural resource would be less-than-significant. When compared to the Certified SEIR findings, no new or substantially increased impacts to tribal cultural resources would result from the Modified Project.

Modified Project Conditions of Approval:

TR-1 Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities:

A. The project applicant/lead agency shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation. The monitor

shall be retained prior to the commencement of any "ground-disturbing activity" for the subject project at all project locations (i.e., both on-site and any off-site locations that are included in the project description/definition and/or required in connection with the project, such as public improvement work). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching.[9]

B. *A copy of the executed monitoring agreement shall be submitted to the lead agency prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity.*[10]

C. *The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the project applicant/lead agency upon written request to the Tribe.*

D. *On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Kizh from a designated point of contact for the project applicant/lead agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or (2) a determination and written notification by the Kizh to the project applicant/lead agency that no future, planned construction activity and/or development/construction phase at the project site possesses the potential to impact Kizh TCRs.*

[9] Tribal monitoring shall cease once all ground disturbance activities have been completed with respect to the property or portion thereof. Example: Once excavation, grading, trenching, etc. have occurred tribal monitoring shall cease.

[10] The extent of necessary manpower and hourly wage shall be subject to commercially reasonable standards. If there is a dispute as to scope of the necessary labor needs or wage rates, the City shall arbitrate any such disputes in accordance with commercially reasonable standards.

E. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Kizh monitor and/or Kizh archaeologist. The Kizh will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural and/or historic purposes.

TR-2 Unanticipated Discovery of Human Remains and Associated Funerary Objects:

A. Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code Section 5097.98, are also to be treated according to this statute.

B. If Native American human remains and/or grave goods discovered or recognized on the project site, then all construction activities shall immediately cease. Health and Safety Code Section 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and all ground-disturbing activities shall immediately halt and shall remain halted until the coroner has determined the nature of the remains. If the coroner recognizes the human remains to be those of a Native American or has reason to believe they are Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission, and Public Resources Code Section 5097.98 shall be followed.

C. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2).

D. Construction activities may resume in other parts of the project site at a minimum of 200 feet away from discovered human remains and/or burial goods, if the Kizh determines in its sole discretion that resuming construction activities at that distance is acceptable and provides the project manager express consent of that determination (along with any other mitigation measures the Kizh monitor and/or archaeologist deems necessary). (CEQA Guidelines Section 15064.5(f).)

E. *Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods. Any historic archaeological material that is not Native American in origin (non-TCR) shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.*

F. *Any discovery of human remains/burial goods shall be kept confidential to prevent further disturbance.*

TR-3 *Procedures for Burials and Funerary Remains:*

A. *As the Most Likely Descendant ("MLD"), the Koo-nas-gna Burial Policy shall be implemented. To the Tribe, the term "human remains" encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the preparation of the soil for burial, the burial of funerary objects with the deceased, and the ceremonial burning of human remains.*

B. *If the discovery of human remains includes four or more burials, the discovery location shall be treated as a cemetery and a separate treatment plan shall be created.*

C. *The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered as associated funerary objects. Cremations will either be removed in bulk or by means as necessary to ensure complete recovery of all sacred materials.*

D. *In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make every effort to*

recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that burials will be removed.

E. *In the event preservation in place is not possible despite good faith efforts by the project applicant/developer and/or landowner, before ground-disturbing activities may resume on the project site, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects.*

F. *Each occurrence of human remains and associated funerary objects will be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the project site but at a location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.*

G. *The Tribe will work closely with the project's qualified archaeologist to ensure that the excavation is treated carefully, ethically, and respectfully. If data recovery is approved by the Tribe, documentation shall be prepared and shall include (at a minimum) detailed descriptive notes and sketches. All data recovery data recovery-related forms of documentation shall be approved in advance by the Tribe. If any data recovery is performed, once complete, a final report shall be submitted to the Tribe and the NAHC. The Tribe does NOT authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.*

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different impacts to tribal cultural resources would occur as a result of the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

19. UTILITIES AND SERVICE SYSTEMS

Would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment, storm water drainage, electric power, natural gas, or telecommunication facilities, the construction or relocation of which could cause significant environmental effects?					X	
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?					X	
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?					X	
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?					X	
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?					X	

***Substantiation*:**

a) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that, although buildout of TOP 2050 would generate additional wastewater, it would be adequately treated in accordance with Regional Water Quality Control Board and California Department of

Public Health requirements. City sanitary sewer systems, and stormwater management would be expanded to accommodate growth associated with the buildout of TOP 2050.

Other utilities systems would be extended and improved consistent with purveyor master plans and as warranted by market conditions. Compliance with regulatory requirements and standard conditions of approval acts to reduce impacts on utilities systems generally, improve system efficiencies, and reduce system maintenance requirements. Collectively, this diminishes the requirement to construct new systems or replace existing systems.

Construction of utilities systems serving the City under TOP 2050 buildout conditions would not result in substantially different impacts than would result from development of TOP 2050 land uses generally.

The Certified SEIR concluded that with implementation of regulatory requirements and standard conditions of approval, the potential for TOP 2050 to require or result in the relocation or construction of new or expanded utilities systems, the construction or relocation of which would result in adverse environmental impacts would be less-than-significant (Certified SEIR, p. 5.19-11).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project amends the site's current land use designations to conform to TOP 2050 land use designations. Proposed residential and commercial uses implemented under the Modified Project would not increase demands on utilities systems beyond those reflected in TOP 2050 and evaluated in TOP 2050 SEIR.

The Modified Project is fully-served by utilities and services systems including: water, wastewater treatment, storm water drainage, electric power, natural gas, and telecommunication facilities. Any localized modification of or connections to serving utilities systems implemented by the Modified Project would not result in substantially different impacts than would result from development of the Modified Project land uses

generally. These impacts would be no greater than or different than impacts considered and addressed in the Certified SEIR.

Modified Project Conditions of Approval: None.

b) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: A foundational document for compliance with both SB 610 and SB 221 is the Urban Water Management Plan (UWMP). Both of these statutes repeatedly identify the UWMP as a planning document that, if properly prepared, can be used by a water supplier to meet the standards set forth in both statutes. Thorough and complete UWMPs will allow water suppliers to use UWMPs as a foundation to fulfill the specific requirements of these two statutes. Cities, counties, water districts, property owners, and developers will all be able to utilize this document when planning for and proposing new projects (Guidebook for Implementation of Senate Bill 610 and Senate Bill 221 of 2001).

The City of Ontario 2020 Urban Water Management Plan (UWMP) substantiates that there would be sufficient and reliable water supplies available to the City through 2045. The Certified SEIR concludes that buildout of the City under TOP 2050 would incrementally increase water demands. However, water demands of the City would remain below 2020 UWMP water demand projections. On this basis, there would be sufficient water supplies available to the City under TOP 2050 buildout conditions. The potential for there to be insufficient water supplies available to serve the City and reasonably foreseeable future development during normal, dry and multiple dry years is therefore considered less-than-significant (Certified SEIR, pp. 5.19-30, 5.19-31).

Certified SEIR Mitigation Measures: None.

Modified Project: Consistent with SB610 requirements, a Water Supply Assessment (WSA) has been prepared for the Modified Project (see: *Water Supply Assessment and Written Verification of Sufficient Water Supply, The Avenue Specific Plan, City Of Ontario* [Albert A. Webb Associates] January 24, 2024; Project WSA, Addendum Appendix G).

The Project WSA concludes that water demand of the Modified Project was not fully accounted for in the 2020 UWMP (Project WSA, p. 25). The WSA also concludes that "water supplies available to OMUC [Ontario Municipal Utilities Company] currently meet and exceed citywide water demands. Groundwater production by OMUC is currently less than their existing rights and within their production capacity. Regardless, OMUC has the means and right to exceed their groundwater allocation in the Chino Basin when required to meet demand pursuant to the Judgment. Further, OMUC has rights to water held in storage that would supply all City demands for more than two years. In addition to groundwater, OMUC can supply water to the Project purchased from the WFA that is within their existing entitlements and capacities" (Project WSA, p. 64). On this basis, the potential for the Modified Project to result in insufficient water supplies available to serve the City and reasonably foreseeable future development during normal, dry and multiple dry years would be less-than-significant.

Modified Project Conditions of Approval: None.

c) No Changes or New Information Requiring Preparation of an MND or EIR.

Certified EIR Conclusions: The Certified EIR recognizes that buildout of the City under TOP 2050 would result in increased wastewater treatment demands. However, existing wastewater treatment plants have excess capacity sufficient to meet these increased demands. Planned wastewater treatment plant expansion would provide additional capacity available to serve the City under TOP 2050 buildout conditions. Treated wastewater meets or exceeds RWQCB and NPDES standards and requirements. On this basis, the Certified EIR concluded that the potential for buildout of City under TOP 2050 to result in or cause insufficient or inadequate wastewater treatment would be less-than-significant.

Certified EIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. By extension, the Modified Project wastewater treatment demand is reflected in wastewater treatment

demand of the City under TOP 2050, as considered and addressed in the Certified SEIR. The Project proposes conventional urban residential/commercial development. Wastewater generated by the Modified Project would not require special or atypical treatment. Based on the preceding, the potential for the Modified Project to result in or cause insufficient or inadequate wastewater treatment would be less-than-significant.

Modified Project Conditions of Approval: None.

d, e) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: The Certified SEIR concluded that buildout of TOP 2050 would be served by landfills with sufficient permitted capacities to accommodate all solid waste disposal needs. Additionally, no conflicts with federal, state, and local management and reduction statutes and regulations related to solid waste were identified. The Certified SEIR determined that impacts related to solid waste would be less-than-significant (Certified SEIR, p. 5.17-31).

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. By extension, the Modified Project solid waste management demand is reflected in solid waste management demand of the City under TOP 2050, as considered and addressed in the Certified SEIR. Moreover, the Modified Project would comply with applicable solid waste management and reduction statutes and regulations (summarized below), acting to further reduce solid waste management impacts of the Modified Project.

City of Ontario Construction & Demolition Recycling Plan (CDRP)

Pursuant to Ontario Municipal Ordinance (OMC) Sec. 6-3.602 *Construction & Demolition Recycling Plan* and the 2016 California Green Building Standards Code (CALGreen), all building and demolition permit applicants are required to prepare and submit a Construction & Demolition Recycling Plan (CDRP) and a CDRP Summary Report. OMC Sec. 6-3.602 and CALGreen require all construction and qualifying renovation and

demolition projects to divert at least 65% of all generated waste materials. The Modified Project would be subject to (OMC) Sec. 6-3.602 and CALGreen construction waste diversion mandates. The City oversees compliance with OMC Sec. 6-3.602 and CALGreen construction waste diversion mandates.

AB 939 - California Integrated Waste Management Act of 1989

Solid waste management is guided by the California Integrated Waste Management Act of 1989 (AB 939), which emphasizes resource conservation through reduction, recycling, and reuse of solid waste. AB 939 requires that localities conduct a Solid Waste Generation Study (SWGS) and develop a Source Reduction Recycling Element (SRRE), providing for a minimum 50 percent reduction in waste sent to landfills. Diversion rates are calculated and tracked by the California Integrated Waste Management Board (Board). Alternatively, the Board can determine that a jurisdiction's "good faith efforts" to implement comprehensive diversion programs have satisfied the requirement even if diversion levels are below 50 percent.

To reduce waste disposal, AB 939 requires every California city and county to divert 50 percent of its waste from landfills. Residential, commercial and governmental waste recycling programs in support of the SRRE have been implemented by the City.

The City is currently meeting or exceeding all AB 939 solid waste diversion targets. The Modified Project would be required to comply with AB 939 as implemented by the City.

AB 341 - Commercial Recycling

Assembly Bill 341 mandates recycling for businesses producing four or more cubic yards of solid waste per week, and multifamily dwellings of five units or more. Under the law, business must separate recyclables from trash and then either subscribe to City of Ontario recycling services, self-haul their recyclables, or contract with a permitted private recycler. The Modified Project would be subject to Assembly Bill 341 mandates.

AB 1826 - Commercial Organics Recycling

Under Assembly Bill 1826, businesses are required to arrange for organic recycling services. The Modified Project would be subject to Assembly Bill 1826 mandates.

The California Department of Resources Recycling and Recovery (CalRecycle) oversees both the mandatory commercial recycling program and the mandatory commercial organics recycling program. The City of Ontario supports both bills through public outreach, monitoring of recycling efforts, providing notification to non-compliant businesses, and periodic State reporting.

The Modified Project would be required to comply with the above solid waste management statutes and regulations. The City and CalRecycle would oversee and monitor compliance with applicable solid waste management statutes and regulations.

SB 1383 - Organic Waste Management Requirements

SB 1383 establishes targets to achieve a 50 percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75 percent reduction by 2025. The law grants CalRecycle the regulatory authority required to achieve the organic waste disposal reduction targets and establishes an additional target that not less than 20 percent of currently disposed edible food is recovered for human consumption by 2025.

The City is currently developing programs and strategies to address the requirements of SB 1383, the Modified Project would be required to ultimately abide by those requirements.

As stated in the Certified SEIR, impacts to solid waste services and facilities from new development are addressed through the payment of development impact fees as outlined in the City of Ontario Development Impact Fee Calculation and Nexus Fee Schedules. With the payment of required development impact fees and compliance with existing solid waste regulations, the Modified Project would not result in any new or substantially increased solid waste impacts not previously identified within the Certified SEIR.

Based on the preceding, the Modified Project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals would be less-than-significant. Additionally, the Modified Project would comply with applicable solid waste

management and reduction statutes and regulations. On this basis, the Modified Project would result in less-than-significant solid waste management impacts. The Modified Project would not result in solid waste management impacts substantially greater than or substantially than solid waste management impacts considered and addressed in the Certified SEIR.

Modified Project Conditions of Approval: None.

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different utilities and service systems impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; Water Supply Assessment and Written Verification of Sufficient Water Supply, The Avenue Specific Plan, City Of Ontario* (Albert A. Webb Associates) January 24, 2024*; The Avenue Specific Plan, 2024 Amendment*.

20. WILDFIRE

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?					X	
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?					X	

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?					X	
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?					X	

***Substantiation*:**

a – d) *No Changes or New Information Requiring Preparation of an MND or EIR.*

Certified SEIR Conclusions: As discussed in the Certified SEIR, CAL FIRE has determined that the City contains no areas subject to very high wildfire risk. However, the City recognizes that even though fuel loading is light in Ontario and fire risk comes primarily from urban fires, not wildfires, there is some risk related to wildfires. There are many resources available to address wildland fires should they arise - CAL FIRE's *2019 Strategic Fire Plan for California*, the CFC, County of San Bernardino MJHMP, City of Ontario LHMP, and fire services from the City of Ontario Fire Department. With adherence to these building practices, development and infrastructure associated with TOP 2050 would not exacerbate risk or result in post-wildfire hazards (e.g., landslides, mudflows, and flooding). In addition, TOP 2050 incorporates policies to prevent wildfire hazards and support the community during wildfire events (Certified SEIR, pp. 5.20-15, 5.20-16). On this basis, the Certified SEIR concluded that potential wildfire impacts resulting from TOP 2050 would be less-than-significant.

Certified SEIR Mitigation Measures: None.

Modified Project: The Modified Project land uses and development concepts are consistent with anticipated buildout of the City under TOP 2050. By extension, potential wildfire impacts affecting the Modified Project are reflected in the assessment of wildfire impacts affecting the City under TOP 2050, as considered and addressed in the Certified SEIR. Per CAL FIRE "Fire Hazard Severity Zone Maps," the City and the Modified Project site are not located within or near a state responsibility area, or within an area classified as a very high fire hazard severity zone.

Fire protection services for the Modified Project site and vicinity are currently provided by the Ontario Fire Department (Fire Department). Adherence to Fire Department building and site design requirements, and compliance with codified fire protection and prevention measures during construction and operation of the Modified Project are required. On this basis, when compared to the Certified SEIR findings, no new or substantially increased wildfire impacts would result from the Modified Project.

Modified Project Conditions of Approval: None.

Summary

When compared to impacts considered and addressed in the Certified SEIR, no new significant, substantially increased, or substantially different wildfire impacts would result from the Modified Project. No changed or new information has been identified to indicate that any potential impacts resulting from the Modified Project would be different from those previously identified and addressed in the Certified SEIR.

Sources: *The Ontario Plan 2050 Certified Supplemental Environmental Impact Report, SCH No. 2021070364 (Placeworks) August 2022; SW San Bernardino County, Fire Hazard Severity Zones in SRA* (November 7, 2007); https://osfm.fire.ca.gov/media/6781/fhszs_map62.pdf; *The Avenue Specific Plan, 2024 Amendment.*

21. MANDATORY FINDINGS OF SIGNIFICANCE

Does the project:	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce but not Eliminate Significant Effects in Previous EIR	No Changes or New Information Requiring Preparation of an MND or EIR	No Impact
a) Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?					X	
b) Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of the past projects, the effects of other current projects, and the effects of probable future projects.)					X	
c) Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?					X	

***Substantiation*:**

a – c) *No Changes or New Information Requiring Preparation of an MND or EIR.*

This Addendum defines, describes, compares, and contrasts potential environmental impacts of the Modified Project in the context of the environmental impacts assessed in the Certified SEIR. In so doing, this Addendum substantiates consistency with applicable *CEQA Guidelines* provisions addressing preparation of an Addendum to a previously-Certified SEIR.

As supported by the discussions presented herein, the Modified Project would not result in or cause any new significant impacts, substantively increased impacts, or substantively different environmental impacts than those previously considered and addressed in the Certified SEIR. Analysis beyond that presented in this Addendum is not required or warranted.

4.0 DETERMINATION

4.0 DETERMINATION

As supported by the analysis presented herein, the potential environmental effects of the development allowed by the Modified Project, and associated required discretionary actions, have been adequately addressed in the Certified EIR. As such, the development of any further information and analysis is not warranted. Pursuant to the requirements of *CEQA Guidelines* Section 15162 and 15164, the following determinations have been made.

Major Revisions to the Certified EIR Not Required

Based on the preceding analysis and information, there is no evidence that major changes to the Certified EIR are required. This Addendum indicates that there is no new significant or more severe environmental impact, and that the development of the Modified Project described herein would essentially have the same, or reduced, impacts as those considered and addressed in the Certified EIR.

No Substantial Change in Circumstances Requiring Major Revisions to the Certified EIR

No information exists in the record, or is otherwise available that indicates that there are substantial changes in circumstances that would require major changes to the Certified EIR.

No New Information Showing Greater Significant Effects than Identified in the Certified EIR

This Addendum has considered all available relevant information to determine whether there is new information, which was not available at the time the Certified EIR was prepared, that may indicate that a new significant effect may occur that was not reported in the Certified EIR. As supported by the analysis presented in this

Addendum, there is no substantial new information that was not available at the time of the Certified EIR, indicating that there would be a new, significant impact requiring major revisions of the Certified EIR.

No New Information Showing Ability to Reduce Significant Effects Identified in the Certified EIR

The Addendum analysis substantiates that there are no significant impacts requiring identification of alternatives to the Modified Project. The continued implementation of applicable mitigation from previous relevant CEQA documents, as incorporated in this Addendum, reduce the Project's potentially significant impacts to levels that are less-than-significant.

Summary

The analysis presented in this document substantiates that the analysis presented in the Certified EIR is sufficient to satisfy CEQA requirements for the proposed Modified Project. That is, with incorporation of mitigation, implementation of the Modified Project described and evaluated herein would not result in any significant new, different, additional, or substantially increased environmental impacts than were previously considered and addressed in the Certified EIR. As such, environmental assessment of the Modified Project does not require any major revision of the previously-approved Certified EIR, nor would development allowed by the Modified Project result in conditions that would require preparation of further analysis as described in the *CEQA Guidelines*.

5.0 MITIGATION SUMMARY

5.0 MITIGATION SUMMARY

5.1 OVERVIEW

The following Table 5.1-1, *Mitigation Summary Matrix*, presents relevant mitigation measures incorporated in the Certified SEIR, and Conditions of Approval proposed by the Modified Project described herein.

Certified SEIR mitigation measures that are no longer required are indicated by ~~strikeout font~~. New Conditions of Approval to be implemented under the Modified Project are indicated by ***bold italic text***. The "Remarks" column identifies status and applicability of all Mitigation Measures/Conditions of Approval. Required measures presented at Table 5.1-1 will be implemented through the Modified Project Conditions of Approval or as otherwise deemed appropriate by the City.

At the discretion of the City, any of the mitigation measures/conditions of approval identified at Table 5.1-1 may be modified to respond to incumbent conditions and context as they may apply to development proposed by the Modified Project. Any such modifications shall not result in any new significant environmental impacts. Rather, modifications (if any) would ensure compliance and consistency with current City goals, policies, regulations, and development programs/plans.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
Aesthetics	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all aesthetics impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.
Agriculture and Forestry Resources	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all agriculture and forestry resources impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.
Air Quality	
3-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario building department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:	Applicable. This Measure is carried forward from the Certified SEIR and would be implemented by the Modified Project. Consistent with this measure, a development-specific air quality impact analysis has been prepared for the Modified Project. Please refer to the Modified Project AQIA, Addendum Appendix B. The Modified Project would implement MM 3-1 emissions reductions/emissions control measures per City Conditions of Approval.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**

• Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:
  ○ Requiring use of nontoxic soil stabilizers to reduce wind erosion.
  ○ Applying water every four hours to active soil disturbing activities.
  ○ Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.
  ○ Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits.
• Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.
• Limiting nonessential idling of construction equipment to no more than five consecutive minutes.
• Using Super-Compliant VOC paints for coating architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: http://www.aqmd.gov/prdas/brochures/Super-Compliant_AIM.pdf.
These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.	

3-2 The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g., sidewalks).	Applicable. This Measure is carried forward from the Certified SEIR and shall be implemented by the Modified Project.

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks
AQ-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following: • For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions. • Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use. • Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for	Applicable. This Measure is carried forward from the Certified SEIR and would be implemented by the Modified Project. Consistent with this measure, a development-specific air quality impact analysis has been prepared for the Modified Project. Please refer to the Modified Project AQIA, Addendum Appendix B. The Modified Project would implement MM AQ-1 emissions reductions/emissions control measures per City Conditions of Approval.

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks
loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485). • Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures). • Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures). • Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures). • Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures). Applicant-provided appliances shall be Energy Star-certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star-certified or equivalent appliances shall be verified by the City during plan check.	
Biological Resources	
BIO-1 Avoidance of Nesting Burrowing Owls: No more than 72 hours prior to any site disturbances, focused surveys for the burrowing owl shall be conducted. If absence of this species is confirmed, project work can proceed. If, however, burrowing owl is located on site, the appropriate resource agencies (CDFW and USFWS) shall be contacted. The Applicant shall consult with the wildlife agencies regarding the most appropriate methods and timing for removal of owls. As necessary, owls will be actively evicted following agency approved protocols (i.e., placing a one-way door at the burrow	Mitigation is not identified in the Certified SEIR. Condition of Approval BIO-1 is incorporated to ensure that impacts to the burrowing owl are maintained at levels that would be less-than-significant.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
entrance to ensure that owls cannot access the burrow once they leave). Any such active eviction shall occur outside of the breeding/nesting season. That is, if active eviction is required, eviction shall be accomplished between September 1 and February 15. If more than 30 days have elapsed between owl eviction and completion of clearing and grubbing activities, a subsequent survey for the burrowing owl shall be conducted to ensure that owls have not re-populated the site. Any reoccupation by owls will require subsequent protocol active eviction.	
BIO-2 Avoidance of Nesting Migratory Birds: If possible, all vegetation removal activities shall be scheduled from August 1 to February 1, which is outside the general avian nesting season. This would ensure that no active nests would be disturbed, and that removal could proceed rapidly. If vegetation is to be cleared during the nesting season, all suitable habitat will be thoroughly surveyed within 72 hours prior to clearing for the presence of nesting birds by a qualified biologist (Biologist). The Biologist shall be approved by the City and retained by the Applicant. The survey results shall be submitted by the Applicant to the City Planning Department. If any active nests are detected, the area of nesting shall be flagged and mapped on the construction plans along with a minimum 300-foot buffer, with the final buffer distance to be determined by the Project Biologist. The buffer area shall be avoided until, as determined by the Biologist, the nesting cycle is complete, or it is concluded that the nest has failed. In addition, the Biologist shall be present on the site to monitor the vegetation removal to ensure that any nests, which were not detected during the initial survey, are not disturbed.	Mitigation is not identified in the Certified SEIR. Condition of Approval BIO-2 is incorporated to ensure that impacts to the nesting migratory birds are maintained at levels that would be less-than-significant.

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks
BIO-3 To the extent not considered and addressed in prior biological resources assessments, the Project DSFLF Study, or the January 2024 Biological Update, and to properly assess and address potential biological resources impacts, Biological Resources surveys shall be prepared prior to approval of Tentative Tract Maps within the Modified Project site. If suitable habitat is determined present onsite, subsequent focused surveys shall be completed and no "take" of any protected species and/or their habitat shall occur without obtaining the requisite regulatory permits from State and Federal agencies.	Mitigation is not identified in the Certified SEIR. Condition of Approval BIO-3 is incorporated to ensure that impacts affecting areas of the Specific Plan that may not have been previously identified are resolved prior to the approval of Tentative Tract Maps for the affected areas.
Cultural Resources	
5-1 Historic or potentially historic resources in the City shall be evaluated for historic significance through the City's tier system prior to the issuance of plan or development approvals. Pursuant to City's Development Code (Chapter 7, Historic Preservation), each historic resource shall be fully documented and cataloged pursuant to Historic American Building Survey/Historic American Engineering Record (HABS/HAER) standards, to provide a record of the resource, including, but not limited to: [i] the preparation of site plans, floor plans, exterior and interior elevations, and detail drawings of character defining features (such as moldings, stairs, etc.); and [ii] photographs of the resource, including the exterior, interior, and interior and exterior character defining features (such as moldings, light fixtures, trim patterns, etc.).	Applicable. This Measure is carried forward from the Certified SEIR and shall be implemented by the Modified Project. Note: Previous surveys indicate there are no known or probable historic resources within the Modified Project site.
5-2 In areas of documented or inferred from evident archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed	Applicable. This Measure is carried forward from the Certified SEIR and shall be implemented by the Modified Project. Note: Previous surveys indicate there are no known or probable archaeological and/or paleontological resources within the Modified Project site. The Modified Project would implement MM 5-2 measures providing for

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements: a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities. b) Should any cultural/scientific resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director is satisfied that adequate provisions are in place to protect these resources. c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including catalog with museum numbers.	protection of unknown resources that may exist in a buried context. Please refer also to Conditions of Approval that would be implemented under the topical heading "Tribal Cultural Resources."
Energy	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all energy impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.
Geology and Soils	
Please refer to Mitigation Measure 5-2, presented previously.	Applicable. Mitigation is carried forward from the Certified EIR and shall be implemented by the Modified Project.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
Greenhouse Gas Emissions	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all GHG impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.
Hazards and Hazardous Materials	
HM-1 Removal of structures, including, but limited to, under- and aboveground storage tanks, septic systems, and water wells shall conform to all Federal, State, and local agency regulations (specifically with those required by the City Building and Safety Department and the Hazardous Materials Division of the San Bernardino County Fire Department). Due to the extensive disposal requirements and protocols contained within these regulatory schemes, implementation and adherence to these various regulatory requirements will ensure that no significant impacts occur.	Mitigation is not identified in the Certified SEIR. Condition of Approval HM-1 is incorporated to ensure compliance with applicable regulations, ordinances, and policies.
HM-2 Prior to grading activities for any areas not previously tested, a methane gas assessment shall be prepared by a licensed professional with expertise in soil gas assessments for subdivisions proposed on former dairies, poultry ranches, hog ranches, livestock feed operations and similar facilities to determine the presence of methane gas within the project boundary. The methane gas assessment shall identify monitoring and mitigation strategies and approaches. All mitigation measures/plans and specifications shall be reviewed and approved by the City of Ontario. ***Such an assessment may take two steps. A preliminary assessment will be done prior to grading to determine exactly where dairies have existed in the past so that the post grading***	Mitigation is not identified in the Certified SEIR. Condition of Approval HM-2 is incorporated to ensure compliance with applicable regulations, ordinances, and policies.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
assessment/mitigation measures can be focused on the portions of the Planning Areas that have included former agricultural activities. The second step will include actual testing of graded pads no sooner than 30 days after construction to determine if methane is detected above 5,000 ppm. ***The following grading guidelines shall also be adhered to:*** • ***Careful clearing, grubbing, segregation, and stockpiling or disposal near surface, of organics-rich soils at the site prior to the initiation of mass grading activities.*** • ***The identification and segregation/stockpiling or disposal of deeper soils which contain elevated levels of organic material. Soils with an organic content of 0.4% or higher shall be segregated for controlled placement that ensures that methane levels are below 5,000 ppm.*** • ***Soils with organic content in excess of 0.4% shall not be placed as "deep" fill. Soils with organic contents in excess of this amount shall be placed in open areas within approximately two feet of the finished ground surface.***	
HM-3 To eliminate the risk of ground cracking, manure shall be removed from the site, such that the organic matter content of onsite soils shall not exceed 2% (a 2% total organic content is allowed, of which no more than 1% can be manure) in the building foundation areas when mixed with underlying clean soils and imported fill.	Mitigation is not identified in the Certified SEIR. Condition of Approval HM-3 is incorporated to ensure compliance with applicable regulations, ordinances, and policies.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
HM-4 To the extent not previously prepared and to properly assess and address potential hazardous materials, a Phase I Environmental Site Assessment (ESA) shall be performed by a registered environmental assessor (REA) prior to the approval of the Tentative Tract Map, site plan or other discretionary approval for a given phase of development. If potential hazardous materials or conditions are identified in the Phase I report, the recommendations of the ESA shall be implemented. Such recommendations shall include surficial sampling and chemical analysis within agricultural areas or where soil staining was observed. The Phase I ESA shall be provided to the City and shall be included in any CEQA analysis prepared in connection with the consideration of the discretionary approval for development.	Mitigation is not identified in the Certified SEIR. Condition of Approval HM-4 is incorporated to ensure compliance with applicable regulations, ordinances, and policies.
HM-5 If, while performing any excavation as part of Project construction, material that is believed to be hazardous waste as defined in Section 25117 of the California Health and Safety Code is discovered, the developer shall contact the City Fire Department and the County of San Bernardino Fire Department Hazardous Materials Division. Excavation shall be stopped until the material has been tested and the absence of hazardous waste has been confirmed. If hazardous waste is determined to be present, the California Department of Toxic Substances control shall be contacted and the material shall be removed and disposed of pursuant to applicable provisions of California law.	Mitigation is not identified in the Certified SEIR. Condition of Approval HM-5 is incorporated to ensure compliance with applicable regulations, ordinances, and policies.
Hydrology and Water Quality	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all hydrology and water quality impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
	Modified Project.
Land Use and Planning	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all land use and planning impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.
Mineral Resources	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all mineral resources impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.
Noise	
~~12-1 Prior to the issuance of building permits for any project that involves a noise sensitive use within the 65 dBA CNEL contour of the Ontario International Airport, the project property owner/developers shall retain an acoustical engineer to conduct an acoustic analysis and identify, where appropriate, site design features and/or required building acoustical improvements (e.g., sound transmission class rated windows, doors, and attic baffling), to ensure compliance with the City's Noise Compatibility Criteria and the California State Building Code and California Noise Insulation Standards (Titles 24 and 21 of the California Code of Regulations).~~	Airport noise level impacts affecting the Modified Project site have been evaluated in this Addendum and are substantiated to be less-than-significant. Please refer also to the Modified Project Noise Impact Analysis presented at Addendum Appendix E.
~~12-2 Prior to issuance of a building permit, individual projects that involve vibration intensive construction activities, such as pile drivers, jack hammers, and vibratory rollers near sensitive receptors shall be evaluated for potential vibration impacts. For construction~~	Construction-source vibration impacts of the Modified Project have been evaluated in this Addendum and are substantiated to be less-than-significant. Please refer also to the Modified Project Noise Impact Analysis presented at Addendum Appendix E.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
~~within 135 feet of fragile structures, such as historical resources, within 100 feet of nonengineered timber and masonry buildings (e.g., most residential buildings), or within 75 feet of engineered concrete and masonry (no plaster); or a vibratory roller within 25 feet of any structure, the project applicant shall prepare a noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to these activities. This noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed Federal Transit Administration (FTA) architectural damage thresholds (e.g., 0.12 inches per second [in/sec] peak particle velocity [PPV] for fragile or historical resources, 0.2 in/sec PPV for nonengineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses shall be used, such as drilling piles as opposed to pile driving and static rollers as opposed to vibratory rollers. If necessary, construction vibration monitoring shall be conducted to ensure vibration thresholds are not exceeded.~~	
~~12-4 Construction activities associated with new development that occurs near sensitive receptors shall be evaluated for potential noise impacts. Construction contractors shall implement the following measures for construction activities in the City of Ontario. Construction plans submitted to the City shall identify these measures on demolition, grading, and construction plans. The City of Ontario Planning and Building Departments shall verify that grading, demolition, and/or construction plans submitted include these notations prior to issuance of demolition, grading, and/or building permits.~~ ~~• Construction activity is limited to the hours between 7:00 am~~	Construction-source noise impacts of the Modified Project have been evaluated in this Addendum and are substantiated to be less-than-significant. Please refer also to the Modified Project Noise Impact Analysis presented at Addendum Appendix E.

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks
~~and 6:00 pm Monday through Friday and 9:00 am to 6:00 pm Saturdays and Sundays, as prescribed in Municipal Code Section 5-29.09.~~ ~~• During the entire active construction period, equipment and trucks used for project construction shall use the best available noise control techniques wherever feasible (e.g., improved mufflers, equipment re-design, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds).~~ ~~• Impact tools (e.g., jack hammers and hoe rams) shall be hydraulically or electrically powered wherever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools.~~ ~~• Stationary equipment such as generators and air compressors shall be located as far as feasible from nearby noise sensitive uses.~~ ~~• Stockpiling shall be located as far as feasible from nearby noise sensitive receptors.~~ ~~• Construction traffic shall be limited, to the extent feasible, to approved haul routes established by the City Planning and Building Agency.~~ ~~• At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report the action to the City.~~ ~~• Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to~~	

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
~~reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes.~~ ~~• During the entire active construction period and to the extent feasible, the use of noise-producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level or switch off back-up alarms and replace with human spotters in compliance with all safety requirements and laws.~~ ~~• Erect temporary noise barriers (at least as high as the exhaust of equipment and breaking line of sight between noise sources and sensitive receptors), as necessary and feasible, to maintain construction noise levels at or below the performance standard of 80 dBA Leq. Barriers shall be constructed with a solid material that has a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier and may be lined on the construction side with an acoustical blanket, curtain, or equivalent absorptive material.~~	
Population and Housing	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all population and housing impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.
Public Services	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all public services impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
Recreation	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all recreation impacts of the Modified Project would be less-than-significant. No mitigation is required of the Modified Project.
Transportation	
~~T-1 Prior to approval of discretionary projects subject to VMT reduction analysis, applicants shall demonstrate compliance with the City's VMT Guidelines for CEQA assessment of VMT impacts. For projects with VMT per Service Population exceeding the County's significance threshold, a mitigation plan shall be developed and implemented. Mitigation should consist of Transportation Demand Management (TDM) measures analyzed under a VMT-reduction methodology consistent with the California Air Pollution Control Officers Association's (CAPCOA) Final Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (2021) and approved by the City of Ontario (if applicable). Examples of measures include but are not limited to:~~ ~~• Pedestrian Network Improvements: constructing new sidewalks and/or improving damaged or substandard sidewalks that connect to a larger pedestrian network.~~ ~~• Construct or Improve Bike Facilities: constructing new or enhancing a single existing Class I, II or IV bike facility that connects to a larger bike network.~~ ~~• Construct or Improve Bike Boulevards: implementing a Class III bike boulevard on a local or collector street that is one travel lane in each direction, has a design speed of 25 mph or less and a design~~	Modified Project VMT impacts have been evaluated in this Addendum and are substantiated to be less-than-significant. Please refer also to the Modified Project VMT Analysis presented at Addendum Appendix F.

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks
~~volume of 5,000 ADT or less.~~ ~~• Expand Bikeway Networks: constructing a network of interconnected new Class I, II, or IV bike facilities.~~ ~~• Provide End of Trip Bicycle Facilities: constructing facilities that support cyclists such as bike parking, lockers, and showers.~~ ~~• Implement Transit-Supportive Roadway Treatments: funding infrastructure improvements such as traffic signal modifications and roadway signing and striping that are dedicated to improving transit travel times and reliability.~~ ~~• Transit Passes: proving discounted or free transit fare to a specific geographic area, population group, or to the general public.~~ ~~• Vanpool Program: providing groups of 5 to 15 people with direct shuttle service between their workplace and residence.~~ ~~• Carshare Program (conventional or EV): providing access to a shared fleet of on-demand vehicles for short term use/rental. Best practice is to discount carshare membership and provide priority parking for carshare vehicles to encourage use of the service.~~ ~~• Bikeshare Program (conventional or EV): providing access to a shared fleet of on-demand bicycles for short term use/rental. Best practice is to discount bikeshare membership and dedicate bikeshare parking to encourage use of the service.~~ ~~• Rideshare Program: providing access to and encouraging the use of a ridesharing platform or service. This could be an app, website, or other service that provides ride matching coordination services.~~ ~~• Community Based Travel Planning (CBTP): CBTP is a residential based approach to outreach, performed by trained advisors, that provides households within a targeted geographic area with customized information, incentives, and support to encourage the use of transportation alternatives in place of single~~	

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
~~occupancy vehicles.~~ ~~• Commute Trip Reduction (CTR) Program: CTR programs can be mandatory or voluntary, and involve providing information, coordination, services, infrastructure, and/or incentives for alternative modes such as ridesharing, vanpool, transit passes, and cycling.~~	
Tribal Cultural Resources	
5-3 Upon receipt of an application for a proposed project subject to CEQA and within the City's jurisdiction, the City's representative shall consult with the relevant tribe(s)' representative(s) to determine if the proposed project is within a culturally sensitive area to the tribe. If sufficient evidence is provided to reasonably ascertain that the site is within a tribal culturally sensitive area, an archaeologist shall prepare a cultural resources assessment. The findings of the cultural resources assessment shall be incorporated into the CEQA documentation. A copy of the report shall be forwarded to the tribe(s). If mitigation is recommended in the CEQA document, the procedure described in Mitigation Measure 5-4 shall be followed.	Applicable. This Measure is carried forward from the Certified SEIR and shall be implemented by the Modified Project.
5-4 Prior to the issuance of grading permits for a proposed project for which the CEQA document defines cultural resource mitigation for potential tribal resources, the project applicant shall contact the designated tribe(s) to notify them of the grading, excavation, and monitoring program. The applicant shall coordinate with the City of Ontario and the tribal representative(s) to develop mitigation measures that address the designation, responsibilities, and participation of tribal monitors during grading, excavation, and ground-disturbing activities; scheduling; terms of compensation; and treatment and final disposition of any cultural resources, sacred	Applicable. This Measure is carried forward from the Certified SEIR and shall be implemented by the Modified Project.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
sites, and human remains discovered on the site. The City of Ontario shall be the final arbiter of the conditions for projects within the City's jurisdiction.	
TCR-1 Tribal Cultural Resources Monitoring. The project archaeologist, in consultation with interested tribes, the developer, and the City of Ontario, shall develop an archaeological monitoring plan (AMP) to address the details, timing, and responsibility of archaeological and cultural activities that will occur on the project site. Details in the AMP shall include: 1. Project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) and development scheduling; 2. The development of a rotating or simultaneous schedule in coordination with the developer and the project archeologist for designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all project archaeologists (if the tribes cannot come to an agreement on the rotating or simultaneous schedule of tribal monitoring, the Native American Heritage Commission shall designate the schedule for the onsite Native American Tribal Monitor for the proposed project); 3. The protocols and stipulations that the developer, City, Tribes, and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources	Applicable. This Measure is carried forward from the Certified SEIR and shall be implemented by the Modified Project.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
evaluation. At least 30 days prior to application for a grading permit and before any brush clearance, grading, excavation, and/or ground disturbing activities on the site, the developer shall retain a tribal cultural monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources. Pursuant to the AMP, a tribal monitor from the consulting tribe shall be present during the initial grading activities. If tribal resources are found during grubbing activities, the tribal monitoring shall be present during site grading activities.	
TCR-2 Treatment and Disposition of Cultural Resources. In the event that Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., for the proposed project, the following procedures will be carried out for treatment and disposition of the discoveries: 1. Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process; 2. Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and nonhuman	Applicable. This Measure is carried forward from the Certified SEIR and shall be implemented by the Modified Project.

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks
remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Ontario with evidence of same: a. Accommodate the process for on-site reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloging, basic analysis, other analyses as recommended by the project archaeologist and approved by consulting tribes, and basic recordation have been completed; all documentation should be at a level of standard professional practice to allow the writing of a report of professional quality; b. A curation agreement with an appropriate qualified repository in San Bernardino County that meets federal standards per 36 CFR Part 79, and therefore the resource would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility in San Bernardino County, to be accompanied by payment of the fees necessary for permanent curation; c. For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, materials shall be curated at the San Bernardino County Museum by default;	

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
d. At the completion of grading, excavation, and ground-disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pregrade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the City, County Museum, and consulting tribes.	
TR-1 Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities: ***A. The project applicant/lead agency shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation. The monitor shall be retained prior to the commencement of any "ground-disturbing activity" for the subject project at all project locations (i.e., both on-site and any off-site locations that are included in the project description/definition and/or required in connection with the project, such as public improvement work). "Ground-disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching.*** ***B. A copy of the executed monitoring agreement shall be submitted to the lead agency prior to the earlier of the commencement of any***	In addition to mitigation carried forward as noted above, Condition of Approval TR-1 is incorporated to ensure that tribal cultural resource impacts are maintained at levels that would be less-than-significant.

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks
ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity. ***C. The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the project applicant/lead agency upon written request to the Tribe.*** ***D. On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Kizh from a designated point of contact for the project applicant/lead agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or (2) a determination and written notification by the Kizh to the project applicant/lead agency that no future, planned construction activity and/or development/construction phase at the project site possesses the potential to impact Kizh TCRs.*** ***E. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered***	

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
TCR has been fully assessed by the Kizh monitor and/or Kizh archaeologist. The Kizh will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural and/or historic purposes.	
TR-2 Unanticipated Discovery of Human Remains and Associated Funerary Objects: ***A. Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code Section 5097.98, are also to be treated according to this statute.*** ***B. If Native American human remains and/or grave goods discovered or recognized on the project site, then all construction activities shall immediately cease. Health and Safety Code Section 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and all ground- disturbing activities shall immediately halt and shall remain halted until the coroner has determined the nature of the remains. If the coroner recognizes the human remains to be those of a Native American or has reason to believe they are Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission, and Public Resources Code Section 5097.98 shall be followed.*** ***C. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2).***	In addition to mitigation carried forward as noted above, Condition of Approval TR-2 is incorporated to ensure that tribal cultural resource impacts are maintained at levels that would be less-than-significant.

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks
D. Construction activities may resume in other parts of the project site at a minimum of 200 feet away from discovered human remains and/or burial goods, if the Kizh determines in its sole discretion that resuming construction activities at that distance is acceptable and provides the project manager express consent of that determination (along with any other mitigation measures the Kizh monitor and/or archaeologist deems necessary). (CEQA Guidelines Section 15064.5(f).) ***E. Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods. Any historic archaeological material that is not Native American in origin (non-TCR) shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, it shall be offered to a local school or historical society in the area for educational purposes.*** ***F. Any discovery of human remains/burial goods shall be kept confidential to prevent further disturbance.***	
TR-3 Procedures for Burials and Funerary Remains: ***A. As the Most Likely Descendant ("MLD"), the Koo-nas-gna Burial Policy shall be implemented. To the Tribe, the term "human remains" encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the preparation of the soil for burial, the burial of funerary objects with the deceased, and the ceremonial burning of human remains.***	In addition to mitigation carried forward as noted above, Condition of Approval TR-3 is incorporated to ensure that tribal cultural resource impacts are maintained at levels that would be less-than-significant.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
B. If the discovery of human remains includes four or more burials, the discovery location shall be treated as a cemetery and a separate treatment plan shall be created. ***C. The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered as associated funerary objects. Cremations will either be removed in bulk or by means as necessary to ensure complete recovery of all sacred materials.*** ***D. In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that burials will be removed.*** ***E. In the event preservation in place is not possible despite good faith efforts by the project applicant/developer and/or landowner, before ground-disturbing activities may resume on the project site, the landowner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human***	

Table 5.1-1
Mitigation Summary Matrix

Mitigation Measures	Remarks
remains and/or ceremonial objects. ***F. Each occurrence of human remains and associated funerary objects will be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the project site but at a location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.*** ***G. The Tribe will work closely with the project's qualified archaeologist to ensure that the excavation is treated carefully, ethically, and respectfully. If data recovery is approved by the Tribe, documentation shall be prepared and shall include (at a minimum) detailed descriptive notes and sketches. All data recovery data recovery-related forms of documentation shall be approved in advance by the Tribe. If any data recovery is performed, once complete, a final report shall be submitted to the Tribe and the NAHC. The Tribe does NOT authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.***	
Utilities and Service Systems	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all utilities and service systems impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.

Table 5.1-1 Mitigation Summary Matrix	
Mitigation Measures	**Remarks**
Wildfire	
N/A	Mitigation is not identified in the Certified SEIR. As substantiated in this Addendum, all wildfire impacts of the Modified Project would be less-than-significant, or no impacts would result from the Modified Project. No mitigation is required of the Modified Project.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PSPA22-005, AN AMENDMENT TO THE AVENUE SPECIFIC PLAN TO: 1) MODIFY THE LAND USE DESIGNATION OF PLANNING AREA 4 AND APPLY DENSITY MODIFICATIONS TO PLANNING AREAS 1B, 2A, 3B, AND 5 FOR CONISTENCY WITH THE ONTARIO PLAN 2050 LAND USE PLAN; 2) APPLY GENERAL MODIFICATIONS THROUGHOUT THE DOCUMENT FOR CLARITY; AND, 3) MAKE EXHIBIT AND TEXT UPDATES THROUGHOUT THE DOCUMENT TO SUPPORT THE PROJECT, FOR LAND LOCATED AT THE NORTHWEST CORNER OF ARCHIBALD AVENUE AND ONTARIO RANCH ROAD, AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 0218-191-04; 0218-191-14; 0218-191-15; 0218-191-16; 0218-191-05; 0218-191-22; 0218-191-20.

WHEREAS, RICHLAND COMMUNITIES (hereinafter referred to as "Applicant") has filed an Application for the approval of a Specific Plan Amendment, File No. PSPA22-005, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"). The full Specific Plan Amendment document is attached to this Resolution as “Attachment A: File No. PSPA22-005 Amended Specific Plan Document”; and

WHEREAS, the Application applies to land located within The Avenue Specific Plan area, which is bound by Schaefer Avenue to the north, Carpenter Avenue to the west, Ontario Ranch Road and Old Edison Road to the south, and Haven Avenue to the east, and is presently improved with a mix of developed residential and commercial land uses, vacant and unimproved land, and agricultural dairy and nursery uses; and

WHEREAS, the property to the north of the Project site is within the Specific Plan – Agricultural Overlay (SP-AG), Countryside Specific Plan, West Haven Specific Plan, and Utility Corridor (UC) zoning district, and is developed with agricultural, dairy, and residential land uses and vacant land. The property to the east is within the Rich-Haven Specific Plan, and is developed with residential land uses and vacant land. The property to the south is within the Parkside and Grand Park Specific Plans, and is developed with agricultural and residential land uses and vacant land. The property to the west is within the Specific Plan – Agricultural Overlay (SP-AG) zoning district, and is developed with agricultural uses and vacant land; and

WHEREAS, the Specific Plan Amendment consists of various map and text changes to accommodate land use and density modifications to Planning Areas 4, 1B, 2A, 3B, and 5, to bring the Specific Plan’s Land Use Plan into consistency with The Ontario Plan 2050 Land Use Plan (see Exhibit A: Existing and Proposed Specific Plan Land Use Plan and Exhibit B: Proposed Specific Plan Land Use Table, appended to this Resolution). Textual changes are summarized as follows:

- The net acreage has been updated to more accurately reflect existing conditions.

- The total number of dwelling units will increase from 2,981 to 3,753 units and commercial square footage will increase from 130,680 to 335,176 square feet.

- Each land use within a Planning Area has been provided a designated line on the land use table, whereas previously, no such distinctions were made.

- Adjustments have been made throughout the table to accurately reflect existing conditions and accurate development information for built-out Planning Areas.

- The following notes have been introduced to the table for further clarification:

    - Realignment of Schaefer Avenue creates the need for Planning Area C, as it is owned separately from Planning Area 1A.

    - All acreages are approximate – exact acreages will be defined through tract map surveys. Additional studies may be required to transfer these units. See Section 3.1.1 for additional information.

    - Density blending will be allowed within Planning Areas within one TOP land use step (i.e. from LDR to LMDR) and between Planning Areas at a rate no higher than 15 percent. If units are blended within a Planning area or moved between Planning Areas, then Technical Studies for impacts to the Water and Sewer Master Plan Systems will be required as part of the entitlement process; and

WHEREAS, the Specific Plan Amendment will facilitate future development through forthcoming Tentative Tract or Parcel Maps and Development Agreements, which shall be reviewed by the appropriate hearing bodies once deemed ready for public hearing; and

WHEREAS, The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) was certified on August 16, 2022 (hereinafter referred to as "Certified SEIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified SEIR (hereinafter referred to as "SEIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the environmental impacts of this project were thoroughly analyzed in the SEIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified SEIR, and that the Certified SEIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an EIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, the proposed Project is located within the Airport Influence Area of Chino Airport, within the City of Ontario boundary, and is subject to, and must be consistent with, the policies criteria set forth in Reference I, Chino Airport Land Use Compatibility Plan (CNO ALUCP), which applies only to jurisdictions within City of Ontario, and addresses the safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on February 25, 2025, the Planning Commission of the City of Ontario conducted a hearing to consider the SEIR Addendum and the Project, and concluded said hearing on that date, voting to issue Resolution No. PC25-012, recommending the City Council adopt the EIR Addendum, and voting to issue Resolution No. PC25-013, recommending the City Council approve the Application; and

WHEREAS, as the first action on the Project, on March 18, 2025, the City Council issued a Resolution adopting the SEIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on March 18, 2025, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the Addendum and the administrative record for the Project, including all written and oral evidence provided during the comment period. Based upon the facts and information contained in the Addendum and the administrative record, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The environmental impacts of the Project were reviewed in conjunction with an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The SEIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of Project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The SEIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the Project may result in significant environmental impacts.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the SEIR Addendum, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Certified SEIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified SEIR that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified SEIR was certified/adopted, that shows any of the following:

a. The Project will have one or more significant effects not discussed in the Certified SEIR; or

b. Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

c. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

d. Mitigation measures or alternatives considerably different from those analyzed in the Certified SEIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the City Council finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 4: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

(2) On August 2, 2022, the City Council of the City of Ontario approved and adopted a Development Code Amendment to establish the Chino Airport ("CNO") Overlay Zoning District ("OZD") and Reference I, Chino Airport Land Use Compatibility Plan ("CNO ALUCP"). The CNO OZD and CNO ALUCP established the Airport Influence Area for Chino Airport, solely within the City of Ontario, and limits future land uses and development within the Airport Influence Area, as they relate to safety, airspace protection, and overflight impacts of current and future airport activity. The CNO ALUCP is consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the CNO ALUCP. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the CNO ALUCP compatibility factors, including Safety, Airspace Protection, Overflight. As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the Chino ALUCP.

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Sections 1 through 4, above, the City Council hereby concludes as follows:

(1) ***The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan 2050.*** The Specific Plan Amendment is intended to bring The Avenue Specific Plan's land use plan into consistency with The Ontario Plan 2050's land use plan and therefore will enable the Specific Plan to be consistent with and further implement the goals, policies, plans, and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan 2050.

(2) ***The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The Specific Plan Amendment is intended to bring The Avenue Specific Plan's land use plan into consistency with The Ontario Plan 2050's land use plan. The Ontario Plan 2050's land use plan was established to promote the public interest, safety, convenience, and general welfare of the City. The proposed Specific Plan land use plan modifications will be in keeping with the existing and anticipated land use patterns in and around the Specific Plan area.

(3) ***In the case of an application affecting specific property(ies), the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The Specific Plan Amendment is intended to bring The Avenue Specific Plan's land use plan into consistency with The Ontario Plan 2050's land use plan and the proposed modifications will be in keeping with the existing and anticipated land use patterns in and around the Specific Plan area. The proposed amendment will thus remain harmonious with the surrounding residential, agricultural, and commercial land uses and will not adversely affect the adjacent properties and land uses.

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** The Specific Plan Amendment is intended to bring The Avenue Specific Plan's land use plan into consistency with The Ontario Plan 2050's land use plan, and no modifications are proposed that will impact property development regulations. The Ontario Plan 2050 analyzed potential impacts to utilities, and the Project Addendum found that there would be no additional impact as a result of this Project. Any future development shall be reviewed and approved through subsequent entitlements that will ensure that adequate parcel size, shape and access will be provided. Further, additional studies ensuring the adequate

availability of utilities shall be required, should any future development deviate from the standards established by this Specific Plan Amendment.

SECTION 6: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 5, above, the City Council hereby APPROVES the herein described amendment to The Avenue Specific Plan (File No. PSPA22-005), attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 18th day of March, 2025.

Section 1 - Introduction/Overview

1.1 Vision of The Avenue

The Avenue will be a truly walkable community, featuring pedestrian amenities that encourage walking and biking to schools, parks and basic commercial needs—all within five minutes, for the majority of residents. The Avenue is named after the central La Avenida Drive, a tree-lined street with one-way traffic on each side, and a continuous 13' parkway and 8' sidewalk on both sides without curb cuts or driveways to create an uninterrupted path. The Avenue will provide a connection from Archibald Avenue to the Recreation Area, Active Recreation Park, Schools, and adjacent neighborhood and pocket parks. With a diversity of housing types and styles, The Avenue will have something for everyone—providing a place for everyone to live, learn, play and shop.

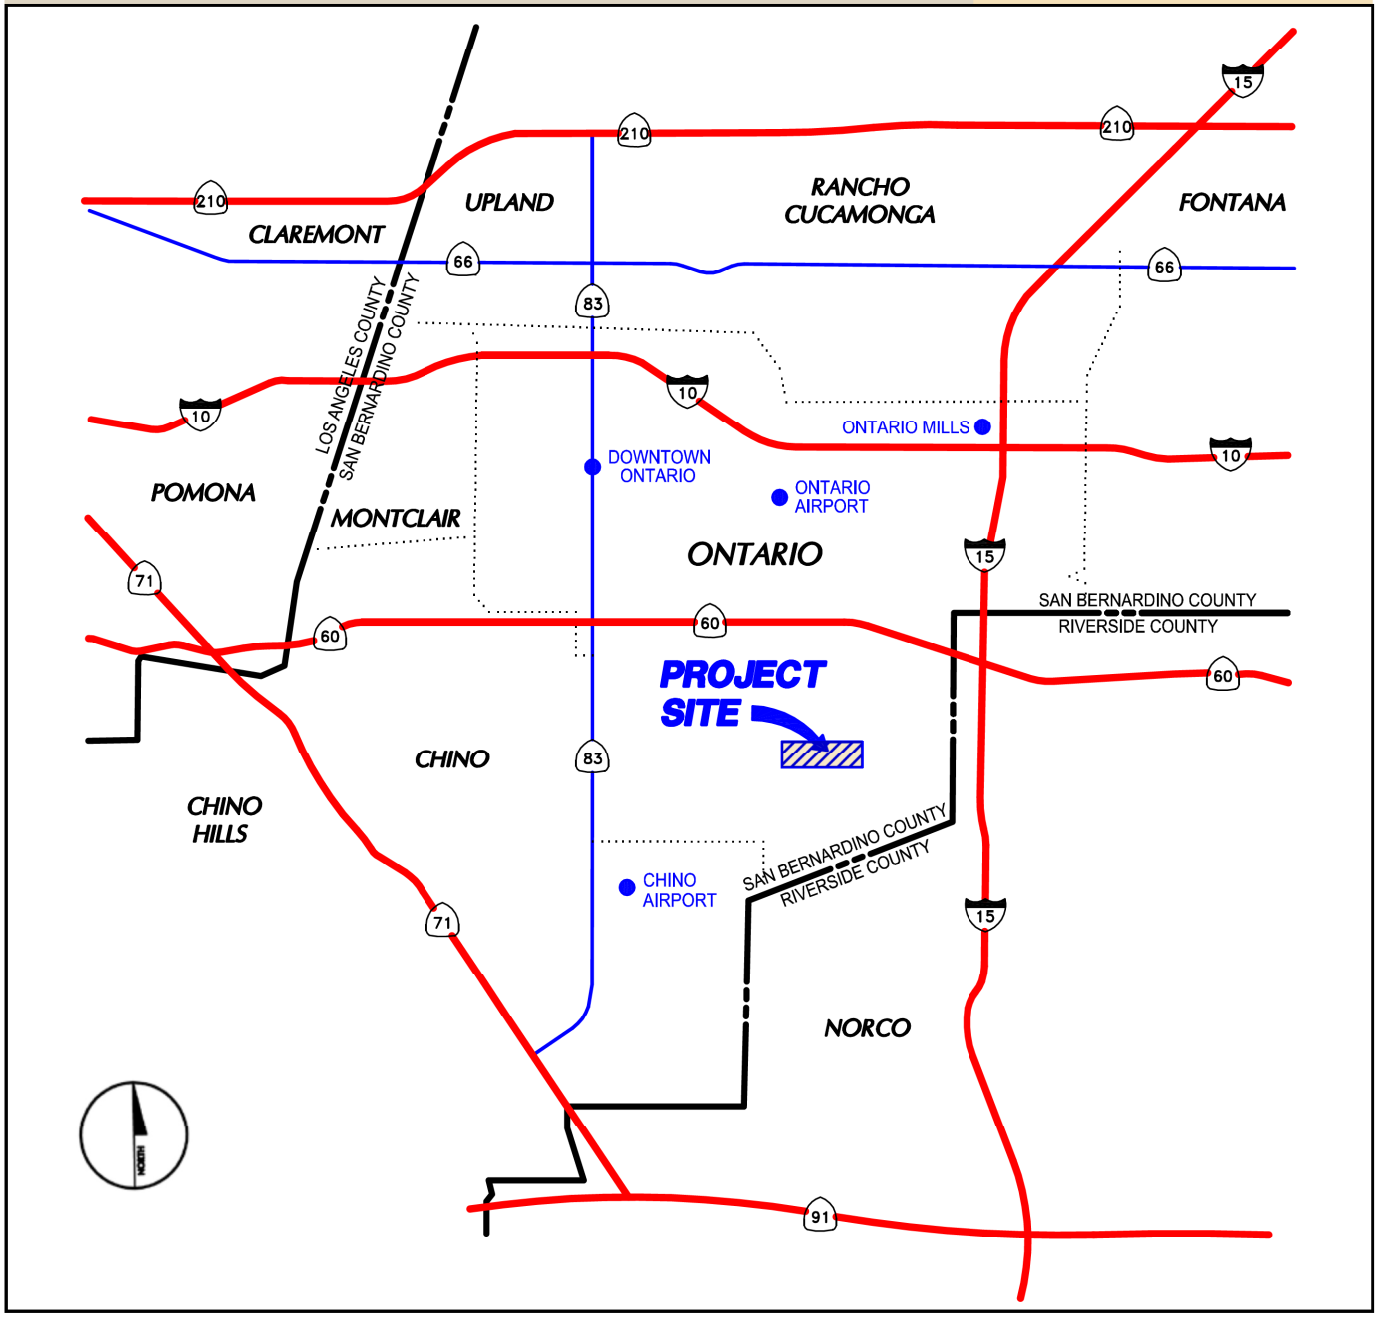
1.2 Project Location

The Avenue Specific Plan is comprised of approximately 568.1 gross acres. The project site is bounded by Schaefer Avenue to the north, Ontario Ranch Road to the south, Haven Avenue to the east, Carpenter Avenue to the west as illustrated in Exhibit 1, "Regional Map" and Exhibit 2, "Project Location".

The Avenue will offer a variety of residential housing types and neighborhoods within walking distance to parks, schools, and recreation facilities. The Land Use Plan, as illustrated in Exhibit 8, "Land Use Plan" is consistent with the goals and policies of Ontario Ranch General Plan Amendment, combining walkable residential neighborhoods served by recreational spaces that offer opportunities for social interaction among residents. A Planned retail and commercial area is located within La Avenida Drive at Ontario Ranch Road and Haven Avenues to serve the commercial needs of the residents of The Avenue as well as surrounding neighborhoods.

The regional context and local setting of The Avenue (the Project Site) are illustrated in Exhibit 1, "Regional Map", and Exhibit 2, "Project Location Map".

Exhibit 1 - Regional Map



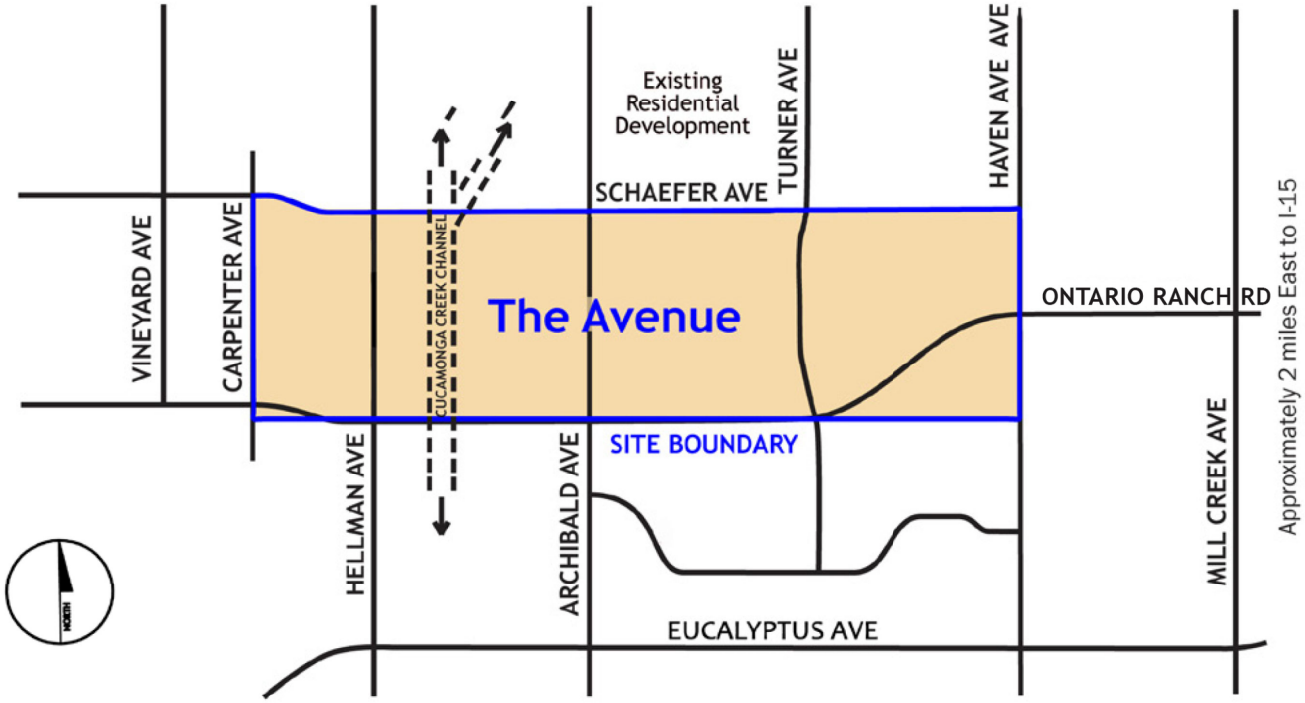


Exhibit 2 - Project Location Map

1.3 Project History and Background

After an extensive public participation program, the Ontario City Council adopted the Sphere of Influence General Plan Amendment for the 8,069 acre area known as the "The New Model Colony, now known as Ontario Ranch, on January 7, 1998. On November 30, 1999, the area was annexed into the City of Ontario. Ontario Ranch General Plan provides the framework to create a high quality environment where residents will live, work and play. The area was divided into 30 subareas, each requiring the preparation of a specific plan reflecting the unique goals and qualities of each area. In this way, each subarea could be part of the overall Ontario Ranch, but retain a sense of individuality. The Avenue site has historically been used for agricultural operations, primarily dairy use. Those areas not in active agricultural production are occupied by rural residential housing, farm buildings, and other ancillary agricultural facilities. The natural vegetation and soil conditions that once occurred throughout La Avenida Drive have been significantly altered through agricultural uses, leaving little or no native vegetation.

On January 26th, 2010, the City of Ontario adopted The Ontario Plan (TOP) which serves as the City's new business plan and includes a long term Vision and a principle based Policy Plan (General Plan). The city's Policy Plan, which acts as the City's General Plan, designates (Policy Plan Exhibit LU-1 -Land Use Plan) the project site for development of Low Density Residential (2.1 -5.0 dwelling units per acre), Low Medium Residential (5.1 - 11 .0 dwelling units per acre), Medium Density Residential (11.1 - 25.0 dwelling units per acre), Neighborhood Commercial, Public Schools, and Open Space- Parkland.

The Avenue Specific Plan was amended on February 2, 2010, June 17, 2104, March 21, 2017, and November 17, 2020 to modify the Land Use Plan. The city of Ontario General Plan (The Ontario Plan – TOP) and The Avenue Specific Plan was amended concurrently and reflects the final language to convert a 10 acre portion of the 20 acre school site located west of Turner Road; identified as PA 6B to Low Medium Density Residential (5.1 – 11.0 dwelling units per acre).

1.4 Specific Plan Purpose

The Avenue Specific Plan serves to implement the City's Policy Plan for the project site and provides zoning regulations for development of the project site by establishing permitted land use, development standards, infrastructure requirements, and implementation requirements for development. A comprehensive set of design guidelines and development regulations are included to guide and regulate site planning, landscape and architectural character within the community ensuring that excellence in community design is achieved during project development. The Avenue Specific Plan establishes the procedures and requirements to approve new development within the project site.

Typical neighborhood pocket park

1.5 Specific Plan Objectives

The following objectives are established for The Avenue Specific Plan:

Residential Areas

1. Development of a variety of housing types into the land use plan addressing a wide variety of lifestyles and economic segments
2. Provide for both single family attached and detached housing in low density and low medium density residential districts
3. Plan for seamless transitions between housing product types in order to create cohesive neighborhoods that include a range of types and styles
4. Plan residential neighborhoods around a series of parks and open space areas, promoting outdoor activity and interaction among neighbors
5. Provide for connectivity between residential neighborhoods, recreational areas, and adjacent commercial land uses, as well as to the schools, by means of pedestrian and bicycle trail linkages along the Avenue and trails incorporated into both the Southern California Edison Easement and the Cucamonga Creek Channel

6. Create a strong functional relationship between homes and schools
7. Create an hierarchy of parks, providing for active and passive recreation
8. Create residential neighborhoods with diverse architectural styles and traditional design elements reflecting some of the characteristics of older established Ontario neighborhoods

Commercial Area

1. Develop retail and commercial uses to meet the needs of the residential community and larger surrounding market area, as well as implement Policy Plan Policies
2. Provide trails and sidewalks to connect the residential community with the retail and commercial area
3. Consider the development of plazas and other public space amenities within the retail and commercial area providing space for social interaction
4. Orient retail and commercial buildings to the street, wherever possible, to create an urban edge and sense of arrival

Commercial entry concept from adjacent neighborhood

1.6 Development Approval Components

The components of the development approval process for The Avenue are discussed below.

General Plan

The Ontario Plan establishes the direction and vision for the City of Ontario providing a single guidance system that will shape the Ontario community for the future. The Plan provides for policies to accommodate change over a 30 year period commencing in 2010, the beginning of the planning period. The Ontario Plan consists of a six part Component Framework: 1) Vision, 2) Governance Manual, 3) Policy Plan, 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback.

Specific Plan

The Policy Plan requires the approval of a Specific Plans for development of the project site to ensure that sufficient land area is included to achieve unified districts and neighborhoods. The City of Ontario has zoned the project site as AG-Specific Plan. The zoning designation of AG-Specific Plan requires that a Specific Plan be approved to guide development of the project site and to implement the goals and policies of the Policy Plan. The Specific Plan provides the zoning regulations to govern development of the project

site. The requirements of the Specific Plan shall take precedence over the City of Ontario Development Code. In instances where the Specific Plan is silent, the City of Ontario Development Code shall prevail.

Subdivision Maps

Tentative tract maps will be approved by the City of Ontario for the residential portion of The Avenue indicating the approximate location of lot lines, streets, and proposed grading. Following approval by the City of the tentative tract maps, final maps will be prepared. The final maps become legal documents that are recorded and define legal parcels and lots that can be sold for development. Parcel maps may be approved by the City of Ontario for development proposed within the commercial and business park/light industrial portions of The Avenue.

Development Plan Review

Following the approval of The Avenue Specific Plan, all development proposals for individual neighborhoods or product areas within the Specific Plan will be subject to the Development Plan Review process pursuant to Article 8 of the City's Development Code.

Development Agreement(s) Required

Unless done in a coordinated manner and with adequate fiscal planning, development projects within Ontario Ranch are likely to present a challenge in their implementation because of the lack of existing public facilities including streets, sewerage, transportation, drinking water, school, and utility facilities. California law has established a mechanism for ensuring the adequate provision of such facilities, while at the same time providing assurances to applicants that, upon approval of the project, the applicants can proceed with their projects. Approval of this Specific Plan without development agreements may result in a waste of resources, escalate the cost of housing to the consumer, and discourage investment in and commitment to comprehensive planning, as envisioned by the City, which seeks to make maximum efficient utilization of resources at the least economic cost to the public.

Therefore, a single statutory development agreement, or multiple agreements, authorized pursuant to California Government Code sections 65864 et seq., shall be required as part of the approval of this Specific Plan. For the above-mentioned reasons, the development agreement(s) for this Specific Plan shall include, among other things, methods for financing acquisition and construction of infrastructure, acquisition and development of adequate levels of parkland, and schools, as well as the provision of adequate housing opportunities for various segments of the community consistent with the regional housing needs assessment. Such development agreements shall have been fully approved before the issuance of building permits for plans within this project.

1.7 Specific Plan Authority and Requirements

State of California Government Code, Title 7, Division 1, Chapter 3, Article 8, Section 65450-57 grants authority to cities to adopt Specific Plans for purposes of implementing the goals and policies of their

General Plans. The Government Code specifies that Specific Plans will be adopted by ordinance, and that the Specific Plan is required to be consistent with the General Plan. The City of Ontario will be adopting this Specific Plan, as with other Ontario Ranch Specific Plans, by ordinance, thereby establishing the zoning regulations for the development of The Avenue. The standards set by The Avenue Specific Plan shall take precedence over the City of Ontario Development Code, and in instances where The Avenue Specific Plan is silent, the City of Ontario Development Code shall prevail. California Government Code Section 65451 sets forth the minimum requirements and review procedures for specific plans as follows:

A Specific Plan shall include a text and a diagram or diagrams, which specify all of the following in detail:

1. The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan;
2. The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan;

Typical outdoor eating area - School

3. Standards and criteria by which improvements will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable, and a program of implementation measures including regulations, programs, public works projects and the financing measures necessary to carry out paragraphs 1 and 2 above. The Specific Plan shall include a statement of the relationship of the Specific Plan to the General Plan.

