CITY OF ONTARIO

Regular City Council/Housing Authority Meeting
MARCH 19, 2024

City Hall
303 East B Street, Ontario, CA 91764

MAYOR PAUL S. LEON • MAYOR PRO TEM DEBRA DORST-PORADA
COUNCIL MEMBERS ALAN D. WAPNER, JIM W. BOWMAN AND RUBEN VALENCIA

CITY CLERK SHEILA MAUTZ • TREASURER JAMES R. MILHISER
CITY MANAGER SCOTT OCHOA • CITY ATTORNEY RUBEN DURAN

WELCOME TO A MEETING OF THE ONTARIO CITY COUNCIL

All documents for public review are on file with the Records Management/City Clerk's Department located at 303 East B Street, Ontario, CA 91764.

Anyone wishing to speak in person during public comment or on a particular item will be required to fill out a blue slip. Blue slips must be turned in prior to public comment beginning or before an agenda item is taken up. The Clerk will not accept blue slips after that time. To comment by email, submit your comments no later than 4:00 p.m. on the day of the meeting by emailing your name, agenda item you are commenting on and your comments to publiccomments@ontarioca.gov. All comments received by the deadline will be forwarded to the City Council for consideration before action is taken on the matter and will be entered into the record.

Comments will be limited to 3 minutes. Speakers will be alerted when they have 1 minute remaining and when their time is up. Speakers are then to return to their seats and no further comments will be permitted.

In accordance with State Law, remarks during public comment are to be limited to subjects within Council's jurisdiction. Remarks on other agenda items will be limited to those items.

Remarks from those seated or standing in the back of the chamber will not permitted. All those wishing to speak including Council and Staff need to be recognized by the Chair before speaking.

ACCOMODATIONS

If you need special assistance or accommodations to participate in this meeting, please contact the City Clerk's office at 909-395-2009. Notification of 48 hours prior to the meeting will help the City make reasonable arrangements. Equipment for the hearing impaired is available in the Records Management Office.

ORDER OF BUSINESS

The regular City Council and Housing Authority meeting begins with Closed Session and Closed Session Comment at 6:00 p.m., Public Comment at 6:30 p.m. immediately followed by the Regular Meeting and Public Hearings. No agenda item will be introduced for consideration after 10:00 p.m. except by majority vote of the City Council.

CALL TO ORDER *(OPEN SESSION)*

ROLL CALL

Dorst-Porada, Wapner, Bowman, Valencia, Mayor/Chairman Leon

CLOSED SESSION PUBLIC COMMENT

The Closed Session Public Comment portion of the Council/Housing Authority meeting is limited to a maximum of 3 minutes for each speaker and comments will be limited to matters appearing on the Closed Session. Additional opportunities for further Public Comment will be given during and at the end of the meeting.

REPORT ON CLOSED SESSION

City Attorney

PUBLIC COMMENTS 6:30 P.M.

The Public Comment portion of the Council/Housing Authority meeting is limited to 30 minutes with each speaker given a maximum of 3 minutes. An opportunity for further Public Comment may be given at the end of the meeting. Under provisions of the Brown Act, Council is prohibited from taking action on oral requests.

To comment by email, submit your comments by email no later than 4:00 p.m. on the day of the meeting by emailing your name, agenda item you are commenting on and your comment to publiccomments@ontarioca.gov. All Comments received by the deadline will be forwarded to the City Council for consideration before action is taken on the matter and entered into the record. As previously noted -- if you wish to address the Council, fill out one of the blue slips at the rear of the chambers and give it to the City Clerk.

AGENDA REVIEW/ANNOUNCEMENTS

The City Manager will go over all updated materials and correspondence received after the Agenda was distributed to ensure Council Members have received them. He will also make any necessary recommendations regarding Agenda modifications or announcements regarding Agenda items to be considered.

INFORMATION RELATIVE TO POSSIBLE CONFLICT OF INTEREST

Agenda item contractors, subcontractors and agents may require member abstentions due to conflict of interests and financial interests. Council Member abstentions shall be stated under this item for recordation on the appropriate item.

CONSENT CALENDAR

All matters listed under CONSENT CALENDAR will be enacted by one motion in the form listed below – there will be no separate discussion on these items prior to the time Council votes on them, unless a member of the Council requests a specific item be removed from the Consent Calendar for a separate vote.

Each member of the public wishing to address the City Council on items listed on the Consent Calendar will be given a total of 2 minutes.

1. **APPROVAL OF MINUTES**

CITY OF ONTARIO *Agenda Report* **March 19, 2024**	**SECTION:** **CONSENT CALENDAR**
Department: Engineering Prepared By: Angela Truong Staff Member Presenting: Scott Murphy, Executive Director Community Development Reviewed By: Raymond Lee, Khoi Do Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 3

SUBJECT: **A RESOLUTION APPROVING THE SUMMARY VACATION OF AN EASEMENT FOR PUBLIC UTILITY PURPOSES LOCATED AT THE SOUTHEAST CORNER OF HAVEN AVENUE AND PHILADELPHIA STREET**

RECOMMENDATION: That the City Council adopt a Resolution ordering the summary vacation of an easement for public utility purposes located at the southeast corner of Haven Avenue and Philadelphia Street.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Focus Resources in Ontario's Commercial and Residential Neighborhoods
Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)

FISCAL IMPACT: There is no direct fiscal impact associated with this action. The City did not pay to acquire the subject easement. The Developer has paid the applicable processing fees to defray any City cost to process this request.

BACKGROUND & ANALYSIS: The applicant, Executive Development, LLC, has requested that the City vacate an existing public utility easement, as shown on Exhibit 1, to facilitate the development of the area. The easement was originally envisioned to provide a connection between the public system on Haven Avenue and the public system on Ponderosa Avenue. Evaluation of the need for the connection determined that it is not needed for any present or future public recycled water line or utility purposes. There are currently no existing public utilities within the easement and the easement is determined to be excess.

Section 8333(c) of the California Streets and Highways Code authorizes the City to summarily vacate (by Resolution with no public hearing) a public service easement that has been superseded by relocation or determined to be excess, and there are no public facilities located within the easement.

This summary vacation meets the California Government Code, Streets and Highways Code, Ontario Municipal Code, and has been reviewed and approved by the City Engineer.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING THE SUMMARY VACATION OF AN EASEMENT FOR PUBLIC UTILITY PURPOSES LOCATED AT THE SOUTHEAST CORNER OF HAVEN AVENUE AND PHILADELPHIA STREET.

WHEREAS, the City Council of the City of Ontario, California, pursuant to Division 9, Part 3, Chapter 4, of the Streets and Highways Code, may summarily vacate an easement under certain conditions specified therein; and

WHEREAS, an easement for public utility purposes located at the southeast corner of Haven Avenue and Philadelphia Street, shown on a portion of the northwest quarter of Section 1, Township 2 South, Range 7, San Bernardino Base and Meridian, according to Government Survey, in the City of Ontario, County of San Bernardino, State of California, as described in Document No. 2023-0012683, of Official Records of the County Recorder of San Bernardino County, State of California, is not needed for any present or future street or public utility or other municipal purposes and is determined to be excess; and

WHEREAS, Section 8333(c) of the California Streets and Highways Code authorizes the City to summarily vacate (by Resolution with no public hearing) a public service easement that has been superseded by relocation or determined to be excess and there are no other public utilities located within the easement;

NOW, THEREFORE, BE IT RESOLVED, by the City Council of the City of Ontario, California:

1. That the above recitals are true and correct.

2. That title to the above-described said properties, more specifically described in Exhibit “A” and depicted on Exhibit “B” attached hereto, shall be vacated.

3. That the City Clerk of the City of Ontario, California, shall cause a copy of this Resolution to be recorded in the office of the County Recorder of San Bernardino County, California.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 19th day of March 2024.

LEGAL DESCRIPTION

IN THE CITY OF ONTARIO, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, BEING TWO (2) STRIPS OF LAND DESCRIBED IN DOCUMENT NO. 2023-0012683, RECORDED JANUARY 18, 2023 OF OFFICIAL RECORDS OF SAID COUNTY RECORDER, THE CENTERLINES OF WHICH ARE DESCRIBED AS FOLLOWS:

STRIP 1 (15.00 FEET WIDE, 7.50 FEET WIDE ON EACH SIDE)

COMMENCING AT THE SOUTHWEST CORNER OF PARCEL 1 OF PARCEL MAP NO. 15700 AS PER MAP FILED IN BOOK 195 PAGES 26 AND 27, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, SAID POINT BEING ON THE EASTERLY RIGHT-OF-WAY LINE OF HAVEN AVENUE, 72.00 FEET HALF-WIDTH AS SHOWN ON SAID PARCEL MAP; THENCE SOUTHERLY ALONG SAID EASTERLY RIGHT-OF-WAY LINE SOUTH 00°25'57" EAST 315.88 FEET TO THE NORTHERLY CORNER OF PARCEL NO. 9653-1 OF THAT CERTAIN FINAL ORDER OF CONDEMNATION, SUPERIOR COURT CASE NO. RCV 02376, A CERTIFIED COPY OF WHICH WAS RECORDED DECEMBER 5, 1996 AS INSTRUMENT NO. 96-447914 OF OFFICIAL RECORDS OF SAID COUNTY RECORDER; THENCE SOUTHEASTERLY ALONG THE NORTHEASTERLY BOUNDARY OF SAID PARCEL 9653-1, FOLLOWING THE COURSES DESCRIBED AS FOLLOWS:

SOUTH 21°31'49" EAST 68.47 FEET;
THENCE SOUTH 05°44'03" EAST 492.05 FEET TO THE **TRUE POINT OF BEGINNING.**

THENCE NORTH 82°32'15" EAST 6.86 FEET; THENCE SOUTH 23°31'14" EAST 137.83 FEET; THENCE SOUTH 59°16'27" EAST 139.68 FEET; THENCE NORTH 89°41'23" EAST 28.68 FEET TO A POINT HEREINAFTER REFERRED TO AS **POINT "A"**; THENCE CONTINUING NORTH 89°41'23" EAST 204.14 FEET; THENCE NORTH 44°41'23" EAST 14.14 FEET; THENCE NORTH 00°18'37" WEST 77.64 FEET; THENCE NORTH 44°41'12" EAST 14.14 FEET; THENCE NORTH 89°41'01" EAST 85.23 FEET TO THE EASTERLY LINE OF THE WEST HALF OF THE NORTHWEST QUARTER OF THE NORTHWEST QUARTER OF SAID SECTION 1, SAID EASTERLY LINE ALSO BEING THE WESTERLY RIGHT-OF-WAY LINE OF PONDEROSA AVENUE, 66.00 FEET WIDE, AS SHOWN ON SAID PARCEL MAP.

THE ABOVE DESCRIBED STRIP SHALL TERMINATE WESTERLY AT THE NORTHEASTERLY BOUNDARY OF SAID PARCEL NO. 9653-1, AND EASTERLY AT THE EASTERLY LINE OF THE WEST HALF OF THE NORTHWEST QUARTER OF THE NORTHWEST QUARTER OF SAID SECTION 1.

CONTAINS 10,625 SQUARE FEET (0.244 ACRES), MORE OR LESS.

THE SIDELINES OF THIS STRIP OF LAND TO BE SHORTENED OR LENGTHENED SO AS TO TERMINATE AT ANGLE POINTS.

AS SHOWN ON EXHIBIT B, ATTACHED HERETO AND MADE A PART THEREOF.

STRIP 2 (10.00 FEET WIDE, 5.00 FEET WIDE ON EACH SIDE)

BEGINNING AT THE ABOVE MENTIONED **POINT "A"**, THENCE SOUTH 00°18'37" EAST 14.89 FEET.

EXCLUDING THAT PORTION LYING WITHIN ABOVE DESCRIBED STRIP 1.

CONTAINS 74 SQUARE FEET (0.002 ACRES), MORE OR LESS.

AS SHOWN ON EXHIBIT "B", ATTACHED HERETO AND MADE A PART THEREOF.

SUBJECT TO COVENANTS, CONDITIONS, RESTRICTIONS, RESERVATIONS, EASEMENTS, RIGHTS AND RIGHTS-OF-WAY OF RECORD, IF ANY.

CITY OF ONTARIO *Agenda Report* **March 19, 2024**	**SECTION:** **CONSENT CALENDAR**
Department: Engineering Prepared By: Jaime Maciel-Carrera Staff Member Presenting: Scott Murphy, Executive Director Community Development Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 4

SUBJECT: **A RESOLUTION AUTHORIZING SUBMITTAL OF A CLAIM TO THE SAN BERNARDINO COUNTY TRANSPORTATION AUTHORITY FOR THE 2023 TRANSPORTATION DEVELOPMENT ACT, ARTICLE 3 FUNDS FOR THE BUS STOP BOARDING PAD INSTALLATION PROJECT**

RECOMMENDATION: That the City Council adopt a Resolution approving the submittal of a claim for $32,835 to the San Bernardino County Transportation Authority (SBCTA) for the 2023 Transportation Development Act (TDA) Article 3 Funds for the Bus Stop Boarding Pad Installation Project and authorize the City Manager, or his designee, to execute all necessary documents to submit a reimbursement claim.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Operate in a Businesslike Manner
Pursue City's Goals and Objectives by Working with Other Governmental Agencies
Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)

FISCAL IMPACT: The City is eligible to receive a reimbursement in the amount of $32,835 through the SBCTA from the 2023 TDA Article 3 Funds for the Bus Stop Boarding Pad Installation Project. The grant will be included in the Proposed Fiscal Year 2024-25 Budget. There is no fiscal impact to the General Fund.

BACKGROUND & ANALYSIS: The City and Omnitrans, a regional public transit agency, elected to partner on a potential project for the 2023 Transportation Development Act (TDA) Article 3 Call for Projects intended for the improvement of bicycle and pedestrian facilities. Based on coordination with Omnitrans, the City submitted an application to install bus stop boarding pads at 1) Riverside Drive and Mill Creek Avenue; 2) Inland Empire Boulevard and Ferrari Lane; and 3) Vineyard Avenue and Walnut Street. The City has applied for and utilized TDA Article 3 project funds in the past for similar project improvements. An evaluation panel comprised of representatives from SBCTA, Western Riverside Council of Governments (WRCOG), and Riverside County Transportation Commission (RCTC) scored the potential projects.

City Staff was informed of the award, based on evaluation results on October 11, 2023. SBCTA requires that within 6 months of funding award notification, that a submittal of a claim form and an authorizing Resolution be completed. Upon approval, Staff will submit the claim form and Resolution.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, AUTHORIZING SUBMITTAL OF A CLAIM TO THE SAN BERNARDINO COUNTY TRANSPORTATION AUTHORITY FOR TRANSPORTATION DEVELOPMENT ACT ARTICLE 3 FUNDS FOR THE BUS STOP BOARDING PAD INSTALLATION PROJECT.

WHEREAS, Mills-Alquist-Deddeh Act (SB 325) was enacted by the California Legislature to improve existing public transportation services and encourage regional transportation coordination. Known as the Transportation Development Act (TDA) of 1971, this law provides funding to be allocated to transit and non-transit related purposes that comply with regional transportation plans; and

WHEREAS, TDA provides two funding sources, the Local Transportation Fund (LTF) and State Transit Assistance fund (STA); and

WHEREAS, LTF is derived from a ¼ cent of the general sales tax collected statewide and apportioned by population to areas within the county; and

WHEREAS, STA is derived from the statewide sales tax on diesel fuel, plus an additional vehicle registration fee authorized under Senate Bill 1, referred to as the State of Good Repair, and both are apportioned by the State Controller's Office 50% by population and 50% by transit operator revenues; and

WHEREAS, the San Bernardino County Transportation Authority (SBCTA) authorizes funding for a wide variety of transportation programs in San Bernardino County, including planning and program activities, pedestrian and bicycle facilities, community transit services, public transportation, and bus and rail projects to local transportation agencies through annual apportionment and allocation processes, and approves payments periodically throughout the year; and

WHEREAS, SBCTA awarded the City of Ontario TDA Article 3 grant funds in the amount of $32,835 for development of the Bus Stop Boarding Pad Installation Project within the City of Ontario jurisdiction through a competitive "Call for Projects"; and

WHEREAS, TDA Article 3 grant funds are provided on a reimbursement basis; and

WHEREAS, SBCTA requires the City of Ontario to submit a claim and request(s) for reimbursement; and

WHEREAS, submittal of the claim for TDA Article 3 funds must be first authorized by the City Manager; and

WHEREAS, the Bus Stop Boarding Pad Installation Project award is over $200,000, and is eligible for progress reimbursement, or under, and eligible for reimbursement at project completion; and

WHEREAS, SBCTA requires the designation of individuals authorized to certify Project completion; and

WHEREAS, the City Manager, or their designee, is authorized to certify project completion.

NOW, THEREFORE, BE IT RESOLVED that the City Council of the City of Ontario, California, authorizes submittal of a claim and request for reimbursement(s) for TDA Article 3 funds for the Bus Stop Boarding Pad Installation Project in the amount of $32,835 and that the City Manager is authorized to certify project completion.

BE IT FURTHER RESOLVED that the City Manager, or his designee, is hereby authorized and empowered to execute in the name of the City of Ontario all documents, including but not limited to applications, agreements, annual reports including expenditure reports and amendments necessary to secure said reimbursement claim payments to support our TDA Article 3 Funds for the Bus Stop Boarding Pad Installation Project.

BE IT FURTHER RESOLVED that this authorization is effective until rescinded by the signature authority or this Governing Body.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 19th day of March, 2024.

CITY OF ONTARIO *Agenda Report* **March 19, 2024**	**SECTION:** **CONSENT CALENDAR**
Department: Engineering Prepared By: Antonio Alejos Staff Member Presenting: Scott Murphy, Executive Director Community Development Reviewed By: Raymond Lee, Khoi Do Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 5

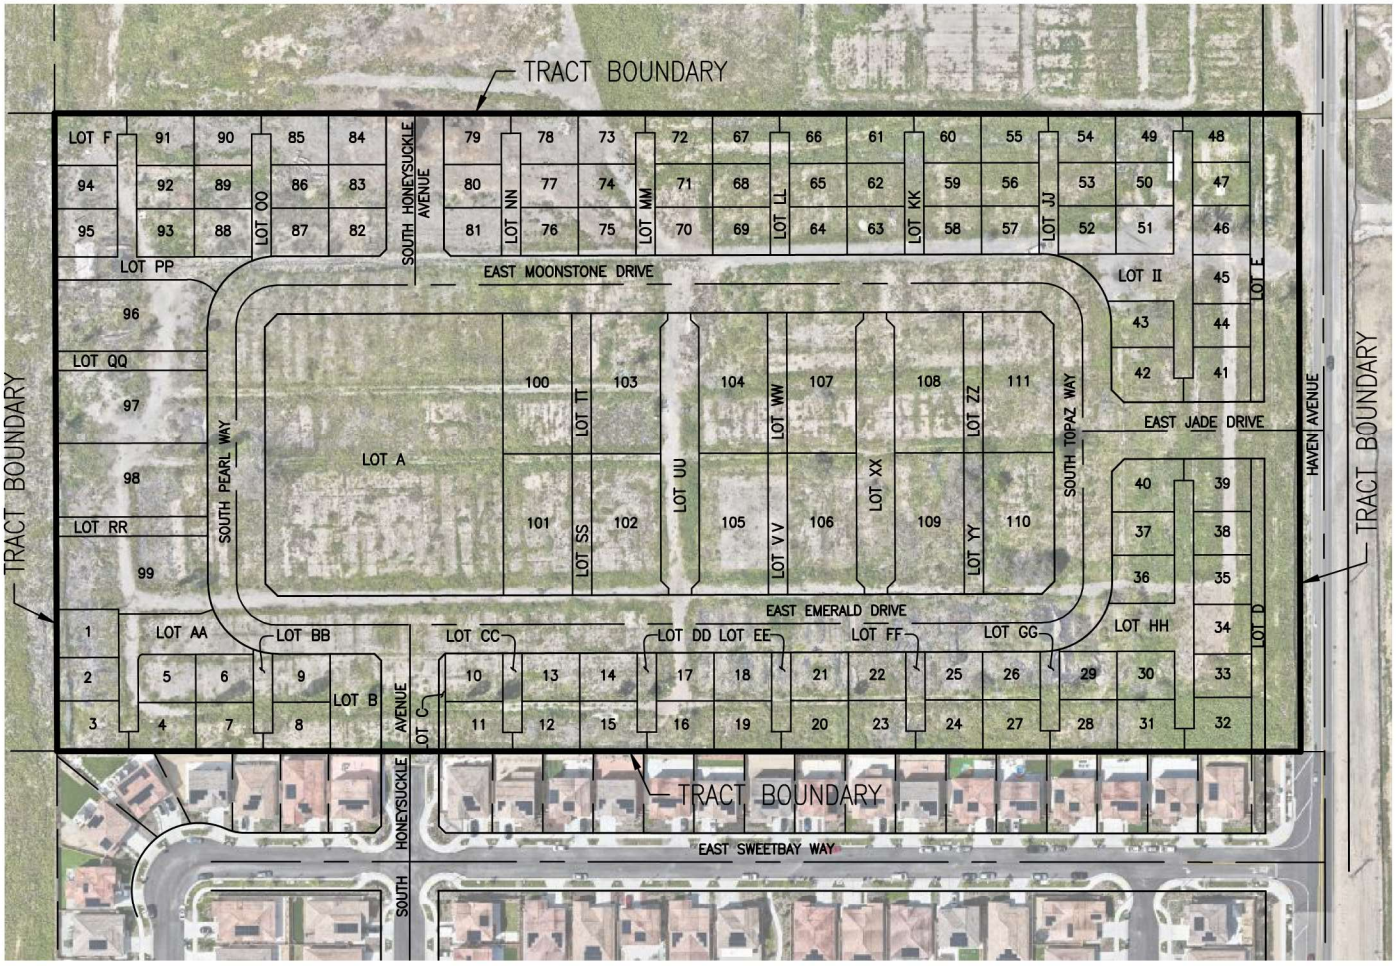
SUBJECT: **A RESOLUTION APPROVING AN IMPROVEMENT AGREEMENT, IMPROVEMENT SECURITY AND FINAL TRACT MAP NO. 20452 LOCATED ON THE WEST SIDE OF HAVEN AVENUE, APPROXIMATELY 600 FEET NORTH OF CHINO AVENUE**

RECOMMENDATION: That the City Council adopt a Resolution approving an Improvement Agreement, Improvement Security and Final Tract Map No. 20452 located on the west side of Haven Avenue, approximately 600 feet north of Chino Avenue.

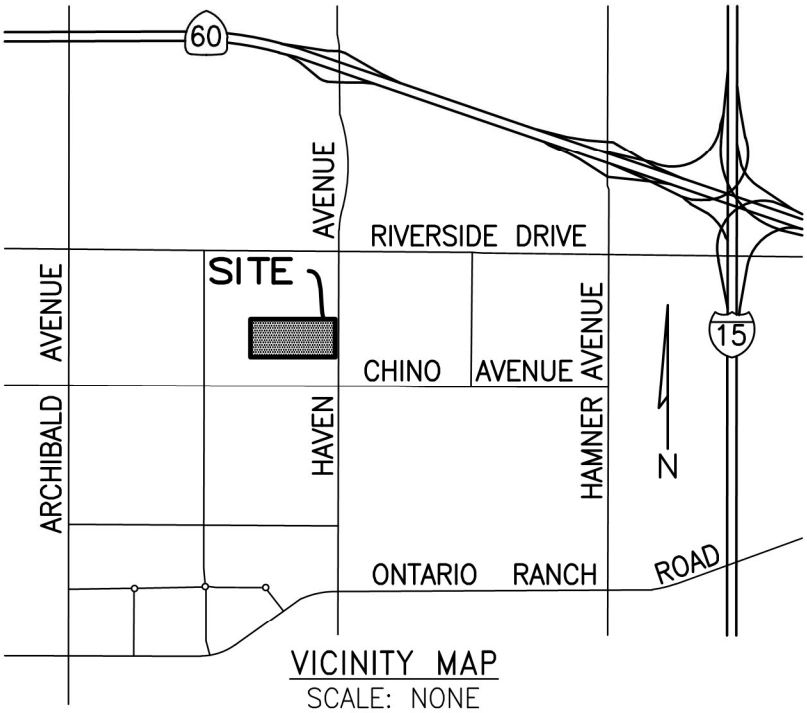
THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Focus Resources in Ontario's Commercial and Residential Neighborhoods
Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)
Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in Ontario Ranch

FISCAL IMPACT: There is not a direct fiscal impact associated with this action. All public infrastructure improvements required for this project will be constructed by the Developer at its sole cost.

BACKGROUND & ANALYSIS: Final Tract Map No. 20452, consisting of 111 numbered lots and 32 lettered lots on approximately 20 acres of land, as shown on Exhibit A, has been submitted by the Developer, Landsea Homes of California, LLC. Tentative Tract Map No. 20452 was approved by the Planning Commission on June 27, 2023.



Improvements will include streets, storm drain, domestic water main, recycled water main, sewer main, fiber optic conduits, streetlights, and parkway landscaping with irrigation. All landscape improvements will be consistent with current City approved drought measures.



The Developer has entered into an Improvement Agreement with the City for Final Tract Map No. 20452 and has posted adequate security to ensure the construction of the required improvements.

This project meets all conditions of the Ontario Municipal Code and has been reviewed and approved by the City Engineer.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING AN IMPROVEMENT AGREEMENT, IMPROVEMENT SECURITY AND FINAL TRACT MAP NO. 20452 LOCATED ON THE WEST SIDE OF HAVEN AVENUE, APPROXIMATELY 600 FEET NORTH OF CHINO AVENUE.

WHEREAS, Tentative Tract Map No. 20452 submitted for approval by HCW Lathrop Investors, LLC and JH Bray, LLC, was approved by the Planning Commission of the City of Ontario on June 27, 2023; and

WHEREAS, Tentative Tract Map No. 20452 consists of 111 numbered lots and 32 lettered lots, in the City of Ontario, County of San Bernardino, State of California, being a portion of the North half of the Southeast quarter of the Northeast quarter of Section 11, Township 2 South, Range 7 West, San Bernardino Base and Meridian; and

WHEREAS, to meet the requirements established as prerequisite to final approval of Tract Map No. 20452, Landsea Homes of California LLC, a Delaware Limited Liability Company has offered the Improvement Agreement together with good and sufficient improvement security, in conformance with the City Attorney's approved format, for approval and execution by the City; and

WHEREAS, the requirement for the preparation of Covenants, Conditions and Restriction (CC&R's), approved by the City Attorney's Office, to ensure the right to mutual ingress and egress and continued maintenance of common facilities by the commonly affected property owners has been deferred to a date that coincides with the recordation of the subject Tract Map; and

NOW, THEREFORE, BE IT RESOLVED, by the City Council of the City of Ontario, California, as follows:

1. That said Improvement Agreement be, and the same is, approved and the City Manager is authorized to execute same on behalf of said City, and the City Clerk is authorized to attest thereto; and

2. That said Improvement Security is accepted as good and sufficient, subject to approval as to form and content thereof by the City Attorney.

3. That Final Tract Map No. 20452 be approved and that the City Clerk be authorized to execute the statement thereon on behalf of said City.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 19th day of March 2024.

between

THE CITY OF ONTARIO

a California municipal corporation

and

Landsea Homes of California, LLC

SUBDIVISION IMPROVEMENT AGREEMENT
FOR COMPLETION OF PUBLIC IMPROVEMENTS

TRACT MAP NO. 20452

I. PARTIES AND DATE

This Subdivision Improvement Agreement for the Completion of Public Improvements ("Agreement") is entered into as of this ____ day of _____, 20__, by and between the City of Ontario, a California municipal corporation ("City") and Landsea Homes of California, LLC a Delaware corporation, with its principal office located at 7525 Irvine Center Drive Suite 200, Irvine, CA 92618 ("Developer"). City and Developer are sometimes hereinafter individually referred to as "Party" and hereinafter collectively referred to as the "Parties."

II. RECITALS

A. Developer's tentative tract map for real property located within City, a legal description of which is attached hereto as Exhibit "A" ("Property"), was conditionally approved by the Ontario PC23-051 on June 27, 2023. The tentative tract map is identified in City records as Tract Map No. 20452 ("Map").

B. Developer has not completed all of the work or made all of the public improvements required by the City's Municipal Code, the Subdivision Map Act (California Government Code section 66410, *et seq.*) ("Map Act"), the conditions of approval for the Map, or other ordinances, resolutions, or policies of City requiring construction of improvements in conjunction with the subdivision of land.

C. Pursuant to the City's Municipal Code and the applicable provisions of the Map Act, Developer and City enter into this Agreement for the timely construction and completion of the public improvements and the furnishing of the security therefor, acceptable to the City Engineer and City Attorney, for the Map.

D. Developer's execution of this Agreement and the provision of the security are made in consideration of City's approval of the final Map for the Property.

III. TERMS

1.0 Effectiveness. This Agreement shall not be effective unless and until all four of the following conditions are satisfied: (a) Developer provides City with security of the type and in the amounts required by this Agreement; (b) Developer executes and records this Agreement in the Recorder's Office of the County of San Bernardino; (c) the approving body per the Ontario Development Code approves the final map for the Property; and (d) Developer records the final map for the Property in the Recorder's Office of the County of San Bernardino. If any of the above described conditions are not satisfied, this Agreement shall automatically terminate without need of further action by either City or Developer, and Developer may not thereafter record the final map for the Property.

1.1 Definitions. For purposes of enforcing this Agreement, the term "City" shall include, but shall not be limited to, City Council, Public Works Director, City Engineer, Community Development Director, Building Official, or any of their authorized representatives. City shall have the sole and absolute discretion to determine which public body, public official, or public employee may act on behalf of City for any particular purpose.

2.0 Public Improvements. Developer shall construct or have constructed at its own cost, expense, and liability all improvements required by City as part of the approval of the Map, including, but not limited to, all grading, roads, paving, curbs and gutters, pathways, storm drains, sanitary sewers, utilities, drainage facilities, traffic controls, landscaping, street lights, waters, and all other required facilities as shown in detail on the plans, profiles, and specifications which have been prepared by or on behalf of Developer for the Map ("Public Improvements"). The Public Improvements are more specifically described in Exhibit "B," which is attached hereto and incorporated herein by this reference. Construction of the Public Improvements shall include any transitions and/or other incidental work deemed necessary for drainage or public safety. Developer shall be responsible for the replacement, relocation, or removal of any component of any utility system or public improvement in conflict with the construction or installation of the Public Improvements. Such replacement, relocation, or removal shall be performed to the complete satisfaction of the City Engineer and the owner of such utility system or public improvement. Developer further promises and agrees to provide all equipment, tools, materials, labor, tests, design work, and engineering services necessary or required by City to fully and adequately complete the Public Improvements.

2.1 Prior Partial Construction of Public Improvements. Where construction of any Public Improvements has been partially completed prior to the execution of this Agreement, Developer agrees to complete such Public Improvements or assure their completion in accordance with this Agreement.

2.2 Permits; Notices; Utility Statements. Prior to commencing any work, Developer shall, at its sole cost, expense, and liability, obtain all necessary permits and licenses and give all necessary and incidental notices required for the lawful construction of the Public Improvements and performance of Developer's obligations under this Agreement. Developer shall conduct the work in full compliance with the regulations, rules, and other requirements contained in any permit or license issued to Developer. Prior to commencing any work, Developer shall file a written statement with the City Clerk and the City Engineer, signed by Developer and each utility that will provide utility service to the Property, attesting that Developer has made all deposits legally required by the utility for the extension and provision of utility service to the Property.

2.3 Pre-approval of Plans and Specifications. Developer is prohibited from commencing work on any Public Improvement until all plans, specifications, estimates, and bonds for such Public Improvement have been submitted to and approved by the City Engineer, or his/her authorized designee. Approval by the City Engineer shall not relieve Developer from ensuring that all Public Improvements conform with all other requirements and standards set forth in this Agreement.

2.4 Quality of Work; Compliance With Laws and Codes. The construction plans and specifications for the Public Improvements shall be prepared in accordance with all

applicable federal, state, and local laws, ordinances, regulations, codes, standards, and other requirements. The Public Improvements shall be completed in accordance with all approved maps, conditions, plans, specifications, standard drawings, and special amendments thereto on file with City, as well as all applicable federal, state, and local laws, ordinances, regulations, codes, standards, and other requirements applicable at the time work is actually commenced.

2.5 Standard of Performance. Developer and its contractors, if any, shall perform all work required to construct the Public Improvements under this Agreement in a skillful and workmanlike manner, and consistent with the standards generally recognized as being employed by professionals in the same discipline in the State of California. Developer represents and maintains that it or its contractors shall be skilled in the professional calling necessary to perform the work. Developer warrants that all of its employees and contractors shall have sufficient skill and experience to perform the work assigned to them, and that they shall have all licenses, permits, qualifications, and approvals of whatever nature that are legally required to perform the work, and that such licenses, permits, qualifications, and approvals shall be maintained throughout the term of this Agreement.

2.6 Alterations to Improvements. The Public Improvements in Exhibit "B" are understood to be only a general designation of the work and improvements to be done, and not a binding description thereof. All work shall be done and improvements made and completed as shown on approved plans and specifications, and any subsequent alterations thereto. If during the course of construction and installation of the Public Improvements it is determined that the public interest requires alterations in the Public Improvements, Developer shall undertake such design and construction changes as may be reasonably required by City. Any and all alterations in the plans and specifications and the Public Improvements to be completed may be accomplished without giving prior notice thereof to Developer's surety for this Agreement.

2.7 Superintendence by Developer. Developer shall require each contractor and subcontractor to have a competent foreperson on the job at all times when that contractor or subcontractor, or any employee or agent thereof, is performing work on the Public Improvements. Before starting work on the Public Improvements, each contractor and subcontractor shall submit in writing the name of the proposed foreperson, who shall be subject to the review and approval of City. Following approval by City, each foreperson shall be present at the work site at all times that any work is in progress and at any time that any employee of the contractor or subcontractor is present at the work site. The Developer shall employ a competent construction manager that is responsible for the entire work. Each contractor or subcontractor shall contractually report to the construction manager, either directly or through a subcontract. The construction manager shall be immediately available by phone during hours when construction is in progress and shall be available in person within two hours when requested by the City. The construction manager shall coordinate the work such that construction and the associated inspection happen in an efficient manner. Should a contractor or subcontractor desire to change its foreperson, it shall provide the information specified above and obtain City's prior written approval. City, in its sole and absolute discretion, may require any contractor or subcontractor to replace its foreperson provided that City gives the contractor or subcontractor at least forty-eight hours written notice.

Developer shall, at all times, enforce strict discipline and good order among its employees and those of its subcontractors and shall not employ any unfit person or anyone not skilled in the

assigned task. If any person employed by, the Developer, a contractor or subcontractor fails or refuses to carry out the directions of the City or appears to the City, in its sole and absolute discretion, to be incompetent or to act in a disorderly or improper manner, such person shall be removed from the project immediately upon request by the City, and such person shall not again be employed on the work. Such removal shall not be the basis for any claim of compensation or damages against the City.

In addition, Developer shall maintain an office with a telephone, and Developer or a person authorized to make decisions and to act on Developer's behalf in Developer's absence shall be available to be on the job within three (3) hours of being called at such office by the City, during the hours of 9:00 a.m. through 5:00 p.m., Monday through Friday, or any other day or time when work is being performed on the Public Improvements. Developer shall also provide City with a telephone number, at which Developer, or its representative, shall be available twenty-four (24) hours a day in the event of an emergency.

3.0 Maintenance of Public Improvements and Landscaping. City shall not be responsible or liable for the maintenance or care of the Public Improvements until City approves and accepts them. City shall exercise no control over the Public Improvements until accepted. Any use by any person of the Public Improvements, or any portion thereof, shall be at the sole and exclusive risk of Developer at all times prior to City's acceptance of the Public Improvements. Developer shall maintain all the Public Improvements in a state of good repair until they are completed by Developer and approved and accepted by City, and until the security for the performance of this Agreement is released.

Maintenance shall include, but shall not be limited to: repair of pavement, curbs, gutters, sidewalks, signals, parkways, water mains, and sewers; maintaining all landscaping in a vigorous and thriving condition reasonably acceptable to City; removal of debris from sewers and storm drains; and sweeping, repairing, and maintaining in good and safe condition all streets and street improvements. Developer shall cause the sweeping of streets to occur weekly at a minimum. Developer shall perform additional street sweeping work as necessary depending on construction activities or as required by, and at the direction of, the City Engineer. It shall be Developer's responsibility to initiate all maintenance work, but if it shall fail to do so, it shall promptly perform such maintenance work when notified to do so by City. If Developer fails to properly prosecute its maintenance obligation under this Section, City may do all work necessary for such maintenance and the cost thereof shall be the responsibility of Developer and its surety under this Agreement. City shall not be responsible or liable for any damages or injury of any nature in any way related to or caused by the Public Improvements or their condition prior to acceptance.

3.1 Landscaping and Existing Irrigation Systems. Developer shall plant and maintain parkway trees and landscaping as provided in Section 10-2.07 of the City Municipal Code, and as directed by the Public Facilities Department. The Developer shall also be responsible for the replacement, relocation or removal of any component of any irrigation water system in conflict with the construction or installation of the Public Improvements. Such replacement, relocation or removal shall be performed to the complete satisfaction of the City Engineer and the owner of such water system.

4.0 Construction Schedule. Unless extended pursuant to Section 4.1 of this Agreement, Developer shall fully and adequately complete or have completed the Public Improvements within twelve (12) months following approval of the final Map. At least fifteen (15) days prior to the commencement of such work, Developer shall notify the City Engineer in writing of the date fixed by Developer for commencement of the work.

4.1 Extensions. Time is of the essence with regard to this Agreement. The City may, in its sole and absolute discretion, provide Developer with additional time within which to complete the Public Improvements. Requests for extension of time shall be in writing and shall be delivered to City in the manner hereinafter specified for service of notices. An extension of time, if any, shall be granted only in writing, and an oral extension shall not be valid or binding on City. It is understood that by providing the security required by this Agreement, Developer and its surety consent in advance to any extension of time as may be given by City to Developer and waive any and all right to notice of such extension(s). Developer's acceptance of an extension of time granted by City shall constitute a waiver by Developer and its surety of all defenses of laches, estoppel, statutes of limitations, and other limitations of action in any action or proceeding filed by City following the date on which the Public Improvements were to have been completed hereunder. In addition, as consideration for granting such extension to Developer, City reserves the right to review the provisions of this Agreement, including, but not limited to, the construction standards, the cost estimates approved by City, and the sufficiency of the improvement security provided by Developer, and to require adjustments thereto when warranted according to City's reasonable discretion.

4.2 Accrual of Limitations Period. Any limitations period provided by law related to breach of this Agreement or the terms thereof shall not accrue until Developer has provided the City Engineer with written notice of Developer's intent to abandon or otherwise not complete required or agreed upon Public Improvements.

5.0 Grading. Developer agrees that any and all grading done or to be done in conjunction with construction of the Public Improvements or development of the Property shall conform to all federal, state, and local laws, ordinances, regulations, and other requirements including, without limitation, City's grading regulations, the National Pollutant Discharge Elimination Systems (NPDES), and stormwater regulations thereunder as administered by the State Water Resources Control Board and Regional Water Quality Control Boards. In order to prevent damage to the Public Improvements by improper drainage or other hazards, the grading shall be completed in accordance with the time schedule for completion of the Public Improvements established by this Agreement, and prior to City's approval and acceptance of the Public Improvements and release of the Security as set forth in this Agreement. Developer further agrees that the indemnification as set forth in this Agreement shall extend to and include any and all grading contemplated by this Agreement, including but not limited to, any partial or rough grading work.

6.0 Encroachment Permit. Developer shall obtain any necessary encroachment permits from the office of the City Engineer prior to start of any work within the public rights-of-way, and the Developer shall conduct such work in full compliance with the regulations and other requirements contained therein. The Developer shall be responsible for the removal of all loose rock and other debris from the public rights-of-way resulting from work done on adjacent property

or within said rights-of-way. Work done within existing public rights-of-way shall be diligently pursued to completion with minimal obstruction or inconvenience to the public and pursuant to the terms of the encroachment permit and any applicable federal, state or local laws, rules or regulations. The City shall have the right to complete any and all work in the event of unjustified delay in completion, and to recover all costs and expenses incurred from the Developer or its surety by any lawful means. Non-compliance with the terms of the encroachment permit or any applicable federal, state or local laws, rules or regulations may result in the City's cessation of the work and assessment of any applicable penalties or other remedies. Prior to, and as a condition precedent to, the issuance of any required encroachment permit(s), Developer shall provide to the City evidence satisfactory to the City of: (1) the certificate(s), endorsement(s), or policy(ies) of insurance as required by this Agreement; and (2) any and all licenses, permits, qualifications and approvals of whatever nature that are legally required to perform the work.

7.0 Utilities. Developer shall assume all costs for and shall provide utility services, including water, power, gas, and telephone service to serve each parcel, lot, or unit of land within the Property in accordance with all applicable federal, state, and local laws, rules, and regulations, including, but not limited to, the regulations, schedules, and fees of the utilities or agencies providing such services. Except for commercial or industrial properties, Developer shall also provide cable television facilities to serve each parcel, lot, or unit of land in accordance with all applicable federal, state, and local laws, rules, and regulations, including, but not limited to, the requirements of the cable company possessing a valid franchise with City to provide such service within City's jurisdictional limits. All utilities shall be installed underground, unless otherwise approved by the City Council or the Planning Commission of the City, or by any other state or federal laws or regulations.

8.0 Fees and Charges. Developer shall, at its sole cost, expense, and liability, pay all fees, charges, and taxes arising out of construction of the Public Improvements, including, but not limited to fees for the checking, filing, and processing of improvement plans and specifications and for inspecting the construction of the Public Improvements. These fees must be paid in full prior to approval of the final map and improvement plans. The fees referred to above are not necessarily the only City fees, charges, or other costs that have been or will be imposed on the subdivision and its development, and this Agreement shall in no way exonerate or relieve Developer from paying such other applicable fees, charges, and/or costs.

9.0 City Inspection of Public Improvements. Developer shall, at its sole cost, expense, and liability, and at all times during construction of the Public Improvements, maintain reasonable and safe facilities and provide safe access for inspection by City of the Public Improvements and areas where construction of the Public Improvements is occurring or will occur.

10.0 Acceptance of Improvements; As-Built or Record Drawings. If the Public Improvements are properly completed by Developer and approved by the City Engineer, and if they comply with all applicable federal, state and local laws, ordinances, regulations, codes, standards, and other requirements, the City Council shall be authorized to accept the Public Improvements. The City Council may, in its sole and absolute discretion, accept fully completed portions of the Public Improvements prior to such time as all of the Public Improvements are complete, which shall not release or modify Developer's obligation to complete the remainder of the Public Improvements within the time required by this Agreement. Upon the total or partial

acceptance of the Public Improvements by City, the City Clerk shall file with the Recorder's Office of the County of San Bernardino, a notice of completion for the accepted Public Improvements in accordance with California Civil Code Section 9204, at which time the accepted Public Improvements shall become the sole and exclusive property of City without payment therefor. Title to and ownership of the Public Improvements constructed under this Agreement shall vest absolutely in City upon completion and acceptance in writing of such Public Improvements by City. Issuance by City of occupancy permits for any buildings or structures located on the Property shall not be construed in any manner to constitute City's acceptance or approval of any Public Improvements. Notwithstanding the foregoing, City may not accept any Public Improvements unless and until Developer provides one (1) set of "as-built" or record drawings or plans to the City Engineer for all such Public Improvements. The drawings shall be certified and shall reflect the condition of the Public Improvements as constructed, with all changes incorporated therein.

11.0 Default; Notice; Remedies.

11.1 Notice. If Developer neglects, refuses, or fails to fulfill or timely complete any obligation, term, or condition of this Agreement, or if City determines there is a violation of any federal, state, or local law, ordinance, regulation, code, standard, or other requirement, City may at any time thereafter declare Developer to be in default or violation of this Agreement and make written demand upon Developer or its surety, or both, to immediately remedy the default or violation ("Notice"). Developer shall substantially commence the work required to remedy the default or violation within ten (10) days of the Notice. If the default or violation constitutes an immediate threat to the public health, safety, or welfare, City may provide the Notice verbally, and Developer shall substantially commence the required work within twenty-four (24) hours thereof. Immediately upon City's issuance of the Notice, Developer and its surety shall be liable to City for all costs of construction and installation of the Public Improvements and all other administrative costs and expenses.

11.2 Failure to Remedy; City Action. If the work required to remedy the noticed default or violation is not diligently prosecuted to a completion acceptable to City within the time frame contained in the Notice, City may complete all remaining work, arrange for the completion of all remaining work, and/or conduct such remedial activity as in its sole and absolute discretion it believes is required to remedy the default or violation. All such work or remedial activity shall be at the sole and absolute cost, expense, and liability of Developer and its surety, without the necessity of giving any further notice to Developer or surety. City's right to take such actions shall in no way be limited by the fact that Developer or its surety may have constructed any, or none, of the required or agreed upon Public Improvements at the time of City's demand for performance. In the event City elects to complete or arrange for completion of the remaining work and improvements, City may require all work by Developer or its surety to cease in order to allow adequate coordination by City. Notwithstanding the foregoing, if conditions precedent for reversion to acreage can be met and if the interests of City will not be prejudiced thereby, City may also process a reversion to acreage and thereafter recover from Developer or its surety the full cost and expense incurred.

11.3 Notice of Violation; Stop Work Order. If City determines that there is a violation of applicable federal, state or local laws, ordinances, regulations or other requirements, or the terms and conditions of this Agreement, the City and/or City Engineer may issue a Notice of Violation and Demand for Compliance and/or a Stop Work Order. The City may declare the Developer to be in default or violation of this Agreement and make written demand upon Developer or its surety, or both, to immediately remedy the default or violation. Developer shall comply with the Notice of Violation and/or Stop Work Order and shall substantially commence the work required to remedy the default or violation with the time specified in the Notice of Violation. If the default or violation constitutes an immediate threat to the public health, safety, or welfare, City and/or City Engineer may provide the Notice of Violation verbally, and Developer shall substantially commence the required work within twenty-four (24) hours thereof.

11.4 Other Remedies. No action by City pursuant to this Section of this Agreement shall prohibit City from exercising any other right or pursuing any other legal or equitable remedy available under this Agreement or any federal, state, or local law. City may exercise its rights and remedies independently or cumulatively, and City may pursue inconsistent remedies. City may institute an action for damages, injunctive relief, or specific performance.

11.5 Administrative Costs. If Developer fails to construct and install all or any part of the Public Improvements within the time required by this Agreement, or if Developer fails to comply with any other obligation contained herein, Developer and its surety shall be jointly and severally liable to City for all administrative expenses, fees, and costs, including reasonable attorney's fees and costs, incurred in obtaining compliance with this Agreement or in processing any legal action or for any other remedies permitted by law.

12.0 Warranty and Guarantee. Developer hereby warrants and guarantees all Public Improvements against any defective work or labor done, or defective materials furnished in the performance of this Agreement, including the maintenance of all landscaping within the Property in a vigorous and thriving condition reasonably acceptable to City, for a period of one (1) year following completion of the work and acceptance by City ("Warranty"). During the Warranty, Developer shall repair, replace, or reconstruct any defective or otherwise unsatisfactory portion of the Public Improvements, in accordance with the current ordinances, resolutions, regulations, codes, standards, or other requirements of City, and to the approval of the City Engineer. All repairs, replacements, or reconstruction during the Warranty shall be at the sole cost, expense, and liability of Developer and its surety. As to any Public Improvements which have been repaired, replaced, or reconstructed during the Warranty, Developer and its surety hereby agree to extend the Warranty for an additional one (1) year period following City's acceptance of the repaired, replaced, or reconstructed Public Improvements. Nothing herein shall relieve Developer from any other liability it may have under federal, state, or local law to repair, replace, or reconstruct any Public Improvement following expiration of the Warranty or any extension thereof. Developer's warranty obligation under this section shall survive the expiration or termination of this Agreement.

13.0 Security.

13.1 Prior to execution of this Agreement, Developer shall provide City with sufficient security in the amounts and under the terms set forth below ("Security"). Nothing in this Section is intended to prevent City, in its sole discretion, from requiring Developer to submit, or prevent Developer from submitting, security in a form other than bonds that may be allowed under California Government Code Section 66499, et seq. and the City's Municipal Code, and acceptable to City. The amount of the Security shall be based on the City Engineer's approximation of the actual cost to construct the Public Improvements, including the replacement cost for all public landscaping ("Estimated Costs"). If City determines, in its sole and absolute discretion, that the Estimated Costs have changed, Developer shall adjust the Security in the amount requested by City. Developer's compliance with this Section shall in no way limit or modify Developer's indemnification obligation under this Agreement. Security shall be on forms approved by the City for the purposes and amounts as follows:

13.1.1 Performance Bond. To guarantee the faithful performance of the Public Improvements and all the provisions of this Agreement, to protect City if Developer is in default as set forth in this Agreement, and to secure Developer's one-year guarantee and warranty of the Public Improvements, including the maintenance of all landscaping in a vigorous and thriving condition, Developer shall provide City security in the amount of **THREE MILLION TWO HUNDRED SEVENTY THREE THOUSAND ONE HUNDRED FORTY NINE DOLLARS AND SEVENTY SEVEN CENTS ($3,273,149.77)**, which sum shall be not less than one hundred percent (100%) of the Estimated Costs (Bonds attached in Exhibit "C" and Engineering Cost Estimate attached in Exhibit "B"). The City may, in its sole and absolute discretion, partially release a portion or portions of the security provided under this section as the Public Improvements are accepted by City, as provided herein, provided that Developer is not in default on any provision of this Agreement or condition of approval for the Map, and the total remaining security is not less than twenty-five percent (25%) of the Estimated Costs. All security provided under this section shall be released at the end of the Warranty period (as defined above), or any extension thereof as provided in this Agreement, provided that Developer is not in default on any provision of this Agreement or condition of approval for the Map.

13.1.2 Labor & Material Bond. To secure payment to the contractor and subcontractors, laborers, material men and other persons furnishing labor, materials, or equipment for performance of the Public Improvements and this Agreement, Developer shall provide City security in the amount of **THREE MILLION TWO HUNDRED SEVENTY THREE THOUSAND ONE HUNDRED FORTY NINE DOLLARS AND SEVETY SEVEN CENTS ($3,273,149.77)**, which sum shall not be less than one hundred percent (100%) of the Estimated Costs (Bonds attached in Exhibit "C" and Engineering Cost Estimate attached in Exhibit "B").. The security provided under this subsection may be released by written authorization of the City Engineer after one (1) year or within the time limits established in California Government Code section 66499.7 from the date City accepts the final Public Improvements at the discretion of City. The amount of such security shall be reduced by the total of all stop notice or mechanic's lien claims of which City is aware, plus an amount equal to twenty percent (20%) of such claims for reimbursement of City's anticipated administrative and legal expenses arising out of such claims.

13.1.3 Monument Security. To guarantee payment by the Developer to the engineer or surveyor whose certificate appears on the final map for the setting of all subdivision boundaries, lot corners and street centerline monuments, as well as the furnishing of all centerline tie notes to the City, prior to the City's execution of this Agreement, Developer shall deposit cash with the City in the amount of **TWO THOUSAND DOLLARS ($2,000)**. Said cash deposit may be released after receipt by the City of the centerline tie notes and written acknowledgment of payment in full from the engineer or surveyor.

13.1.4 Warranty Bond. To provide in the amount of ten percent (10%) of the Estimated Costs of the Work to guarantee and warrant the Work, for a period of one year following its completion and acceptance, against any defective work or labor done, or defective materials furnished, as required by California Government Code Section 66499.3(d). Any unused portion of the guarantee and warranty security shall be released one year after acceptance of the required improvements by the City Council.

13.2 Bond/Surety Requirements. The surety for any surety bonds provided as Security shall have a current A.M. Best rating of no less than A:VIII, shall be authorized to do business in the State of California, and shall be satisfactory to City. As part of the obligation secured by the Security and in addition to the face amount of the Security, Developer or its surety shall secure the costs and reasonable expenses and fees, including reasonable attorneys' fees and costs, incurred by City in enforcing the obligations of this Agreement. Developer and its surety stipulate and agree that no change, extension of time, alteration, or addition to the terms of this Agreement, the Public Improvements, or the plans and specifications for the Public Improvements shall in any way affect its obligation on the Security.

13.3 Evidence and Incorporation of Security. Evidence of the Security shall be provided on the forms set forth in Exhibit "C," unless other forms are deemed acceptable by the City Engineer and the City Attorney, and when such forms are completed to the satisfaction of City, the forms and evidence of the Security shall be attached hereto as Exhibit "C" and incorporated herein by this reference.

14.0 Lien. To secure the timely performance of Developer's obligations under this Agreement, including those obligations for which security has been provided pursuant to this Agreement, Developer hereby creates in favor of City a lien against all portions of the Property not dedicated to City or some other governmental agency for a public purpose. As to Developer's default on those obligations for which security has been provided pursuant to this Agreement, City shall first attempt to collect against such security prior to exercising its rights as a contract lienholder under this Section.

15.0 Indemnification. Developer shall defend (with counsel reasonably satisfactory to the City Attorney), indemnify, and hold harmless City, its elected officials, officers, employees, agents, and volunteers from any and all actual or alleged claims, demands, causes of action, liability, loss, damage, or injury, to property or persons, including wrongful death, whether imposed by a court of law or by administrative action of any federal, state, or local governmental body or agency, arising out of or incident to any acts, omissions, negligence, or willful misconduct of Developer, its personnel, employees, agents, or contractors in connection with or arising out of construction or maintenance of the Public Improvements, or performance of this Agreement. This

indemnification includes, without limitation, the payment of all penalties, fines, judgments, awards, decrees, attorneys' fees, and related costs or expenses, and the reimbursement of City, its elected officials, officers, employees, and/or agents for all legal expenses and costs incurred by each of them. This indemnification excludes only such portion of any claim, demand, cause of action, liability, loss, damage, penalty, fine, or injury, to property or persons, including wrongful death, which is caused solely and exclusively by the negligence or willful misconduct of City as determined by a court or administrative body of competent jurisdiction. Developer's obligation to indemnify shall survive the expiration or termination of this Agreement and shall not be restricted to insurance proceeds, if any, received by City, its elected officials, officers, employees, agents, or volunteers.

16.0 Insurance.

16.1 Time for Compliance. Developer shall not commence work under this Agreement until it has provided evidence satisfactory to the City that it has secured all insurance required under this section. In addition, Developer shall not allow any contractor to commence work on any contract until it has provided evidence satisfactory to the City that the contractor has secured all insurance required under this section. Failure to provide and maintain all required insurance shall be grounds for the City to terminate this Agreement for cause.

16.2 Types of Insurance Required. As a condition precedent to the effectiveness of this Agreement for work to be performed hereunder, and without limiting the indemnity provisions of the Agreement, the Developer, in partial performance of its obligations under such Agreement, shall procure and maintain in full force and effect during the term of the Agreement the following policies of insurance. If the existing policies do not meet the insurance requirements set forth herein, Developer agrees to amend, supplement or endorse the policies to do so.

16.2.1 Commercial General Liability: Commercial General Liability Insurance which affords coverage at least as broad as Insurance Services Office "occurrence" form CG 00 01, or the exact equivalent, with limits of not less than $2,000,000 per occurrence and no less than $4,000,000 in the general aggregate. Defense costs shall be paid in addition to the limits. The policy shall contain no endorsements or provisions (1) limiting coverage for contractual liability; (2) excluding coverage for claims or suits by one insured against another (cross-liability); (3) products/completed operations liability; or (4) containing any other exclusion(s) contrary to the terms or purposes of this Agreement.

16.2.2 Automobile Liability Insurance: Automobile Liability Insurance with coverage at least as broad as Insurance Services Office Form CA 00 01 covering "Any Auto" (Symbol 1), or the exact equivalent, covering bodily injury and property damage for all activities with limits of not less than $2,000,000 combined limit for each occurrence.

16.2.3 Workers' Compensation: Workers' Compensation Insurance, as required by the State of California and Employer's Liability Insurance with a limit of not less than $1,000,000 per accident for bodily injury and disease.

16.3 Insurance Endorsements. Required insurance policies shall contain the following provisions, or Developer shall provide endorsements on forms approved by the City to add the following provisions to the insurance policies:

16.3.1 Commercial General Liability: (1) Additional Insured: The City, its officials, officers, employees, agents, and volunteers shall be additional insureds with regard to liability and defense of suits or claims arising out of the performance of the Agreement. Additional Insured Endorsements shall not (1) be restricted to "ongoing operations"; (2) exclude "contractual liability"; (3) restrict coverage to "sole" liability of Developer; or (4) contain any other exclusions contrary to the terms or purposes of this Agreement. For all policies of Commercial General Liability insurance, Developer shall provide endorsements in the form of ISO CG 20 10 10 01 and 20 37 10 01 (or endorsements providing the exact same coverage) to effectuate this requirement. (2) Cancellation: Required insurance policies shall not be canceled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium.

16.3.2 Automobile Liability: (1) Cancellation: Required insurance policies shall not be canceled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium.

16.3.3 Workers' Compensation: (1) Cancellation: Required insurance policies shall not be canceled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium. (2) Waiver of Subrogation: A waiver of subrogation stating that the insurer waives all rights of subrogation against the City, its officials, officers, employees, agents, and volunteers.

16.4 Primary and Non-Contributing Insurance. All policies of Commercial General Liability and Automobile Liability insurance shall be primary and any other insurance, deductible, or self-insurance maintained by the City, its officials, officers, employees, agents, or volunteers shall not contribute with this primary insurance. Policies shall contain or be endorsed to contain such provisions.

16.5 Waiver of Subrogation. All required insurance coverages, except for the professional liability coverage, shall contain or be endorsed to waiver of subrogation in favor of the City, its officials, officers, employees, agents, and volunteers or shall specifically allow Developer or others providing insurance evidence in compliance with these specifications to waive their right of recovery prior to a loss. Developer hereby waives its own right of recovery against City, and shall require similar written express waivers and insurance clauses from each of its contractors.

16.6 Deductibles and Self-Insured Retentions. Any deductible or self-insured retention must be approved in writing by the City and shall protect the City, its officials, officers, employees, agents, and volunteers in the same manner and to the same extent as they would have been protected had the policy or policies not contained a deductible or self-insured retention.

16.7 Evidence of Insurance. The Developer, concurrently with the execution of the Agreement, and as a condition precedent to the effectiveness thereof, shall deliver either certified copies of the required policies, or original certificates on forms approved by the City, together with all endorsements affecting each policy. Required insurance policies shall not be in compliance if they include any limiting provision or endorsement that has not been submitted to the City for approval. The certificates and endorsements for each insurance policy shall be signed by a person authorized by that insurer to bind coverage on its behalf. At least fifteen (15 days) prior to the expiration of any such policy, evidence of insurance showing that such insurance coverage has been renewed or extended shall be filed with the City. If such coverage is cancelled or reduced and not replaced immediately so as to avoid a lapse in the required coverage, Developer shall, within ten (10) days after receipt of written notice of such cancellation or reduction of coverage, file with the City evidence of insurance showing that the required insurance has been reinstated or has been provided through another insurance company or companies.

16.8 Acceptability of Insurers. Each such policy shall be from a company or companies with a current A.M. Best's rating of no less than A:VII and authorized to transact business of insurance in the State of California, or otherwise allowed to place insurance through surplus line brokers under applicable provisions of the California Insurance Code or any federal law.

16.9 Enforcement of Agreement Provisions (non estoppel). Developer acknowledges and agrees that actual or alleged failure on the part of the City to inform Developer of non-compliance with any requirement imposes no additional obligation on the City nor does it waive any rights hereunder.

16.10 Requirements Not Limiting. Requirement of specific coverage or minimum limits contained in this Section are not intended as a limitation on coverage, limits, or other requirement, or a waiver of any coverage normally provided by any insurance.

16.11 Additional Insurance Provisions

16.11.1 The foregoing requirements as to the types and limits of insurance coverage to be maintained by Developer, and any approval of said insurance by the City, is not intended to and shall not in any manner limit or qualify the liabilities and obligations otherwise assumed by the Developer pursuant to this Agreement, including but not limited to, the provisions concerning indemnification.

16.11.2 If at any time during the life of the Agreement, any policy of insurance required under this Agreement does not comply with these specifications or is canceled and not replaced, City has the right but not the duty to obtain the insurance it deems necessary and any premium paid by City will be promptly reimbursed by Developer.

16.11.3 The City may require the Developer to provide complete copies of all insurance policies in effect for the duration of the Project.

16.11.4 Neither the City nor any of its officials, officers, employees, agents or volunteers shall be personally responsible for any liability arising under or by virtue of this Agreement.

16.11.5 The limits set forth herein shall apply separately to each insured against whom claims are made or suits are brought, except with respect to the limits of liability. Further the limits set forth herein shall not be construed to relieve the Developer from liability in excess of such coverage, nor shall it limit the Developer's indemnification obligations to the City and shall not preclude the City from taking such other actions available to the City under other provisions of the Agreement or law.

16.11.6 Developer shall report to the City, in addition to Developer's insurer, any and all insurance claims submitted by Developer in connection with this Agreement.

17.0 Signs and Advertising. Developer understands and agrees to City's ordinances, regulations, and requirements governing signs and advertising structures. Developer hereby agrees with and consents to the removal by City of all signs or other advertising structures erected, placed, or situated in violation of any City ordinance, regulation, or other requirement. Removal shall be at the expense of Developer. Developer shall indemnify and hold City free and harmless from any claim or demand arising out of or incident to signs, advertising structures, or their removal.

18.0 Relationship Between the Parties. The Parties hereby mutually agree that neither this Agreement, any map related to the Property, nor any other related entitlement, permit, or approval issued by City for the Property shall operate to create the relationship of partnership, joint venture, or agency between City and Developer. Developer's contractors and subcontractors are exclusively and solely under the control and dominion of Developer. Nothing herein shall be deemed to make Developer, its contractors, or its subcontractors an agent, contractor or subcontractor of City.

19.0 General Provisions.

19.1 Authority to Enter Agreement. Each Party warrants that the individuals who have signed this Agreement have the legal power, right, and authority to make this Agreement and bind each respective Party.

19.2 Cooperation; Further Acts. The Parties shall fully cooperate with one another, and shall take any additional acts or sign any additional documents as may be necessary, appropriate, or convenient to attain the purposes of this Agreement.

19.3 Construction; References; Captions. It being agreed the Parties or their agents have participated in the preparation of this Agreement, the language of this Agreement shall be construed simply, according to its fair meaning, and not strictly for or against any Party. Any term referencing time, days, or period for performance shall be deemed calendar days and not work days. All references to Developer include all personnel, employees, agents, and contractors and subcontractors of Developer, except as otherwise specified in this Agreement. All references to City include its elected officials, officers, employees, agents, and volunteers except as otherwise specified in this Agreement. The captions of the various articles and paragraphs are for convenience and ease of reference only, and do not define, limit, augment, or describe the scope, content, or intent of this Agreement.

19.4 Notices. All notices to be given hereunder shall be in writing and may be made either by personal delivery or by registered or certified mail, postage prepaid, return receipt requested. Mailed notices shall be addressed to the parties at the addresses listed below, but each party may change the address by written notice in accordance with this Section. Notices delivered personally will be deemed communicated as of actual receipt; mailed notices will be deemed communicated as of two (2) days after mailing.

CITY:
City of Ontario

Ontario, CA 91764
Attn: City Engineer

DEVELOPER:
LANDSEA HOMES OF CALIFORNIA
7525 IRVINE CENTER DRIVE STE 200
IRVINE, CA 92618
Attn: SHANNON WHITTAKER

19.5 Amendment; Modification. No supplement, modification, or amendment of this Agreement shall be binding unless executed in writing and signed by both Parties.

19.6 Entire Agreement. This Agreement contains the entire Agreement of the parties with respect to the subject matter hereof, and supersedes all prior negotiations, understandings or agreements, either written or oral, express or implied. The invalidity in whole or in part of any provision of this Agreement shall not void or affect the validity of any other provision of this Agreement.

19.7 Successors and Assigns. This Agreement shall be binding on the successors and assigns of the parties, and shall not be assigned by the Developer without the prior written consent of the City.

19.8 Waiver. City's failure to insist upon strict compliance with any provision of this Agreement or to exercise any right or privilege provided herein, or City's waiver of any breach of this Agreement, shall not relieve Developer of any of its obligations under this Agreement, whether of the same or similar type. The foregoing shall be true whether City's actions are intentional or unintentional. Developer agrees to waive, as a defense, counterclaim or set off, any and all defects, irregularities or deficiencies in the authorization, execution or performance of the Public Improvements or this Agreement, as well as the laws, rules, regulations, ordinances or resolutions of City with regards to the authorization, execution, or performance of the Public Improvements or this Agreement.

19.9 Assignment or Transfer of Agreement. Developer shall not assign, hypothecate, or transfer, either directly or by operation of law, this Agreement or any interest herein without prior written consent of City. Any attempt to do so shall be null and void, and any assignee, hypothecate, or transferee shall acquire no right or interest by reason of such attempted assignment, hypothecation, or transfer. Unless specifically stated to the contrary in City's written consent, any assignment, hypothecation, or transfer shall not release or discharge Developer from any duty or responsibility under this Agreement. In the event that City consents in writing to such an assignment, any assignee, hypothecate, or transferee shall expressly assume Developer's

obligations hereunder by a written agreement in a form, and containing such security, as is reasonably acceptable to City.

The agreement, hypothecation, or transfer shall be to the satisfaction of the City Attorney and shall include provisions requiring the assignee to post bonds or submit another form of financial security, satisfactory to City and approved by the City Attorney, to guarantee construction of the Public Improvements. The agreement shall survive the recordation of the Final Map and shall be recorded against each of the proposed lots to inform successors and assigns of the required Public Improvements to be constructed and their time frame for construction.

Following any permitted assignment, hypothecation, or transfer of the Public Improvements as set forth in this Section, City shall release Developer from its obligations so assigned and shall release to Developer any bonds or other security posted to secure the Public Improvements so assigned; provided, however, that City shall not release any security or undertakings given to secure the performance of any of the Public Improvements not assigned, hypothecated, or transferred.