1.8 Relationship to General Plan, Airport Land Use Compatibility and Zoning

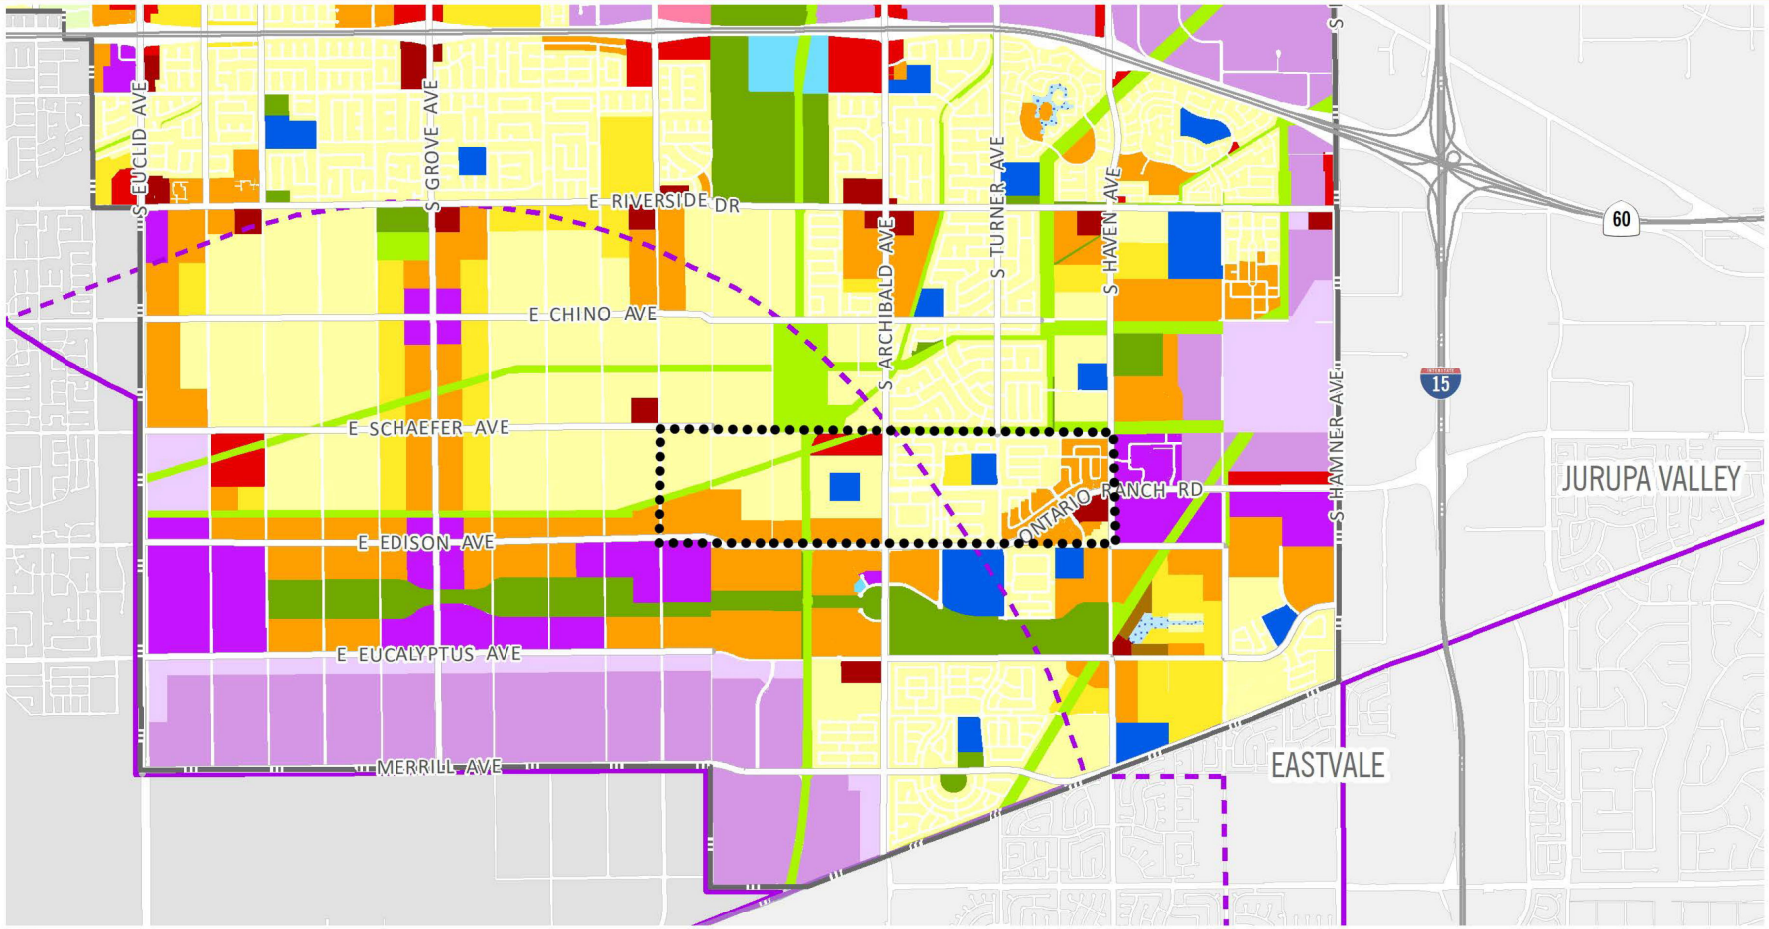
The City's Policy Plan, which acts as the City's General Plan, designates the project site for development as follows:

- Low Density Residential (2.1 -5.0 dwelling units per acre)
- Low Medium Residential (5.1 - 11 .0 dwelling units per acre)
- Medium Density Residential (11.1 - 25.0 dwelling units per acre)
- Neighborhood Commercial
- General Commercial
- Public Schools
- Open Space- Parkland.
- Open Space - Non-Recreation

On August 16, 2022, TOP was amended to accommodate the TOP 2050 Update, which made modifications to the Vision, Governance Manual, and Policy Plan components of TOP and established a General Commercial land use within PA-4 and Medium Density Residential land use areas within PAs 2A, 3B and 5. The Policy Plan (General Plan) establishes a development capacity of 3,739 dwelling units and a maximum FAR of 0.40 for Neighborhood Commercial for a total of up to 436,297 square feet of commercial uses for the Specific Plan Area. The Policy Plan residential capacity is further broken down as follows:

Net Acres	TOP Land Use Designation	Maximum Permitted Dwelling Units
351.0	Low Density Residential	1,580
57.6	Low Medium Density Residential	489
75.9	Medium Density Residential	1,670
Total 484.5		3,739*

**Densities do not reflect maximum allowable densities by the Policy Plan and are based on TOP EIR densities (average) of 4.5 du/ac for Low Density, 8.5 du/ac for Low Medium Density and 22 du/ac for Medium Density.*



California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65450-65457) permits the adoption and administration of specific plans as an implementation tool for elements contained in the local general plan. Specific plans must demonstrate consistency in regulations, guidelines, and programs with the goals and policies set forth in the general plan. The A venue Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario Policy Plan (General Plan). The policy analysis in located in the Appendix of this document, describes the manner in which the A venue Specific Plan complies with the Policy Plan policies applicable to the project.

The Avenue Specific Plan is located within the Airport Influence Area (AIA) of Chino Airport and Ontario International Airport and is required to be consistent with both Airport Land Use Compatibility Plans.

1.9 CEQA Compliance

An Environmental Impact Report (EIR) was prepared by the City of Ontario for The Avenue Specific Plan in accordance with the California Environmental Quality Act (CEQA), to address impacts associated with the Specific Plan. The EIR was prepared as a basis for the environmental review for all subsequent discretionary and ministerial actions. On December 19, 2006, the City Council certified the EIR for The Avenue Specific Plan.

Section 2 - Existing Conditions

2.1 Site History

The Avenue site has previously been extensively used for agricultural operations, including dairy use. Those areas not in active agricultural production are occupied by rural residential housing, farm buildings and other ancillary facilities. The natural vegetation and soils conditions that once occurred throughout the project area have been significantly altered through agricultural uses, leaving little or no native vegetation. Though still currently in the transitioning phase for development from agricultural uses, the Zoning Classification for parts of the site were once considered as (AG) Specific Plan Ag Preserve.

2.2 Existing Site Conditions

The Avenue has undergone a significant change in land use patterns replacing what was historically undeveloped, with agricultural operations scattered throughout the area with lower density urban land uses. Historically, improvements within The Avenue included single-family residences, feed storage areas, and various other farming or cattle raising facilities. Other agricultural-related facilities, such as above ground tanks and modular structures, were scattered throughout, and a commercial nursery was located on the easterly portion of the site. These agricultural uses are transitioning to residential uses, parks and recreational areas and neighborhood commercial development since the Avenue Specific Plan has been approved and has been implemented over the plan area.

Exhibit 4 - Site Aerial Photo

2.2.1 Site Area

The Avenue Specific Plan is approximately 568.1 gross acres in size. This includes street right-of-ways and all utility easements.

2.2.2 Topography

The Project Site is located on gently sloping undeveloped terrain with a relatively uniform slope as illustrated in Exhibit 5, “Existing Topography”. The existing ground on the site slopes southerly away from Schaefer Avenue at an approximately 1% grade.

2.2.3 Existing On-site Land Use

The Avenue Specific Plan currently comprises agricultural, dairy, farming, and other agricultural related land uses. There are utility uses such as the Cucamonga Creek flood control channel and the Southern California Edison utility easement traversing the site, as well as a one-acre Southern California Edison substation.

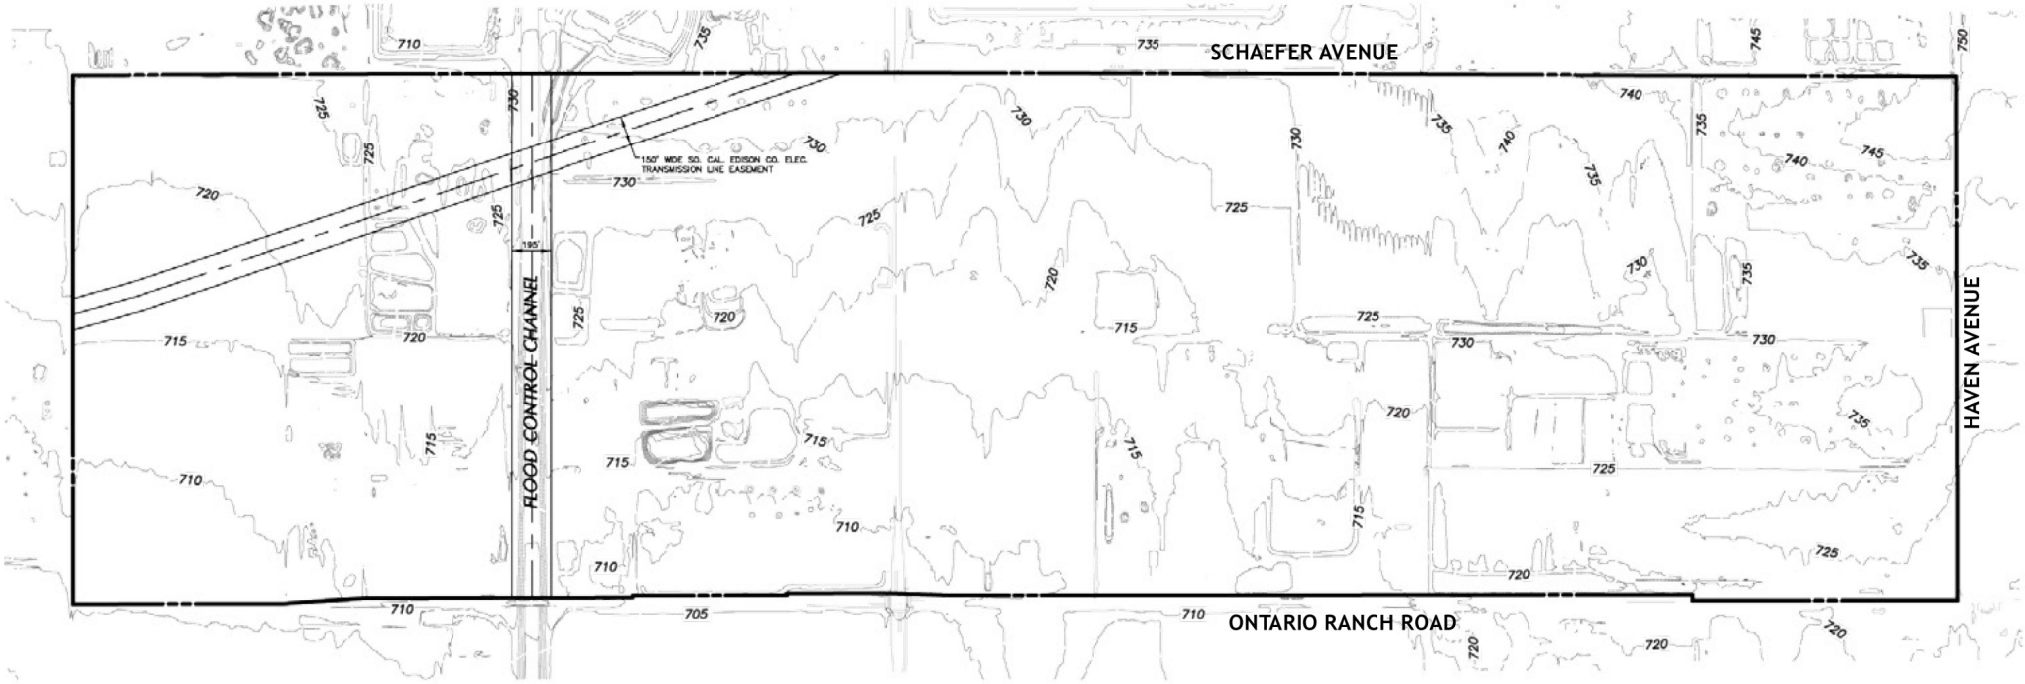
Historic agricultural uses on the Project Site circa 2004



Street scene along La Avenida Drive

Turner Avenue and La Avenida Drive Intersection

VIEW OF THE AVENUE SPECIFIC PLAN AREA LOOKING WEST

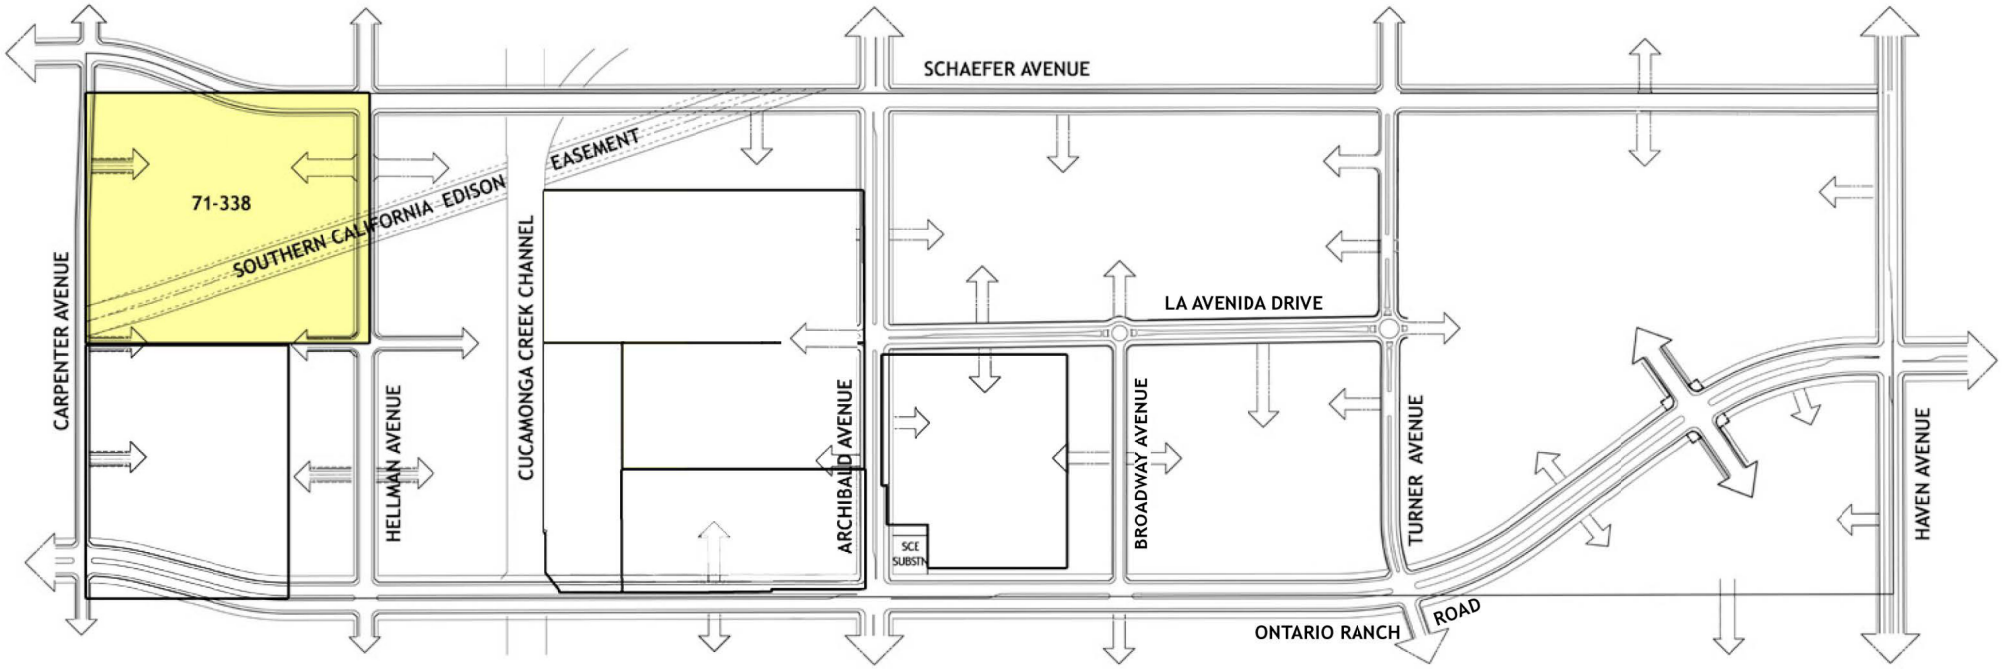
Note: The existing site slopes southerly at approximately 2% grade.

2.2.4 Surrounding Land Use

Land uses adjacent to The Avenue Specific Plan area include:

North: Existing residential community and SCE Easement.
East: New residential community, low and medium density developments, farm land and vacant land.
South: Existing residential community is currently under construction and future mixed use/residential development.
West: Farm land and vacant land.

Ontario Ranch General Plan designates the surrounding areas as:



North: Low Density Residential, Elementary School, Flood Control and Green Belt (Subareas 5 and 12)
East: Low Density Residential and Green Belt (Subarea 12)
South: Low, Medium and High Density Residential, Flood Control and Green Belt (Subarea 23)
West: Medium Density Residential, High Density Residential and Green Belt (Subarea 17)

2.4 Existing Circulation

Access to The Avenue Specific Plan is currently provided from newly constructed arterial and collector roadways that are developed adjacent to and within The Avenue Specific Plan area. Ontario Ranch Road abuts the plan area on the south and is currently being improved in a phased manner from Haven Avenue westerly towards Carpenter Avenue.

Archibald Avenue has partially been improved to its ultimate condition and bisects the plan area through the center of the project. Schaefer Avenue has been fully constructed from Haven Avenue to Archibald Avenue. Haven Avenue has been fully constructed between Schaefer Avenue and Ontario Ranch Road (formerly Edison Avenue).

2.5 Existing Infrastructure and Utilities

2.5.1 Water

There is an existing 12-inch main within Archibald. This is a Chino Desalter Authority (CDA) line which extends through La Avenida Drive. The source is well water, the zone is elevation 1010 and the line usage is for dairy lands in this vicinity. The private wells currently in use for this main will eventually be destroyed per DHS standards upon development of this Specific Plan. The location of existing wells are shown in Exhibit 24, "Existing Wells". Per the Ontario Ranch Water Master Plan, new domestic facilities will be required to serve The Avenue Specific Plan area. Existing water facilities are shown on Exhibit 20, "Domestic Water Master Plan".

In compliance with the Chino Basin Water Master's Well Procedure for Developers, a well use/destruction plan and schedule for all existing private/agricultural wells shall be submitted to the City of Ontario for approval prior to the issuance of permits for any construction activity. If a private well is actively used for water supply, the Developer shall submit a plan to abandon such well and connect users to the City's water system (residential to the domestic water system and agricultural to the recycled water system) when available. Wells shall be destroyed/abandoned per the California Water Resource Guidelines and require permitting from County Health Department. The location of existing wells are shown in Exhibit 24, "Existing Wells". A copy of such permit and Form DWR 188 Well Completion Form shall be provided to the Engineering and Public Works Agency prior to issuance of grading and/or building permits. If the Developer proposes temporary use of an existing agricultural well for purposes other than agriculture, such as grading, dust control, etc., the developer shall make a formal request to the City of Ontario for such use prior to issuance of permits for any construction activity. Upon approval, the Developer shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by the agreement.

2.5.2 Recycled Water

There is an existing Chino Basin Municipal Water District 30-inch main within La Avenida Drive. The main is located within the existing and proposed alignment of Carpenter Street extending northerly and southerly of this Specific Plan area. This main will serve The Avenue project along with proposed Ontario Ranch Master Plan facilities connecting to this 30-inch line as the source of recycled water. Existing recycled water facilities are shown on Exhibit 21, "Recycled Water Master Plan".

2.5.3 Sewer

Existing recently constructed IEUA 33-inch and 36-inch Eastern Trunk Sewer mains are located within Archibald Avenue. The Archibald trunk reach eventually joins the existing Kimball 54-inch Interceptor Trunk Sewer to the south of La Avenida Drive. The existing Archibald IEUA sewer will serve the easterly side of The Avenue Specific Plan via proposed Ontario Ranch Master Plan facilities which will connect to it. La Avenida Drive west of the Cucamonga Flood Channel currently has no gravity sewer service. All other existing septic systems will be destroyed per DHS standards with the development of the Specific Plan. Existing sewer facilities are shown on Exhibit 23, "Sewer Master Plan".

2.5.4 Storm Drainage

The Avenue is presently in agricultural use; therefore, only a limited portion of the site is covered with impervious surfaces. Normal rainfall to the area is able to percolate through on-site soils and does not result in high volumes of surface runoff, as typically associated with urban areas. During periods of heavy rainfall when ground surfaces are saturated, surface runoff is collected in the existing drainage ditches and retention basins located within the site. Off-site flows are then directed into the existing storm drain system surrounding The Avenue which is generally unimproved and consists primarily of open earthen swales along area roadways or curbed roadway surfaces.

Cucamonga Creek Channel

An existing drainage channel bisects the site but does not collect off-site flows from La Avenida Drive. The channel is a major flood control facility that conveys water from much of the urbanized area located to the north of La Avenida Drive through the site and then to the Prado Basin in the south. Existing storm drain facilities are shown on Exhibit 22 “Storm Drain Master Plan”.
Master planned storm drain facilities have been installed along with development/implementation of the Specific Plan since it was originally approved.

2.5.5 Solid Waste

Solid Waste service is provided by the City of Ontario.

2.5.6 Gas

No gas is currently available within The Avenue. Individual propane units are currently being used.

2.5.7 Electric

Electricity is available from Southern California Edison.

2.5.8 Telephone

Telephone is currently available from Verizon.

2.5.9 Cable Television

Cable is available in the newly developed areas of The Avenue.

Schaefer Avenue looking west between Archibald and Haven

Ontario Ranch Road looking west

Northerly site boundary along Schaefer Avenue

2.6 Airport Influence Areas

The Avenue Specific Plan is located within the Airport Influence Areas of Chino Airport and Ontario International Airport. All development proposals or Specific Plan Amendments must be consistent with the Airport Land Use Compatibility Plans for both airports.

This page intentionally left blank

Section 3 - Land Use Plan

3.1 Land Use Concept

The proposed 568.1-acre Avenue Specific Plan offers a traditional neighborhood lifestyle featuring a variety of residential housing types designed within easy walking distance to recreational amenities, retail and commercial uses, and school sites. Connectivity within The Avenue Specific Plan is provided through a system of pedestrian and bicycle trails linking residential neighborhood parks to the retail and commercial land use areas within the plan area.

The Avenue lies between two tree-lined avenues - Ontario Ranch Road to the south and Schaefer to the north. These arterials converge on one another at the eastern portion of the project. There are two additional dramatic tree-lined arterials, Archibald and Haven, that take advantage of the views of the San Bernardino Mountains to the north and the Santa Ana Mountains to the south. The vehicular circulation through the community provides a significantly different experience at each point of entry into the Colony. The Avenue's central element emphasizes pedestrian and recreational movement with wide sidewalks, tree-lined parkways and planted vehicular medians. The unifying elements include tree-lined streets and entry monuments coupled with drought tolerant flowering plant material.

Several key issues have been addressed in the design concept for The Avenue. They include the following:

- Development of an elegant, traditional style of landscape theming with generously landscaped common areas and strong, rich landscape materials that may include river rock, stone, brick, groves of trees, tree-lined streets, earth tone colors, and a diversity of other materials appropriate to the design theme
- Incorporation of a residential village and park program which is clear, identifiable and properly serves the needs of the community
- Pedestrian and non-motorized circulation throughout the community between recreational and educational elements
- Consideration of resources and long term maintenance efficiency in the selection of plant materials and placement helps create a strong "sense of community" through landscape design elements

Notable features of the proposed The Avenue Land Use Plan include the following:

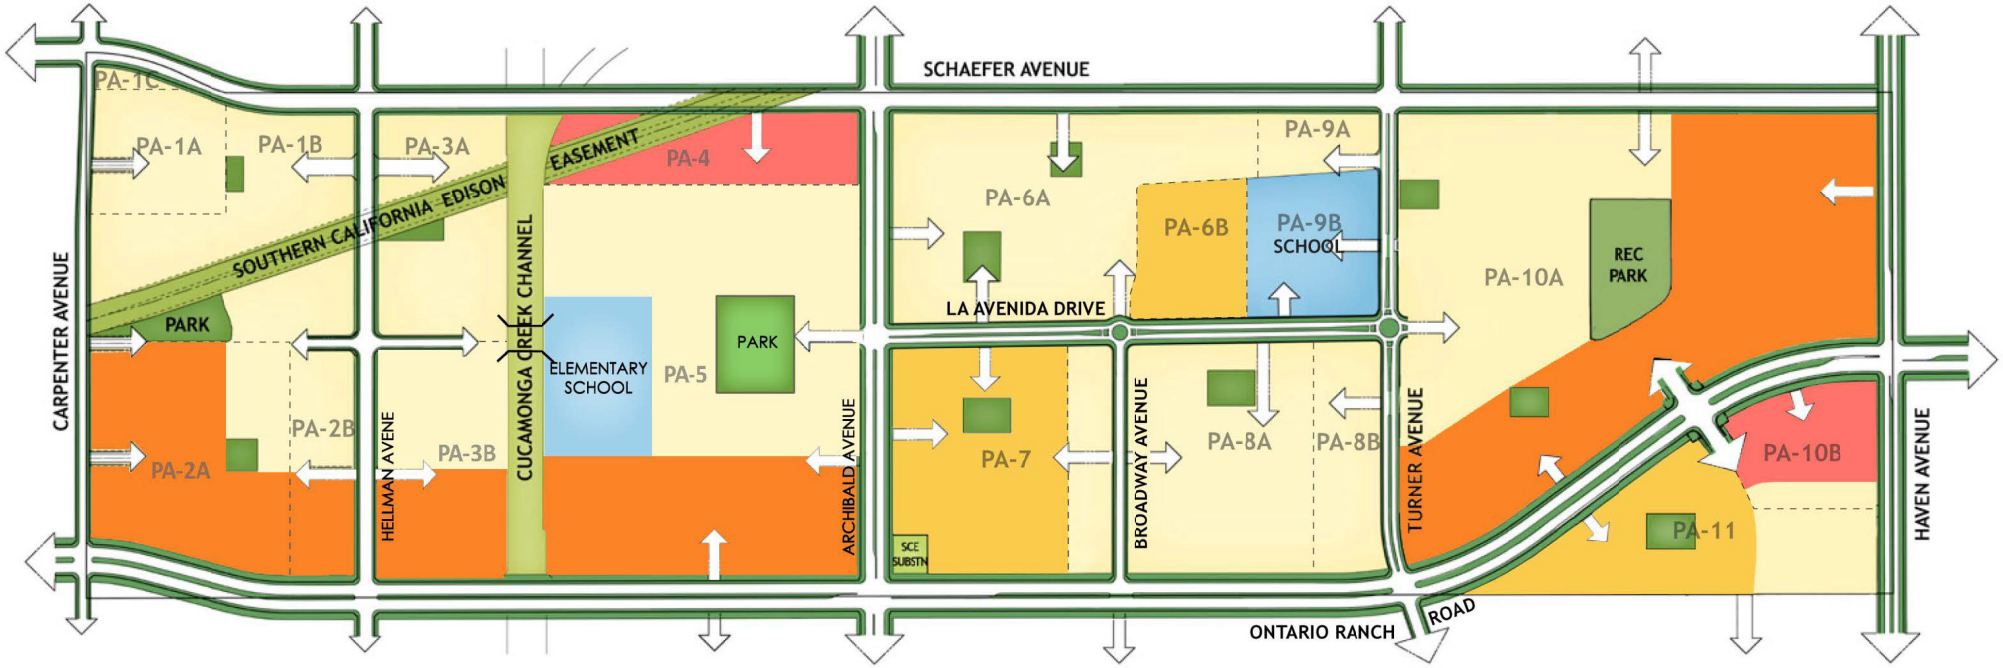
- A variety of attached and detached housing opportunities
- Neighborhoods that serve retail and commercial locations
- Recreation Areas may feature shade trees, barbeques and turf play areas that may include pools, and tot lots

- Neighborhood pocket parks that will serve to integrate the neighborhoods
- Enhanced Roadways - La Avenida Drive and Turner Avenue - roadway, pedestrian and multi-use corridors linking each of the recreational sites and schools—providing connection between neighborhoods, featuring enhanced setbacks, multi-use paths, divided landscape medians, and front-on architecture
- Schools - One Elementary School (10 acres) and one additional school site (10 acres) that will be pedestrian-accessible from all neighborhoods
- Trails - 5 to 10 minute walk or bike to community amenities

Residential development is designed to address a variety of lifestyles, such as singles, families, executives and "empty nesters". Housing types will include a variety of single family detached and attached homes. Attached housing may include duplex, triplex, row townhomes, senior and court-style residential.
Retail and commercial land uses are provided for in The Avenue Specific Plan for the development of one commercial site totaling 10 acres. The commercial site is located on the southwest corner of Haven Avenue and Ontario Ranch Road.

3.1.1 Residential Planning Areas/Housing Types

The Specific Plan will provide for development of a variety of residential housing types oriented toward open space amenities and designed to promote walkability and interaction among residents. Residential development on approximately 484.5 net acres of the plan area will contain up to 3,753 dwelling units, providing a mix of single family detached, single family attached and multifamily attached housing types. In determining the number of residential units for The Avenue Specific Plan area, SCE easements, schools and commercial areas have been removed from the gross in order to determine net acres as shown on Table 2, "Statistical Analysis".



A. Transferring or removing units within the Specific Plan Area are subject to the following requirements:

1. Water and Sewer Technical Studies shall be prepared to study how the transfers change the quantity and locations of sewer and water demands and how those changes impact the Water and Sewer Master Plan Systems and local sewer and water systems."
2. If unit transfers result in net changes to the overall projected water demands or the water demands are transferred between the 1010PZ and 925PZ, then the initializing project shall be responsible for processing an Amendment to the Water Master Plan as part of the entitlement process of Implementation."
3. If unit transfers result in net changes to the overall projected sewer demands or the sewer demands are transferred between different Master Plan Truck Sewer Tributary Areas, then the initializing project shall be responsible for processing an Amendment to the Sewer Master Plan as part of the entitlement process of Implementation."

3.1.2 Parks and Open Spaces

The Avenue Specific Plan will provide parkland in a diverse hierarchy of evenly distributed parks. Per city standard The Avenue Specific Plan will require a parkland dedication of 2 acres per 1,000 population The city standard of 3.997 persons per household for single family homes and 3.347 persons per household for multi-family homes will be use in calculating park demand. Per this Specific Plan each individual parcel will meet its park requirement based on standards mentioned above.

Approximately 14 acres of Southern California Edison (SCE) easement, located in the northwest portion of the plan area will be utilized for passive recreation and a trail, to the extent permitted by SCE. The multi-use path is designed to connect the regional trail in the SCE easement, Active Recreation Park, Schools, The Avenue and Recreation Area. The conceptual locations of parks are shown in Exhibit 10, the “Parks and Open Space” plan.

Total	**568.1**	**556.44**	**3,753**	**6.7**	**335,176**	

Notes:
* Realignment of Schaeffer Ave creates the need for PA 1C (APN 021-812-201) as it is owned separately from PA 1A (APN 0218-181-126).
- All acreages approximate- exact acreages will be defined through tract map surveys. Additional studies may be required to transfer these units. See Section 3.1.1 for additional information.
- Density blending will be allowed within Planning Areas within one TOP land use step (i.e. from LDR to LMDR) and between Planning Areas at a rate no higher than 15%. If units are blended within a PA or moved between PA's, then Technical Studies for Impacts to the Water and Sewer Master Plan Systems will be required as part of the entitlement process.

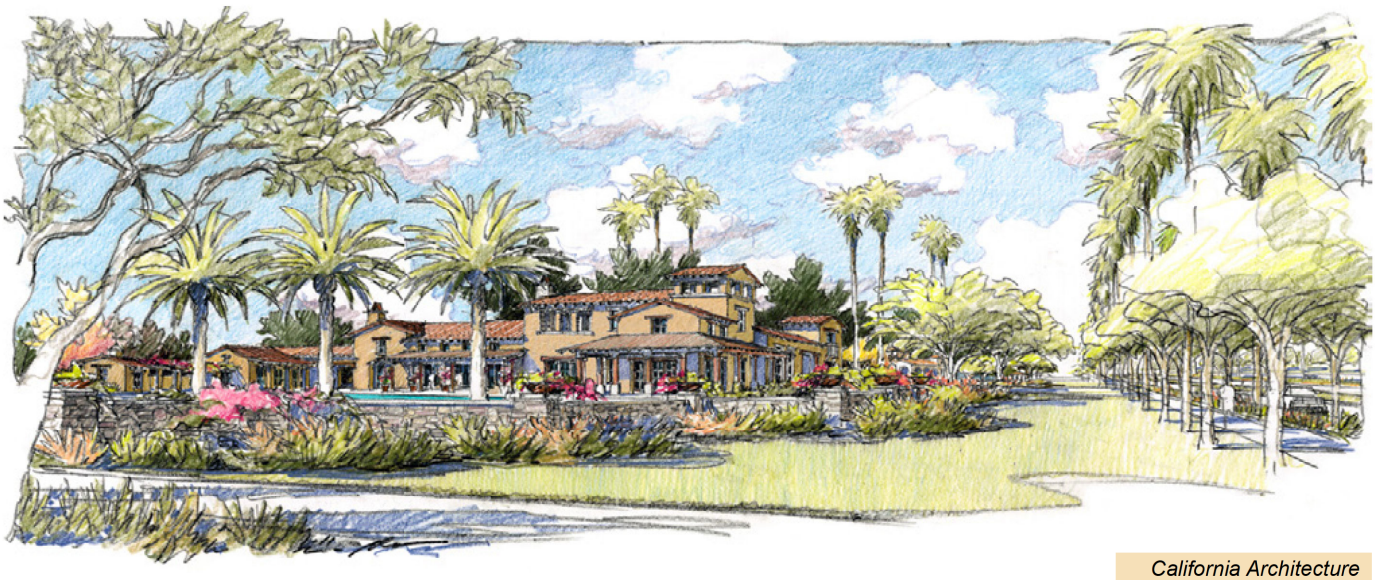
Planning Areas/Developer Controlled/Ownership



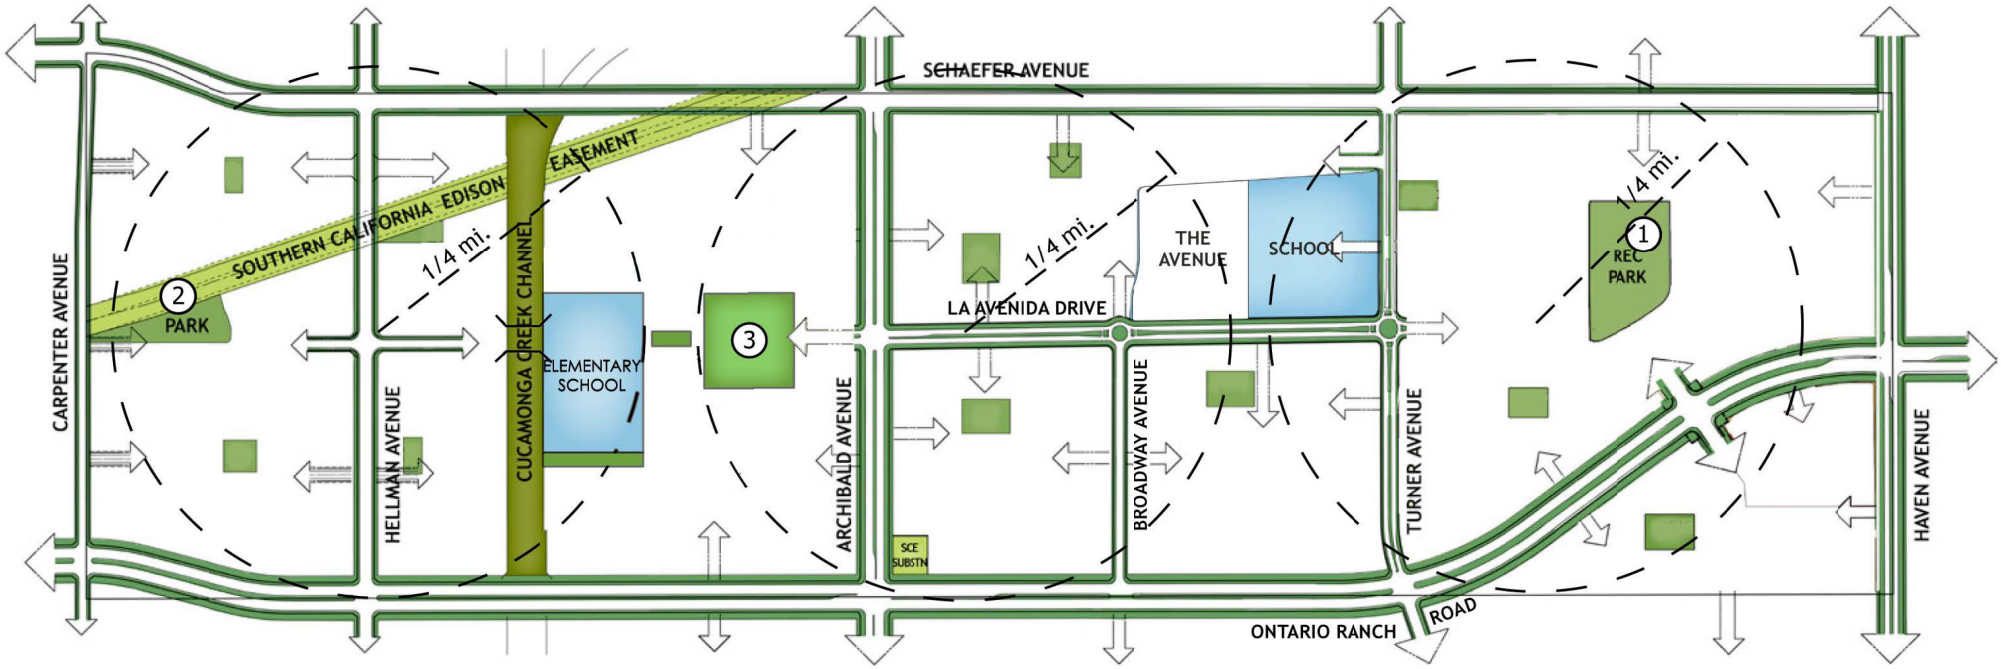
The Avenue SPECIFIC PLAN

Ontario Ranch ▪ Ontario, California

Exhibit 9 - Planning Areas/Developer Controlled/Ownership

Critical to the success of any community is the quality of the community spaces and proper integration into the community fabric. The Avenue's land plan is developed around a theme of recreation and open space amenities to enhance the quality of life. All parks (including the pool and splash play area) will be designed to meet all ADA and City accessibility standards. The Active Recreation Park site and recreation amenities will become more valuable in combination with the school sites as the synergy of active recreational, social and educational opportunities will address the diverse and changing needs of the community. The park and recreation design program has several major elements including multi use park sites, a recreation trail system and an aquatic sports facility.

The Avenue enjoys a well balanced plan of park locations interconnected by a clear pedestrian system. A majority of the residents can access the community parks and school sites with minimal vehicular road interface by utilizing the Avenue's pedestrian paths and parkways, the SCE easement, and flood control channel trails.



California Architecture

Neighborhood Park Sites

The park system includes approximately Thirteen (13) Neighborhood Parks that range in size. These are private parks and conceptual designs may include the following elements:

- Restrooms
- Picnic facilities
- Barbecues
- Basketball courts
- Sand volleyball courts
- Tot lot and pre-teen areas
- Gazebo and/or trellis structures
- Shade tree plantings with open turf areas for informal sport activities
- Drinking fountains

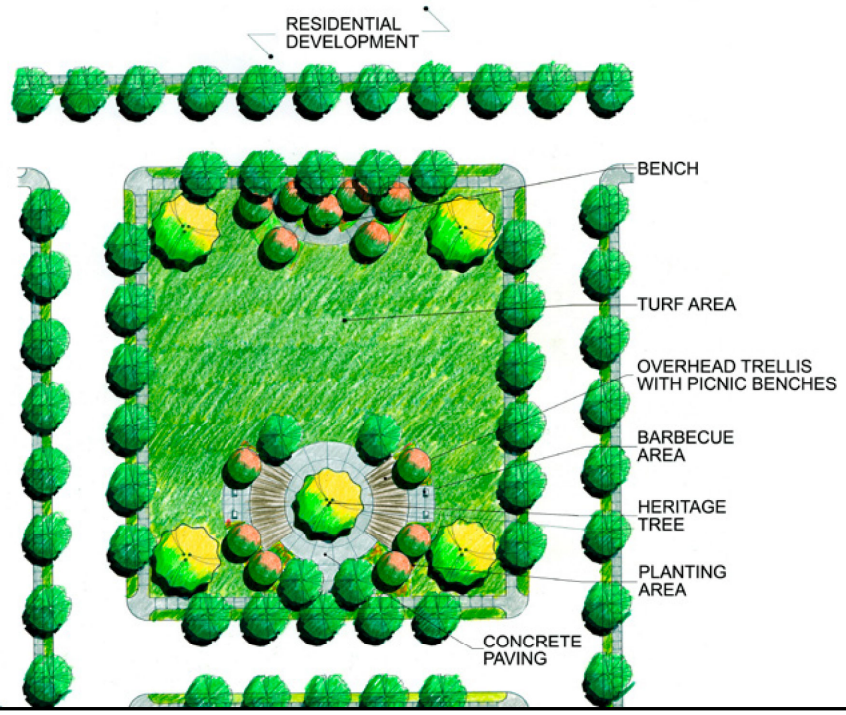
Parks and Open Space

Exhibit 11 - Typical Neighborhood Park 1

Conceptual Plan



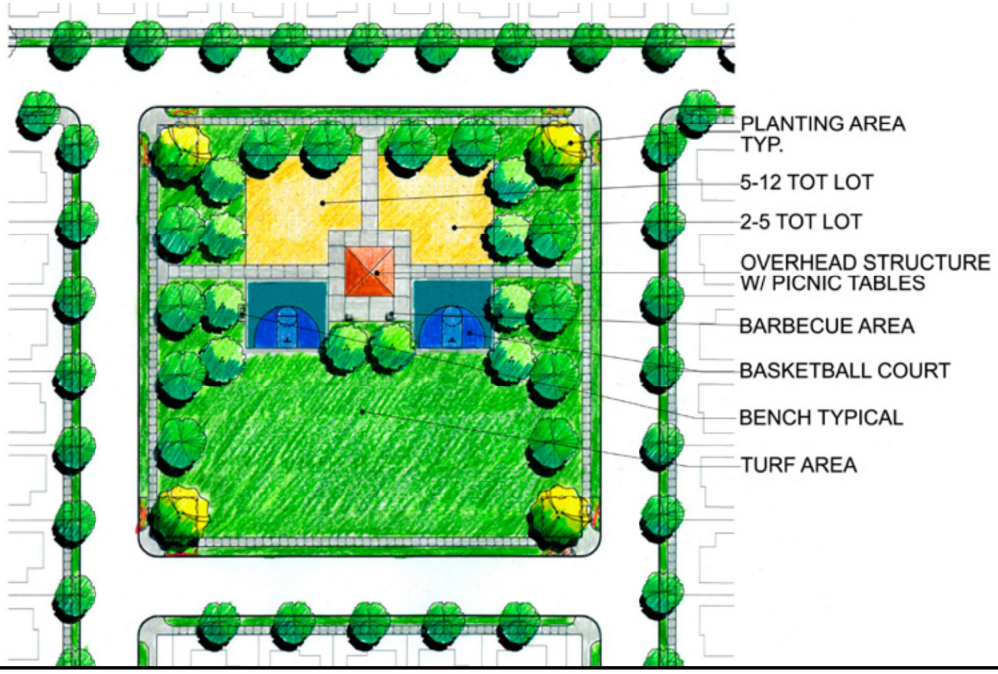


Exhibit 12 - Typical Neighborhood Park 2

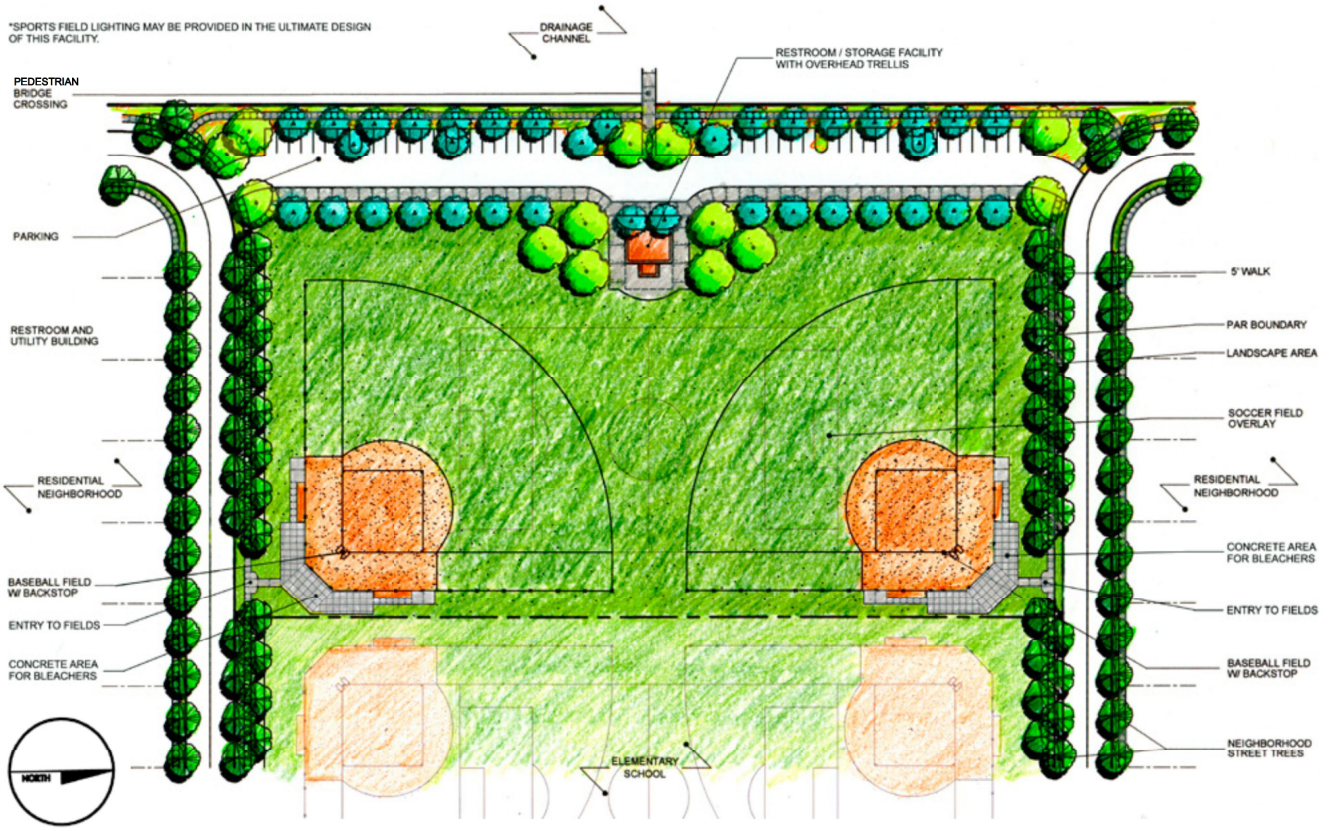
Conceptual Plan

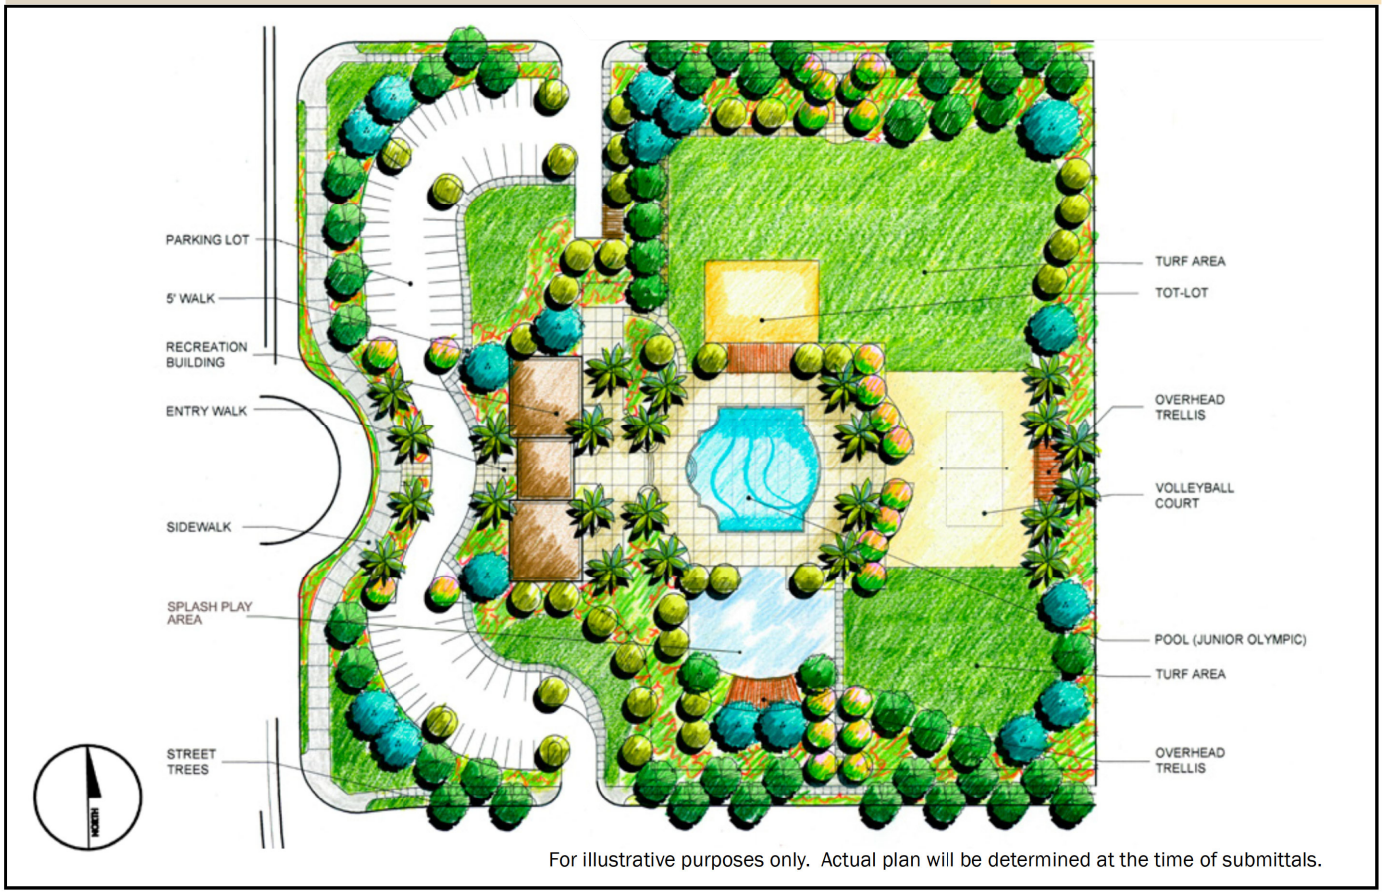


Active Recreation Park Site

The design maximizes the efficiency of organized sport league management by focusing, if feasible, on a particular field sport entity. As a public park, the school district will be encouraged to design site plans that complement park development to better meet community needs. The specific specialty sport uses provided in the park include a soccer/football field and baseball/softball fields that will be lit for security and evening use. Basketball and volleyball uses can be best accommodated on the school sites due to the large number of courts available.

Exhibit 13 - Typical Active Recreation Park

Conceptual Plan



Recreation Areas

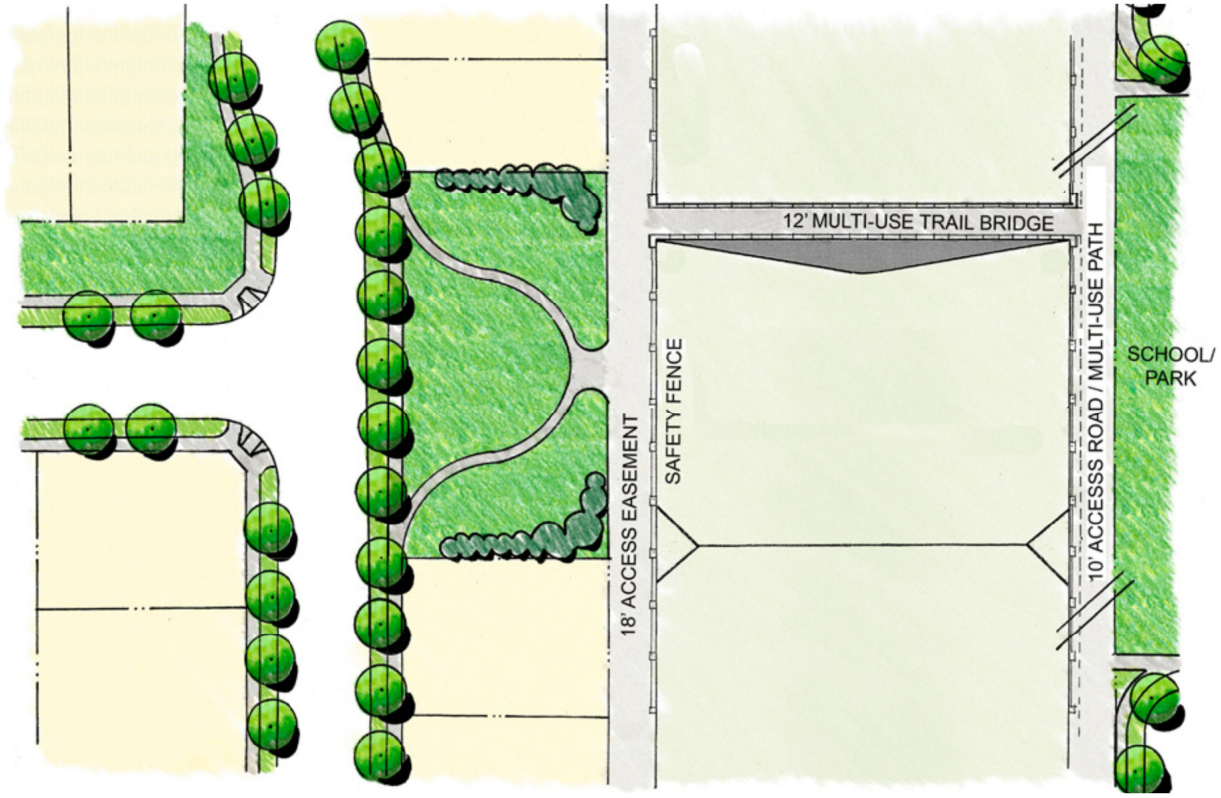
Opportunities for recreation centers will be provided within the Avenue. These recreation centers will be developed and maintained by the Homeowners Association, boundaries and location of which have yet to be determined.

The recreation centers may include, but not limited to, the following amenities:

- Clubhouse with Picnic facilities
- Gazebo and/or trellis structures
- Basketball courts
- Tot lot and pre-teen areas
- Shade tree plantings with open turf area for additional recreational activities
- Barbecues
- Swimming pool and splash park
- Sand volleyball courts
- Open play area
- Drinking fountains

Exhibit 14 - Typical Recreation Area

For illustrative purposes only. Actual plan will be determined at the time of submittals.



3.1.3 Schools

The Avenue Specific Plan provides two (2) school sites within the plan area to serve students both within the plan area and surrounding areas. A ten (10) acre elementary school site is centrally located west of Archibald Avenue in the western portion of the plan area. An additional ten (10) acre school site is located on the west side of Turner Avenue, south of Schaefer Avenue in the central portion of the plan area. Both school sites are easily accessible by multi-purpose path, sidewalks and interior roadways. The site plan will be determined by Mountain View School District. The school locations are shown in Exhibit 10, “Parks and Open Space” and in Exhibit 8, “Land Use Plan”.

In the event that the Mountain View School District chooses to build an elementary school at a different location outside of Planning Area 5, the designated school site in Planning Area 5 may be developed with residential uses. An SPA and GPA will need to be filed, and appropriate CEQA action undertaken if and at such time that the school decides to sell off the property. Upon this occurring, the total number of dwelling units will be increased for the specific plan with the approval of a Specific Plan Amendment (SPA).

In order to develop residential uses in lieu of a school in Planning Area 5, the developer shall be required to obtain a written confirmation from the Mountain View School District that it will not utilize the school site in Planning Area 5 for development of a school. The written confirmation will be submitted to the City of Ontario Planning Department along with any development application for the school site, which would require an amendment to the Specific Plan and General Plan, in addition to appropriate CEQA review.

A multi-use bridge for crossing Cucamonga Creek is conceptually located near the school to facilitate non-vehicular access from the neighborhoods west of Cucamonga Creek to the school. Lots will be pulled back away from the trail landing on the west side of the bridge to allow for good visibility and, therefore, safety and security of trail users. The graphic on this page is a conceptual layout to show a potential method of access and can be relocated or incorporated into another bridge crossing. Final location and design will be subject to approval by Planning Director.

Conceptual layout for the bike and pedestrian access to the multi-use path over Cucamonga Creek

3.1.4 Commercial/Retail

The Avenue Specific Plan will provide for the development of a 10 acre and a 15.04 acre commercial sites totaling 335,176 s.f. of commercial squarefootage. The 10 acre site is located on the southwest corner of Ontario Ranch Road and Haven Avenue. The 15.04 acre commercial site is located at the southwest corner of Schaefer Avenue and Archibald Avenue. The commercial sites have been located to provide vehicular access off the major arterial streets, minimizing traffic through the residential neighborhoods. The commercial sites will include a mix of retail and high density residential in order to locate a high number of residents within a short walk of retail services.

The Avenue Main Street District Concept

The commercial center at The Avenue is located at the southwest corner of Ontario Ranch Road and Haven. It is envisioned as an inviting suburban destination, not your typical neighborhood center or strip mall. The idea behind this commercial center is to provide a memorable and walkable center with strong architectural elements, public spaces and a complementary and diverse mix of residential uses surrounding the site.

The Experience – Main Street

The Main Street is envisioned to have a traditional feel with storefronts adjacent to wide sidewalks, plenty of on-street parking and inviting outdoor plazas. The shops along Main Street will provide an eclectic mix of smaller retail stores, coffee houses and restaurants. There are also pad buildings proposed near the major arterials to provide opportunities for other uses including but not limited to larger restaurants, drug store, in-line shops or a bank.

The Residential Program

The residential areas adjacent to the commercial center will play a crucial role in the vitality of the center. An intensification of the residential density surrounding the commercial area will provide a strong local consumer base to support the commercial uses. The Ontario Ranch Road corridor east of Turner is envisioned by the city as a mixed-use, higher intensity corridor that will provide employment and shopping among typically higher residential densities than found elsewhere at The Avenue. The Main Street District is a complementary use to the higher density residential and the District's pedestrian environment encourages residents to walk, therefore reducing vehicle trips.

Potential Residential Uses:

- Townhomes & Flats
- Apartments
- Senior Housing

Section 4 - Infrastructure and Services

4.1 Master Plan of Circulation

The proposed circulation plan for The Avenue Specific Plan provides for safe and efficient movement of vehicular traffic through the project, while also providing a safe environment for pedestrian movement and bicycle traffic, reducing the reliance on the automobile as a means of travel.

Access to The Avenue Specific Plan from surrounding areas is provided by Archibald Avenue bisecting the site in a north and south direction; also running in a north to south direction is Haven Avenue on the eastern boundary and Carpenter Avenue on the western boundary; running in an east to west direction is Ontario Ranch Road on the southern boundary and Schaefer Avenue on the northern boundary. Hellman Avenue bisects the site in a north to south direction between Archibald and Carpenter in the western portion of the plan area. Bus turnouts will be provided on Ontario Ranch Road, Schaefer Avenue, Haven Avenue, and Archibald Avenue to the satisfaction of the City Engineer and Omnitrans.

A primary interior circulation element for The Avenue Specific Plan is the central “La Avenida Drive” which features enhanced setbacks and travel lanes to allow for vehicle, bicycle, and pedestrian access linking residential areas with retail and commercial, recreational, and the school sites within the plan area. Improvements to non-Ontario Ranch streets will be made by the developer/applicant based on the data from the Environmental Impact Report and traffic study. The traffic study will also determine the additional right of way that may be needed at critical intersections to accommodate additional right and left turn lanes. The “Circulation Plan”, Exhibit 15, establishes the hierarchy and general location of these roadways within the plan area.

Streetscapes within The Avenue are critical in maintaining the perception of community theming, unification and quality. These common landscape areas link vehicular and pedestrian traffic to neighborhoods and community elements.

The streetscapes in The Avenue are treated as critical community spaces providing quality pedestrian and vehicular circulation ways including jogging and bicycle paths and well-buffered pedestrian walks. For pedestrian and vehicle safety, reflective street signs will be provided on all proposed streets within the City. Shrubs and low groundcovers from Ontario Ranch Streetscape Master Plan will be used to the greatest extent feasible to reduce maintenance, conserve resources and provide a buffered separation between pedestrian and vehicular traffic. The 8’ expanded sidewalks, at an enlarged width, are designed to provide a better travel way along La Avenida Drive.

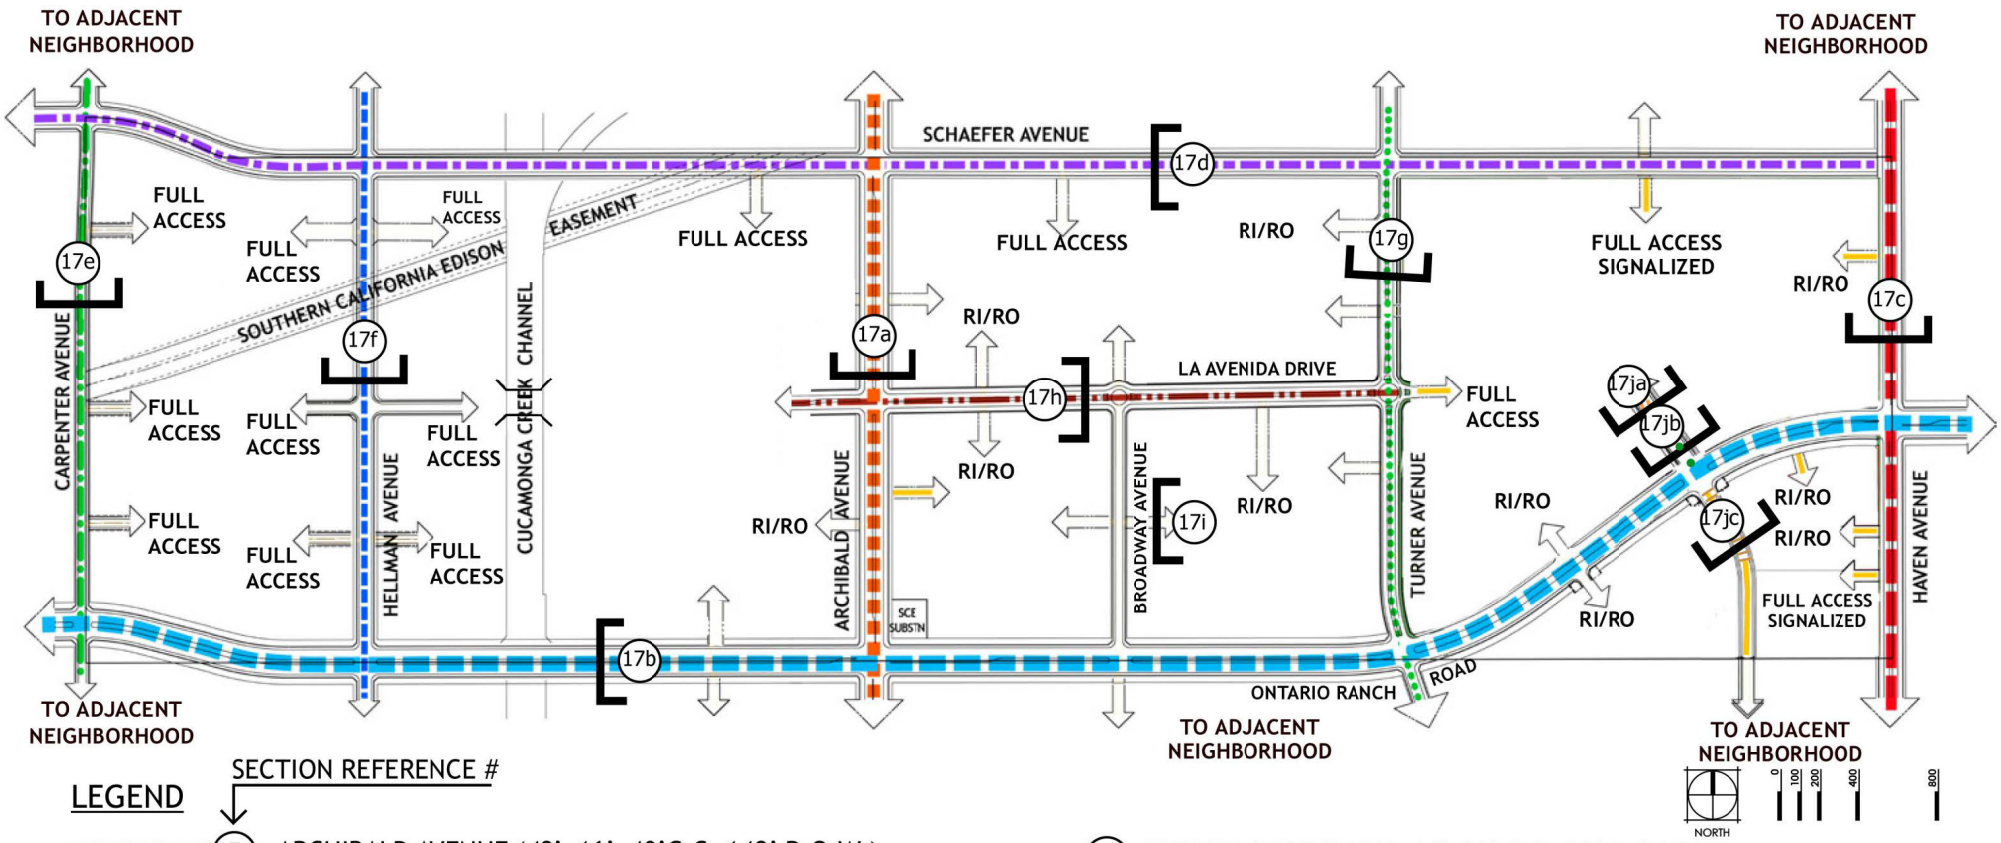
Streetscape landscape treatments were developed to form a hierarchy of community importance and use characteristics. Landscaped parkways are enlarged beyond the city street right-of-way to reinforce this hierarchy consistent with the pathway system, residential orientation, and traffic volumes. These “landscape edges” are indicated on the streetscape sections.

La Avenida Drive's design concept is focused on the use of earth tone materials and colors, meandering drifts and groves of plant material and trees and the limited but appropriate use of turf. Soldiered trees are at a uniform spacing reinforcing the linear design of the vehicular circulation system to provide a welcoming feel to those entering the community.

The unique and vital streetscape concept for La Avenida Drive is focused on the treatment of the divided collector streetscape cross section. The design of the streetscape provides a strong and significant landscape while providing pedestrian pathway choices for residents.

Although The Avenue is designed for maximum benefit of the community residents, the overall plan provides convenient access points to allow vehicles to maximize road travel on the perimeter urban arterials and neighborhood collectors instead of La Avenida Drive. This is intended to reduce interior traffic and maximize resident, pedestrian, and bicycle enjoyment of the streetscapes.

Ontario Ranch Road, Schaefer Avenue, Haven Avenue, and Archibald Avenue streetscapes are designed to provide additional landscape area beyond the street right-of-way. The Avenue is planned to focus internally. These perimeter streetscapes will allow reasonable buffering along with the appropriate landscape treatments to properly introduce the community while maintaining consistency along the overall arterial streetscape.



Carpenter Avenue and Hellman Avenues are north/south trending collectors while Turner Avenue is a north/ south trending divided collector all which contain relatively balanced landscape zones beyond their respective right-of-ways. These collectors provide access to community facilities, recreation areas, school sites, the retail center and the arterial avenues of Schaefer, Ontario Ranch Road, Haven, and Archibald.

4.1.1 Street Plans and Sections

Primary access to The Avenue Specific Plan is provided by seven (7) major Avenues: Ontario Ranch Road, Haven, Schaefer, Turner, Hellman, Carpenter and Archibald Avenues. Within the plan area public streets of varying design will provide access to the residential, commercial, school, and park areas.

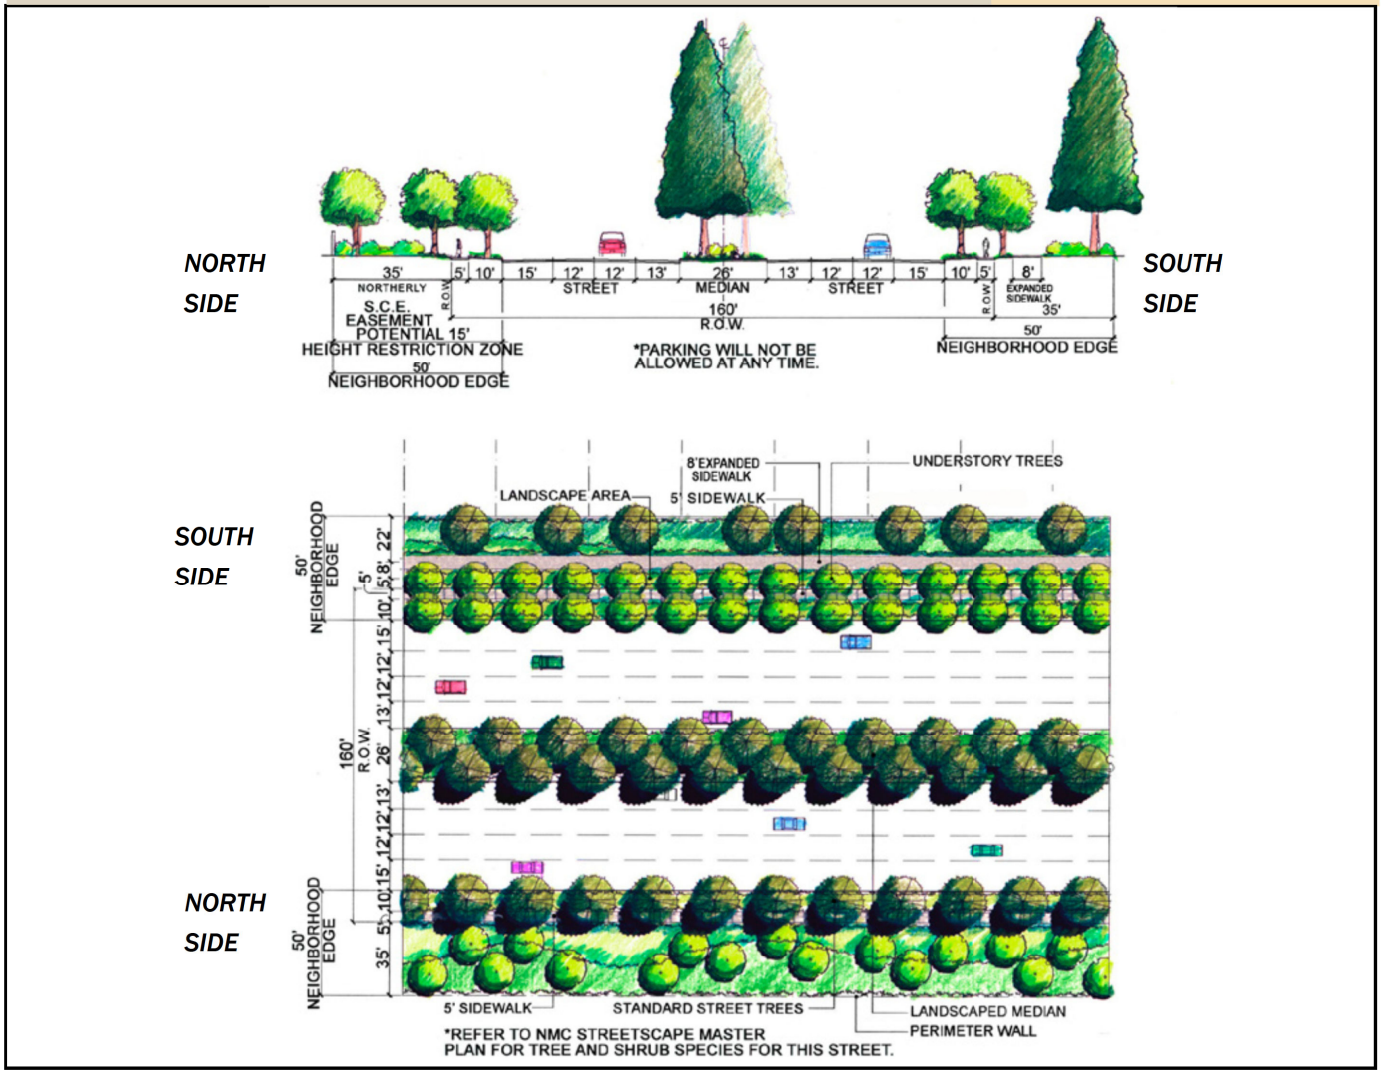
Entries and Signalization

Archibald Avenue

Archibald Avenue bisects The Avenue Specific Plan in a north/south direction in the central portion of the plan area. Archibald Avenue is designated as a "Principal Arterial" with a total right of way of 148 feet with 80 feet of paved travel area separated by a 16-foot wide raised median. There are 19-foot wide landscape lots on both sides of the street serving as a buffer between homes and the right-of-way. The west side of the street has a 13-foot multi-use path (5' sidewalk may be divided from the 8' expanded sidewalk at the discretion of the City) separated from the street by a 13-foot landscaped parkway. The east side of the street has a 5-foot sidewalk separated from the street by a 21-foot landscaped parkway. Along Archibald Avenue, bus turnouts will be located to the satisfaction of the City Engineer and Omnitrans. The developer will be responsible for those improvements to Archibald Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The Archibald Avenue cross-section is illustrated below:

Exhibit 17a - Archibald Avenue - Principal Arterial



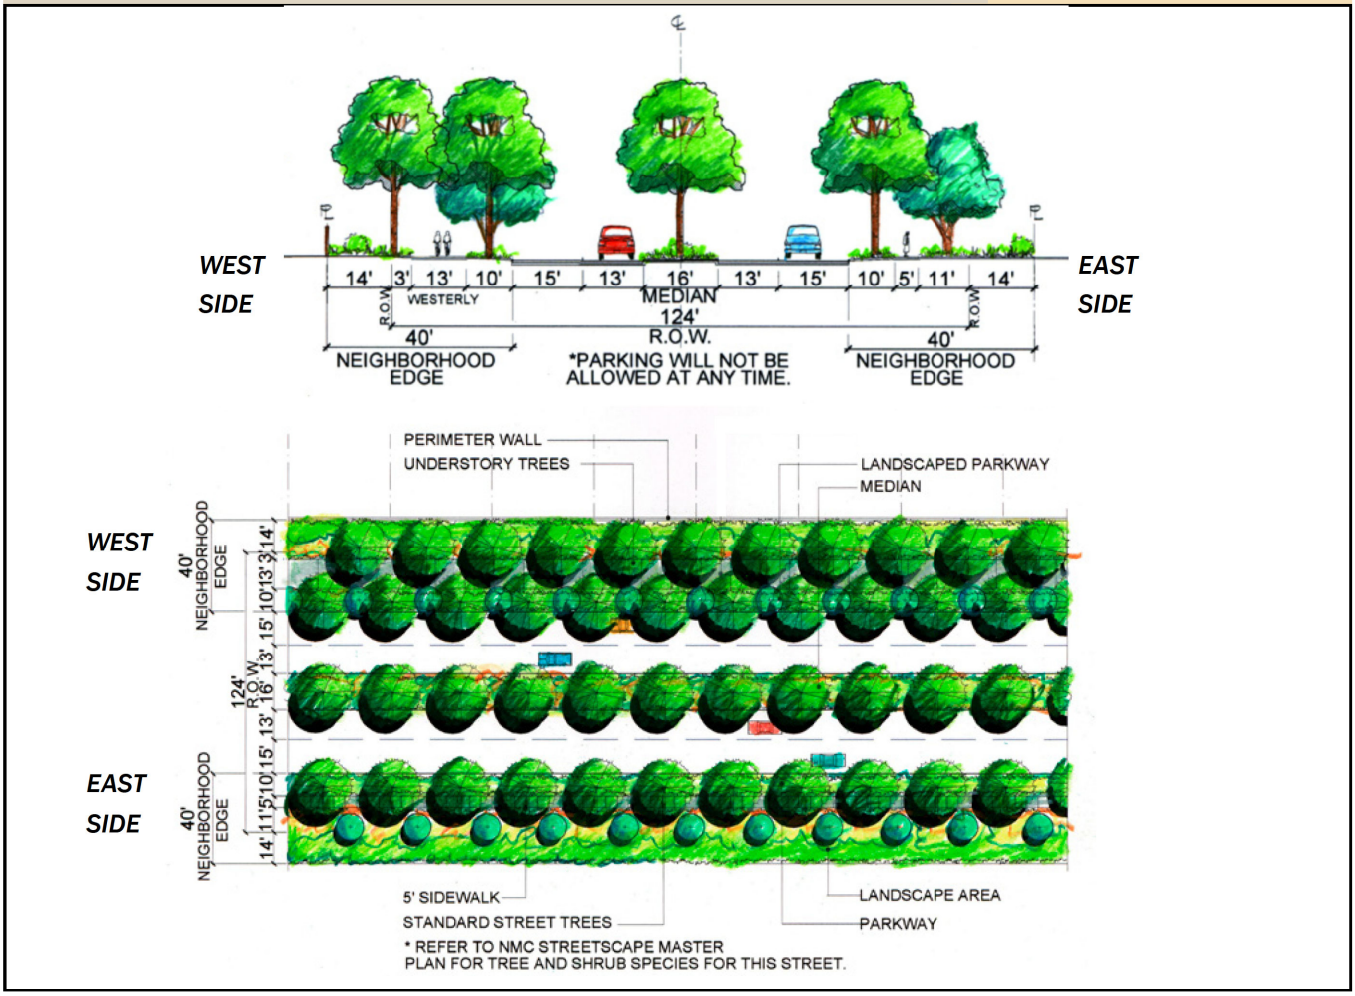
Note: This section and the 45' neighborhood edge for Archibald Avenue is applicable North of Ontario Ranch Road within the Avenue Specific Plan frontage only and neighborhood edge to the South of Ontario Ranch Road will remain at 50'

Ontario Ranch Road

Ontario Ranch Road is designated as "Principal Arterial" and borders the plan area on the south. Ontario Ranch Road has a total right-of-way of 160 feet with 104 feet of paved travel area separated by a 26-foot wide raised median.