19.10 Binding Effect. Each and all of the covenants and conditions shall be binding on and shall inure to the benefit of the Parties, and their successors, heirs, personal representatives, or assigns. This Section shall not be construed as an authorization for any Party to assign any right or obligation.

19.11 No Third-Party Beneficiaries. There are no intended third-party beneficiaries of any right or obligation assumed by the Parties.

19.12 Invalidity; Severability. If any portion of this Agreement is declared invalid, illegal, or otherwise unenforceable by a court of competent jurisdiction, the remaining provisions shall continue in full force and effect.

19.13 Consent to Jurisdiction and Venue. This Agreement shall be construed in accordance with and governed by the laws of the State of California. Any legal action or proceeding brought to interpret or enforce this Agreement, or which in any way arises out of the Parties' activities undertaken pursuant to this Agreement, shall be filed and prosecuted in the appropriate California State Court in the County of San Bernardino, California. Each Party waives the benefit of any provision of state or federal law providing for a change of venue to any other court or jurisdiction including, without limitation, a change of venue based on the fact that a governmental entity is a party to the action or proceeding, or that a federal right or question is involved or alleged to be involved in the action or proceeding. Without limiting the generality of the foregoing waiver, Developer expressly waives any right to have venue transferred pursuant to California Code of Civil Procedure Section 394.

19.14 Attorneys' Fees and Costs. If any arbitration, lawsuit, or other legal action or proceeding is brought by one Party against the other Party in connection with this Agreement or the Property, the prevailing party, whether by final judgment or arbitration award, shall be entitled to and recover from the other party all costs and expenses incurred by the prevailing party, including actual attorneys' fees ("Costs"). Any judgment, order, or award entered in such legal

action or proceeding shall contain a specific provision providing for the recovery of Costs. This Section shall survive the termination or expiration of this Agreement.

19.15 Acquisition and Dedication of Easements or Rights-of-Way. If any of the Public Improvements required by this Agreement are to be constructed on land not within the subdivision or an already-existing public right-of-way, no construction or installation shall be commenced before:

19.15.1 The irrevocable offer of dedication or conveyance to City of appropriate rights-of-way, easements, or other interests in real property, and appropriate authorization from the property owner to allow construction or installation of the Public Improvements or work; or

19.15.2 The issuance of an order of possession by a court of competent jurisdiction pursuant to California's Eminent Domain Law. Developer shall comply in all respects with any such order of possession.

Nothing in this paragraph shall be construed as authorizing or granting an extension of time to Developer for completion of the Public Improvements.

19.16 Prevailing Wages. Developer has been alerted to the requirements of California Labor Code sections 1720 et seq. and 1770 et seq., which require the payment of prevailing wage rates and the performance of other requirements if it is determined that this Agreement constitutes a public works contract. It shall be the sole responsibility of Developer to determine whether to pay prevailing wages for any or all work required by this Agreement. As a material part of this Agreement, Developer agrees to assume all risk of liability arising from any decision not to pay prevailing wages for work required by this Agreement.

19.17 Counterparts. This Agreement may be executed in counterpart originals, which taken together, shall constitute one and the same instrument.

CITY OF ONTARIO *Agenda Report* **March 19, 2024**	**SECTION:** **CONSENT CALENDAR**
Department: Planning Prepared By: Robert Morales Staff Member Presenting: Scott Murphy, Executive Director Community Development Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 6

SUBJECT: A RESOLUTION APPROVING THE 2023 GENERAL PLAN ANNUAL PROGRESS REPORT AND 2023 HOUSING ELEMENT ANNUAL PROGRESS REPORT

RECOMMENDATION: That the City Council consider and adopt a Resolution authorizing Staff to transmit the 2023 General Plan Annual Progress Report, which includes the 2023 Housing Element Annual Progress Report, to the California Department of Housing and Community Development and Governor's Office of Planning and Research.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Operate in a Businesslike Manner
Pursue City's Goals and Objectives by Working with Other Governmental Agencies
Focus Resources in Ontario's Commercial and Residential Neighborhoods

FISCAL IMPACT: There is not a direct fiscal impact associated with this action.

BACKGROUND & ANALYSIS:

General Plan Annual Progress Report: California Government Code Section 65400 requires that all cities and counties annually prepare and submit reports on their General Plan and, specifically, on their Housing Element. The General Plan Annual Progress Report (APR) and Housing Element (APR) are submitted to the Governor's Office of Planning and Research (OPR) and the California Department of Housing and Community Development (HCD) by April 1st of each year. The General Plan APR reports on the overall status of the General Plan and the progress in its implementation. The Housing Element APR reports on residential building activity throughout the year.

The Ontario Plan (TOP) was adopted by the City Council on January 27, 2010. A technical update to the TOP (TOP 2050), which includes the City's Policy Plan (General Plan), was approved on August 16, 2022. Previously, on March 15, 2022, the City Council adopted the 2021-2029 Housing Element, which was certified by HCD on October 7, 2022. The 2023 General Plan APR (Resolution Attachment "A") summarizes progress toward implementation of the nine elements of the General Plan. As outlined in the report, the City continues to make substantial progress towards the 300-plus goals and policies identified in the Policy Plan.

Housing Element Progress Report: In accordance with California Government Code Section 65400, a report analyzing the City's progress towards compliance with the adopted Housing Element must be submitted to HCD and OPR annually. Cities and counties with compliant Housing Elements and up-to-date Housing Element APR submissions gain access to State grant funding (e.g., SB 2 Building Homes and Jobs Act and the Local Early Action Planning (LEAP) grants program). The APR for the calendar year 2023 is the second progress report for the 2021-2029 Housing Element.

Since the enactment of SB 35 and AB 879 2018 in 2018, the reporting requirements for the APR have significantly increased. Previously, reporting on issued building permits and the status of housing programs identified in The Ontario Plan was required. For the 2023 calendar year, reporting requirements have been expanded to include housing applications, entitlements, building permits issued, certificates of occupancy issued, and projects submitted under the new streamlining provisions. The reporting must also include the assessor's parcel number (APN), address, and local jurisdiction identification number, as well as reporting on the status of all housing programs. The Housing Element APR (Resolution Attachment "A") tracks housing activity from January 1, 2023, to December 31, 2023. The tables in the APR include the following:

- ***Table A*** **- Housing Development Applications Submitted:** This table tracks and identifies each application submitted, unit type, application submittal date, unit count (including affordability by housing income), total units, units approved, units disapproved, and project streamlining during the reporting period. The City received applications for 1,581 units during the reporting period, including 7 units in the Moderate-Income category and 1,574 units in the Above Moderate-Income category. Of those units submitted, 233 units were approved, and 1,348 were still awaiting final approval.

- ***Table A2*** **- Annual Building Activity Report Summary - New Construction, Entitled, Permits, and Completed Units:** This table identifies each project submitted, unit type, affordability by household income for completed entitlement, affordability by household income for building permits, affordability by household income for certificates of occupancy, streamlining, financial assistance, deed restrictions, and demolished/destroyed units. Entitlements were approved for 1,678 units (this total includes applications submitted in prior years). Building permits were issued for 1,557 units. Certificates of Occupancy were issued for 616 units (which include issued building permits from calendar years since 2019). *Table A2 is not attached to this report due to its size and printing limitations; however, copies are available from the Records Management Department.*

- ***Table B*** **- Regional Housing Needs Allocation Progress - Permitted Units Issued by Affordability:** This table summarizes the City's progress towards meeting the Regional Housing Needs Allocation (RHNA). The table identifies the number of units permitted by the affordability category and identifies progress toward meeting the RHNA allocation. The report identifies the progress on these implementing programs and progress toward the City's RHNA allocation. This report covers year 2 of an 8-year cycle (100% of the Housing Element/RHNA cycle). Within this planning cycle, the City has issued permits to 19% of the total identified RHNA allocation. In 2023, the City issued building permits for a total of 30 units in the Very Low-Income category (for households with incomes ranging from 0-50% of

the area median income (AMI)), 20 units in the Low-Income category (for households with incomes between 50-80% of the AMI), and 1,507 units in the Above Moderate-Income category (for households earning above 120% of the AMI). This included 1,235 single-family units, 194 multi-family units, and 128 Accessory Dwelling Units (ADUs).

- ***Table C*** **- Sites Identified or Rezoned to Accommodate Shortfall Housing Need:** This table identifies those parcels rezoned during the year to address a shortfall of available sites to meet the City's RHNA allocation. During the reporting period, a total of 5 properties were rezoned to a comply with the no net loss law. The distribution of units includes 27 in the very low-income category, 26 in the low-income category, 53 units in the moderate-income category, and 165 units in the above-moderate-income category.

- ***Table D*** **- Program Implementation Status pursuant to Government Code Section 65583:** This table provides a summary of the City's annual progress in implementing programs and statutory requirements of the 2021-2029 Housing Element. The Housing Element identifies four major categories of housing goals and includes 34 implementing programs to accomplish these goals. The four major categories include: Neighborhoods and Housing Supply and Diversity Government Constraints Housing Assistance. The attached narrative includes a more detailed explanation of each of the Housing Programs, its objective, timeframe, and status.

- ***Table E*** **- Commercial Development Bonus Approved pursuant to Government Code Section 65915.7:** This table identifies those commercial sites receiving a development bonus for contributing to or providing affordable housing. There were no projects to report on during the reporting period.

- ***Table F*** **- Units Rehabilitated, Preserved and Acquired for Alternative Adequate Sites pursuant to Government Code Section 65583.1(c):** This table is optional and allows jurisdictions to list (for informational purposes) units that were substantially rehabilitated, acquired, or preserved, but do not count towards the RHNA. Units may only be credited towards the RHNA when they are included as part of a specific program that meets Government Code Section 65583.1(c)(2). There were no projects to report on during the reporting period.

- ***Table F2*** **- Above Moderate-Income Units Converted to Moderate Income pursuant to Government Code Section 65400.2:** For up to 25% of a jurisdiction's moderate-income regional housing needing allocation, the Planning Department may include the number of units in an existing multi-family building that was converted to deed-restricted rental housing for moderate-income households by the imposition of affordability covenants and restrictions for the unit. There were no Above Moderate-Income units converted to Moderate Income during the reporting period.

- ***Table G*** **- Locally Owned Lands Included in the Housing Element Sites Inventory that have been sold, leased, or otherwise disposed of, pursuant to Government Code section 65400.1:** This table is only to be filled out if the housing element sites inventory that contains a site which is or was owned by the reporting jurisdiction and has been sold, leased,

or otherwise disposed of during the reporting year. There were a total of 4 properties sold for an affordable housing project.

- ***Table H* - Locally Owned or Controlled Lands Declared Surplus Pursuant to Government Code Section 54221 or Identified as Excess Pursuant to Government Code Section 50569:** This table is used to create an inventory of surplus lands and all lands over its foreseeable needs if any, that a City owns or controls. There were no locally owned or controlled lands to report on during the specified reporting period.

- ***Table J* - Student Housing With Density Bonus:** This table only needs to be completed if there was student housing constructed with a density bonus approved subject to Government Code Section 65915(b)(1)(F). There was no student housing constructed during this period.

- ***Table K* - Tenant Preference Policy:** Local governments must inform the California Department of Housing and Community Development about tenant preference ordinances in their annual housing progress report. Starting January 1, 2023, if a local government adopts such an ordinance, they must create a webpage on their official site within 90 days, displaying the ordinance and supporting materials. The City does not currently have a tenant preference ordinance in place.

- **LEAP Grant Reporting:** Cities are required to report on the status of their Local Early Action Planning (LEAP) grant. Ontario was awarded $500,000 in LEAP funding and applied those funds toward the TOP 2050 Update. The City has submitted a LEAP request for reimbursement of funds totaling $500,000.

Staff recommends the City Council accept the General Plan and Housing Element Reports and approve the Resolution authorizing submittal of the reports to the State.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING THE 2023 GENERAL PLAN ANNUAL PROGRESS REPORT (FILE NO. PADV24-001), WHICH INCLUDES THE HOUSING ELEMENT ANNUAL PROGRESS REPORT, AND AUTHORIZING STAFF TO SUBMIT THE REPORTS TO THE CALIFORNIA DEPARTMENT OF HOUSING AND COMMUNITY DEVELOPMENT AND THE GOVERNOR'S OFFICE OF PLANNING AND RESEARCH.

WHEREAS, the City of Ontario adopted The Ontario Plan pursuant to Section 65300 of the Government Code on January 27, 2010; and

WHEREAS, the City of Ontario adopted a technical update to The Ontario Plan (TOP 2050), which includes the City's Policy Plan (general plan) pursuant to Section 65300 of the Government Code on August 16, 2022; and

WHEREAS, the City of Ontario adopted the 2021-2029 Housing Element of the General Plan pursuant to Section 65352 of the Government Code on March 15, 2022; and

WHEREAS, the California Department of Housing and Community Development certified that the adopted 2021-2029 Housing Element was in full compliance with state housing law on October 7, 2022; and

WHEREAS, the City is required to submit an annual report on the status of the General Plan and progress in its implementation per Government Code Sections 65400 and 65700 and the City is required to submit an annual report on the progress of the Housing Element per Government Code Section 65400(b)(1); and

WHEREAS, the proposed 2023 General Plan Annual Progress Report (Attachment "A") has been prepared in accordance with Government Code Sections 65400 and 65700 and the proposed 2023 Housing Element Annual Progress Report (Attachment "A") has been prepared in accordance with Government Code Section 65400(b)(1); and

WHEREAS, the proposed 2023 Housing Element Annual Progress Report is the second Annual Progress Report for the 2021-2029 Housing Element Cycle; and

WHEREAS, the proposed 2023 General Plan Annual Progress Report, which includes the 2023 Housing Element Annual Progress Report, is categorically exempt from California Environmental Quality Act (CEQA), as amended (Section 15306, Information Collection); and

WHEREAS, on March 19, 2024, the City Council of the City of Ontario conducted a hearing to review the proposed 2023 General Plan Annual Progress Report, which includes the Housing Element Annual Progress Report, and accept public comments on the Report and concluded said hearing on that date.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, California, as follows:

SECTION 1. ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The administrative record has been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(2) The Project is categorically exempt from environmental review pursuant to Section 15306, (Class 6 – Information Collection) of the CEQA Guidelines; and

(3) The application of the categorical exemption is not barred by one of the exceptions set forth in CEQA Guidelines Section 15300.2; and

(4) The determination of CEQA exemption reflects the independent judgement of the City Council.

SECTION 2. ***City Council Action.*** Based upon the findings and conclusions set forth in Section 1 above and upon the substantial evidence presented to the City Council including the 2023 General Plan Annual Progress Report and public comments during the above-referenced hearing, the City Council hereby APPROVES the herein described Report attached hereto as "Attachment A," and incorporated herein by this reference; and Planning staff is hereby authorized to submit the Reports to the California Department of Housing and Community Development (HCD) and the Governor's Office of Planning and Research (OPR).

SECTION 3. ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 4. ***Certification to Adoption.*** The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 19th day of March, 2024.

2023 General Plan Element Annual Progress Report

(Document follows this page)

CITY OF ONTARIO

2023 GENERAL PLAN ANNUAL PROGRESS REPORT

Prepared by

City of Ontario

Planning Department

The Ontario Plan:

The Ontario Plan (TOP) serves as the foundational framework for the City's business plan, guiding its operations as a municipal corporation composed of six (6) distinct components: 1) Vision; 2) Governance Manual; 3) Policy Plan (General Plan); 4) Council Priorities; 5) Implementation; and 6) Tracking and Feedback. Within TOP, the Policy Plan component fulfills the functional and legal requirements of a General Plan, encompassing nine elements: Land Use, Housing, Parks and Recreation, Environmental Resources, Community Economics, Safety, Mobility, Community Design, Social Resources, with Environmental Justice interwoven throughout. The online version of The Ontario Plan is accessible at Ontarioca.gov/Ontarioplan.

Advancing toward the City's Vision of a "Complete Community," TOP provides a structured framework that aligns long and short-term goals and policies with budgeting, implementation, and outcome assessment, supporting day-to-day operations. This approach aims at establishing and promoting Ontario's leadership role in the region across key areas. The Ontario Plan facilitates the integration of planning decisions with those made by other City departments, fostering better linkages between the goals outlined in various documents. Recognizing the need for an update, the City has embarked on a TOP Update to incorporate legislative mandates and revisit the shared vision of a "Complete Community.

Annual General Plan Report:

The City of Ontario undertook a comprehensive update of its General Plan, known as The Ontario Plan (TOP), originally adopted by the City Council on January 27, 2010. The update, named TOP 2050, was initiated in 2019 and included revisions to the City's Policy Plan (general plan). The revised Policy Plan received approval from the City Council in August 2022.

The 2023 General Plan Annual Progress Report (Attachment A) presents a comprehensive list of the Policy Plan Goals and Policies, along with their associated status and comments. The primary objective of the Annual Progress Report is to provide the City Council with an update on the progress made in implementing the General Plan's (TOP) Vision. A secondary aim is to fulfill the annual reporting obligations of both the General Plan Annual Progress Report, submitted to the Governor's Office of Planning and Research (OPR), and the Housing Element Annual Progress Report, submitted to the

California Department of Housing and Community Development (HCD). Both reports are due to their respective state agencies by April 1st of each year.

The General Plan Implementation Program Table identifies the General Plan policies that have been completed, are in progress, or are ongoing activities of the City. To assist in the review of the General Plan APR, this report presents the following information:

- EXHIBIT A – 2023 General Plan Implementation Program Table.
    - Attachment 1 – Amendments to the General Plan adopted by the City in 2023.
- EXHIBIT B – 2023 Housing Element Annual Progress Report.
    - Attachment 1 – Housing Element Land Inventory Map.

EXHIBIT A

2023 GENERAL PLAN IMPLEMENTATION PROGRAM TABLE

Goal	Policy	Action	Action Status/Comments
LAND USE ELEMENT			
LU-1 –Balance			
LU-1	**A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.**		
	LU-1.1	**Strategic Growth.** We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City. (Refer to Mobility Element Policies M2-M-2.1, M3-M-3.3; Community Design Element Image and Identity Section; Community Design Policies CD-3.1, CD-3.3, CD-3.6)	Ontario, a cornerstone of regional development, has demonstrated its leadership in home sales in Southern California. The Planning Department processed 457 project applications. The Planning Commission has entitled 1,678 dwelling units, 66,665 sq ft of retail/commercial space, and 7,309,006 sq ft of industrial space. Notably, permits were successfully finalized for 616 dwelling units, 47,491 sq ft of retail/commercial space, and 90,098 sq ft of industrial space. These accomplishments underscore Ontario's pivotal role in driving forward regional progress.
	LU-1.2	**Sustainable Community Strategy**. We integrate state, regional and local Sustainable Community/Smart Growth principles into the development and entitlement process.	City staff is continuing to work with both SBCTA and SCAG in support of sustainable strategies through participation in the development of the RTP/SCS So Cal Connect and local initiatives, including participation in the formation and founding member of the Inland Southern California Climate Collaborative (ISC3).
	LU-1.3	**Adequate Capacity**. We require adequate infrastructure and services for all development.	On-going. Through our CIP program, City staff continues to update infrastructure needs.
	LU-1.4	**Multimodal Mobility.** We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on active transportation, transit, electric vehicles, and multimodal transportation opportunities. (Refer to Mobility Element Policies M-2.1, M-3.3; Community Design Element Policy CD-2.6, CD-3.1, CD-3.3, CD3.6).	On-going.
	LU-1.5	**Jobs-Housing Balance.** We coordinate land use, infrastructure, and transportation planning and analysis with the regional, county, and other local agencies to further regional and sub-regional goals for jobs-housing balance. (Refer to Community Economics Element Policy CE-1.1; Mobility Element Policy M-1.6)	On-going.
	LU-1.6	**Complete Community.** We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate	On-going. City staff has processes Development Plan applications, tract maps, and Conditional Use Permits encompassing a wide variety of residential, commercial, and industrial land uses.

Goal	Policy	Action	Action Status/Comments
		within Ontario. (Refer to Community Economics Element Complete Community Section; Community Design Element Urban, Mixed Use, and Transit-oriented Place Types Section)	
LU-2 – Compatibility			
LU-2	**Compatibility between a wide range of uses and resultant urban patterns and forms.**		
	LU-2.1	**Land Use Decisions**. We minimize adverse impacts on adjacent properties when considering land use and zoning request.	On-going.
	LU-2.2	**Buffers**. We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur. Additional mitigation is required when new uses could negatively impact environmental justice areas. (Refer to Community Design).	On-going.
	LU-2.3	**Hazardous Uses.** We regulate the development of industrial and similar uses that use, store, produce or transport toxic substances, air emissions, other pollutants, or hazardous materials. (Refer to Hazardous Materials & Waste including Policies S-6.4 and S-6.5).	Ongoing. Reviewed as part of project processing.
	LU-2.4	**Regulation of Nuisances**. We regulate the location, concentration, and operations of potential nuisances.	On-going.
	LU-2.5	**Regulation of Uses**. We regulate the location, concentration, and operations of uses that have impacts on surrounding land uses.	On-going.
	LU-2.6	**Infrastructure Compatibility**. We require infrastructure to be aesthetically pleasing and in context with the community character.	Ongoing. Infrastructure siting is reviewed as part of the project processing.
	LU-2.7	**Inter-jurisdictional Coordination**. We maintain an ongoing liaison with ONT, Caltrans, Public Utilities Commission, the railroads, and other agencies to help minimize impacts and improve the operations and aesthetics of their facilities.	The City of Ontario coordinates with the Ontario International Airport Authority (OIAA), state and local entities, and other agencies to help minimize impacts and improve the operations and aesthetics of their facilities.
	LU-2.8	**Transitional Areas.** We require development in transitional areas to protect the quality of life of current residents.	On-going.
	LU-2.9	**Methane Gas Sites.** We require sensitive land uses and new uses on former dairy farms or other methane-producing sites to be designed to minimize health risks.	On-going.
	LU-2.10	**Sensitive Uses.** We monitor and share information with the community about stationary and non-stationary emission	On-going.

Goal	Policy	Action	Action Status/Comments
		sources. We encourage siting and design of facilities to minimize health and safety risks on existing and proposed sensitive uses, especially in environmental justice areas.	
	LU-2.11	**Context-Aware Transitions and Connections.** We require new development projects and land-planning efforts to provide context-aware and appropriate transitions and connections between existing and planned neighborhoods, blocks, sites, and buildings. (Refer to Community Design Element Policies CD-1.1, CD-1.3, CD-3.4)	On-going.
LU-3 – Flexibility			
LU-3	**Staff, regulations and processes that support and allow flexible responses to conditions and circumstances in order to achieve the Vision.**		
	LU-3.1	Development Standards. We maintain clear development standards that allow flexibility to achieve our Vision. and provide objective standards that ensure predictability and deliver the intended physical outcomes. (Refer to Community Design)	The City has periodically updated the zoning and development standards to support project processing and implemented a streamlined Administrative Use Permit process, in compliance with State mandates.
	LU-3.2	**Design Incentives**. We offer design incentives to help projects achieve the Vision. (Refer to Community Design).	The City offers a Preliminary Review process for proposed entitlement projects. The City has conducted two updates to address legislative actions.
	LU-3.3	**Land Use Flexibility**. We consider uses not typically permitted within a land-use category if doing so improves livability, reduces vehicular trips, creates community gathering places and activity nodes, and helps create identity.	On-going.
LU-4 Phased Growth			
LU-4	**Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.**		
	LU-4.1	**Commitment to Vision**. We are committed to achieving our Vision but realize that it may take time and several interim steps to get there.	On-going.
	LU-4.2	**Interim Development.** We allow development in urban, mixed use, and transit-oriented Place Types that is not immediately reflective of our ultimate Vision for the Place Type, provided it can be modified or replaced when circumstances are right to support development aligned with the Place Type Vision. We will not allow development that impedes, precludes, or compromises our ability to achieve our Vision. (Refer to Community Economics Element Policy CE-2.3; Community	On-going. The City encourages development in growth areas commissary to the scale of development that the investment can be sufficiently amortized to make Vision-compatible redevelopment financially feasible.

Goal	Policy	Action	Action Status/Comments
		Design Element Policy CD-1.2; Community Design Element Urban, Mixed Use, and Transit-oriented Place Types section).	
	LU-4.3	**Infrastructure Timing**. We require that the necessary infrastructure and services be in place prior to or concurrently with development.	On-going and achieved through the City development entitlement process.
	LU-4.4	**Shared Infrastructure.** We encourage and facilitate the use of shared infrastructure (including shared or managed parking) in urban, mixed use, and transit-oriented Place Types. (Refer to Community Design Element Policy CD-3.6)	On-going.
LU-5 – Airport Planning			
LU-5	**Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.**		
	LU-5.1	**Coordination with Airport Authorities**. We collaborate with FAA, Caltrans Division of Aeronautics, airport owners, neighboring jurisdictions, and other shareholders in the preparation, update and maintenance of airport-related plans.	On-going.
	LU-5.2	**Airport Planning Consistency**. We coordinate with airport authorities to ensure The Ontario Plan is consistent with state law, federal regulations, and/or adopted master plans and airport land use compatibility plans for ONT and Chino Airport.	The City of Ontario updated the Ontario Airport Land Use Compatibility Plan to be consistent with the most recent Airport Layout Plan for ONT. The City made revisions to the City of Ontario Development Code, establishing the Chino Airport Overlay zoning district to be in compliant with the Chino Airport Land Use Compatibility Plan adopted in 2022.
	LU-5.3	**Airport Impacts**. We work with agencies to maximize resources to mitigate the impacts and hazards related to airport operations – their homes.	The City of Ontario previously managed the Part 150 (Quiet Home Program) initially approved by FAA in 1991. The Quiet Home Program focused on land acquisition and noise insulation of residential properties impacted by airport noise, but was terminated in September 2015 because of updated noise exposure maps (NEM) eligibility noise contours, which eliminated funding for the program. The City continues to support the Ontario International Airport Authority (OIAA) to maintain the Noise Management Program for ONT.
	LU-5.4	**ONT Growth Forecast**. We support and promote an ONT that accommodates 30 million annual passengers and 1.6 million tons of cargo per year, as long as the impacts associated with that level of operations are planned for and mitigated.	The city supports the OIAA Joint Powers Agreement (JPA), the owner of the Ontario International Airport. In 2023, ONT increase to over 6.4 million passengers 700 thousand tons of cargo.
	LU-5.5	**Airport Compatibility Planning for ONT**. We create and maintain the Airport Land Use Compatibility Plan for ONT.	On-going.

Goal	Policy	Action	Action Status/Comments
	LU-5.6	**Alternative Process**. We fulfill our responsibilities and comply with state law with regard to the Alternative Process for proper airport land use compatibility planning.	On-going.
	LU-5.7	**ALUCP Consistency with Land Use Regulations**. We comply with state law that requires general plans, specific plans, and all new development to be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public-use airport.	On-going.
	LU-5.8	**Chino Airport.** We will support the creation and implementation of the Airport Land Use Compatibility Plan for Chino Airport.	The City made revisions to the City of Ontario Development Code, establishing the Chino Airport Overlay zoning district to be in compliant with the Chino Airport Land Use Compatibility Plan adopted in 2022.
COMMUNITY DESIGN ELEMENT			
CD-1 – Image & Identity			
CD-1	A dynamic, progressive city containing distinct neighborhoods and commercial districts that foster a positive sense of identity and belonging among residents, visitors, and businesses		
	CD-1.1	**City Identity**. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing the diverse character of our existing viable neighborhoods.	On-going.
	CD-1.2	**Place Types.** We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities. (Refer to Community Design Element Urban, Mixed Use, and Transit-oriented Place Types Section)	The General Plan provides guidance in the development of identified Growth Areas and supports distinctive and unique places as development applications are submitted. For the Historic Downtown Growth Area, the City approved a Downtown Mixed-Use District Plan to provide a clear and distinctive design program. A Downtown Planned Unit Development is in process to provide detailed design requirements.
	CD-1.3	**Existing Neighborhoods.** We require the existing character of viable residential and non-residential neighborhoods be preserved, protected, and enhanced.	On-going.
	CD-1.4	**Transportation Corridors**. We will enhance our major transportation corridors within the City through landscape, hardscape, signage, and lighting. The extent of enhancement should be appropriate to the use, type, and context of each corridor.	On-going.
	CD-1.5	**View Corridors**. We require all major north-south streets be designed and redeveloped to feature views of the San	On-going and implemented through our entitlement design review process.

Goal	Policy	Action	Action Status/Comments
		Gabriel Mountains, which are part of the City's visual identity and a key to geographic orientation. Such views should be free of visual clutter, including billboards, and maybe enhanced by framing with trees.	
CD-2 – Design Quality			
CD-2	**A high level of design quality resulting in public spaces, streetscapes, and developments that are attractive, safe, functional and distinct.**		
	CD-2.1	**Quality Building Design and Architecture**. We encourage all development projects to convey visual interest and character through 1) Building volume, massing, and height to provide appropriate scale and proportion; 2) A true architectural style which is carried out in the plan, section and elevation through all aspects of the building and site design and appropriate for its setting; 3) Exterior building materials that are visually interesting, high quality, durable, and appropriate for the architectural style.	To ensure quality architecture and consistent application, the City has created an on-going Urban Design Studio training module providing staff the opportunity to learn and collaborate regarding basic quality design concepts. In addition, the Ontario Development Code and city-wide Specific Plans provide for design guidelines for residential and non-residential developments that focus on neighborhood context, building scale/massing, materials, and architectural styles. As part of The Ontario Plan 2050 Update, the City is in the process of completing Objective Development and Design Standards.
	CD-2.2	**Neighborhood Design.** We create distinct residential neighborhoods that are functional, have a sense of community, emphasize livability and social interaction, and are uniquely identifiable places through such elements as: 1) A pattern of smaller, walkable blocks that promote access, activity, and safety; 2) Variable setbacks and parcel sizes to accommodate a diversity of housing types; 3) Traffic calming measures to slow traffic and promote walkability while maintaining acceptable fire protection and traffic flows; 4) Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the street frontage as the "outdoor living room") and porches in front of homes, as appropriate; and 5) Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments.
	CD-2.3	**Commercial Areas**. We desire commercial centers to be distinctive, pedestrian-friendly, functional, and vibrant with a range of businesses, places to gather, and connectivity to the neighborhoods they serve.	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments.
	CD-2.4	**Urban, Mixed-Use, Urban Office, and Transit-oriented Areas**. We establish Place Types to require mixed use, urban, and transit-oriented areas to be designed and developed as	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments.

Goal	Policy	Action	Action Status/Comments
		pedestrian oriented areas that are integrated with adjacent neighborhoods and promote a vibrant, comfortable, and functional environment, as defined for each Place Type. (Refer to Community Design Element Urban, Mixed Use, and Transit-oriented Place Types Section)	
	CD-2.5	**Streetscapes.** We design new and, when necessary, retrofit existing streets to improve walkability, bicycling, and transit integration, to strengthen connectivity, and enhance community identity through improvements to the public right of way such as sidewalks, street trees, parkways, curbs, street lighting, and street furniture.	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments.
	CD-2.6	**Connectivity**. We promote development of local street patterns, multimodal networks, and connected public spaces that create and unify neighborhoods, rather than divide them, and create cohesive and continuous corridors, rather than independent "islands" through the following means:1) Local street patterns that provide access between subdivisions, within a neighborhood and discourage through traffic; 2) A local street system that is logical and understandable for the user. A grid system is preferred to avoid circuitous and confusing travel paths between internal neighborhood areas and adjacent arterials and to provide adequate emergency and evacuation access; and 3) Pedestrian and bicycle networks that provide convenient access to neighborhoods and nearby destinations, such as schools, parks, other public spaces, commercial areas, and transit stops.	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments.
	CD-2.7	**Sustainability.** We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping, and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials and construction techniques.	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments. As part of The Ontario Plan 2050 Update, the Community Climate Action Plan was updated to address SB 32 goals.
	CD-2.8	**Safe Design**. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments.

Goal	Policy	Action	Action Status/Comments
		and visually isolated spaces, maintaining visibility and accessibility, and using lighting.	
	CD-2.9	**Landscape Design**. We encourage durable landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments.
	CD-2.10	**Parking Areas.** We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include: 1) Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field; 2) Structured parking: facade articulation, screening, appropriate lighting, and landscaping; and 3) Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments.
	CD-2.11	**Entry Statements**. We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed-use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments.
	CD-2.12	**Site and Building Signage**. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments.
	CD-2.13	**Entitlement Process.** We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.	On-going and implemented through the City' Preliminary Review process that allows stakeholders to anticipate Development Code, and infrastructure requirements, before formal entitlement submittal.
	CD-2.14	**Availability of Information**. We provide easy access to information for developers, builders, and the public about design quality, construction quality, and sustainable building practices.	On-going and implemented through information on the Planning Department Website and Public Counter handouts.

Goal	Policy	Action	Action Status/Comments
	CD-2.15	**Leverage Professional and Trade Organizations**. We support excellence in design and construction quality through collaboration with trade and professional organizations that provide expertise, resources, and programs for developers, builders, and the public.	On-going. The City continues to work in collaboration with the Building Industry Association (BIA) and other organizations to help provide resources and programs for developers, builders, and the public.
	CD-2.16	**Transit Stops**. We require transit stops be conveniently located, well lit, safe, and clearly accessible to pedestrians, bicyclists, and people of all abilities.	On-going.
CD-3 – Pedestrian & Transit Environments			
CD-3	**Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.**		
	CD-3.1	**Unique Identity.** We promote development that heightens the unique character and identity of each Place Type by requiring compatible land uses and land planning, site design, and building design that promotes an active public realm.	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments.
	CD-3.2	**Comfortable, Human-Scale Public Realm.** We require that public spaces, including streets, parks, and plazas on both public and private property be designed to maximize safety, comfort and aesthetics and connect to the citywide pedestrian, vehicular, and bicycle networks.	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments.
	CD-3.3	**Complete and Connected Network**. We require that pedestrian, vehicular, and bicycle circulation on both public and private property be coordinated to provide connections internally and externally to adjacent neighborhoods and properties (existing and planned) through a system of local roads and trails that promote walking and biking to nearby destinations (including existing and planned parks, commercial areas, and transit stops) and are designed to maximize safety, comfort, and aesthetics.	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments.
	CD-3.4	**Context-Aware and Appropriate Design.** We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments.

Goal	Policy	Action	Action Status/Comments
	CD-3.5	**Active Frontages**. We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments.
	CD-3.6	**Managed Infrastructure**. We collaborate with developers and property owners to facilitate development that realizes the envisioned character and functionality of the Place Type through the use of green and shared infrastructure within each Place Type.	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments.
CD-4 – Historic Preservation			
CD-4	**Historic buildings, streets, landscapes and neighborhoods, as well as the story of Ontario's people, businesses, and social and community organizations, have been preserved and serve as a focal point for civic pride and identity.**		
	CD-4.1	**Cultural Resource Management**. We update and maintain an inventory of historic sites and buildings, professional collections, artifacts, manuscripts, photographs, documents, maps, and other archives.	City staff updates and maintains the inventory on an on-going regular basis.
	CD-4.2	**Collaboration with Property Owners and Developers**. We educate and collaborate with property owners and developers to implement strategies and best practices that preserve the character of our historic buildings, streetscapes, and neighborhoods.	City staff works with residential property owners and developers on preservation, restoration, rehabilitation, and adaptive reuse of historic buildings, and on new "infill" construction located within historic neighborhoods by requiring a Certificate of Appropriateness. Staff will guide the applicant through the process and make recommendations on appropriate treatments pursuant to the Secretary of Interior Standards for the Treatment of Historic Properties.
	CD-4.3	**Collaboration with Outside Agencies**. We pursue opportunities to team with other agencies, local organizations, and non-profits in order to preserve and promote Ontario's heritage.	City staff collaborates with state, regional, and sub-regional agencies to avoid or mitigate impacts that projects might have on cultural resources.
	CD-4.4	**Incentives.** We use the Mills Act and other federal, state, regional, and local programs to assist property owners with the preservation of select properties and structures.	The City has a Mills Act Program and a Downtown Façade Improvement Program to incentivize the preservation of historic buildings. To date, the City has 98 properties participating in the Mills Act Program.
	CD-4.5	**Adaptive Reuse.** We actively promote and support the adaptive reuse of historic sites and buildings to preserve and maintain their viability.	City staff receives training and support for the use of the Historic Building Code for the adaptive reuse of historic buildings. The City has initiated the development of an Adaptive Reuse Ordinance.

Goal	Policy	Action	Action Status/Comments
	CD-4.6	**Promotion of Public Involvement in Preservation**. We engage in programs to publicize and promote the City's and the public involvement in preservation efforts.	The City provides a variety of programs, including Landmark Plaque Program, annual Historic Preservation Awards for property owners who have excelled in historic preservation.
	CD-4.7	**Public Outreach**. We provide opportunities for our residents to research and learn about the history of Ontario through the Planning Department, Museum of History and Art, Ontario, and the Robert E. Ellingwood Model Colony History Room.	Provide opportunities for our residents to learn about preservation through Arts and Culture programming, including the website for cataloging historic information.
CD-5 – Protection of Investment			
CD-5	**A sustained level of maintenance and improvement of properties, buildings and infrastructure that protects the property values and encourages additional public and private investments.**		
	CD-5.1	**Maintenance of Buildings and Property**. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.	On-going. Refer to the attached Housing Element Annual Progress Report
	CD-5.2	**Maintenance of Infrastructure.** We require the continual maintenance of infrastructure.	On-going.
	CD-5.3	**Improvements to Property & Infrastructure**. We provide programs to improve property and infrastructure.	Complete the integration of Ontario Ranch Development Impact Fee (DIF) credits and reimbursements with the Accela Permitting System, improving the accounting data as well as secure city assets and infrastructure.
	CD-5.4	**Neighborhood Involvement**. We encourage active community involvement to implement programs aimed at the beautification and improvement of neighborhoods.	On-going. The Neighborhood Action Team was formed in 2019 and included key members from various City agencies. This team is the implementing entity for the Neighborhood Preservation Strategy, which is designed to create meaningful community engagement to build sustainable neighborhoods organically.
HOUSING ELEMENT			
COMMUNITY ECONOMICS ELEMENT			
CE-1 – Complete Community			
CE-1	**A complete community that provides for all incomes and stages of life.**		
	CE-1.1	**Jobs-Housing Balance**. We pursue improvement to the Inland Empire's balance between jobs and housing by promoting job growth that reduces the regional economy's reliance on out-commuting.	On-going.

Goal	Policy	Action	Action Status/Comments
	CE-1.2	**Jobs and Workforce Skills.** We use our economic development resources to 1) attract jobs suited for the skills and education of current and future City residents; 2) work with regional partners to provide opportunities for the labor force to improve its skills and education, and 3) attract businesses that increase Ontario's stake and participation in growing sectors of the regional and global economy. (Refer to Social Resources Policy SR-2.2).	On-going. The City is engaged in several partnership programs from local school districts (OMSD, etc.) and Community Colleges to San Bernardino County Workforce Development Department (SBCWDD). Partnering with the schools, the City continues to support the Ontario-Montclair Promise Scholars Program to assist Ontario-Montclair youth by helping to prepare them in their journey towards a college education. SBCWDD oversees a suite of workforce development programs in the region that help place San Bernardino County residents in new jobs or gain new skills. These programs include job fairs at the local community colleges and high schools, job readiness workshops, and one-on-one job coaching. Additionally, SBCWDD oversees a number of educational programs to help prepare unemployed or underemployed residents to enter the workforce, including English language courses, assistance obtaining a high school diploma or General Educational Development (GED), and scholarships for higher education. As part of the Strategic Growth Council TCC grant workforce opportunities reach residents of the TCC project area specifically, SBCWDD created a permanent workforce development program within downtown Ontario. The City initiated a virtual workforce development program and completed the Workforce Development Office space within the Ovitt Family Community Library. Ontario City Library partners with Jobs Vision Success – JVS SoCal, a regional workforce development nonprofit headquartered in Los Angeles. The library specifically partners with the JVS Veterans Services team with available virtual veterans resources services.
	CE-1.3	**Regional Approach to Workforce Development**. We work with our partners to provide workforce training and development services throughout the region, recognizing that Ontario employers rely on workers living outside of the City.	SBCWDD established a Satellite Workforce Services Office to provide job training and placement assistance for residents. Additional opportunities are available to partner with SBCWDD with the anticipated City campus expansion. Workforce Development office located at Ovitt Family Community Library and open M-F, same hours as library.
	CE-1.4	**Business Retention and Expansion**. We continuously improve two-way communication with the Ontario business community and emphasize customer service to existing businesses as part of our competitive advantage.	On-going. City staff engages in an on-going proactive business retention program encompassing scheduled virtual/in person one-on-one meetings with the business to identify needs to help enhance

Goal	Policy	Action	Action Status/Comments
			business services or explore possible expansion options and informal periodic check-ins.
	CE-1.5	**Business Attraction**. We proactively attract new and expanding businesses to Ontario in order to increase the City's share of growing sectors of the regional and global economy.	The City continues a proactive approach to attract businesses through virtual attendance to various conferences and tradeshows (e.g., ICSC) throughout the country and collaborate with local partners (e.g., OIAA).
	CE-1.6	**Diversity of Housing**. We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.	On-going. The City continues to collaborate with the development community on a variety of housing types for every stage of life.
	CE-1.7	**Retail Goods and Services**. We seek to ensure a mix of retail businesses that provide the full continuum of goods and services for the community.	On-going and implemented through the Ontario Development Code, City-wide Specific Plans, and Planned Unit Developments.
	CE-1.8	**Regional Attractions**. We encourage the development and programming of regional cultural and entertainment destinations in Ontario.	On-going. The City-Owned Toyota Area and regional Outlet Mall (Ontario Mills) are regional attractions. The finalized the Downtown Mixed-Use District Plan is intended to revitalize the Historic Downtown into a vibrant, culturally diverse, mixed-use entertainment destination for our community and visitors. Other regional attractions include the City's Museum of History and Art and the Chaffey Community Museum of Art, located in the City's Downtown. Through special themed exhibits and programmed cultural events, such as the yearly Ontario Festival of the Arts, the Museums attract many residents and visitors to the downtown. Complementing the cultural assets in the Downtown, the Recreation & Community Services Department hosts a ten-week summer concert series and eight-week movies in the park at Ontario Town Square park and parks within Ontario Ranch. Each summer, over 50,000 spectators participate in this summer series. Additionally, the Department hosts an Independence Day Parade, Fireworks Spectacular Show, and Holiday Light Parade, which each bring over 20,000 spectators at each of those events to the City.
	CE-1.9	**Regional Leadership**. We provide leadership for public, quasi-public, and private-sector partners that help Ontario and its	On-going.

Goal	Policy	Action	Action Status/Comments
		residents and businesses realize our goals and achieve our Vision.	
	CE-1.10	**Life-Long Education**. We work with our partners who provide life-long learning to ensure that our residents and workforce have access to education at all stages of life.	On-going. We partner with nonprofit originations, health organizations, and school districts to provide and ensure life-long learning opportunities for our residents and workforce have access to education at all stages of life. The City has established and continues the Community College Promise Program to expand access to higher education, support local economic development initiatives, and encourage students to obtain a vocational or higher education degree to enhance and retain the workforce in the region. The City's Recreation & Community Service Department offers the Empowerment Scholarship Program that allows all youth, adults, seniors and veterans from low-income backgrounds the opportunity to participate in recreation activities, classes, and programs that will enrich their lives and in turn, positively impact their families, schools, and community. The Department also has AmeriCorps Members that act as Youth Mentors to guide children to achieve their dreams and provide mentorship opportunities to them out of the de Anza Community & Teen Center. Additionally, the Department provides programming and outreach at local high-schools to promote programming at each community centers and attract teens to volunteer and take part in the citywide Teen Action Committee.
	CE-1.11	**Socioeconomic Trends**. We continuously monitor, plan for, and respond to changing socioeconomic trends.	On-going.
	CD-1.12	**Circulation.** We continuously plan and improve public transit and non-vehicular circulation for the mobility of all, including those with limited or no access to private automobiles. (Refer to Mobility Element Public Transit Section).	On-going.
	CD-1.13	**Safety and Security**. We invest in public safety and communicate our successes because the perception and reality of safety and security are necessary prerequisites for private investment and economic growth.	On-going.
CE-2 – Place-Making			
CE-2	**A City of distinctive neighborhoods, districts, and corridors, where people choose to be.**		
	CE-2.1	**Development Projects**. We require new development and redevelopment to create unique, high-quality places that add	On-going.

Goal	Policy	Action	Action Status/Comments
		value to the community. (Refer to Community Design Element).	
	CE-2.2	**Development Review**. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.	On-going.
	CE-2.3	**Interim Development**. We require interim development that does not reflect the long-term Vision, be limited in the scale of development so that the investment can be sufficiently amortized to make Vision-compatible redevelopment financially feasible.	On-going.
	CE-2.4	**Protection of Investment**. We require that new development and redevelopment protect the existing investment by providing architecture and urban design of equal or greater quality.	On-going.
	CE-2.5	**Private Maintenance**. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values. (Refer to Community Design Policy CD-5.1).	On-going.
	CE-2.6	***Public Maintenance***. We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm, whether on private land, in rights-of-way, or on publicly owned property. (Refer to Community Design Element Policy CD-5.1).	On-going.
CE-3 – Fiscal Decision-Making			
CE-3	**Decision-making deliberations that incorporate the full short-term and long-term economic and fiscal implications of proposed City Council actions.**		
	CE-3.1	**Fiscal Impact Disclosure**. We require requests for City Council action to disclose the full fiscal impacts, including direct and indirect costs.	Ongoing.
	CE-3.2	**General Plan Amendments**. We require those proposing General Plan amendments to disclose reasonably foreseeable impacts through a fiscal analysis.	On-going.

Goal	Policy	Action	Action Status/Comments
	CE-3.3	**Long-Term Funding Disclosure**. We require those requesting City support or funding for projects or programs to disclose if and how they can be continued without further City support.	The City's CIP is in compliance per state law and provides website links to all revenue share agreements.
	CE-3.4	**Improving Fiscal Decision-Making**. We periodically assess the accuracy of projections for staff time and City resources and use the assessment results to improve our fiscal decision-making process.	On-going.
	CE-3.5	**Sustainable Development**. We recognize impacts to municipal finances as an element of sustainability, and we require claims of sustainability to assess fiscal impacts.	On-going.
	CE-3.6	**Fully Funded Liability**. We require long term liabilities such are retiree medical benefits, employee accrued leave balances, and self-insured liability claims to be fully funded to ensure sound, long term fiscal health.	On-going.
	CE-3.7	**Programmatically Balanced Budget**. We require that the annual budget include appropriations allocated in a manner to meet the goal of the programmatically balanced budget.	On-going.
	CE-3.8	**Budget Margins**. We require that the adopted budget for revenues and expenditures reflect sufficient budget margins to minimize negative impacts to City services due to economic uncertainties.	On-going.
	CE-3.9	Complete Comparative Context. We require that our annual budget process provide the complete comparative context for proposed new and increased funding so decision makers can fully understand the trade-offs among budget choices.	On-going.
MOBILITY ELEMENT			
M-1 – Roadway Systems			
M-1	**A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.**		
	M-1.1	**Roadway Design and Maintenance.** We require our roadways to: 1) Comply with federal, state and local design and safety standards; 2) Meet the needs of multiple transportation modes and users; 3) Handle the capacity envisioned in the City of Ontario Master plan of Streets and Highways; 4) Be maintained in accordance with best practices; 5) Be compatible with the streetscape and surrounding land uses, and 6) Promote the efficient flow of all modes of traffic through the	Ongoing maintenance programs include pavement reconstruction, street overlays, slurry seals, pothole repairs, and sidewalk replacement.

Goal	Policy	Action	Action Status/Comments
		implementation of intelligent transportation systems and travel demand management strategies.	
	M-1.2	**Mitigation of Impacts.** We require development to mitigate its traffic impacts.	Ongoing.
	M-1.3	**Roadway Improvements.** We work with Caltrans, SBCTA, and others to identify, fund, and implement needed improvements to roadways when necessary. We work with neighboring jurisdictions to promote regional connectivity, access, and meet operational level of service standards at the City limits.	The City is coordinating with SBCTA and Caltrans the construction of the I-10 Express Lane Project as well as the design of the I-15 Express Lane Project. The City is also working with SBCTA and Omnitrans to improve Holt Boulevard to accommodate a future Bus Rapid Transit (West Valley Connector) and is currently in the Construction Phase.
	M-1.4	**Complete Streets.** We work to provide a complete, balanced, context-aware, multimodal transportation network that meets the needs of all users of streets, roads, and highways, including motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation. We prioritize implementation of complete streets improvements in environmental justice areas to facilitate opportunities for residents to use active transportation systems.	The City is working with the City of Fontana on improvements to the intersection of Airport Drive and Etiwanda Avenue. The City is also working with the City of Montclair on bicycle network opportunities.
	M-1.5	**Level of Service.** Maintain a peak hour Level of Service (LOS) E or better at all intersections. Maintain Level of Service D or better on arterial streets in the City. Develop and maintain a list of locations where LOS E or LOS F are considered acceptable and would be exempt from this level of service policy. Considerations for LOS exemption include being restricted by environmental constraints, lacking available right-of-way, deterring an increase in VMT, or degrading other modes of travel (such as bicycle or pedestrian infrastructure).	On-going.
	M-1-6	**Reduce Vehicle Miles Traveled**. We will strive to reduce VMT through a combination of land use, transportation projects, travel demand management strategies, and other trip reduction measures in coordination with development projects and public capital improvement projects.	On-going.
M-2 – Bicycle & Pedestrian .			
M-2	**A system of trails and corridors that facilitate and encourage active modes of transportation.**		
	M-2.1	**Active Transportation.** We maintain our Active Transportation Master Plan to create a comprehensive system of on- and off-street bikeways and pedestrian facilities that are safe,	The City is completing the design of a bicycle boulevard on Vine Avenue and B Street funded from the Active Transportation Program (ATP). The City is also completing the design of a buffered bike lane

Goal	Policy	Action	Action Status/Comments
		comfortable, and accessible and connect residential areas, businesses, schools, parks, and other key destination points.	on Mission Boulevard funded from the Transformative Climate Communities (TCC) grant.
	M-2.2	**Bicycle System.** We provide off-street multipurpose trails and Class II bikeways as our preferred paths of travel and use the Class III for connectivity in constrained circumstances. When truck routes and bicycle facilities share a right-of-way, we prefer Class I or Class IV bicycle facilities. We require new development to include bicycle facilities, such as bicycle parking and secure storage areas.	On-going. The City has a current Multipurpose Trails and Bikeway Plan updated as part of TOP 2050 Update process.
	M-2.3	**Pedestrian Walkways**. We require walkways that promote safe and convenient travel between residential areas, businesses, schools, parks, recreation areas, and other key destination points. (Refer to Community Design Policy CD-3.3)	The City is completing the design of missing sidewalk along Mission Boulevard funded from the Transformative Climate Communities (TCC) grant.
	M-2.4	**Network Opportunities**. We use public rights-of-way and easements such as, utility easements, levees, drainage corridors, road rights-of-way, medians, and other potential options to maintain and expand our bicycle and pedestrian network. In urban, mixed- use, and transit-oriented Place Types, we encourage the use of underutilized public and private spaces to expand our public realm and improve pedestrian and bicycle connectivity. (Refer to Community Design Element)	On-going.
M-3 –Public Transit			
M-3	**A public transit system that is a viable alternative to automobile travel and meets the basic transportation needs of transit dependent.**		
	M-3.1	**Transitional Areas**. We maintain a proactive working partnership with transit providers to ensure that adequate public transit service is available, cost-efficient, and convenient, particularly for residents in environmental justice areas.	On-going.
	M-3.2	**Alternative Transit Facilities at New Development.** We require new development adjacent to an existing or planned transit stop to contribute to the creation of transit facilities, such as bus shelters, transit bays and turnouts, and bicycle facilities, such as secure storage areas.	On-going. These improvements are incorporated into the design of street improvements where applicable.
	M-3.3	**Transit-Oriented Development**. We may provide additional development-related incentives to those inherent in the Land Use Plan for projects that promote transit use and reduce vehicle miles traveled.	On-going.

Goal	Policy	Action	Action Status/Comments
	M-3.4	**Bus Rapid Transit (BRT) Corridors**. We work with regional transit agencies to implement BRT service and reduce vehicle miles traveled by targeting destinations and corridors with the highest number of potential riders.	On-going. The City continues to work with SBCTA and Ominitrans to refine the design of the West Valley Connector (BRT) project.
	M-3.5	**Light Rail**. We support the extension of the Metro Rail Gold Line to Ontario and will work to secure station locations adjacent to the Meredith site and at the proposed multimodal transit center.	The City completed the Multimodal Transportation Center (MTC) Needs Assessment and Siting Criteria project which looks at potential locations for an MTC on or near the Ontario International Airport connecting future modes of transportation including light rail opportunities.
	M-3.6	**Metrolink Expansion**. We advocate expansion of Metrolink service to include the Downtown and the multimodal transit center.	On-going.
	M-3.7	**High-Speed Rail**. We encourage the development of high-speed rail systems that would enhance regional mobility in southern California and serve the City of Ontario.	On-going.
	M-3.8	**Feeder Systems**. We work with regional transit agencies to secure convenient feeder service from the Metrolink station and the proposed multimodal transit center to employment centers in Ontario.	The City supported SBCTA's pilot program that offers Lyft connections to and from the Ontario International Airport and four Metrolink stations.
	M-3.9	**Ontario Airport Metro Center Circulator**. We will explore the development of a convenient mobility system, including but not limited to shuttle service, people mover, and shared car system for the Ontario Airport Metro Center.	On-going.
	M-3.10	**Multimodal Transportation Center**. We intend to ensure the development of a multimodal transportation center near ONT airport to serve as a transit hub with amenities for transit riders, pedestrians, and bicyclists transitioning to local buses, BRT, the Gold Line, high-speed rail, the proposed Ontario Airport Metro Center Circulator, and other future transit modes. We support locations for the multimodal transportation center that are north of ONT airport, between Vineyard Avenue and Interstate 15.	The City completed the Multimodal Transportation Center (MTC) Needs Assessment and Siting Criteria project which looks at potential locations for an MTC on or near the Ontario International Airport connecting future modes of transportation including light rail opportunities.
	M-3.11	**Transit and Community Facilities**. We require the future development of community-wide serving facilities to be sited in transit-ready areas that can be served and made accessible by public transit. Conversely, we plan (and coordinate with other transit agencies to plan) future transit routes to serve existing community facilities.	The City continues to work with the community in assessing potential needs and collaborate with Omnitrans in potential modifications related to their routes and service levels.

Goal	Policy	Action	Action Status/Comments
M-4 Goods Movement			
M-4	**An efficient flow of goods through the City that maximizes economic benefit and minimizes negative impacts.**		
	M-4.1	**Truck Routes**. We designate and maintain a network of City truck routes that provide for the safe and efficient transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses, as shown on Exhibit M-04, Truck Routes. We will minimize conflicts on truck routes through the design and implementation of buffers between travel lanes and pedestrian and bicycle facilities on designated truck routes.	On-going.
	M-4.2	**Regional Participation**. We work with regional and sub-regional transportation agencies to plan and implement goods movement strategies, including those that improve mobility, deliver goods efficiently, and minimize negative environmental impacts. (Refer to Environmental Resources Policy ER-4.3).	City staff works with our regional partners (Southern California Association of Governments (SCAG), California Air Resources Board (CARB), and SBCTA) as new strategies are developed.
	M-4.3	**Railroad Grade Separations**. We eliminate at-grade rail crossings identified on Exhibit M-01, Roadway Classifications.	On-going.
	M-4.4	**Environmental Considerations.** We support both local and regional efforts to reduce/eliminate the negative environmental impacts of goods movement through the planning and implementation of truck routing and the development of a plan to evaluate the future needs of clean fueling/recharging and electrified truck parking.	Through the City's rezoning efforts to ensure the zoning of properties were consistent with the City's adopted General Plan, in part, to ensure warehousing / industrial uses will be compatible with adjacent land uses.
	M-4.5	**Air Cargo.** We support and promote a ONT that accommodates 1.6 million tons of cargo per year, as long as the impacts associated with that level of operations are planned for and mitigated.	In 2018, local control of the Ontario International Airport was acquired through the formation of the OIAA JPA. The City continues to review development applications for on-airport development projects to ensure the impacts are adequately mitigated. In 2023, ONT increase to approximately 700 thousand tons of cargo.
M-5 – Regional Transportation			
M-5	**A productive leadership role to help identify and facilitate implementation strategies that address regional transportation challenges.**		
	M-5.1	**Regional Leadership**. We maintain a leadership role to help identify and implement potential solutions to long-term regional transportation problems.	City staff are active participants on the SBCTA's Transportation Technical Committee, the SCAG SoCal Connects Technical Working Group, and the State's Active Transportation Advisory Committee.
	M-5.2	**Land Use Compatibility with Regional Transportation Facilities.** We work with ONT, railroads, Caltrans, SBCTA, and other transportation agencies to minimize impacts.	On-going.
ENVIRONMENTAL RESOURCE ELEMENT			

Goal	Policy	Action	Action Status/Comments
ER-1 – Water and Wastewater			
ER-1	**A reliable and cost-effective that permits the City to manage its diverse water resources and needs.**		
	ER-1.1	**Local Water Supply**. We increase local water supplies to reduce our dependence on imported water. New and redevelopment projects are aligned with our available water supply and/or to enhance our available water supply.	The City collaborates with the Metropolitan Water District (MWD) and Inland Empire Utilities Agency (IEUA) in support of local water supplies.
	ER-1.2	**Matching Supply to Use**. We match the water supply and quality to the appropriate use.	On-going. The City's 2020 Urban Water Management Plan (UWMP) is a State-mandated planning document for long-term resource planning to ensure adequate water supplies are available to meet existing and future water supply needs. In addition, the 2020 UMWP incorporates water supply reliability determinations resulting from potential prolonged drought, regulatory revisions, and/or changing climatic conditions.
	ER-1.3	**Conservation.** We work with regional water providers and users to conserve water and ensure sustainable local water supplies as more frequent droughts reduce long term local and regional water availability.	On-going. The Community Climate Action Plan provides water conservation measures, and associated landscape conservation measures. In addition, the Ontario Municipal Utility Company provides citizens with access to water conservation programs.
	ER-1.4	**Supply-Demand Balance.** We require that available water supply and demands be balanced.	On-going. See ER-1.2
	ER-1.5	**Water Resource Management.** Environmental justice areas are prioritized as we coordinate with local agencies to protect water quality, prevent pollution, address existing contamination, and remediate contaminated surface water and groundwater.	On-going.
	ER-1.6	**Urban Run-Off Quantity.** We encourage the use of low impact development strategies to intercept run-off, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.	On-going.
	ER-1.7	**Urban Run-Off Quality.** We require the control and management of urban runoff, consistent with Regional Water Quality Control Board regulations.	On-going. The City's 2021 Sewer System Management Plan (SSMP) is written to comply with the State Water Resources Control Board' s Order No. 2006- 0003- DWQ (as amended by WQ2008- 002-EXEC and WQ2013- 0058EXEC), Statewide General Waste Discharge Requirements for Wastewater Collection Agencies WDR). A SSMP is a document that describes the activities that an agency uses to manage their wastewater collection system effectively. The state describes effective management of a wastewater collection system as including: 1) Maintaining or improving the condition of the collection system infrastructure in order to provide reliable services

Goal	Policy	Action	Action Status/Comments
			into the future; 2) Cost-effectively minimizing infiltration/inflow (UI) and providing adequate sewer capacity to accommodate design flows; and 3) Minimizing the number and impact of sanitary sewer system overflows (SSOs) that occur.
	ER-1.8	**Wastewater Management**. We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.	On-going.
ER-2 – Solid Waste & Recycling			
ER-2	**A cost effective, integrated waste management system that meets or exceed state and federal recycling and waste diversion mandates.**		
	ER-2.1	**Waste Diversion**. We shall meet or exceed the AB 939 requirements.	On-going.
	ER-2.2	**Hazardous and Electronic Wastes**. We prohibit the disposal of hazardous and electronic waste into the municipal waste stream pursuant to state law.	On-going.
	ER-2.3	**Purchase Products Made from Recycled Materials**. We purchase recycled-content products where it is cost-effective.	On-going.
ER-3 – Energy			
ER-3	**Cost-effective and reliable energy system sustained through a combination of low impact buildings, site and neighborhood energy conservation and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.**		
	ER-3.1	**Conservation Strategy.** We require conservation as the first strategy to be employed to meet applicable energy-saving standards.	On-going.
	ER-3.2	**Green Development – Communities.** We encourage the use of the LEED Neighborhood Development rating system, or similar mechanism, to guide the planning and development of all new communities.	On-going.
	ER-3.3	**Building and Site Design.** We require new construction to incorporate energy-efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.	On-going. The City has adopted the most current Uniform Building Code Title 24 requirements and incorporates energy-efficient and site design strategies in compliance with the Community Climate Action Plan implementation strategies.
	ER-3.4	**Green Development – Public Buildings.** We require all new and substantially renovated City buildings in excess of 10,000 square feet to achieve a LEED Silver Certification standard, as determined by the U.S. Green Building Council.	On-going. New and renovated City Facilities are designed to incorporate site and building conservation measures.

Goal	Policy	Action	Action Status/Comments
	ER-3.5	**Fuel-Efficient and Alternative Energy Vehicles and Equipment.** We require purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use renewable sources of energy.	The City of Ontario Fleet currently has 5 EV vehicles, 5 Hybrid vehicles and 105 CNG vehicles. We are planning on adding 5 additional hybrid PD interceptors in fiscal year 23/24. The City currently has installed 56 EV charging stations located throughout City Facilities.
	ER-3.6	**Generation – Renewable Sources**. We promote the use of renewable energy sources (e.g., solar, wind, biomass) in public and private sector development.	The City launched the "Smart Ontario" program committing the City services to become more sustainable through installing solar and battery backup on City facilities and increasing efficiencies in the area of HVAC and lighting for a total of 4,775 kw. As part of the TCC grant program Grid Alternative has installed an additional 9solar panel systems on single-family homes totaling approximately420kw.
ER-4 - Air Quality			
ER-4	**Improve indoor and outdoor air quality and reduced locally generated pollutant emissions.**		
	ER-4.1	**Land Use**. We reduce GHG and other local pollutant emissions through compact, mixed-use, and transit-oriented development and development that improves the regional jobs-housing balance.	On-going.
	ER-4.2	**Sensitive Land Uses**. We prohibit the future siting of sensitive land uses within the distances defined by the California Air Resources Board for specific source categories without sufficient mitigation.	City staff project review process incorporates a pilot Healthy Development Checklist in support of Healthy Ontario objectives and the potential need to conduct a Health Risk Assessment.
	ER-4.3	**Greenhouse Gases (GHG) Emissions Reductions**. We reduce GHG emissions in accordance with regional, state, and federal regulations.	As part of the General Plan Update, the City updated the Community Climate Action Plan to address 2030 and 2050 Statewide Targets. The Plan was adopted in August 2022. The City is installing solar upon municipal facilities, installing ev charging within all new parking areas, and expanding our active transportation network.
	ER-4.4	**Indoor Air Quality**. We will comply with State Green Building Codes relative to indoor air quality. We seek funding to improve indoor air quality for households with poor indoor air quality, with priority for lower income households in environmental justice areas.	On-going.
	ER-4.5	**Transportation**. We promote mass transit and non-motorized mobility options (walking, biking) to reduce air pollutant emissions.	On-going.
	ER-4.6	**Particulate Matter**. We support efforts to reduce particulate matter to meet State and Federal Clean Air Standards.	On-going.

Goal	Policy	Action	Action Status/Comments
	ER-4.7	**Other Agency Collaboration**. We collaborate with other agencies within the South Coast Air Basin to improve regional air quality at the emission source.	On-going.
	ER-4.8	**Tree Planting**. We protect healthy trees within the City and plant new trees to increase carbon sequestration and help the regional/local air quality.	On-going. The City is designated as a "Tree City". The City annually plants new trees and/or replaces dead, diseased or damaged trees to increase carbon sequestration and help with the regional and local air quality. The City in 2023 has planted an additional 280 trees.
	ER-4.9	**New Localized Air Pollution Sources Near Existing Sensitive Receptors.** We require new developments to conduct a Health Risk Assessment for land uses that generate more than 100 trucks per day or 40 trucks per day by trucks operating transportation refrigeration units (TRU's) within 1,000 feet from sensitive land uses (California Health and Safety Code § 42705.5(a)(5)). If the health risk assessment determines the new development poses health hazards that increase the incremental cancer risk above the threshold established by the South Coast Air Quality Management District (AQMD), we will only approve permits upon the condition that adequate mitigation measures are proposed and implemented for potential impacts on the sensitive uses around the site and along the route within Ontario taken by the trucks to and from freeways. We require new developments that must perform a health risk assessment to conduct additional public outreach by sending notifications in multiple languages to all residents living within 500 feet and encourage hosting a public meeting.	On-going.
ER-5 – Biological, Mineral and Agricultural Resources			
ER-5	**Protect high value habitat and farming and mineral resources extraction activities that are compatible with adjacent development.**		
	ER-5.1	**Habitat Conservation Areas**. We support the protection of biological resources through the establishment, restoration, and conservation of high-quality habitat areas.	On-going.
	ER-5.2	**Entitlement and Permitting Process**. We comply with state and federal regulations regarding protected species.	On-going.
	ER-5.3	**Right to Farm**. We support the right of existing farms to continue their operations within the Ontario Ranch.	The City allows existing agricultural uses to continue for as long as they wish to operate and interim agricultural uses to operate.
	ER-5.4	**The Transition of Farms**. We protect both existing farms and sensitive uses around them as agricultural areas transition to urban uses.	On-going.