Along Ontario Ranch Road, bus turnouts will be located to the satisfaction of the City Engineer and Omnitrans. A 50-foot landscape edge on both sides of the street contains a 35-foot landscape buffer with a 5-foot sidewalk separated from the street by a 10-foot landscaped parkway and a multi-use path on the south. The S.C.E. Easement exists within the northerly 50-foot Landscape Edge and may be relocated within the Landscape Edge in the future. The developer will be responsible for those improvements to Ontario Ranch Road as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The Ontario Ranch Road cross-section is illustrated below:

Exhibit 17b - Ontario Ranch Road - Principal Arterial



Haven Avenue

Haven Avenue is designated as "Principal Arterial" and borders the plan area on the east. Haven Avenue has a total right-of-way of 124 feet, with 56 feet of paved travel area separated by a 16-foot wide raised median.

The west side of the street has a 40-foot Neighborhood Edge with 14 feet of landscape buffer between the property line and the right-of-way. Along Haven Avenue, bus turnouts will be located to the satisfaction of the City Engineer and Omnitrans. A 13-foot multi-use path (5' sidewalk may be divided from the 8' expanded sidewalk at the discretion of the City) that is separated from the street by a 10-foot parkway and an additional 3 feet of landscape to the right-of-way edge. The east side of the street also has a 40-foot landscape edge with 14 feet of landscape buffer to the right-of-way. A 5-foot sidewalk is separated from the street by a 10-foot parkway and the right-of-way by an additional 11 feet of landscape. The developer will be responsible for those improvements to Haven Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The Haven Avenue cross-section is illustrated below:

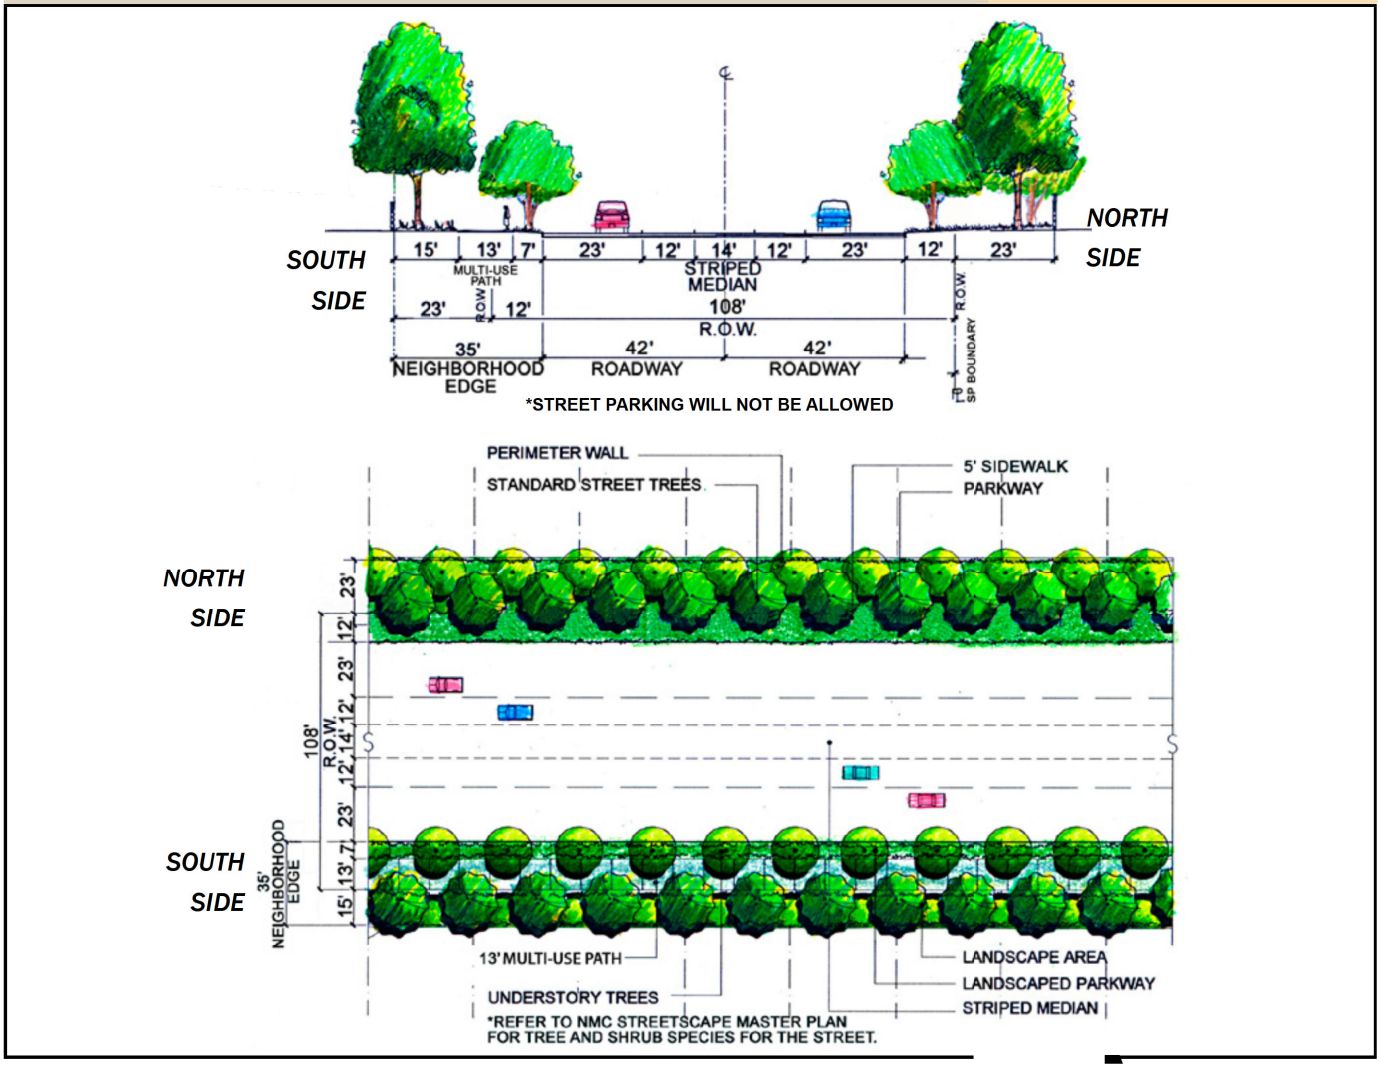


Exhibit 17c - Haven Avenue - Principal Arterial

Schaefer Avenue

Schaefer Avenue is designated as "Collector" and borders the plan area on the north. Schaefer Avenue has a total right-of-way of 108 feet with 84 feet of paved travel area. Along Schaefer Avenue, bus pads will be located to the satisfaction of the City Engineer and Omnitrans. The south side of Schaefer has a 35-foot neighborhood edge. The Neighborhood Edge is comprised of 12 feet of street right-of-way and an adjacent 23-foot wide landscape lot. The Neighborhood Edge includes a 13-foot multi-use path, including 5-foot sidewalk, separated from the street by a 7-foot parkway. The north side of Schaefer will have a 23 -foot wide landscape lot adjacent to a 12-foot parkway. The dedication and improvements of the 23 -foot wide landscape lot to the north of the Project boundary is not a part of The Avenue Specific Plan Requirements. The developer will be responsible for those improvements to Schaefer Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The Schaefer Avenue cross-section is illustrated below:

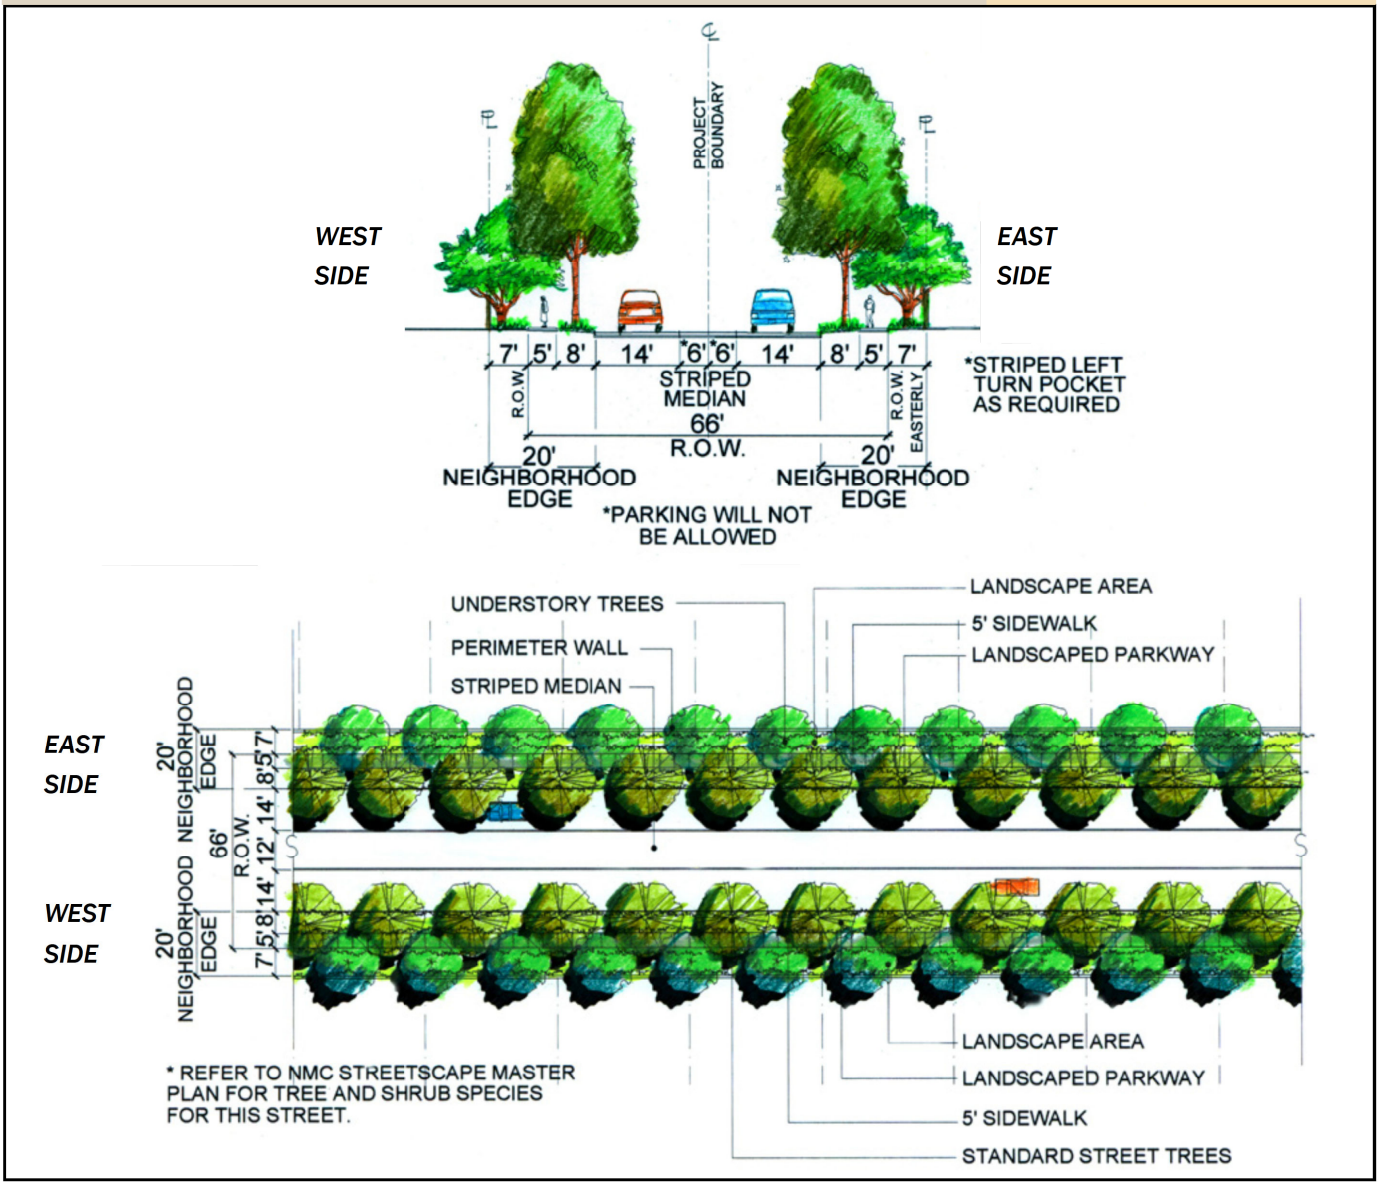

Exhibit 17d - Schaefer Avenue - Collector

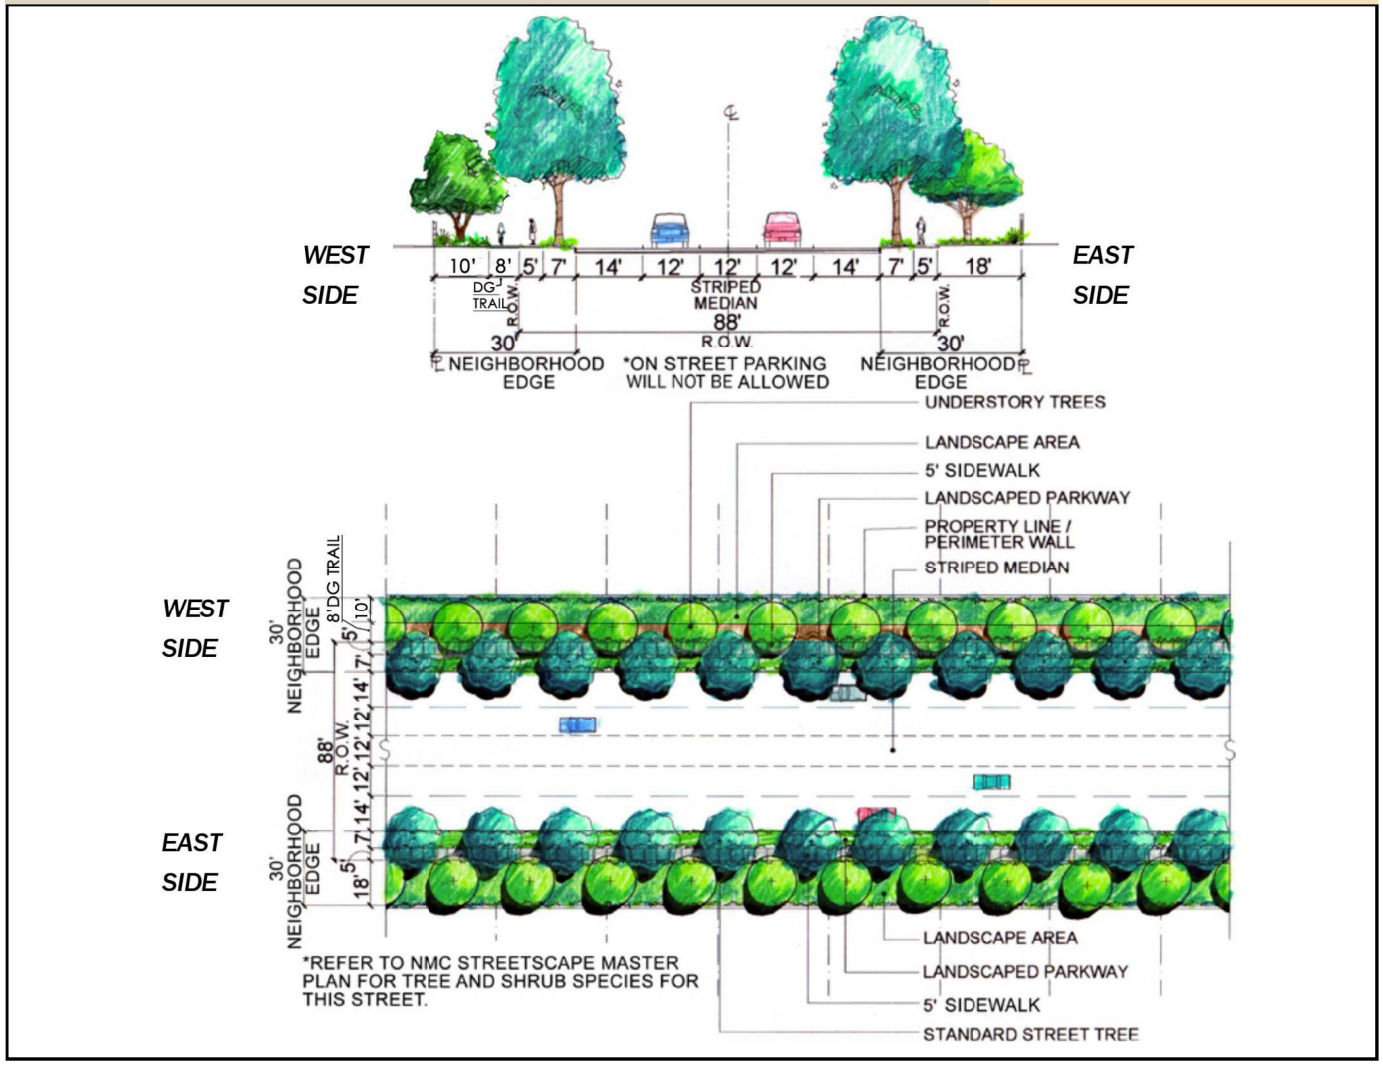
Carpenter Avenue

Carpenter Avenue is designated as a "Primary Local Street" running in a north/south direction whose centerline forms the western project boundary. It has a total right-of-way of 66 feet with 40 feet of paved travel area. There is a 5-foot sidewalk separated from the street by a 8-foot landscaped parkway on each side of the street. In addition, there is an 7-foot wide landscape lot adjacent to both sides of the street. The developer will be responsible for those improvements to Carpenter Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The Carpenter Avenue cross-section is illustrated below:

Exhibit 17e - Carpenter Avenue - Primary Local Street



Hellman Avenue

Hellman Avenue is designated as "Collector: and bisects the plan area in a north/south direction in the western portion. Hellman Avenue has a total right-of-way of 88 feet with 64 feet of paved travel area. There is a 12-foot parkway on each side of the street which includes a 5-foot sidewalk separated from the street by a 7-foot landscaped parkway. In addition, there is an 18-foot wide “landscaped lot” adjacent to both sides of the street. The "landscape lot" to the west side of Hellman Avenue will include a 8-foot decomposed granite trail.

The developer will be responsible for those improvements to Hellman Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The developer will be responsible for those improvements to Hellman Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The Hellman Avenue cross-section is illustrated below:

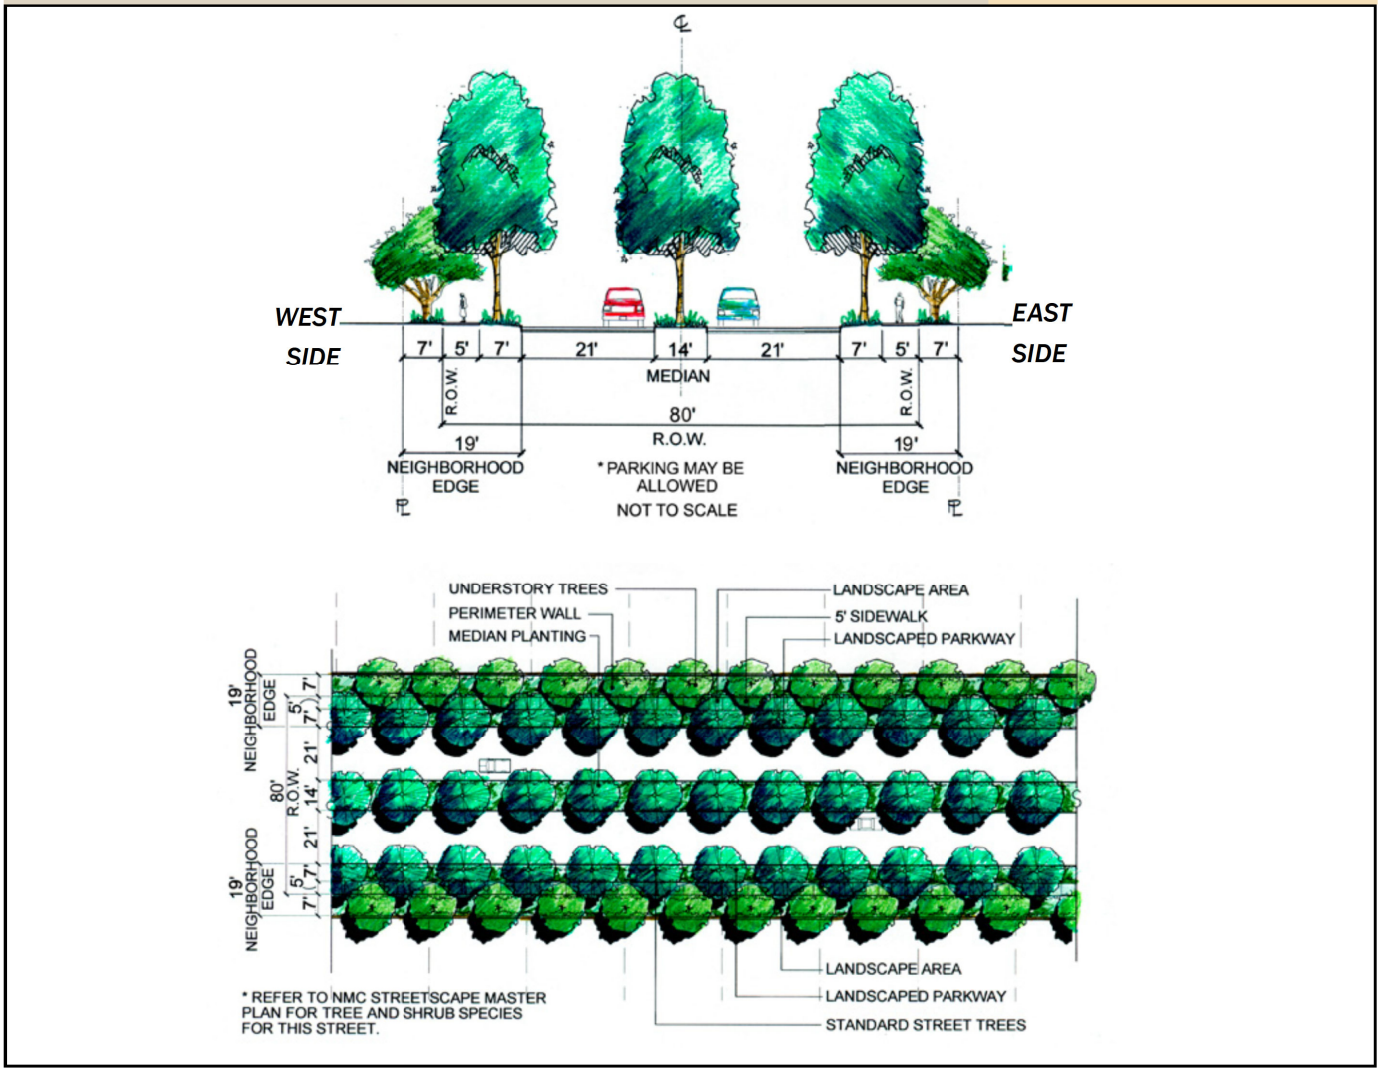


Exhibit 17f - Hellman Avenue - Collector

Turner Avenue

Turner Avenue is designated as "Divided Primary Local Street" and bisects the plan area in a north/south direction in the eastern portion. Turner Avenue has a total right-of-way of 80 feet through the Specific Plan Area, with a 14-foot landscaped median separating two paved 21-foot travel lanes. The east and west sides of the street includes a 5-foot sidewalk separated from the street by a 7-foot landscaped parkway. The final roadway section will be determined by the City Engineer. The developer will be responsible for those improvements to Turner Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. Turner Avenue shall be constructed such that the westerly curb and gutter shall be located completely off Assessor's Parcel Number 218-201-19 with the parkway and neighborhood edge on the west side to be deferred until such time APN: 218-201-19 develops in accordance with The Avenue Specific Plan.

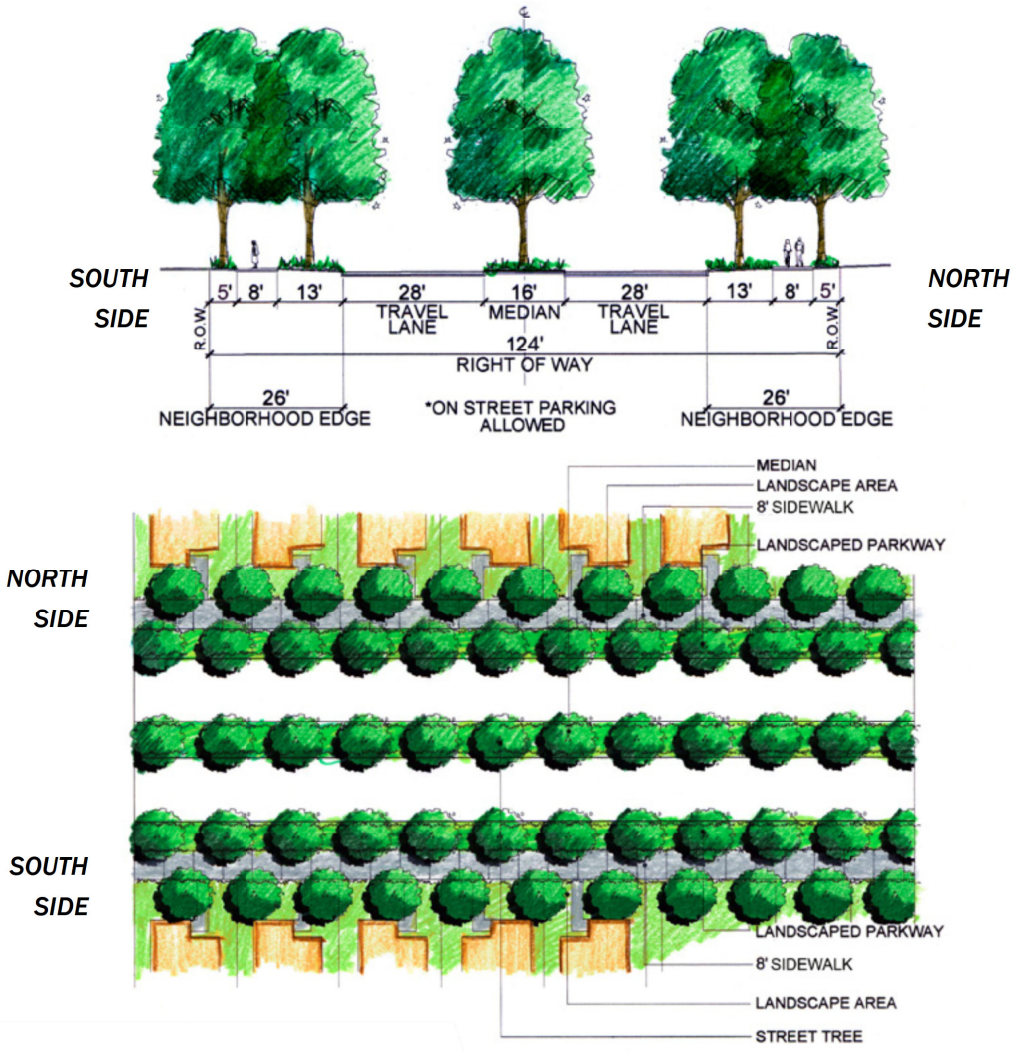

Exhibit 17g - Turner Avenue - Divided Primary Local Street

La Avenida Drive

La Avenida Drive, designated as a "Divided Primary Local Street", is a centrally-located avenue connecting community amenities to the residential neighborhoods. La Avenida Drive has a total right-of-way of 124 feet with two 28-foot one-way avenues with on-street parking, separated by a 16-foot wide raised median. This pedestrian oriented street, with generously landscaped median and parkways, links the recreation areas, schools and parks. La Avenida Drive presents a strong image, emphasizing homes fronting along the street with an 8-foot expanded sidewalk on both sides of the street separated by 13-foot landscaped parkways and 5-foot landscape lots. The developer will be responsible for those improvements to La Avenida Drive as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. No portion of La Avenida Drive right of way or neighborhood edge shall be located on the property identified as Assessor's Parcel Number 218-201-19.

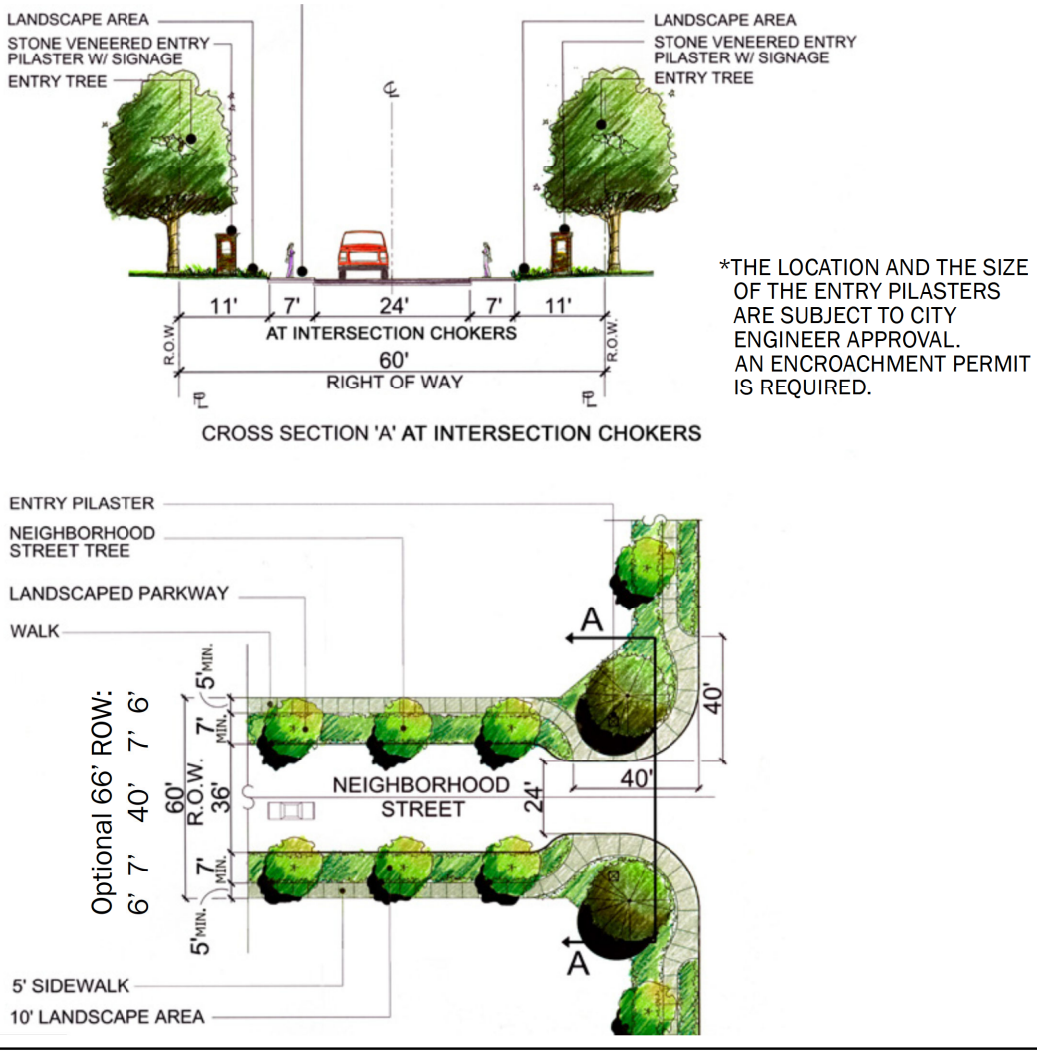

Exhibit 17h - La Avenida Drive - Divided Primary Local Street

Neighborhood Entry Street

Neighborhood Entry Streets are designed to distribute vehicular traffic from the arterial and collector streets into the residential neighborhoods. These streets have a 60 foot minimum total right-of-way with 36 feet of paved travel area. There is a 12-foot wide parkway within the right-of-way which provides for a minimum 5-foot wide sidewalk separated from the street by a minimum 7-foot wide landscaped area. The developer will be responsible for those improvements to Neighborhood Entry Streets as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The Neighborhood Entry Street cross-section is illustrated below:

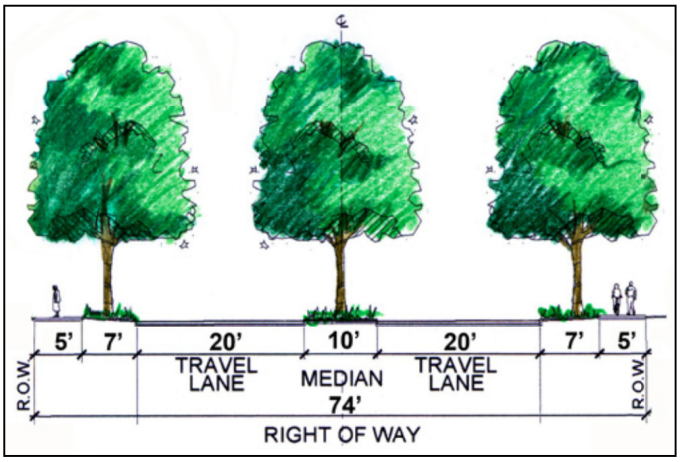

Exhibit 17i - Neighborhood Entry Street

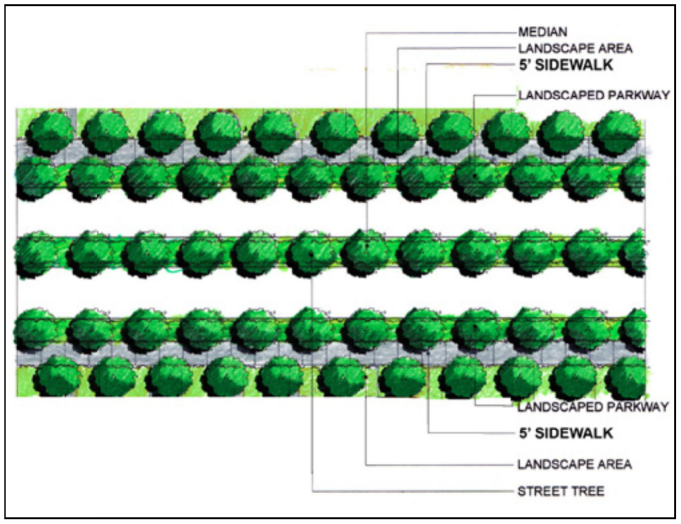


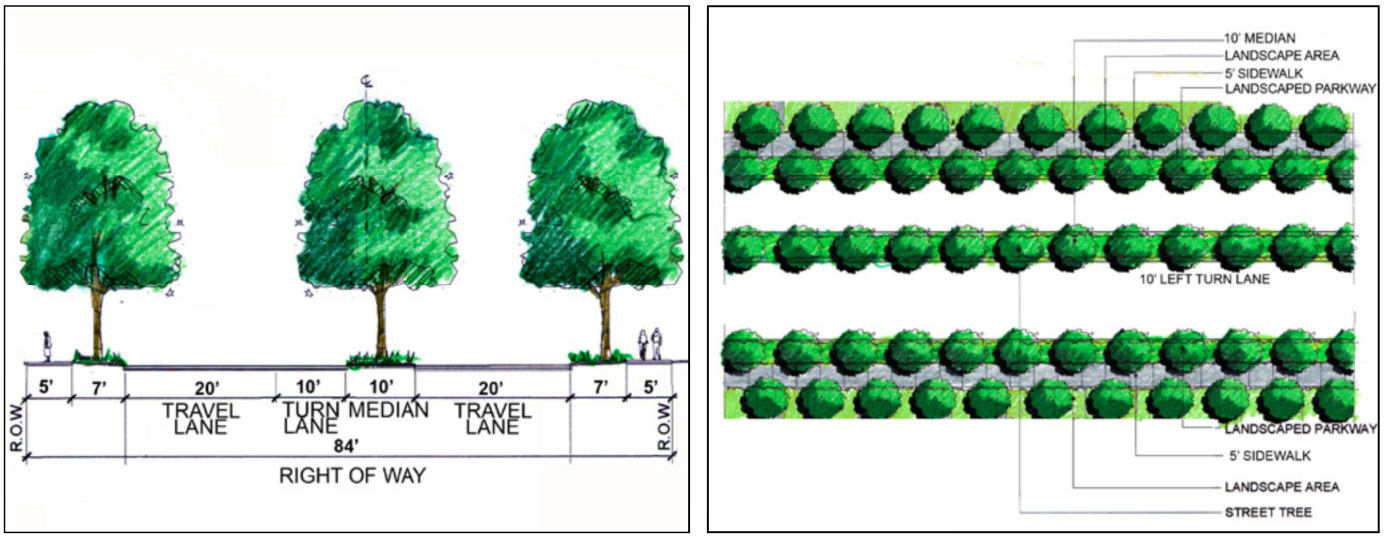
Neighborhood Entry Street With Median

The Neighborhood Entry Street With Median is designed to distribute vehicular traffic from Ontario Ranch Road into the residential neighborhood. Section 17ja has a 74 foot minimum total right-of-way with 40 feet of paved travel area split by a 10-foot landscaped median. There is a 12-foot wide parkway within the right-of-way which provides for a 5-foot wide sidewalk separated from the street by a 7-foot wide landscaped area. Section 17jb has an 84-foot right-of-way with two 20 foot travel lanes, split by a 10' landscaped median and 10 foot turn lane for southbound motorists wishing to turn left onto Ontario Ranch Road. Each side of Section 17jb contains a 5 foot sidewalk and 7 foot parkway. Section 17jc also has an 84 foot right-of-way containing two 20 foot travel lanes. There is a 10 foot turn lane for northbound motorist wishing to turn left onto Ontario Ranch Road. This 10 foot turn lane is flanked by a 4 foot landscape median and a 6 foot striped zone. Each side of Section 17jc also contains a 5 foot sidewalk and 7 foot parkway.

Exhibit 17ja - Neighborhood Entry Street with Median

The final roadway section widths will be determined by the City Engineer based on the need for intersection left and/or right turn lanes. The developer will be responsible for those improvements to Neighborhood Entries as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. The Neighborhood Entry Street with Median cross-section is illustrated below:

Exhibit 17jb - Neighborhood Entry Street with Median - Southbound



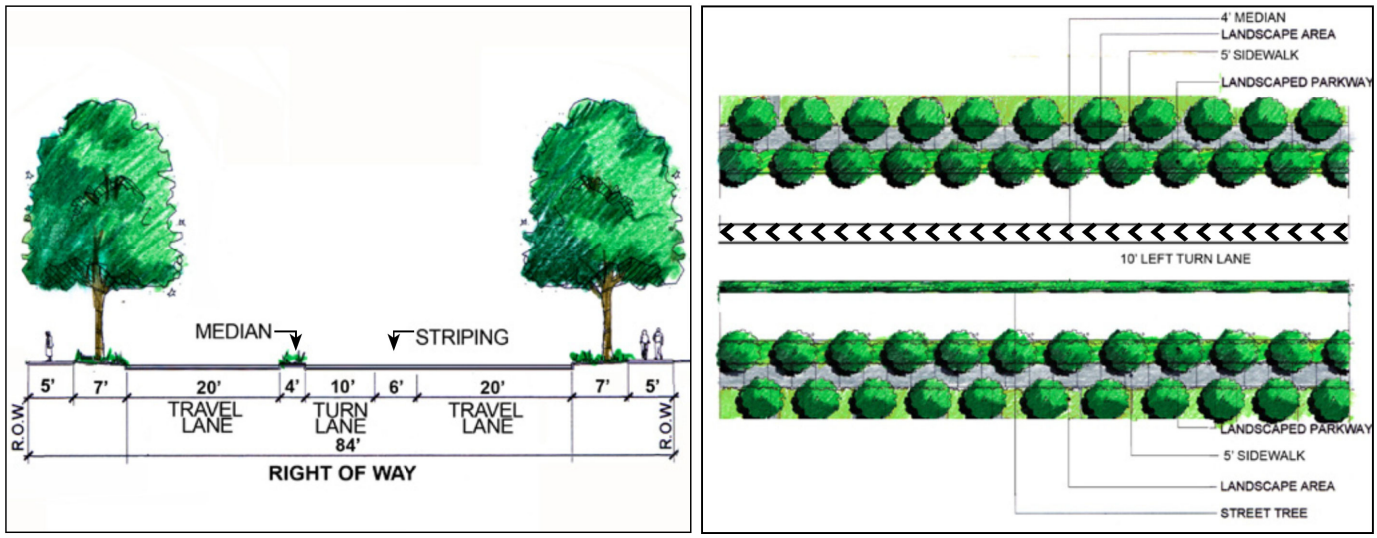


Exhibit 17jc - Neighborhood Entry Street with Median - Northbound *(South of Ontario Ranch Road)*

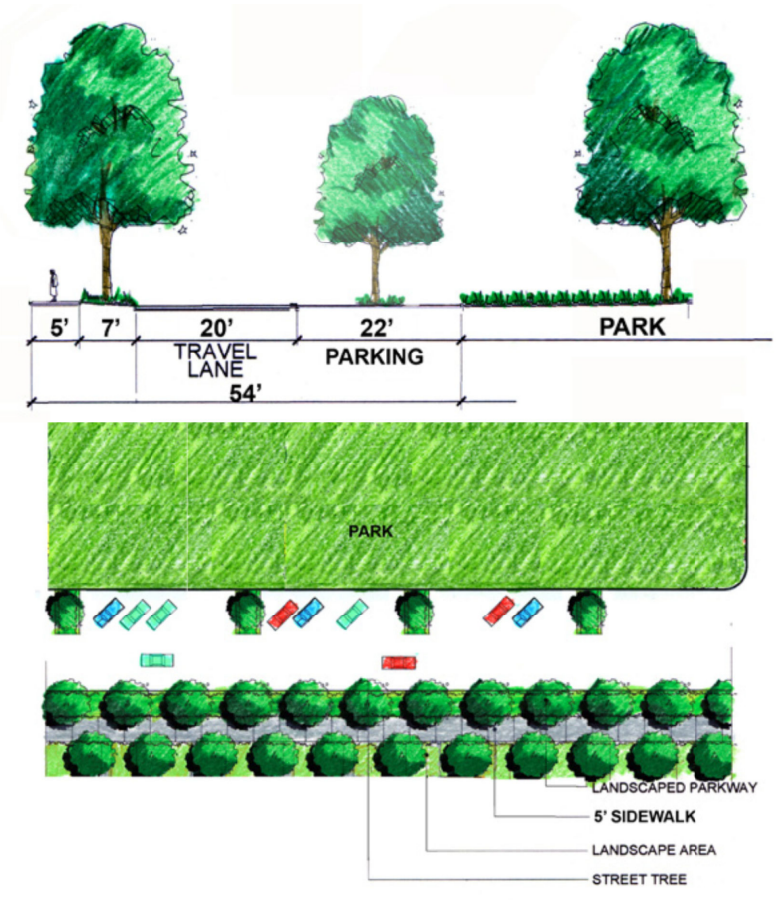
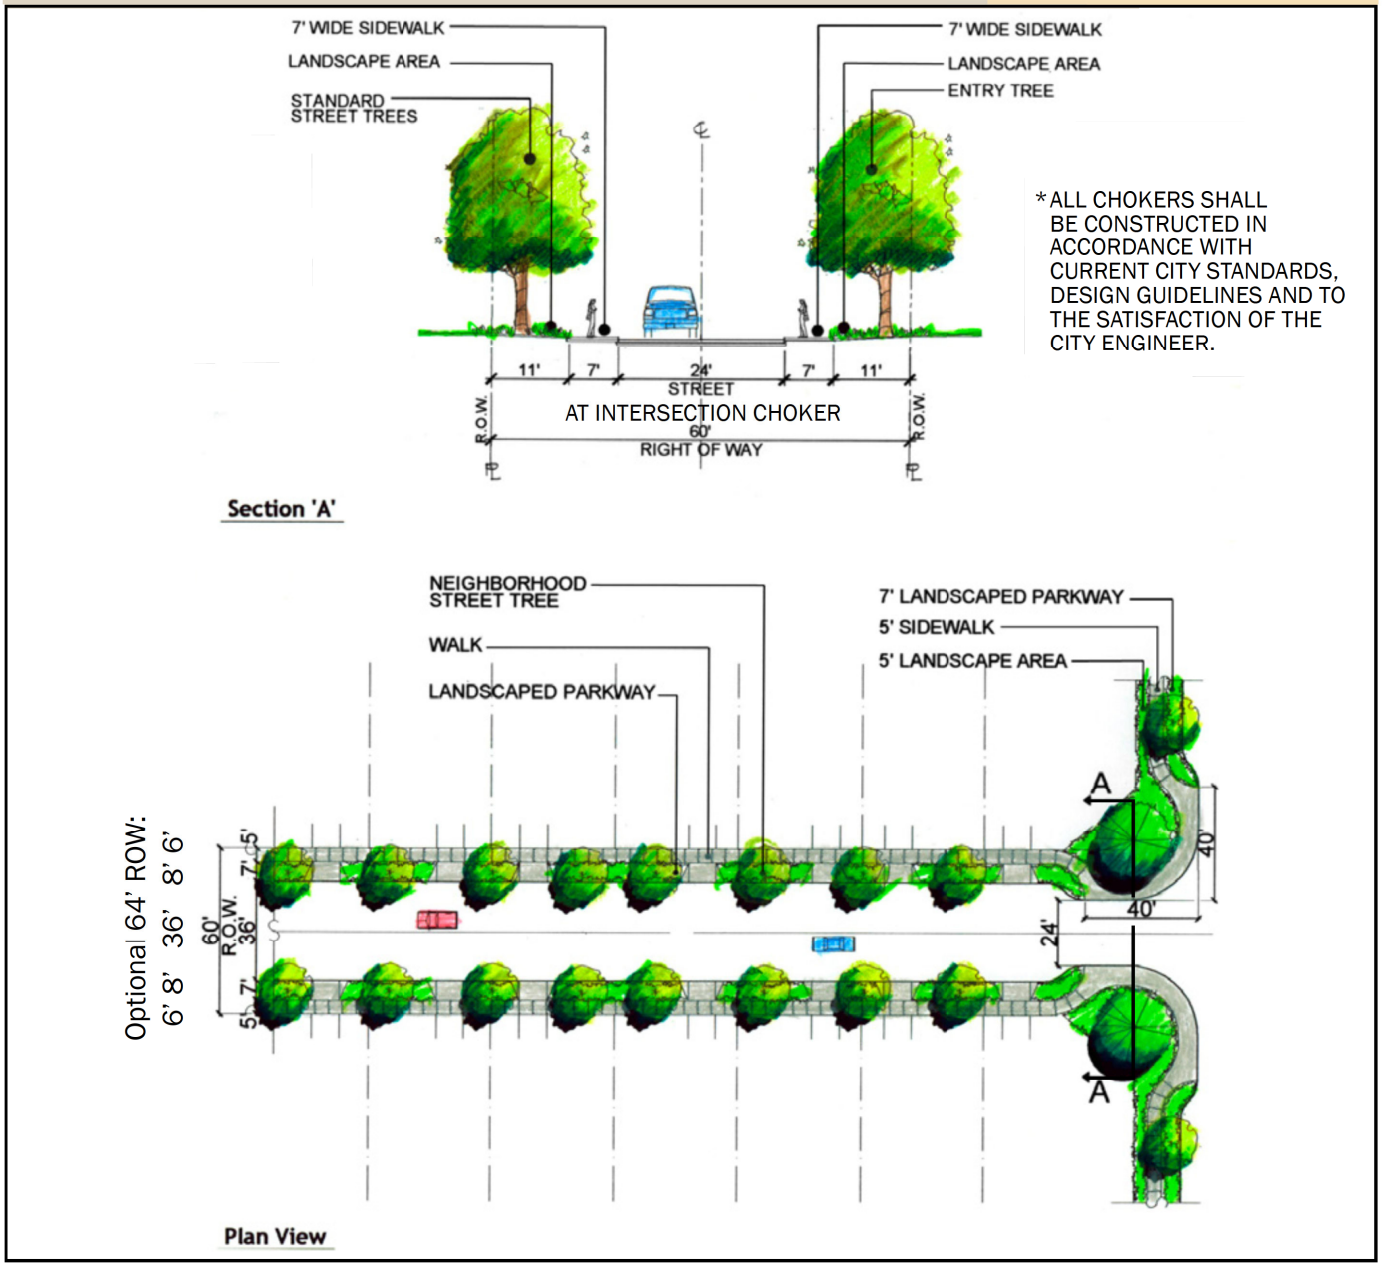


Neighborhood Park Adjacent Street

The Park adjacent street is a 20-foot clear paveway and 3-foot concrete gutter for one-way circulation around the park. This narrow section does not allow on-street parking in order to allow a clearer view from the homes to the park, better visibility of pedestrians and a minimum 20-foot clear for emergency vehicles. On the park side of the street angled parking is provided outside of the 20-foot right of way between the corners of the park.

Within each row of parking spaces, landscape islands shall be placed to prevent more than 10 vehicles from being parked side-by-side in an abutting configuration. Planter islands for a single row of parking spaces shall be landscaped with at least one (1) tree and vegetative groundcover. The side of the street adjacent to homes will have a 7-foot landscaped area and 5-foot sidewalk as indicated below and the developer will be responsible for those improvements to Neighborhood Streets as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project. This street type applies to Planning Area 10A only. The Neighborhood Park Adjacent Street is illustrated below:

Exhibit 17k - Neighborhood Park Adjacent Street



NOTE: This concept applies to PA 10A only.

Neighborhood Streets With Intersection Chokers

Neighborhood intersection chokers are traffic calming devices to slow down vehicles when they reach the neighborhood street level. They also facilitate pedestrian crossings by shortening the crossing distance and make them safer. The developer will be responsible for those improvements to Neighborhood intersection chokers as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project.

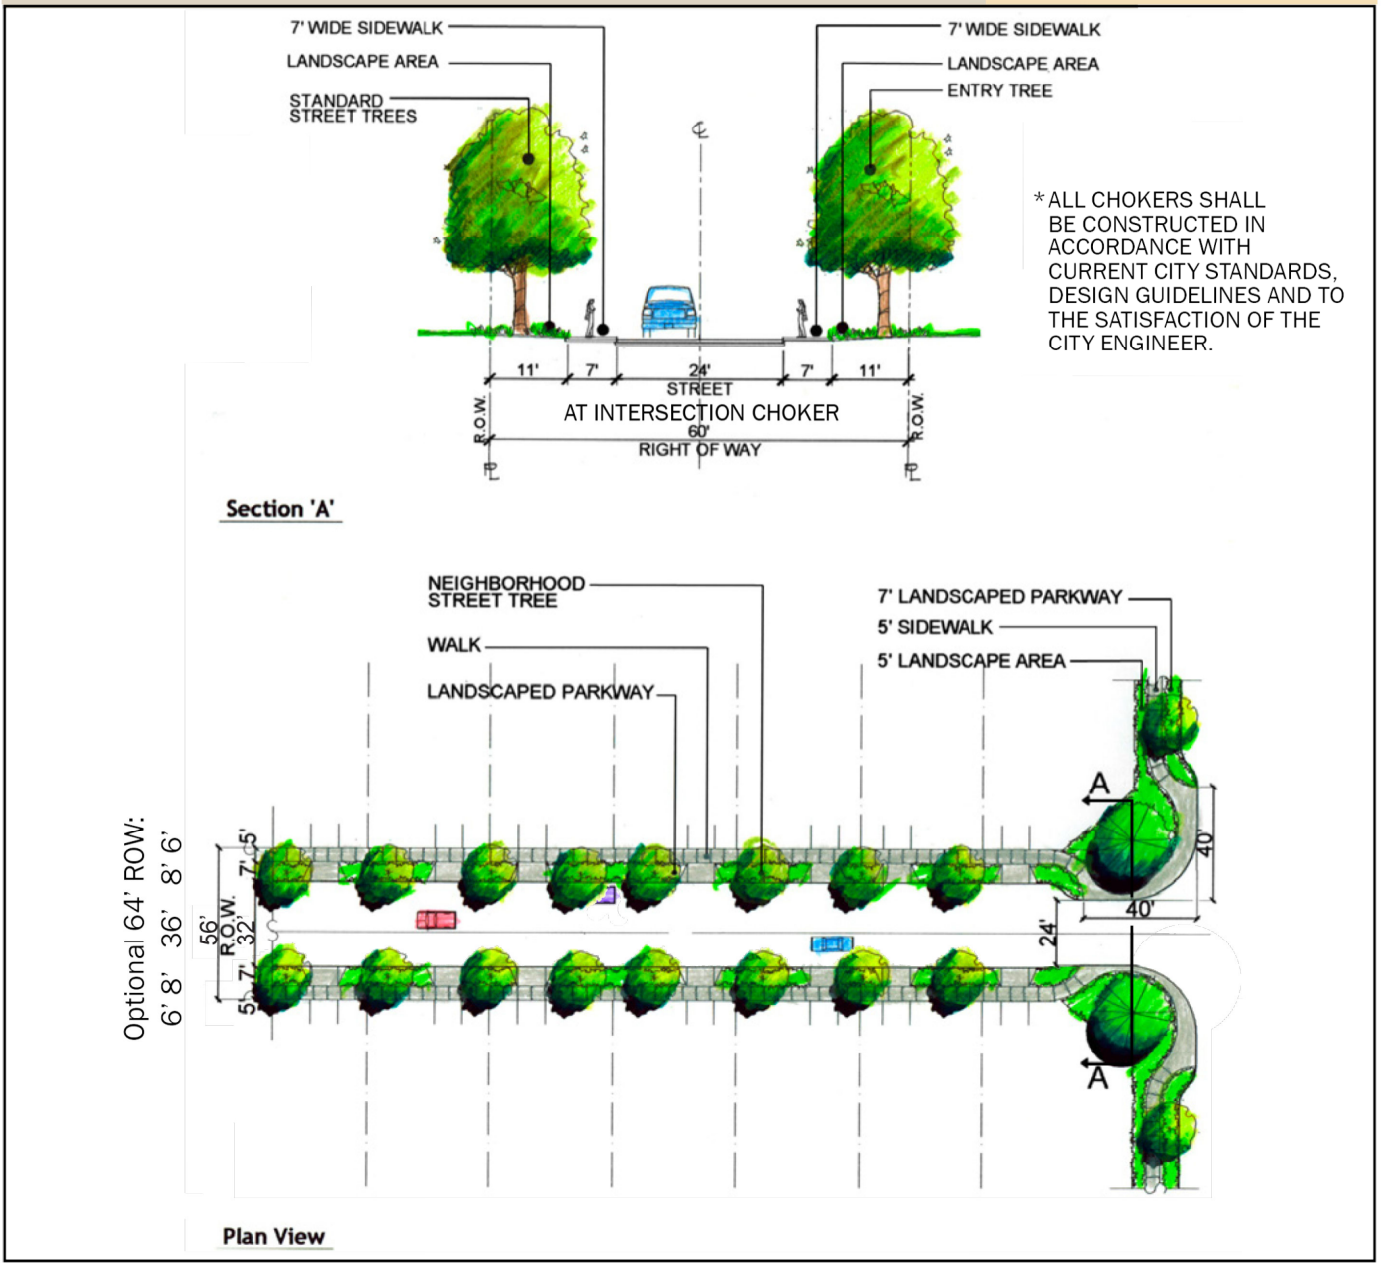


Exhibit 17I-1 - Neighborhood Streets With Intersection Chokers

Private Streets With Intersection Chokers

Private Street intersection chokers are traffic calming devices to slow down vehicles when they reach the neighborhood street level. They also facilitate pedestrian crossings by shortening the crossing distance and make them safer. The developer will be responsible for those improvements to private Street intersection chokers as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project.

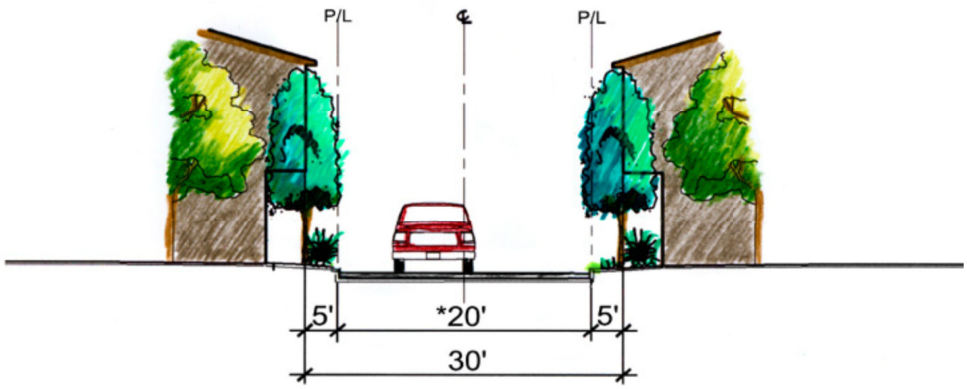

Exhibit 17I-2 - Private Streets With Intersection Chokers

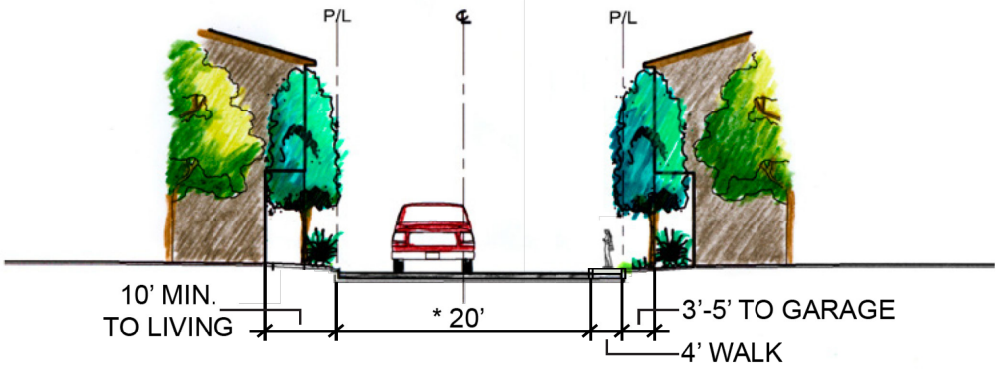
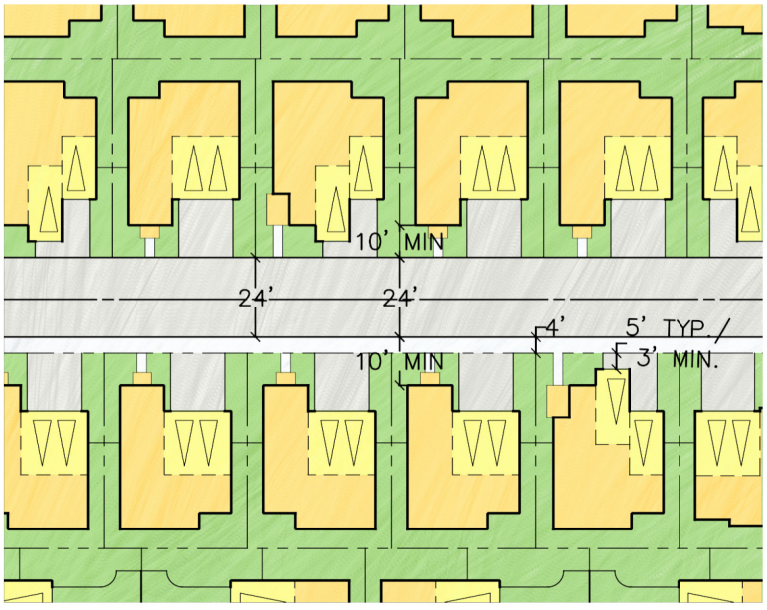
Alley

Alleys within the plan area will consist of 20 feet of paved travel area with 5 feet of landscape and apron on each side. The alleys will incorporate tapers at the entrance to alleys to slow traffic in these areas and to provide a visual element to discourage drivers from using alleys as a through street. Pavement may expand to 24 feet for Fire use with 3' landscape and apron on each side to maintain a 30' building separation. Final alley design shall be subject to review and approval by the Planning, Engineering, and Fire Departments. The developer will be responsible for those improvements to alleys as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project.

Exhibit 17m-1 - Alley (Cross-Section and Plan)



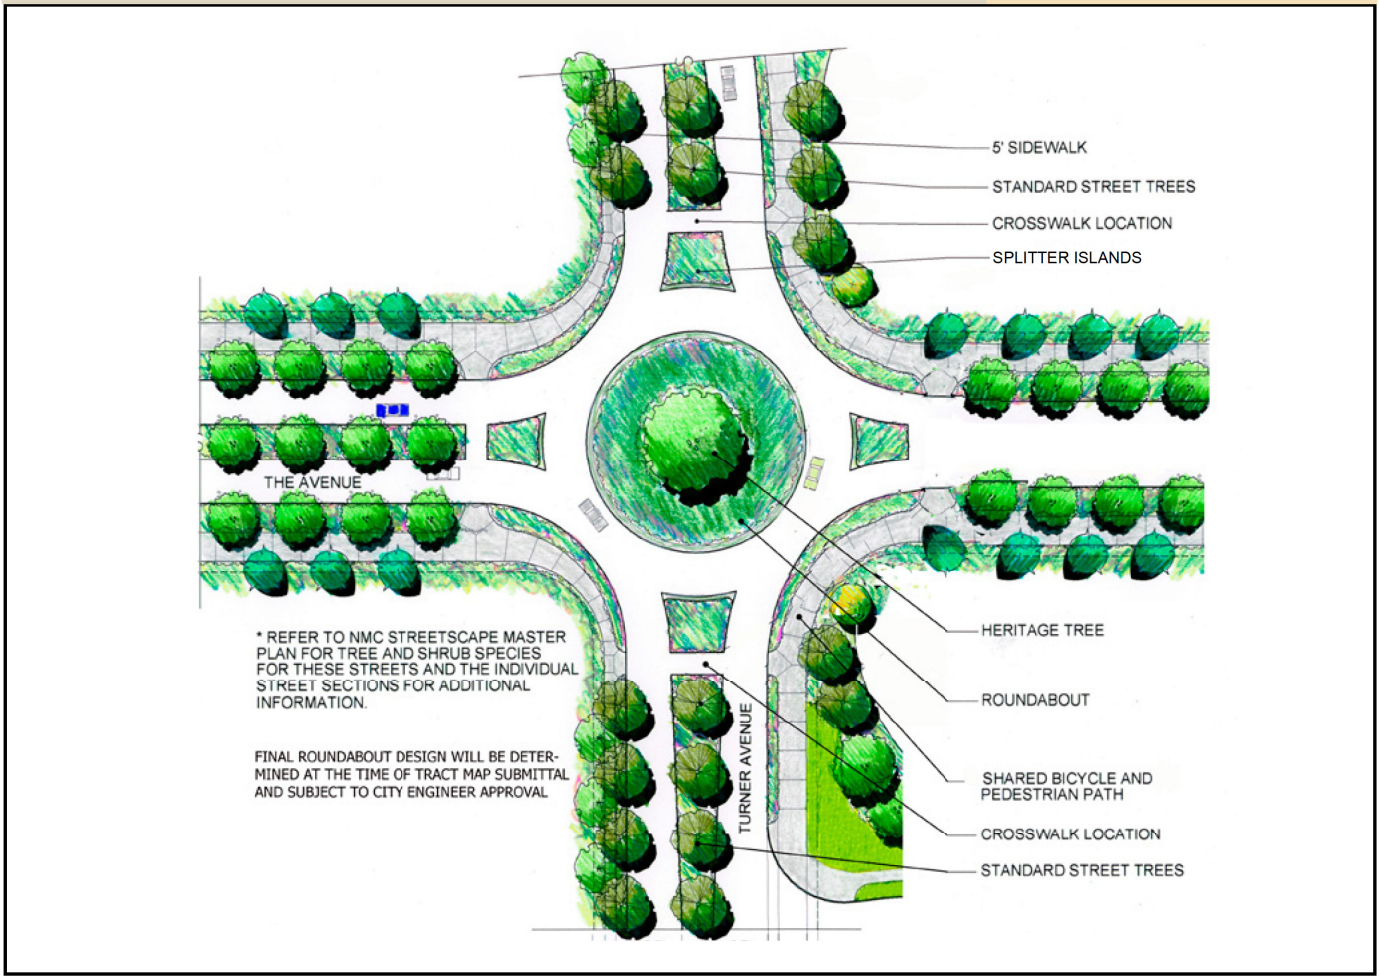
*PAVEMENT MAY EXPAND TO 24' FOR FIRE USES WITH 3' LANDSCAPE AND APRON EDGES ON BOTH SIDES TO MAINTAIN 30' BUILDING SEPARATION. FINAL PRIVATE DRIVE DESIGN SHALL BE SUBJECT TO REVIEW AND APPROVAL BY THE PLANNING, ENGINEERING AND FIRE DEPARTMENTS.



Private Alley

Private alleys within the plan area will consist of 20 feet of paved travel area with 5 feet minimum driveway aprons on each side. The private alleys will be paved per City Standards to encourage a street-like character. Pavement may expand to 24 feet for Fire use with 3' landscape and apron on each side. Final private alley design shall be subject to review and approval by the Planning, Engineering, and Fire Departments.The developer will be responsible for those improvements to Private Alleys as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project.

Exhibit 17m-2 - Private Drive (Cross-Section and Plan)



*PAVEMENT MAY EXPAND TO 24' FOR FIRE USES WITH 3' LANDSCAPE AND APRON EDGES ON BOTH SIDES TO MAINTAIN 30' BUILDING SEPARATION. FINAL PRIVATE DRIVE DESIGN SHALL BE SUBJECT TO REVIEW AND APPROVAL BY THE PLANNING, ENGINEERING AND FIRE DEPARTMENTS.

Typical Roundabout

Roundabouts have been strategically located throughout the plan to calm traffic through the center of the project, facilitate traffic movement and reduce air pollution by avoiding mandatory stops from all directions at the conceptual locations shown in Exhibit 17n, "Typical Roundabout". These roundabouts will follow the City adopted guidelines/standards and their final design will require City planning and engineering department approval as part of the tentative tract map review process. Utilities shall not be located under roundabouts. The developer will be responsible for those improvements to Roundabouts as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project.

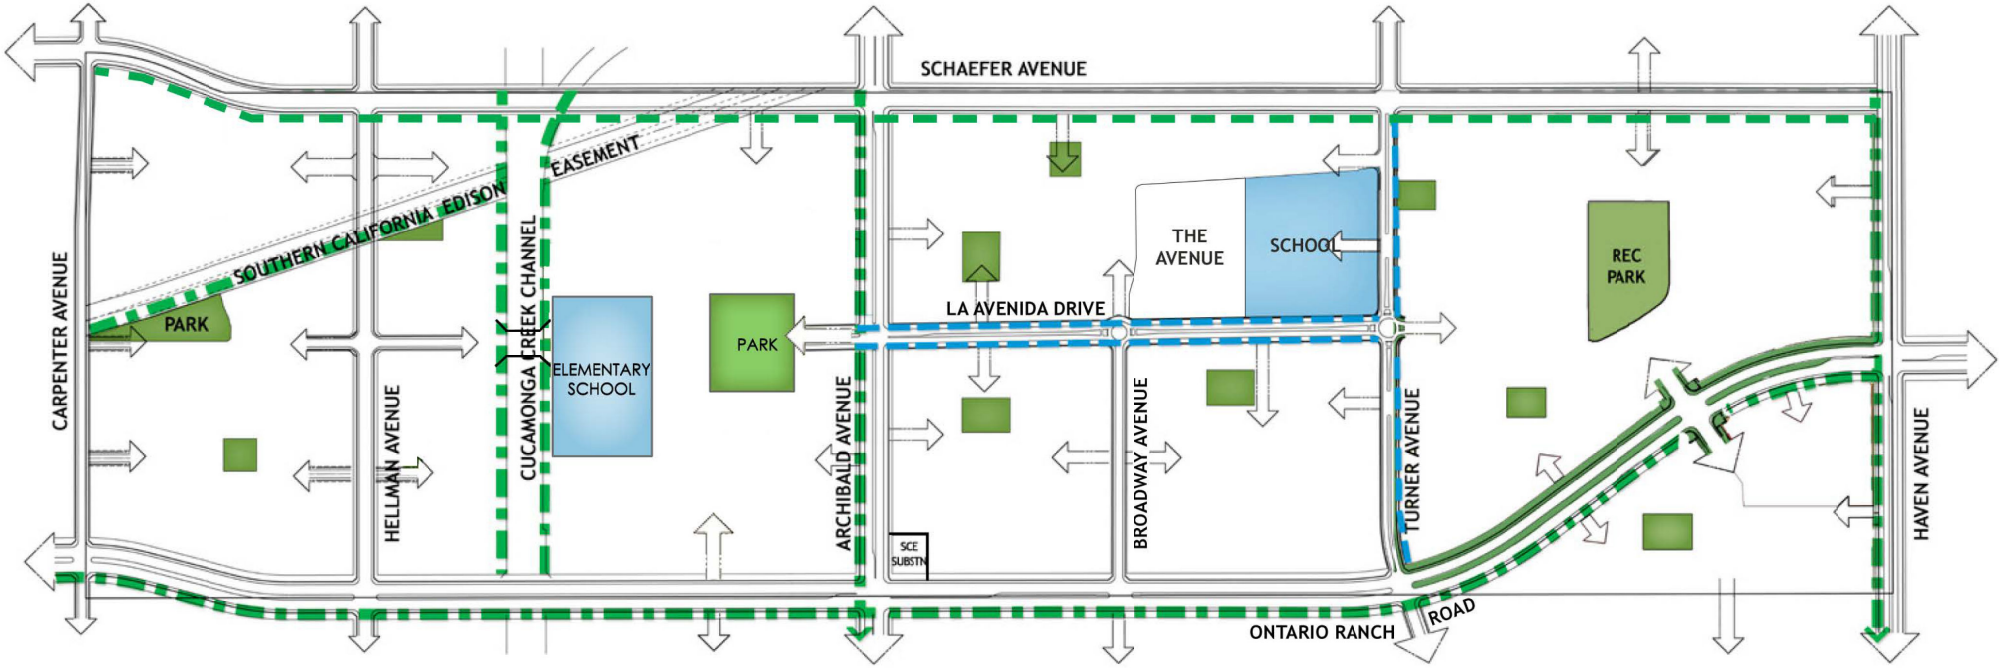
Exhibit 17n - Typical Roundabout (La Avenida Drive and Turner Avenue)

* ROUNDABOUTS ARE ONLY ALLOWED ON SINGLE LANE APPROACHES.
IF IT IS INTENDED THAT LA AVENIDA DRIVE OR TURNER AVENUE EVER BECOME A 4 LANE ROADWAY (2 APPROACH LANES) THE PROPOSED ROUNDABOUT AT THIS LOCATION SHALL BE REMOVED.

4.1.2 Traffic Calming

The Avenue Specific Plan provides for traffic calming within residential neighborhoods to contribute to safer and more livable neighborhoods in which to walk, bike and drive. According to the Federal Highway Administration (FHWA) document FHWA-HRT-06-047 HRTC-01/01-06(1M)E, Roundabouts Safety and Design, 2006 some of the benefits of roundabouts are:

- Crashes are less severe than other intersection crashes.
- Safer than traditional intersections.
- Cost-effective way to improve intersection safety.
- Increased traffic capacity and improved traffic flow.
- No signal equipment to maintain.
- Aesthetic benefits.



There are also environmental benefits to roundabouts. The FHWA Publication FHWA-RD-00-067 Roundabouts, An Informational Guide, June 2000 states that "The environmental benefits of a project are most readily quantified in terms of reduced fuel consumption and improved air quality. Of these, reductions in fuel consumption and the benefits associated with those reductions are typically the simplest to determine."

4.1.3 Pedestrian/Bicycle Trails and Connectivity

A primary recreational trail will be provided through the improvement of a portion of the SCE owned property (SCE Corridor) within the plan area as shown on Exhibit 18b, "SCE Easement Trail". The developers of the Specific Plan Area will be responsible for the construction of this trail. These improvements represent a part of the City's Master Planned multi-use path system planned for Ontario Ranch. This SCE trail will extend from Vineyard Avenue, located west of the plan area to the Cucamonga Creek Channel. The trail will then head north along the west side of the Channel, where it will meet the Multi-Use path on Schaefer Avenue. This series of trails will provide access to Archibald Avenue and the trail on the East side of the Channel, which also runs north-south within the flood control right of way connecting Schaefer to Ontario Ranch Road. The trail also provides points of connection to parks, LaAvenida Drive corridor, residential neighborhoods and the retail center.

The Specific Plan proposes a steel truss bicycle/pedestrian bridge crossing over the Cucamonga Creek Channel to connect the east and west sides of the channel and encourage school children west of the Channel to walk or bike to school. The Specific Plan shows a potential location for the bicycle/pedestrian bridge that may be relocated or incorporated into another bridge crossing. Final location and design will be subject to approval by Planning Director. The developer will be required to pay for the bridge and its construction. An encroachment permit will be needed from San Bernardino County Flood Control to construct the bridge crossing. A minimum 12-foot easement will need to be recorded to the City of Ontario in order to maintain the pedestrian bridge and provide public access across the channel. The SCE and flood control channel trails are important components in the overall trail system design of Ontario Ranch and are an important component of the city's master plan trail system. The residential users will find that the trail is useful in reaching many of The Avenue's amenities, as well as the surrounding community. The improved trails will be landscaped with approved evergreen, deciduous, and flowering plant material. There will be several points in the trail system linking to secondary paths that will lead to The Avenue's retail/commercial areas, as well as to the neighborhoods.

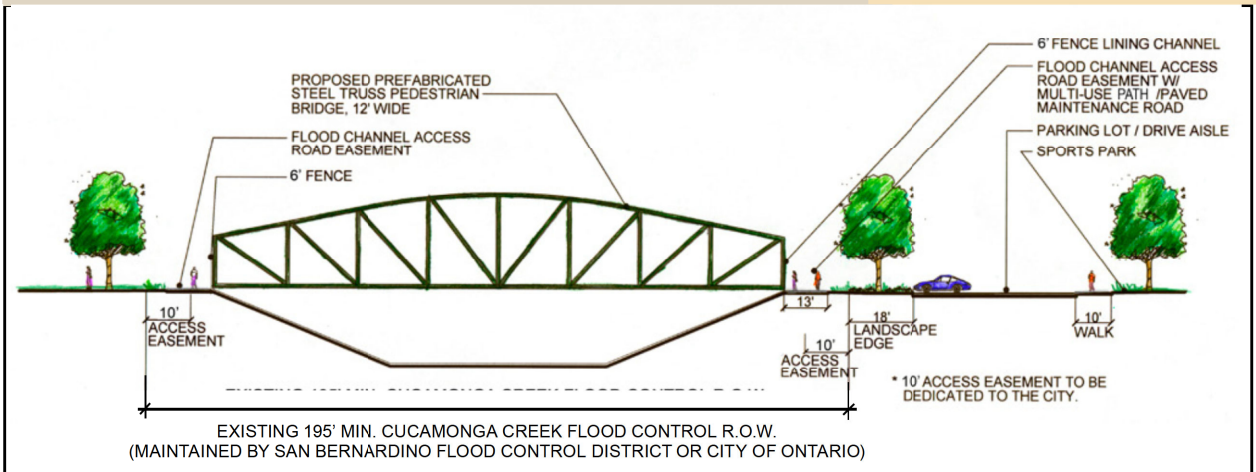
LEGEND

- NMC MASTER PLAN MULTI-USE PATH
- PROPOSED MULTI-USE BRIDGE ACROSS CHANNEL
- ENHANCED PEDESTRIAN SIDEWALK PER SPECIFIC PLAN (SEE SECTIONS 17G AND 17H)

NORTH

0 100 200 400 800

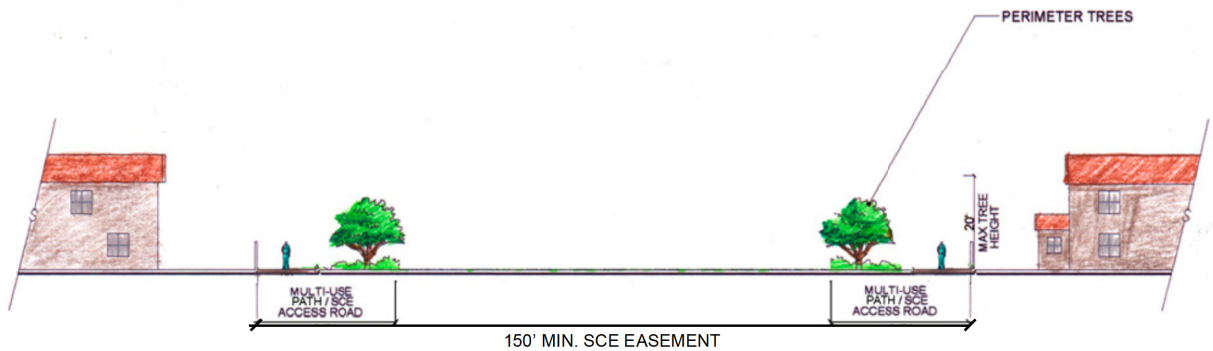
NOTE: The precise locations of the trails are conceptual and will be determined as part of the tract map approval process. The location of the proposed multi-purpose bridge is shown as conceptual and subject to Planning Department and Traffic Engineering Department review and approval.



Trail Master Plan

Multi-use paths are provided within the plan area along Archibald, Haven, Ontario Ranch Road and Schaefer Avenues. These paths are provided adjacent to the major drainage easement, along Hellman Avenue, and along the spine road (The "Avenue") which traverses the center of the plan area in an east-west direction.

Multi-use paths shall provide benches/seatwalls along path at appropriate locations with adequate lighting and trash receptacles at seating areas. In addition, these paths should provide clear directional signage (subject to Engineering and Planning Department approval) to facilitate movement to and from crosswalks and entry points.



Bike racks at destination locations serving as a point of departure to and from bike path will also be available on Class I bike paths. The bicycle trail system provides access and connectivity to the various land use components of the plan area (parks, schools, retail and commercial center, and residential neighborhoods) as shown in Exhibit 18, "Trail Master Plan". Class II on-street striped bike lanes shall be provided on roadways within The Avenue Specific Plan area as determined by the City Engineer.

Exhibit 18a - Cucamonga Creek Channel Trail

NOTE: The design and location of bridge is shown as conceptual and subject to Planning Department and Engineering Department review and approval.

Exhibit 18b - SCE Easement Trail

NOTE: The Landscape and Trail Design of the SCE Easement Trail shall comply with the landscape and trail design standards of NMC Streetscape Master Plan.

4.2 Infrastructure Plans

The improvement plans for the various infrastructure facilities, including water, recycled water, sewer, and storm drainage are intended to provide The Avenue Specific Plan with essential services in a safe and efficient manner. Infrastructure facilities shall comply with the latest approved Master Plans. The current Water Master Plan shall be referenced for design standards, sizing, alignment, etc. Water, recycled water and sewer utilities may be designated as "public utilities" if located within public or private streets. All public utilities within private streets shall be designed and constructed per City standards and contained within easements acceptable to the City. The CC&RS shall contain language that requires all proposed work by the HOA within said easements to be plan checked and inspected by the City, including applicable fees. Generally, utilities will not be accepted as public within alleys, parking areas or driveways.

Utilities within commercial and industrial parking lots and loading areas shall be designated as private. The extent to which said utilities will be accepted as public utilities for maintenance shall be determined, at the full discretion of the City, during final design plan review. The following sections describe each of the infrastructure facilities in detail.

4.2.1 Water

Domestic water will be provided by the City of Ontario. The Master Planned (MP) programs new potable water facilities to include: 30 and 24-inch Francis loop main extension from existing Zone 925 reservoir facilities within Milliken, Eucalyptus, and Archibald Streets. The remainder of The Avenue will be served by a series of new Master Planned 12-inch mains as follows: Ontario Ranch Road extending to Haven, Schaefer from Carpenter to Haven, Haven from Eucalyptus to Schaefer, Turner from Ontario Ranch Road to Schaefer and Hellman from Ontario Ranch Road to Schaefer. Construction of the Master Planned water mains service network improvements is required prior to issuance of project related building permits for The Avenue. Master Planned domestic and recycled water main lines serving, surrounding and within the Specific Plan, as identified in the current Water Master Plan, shall be constructed prior to issuance of first occupancy. Sizing of non-master planned facilities is subject to City review and approval of the required Hydraulic Analysis. Requirements for Master Plan backbone water improvements for Phase 1A, 1B and 2 are subject to the NMC Builders' agreement.

New domestic water mains to be constructed as part of the development of The Avenue will include: 12-inch 925PZ mains within Carpenter Avenue, Hellman Avenue and Turner Avenue from Ontario Ranch Road to Schaefer, within La Avenida Drive street from the proposed Elementary school site easterly of Archibald extending to Turner Avenue, within Ontario Ranch Road and Schaefer Avenue from Haven to Carpenter. These 12-inch mains form the interior backbone loops connecting to Master Planned potable water facilities. The remainder of all interior streets within The Avenue project, and "A" Street located between Archibald and Turner will have 8-inch domestic mains. The construction on dead end water mains shall be avoided.

Higher fire flow demands for medium to high density residential and non-residential projects should be identified in accordance with the current Water Master Plan. Fire flow demands in excess of 1500 gpm for single family residential may require upsizing certain distribution to 12-inch pipelines as shown in Exhibit 20, "Domestic Water Master Plan". A hydraulic modeling analysis report is required to demonstrate that the proposed water system will meet peak demands including maximum day plus fire demand and peak hour demand.

4.2.2 Recycled Water

The ultimate sizing and alignment shall follow the most currently approved Master Plan. In order to assure conformance with Master Plan Design Criteria during the Implementation process: a Conceptual Technical Study shall be prepared and approved by the City prior to or concurrently with the entitlement submittal; and, a Final Technical Study shall be prepared and approved by the City prior to approval of Construction Drawings and Permits.

All new Master Planned recycled water mains will have the potential to interconnect to the proposed future 48-inch transmission facility within Carpenter. New recycled water facilities to be constructed as part of The Avenue will include: a 8-inch main within Turner from Ontario Ranch Road to Schaefer; a 8-inch main within La Avenida Drive from Archibald westerly to the Elementary school site and from Archibald to Turner. All remaining interior streets built with The Avenue project will connect to the Master Planned recycled water facilities and The Avenue backbone facilities to serve the project landscape edges, parkways, neighborhood, parks, street medians, etc. via 8-inch mains within the interior streets, as required, and irrigation sleeving at intersections and appropriate mid-block crossings to serve The Avenue landscaping improvements irrigation needs. Sizing of non-master planned facilities is subject to review and approval of the required Hydraulic Analysis. An initial Master Plan construction of recycled water improvements will be the construction of the 930 pressure zone (PZ) recycled water system in Archibald Avenue from southerly project limits to Riverside Drive, the Pressure Reducing Station (PRS) at Archibald & Chino Avenue, 1050 PZ pipes in Archibald, 1050 PZ pipes in Riverside Drive and on into RP-1. This above mentioned series of piping will tie into The Avenue via Schaefer, Ontario Ranch Road, etc. A recycled water loop must also be constructed in Haven Ave. from the southerly project limits to Riverside Dr. and in Riverside Dr. from Haven Ave, to RP-1 including the PRS stations per the Recycled Water Master Plan.

The Avenue (Subarea 18) Specific Plan shall comply with City Ordinance 2689 and make use of recycled water for all approved uses, including but not limited to irrigation of parks, schools, street landscaping, recreational trails, HOA maintained on-site common areas and commercial/industrial landscaping. An Engineering Report approved by the City and the California Department of Public Health is required prior to the use of recycled water.

4.2.3 Sewer

The ultimate sizing and alignment shall follow the most currently approved Master Plan. In order to assure conformance with Master Plan Design Criteria during the Implementation process: a Conceptual Technical Study shall be prepared and approved by the City prior to or concurrently with the entitlement submittal; and, a Final Technical Study shall be prepared and approved by the City prior to approval of Construction Drawings and Permits.

The 21-inch Haven Avenue Trunk Sewer line runs in Haven Avenue begins north of the Ontario Ranch Road intersection. The Ontario Ranch Road Trunk Sewer line (27-inch and 30-inch) runs in Ontario Ranch Road between Archibald Avenue and Haven Avenue. There is also a sewer line (21-inch and 24-inch) to be located within Carpenter Avenue which will connect to the Kimball Interceptor at the County line. The Carpenter Avenue Trunk Sewer will extend northerly to Schaefer Avenue and will serve the Avenue project development area from midway to Hellman to the east and Carpenter Avenue to the west. Sewer in Hellman Avenue will extend northerly to Chino Avenue and will serve areas to the Cucamonga Creek Channel to the west and midway to Carpenter Avenue to the east.

New sewer facilities to be constructed as part of The Avenue will include: 12-inch sewer in La Avenida Drive from Archibald easterly to Turner; 10-inch sewer in La Avenida Drive from Archibald westerly to the Elementary school site; 10 inch sewer in Broadway Avenue from Ontario Ranch Road terminating near La Avenida Drive intersection; 12-inch sewer in Turner from La Avenida Drive intersection northerly to Schaefer.

A 12-inch sewer will be constructed in Ontario Ranch Road from Hellman westerly to join the master plan sewer in Carpenter Avenue and 10 inch sewer in Hellman Avenue from Ontario Ranch Road terminating in Chino Avenue. All remaining interior streets within The Avenue, when developed, will have 8-inch minimum sewer main lines as shown in Exhibit 23, “Sewer Master Plan.” Master planned sewer main lines serving and surrounding the development shall be constructed prior to issuance of first occupancy. Initial sewer improvements shall be constructed between IEUA’s Archibald Trunk and the development limits, including constructing that portion of Ontario Ranch Road sewer between Archibald and Haven.

4.2.4 Drainage

Ontario Ranch Master Plan of Storm Drains report, prepared by LD King Engineers and updated Ontario Ranch Improvements Hydrology Analysis provided by Stantec Engineers considered the entire Master Plan zoning area drainage analysis of which The Avenue (Planning Area 18) is included. The City of Ontario will be the maintenance agency for Master Planned and The Avenue storm drainage system facilities.

All Avenue drainage will eventually discharge into the existing Bellegrave County Line Drainage Channel facility located approximately 7,000-feet south of La Avenida Drive. The Master Planned improvements will utilize the existing Cucamonga Channel County of San Bernardino Flood Control facility, which drains north to south and joins the east-west Bellegrave County Line Drainage Channel. The Master Planned Storm Drain Improvements will construct a new network of storm drain lines within existing and proposed north-south streets extending northerly from the Bellegrave County Line Flood Control facility. Also, east-west storm drain lines will be built periodically joining the existing Cucamonga Channel Flood Channel facility. The Master Planned Storm Drain Improvements will include the following: an 84-inch storm drain

within Haven fronting the easterly edge of La Avenida Drive and extending southerly joining the Bellegrave Flood Channel with a 96-inch line; a 66-inch storm drain within Turner, the Turner storm drain will extend southerly eventually joining the Bellegrave Flood Channel with a 96-inch line; Archibald Avenue accepts flows from a 36-inch line within Schaefer easterly of the Archibald intersection.

The Archibald main extends southerly eventually joining the Bellegrave Flood Channel with a 96-inch line. The Hellman storm drain accepts flows from a 42-inch line north of Schaefer.

The Hellman storm drain extends southerly through The Avenue as an 42-inch line and joins an 84-inch line within Ontario Ranch Road. The Hellman storm drain extends southerly to future Eucalyptus Street as a 96-inch line, then travels easterly on Eucalyptus as a 6' x 11' box culvert to join the existing Cucamonga Flood Channel. Ontario Ranch Road west of the Cucamonga Flood Channel has an 84-inch storm drain easterly of the Hellman intersection and 72-inch lines extending from west to east from Vineyard to Hellman. Ontario Ranch Road, between Archibald Avenue and Turner Avenue, contains 60-inch, 54-inch and 48-inch storm drain. A 48-inch storm drain extends easterly from the existing Cucamonga Channel within Ontario Ranch Road terminating mid-block between the channel and Archibald intersection.

Cucamonga Creek Channel

Storm drain facilities to be constructed as part of The Avenue will include: a 30-inch line in Carpenter from Ontario Ranch Road northerly to mid-block between Schaefer; a 36-inch line paralleling the easterly side of the existing Cucamonga Flood Channel to serve the Park/Elementary school sites and extending northerly to serve the future retail site adjacent and southerly of Schaefer; a 30-inch line within La Avenida Drive– between Archibald and Turner to provide service to the 10 acre School site; the individual planning areas within The Avenue will have storm drain pick-up laterals (18-inch minimum) joining Master Planned Improvements and The Avenue backbone storm drain facilities.

Ultimate development of The Avenue requires construction of all proposed Master Planned Storm Drain Improvements. The existing Avenue site generally sheet flows form north to south. It is not anticipated that Grading of individual planning areas will be permitted, prior to completion of Master Planned Storm Drain Improvements due to the fact that the City of Ontario will not allow temporary stormwater runoff detention basins to be constructed for individual planning areas in The Avenue until downstream Master Planned storm drain facilities are constructed and functioning to provide necessary flood control for that tract map area.

4.2.5 Grading

Landscape Setback Swale System

The Avenue existing topography may be described as flatland terrain which gently slopes to the south varying from 0.6% to 1.1% across the site as shown in Exhibit 5, "Existing Topography". The high elevation is elevation 750 at the northeast corner of the site. The low elevation is 706 located at the intersection of Archibald and Ontario Ranch Road Streets. Existing land uses vary from vacant land to agricultural with the majority of land being existing or vacated dairy farm operation. The dairy farm operations contain many ponding areas for acceptance/ filtration of dairy livestock excrement runoff. The dairy farms on the site have varying thickness layers of manure which will require off-site disposal from The Avenue project. Due to the varied number of development ownership of The Avenue planning areas, it is anticipated that mass grading of the entire site will not occur. Individual planning area owners will be responsible for obtaining any rough grading and precise grading permits along with remedial grading, removal of manure deposits and dairy bog pond sediments disposal. If the Developer proposes temporary use of an existing agricultural well for purposes other than agriculture, such as grading, dust control, etc., the developer shall make a formal request to the City of Ontario for such use prior to issuance of permits for any construction activity. Upon approval, the Developer shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by the agreement.

4.2.6 NPDES Compliance

The grading and drainage of The Avenue Specific Plan area shall be designed to detain, filter and treat surface runoff, in a manner and combination which is practical, to comply with the most recent requirements of the San Bernardino County NPDES Stormwater Program's Water Quality Management (WQMP) for significant new development projects. The objective of the WQMP for this project is to minimize the detrimental effects of urbanization on the beneficial uses of receiving waters, including effects caused by increased pollutants and changes in hydrology. These effects may be minimized through the implementation of site designs that reduce runoff and pollutant transport by minimizing impervious surfaces and maximizing on-site infiltration, Source Control Best Management Practices (BMP's) and/or either on-site structural Treatment Control BMP's, or participation in regional or watershed-based Treatment Control BMP's. An alternative to the implementation of on-site Low Impact Development (LID) BMPs to retain/infilter and treat stormwater runoff is the utilization of the off-site, regional Mill Creek Wetland facility for accomplishing water quality improvements in residential project runoff from this master planned community. All non-residential planning area projects within The Avenue will incorporate all required on-site LID BMPs, pursuant to the requirements of the current San Bernardino County Water Quality Management Plan.

Prior to the issuance of a grading or construction permit, all projects greater than 1 acre in size shall apply for coverage under the California General Permit To Discharge Storm Water Associated with Construction

Activity, obtain a WDID# from the State Water Resources Control Board and prepare a Stormwater Pollution Prevention Plan (SWPPP) on the CASQA 2009 Template form and upload it to the State's SMART database system. A copy of each SWPPP document and WDID# Certification shall also be provided to the City of Ontario, prior to any construction permit issuance. The SWPPP will identify and detail all appropriate Best Management Practices (BMPs) to be implemented or installed during construction of the project.

In addition to the preparation of a SWPPP for construction-related activities, and as part of the approval of any grading plans within the Specific Plan Area, the applicant will be required to submit a Water Quality Management Plan (WQMP) on the regional model form provided by the City. The WQMP shall identify and detail all Site Design BMPs, Source Control BMPs and Treatment Control BMPs to be implemented or installed at this site in order to reduce storm water pollutants and site runoff.

The Mill Creek Wetland facility has been constructed and will be on line and functioning in June, 2014. The facility will serve as an alternative to on-site LID BMP implementation for residential tract developers that are members of the Ontario Ranch Builders, LLC consortium and which have adequate reserved capacity in the regional facility for those planning areas. Out of a proposed 425 acres of residential development in The Avenue, 288 acres will be developed by Ontario Ranch Builders members, 20 acres of land will be utilized for public schools and 107 acres will developed by non-members, who will be required to make other arrangements or utilize another, future regional water quality facility, downstream of the project area. All non-residential planning area projects within The Avenue, including Public Schools, will incorporate on-site LID BMPs, in accordance with the regional NPDES Permit and the current San Bernardino County Water Quality Management Plan, and shall not rely on the regional wetlands facility for retention and treatment of runoff water.

All Priority Land Use (PLU) areas within the Specific Plan Area shall comply with the statewide Trash Provisions adopted by the State Water Resources Control Board (SWRCB) and trash requirements in the most current San Bernardino County Area-Wide MS4 Permit.

4.2.7 Solid Waste

The City of Ontario will provide solid waste collection services to The Avenue Specific Plan area. The following addresses additional solid waste issues:

- An integrated waste management plan is required and shall be submitted prior to DAB approval of each subdivision.
- Commercial – Developer shall comply with Municipal Code Sec. 6-3.314 Commercial Storage Standards, and Sec. 6-3.601 Business Recycling Plan.
- Apartment – For apartments using commercial bin service developer shall comply with Municipal Code Sec. 6-3.314 Commercial Storage Standards and Sec. 6-3.601 Business Recycling Plan.
- Residential – For curbside automated container service developer shall comply with Municipal Code Sec. 6-3.308.9(a) and (d), Residential Receptacles, Placement.

- Recycling Requirements – Developer shall comply with Municipal Code Article 6. Recycling Requirements for Specified Business Activity, Sec. 6-3.601 Business Recycling Plan, and Sec. 6-3.602 Construction and Demolition Recycling Plan.
- All project sites shall be designed to meet all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Area, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types.
- Project shall follow the City of Ontario's latest "Solid Waste Department Refuse and Recycling Planning Manual".

4.2.8 Gas

The Gas Company will provide natural gas to the Project Site. Gas mains will be installed to the Project Site by the Gas Company, as necessary.

4.2.9 Electric

Southern California Edison will provide electricity to the plan area from existing facilities in the vicinity. Proposed new facilities to serve the project will be owned and operated by the City of Ontario and located underground.

4.2.10 Telephone

Verizon will provide telephone service to the plan area. The City will provide a fiberoptic network to the home, accommodating voice mail data, cable and video on demand. Proposed on-site facilities will be placed underground.

4.2.11 Cable Television

Adelphia will provide cable television service to the plan area. The City will provide coaxial/fiber cable to the home, accommodating cable television, internet services, voice mail data, cable and video on demand. Proposed on-site facilities will be placed underground.

4.2.12 Fiber Optics

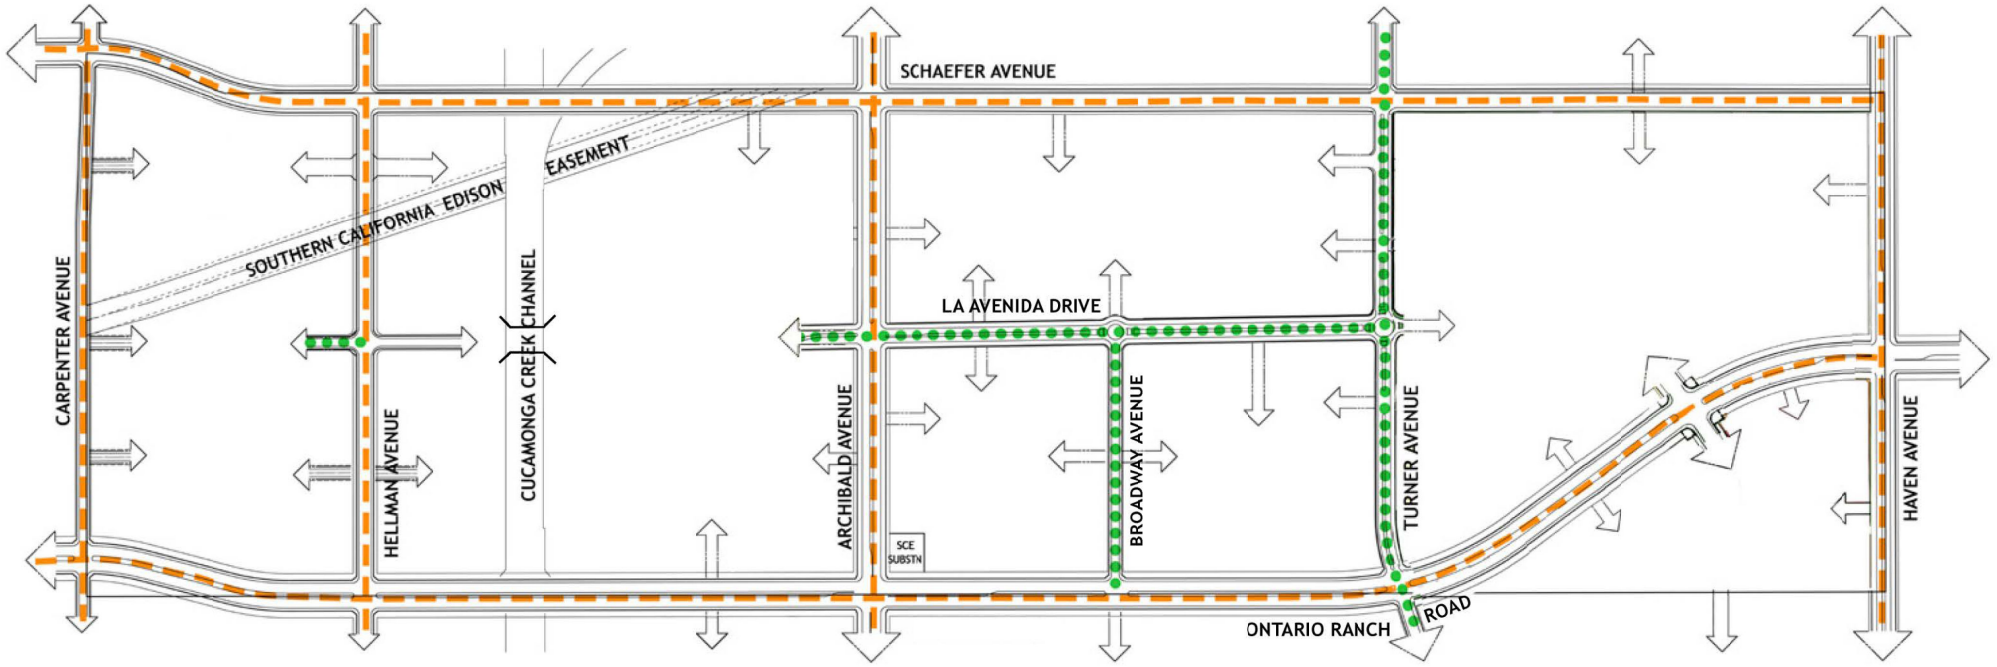
Proposed Fiber Optics (conduits and fiber) will be placed underground within a duct and structure system to be installed by the Developer, as illustrated in Exhibit 19. The fiber and conduits along the backbone streets shall be installed in a joint trench by each Developer as the last lane improvements are completed. In-tract fiber and conduit shall be installed by the Developer in joint trenches where possible. Maintenance of the installed system will be the responsibility of the City/Special District. Development of the Project requires the installation by the Developer of all fiber optic infrastructure necessary to service the Project as a standalone Development.

4.3 Community Facilities

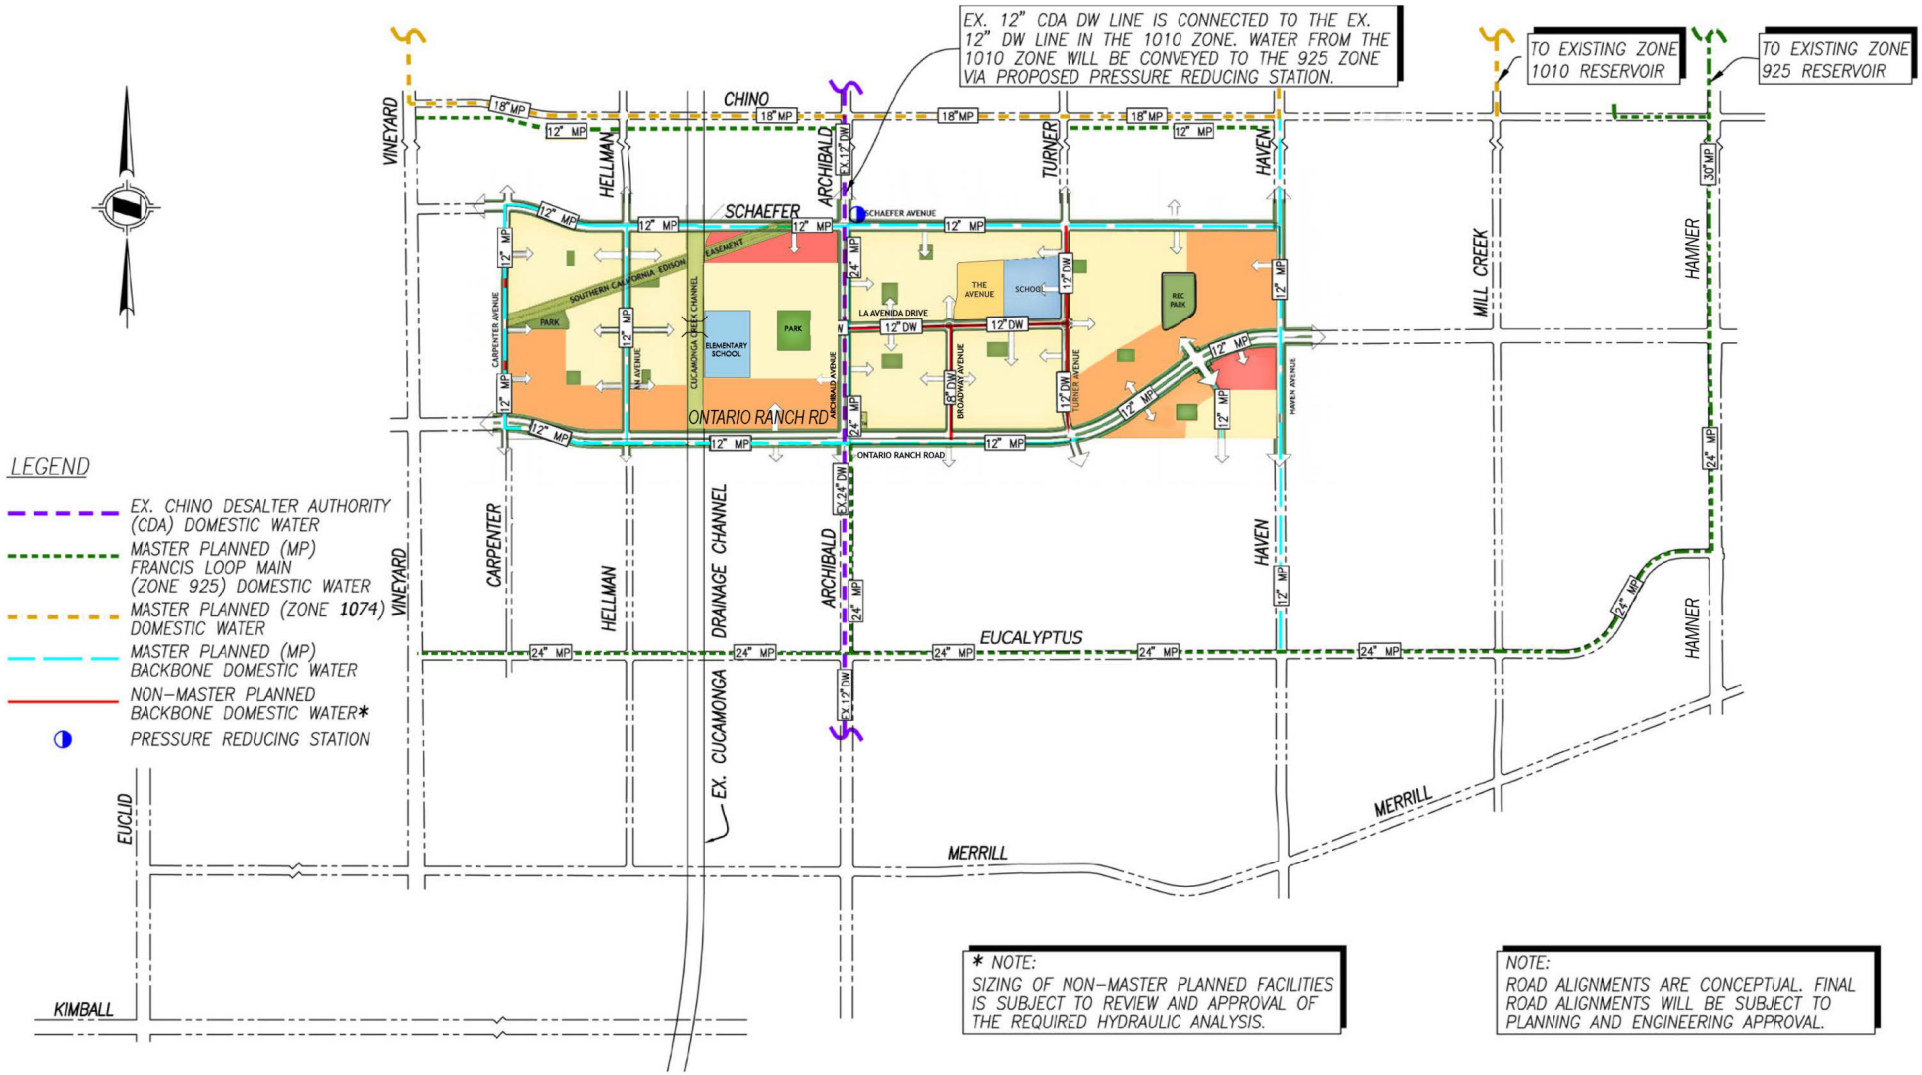
4.3.1 Schools

The Mountain View School District serves the K-8 school's needs of the proposed The Avenue Specific Plan. The Chaffey Etiwanda Joint Union School District serves the school needs of grades 9-12 within the plan area. Colony High School is located to the north of the plan, for the high school students living in the plan area. In addition, the proposed The Avenue Specific Plan is providing sites for a ten (10) acre elementary school and an additional ten (10) acre school.

4.3.2 Library



The City of Ontario will provide library services to The Avenue Specific Plan area.



4.3.3 Fire

The City of Ontario will provide fire protection services to The Avenue Specific Plan area.

4.3.4 Police

The City of Ontario will provide police services to The Avenue Specific Plan area.

Section 5 - Development Regulations

5.1 General Provisions

A. Development proposals within The Avenue Specific Plan shall be subject to the implementation procedures established herein. Whenever the provisions and development standards contained herein conflict with those contained in the City of Ontario Development Code, the provisions of The Avenue Specific Plan shall take precedence. On issues where the Specific Plan is silent the City of Ontario Development Code shall prevail.

B. Severability - If any portion of these regulations is declared to be invalid or ineffective in whole or in part, such decision shall not affect the validity of the remaining portions thereof. The legislative body hereby declares that they would have enacted these regulations and each portion thereof irrespective of the fact that any one or more portions be declared invalid or ineffective.

C. Unless otherwise provided, any ambiguity concerning the content or application of The Avenue Specific Plan shall be resolved by the Planning Director or his/her designee, hereinafter referred to as Director, in a manner consistent with the goals, policies, purpose and intent established in The Avenue Specific Plan.

D. Any major deviation from the Design Guidelines (Section 6) within The Avenue Specific Plan shall require a Specific Plan Amendment. The Director shall determine whether a proposed change constitutes a major deviation.

E. The meaning and construction of words, phrases, titles, and terms shall be the same as provided in the City of Ontario Development Code Article 2, “Definitions”, unless otherwise specifically provided herein.

5.2 Applicability

The development regulations contained herein provide specific standards for land use development within the proposed The Avenue Specific Plan. Regulations address residential, retail and commercial and open space land uses. General landscaping regulations are also provided. Application of the following regulations is intended to encourage the most appropriate use of the land, ensure the highest quality of development, and protect the public health, safety, and general welfare. The adoption of The Avenue Specific Plan by ordinance will supercede otherwise applicable City of Ontario zoning regulations unless stated herein to the contrary. Whenever the provisions and development standards contained herein conflict with those contained in the City of Ontario Development Code, the provisions of The Avenue Specific Plan shall take precedence. Where The Avenue Specific Plan is silent, City codes shall apply.

5.3 Development Review Process

All development projects within the proposed The Avenue Specific Plan shall be subject to the Development Plan Review Process as established in Article 8 of the City's Development Code. Adoption of The Avenue Specific Plan by the City includes adoption of the Design Guidelines contained within Section 6 of The Avenue Specific Plan and which provide direction for the design of development projects within the plan area. Where the Design Guidelines are silent, the applicable design guidelines contained within the City's Development Code shall apply. The Design Guidelines are intended to be flexible in nature while establishing basic evaluation criteria for the review by the City of developer projects during design review.

Pursuant to these provisions, the Development Permit process constitutes a design review of project architecture, site plans, and landscape plans. All development project applications shall include a landscape and irrigation plan describing plant materials and their growth habits, plant size and spacing, methods of irrigation and landscaping maintenance, site plans, architectural elevations, floor plans, grading plans and other requirements as specified by the City. Development permits are approved with conditions of approval.

As the Specific Plan is Phased, the following minimum criteria shall be met for each Subdivision and Development of each Phase:

- For Domestic Water, all the Master Plan, Regional and Local Infrastructure identified in Section 4 and the Conceptual Domestic Water Plan for the Water Pressure Zone that the Phase is within shall be completed as part of the Phase's infrastructure requirements. Also, any domestic water infrastructure necessary to provide primary looping, secondary looping, and meet all hydraulic criteria and fire flow shall be completed as part of the Phase's infrastructure requirements.
- For Recycled Water, all the Master Plan, Regional and Local Infrastructure identified in Section 4 and the Conceptual Recycled Water Plan for the Recycled Water Pressure Zone that the Phase is within shall be completed as part of the Phase's infrastructure requirements. Also, any recycled water infrastructure necessary to provide primary looping, secondary looping, and meet all hydraulic criteria shall be completed as part of the Phase's infrastructure requirements.
- For Sewer, all the Master Plan, Regional and Local Infrastructure identified in Section 4 and the Conceptual Sewer Plan for the Master Plan Sewer Tributary Area that the Phase is within and upstream of shall be completed as part of the Phase's infrastructure requirements. Also, any sewer infrastructure necessary to meet all hydraulic criteria shall be completed as part of the Phase's infrastructure requirements.

5.3.1 Additional Entitlement Requirements

In order to ensure orderly expansion of the City Utility Systems and other City Infrastructure, the following Additional Entitlement Requirements are imposed upon all Subdivision Maps and Developments within the Specific Plan area.

5.3.1.1 Conceptual Design Report:

Prior to approval of any entitlement application (subdivision maps, Development Plan Reviews, etc.), a conceptual design report shall be prepared and submitted to the Development Agency Engineering Department and the Utilities Engineering Department for review and approval for the established extent of all public improvements required for the project. The study shall identify existing and future rights-of-ways (ROW) and infrastructure improvements and establish all vertical and horizontal alignments for each utility. The report shall include cross-sections, profiles, and any supporting details needed to demonstrate that utilities can be adequately accommodated in the public ROW. The study shall account for all utility conflicts, right-of-way variations, existing obstructions, and the timing of utility installation. This shall also include Water Sub-Area Master Plans (WSAMP) and Sewer Sub-Area Master Plans (SSAMP) to assure compliance with all Master Plan Design Criteria, including Hydraulic Design Criteria. Utilities cannot be located along an alignment that conflicts with existing conditions (e.g. electrical poles, private property, etc.) unless that applicant is accepting the responsibility of modifying the existing conditions (e.g. undergrounding, relocation, ROW acquisition, etc.).

5.3.1.2 Preliminary Design Report:

As a condition of entitlements (subdivision maps, Development Plan Reviews, etc.) within the Specific Plan and prior to submittal of Infrastructure Improvements Plans, a Preliminary Design Report (PDR) for all public infrastructure shall be submitted and approved by the Development Agency Engineering Department and the Utilities Engineering Department. The PDR shall include the following:

Conceptual Design Compliance: A discussion modifying or confirming the conceptual design established with the Project's Conceptual Design Report. The study shall confirm all rights-of-ways (ROW), infrastructure improvements, and vertical and horizontal alignments for each utility.

Street Cross Sections and Profiles: Street Cross Sections and Profiles shall be provided for each public street, private street and Public Utility Easement (PUE) containing a public utility and at any points along the alignments where the ROW varies. The cross sections shall show the location and size of each utility and shall annotate the property/ROW lines, the type of finished surface material, the distance of each utility from centerline, the depth from finished surface to top of pipe, and the distance between utilities (outside wall to outside wall).

Constructability Review: The report shall include a discussion of the constructability issues along the proposed alignment and identify the recommended construction methods that may be utilized. The study shall perform field investigation (field survey and potholing) in order to identify potential utility conflicts, right-of-way variations, existing obstructions, and constructability issues created by the timing of utility installation.

Supporting Details: The PDR shall include any supporting details needed to demonstrate that utilities can be adequately accommodated in the public ROW, including the placement of large appurtenances, clearance from existing obstructions, etc.

30% Design Drawings: The PDR findings shall be incorporated into a 30% design plan set and included in the PDR.

5.3.1.3 Utilities Systems Map (USM):

Prior to approval of any entitlement application (subdivision maps, Development Plan Reviews, etc.), as part of the entitlement application a Conceptual Utilities Systems Map (USM) shall be prepared and submitted to the Development Agency Engineering Department and the Utilities Engineering Department for review and approval. The USM is a summary plan sheet exhibit that shows all the public off-site infrastructure requirements and demands for the Development Project (and/or Subdivision), the on-site private infrastructure improvements, and the interaction between the public and private utilities systems. As a Condition of Approval for the Development Project (and/or Subdivision), the Conceptual Utilities Systems Map shall be updated into a Final Utilities Systems Map to reflect the changes that occur between entitlement and Final Plan and Permit Approval. Reference the Ontario Municipal Utilities Company Utilities Engineering Department's Utilities Systems Map (USM) Requirements for details.

5.3.1.4 Integrated Waste Management Report (IWMR) and Solid Waste Handling Plan (SWHP):

Prior to approval of any entitlement application (subdivision maps, Development Plan Reviews, etc.), as part of the entitlement application a Conceptual Integrated Waste Management Report (IWMR) and a Conceptual Solid Waste Handling Plan (SWHP) shall be prepared and submitted to the Development Agency Engineering Department and the Utilities Engineering Department for review and approval. The SWHP summary plan sheet exhibit that demonstrates the project site's design conformance with the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Areas, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types. The IWMR is a report that presents project specific information that is not able to be demonstrated within the Solid Waste Handling Plan, including discussions on: project solid waste operations; project compliance with all applicable laws, statues, policies, and requirements; and, conformance with all the Integrated Waste Department's requirements, including the requirements for Sizing of Storage, Location of Collection Areas, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types. As a Condition of Approval for the Development Project (and/or Subdivision), the Conceptual SWHP and the a Conceptual IWMR shall be updated into a Final SWHP and Final IWMR to reflect the changes that occur between entitlement and Final Plan and Permit Approval. The SWHP and IWMR may be required to be updated from whenever there are new occupants, new uses or changes to existing uses, Tenant Improvements, Business Licenses, and Certificates of Occupancy. Reference the Ontario Municipal Utilities Company Utilities Engineering Department's Integrated Waste Management Report (IWMR) and Solid Waste Handling Plan (SWHP) Requirements for details.

5.4 Development Regulations

The Avenue Specific Plan is adopted by ordinance and will serve as the implementation tool for the General Plan as well as the zoning for the Project Site. The Avenue Specific Plan Development Regulations address general provisions, permitted uses, and development standards for the plan area.

5.4.1 General Site Development Standards

The following general site development criteria shall apply to all land development proposed in The Avenue Specific Plan.

A. Gross Acres - Except as otherwise indicated, gross acres for all development areas are measured to the centerline of streets.

B. Grading - Development within the plan area shall utilize grading techniques as approved by the City of Ontario. Grading concepts shall respond to the Design Guidelines included in The Avenue Specific Plan which guide the development of land use toward the goal of providing for a livable community with streets and entries designed for walking and resident interaction. Additionally, the grading concepts should adhere to the following:

   1. Where slope conditions are present, the property shall be located at the top of a slope

   2. In areas adjacent to a ridge line or in moderate slope areas, dwelling units and structures should be sited to:
      a. Use the natural ridge line as a backdrop for structures
      b. Use landscape plant materials as a backdrop
      c. Use structure to maximize concealment of cut slope

C. Building Modification - Additions and/or projections into setback areas permitted by The Avenue Specific Plan shall match the architectural style of the primary unit and shall be constructed of the same materials and colors as the primary unit.

D. Utilities - All new and existing public utility distribution lines of 34.5 kV or less shall be subsurface throughout the plan area.

E. Technology - All homes and businesses shall accommodate the most modern technology for computer internet access, phone, fax, and television. Broadband fiber optics cable will be installed on all peripheral streets per the approved Master Plan.

F. Density - The Avenue Specific Plan Land Use Plan establishes a maximum gross density average for each residential land use designation as indicated in Table 2 “Statistical Analysis”. These densities are 4.5 dwelling units per gross acres for the Low Density Residential designation, 8.5 dwelling units per gross acres for the Low Medium Density Residential designation and 22.0 dwelling units per gross acre for the Medium Density Residential designation.

G. Maximum Number of Dwelling Units - The maximum number of residential dwelling units permitted within The Avenue Specific Plan shall be 3,753 dwelling units.

H. Retaining walls - Exposed walls and fences facing roadways shall be no greater than six feet in height, except as necessary for acoustical purposes to satisfy the intent of the noise ordinance. Where retaining walls or fences face roadways, they shall be built, when feasible, of decorative materials consistent with the wall theme of the neighborhood.

Northerly Site Boundary along Schaefer Avenue, looking east

I. Temporary Uses - Temporary Uses shall be consistent with the Development Code requirements of Article 13 (page 13-46).

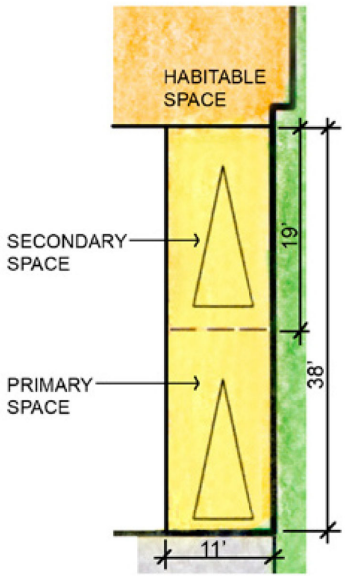
J. Satellite Dishes - Freestanding satellite dish antennas shall be in compliance with Article 32, Section 9.1.3289 of the Development Code.

K. Recreational Vehicle Storage - No recreational vehicle (RV) storage in front or corner side yards and no RV street parking for a period of more than 72 hours.

L. Dairy Separation Requirement for Residential District Development Standards Section – The following separation requirements from existing dairies/feed lots shall apply to new residential development or structures used for public assembly purposes from existing dairies/feed lots. A minimum 100' separation shall be required between new residential, commercial, or industrial development or structure used for public assembly and an existing animal feed trough, corral/pen or an existing dairy/feed lot including manure stockpiles and related wastewater detention basins. The 100-foot separation requirement may be satisfied by an off-site easement acceptable to the Planning Director with adjacent properties, submitted with the initial final map and recorded prior to or concurrent with the final map.

Typical single family detached residences

M. Product distribution requirements within Zones 1-8 (as shown on Exhibit 26, "Conceptual Product Distribution") - Minimum number of product types per zone: 2. The following details the limitations on unit counts for products within a single zone or in a contiguous area of the same product(1). A contiguous area of one product type can not continue into an adjacent zone unless the unit count for that contiguous area conforms to the following limitations.



1. Single Family Detached (SFD):
   a. Minimum number of dwelling units per product: 25
   b. Maximum number of dwelling units per Product: 125

2. Single Family Attached (SFA):
   a. Minimum number of dwelling units per product: 36
   b. Maximum number of dwelling units per Product: 250

3. Multi-Family:
   a. Minimum number of dwelling units: 200(2)
   b. Maximum number of dwelling units: 400

N. Tandem Parking:

1. All vehicles must be registered with the HOA or management company. A copy of the registration for each vehicle showing the address, make model, vehicle year and color will be required upon registration.
2. No garage may be separately sold or assigned by an owner. A garage may be rented or leased to a non-owner solely in connection with the rental or lease of the respective unit.
3. All residents are required to use their garage space for parking their vehicles. Residents with more than two vehicles must register two vehicles for the garage spaces before a parking permit will be considered allowing parking on the private streets or parking bays within the project.
4. Anyone requesting a parking permit must also demonstrate that his/her garage is not being used for storage, or being used as a workshop or for any other purpose which would prevent the garage from being used to park two vehicles.

Tandem Parking

5. The secondary space (adjacent to habitable space) will be given 25% credit towards parking requirement.
6. Minimum size of tandem parking: 11'x38'.

O. Multi-family projects proposed within a gated neighborhood, may be subject to the following open space requirement, subject to review and approval of the Planning Department:

1. Ground Floor: A minimum contiguous area of 150 sq. ft. in area with no dimension less than 10 feet in any direction.
2. Balconies and Decks: Must have a minimum contiguous area of 50 sq. ft. in area with no dimension less than 5 feet in any direction.
3. Common Open Space: A minimum of 250 sq. ft. of common open space shall be provided per each unit. Common open space shall require a minimum contiguous area of 300 sq. ft. with no dimension less than 15 feet in any direction.

5.4.2 Residential Development Standards Tables

The development standards for proposed residential products at The Avenue are shown on the following pages (Table 3a-3l).

(2) Units of less than 200 may be approved with the review and approval of the Planning Director.

Table 3a - Product Type 1A Development Standards (11)

Typical lot sizes: 55'x105', 60'x100', 60'x110' (5,500+ SF Lots)

Lot Criteria

Min. Lot Width at Front PL for Standard Lot	55'
Min. Lot Width on Corner	65'
Min. Lot Depth on Standard Lot	100'
Min. Lot Depth on Corner Lot	100'
Min. Lot Size	5,500 S.F.

NOTE: Lots within cul-de-sacs, standard knuckles or modified knuckle configurations shall provide a minimum 35-foot lot width at front property line and shall meet the minimum lot width established for the Planning Area at the building setback. All minimum side and rear yard setbacks shall be maintained at all times.

Minimum Setbacks

All front and corner side setbacks are measured from the property line at back of sidewalk.
All other setbacks are measured from property line unless otherwise noted.

Front Setbacks

Living Area	20'
Porch with Single Story Plate Line (2)	12'
Front Entry Garage (3)	18'
Turn In Garage with Single Story Plate Line	10' (Street Facing 18')

Side Setbacks (4)

From Interior PL (1)	5'
From Residential Street - First Story (6)	10'
From Residential Street - Porch	8'
Side for Garages (Min. 10' Between Garages)	3'
Garage to Back-of-Sidewalk	18'
Patio Cover	3'

Rear Setbacks

Main Structure	15'
Garage (Single Story Plate Line)	5'
Patio Cover	5'

Recreational Vehicle (RV) storage is prohibited in front or corner side yards. RV Street parking, over 72 hours, is prohibited.

Table 3f - Product Type 3 Development Standards[11]

Typical product types: SFD 4 to 8 units Cluster/Mews (Common Lot and Single Lot Subdivisions)

Lot Criteria

Min. Lot Size	2,000 S.F. (assumes single unit built where unique site constraints exist)

Minimum Setbacks [1]

Setbacks for Common Lot and Single Lot Subdivision conditions are shown graphically in Section 6, Design Guideline and below. These standards will apply to situations where the Cluster is plotted with less than 4, 6 or 8 typical units including, but not limited to, 2 or 3 unit plots of the 4-unit cluster, 3, 4 or 5 unit plots of the 6-unit cluster, or 4, 5, 6 or 7 unit plots of the 8 unit cluster.

Front Setbacks

Living Area	10’
Porch with Single Plate Line	8’

Side Setbacks

To Interior Property Line	4’
From Residential Street [6]	10’

Walls, Fences and Hedges

Maximum Height in Traffic Safety-Site Areas and/or front or corner side yard areas	3’
Maximum Height at all other Locations	6’
Maximum Height of Retaining Walls	3’

Parking

Minimum Resident Parking Required	2 Spaces within a Garage

Driveways may be <5’ or >18’. No driveway between 5 feet and 18 feet is allowed.

Recreational Vehicle (RV) storage is prohibited in front or corner side yards. RV Street Parking, over 72 hours, is prohibited.

Drives

Private lanes shall be enhanced with a combination of pavers, colored concrete or similar decorative material, subject to the review of and approval by the Planning Director.

Table 3g - Product Type 4 Development Standards(11)

Typical product type: Duplex

Lot Criteria

Min. Lot Size	5,000 S.F.

Minimum Setbacks (1)

All front and corner side setbacks are measured from the property line at back of sidewalk.
All other setbacks are measured from property line unless otherwise noted.

Front Setbacks

Living Area	10’
Porch with Single Story Plate Line (2)	8’
Front Entry Garage	NA

Parking	
Minimum Resident Parking Required:	
1 space per bedroom (1 in garage per unit)	
Minimum Guest Parking Required:	
0.25 space per unit	
A parking study shall be completed and approved by the city for each community.	
Any public street parking can not be counted towards meeting the parking requirement.	
See Section 5.4.1.N. for Tandem Parking.	
Open Space	
Private open space per unit in balcony or patio- ground floor 100 S.F. with min. 10’ dimension and all other floors 50 S.F. with min. 10’ dimension.	
Common open space per unit -250 S.F. with min. 15’ dimension.	
See Section 5.4.1.O. for open space requirement for a gated multi-family projects.	

Footnotes:

(1) Architectural projections may encroach a maximum of 3' into setbacks

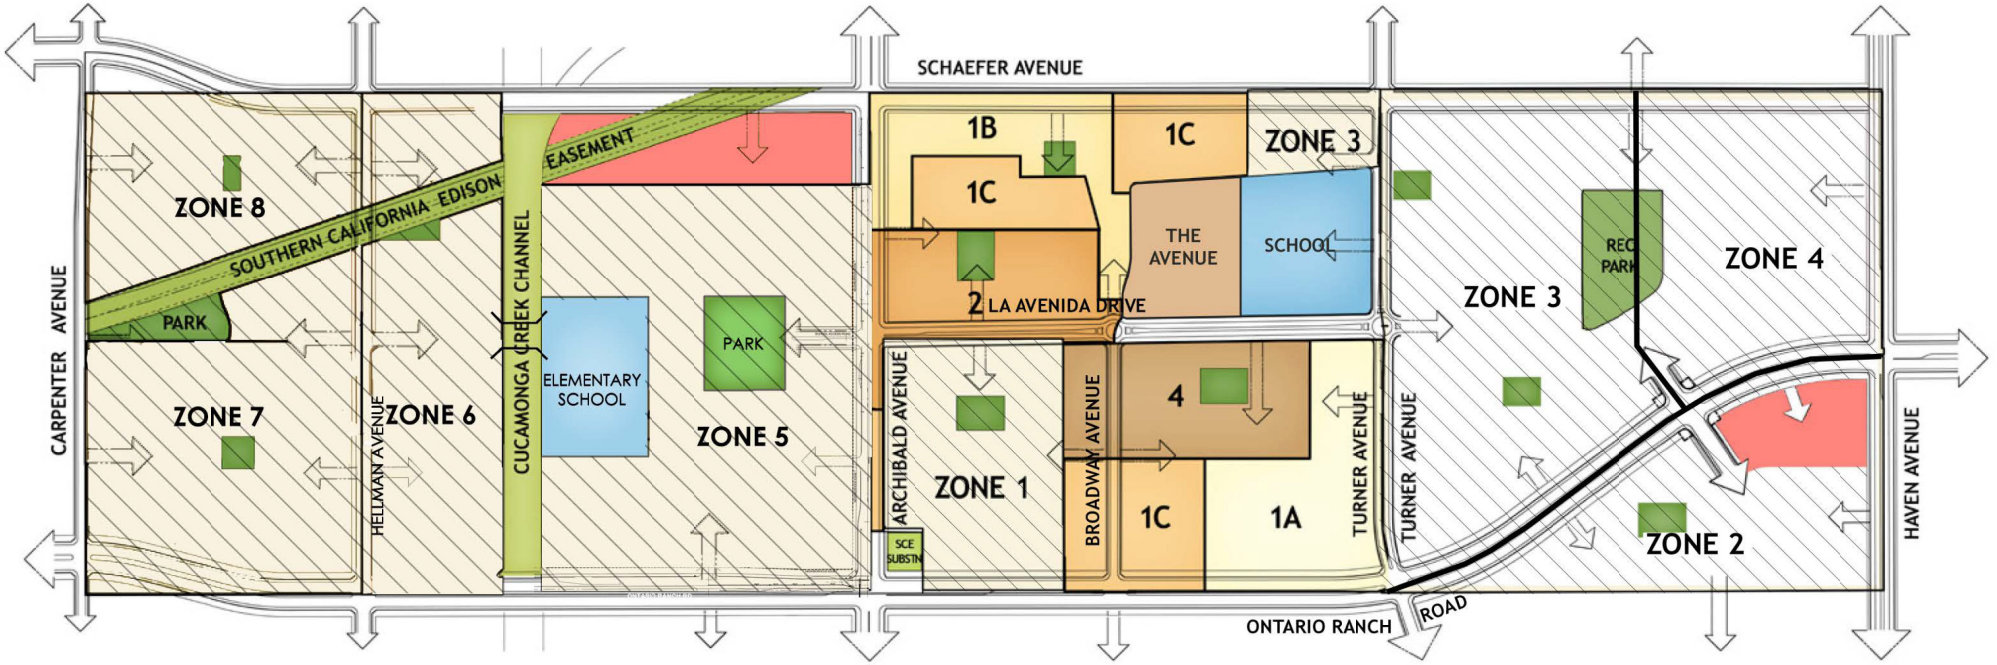
(2) The minimum depth of a porch shall be 7 feet with a minimum area of 70 S.F.

(3) If front entry garages are adjacent there shall be a minimum of 3' garage face offset with the adjacent garage

(4) Side yard slopes may not encroach more than 50% into side yard setback areas

(5) Minimum 8' setback from the back of the sidewalk

(6) Side setback measured from the property line at back of sidewalk excluding corner intersection cutoffs



(7) Second story on corner lots is 15' average

(8) Articulation on rear elevations of alley loaded projects to be City approved

(9) Except at corner lot

(10) Stepped walls allowed

(11) All new entitlements shall be subject to consultation with the Gabrieleno Band of Mission Indians – Kizh Nation and the San Manuel Band of Mission Indians - Serrano Nation

The Avenue SPECIFIC PLAN

Conceptual Product Distribution

Ontario Ranch ▪ Ontario, California

Exhibit 26 - Conceptual Product Distribution

5.4.3 Low Density Residential Permitted and Conditional Uses

This category includes the development of single family detached dwelling units. The purpose of the residential standards for single family detached housing is to establish the minimum criteria for the development of these product types on individual lots within the neighborhoods specified within the plan area.

A. Permitted Uses

1. Single family detached dwellings including live/work units and their accessory uses
2. Single family attached dwellings
3. Public or private parks
4. Recreational buildings including swimming pool
5. Child day care facilities serving up to seven (7) children (per State guidelines)
6. Schools
7. Accessory uses to include the following:
    a. Garages
    b. Granny Flats (i.e. Second Dwelling Units, in accordance the City's Zoning Code)
    c. Home occupations
    d. Swimming pools, spas, sports courts, and other similar outdoor recreational amenities
    e. Patios and patio covers
    f. Storage, garden structures, cabanas, and greenhouses
    g. Monument signs
    h. Temporary uses such as model home and subdivision sales trailers, temporary construction parking, offices, and facilities, real estate signs, signage indicating future development and directional signage
    i. Second story additions to single family dwelling units

B. Conditionally Permitted Uses

1. Places of worship including but not limited to churches and synagogues
2. Child day care facilities serving eight (8) to 14 children (per State guidelines)

5.4.4 Low Medium Density Residential Permitted and Conditional Uses

This category includes the development of single-family and multi-family attached type dwelling units.

A. Permitted Uses

1. Single family detached dwellings including Cluster SFD and Mews SFD, single-family attached and multi-family attached dwellings
2. Public or private parks
3. Recreational buildings including swimming pool
4. Child day care facilities serving up to seven (7) children (per State guidelines)
5. Schools
6. Accessory uses to include the following:
    a. Garages
    b. Granny Flats (i.e. Second Dwelling Units, in accordance with City Zoning Code)
    c. Home occupations
    d. Swimming pools, spas, tennis courts, sports courts, and other similar outdoor recreational amenities
    e. Patios and patio covers
    f. Mailboxes
    g. Community center buildings
    h. Maintenance storage buildings
    i. Monument signage
    j. Temporary uses such as model units, sales offices, and subdivision sales trailers, temporary construction offices and facilities, real estate signs, signage indicating future
    k. Second story additions to single dwelling units

B. Conditionally Permitted Uses

1. Places of worship including but not limited to churches and synagogues
2. Child day care facilities serving eight (8) to 14 children (per State guidelines)

5.4.5 Medium Density Residential Permitted and Conditional Uses

This category includes the development of single-family and multi-family attached type dwelling units.

C. Permitted Uses

1. Single family attached and multi-family attached dwellings
2. Public or private parks
3. Recreational buildings including swimming pool
4. Child day care facilities serving up to seven (7) children (per State guidelines)
5. Schools
6. Accessory uses to include the following:
    a. Garages
    b. Home occupations
    c. Swimming pools, spas, tennis courts, sports courts, and other similar outdoor recreational amenities
    d. Patios and patio covers
    e. Mailboxes
    f. Community center buildings
    g. Maintenance storage buildings
    h. Monument signage
    i. Temporary uses such as model units, sales offices, and subdivision sales trailers, temporary construction offices and facilities, real estate signs, signage indicating future

B. Conditionally Permitted Uses

1. Places of worship including but not limited to churches and synagogues
2. Child day care facilities serving eight (8) to 14 children (per State guidelines)
3. Age-restricted/Senior Housing and apartments (MDR only)

5.4.6 Commercial Development Standards[1]

Minimum Lot Area

Minimum lot size shall be large enough to accommodate the proposed use and meet all Development Standards as specified within the Specific Plan. Minimum site area shall be 4 acres; however, the site area may be less when developed as part of an integrated commercial center.

Building Setbacks

Building setbacks shall be determined by the hierarchy of streets (major arterial and local streets) and measured from PL for local streets and RW for Major Arterials. All setback areas are to be landscaped. These landscape area setbacks are:

From Ontario Ranch Road Right-Of-Way	35 feet
From Haven Avenue Right-Of-Way	14 feet
Archibald Avenue Right-Of-Way	19 feet
Schaefer Avenue Right-Of-Way	10 feet
From Private or Local Street (from required 5' min. sidewalk)	10 feet
From Interior Property Line	0 feet
From Interior Property Line Adjacent to Residential District	25 feet

Maximum Development Floor Area Ratio (FAR) shall be 0.35.
Maximum Height shall be 35 feet, excluding architectural projections and focal elements such as towers and cupolas.

Loading Areas

All loading areas shall be screened from adjacent public streets, residential and open space use through the use of landscaping, earthen berms, and/or decorative walls or fencing. All storage including cartons, containers, materials, or trash shall be shielded from view within a building or area enclosed by a solid fence or wall not less than six feet in height.

Parking Setbacks

All parking setback areas are to be landscaped as follows:

From Ontario Ranch Road Right-Of-Way	35 feet
From Haven Avenue Right-Of-Way	14 feet
Archibald Avenue Right-Of-Way	19 feet
Schaefer Avenue Right-Of-Way	10 feet
From Private or Local Street	10 feet
From Interior Property Line	5 feet
From Interior Property Line Adjacent to Residential District	5 feet

Footnote:
[1] All new entitlements shall be subject to consultation with the Gabrieleno Band of Mission Indians - Kizh Nation and the San Manuel Band of Mission Indians - Serrano Nation

Wall and Fences

When a non-residential use adjoins a residential district, a 6-foot high decorative masonry wall shall be required at the interior side and/or rear property lines. Proposed walls in excess of 6 feet in height shall be designed to retain up to a maximum of 3 feet of earth. In no case, however shall a wall exceed an overall height of 9 feet (maximum 6-foot high wall on top of a maximum 3-foot height retaining wall).

5.4.7 Commercial Permitted and Conditional Uses

List of Permitted uses in the Commercial Zone:

Administrative, Professional, and Other Offices

Advertising Agency

Animal Hospital/Veterinarian

Antique Stores

Art Galleries and Art Supply Store

Auditoriums and Other Public Assembly Facilities

Automotive Parts and Accessories Stores (Retail Sales Only)

Automotive Services (i.e. tune-up, emission tests, batteries, etc. — no use of impact wrenches or other equipment that could create noise impacts)

Bakery

Banks, Credit Unions and other Depository Institutions

Barber Shop and Beauty/Nail Salon

Beauty Supply Store

Book Stores

Camera and Photographic Supply Store

Catering establishments

Charitable, Philanthropic, Service and other Non-Profit Organization Offices

Cigar and other Tobacco Products Store

Clothing and Accessory Stores

Communications equipment — Refer to Development Code Section 9-1.3289

Computer and Home Electronic Stores

Computer, Home Electronics, and Small Home Appliances (when ancillary to another use)

Convenience Market (per Development Code Section 9-1.1305)

Dance/Studio (Instructional)

Delicatessen

Discount Variety Store

Dry Cleaners

Fast Food

Florist

General Merchandise Stores

Grocery Store/Supermarket

Hardware Store

Health Club/Gymnasium — less than 2,000 square feet

Hobby, Toy and Game Store

Jewelry and Watches/Clocks

Jewelry Store

Laundry Self Serve

Library Locksmith/Key Shop

Luggage and Leather Goods

Medical Office

Minor Auto Repair (i.e. brakes, tires, radiators, electrical, etc)

Money Transmitting

Music and Video Stores

Office Supply, Stationery and Gift Stores

Other Financial Services

Pet and Pet Supply Store

Pet Grooming — Commercial

Pharmacies and Drug Stores w/o drive thru facilities

Photocopying and Duplicating Services

Photography Studio

Police Storefront/Substation

Police/Fire Station

Restaurants (sit down/full service)

Shoe Repair or Shoe Store

Specialty Food Stores

Sporting Goods Store

Tailor

Thrift and Second Hand Store

Travel Agency

List of Conditionally-Permitted uses in the Commercial Zone:

Alcoholic Beverage Sales

Ambulance Service (Office Only — No Storage of Vehicles)

Assisted Living/Congregate Care

Banks, Credit Unions and other Depository Institutions (with drive thru, see Development Ordinance Section 9-101305 D)

Banquet Facilities

Bar/Cocktail Lounge

Billiard Parlor/Pool Hall

Bowling Alley

Building Materials and Garden Supply

Car Wash — Full

Car Wash Self Service (Ancillary)

Charitable Distribution Services (i.e. food banks, etc.)

Check Cashing, Check/Payday Advance

Church

Commercial Day care

Convalescent Care Facility (w/continuous skilled nursing care)

Exterminating Service per Development Ordinance Section 9-1.1305 E

Fast Food with Drive-through (per Development Code, Section 9-10305D) Funeral Parlor, Mortuary

Gas Stations (per Section 9-1.1305 G)

Health Club Gymnasium — over 10,000 square feet

Home Appliance Store

Liquor Store

Live Entertainment

Pawnshop/Pawnbroker

Pharmacies and Drug Stores with drive thru facilities

Public Storage (PA-4 Only)

Simulated Shooting Games (Indoor)

Skating Rink

Substance Abuse Clinics/Facilities

Theater

Tire Stores

Video/Electronic Game Arcades (per Development Code Section 9-101305V)

Vocational/Trade Schools

5.5 Maintenance

The public and private improvements constructed within The Avenue Specific Plan will be maintained through a combination of public and private entities as described below and in Table 4, "Maintenance Responsibility Matrix".

5.5.1 Public Maintenance

1. All residential development areas will be dedicated as public streets (excluding private drive ways) to the City of Ontario and will be maintained by the City.
2. The SCE Corridor Trail within the SCE owned property will be constructed by the developers of the Specific Plan Area and maintained by the City.
3. The City will maintain landscaping of master-planned arterial streets and "curb-to-curb" on internal streets through the creation of an Operations and Maintenance Community Facilities District. Parkway improvements within the right-of-way of residential areas along interior streets and private drives shall be maintained by Homeowners Associations. Parkway improvements along interior streets and driveways within the retail and commercial center shall be maintained by the property owners of each respective center.
4. Public storm drain, sewer, and water easements shall be dedicated to the City as deemed necessary by the City.
5. All on-site water, sewer, and storm drains within public streets or easements dedicated to the City shall be constructed by the developer and, upon acceptance, shall be maintained by the City.
6. Off-site infrastructure improvements such as water, sewer and storm drain facilities, will be constructed/installed by the developer and maintained by the City.
7. During the course of maintenance of public utilities (including storm drain) within private and public streets, the City will pave the streets and restore landscaping per City standards. Restoration of any enhancements above and beyond City standards, including but not limited to architectural, hardscaping and landscaping enhancements shall be the responsibility of the HOA or other entity maintaining those enhancements. This applies to all areas where public utilities are located including but not limited to public and private streets, gated communities, private drives, etc.

8. Project Financing – The financing of construction, operation, and maintenance of public improvements and facilities ("the facilities"), and public services will include funding through a combination of financing mechanisms. Final determination as to the facilities to be constructed and as maintenance responsibilities, whether publicly or privately maintained, will be made prior to recordation of the final maps. In order for the project to be fiscally self-sufficient, the following financing options can be considered for implementation:

Facilities and Services

- Private capital investment for the construction of facilities.
- Community Facilities District (CFD) established pursuant to the Mello-Roos Community Facilities District Act of 1982, or other special district, to provide funding for the construction of a variety of public facilities and the provision of public services.

Operation and Maintenance

- By individual private property owner.
- By private, Property Owners or Home Owners Association.
- By Community Facilities District (CFD) established pursuant to the Mello-Roos Community Facilities District Act of 1982, or other special district.

5.5.2 Private Maintenance

A Master Homeowner association will be established for the maintenance of common area landscape improvements within the residential portion of The Avenue Specific Plan. Private improvements to be maintained by the homeowner association include:

- Private alleys and adjacent landscaping within the residential development areas
- Courts, parkways and landscaping within the residential areas
- Streets and Landscape areas that have architectural enhancements
- Walkways and common areas distinct to individual residential types and neighborhoods
- Recreational facilities including the country market
- Internal slopes fronting streets and slope areas in the rear of homes
- All internal open spaces, parks, and common areas at neighborhood entries
- Drives and on-site circulation within the retail and commercial areas

5.5.3 Maintenance Responsibility

Table 4 - Maintenance Responsibility Matrix

	City and/or Special District	Private Homeowners Association or Property Owners Association	Private Homeowners	Utility Entity
Master Plan Roadways (Ontario Ranch Road, Haven, Schaefer, Hellman, Archibald Avenue)	X			
Interior Public Streets - Curb to Curb (Primary Entry St., Secondary Entry Streets, Neighborhood Streets)	X			
Traffic Signals and Street Lights in the public street right-of-way	X

Monument Signs within tract entry		X		
Electricity and Natural Gas				X
Communications Systems	X			X
Police and Fire	X			
Fiber Optic Conduit (in Ontario Ranch streets)	X			
Fiber Optic Conduit (in-tract streets)	X			
NPDES Facilities (off-site)/W.Q.M.P (1)	X			

(1) Only those facilities in public roads or easements

(2) Only those facilities on private property

(3) Including restoration work following public street repairs

5.6 Modifications and Plan Amendment Process

5.6.1 Minor Modifications

The following constitute minor modifications to The Avenue Specific Plan, not requiring a Specific Plan Amendment, and are subject to review and approval by the Zoning Administrator. The Zoning Administrator shall have the discretion to refer any such request for modification to the Planning Commission or the City Council.