Goal	Policy	Action	Action Status/Comments
	ER-5.5	**Mining Operations**. We prohibit future mining operations where the resource extraction activities are incompatible with existing or proposed adjacent land uses.	On-going.
SAFETY ELEMENT			
S-1 – Seismic & Geologic Hazards			
S-1	**Minimize risk of injury, loss of life, property damage and economic and social disruption caused by earthquake-induced or other geological hazards.**		
	S-1.1	**Implementation of Regulations and Standards**. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.	On-going.
	S-1.2	**Entitlement and Permitting Process.** We follow state guidelines and the California Building Code to determine when development proposals must conduct geotechnical and geological investigations.	On-going.
	S-1.3	**Continual Update of Technical Information**. We maintain up-to-date California Geological Survey seismic hazard maps.	On-going.
	S-1.4	**Seismically Vulnerable Structures**. We conform to state law regarding unreinforced masonry structures and coordinate with not-for-profits to facilitate seismic retrofits in environmental justice areas and for low-income households.	On-going.
S-2 – Flood Hazards			
S-2	**Minimize risk of injury, loss of life, property damage and economic and social disruption caused by flooding and inundation hazards.**		
	S-2.1	**Entitlement and Permitting Process.** We require hydrological studies prepared by a state-certified engineer when new development is located in a 100-year or 500-year floodplain to assess the impact that the new development will have on the flooding potential of existing development down-gradient.	On-going.
	S-2.2	**Flood Insurance.** We require any new development partially or entirely in 100-year flood zones to provide detailed floodplain mapping for 100- and 200-year storm events as part of the development approval process.	On-going.
	S-2.3	**Facilities that Use Hazardous Materials**. We comply with state and federal law and do not permit facilities using, storing, or otherwise involved with substantial quantities of onsite hazardous materials to be located in the 100-year flood zone unless all standards of elevation, floodproofing, and storage	On-going.

Goal	Policy	Action	Action Status/Comments
		have been implemented to the satisfaction of the Building Department.	
	S-2.4	**Prohibited Land Uses**. We prohibit the development of new essential and critical facilities in the 100-year floodplain and discourage the development of new essential and critical facilities in the 500-year floodplain unless all standards of elevation and flood proofing demonstrate that a facility can be safe and operational during a flood event, implemented to the satisfaction of the Building Department.	On-going.
	S-2.5	**Stormwater Management**. We maintain the storm drain system to convey a 100-year storm, when feasible, and encourage environmental site design practices to minimize flooding and increase groundwater recharge, including natural drainage, green infrastructure, and permeable ground surfaces. (Link to Environmental Resources Element)	On-going.
	S-2.6	**Use of Flood Control Facilities**. We encourage the joint use of flood control facilities as open space or other types of recreational facilities.	The city continues to support the Mill Creek Wetlands, a multi-jurisdictional regional watershed water quality management project via stormwater wetlands treatment.
	S-2.7	**Collaboration Between Agencies**. Collaborate with the San Bernardino County Flood Control District and other state and federal agencies to maintain flood-control infrastructure to minimize flood damage.	On-going.
S-3 – Fire & Rescue Hazards			
S-3	**Reduce the risk of death, injury, property damage and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.**		
	S-3.1	**Prevention Services.** We proactively mitigate or reduce the negative effects of fire, hazardous materials release, and structural collapse by implementing the regularly adopted California Fire Code and California Building Code.	On-going.
	S-3.2	**Community Outreach.** We provide education to local schools and community groups to promote personal and public safety.	Automated External Defibrillator (AED) classes, cardiopulmonary resuscitation (CPR) classes, Community Emergency Response Team (CERT) classes) The on-going program of the fire service career introduction program (Fire Explorers) are available and taught several times throughout the year.
	S-3.3	**Fire and Emergency Medical Services.** We maintain sufficient fire stations, equipment and staffing to respond effectively to	On-going.

Goal	Policy	Action	Action Status/Comments
		emergencies and meet the needs of the community and state requirements.	
	S-3.4	**Special Team Services.** We maintain effective special rescue services.	On-going.
	S-3.5	**Emergency Notifications.** We maintain a public alert notification system that efficiently conveys information about imminent, developing, ongoing, and concluding emergency events to residents and visitors, working with network providers that translate information into other languages.	On-going.
	S-3.6	**Interagency Cooperation**. In order to back up and supplement our capabilities to respond to emergencies, we participate in the California Fire Rescue and Mutual Aid Plan.	On-going.
	S-3.7	**Water Supply and System Redundancy**. We monitor our water system to manage firefighting water supplies.	As part of the City's annual Capital Improvement Program, OMUC has been replacing and upsizing aged and undersized potable water mains with the included goal of improving fire flow capacity and reliability. In FY22-23, 4,225 linear feet of potable water mains were replaced.
	S-3.8	**Fire Prevention through Environmental Design**. We require new development to incorporate fire prevention considerations in the design of streetscapes, sites, open spaces, and buildings. (Refer to Community Design Element).	On-going.
	S-3.9	**Resource Allocation**. We analyze fire data to evaluate the effectiveness of our fire prevention and reduction strategies and allocate resources accordingly.	On-going.
S-4 – Noise			
S-4	**An environment where noise does not adversely affect the public's health, safety, and welfare.**		
	S-4.1	**Noise Mitigation**. We utilize the City's Noise Ordinance, building codes, and subdivision and development code regulations to mitigate noise impacts.	On-going.
	S-4.2	**Coordination with Transportation Authorities**. We collaborate with airport owners, FAA, Caltrans, SBCTA, SCAG, neighboring jurisdictions, and other transportation providers in the preparation and maintenance of and updates to transportation-related plans to minimize noise impacts and provide appropriate mitigation measures.	On-going.

Goal	Policy	Action	Action Status/Comments
	S-4.3	**Airport Noise Mitigation**. We aggressively pursue funding and utilize programs to reduce the effects of aircraft noise in impacted areas of our community.	The City of Ontario previously managed the Part 150 (Quiet Home Program) initially approved by FAA in 1991. The Quiet Home Program focused on land acquisition and noise insulation of residential properties impacted by airport noise, but was terminated in September 2015 because of updated noise exposure maps (NEM) eligibility noise contours, which eliminated funding for the program. The City continues to support the OIAA to maintain the Noise Management Program for ONT.
	S-4.4	**Truck Traffic**. We manage truck traffic to minimize noise impacts on sensitive land uses.	On-going.
	S-4.5	**Roadway Design**. We design streets and highways to minimize noise impacts.	On-going.
	S-4.6	**Airport Noise Compatibility.** We utilize information from Airport Land Use Compatibility Plans to prevent the construction of new noise-sensitive land uses within airport noise impact zones.	On-going. The City continues to implement the Ontario Airport Land Use Compatibility Plan.
	S-4.7	**Rail Noise Mitigation.** We require residential and mixed use development of vibration-sensitive uses in areas within 200 feet of rail to evaluate for indoor vibration levels and mitigate any exceedances of the Federal Transit Administration vibration-annoyance criteria.	On-going.
S-5 – Wind Related Hazards			
S-5	**Minimize the risk of injury, property damage, and economic loss resulting from windstorms and wind-related hazards.**		
	S-5.1	**Dust Control Measures**. We require the implementation of Best Management Practices for dust control at all excavation and grading projects.	On-going.
	S-5.2	**Grading in High Winds.** We prohibit excavation and grading during strong wind conditions, as defined by the Building Code.	On-going.
	S-5.3	**Public Safety Power Shutoffs.** We coordinate with utility companies to minimize service interruptions, such as Public Safety Power Shutoffs, before, during, and after windstorms and wind-related hazards.	On-going. The City provides back-up power facilities to critical facilities and exploring opportunities to incorporate battery storage as feasible.
S-6 – Hazardous Materials & Waste			
S-6	**Reduced potential for hazardous materials exposure and contamination.**		
	S-6.1	**Disclosure and Notification**. We enforce disclosure laws that require all users, producers, and transporters of hazardous	On-going.

Goal	Policy	Action	Action Status/Comments
		materials and wastes to clearly identify the materials that they store, use, or transport.	
	S-6.2	**Response to Hazardous Materials Releases**. We respond to hazardous materials incidents and coordinate these services with other jurisdictions.	On-going.
	S-6.3	**Safer Alternatives.** We minimize our use of pesticides and other hazardous materials by choosing non-toxic alternatives that do not pose a threat to the environment, especially when it could affect public park facilities and open spaces.	On-going.
	S-6.4	**Safe Storage and Maintenance Practices**. We require that the users of hazardous materials be adequately prepared to prevent and mitigate hazardous materials releases.	On-going.
	S-6.5	**Location of Hazardous Material Facilities**. We regulate facilities that will be involved in the production, use, storage, or disposal of hazardous materials, pursuant to federal, state, county, and local regulations so that impacts to the environment and sensitive land uses are mitigated. We prohibit new hazardous waste facilities in close proximity to sensitive land uses and environmental justice areas.	On-going.
	S-6.6	**Location of Sensitive Uses**. We prohibit new sensitive land uses from locating within airport Safety Zones and near existing sites that use, store, or generate large quantities of hazardous materials. (Refer to Land Use Element).	On-going.
	S-6.7	**Household Hazardous Waste**. We support the proper disposal of household hazardous substances.	On-going. The City continues to operate the Household Hazardous Waste Facility for our residents to ensure proper disposal.
	S-6.8	**Mitigation and Remediation of Groundwater Contamination**. We actively participate in local and regional efforts directed at both mitigating environmental exposure to contaminated groundwater and taking action to clean up contaminated groundwater once exposure occurs.	On-going.
	S-6.9	**Remediation of Methane**. We require development to assess and mitigate the presence of methane, per regulatory standards and guidelines.	On-going.
S-7 – Law Enforcement			
S-7	**Residential neighborhoods, commercial areas, and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, and community involvement in public safety.**		

Goal	Policy	Action	Action Status/Comments
	S-7.1	**Police Unit Response**. We respond to calls requiring service in a timely manner.	On-going.
	S-7.2	**Community Oriented Problem Solving (C.O.P.S.).** We support and maintain the mission of COPS to identify and resolve community problems.	On-going. The Ontario Police Department has a Community Engagement Team. They partner with Community Improvement and Public Works to resolve community problems.
	S-7.3	**Prevention Services**. We provide crime prevention programs targeted to youth, parents, seniors, businesses, and neighborhoods.	On-going. Youth: Every 15 mins, Drug Awareness, Drunk Driving Awareness, Fatal Vision, Teen Dating Violence Parents/Children: Bicycle Safety, Bullying Prevention, Child Abuse Awareness, Child Safety/Dangerous People, Finger Printing, Drug Use Prevention, Youth Academy, T.E.A.M.S. (Together Empowering And Mentoring Students); Seniors: Fraud Prevention, Elder Abuse Prevention; Businesses: Building Security Guidelines, Business Burglary Prevention, Internal Theft/White Collar Crimes, Retail Security Guidelines, Neighborhoods: Neighborhood Watch, Ontario Night Out.
	S-7.4	**Crime Prevention through Environmental Design (CPTED)**. We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces, and buildings.	On-going. Continuously working with other City agencies to incorporate CPTED. We have a Police Representative who is embedded in this project review process. In addition, there are programs available through Crime Prevention.
	S-7.5	**Interdepartmental Coordination**. We utilize all City departments to help reduce crime and promote public safety.	On-going. Collaboration with Community Life and Culture, Public Works, and Community Improvement.
	S-7.6	**Partnerships.** We partner with other local, state, and federal law enforcement agencies and private security providers to enhance law enforcement service in Ontario.	On-going. Currently partnering with FBI, County Probation, County Crisis Team, Community Behavioral Health and Private security to enhance law enforcement and other services for city residents.
	S-7.7	**Resource Allocation**. We analyze crime data to evaluate the effectiveness of crime prevention and reduction strategies and allocate resources accordingly.	On-going. Crime Analysis Unit provides information to attempt to predict crime. This allows for the police resources to be allocated in an attempt to reduce crime.
	S-7.8	**Social Services.** We support behavioral health and social services as part of the public safety solution.	On-going.
S-8 – Emergency Management			
S-8	**Disaster resilient, prepared community through effective emergency/disaster preparedness, response, mitigation and recovery.**		
	S-8.1	**State and Federal Mandates.** We maintain emergency management programs that meet the requirements of the State of California Standardized Emergency Management System (SEMS) and the National Incident Management System (NIMS).	On-going. Continued compliance with SEMS and NIMS.

Goal	Policy	Action	Action Status/Comments
	S-8.2	**Emergency Management Plans**. We maintain, update, and adopt the Emergency Operations Plan (EOP) and the Hazard Mitigation Plan (HMP).	The City will adopt an updated EOP in 2024 and adopted an updated the HMP in December 2023.
	S-8.3	**Emergency/Disaster Training and Exercises.** We conduct training and exercises to prepare for and evaluate emergency/disaster response and recovery procedures.	On-going training, including Active Shooter Training, Stop the Bleed, and CERT. Train and credential EOC responders through the West End Academy.
	S-8.4	**Interagency Collaboration**. We maintain partnerships, including automatic aid agreements, with fire protection, police and sheriff departments, and emergency management agencies in San Bernardino and Riverside County to strengthen emergency response.	On-going. City staff has on-going coordination and collaboration with the San Bernardino County Operational Area, San Bernardino County Collaborative Organizations Active in Disaster, and the American Red Cross.
	S-8.5	**Interdepartmental Coordination**. We utilize all City departments to help support emergency/disaster mitigation, preparedness, response mitigation, and recovery.	On-going. Bi- monthly coordination meetings with the Emergency Management Working Committee comprised of all city departments.
	S-8.6	**Community Outreach.** We provide education to the community to promote personal, family, and community emergency preparedness to both natural and human-generated hazards.	On-going. City staff manages and coordinates the Community Emergency Response Team training program. Additionally, the Listos Training Continuity and Organizational Resilience in Emergencies (CORE), outreach events at various city events such as the Summer Concerts Series and fire department open house.
	S-8.7	**Extreme Heat and Air Quality.** We work to ensure that all community members are informed about and have access to community cooling centers and clean air centers during extreme heat events or wildfires, with a focus on serving environmental justice communities. We support the development of extreme heat emergency response policies and practices to address these critical health risks in the community.	On-going.
	S-8.8	**Regional Partnerships for Climate Adaptation**. We partner with local governments in San Bernardino County, Riverside County, and Inland Southern California Climate Collaborative to develop regional climate change adaptation strategies and programs.	On-going.
	S-8.9	**Backup Power in Critical Facilities.** We require backup power be maintained in critical facilities. We encourage backup power solutions that include renewable energy components.	On-going.
Goal S-9 - Energy Resiliency			

Goal	Policy	Action	Action Status/Comments
S-9	**Incorporate energy efficient practices and renewable energy systems to improve air quality, comfort, and energy reliability during temporary power outages.**		
	S-9.1	**Solar Energy**. We support and may incentivize the installation of residential and commercial solar panels and battery storage systems that can provide electricity during power outages.	On-going.
	S-9.2	**Renewable Energy.** Renovate existing city-owned facilities and plan future facilities to include renewable energy generation capacity and battery storage as part of an effort to make public facilities and services greener and more resilient to power outages.	On-going.
	S-9.3	**Energy Efficiency Retrofits.** We support and may incentivize retrofits to residential and commercial buildings that improve energy efficiency and insulation from extreme temperatures, giving priority towards low-income applicants.	On-going.
PARKS & RECREATION ELEMENT			
PR-1 – Planning & Design			
PR-1	**A system of safe and accessible parks that meets the needs of the community.**		
	PR-1.1	**Access to Parks.** In all new residential development areas, we strive to provide a park and/or recreational facility within walking distance (¼ mile) of every residence and prioritize the establishment of parks in environmental justice areas that do not have adequate access to parks.	On-going. In 2021, the City adopted a comprehensive Recreation & Park Master Plan that provided an outline for future parks and joint-use opportunities to close this gap.
	PR-1.2	**Adjacency to Schools.** We examine locating parks adjacent to school sites to promote joint-use opportunities.	On-going.
	PR-1.3	**Funding**. We shall seek outside, one-time sources of funding for capital improvements and reserve ongoing City funds primarily for operations and maintenance.	On-going. In 2023, the City received funding through the Prop 68 per capita grant program and completed a playground renovation project at Sam Alba Memorial Park. The City continues to pursue funding in order to make capital improvements (such as trails, lighting, restroom improvements, new amenities, and outdoor fitness equipment) in several parks based on a community needs assessment and the Recreation & Parks Master Plan. Recently, the City received funding to help improve lighting at De Anza Park; new fitness equipment to be installed at Vineyard Park; and new outdoor fitness courts at John Galvin Park and Homer F. Briggs Park. Additionally, the Recreation & Community Services Department received funding through Omnitrans, through Measure I funding, to purchase vehicles

Goal	Policy	Action	Action Status/Comments
			and expand the senior transportation program. This allows seniors throughout the community access to local parks and community centers.
	PR-1.4	**Joint-use Opportunities**. In areas where there is a need but no City recreational facility, we explore joint-use opportunities (e.g., school sites).	On-going. The Recreation & Parks Master Plan pinpoints schools that would help close service gaps throughout certain parts of the city and provide additional access to playgrounds, sports fields and courts, and walking paths for the general public.
	PR-1.5	**Acreage Standard.** We strive to provide 5 acres of parkland (private and public) per 1,000 residents.	On-going.
	PR-1.6	**Private Parks**. We expect the development to provide a minimum of 2 acres of developed private park space per 1,000 residents.	On-going.
	PR-1.7	**Special Needs/Universal Design**. We attempt to provide recreational opportunities at parks for people of all ages and abilities.	City staff has completed the Grand Park Concept Plan providing phased active/passive spaces and entertainment venues and leveraging opportunities for innovation in water conservation and environmental stewardship. The City is developing a conceptual plan for a future regional sports complex with active athletic fields for both local and regional use.
	PR-1.8	**Renovation**. We examine renovating existing facilities prior to building replacement facilities.	On-going. City staff are working on renovation of De Anza Park to create enhanced amenities and new park attractions for residents in this area of the City.
	PR-1.9	**Phased Development**. We require parks to be built in new communities before a significant proportion of residents move in.	On-going.
	PR-1.10	**Master Plans for Individual Park Facilities.** We require an individual park master plan for parks in excess of 10 acres.	On-going.
	PR-1.11	**Environmental Function of Parks**. We require new parks to meet environmental management objectives.	On-going.
	PR-1.12	**Trails**. We promote connections between parks and local trails, including those managed by other public agencies.	On-going.
	PR-1.13	**Equestrian Trails**. We require the design, construction, and maintenance of equestrian trails in Rural Residential designated areas.	On-going.
	PR-1.14	**Multi-family Residential Developments**. We require that new multi-family residential developments of five or more units provide recreational facilities or open space, in addition to paying adopted impact fees.	On-going.

Goal	Policy	Action	Action Status/Comments
	PR-1.15	**Trail Connectivity.** We strengthen and improve the equestrian, bike, and multipurpose trail connections within the City and work to improve trail connections into adjacent jurisdictions.	On-going.
	PR-1.16	**Equestrian Master Plan.** We use Homer Briggs Park as the primary focal point for the development of a Master Plan of Equestrian Trails in the Rural Residential area.	On-going.
PR-2 – Programming			
PR-2	**A range of recreational programs provided by public, private and non-profit organizations that meet the needs of the community's varied interests, age groups and abilities.**		
	PR-2.1	**Participation**. We program park facilities to maximize utilization and participation while considering park size, location, and population served.	On-going. The City continues to increase community engagement following COVID 19 through surveys and focus groups for programming needs. The Recreation & Community Services Department also has a strong group of teens and youth who actively participate in program planning for each facility. The Department has a mobile recreation program that visits four parks each week to provide recreation programming in areas of the communities that do no have a community center near them to provide a safe environment for children to play and explore outside, but also utilize this opportunity to gather feedback from the community on how to improve programming at each location. The Department also started an Active Seniors on the Go program hosted at each community center, where active older adults are encouraged to get active and socialize with staff. This gives the Department active feedback on what our active adults wish to see in each park and community center.
	PR-2.2	**Needs Assessment.** We track the needs and priorities for recreational programming and look for ways to meet demand.	On-going.
	PR-2.3	**Community Involvement**. We involve the local community in planning programs for neighborhood and community park facilities.	On-going. The City has hosted community forums at our recreation centers to solicit feedback from the community on issues that matter in their neighborhoods. We also have a very active teen action committee (Advocates for a Healthy Life), and are advocating for safe parks. The Recreation & Community Services Department also connects with Promotoras in the community to help send out citywide messages and resources to our Spanish-speaking neighborhoods through our Zumba program, community gardens, and nonprofit local partners.

Goal	Policy	Action	Action Status/Comments
	PR-2.4	**Access to Programs**. We provide a range of recreational and physical exercise programs that are accessible to residents of all income levels throughout the community and prioritize establishing and maintaining equitable access for residents in environmental justice areas.	On-going. The City provides numerous free classes daily to our community, including free Zum Up! Zumba classes, after school programs, mobile recreation programs, active senior programs, open gymnasium play, access to free exercise facilities and a scholarship program to increase access to fee-based classes open to all ages.
	PR-2.5	**Partnerships.** We partner with local and regional agencies, non-profit organizations, and the private sector to provide a comprehensive range of recreational programs.	On-going.
	PR-2.6	**Crime Deterrents**. We promote and participate in recreational programming as part of our crime prevention effort.	On-going.
SOCIAL RESOURCES ELEMENT			
SR - 1 – Health			
SR-1	**Residents have access to information, services and goods that improve their health and wellbeing.**		
	SR-1-1	**Partnering for Healthcare.** We work with healthcare providers, and local, regional, state, and federal agencies to attract and retain a diversity of affordable, quality healthcare and facilities for the entire community.	On-going. The Recreation & Community Services Department works closely with San Bernardino County Public on helping to distribute health and wellness resources. The Department also participated in the County's Community Health Collaborative to network with local health providers on expanding resources to our community members. The Department has also developed strong relationships with Kaiser Permanente and San Antonio Regional Hospital in structuring future programming and partnerships.
	SR-1.2	**Nutrition Choices**. We support the promotion of healthy nutritional food choices in the community, including community gardens, farmers markets, and cooking classes.	On-going. The City partners with Huerta Del Valle Community Garden and Urban Farm to bring fresh, local organic produce to the community at affordable prices, including local community-supported agriculture (CSA program). We also partner with the Ontario-Montclair School District to provide free Summer meals to our community through our community centers and library and a free super program at Dorothy A. Quesada Community Center and De Anza Community & Teen Center during the school year. The City also partners with Caramel Connections Foundation whom operates the Seeds of Joy Community Garden at Anthony Munoz Park. The Department also partners with Family Service Association to provide a free nutrition program daily (Monday – Friday) at the Ontario Senior Center for those ages 50 and up.
	SR-1.3	**Healthy Education**. We promote health education, including disease prevention, mental health, nutrition, and physical fitness.	On-going. The City through our community engagement activities have community Promotores that promote all the health education resources available to the community through our community centers or through partner organizations.

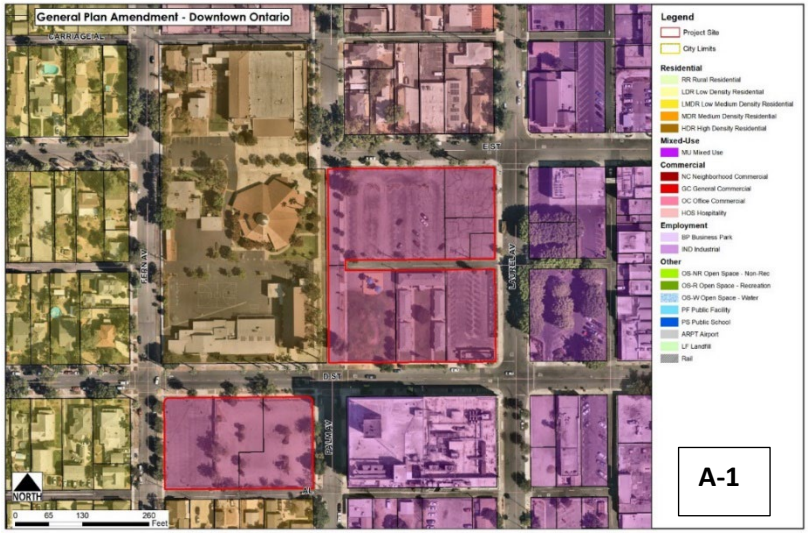
Goal	Policy	Action	Action Status/Comments
	SR-1.4	**Physical Activity.** We encourage activities and community design that improves the physical fitness of our community members, with an emphasis on the provision of activities and facilities in environmental justice areas.	On-going. In 2020 the City completed a citywide Active Transportation Master Plan to encourage walking and bike riding throughout the City. The City also implemented the Ontario on the Go program, which is a mobile recreation program to get youth back out into parks and promote physical activity and homework help. The Active Seniors on the Go program also promotes physical activity for active older adults at each community center and each community center promotes walking in the parks and living a healthy lifestyle. The Recreation & Community Services Department also hosts the annual 5K Reindeer Run & Rudolph's Dash to promote an active and healthy community by partnering with local school districts to promote the race. We also host an annual Tot Olympics for 3-5 year olds to promote an active lifestyle early on. The Department has also expanded its tot sports, youth sports, and adult sports programs to get community members active in parks and gymnasiums throughout the city. The Department has also worked to secure funding for development of new outdoor fitness equipment at Vineyard Park, John Galvin Park, and Homer F. Briggs Park and new playgrounds at Bon View Park, De Anza Park, and Homer F. Briggs Park.
SR-2 – Education			
SR-2	**A range of educational and training opportunities for residents and workers of all ages and abilities that improves their life choices and provides a skilled workforce for our businesses.**		
	SR-2.1	**Education Partners**. We partner with educational institutions throughout the region in order to expand the range and quality of educational offerings available to the community.	On-going. Library: Provide students at Ontario high schools with 600 mental health Social Emotional Learning (SEL) Kits. Provide "No Limit" bags for Colony High School students experiencing homelessness, in foster care or in other sensitive situations. Kindergo partners with all elementary school districts in Ontario to provide library cards and classroom visits to kindergarten-aged students. Promise Scholars meets regular at Ovitt Family Community Library and staff do class visits for them. Lunch at the Library partners with OMSD to serve lunch during the summer to all children 0-18 years of age.
	SR-2.2	**Workforce Training.** We work with industrial organizations, businesses, and educational institutions to create opportunities for workforce training.	On-going. City staff partnering with San Bernardino County Workforce Development located a satellite office Ontario Library to provide jobs and training resources directly to our community. Workforce Development offers one-on-one appointments for job seekers and quarterly public programming in job searching, resume building, interview skills, etc.

Goal	Policy	Action	Action Status/Comments
	SR-2.3	**Joint-use Facilities.** We partner with public and private educational institutions to jointly use facilities for both City and educational purposes	On-going. Ontario City Library Lewis Family Branch is a joint use with Colony High School.
	SR-2.4	**Access to Schools.** We work with our local and regional partners to improve safety in and around schools and to improve access for all citizens of all ages and abilities to schools and community services such as afterschool and other programs.	On-going. The City annually partner with parents, students, schools, and our police department to celebrate National Walk to School Day to bring awareness and resources to safety around our schools. We have also secured several rounds of Caltrans Active Transportation funding to improve sidewalks, handicap ramps, and safety crossings near our schools.
	SR-2.5	**School Facilities.** We plan and coordinate with the school districts for designing and locating school facilities to meet the city's goals, such as for health, walkability, and safety, and to minimize impacts to the existing neighborhood.	On-going.
	SR-2.6	**Language.** We promote broad outreach in languages used by the community for proposed projects that could negatively affect environmental justice areas.	On-going.
	SR-2.7	**Community Engagement.** We promote targeted outreach and education to historically underrepresented groups to encourage meaningful participation in decision-making process for projects whose outcomes will affect land use in environmental justice areas.	On-going.
SR-3 – Community & Leisure Activities			
SR-3	**A range of community and leisure programs and activities provided by public, private and non-profit organizations that meet the needs of the community's varied interests, age groups and abilities.**		
	SR-3.1	**Partnerships.** We partner with local and regional agencies, non-profit organizations, and the private sector to provide a comprehensive range of community activities and events to citizens.	On-going.
	SR-3.2	**Needs Assessment.** We track the needs and priorities for community services and look for ways to meet demands and avoid duplication of offerings.	A Library Facility Needs Assessment and Master Plan was completed in 2021 to identify space and facilities needs and/or alternative service delivery options for the city and defining best approaches to address identified needs. An update was completed in 2022.
	SR-3.3	***Program Outreach.*** We promote information about leisure activities, classes, and special events and other services and activities in our community.	On-going. The City provides information on all City programming through our Ontario Living magazine, on social media, and through a Promotore Outreach program.

Goal	Policy	Action	Action Status/Comments
	SR-3.4	**Community Events.** We plan and actively participate in regularly scheduled community events and seasonal or yearly citywide events.	On-going. The City annually celebrates our annual 5K Reindeer Run, Christmas on Euclid, and Concerts in the Park.
	SR-3.5	**Community Activities as Crime Deterrents.** We promote and participate in community activities as part of our crime prevention efforts. (Refer to Safety Element S-7.3).	On-going. The City annually celebrates National Night Out at all City Park facilities to bring community awareness to Crime Prevention efforts.
SR-4 – Library			
SR-4	**City libraries that connect community members of all ages and abilities to a broad range of programs, communication and informational resources.**		
	SR-4.1	***Community Needs.*** We identify and monitor community needs for library services, technology, and facilities, and tailor them to effectively meet those needs.	On-going. The Ontario City Library Department has a Lightspeed makerspace at each branch to encourage learning and exploration through technology and making through access to modern technology; Veterans Resource Center staffed by Jobs Vision Success partnership to assist Veterans and their families with information needs regarding benefits; Liftoff to Literacy, a program for adult learners to increase literacy skills by pairing a learner with a volunteer tutor; Little Learners Big Futures, an early literacy program that aims to make a parent their child's first teacher; Lunch at the Library, a partnership with the Ontario Montclair School District to serve free lunches to children throughout the summer; teen advisory groups at both locations; implementation of Libraries for All, programming for special needs adults.
	SR-4.2	**Interagency Coordination.** We leverage relationships with outside agencies, educational institutions, and neighboring jurisdictions to share the library resources to the benefit of Ontario residents.	On-going. The Library Department partners with educational institutions to share library resources and offer services to the community through partnerships with four school districts, private schools, and adult schools. Collaboration with Ontario Montclair School District brought free daily meals during summer vacation to youth ages 1 – 18 in the library, the hosting of two summer school classes in the library's makerspace, and an agency wide event with student performances. Coordination with Cal Poly Pomona's College Corps program brought homework help and literacy tutoring to Ontario's youth. Collaboration with Chaffey College and the library's adult literacy program brought a free adult English as a second language course to the library. Partnerships with Reach Out, Inland Empire Health Plan, Smile Medi-Cal Dental, Vision to Learn, and San Antonio Regional Hospital brought free educational programs for children, parents, and caregivers. Through a partnership with the American Heart Association, the library brought education and

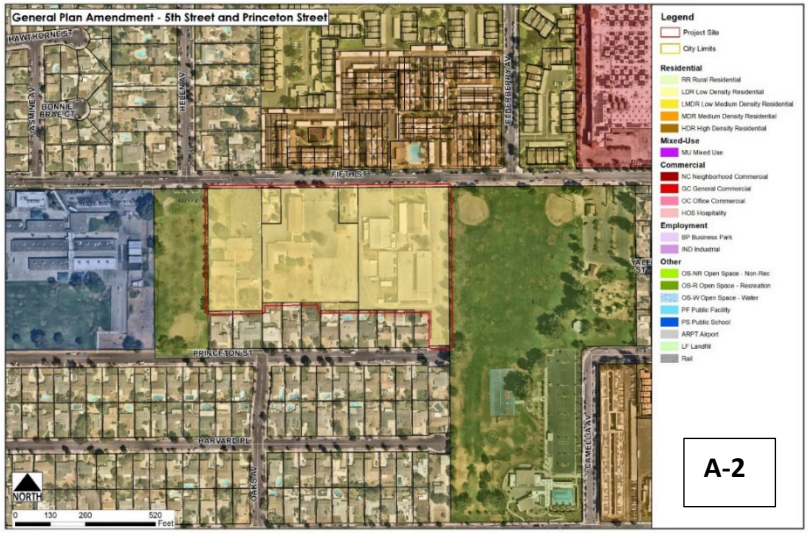
Goal	Policy	Action	Action Status/Comments
			access to blood pressure monitors to Ontario residents. Coordination with San Bernardino County services shared resources for residents with the Department of Child Support Services and Department of Public Health. Services to veterans continue to be provided through the Veterans Resource Center in the library through partnerships with Jobs Vision Success and active participation in the Inland Empire Veterans Employment Committee including two Veteran Job & Resource Fairs.
	SR-4.3	**Library Outreach**. We outreach to the community to increase the patronage of the library.	On-going. The Library Department hosts regular outreach to elementary, middle, and high schools in Ontario and outreach to college campuses, local organizations, non-profits, and businesses to promote library services. Through the KinderGo program, over 26 elementary schools in Ontario were visited, and 1,800 library cards were distributed to kindergarten students. Staff hosted regular early childhood education programs at community centers, parks, and organizations. The library launched a library card for educators and conducted outreach and programs focused on services to Ontario educators.
	SR-4.4	**Coordination with other Community Services.** We coordinate library programs with other recreational and community programs and facilities.	On-going. Participation in Citywide programming/events: Community Open House, Kids to Park Day, 4th of July parade, Ontario's Night Out, Ontario Arts Festival, and Día de los Muertos, the Holiday Light Parade. Invitation of City departments to participate in KinderGo, Big Trucks event, Lunch at the Library, and various library programs for adults to present and share information about City resources to community members. Library staff organized a walking field trip for teenagers to the Ontario Museum of History and Art for Go to an Art Museum Day and received a tour.
	SR-4.5	**Focal Points of the Community.** We design and program Ontario's libraries as focal points of community engagement, including public outreach and community engagement.	On-going. The Library Department coordinates regular ongoing programs and services that create positive engagement with our community. It also assists in addressing the community's informational needs, and provides access to technology, like Wi-Fi, and staff that can instruct in using that technology. Focused on literacy and learning: Little Learner Academy (story times), Raising Little Learners (parent/caregiver workshops), homework help for youth, adult literacy tutoring, KinderFair (learning resource fair and activities), Ontario Reads (adult reading program) and Ontario Learns (skill building

Goal	Policy	Action	Action Status/Comments
			workshops) and technology programming through the library's makerspace, Lightspeed. Focused on community and library services: National Library Week (celebration of libraries and learning), Summer at Ontario City Library (summer reading program), Lunch at the Library (free meals for youth).
	SR-4.6	**Robert E. Ellingwood Model Colony History Room**. We work with the Museum of History and Art, Ontario in order to collect, preserve and display artifacts and images from Ontario's heritage and connect the City's past to the present through the History Room.	On-going.
SR-5 – Entertainment & Culture			
SR-5	**Local heritage, entertainment and cultural experiences that enrich the lives of Ontario's residents, workers, and visitors and serve to attract residents and businesses to the City.**		
	SR-5.1	**Provisions of Entertainment and Culture**. We support a range of entertainment and cultural experiences, such as public art, exhibitions, and performances.	On-going. Community Life & Culture Agency supports a range of arts experiences from the Arts Festival, Summer Concert Series, and Museum Exhibits.
	SR-5.2	**Local Heritage Education**. We partner with educational providers to promote culture and heritage. (Link to Community Design Element, *Historic Preservation* Section).	On-going. Community Life & Culture Agency maintains collections related to local history and partners with Heritage organizations to promote Culture & Heritage.
	SR-5.3	**Public Art**. We encourage public art in buildings, parks, open spaces, and other public and private spaces.	On-going.
	SR-5.4	**Private-Public Sector Events.** We partner with private and non-profit sectors to provide and promote participation in cultural activities, including fairs, festivals, and other events geared to neighborhoods, the City as a whole, and the region.	On-going. Community Life & Culture Agency coordinates the Arts & Culture working group which consists of local nonprofits conducting arts programming and activities within the City.
	SR-5.5	**Promotion of Ontario Artists and Musicians**. We promote awareness of entertainment and culture produced in Ontario.	On-going. Community Life and Culture Agency hosts the annual Arts & Culture Festival highlighting work from local artists.