A. Change in utility and/or public service provider

B. Adjustment of a neighborhood boundary provided the total acreage of the affected area does not increase or decrease by more than 15% the total acreage stated in the approved The Avenue Specific Plan

C. Minor changes to landscape materials, wall materials, wall alignment, entry design, and streetscape design which are consistent with the conceptual design set forth in the design guidelines contained within The Avenue Specific Plan

D. Minor changes to the Design Guidelines, which are intended to be conceptual in nature only, and are intended to be flexible in implementation

E. Other modifications of a similar nature to those listed above, which are deemed minor by the Director, which are in keeping with the purpose and intent of the approved The Avenue Specific Plan and which are in conformance with the General Plan

F. The Avenue Specific Plan land use plan allocates density to each Planning Area. Variations in allocation of density between the Planning Areas of The Avenue Specific Plan is permitted provided the variation does not exceed a net of 15% and the maximum dwelling unit count of 2,875 units established for the Specific Plan is not exceeded.

5.6.2 Specific Plan Amendments

Amendments to The Avenue Specific Plan may be requested by the applicant or by the City at any time pursuant to Section 65453(a) of the Government Code. Amendments shall be processed pursuant to the provisions of the Government Code for Specific Plan Amendments. In the event the proposed amendment requires supplemental environmental analysis pursuant to the California Environmental Quality Act (CEQA), the applicant(s) will be responsible for preparing the necessary CEQA documentation.

5.7 Airport Land Use Compatibility Planning Consistency

All development proposals or Specific Plan Amendments are required to be consistent with the Airport Land Use Compatibility Plans of Chino Airport and Ontario International Airport. The Project Site is located within the Airport Influence Areas of Chino Airport and Ontario International Airport (ONT). The ALUCP for ONT was adopted in April of 20II and the project site is located outside noise and safety impact zones but is located within the Real Estate Transaction Disclosure zone due to overflight and does not place development restrictions on the property but does require disclosure to new property owners.

The Business and Professions Code Section II010 and Civil Code Sections 1102.6, 1103.4, and 1353 require that, as part of many residential real estate transactions, information be disclosed regarding whether the property is situated within an AIA. The Business and Professions Code applies the disclosure requirement to the sale or lease of newly subdivided lands and condominium conversions and to the sale of certain existing residential property. The Civil Code applies the disclosure requirement to existing residential property transfers only when certain natural conditions (earthquake, fire, or flood hazards) warrant disclosure. State Law provides the following disclosure language:

"NOTICE OF AIRPORT IN VICINITY: This property is presently located in the vicinity of an airport, within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances or inconveniences associated with proximity to airport operations (for example: noise, vibration, or odors).
Individual sensitivities to those annoyances can vary from person to person. You may wish to consider what airport annoyances, if any, are associated with the property before you complete your purchase and determine whether they are acceptable to you."

Section 6 - Design Guidelines

6.1 Introduction

All residential master planned communities seek to create a unique identity for their residents and the surrounding community. There are four main components in developing this character for The Avenue. These include:

- A strong, well defined and memorable site plan, emphasizing La Avenida Drive streetscape as a defining element
- Appropriate community amenities and facility design
- Attractive and timeless landscape architecture
- Complementary and purely themed residential architectural styles

In addition to quality site planning and facility design, the residential architectural design concept for The Avenue seeks to blend the traditional architectural styles found in the Pacific Southwest with contemporary lifestyles, building methods and technologies. The specific styles selected for this community include Spanish, Bungalow, California Ranch, Monterey and Cottage. The design aspects of each of these styles will be further described in the following guidelines.

As the individual architectural styles for each home are developed for the various neighborhoods, it is important that the underlying lifestyle defined by each architectural style is considered in the development of the floor plans to help maintain architectural authenticity. The creation of successful floor plans and elevations will always be a function of good design, coupled with the incorporation of contemporary lifestyles and building standards.
Builders may submit home designs using alternative architectural styles to those listed, provided they are consistent with the Specific Plan, and appropriate to the region, environment, and setting.

The architectural character of The Avenue should provide:

- A unique and interesting architectural heritage as the community develops
- Compatible and complementary styles, colors, materials and detailing
- Massing, setbacks and articulation which are appropriate and fundamentally sound
- Historical relevance and timelessness
- Adaptable and flexible to changing market desires

The following design guidelines address site design issues, and key elements of each architectural style.

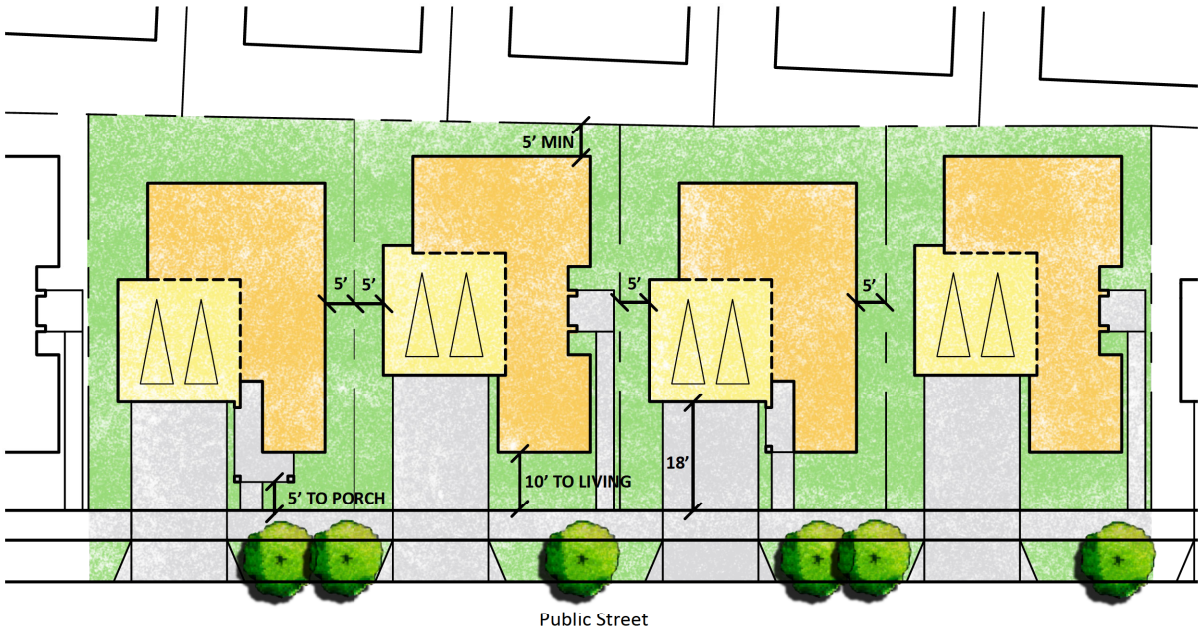
6.2 Site Planning and Design

The first critical aspect of creating an attractive and successful residential community is proper site planning. Important components of site planning include building setbacks and plotting, architectural massing and articulation, roof forms and garage placement. These components must be successfully addressed regardless of the architectural styles selected

6.2.1 Setbacks and Plotting

The relationship of each building to the property lines, street frontages and to adjacent buildings should be carefully considered within each neighborhood. In addition to the minimum setback standards, variable front and rear setbacks should be incorporated into the plotting of each product type. Corner lots and critical edge conditions shall have increased setbacks to soften the impact of the architecture on the streetscape. These plot prototypes are for illustrative purposes. The Residential Development Standards (Table 3a-3j) will serve as zoning for the project upon adoption of The Avenue Specific Plan.

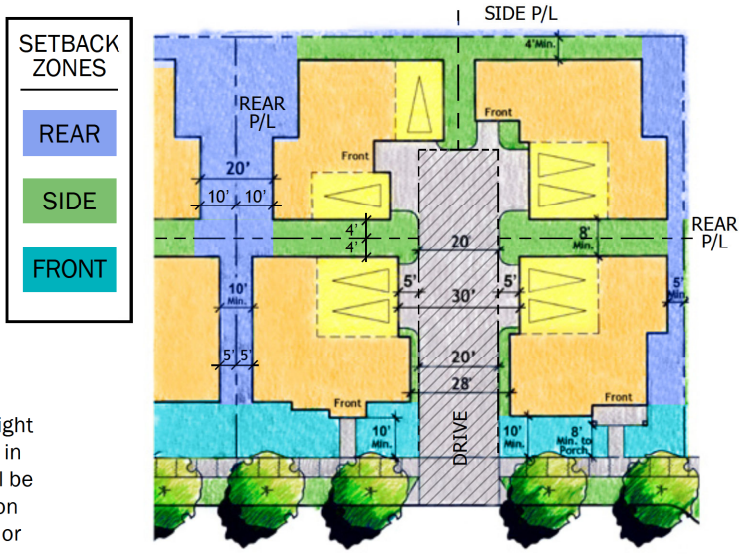
Lot Demonstration Plotting 5,500+ SF Lot (Product Type 1A)



Lot Demonstration Plotting 4,250-5,775 SF Lot (Product Type 1B)

Lot Demonstration Plotting 3,200 - 5,600 SF Lot (Product Type 1C)

Lot Demonstration Plotting 2,700 - 3,500 SF Lot (Product Type 1D) - Public Street



Lot Demonstration Plotting 2,700 - 3,500 SF Lot (Product Type 1D) - Private Drive

Lot Demonstration Plotting 2,380 - 3,600 SF Lot (Product Type 2)

SFD 4/6 Cluster Demonstration Plotting (Product Type 3a)

NOTE: The setback zones shown in the Cluster Demonstration Plotting graphics above and to the right refer to the zones identified in Table 3e. Private lanes shall be enhanced with a combination of pavers, colored concrete or similar decorative material, subject to the review of and approval by the Planning Director.

Parking shown is for conceptual purposes only. Tandem parking standards currently under review by the City of Ontario.

Apartments (Max. 25 DU/Ac) Demonstration Plotting (Product Type 9A)

Parking shown is for conceptual purposes only.

Apartments (Max. 25 DU/Ac) Demonstration Plotting (Product Type 9B)

Parking shown is for conceptual purposes only.

6.2.2 Architectural Massing

Building volumes shall be appropriately scaled to the individual lot sizes. The composition of the building mass shall include the incorporation of single- story elements into two-story buildings, variable setbacks along building elevations for porches, living and garage areas, the minimization of shear two- story façades, and the development of four-sided elevations through articulation and detailing.

Garage and Roof Articulation

Autocourt - Garage and Roof Articulation with Single Story Elements

6.2.3 Corner Home Placement

Special attention must be made to the treatment of architectural massing on corner lots and critical edge conditions.

Architectural elements such as porches, single story elevations, special façade materials and architectural fenestration should wrap around from front to side in these conditions whenever possible.

Wrap Around Porch and Architecture with Side Entry

Wrap Around Porch and Architecture with Side Entry

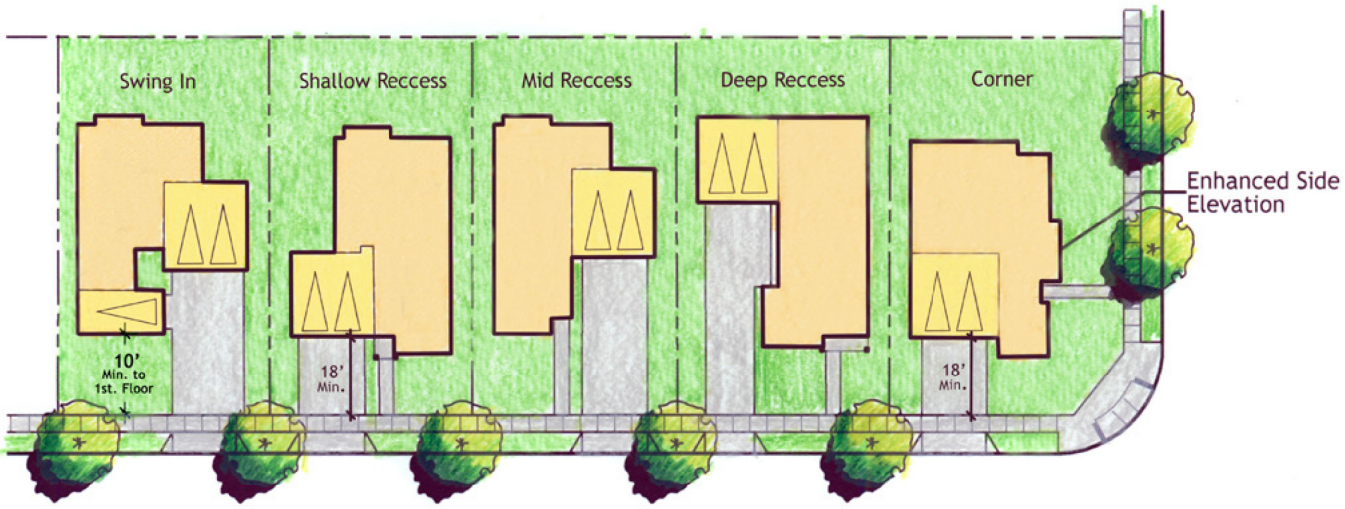
6.2.4 Roof Lines, Forms

Roof forms are critical in creating interest to the building mass. Roof forms and material finishes help blend the structures into the landscape through shadow patterns, texture, color variations and visual interruption of vertical walls and planes.

The roof forms, lines and ridges should be fenestrated and varied. Architectural features, roof intersections and roof pitches consistent with each style should be incorporated whenever possible.

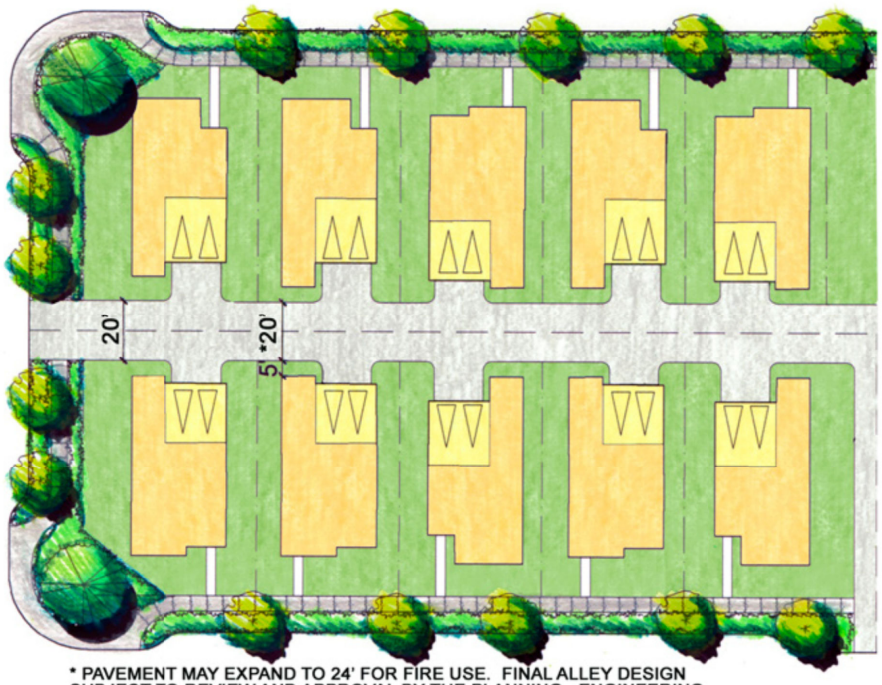
6.2.5 Garage Placement

Side Entry with Wrap Around Architecture



Side Entry with Wrap Around Architecture

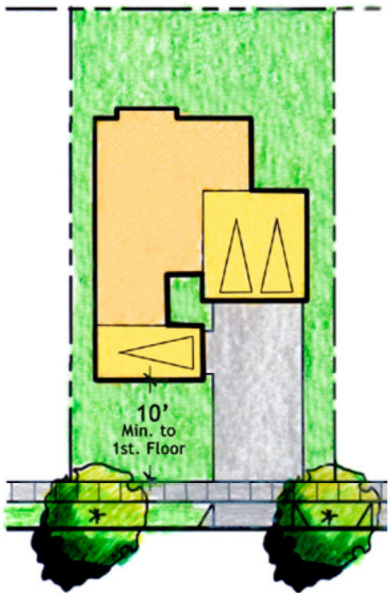
The location, configuration and orientation of the garage on each lot are an important design element, both for the composition of the dwelling and its contribution to the streetscape.



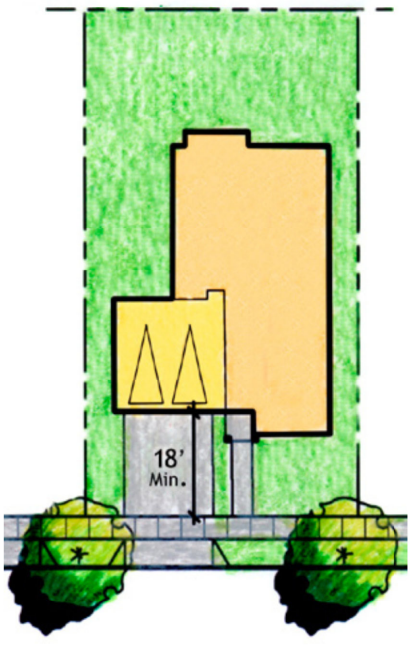
De-emphasizing the garage is important to community design. The goal is to emphasize the living areas of the home as they address the street. Placing living areas forward in lieu of a garage dominant front elevation encourages "eyes on the street" for neighborhood safety and security while establishing neighborhood orientation to the pedestrian as opposed to the automobile. Garage door patterns are encouraged to be varied among elevation types, and to reinforce the architectural theme of the dwelling.

The number of homes with the shallow recess garage condition should be limited to 25% of the total number of units in each builder's plan package and shall be setback a minimum of 18-feet from property line.

Demonstration Plotting

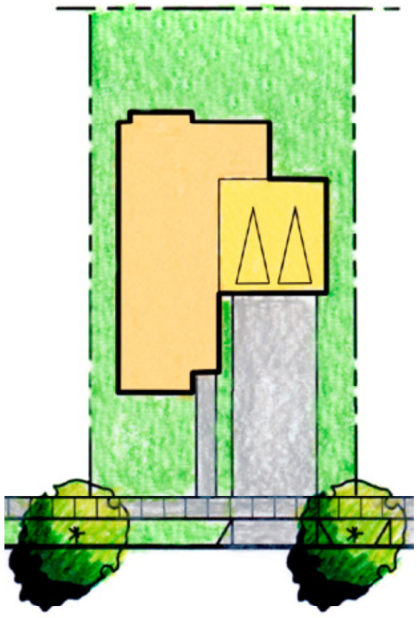


Alley Demonstration Plotting

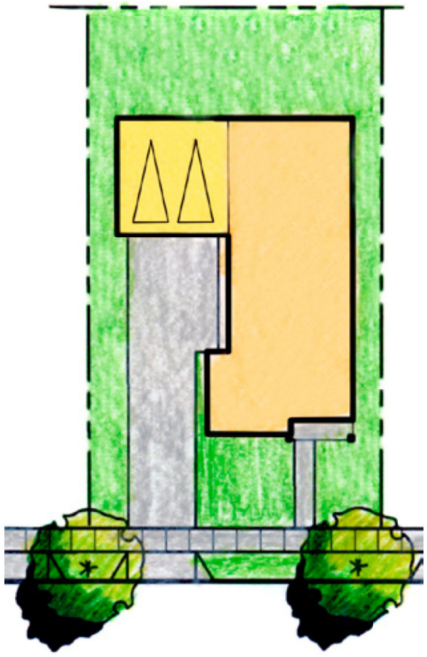


* PAVEMENT MAY EXPAND TO 24' FOR FIRE USE. FINAL ALLEY DESIGN SUBJECT TO REVIEW AND APPROVAL BY THE PLANNING , ENGINEERING, AND FIRE DEPARTMENTS.

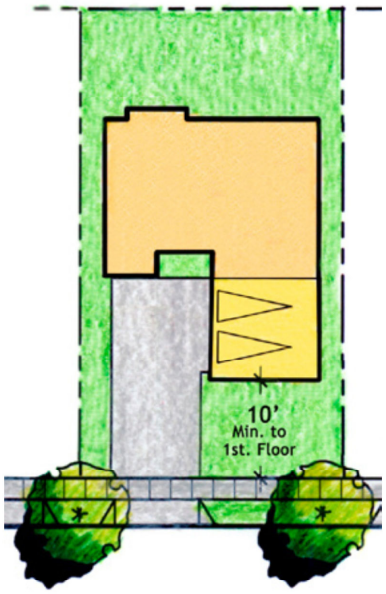
Three Car Swing-In



Shallow Recessed



Mid Recessed



Deep Recessed

Two Car Swing-In

6.3 Miscellaneous Architectural Elements

Each selected style of architecture has attributes specific to that style. There are architectural features that are particularly important from both a standpoint of helping define the architectural style and from providing lifestyle benefits. These items include porches, trellises and arbors and balconies.

Wrap Around Style

6.3.1 Porches

Sufficiently sized porches (minimum depth: 7', minimum area: 70 square feet) become key elements in creating active, social neighborhood, through the visual and conversational interaction that occurs between these elements and the streetscape.

They provide interest, shadow lines and architectural fenestration to the building.

Porches should be provided for various homes in each product area whenever feasible and should have the following attributes:

- Porches should be integrated into the architectural elevation and floor plan consistent with the particular design style
- At corner conditions, porches should wrap around or be designed into two sides of the building
- Porches should be of sufficient depth to allow chair and table placement (seven foot minimum depth at ground level is preferred but can be modified if necessary at side elevations)
- Porches should relate to the streetscape consistent with traditional design aspects

Stucco Detailing

Wood Detailing

6.3.2 Balconies

Balconies are part of many styles of architecture and can range in size from small decorative balustrades to large inviting verandas. Balconies are more flexible in size than porches and can serve many uses from more decorative, offering visual detail and architectural fenestration to accessible congregation spaces which become important outdoor rooms and overlooks.

Balconies are encouraged elements of the architecture but should adhere to the following principals:

- Balcony design and detailing should be consistent with the architectural style
- Balcony placement is encouraged towards the front of homes whenever feasible
- Balcony placement at rear or sides of homes should consider site plan and adjacent lot privacy issues

Balcony on a Multi-Family Building

Wood Detailing

6.3.3 Window Treatments

Window treatment is an important element in defining architectural styles and providing detail to buildings. Whether it is recessed or protruding, multi-paned or single paned, rectangular or arched, framed or not, all make a difference in the building character. The window treatment should be consistent with the style of architecture.

Window sizing and scale must be consistent with the architectural enframement. Use of shutters as window detailing and design style elements is encouraged but shutters should be properly sized to the window opening for authenticity.

Iron Detailing

Recessed Window Detail

Window Surround

6.3.4 Trellises and Arbors

Trellises and arbors are valuable architectural features for softening building façades, extending indoor rooms into the exterior landscape, and creating shelter from harsh sun and glare. Trellises are also encouraged in the design of each building but must also be consistent with the architectural style, be appropriately sized and scaled, and be constructed of material that will survive the harsh inland sun and hot, dry wind conditions.

Wood Trellis Over Entry Drive

6.4 Architectural Styles and Elements

The architectural character of The Avenue shall consist of the traditional styles found in the Pacific Southwest. These styles were developed over time as reactions to prevailing climate, locally available material, historical tradition and/ or architectural trends of the early twentieth century. Over time, these styles have often become blended in part with new interpretations and in response to modern technologies. While the community infrastructure, architecture, site planning, land design, and landscape architecture are the key factors in creating a unique and special place for The Avenue, the interpretation and execution of the individual architectural styles and residential product types will provide lasting value.

Simple Iron Trellis of Driveway

Each style has aspects relating to massing, articulation, roof form, and garage placement. The development of these styles in an appropriate manner requires incorporation of specific elements of each style.

The chosen styles complement one another through overall scale, massing, proportions, details, and the ability to establish a charming architectural backdrop that will age gracefully over time. The materials and colors of these home styles shall complement the overall landscape design of the neighborhoods. Each style shall be developed appropriate to the region, and address the needs and lifestyles of the residents.

Acceptable architecture styles for The Avenue homes include:

- Monterey
- Bungalow
- Spanish
- California Ranch
- Cottage
- Farmhouse
- Transitional

Note: Additional styles proposed by the homebuilder may be deemed acceptable by the City and Community Design Team.

The following guidelines have been developed by The Avenue Community Design Team in order to create a community with an appropriate diversity of architectural styles and design:

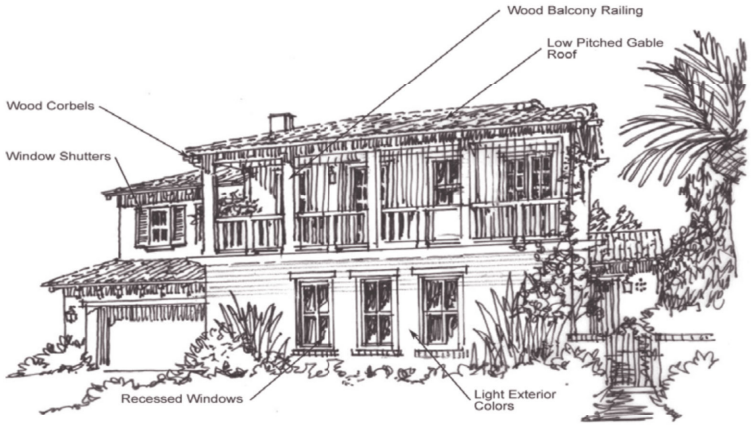
- A variety of styles and plans is encouraged
- The adjacent plotting of the same plan, either standard or reverse, should be discouraged
- A variety of plan orientations is encouraged
- No two adjacent homes shall utilize the same architectural styles

The styles on the following pages will provide the builder and their design consultants the tools to create architectural designs appropriate and authentic to each style.

6.4.1 Monterey

Single Family

History and Character:



The Monterey style is a combination of Spanish Colonial construction methods and the basic two-story New England Colonial house.

Architects in the 1920's began to reintroduce the style and modify the elements to suit the period preferences. The signature cantilevered balcony on the front of the house may be a prelude to the porch that often surrounds or defines a private courtyard in the back of the house. The original houses used adobe wall construction. Detailing of the porches and the cornice is extremely simple. Rafters are often exposed, gable or hipped roofs are used, chimneys often anchor one end of the house, and flat paneled doors are used both on the ground floor and on the balcony, in addition to a more solid entry door.

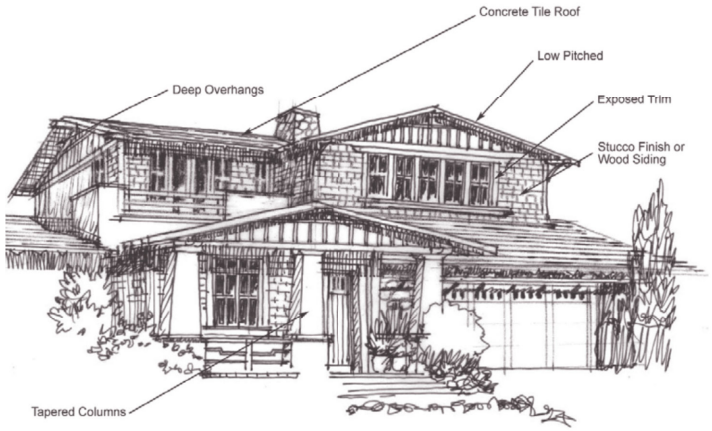
Autocourt Example

General Attributes:

- Simple-box plan form
- Front-to-back gable roof
- Stucco finished walls
- Colonial-style windows with shutters and door trim
- Wrought iron or wood balcony railing
- Light exterior colors
- White or dark trim colors

6.4.2 Bungalow

History and Character:

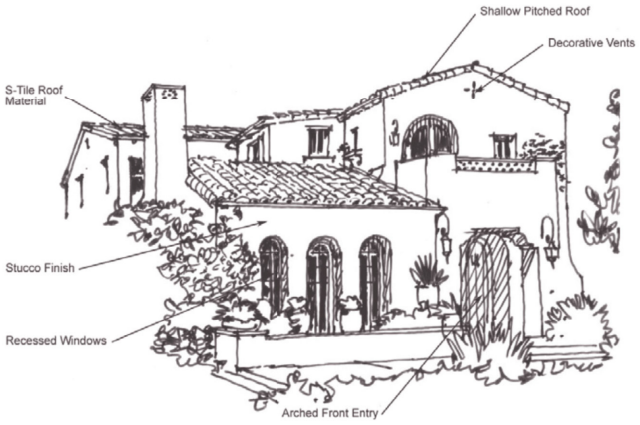


The Bungalow with its variations of the Craftsman style home evolved form the late 19th century American Arts and Crafts movement. These moderately detailed buildings are characterized by the use of hand-finished materials with a rusticated texture. Open porches, sloping roofs with deep overhangs, multiple gables, asymmetrical compositions, oversized first floor windows, expressive trim, rafters, brackets and porches characterize the Bungalow style.

General Attributes:

- Simple plan form massing and simple roof
- Intersecting gable roofs with overhang
- Stucco and/or horizontal siding
- Vertical multi-paned windows at front elevation
- Large picture window at front
- Porches with simple wood columns and railing
- Corbels
- White or dark stucco color
- White or dark color trim

6.4.3 Spanish



History and Character:

Spanish inspired homes began appearing at the turn of the 20th century in the form of the Mission Style, reflecting a loose adaptation of features often found in detailing from various influences, including Moorish and Spanish Colonial. Spanish Style is a catalog of styles unified by the order of arches, courtyards, strong form and mass, plain wall surfaces and tile roofs all derived from Mediterranean architectural styles. The Spanish style is most often characterized by an informal plan arrangement and massing. This informality reflects the natural composition of the farmhouses and small estates of Spain, which were not symmetrically composed.

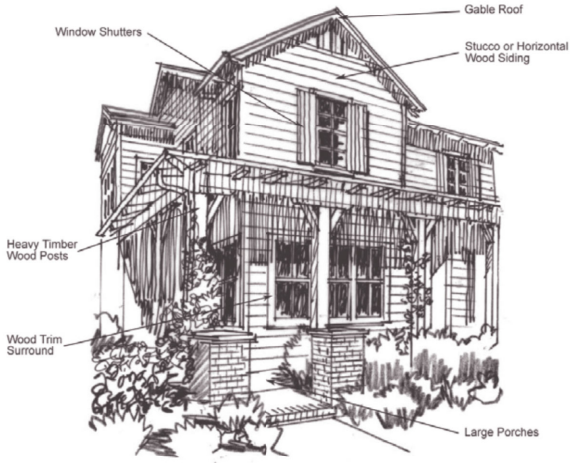
General Attributes:

Some identifying features of this style are large distinctive (sometimes arched) windows on the front façade, red clay roofs and light colored stucco walls.

- Two story massing with one story element
- Simple hip or gable roof
- Barrel or 'S' shape concrete tile
- Stucco Finish
- Vertically hung multi-paned windows at front elevation
- Arched stucco column
- Light colors with dark trim
- Wrought iron accent

6.4.4 California Ranch

History and Character:

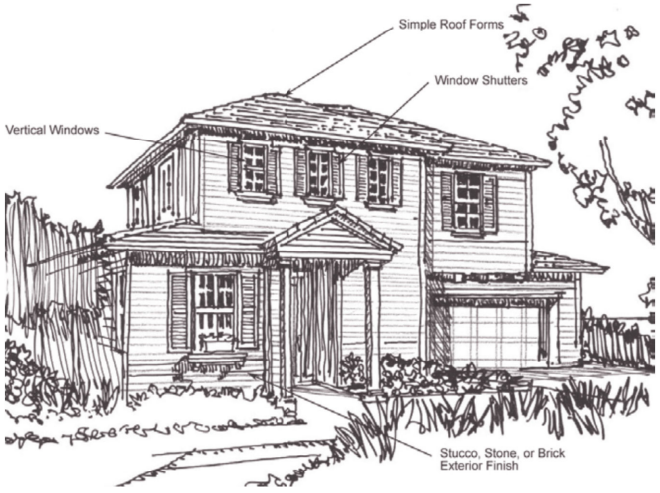


Reminiscent of the early ranchers and farmers of Southern California, the California Ranch Style was developed in response to their lifestyle, available materials and environmental considerations. The strong indoor/outdoor relationship is ideal for the temperature climate of the region and incorporates sliding glass doors, picture windows, terraces and secluded patios. These homes were influenced by Colonial, Spanish Colonial, Stick, Monterey, and Spanish Eclectic architecture; however, the detailing was simplified when adapted to the California Ranch Style.

General Attributes:

- Simple rectilinear form
- Gabled roof
- Long horizontal gable roofs
- Stucco or horizontal wood siding
- Simple column and railing at porches
- White or dark stucco colors
- White or dark color accent trim

6.4.5 Cottage



History and Character:

The Cottage style is based upon early twentieth century American interpretations of English architecture. The source for design originates from medieval English and French cottages, as well as from the country estates of Brittany and Normandy, larger manor homes, and rural village vernacular houses. The Cottage style captures a romantic and picturesque architecture, and American interpretations include houses with simple volumes most often with front facing gables that have steeply pitched roofs.

General Attributes:

- Asymmetrical massing
- Large simple roof planes
- Stucco finish
- Vertical windows
- Decorative stone or brick veneer
- White, off-white, light earth tone shades

6.4.6 Farmhouse

History and Character:

The Farmhouse style is based upon regional American interpretations of agrarian architecture. The source for design originates from rural residential homes in the early settlements in Midwestern and Southwestern areas of America. The Farmhouse style establishes a pastoral character, and recent interpretations include houses with simple building designs, gabled roof forms characterized by a moderate to steep pitch.

General Attributes:

- Simple rectangular massing
- Large simple roof planes
- Siding or Stucco building materials
- Vertical windows with decorative accent shutters
- Entry porches with low sloping shed roofs
- White or light earth tone shades with contrasting design elements

6.4.7 Transitional

History and Character:

The Transitional style is an interpretive style based upon historic European and American architecture. The design inspiration uses modern building forms and construction materials to develop more contemporary designs that reflect earlier period styles. The Transitional style incorporates clean lines and simplified architectural detailing to reinforce the intended character. This style includes interpretations of Spanish, Monterey, California Ranch and Farmhouse architecture.

General Attributes:

- Building massing to reinforce the intended period style
- Large simple roof planes, including asymmetrical roof forms and limited flat roofs.
- Horizontal siding or smooth stucco finish
- Square or vertically proportioned windows with simple or no trim details.
- Light exterior building shades with contrasting details such as wood trim/ fascias, window frames, doors and simple window shutters.

6.5 Commercial Design Guidelines

6.5.1 Introduction

The Avenue Specific Plan area includes one (1) neighborhood center. This 10-acre center is at the southwest corner of Ontario Ranch Road and Haven Avenues. A 15.04-acre self-storage is planned at the southwest corner of Archibald and Schaefer. The neighborhood center will allow the homeowners of The Avenue access to shopping and employment opportunities nearby. Residents will have the ability to access services by foot, or ride their bicycles to work via pedestrian trails connecting the community to the neighborhood center.

Throughout the neighborhood center, appropriate landscaping, site planning and architectural design should be considered to create friendly and welcoming places to shop and work and shall continue the vision established in the residential community, including integrating pedestrian-friendly design.

In order to maintain the character of The Avenue, the neighborhood center is expected to be developed with a compatible and harmonious quality. These Avenue Commercial Design Guidelines will help direct the development of the area to enhance the pedestrian experience that positively contributes to the character of The Avenue Specific Plan area. These guidelines are not intended to be strictly enforced rules, but a tool in aiding the design process and are therefore general in nature. Developers of the neighborhood center will be required to submit their own supplemental design guidelines for City approval. These commercial design guidelines are organized into the following:

- Site Planning
- Building Design
- Architectural Details
- Open Space and Landscaping

Pedestrian-friendly Commercial Retail

A. Guiding Principles

Guiding Principles for commercial design for The Avenue are:

Buildings should contribute to a qualitative nature of the overall neighborhood.

- Proper scale and proportions in massing and details should be used
- Pedestrian open spaces should be provided
- Massing and articulation should be varied
- Buildings shall be designed at a human-scale

Buildings should have an enduring quality.

- Design should draw inspiration from the rich and diverse Southern California architectural heritage
- Materials and colors typical to Southern California should be used
- Details and ornamentation should be authentic
- Design shall create an inviting place to shop and work

B. Review Process

The Commercial Design Guidelines are to be used as a general tool to guide the development of the neighborhood center within The Avenue. Final designs will be subject to the City of Ontario's approval. Additionally, more detailed design guidelines for each development will be required by the City prior to final approval. Refer to the City of Ontario Development Code or the Planning Department for further information regarding the review process.

6.5.2 Commercial Design Guidelines

C. Introduction

The Neighborhood Center within The Avenue is intended to continue the pedestrian-friendly character established in the residential community. Appropriate site planning can de-emphasize the vehicle, creating a safe outdoor environment without ignoring the necessary needs of vehicular circulation. Through well executed planning, architecture, and landscape design, the Neighborhood Center can complement and integrate the residential community. Images within this section are for illustrative purposes and final plans must be submitted to, and approved by, the City.

Design shall create an inviting place to shop and work

D. Site Planning

Orientation

Buildings should be oriented for optimal visibility from the street. Windows and entries should face the street avoiding blank walls dominating public views. Stores with entries not visible from the street may be oriented towards pedestrian open space and all primary entries should face onto a street or a connecting walkway.

Building clusterings are recommended to help define parking lot areas and encourage walking between stores. Building entries and storefronts should be positioned close to one another to reduce walking distances between them.

Driveways and Sidewalks

The site shall be provided with an adequate number of driveways to facilitate circulation and also reduce the traffic impact along the surrounding arterials. Pedestrian crossing distances should be minimized at driveways. All driveways and sidewalks shall be constructed per City Standards and to the satisfaction of the City Engineer. No decorative paving will be allowed in the public right of way unless otherwise approved by theCity Engineer.

Street Frontage and Buildings

Streetside buildings, or those with no parking separating them from the street, should use windows and entry features to soften the building's appearance to the street.

Streetside Setbacks and Buildings

The sides of buildings along street edges shall be landscaped within the setback to soften the building's appearance as well as designed with windows or design elements.
Refer to the City of Ontario Development Code for specific setback requirements.

Street Frontage and Parking Lots

Parking lots should generally be placed away from streets. Street frontages shall be broken up with buildings, landscaping, plazas, and other pedestrian features. Continuous parking lots along the street frontage should be avoided. Any parking along street edges shall be set back with a landscaped buffer which can be used to filter parking lot runoff. Continuous parking stalls shall be interrupted by landscaped islands no more than 10 stalls apart.
Parking lots are encouraged to be interconnected rather than separated for each building. Separated parking lots encourage customers to drive from store to store.

Retail Orientation to Vehicular Travel Lanes and Parking

Service and Storage Areas

Loading docks, garages and storage areas are to be located behind or to the side of buildings siting onto secondary access and not primary streets. These features must be screened with walls and landscaping as much as possible from public view of streets, residences, pedestrians walkways and connecting trails. Loading docks and storage areas should not conflict with pedestrian walkways.

Refuse Containers, Utility and Mechanical Equipment

Refuse containers and equipment shall be easily accessed by service vehicles. They shall be screened from view of the streets, parking lots, and connecting walkways through roof forms, walls and/or landscaping.
Screening details should incorporate elements that are compatible to the architecture style of the buildings. Proper landscaping, including trellises, may also help to screen these elements. Equipment and enclosures shall not be located near pedestrian walkways. Roof-mounted equipment shall be screened by the roof/ parapet.

Sidewalks

Sidewalks shall be located along natural pedestrian travel paths. Sidewalks should be a minimum of 6' wide along pedestrian pathways and a minimum of 8' wide along more heavily traveled commercial areas.

E. Building Design

Massing

With larger buildings, appropriate massing becomes more important to maintain the human-scale of the development and create a visually pleasing environment. Bay windows, stepped buildings, height changes and setback variations between stores help to break up large buildings as well as indicate entries and store locations to customers. Tower elements or monumental features are encouraged at focal points, such as corners, plazas, major entrances, or where walkways meet streets.

Architectural Massing and Materials

Varying setbacks along the front façade of buildings are recommended to create small outdoor public spaces for pedestrians to gather and sit.

Roof Forms

Hipped and gable roofs are encouraged. Roof pitches shall be compatible to the architectural style of the buildings. Flat roofs should vary in height and be accompanied by cornice, trim or other accent features.

Arcades and Awnings

Outdoor arcades along store fronts are encouraged over pedestrian walkways. Arcades may be used to connect separate buildings providing a more pleasing experience for pedestrians. Trellises or awnings may also be used to create a covered walkway to protect pedestrians from the sun and rain.

Entry Design

Building entries shall be prominent and easily identified. Various elements can be used to enhance the entry features including massing variation, materials and color change, change in roof form, and awnings. For smaller retail buildings, part of a cluster or strip, arcades, awnings and simple signage may be acceptable as entries.
No signs shall be placed in the public right-of-way and shall be in accordance with City standards regarding corner site distance.

Commercial Retail Massing, Material Change, Entry Design

Design Flexibility

Retail spaces exceeding 30,000 SF should be designed with the flexibility to be divisible into smaller retail spaces should future market demand change.

F. Architectural Details

Architectural Styles

A variety of compatible architectural styles should be used throughout the Neighborhood Center to create a sense of continuity and visual interest between the buildings. Related elements, such as trellises, planters, light-standards, windows, doors, etc. shall also adopt detailing that is compatible to the selected architectural styles. The selected styles of the Neighborhood Center do not necessarily need to be of any one of those specified for the residential community but shall be compatible with them.

Architectural styles shall derive from southern California and Ontario historic precedents. Modern and "high- tech" styles are not acceptable style choices. Acceptable styles generally respond to the region's climate including such features as outdoor circulation, outdoor courtyards or plazas, recessed window frames, awnings, arcades, loggias, and trellises.

Building Wall Treatment

No wall should have a blank, uninterrupted length exceeding 20 feet without including one of the following:

- Change in texture
- Change in material
- Change in plane
- Lattice
- A tree or equivalent element

Façades that are visible from adjacent streets or walkways should display even greater visual interest by using architectural elements that break up the massing of large buildings, such as windows, arcades, awnings, porticos, and other architectural features.

Base And Top Treatments

Base and top treatments help to balance the "weight" of the building visually. Bases should appear to "ground" the building, while tops create a defined edge to the roofline. Possible treatment techniques are as follows:

Base:

- Natural materials
- Pre-cast materials
- Thicker walls
- Enriched landscaping with a mature height of at least 18"
- Other decorative, durable materials as approved by the City

Special materials, such as ceramic tile, granite and marble are encouraged at major entries.
Tops:

- Cornice treatments
- Stepped parapets
- Roof overhangs with brackets
- Textured materials

Colored "stripes" are not acceptable as the only treatment.

Exterior Materials

Recommended materials include, but are not limited to stucco, exterior plaster, brick, wood siding, tile, pre-cast concrete or stone. Exterior materials that appear pre-fabricated are not recommended. Selected materials and detailing should have an enduring appearance. Foam products should be avoided at the pedestrian level.

Roof Materials

Roofing materials that are generally acceptable include standing metal seam, concrete tile, tile and slate or slate-like materials. Asphalt or wood shingles are prohibited.

Colors

Color selection shall be consistent with the selected architecture style.

G. Commercial Site Landscape Requirements

The Neighborhood Center site will be developed both architecturally and through landscape treatments as an extension of The Avenue. The land plan encourages integration of the Neighborhood Center by providing for frontage on Ontario Ranch Road and Haven Avenues, while also incorporating a major community entry. Commercial uses appropriate to and compatible with The Avenue's residential community will be encouraged.

Minimum Landscape Requirements

- Builder/developer shall refer to City of Ontario standards for the percentage of gross commercial site acreage required to be landscaped.
- All areas of the site not occupied by buildings, parking or otherwise utilized shall be landscaped with groundcover, turf or tree materials from the community plant list.
- Appropriate street trees should be utilized adjacent to street frontage integrating the site into the overall community setting.
- Side yard and rear service yard use areas should be screened with a combination of a six foot (6') wall and dense landscape buffer. Tubular steel fencing and gates should be used adjacent to interior residential streets to control access points.
- Accent tree entry planting should be incorporated at the site's vehicular access points.
- No shrubs higher than 3 feet and no tree canopy lower than 7 feet as to allow officers on patrol the ability to view the business, without obstructing their view.
- Plants by low-lying windows may have thorns as a deterrent.

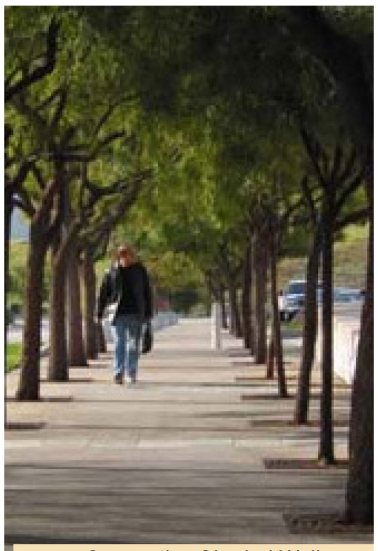
Parking Areas

- Where a parking lot contains 10 or more parking spaces and is visible from a street, not less than 10-15% of the total area (excluding any perimeter landscaping), shall be landscaped. Such landscaping shall not be concentrated in any one location. A minimum of 50% of the plant material shall be canopy or shade trees and shrubs shall be 3' or less to provide clear visibility.
- All rows of parking spaces shall be provided with landscape islands at each row terminus to protect parked vehicles, ensure visibility, confine moving traffic to drive aisles and driveways, and provide space for landscaping. Within each row of parking spaces, landscape islands shall be placed to prevent more than 10 vehicles from being parked side-by-side in an abutting configuration. These landscape islands shall measure a minimum of five (5) feet in width, exclusive of curbs. Creation of large planting islands (tree groves) are encouraged as opposed to small pockets of individual trees.

Retail Plaza

- Planter islands for a single row of parking spaces shall be landscaped with at least one (1) tree and vegetative groundcover or turf. Planter islands for a double row of parking spaces shall contain not less than two (2) trees and vegetative groundcover or turf.
- Landscaped areas shall be delineated with a concrete curb which may have curb cuts to facilitate sheet flow runoff from parking lots to infiltrate the landscape planters.
- Parking area landscaping is required for the screening of large parking areas to limit their visual impact.
- When parking is located adjacent to a public street or interior residential street, a combination of landscaped berms and/or planting totaling three feet (3') high is to be used to screen views or parked cars.

- Wherever possible, pedestrian traffic should be separated from vehicular traffic by additional sidewalks. The parking lot should have crosswalks highlighted with decorative or varied texture paving.



H. Open Space and Landscaping

Site Accessories

Site accessories, such as recycling bins, bike racks, litter cans, planters, benches and transit shelters, should use materials and have an architectural character consistent with the overall project. These accessories should be graffiti-resistant with materials that are easy to clean and paint.

Connecting Walkways

Walkways throughout The Avenue's neighborhood center shall connect the various buildings to each other and to the sidewalks along adjacent arterials. Use of trellises, landscaping, seating areas and building placement adjacent to one another will encourage pedestrian activity within the center. A typical walkway shall be a minimum of 6' wide. In large parking lots, pedestrian walkways shall be provided within the median of at least one parking aisle for eight aisles of 20 stalls or more.

Connecting Shaded Walkway

Pedestrian walkways that may also be used for emergency access must allow minimum clearance of 26' wide and 14' vertical clearance. Off-site connections will be provided from the neighborhood center to The Avenue's residential development.

Plazas

Plazas are encouraged to emphasize a pedestrian-friendly environment by creating locations within the Neighborhood Center that allow for people to gather. Plazas create a more inviting feeling for pedestrians, allowing them to feel safe from the vehicular-dominated parking lot. These outdoor places may include water features, landscaping, and other elements to create a comfortable place to sit. Plazas are encouraged where high levels of pedestrian activity are expected. Major entrances and nearby uses that allow for more interaction with the plaza such as delis, cafes, restaurants, bakeries and other food services are a few key examples.

Landscaping

Landscaping helps to soften the feel of the buildings and parking lot while enhancing the visual aspect of the site. The following landscaping techniques may be used:

1. Provide special landscaping treatment at all project and building entries.
2. Provide shade/canopy trees within parking areas.

3. Use plants to define outdoor spaces such as along edges, outdoor plazas, or pathways between parking and building entrances.
4. Plantings shall provide a continuity of form across the entire project.

Outdoor Storage Areas

Outdoor storage areas should be incorporated into the design of a project to avoid visual impacts on the site. Outdoor storage areas shall be located away from the street, behind or to the side of buildings. Walls and landscaping shall be used to screen stored materials. Materials placed on palettes in front of buildings are not permitted.

Transit Shelters

Transit shelters should be incorporated into the design of neighborhood center. The design of transit related structures shall be integrated architecturally with the project through its color, materials and architectural style. Walkways shall be provided for easy accessibility by pedestrians moving to and from transit stops to the Neighborhood Center.

Fence and Wall Design

Chain-link fencing, barbed wire, corrugated metal fencing and tennis windscreens are not permitted. Fences and walls should be built with attractive, durable materials, including (but not limited to) wrought iron, textured concrete block, or formed concrete with reveals. Fences or walls should be consistent with architectural style, materials and designs used throughout the project.

Adjacent to residential areas walls and fences should not exceed a height of six feet (6') without being made of textured concrete block, interlocking "diamond" blocks, formed concrete with reveals, or similar materials to a maximum of eight feet (8') from grade.

Along streets, walls and fences should not exceed 36" in height and long expanses of uninterrupted fences and walls should be avoided. Use of openings, planter boxes, material changes, pilasters or posts are acceptable. Openings shall be provided to connect walkways directly to the street avoiding long, inconvenient walking paths. These pedestrian portals should be announced by pilasters, trellis, special landscaping, or other features.

Lighting

On-site lighting standards shall provide adequate illumination throughout the site during the nighttime hours. Lighting fixtures shall be designed to be compatible with the architectural styles selected for the project. All light standards should have an attractive base and top; overhead "cobrahead" standards are not permitted.

Along pedestrian walks, lighting fixtures should not exceed 12' in height and may include lighting within bollards. Pedestrian lighting shall provide appropriate illumination at a human scale without too much glare. Lighting within larger parking lots shall not exceed 25' in height providing enough visibility for customers

and employees to walk safely to their vehicles. The same bulb type shall be used for all parking lot and pedestrian lighting fixtures within the development. Service area lighting should be positioned so no bulbs can be seen from public view. Any street light within the public right-of-way shall be per City standards and to the satisfaction of the City Engineer.

G. Main Street Design Guidelines

Building Form and Massing:

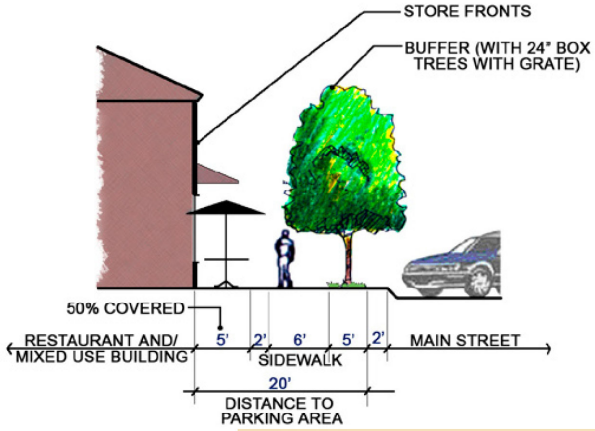
- Building heights shall consist of a mix of building heights to provide visual interest.
- Tower elements and other vertical/prominent building features should be used to accentuate key elements such as building entries, pedestrian nodes, plazas or courtyards.
- Modulation and variation of building masses between adjacent buildings. Three and four story elevations should have varied massing and architecture, both in height and depth along the façade.

Materials and Colors:

- Materials and colors should be applied to create obvious and identifiable delineation between uses.
- All materials shall wrap architectural elements in their entirety, on primary elevations and where exposed to public spaces.
- Materials applied to any elevations shall turn the corner of a minimum of 8 feet, or to a logical termination point in relation to architectural features or massing.
- Rough cut, rustic appearances through the use of stone, brick, or siding is encouraged. Only finished materials are allowed, no exposed or untreated concrete masonry materials, unless consistent with the architectural style.

Main Street architecture, walkway and outdoor seating

Exterior Design:



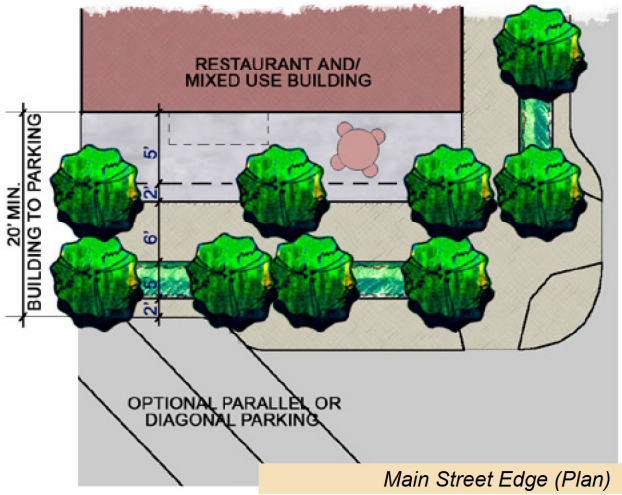
Building shall have articulation along auto and pedestrian corridors to generate pedestrian scaling and visual interest along the streetscape.

- No single building shall have a singular wall plane or building height on the primary elevation.
- Front wall planes of commercial/mixed-use buildings, including retail/shop space veneer configurations, shall be articulated.
- Articulation can include, but is not limited to: 1) Vertical and horizontal offsets, 2) Color blocking and 3) appropriate use of detail elements.

- Mixed-use buildings, multi-tenant shop buildings with more than one ground floor tenant: no more that 66% of the front elevation may consist of a single contiguous wall plane on a tenant by tenant basis.

Primary exposures/elevations shall be appropriately detailed and articulated consistent with the architectural style and character of the development, as established by these guidelines.

- First-story pedestrian scale character and commercial retail exposure is crucial to business viability. In-line retail/commercial/service space shall be designed to optimization of space, exposure and aesthetic articulation.
- No adjacent mixed-use buildings shall have identical architectural appearance, or use of materials, or color palette unless pairing is integral feature of the project design theme.
- Projections, overhangs and recesses may be used to provide shadow articulations and scale to building elevations.
- At least 40% of ground floor of the primary exposure of an in-line/shop-space/free standing show use, excluding restaurants pads, shall be devoted to transparent windows and/or doors.



Main Street Edge (Section)

Roof Form and Slope:

Building height shall be varied to provide interest to the "Main Street" as viewed from community streets, open space, or other public spaces.

- Variety in roof forms, ridge heights and direction of gables is required.
- Although the majority of commercial roof area may be flat, visible elevations should be treated with sloping roof elements, including hips or gables forms (as appropriate to the primary architectural style) or parapet treatments.
- Architectural exposed roof materials shall be consist of flat, barrel, or "S" tile concrete or slate tiles or shakes. Metal roofs are permitted as feature elements consistent with the architectural style.

Main Street Edge (Plan)

Patio Dining:

Outdoor seating, in conjunction with business, shall be encouraged to enliven the street scene along commercial edges. Patio dining along retail storefronts have the dimensions:

- A minimum 20-foot area from building to parking area/drive aisle/interior Street. Patio seating area must have an internal minimum dimension of 5 feet clear, with an additional 2-foot buffer area (plant hedge or low fence.
- Minimum 6-foot sidewalk
- Minimum 5-foot landscape buffer or tree well
- Minimum 2-foot paving edge (Along parking area/drive aisle/interior Street).

Signage Guidelines:

A sign guideline section should be incorporated to promote an overall “sense of place” through signage that is architecturally integrated and visually interesting while conforming to applicable code requirements. The guidelines should include the following criteria:

- Signage Design Objectives
- General Sign Design and Limits
- Identity Signs
- Directional Signs
- Information Signs
- Regulation Signs
- Amenity Signs (Banners on light fixtures, etc..)
- Commercial, Retail and Residential Design Guidelines.
- Fabrication and Installation
- Sign Maintenance
- Sign Location
- Temporary Signs
- Sign Illumination

Landscape Design Guidelines:

To create a distinct and unified landscape character for “Main Street”, specific landscape design guidelines should be incorporated. The guidelines should include the flowing criteria:

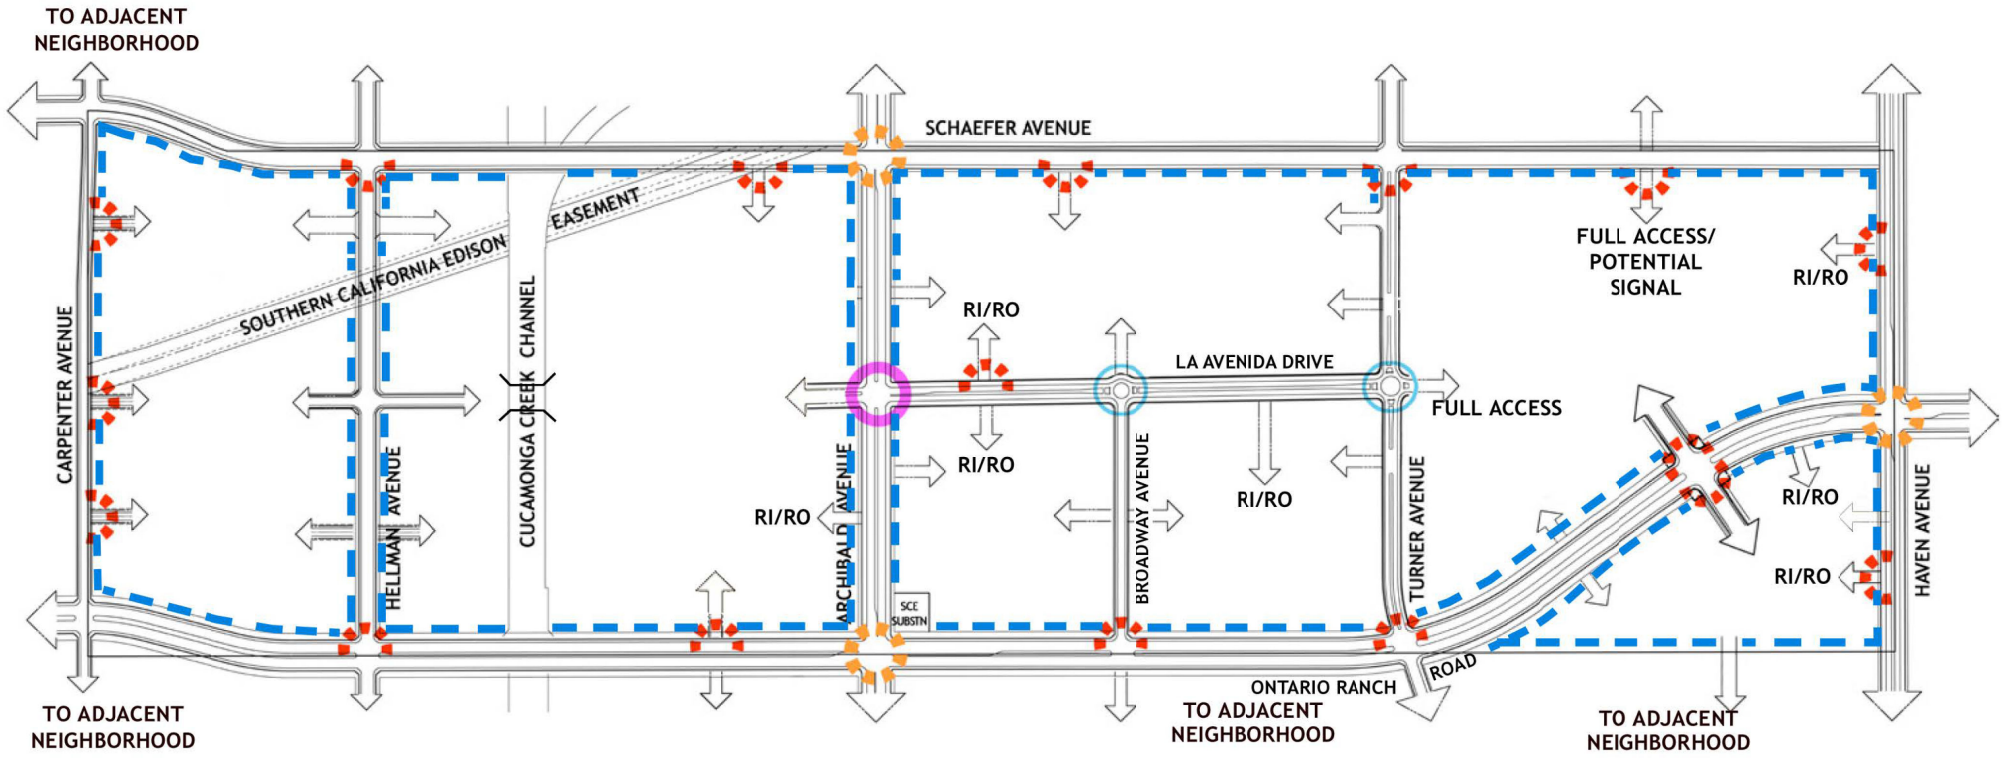
- Parking/Shopping Interface: To provide a safe and comfortable pedestrian experience and reduce the presence of the parking area from shoppers with buffer planting.
- Retail Plazas: To provide active and passive pedestrian spaces that encourage user interaction; Fountains, stages, public art is encouraged for these spaces.
- To provide shaded and non shaded restaurant/outdoor eating and dining areas, use of awnings or umbrellas in west or south facing building exposures, planting as a way to provide a comfortable barrier and also allow for people watching (a 2-foot minimum plant barrier can be substituted for a rail.
- Building Edge/Retail Shops: Planting areas to create a buffer zone between the parking lot and promenade.

6.6 Landscape Design Guidelines

The Landscape Design Guidelines describe the key elements of the proposed landscape treatments within The Avenue Specific Plan area, which will develop over several years. These guidelines will help maintain a consistent design theme in a high quality, visually attractive and resource efficient framework.
The objectives of the Design Guidelines are:

- To provide guidance to developers and builders, as well as to engineers, architects, landscape architects and other professionals, as to the quality and character of the community and development of each planning area.
- To assure the City of Ontario that The Avenue will develop in accordance with the guidelines provided herein.
- To provide guidance to City decision makers in the review of future development projects in The Avenue.
- To provide guidance in formulating Covenants, Conditions and Restrictions.

These Landscape Design Guidelines are intended to be flexible and are, therefore, illustrative in nature. As a flexible document, the guidelines can, over time, accommodate changing community desires, economic conditions and the marketplace.



The General Landscape Guidelines address typical areas of importance and concern with regards to landscape architecture such as resource conservation, landscape lighting impacts and maintenance issues. The Plant Material Guidelines provide a specific list of plants compatible with the community design theme and Ontario Ranch Streetscape Master Plan. The lists are organized by community elements and streetscape themes.

Although a great deal of specific design information is provided in these Landscape Design Guidelines, there will at times be a need for interpretation of the intent of the guidelines in keeping with the spirit of The Avenue's design theme. It is critical that these guidelines are followed in a manner consistent with this design theme, in order to create a unified landscape, while providing the opportunities for diversity and visual interest that are so apparent in the most successful residential communities in the City of Ontario.

6.6.1 Community Fences and Walls

Community fences and walls are a major visual element and help unify the appearance of the community. Community walls and fences have been carefully designed to complement the overall theme. They will be easy to maintain and provide a durable, long term edge enclosure defining "private" and "public" spaces. Community walls and fences shall not encroach into the public right-of-way unless permitted. The size and location of any monument, fence or wall that encroach into the public right-of-way shall require approval by the City Engineer.

An encroachment permit shall be obtained to construct any monument, fence or wall in the public right-of-way. Exhibit 27, "Entries, Intersections, and Community Walls" shows the conceptual location of community walls.

LEGEND

- ROUNDABOUT
- MAIN ENTRY
- PRIMARY ENTRY
- SECONDARY ENTRY
- RI/RO — RIGHT IN/RIGHT OUT ONLY
- COMMUNITY WALL

NORTH 0 100 200 400 800

NOTE: The locations of entry points is conceptual. Precise locations will be determined as part of the tract map process.

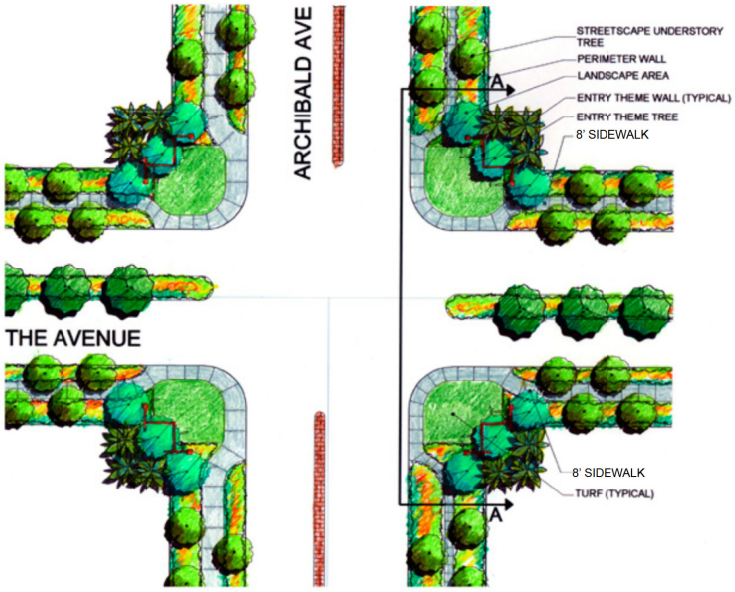
NOTE: If a wall is proposed along the east side of Carpenter Avenue where the homes are plotted to rear onto Carpenter Avenue, a 10-foot wide landscape buffer shall be incorporated along the street frontage. The 10-foot landscape buffer shall be measured from back of sidewalk (ROW) (13-foot parkway + 10 foot landscape buffer = total 23-foot edge measured from curb face).

NOTE: No monuments or walls will be allowed in the public street right-of-way along backbone streets.

Entries, Intersections and Community Walls

6.6.2 Entries

The entries and intersections within The Avenue establish the design theme for the community while reinforcing the design hierarchy and providing a reassurance of the community areas and boundaries. These features are created through a thematic blend of hardscape and planting schemes, and become the first impressions on all visitors and residents entering the colony. No monuments or walls will be allowed in the public street right-of-way along backbone streets. See Exhibit 27, "Entries, Intersections, and Community Walls" for specific locations of monumentation.

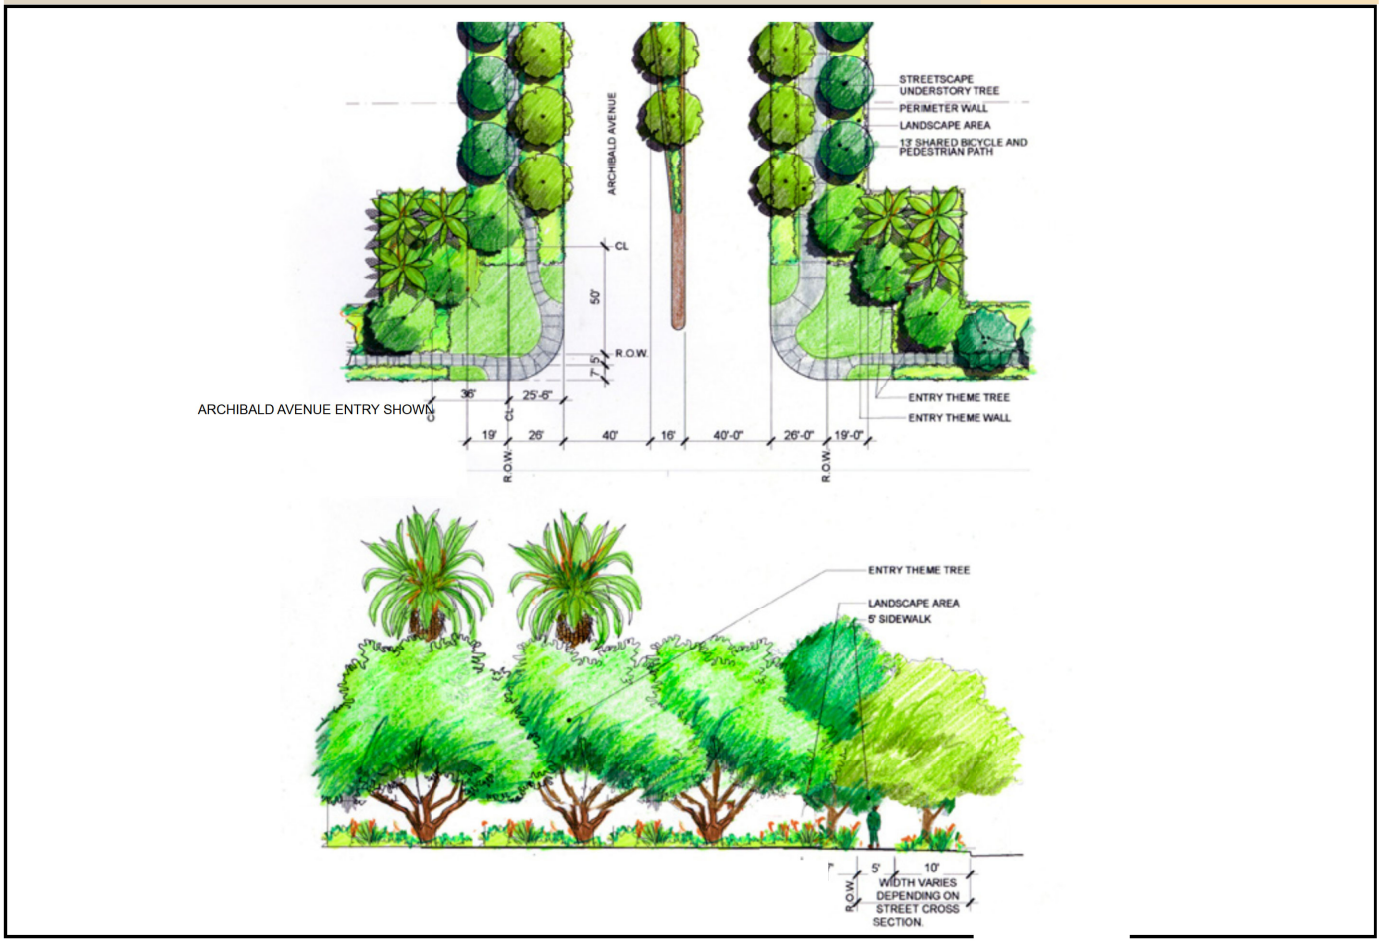


Main Entry

The Avenue is bordered by urban arterials on three sides. This allows easy access to neighborhoods throughout the community but also requires a carefully considered hierarchy and treatment of colony entries. The Main Entry provides a relaxed but strong sense of arrival and identity by utilizing soft open turf leading to stone veneered pilasters and a low planter wall. Clustered palms mixed with evergreen foliage trees and flowering shrubs will evoke the image of a classic Ontario community scene. The developer will be responsible for those improvements to the Main Entry as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project.

Exhibit 27a - Main Entry

Main Entry Section View

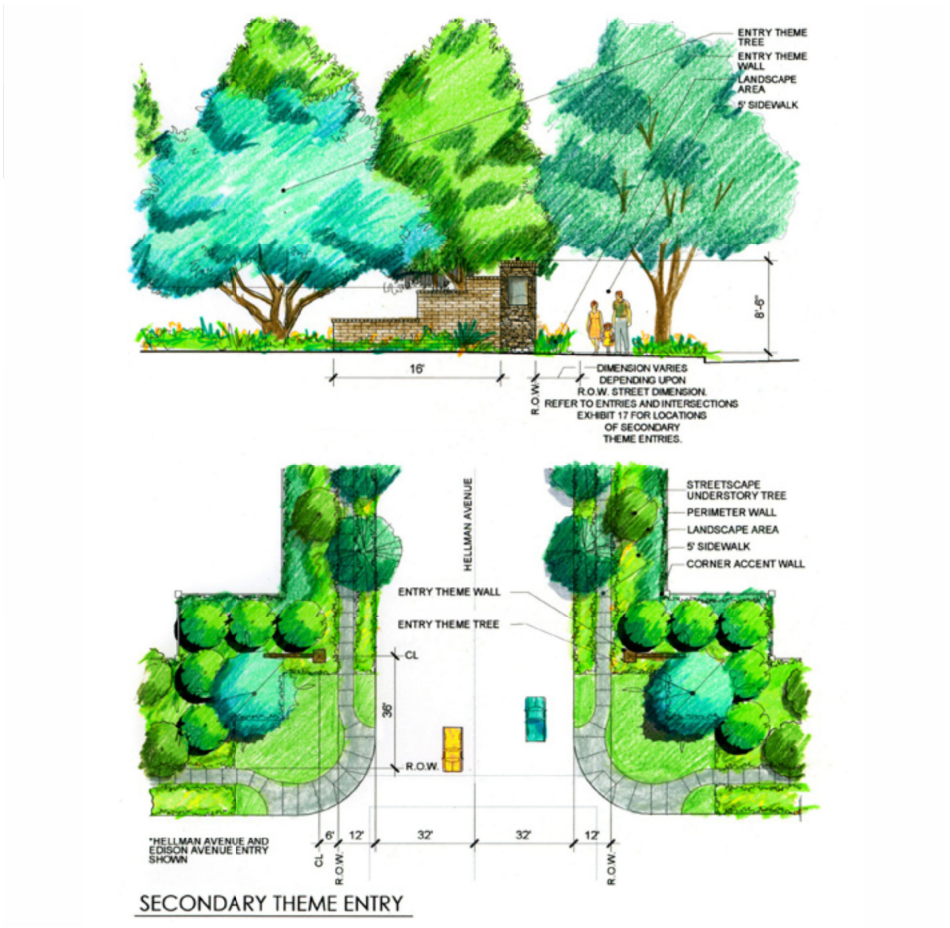


Main Entry Plan View

Primary Entries

These entries occur along the urban arterial and collectors throughout the community as shown in Exhibit 27, “Entries, Intersections and Community Walls”. They will be smaller scale versions of the main entry and will contain minor sign monuments, theme walls and pilasters, simple attractive evergreen and deciduous tree planting and accent shrubs set behind a simple turf area. These entries will provide an important outlet and inlet for colony traffic to most efficiently access residential enclaves and other community elements. The developer will be responsible for those improvements to the Primary Entries as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project.

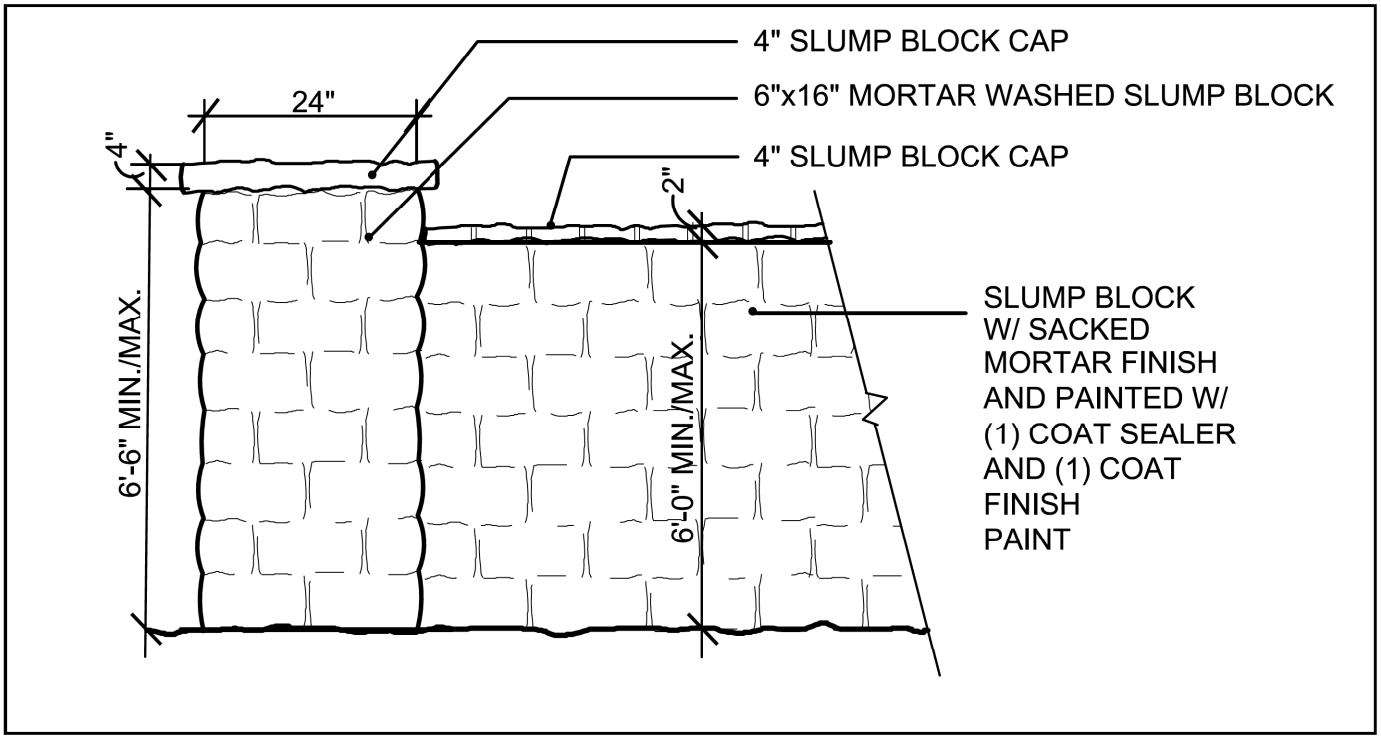
Exhibit 27b - Primary Entries



Secondary Entries

These entries will be the primary marketing and residential enclave access for the separate residential products within The Avenue as shown in Exhibit 27, “Entries, Intersections and Community Walls”. These entries occur from the internal road system and will be determined through the separate future planning of each enclave per the City of Ontario’s planning design standards and this Specific Plan document.

Simple identification signage and individualized landscape theming will be allowed. Signage may be permanent or temporary and is subject to review and approval by the master community developer. The signage and landscape materials must be compatible and complementary to The Avenue’s landscape design theme. Flexibility within this framework will allow visual diversity and individualization of the residential neighborhoods.

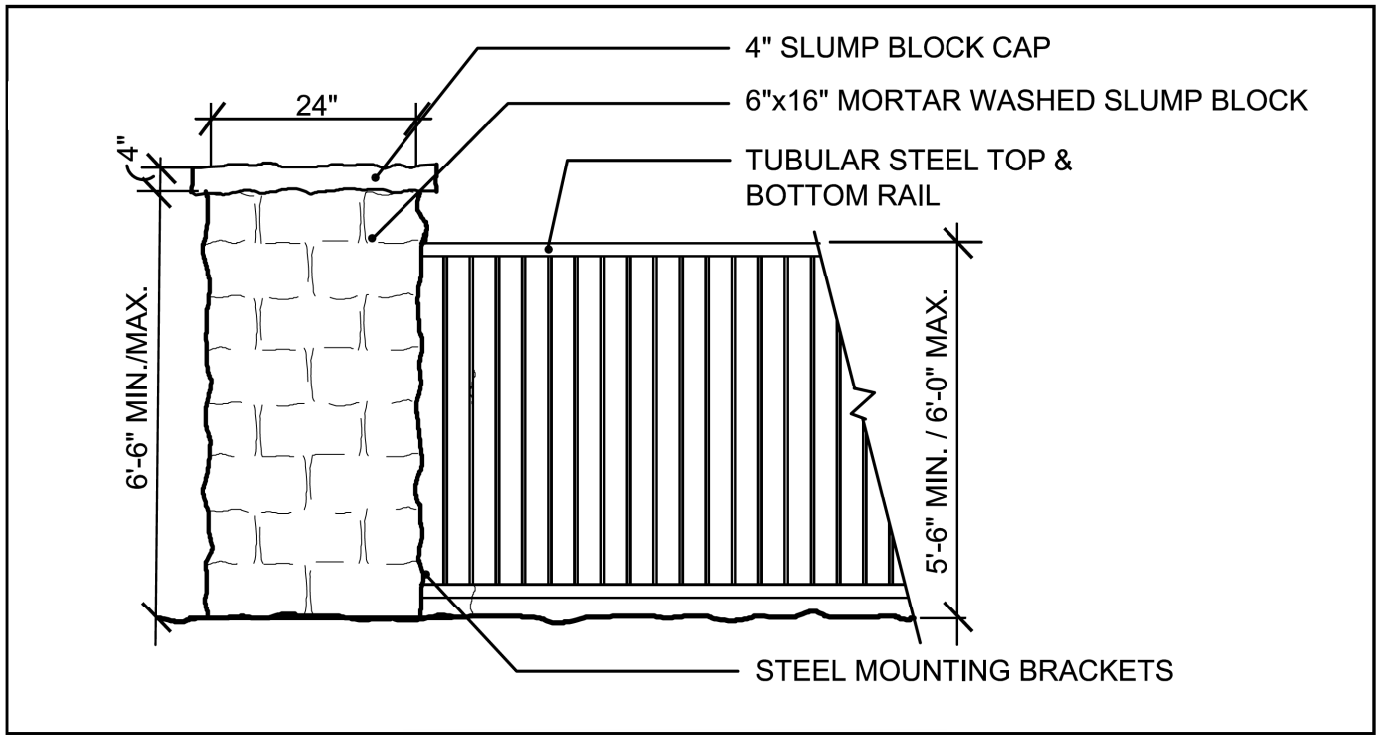


The developer will be responsible for those improvements to Archibald Avenue as determined by the City Engineer and pursuant to the mitigation measures identified in the EIR and/or the Conditions of Approval established on the approved tentative maps for the project.

Exhibit 27c - Secondary Entries

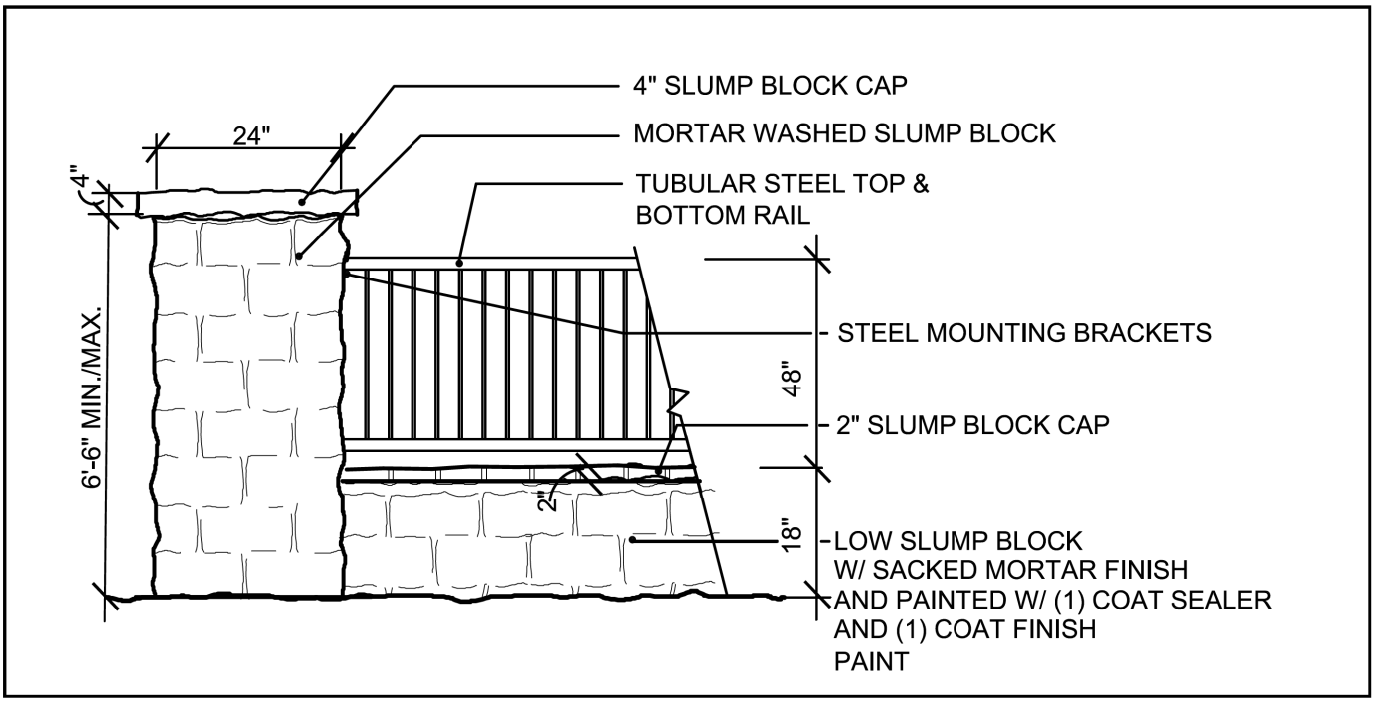
Solid Masonry Theme Wall

Solid masonry walls will be provided as rear and side yard enclosures where privacy is desired such as adjacent to streetscapes. The solid theme wall used within The Avenue will be a mortar washed painted slump block masonry unit. Pilasters will be placed at wall terminus points and as determined to be necessary for visual benefit.



Open Tubular Steel Fence

Tubular steel fencing will be used at residential interfaces to allow maximum view retention. Tubular steel fencing may also be used where an attractive open enclosure is necessary at park sites or recreation facilities.



Where feasible, the tubular steel fence will be interspersed with thematic community stone or masonry pilasters.

Combination Fence/Wall

This combination enclosure of a tubular steel fence mounted on a low solid masonry theme wall occurs where partial privacy is necessary, but permits some view opportunity. Pilasters shall occur at the intersections of rear and side property lines and shall be constructed of solid masonry theme wall materials.

Community Wood Fence

Wood fencing is acceptable when not adjacent to common open spaces such as school sites, parks or commercial sites. Wood fencing is allowed for front yard low (3'-6" high max.) decorative fencing. Wood fencing will not be permitted in rear or sides (masonry block only). Wood fence materials must be of sufficient quality to accept solid and semi-transparent stains required to help prevent rotting and weathering. No transparent stains will be allowed.

Interior Neighborhood Streetscene Walls

- Walls adjoining any interior neighborhood streetscene shall have a perimeter streetscene solid community theme treatment.
- The community solid theme wall shall be utilized at all residential corner lot side yards which parallel or are viewed from public streets.
- Wood fencing is permitted within the individual neighborhood provided the fencing is not readily visible from the community streetscenes, except as located behind the front yard setback.

Commercial, Institutional and Other Uses

Screen and security fences and walls are encouraged only in rear or side yards. Trash deposit areas shall be enclosed within a six foot (6') high gated trash enclosure wherever located.

Wall and Fence Heights

Residential, Institutional and Commercial Uses:

- Front yard wall heights must be compatible with the visual appearance and integrity of the front yard streetscene. Fences and walls in the front setback and street side setback shall not exceed three and one-half feet (3 ½') above grade. However, security fencing may be approved if there is a demonstrated need for security. The maximum height for this fencing shall be six feet (6') above grade. In this instance a combination wall/open fence enclosure shall be encouraged.
- Side and rear fences or walls shall not exceed a height of six feet (6').
- Pool Code: All fencing shall conform to the applicable City of Ontario pool code fencing requirements.

Wall and Fence Materials and Colors

All fences and walls within the private residential lots shall be designed and constructed as part of the overall architectural site design. All materials shall be durable and finished in textures and colors complementary to the overall architectural design.

- Permitted Wall Materials: Stone veneer, stucco (including stucco covered block), masonry, brick, slump block, block and wrought iron combination are acceptable.
- Conditionally Acceptable Wall and Fence Materials: Glass and/or heavy, break-resistant plastic are acceptable for use in fences and walls when necessary to preserve views while providing protection against winds, etc., if used in conjunction with the community solid theme wall.
- Prohibited Wall and Fence Materials: Barbed wire, wire, electrically charged fences, plain exposed precision block; plastic materials, corrugated metal, chain link and grape stake fencing are prohibited.
- Color and Special Wall and Fence Treatments: Walls may be left natural or covered with stucco, except plain precision block must be covered with stucco. Brick or slump block walls may be painted or covered with stucco, if desired. Stone surfaces shall remain natural or unpainted.
- Special Wall and Fence Regulations: A six foot (6') high minimum masonry wall shall be constructed on each property line prior to development of any commercial, industrial or business related use that adjoins any parcel specifically zoned for residential use or destined for open space or as a school site.

Special Wall and Fence Regulations

- A six foot (6') high masonry wall shall be constructed on each property line prior to development of any commercial/office related use that adjoins any parcel specifically zoned for residential use, or designed for open space or as a school site.
- All fences and walls connecting two (2) separate residential dwelling units shall be constructed of the same color and material and shall be compatible with the color and material of the architecture.
- Long walls should be broken up with landscaping, alignment offsets and material changes to relieve visual monotony. When possible, a three foot (3') minimum space should be left between paved areas and walls and fences to allow for vines and espaliers.
- All walls and/or fencing in commercial areas shall be planted with vines or screened by dense shrubbery.
- Brick walls or screening walls should have climbing plants or anti-graffiti elements such as anti-graffiti paint to prevent walls from being vandalized.
- If a wall is proposed along the east side of Carpenter Avenue where the homes are plotted to rear onto Carpenter Avenue, a 10-foot wide landscape buffer shall be incorporated along the street frontage. The 10-foot landscape buffer shall be measured from back of sidewalk (ROW) (13-foot parkway + 10 foot landscape buffer: Total 23-foot edge measured from curb face).

Typical residential streetscene

6.6.3 Local Streets/Residential Lot Frontage and Private Lot Landscaping

The local roads within The Avenue consist of private front or side yards of single family residences. Street trees and front and exterior side yards will be required to be installed by the residential enclave builder, however, the rear and interior side yards will be the responsibility of each individual homeowner.

Residential Lot Landscape Requirements

Each single-family dwelling/lot shall be provided with front yard landscaping and a permanent automatic irrigation in the front yard of each lot. At a minimum, a seeded turf lawn, appropriate shrubs and trees and an automatic irrigation system shall be provided. Furthermore, a variety of typical landscape designs shall be provided for use on each lot within the subdivision.

Multiple-family residential projects shall be provided with full landscape improvements throughout the development. At a minimum, a seeded turf lawn, appropriate shrubs and trees, and a permanent automatic irrigation system shall be provided.

Landscape and irrigation drawings of the entire project site must be submitted to the Building department in conjunction with construction plans. The plans shall be approved by the Planning Department and the Landscape Planning Division prior to the issuance of building permits.

Those portions of a property which are not used for drive entries, parking, or approved outdoor uses shall be fully landscaped; all unpaved areas shall be landscaped; and all future development phase areas shall be hydroseeded.

Per City of Ontario's landscape Development Standards, each residential lot shall receive minimum of one (1) - 24" box size street tree planted in the right-of-way. Corner lots shall receive two (2) -24" box size street trees also planted in the right-of-way. Street trees planted in the right-of-way shall be thirty feet (30') maximum on center. Tree varieties shall be chosen from The Avenue's Plant Palette contained herein. Trees should be clustered near property lines to maximize their buffering effect and streetscene impact. One (1) species of tree shall be selected and approved for each residential street to maximize visual neighborhood identity. Deciduous or flowering evergreen accent trees which contrast with the chosen street trees are encouraged at cul-de-sacs, knuckles and intersections to provide seasonal emphasis and interest.

Residential Front Yard Requirements

A maximum of twenty five percent (25%) of the front yard, excluding driveways and sidewalks may be seeded or sodded turf. A minimum of ten (10) 5 gallon shrubs, twenty (20) 1 gallon shrubs and an automatic irrigation system shall be installed by the builder/developer in the front yard of each residential lot. The turf, shrubs and irrigation shall be installed up to a property line from the curb face to the front of house and side yards. Side yard slopes over 3:1 surface gradient and three feet (3') in height should be planted with ground cover. Low slopes may be graded out to a less than 3:1 surface gradient and planted with turf.

A minimum of one (1) 24" box tree shall be planted in the front yard of each residential lot in addition to the required street tree. These trees may match the street trees planted in the right-of-way and be located in proximity to said street trees in order to create a more harmonious effect. The trees may also contrast with the street tree and form backdrop tree clusters. Overall, the front yard scheme shall create a streetscene appearance of tree clusters meandering through the project and across streets.

6.6.4 General Landscape Guidelines

Individual homeowners shall be responsible for the maintenance of public street landscape frontage or side of their property unless otherwise identified within their legal ownership documents. Private homeowners shall also be responsible for all maintenance within their private lot area as well as fences and wall faces on their internal boundaries. For public and common area landscape maintenance responsibility refer to Table 4, “Maintenance Responsibility Matrix”.

Outdoor Lighting

All street and commercial developments within The Avenue shall have uniform lighting standards with regard to style, materials and colors in order to ensure consistent design. Each residential development may develop its own lighting standards, provided that the selected lighting fixture style is used consistently throughout the project. Lighting fixtures shall be well integrated into the visual environment and the appropriate architectural theme. All lighting fixtures within The Avenue project area shall comply with the following regulations and provisions.

- All outdoor lighting, including spotlights, floodlights, electrical reflectors and other means of illumination for signs, structures, landscaping, parking, loading, unloading and similar areas shall be focused, directed and arranged to minimize glare and illumination of streets or adjoining property. Low intensity, energy conserving night lighting is preferred.
- Lights shall be unbreakable plastic, recessed or otherwise designed to reduce the problems associated with damage and replacement of fixtures. Fixtures shall be vandal proof.
- Neon and similar types of lighting are prohibited in all areas of The Avenue except in retail commercial developments.
- All exterior lighting designs should develop a sense of hierarchy by varying fixtures and illumination levels. Proper lighting helps to define the organization of streets and plazas; and also distinguishes vehicular and pedestrian circulation patterns. Community entry areas (both pedestrian and vehicular), public plazas, community facilities and highly used recreation areas shall be creatively lit to develop a sense of place and arrival.
- All exterior lighting designs shall address the issue of security. Parking lots, pedestrian walkways and building entrances shall be well lighted for security reasons.

- Street lighting should be metal halide to project true colors and clear visibility for safety and security reasons.
- All lighting is required to have anti-vandalism fixtures.
- Residential units will be required to have their addresses illuminated on their home as close to the front door as possible. In addition, an illuminated address on the garage door should be present if the garage door faces a private drive. Also, the address numbers should be painted on the curb with white reflective paint on a black background. Each homeowner will be responsible for the maintenance of these numbers.
- All exterior lights should be shielded where feasible and focused to minimize spill light into the night sky or adjacent properties.
- No freestanding lighting fixtures shall exceed twenty-five feet (25') in height.
- Service area lighting shall be contained within the service yard boundaries and enclosure walls.
- The lighting concept of the entry monumentation features is to illuminate the sign graphics and to gently wash the walls and pilasters with light. Trees and other landscape features should be illuminated by concealed uplight fixtures.
- All electrical meter pedestals and light switch/control equipment shall be located with minimum public visibility if possible or shall be screened with appropriate plant materials.
- The level of on-site lighting as well as lighting fixtures, shall comply with any and all applicable requirements and policies of the City of Ontario. Energy conservation, safety and security should be emphasized when designing any light system.
- All community landscape common areas, public facilities, commercial sites, streetscapes, parks, schools and other areas may, at the discretion of the project developer or builders, contain area, accent sports or other night lighting entities.

Irrigation

All landscaped areas shall be watered with a permanent underground irrigation system. Irrigation systems which adjoin a separate maintenance responsibility area shall be designed in a manner to ensure complete water coverage between the areas.

Proper consideration of irrigation system design and installation in the climate extremes of The Avenue area is critical to the success of the landscape investment. In particular, the combined summer elements of heat and wind must be carefully considered in proper irrigation design and equipment selection.

Overhead spray irrigation systems shall be designed with head to head 100 percent double coverage at a minimum. Native and drought tolerant shrub areas will use a combination of spray (temporary) and drip or bubbler irrigation to shrubs and trees. All trees shall have a bubbler or spray irrigation system separate from shrubs and groundcovers. In addition, all irrigation systems shall run by an automatic irrigation controller operated by a centralized computer system with manufacturer to be selected by the Parks and maintenance Department.

Irrigation backflow prevention devices and controllers shall be located with minimum public visibility or shall be screened with appropriate plant materials.

- Reclaimed Water: Irrigation systems designed for use with both domestic and reclaimed water are encouraged (Refer to the city's Ontario Ranch Recycled Water Master Plan for additional information). All irrigation systems shall be designed for the eventual use of reclaimed water and/or conversion when available per current applicable standards.

Water Conservation Measures

- Drip and/or bubbler irrigation will be used where appropriate.
- Use of moisture sensors and/or central control irrigation systems may be incorporated where appropriate and feasible.
- Irrigation systems will be designed per AB 325 guidelines and/or the City of Ontario's Water Conservation Ordinance.
- Irrigation systems and plans will be prepared per landscape maintenance district or the City of Ontario's Landscape Development Standards.

Farming next to Flood Control Channel

- Place plants in similar hydro zone groupings to maximize efficient water use. Do not mix drought tolerant or native plants with ornamental plants that have dissimilar water requirements

6.6.5 Plant Material Guidelines

The Avenue will have a vastly different appearance from initial planting to several years into development. The quality of that appearance will depend on many factors including the initial selection of the plant material palette, soil preparation and installation, irrigation management and care and maintenance. All of these issues have been addressed in the preparation of the planting design theme and plant palette selection. A brief discussion of the planting approach and key issues follows:

General Landscape Requirements

- All areas required to be landscaped shall be planted with turf, groundcover, shrub or tree materials selected from the plant palette contained in these guidelines or other drought-tolerant or regionally appropriate species subject to the approval of Landscape Planning Division.
- The owners of parcels which require landscape development shall consider any existing common landscape areas adjoining their property. Where feasible, landscape development shall reinforce or be compatible with such existing common area setting.

- Cut slopes equal to or greater than eight feet (8') in vertical height and fill slopes equal to or greater than five feet (5') in vertical height shall be planted with an erosion ground cover to protect the slope from erosion and instability. Slopes exceeding fifteen feet (15') in vertical height shall be planted with shrubs, spaced not more than seven feet (7') average on center or trees spaced not to exceed thirty feet (30') average on center or a combination of shrubs and trees at equivalent spacings, in addition to the groundcover. The plants selected and planting methods shall be suitable for the soil and climatic conditions.
- Reference should be made to the City of Ontario Landscape Development Standards for erosion control methods for slopes and other landscaped areas.
- Parkway Tree Planting: All street or parkway trees shall be planted so as to maintain adequate distance and shall maintain the following planting distances:
- Ten feet (10') from all water and sewer lines, fire hydrants, light standards and power poles.
- Five feet (5') from all flat hardscape (sidewalks, curbs, vaults, etc.) except as otherwise approved by the City.
- Twenty-five feet (25') from street intersection beginning of curb returns (BCR).

Climate Constraints

Plant material palettes for The Avenue contained herein are compatible with the climatic setting of the area. The utilization of some materials, depending upon their site location, exposure and relationship to other influential factors may not be appropriate.

Planting Time

Due to the climate extremes of the area, the installation of plant materials during the coldest winter months (December through March) and the hottest summer/fall months (July through September) can be difficult. Container plant materials not acclimated to the area can easily suffer from damage or sun/heat exposure resulting in partial or entire foliage loss even through such materials are perfectly suited to the temperature ranges once established. If planting must be done during these difficult periods, plant establishment may be difficult and require a prolonged period of time, as well as additional replacement plants.

Horticultural Soils Test Requirements

Soil characteristics within The Avenue project may be variable. The owners of parcels which require landscape development shall procure a horticultural soils report in order to determine proper planting and maintenance requirements for proposed plant materials. Such a soils test shall be performed by a qualified agricultural laboratory and shall include a soil fertility and agricultural suitability analysis with pre-planting and post-planting recommendations.

Topography

The Avenue lies across a flat plain. There may be extreme cold conditions occurring during winter months. This will be affected by the development patterns of the community and are difficult to predict. The plant palette proposed may, on occasion, suffer adverse affects in certain areas of the community. Adjustments may need to be made at that time and other drought-tolerant or regionally appropriate species may be substituted subject to the approval of Landscape Planning Division.

Drought Tolerance/Water Conserving Plant Material

Although a plant may be considered as drought tolerant or water conserving, that plant requires proper care, installation, watering and maintenance to maintain an optimum healthy condition.

- Degrees of Drought Tolerance/Water Conservation: There are degrees of drought tolerance with some plants able to withstand or go without water for a greater period of time than others. Water conserving plant material may not be drought tolerant but can thrive on low water amounts throughout the year once established.

Deer Grass

- Plant Installation Water Demand: Drought tolerant plants like other plants, require more watering during the initial installation period and for at least a three month maintenance period following to become established. Therefore, if drought tolerant plants are installed in the warmer months more supplemental water will be required until the plant is established.

- Deep Watering Practices: Drought tolerant plants like most plants need the proper deep watering practices to encourage deep root system development. Drought tolerant plants with a shallow root system resulting from frequent light applications of water will not be drought tolerant. Checking the depth of water penetration into the soil with a soil probe or spade and adjusting irrigation run times enhance plant vigor and prevents plant loss from drought stress over saturation.

Manzanita

- Warmer Months Water Application: Although a plant is labeled drought tolerant, that does not necessarily mean it can survive without summer water, the plant may have low water requirements. Depending upon the plant, drought tolerant plants will have a better appearance and health during the warmer months with infrequent deep watering. Do not water during the heat of the day and avoid overhead watering; prolonged leaf wetting can promote disease.

- Full Season Plant Water Requirements: After drought tolerant plants have grown a full season, the water application rate should be diminished and the drought tolerant plant allowed to survive on less water.

- Maintenance: Drought tolerant and California native plants still need regular maintenance such as pruning, fertilizing, deep watering and checking for pests and diseases.

Invasive Species

Non-native invasive plant species shall not be used in landscape plans. Controlled invasive non-native species shall include the following:

Non-native Acacia's (Acacia spp.)
Tree of Heaven (Ailanthus altissima)
Giant reed (Arundo donax)*
Hottentot-fig (Carpobrotus edulis)
Garland chyrsanthemum (Chrysanthemum coronarium)*
Pampas grass (Cortaderia atacamensis)*
French broom (Cytisus monspessulans)
Scotch broom (Cytisus scoparius)
Crystal ice plant (Mesembryanthemum crystallinum)
Small-flowered ice plant (Mesembryanthemum nodiflorum)
Bermuda buttercup (Oxalis pes-caprae)*
German ivy (Senecio mikanoides)
Pink periwinkle (Vinca major)
Tamarisk (Tamarix spp.)*
Gorse (Ulex europaeus)

Ailanthus altissima

** Indicates a species that may not be used in any plant palettes, regardless of location in the development, due to its ability to readily spread via airborne seeds, rather than vegetatively.*

Plant Pest and Disease Control

A consistent problem in ornamental and native planting schemes is the disease and pests which have affected trees and shrubs often in significant visual patterns through a community. Recent well documented problems include oleander scorch blight and several eucalyptus and olive problems, however, a series of other problems have occurred on an annual basis. There is no way to predict the occurrence of new pests or diseases, however, there are useful methods to limit the impact of outbreaks. These include the following:

- Maintain optimum plant health through soil preparation, water management and nutrient monitoring.
- Review community plant material on a regular basis to observe health problems due to disease or pest infestation and take appropriate action.
- Place plant material in appropriate planting areas and provide proper spacing consistent with the requirements of the plant species.
- Provide good cultural practices to maintain plant health and disease resistance with adequate mulch, sufficient air circulation and protection from mechanical injury from mowers and edgers.

The following Plant List is to provide design guidance and intent. While this list is not a comprehensive list of suitable plants for The Avenue, other drought-tolerant or regionally appropriate species, preferably from the low and moderate species of the WUCOLS (Water Use Classification of Landscape Species) classification system, may be substituted subject to the approval of Landscape Planning Division.

Table 5 - Plant List

Trees		Archibald Avenue	Hellman Avenue	Haven Avenue	SCE Corridor	Edison Avenue	Schaefer Avenue	Turner Avenue	The Avenue	Neighborhood Streets	Alleys	Residential Street Trees	Accent Trees	Primary Entries	Secondary Entries	Residential Entry	Typ. Neighb. Park 1 & 2	Sports Park	Retail/Commercial Area
Botanical Name	**Common Name**	Per Ontario Ranch Streetscape Plan																	
Acacia subporosa	Weeping Acacia																		x
Agonis flexuosa	Peppermint Tree									x									
Albizia julibrissin 'Rosa'	Silk Tree																		
Bauhinia variegata	Purple Orchid Tree												x				x		
Cassia leptophylla	Gold Medallion Tree																		x
Cedrus deodara	Deodar Cedar												x	x	x	x			
Chamaerops humilis	Mediterranean Fan Palm													x	x				
Chionanthus retusus	Chinese Fringe Tree							x											
Cinnamonum camphora	Camphor Tree													x	x				
Citrus spp.	Citrus												x				x	x	
Cupaneopsis anacardioides	Cottonwood									x		x					x	x	x
Eucalyptus spp.	Eucalyptus									x									
Fraxinus spp.	Ash													x	x		x	x	
Geijera parviflora	Austraillian Willow											x					x		x
Gleditsia triacanthos	Honey Locust									x							x	x	x

Trees		Archibald Avenue	Hellman Avenue	Haven Avenue	SCE Corridor	Edison Avenue	Schaefer Avenue	Turner Avenue	The Avenue	Neighborhood Streets	Alleys	Residential Street Trees	Accent Trees	Primary Entries	Secondary Entries	Residential Entry	Typ. Neighb. Park 1 & 2	Sports Park	Retail/Commercial Area
Botanical Name	**Common Name**																		
Jacaranda mimosifolia	Jacaranda								x					x	x				
Koelreuteria bipinnita	Chinese Flame Tree									x			x			x		x	x
Lagerstroemia indica	Crape Myrtle								x		x		x	x			x	x	x
Liriodendron tulipifera	Tulip Tree							x					x	x	x	x	x	x	x
Melaleuca linariifolia	Flaxleaf Paperbark																	x	x
Melaleuca nesophila	Pink Melaleuca													x	x				
Melaleuca quinquenervia	Cajuput Tree								x										
Michelia champaca	Michelia																		
Olea europea	Olive													x	x		x	x	
Phoenix dactylifera	Date Palm													x	x		x	x	x
Pinus spp.	Pine												x	x	x	x	x	x	x
Pistacia chinensis	Chinese Pistache								x			x				x	x	x	x
Plantanus acerifolia	London Plane Tree									x		x					x		
Plantanus racemosa	California Sycamore								x								x	x	
Quercus agifolia	Coast Live Oak													x	x	x	x	x	
Quercus ilex	Cork Oak													x	x	x	x	x	
Podocarpus gracilior	Fern Pine											x				x	x		x
Rhaphiolepis 'Magestic Beauty'	N.C.N.										x						x		x
Rhus lancea	African Sumac																x	x	x
Robinia Pseudoacacia	Locust																		x
Schinus molle	California Pepper							x						x	x	x	x	x	
Sequoia sempervirens	Aptos Blue Redwood													x	x				
Sophora japonica	Japanese Pagoda							x											
Trachycarpus fortunei	Windmill Palm																x	x	
Tristania conferta	Brisbane Box							x		x		x							x
Tristania laurina	N.C.N.									x	x								x
Ulmus parvifolia	Evergreen Elm											x					x	x	x

Per Ontario Ranch Streetscape Plan

Shrubs		Archibald Avenue	Hellman Avenue	Haven Avenue	SCE Corridor	Edison Avenue	Schaefer Avenue	Turner Avenue	The Avenue	Neighborhood Streets	Alleys	Primary Entries	Secondary Entries	Residential Entry	Typ. Neighb. Park 1 & 2	Sports Park	Retail/Commercial Area
Botanical Name	**Common Name**	Per Ontario Ranch Streetscape Plan															
Acacia 'Desert Carpet'	Acacia							x				x	x	x	x	x	x
Agave attenuata	Foxtail Agave								x			x	x	x	x	x	
Aloe species	Aloe								x			x	x	x	x	x	x
Alyogene huegelii	Blue Hibiscus											x	x	x	x	x	x
Arctostaphyllos 'Howard McMinn'	Sur Manzanita																
Baccharis 'spp	Coyote Bush														x	x	
Buxus m. japonica	Japanese Boxwood									x	x	x	x	x	x	x	x
Cistus spp.	Rock Rose							x				x	x	x	x		
Coprosma kirkii	Cooprosma													x	x	x	x
Cotoneaster spp.	Cotoneaster							x				x	x		x	x	
Dietes Bicolor	African Iris									x	x	x	x	x	x	x	x
Echium fastuosum	Pride of Madiera											x	x	x	x	x	
Eleagnus pungens	Silberberry							x								x	x
Encelia farinosa	Encelia																
Festuca californica	California Fescue																
Grewia caffra	Lavender Star Flower											x	x				x
Hemerocallis species	Day Lily							x	x			x	x	x	x		x
Hesperaloe spp.	Hesperaloe							x	x	x	x	x	x	x	x	x	x
Heteromeles arbutifolia	Toyon														x		x
Ilex vomitoria 'Nana'	Holly																x
Lantana montevidensis	Lantana								x			x	x	x	x	x	x
Lavandula species	Lavender								x			x	x	x	x		
Lavatera bicolor	N.C.N.																
Leptospermum scoparium	New Zealand Tea Tree																

Shrubs		Archibald Avenue	Hellman Avenue	Haven Avenue	SCE Corridor	Edison Avenue	Schaefer Avenue	Turner Avenue	The Avenue	Neighborhood Streets	Alleys	Primary Entries	Secondary Entries	Residential Entry	Typ. Neighb. Park 1 & 2	Sports Park	Retail/Commercial Area
Botanical Name	**Common Name**	Per Ontario Ranch Streetscape Plan															
Ligustrum japonicum 'Texanum'	Glossy Privet									x		x	x	x	x	x	x
Muhlenbergia 'Regal Mist'	Deer Grass											x	x	x	x	x	x
Myoporum parvifolium	N.C.N.									x						x	x
Phlomis fruticosa	Jerusalem Sage																
Pittosporum spp.	Mock Orange									x	x	x	x	x	x	x	x
Plumbago auriculata	Cape Plumbago							x			x				x	x	x
Rhamnus spp.	Coffee													x	x		x
Rhaphiolepis indica	India Hawthorne							x	x		x	x	x	x	x	x	x
Rhus integrifolia	Lemonade Berry																
Rosa species	Rose							x				x	x	x		x	x
Rosemarinus spp.	Rosemary							x	x			x	x	x	x		
Salvia spp.	Sage								x			x	x	x	x	x	x
Salvia spathacea	Hummingbird Sage								x			x			x	x	x
Tagetes lemmonii	Bush Marigold											x	x				
Trachelospermum spp.	Star Jasmine											x	x	x	x		x
Xylosma congestum	Shing Xylosma							x					x	x	x	x	x

Ceanothus

Bougainvillea

Vines		Archibald Avenue	Hellman Avenue	Haven Avenue	SCE Corridor	Edison Avenue	Schaefer Avenue	Turner Avenue	The Avenue	Neighborhood Streets	Alleys	Primary Entries	Secondary Entries	Residential Entry	Typ. Neighb. Park 1 & 2	Sports Park	Retail/Commercial Area
Botanical Name	**Common Name**	Per Ontario Ranch Streetscape Plan															
Bougainvillea species	Bougainvillea							x	x			x	x	x	x	x	x
Distictus buccinatoria	Blood Red Trumpet Vine											x	x	x	x	x	x
Gelsemium sempervirens	Carolina Jessamine											x	x	x			x
Grewia caffra	Lavender Star Flower								x			x	x				
Macfadyana unguis-cati	Cat's Claw											x	x		x	x	x
Pandorea jasminoides	Bower Vine											x	x	x	x	x	x
Parthenocissus tricuspidata	Boston Ivy								x			x	x	x	x	x	x
Rosa banksiae	Lady Bank's Rose																
Wisteria sinensis	Chinese Wisteria								x						x	x	x

Groundcovers		Archibald Avenue	Hellman Avenue	Haven Avenue	SCE Corridor	Edison Avenue	Schaefer Avenue	Turner Avenue	The Avenue	Neighborhood Streets	Alleys	Primary Entries	Secondary Entries	Residential Entry	Typ. Neighb. Park 1 & 2	Sports Park	Retail/Commercial Area
Botanical Name	**Common Name**	Per Ontario Ranch Streetscape Plan															
Acacia 'Desert Carpet'	Dwarf Trailing Acacia														x	x	x
Arctostaphylos 'John Dourley'	Manzanita							x	x			x	x	x			x
Carex spp.	Carex							x	x	x	x	x	x	x	x	x	x
Ceanothus griseus Hor. 'Yankee Point'	California Lilac							x	x								
Coprosma kirkii	Coprosma							x	x			x	x	x	x	x	x
Cotneaster spp.	Cotoneaster							x	x	x	x	x	x	x	x	x	x
Festuca spp.	Fescue							x	x	x	x	x	x	x	x	x	x
Juncus spp.	Rushes							x	x	x	x	x	x	x	x	x	x
Lonicera japonica	Japanese Honeysuckle							x	x	x	x	x	x	x	x	x	x
Myoporum parvifolium	Myoporum																
Myoporum pacificum	Pacific Myoporum								x		x				x	x	x
Rosmarinus prostratus	Prostratus Rosemary								x		x	x	x	x	x	x	x
Trachelospermum asiaticum	Asiatic Jasmine								x		x	x	x	x	x	x	x

Turfgrass and Seed:

Year round turf grass mixes as follows:

General turf areas:

100% Dwarf tall fescue blend - 10 lbs. per 1,000 s.f.

Park Site and Athletic areas:

Hybrid bermuda (seeded or stolonized)

Bermuda grass must be planted and mature prior to the dormant season.

General Plan Consistency

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65450-65457) permits the adoption and administration of specific plans as an implementation tool for elements contained in the local general plan. Policy plans must demonstrate consistency in regulations, guidelines, and programs with the goals and policies set forth in the general plan. The Avenue Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario Policy Plan. The policy analysis in Table 7-1, "Policy Plan Consistency," describes the manner in which the Avenue Specific Plan complies with The Ontario Plan (TOP) policies applicable to the project.

Plan Policy	Specific Plan Consistency
Land Use Element	
GOAL LU-1: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.	
LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.	The Specific Plan outlines pedestrian sidewalk and multi-use trail network connecting neighborhoods to open space, schools and future commercial land use.
LU-1.2 Sustainable Community Strategy. We integrate state, regional, and local Sustainable Community/Smart Growth principles into the development and entitlement process.	Sustainable Community/Smart Growth principles are incorporated into the Avenue Land Use Plan. Pedestrian sidewalks and bicycle paths to be constructed as part of the project throughout the community provide connectivity among residential planning areas and schools to help reduce vehicle trips and miles traveled. The design of residential areas incorporates tree-lined parkways providing shade for pedestrians and parked cars. Safe and efficient pedestrian and bicycle connectivity is provided throughout the project. The Avenue architectural design guidelines allow for a variety of architectural styles that respond to local climate conditions. Some styles allow the incorporation of flat roofs that facilitate the use of solar collectors. All new construction will utilize design features, fixtures, appliances, and heating and cooling controls to conserve energy and water. The landscape concept for The Avenue incorporates a plant palette of drought tolerant materials and requirements that the development implement planting and irrigation systems designed to conserve water. Park and recreation areas will include shaded areas, bicycle racks, and other amenity features to encourage pedestrian and other non-vehicular activities.

Plan Policy	Specific Plan Consistency
LU-1.3 Adequate Capacity. We require adequate infrastructure and services for all development.	The Avenue Specific Plan establishes an infrastructure and public facilities plan to ensure that adequate roadways and public utilities including sewer, water, and drainage facilities along with schools, parks, and other public facilities are provided to serve the project.
LU-1.4 Multimodal Mobility. We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on active transportation, transit, electric vehicles, and multimodal transportation opportunities	The Avenue Specific Plan requires the construction of Class 1 Bike Paths, which are an integral element to creating accessibility and mobility and Class II on-street striped bike lanes shall be provided on roadways within The Avenue Specific Plan area as determined by the City Engineer. Bus turnouts will be provided on Ontario Ranch Road, Schaefer Avenue, Haven Avenue, and Archibald Avenue to the satisfaction of the City Engineer and Omnitrans.
LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.	The Avenue provides for development of up to 3,753 residential dwelling units in a variety of residential single-family detached and multi-family attached housing types oriented toward open space amenities.
GOAL LU-2: Compatibility between a wide range of uses and resultant urban patterns and forms.	
LU-2.6 Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character.	Arterial streets within Avenue will be uniformly landscaped in an aesthetically pleasing manner with 8-10-foot wide landscaped parkways on each side of the street and 16-26 foot wide landscaped medians in each street. A planting buffer area varying in width from 40-50 feet in width will be provided adjacent to sidewalks within the project adjacent to all arterial roadways. Decorative project monuments will be constructed at key project entries providing community identification and establishing a sense of arrival and a welcoming feeling for the community.
LU-2.9 Methane Gas Sites. We require sensitive land uses and new uses on former dairy farms or other methane-producing sites be designed to minimize health risks.	The project will comply with appropriate mitigation measures identified in the project EIR for soil remediation and proper venting to address the potential existence of methane gases within the project.

Plan Policy	Specific Plan Consistency
GOAL LU-4: Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.	
LU-4.3 Infrastructure Timing. We require that the necessary infrastructure and services be in place prior to or concurrently with development.	Approval of the Avenue Specific Plan is accompanied by an application for approval of a development agreement. The development agreement shall include, but not be limited to, methods for financing, acquisition, and construction of infrastructure, acquisition, and development of adequate levels of parkland and schools, as well as the provision of adequate housing opportunities for various segments of the community consistent with the City's regional housing needs assessment. The Avenue development agreement shall be fully approved before the issuance of the first building permits for the project.
GOAL LU-5: Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.	
LU-5.2 Airport Planning Consistency. We coordinate with airport authorities to ensure The Ontario Plan is consistent with state law, federal regulations, and/or adopted master plans, and airport land use compatibility plans for ONT and Chino Airport.	The Specific Plan will comply with the ALUCP requirements for Ontario Airport (ONT) and Chino Airport as outlined in The Avenue Specific Plan Section 2-6.
LU-5.7 ALUCP Consistency with Land Use Regulations. We comply with state law that requires general plans, specific plans, and all new development to be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public-use airport.	The Specific Plan will comply with the ALUCP requirements for Ontario Airport (ONT) and Chino Airport as outlined in The Avenue Specific Plan Section 2-6.
Housing Element	
GOAL H-2 Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.	

Plan Policy	Specific Plan Consistency
H-2.4 Ontario Ranch. We support a premier lifestyle community in the Ontario Ranch, distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.	The Avenue Specific Plan allows for the development of up to 3,753 residential dwelling units comprised of a variety of single-family detached and multi-family attached homes. Residential land use areas are linked by a network of street- separated sidewalks and bicycle trails connecting all neighborhoods to parks and schools. Residential development is designed to address a variety of lifestyles and economic segments of the marketplace, such as singles, families, executives and "empty nesters."
H-2.5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.	The Specific Plan includes architectural design guidelines to encourage development of diverse neighborhoods with the use of varied architectural styles articulated with elements true to the architectural characteristics of each style.
GOAL H-5 A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age, or other status.	
H-5.2 Family Housing. We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation, and other amenities.	The Specific Plan allows for the development of condominium and multi-family home types designed to accommodate families with children. The Specific Plan requires that all condominium and multi-family developments within the project provide private recreational areas and/or pocket parks for residents of the development.
Parks & Recreation Element	
GOAL PR-1: A system of safe and accessible parks that meets the needs of the community.	
PR-1.5 Acreage Standard. We strive to provide 5 acres of parkland (public and private) per 1,000 residents.	The project will comply with the City requirement for the payment of an in-lieu fee in amount equivalent to three acres of parkland per 1,000 residents to fund the development of public parks and the requirement that each new development provide park acreage on-site equivalent to 2 acres per 1,000 residents. The Specific Plan includes the provision of private pocket parks in each Planning Area.

Plan Policy	Specific Plan Consistency
PR-1.6 Private Parks. We expect development to provide a minimum of 2 acres of developed private park space per 1,000 residents.	The Specific Plan includes the provision of private pocket parks in each Planning Area with a total acreage provided equivalent to 2 acres of developed private park per 1,000 residents.
PR-1.9 Phased Development. We require parks be built in new communities before a significant proportion of residents move in.	Development within the Specific Plan is required to be reviewed and approved pursuant to the City's Subdivision Ordinance, which requires the approval of tentative and final subdivision maps for the project. Conditions of approval associated with the City's approval of tentative subdivision maps will provide for the timing of construction of parks as part of the development.
PR-1.11 Environmental Function of Parks. We require new parks to meet environmental management objectives.	The Specific Plan requires all new development to be reviewed and approved pursuant to the provisions of the City's Subdivision Ordinance and Development Plan Review process, which provides for review by the City's Planning Department which may require the development to incorporate environmental management objectives into the design of parks.
PR-1.12 Trails. We promote connections between parks and local trails including those managed by other public agencies.	The Specific Plan is designed for bicycle and pedestrian accessibility provided throughout the community through a network of off-street bike and pedestrian trails within the plan area along Archibald, Haven, Ontario Ranch Road and Schaefer Avenues. Connectivity to this network of off-street trails from all residential Planning Areas is provided through the local street system.
PR-1.14 Multi-family Residential Developments. We require that new multi-family residential developments of five or more units provide recreational facilities or open space, in addition to paying adopted impact fees.	The Specific Plan requires that all condominium and multi-family developments within the project provide private recreational areas and/or pocket parks for residents of the development in addition to the payment by the developer of adopted impact fees.
Environmental Resources Element	
GOAL ER-1: A reliable and cost-effective system that permits the City to manage its diverse water resources and needs.	

Plan Policy	Specific Plan Consistency
ER-1.3 Conservation and Sustainable Water Supply. We work with regional water providers and users to conserve water and ensure sustainable local water supplies as more frequent droughts reduce long term local and regional water availability.	The Specific Plan requires all public and common area landscaping within the project to utilize plant materials listed on the approved Specific Plan Landscape Plant Matrix, which is comprised of drought tolerant and California Friendly plant materials. The Specific Plan requires that irrigation systems for both public and private landscaped areas be designed to be as water-efficient as possible and includes the following minimum requirements. • Use of moisture sensors and/or central control irrigation systems may be incorporated where appropriate and feasible. • Drip and/or bubbler irrigation will be used where appropriate. • Irrigation systems will be designed per AB325 guidelines and/or the City of Ontario's Water Conservation Ordinance. • Irrigation systems and plans will be prepared per landscape maintenance district or the City of Ontario's Landscape Development Standards. • Place plants in similar hydro zone groupings to maximize efficient water use. Do not mix drought tolerant or native plants with ornamental plants that have dissimilar water requirements.
ER-1.5 Water Resource Management. Environmental justice areas are prioritized as we coordinate with local agencies to protect water quality, prevent pollution, address existing contamination, and remediate contaminated surface water and groundwater.	The Avenue Specific Plan requires that the developer obtain approval of a Strom Water Pollution Prevention Plan (SWPPP) prior to issuance of grading or construction permits. All projects greater than 1 acre in size shall apply for coverage under the California General Permit To Discharge Storm Water Associated with construction activity, obtain a WDID# from the State Water Resources Control Board and prepare a Stormwater Pollution Prevention Plan (SWPPP) on the CASQA 2009 Template form and upload it to the State's SMART database system.

Plan Policy	Specific Plan Consistency
	In addition to the preparation of a SWPPP for construction-related activities, and as part of the approval of any grading plans for the project, the developer is required to submit a Water Quality Management Plan (WQMP) on the regional model form provided by the City. The WQMP shall identify and detail all Site Design BMP's, Source Control BMP's and Treatment Control BMP's to be implemented or installed as part of the project in order to reduce storm water pollutants and site runoff.
ER-1.6 Urban Run-off Quantity. We encourage the use of low impact development strategies, including green infrastructure, to intercept run-off, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.	The Specific Plan requires that grading and drainage for the project be designed to retain, filter, and/or treat surface runoff to the maximum extent practicable, to comply with the requirements of the current San Bernardino County NPDES Stormwater Program's MS4 Permit and Water Quality Management Plan (WQMP) for significant new development projects. These effects may be minimized through the implementation of site designs that reduce runoff and pollutant transport by minimizing impervious surfaces and maximizing on-site infiltration, Source Control Best Management Practices (BMP's) and/or either on-site structural Treatment Control BMP's, or participation in regional or watershed-based Treatment Control BMP's. An alternative to the implementation of on-site Low Impact Development (LID) BMPs to retain/infilter and treat stormwater runoff is the utilization of the off-site, regional Mill Creek Wetland facility for accomplishing water quality improvements in residential project runoff from this master planned community. All non-residential planning area projects within The Avenue will incorporate all required on-site LID BMPs, pursuant to the requirements of the current San Bernardino County Water Quality Management Plan.

Plan Policy	Specific Plan Consistency
ER-1.7 Urban Run-off Quality. We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.	The Specific Plan requires that the project comply with the most recent requirements of the San Bernardino County NPDES Storm Water Program's Quality Management (WQMP) for significant new development projects. A final WQMP is required to be submitted by the developer for approval by the City prior to the issuance of any grading and construction permits for the project.
ER-1.8 Wastewater Management. We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.	The Specific Plan requires the construction of a wastewater system consistent with City requirements and also requires that the project obtain approval of a WQMP for the project prior to the issuance of any grading or construction permit.
Community Economics Element	
GOAL ER-3: Cost-effective and reliable energy system sustained through a combination of low impact buildings, site and neighborhood energy conservation, and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.	
ER-3.1 Conservation Strategy. We require conservation as the first strategy to be employed to meet applicable energy-saving standards.	The Specific Plan requires all public and common area landscaping within the project to utilize plant materials listed on the approved Specific Plan Landscape Plant Matrix, which is comprised of drought tolerant and California Friendly plant materials. The Specific Plan requires that irrigation systems for both public and private landscaped areas be designed to be as water-efficient as possible. The Specific Plan requires the construction of separate water mains for the use of recycled water in public and common areas of the project. The Specific Plan includes architectural styles that respond to local climate conditions and allow for the incorporation of flat roofs that facilitate the use of solar collectors. All new construction will utilize fixtures, appliances, and heating and cooling controls to conserve water and energy.

Plan Policy	Specific Plan Consistency
ER-3.2 Green Development– Communities. We encourage the use of the LEED Neighborhood Development rating system, or similar mechanism, to guide the planning and development of all new communities.	The Specific Plan includes architectural guidelines, which allow for a variety of styles that respond to local climate conditions. Some styles allow the incorporation of flat roofs that facilitate the use of solar collectors. All new construction will utilize design features, fixtures, appliances, and heating and cooling controls to conserve energy and water. The landscape concept for The Avenue incorporates a plant palette and a planting and irrigation system designed to conserve water. Park and recreation areas will include shaded areas, bicycle racks, and other amenity features to encourage pedestrian and other non-vehicular activities.
ER-3.3 Building and Site Design. We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.	The Specific Plan includes architectural design guidelines, which allow for styles that respond to local climate conditions. Some styles allow for flat roofs that facilitate the use of solar collectors.
GOAL ER-4: Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.	
ER-4.4 Indoor Air Quality. We will comply with State Green Building Codes relative to indoor air quality. We seek funding to improve indoor air quality for households with poor indoor air quality, with priority for lower income households in environmental justice areas.	All development within the Specific Plan will be required to comply with the State Green Building Code as implemented by the City.
GOAL ER-5 Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.	
ER-5.2 Entitlement and Permitting Process. We comply with state and federal regulations regarding protected species.	The project will comply with all mitigation measures identified in the project EIR with regard to biological resources.
ER-5.3 Right to Farm. We support the right of existing farms to continue their operations within the Ontario Ranch.	The Specific Plan requires a minimum 100-foot wide agricultural buffer be provided by the development between any new residential structure and any existing animal feed trough, corral/pen or an existing dairy/feed lot.

Plan Policy	Specific Plan Consistency
ER-5.4 Transition of Farms. We protect both existing farms and sensitive uses around them as agricultural areas transition to urban uses.	The Specific Plan requires a minimum 100-foot wide agricultural buffer be provided by the development between any new residential structure and any existing animal feed trough, corral/pen or an existing dairy/feed lot.
Community Economics Element	
GOAL CE-1: A complete community that provides for all incomes and stages of life.	
CE-1.6 Diversity of Housing. We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.	The Specific Plan allows for the development of 3,753 residential dwelling units comprised of single-family detached and multi-family attached homes. A network of street-separated sidewalks and Multipurpose Trails connecting all neighborhoods to parks and schools links residential land use areas. Residential development is designed to address a variety of lifestyles and economic segments of the marketplace, such as singles, families, executives and "empty nesters."
GOAL CE-2: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.	
CE-2.1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.	The Specific Plan includes architectural and landscape design guidelines.
CE-2.2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.	The Specific Plan requires all new development to be reviewed and approved pursuant to the provisions of the City's Subdivision Ordinance and Development Plan Review process which provides for review by the City's Planning Department which may require the development to demonstrate how the project will create appropriately unique, functional and sustainable places.
CE-2.5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.	The Specific Plan includes a Maintenance Responsibility Matrix defining the private responsibilities for maintenance of private roadways, parkways, trails, common areas, parks, yards, walls, and monuments within the project.

Plan Policy	Specific Plan Consistency
CE-2.6 Public Maintenance. We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm whether on private land, in rights-of-way, or on publicly-owned property.	The Specific Plan includes a Maintenance Responsibility Matrix defining the responsible public entities, including special districts, for maintenance of roadways, sidewalks, traffic signals, off site and on site public water, sewer, and storm drain infrastructure facilities.
Safety Element	
GOAL S-1: Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by earthquake-induced and other geologic hazards.	
S-1.1 Implementation of Regulations and Standards. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.	All development within the Specific Plan will be required to comply with the State of California Building Code as adopted and implemented by the City.
GOAL S-3: Reduced risk of death, injury, property damage and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.	
S-3.8 Fire Prevention through Environmental Design. We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open spaces, and buildings.	The Specific Plan requires new development to be reviewed and approved pursuant to the City's Subdivision Ordinance and Development Plan Review process, allowing for the Fire Department review, and requiring the incorporation of any required fire prevention design elements in streetscapes, open spaces and buildings.
GOAL S-4: An environment where noise does not adversely affect the public's health, safety, and welfare.	
S-4.1 Noise Mitigation. We utilize the City's Noise Ordinance, building codes, and subdivision and development codes to mitigate noise impacts.	All development within the Specific Plan will be required to comply with City's Noise Ordinance, building codes, and subdivision and development codes to mitigate noise impacts.
GOAL S-5: Minimize the risk of injury, property damage, and economic loss resulting from windstorms and wind-related hazards.	
S-5.1 Dust Control Measures. We require the implementation of Best Management Practices for dust control at all excavation and grading projects.	Construction within the Specific Plan will comply with a City approved construction management plan and all mitigation measures identified in the project EIR with regard to dust control.

Plan Policy	Specific Plan Consistency
GOAL S-6: Reduced potential for hazardous materials exposure and contamination.	
S-6.9 Remediation of Methane. We require development to assess and mitigate the presence of methane, per regulatory standards and guidelines.	The project will comply with all mitigation measures identified as part of the project EIR for soil remediation and proper venting to address the potential existence of methane gases within the project.
GOAL S-7: Residential neighborhoods, commercial areas, and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, and community involvement in public safety.	
S-7.4 Crime Prevention through Environmental Design (CPTED). We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces, and buildings.	The Specific Plan requires all new development to be reviewed and approved pursuant to the provisions of the City's Subdivision Ordinance and Development Plan Review process which provides for review by the City's Police Department, which may require the development to incorporate CPTED in the design of streetscapes, sites, open spaces and buildings.
Mobility Element	
GOAL M-1: A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.	
M-1.1 Roadway Design and Maintenance. We require our roadways to: • Comply with federal, state, and local design and safety standards; • Meet the needs of multiple transportation modes and users; • Handle the capacity envisioned in the City of Ontario Master Plan of Streets and Highways; • Be maintained in accordance with best practices; • Be compatible with the streetscape and surrounding land uses; and • Promote the efficient flow of all modes of traffic through the implementation of intelligent transportation systems and travel demand management strategies	The Specific Plan requires the construction of a network of Master Plan Roadways designed consistent with the requirements of the City's Functional Roadway Classification Plan and the New Model Colony Streetscape Master Plan. The roadway system is designed to maintain a peak hour Level of Service (LOS) E or better at all intersections as discussed in the project EIR. Site design, source control, and treatment BMP's for the project are required to be submitted by the developer for approval by the City prior to issuance of permits for the project.

Plan Policy	Specific Plan Consistency
GOAL M-2: A system of trails and corridors that facilitate and encourage active modes of transportation.	
M-2.3 Pedestrian Walkways. We require streets to include sidewalks and visible crosswalks at major intersections where necessary to promote safe and comfortable mobility between residential areas, businesses, schools, parks, recreation areas, and other key destination points.	The Specific Plan requires the developer of the project to coordinate with the local mass transit provider, Omnitrans, to accommodate adequate area for any bus turnouts within the Master Plan Roadways as required by Omnitrans.
Community Design Element	
GOAL CD-1: A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.	
CD-1.2 Place Types. We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.	The Specific Plan includes design guidelines to guide the physical character of all future residential development and all community and neighborhood features, including the overall landscape treatment within the project. The proposed community character establishes a unified aesthetic treatment and design theme. The community vision for The Avenue is based upon the architectural and landscape influences found in Ontario and throughout Southern California. The architectural styles and landscape concept chosen for the community have been selected in order to be reflective of older neighborhoods of historic Ontario as well as to accommodate innovative transitional influences. Together, the architectural styles and landscape concept are designed to create a neighborhood character for The Avenue that will be sustainable over time.
CD-1.5 View Corridors. We require all major north-south streets be designed and redeveloped to feature views of the San Gabriel Mountains, which are part of the City's visual identity and a key to geographic orientation. Such views should be free of visual clutter, including billboards and may be enhanced by framing with trees.	The major north south streets in The Avenue are designed to frame the views of the San Gabriel Mountains. The Specific Plan requires the construction of extensive landscaping on both sides of each street and in the median of each street. All new utility lines will be placed underground.

Plan Policy	Specific Plan Consistency
GOAL CD-2: A high level of design quality resulting in neighborhoods, commercial areas, public spaces, parks, and streetscapes that are attractive, safe, functional, human- scale, and distinct	
CD-2.1 Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through: • Building volume, massing, and height to provide context-appropriate scale and proportion; • A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and • Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.	The Specific Plan includes design guidelines to guide the construction of the project by requiring building massing to address the street and the pedestrian experience, the use of selected architectural styles to be implemented in a comprehensive manner throughout each neighborhood around all building elevations, and the use of building materials and architectural features and elements which are true to each selected style.
CD-2.2 Neighborhood Design. We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as: • A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services; • Varied parcel sizes and lot configurations to accommodate a diversity of housing types; • Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access; • Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and • Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.	The Avenue is designed as a walkable community of traditional residential neighborhoods organized around a simple grid street system offering a variety of home types within an open space setting. Residents can walk or bike to parks and schools via an interconnected network of sidewalks and trails throughout the community. Traditional site planning elements, varied residential product design and architecture, well-landscaped streets and enhanced entries combine to create welcoming neighborhoods within the community with aesthetic and functional harmony. Streets are linked together in a grid pattern with sidewalks separated from the street by landscaped parkways providing a simple and understandable system for pedestrian and vehicular travel connecting neighborhoods, open space amenities, public facilities, and recreational areas. A variety of housing types, including detached single-family homes, attached single-family homes, and multifamily homes are planned for Avenue, all of which are located close to schools, parks, and open space amenities.

Plan Policy	Specific Plan Consistency
	Residential development standards and design guidelines contained in the Specific Plan ensure that homes are designed at a human scale emphasizing architecture fronting the street. Residential development standards are designed to minimize views of garage doors through use of alternating garage configurations. Traffic calming features incorporated into neighborhood streets include a traditional grid pattern with sidewalks separated by landscaping on either side of the street, and the use of intersection chokers and roundabouts where appropriate.
CD-2.5 Streetscapes. We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right-of-way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.	The Specific Plan is designed with a comprehensive street system to accommodate the safe and efficient movement of automobiles as well as bike trails and a multi-purpose trail to accommodate bicycle and pedestrian mobility and connectivity throughout the community. Streets are designed as a grid system of short blocks allowing for various access points and travel routes. Streets are designed with sidewalks separated from the street to create an inviting environment for walking. Streets connect neighborhoods, parks and schools through a variety of travel paths. There will be several points in the trail system linking to secondary paths that will lead to The Avenue's retail/commercial areas, as well as to the neighborhoods. Multi-use paths are provided within the plan area along Archibald, Haven, Ontario Ranch Road and Schaefer Avenues. These paths are provided adjacent to the major drainage easement, along Hellman Avenue, and along the spine road which traverses the center of the plan area in an east-west direction. Connectivity to this network of off street bike trails from all residential Planning Areas is provided through the local street system.

Plan Policy	Specific Plan Consistency
CD-2.6 Connectivity. We promote development of local street patterns, multimodal networks, and connected public spaces that create and unify neighborhoods, rather than divide them, and create cohesive and continuous corridors, rather than independent "islands" through the following means: • Local street networks that provide access both between subdivisions and within neighborhoods and discourage through traffic; • A local street system that is logical and understandable for the user. A grid system is preferred to avoid circuitous and confusing travel paths between internal neighborhood areas and adjacent arterials and to provide adequate emergency and evacuation access; and • Pedestrian and bicycle networks that provide convenient access to neighborhoods and nearby destinations, such as schools, parks, other public spaces, commercial areas, and transit stops.	Off-street pedestrian circulation is available throughout The Avenue by means of the interconnected, paved sidewalk system within the roadway right-of-way, separated from travel lanes by a landscaped parkway and within off-street Multipurpose Trails. The Project pedestrian system provides connectivity among residential neighborhoods to pocket parks and the schools within The Avenue. Streets are designed in a simple grid system with short blocks promoting a sense of small neighborhoods.
CD-2.8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.	Residential development standards and design guidelines contained within the Specific Plan require home designs with fronts of homes, not garages, oriented toward the street to ensure that "eyes are on the street" in each neighborhood. Residences are oriented around open space, parks, and trails. Parking areas and garages are located to the rear of residences to avoid dominance of the streetscape by automobiles and to enhance a pedestrian environment on all streets.
CD-2.9 Landscape Design. We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.	The landscape concept for The Avenue incorporates the use of durable landscaping materials, a drought tolerant plant palette, and a planting and irrigation system designed to conserve water. Park and recreation areas will include shaded areas, bicycle racks, and other amenity features to encourage pedestrian and other non-vehicular activities. All materials utilized in private and public common areas will be durable landscaping materials.

Plan Policy	Specific Plan Consistency
CD-2.11 Entry Statements. We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.	Signage and landscaping will be provided at neighborhood entries within The Avenue. Community and neighborhood entry monumentation is required by the Specific Plan and is designed to establish a hierarchy for each Planning Area of the community. At key entries a monumentation program will be utilized to help identify the community as well as convey a sense of arrival and a welcoming feel for both vehicular and pedestrian traffic. These monuments and "gateways" are to be designed with durable, lasting materials approved by the City of Ontario.
CD-2.12 Site and Building Signage. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.	The Avenue Specific Plan requires identification signage and individualized landscape theming. Signage may be permanent or temporary and will be subject to review and approval by the master community developer. The signage and landscape materials must be compatible and complementary to The Avenue's landscape design theme.
GOAL CD-3: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.	
CD-3.1 Unique Identity. We promote development that heightens the unique character and identity of each Place Type by requiring compatible land uses and land planning, site design, and building design that promotes an active public realm.	The Specific Plan includes architecture and landscape design guidelines to enrich the community landscape and architectural style for The Avenue. The design guidelines are organized to define the basic landscape design principles for the project, to guide the implementation of the "design vision," and to ensure the design integrity of the project. All landscape plans, streetscape plans, and graphic designs with regard to community identity, neighborhood identity, or entry monumentation within the project are required to conform to the landscape design guidelines as set forth in the Specific Plan and are subject to review and approval by the City of Ontario.

Plan Policy	Specific Plan Consistency
CD-3.3 Complete and Connected Network. We require that pedestrian, vehicular, and bicycle circulation on both public and private property be coordinated to provide connections internally and externally to adjacent neighborhoods and properties (existing and planned) through a system of local roads and trails that promote walking and biking to nearby destinations (including existing and planned parks, commercial areas, and transit stops) and are designed to maximize safety, comfort, and aesthetics.	The Specific Plan is designed for bicycle and pedestrian accessibility throughout the community through a network of off-street bike and pedestrian trails or multi-use paths within Ontario Ranch Road, Archibald, Haven, Schaefer and Hellman Avenues. Connectivity to this network of off street trails from all residential Planning Areas is provided through the local street system.
CD-3.5 Active Frontages. We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).	The Specific Plan includes architectural design guidelines, which promote street facing front entries and architectural elements visible from adjacent streets, sidewalks, and parks within the project.
GOAL CD-5: A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the property values and encourages additional public and private investments.	
CD-5.1 Maintenance of Buildings and Property. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.	The Specific Plan includes a Maintenance Responsibility Matrix defining the public, private, and utility entities responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, parks, yards, walls and monuments, traffic signals, infrastructure, and utilities within the project.
CD-5.2 Maintenance of Infrastructure. We require the continual maintenance of infrastructure.	The Specific Plan includes a Maintenance Responsibility Matrix defining the responsible entities for continual maintenance of roadways, sidewalks, traffic signals, off site and on site public water, sewer, and storm drain infrastructure facilities.

Plan Policy	Specific Plan Consistency
Social Resources Element	
GOAL SR-2: A range of educational and training opportunities for residents and workers of all ages and abilities that improves their life choices and provides a skilled workforce for our businesses.	
SR-2.4 Access to Schools. We work with local and regional partners to improve the safety in and around schools and to improve access for citizens of all ages and abilities to schools and community services, such as after school and other programs.	The Avenue Specific Plan lists creating a strong functional relationship between homes and schools and providing for connectivity between residential neighborhoods, recreational areas, and to the schools, by means of pedestrian and bicycle trail linkages, as part of the Specific Plan Objectives.
GOAL SR-5: Local heritage, entertainment, and cultural experiences that enrich the lives of Ontario's residents, workers, and visitors and serve to attract residents and businesses to the City.	
SR-5.3 Public Art. We encourage public art in buildings, parks, open spaces, and other public and private spaces.	The Avenue Specific Plan Landscape Design Guidelines includes provision of active and passive pedestrian spaces that encourage user interaction; Fountains, stages, public art is encouraged for these spaces.

LAND DEVELOPMENT DIVISION
CONDITIONS OF APPROVAL

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

Date Prepared: 1/2/2025

File No: PSPA22-005

Related Files: PMTT23-002

Project Description: An amendment to The Avenue Specific Plan to: 1) modify the land use designation of Planning Area 4 and apply density modifications to Planning Areas 1B, 2A, 3B, and 5 for consistency with The Ontario Plan 2050 Land Use Plan; 2) apply general modifications throughout the document for clarity; and, 3) make exhibit and text updates throughout the document to support the Project, for land located at the northwest corner of Archibald Avenue and Ontario Ranch Road; (APNs: 0218-191-04; 0218-191-14; 0218-191-15; 0218-191-16; 0218-191-05; 0218-191-22; 0218-191-20); submitted by Richland Communities.

Prepared By: Alexis Vaughn, Associate Planner
Phone: 909.395.2416 (direct)
Email: avaughn@ontarioca.gov

The Planning Department, Land Development Section, conditions of approval applicable to the above-described Project are listed below. The Project shall comply with each condition of approval as listed:

1.0 Standard Conditions of Approval. The project shall comply with the *Standard Conditions for New Development*, adopted by City Council Resolution No. 2017-027 on April 18, 2017. A copy of the *Standard Conditions for New Development* may be obtained from the Planning Department or City Clerk/Records Management Department.

2.0 Special Conditions of Approval. In addition to the *Standard Conditions for New Development* identified in condition no. 1.0, above, the project shall comply with the following special conditions of approval:

2.1 Specific Plan Amendment. The following shall be submitted to the Planning Department within 30 days following City Council approval of the Specific Plan Amendment:

(a) Two hard copies of the final Specific Plan document (bound, double-sided, color);

(b) One flash drive containing:

(i) A complete Microsoft Word or equivalent copy of the final Specific Plan document, including all required revisions;

(ii) A complete PDF copy of the final Specific Plan document, including all required revisions; and

(iii) A complete electronic website version (PDF, reduced size, OCR) of the final Specific Plan document, including all required revisions.

2.2 Signs.

(a) All Project signage shall comply with the requirements of Ontario Development Code Division 8.1 (Sign Regulations).

(b) On-site posting of public noticing shall be provided pursuant to Code Section 2.03.010.C.4, which consists of one or more large, 6-foot-tall, freestanding public notification signs. The sign face shall measure 4 feet tall by 8 feet wide, in a format approved by the Planning Director. The sign shall be posted no later than ten calendar days prior to the Planning Commission hearing date and removed no later than fourteen calendar days following the City Council hearing date, unless otherwise required by the Planning Director. The format is available on the City's website.

2.3 Additional Fees.

(a) Within 5 days following final application approval, the Notice of Determination ("NOD") filing fee shall be provided to the Planning Department. The fee shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act ("CEQA"). Failure to provide said fee within the time specified will result in the extension of the statute of limitations for the filing of a CEQA lawsuit from 30 days to 180 days.

CITY OF ONTARIO *Agenda Report* **March 18, 2025**	**SECTION:** **PUBLIC HEARINGS**
Department: Planning Prepared By: Lorena Mejia Department: Prepared By: Lorena Mejia Staff Member Presenting: Rudy Zeledon, Executive Director Community Development Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 21

SUBJECT: **A PUBLIC HEARING TO CONSIDER AN ADDENDUM TO THE ONTARIO PLAN 2050 SUPPLEMENTAL ENVIRONMENTAL IMPACT REPORT; TWO ORDINANCES APPROVING A DEVELOPMENT AGREEMENT (FILE NO. PDA23-005) BETWEEN THE CITY OF ONTARIO AND DIVERSIFIED PACIFIC DEVELOPMENT GROUP, LLC IN CONJUNCTION WITH THE EMPIRE GROVES SPECIFIC PLAN (FILE NO. PSP23-001); AND A RESOLUTION FOR A DEVELOPMENT PLAN (FILE NO. PDEV23-039)**

RECOMMENDATION: That the City Council consider and waive further reading of:

A. A Resolution approving the use of an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364, certified by the City Council on August 16, 2022);
B. An Ordinance for a Development Agreement (File No. PDA23-005) between the City of Ontario and Diversified Pacific Development Group, LLC and the Empire Groves Specific Plan (File No. PSP23-001) to establish terms and conditions for the associated Development Plan (File No. PDEV23-039);
C. An Ordinance for the Empire Grove Specific Plan (File No. PSP23-001 to establish the Land Use District, development standards, guidelines, and infrastructure improvements); and
D. A Resolution approving Development Plan (File No. PDEV23-039) to construct 600,000 SF hotel and commercial building consisting of 600 rooms.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Focus Resources in Ontario's Commercial and Residential Neighborhoods

FISCAL IMPACT: The fiscal impacts have not been determined.