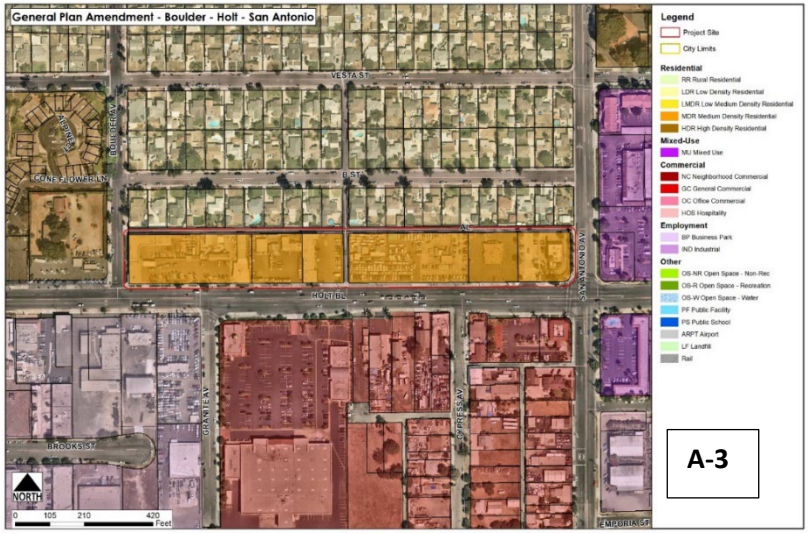
ATTACHMENT 1

AMENDMENTS TO THE GENERAL PLAN IN 2023

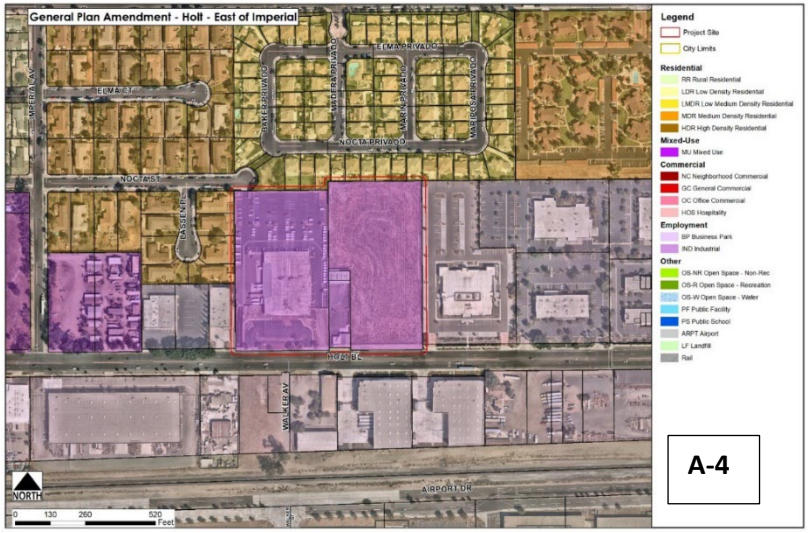


Amendments to the General Plan in 2023

File No. PGPA23-001



- Modify land use designations for 3.8 acres from High-Density Residential to Mixed Use - Downtown. Located on properties in the Downtown area to the north of D Street, south of E Street, and to the west of Laurel Street. (Exhibit A-1)
- Modify land use designations for 9.3 acres from Medium-Density Residential to Low-Density Residential. Located on properties south of 5th Street and west of Mountain Avenue. City Council directed. (Exhibit A-2)
- Modify land use designations for 4.7 acres from High-Density Residential to Medium-Density Residential. Located north of Holt Boulevard, west of San Antonio Avenue, and east of Boulder Avenue. City Council directed. (Exhibit A-3)
- Modify land use designations for 9.8 acres from Business Park to Mixed Use – East Holt. Located on the north side of Holt Boulevard 800 feet east of Imperial Street. (Exhibit A-4)
- Modify text in the Land Use Designation Summary Table (Exhibit LU-02) to allow Civic uses within the Mixed-Use Downtown land use designation.



Proposed Policy Plan Land Use Designation – Downtown Mixed Use

Proposed Policy Plan Land Use Designation – Low Density Residential

Proposed Policy Plan Land Use Designation – Medium Density Residential

Proposed Policy Plan Land Use Designation – East Holt Mixed Use

Progress toward extremely low-income housing need, as determined pursuant to Government Code 65583(a)(1).

	5		2021	2022	2023	2024	2025	2026	2027	2028	2029	6	7
	Extremely low-Income Need											**Total Units to Date**	**Total Units Remaining**
Extremely Low-Income Units*	2,820		-	-	5	-	-	-	-	-	-	**5**	**2,815**

*Extremely low-income houisng need determined pursuant to Government Code 65583(a)(1). Value in Section 5 is default value, assumed to be half of the very low-income RHNA. May be overwritten.
Note: units serving extremely low-income households are included in the very low-income RHNA progress and must be reported as very low-income units in section 7 of Table A2. They must also be reported in the extremely low-income category (section 13) in Table A2 to be counted as progress toward meeting the extremely low-income housing need determined pursuant to Government Code 65583(a)(1).
Please note: For the last year of the 5th cycle, Table B will only include units that were permitted during the portion of the year that was in the 5th cycle. For the first year of the 6th cycle, Table B will only include units that were permitted since the start of the planning period. Projection Period units are in a separate column.
Please note: The APR form can only display data for one planning period. To view progress for a different planning period, you may login to HCD's online APR system, or contact HCD staff at apr@hcd.ca.gov.

Program Implementation Status pursuant to GC Section 65583

Housing Programs Progress Report

1 Name of Program	2 Objective	3 Timeframe in H.E	4 Status of Program Implementation
1. Code Enforcement	Continue Code Enforcement using a progressive approach of voluntary compliance, citations, and court action, if needed. Continue to apply for funding.	Ongoing, inspect properties annually	Community Improvement opened 2,593 cases, conducted 4,664 inspections and closed 2,615 cases in 2023. Of the 2,593 cases opened in 2023, 1,261 were proactive in nature. The Rental Inspection Program conducted 5,347 inspections and abated violations in 255 housing units in 2023.
2. Historic Preservation	Continue to Implement Program	Ongoing	City staff continues to implement the Historic Preservation program, including: 9 properties on the Ontario Register were reviewed for historic significance, 4 were removed, and 5 were retained on the Ontario Register. One Mills Act Contract (preservation agreement) was approved, 12 Certificates of Appropriateness were approved, and staff continues to complete administrative design reviews for historic properties. Completion of community outreach activities including: Model Colony Awards program and the Historic Plaque program.
3. Housing Rehabilitation Loan and Grants	Continue to Implement Program, as funding is available.	Ongoing	The Community Improvement Code Abatement Loan Program has assisted one home-owner rehabilitate their property since its inception in 2020. The City's largest housing rehabilitation program, the CARES Program continues to remain on hold. Funding for this program had been provided through the Ontario Redevelopment Agency's Low and Moderate-Income Housing Fund (LMIHF). To date, no replacement funding has been identified and secured. Using Community Development Block Grant funds, the City designed the Conservation Home Improvement Loan Program in the beginning of 2020. During 2023, no clients were assisted through this program.
4. CARES	Continue program implementation, as funding is available.	Ongoing	As stated earlier, this program was funded with LMIHF. At this time, the program is on hold and no activity took place during 2023.
5. Neighborhood Plans	Designate focus neighborhoods, outreach plan and process, and initiate survey efforts. Evaluate the potential of creating neighborhood improvement plans.	Ongoing	The City continues to move forward with the Transformative Climate Communities (TCC). The TCC Community Engagement Outreach Plan provides project specific outreach and educational events. Residents in identified target areas continued to be invited to virtual engagements from topics including solar installation, bus pass distributions, and workforce development services throughout 2023. The City continues to move forward on the Multimodal Transportation Center Needs Assessment and Siting Criteria project that was finalized in 2021 that will centralize multimodal options for residents and employees of and visitors to Ontario. The City has also approved the Parks Master Plan and the Great Park Master Plan.
6. Neighborhood Stabilization	Designate focus neighborhoods, outreach plan and process, and initiate survey efforts. Evaluate the potential of creating neighborhood improvement plans.	Ongoing	In 2023, the Community Improvement Department, in partnership with several City Departments, completed the 2023 Neighborhood Preservation Strategy Update. The plan was expanded to include 5 additional focus neighborhoods (6th/Grove, 4th/Vineyard, De Anza Middle School Neighborhood, East Euclid / Sunkist, West Euclid/Sunkist.) The Neighborhood Action Team continued to meet regularly to address flashpoint issues in City neighborhoods and conducted Community Clean Up events in partnership with Integrated Waste.
7. Accessory Dwelling Units	The City shall promote accessory dwelling units (including junior accessory dwelling units) (ADUs/JADUs) as an affordable housing option in high-resource areas and an economic mobility opportunity in Ontario through the following actions. The cumulative impact of these strategies would exceed the conservative estimate of 120 units to achieve 360 ADUs in the planning period, with at least one third of the units (180) available as affordable housing to lower income households.	Ongoing	The City has finalized 17 accessory dwelling units (ADUs) and permitted 128, including junior accessory dwelling units (JADUs) in 2023. Our progress continues towards achieving a total of 360 units. At least one third (180) of these units are designated as affordable housing for lower-income households.
8. Downtown Plan	Downtown planning to facilitate new mixed-use and residential development; continue to acquire property and assemble sites to facilitate new housing.	Ongoing	The objective of the downtown planning effort is to facilitate new mixed-use and residential development and continue to acquire property and assemble sites to facilitate new housing. *To facilitate new development and establish new businesses within the downtown area the HEART (Historic Euclid Avenue Revitalization Team) Initiative was established in 2015. HEART leverages resources, services and activities to enhance the downtown experience. Through improved transit and placemaking efforts that integrate arts and culture, the HEART Initiative is creating an environment that attracts new housing, improves existing housing, and encourages a mix of uses and activities. *The 153-unit mixed-use development at the northeast corner of Euclid and C Street began construction in 2023. *The Downtown Parking Structure has been completed and include 411 parking spaces and 37 charging stations. *And finally, the Downtown Plan area is included in a $35 million Transformative Climate Communities Grant awarded to the City. The TCC program includes affordable housing project of 101 units completed, active transportation improvements - in design phase, mobility hub, urban greening - completed with 250 trees planted, carbon farm, solar photovoltaic both for Multi- and Single family -40 instalations completed, and transit improvements.

9. Mountain and Euclid Corridors	Re-designate corridors for medium- and high-density residential uses and develop a lot consolidation ordinance to facilitate the assemblage of lots into larger parcels.	Completed	All sites on the Housing Element Available Land Inventory along these corridors have been rezoned to medium density residential, high density residential, or mixed use designations consistent with The Ontario Plan (which includes the General Plan).
10. Holt Blvd.	Re-designate as High Density and Mixed Use and develop a lot consolidation ordinance to assemble parcels.	Completed	All sites on the Housing Element Available Land Inventory along the Holt Boulevard corridor have been rezoned to accommodate higher densities.
11. Ontario Ranch	Continue to review, approve, and implement plans to develop the New Model Colony.	Ongoing	City staff continues to review and process applications for development in the Ontario Ranch. Permits were issued for 1,318 units within Ontario Ranch in 2023.
12. Green Building	Promote green building practices in the private sector and explore point-of-sale energy retrofits for residences. Renewable energy incentive and energy efficiency programs. Develop a citywide 20-year energy plan. Support pilot development project as a net-zero-energy community and formulate solar site orientation guideline.	Ongoing	The City has update the Community Climate Action Plan to address 2030 and 2050 reduction Targets. As part of the inventory, the City did meet the intial target set of 30% below Year 2020. The City also implemented the SMART Ontario Plan/App identifying City projects implemented from solar instalations to streetlight LED repacements.
13. 2021–2029 Regional Housing Need	To comply with state law (California Government Code Sections 65583(c)(1)(A) and 65583(c)(1)(B)) regarding the 2021-2029 Regional Housing Needs Allocation (RHNA), the City will amend the Policy Plan and Development Code, ensuring sites for 11,068 total units, with a minimum density of 30 dwelling units per acre on 270-370 acres. Lower-income units must meet specific criteria, and an Affordable Housing Overlay zone will be established with minimum densities. The Overlay encourages two tiers of affordable housing in the Ontario Ranch, adjusting maximum densities based on affordability percentages. Projects without specific plans follow Policy Plan designations, and specific plans will be updated to mandate minimum densities.	Completed	The City updated its Development Code, Zoning, and Land Use map to allocate sites for 11,068 units with a minimum density of 30 units/acre on 270-370 acres. Lower-income units now meet specific criteria, and an Affordable Housing Overlay zone is established. The Affordable Housing Overlay encourages two tiers of affordable housing, adjusting max densities based on affordability percentages. Projects without specific plans follow Policy Plan designations; specific plans mandate minimum densities.
14. Land Monitoring Program to Meet the RHNA	Ensure there is sufficient supply of multi-family zoned land to meet the housing needs identified in the Regional Housing Needs Allocation.	Ongoing	City staff monitors entitlement applications to ensure that the Housing Element Sites Inventory is maintained and verifies that development of identified sites complies with the minimum density so that sufficient sites are available to meet the City's RHNA. Safeguards have been incorporated into the City's Discretionary Permit Application which includes an affidavit regarding compliance with the Housing Element Sites Inventory.
15. Residential By-Right for Developments with 20-Percent Affordable	In accordance with AB 1397, sites listed in Table 9-1 of the land inventory must permit residential development by-right under Government Code Section 65583.2(c), specifically for projects with at least 20 percent affordable units to lower-income households.	Ongoing	The City is currently seeking applications for projects supporting a minimum of 20% affordable housing units. Interested parties are encouraged to apply and contribute to the City's commitment to inclusive and accessible housing.
16. Incentives	Offer financial and regulatory incentives for residential projects that meet City housing and affordable housing goals.	Ongoing	The City continues to offer financial incentives for affordable housing projects where feasible and as funding is available. Housing incentives have also been included in the comprehensive Development Code update adopted in 2016, which continues to be implemented in 2023.
17. Land Acquisition	Continue to approve financial incentives for residential projects that meet City housing and affordable housing goals.	Ongoing	City staff will implement programs as funds become available.
18. Planned Unit Development (PUD)	Continue to utilize the PUD to create tailored development standards to facilitate new housing.	Ongoing	The PUD continues to be a viable tool to implement new multi-family housing.
19. Mixed-Use and High-Density Residential Zone and Standards	Develop new mixed-use and high-density residential development zone and standards to implement the General Plan. Allow residential uses by right in both zones.	Ongoing	The City is actively working on establishing Objective Design and Development Standards to facilitate standards for multiple-family and residential mixed-use projects by right.
20. Development Code Admendments	To comply with state law, address identified constraints to residential development and remove barriers to housing for special-needs groups, including, but not limited to, low-, very low-, and extremely low-income households	Ongoing	The Planning Department work program includes necessary Development Code Amendments to address identified constraints to residential development and remove barriers to housing for special-needs groups. These amendments are on track for adoption within two years of the Housing Elements adoption.
21. Senate Bill 2 Implementation	The City, under its SB 2 grant workplan, aims to create Objective Design and Development Standards (ODDS) for various residential projects, including mixed-use, multifamily, and single-family developments. This involves establishing comprehensive numerical standards, eliminating subjective policies, and providing applicants with a clear checklist and style sheet to ensure compliance with design requirements.	Ongoing	The City is on track to pass an urgency ordinance that aims to establish Objective Design and Development Standards for both multiple-family and mixed-use residential projects. The City anticipates completing this process in early 2024. The City has completed all SB2 funded activity and submitted Close Out reports for the SB2 Planning Grant.
22. Streamline Housing Development Process	Create a written policy outlining the streamlined approval process and standards for eligible projects under SB 35 (2017), as specified in Government Code Section 65913.4. Provide clear procedures and appropriate guidance to ensure compliance with the streamlined approval process for qualifying projects.	Ongoing	The task will be finished when the Objective Design and Development Standards receive approval.
23. Public Housing	Continue to assist up to 600 households under the public housing program and seek additional vouchers as available.	Ongoing	Public housing programs in Ontario are administered through the Housing Authority of the County of San Bernardino (HACSB). During 2023, the HACSB managed approximately 779 Housing Choice Vouchers within Ontario.

24. Homeownership	Implement down payment assistance programs Citywide and for the Town Square project.	Ongoing	The CalHome Mortgage Assistance program ended on April 5, 2017. City staff continue tracking the use of loan funds paid off in a reuse account for use on eligible projects.
25. Preservation of At-Risk Housing	Monitor the status of at-risk projects and, if they are at imminent risk of conversion, provide technical assistance and/or financial assistance to preserve the properties as deemed feasible.	Ongoing	There are a total of 1,916 assisted, multifamily rental units in the City. During calendar year 2023, 392 units were identified at-risk of conversion to market rate within the next five years. To address the preservation of public housing for very low- and low-income persons, the City of Ontario maintains contact with owners of at-risk units as the use restriction expiration date approaches to communicate with the owner the importance of the units to the supply of affordable housing in Ontario, as well as its desire to preserve the units as affordable. The City will make every effort in using local incentives that can be offered to property owners to preserve any at risk units.
26. Jack Galvin Accord	Continue to implement the Jack Galvin Accord and monitor the effectiveness of the accord.	Ongoing	City staff administered the Accord that covers 1,697 mobile home units located in 10 mobile home parks throughout Ontario. City staff distributed the annual rent adjustments allowed as part of the Accord and designed to limit rental increases within the participating mobile home parks. The Accord was approved for a 5-year extension on November 15, 2019 with an expiration date of January 5, 2025.
27. Fair Housing	Continue to contract with fair housing providers.	Ongoing	The City of Ontario has worked in conjunction with the Inland Fair Housing and Mediation Board to affirmatively further fair housing opportunities in this community. The Inland Fair Housing and Mediation Board "actively supports and promotes freedom of residence through education, advocacy and litigation to the end that all persons have the opportunity to secure the housing they desire and can afford, without regard to their race, color, religion, gender, sexual orientation, national origin, familial status, marital status, disability, ancestry, age, source of income or other characteristics protected by law."
28. Homeless Continuum of Care	Continue to fund Mercy House to implement the Continuum of Care program for homeless residents and other programs as funding is available.	Ongoing	During 2023, the following achievements were made under the City's Continuum of Care: *Operation of the Ontario Access, providing basic needs to 904 unduplicated individuals, as well as eligibility screening for City-managed HOME TBRA rental assistance *Street outreach 40 hours per week *Assisi House transitional housing served 22 households *Emergency motel voucher program and extreme weather motel voucher program using City general funds, CDBG, and ESG-CV funding *Expansion of the City's Continuum of Care. Under the direction of the Continuum of Care Manager position, which was created in 2020, the City hired a Continuum of Care Social Worker in 2022. Two additional social workers and a management analyst were hired in early 2023 to deepen the City's services to stabilize residents in permanent housing and prevent homelessness. *HOME TBRA – Provide tenant based rental assistance to 52 households; *Project Gateway – Assist 12 chronically homeless individuals with disabilities and their families secure permanent housing with wrap around services through HUD's Shelter Plus Care Program; *Permanent Housing Units – Operate 85 permanent housing units in cooperation with the Ontario Housing Authority. Units assist in providing priority occupancy to participants in the CoC Project Gateway; and *Partner with local school district to identify homeless families and assist them with rental subsidies through the HOME TBRA Program.
29. Senior Housing	Continue to provide a full range of housing support services.	Ongoing	During calendar year 2023, the City continued to monitor 782 units of affordable senior housing.
30. Housing for People with Disabilities	Continue to assist with the development of housing for persons with disabilities, including those with developmental disabilities and update the definition of family to comply with State law.	Ongoing	The City enforces state and federal accessibility laws to facilitate the improvement of housing for disabled people and encourages reasonable accessibility accommodations. In addition, the comprehensive Development Code update, which went into effect in 2016, incorporates reasonable accommodation provisions and redefined "family" to comply with State law.
31. Family Housing	Continue program implementation.	Ongoing	The City continued to monitor 932 units of affordable family housing during calendar year 2023. The City entered into a DDA for a new affordable housing development during 2022 that will construct 50 units as part Emporia Place Phase II and has entered into an Exclusive Negotiations Agreement for an additional 177 units of afforfdable housing.
32. Extremely Low-Income Households	Work with non-profits and/or for-profit developers to build housing for ELI households through supporting grants and funding applications. Offer fee reductions and land write downs for new affordable housing for low-income, very low-income, and ELI households.	Annually	During calendar year 2023, the following services were provided to Extremely Low-Income households: *Assisted housing units – 49 housing units restricted to extremely low-income occupancy; *Project Gateway – 12 units occupied by extremely low-income households; *HOME Tenant Based Rental Assistance (TBRA) – 52 households assisted; *CoC Permanent Housing (excluding Project Gateway and HOME TBRA) – 0 households assisted; *Assisi House and Aftercare Services program – 22 persons (unduplicated); *Mercy House Center Ontario – 904 persons (unduplicated); *Services for Battered Women and Children – 45 persons (unduplicated); *SOVA Food Security Center – 1,111 persons (unduplicated); *Fair Housing services – 115 households (unduplicated); *Landlord-Tenant Mediation services – 1,037 households (unduplicated); *Senior Services – 12 persons (unduplicated); and *Childcare Subsidies – 118 persons (unduplicated).
33. Special Needs Housing	Collaborate with affordable housing developers and secure funding, if feasible, to assist with the development of special needs housing projects.	Annually	In conjunction with the Ontario Housing Authority, the Housing Authority of the County of San Bernardino, County of San Bernardino Department of Behavioral Health, and Mercy House Living Centers, 13 Shelter Plus Care project based vouchers were available within Ontario for chronically homeless with disabilities and their families. During 2023, the City implemented the HOME Tenant Based Rental Assistance to provide rental assistance with security deposits and utility deposits to chronically homeless and homeless households. Additionally, 52 homeless households were assisted with permanent housing.

34. Infrastructure Provision and Financing	The City aims to minimize infrastructure costs for residential development through annual assessments, seeking funding sources, and applying for relevant programs, with a focus on areas of concentrated poverty. Ongoing monitoring will ensure any adverse impact on housing production is addressed, and a strategy to reduce costs for developers will be developed if necessary.	Annually	The City is diligently working to minimize infrastructure costs for residential development through ongoing assessments, diverse funding exploration, and strategic program engagement, particularly in areas with concentrated poverty. Continuous monitoring ensures prompt addressing of any adverse impacts on housing production, with a commitment to developing cost-reducing strategies for developers as needed.

CITY OF ONTARIO *Agenda Report* **March 19, 2024**	**SECTION:** **CONSENT CALENDAR**
Department: Police Department Prepared By: Lizceth Zazueta Department: Prepared By: Michael Gracia Staff Member Presenting: Mike Lorenz, Chief of Police Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 7

SUBJECT: AN AMENDMENT TO THE GENERAL SERVICES AGREEMENT WITH HUNTER CONSULTING INC. DBA HCI ENVIRONMENTAL AND ENGINEERING

RECOMMENDATION: That the City Council authorize the City Manager or his designee to execute Amendment No. 3 to the General Services Agreement with Hunter Consulting Inc. dba HCI Environmental and Engineering Inc. (HCI), of Corona, California, to extend the current funding threshold and terms of services for cleaning and maintenance of the Ontario Police Department Firearms Training Facility and biohazard clean-up services for a total not-to-exceed contract amount of $253,377.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Maintain the Current High Level of Public Safety
Operate in a Businesslike Manner

FISCAL IMPACT: The recommended Amendment No. 3 increases the authorized contract of $150,000 by $103,377 over the remaining term. This brings the total not-to-exceed contract amount to $253,377. Appropriations in the General Fund have been included in the Fiscal Year 2023-24 Adopted Budget.

BACKGROUND & ANALYSIS: On December 15, 2020, the City of Ontario and Hunter Consulting Inc. dba HCI Environmental and Engineering Inc. (HCI) entered into a General Services Agreement for firing range remediation services and emergency response to bio-hazardous clean-up services by soliciting proposals through the City's Request for Proposal (RFP) management system, RFP #1497. Amendment No. 3 allows the City of Ontario to exhaust the agreement to meet the full five (5) year threshold pursuant to Section 3.1.3.

HCI has provided the highest quality materials contributing to the longevity and effectiveness of the Ontario Police Department's firing range infrastructure. HCI also provides emergency response to biohazardous clean-up services after transportation of materials, substances, or individuals that have the potential to be harmful or deadly to one's health. With the specialized nature of services, the unique combination of qualifications offered, and the overall satisfactory performance in completion of services, City Staff recommends entering into Amendment No. 3 to continue these services provided by HCI.

AMENDMENT NO. 3 TO THE AGREEMENT FOR GENERAL SERVICES BETWEEN THE CITY OF ONTARIO AND HUNTER CONSULTING INC. (HCI) ENVIRONMENTAL AND ENGINEERING

1. Parties and Date.

This **Amendment No. 3** to the Agreement for General Services is made and entered into as of _____, by and between the City of Ontario, a California municipal corporation ("City") and **Hunter Consulting Inc. Environmental and Engineering** ("Contractor"), a Nevada corporation with its principal place of business at 1680 Commerce Street, Corona, CA 92880. City and Contractor are sometimes individually referred herein to as "Party" and collectively as "Parties."

2. Recitals.

2.1 Agreement. City and Contractor entered into an agreement titled "Agreement for General Services", dated December 15, 2020, for the Cleaning and Maintenance of the Ontario Police Department Firearms Training Facility ("Agreement").

2.2 First Amendment. City and Consultant entered into Amendment No. 1 to the Agreement, dated July 19, 2021, for the purposes of expanding the scope of services and compensation amount to include Crime Scene/Biohazard Clean-Up Services.

2.3 Second Amendment. City and Contractor entered into Amendment No. 2 to the Agreement, dated August 4, 2023, for the purposes of extending the Agreement term and increasing the not to exceed amount.

2.4 Amendment Purpose. City and Contractor now desire to once again amend the Agreement for the purposes of extending the Agreement term and increasing the not-to-exceed compensation amount.

2.5 Amendment Authority. This Amendment No. 2 is authorized pursuant to Sections 3.1.3 and 3.7.13 of the Agreement.

3. Terms.

3.1 Amendment. Section 3.1.3 of the Agreement is hereby amended in its entirety to read as follows:

"Term. The term of this Agreement shall be from **December 15th 2020, to December 14th 2025**, unless terminated as provided herein. Consultant shall complete the Services within the term of this Agreement and shall meet any other established schedules and deadlines. The Parties may, by mutual, written consent, extend the term of this Agreement if necessary to complete the Services."

3.2 Amendment. Section 3.2.1 of the Agreement is hereby amended in its entirety to read as follows:

"Compensation. Contractor shall receive compensation including authorized reimbursements, for all services rendered under this Agreement at the rates set forth in Exhibit "C" attached hereto and incorporated herein by reference. The total compensation shall not exceed **Two Hundred Fifty-Three Thousand Three Hundred Seventy-Seven Dollars and Zero Cents ($253,377.00)**, without written approval of the City Manager. Extra Work may be authorized, as described below, and if authorized, will be compensated at the rates and manner set forth in this Agreement."

3.3 Continuing Effect of Agreement. Except as amended by this Amendment No. 3, all other provisions of the Agreement remain in full force and effect and shall govern the actions of the parties under this Amendment No. 3. From and after the date of this Amendment No. 3, whenever the term "Agreement" appears in the Agreement, it shall mean the Agreement as amended by this Amendment No. 3.

3.4 Adequate Consideration. The Parties hereto irrevocably stipulate and agree that they have each received adequate and independent consideration for the performance of the obligations they have undertaken pursuant to this Amendment No. 3.

3.5 Severability. If any portion of this Amendment No. 3 is declared invalid, illegal, or otherwise unenforceable by a court of competent jurisdiction, the remaining provisions shall continue in full force and effect.

3.6 Integration. This Amendment represents the entirety of the Parties' understanding relating to the subject of this Amendment, including written or verbal communications between the Parties, which shall have no relevance unless expressly incorporated herein. This is an integrated amendment.

Department: Economic Development Prepared By: Karla Tavera Staff Member Presenting: Jennifer McLain Hiramoto, Economic Development Director Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 8

SUBJECT: THE DOWNTOWN ONTARIO IMPROVEMENT ASSOCIATION ANNUAL REPORT FOR FISCAL YEAR 2023-24

RECOMMENDATION: That the City Council adopt a Resolution approving the Downtown Ontario Improvement Association (DOIA) Annual Report for Fiscal Year 2023-24.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Operate in a Businesslike Manner
Focus Resources in Ontario's Commercial and Residential Neighborhoods

FISCAL IMPACT: The Fiscal Year 2023-24 Adopted Budget allocates $145,000 for property tax assessments of City-owned properties and $27,300 for assessments of Ontario Housing Authority properties.

BACKGROUND & ANALYSIS: On August 20, 2019, the City Council approved the establishment of the Downtown Ontario Community Benefit District (CBD) for an initial five-year term. The aim is to enhance services and improvements for Downtown property owners, boosting economic activity and property value. As part of the Downtown revitalization strategy, the CBD has stimulated commerce, attracting new businesses, and is supporting the transformation of the Downtown into an 18-hour vibrant hub of retail and residential activity.

California Streets and Highway Code, Section 36650, mandates the Downtown Ontario Improvement Association (DOIA) to produce an Annual Report each fiscal year for which assessments are levied. This report must align with the components outlined in District Management Plan, focusing on Civil Sidewalk Improvements, Marketing/District Identity/Placemaking, and Administration.

The Annual Report highlights the assessment methodology based on parcel size, street frontage, and building size. Annual assessments vary depending on these factors and are applied exclusively within the district boundaries. The report also outlines the budget breakdown for Fiscal Year 2023-24, approved by the DOIA Board of Directors. Staff recommends approval of the DOIA Annual Report for Fiscal Year 2023-24 in compliance with California law.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING THE ANNUAL REPORT SUBMITTED BY THE DOWNTOWN ONTARIO IMPROVEMENT ASSOCIATION FOR THE DOWNTOWN ONTARIO COMMUNITY BENEFIT DISTRICT FOR FY 2023-24.

WHEREAS, on August 20, 2019, the City Council approved a Management District Plan entitled the "Downtown Ontario CBD Management District Plan" (the "Management District Plan").