BACKGROUND & ANALYSIS:

On January 27, 2010, the Ontario City Council certified The Ontario Plan Environmental Impact

Report in conjunction with File No. PGPA06-001 (City Council Resolution No. 2010-006). On August 16, 2022, the Ontario City Council certified The Ontario Plan 2050 Update Supplemental Environmental Impact Report in conjunction with File No. PGPA20-002 (City Council Resolution No. 2022-129). The Ontario Plan 2050 (TOP) and associated Environmental Impact Report analyzed the Project site and established the vision, general guidelines, overlays, districts, mixed-use areas, etc. for the Project site and surrounding area.

The TOP adopted several overlay areas at varying scales. The first is the Ontario Airport Metro Center Overlay (OAMC Overlay), which envisioned an area developed with a mix of regional serving retail, office, restaurant, cultural, entertainment, and residential uses. The OAMC is bounded by Fourth Street to the north, the 1-15 Freeway to the east, the Southern Pacific Railroad and Airport Drive to the south and Vineyard Avenue to the west. Within the OAMC there are two Place Type Districts - Airport Metro/Entertainment District and Guasti District, as well as six Mixed Use zoning designations, including the Multimodal Mixed-use Area where the project site is located.

The project site is within the Guasti Place Type District and the Multimodal Mixed-Use zoning designation. Both areas are envisioned with office, commercial, hospitality, and residential uses that can complement current and future public transportation and the nearby Ontario Airport.

On October 16, 2023, the applicant submitted three applications to facilitate the development of a 600-room hotel with commercial/retail space.

- A Development Agreement (File No. PDA23-005) between the City of Ontario and Diversified Pacific Development Group, LLC to establish the terms and conditions for the associated Development Plan (File No. PDEV23-039).
- A Specific Plan application (File No. PSP23-001 - Empire Groves Specific Plan) to establish the land use district, development standards, guidelines, and infrastructure improvements for the potential development of up to 600,000 square feet of hospitality and commercial land uses.
- A Development Plan (File No. PDEV23-039) to construct a 600,000 square foot hotel consisting of 600 rooms and commercial space for restaurant and retail uses for hotel guests and the general public.

DEVELOPMENT AGREEMENT: The proposed Agreement is between the City of Ontario and Diversified Pacific Development Group, LLC for the construction of a full-service hotel with several on-site amenities. The terms of the Agreement outline the development of the hotel project, timing of development, required infrastructure improvements, as well as obligations towards Development Impact Fees, off-site street improvements, among others. Staff finds that the Agreement is consistent with State law, The Ontario Plan, and the City's Development Agreement policies. As a result, Staff is recommending approval of the application to the City Council.

SPECIFIC PLAN: The Empire Groves Specific Plan serves to implement the City's Policy Plan for the project site and provides zoning regulations for development of the Project site by establishing permitted land uses, development standards, infrastructure requirements, implementation

requirements that are outlined below. The proposed Specific Plan boundary covers 10.43 acres of vacant land for the development of a hotel and commercial/retail space. While the Specific Plan currently facilitates the hotel and commercial/retail development, there is anticipation that the proposed development will encourage future growth in the immediate and surrounding areas.

- Land Use Plan – The Empire Groves Specific Plan land use plan includes one Planning Area for the Project site, the Hospitality Mixed Use (PA1). The Hospitality Mixed-Use combines hotel uses, ancillary services and amenities with local service commercial/retail uses on a single property. At buildout, the total development allowed for the project site will be 600,000 square feet (hotel: 553,124 square feet and retail: 46,876 square feet) and up to 600 guest rooms.
- Design Guidelines – The design concept ensures a high-quality, attractive, and cohesive design structure for the Specific Plan. The guidelines ensure a high-quality design for new development design standards that promote energy and water conservation.
- Site Plan and Circulation – The Circulation Plan for the Specific Plan reinforces the objective of moving vehicles, pedestrians, cyclists, and public transit safely and efficiently through and around the Project. The site planning and circulation design guidelines are intended to promote high quality aesthetics, efficient land use practices, and public safety.
- Landscape Design – The landscape design guidelines ensure water-conserving, drought-tolerant plant palette that will soften transitions from the ground plane to the vertical plane of the building; offer screening from the adjacent neighborhood; and add color and texture to the development.
- Infrastructure – Development of the Specific Plan requires the installation of all infrastructure necessary to serve the Project as a standalone development.

DEVELOPMENT PLAN: The proposed Development Plan will allow for the construction of a 600,000 square foot luxury hotel and commercial building consists of 600 rooms and will provide destination dining, luxury retail, banquet halls, spa, fitness center, public gathering spaces and additional guest amenities. The hotel will be 11-stories including two subterranean levels for parking**.** The Applicant proposes a modern architectural design. The primary building materials include a combination of glazing, aluminum panels, metal edging, fiber reinforced concrete, natural stone, laminated glass, metal shade canopies and LED screens integrated into the design of the building walls.

PLANNING COMMISSION REVIEW: On February 25, 2025, the Planning Commission conducted a duly noticed public hearing on the subject applications and voted (4-0) to recommend that the City Council approve the TOP Addendum (Resolution No. PC25-006), the Development Agreement (Resolution No. PC25-007), Specific Plan (Resolution No. PC25-008) and the Development Plan, File No. PDEV23-039 subject to conditions (Resolution No. PC25-009).

COMPLIANCE WITH THE ONTARIO PLAN: The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan (TOP).

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (general plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

AIRPORT LAND USE COMPATIBILITY PLAN COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

ENVIRONMENTAL REVIEW: Staff has prepared an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364, certified by the City Council on August 16, 2022. This Application introduces no new significant environmental impacts. All previously adopted mitigation measures are a condition of Project approval and are incorporated herein by this reference.

CITY OF ONTARIO PLANNING DEPARTMENT

PLANNING COMMISSION AGENDA REPORT

February 25, 2025

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Email: PlanningDirector@OntarioCA.gov

FILE NOS: PDA23-005, PSP23-001 and PDEV23-039

SUBJECT: A public hearing to consider the following: [1] A Development Agreement (File No. PDA23-005) between the City of Ontario and Diversified Pacific Development Group, LLC to establish the terms and conditions for the associated Development Plan; [2] A Specific Plan (File No. PSP23-001 - Empire Groves Specific Plan) to establish the land use district, development standards, guidelines, and infrastructure improvements for the potential development of up to 600,000 square feet of hospitality and commercial land uses; and [3] A Development Plan (File No. PDEV23-039) to construct a 600,000 square foot hotel and commercial building consisting of 600 rooms on 10.43-acres of land located on the southeast corner of Guasti Road and Holt Boulevard within the proposed PA1 (Hospitality Mixed-Use) district of the Empire Groves Specific Plan; (APN: 110-322-33) **submitted by Diversified Pacific Development Group, LLC. City Council action is required for PDA23-005 and PSP23-001.**

PROPERTY OWNER: JC Horizon LTD

RECOMMENDED ACTION: That the Planning Commission consider and adopt the following:

1) A Resolution recommending the City Council approve the use of an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364, certified by the City Council on August 16, 2022); and

2) Resolutions recommending the City Council approve File Nos. PDA23-005 and PSP23-001 pursuant to the facts and reasons contained in the staff report and attached Resolutions; and

3) A Resolution approving File No. PDEV23-039, pursuant to the facts and reasons contained in the staff report and attached Resolution, and subject to the conditions of approval appended to the attached resolution as Attachment A.

BACKGROUND: On January 27, 2010, the Ontario City Council certified The Ontario Plan Environmental Impact Report in conjunction with File No. PGPA06-001 (City Council Resolution No. 2010-006). On August 16, 2022, the Ontario City Council certified The Ontario Plan 2050 Update Supplemental Environmental Impact Report in conjunction with File No. PGPA20-002 (City Council Resolution No. 2022-129). The Ontario Plan 2050

(TOP) and associated Environmental Impact Report analyzed the Project site and established the vision, general guidelines, overlays, districts, mixed-use areas, etc. for the Project site and surrounding area.

The TOP adopted several overlay areas at varying scales. The first is the Ontario Airport Metro Center Overlay (OAMC Overlay), which envisioned an area developed with a mix of regional serving retail, office, restaurant, cultural, entertainment, and residential uses. The OAMC is bounded by Fourth Street to the north, the 1-15 Freeway to the east, the Southern Pacific Railroad and Airport Drive to the south and Vineyard Avenue to the west (see Figure 1: Ontario Airport Metro Center Overlay Map). The OAMC is over 2,300 acres in size and serves as one of the over-arching visionary overlays. Within the OAMC are two Place Type Districts - Airport Metro/Entertainment District and Guasti District, and six Mixed Use areas including the Multimodal Mixed-use Area. The project site is within the Guasti District and Multimodal Mixed-Use, both of which are discussed further below.

Figure 1: Ontario Airport Metro Center Overlay Map

The Guasti District Place is bounded by the I-10 Freeway and Holt Boulevard to the north, Turner Avenue to the east, the Southern Pacific Railroad to the south and Guasti Road to the west (see Figure 2: Guasti District and Mixed-Use Areas Map). The district is envisioned to preserve and enhance the Guasti (winery) historic buildings into vibrant mixed-use area that leverages its proximity to the Ontario International Airport, Ontario Convention Center, and the future development within the adjacent Multimodal land use. The district is designed with intense office, commercial, and lodging uses along the I-10 corridor, and appropriately-scaled residential, office, commercial, and lodging near the Guasti Village.

The Multimodal Mixed-Use Area is envisioned as a future multimodal area with uses that link and support local and regional transportation. Such uses may include office, retail, hotel/hospitality, and residential, that will complement current and future public transportation, as well as the adjacent Ontario Airport.

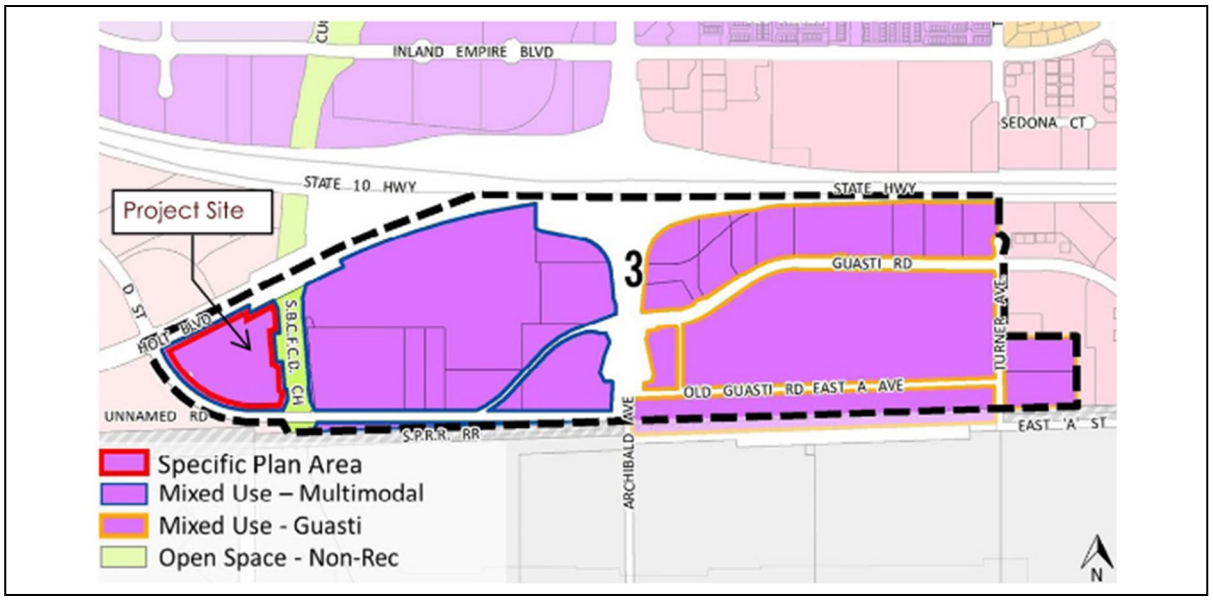

Figure 2: Guasti District and Mixed-Use Areas Map

On October 16, 2023, the applicant submitted three applications to facilitate the development of a 600-room hotel with commercial/retail space.

- A Development Agreement (File No. PDA23-005) between the City of Ontario and Diversified Pacific Development Group, LLC to establish the terms and conditions for the associated Development Plan (File No. PDEV23-039).

- A Specific Plan application (File No. PSP23-001 - Empire Groves Specific Plan) to establish the land use district, development standards, guidelines, and infrastructure improvements for the potential development of up to 600,000 square feet of hospitality and commercial land uses.

- A Development Plan (File No. PDEV23-039) to construct a 600,000 square foot hotel consisting of 600 rooms and commercial space for restaurant and retail uses for hotel guests and the general public. Approval of the Development Plan is contingent upon approval of the associated Specific Plan.

On February 19, 2025, the Development Advisory Board conducted a public hearing regarding File No. PDEV23-039 and adopted a Decision recommending the Planning Commission approve the Development Plan.

Approval of this Project is contingent upon City Council approving the Development Agreement (File No. PDA23-005), the Empire Groves Specific Plan (File No. PSP23-001), and EIR Addendum.

PROJECT SETTING: The Project site consists of 10.43 acres of land located at the southeast corner of Guasti Road and Holt Boulevard, within the proposed PA1 (Hospitality Mixed-Use) district of the Empire Groves Specific Plan, which is depicted in Exhibit A: Project Location Map. The triangular-shaped lot is undeveloped, with 11-foot deferential in grade that slopes down from north to south. Ruderal vegetation, including nonnative trees and shrubs, as well as stockpiled dirt mounds and rocks are present on-site. The site has been maintained through disking and mowing. Surrounding land uses include a mix of hotel and office uses to the north, the San Bernardino flood control channel to the east, and a hotel to the west and south. The existing surrounding land uses, zoning, and Policy Plan (general plan) and specific plan land use designations are summarized in Table 1: Surrounding Zoning & Land Uses.

PROJECT ANALYSIS:

(1) Development Agreement (File No. PDA23-005)

The proposed Agreement is between the City of Ontario and Diversified Pacific Development Group, LLC for the construction of a full-service hotel with several on-site amenities. The terms of the Agreement outline the development of the hotel project, timing of development, such as building plan submittal and commencement of construction, required infrastructure improvements, as well as obligations towards Development Impact Fees, off-site street improvements, among others.

Staff finds that the Agreement is consistent with State law, The Ontario Plan, and the City's Development Agreement policies. As a result, Staff is recommending approval of the application to the Planning Commission. If the Planning Commission finds the Agreement is acceptable, a recommendation of approval to the City Council would be appropriate.

(2) Specific Plan (File No. PSP23-001)

The Empire Groves Specific Plan serves to implement the City's Policy Plan for the project site and provides zoning regulations for development of the Project site by establishing permitted land uses, development standards, infrastructure requirements, implementation requirements, and more. The proposed Specific Plan boundary covers roughly 10.43 acres of vacant land for the development of a hotel and commercial/retail space (see associated PDEV discussion below). While the Specific Plan currently facilitates the hotel and commercial/retail development, there is anticipation that the proposed development will encourage future growth in the immediate and surrounding areas. With this anticipation, the Specific Plan has been drafted in a manner that will allow for adjacent properties to be annexed into the proposed Specific Plan without substantial changes to the current document. This will allow the Specific Plan to cover a larger area and further the vision of the Multimodal Mixed-Use/Guasti area.

(a) Land Use Plan. The Empire Groves Specific Plan proposes a land use plan that includes one Planning Area for the Project site, the Hospitality Mixed Use (PA1) (see

Exhibit F: Empire Groves Specific Plan – Land Use Plan, attached). The Hospitality Mixed-Use combines hotel uses, ancillary services and amenities with local-serving commercial/retail uses on a single property. At buildout, the total development allowed for the project site will be 600,000 square feet.

(i) Hotel Land Use – The Hotel use is the primary component of the Specific Plan's Hospitality Mixed-Use Planning Area and will occupy the majority of the FAR of the development (553,124 square feet). The hotel use includes 600 guest rooms, office space for hotel administration, and may also include ancillary uses such as restaurants, bars, lounges, day spas, gyms, ballrooms and meeting rooms.

(ii) Local-Serving Retail Uses – The local-serving retail uses (46,876 square feet) will occupy a smaller portion of the project site FAR. The local serving retail uses will be stand-alone uses not affiliated with the hotel. Such uses may include a combination of coffee shops, restaurants and/or retail to complement the hotel and nearby Ontario Convention Center.

(b) Design Guidelines. The design concept ensures a high-quality, attractive, and cohesive design structure for the Specific Plan. The guidelines provide the following objectives for future development within the Specific Plan area:

- Establish high-quality design for new development.
- Avoid continuous single planes; break monotony by using at least two planes.
- Allow variation in architectural elements at upper and lower building elevations.
- Use vertical elements to provide rhythm and continuity between the floors.
- Achieve good building articulation, beyond the building façade.
- Incorporate a mix of building heights for appropriate massing, vertical movement.
- Incorporates design standards that promote energy and water conservation.
- Implements the goals and policies of The Ontario Plan.
- Meet the intent of the Ontario Development Code.

(c) Site Plan and Circulation. The Circulation Plan for the Specific Plan reinforces the objective of moving vehicles, pedestrians, cyclists, and public transit safely and efficiently through and around the Project. The following site planning and circulation design guidelines are intended to promote high quality aesthetics, efficient land use practices, and public safety:

- Service, delivery/loading zones should be separated from pedestrian/guest areas.
- Ensure that all areas are accessible to emergency vehicles and personnel.
- The main access to the hotel as well as to the hotel parking is from Guasti Road.
- The main access to the hotel will be full access with a traffic signal.

(d) Landscape Design. The landscape will play an important role at many levels, primarily to soften transitions from the ground plane to the vertical plane; offer screening from the adjacent neighborhood; and add color and texture to the

development. The following landscape design guidelines were incorporated into Specific Plan.

- Landscape material should be native to or adaptive to Southern California.
- All plants should be water-conserving, drought-tolerant to the best extent.
- Trees, shrubs, hedges, etc. should be used to address solar heat gain.
- Paving materials should complement the architectural style, elevation materials.

(e) Infrastructure. Development of the Specific Plan requires the installation of all infrastructure necessary to serve the Project as a standalone development, with phasing and ultimate details to be reviewed and approved via a Development Agreement and Development Plan.

(3) Development Plan (File No. PDEV23-039)

(a) Site Design/Building Layout — The proposed 600,000 square foot luxury hotel and commercial building consists of 600 rooms and will provide destination dining, luxury retail, banquet halls, spa, fitness center, public gathering spaces and additional guest amenities. The Project site's northern property line fronts Holt Boulevard, the southern and western property line fronts Guasti Road and the eastern interior property line is located adjacent to the San Bernadino County flood control channel. The proposed hotel/commercial building is v-shaped and comprised of two wings. The west wing occupies the south and western portion of the parcel, and the smaller secondary east wing occupies the majority of the eastern portion of the parcel. The northern portion of the site and areas between the two wings provide open space amenities that include ground level plaza areas, pools, and gardens. A smaller surface parking lot will also be provided along Guasti Road to serve the local retail/restaurant uses. The hotel's entry lobby will be located on the east and south elevations facing an internal circular motor courtyard (see Exhibit B: Site Plan, attached). There are a total of 11 stories within the building that include two subterranean levels for parking that are described below.

The first floor of the hotel consists of the lobby, lounge, upscale restaurant and bar, spa, retail area, small meeting rooms, and a spacious banquet/conference center. The first-floor mezzanine level has a game room, fitness area, meeting rooms, and a board room in addition to mechanical and electrical equipment (see Exhibit C: Floor Plan, attached). The second floor includes offices and a fitness center. The remaining floors are dedicated to guest suites with a range of modern amenities. The hotel's rooftop is designed with a pool and lounge terrace that offers views and features a full-service restaurant and bar. The two level, subterranean parking structure is located underneath the hotel that is accessed on the east side of the property. The subterranean areas also include facilities, storage, employee areas, offices, mechanical and electrical equipment.

The hotel's main entrance has been designed with a porte-cochere with decorative pavers and lush landscaping, creating a grand and inviting main entrance into the hotel.

The motor courtyard is accessible from Guasti Road and will offer check-in and valet services for guests.

(b) Site Access/Circulation — The Project site will be served by five vehicular entries along Guasti Road. An emergency access will be provided from Holt Boulevard into the northern plaza courtyard area. The project has also been conditioned to provide emergency access and improvements along the eastern property line adjacent to the San Bernardino flood control channel. The improvements include the construction of an access road that connects driveways located along Guasti Road and Holt Boulevard. Pedestrian access from the street to the hotel will be provided from various access points along Guasti Road and Holt Boulevard.

(c) Parking — A shared parking analysis was completed by Translutions (Dated: November 2023) to evaluate the shared parking demand of the 600-room/suite full-service hotel with amenities (a pool/spa, fitness areas, meeting/conference rooms) and retail/restaurant areas. The methodology used for the shared parking analyses includes base parking demand ratios derived from the Urban Land Institute's (ULI) Shared Parking (3rd Edition, 2020). The parking analyses identified the highest parking demand is for 925 spaces on weekdays and 745 parking spaces on weekends. The Project is proposing a total of 932 parking spaces to meet the parking needs of the project.

(d) Architecture — The Applicant has proposed a modern architectural design. The primary building materials include a combination of glazing, aluminum panels, metal edging, fiber reinforced concrete, natural stone, laminated glass, metal shade canopies and LED screens integrated into the design of the building walls (see Exhibit D: Elevations, attached). The building structure is divided into three parts, the base, the middle and top. The bottom two floors include vertical articulation using architectural fin walls, forming a base of the building. These fins span two floors and are capped by a strong horizontal element. The middle has a consistent window pattern, with proportionately spaced vertical architectural fin walls adding depth and perspective to the façade. These architectural fins provide visual appeal and solar shading and connect with the vertical articulation of the base. The fin walls are interrupted every two floors by a strong horizontal element, creating a regularity in design in the form of a grid pattern. The elevation undergoes a transition from a grid patterned building plane to a glass structure as it reaches the limits on the east and west sides of the development. The transition is provided in the form of a stepped design for a seamless shift in architectural style. The top consists of a monolithic glass structure comprising of two stories and connecting the two buildings in the development.

(e) Landscaping — The Project proposes 25.3 percent landscape coverage throughout the Project site consistent with the proposed Empire Groves Specific Plan. The landscape palette consists of plant materials that have been selected for adaptability to site conditions, including rooftop drainage, sun exposure, soil climate, and the impact on underground parking (see Exhibit E—Landscape Plan, attached). Careful attention was given to the transitioning of plantings between the buildings which were specifically

sited to create comfortable outdoor rooms on a rooftop setting. The plant materials selected are also based on natural form and appearance, overall visual impact, and demand on natural resources.

The proposed conceptual landscape plan is divided into three general areas including the Guasti Road main entrance area, edge treatments, and the north central courtyard, which are described further below.

- Guasti Road Main Entrance Area - The main entrance landscape concept has been designed to create a sense of grandeur to the entrance, by providing multiple palm varieties and landscaped features at varying heights and profiles to create a visually appealing entrance. The entranceway has a canal water feature that bisects the entrance roadway and creates a focal point within the overall composition. The main access roadway leads to the entrance motor court plaza area. The entrance road is bordered by terraced plantings, with a variety of colors, textures, and shapes that will further accent the building and create a grand entrance from Guasti Road.

- Edge Treatments – The landscape street edge treatments facilitate a seamless transition between the public streets and the proposed project. The areas along Holt Boulevard and Guasti Road have been designed to encompass an array of street trees and decorative flowering trees to elevate the visual appeal of the streetscape. The sidewalk along Guasti meanders through the project site and provides connections to a plaza area located on the northwest corner of the site and retail/restaurant uses located along the southern portion of the building. The corner plaza features decorative pavers, accent plantings and raised planters, palm trees, and outdoor shaded seating areas. Pedestrian edge pathways will also be illuminated to ensure safe connections to the hotel amenities.

North Central Courtyard – The hotel courtyard, pool, and spa areas are located in the northeastern portion of the project site bounded by Holt Boulevard to the north, the hotel to the south and west, and the flood control channel to the east. The outdoor spaces provide three distinct pool areas, a water garden, large and small event spaces, a wellness garden, and a food and beverage pavilion. These areas include covered seating areas, outdoor furnishings, water features and lush landscaping.

(f) Signage — All Project signage is required to comply with sign regulations provided in Ontario Development Code Division 8.1 and/or additional sign agreements provided through the associated Development Agreement or associated Specific Plan. Prior to the issuance of a Building Permit for the installation of any new on-site signage, the Applicant is required to submit a Sign Program for Planning Department review and approval.

(g) Utilities (drainage, sewer) — Public utilities (water and sewer) are available to serve the Project. Furthermore, the Applicant has submitted a Preliminary Water Quality Management Plan (PWQMP), which establishes the Project's compliance with

storm water discharge/water quality requirements. The PWQMP includes site design measures that capture runoff and pollutant transport by minimizing impervious surfaces and maximizes low impact development (LID) best management practices (BMPs), such as retention and infiltration, biotreatment, and evapotranspiration. The PWQMP proposes the use of underground chambers located on the southeast quadrant of the site within the landscape areas facing Guasti Road. Any overflow drainage will be conveyed to the public street by way of parkway drains and culverts.

PUBLIC NOTIFICATION: The subject application was advertised as a public hearing in at least one newspaper of general circulation in the City of Ontario (the Inland Valley Daily Bulletin newspaper). In addition, the Project site was posted with two large public notification signs and notices were mailed to all owners of real property located within a minimum of 500 feet of the exterior boundaries of the property that is the subject of the hearing, as shown on the records of the County Assessor.

CORRESPONDENCE: As of the preparation of this Agenda Report, Planning Department staff has not received any written or verbal communications from the owners or occupants of properties surrounding the Project site or from the public in general, regarding the subject application.

AGENCY/DEPARTMENT REVIEWS: Each City agency/department has been provided the opportunity to review and comment on the subject application and recommend conditions of approval to be imposed upon the application. At the time of the Resolution preparation, recommended conditions of approval were provided and are appended to the attached Development Plan Resolution as Attachment A.

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Development and recommending body for the Development Agreement and Specific Plan, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission finds and determines that the

Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan (TOP). More specifically, the goals and policies of TOP that are furthered by the proposed Project are as follows:

(1) City Council Goals

- Invest in the Growth and Evolution of the City's Economy
- Operate in a Businesslike Manner
- Focus Resources in Ontario's Commercial and Residential Neighborhoods
- Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)

(2) Vision

Distinctive Development that integrates our varied and diverse focal points, districts, centers, corridors, and neighborhoods to provide a feeling of coherence without sacrificing uniqueness.

Commercial and Residential Development

- Development quality that is broadly recognized as distinctive and not exclusively tied to the general suburban character typical of much of Southern California.

- A system of vibrant retail, town, and neighborhood centers responsive to market demands and woven into the fabric of the community.

Development Quality

- Unique and authentic districts, centers, and corridors of varied scales that establish Ontario as one of the most vital and diverse locales in Southern California.

- Superior quality and design of the built environment and open spaces through careful attention to detail at every scale, including public and private spaces and structures.

(3) Governance

Decision Making

Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

(4) Policy Plan (General Plan)

Land Use Element

Goal LU-2 Compatibility: Compatibility between a wide range of uses and a resultant urban patterns and forms.

- LU-2.1 Land Use Decisions. We minimize adverse impacts on adjacent properties when considering land use and zoning requests.

- LU-2.2 Buffers. We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur. Additional mitigation is required when new uses could negatively impact environmental justice areas.

- LU-2.6 *Infrastructure Compatibility*. We require infrastructure to be aesthetically pleasing and in context with the community character.

Goal LU-3 Flexibility: Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the Vision.

- LU-3.1 Development Standards. We maintain clear development standards which allow flexibility to achieve our Vision and provide objective standards that ensure predictability and deliver the intended physical outcomes.

- LU-3.3 Land Use Flexibility. We consider uses not typically permitted within a land use category if doing so improves livability, reduces vehicular trips, creates community gathering places and activity nodes, and helps create identity.

Community Economics Element

Goal CE-1 Complete Community: A complete community that provides for all incomes and stages of life.

- CE-1.5 Business Attraction. We proactively attract new and expanding businesses to Ontario in order to increase the City's share of growing sectors of the regional and global economy.

Goal CE-2 Placemaking: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.

- CE-2.1 *Development Projects.* We require new development and redevelopment to create unique, high-quality places that add value to the community.

Mobility Element

Goal M-2 Active Transportation: A system of trails and corridors that facilitate and encourage active modes of transportation.

- M-2.3 Pedestrian Walkways. We require streets to include sidewalks and visible crosswalks at major intersections where necessary to promote safe and comfortable mobility between residential areas, businesses, schools, parks, recreation areas, and other key destination points.

Community Design Element

Goal CD-1 Image & Identity: A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.

- CD-1.1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing, enhancing, and preserving the character of our existing viable neighborhoods.

- CD-1.2 Place Types. We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.

Goal CD-2 Design Quality: A high level of design quality resulting in neighborhoods, public spaces, parks, and streetscapes that are attractive, safe, functional, human-scale, and distinct.

- CD-2.1 Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through:

    1. Building volume, massing, and height to provide context-appropriate scale and proportion;

    2. A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and

3. Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.

- CD-2.4 Urban, Mixed Use, and Transit-oriented Areas. We establish Place Types to require mixed use, urban, and transit-oriented areas to be designed and developed as pedestrian oriented areas that are integrated with adjacent neighborhoods and promote a vibrant, comfortable, and functional environment, as defined for each Place Type.

- CD-2.9 Landscape Design. We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.

- CD-2.11 Entry Statements. We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.

- CD-2.13 Entitlement Process. We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.

Goal CD-3 Urban, Mixed Use, and Transit-Oriented Place Types: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.

- CD-3.1 Unique Identity. We promote development that heightens the unique character and identity of each Place Type by requiring compatible land uses and land planning, site design, and building design that promotes an active public realm.

- CD-3.2 Comfortable, Human-Scale Public Realm. We require that public spaces, including streets, parks, and plazas on both public and private property be designed to maximize safety, comfort and aesthetics and connect to the citywide pedestrian, vehicular, and bicycle networks.

- CD-3.3 Complete and Connected Network. We require that pedestrian, vehicular, and bicycle circulation on both public and private property be coordinated to provide connections internally and externally to adjacent neighborhoods and properties (existing and planned) through a system of local roads and trails that promote walking and biking to nearby destinations (including existing and planned parks, commercial areas, and transit stops) and are designed to maximize safety, comfort, and aesthetics.

- CD-3.4 Context-Aware and Appropriate Design. We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.

- CD-3.5 Active Frontages. We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).

- CD-3.6 Managed Infrastructure. We collaborate with developers and property owners to facilitate development that realizes the envisioned character and functionality of the Place Type through the use of green and shared infrastructure within each Place Type.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (general plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

ENVIRONMENTAL REVIEW: Staff has prepared an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364, certified by the City Council on August 16, 2022. This Application introduces no new significant environmental impacts. All previously adopted mitigation measures are a condition of Project approval and are incorporated herein by this reference.

RESOLUTION NO. PC25-006

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO RECOMMENDING CITY COUNCIL APPROVE AN ADDENDUM TO THE ONTARIO PLAN 2050 SUPPLEMENTAL ENVIRONMENTAL IMPACT REPORT, PURSUANT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NO. PSP23-001

WHEREAS, Diversified Pacific Development Group, LLC (hereinafter referred to as "Applicant") has filed an Application for the approval of the Empire Groves Specific Plan, File No. PSP23-001, to establish the land use district, development standards, guidelines, and infrastructure improvements for the development of up to 600,000 square feet of hospitality and commercial land uses on 10.43-acres of land located on the southeast corner of Guasti Road and Holt Boulevard, in the City of Ontario, California (hereinafter referred to as "Application" or "Project"); and

WHEREAS, in conjunction with the Project, the Applicant also filed an application for a Development Agreement (File No. PDA23-005) between the City of Ontario and Diversified Pacific Development Group, LLC to establish the terms and conditions for the associated Development Plan (File No. PDEV23-039), which will be considered by the City Council and contingent upon approval of the Empire Groves Specific Plan; and

WHEREAS, in conjunction with the Project, the Applicant also filed an application for a Development Plan (File No. PDEV23-039) to construct a 600,000 square foot hotel and commercial building consisting of 600 rooms, which will be considered by the Planning Commission and contingent upon approval of the Empire Groves Specific Plan; and

WHEREAS, the City of Ontario certified the Environmental Impact Report prepared for The Ontario Plan and associated Statement of Overriding Considerations, and issued Resolution No. 2010-003; and

WHEREAS, the City of Ontario adopted the Policy Plan (General Plan) as part of the component framework for The Ontario Plan on January 27, 2010, and issued Resolution No. 2010-004; and

WHEREAS, the City of Ontario certified the Supplemental Environmental Impact Report (SEIR), for the General Plan Amendment for The Ontario Plan 2050 Technical Update on August 16, 2022; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as "EIR Addendum") in accordance with the

requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the EIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified EIR was appropriate; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the Planning Commission is the recommending authority for the requested approval to construct and otherwise undertake the Project; and

WHEREAS, the Planning Commission has reviewed and considered the EIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent of supplemental EIR have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the EIR Addendum for the Project is on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, is available for inspection by any interested person at that location and is, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending authority for the Project, the Planning Commission has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written

and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of this Project were reviewed in conjunction with an Addendum to TOP 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the Project may result in significant environmental impacts.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 and 2, above, the Planning Commission hereby recommends the City Council finds that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified EIR, and does hereby approve the EIR Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 4: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the Applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 5: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 6: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 25th day of February 2025, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Nicola Ricci
Planning Commission Chairman

ATTEST:

Henry K. Noh
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA)
COUNTY OF SAN BERNARDINO)
CITY OF ONTARIO)

I, Gwen Berendsen, Secretary Pro Tempore of the Planning Commission of the City of Ontario, DO HEREBY CERTIFY that foregoing Resolution No. PC25-006, was duly passed and adopted by the Planning Commission of the City of Ontario at their regular meeting held on February 25, 2025, by the following roll call vote, to wit:

AYES: DeDiemar, Gage, Lampkin, Ricci

NOES: None

ABSENT: Anderson

ABSTAIN: None

1.0 INTRODUCTION

In 2009 and 2010, the City of Ontario (City), as Lead Agency, prepared a Draft Environmental Impact Report (EIR), Recirculated Draft EIR, and a Final EIR for *The Ontario Plan* (TOP). These documents are collectively referred to in this document as the 2010 TOP EIR. TOP consisted of a six-part component framework: 1) Vision, 2) Governance Manual, 3) Policy Plan (General Plan), 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback, to guide development of Ontario 20 years or more into the future.

In 2022, the City prepared *The Ontario Plan 2050 Final Supplemental Environmental Impact Report* (TOP 2050 SEIR; State Clearinghouse No. 2021070364) for *The Ontario Plan 2050* (TOP 2050), which was an update to TOP to guide the City's development and conservation for the next 30 years through 2050. TOP 2050 is referred to herein as the "approved project."

The Empire Groves Specific Plan (referred to herein as the "modified project" or "Specific Plan") proposes to establish land use regulations, development standards, and design guidelines for a proposed hotel and retail development. This Addendum has been prepared to determine whether the modified project would result in new or substantially more severe significant environmental impacts compared to the impacts of the approved project as disclosed in the TOP 2050 SEIR.

1.1 PROJECT LOCATION

The City of Ontario is in the southwestern portion of San Bernardino County and is surrounded by the cities of Upland and Rancho Cucamonga to the north; the City of Fontana and unincorporated San Bernardino County to the east; the cities of Eastvale and Jurupa Valley to the south; and the cities of Chino and Montclair and unincorporated San Bernardino County to the west; refer to Exhibit 1, *Regional Vicinity*.

As shown on Exhibit 2, *Site Vicinity*, the approximately 10.43-acre triangular modified project site (Assessor's Parcel Number [APN] 0110-322-33) is in the southeastern quadrant of the intersection of East Holt Boulevard and East Guasti Road. The site is bounded by East Holt Boulevard to the north, while East Guasti Road runs along its southern and southwestern edges. The eastern boundary is defined by an existing flood channel and the Cucamonga Creek Trail. To the south of the site lies the Ontario International Airport, which is separated from the site by East Guasti Road, Airport Drive, and a set of railroad tracks. The modified project site (also referred to as "Specific Plan area" herein) has direct access from Interstate 10 (I-10), situated to the north of the site.

Exhibit 1
Regional Vicinity

Exhibit 2
Site Vicinity

1.2 PREVIOUS ENVIRONMENTAL DOCUMENTS

The Ontario Plan Final Environmental Impact Report

In 2009 and 2010, the City prepared a Draft EIR, Recirculated Draft EIR, and Final EIR for *The Ontario Plan* (TOP). These documents are collectively referred to in this document as the 2010 TOP EIR. TOP consisted of a six-part component framework: 1) Vision, 2) Governance Manual, 3) Policy Plan (General Plan), 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback, to guide development of Ontario 20 years or more into the future.

The 2009 Draft EIR identified six environmental topical areas (Agricultural Resources, Air Quality, Cultural Resources, Global Climate Change, Noise, and Traffic and Transportation) with significant and unavoidable impacts.

The 2009 Recirculated Draft EIR was released to provide additional analysis related to greenhouse gas (GHG) emissions impacts associated with buildout of TOP.

Pursuant to Section 15088.5(c) of the CEQA Guidelines, which states that if an EIR revision is "limited to a few chapters or portions of the EIR, the lead agency need only recirculate the chapters or portions that have been modified," only the following topic areas were analyzed in the 2009 Recirculated Draft EIR:

- Global Climate Change; and
- Additional Project Alternative: 15 percent GHG Reduction Alternative.

Remaining topics previously analyzed in the 2009 Draft EIR were determined to be adequately addressed. Analysis in the 2009 Recirculated Draft EIR found that significant and unavoidable impacts identified in the 2009 Draft EIR would remain significant and unavoidable. These determinations were reiterated in the 2010 TOP EIR when it was certified on January 27, 2010.

The Ontario Plan 2050 Final Supplemental Environmental Impact Report

In 2022, the City prepared TOP 2050 SEIR for *The Ontario Plan 2050* (TOP 2050), which was an update to TOP to guide the City's development and conservation for the next 30 years through 2050. TOP 2050 is a focused effort, with particular emphasis on technical refinements to the Policy Plan to comply with State housing mandates; conform with new State laws related to community health, environmental justice, climate adaptation, resiliency, and mobility; bring long-term growth and fiscal projections into alignment with current economic conditions; and advance the Implementation Plan and Tracking and Feedback system.

TOP 2050 fulfills the City's mandatory Regional Housing Needs Assessment (RHNA) obligation. TOP 2050 brings long-term growth and fiscal projections into alignment with

current economic conditions as well as property owner and stakeholder requests, to support the vision for Ontario.

TOP 2050 SEIR identified significant and unavailable impacts related to air quality, cultural resources, noise, and transportation.

This page intentionally left blank.

2.0 DESCRIPTION OF PROJECT MODIFICATIONS

2.1 ADDENDUM'S PURPOSE AND NEED

When an EIR has been certified or a negative declaration adopted for a project, no subsequent or supplemental environmental review documentation shall be required unless one or more of the following events occurs:

1) Substantial changes are proposed in the project, which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

2) Substantial changes occur with respect to the circumstances under which the project is undertaken, which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:

    A. The project will have one or more significant effects not discussed in the previous EIR or negative declaration;

    B. Significant effects previously examined will be substantially more severe than shown in the previous EIR;

    C. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

    D. Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

When none of the above events has occurred, yet minor technical changes or additions to the previously adopted negative declaration are necessary, an addendum may be prepared (CEQA Guidelines Section 15164[b]).

As discussed below, none of the conditions described in CEQA Guidelines Section 15162 calling for preparation of subsequent environmental review have occurred. This Addendum supports the conclusion that the modified project modifications are minor or technical changes that do not result in any new significant environmental effects or a substantial increase in the severity of previously identified significant effects. In addition, as discussed below, the modified project modifications would not result in any new or substantially increased significant environmental impacts, no new mitigation measures, or no new alternatives that would substantially reduce significant impacts. As a result, an addendum is an appropriate CEQA document for analysis and consideration of the modified project modifications.

Circulation of an addendum for public review is not necessary (CEQA Guidelines Section 15164, subdivision (c)); however, the addendum must be considered in conjunction with the adopted Final EIR by the decision-making body (CEQA Guidelines Section 15164, subdivision (d)). The modified project is an Addendum to TOP 2050 SEIR (i.e., the certified Final EIR).

CEQA requires a comparative evaluation of a modified project and alternatives to the project, including the “No Project” alternative. TOP 2050 SEIR addressed a reasonable range of alternatives for the approved project. There is no new information indicating that an alternative that was previously rejected as infeasible is in fact feasible, or that a considerably different alternative than those previously studied would substantially reduce one or more significant effects on the environment.

2.2 ENVIRONMENTAL SETTING

Located in an urban environment, the modified project site is an undeveloped, vacant, disturbed lot and is relatively flat with no temporary or permanent structures. Ruderal vegetation, including nonnative trees and shrubs, as well as stockpiled dirt mounds and rocks are present on-site. The site was formerly utilized for agriculture production until the early to mid-1980s and has since remained undeveloped. The site has been maintained through disking and mowing. The modified project site is surrounded by development on all four sides, including a channelized portion of Cucamonga Creek to the east.

GENERAL PLAN DESIGNATION

According to TOP 2050 Figures LU-01, *Land Use Plan*, and LU-04, *Mixed Use Areas*, the modified project site has a Mixed Use-Multimodal (MU-Multimodal) land use designation. Per TOP 2050 Figure LU-05, *Overlay Areas*, the site is also within the Ontario Airport Metro Center Overlay.

The City’s future multimodal transit station is under consideration within the MU-Multimodal area, which will link rail, regional, local, and airport transit. Intensive office, retail, and residential uses are envisioned to be integrated with the transit station. The transit center is envisioned as an iconic, convenient, and intuitively designed multimodal transportation center that will serve the City and the region at large.

According to TOP 2050 full buildout summary, the total acreage under the MU-Multimodal designated areas (west of Archibald Avenue and south of I-10) is 72.56 acres, of which 10.43 acres fall in the Specific Plan area. It is estimated that this area will absorb a total of 2,449,727 square feet of nonresidential development and will create 5,993 jobs. Of this, approximately 553,124 square feet is allocated to lodging and the remaining approximately 1,896,603 square feet is allocated to retail and office development. The area has an allowable density of 20.0 to 80.0 dwelling units per acre.

The Ontario Airport Metro Center Overlay is envisioned as the most intensive area in the County with a vertical and horizontal mixture of regional-serving retail, office, restaurant, entertainment, cultural, and residential uses in low- to mid-rise buildings (i.e., 3 to 10 stories in height).

ZONING

According to the City's *Official Zoning Map*, dated January 1, 2016, the site is zoned Specific Plan (SP) within the Multimodal Transit Center (MTC) Overlay District. The SP zoning district is established to accommodate the adoption of specific plans pursuant to TOP 2050 Exhibit LU-05, *Overlay Areas*. All land uses, activities, and facilities within the SP zoning district shall only be allowed pursuant to the applicable Specific Plan document. The MTC Overlay District was established to allow for the interim use of existing buildings located within the overlay district boundary, while preserving the City's vision for development of a multimodal transit center and supporting mixed-use development.

SURROUNDING LAND USES

Surrounding land uses include a mix of commercial, airport, and industrial uses, which are further described as follows:

- *North*: East Holt Boulevard bounds the modified project site to the north. The Frontier Center office building and Holiday Inn are located further north. These land uses are designated Hospitality with a floor area ratio (FAR) of 1.0, and zoned Convention Center Support Commercial (CCS).

- *East*: An existing flood channel and the Cucamonga Creek Trail bound the site to the east. Further east is an industrial warehouse development. Land uses to the east are designated Open Space-Non-Recreation and MU-Multimodal (20.0 to 80.0 dwelling units per acre and 1.0 FAR), and zoned SP with an MTC overlay.

- *South*: East Guasti Road bounds the southern modified project boundary. The Ontario Gateway Hotel is located to the south of East Guasti Road. The Ontario International Airport is located further to the south and is separated from the site by East Guasti Road, Airport Drive, and a set of railroad tracks. Land uses to the

south are designated Hospitality (1.0 FAR), Rail and Airport, and zoned CCS, Railway Corridor (RC), and Ontario International Airport (ONT).

- *West*: East Guasti Road bounds the modified project site to the west. The Ontario Gateway Hotel is located further west and southwest of East Guasti Road. Land uses to the west are designated Hospitality (1.0 FAR) and zoned CCS.

2.3 MODIFIED PROJECT DESCRIPTION

The modified project proposes to implement the Empire Groves Specific Plan which would include construction of a hotel and retail development with ancillary site improvements; refer to Exhibit 3, *Conceptual Site Plan*. The hotel would encompass approximately 553,124 square feet and the local-serving retail component would encompass approximately 46,876 square feet. Buildout of the total development would be approximately 600,000 square feet; refer to Table 1, *Proposed Specific Plan Buildout*. Additionally, as shown, the proposed buildout would be within the TOP 2050 full buildout assumptions for the project site based on the MU-Multimodal designation.

Table 1
Proposed Specific Plan Buildout

Land Use	Proposed Buildout	TOP 2050 Maximum Buildout for Project Site
Hotel	553,124 square feet	553,124 square feet
Local-Serving Retail	46,876 square feet	1,896,603 square feet
TOTAL	**600,000 square feet**	**2,449,727 square feet**
Notes: According to TOP 2050 full buildout summary, the total acreage under the City's MU-Multimodal designated areas is 72.56 acres, of which 10.43 acres fall in the Specific Plan area. It is estimated that the Specific Plan area will absorb a total of 2,449,727 square feet of nonresidential development, consisting of 553,124 square feet of lodging and 1,896,603 square feet of retail and office development.		

In compliance with the City of Ontario's *Community Climate Action Plan* (CCAP), the modified project proposes to implement Screening Table Measures identified in CCAP Table 6, *Screening Table for Implementing GHG Performance Standards for Commercial, Office, Medical, Hotel, Fitness, Industrial, and Retail Development, 2030*, that achieve a minimum of 100 points to ensure modified project-related GHG emission impacts remain less than significant. Potential GHG reduction measures include those related to building electrification, solar energy systems, green roofs, urban cooling, transit oriented communities, and transit ridership. The City would be responsible for verifying that Screening Table Measures achieving the requisite points are incorporated into the modified project plans and are appropriately implemented. At the discretion of the City, measures that provide GHG reductions equivalent to GHG emissions reductions achieved via the CCAP Screening Table Measures may be implemented.

Exhibit 3
Conceptual Site Plan

PROPOSED DEVELOPMENT

Hotel Component

The hotel component consists of a 600-room hotel with a variety of amenities, including banquet halls, conference rooms, restaurants/cafes, spa and pool facilities, and a rooftop deck. The hotel consists of an east and west wing, connected above by a rooftop floor. In total, there would be eight levels with a rooftop deck with a maximum building height of 120 feet. The first floor of the hotel consists of the lobby, lounge, upscale restaurant and bar, spa, retail area, small meeting rooms, and a spacious banquet/conference center. The first-floor mezzanine level is planned to include a game room, fitness area, meeting rooms, and a board room in addition to mechanical and electrical equipment. The second floor would house offices and a fitness center, and the remaining floors would be dedicated to hotel rooms. A rooftop pool and lounge terrace are also proposed with a full-service restaurant and bar.

Local-Serving Retail Component

The local-serving retail and restaurant component would be located on the ground floor and be the focus of the northwest corner of the modified project site as a community plaza. Local-serving retail would consist of business spaces to provide services to the local community. Small businesses may include such uses as coffee shops, food and beverage outlets, retail, print shops, laundry or tailoring services, among others.

Landscaping

Extensive landscaping is proposed on the ground level of the entire site and third and rooftop floors of the hotel building. On the ground level, primary landscaped areas include the entrance area; edge treatments; courtyard, pool, and spa areas; and buffer planting area. Specifically, the primary entranceway to the hotel development from East Guasti Road would be designed with a canal water feature, fountain sculpture, and terraced plantings.

The edge treatments along East Guasti Road and near the intersection of East Guasti Road and East Holt Boulevard would include an array of street trees and decorative flowering trees to provide an aesthetic and safe buffer from vehicular traffic, promoting a pedestrian-friendly environment for the local-serving community plaza. The courtyard, pool, and spa areas would include pools, a water garden, event spaces, a wellness garden, and a food and beverage pavilion landscaped with shade trees, low hedges, and grassy open areas. Lastly, the buffer planting area is located between Cucamonga Creek and the eastern modified project boundary and would include a dense screening hedge to provide a visual privacy barrier that delineates the boundary between the modified project site and trail users along the creek.

On the third floor, a meadow type landscaping is proposed with specimen trees, an herb garden, pathways, and outdoor seating areas with cabanas, a fire pit, and pocket lounges.

The rooftop area would be divided into the Sky Island on the west and High Gardens on the east. The Sky Island would include a central water feature and rock sculpture with a stone landscaping area, an expansive wooden deck, and pocket seating areas. The High Gardens would include a VIP pool with cabanas, chaise chairs, and outdoor living rooms.

Parking

A total of 932 parking spaces would be provided via a 27-space aboveground lot (for the local-serving retail uses) and a two-level, subterranean parking structure with 905 spaces (for the hotel). The subterranean areas would also include back-of-the-hotel facilities, storage, employee areas, and offices as well as mechanical and electrical equipment.

EMPIRE GROVES SPECIFIC PLAN

The proposed Specific Plan establishes land use regulations, development standards, and design guidelines for future development within the Specific Plan area.

Development Plan

The proposed development plan outlines the comprehensive land use framework, encompassing a summary of the modified project, a depiction of land uses specified in the Specific Plan, and various modified project elements, including landscape concepts and parking facilities. It also presents essential infrastructure plans, covering circulation, fire access, water supply, sewage, recycled water, solid waste, and community facilities.

The Specific Plan consists of one planning area (PA1), Hospitality Mixed-Use. The Hospitality Mixed-Use land use refers to a development that combines hotel uses, ancillary services, and amenities with local-serving commercial uses within a single property.

- *Hotel Use*: Hotel use is the primary component of Hospitality Mixed-Use and should occupy the majority of the FAR of the development. This includes guest rooms, office space for hotel administration, and may also include restaurant, bars, lounges, day spas, gyms, ballrooms, meeting rooms, and more.
- Local-Serving Retail Uses: Local-serving retail uses cater to the daily needs of the local community as well as the hotel use. These businesses may include coffee shops, restaurants, retail, print shops, laundry or tailoring services and similar types of uses. These types of uses can benefit shoppers visiting the surrounding area as well as nearby residents who can access these services by foot.

As detailed in Table 1, total anticipated Specific Plan buildout would be approximately 553,124 square feet of hotel use and 46,876 square feet of local-serving use, totaling 600,000 square feet.

As previously described, the City's MU-Multimodal designated areas (west of Archibald Avenue and south of I-10) encompass 72.56 acres, of which 10.43 acres fall in the

Specific Plan area. Based on TOP 2050 full buildout summary, the MU-Multimodal designated areas have an anticipated buildout of 2,449,727 square feet of nonresidential uses (approximately 553,124 square feet for lodging and approximately 1,896,603 square feet for retail and office development). As shown in Table 1, the proposed Specific Plan buildout for both hotel and local-serving retail use would be within the TOP 2050 maximum buildout assumptions for the project site based on the MU-Multimodal designation. Overall, the site's total anticipated buildout of 2,449,727 square feet under the MU-Multimodal designation would not be exceeded.

Circulation and Access

Potential roadway improvements in the modified project vicinity along East Holt Boulevard, East Guasti Road, and Airport Drive are identified in the Specific Plan that would complement future development of the area as well as improve connectivity.

The pedestrian circulation around the Specific Plan area is provided by existing sidewalks that have gaps at certain locations. The development of the Specific Plan would include sidewalks around the site and development of the community plaza at the intersection of East Holt Boulevard and East Guasti Road.

Infrastructure Plan

- *Domestic/Potable Water*: Water service to the Specific Plan area would be provided by the City. Currently, there is an existing 12-inch water main in East Guasti Road along the modified project frontage, and an existing 8-inch water main in East Holt Boulevard along the modified project frontage, both available for connection. The modified project proposes water line connections from the site to the existing water mains in East Guasti Road and East Holt Boulevard.

- *Sewer*: Sewer mains are maintained by the City of Ontario and wastewater is treated at the Inland Empire Utilities Agency (IEUA) Treatment Plant. Several regional trunk sewers collect sewage generated in the City and transport it to IEUA's Regional Plant No. 1 and Regional Plant No. 5 for treatment. The modified project proposes to install a sewer line on-site to connect to an existing 12-inch sewer main in East Holt Boulevard.

- *Recycled Water*: Recycled water is provided to the City by the IEUA from its four wastewater reclamation plants. Currently, there are recycled water mains in the vicinity of the Specific Plan Area, with a point of connection located at the intersection of East Guasti Road and East Holt Boulevard. The modified project proposes to install an 8-inch recycled water main in East Guasti Road that connects to an existing 8-inch recycled water main in Convention Center Way (north of East Holt Boulevard) to extend south in East Guasti Road to end east of the Cucamonga Creek Channel.

- *Stormwater*: The Specific Plan area would connect to existing storm drain infrastructure systems within adjacent roadways. Specifically, the modified project proposes an underground detention system and stormwater pump in the southeast of the site to convey treated stormwater flows on-site to an existing 108-inch storm drain line in Guasti Road.

- *Dry Utilities*: Electrical lines would be installed underground to connect to existing Southern California Edison (SCE) infrastructure. Similarly, the modified project would connect to existing gas lines provided by Southern California Gas Company (SoCalGas). Infrastructure supporting telephone services by AT&T and Verizon and cable television services provided by Time Warner Cable would be installed along with other utilities.

Development Standards

The development standards associated with the proposed Specific Plan serve as the authoritative document that delineates the specific land use designations and regulatory guidelines for the Specific Plan. The Specific Plan establishes standards, including those related to setbacks, maximum building height, floor area ratio, and lot coverage. Specific standards associated with utilities, public and private open space, bicycle parking, and loading areas are also detailed. Additionally, Specific Plan Table 3, *Allowable Land Uses*, details the allowable uses within the Specific Plan area.

Design Guidelines

The design guidelines establish a clear set of qualitative guiding principles that form a basis for the City to review development within the Specific Plan. The guidelines serve to establish high-quality design for new development and facilitate the design review and planning approval process relative to building configuration and architecture.

The guidelines are not intended as a literal requirement; instead, they serve as a framework for the design review process and cover key elements including building mass, elevation treatment and materials, entrances, façade design and composition, roof forms, materials, colors, landscaping, lighting, and signage. The intent is for the City to use the guidelines as part of the formal design review process, and for the City's decision-making body to make qualitative findings demonstrating such compliance.

CONSTRUCTION

The modified project is anticipated to be constructed in a single phase for a duration of approximately 15 months.

DISCRETIONARY ACTIONS

The modified project is anticipated to require the following City discretionary permits and approvals:

- CEQA Clearance;
- Development Plan;
- Specific Plan; and
- Development Agreement.

Additionally, the modified project may be required to obtain permits/approvals from the following agencies:

- ONT Inter-Agency Notification Process;
- FAR Part 77 Notification – Federal Aviation Administration; and
- NPDES Construction General Permit – Santa Ana Regional Water Quality Control Board.

2.4 ADDENDUM SCOPE OF ENVIRONMENTAL REVIEW

As discussed in the TOP 2050 SEIR, the approved project was determined to have less than significant impacts or no impact with regard to the following environmental issue areas:

- Aesthetics;
- Agriculture and Forestry Resources;
- Biological Resources;
- Energy;
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Mineral Resources
- Population and Housing;
- Public Services;
- Recreation;
- Utilities; and
- Wildfire.

The TOP 2050 SEIR established that, with mitigation, the approved project would result in less than significant impacts related to the following environmental issue areas:

- Geology and Soils; and
- Tribal Cultural Resources.

The TOP 2050 SEIR determined that the approved project would result in the following significant and unavoidable impacts:

- Air Quality;
- Cultural Resources;
- Noise; and
- Transportation.

This Addendum addresses changes resulting from implementation of the modified project to each of the environmental resource areas noted above.

This page intentionally left blank.

3.0 ENVIRONMENTAL ASSESSMENT

This comparative analysis has been undertaken to analyze whether the modified project would result in any new or substantially more severe significant environmental impacts as compared to the approved project that has been subject to the TOP 2050 SEIR. The comparative analysis discusses whether impacts are greater than, less than, or similar to the conclusions discussed in the TOP 2050 SEIR.

3.1 IMPACTS HAVING NO POTENTIAL TO RESULT IN NEW OR SUBSTANTIALLY MORE SEVERE SIGNIFICANT IMPACTS

- Agriculture and Forestry Resources: According to the California Department of Conservation, the modified project site is designated as Urban and Built-Up Land.[1] As such, no agricultural or forestry resources occur on-site. No new or substantially more severe significant impacts to agricultural and forestry resources would result from implementation of the modified project.

- Hazards and Hazardous Materials: The *Phase I Environmental Site Assessment: Proposed Empire Resort and Spa, Southeast Corner of E. Holt Boulevard and E. Guasti Road, APN 0110-322-33-0-000, City of Ontario, San Bernardino County, California 91761,* (Phase I ESA), prepared by Petra Geosciences, Inc., and dated December 5, 2023, was prepared for the modified project; refer to Appendix A, *Phase I ESA*. According to the Phase I ESA, the modified project site is not located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. Additionally, the Phase I ESA determined that no recognized environmental conditions, controlled recognized environmental conditions, or historical recognized environmental conditions were identified within or affecting the modified project site. Further, the modified project site is not located within 0.25-mile of a school. While modified project construction could involve the use of limited amounts of hazardous materials, such as paints and solvents, gasoline, diesel fuels, and other hazardous materials routinely utilized with construction equipment, activities would be short-term, and the materials used would not be in such quantities, or stored in such a manner, as to pose a significant safety hazard. Given that the modified project site was historically used for agriculture, it is possible that discolored soils, noxious odors, buried pipelines or irrigation channels, and/or other buried objects/debris may be encountered during clearing and grubbing, or future grading. However, similar to the approved project, all modified project-related construction activities would be subject to applicable laws and regulations governing the use, storage, and transportation of hazardous materials, specifically those established by the U.S. Department of Transportation,

[1] California Department of Conservation, *California Important Farmland Finder*, https://maps.conservation.ca.gov/DLRP/CIFF/, accessed August 14, 2024.

California Department of Transportation, and California Highway Patrol, as well as the Hazardous Materials Transportation Uniform Safety Act.

Operation of the proposed uses would involve the use of small amounts of hazardous materials, such as cleansers, paints, fertilizers, and pesticides for cleaning and maintenance purposes. However, uses of such hazardous materials would be regulated by the California Fire Code, as well as other federal, State, and local regulations related to the protection of the public's health and safety. Following compliance with existing local, State, and federal regulations, impacts would be less than significant in this regard. Thus, no new or substantially more severe significant impacts regarding hazards and hazardous materials would result from implementation of the modified project.

- Mineral Resources: According to Figure 5.12-1, *Areas of Mineral Resources Significance*, of TOP 2050 SEIR, the modified project site is identified as Mineral Resource Zone 3 (MRZ-3), which are areas where the significance of mineral deposits cannot be determined from the available data. Development in an MRZ-3 area would not result in significant impacts because mineral resources of Statewide or local importance are not identified in those areas on the California Geological Survey's maps. As such, no new or substantially more severe significant impacts related to mineral resources would result from implementation of the modified project.

- Population and Housing: The modified project site is currently vacant; therefore, the modified project would not displace any existing housing or residents. The proposed hotel and retail uses are considered employment-generating uses. Employment opportunities resulting from the modified project could directly increase the City's population, as employees (and their families) may choose to relocate to the City. However, estimating the number of future employees who may choose to relocate to the City would be highly speculative, since many factors influence personal housing location decisions (e.g., family income levels and the cost and availability of suitable housing in the local area). Further, many modified project employees could already live within Ontario or neighboring jurisdictions. Nonetheless, buildout of the modified project site and other areas designated MU-Multimodal was projected by TOP 2050 to create 5,993 jobs associated with lodging and retail/office uses and was analyzed in TOP 2050 SEIR. The modified project is consistent with the MU-Multimodal designation and thus, would not substantially increase employment growth beyond what was previously analyzed in TOP 2050 SEIR. Additionally, the modified project would support this potential increase in population by providing for the infrastructure to accommodate the projected growth (e.g., utility and roadway improvements). Further, the modified project would support the goals of TOP 2050 by providing employment in proximity to multimodal transit. As such, no new or substantially more severe significant impacts related to population and housing would result from implementation of the modified project.

- Public Services: As discussed above under *Population and Housing*, while the proposed hotel and retail uses may be growth inducing, such growth has been projected by TOP 2050 for MU-Multimodal designated areas within Ontario. As such, while new development may increase demand for public services, including police protection, fire protection, school, and library services, TOP 2050 SEIR determined that buildout of the approved project would be adequately served by existing and planned public services. No new or substantially more severe significant impacts related to public services would result from implementation of the modified project.

- Recreation: As discussed above under *Population and Housing*, while the proposed hotel and retail uses may be growth inducing, such growth has been projected by TOP 2050 for MU-Multimodal Designated areas within Ontario. Additionally, no housing is proposed under the modified project, and the modified project would include extensive public and private open space areas to accommodate the proposed development. As such, demand for parks and other recreational facilities would not substantially increase. No new or substantially more severe significant impacts related to recreation would result from implementation of the modified project.

- Wildfire: According to the California Department of Forestry and Fire, the modified project site is not located in or near a State Responsibility Area Fire Hazard Severity Zone.[2] According to Figure 5.20-2, *Fire Hazard Severity Zones*, of TOP 2050 SEIR, the modified project site is not located in or near a fire hazard zone. Thus, no new or substantially more severe significant impacts related to wildfire would result from implementation of the modified project.

3.2 IMPACTS POTENTIALLY RESULTING IN NEW OR SUBSTANTIALLY MORE SEVERE SIGNIFICANT IMPACTS

3.2.1 Aesthetics/Light And Glare

Approved Project Findings

TOP 2050 SEIR determined that the approved project would have no impact on State-designated scenic highways as there are none in the City. TOP 2050 SEIR concluded that the approved project would not propose any development of a design and/or scale that would impact views of the San Gabriel Mountains, that implementation of the approved project would not conflict with existing zoning and regulations governing scenic quality, and that the approved project would be subject to the *City of Ontario Municipal Code* (Municipal Code) regarding potential light and glare impacts. Overall, aesthetic

[2] California Department of Forestry and Fire, *Fire Hazard Severity Zones in State Responsibility Area*, effective April 1, 2024, https://calfire-forestry.maps.arcgis.com/apps/webappviewer/index.html?id=988d431a42b242b29d89597ab693d008, accessed August 14, 2024.

impacts were determined to be less than significant. No mitigation measures were required for the approved project.

Modified Project Analysis

The modified project proposes a hotel and retail development in accordance with the proposed Empire Groves Specific Plan that establishes a development plan, development standards, and design guidelines to guide development within the Specific Plan area. As detailed in Section 2.2, *Environmental Setting*, the MU-Multimodal land use designation permits lodging and retail on-site, which is consistent with the modified project's uses. While the MU-Multimodal land use designation permits low- to mid-rise buildings ranging from three to 10 stories (approximately 30 to 100 feet) in height, the proposed Specific Plan would permit a maximum height of 10 to 15 stories (approximately 100 to 140 feet). This would be consistent with the allowable building height for the modified project site based on the *Ontario International Airport Land Use Compatibility Plan* (ONT ALUCP; refer to Section 3.2.9, *Land Use and Planning*). The Specific Plan would include development standards and design guidelines to ensure high-quality design and facilitate the design review and planning approval process within the Specific Plan area. Development standards would require site setbacks ranging from five to 50 feet, a floor area ratio of 1.0, and a maximum 40 percent lot coverage. The Specific Plan would require that public open space be accessible at the pedestrian level from public sidewalks and would set minimum dimensions for private open spaces that are visible to the public. Design guidelines would provide direction regarding building massing and elevation treatments, as well as site landscaping, lighting, and sign design. Specifically, lighting would need to be shielded in order to minimize light trespass, glare, and sky glow. Further, lighting provision for modified project construction are detailed in Municipal Code, Title 4, Chapter 11, Section 4-11.11, *Construction site security provisions*. Collectively, the proposed Specific Plan development standards and design guidelines and existing Municipal Code requirements would ensure the proposed development is consistent with regulations governing scenic quality.

Scenic views of the San Gabriel Mountains, the dominant scenic resource within the City, would not be obstructed with buildout of the proposed Specific Plan. Proposed design guidelines and development standards related to building mass, elevation, and height would ensure the proposed development does not have the potential to alter scenic views provided by the backdrop of the San Gabriel Mountains as the peaks rise to 7,000 feet above mean sea level.

Further, the proposed development would be adjacent to similar uses, including existing hotels to the north and west. Overall, the modified project would be of similar scale and character to surrounding uses and would be compatible with the buildout envisioned for the MU-Multimodal land use designated site by TOP 2050. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Certified TOP 2050 SEIR Mitigation Measures: Not Applicable.

Addendum Project Conditions: None.

3.2.2 Air Quality

Approved Project Findings

According to TOP 2050 SEIR, TOP 2050 would be inconsistent with the South Coast Air Quality Management District's (SCAQMD's) Air Quality Management Plan (AQMP) because buildout under TOP 2050 would generate short- and long-term emissions that exceed SCAQMD's regional significance thresholds and cumulatively contribute to the nonattainment designations of the South Coast Air Basin (Basin). Additionally, operation of industrial and warehousing land uses accommodated under TOP 2050 could expose sensitive receptors to substantial toxic air contaminant concentrations.

Incorporation of mitigation measures that would apply to a development project's construction phase (2010 TOP EIR Mitigation Measure 3-1) and operational phase (2010 TOP EIR Mitigation Measure 3-2 and TOP 2050 SEIR Mitigation Measure AQ-1) would reduce short- and long-term emissions and subsequently, impacts associated with consistency with the SCAQMD. Additionally, TOP 2050 goals and policies would promote increased capacity for alternative transportation modes.

However, due to the magnitude of residential units that would be planned under TOP 2050 to accommodate the City's Regional Housing Needs Assessment requirements, no additional mitigation measures are available that would reduce impacts below SCAQMD thresholds. Impact pertaining to consistency with an adopted AQMP, short-term and long-term air pollutants emissions, and health impacts to nearby sensitive receptors would remain significant and unavoidable.

According to TOP 2050 SEIR, TOP 2050 would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people. Impacts would be less than significant in this regard.

Modified Project Analysis

The *Empire Groves Hotel Air Quality Impact Analysis, City of Ontario* (Air Quality Impact Analysis), prepared by Urban Crossroads and dated April 19, 2024, was prepared to evaluate potential air quality impacts associated with the modified project; refer to Appendix B, *Air Quality Impact Analysis*.

Project Consistency with AQMP

In December 2022, SCAQMD released the *Final 2022 AQMP* (2022 AQMP). The 2022 AQMP continues to evaluate current integrated strategies and control measures to meet the California Ambient Air Quality Standards (CAAQS), as well as explore new and

innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, State, and local levels. Similar to the 2016 AQMP, the 2022 AQMP incorporates scientific and technological information and planning assumptions, including the Southern California Association of Governments (SCAG) *2020-2045 Regional Transportation Plan/Sustainable Communities Strategy* (2020-2045 RTP/SCS), a planning document that supports the integration of land use and transportation to help the region meet the Federal Clean Air Act requirements. The modified project's consistency with the AQMP will be determined using the 2022 AQMP as discussed below.

- *Consistency Criterion No. 1*: The proposed project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

As demonstrated below, the modified project's localized and regional construction-source emissions would not exceed applicable regional significance threshold and LST thresholds. As such, a less than significant impact is expected. Further, the modified project's localized and regional operation-source emissions would not exceed applicable regional significance threshold and localized significance thresholds. As such, a less than significant impact is expected. On the basis of the preceding discussion, the modified project is determined to be consistent with the first criterion.

- *Consistency Criterion No. 2*: The project will not exceed the assumptions in the AQMP based on the years of project buildout phase.

Peak day emissions generated by construction activities are largely independent on land use assignments, but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities. As such, when considering that no emissions thresholds will be exceeded, a less than significant impact would result.

TOP 2050 designates the modified project site as MU-Multimodal. The MU designation allows for a maximum FAR of 1.0 for office and retail uses. Intensive office, retail, and residential uses are envisioned to be integrated with the future multimodal transit station that is under consideration, which links rail, regional, local and airport transit. The modified project includes the development of a hotel with 600 rooms and suites, ballrooms, a spa & fitness center, meeting and conference rooms as well as an outdoor pool and event lawn and locally serving retail uses. Since the modified project's proposed land uses are consistent with TOP 2050 and as the modified project's construction and operational-source air pollutant emissions would not exceed the regional or localized significance thresholds, the modified project is determined to be consistent with the second criterion.

In conclusion, the modified project would not have the potential to result in or cause federal and/or State ambient air quality standards (i.e., National Ambient Air Quality Standards [NAAQS] and/or CAAQS) violations. The modified project's proposed uses are consistent with the site's land use designation and the modified project would not exceed the regional or localized construction and operational thresholds. As such, the modified project is considered to be consistent with the 2022 AQMP and impacts in this regard would be less than significant. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Construction Emissions

As part of the Air Quality Impact Analysis, modified project-related construction-source and operational-source air quality emissions from criteria pollutants (volatile organic compounds [VOCs], nitrous oxides [NO_x], carbon monoxides [CO], sulfur oxides [SO_x], coarse particulate matter [PM_{10}], and fine particulate matter [$PM_{2.5}$]) were calculated using the California Emissions Estimator Model (CalEEMod) version 2022.1.1.22. Output from the model runs for both construction and operational activity are provided in Appendix B.

The estimated maximum daily construction emissions without mitigation are summarized in Table 2, *Overall Construction Emissions Summary*. Under the assumed scenarios, emissions resulting from modified project construction would not exceed criteria pollutant thresholds established by the SCAQMD. Therefore, construction impacts in this regard would be less than significant. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Table 2
Overall Construction Emissions Summary

Year	Emissions (pounds/day)					
	VOC	NO_X	CO	SO_2	PM_{10}	$PM_{2.5}$
Summer						
2024	4.86	85.10	59.57	0.32	15.68	5.96
2025	39.43	27.80	72.35	0.08	9.62	2.95
Winter						
2024	3.67	20.66	46.45	0.06	7.91	2.33
2025	3.30	19.14	43.84	0.06	7.84	2.27
Maximum Daily Emissions	**39.43**	**85.10**	**72.35**	**0.32**	**15.68**	**5.96**
SCAQMD Thresholds	75	100	550	150	150	55
Threshold Exceeded?	***No***	***No***	***No***	***No***	***No***	***No***

Notes: VOC = volatile organic chemical; NO_x = nitrous oxide; CO = carbon monoxide; SO_2 = sulfur dioxide; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter

Source: Urban Crossroads, *Empire Groves Hotel Air Quality Impact Analysis, City of Ontario*, April 19, 2024; refer to Appendix B, *Air Quality Impact Analysis*.

Operational Emissions

Operational activities associated with the modified project would result in emissions of VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$. Operational emissions are expected from the following primary sources:

- *Area Source Emissions*: Area sources include architectural coatings, consumer products, and landscape maintenance equipment.
- *Energy Source Emissions*: Energy source emissions include combustion emissions associated with generation of natural gas and electricity. However, because electrical generating facilities for the modified project area are located either outside the region (State) or offset through the use of pollution credits (RECLAIM) for generation within the Basin, criteria pollutant emissions from off-site generation of electricity are excluded from the evaluation of significance.
- *Mobile Source Emissions*: Modified project-related air quality emissions derive primarily from vehicle trips associated with the modified project, including employee trips and commercial trips to and from the site associated with the proposed uses. Moreover, vehicles traveling on paved roads would be a source of fugitive emissions due to the generation of road dust inclusive of brake and tire wear particulates. Trip characteristics available from the modified project-specific traffic impact analysis.

The estimated operational-source emissions are summarized in Table 3, *Summary of Peak Operational Emissions*. Modified project operational activities would not exceed the numerical thresholds of significance established by the SCAQMD for emissions of any criteria pollutant. As such, operational impacts would be considered less than significant. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Table 3
Summary of Peak Operational Emissions

Source	Emissions (pounds/day)					
	VOC	NO_X	CO	SO_2	PM_{10}	$PM_{2.5}$
Summer						
Mobile Source	19.66	18.24	172.16	0.41	35.25	9.14
Area Source	23.33	0.40	47.22	0.00	0.08	0.06
Energy Source	0.29	5.21	4.38	0.03	0.40	0.40
Maximum Daily Emissions	**43.28**	**23.84**	**223.76**	**0.44**	**35.73**	**9.60**
SCAQMD Thresholds	75	100	550	150	150	55
Threshold Exceeded?	***No***	***No***	***No***	***No***	***No***	***No***
Winter

Localized Significance to Sensitive Receptors

The Air Quality Impact Analysis makes use of methodology included in the SCAQMD *Final Localized Significance Threshold Methodology* (LST Methodology). The SCAQMD has established that impacts to air quality are significant if there is a potential to contribute or cause localized exceedances of the federal and/or State ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs). Based on SCAQMD's LST Methodology, emissions of concern during construction activities are those associated with on-site NO_X, CO, $PM_{2.5}$, and PM_{10} emissions. The LST Methodology clearly states that "off-site mobile emissions from the project should not be included in the emissions compared to LSTs." As such, for purposes of the construction LST analysis, only emissions included in the CalEEMod "on-site" emissions outputs were considered.

The SCAQMD recommends that the nearest sensitive receptor be considered when determining a project's localized air quality impacts. The nearest land use where an individual could remain for 24 hours to the project site has been used to determine localized construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$ (since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time). Receptors in the modified project area are described and shown in Air Quality Impact Analysis Exhibit 3-B, *Receptor Locations*.