WHEREAS, the City Council conducted the public hearing on August 20, 2019, at which ballots cast in favor of and in opposition to proposed assessment and formation of the Downtown Ontario Community Benefit District ("CBD") for a five-year term were tabulated; and

WHEREAS, of the ballots cast, property owners representing a majority of the total assessments voted in favor of the proposed assessment and formation of the CBD; and

WHEREAS, Streets and Highways Code Section 36650 requires the improvement association of a property-based community benefit district submit an Annual Report to the legislative body for approval beginning its second year of operation and each year thereafter; and

WHEREAS, the Downtown Ontario Improvement Association ("DOIA") has submitted its Annual Report for FY 2023-2024 for approval by the City Council.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Ontario, California, as follows:

SECTION 1. The City Council has reviewed the Annual Report for FY 2023-2024 submitted by the Downtown Ontario Improvement Association and determined that the Annual Report presented is consistent with the services and improvement components outlined in the approved Management District Plan.

SECTION 2. That the Annual Report for FY 2023-2024 is hereby approved in substantially the form submitted and attached hereto as Exhibit A.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 19th day of March, 2024.

DOWNTOWN ONTARIO
IMPROVEMENT ASSOCIATION

Downtown Ontario Community Benefit District

ANNUAL REPORT

December 1, 2023
to
November 30, 2024

January 16, 2024

Prepared By: Downtown Ontario Improvement Association
Ismael Arias
Executive Director
425 N. Euclid Ave.
Ontario, CA 91762
(909) 706-7877

ANNUAL REPORT

December 1, 2023 to November 30, 2024

This Annual Report is being submitted to the City Council of the City of Ontario to outline current and past improvements, activities, expenses, budgets and assessments for the Downtown Ontario Community Benefit District ("CBD") for the fiscal year 2023 - 2024. This annual report presents the budget and assessments approved by the DOIA Board of Directors on November 16, 2023.

EXECUTIVE SUMMARY

The fifth year of the Downtown Ontario CBD continues with the full implementation of services that have proved to be effective for the properties located within the district boundaries. Also, the DOIA Executive Director manages and oversees the day-to-day operations to benefit downtown property owners and merchants. The Downtown Ontario CBD has been receiving the benefit of a 7-day maintenance ambassador program as well as marketing and advocacy initiatives. All environmental and economic enhancements within the CBD augment, rather than replace services provided by the City of Ontario.

The Downtown Ontario Improvement Association (“DOIA”), the CBD’s governing body, continues to contract maintenance services from District Maintenance Services, Inc. a professional service provider. A truck and pressure washing machine continue to be in service provided by District Maintenance Services, Inc. to enhance the cleaning of sidewalks and gutters throughout downtown. DOIA is maintaining several pet clean-up stations, as a pilot program on the Euclid median. DOIA also installed seasonal Autumn décor and worked with city staff to continuously activate an open spaces to attract visitors to the Downtown Ontario. This year DOIA began the process and is currently in the final phases of the process of renewing the Downtown Ontario Community Benefit District.

To further enhance the positive image of Downtown Ontario the DOIA is continuously updating its website www.DowntownOntario.org and uses various social media accounts such as, Facebook, TikTok, Twitter(now know as”X”), Instagram. and Threads in order to promote the downtown as a whole, its businesses and its many community events.

KEY PERSONNEL:

Executive Director: Ismael Arias

Contracted Service Providers:

Maintenance Contractor: District Maintenance Services, Inc.
Auditor: Smith Marion & Co.
Social Media: TumbleWeed Social

DOIA Meetings:

Board of Directors:

4th Thursday of the month at 9:00am at 425 N. Euclid Ave.

District Identity & Placemaking Committee:

2nd Thursday of the month at 10:00am at 425 N. Euclid Ave.

Civil Sidewalks Committee: 2nd Thursday of January, March, May, July and October at 9:00am at 425 N. Euclid Ave.

In addition, every year the DOIA holds an **Annual Meeting** where all property owners are invited for a special report, board elections and discussion on DOIA's programs and services. The Annual Meeting is held on a date determined by the DOIA Board of Directors. The Annual Meeting for Fiscal 2022-2023 was held on September 28, 2023, a video summary was presented and is available for viewing on our website at downtownontario.org.

Civil Sidewalks: The 2023-2024 budget is $262,500. The civil sidewalks committee oversees the civil sidewalk operations. The DOIA contracts with a maintenance service provider for two full time maintenance ambassadors to perform power washing, trash clean up, sidewalk and gutter sweeping along with other maintenance duties. One pickup truck equipped with a power washer provided by the maintenance provider along with two trash carts have been placed into service to facilitate operations. Since its creation, DOIA has funded over 23,000-man hours dedicated to cleaning and maintenance services within the downtown.

On-going and future projects:

▪ **Seven days a week maintenance ambassador service:**

▪ Regular sidewalk and gutter sweeping. (in 2023, A total of 2,696, 45-gallon bags; approximately 50,550 pounds of litter picked up, and 159 clean ups of bio waste)
▪ Regular sidewalk power washing (in 2023, 202 full city blocks pressure washed)
▪ Trash can emptying.
▪ Timely graffiti, stickers and poster removal, within 24 hours as necessary.
(In, 2023 a total of 1,776 pieces of graffiti, stickers, and posters removed.)
▪ Shopping cart removal, (In 2023, 101 shopping cars returned to business or removed from the district.)
▪ Maintenance of existing and new public spaces.
▪ Beautification of the district.
▪ DOIA continues to work with the City of Ontario Utilities Dept. to address overflowing, illegal dumping and cleanliness of dumpsters and alleys in the Downtown.
(In 2023, 378 reports filled: including broken city property, extensive graffiti, and illegal dumping.)
▪ DOIA uses environmentally friendly quiet leaf blowers and push trash carts have to facilitate sidewalk clean up.
▪ DOIA continuously maintains two Pet cleanup stations on the Euclid median between "D" Street and "E" Street.
▪ DOIA has assisted various community nonprofit organizations as well as the city of Ontario with community event clean up assistance i.e., Ontario Art Walk, Ontario Arts Festival, Holiday of Lights parade, Cruisin Reunion Car Show.
▪ DOIA has also served as an advocate for Downtown property owners and businesses with Caltrans on issues pertaining to streetlight synchronization and vegetation maintenance along the Euclid median.
▪ DOIA continuously assists downtown property owners with filling "No Trespassing" forms with Ontario Police Department in an effort to prevent damage to their properties and to help address quality of life issues.
▪ DOIA is also continuously working with downtown property owners to remove acid etching damage from their store front windows as well as pre-screening Façade Improvement Applications.
▪ DOIA Ambassadors have performed 121 homeless outreaches relating to business calls and disturbances.
▪ DOIA is continuously working closely with Ontario Police Department to address manners affecting the downtown.

District Identity/Placemaking: The 2023-2024 District Identity/Placemaking budget is $68,379. The District Identity committee oversees and implements placemaking programs. In addition to ongoing advertising, the District Identity committee authorized the manufacturing of the "DTO" Letters activate public spaces and promote the downtown. The printing and deployment lawn signs which lead visitors to the Downtown Ontario website and social media platforms. The district identity committee has also authorized the creation of a Downtown Ontario banner program. in partnership with City of Ontario also activated the Downtown by installing Autumn décor throughout the Downtown.

On-going and future projects:

- The consistent and continuous updates to the DOIA website www.downtownontario.org resulted in 36,000 visitors in the last year.
- The DOIA consistently promotes the downtown via various social media platforms, including Facebook, Instagram, TikTok, Threads, and X(Twitter) have a post reach of 1.3 million users all within the last year. Including a followship of 7.6k followers across social networks, which is continuously growing.
- DOIA continues to utilize its logo as its branding tool.
- DOIA is and will continue to sponsor events such as The Downtown Ontario Arts District Art Walk, Ontario 5K Reindeer Run., Friends of the Library, OPOA Widows & Orphans Charity Golf Tournament, The Ontario Hispanic Chamber of Commerce and others.
- DOIA and the City of Ontario are continuing the downtown banner program which is funded by DOIA. The installation of new designs will be occurring in early 2024.
- DOIA's office serves as an information center for all downtown visitors and businesses.
- DOIA continues to produce, print, and distributes QR coded postcards, posters, and lawn signs leading visitors to DOIA (link tree) which hosts the DOIA website; Facebook, Instagram, Twitter (X), TikTok, and Threads.
- DOIA is promoting the district as a pedestrian friendly community.
- DOIA promotes the downtown locally and regionally.
- DOIA continues to procure the services of a social media consultant to manage all social media platforms.
- DOIA procures permits, purchases, installs and maintains Autumn Décor through the downtown and will provide other seasonal décor as well.
- DOIA Ambassadors provide directions or recommendations to visitors of the downtown, in the last year they have given directions and/or recommendations to 194 visitors.
- DOIA works with City staff to promote the downtown in a cohesive manner.
- DOIA intends to coordinate Community Sing-A-Long on conjunction with GOCAL as part of the Christmas on Euclid Experience.
- DOIA also has worked and will continue to work with a local artist. The local artist commissioned by DOIA manufactured the Butterfly Wings and DTO Letters. These placemaking tools will continue to be deployed within the downtown as promotional tools for the downtown and a mechanism to engage the community.

Administration: The 2023-2024 administrative budget is $173,320.62. The Executive Committee and the Executive Director oversee administrative operations. The DOIA Executive Director manages and oversees the day-to-day operations to ensure effective delivery of services. The DOIA office also serves as a visitor center located at 425 North Euclid Ave., Ontario, CA 91762. The DOIA Executive Director is in close contact with city of Ontario staff which help to provide insight into the needs of the downtown. This year DOIA has begun and is in the final phases of renewing the Downtown Ontario Community Benefit District, a portion of the one-time expenditure is reflected in the administrative budget.

On-going expenses:

- Staff and administrative costs
- Directors and Officers Insurance, General Liability and other insurance coverages.
- Office related expenses
- Financial reporting, accounting, and legal services.

BUDGET

The CBD (DOIA) is funded through downtown property tax assessments. Maintaining financial balance is a key objective in any organization; the budget is managed through monitoring expenditures and analyzing variances. Marketing, maintenance, and administration, which include costs for building, equipment, supplies, services and staff, are all managed via the budget.

The board approved budget for Fiscal Year 2023-2024 is $504,200.14,additionally $190,114 in operating reserves and $155,000.00 to be allocated to one time expenditures thru a Board of directors strategic planning study session process. The FY 2023-2024 budget is shown in Exhibit A.

ASSESSMENTS

The CBD (DOIA) uses common parcel-based factors to assess special benefit in a commercial/retail/residential business district, which are parcel size, street frontage, and building size. Street frontage has been determined to provide approximately 36% of the total assessment, land area approximately 26% of the total assessment, and building area approximately 38% of the total assessment. Annual assessments on property will be $0.06 (6 cents) per parcel square foot, $0.17 (17 cents) per building square foot, plus $6.42 per frontage foot. Residential condominiums are assessed $0.25 (25 cents) per square foot for residential condominiums.

The benefits provided to properties within the district are listed in the diagram below. These services are only applied to properties within the boundaries of the district.

Category of Special Benefit Services	Annual Amount 2023-2024	Percentage of total budget
Civil Sidewalks	$ 262,500	52%
District Identity/Placemaking	$ 68,379	14%
Administration/Contingency	$ 173,320	34%
Total	***$ 504,200***	***100%***

Properties that are owned and operated as a non-profit, and are property tax exempt, are not assessed the full assessment because these parcels are deemed to benefit from most, but not all, of the proposed District improvements and services. As stated above, these properties receive benefits from, maintenance and streetscape, and administration, but do not receive any marketing. Therefore, properties that are owned and operated as a non-profit, and are property tax exempt, and exclude the per building square foot assessment.

Based on the above factors, the resulting assessments are shown in the chart attached hereto as Appendix 1. The CBD assessment is collected with regular property taxes. The assessment appeared as a separate line item on annual Property Tax bills prepared by the County of San Bernardino.

CITY OF ONTARIO *Agenda Report* **March 19, 2024**	**SECTION:** **CONSENT CALENDAR**
Department: Public Works Prepared By: Adrian Escamilla Staff Member Presenting: Tito Haes, Executive Director Public Works Reviewed By: Bonnie Tam, Andrea Ampig Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 9

SUBJECT: AN AMENDMENT TO THE DESIGN SERVICES AGREEMENT WITH THIRTIETH STREET ARCHITECTS, INC. FOR THE DOWNTOWN MOBILITY HUB PROJECT DESIGN

RECOMMENDATION: That the City Council take the following actions:

A. Authorize the City Manager or his designee to execute Amendment No. 4 to the Design Services Agreement with Thirtieth Streets Architects, Inc., of Costa Mesa, California, for the Downtown Mobility Hub Project design, formerly the Fallis House, in the amount of $109,300 for a total not-to-exceed contract amount of $559,300; and
B. Authorize the City Manager or his designee to execute all documents required for the completion of the project including, but not limited to, contracts, agreements, assessments, easements, reduction of retention accounts, and filing a notice of completion at the conclusion of all construction related activities.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Focus Resources in Ontario's Commercial and Residential Neighborhoods
Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)

FISCAL IMPACT: The Fiscal Year 2023-24 Adopted Budget includes appropriations in the Grants Fund for the Downtown Mobility Hub Project Design. The proposed Amendment would increase the contract amount by $109,300 for a total not-to-exceed contract amount of $559,300.

BACKGROUND & ANALYSIS: In November of 2021, the building located at 122 South Vine Avenue suffered fire damage due to an undetermined source. Prior to the fire, City Staff had undertaken a work program that included the adaptive reuse of the property as part of the Transformative Climate Community Grant. The proposed project was called the Downtown Ontario Mobility Hub, which was slated to convert the property into a Transit Hub serving Emporia Place and adding connectivity to the existing Omni Trans fixed route service, as well as West Valley Connector. Proposed amenities included bike lockers, a bike repair station, a shared education center, and a training and class area with landscaping comprising of California friendly, drought-tolerant plant

material.

Given the fire damage, the proposed project needs to be reviewed. Previous amendments to the Professional Services Agreement with Thirtieth Street Architects, Inc. included architectural, engineering, and landscape design services for the future construction of a new Downtown Ontario Mobility Hub. The proposed Amendment No. 4 will allow additional interior designs requested by the Housing Department to facilitate their programming needs. The interior design changes will include a designated space for staffing, storage space for programming supplies, and a large space to hold community meetings and educational workshops for the Ontario Promise Corps programs, specifically the Early Family Literacy and Promise Scholars programs. Staff recommends authorizing Amendment No. 4 to the Design Services Agreement with Thirtieth Streets Architects, Inc. in the amount of $109,300 for a new total not-to-exceed contract amount of $559,300.

AMENDMENT NO. 4 TO THE DESIGN SERVICES AGREEMENT BETWEEN THE CITY OF ONTARIO AND THIRTIETH STREET ARCHITECTS, INC.

1. Parties and Date.

This Amendment No. 4 to the Agreement (as defined herein) is made and entered as of _____, by and between the City of Ontario ("City") and Thirtieth Street Architects, Inc. a Corporation ("Consultant"). City and Consultant are sometimes individually referred to as "Party" and collectively as "Parties."

2. Recitals.

2.1 Agreement. The City and Consultant have entered into an agreement entitled "Design Services Agreement" dated February 15, 2021 ("Agreement").

2.2 Amendment Purpose. The City and Consultant desire to amend the Agreement to revise the scope of services for the D&C23-026 Downtown Mobility Hub set forth in Amendment No. 4 – Attachment "A" and increase the not-to-exceed compensation amount by **One Hundred Nine Thousand Three Hundred Dollars ($109,300)**. The Parties have heretofore entered into Amendment No. 1 dated April 19, 2022, Amendment No. 2 dated March 21, 2023, and Amendment No. 3 dated November 1, 2023.

2.3 Amendment Authority. This Amendment No. 4 is authorized pursuant to Section 3.8.1 of the Agreement.

3. Terms.

3.1 Amendment. Section 3.10.1 of the Agreement is hereby amended in its entirety to read as follows:

> "3.10.1 Consultant's Compensation for Basic Services. City shall pay to consultant, for the performance of all Services rendered under this Agreement, with the total not to exceed amount of **Five Hundred Fifty-Nine Thousand Three Hundred Dollars ($559,300)** ("Total Compensation"). This Total Compensation amount shall be based upon,

and may be adjusted according to, the fee schedule and related terms and conditions attached hereto as Exhibit "B" and incorporated herein by reference. The Total Compensation, as may be adjusted upon mutual agreement, shall constitute complete and adequate payment for Services under this Agreement."

Exhibit A is hereby deleted in its entirety and replaced with Attachment A attached hereto and incorporated herein by reference.

3.2 Continuing Effect of Agreement. Except as amended by this Amendment No. 4, all other provisions of the Agreement remain in full force and effect and shall govern the actions of the parties under this Amendment No. 4. From and after the date of this Amendment No. 4, whenever the term "Agreement" appears in the Agreement, it shall mean the Agreement as amended by this Amendment No. 4.

3.3 Adequate Consideration. The Parties hereto irrevocably stipulate and agree that they have each received adequate and independent consideration for the performance of the obligations they have undertaken pursuant to this Amendment No. 4.

3.4 Severability. If any portion of this Amendment No. 4 is declared invalid, illegal, or otherwise unenforceable by a court of competent jurisdiction, the remaining provisions shall continue in full force and effect.

3.5 Integration. This Amendment represents the entirety of the Parties' understanding relating to the subject of this Amendment, including written or verbal communications between the Parties, which shall have no relevance unless expressly incorporated herein. This is an integrated amendment.

AGREEMENT

Agreement made January 15, 2024, between the City of Ontario, 303 East B Street, Ontario, CA 91764, referred to as the Owner and Thirtieth Street Architects, Inc., 2821 Newport Boulevard, Newport Beach, CA 92663, John C. Loomis and James C. Wilson, the Architects.

It is the intention of the Owner to modify the design of the new Ontario Downtown Mobility Hub building located at 122 S. Vine St., Ontario, CA, 91764 to accommodate offices and classrooms for the Ontario Promise Corps while maintaining the Mobility Hub functions on site.

The Owner and the Architect agree as set forth below.

BASIC SERVICES

The Architect's Basic Services consist of the three phases described below, including Architectural and Landscape Design, Civil, Structural, Mechanical, Electrical, and Plumbing Engineering Services. Coordination with other consultants retained directly by the Client is also included. Regarding site work, we will try to reuse as many of the drawings completed last year as possible.

Project Team

Architect	Thirtieth Street Architects, Inc. John C. Loomis, Principal in Charge 2821 Newport Blvd. Newport Beach, CA 92663 Office (949) 673-2643, Ext. 29 Cellphone (949) 274-1092 tsainc@aol.com
Civil Engineering	CVC Consulting, Inc. Dane McDougall, P.E., P.L.S. 9830 Irvine Center Drive Irvine, CA 92618 Office (949) 916-3800 DMcDougall@cvc-inc.net
Structural Engineering	Shucri (Chuck) Yaghi Structural Engineering Shucri Yaghi, P.E. 112 E. Chapman Ave., Suite D Orange, CA 92866 Office (714) 997-9120 yaghi.engineers@live.com

MEP Engineer	Winston Engineering Inc. Anthony Winston III, P.E. 8605 Santa Monica Blvd., Suite 63454 West Hollywood, CA 90069 Office (951) 902-6600 anthony@windstoneng.com
Landscape	RMA International, Inc. Bob McMahon 315 3rd St., Suite N Huntington Beach, CA 92648 Office (562) 618-9119 rmalandscape@gmail.com

The following services/consultants are not included in this Agreement:

- Interior Design
- Geotechnical Engineering

SCOPE OF WORK

Modify the current design of the building's interiors to accommodate the Ontario Promise Corps (OPC) services, including a classroom, conference room, office cubicles, hoteling stations, storage, and restrooms.

Modify Construction Documents as required and re-submit for Plan Check and Development Plan approvals.

Phase Ia, Design Development Revisions:

Based on the Program for OPC, the Team shall conduct a brief Design Development Phase to make recommendations and prepare exhibits depicting the revised Building Floor Plan and all building systems, lighting fixtures, finish materials, colors, and built-ins for review and approval by the city.

The Architect shall prepare an updated Design Development Statement of Probable Cost for the Project.

Phase Ia Products:

- Revised Floor Plan, Site Plan, and miscellaneous drawings
- Materials and colors and lighting
- Design Development Statement of Probable Cost.

Phase Ib, Preliminary Governmental Processing:

If required, the Architect shall assist the Owner in obtaining preliminary Governmental approvals, including Development Review for the design modifications, if required.

The Architect shall attend any meetings with the City of Public Hearings, if required.

Phase Ib, Products:

- Miscellaneous documents.

Phase IIa, Modify Construction Documents:

The Team shall modify existing Construction Documents including Working Drawings and Specifications depicting in detail, all aspects of the Scope of Work described above for review and approval by the Owner.

The Team shall prepare a Construction Document Statement of Probable Cost.

The Architect shall coordinate with the Client and the consultants as required.

Phase IIa, Products:

- Revised Construction Documents, including Working Drawings and Specifications.
- Construction Document Statement of Probable Cost.

Phase IIb, Plan Check:

The Architect shall assist the Client in submitting for Plan Check and shall make all necessary Plan Check Corrections.

Phase IIb Products:

- Plan Check Corrections.

Phase III, Construction Observation:

The Architect shall periodically visit the site at intervals appropriate to the stage of construction or as otherwise agreed by the Architect in writing to become generally familiar with the progress and quality of the Work and to determine in general if the Work is proceeding in accordance with the Contract Documents. However, the Architect shall not be required to make exhaustive or continuous on-site inspections to check the quality or quantity of the Work. On the basis of such on-site observations as an Architect, the Architect shall keep the Owner informed of the progress and quality of the Work and shall endeavor to guard the Owner against defects and deficiencies in the Work of the Contractor.

The Architect shall be the interpreter of the requirements of the Contract Documents and the judge of the performance thereunder by both the Owner and Contractor. The Architect shall render interpretations necessary for the proper execution or progress of the Work with reasonable promptness on written decisions, within a reasonable time, on all claims, disputes, and other matters in question between the Owner and the Contractor relating to the execution or progress of the Work or the interpretation of the Contract Documents.

The Architect shall review and approve or take other appropriate action upon the Contractor's submittals such as shop drawings, product data, and samples, but only for conformance with the design concept of the Work and with the information given in the Contract Documents. Such action shall be taken with

reasonable promptness so as to cause no delay. The Architect's approval of a specific item shall not indicate approval of an assembly of which the item is a component.

It is agreed that the Owner shall hire all Contractors/Subcontractors and handle all certificates for payments. The Owner shall file Notice of Completion and shall be responsible for all matters regarding liens.

The Architect shall meet and coordinate with the Client periodically.

The Architect shall coordinate and collaborate with the other consultants as needed.

The Architect shall prepare a Punch list at the conclusion of the job and shall assist the Owner in the close-out of the project.

The Architect shall prepare a record set of "as builts" depicting field changes at the end of the project.

Phase III, Products:

- Miscellaneous documents.

ADDITIONAL SERVICES

Additional Architectural and Engineering Services for Owner selected improvements to the building shell are available via amendment to this agreement.

The following services are not included in Basic Services:

Providing services and consultants for other than normal Architectural, and Landscape Design, Structural, MEP, and Civil Engineering. Interior Design and Geotechnical Engineering are not a part of this Agreement.

Providing coordination of Work performed by separate Contractors or by the Owner's own forces.

Providing services in connection with the Work of a construction manager or separate consultants retained by the Owner.

Providing detailed estimates of construction cost, analyses of owning and operating costs, or detailed quantity surveys or inventories of material, equipment, and labor.

Providing legal services for the preparation of partywall agreements, easements or right of ways.

Making revisions in Drawings, Specifications, or other documents when such revisions are inconsistent with written approval or instructions previously given, or required by the enactment or revision of codes, laws or regulations subsequent to the preparation of such documents or are due to other causes not solely within the control of the Architect.

Preparing Drawings, Specifications and supporting data and providing other services in connection with Change Orders to the extent that the adjustment in the Basic Compensation resulting from the adjusted Construction Cost is not commensurate with the services required of the Architect, provided such Change Orders are required by causes not solely within the control of the Architect.

Providing services made necessary by the default of the Contractor, or by major defects or deficiencies in the Work of the Contractor, or by failure of performance of either the Owner or Contractor under the Contract for Construction.

Preparing to serve or serving as an expert witness in connection with any public hearing, arbitration proceeding or legal proceeding.

Providing any other services not otherwise included in this Agreement or not customarily furnished in accordance with generally accepted Architectural practice.

OWNER'S RESPONSIBILITIES

The Owner shall provide full information regarding his requirements for the Project. The Owner shall designate, when necessary, a representative authorized to act in his behalf with respect to the Project. The Owner or his representative shall examine documents submitted by the Architect and shall render decisions pertaining thereto promptly, to avoid unreasonable delay in the progress of the Architect.

The Owner shall furnish a Geotechnical Report prepared by a Soil Engineers and/or other consultant's services when such services are deemed necessary by the Architect. Such services shall include test borings, test pits, soilbearing values, percolation tests, air and water conditions, with reports and appropriate professional recommendations.

The Owner shall furnish structural, mechanical, chemical, and other laboratory tests, inspections and reports as required by law or the Contract Documents.

The Owner shall furnish all legal, accounting and insurance counseling services as may be necessary at any time for the Project, including such auditing services as the Owner may require to verify the Contractor's Applications for Payment or to ascertain how or for what purposes the Contractor uses the monies paid by or on behalf of the Owner.

The services, information, surveys, and reports required above shall be furnished at the Owner's expense, and the Architect shall be entitled to rely upon the accuracy thereof.

If the Owner observes or otherwise becomes aware of any fault or defect in the Project of non-conformance with the Contract Documents, he shall give prompt written notice thereof to the Architect.

The Owner shall furnish information required of him expeditiously as necessary for the orderly progress of the Work.

CONSTRUCTION COST ESTIMATE

Construction Cost does not include the fees of the Architect and consultants, the cost of land, rights of way, or other costs, which are the responsibility of the Owner as previously mentioned.

Cost Estimates prepared by the Architect represent his best judgment as a design professional familiar with the construction industry. It is recognized, however, that neither the Architect nor the Owner has any control over the cost of labor, materials, or equipment, over the Contractor's methods of determining

bid prices, or over competitive bidding or market conditions. Accordingly, the Architect cannot and does not guarantee that bids will not vary from any cost estimate prepared by him.

PROFESSIONAL FEES

The Professional Fees for Phase Ia through III shall be as listed below, plus reimbursable expenses.

Phase	Fee
Phase Ia, Design Development Revisions	A lump sum of $21,800.00
Phase Ib, Preliminary Governmental Processing,	Hourly
Phase IIa, Modify Construction Documents	A lump sum of $52,500.00
Phase IIb, Plan Check Corrections	Hourly
Phase III, Construction Observation	A lump sum of $35,000.00

Hourly Services and Additional Services, if requested by the Owner in writing, shall be billed at the following hourly rates:

HOURLY FEE SCHEDULE:

ARCHITECT	
Principal	$205/hr.
Licensed Architect	$180/hr.
Draftsperson	$150/hr.
ENGINEERS	
Civil Engineer	$200/hr.
Structural Engineer	$220/hr.
MEP Engineer	$175/hr.
OTHERS	
Landscape Architect	$150/hr.

Once the signed contract is received, we will begin work immediately. Billings shall be made to the Owner monthly in proportion to the Work completed plus reimbursable expenses, and are to be paid within fifteen (15) days of receipt. Invoices outstanding over thirty (30) days shall be subject to 1-1% per month interest charge.

Reimbursable expenses include blueprinting and any unusual expenses incurred and shall be in addition to any fees above. Blueprinting shall be billed at the multiple of 1.1 to cover processing and bookkeeping per the following reimbursable schedule:

Printing	Invoice
Copying	.25/page
In-house Blueprints	$1/sheet
In-house color copies	$1/sheet
Other Expenses	Cost

The fees listed above, and the hourly rates listed are subject to a cost of living increase one year from the date of this Agreement.

TIME OF PERFORMANCE

We estimate the following time frames to complete each phase of work:

Phase	Time to Complete
Phase Ia, Design Development Revisions	3 weeks
Phase Ib, Preliminary Governmental Processing	As required
Phase IIa, Construction Documents Revisions	6 – 8 weeks
Phase IIb, Plan Check	As required
Phase III, Construction Observation	As needed

It is agreed that if suit is filed or informal proceedings are needed to obtain or to enforce payment of the statement, Owner is to pay the Architect, in addition to the amount of the statement and interest thereon, all costs of collection including court costs, and such reasonable attorney's fees as the court may fix, or if collection is obtained without court action, then in the amount of fifteen (15) percent of the total amount due, including interest.

Owner hereby agrees that the balance as stated on the billing from the Architect to Owner is correct, conclusive and binding on the Owner unless Owner, within ten (10) days from the date of the making of the billing, notifies the Architect in writing of the particular item that is alleged to be incorrect. Payment for the Architect's services are not contingent upon the Owner's ability to collect monies due the Owner.

No deductions shall be made from the Architect's compensation on account of penalty, liquidated damages or other sums withheld from payments to Contractors.

If the Project is suspended by the Owner or abandoned in whole or in part, the Architect shall be paid his compensation for services performed prior to receipt of written notice from the Owner of such suspension or abandonment, together with reimbursable expenses then due.

DEFAULT

In the event Owner fails to pay the Architect within thirty (30) days after invoices are rendered, Owner agrees that the Architect shall have the right to consider said default a total breach of this Agreement and, upon written notice, the duties, obligations and responsibilities of the Architect under this Agreement are terminated. In such event, Owner shall then promptly pay the Architect all of the fees and charges for services rendered by the Architect.

DELAYS

Neither party shall hold the other responsible for damages or delay in performance caused by acts of God, strikes, lockouts, accidents, or other events beyond the other's control.

TERMINATION

This Agreement may be terminated by either party upon seven days written notice should the other party fail substantially to perform in accordance with its terms through no fault of the other. In the event of termination due to the fault of others than the Architect, the Architect shall be paid his compensation for services performed to termination date, including reimbursable expenses then due and all terminal expenses.

SUCCESSORS AND ASSIGNS

The Owner and Architect each binds himself, his partners, successors, assigns and legal representatives to the other party to this Agreement. Neither the Owner or the Architect shall assign, sublet, or transfer his interest in this Agreement without the written consent of the other.

LIMITATION OF LIABILITY

The Owner agrees to limit the Architect's liability to the Owner and to all Contractors and Subcontractors on the Project, due to professional negligent acts, errors or omissions of the Architect, to the sum of $50,000. or the Architect's fee, whichever is smaller.

CLAIMS BY PARTIES

All claims, disputes, and other matters in question arising out of or relating to, this Agreement or the breach thereof, shall be decided by arbitration in accordance with the Construction Industry Arbitration rules of the American Arbitration Association then obtaining. This Agreement so to arbitrate shall be specifically enforceable under the prevailing arbitration law.

Notice of the demand for arbitration shall be filed in writing with the other party to the contract and with the American Arbitration Association. The demand shall be made within a reasonable time after the claim, dispute or other matter in question has arisen. In no event shall the demand for arbitration be made after institution of legal or equitable proceedings based on such claim, dispute or other matter in question would be barred by the applicable statute of limitations.

Should arbitration occur between the two parties relating to the provisions of this Agreement, or any act arising out of the performance of this Agreement, all expenses, collection expenses, witness fees, court costs and attorney's fees shall be paid by the non-prevailing party to the prevailing party.

The Owner agrees that the Architect can not be joined with any other person that is not a party to this Agreement either by joiner or consolidation except by the Architect's written consent.

APPLICABLE LAW

Unless otherwise specified, this Agreement shall be governed by the law of the principal place of business of the Architect.

WARRANTY OF AUTHORITY TO SIGN

The person signing this Agreement warrants he has authority to sign as, and on behalf of, the Owner for whom or for whose benefit Thirtieth Street Architect's services are rendered. If such person does not have such authority, he agrees that he is personally liable for all breaches of this Agreement, and that in any action against him for breach of such warranty a reasonable attorney's fee shall be included in any judgment rendered.

The undersigned hereby acknowledges that he or she has reviewed and accepts all provisions of this Agreement including the payment schedule.

The confirmation is valid for a period of thirty (30) days from the date shown above. If not accepted within thirty (30) days it is void.

This Agreement executed on the day and year first written above.

CITY OF ONTARIO *Agenda Report* **March 19, 2024**	**SECTION:** **CONSENT CALENDAR**
Department: Public Works Prepared By: Adrian Escamilla Staff Member Presenting: Tito Haes, Executive Director Public Works Reviewed By: Bonnie Tam, Andrea Ampig Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 10

SUBJECT: AN AMENDMENT TO THE DESIGN SERVICES AGREEMENT WITH HOLT ARCHITECTS, INC. FOR THE POLICE DEPARTMENT MEDIA ROOM DESIGN

RECOMMENDATION: That the City Council take the following actions:

A. Authorize the City Manager or his designee to execute Amendment No. 8 to the Design Services Agreement with Holt Architects, Inc., of Palm Desert, California, for the Ontario Police Department Media Room design in the amount of $273,918 for a total not-to-exceed contract amount of $1,328,984; and
B. Authorize the City Manager or his designee to execute all documents required for the completion of the project including, but not limited to, contracts, agreements, assessments, easements, reduction of retention accounts, and filing a notice of completion at the conclusion of all construction related activities.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Maintain the Current High Level of Public Safety
Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)

FISCAL IMPACT: The Fiscal Year 2023-24 Adopted Budget includes appropriations in the Cable Access Fund for the Ontario Police Department Media Room design. The recommended Amendment will increase the contract amount by $273,918 for a total not-to-exceed contract amount of $1,328,984. The total contract amount of $1,328,984 includes on-call work performed for various citywide projects, including the Ontario Police Department Master Plan and Real Time Information Center and Training Division design.