- *R1*: Location R1 represents the Ontario Gateway Hotel at 2200 E Holt Blvd, approximately 176 feet west of the modified project site.
- *R2*: Location R2 represents the existing residence at 304 N Placer Privado, approximately 2,802 feet north of the modified project site.
- *R3*: Location R3 represents the existing building of Holiday Inn Ontario Airport at 2155 E Convention Center Way, approximately 237 feet north of the modified project site.
- *R4*: Location R4 represents the existing residence at 2505 E Date Palm Paseo, approximately 1,968 feet north of the modified project site.
- *R5*: Location R5 represents the existing residence at 710 Via Dolcetto, approximately 3,593 feet northeast of the modified project site.
- *R6*: Location R6 represents the Frontier Center at 2151 E Convention Center Way, approximately 232 feet north of the modified project site.

In order to estimate localized pollutant concentrations resulting from modified project construction, the SCAQMD-approved American Meteorological Society/EPA Regulatory Model (AERMOD) dispersion model was utilized. AERMOD model outputs are provided in Appendix B. As illustrated in Table 4, *Localized Significance Summary Peak Construction*, emissions during the peak construction activity would not exceed the SCAQMD's localized significance thresholds at the maximally exposed receptor location, All other modeled locations in the study area would experience a lesser concentration and consequently a lesser impact.

Table 4
Localized Significance Summary Peak Construction

Peak Construction	CO		NO_2	PM_{10}	$PM_{2.5}$
	Averaging Time				
	1-Hour	8-Hour	1-Hour	24-Hour	24-Hour
Peak Day Localized Emissions	0.05	0.03	0.0366	2.72	1.57
Background Concentration	1.30	1.00	0.085	--	
Total Concentration	**1.35**	**1.03**	**0.12**	**2.72**	**1.57**
SCAQMD LST	*20*	*9*	*0.18*	*10.4*	*10.4*
Threshold Exceeded?	***NO***	***NO***	***NO***	***NO***	***NO***

Notes: NO_2 = nitrogen dioxide; CO = carbon monoxide; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter

Source: Urban Crossroads, *Empire Groves Hotel Air Quality Impact Analysis, City of Ontario*, April 19, 2024; refer to Appendix B, *Air Quality Impact Analysis*.

According to SCAQMD LST methodology, LSTs would apply to the operational phase of a proposed project, if the project includes stationary sources, or attracts mobile sources that may spend long periods queuing and idling at the site (e.g., transfer facilities and warehouse buildings). The modified project does not include such uses, and thus, due to the lack of significant stationary source emissions, no long-term localized significance threshold analysis is warranted.

Based on the Air Quality Impact Analysis, the modified project would not result in potentially adverse CO concentrations or "hot spots". Further, detailed modeling of project-specific CO "hot spots" is not needed to reach this conclusion. It has long been recognized that CO hotspots are caused by vehicular emissions, primarily when idling at congested intersections. Currently, the allowable CO emissions standard in California is a maximum of 3.4 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). To establish a more accurate record of baseline CO concentrations affecting the Basin, a CO "hot spot" analysis was conducted in 2003 for four busy intersections in Los Angeles at the peak morning and afternoon time periods. This 2003 "hot spot" analysis did not predict any violation of CO standards at any of these busy intersections.

An adverse CO concentration, known as a "hot spot," would occur if an exceedance of the State one-hour standard of 20 ppm or the eight-hour standard of 9 ppm were to occur.

The ambient 1-hour and 8-hour CO concentration within the modified project study area is estimated to be 1.3 ppm and 1.0 ppm, respectively (2022 data from I-10 Near Road monitoring station). Therefore, even if the traffic volumes for the modified project were double or even triple the traffic volumes generated at the Long Beach Boulevard and Imperial Highway intersection (the nearest intersection out of the four busy intersections studied in 2003 “hot spot” analysis), coupled with the on-going improvements in ambient air quality, the modified project would not be capable of resulting in a CO “hot spot” at any study area intersections.

In December 2018, in the case of Sierra Club v. County of Fresno (2018) 6 Cal.5th 502, the California Supreme Court held that an EIR’s air quality analysis must meaningfully connect the identified air quality impacts to the human health consequences of those impacts, or meaningfully explain why that analysis cannot be provided. As the modified project’s emissions would comply with federal, State, and local air quality standards, the modified project’s emissions are not sufficiently high enough to use a regional modeling program to correlate health effects on a Basin-wide level and would not provide a reliable indicator of health effects if modeled.

In conclusion, results of the LST analysis indicate that the modified project would not exceed the SCAQMD localized significance thresholds during construction. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations during modified project construction. Additionally, the modified project would not have the potential to exceed the SCAQMD localized significance thresholds during operation as the modified project lack significant stationary source emissions. Further, modified project-related traffic would not create or result in a CO “hotspot.” Lastly, as the modified project’s emissions would comply with federal, State, and local air quality standards, they are not sufficiently high enough to use a regional modeling program to correlate health effects on a basin-wide level and would not provide a reliable indicator of health effects if modeled. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations as the result of modified project and localized impacts would be less than significant. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Odor

The modified project does not contain land uses typically associated with emitting objectionable odors. Potential odor sources associated with the modified project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the modified project’s (long-term operational) uses. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that modified project-generated refuse would be stored in covered containers and removed at regular intervals in compliance

with current solid waste regulations. The modified project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors and other emissions (such as those leading to odors) associated with construction and operations activities of the modified project would be less than significant. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Certified TOP 2050 SEIR Mitigation Measures: Not Applicable.

Addendum Project Conditions: None.

3.2.3 Biological Resources

Approved Project Findings

According to TOP 2050 SEIR, there are no sensitive plant species or wildlife movement corridors within the City. However, TOP 2050 SEIR requires all future development located within special-status wildlife critical habitat in the City, including within jurisdictional waters and wetlands, and conservation plans and areas, to conduct focused species surveys where applicable. Additionally, future projects would be required to consult and coordinate with applicable regulating agencies, including, but not limited to, U.S. Fish and Wildlife Service (USFWS), United States Army Corps of Engineers (USACE), Regional Water Quality Control Board (RWQCB), and California Department of Fish and Wildlife (CDFW), and implement necessary mitigation measures pursuant to the Federal Endangered Species Act (FESA), Migratory Bird Treaty Act of 1918 (MBTA), Clean Water Act (CWA), and California Endangered Species Act (CESA). Following the focused surveys and agency consultation, any resulting mitigation measures should be implemented. Overall, TOP 2050 SEIR determined that less than significant impacts to biological resources would result as the approved project would not grant specific entitlements for development and would not result in development of new, previously undeveloped areas of the City. No mitigation measures were required for the approved project.

Modified Project Analysis

The *Biological Technical Report for the Ontario Hotel Project, San Bernardino County, California* (Biological Technical Report), prepared by ECORP Consulting, Inc., and dated December 2024, was prepared for the modified project; refer to Appendix C, *Biological Technical Report*. The Biological Technical Report involved a literature review using the CDFW's California Natural Diversity Database (CNDDB), the California Native Plant Society's (CNPS) Electronic Inventory, the Natural Resources Conservation Service (NRCS) Web Soil Survey, NRCS Hydric Soils List, USFWS National Wetlands Inventory, and corresponding U.S. Geological Survey (USGS) topographic maps, a biological reconnaissance survey of the modified project site and 500-foot buffer conducted on June 28, 2023, and a tree inventory by a certified arborist.

Riparian Habitat and Sensitive Natural Communities

The Biological Technical Report determined that the modified project site does not contain any riparian habitat or other sensitive natural communities that would need to be preserved, is not located within a designated wildlife corridor or linkage, does not contain any State or federally protected wetlands, and is not located in a habitat conservation plan or natural community conservation plan. As such, no impacts would occur in this regard.

Special-Status Species

No special-status plant or wildlife species were observed during the site survey; however, 12 special-status plant species and 50 special-status wildlife species appeared in the literature review as occurring within five miles of the modified project site. Of the 12 special-status plant species identified, Parry's spineflower (*Chorizanthe parryi* var. *parryi*) and Brand's star phacelia (*Phacelia stellaris*) have a moderate potential to occur on-site. It is acknowledged that neither species was identified on the modified project site during the field survey and the site provides only marginally or limited amounts of suitable habitat (including soils and elevation factors). Further, Parry's spineflower and Brand's star phacelia are not federally or State-listed species. Therefore, it is not likely that the modified project would require a mechanism for "take" of federally or State-listed plant species. If present on-site, these two species are only expected to occur in very low density and modified project-related impacts would not be expected to contribute to an overall decline of populations for these species. Therefore, less than significant impacts would occur to special-status plant species.

Of the 50 special-status wildlife species identified, Crotch bumble bee (*Bombus crotchii*), southern California legless lizard (*Anniella stebbinsi*), burrowing owl (*Athene cunicularia*), northwestern San Diego pocket mouse (*Chaetodipus fallax fallax*), and Los Angeles pocket mouse (*Perognathus longimembris brevinasus*), have a moderate potential to occur on-site. The southern California legless lizard, northwestern San Diego pocket mouse, Los Angeles pocket mouse are all CDFW species of special concern and, if present on the modified project site, these species could be subject to direct impacts through ground disturbance and indirect impacts from construction noise, vibrations, and increased human activity related to modified project development. However, due to the lack of high-quality habitat within the modified project area, the site's long history of anthropogenic disturbances, and the presence of urban development immediately adjacent to the modified site, if present on the modified project site, these species are only expected to occur in very low density and modified project-related impacts would not be expected to contribute to the overall decline of populations for these species. Therefore, impacts to southern California legless lizard, northwestern San Diego pocket mouse, Los Angeles pocket mouse would not be considered significant under CEQA,

Crotch bumble bee and burrowing owl, both candidate species for listing under CESA, were not present on the modified project site during the field survey; however, these species were determined to have moderate potential to occur based on the presence of

marginally suitable habitat and/or recent (less than 20 years old) species records within five miles of the modified project site. To ensure good faith effort and best practices are implemented during ground disturbing activities, Standard Condition of Approval (SCA) BIO-1 through SCA BIO-3 would require implementation of best management practices, including pre-construction surveys, monitoring, and other avoidance measures to reduce potential impacts to special-status wildlife species. Specifically, SCA BIO-1 requires pre-construction surveys be conducted based on established protocols provided by the CDFW and/or USFWS, SCA BIO-2 requires construction monitoring to ensure compliance with environmental regulations including the MBTA, and SCA BIO-3 requires consultation with CDFW and/or USFWS if special-status wildlife species are observed during monitoring. Thus, impacts in this regard would be less than significant.

Nesting Birds and Roosting Bats

During the tree inventory, potential nesting habitat for migratory birds and raptors protected by the MBTA and California Fish and Game Code was present in the river red gum (*Eucalyptus camaldulensis*) and Peruvian pepper trees (*Schinus mole*) scattered throughout the modified project site. Suitable nesting habitat for ground-nesting bird species, such as mourning doves, as well as suitable roosting habitat for foliage roosting bat species could occur on-site. The project would be subject to compliance with the MBTA and California Fish and Game Code regarding nesting birds. Therefore, SCA BIO-2 would require construction monitoring to ensure best practices to minimize impacts to biological resources are implemented.

The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Certified TOP 2050 SEIR Mitigation Measures: Not Applicable.

Addendum Project Conditions:

SCA BIO-1 Pre-construction Surveys. A biologist should conduct surveys for plants species covered by the San Bernardino County Development Code – Plant Protection and Management (Chapter 88.01) and special-status wildlife species (e.g., desert tortoise, Crotch bumble bee, and burrowing owl), as well as for nesting birds. Surveys should follow established protocols provided by the California Department of Fish and Wildlife (CDFW) and/or U.S. Fish and Wildlife Service (USFWS), if applicable. If special-status species or nesting birds are identified, the biologist should coordinate with CDFW and/or USFWS to develop and implement appropriate measures. These may include establishing protective buffer zones, rescheduling activities to avoid sensitive periods, or other measures.

SCA BIO-2 Construction Monitoring. During initial ground-disturbing and vegetation-clearing activities, a biologist should conduct daily clearance surveys

("sweeps") to ensure compliance with environmental regulations, including the Migratory Bird Treaty Act (MBTA). If an active bird nest, protected by the MTBA or other special-status resource is located, the biologist should establish a visible disturbance-free buffer zone around the nest or resource. Construction activities within these buffer zones should only proceed once the biologist determines the nest is no longer active.

SCA BIO-3 Response to Wildlife Observations. If special-status wildlife species are observed during monitoring, consultation with the California Department of Fish and Wildlife (CDFW) and/or U.S. Fish and Wildlife Service (USFWS) is advised to establish and implement additional protective measures. These may include further monitoring or specific work restrictions to ensure compliance with environmental regulations, including the Migratory Bird Treaty Act (MBTA) and the San Bernardino County Development Code – Plant Protection and Management (Chapter 88.01).

3.2.4 Cultural Resources

Approved Project Findings

According to TOP 2050 SEIR, implementation of TOP 2050 could impact historic resources. TOP 2050 would result in an increase in land use intensity but would not result in development in areas of the City that were not planned for development under TOP 2010. Nonetheless, historical resources categorized under the City's Development Code as Tier III could still be potentially impacted with implementation of new land uses under TOP 2050. 2010 TOP EIR Mitigation Measure 5-1 would require historic or potentially historic resources to be evaluated for historic significance through the City's Development Code tier system. Major modification or demolition of Tier III resources may be appropriate under certain circumstances. If demolition occurs, the City requires historic resources to be documented and historic features to be salvaged and requires a demolition mitigation fee. Provided that major modification or demolition of Tier III resources may still occur upon implementation of 2010 TOP EIR Mitigation Measure 5-1, the measure would not provide a high level of protection for Tier III historic resources under CEQA. Therefore, impacts to historic resources were determined to remain significant and unavoidable.

Implementation of TOP 2050 could impact archaeological resources as future development that would be accommodated by TOP 2050 could potentially unearth previously unrecorded resources. 2010 TOP EIR Mitigation Measure 5-2 would require preservation and curation of archeological resources if uncovered during development. Implementation of 2010 TOP EIR Mitigation Measure 5-2 would reduce potential impacts to archeological resources to a less than significant level.

According to TOP 2050 SEIR, grading activities would not adversely impact human remains, if accidently uncovered, because procedures are required under the Public Resources Code and California Health and Safety code. Although soil-disturbing activities

associated with development in accordance with TOP 2050 could result in the discovery of human remains, compliance with existing regulations would ensure that significant impacts to human remains would not occur.

Modified Project Analysis

The *Archaeological Resources Inventory and Evaluation Report for the Ontario Hotel Project on the East Corner of Holt Boulevard and Guasti Road, San Bernardino County, California* (Archaeological Resources Report), prepared by ECORP Consulting, Inc. and dated August 2023, was prepared to evaluate potential cultural resources impacts associated with the modified project; refer to Appendix D, *Archaeological Resources Report*. The Archaeological Resources Report included a records search for the modified project site using the California Historical Resources Information System (CHRIS) at the South-Central Coastal Information Center (SCCIC) at California State University, Fullerton; literature review, and a field survey. In addition to the official records and maps for archaeological sites and surveys in San Bernardino County, the following historic references were also reviewed during the literature review: Built Environment Resource Directory; the National Register Information System; Office of Historic Preservation, California Historical Landmarks; California Points of Historical Interest Caltrans State Bridge Inventory; and Historic Spots in California. Additionally, a search for a local historical registry was conducted at Ontario Heritage, the nearest historical society in the City of Ontario.

The records search results indicated that 22 previous cultural resources studies have been conducted within one mile of the modified project area. As a result of those studies, no archaeological resources have been previously recorded within the modified project site. Consultation with Ontario Heritage indicated the possible presence of a historic building in the modified project site; however, no structure was identified through the literature review, historic aerial and topographic map review, or field survey.

As a result of the field survey, a single historic-period isolated artifact, OH-1 (a small shard of sun-colored amethyst glass), was recorded within the modified project site. OH-1 was evaluated using the National Register of Historic Places and California Register of Historical Resources eligibility criteria and found not eligible for listing under any criteria. OH-1 does not contribute to any known or suspected historic districts; and is neither considered to be a Historic Property for the purpose of Section 106 National Historic Preservation Act (NHPA), nor a Historical Resource under CEQA. OH-1 is not listed in the local register of historical resources, as defined in PRC 5020.1(k), has not been identified as significant in a historical resources survey, as defined in PRC 5024.1(g), and has not been determined to be historically significant by the CEQA lead agency. Therefore, it is not a historical resource under CEQA and is not a historic property under Section 106 of the NHPA.

In conclusion, the records search did not yield any historic-period or pre-contact cultural resources within the modified project site. The field survey identified a single historic-period isolated find. Isolated finds are not considered Historic Properties under Section

106, nor are they considered historic properties under CEQA. Therefore, no Historic Properties under Section 106 of the NHPA or Historical Resources under CEQA would be affected by the modified project.

Due to the modified project area being covered by Holocene alluvium deposit during the period of human occupation in the Americas and the proximity to Cucamonga Creek, which was channelized during the historic period, there exists a potential for buried pre-contact and historic archaeological sites within the modified project area. However, due to a history of agricultural use, and evidence of earthmoving activities related to the Cucamonga Creek, the Interstate 10 freeway and on-ramp, the Archaeological Resources Report concluded that potential for intact historic subsurface cultural deposits is low.

Nonetheless, there is a potential for disturbing previously unknown archaeological resources during excavation into native soil materials. 2010 TOP EIR Mitigation Measure 5-2 is applicable to the modified project and would require preservation and curation of archeological resources if uncovered during development. As such, upon implementation of 2010 TOP EIR Mitigation Measure 5-2, modified project-related impacts to archeological resources would be reduced to less than significant levels.

Similar to TOP 2050, although soil-disturbing activities associated with development of the modified project could result in the discovery of human remains, compliance with existing law, including procedures are required under the Public Resources Code and California Health and Safety code, would ensure that significant impacts to human remains would not occur. No impacts would occur in this regard.

Overall, cultural impacts would be less than significant with implementation of 2010 TOP EIR Mitigation Measure 5-2. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Certified 2010 TOP EIR Mitigation Measures:

5-2 In areas of documented or inferred from evident archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:

a) Archaeologists and/or paleontologist shall be retained for the modified project and will be on call during grading and other significant ground-disturbing activities.
b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee

is satisfied that adequate provisions are in place to protect these resources.

c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the modified project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including a catalog with museum numbers.

Certified TOP 2050 SEIR Mitigation Measures: Not Applicable.

Addendum Project Conditions: None.

3.2.5 Energy

Approved Project Findings

According to TOP 2050 SEIR, regulatory compliance (e.g., Building Energy Efficiency Standards [commonly known as Title 24], CALGreen [California's green building code], California Renewables Portfolio Standard [RPS], and Corporate Average Fuel Economy [CAFÉ] standards) would increase building energy efficiency and vehicle fuel efficiency and reduce building energy demand and transportation-related fuel usage. Additionally, TOP 2050 includes policies related to land use and transportation planning and design, energy efficiency, public and active transit, and renewable energy generation that will contribute to minimizing building and transportation-related energy demands overall and demands on nonrenewable sources of energy. Implementation of proposed policies under TOP 2050 and City's Community Climate Action Plan (CCAP), in conjunction with regulatory requirements would ensure that energy demand associated with growth under TOP 2050 would not be inefficient, wasteful, or unnecessary. Therefore, TOP 2050 would not result in new or a substantial increase in magnitude of impacts. Furthermore, TOP 2050 includes Environmental Resources Element and Safety Element policies that would support the Statewide goal of transitioning the electricity grid to renewable sources and employ best practices regarding energy-saving standards. Therefore, implementation of TOP 2050 would not conflict with or obstruct implementation of California's RPS program. TOP 2050 SEIR determined that energy-related impacts would be less than significant.

Modified Project Analysis

The analysis of impacts related to energy use considers construction and operations of the modified project. The analysis of operational electricity and natural gas usage is based on the CalEEMod modeling results for the modified project from the Air Quality Impact Analysis. The modified project's estimated electricity and natural gas consumption is based primarily on CalEEMod's default settings for San Bernardino County and consumption factors provided by SCE and SoCalGas, the electricity and natural gas providers for the City and the modified project site, respectively. The results of the

CalEEMod modeling are included in Appendix B; results of energy use are included in Appendix E, *Energy Analysis*. The amount of operational fuel consumption was estimated using the modified project's annual vehicle miles traveled (VMT) as modeled in CalEEMod, and California Air Resources Board (CARB) Emissions Factor 2021 (EMFAC2021) website platform, which provides typical fuel efficiency for the County.

Construction

This analysis focuses on the on-road (automotive) fuel consumption associated with construction vehicle trips and off-road fuel consumption associated with construction equipment usage. The modified project's construction equipment fuel consumption is estimated from the modified project's construction equipment, timing/phasing, and hours of duration for construction equipment as modeled in CalEEMod.

The modified project's estimated construction-related energy consumption is summarized in Table 5, *Energy Consumption*.

Table 5
Energy Consumption

Energy Type	Modified Project Annual Energy Consumption[1]	San Bernadino County Annual Energy Consumption[2]	Percentage Increase Countywide
Electricity Consumption (MWh)	11,975	16,629,614	0.0720%
Natural Gas Consumption (therms)	194,008	562,123,065	0.0345%
Construction Off-Road Fuel Consumption (Gallon)	37,165	18,336,278	0.2027%
Construction On-Road Fuel Consumption (Gallon)	205,723	205,723,206	0.1000%
Operational Automotive Fuel Consumption (Gallon)	938,341	1,110,012,646	0.0845%

Notes:
1. Modified project electricity and natural gas consumptions as modeled in California Emissions Estimator Model (CalEEMod) computer model provided in Urban Crossroads, *Empire Groves Hotel Air Quality Impact Analysis, City of Ontario*, April 19, 2024; refer to Appendix B, *Air Quality Impact Analysis*. Fuel consumption calculated based on CalEEMod results.
2. The percentage increases in construction off-road and on-road fuel consumption are compared with the projected Countywide off-road fuel consumption and Countywide on-road fuel consumption in 2024 (assumed first year of construction based on CalEEMod). Countywide off-road construction equipment diesel fuel consumption and on-road fuel consumption are from CARB EMFAC2021.

Refer to Appendix E, *Energy Analysis*, for modeling outputs.

Construction would consume energy in two general forms: (1) the fuel energy consumed by construction vehicles and equipment; and (2) bound energy in construction materials, such as asphalt, steel, concrete, pipes, and manufactured or processed materials such as lumber and glass.

Fossil fuels used for construction vehicles and other energy-consuming equipment would be used during construction of the modified project. Fuel energy consumed during construction would be temporary and would not represent a significant demand on energy resources. In addition, some incidental energy conservation would occur during construction through compliance with State requirements that equipment not in use for more than five minutes be turned off. Construction equipment would also be required to comply with the latest U.S. Environmental Protection Agency (EPA) and CARB engine emissions standards. These emissions standards require highly efficient combustion systems that maximize fuel efficiency and reduce unnecessary fuel consumption. Due to increasing transportation costs and fuel prices, contractors and owners have a strong financial incentive to avoid wasteful, inefficient, and unnecessary consumption of energy during construction. There is growing recognition among developers and retailers that sustainable construction is not prohibitively expensive, and that there is a significant cost-savings potential in green building practices and materials.

The modified project-related incremental increase in the use of energy bound in construction materials, such as asphalt, steel, concrete, pipes and manufactured or processed materials (e.g., lumber and gas), would not substantially increase demand for energy compared to overall local and regional demand for construction materials. As indicated in Table 5, the modified project's off-road fuel consumption and on-road fuel consumption from construction in total would be approximately 37,165 gallons and 205,723 gallons, respectively. Consequently, the modified project's off-road construction equipment diesel fuel consumption and on-road construction fuel consumption would increase San Bernadino County's consumption by approximately 0.2027 percent and 0.1000 percent, respectively. It should be noted that the Countywide annual diesel consumption is based solely on diesel consumption for the mining and construction sector. As such, construction would have a nominal effect on the local and regional energy supplies.

Construction fuel use is temporary and would cease upon completion of construction activities. There are no unusual project characteristics that would necessitate the use of construction equipment that would be less energy-efficient than at comparable construction sites in the region or State. Additionally, construction contractors would be required to comply with the provisions of California Code of Regulations Title 13, Sections 2449 and 2485, which prohibit diesel-fueled commercial motor vehicles and off-road diesel vehicles from idling for more than five minutes and would minimize unnecessary fuel consumption. Construction equipment would be subject to the EPA Construction Equipment Fuel Efficiency Standard, which would also minimize inefficient, wasteful, or unnecessary fuel consumption. Furthermore, per applicable regulatory requirements, such as the current CALGreen, the modified project would comply with construction waste management practices to divert a minimum of 65 percent of construction debris. Therefore, construction fuel consumption would not be any more inefficient, wasteful, or unnecessary than other similar development projects. As such, a less than significant impact would occur.

Operations

As indicated in Table 5, the modified project's operational automotive transportation is estimated to consume approximately 938,341 gallons of fuel per year. This increase would account for 0.0845 percent of the County's forecasted annual consumption of fuel for the buildout year of 2025. As such, the modified project would account for a nominal percentage of the forecasted annual operational automotive fuel consumption for the County and, thus, would have a nominal effect on the local and regional energy supplies. The modified project does not propose any unusual features that would result in excessive long-term operational fuel consumption.

The modified project would be required to comply with the most current and applicable version of the Title 24 standards pertaining to electric vehicle (EV) capable spaces and parking stalls with EV chargers. The modified project would also include features such as bicycle parking, electric vehicle charging station, and vanpool/carpool parking, which would promote near-zero and zero-emissions technologies and encourage alternative modes of transportation. Thus, the modified project would encourage and support the use of EVs and alternative modes of transportation, thus reducing petroleum fuel consumption. Therefore, fuel consumption associated with vehicle trips generated by the modified project would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region.

The CEC developed 2024 to 2040 forecasts for energy consumption and peak demand in support of the 2023 IEPR for each of the major electricity and natural gas planning areas and the State based on the economic and demographic growth projections. CEC forecasted baseline electricity consumption grows at a rate of about 1.7 percent annually through 2040.[3] The natural gas consumption grows at a rate of about 0.2 percent annually through 2035.[4] As shown in Table 5, the modified project's operational energy consumption at full buildout would result in an annual electricity and natural gas consumption of 11,975 MWh and 194,008 therms, respectively. Table 5 also shows the increase of operational energy consumption would result in approximately 0.0720 percent increase in electricity consumption and approximately 0.0345 percent increase in natural gas consumption over the current Countywide usage. As such, energy consumption would be significantly below CEC's forecasts and the current Countywide usage. Therefore, the modified project would be consistent with the CEC's energy consumption forecasts and would not require additional energy capacity or supplies. The modified project would also consume energy during the same time periods as other surrounding residential and commercial developments. As a result, the modified project would not result in unique or more intensive peak or base period electricity demand.

The modified project would be required to comply with the most current and applicable version of the Building Energy Efficiency Standards (commonly known as Title 24), which

[3] California Energy Commission, *2023 Integrated Energy Policy Report, page 130*, July 14, 2024.

[4] Based on the *2023 Integrated Energy Policy Report*, the gas forecast is updated every two years, in odd years. As such, the natural gas consumption shown here is based on the California Energy Commission, *Final 2022 Integrated Energy Policy Report Update, page 140*, May 10, 2023.

provide minimum efficiency standards related to various building features, including appliances, water and space heating and cooling equipment, building insulation and roofing, and lighting. The modified project would also comply with CALGreen pertaining to the installation of EV charging stations. Compliance with the most current and applicable Title 24 standards significantly reduces energy usage. Furthermore, the electricity provider, SCE, is subject to California's RPS. The RPS requires investor-owned utilities, electric service providers, and community choice aggregators to increase procurement from eligible renewable energy resources to 60 percent of total procurement by 2030 and 100 percent of total procurement by 2045. Renewable energy is generally defined as energy that comes from resources which are naturally replenished within a human timescale such as sunlight, wind, tides, waves, and geothermal heat. The increase in reliance of such energy resources further ensures that new development projects will not result in the waste of the finite energy resources. In compliance with Title 24, including the CALGreen, the modified project would install high efficiency lighting and energy efficient appliances. The modified project would also include solar ready roofs. As a result, the modified project would ensure energy consumption to be kept to a minimum through these components.

Based on the analysis above, the modified project would not cause wasteful, inefficient, and unnecessary consumption of building energy during modified project operation or preempt future energy development or future energy conservation. As such, impacts resulting from the modified project would be less than significant.

Conclusion

As discussed above, impacts regarding energy consumption during construction and operation would be less than significant. Modified project implementation would not result in increased operational electricity, natural gas, or fuel consumption compared to existing conditions. Further, the modified project would be required to adhere to all applicable federal, State, and local requirements pertaining to energy efficiency during construction and operation. As such, energy impacts would be less than significant. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Certified TOP 2050 SEIR Mitigation Measures: Not Applicable.

Addendum Project Conditions: None.

3.2.6 Geology And Soils

Approved Project Findings

TOP 2050 SEIR concluded that buildout of TOP 2050 would not result in significant geology and soils impacts. Development in accordance with TOP 2050 would be subject to potential impacts from ground shaking, liquefaction, seismically induced settlement,

ground subsidence, compressible soils, expansive soils, and erosion. TOP 2050 would be subject to its Safety Element and the Municipal Code, which would ensure that geology and soils impacts are reduced to less than significant levels.

With regard to paleontological resources, future development in accordance with TOP 2050 would be required to implement 2010 TOP EIR Mitigation Measure 5-2, which requires that, in the event of an unanticipated discovery of archaeological resources during grading and excavation of a site, a qualified archaeologist is required to assess the find and develop a course of action to preserve the find. Accordingly, 2010 TOP EIR Mitigation Measure 5-2 would reduce potential impacts to paleontological resources to a level that is less than significant.

Modified Project Analysis

The *Preliminary Geotechnical Evaluation, Proposed Empire Resort And Spa Project, Approximately 10.4 Acres Of Vacant Land At Southeast Corner Of E. Holt Boulevard And E. Guasti Road, APN 011 032 233, City Of Ontario, San Bernardino, California* (Geotechnical Evaluation), prepared by Petra Geosciences, Inc. and dated February 10, 2023, was prepared to evaluate potential geology and soils impacts associated with the modified project; refer to Appendix F, *Geotechnical Evaluation*.

Faulting

According to the Geotechnical Evaluation, no active or potentially active faults are known to underly the modified project site and the site does not lie within the bounds of an "Earthquake Fault Zone" as defined by the State of California in the Alquist-Priolo (AP) Earthquake Fault Hazard Zoning Act nor within a San Bernardino County fault zone. In addition, no features in the field were observed that would indicate active faulting. The closest known Quaternary fault is the Red Hill – Etiwanda fault which lies approximately 1,500 feet to the north. As such, the Geotechnical Evaluation concluded that the potential for active fault rupture at the site is considered to be very low; no impacts would occur in this regard.

Seismic Ground Shaking

As discussed above, no active or potentially active faults are known to underly the modified project site and the site does not lie within the bounds of an "Earthquake Fault Zone" nor within a San Bernardino County fault zone. The closest known Quaternary fault is the Red Hill – Etiwanda fault which lies approximately 1,500 feet to the north. Nonetheless, Southern California has numerous active seismic faults subjecting residents to potential earthquake and seismic-related hazards. Therefore, the modified project is anticipated to experience moderate to occasionally high levels of ground motion from nearby faults as well as ground motions from other active seismic areas of the Southern California region.

According to TOP 2050 SEIR, projects considered for approval under TOP 2050 (e.g.,

the modified project) would be required to comply with seismic safety provisions of the California Building Code (CBC) (Title 24, Part 2 of the California Code of Regulations). Such compliance would minimize potential hazards arising from ground shaking. As such, less than significant impacts would occur in this regard.

Liquefaction

According to the Geotechnical Evaluation, the County has identified the general modified project area within a low liquefaction zone. Further, groundwater level is reported at depths of greater than 300 feet below ground surface (bgs). Considering the very dense underlying older alluvial fans deposits that underlay the modified project site, the Geotechnical Evaluation concluded that risks pertaining to liquefaction-induced settlement is considered negligible. As such, no impacts would occur in this regard.

Landslides

According to the Geotechnical Evaluation, the modified project site exhibits nearly level topography that is not subject to landslides. As such, no impacts would occur in this regard.

Soil Erosion

Construction of the modified project would require compliance with the CBC and review of grading plans for individual projects by the City Engineer to ensure no significant impacts regarding soil erosion would occur. In addition, the modified project is required to comply with the requirements of the State's Construction General Permit (CGP), including preparation of a notice of intent and stormwater pollution prevention Plan (SWPPP). Additionally, the modified project would be required to control pollutants in stormwater discharges per the *Water Quality Management Plan for: Empire Hotel, APN: 001032233* (WQMP), prepared by Kimley-Horn and Associates, Inc.; refer to Appendix H, *Hydrology Report/WQMP*. This would include implementation of non-structural and structural source Best Management Practices (BMPs). Following compliance with the existing regulations and implementation of the WQMP, impacts pertaining soil erosion would be minimized, and a less than significant impact would occur in this regard.

Lateral Spreading, Subsidence, or Collapse Associated With Unstable Soil

Lateral spreading is seismically-induced slope instability phenomenon wherein slope failure can occur as a result of liquefaction. According to the Geotechnical Evaluation, risks pertaining to liquefaction-induced settlement is considered negligible. Subsequently, risks pertaining to lateral spreading would also be considered negligible; as such, no impacts would occur in this regard.

Land subsidence may be induced from withdrawal of oil, gas, or water from wells. Based on a search of the California Department of Conservation, Geologic Energy Management Division's (CalGEM) online mapping application Well Finder, there are no active oil or gas

wells within a mile of the site. According to the Phase I ESA prepared for the modified project, the closest mapped well to the modified project site (Chino-1002337) is mapped on the north side of I-10, approximately 3,300 feet to the northeast. Further, groundwater level is reported at depths of greater than 300 feet bgs. Considering the very dense underlying older alluvial fans deposits that underlay the modified project site and the distance to the nearest water well, the likelihood of land subsidence is low. As such, impacts in this regard would be less than significant.

According to the Geotechnical Evaluation, a notable geotechnical factor affecting the modified project site is the presence of existing artificial fills and low density and dry, younger alluvial soils. For relatively light-weight structures, these upper materials, ranging in depth from approximately six to ten feet bgs across the majority site, in their current state are not considered suitable for support of anticipated loads. Therefore, the Geotechnical Evaluation recommended that these materials be removed to an approximate depth of 10 feet and replaced with engineered fill. Any such building may be supported on a shallow spread footing system embedded in compacted fill soils. The lower approximately 10 feet of the younger alluvial soils are not expected to be suitable for the support of the main, moderate- to high-rise structure. However, a portion of the proposed structure is expected to be supported on footings that are within the two-story subterranean parking. As such, no remedial grading (i.e., over-excavation and replacement) is deemed necessary in this area. Conversely, depending on the anticipated loads, considerations may be given to removing the upper approximately 15 to 20 feet of soils consisting of younger alluvial fan deposits to support the other parts of the proposed main structure. Accordingly, the Geotechnical Evaluation recommends that these materials be removed (over-excavation) to expose the underlying competent older alluvial fan deposits, which shall be verified in the field by the geotechnical consultant. Upon implementation of recommendations as provided in the Geotechnical Evaluation, impacts pertaining to collapsible soils would be less than significant.

As such, impacts pertaining to unstable soils would be less than significant upon implementation of recommendations as provided in the Geotechnical Evaluation.

Expansive Soil

According to the Geotechnical Evaluation, on-site soils are sandy and silty with generally a very low to low expansive potential. As such, no impacts would occur in this regard.

Septic Tanks or Alternative Wastewater Disposal System

The modified project does not propose any septic tanks or alternative wastewater disposal systems. The modified project proposes to install a sewer line on-site to connect to an existing 12-inch sewer main in East Holt Boulevard. As such, no impacts would occur in this regard.

Paleontological Resources

Based on the Archaeological Resources Report, the modified project area is comprised of late Pleistocene and early Holocene alluvium, which is characterized by slightly to moderately consolidated deposits consisting mostly of fine to coarse-grained sand, but with thin beds of pebbles, gravels, or silt. Most of the vicinity is alluvial fans and stream valleys removed from mountains. According to the Archaeological Resources Report, there exists the potential for buried pre-contact archaeological sites within the modified project area due to the presence of deep soils deposited during the Holocene period and the likelihood of pre-contact archaeological sites located along perennial waterways such as Cucamonga Creek, which is currently restrained in a constructed channel that forms the eastern boundary of the modified project site. In accordance with TOP 2050 SEIR, the modified project would be required to implement 2010 TOP EIR Mitigation Measure 5-2, which requires that in the event of an unanticipated discovery of paleontological resources during grading and excavation of the site, a qualified paleontologist would assess the find and develop a course of action to preserve the find. Accordingly, 2010 TOP EIR Mitigation Measure 5-2 would reduce potential impacts to paleontological resources to a level that is less than significant.

Conclusion

As detailed above, the modified project would result in less than significant or no geology and soils impacts including those associated with fault rupture; seismic ground shaking; liquefaction; landslides; soil erosion; unstable soils and associated lateral spreading, subsidence, or collapse; expansive soil; and unsupported septic systems. With regard to paleontological resources, the modified project would be required to implement 2010 TOP EIR Mitigation Measure 5-2, which requires that, in the event of an unanticipated discovery of archaeological resources during grading and excavation of a site, a qualified archaeologist is required to assess the find and develop a course of action to preserve the find. Accordingly, 2010 TOP EIR Mitigation Measure 5-2 would reduce potential impacts to paleontological resources to a level that is less than significant. Overall, impacts pertaining to geology and soils would be less than significant. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Certified 2010 TOP EIR Mitigation Measures:

5-2 In areas of documented or inferred from evident archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the

recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:

a) Archaeologists and/or paleontologist shall be retained for the modified project and will be on call during grading and other significant ground-disturbing activities.
b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.
c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the modified project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including a catalog with museum numbers.

Certified TOP 2050 SEIR Mitigation Measures: Not Applicable.

Addendum Project Conditions: None.

3.2.7 Greenhouse Gas Emissions

Approved Project Findings

According to TOP 2050 SEIR, with implementation of the City's Community Climate Action Plan (CCAP), TOP 2050 would achieve the State's GHG emissions efficiency target without implementation of additional local GHG reduction measures. Goals and policies in TOP 2050 and actions in the CCAP would minimize GHG emissions generated by the residential and nonresidential land uses in the City. Implementation of TOP 2050 would not obstruct implementation of the CARB Scoping Plan or interfere with SCAG's ability to implement the regional strategies in the 2020-2045 RTP/SCS. Overall, TOP 2050 would not result in significant unavoidable adverse impacts related to GHG emissions with implementation of regulatory requirements and standard conditions of approval, as well as the City's CCAP. Less than significant impacts would occur in this regard.

Modified Project Analysis

The *Empire Groves Hotel Greenhouse Gas Analysis, City of Ontario* (GHG Analysis), prepared by Urban Crossroads and dated September 9, 2024, was prepared to evaluate potential greenhouse gas impacts associated with the modified project; refer to Appendix G, *GHG Analysis*.

Threshold of Significance

The City of Ontario adopted the CCAP on December 16, 2014. The CCAP contains further guidance on the City's GHG Inventory reduction goals, policies, guidelines, and implementation programs. The purpose of the CCAP is to provide guidance on how to analyze GHG emissions and determine significance during the CEQA review of proposed development projects within the City of Ontario. The CCAP builds upon the Reduction Plan to address City-specific information and City-specific GHG reduction measures. To address the State's requirement to reduce GHG emissions, the City prepared the CCAP with the goal of reducing GHG emissions within the City by 15 percent below 2008 levels by the year 2020. The City's target is consistent with the AB 32 target and ensures that the City o achieves GHG reductions locally that complement and are consistent with State efforts to reduce GHG emissions.

As part of the CCAP, the City published a guidance document titled *Greenhouse Gas Emissions, CEQA Thresholds and Screening Tables* in December 2014. As part of this guidance, the City determined that if GHG emissions of a given project exceeds 3,000 metric tons of carbon dioxide equivalents ($MTCO_2e$) per year, then project emissions would need to be reduced by 25 percent when compared to year 2008 emissions levels. Alternatively, the project would need to achieve a minimum of 100 points pursuant to measures identified in the Screening Tables.

TOP 2050 includes an update to the City's CCAP (CCAP Update) originally adopted in 2014. The CCAP Update is a plan to reduce GHG emissions and improve community resilience to hazardous conditions associated with climate change. The CCAP Update includes updated emissions inventories; updated emissions forecasts; identifies GHG emissions reduction targets to achieve the GHG reduction goals of the City consistent with Senate Bill 32, Executive Order S-03-05, and substantial progress toward the State's carbon neutrality goals of Executive Order B-55-18; and measures, that when quantified, achieve the GHG reduction targets for the City. As noted in TOP 2050 SEIR, the measures included in the CCAP Update are not substantially different than that of the previous CCAP and therefore, there is no change in the environmental impacts associated with the CCAP Update. Because the CCAP Update addresses GHG emissions reductions and is consistent with the requirements of AB 32, SB 32, and international efforts to reduce GHG emissions, projects that comply with the CCAP Update would have a less than significant GHG impact.

GHG Emissions

CalEEMod version 2022.1.1.22 was used to calculate modified project-related GHG emissions. Output from the model runs for construction and operational activity are provided in Appendix G. CalEEMod includes GHG emissions from the following source categories: construction, area, energy, mobile, waste, water, and refrigerants.

The modified project's construction activities would generate CO_2 and CH_4 emissions. For construction phase emissions, GHGs are quantified and amortized over the life of the

modified project. To amortize the emissions over the life of a project, the SCAQMD recommends calculating the total GHG emissions for the construction activities, dividing it by a 30-year project life then adding that number to the annual operational phase GHG emissions. As such, construction emissions were amortized over a 30-year period and added to the annual operational phase GHG emissions. Operational activities associated with the modified project would result in emissions of CO_2, CH_4, N_2O, and refrigerants from the following direct and indirect primary sources:

- *Area Source Emissions*: Direct GHG emissions from area sources are mostly associated with landscape maintenance equipment. Landscape maintenance equipment would generate emissions from fuel combustion and evaporation of unburned fuel. Equipment in this category would include lawnmowers, shedders/grinders, blowers, trimmers, chain saws, and hedge trimmers used to maintain the landscaping of a project.
- *Energy Source Emissions*: Direct GHG emissions from energy sources are mostly associated with combustion emissions associated with natural gas and electricity.
- *Mobile Source Emissions*: Direct GHG emissions from mobile sources are mostly associated with vehicle trips, including employee trips to and from the site associated with the proposed uses. Trip characteristics available from the modified project-specific traffic impact analysis.
- *Water Supply, Treatment, and Distribution*: Indirect GHG emissions result from the production of electricity used to convey, treat, and distribute water and wastewater. The amount of electricity required to convey, treat, and distribute water depends on the volume of water as well as the sources of the water.
- *Solid Waste*: The proposed land uses would result in the generation and disposal of solid waste. A percentage of this waste would be diverted from landfills by a variety of means, such as reducing the amount of waste generated, recycling, and/or composting. The remainder of the waste not diverted would be disposed of at a landfill. GHG emissions from landfills are associated with the anaerobic breakdown of material. GHG emissions associated with the disposal of solid waste associated with the modified project were calculated by CalEEMod using default parameters.
- *Refrigerants*: Air conditioning (A/C) and refrigeration equipment associated with the buildings are anticipated to generate GHG emissions. CalEEMod automatically generates a default A/C and refrigeration equipment inventory for each project land use subtype based on industry data from the U.S. Environmental Protection Agency. CalEEMod quantifies refrigerant emissions from leaks during regular operation and routine servicing over the equipment lifetime and then derives average annual emissions from the lifetime estimate. Note that CalEEMod does not quantify emissions from the disposal of refrigeration and A/C equipment at the end of its lifetime. GHG emissions associated with refrigerants were calculated by CalEEMod using default parameters.

The modified project's anticipated GHG emissions are identified in Table 6, *Estimated Greenhouse Gas Emissions*. As shown, construction and operation of the modified project would generate approximately 9,661.88 $MTCO_2e$ per year.

Table 6
Estimated Greenhouse Gas Emissions

Emission Source	CO_2	CH_4	N_2O	Refrigerants	CO_2e
	Metric Tons/year[1]				
Annual construction-related emissions amortized over 30 years	85.04	0.00565	0.00736	0.0940	87.47
Mobile Source	6,302.52	0.32	0.32	10.69	6,415.24
Area Source	22.02	0.00	0.00	0.00	22.10
Energy Source	2,923.18	0.27	0.02	0.00	2,936.99
Water Source	21.21	0.50	0.01	0.00	37.19
Waste	29.31	2.93	0.00	0.00	102.55
Refrigerants	0.00	0.00	0.00	60.33	60.33
Total CO_2e (All Sources)	***9,661.88 $MTCO_2e$ per year***				

Notes: CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; CO_2e = carbon dioxide equivalent

Source: Urban Crossroads, *Empire Groves Hotel Greenhouse Gas Analysis, City of Ontario*, April 19, 2024; refer to Appendix G, *GHG Analysis*.

The purpose of the CCAP Update is to provide guidance on how to analyze GHG emissions and determine significance during the CEQA review of proposed development projects within the City. Because the CCAP Update addresses GHG emissions reductions and is consistent with the requirements of AB 32, SB 32, and international efforts to reduce GHG emissions, compliance with the CCAP Update fulfills the description of mitigation found in the State CEQA Guidelines.

The modified project would implement Screening Table Measures that achieve the requisite points as a project design feature as detailed above in Section 2.3, *Modified Project Description*. The City would verify that the Screening Table Measures achieving the requisite points are incorporated in the modified project plans prior to issuance of building permits and are appropriately implemented prior to issuance of certificates of occupancy. Appendix 3.2, *CCAP Screening Tables*, of Appendix G identifies potential CCAP Screening Table Measures to be implemented by the modified project. As such, the modified project would be consistent with CCAP Update and is considered to have a less than significant individual and cumulatively considerable impact regarding GHG emissions.

Certified TOP 2050 SEIR Mitigation Measures: Not Applicable.

Addendum Project Conditions: None.

3.2.8 Hydrology And Water Quality

Approved Project Findings

According to TOP 2050 SEIR, the approved project would not exacerbate risk of flood hazards, tsunamis, or seiches or risk release of pollutants due to inundation. However, future development in the City would increase impervious areas, thus increasing runoff and flows into storm drainage systems. As such, TOP 2050 SEIR requires all future

development to prepare hydrology and hydraulic studies in accordance with the County Hydrology Manual and analyze stormwater flows that result from the 100-year storm event to ensure that the capacities of existing and planned storm drain systems are not exceeded. Additionally, future projects would be required to comply with the Santa Ana Regional Water Quality Control Board (RWQCB) multiple separate storm sewer system (MS4) permit and the San Bernardino County Stormwater Program. Upon implementation of regulatory requirements, including low impact design strategies and construction and post-construction best management practices, and TOP 2050 policies and programs, the approved project would result in less than significant impacts to hydrology and water quality, and no mitigation measures were required for the approved project.

Modified Project Analysis

The *Preliminary Hydrology Report for Diversified Empire Hotel, APN: 0010-322-33, Southeast of Holt Blvd and Guasti Road* (Hydrology Report), prepared by Kimley-Horn and Associates, Inc., and dated October 2023, and the *Water Quality Management Plan for: Empire Hotel, APN: 001032233* (WQMP), prepared by Kimley-Horn and Associates, Inc., were prepared for the modified project; refer to Appendix H, *Hydrology Report/WQMP*.

The modified project site consists of vacant, undeveloped land. According to the Hydrology Report, the modified project site is located within Zone X per the Federal Emergency Management Administration (FEMA) Flood Insurance Rate Map (FIRM), indicating that the site has a 0.2 percent annual chance of flood hazard; as such, potential flooding hazards would be less than significant in this regard.

Currently, the modified project site generally drains in the southeast direction with two main drainage areas (DAs). Runoff from DA 1 flows southeast towards Guasti Road, where there is a curb and gutter on the other side of the road with an existing catch basin, as well as a 108-inch storm drain line that collects stormwater for nearby properties. Runoff from DA 2 flows to the east towards the Cucamonga Channel. Current pre-development flows are detailed in Hydrology Report Table 1, *Pre-Development Flows*, for the 10- and 100-year storm events.

Following implementation of the modified project, the modified project site would consist of one main drainage area comprised of five sub-areas. Runoff from the drainage sub-areas would be intercepted by a combination of trench drains, area drains, and curb inlets, which would then be conveyed into a proposed underground detention system located southeast of the site. A stormwater pump is also proposed in the southeast side to pump runoff into the proposed underground detention system to be treated and conveyed into the existing 108-inch storm drain line in Guasti Road. Unmitigated post-development flows are detailed in Hydrology Report Table 2, *Post-Development Flows (Un-Mitigated)*. With the proposed underground detention system and stormwater pump, the Hydrology Report concluded that the modified project would not cause a significant impact to downstream systems and discharges would be less than existing conditions. Therefore, the modified project would not increase the severity or permanence of impacts related to

the City's storm drain system, and no new impacts would occur. No new mitigation measures are required.

Similar to the approved project, in order to minimize impacts to erosion on-site, the modified project would be required to comply with the requirements of the State's CGP, including preparation of a notice of intent and SWPPP. Additionally, the modified project would be required to control pollutants in stormwater discharges per the WQMP prepared for the modified project. This would include implementation of non-structural and structural source BMPs, including LID requirements consistent with the Santa Ana RWQCB MS4 and National Pollutant Discharge Elimination System (NPDES) program. Following compliance with the existing regulations and implementation of the WQMP, water quality standards and waste discharge requirements would not be exceeded, and surface water and groundwater quality would not be degraded. The modified project would not result in a new significant environmental effect or substantial increase the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Certified TOP 2050 SEIR Mitigation Measures: Not Applicable.

Addendum Project Conditions: None.

3.2.9 Land Use and Planning

Approved Project Findings

TOP 2050 SEIR concluded that the approved project's impacts related to land use and planning would be less than significant. Although the approved project would change existing land use designations, implementation of TOP 2050 would ensure compatibility among adjacent land uses to establish a sense of community and enhance the City's character; overall, it was determined that the approved project would not divide an established community. Additionally, the approved project was found to be consistent with the SCAG 2020-2045 RTP/SCS, the ONT ALUCP, and the *Chino Airport Master Plan*.

Modified Project Analysis

The modified project proposes a Specific Plan that establishes a development plan, development standards, and design guidelines to guide development within the Specific Plan area. The modified project site is bound on all sides by existing roadways to the north, south, and west, and by the Cucamonga Channel to the east. Therefore, the modified project would not physically divide an established community.

The modified project would be consistent with the envisioned buildout of the site's MU-Multimodal designation and Ontario Airport Metro Center Overlay by TOP 2050. As detailed in Section 2.2, TOP 2050 anticipates full buildout of the project site's MU-Multimodal designation to be approximately 2,449,727 square feet of nonresidential uses (553,124 square feet for lodging and 1,896,603 square feet for retail and office

development). As shown in Table 1, the proposed Specific Plan buildout would result in 553,124 square feet of hotel use and 46,876 square feet of local-serving retail use. Thus, the project would be within TOP 2050 buildout assumptions for the project site. Additionally, the modified project would contribute towards the Ontario Airport Metro Center Overlay vision providing an intensive development with vertical and horizontal mixtures of regional-serving uses. Further, the proposed Specific Plan would be consistent with the site's SP zoning. The proposed development would also be adjacent to similar uses, including hotels to the north and west.

Development within the City is also subject to applicable ONT ALUCP land use compatibility standards. The modified project is required to undergo the ONT Inter-Agency Notification Process with the ONT Airport Authority to ensure consistency with policies set forth in the ONT ALUCP. As described in Section 3.2.1, *Aesthetics/Light and Glare*, and Section 3.2.10, *Noise*, the modified project would be consistent with building height and noise-related hazards policies detailed in the ONT ALUCP. In addition to the ONT-IAC approval, the modified project would also require Federal Aviation Administration approval of the proposed building height per Federal Aviation Regulation Part 77, Subpart B, and by the California Public Utilities Code, Sections 21658 and 21659. Thus, the modified project would not conflict with applicable land use plans, policies, or regulations, and impacts would be less than significant.

Overall, the modified project would not result in a new significant environmental effect or substantial increase the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Certified TOP 2050 SEIR Mitigation Measures: Not Applicable.

Addendum Project Conditions: None.

3.2.10 Noise

Approved Project Findings

According to TOP 2050 SEIR, construction activities associated with buildout of TOP 2050 would result in temporary noise increases at sensitive receptors during construction activities and could create groundborne vibration during construction activities in excess of established standards. 2010 TOP EIR Mitigation Measure 12-4 would reduce potential impacts associated with construction from individual development projects to the extent feasible, and 2010 TOP EIR Mitigation Measure 12-2 would reduce potential impacts associated with construction vibration from individual development projects to the extent feasible. However, due to the potential for proximity of construction activities to sensitive uses, the number of construction projects occurring simultaneously, and the potential duration of construction activities, TOP 2050 could still result in a temporary substantial increase in noise levels above ambient conditions and exceedance of the 80 dBA L_{eq} threshold and generate excessive vibration levels at sensitive receptor locations.

Therefore, TOP 2050 SEIR concluded that construction noise and vibration impacts in accordance with TOP 2050 would remain significant and unavoidable.

Buildout associated with TOP 2050 would not result in new types of stationary noise sources. Furthermore, TOP 2050 includes Safety Element Policy S-4.1, *Noise Mitigation*, which utilizes the City's Noise Ordinance, building codes, and subdivision and development code regulations to reduce noise from future development projects. As such, stationary noise impacts would be less than significant. In regard to transportation noise, TOP 2050 traffic noise level increase along studied roadway segments in the City would not result in the exceedance of the significance threshold when other noise sources such as rail have been taken into considerations. Additionally, TOP 2050 includes Safety Element Policies S-4.2, *Coordination with Transportation Authorities*, S-4.4, *Truck Traffic*, and S-4.5, *Roadway Design*, that would minimize traffic noise impacts. As such, transportation noise impacts would be less than significant. Moreover, according to TOP 2050 SEIR, TOP 2050's commercial and industrial operations would not generate significant vibration impacts, and vibration from industrial and commercial operations would be less than significant.

According to TOP 2050 SEIR, implementation of TOP 2050 could expose noise sensitive uses to excessive noise levels from the Ontario International Airport. With the implementation of 2010 TOP EIR Mitigation Measure 12-1, impacts to future sensitive receptors from excessive airport-related noise would be reduced to interior noise levels of 45 dBA Community Noise Equivalent Level (CNEL) or less. While interior noise levels are required to achieve the interior noise limits of Title 24 and Title 25, exterior noise levels may continue to exceed the noise compatibility criteria for the City. Consequently, TOP 2050 SEIR concluded that airport noise compatibility impacts would remain significant and unavoidable.

Modified Project Analysis

The *Empire Groves Hotel Noise Impact Analysis, City of Ontario* (Noise Impact Analysis), prepared by Urban Crossroads and dated May 13, 2024, was prepared to evaluate potential noise impacts associated with the modified project; refer to Appendix I, *Noise Impact Analysis*.

Significance Criteria

Noise impacts shall be considered significant if any of the following occur as a direct result of the proposed development. Table 7, *Significance Criteria Summary*, shows the significance criteria summary matrix that includes the allowable criteria used to identify potentially significant incremental noise level increases.

Table 7
Significance Criteria Summary

	Land Use	Condition(s)	Significance Criteria	
			Daytime	Nighttime
On-Site Traffic Noise	All	Exterior Noise Level Criteria From *TOP 2050 LU-07 Noise Level Exposure and Land Use Compatibility Guidelines*	See Noise Impact Analysis Exhibit 3-A	
	Residential	Interior Noise Level Standard From *TOP 2050 LU-07 Noise Level Exposure and Land Use Compatibility Guidelines*	45 dBA CNEL	
	Non-Residential	Interior Noise Level Standard From *TOP 2050 LU-07 Noise Level Exposure and Land Use Compatibility Guidelines*	50 dBA CNEL	
Off-Site	Noise Sensitive	if ambient is < 60 dBA CNEL	≥ 5 dBA CNEL increase	
		if ambient is 60-65 dBA CNEL	≥ 3 dBA CNEL increase	
		if ambient is > 65 dBA CNEL	≥ 1.5 dBA CNEL increase	
	Non-Noise Sensitive	if ambient is > 75 dBA CNEL	≥ 3 dBA CNEL increase	
Operational	Residential	Exterior Noise Level Limit From City of Ontario Municipal Code Section 5-29.09(a)	55 dBA L_{eq}	45 dBA L_{eq}
	Commercial		65 dBA L_{eq}	60 dBA L_{eq}
	Noise Sensitive	if ambient is < 60 dBA L_{eq}	≥ 5 dBA L_{eq} increase	
		if ambient is 60-65 dBA L_{eq}	≥ 3 dBA L_{eq} increase	
		if ambient is > 65 dBA L_{eq}	≥ 1.5 dBA L_{eq} increase	
Construction	Residential	Noise Level Thresholds From FTA's *Transit Noise and Vibration Impact Assessment Manual*.	80 dBA L_{eq}	70 dBA L_{eq}
	Commercial		85 dBA L_{eq}	80 dBA L_{eq}
	Commercial	Vibration Level Thresholds From Caltrans' *Transportation and Construction Vibration Manual*.	0.5 PPV (in/sec)	n/a
Airport Noise	Long- and Short-Term Lodging	Exterior Noise Level Criteria From *TOP 2050 LU-07 Noise Level Exposure and Land Use Compatibility Guidelines*	70 dBA CNEL	
		Interior Noise Level Standard From *TOP 2050 LU-07 Noise Level Exposure and Land Use Compatibility Guidelines*	45 dBA CNEL	

Source: Urban Crossroads, *Empire Groves Hotel Noise Impact Analysis, City of Ontario*, May 13, 2024; refer to Appendix I, *Noise Impact Analysis*.

Construction Noise

This section analyzes potential impacts resulting from the short-term construction activities associated with the development of the modified project. According to Section 5-29.09, *Construction activity noise regulations*, of the Municipal Code states: No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m. In addition, neither TOP 2050 or the Municipal Code establish numeric maximum acceptable construction source noise levels at potentially affected receivers for CEQA analysis purposes. Therefore, a numerical construction threshold based on the

Federal Transit Administration (FTA) *Transit Noise and Vibration Impact Assessment Manual* is used for analysis of daytime construction impacts. The FTA considers a daytime exterior construction noise level of 80 dBA L_{eq} as a reasonable threshold for noise sensitive residential land use.

Noise generated by the modified project construction equipment would include a combination of trucks, power tools, concrete mixers, and portable generators that when combined can reach high levels. The number and mix of construction equipment are expected to occur in the following stages:

- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

To describe construction noise activities, this construction noise analysis was prepared using reference construction equipment noise levels from the Federal Highway Administration (FHWA) published the Roadway Construction Noise Model (RCNM), which includes a national database of construction equipment reference noise emission levels. The RCNM equipment database, provides a comprehensive list of the noise generating characteristics for specific types of construction equipment. In addition, the database provides an acoustical usage factor to estimate the fraction of time each piece of construction equipment is operating at full power (i.e., its loudest condition) during a construction operation.

Using the reference construction equipment noise levels from RCNM and the CadnaA noise prediction model, calculations of the modified project construction noise level impacts at the nearby sensitive receiver locations were completed; refer to Appendix I for detailed CadnaA construction noise model inputs. For construction noise assessment, construction equipment can be considered to operate in two modes: stationary and mobile. As defined, stationary equipment operates in a single location for one or more days at a time, with either fixed-power operation (e.g., pumps, generators, and compressors) or variable-power operation (e.g., pile drivers, rock drills, and pavement breakers). Mobile equipment moves around the construction site with power applied in cyclic fashion, such as bulldozers, graders, and loaders. The FTA and FHWA recommend noise impacts from stationary equipment be assessed from the center of the equipment location, while noise impacts from mobile construction equipment should be assessed from the center of the equipment activity area (e.g., construction site). Thus, to assess a more realistic and reasonable worst-case construction scenario while accounting for the dynamic nature of construction activities, this construction noise analysis models the equipment combination with the highest reference combined level as a moving point within the construction area (modified project site boundary). Construction impacts are based on the highest noise level calculated at each receiver location. To evaluate whether the modified project would generate potentially significant short-term noise levels at nearest receiver locations, a construction-related daytime noise level threshold of 80 dBA

L_{eq} is used as a reasonable threshold to assess the daytime construction noise level impacts at residential locations.

As shown in Table 8, *Construction Equipment Noise Level Summary*, the construction noise levels are expected to range from 34.4 to 60.0 dBA L_{eq}, and the highest construction levels are expected to range from 40.4 to 60.0 dBA L_{eq} at the nearest receiver locations.

Table 8
Construction Equipment Noise Level Summary

Receiver[1]	Construction Noise Levels (dBA L_{eq})						Threshold	Threshold Exceeded ?
	Site Preparation	Grading	Building Construction	Paving	Architectural Coating	Highest Levels		
R1	57.0	60.0	58.0	60.0	54.0	60	80	No
R2	39.5	42.5	40.5	42.5	36.5	42.5	80	No
R3	56.3	59.3	57.3	59.3	53.3	59.3	80	No
R4	42.5	45.5	43.5	45.5	39.5	45.5	80	No
R5	37.4	40.4	38.4	40.4	34.4	40.4	80	No

Notes:
1. Noise receiver locations are shown on Noise Impact Analysis Exhibit 9-A, *Construction Noise Source And Receiver Locations*; refer to Appendix I, *Noise Impact Analysis*.

Source: Urban Crossroads, *Empire Groves Hotel Noise Impact Analysis, City of Ontario*, May 13, 2024; refer to Appendix I, *Noise Impact Analysis*.

As shown in Table 8, the construction noise levels at the nearest receiver locations would not exceed the daytime significance thresholds. Therefore, construction noise impacts would be less than significant at all receiver locations. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Construction Vibration

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods used, distance to the affected structures and soil type. It is expected that ground-borne vibration from modified project construction activities would cause only intermittent, localized intrusion. Ground-borne vibration levels resulting from typical construction activities occurring within the modified project site were estimated by data published by the FTA and California Department of Transportation (Caltrans). However, while vehicular traffic is rarely perceptible, construction has the potential to result in varying degrees of temporary ground vibration, depending on the specific construction activities and equipment used. Based on the representative vibration levels presented for various construction equipment types, it is possible to estimate the potential construction vibration levels using vibration assessment methods defined by Caltrans.

Vibration-generating activities are appropriately evaluated using the Caltrans vibration damage thresholds to assess potential temporary construction-related impacts at

adjacent building locations. The nearest noise sensitive buildings adjacent to the modified project site can best be described as “modern industrial/commercial buildings” with a maximum acceptable continuous vibration threshold of 0.5 PPV (in/sec).

Ground vibration levels associated with various types of construction equipment at each nearby receiver locations are summarized in Table 9, *Construction Vibration Levels*.

Table 9
Construction Vibration Levels

Receiver[1]	Distance (Feet)[1]	Construction Noise Levels (dBA L_{eq})					Threshold PPV (in/sec)[4]	Threshold Exceeded ?
		Site Preparation	Grading	Building Construction	Paving	Highest Levels		
R1	176	<0.01	<0.01	<0.01	<0.01	<0.01	0.50	No
R2	2,802	<0.01	<0.01	<0.01	<0.01	<0.01	0.50	No
R3	237	<0.01	<0.01	<0.01	<0.01	<0.01	0.50	No
R4	1,968	<0.01	<0.01	<0.01	<0.01	<0.01	0.50	No
R5	3,593	<0.01	<0.01	<0.01	<0.01	<0.01	0.50	No

Notes:
1. Noise receiver locations are shown on Noise Impact Analysis Exhibit 9-A, *Construction Noise Source And Receiver Locations*; refer to Appendix I, *Noise Impact Analysis*. Distances are measured from receiver locations to the nearest construction boundary (modified project site boundary).

Source: Urban Crossroads, *Empire Groves Hotel Noise Impact Analysis, City of Ontario*, May 13, 2024; refer to Appendix I, *Noise Impact Analysis*.

At distances ranging from 176 feet to 3,593 feet from modified project construction area (at the modified project site boundary), construction vibration levels are estimated to be less than 0.01 PPV (inch per second [in/sec]) at the nearest vibration sensitive receiver. Based on maximum acceptable continuous vibration threshold of 0.50 PPV (in/sec), the typical modified project construction vibration levels would fall below the building damage thresholds at all the receiver locations. Further, vibration levels at the site of the closest sensitive receiver are unlikely to be sustained during the entire construction period but will occur rather only during the times that heavy construction equipment is operating simultaneously adjacent to the modified project site perimeter. Therefore, the modified project-related vibration impacts during typical construction activities are considered less than significant. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Operational Noise

This section analyzes the potential operational noise impacts resulting from stationary noise sources, including the operation of events with amplified sound, outdoor activities, swimming pool/spa activities, roof-mounted air conditioning units, loading dock activities, and parking lot vehicle movement, as well as potential operational traffic noise impacts.

Stationary Noise

This operational noise analysis is intended to describe noise level impacts associated with the expected typical of daytime and nighttime activities at the modified project site. To analyze noise impacts originating from the modified project, the operational noise levels are evaluated against standards established in the City of Ontario Municipal Code, 5-29.04, *Exterior noise standards.* Section 5-29.04(a) of the Municipal Code sets a stationary-source average Leq exterior noise limit for not to be exceeded 65 dBA L_{eq} during daytime hours and 45 dBA L_{eq} during nighttime hours at residential properties and 65 dBA Leq during daytime hours and 60 dBA L_{eq} during nighttime hours at commercial properties, such as those nearest the modified project site.

To estimate the modified project operational noise impacts, reference noise levels were collected from sample manufacturers specifications for similar equipment, published research, and/or measurements of similar activities that represent the noise levels expected with the development of the modified project. It is important to note that the predicted noise levels assume the worst-case noise environment with the events with amplified sound, outdoor activities, swimming pool/spa activities, roof-mounted air conditioning units, loading dock activities, and parking lot vehicle movement all operating continuously. These sources of noise activity will likely vary throughout the day.

A detailed description of the reference noise levels are shown in Table 10, *Reference Noise Levels*, which are used to estimate the modified project's operational noise impacts.

Table 10
Reference Noise Levels

Noise Source	Noise Source Height (Feet)	Minutes within the Hour		Reference Noise Level (dBA L_{eq}) @ 50 Feet	Sound Power Level Day Night (dBA)[3]
		Day	Night		
Event/Announcement Speaker	5'	60	60	75.6	107.2
Outdoor Gatherings	5'	60	60	59.9	91.5
Swimming Pool Activities	5'	60	60	63.0	94.6
Roof-Top Air Conditioning Units	5'	45	30	77.4	109.0
Loading Dock Activities	8'	60	60	71.8	103.4
Parking Lot Vehicle Movements	0'	60	60	31.4	63.0

Source: Urban Crossroads, *Empire Groves Hotel Noise Impact Analysis, City of Ontario*, May 13, 2024; refer to Appendix I, *Noise Impact Analysis*.

Using the reference noise levels to represent the proposed modified project operations that include events with amplified sound, outdoor activities, swimming pool/spa activities, roof-mounted air conditioning units, loading dock activities, and parking lot vehicle movement, the Noise Impact Analysis calculated the operational source noise levels that are expected to be generated at the modified project site and the modified project-related noise level increases that would be experienced at each of the sensitive receiver

locations. Table 11, *Operational Noise Levels*, shows the modified project operational noise levels during the daytime hours of 7:00 a.m. to 10:00 p.m., as well as the nighttime hours of 10:00 p.m. to 7:00 a.m.

Table 11
Operational Noise Levels

Noise Source	Operational Noise Levels by Receiver Location[1] (dBA L_{eq})				
	R1	**R2**	**R3**	**R4**	**R5**
Daytime Operational Noise					
Event/Announcement Speaker	22.1	31.0	51.8	34.8	29.1

Notes:
1. Noise receiver locations are shown on Noise Impact Analysis Exhibit 9-A, *Construction Noise Source And Receiver Locations*; refer to Appendix I, *Noise Impact Analysis*. Distances are measured from receiver locations to the nearest construction boundary (modified project site boundary).

Source: Urban Crossroads, *Empire Groves Hotel Noise Impact Analysis, City of Ontario*, May 13, 2024; refer to Appendix I, *Noise Impact Analysis*.

The daytime hourly noise levels at the off-site receiver locations are expected to range from 37.9 to 56.3 dBA L_{eq}; the nighttime hourly noise levels at the off-site receiver locations are expected to range from 36.1 to 55.0 dBA L_{eq}. As shown in Table 11, operational noise levels associated with the modified project would satisfy the City's daytime and nighttime exterior noise level standards at all nearby receiver locations.

To describe the operational noise level increases, the operational noise levels are combined with the existing ambient noise levels measurements for the nearest receiver locations potentially impacted by operational noise sources. The difference between the combined modified project's noise levels and ambient noise levels describes the noise level increases to the existing ambient noise environment. As indicated in Table 12, *Operational Noise Level Increases*, the modified project-related daytime and nighttime operational noise level increases are expected to range up to 1.7 dBA L_{eq} at the nearest receiver locations. As such, the modified project-related operational noise level increases would satisfy the operational noise level increase significance criteria presented on Noise Impact Analysis Table 4-1, *Significance Criteria Summary*. Therefore, the incremental operational noise level increase is considered less than significant at all receiver locations.

Table 12
Operational Noise Level Increases

Receiver Location[1]	Modified Project Operational Noise Level (dBA L_{eq})[2]	Measurement Location[3]	Reference Ambient Noise Levels (dBA L_{eq})[4]	Combined Modified Project and Ambient (dBA L_{eq})[5]	Increase (dBA L_{eq})	Increase Criteria (dBA L_{eq})[6]	Increase Criteria Exceeded?
Daytime Operational Noise							
R1	54.4	L1	64.2	64.6	0.4	3.0	No
R2	40.2	L2	59.1	59.2	0.1	5.0	No
R3	56.3	L3	62.0	63.0	1.0	3.0	No
R4	43.0	L4	71.7	71.7	0.0	1.5	No
R5	37.9	L5	66.5	66.5	0.0	1.5	No
Nighttime Operational Noise							
R1	52.4	L1	61.2	61.7	0.5	3.0	No
R2	38.2	L2	58.3	58.3	0.0	5.0	No

Notes:
1. Noise receiver locations are shown on Noise Impact Analysis Exhibit 9-A, *Construction Noise Source And Receiver Locations*; refer to Appendix I, *Noise Impact Analysis*.
2. Refer to Table 10 above.
3. Reference noise level measurement locations as shown on Noise Impact Analysis Exhibit 5-A, *Noise Measurement Locations*.
4. Observed ambient noise levels measured by Urban Crossroads are shown on Noise Impact Analysis Table 5-1, *24-Hour Ambient Noise Level Measurements*.
5. Represents the combined ambient conditions plus the modified project operational activities.
6. Refer to Table 7, *Significance Criteria Summary*.

Source: Urban Crossroads, *Empire Groves Hotel Noise Impact Analysis, City of Ontario*, May 13, 2024; refer to Appendix I, *Noise Impact Analysis*.

Overall, the operational noise levels associated with the modified project would not exceed the City's daytime and nighttime exterior noise level standards at all nearby receiver locations and would not result in significant increases. As such, operational noise impacts resulting from stationary noise sources would be less than significant. The modified project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of TOP 2050 SEIR.

Traffic Noise

To assess the off-site traffic CNEL noise level impacts associated with development of the proposed modified project, noise level contours were developed based on modified project-specific traffic impact analysis; refer to Noise Impact Analysis Appendix 7.1, Off-Site Traffic Noise Calculations, which includes a summary of the dBA CNEL traffic noise level contours. Noise level contour boundaries represent the equal levels of noise exposure and are measured in CNEL from the center of the roadway. Noise contours were used to assess the modified project's incremental 24-hour dBA CNEL traffic-related noise impacts at land uses adjacent to roadways conveying modified project-related traffic. The noise contours represent the distance to noise levels of a constant value and are measured from the center of the roadway for the 70, 65, and 60 dBA CNEL noise levels. The noise contours do not consider the effect of any existing noise barriers or topography that may attenuate ambient noise levels. In addition, because the noise contours reflect modeling of vehicular noise on area roadways, they appropriately do not reflect noise contributions from the surrounding stationary noise sources within the study area.

Roadway segments are analyzed in each of the following timeframes: Existing With and Without Modified Project Conditions, Opening Year 2026 With And Without modified Project Conditions, and Cumulative 2050 With And Without modified Project Conditions. The analyses for each timeframe are as followed:

- *Existing With And Without Modified Project Conditions*: Noise Impact Analysis Table 7-1, *Existing Without Project Conditions Noise Level Contours*, presents the "Existing Without Project Conditions" CNEL noise levels, which are expected to range from 57.5 to 67.6 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Noise Impact Analysis Table 7-2, *Existing With Project Conditions Noise Level Contours*, shows that roadway noise levels from "Existing With Project Conditions" would range from 58.7 to 67.7 dBA CNEL. As shown in Table 7-7, *Existing Off-Site Project-Related Traffic Noise Impacts*, the "Existing With Project Conditions" would generate a noise level increase of up to 2.5 dBA CNEL on the study area roadway segments.

  Based on the significance criteria for off-site traffic noise impacts as presented in Table 7, the modified project-related traffic noise level increases are considered less than significant under "Existing With Modified Project" conditions at the land uses adjacent to roadways conveying modified project-related traffic.

- *Opening Year (2026) With And Without Project Conditions*: Noise Impact Analysis Table 7-3, *OY 2026 Without Project Conditions Noise Level Contours,* presents the "Opening Year (2026) Without Modified Project Conditions" CNEL noise levels, which are expected to range from 60.3 to 69.0 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Noise Impact Analysis Table 7-4, *OY 2026 With Project Conditions Noise Level Contours*, shows that roadway noise levels from "Opening Year (2026) With Modified Project Conditions" would range from 61.0 to 69.0 dBA CNEL. As shown on Noise Impact Analysis Table 7-8, *OY 2026 Off-Site Project-Related Traffic Noise Impacts*, "Opening Year (2026) Without Modified Project Conditions" would generate a noise level increase of up to 1.6 dBA CNEL.

  Based on the significance criteria for off-site traffic noise impacts as presented in Table 7, land uses adjacent to the study area roadway segments would experience less than significant noise level increases due to unmitigated opening year modified project-related traffic noise levels.