BACKGROUND & ANALYSIS: On January 21, 2020, the City Council authorized a Design Services Agreement with Holt Architects, Inc. for on-call architectural, space planning, and engineering design services. On October 17, 2023, the City Council approved Amendments No. 6 and 7 to the Design Services Agreement with Holt Architects, Inc. for the Ontario Police Department Real Time Information Center and Training Division design and the Ontario Police Department Master Plan

design respectively.

The Media Room design will include improvements to the lobby area, formerly the museum, to incorporate a media room to accommodate the creative media team. The design will include interior renovations for new office equipment, audio and visual equipment, and a new conference area for media events. Staff recommends authorizing Amendment No. 8 to the Design Services Agreement with Holt Architects, Inc. for $273,198 for a total contract amount not-to-exceed $1,328,984.

AMENDMENT NO. 8 TO THE DESIGN SERVICES AGREEMENT BETWEEN THE CITY OF ONTARIO AND HOLT ARCHITECTS, INC.

1. Parties and Date.

This Amendment No. 8 to the Agreement (as defined herein) is made and entered as of _____, by and between the City of Ontario ("City") and **Holt Architects, Inc.**, a **California CORPORATION ("Consultant")** City and **Consultant** are sometimes individually referred to as "Party" and collectively as "Parties."

2. Recitals.

2.1 Agreement. The City and Consultant have entered into an agreement entitled "On-call Architectural, Space Planning and Engineering Design Services" dated January 1, 2020 ("Agreement").

2.2 Amendment Purpose. The City and **Consultant** desire to amend the Agreement toincrease the not-to exceed compensation amount to **Two Hundred Seventy - Three Thousand, Nine Hundred Eighteen Dollars ($273,918),** and amend the task list . The Parties have heretofore entered into that Amendment No. 1 dated March 30, 2020, Amendment No. 2 dated March 15, 2022 and that Amendment No. 3 dated April 19 , 2022, Amendment No. 4 dated February 7, 2023, Amendment No. 5 dated February 7, 2023, Amendment No. 6 dated October 17, 2023 and Amendment No. 7 dated October 17, 2023;.

2.3 Amendment Authority. This Amendment No. 8 is authorized pursuant to Section **3.1.1** of the Agreement.

3. Terms.

3.1 Services

Consultant shall provide the City with the Services described in the Scope of Services attached as Exhibit "A".

3.10.1 Consultant's Compensation for Basic Services.

"In no event shall the total amount paid for services rendered by Consultant exceed the sum of **One Million, Three Hundred Twenty - Eight Thousand,**

Nine Hundred Eighty-Four Dollars ($1,328,984). This amount is to cover all printing and related costs, and the City will not pay any additional fees for printing expenses. Periodic payments shall be made within 30 days of receipt of an invoice (per task) which includes a detailed description of the work performed. Payments to Consultant for work performed will be made on a monthly billing basis."

3.2 Continuing Effect of Agreement. Except as amended by this Amendment No. 8, all other provisions of the Agreement remain in full force and effect and shall govern the actions of the parties under this Amendment No. 8. From and after the date of this Amendment No.8 whenever the term "Agreement" appears in the Agreement, it shall mean the Agreement as amended by this Amendment No. 8.

3.3 Adequate Consideration. The Parties hereto irrevocably stipulate and agree that they have each received adequate and independent consideration for the performance of the obligations they have undertaken pursuant to this Amendment No. 8.

3.4 Severability. If any portion of this Amendment No. 8. is declared invalid, illegal, or otherwise unenforceable by a court of competent jurisdiction, the remaining provisions shall continue in full force and effect.

3.5 Integration. This Amendment represents the entirety of the Parties' understanding relating to the subject of this Amendment, including written or verbal communications between the Parties, which shall have no relevance unless expressly incorporated herein. This is an integrated amendment.

HOLT ARCHITECTURE

Original Date: February 7, 2024

Liz Zazueta
City of Ontario Police Department
2500 S. Archibald Avenue
Ontario, CA 91761

RE: ONTARIO POLICE DEPARTMENT – MEDIA ROOM TENANT IMPROVEMENT

Dear Liz:

Holt Architecture is pleased to provide you with this Proposal for Architectural and Engineering Services for the above-referenced Project.

Our understanding of the Scope of Work is as follows and outlined in the attached Exhibit 'A' – Scope of Work Plan.

A. Scope of Work:
We understand the Department is intending to complete an interior renovation to convert the previous Museum space into a new Media Room as identified in the attached exhibit. The currently identified Area of Work consists of approximately 1,700 SF with a majority of it consisting of the two-story height Exhibit Space.

Additionally, various ADA deficiencies have been identified on the site (existing ADA parking stalls and associated paths of travel) and inside the building. See attached "ADA Scope of Work" exhibit for additional information.

Supporting building systems (structural, mechanical, electrical, plumbing, technology) modifications necessary to support the new spaces are included in the Scope of Work.

A. Scope of Services:
The customary Architectural and Engineering development phases are included in this Proposal as follows:

- Due Diligence / Preliminary Design
- Design Development
- Construction Documents
- Agency Review / Approval
- Bid Assistance
- Construction Administration

Civil, Structural, Mechanical, Electrical, Plumbing, and Technology Engineering services are included in this Proposal.

B. Assumptions / Exclusions:

1. LEED design/certification is not required.
2. Low-Voltage System design is included in this Proposal.
3. Structural System modification / retrofit is not included in this Proposal. It is assumed all necessary modifications to support the new design can be provided in the Scope of Work so as to not require a retrofit of the existing area/facility.
4. All Building Systems have sufficient capacities to support the new designs. Studying upsizing existing systems may require additional services to be reviewed with the OPD project team.
5. Electrical Circuit Tracing is not included in this Proposal. If circuits supporting existing spaces within the Area of Work are unknown, circuit tracing can be provided as additional services to be reviewed with the Owner.
6. Exterior building improvements with exception of the ADA specific items noted in the attached exhibit are not included in this Proposal.
7. Fire Alarm / Fire Sprinkler System design and system evaluations are not included in this Proposal and are intended to be listed as a Deferred Approval.

C. Schedule:

Upon receipt of a Purchase Order, an Overall Project Schedule will be developed in collaboration with the OPD project team to establish critical milestones and completion timelines.

D. Compensation:

We propose to accomplish the above Scope of Services as a lump-sum, fixed fee to be billed as a percentage of completion monthly as follows:

• Base Services		229,570
	SUB-TOTAL	**$244,570**
Fee Contingency (10%)		$24,457
Reimbursable Allowance (2%)		$4,891
	BASE SCOPE FEE TOTAL	**$273,918**

Reimbursable expenses will accompany the monthly invoices. If the Scope of Work or the costs of Construction increase by more than 10%, our Compensation shall be adjusted accordingly. This proposal is valid for sixty (60) days from the date of this letter.

We appreciate the opportunity to be of service to you. Please contact me with any questions regarding this proposal.

Sincerely,

HOLT ARCHITECTURE

Matt Acton, NCARB
Principal

CITY OF ONTARIO *Agenda Report* **March 19, 2024**	**SECTION:** **CONSENT CALENDAR**
Department: Utilities Prepared By: Joline Neal Staff Member Presenting: Scott Burton, Utilities General Manager Reviewed By: Dennice Raygoza, Albert G Gastelum, Michael Sigsbee Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 11

SUBJECT: AN AMENDMENT TO THE PROFESSIONAL SERVICES AGREEMENT WITH NJBSOFT LLC FOR COMPLIANCE WORKFLOW AUTOMATION SOFTWARE

RECOMMENDATION: That the City Council approve and authorize the City Manager, or his designee, to execute Amendment No. 2 to Professional Services Agreement with NJBSoft LLC, of Phoenix, Arizona, for the use of SAMS Water, Cross Connection, and Industrial Pretreatment Program Compliance Software modules in the amount of $50,000 for Fiscal Year 2023-24, with the unilateral option to extend the Agreement for up to two successive one-year periods (FY2024-25 to FY2025-26); and authorize the annual cost of $50,000 per year, for a total not-to-exceed amount of $275,500 consistent with City Council approved budgets.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Operate in a Businesslike Manner

FISCAL IMPACT: The Fiscal Year 2023-24 Adopted Budget includes appropriations in the Water and Sewer Operating Funds to cover the cost for annual licensing for SAMS Water, Cross Connection, and Industrial Pretreatment Program Compliance Software modules. The proposed Amendment to the Professional Services Agreement increases the authorized contract amount by $50,000 for a revised new total not-to-exceed amount of $175,500. Should the City exercise the remaining two successive one-year extensions, the projected total amount to be expensed for the five years would amount to a total not-to-exceed amount of $275,500. There is no impact to the General Fund.

BACKGROUND & ANALYSIS: The Ontario Municipal Utilities Company's (OMUC) Environmental and Water Quality Programs implemented automated workflow software on March 1, 2022. The original Agreement was for setup, implementation, deployment of the program, and user training. Prior to implementation of this automated workflow system, Staff managed all data and compliance tracking in a standard spreadsheet software program. The additional costs per year will include annual license costs for Water, Cross Connection, and Industrial Pretreatment Program Compliance.

The software is now live, and it is being utilized to manage environmental compliance with

industrial waste permits (issued by the City), drinking water data analysis, backflow prevention assembly testing, and recycled water inspection and testing. The software maintains facility and asset information (inventory); tracks regulatory and reporting due dates; generates reports for local, state, and federal regulatory reporting; determines compliance with state and federal water quality regulations; and provides a customer portal to electronically submit test results.

NOTICE TO EXTEND AGREEMENT

Amendment No. 2

January 8, 2024

NJBSoft, LLC
202 East Earll Drive, Suite 110
Phoenix, AZ 85012

Re: Notice to Extend Agreement with NJBSoft, LLC, Amendment No. 2.

Dear Pranam Joshi:

As you know, the City of Ontario ("City") and NJBSoft, LLC ("Consultant") entered into a Professional Services Agreement dated March 16, 2022 (the "Agreement"). The term of the Agreement is set to expire on March 1st, 2024.

Pursuant to the Agreement, the City has the sole discretion to renew the Agreement for an additional one-year term. Through this letter, the City hereby extends the term of the Agreement an additional one-year and increases the dollar value by $50,000 for a new total not-to-exceed amount of $175,500. The terms and conditions of the Agreement shall remain the same.

If you have any questions, please don't hesitate to contact Joline Neal, Water Quality Programs Manager, at (909) 395-2652 or email JNeal@ontarioca.gov.

Sincerely,

Scott Ochoa
City Manager

CITY OF ONTARIO *Agenda Report* **March 19, 2024**	**SECTION:** **CONSENT CALENDAR**
Department: Economic Development Prepared By: Karla Tavera Staff Member Presenting: Jennifer McLain Hiramoto, Economic Development Director Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 12

SUBJECT: DOWNTOWN ONTARIO COMMUNITY BENEFIT DISTRICT MANAGEMENT AND DISBURSEMENT AGREEMENT

RECOMMENDATION: That the City Council approve a Management and Disbursement Agreement with the Downtown Ontario Improvement Association for the administration of the Downtown Ontario Community Benefit District.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Operate in a Businesslike Manner
Focus Resources in Ontario's Commercial and Residential Neighborhoods

FISCAL IMPACT: There is no direct fiscal impact associated with this action. The County of San Bernardino Tax-Collector will collect the assessment payments and send them to the City twice a year. This arrangement lets the City pass on the collected money to the Downtown Ontario Improvement Association. It is estimated the total amount of collected assessments will be around $487,000.

BACKGROUND & ANALYSIS: On January 16, 2024 the City Council approved a 10-year renewal of the Downtown Ontario Central Business District (the District) following voter approval by property owners within the District. The purpose of the District is to provide services and improvements benefitting Downtown property owners which enhances public safety, cleanliness and economic development in Downtown.

There is currently an existing Board of Directors responsible for administering and managing the day-to-day operations of the District. The Management and Disbursement Agreement allows the City to transfer collected assessments to the Management Corporation, known as the Downtown Ontario Improvement Association (DOIA), in order to provide all necessary services to the district.

MANAGEMENT AND DISBURSEMENT AGREEMENT

by and between

CITY OF ONTARIO,
a California Municipal Corporation,

and

DOWNTOWN ONTARIO IMPROVEMENT ASSOCIATION,
a California Non-Profit Public Benefit Corporation

March 19, 2024

This Management and Disbursement Agreement ("Agreement") between the City of Ontario, a municipal corporation, (the "**City**") and the Downtown Ontario Improvement Association, a California Non-Profit Public Benefit Corporation, (the "**DOIA**") is entered into this 19th day of March 2024 ("Effective Date"). City and DOIA shall respectively be referred to as the "Party" or collectively as the "Parties."

RECITALS

WHEREAS, on January 16, 2024, the City Council adopted Resolution No. 2024-002, approving the renewal of the Downtown Ontario Community Benefit District of 2019 ("District") pursuant to the California Streets and Highway Code, Section 36660 for an additional ten (10) year term; and

WHEREAS, the Management District Plan for the District ("District Plan") and Engineer's Report that provide the legal basis for the District describe and set forth the intended particular and special benefit the property owners in the District will receive from the ongoing services, including, security, sidewalk maintenance, beautification, promotional, and marketing activities and improvements to be provided by the DOIA through implementation of the District Plan (the "District Plan Improvements"); and

WHEREAS, the City through a District ballot held on Jnaury 16, 2024 received more than 50% weighted approval to levy and collect the property tax assessments for use and administration pursuant to the District Plan; and

WHEREAS, the District Plan Improvements will be funded through an annual levy of special assessments upon real property within the District (the "Assessments"), commencing Fiscal Year 2024-25 and continuing for ten (10) consecutive years through Fiscal Year 2033-34. For purposes of levying and collecting the Assessments within the District, a fiscal year shall commence on each July 1 and end on the following June 30; and

WHEREAS, DOIA is responsible for implementing the District Plan; for creating a District budget and policies to comply with the District Plan; for preparing and filing quarterly and annual reports with the City reflecting compliance with the District Plan; and for overseeing the day-to-day implementation of the District Plan Improvements; and

WHEREAS, the Parties desire to enter into an Agreement in order to coordinate their respective activities necessary for the successful operation, administration and implementation of the District Plan and District Plan Improvements.

NOW THEREFORE, the recitals set forth above are incorporated herein by this reference and the Parties to this Agreement do hereby covenant and agree as follows:

1. Scope of Disbursement Duties. DOIA agrees to promptly perform all duties specified in the District Plan, attached hereto as **Exhibit A**, incorporated herein by this reference, and on file with the City Clerk. DOIA and the City shall each respectively designate an individual or individuals who shall be responsible for communications with each other for the duration of this Agreement. Nothing in this Agreement shall be construed to require DOIA to perform as specified in the District Plan if funds are not available to perform those duties due to lack of funding from Assessments or other revenues from operation of the District (the "District

Revenues"). DOIA shall notify City in writing as soon as DOIA is aware that District Revenues are insufficient or not available to perform duties specified in the District Plan.

2. Method of Performing Disbursement Duties. The method, details and means of performing the disbursement of District Revenues shall be as described in the District Plan attached hereto as **Exhibit A**, and as set forth herein (the "Disbursement Duties"). In the event of any conflict between the District Plan and this Agreement, disbursement of District Revenues shall be for the special benefits described in the District Plan.

3. District Term. DOIA's Disbursement Duties shall begin on December 1, 2024, or as soon as the first year Assessments have been transferred to the DOIA. DOIA shall complete their Disbursement Duties by December 31, 2034 , subject to the annual review and termination provisions in section 13 of this Agreement.

4. DOIA Responsibilities.

4.1 Program Implementation and Operation. DOIA shall be fully responsible for developing, implementing, directing and operating the District Plan. DOIA assumes all responsibility for completing activities required to implement the District Plan and its programs.

4.2 Competitive Bidding. DOIA shall competitively bid all contracts over $25,000 and shall keep and provide copies of all bids submitted for review to any affected property owners or to the City upon request. The lowest bidder will not necessarily receive the contract that is bid. The quality, performance, and experience of bidding contractor shall be taken into consideration prior to the awarding of each contract. The maximum contract term shall be three (3) years for competitively bid projects, unless the contractor provides a 60-day escape clause, without cause, in their agreement with the DOIA.

4.3 Separate Bank Account for District Revenues. All District Revenues received by DOIA pursuant to this Agreement shall be held in a bank account separate and apart from any other funds managed or administered by DOIA, and shall not be co-mingled with any other funds (the "Account"). Copies of all DOIA District Revenue Account statements shall be made available to the City upon request. DOIA shall provide the City with evidence of the establishment of the required District Revenue Account prior to the City transferring any Assessments to the DOIA.

4.4 Use of Downtown Ontario Community Benefit District or DOIA Name. The name "Downtown Ontario Community Benefit District" or the "Downtown Ontario Improvement Association" as its management corporation, or an appropriate abbreviation, shall appear on all marketing and promotional materials funded in part or in whole by District Revenues.

4.5 Reporting to Property Owners within the District. A statement of activities/programs funded by District Revenues, and the cost of each such activity or program shall be mailed to every property owner within the District by January 31st of each year during the Term (the "Activity Statement"). A copy of the Activity Statement and a list of

property owner names and addresses shall be provided to the City no later than January 15th of each year during the Term.

4.6 Open Meetings Laws. DOIA shall comply with the open meeting requirements of the Ralph M. Brown Act, commencing with California Government Code section 54590 *et seq.* with regard to its performance of this Agreement.

4.7 Program and Budget Reports.

4.7.1 Reports, Work Plans and Budgets. On or before April 30, 2024 and quarterly thereafter, the DOIA shall submit quarterly reports to the City. The Board minutes and Committee minutes taken by the DOIA and provided to the City, may serve in the capacity of these quarterly reports to the City provided that the Board minutes and Committee minutes are chronologically organized and the summary of key accomplishments, expenditures, work and planning efforts authorized by the District Plan are included ("the Quarterly Reports"). The Quarterly Reports and Annual Work Plan and Budget shall be prepared in accordance with Sections 36533 and 36622 of the Streets and Highways Code, and Article XIII.D of the California Constitution. If changes to the Annual Report and Budget are requested that would require a public hearing and/or a public meeting pursuant to state law, or which would affect the Assessment database and resulting budget of the upcoming fiscal year, then such modification shall be submitted prior to May 1st of each year. The City must report any changes to the database or boundaries to the County by July 15th of each year during the Term. The Budget for any year shall not be effective until approved by the City.

4.7.2 Budget. Each program or activity specified in the District Plan and succeeding programs and activities shall be implemented within the approved budget amounts in accordance with the District Plan and this Agreement. Any obligations or expenditures not specifically budgeted shall not be paid from District Revenues and shall not constitute a debt of the City.

4.7.3 City's General Fund Not Liable. Neither the City's General Fund, nor any other City fund, revenue source, or any other City monies, *except* the actual Assessment for property the City owns in the District, shall be collected from the County and transferred to the DOIA. The City shall only be responsible for payment of its property Assessment as a property owner in the District. All Parties acknowledge and agree that any unpaid Assessments in the District are not a debt of the City, nor a legal or equitable pledge, charge, lien or encumbrance upon any City property or upon City income, receipts or revenues.

4.8 Financial Statements.

4.8.1 Annually in conjunction with the Annual Report and Budget, DOIA shall prepare financial statements that document the disposition, commitment, and line item expenditures of all District Revenues received during the previous

calendar year (the "Financial Statement"). The Financial Statement shall be prepared by a Certified Public Accountant (CPA) acceptable to, and approved in writing, by the City. The City may request a full audit of the Financial Statement, if in its sole and absolute discretion, the City believes such an audit is necessary.

4.8.2 The City's review of the Financial Statement shall be conducted in accordance with Government Auditing Standards (2018 and subsequent revisions) prescribed by the Comptroller General of the United States. All other audits, if requested by the City, shall be prepared in accordance with Generally Accepted Accounting Principles in the United States of America.

4.8.3 Any District Revenues necessary to cover DOIA's portion of the Financial Statement shall be set aside in the Budget.

4.8.4 The Financial Statement shall be delivered to the City at the same time as the Annual Report and Budget, however in no event later than sixty (60) days after the close of the DOIA's fiscal year (currently December 1st – November 30th). The DOIA shall notify the City in writing prior to any change in the dates of the DOIA's fiscal year.

4.9 Program Coordination. DOIA shall complete its Disbursement Duties and shall cooperate with the City in the implementation of the District Plan, including program development and coordination of District activities with City functions.

4.10 Assessment Records. DOIA shall maintain a complete database for each parcel assessed within the District, containing the following information:

4.10.1 Assessor's Parcel Number

4.10.2 Street Address

4.10.3 Name and Address of Owner(s) of Record

4.10.4 Amount of the Assessment Levied

4.10.5 Proportionate Financial Obligation Imposed, compared to District

4.10.6 Assessment Calculations, including all variables used

DOIA agrees to maintain such information and make it available to the City and property owners within the District during regular business hours.

4.11 Annual Assessment Preparation. By May 15th, of each operating year, DOIA shall provide the City with Assessment data for the subsequent tax year (July 1 – June 30), in a format prescribed by City. The Assessment data shall include all of the information required in "Assessment Records," paragraph 4.10 herein above.

4.12 Liaison with Community. DOIA shall maintain on-going communication and coordination with District property owners, residents and property owners, which shall include:

4.12.1 *Annual Meeting.* At its own cost and expense, DOIA shall organize and conduct, at a minimum, one annual public meeting to be noticed in writing mailed to all record owners of property in the District. This meeting will be conducted at a location convenient to the District. A City representative may attend as a member of the panel to provide information and assistance.

4.12.2 *Other Events*. Such other events and activities involving District members that encourage attainment of the District goals and objectives.

4.12.3 *Cost and Expense Records*. DOIA shall maintain full and complete records of activities performed under this Agreement. Such records shall be open to inspection by the City, and shall be maintained for a minimum of four (4) years after the termination of this Agreement.

4.12.4 *Payment of Taxes*. DOIA is responsible for paying, when due, all taxes, including income taxes, if any, including estimated taxes, incurred as a result of activities completed under this Agreement. On request, DOIA will provide City with proof of timely payment of any taxes. DOIA agrees to indemnify and defend City with counsel acceptable to the City for any claims, costs, losses, fees, penalties, interest or damages suffered by City resulting from DOIA's failure to comply with this provision.

4.12.5 *Payment of Expenses*. DOIA will be responsible for all expenses incurred in performing its Disbursement Duties under this Agreement.

4.12.6 *Tools, Materials and Equipment.* DOIA will supply all tools, materials and equipment required, if any, to perform the Disbursement Duties.

4.12.7 *Compensation*. DOIA agrees and understands that it shall receive no compensation for any of the Disbursement Duties or other obligations set forth in this Agreement.

5. City Responsibilities.

5.1 Administration. This Agreement shall be administered by the City Manager or his/her designee (referred to herein as "City") on behalf of the City. The City agrees to:

5.1.1 Coordinate the collection of the annual Assessment through an agreement with the County of San Bernardino; ensure the billing of those public or tax-exempt entities not billed through the County of San Bernardino property tax billing procedures; and monitor the payment process to obtain timely payment of Assessments by public entities and other tax-exempt District property owners.

5.1.2 Provide timely District property tax roll information to the County of San Bernardino Auditor-Controller to include the annual Assessment amounts on the County's property tax bills;

5.1.3 Provide general information to DOIA, the assessed property owners, and the public;

5.1.4 Direct the disbursement of collected Assessments to DOIA in accordance with this Agreement and the approved Annual Report and Budget;

5.1.5 Use its best efforts to distribute the Assessments to the DOIA in a prompt manner; and

5.1.6 Perform other related tasks, as agreed to by the City.

5.2 Discrepancies and Assessment Disputes. The City may assist with the resolution of any discrepancies in individual Assessment amounts or calculations and has the authority to:

5.2.1 Conduct reviews and or audits of any Assessment related data; verify Assessment data as compiled by any consultant, sub-consultant, or other third-party hired by DOIA; perform field or on-site inspections to verify the accuracy of Assessment data or investigate any Property owner claims concerning the accuracy of any Assessment data.

5.2.2 Recalculate the Assessment amount due and request the San Bernardino County Auditor-Controller (the "CAC") to make the requested adjustments. Provided however (i) the City shall not increase any Assessment beyond that of the maximum annual Assessment as defind in the Engineer's Report as a result of any recalculation request; and (ii) in the event the CAC does not honor the City's request to recalculate the Assessment the City shall not be liable in any way for any Assessments other than its own, and shall not be obligated to pursue any action against the CAC to obtain any adjustment or recalculation.

5.3 Disbursements. The annual District Assessments will be collected through the County property tax collection procedures and will be transmitted to the City pursuant to agreements between the City and County. Except for the costs defined in Paragraph 6, below, City shall disburse the collected Assessments to DOIA pursuant to the terms and conditions of this Agreement. The City shall not be obligated to disburse Assessments which have not been collected. Upon request by DOIA and with approval of the City subject to compliance with this Agreement, any Assessments received by the City that are in excess of the annual Assessment (delinquent Assessments, penalties, interest, etc.) shall be disbursed to the DOIA upon receipt.

5.3.1 Assessment Disbursement Schedule. Contingent upon receipt of District Assessment funds from the County of San Bernardino and contingent upon DOIA's compliance with this Agreement and the District Plan, the City shall disburse to the DOIA the Assessments received from the County on or about the following dates and in accordance with the following percentages. Said

disbursements shall include an accounting of the property Assessments paid per parcel. On or about:

December 20th	Approximately fifty percent (50%) of annual Assessment received from the County, or the full amount transferred by the County to the City in the December installment, whichever is greater. This distribution shall also include those Assessments authorized to be collected by the City for tax-exempt parcels within the boundaries of the District.
April 30	Approximately fifty percent (50%) of the annual Assessment received from the County, or the full amount transferred by the County to the City in the April installment, whichever is greater. This distribution shall also include those Assessments authorized to be collected by the City for tax-exempt parcels within the boundaries of the District.
June 20th	Any additional Assessment amounts transferred to the City that were collected during the fiscal year (terminating on June 30th) and transferred to the City, shall be forwarded to DOIA based on the schedule set forth in this 5.3.1. Said additional amounts may include any delinquency or penalty amounts from the late or non-payment of Assessments by any property owner in the District. This distribution shall also include those Assessments authorized to be collected by the City for tax-exempt parcels within the boundaries of the District.

5.4 Subsequent Adjustments. If there is an adjustment in the Disbursement due to changes in receipts of the District, such Disbursement may be adjusted in the following year. The City shall not be responsible for delays in payment due to delays in transmittal by the County.

5.5 City Review of Financial Summary. The City reserves the right at any time to request a current financial summary of all District Revenues committed and/or spent during the previous quarter(s) from DOIA. DOIA shall submit such financial summary to the City within thirty (30) business days of the City's request. The City reserves the right to review the summary and to refuse to disburse any further installments if it is not satisfied with the statement or with regard to the propriety of DOIA's commitment or expenditure during the previous quarter(s).

6. Costs and Expenses. The Parties acknowledge that the County of San Bernardino will deduct from the funds collected on behalf of the District the County's administrative costs for the collection and distribution of Assessments to the City (the "County Administrative Costs"). All distributions of Assessments from the City to the DOIA will be net of the County Admnisitrative Costs and the City shall not be responsible for distributing any additional proceeds.

7. Ownership of Documents. The designs, plans, reports, files invoices, investigation materials documents prepared or acquired by or for DOIA pursuant to this Agreement become the joint property of the City and DOIA. DOIA agrees to exercise diligence in providing for the secure storage of all such materials and to provide copies for official City records upon request from City.

8. Independent Contractor. It is expressly agreed that in the performance of this Agreement, DOIA is an independent contractor and is not an employee of City. DOIA retains the right to control and supervise its activities, and employment, direction, compensation and discharge of all persons assisting DOIA in the performance of this Agreement. DOIA shall be solely responsible for all matters relating to the payment of its employees, including compliance with social security, withholding and all other regulations governing such matters, and shall be solely responsible for DOIA's own acts and those of DOIA's subordinates and employees.

9. DOIA Not Agent of City. Neither DOIA nor any of its employees, agents, representatives or subcontractors are or shall be deemed to be agents of the City for any purpose, including fulfillment of DOIA's obligations pursuant to this Agreement.

10. DOIA's Qualifications. DOIA represents that it has the qualifications and skills necessary to perform the Disbursement Duties under this Agreement in a competent and professional manner without the advice or direction of City. Failure to perform all of the Disbursement Duties constitutes a material breach of this Agreement and is cause for termination.

11. Non-Exclusive Relationship. DOIA may perform services for, and contract with other clients, persons or companies in its sole discretion so long as such services and contracts do not breach this Agreement.

12. The DOIA. DOIA shall, at all times, comply with all requirements of the Property and Business Improvement District Law of 1994, commencing with Section 36600 *et seq.* of the California Streets and Highway Code.

13. Term and Termination. This Agreement shall become effective on the Effective Date and terminate on December 31, 2034 (the "Term"); unless it is otherwise extended by mutual written agreement of the Parties.

    13.1 *Early Termination*. Either Party may terminate this Agreement at any time upon giving the other Party thirty (30) days written notice.

    13.2 *Termination for Default*. If either Party defaults in the performance of any of the terms and/or provisions to be performed by a Party pursuant to this Agreement, then the non-defaulting Party shall provide written notice to the defaulting Party describing the default and requesting a cure ("Default Notice"). If such default is not cured within thirty (30) days (or such other time as agreed to by written agreement of the Parties if the default is not susceptible to cure within said thirty-day period) after the Default Notice is mailed or delivered, then the non-defaulting Party may terminate this Agreement. To the extent the alleged default concerns or relates to the use or expenditures of District Revenues, DOIA shall hold all unencumbered District Revenues in an escrow account until the default is cured.

14. Inspection of Books and Records. During the Term, and for a period of four (4) years after the Term, or two (2) years after the closure of any disputed matter, whichever occurs later, (the "Audit Period"), DOIA shall maintain financial and operational records related to this Agreement, which include, but are not limited to, the Annual Financial Statements, the Annual Reports and Budgets and any audits (the "Books and Records"). Within fifteen (15) days of a City request to inspect Books and Records, DOIA shall make all Books and Records open to inspection by the City, or its designee during normal business hours.

15. Non-Discrimination in Employment. DOIA certifies and agrees not to discriminate against any employee or person who is subject to this Agreement because of race, color, religion, religious belief, national origin, ancestry, citizenship, age, sex, sexual orientation, marital status, pregnancy, parenthood, medical condition, or physical or mental disability. Evidence of discrimination shall be sufficient cause for termination of this Agreement.

16. Public Liability and Property Damage Insurance. DOIA shall assume all responsibility for damages to property and injuries to persons, including accidental death, which may arise out of or may be caused by DOIA's performance of this Agreement, by its subcontractors or by anyone DOIA directly or indirectly employed, and whether such damage or injury may accrue, or may be discovered, before or after termination of this Agreement. At its own expense, DOIA shall obtain, pay for and maintain during the life of the Agreement an "occurrence" policy for Commercial General Liability (including Contractual Liability) and for Automobile Liability which shall protect it and Owner from claims for injuries and damages. The policy shall name the "The City of Ontario, the Ontario Successor Agency, their officers, agents and employees" as additional insureds under the policy in the following amounts:

16.1 COMMERCIAL GENERAL LIABILITY INSURANCE in an amount not less than Two Million Dollars ($2,000,000) per occurrence for personal injuries, including accidental death, to any one person; property damage insurance in an amount not less than Two Million Dollars ($2,000,000) and subject to the above limits and combined single limit of insurance in an amount not less than Three Million Dollars ($3,000,000); and

16.2 AUTOMOBILE LIABILITY INSURANCE endorsed for all vehicles (whether rented, leased, hired, scheduled, owned or non-owned), in an amount not less than One Million Dollars ($1,000,000) per occurrence for personal injuries, including accidental death, to any one person; property damage insurance in an amount not less than One Million Dollars ($1,000,000) and subject to the above limits and combined single limit of insurance in an amount not less than One Million Dollars ($1,000,000).

16.3 At all times, the insurance company issuing said policy shall be an "admitted" insurer in the State of California; shall be domiciled within, and organized under the laws of, a state of the United States; and shall carry an A.M. Best & Company minimum rating of AA:VII.

16.4 All policies shall contain a "Severability of Interest" clause and a "Primary Coverage" clause for any loss arising out of or caused by DOIA's performance of the Agreement. In addition, the policies shall contain a statement of obligation on the insurance

carrier's part to notify City, by registered mail, at least thirty (30) days in advance of any policy cancellation, termination or reduction in the amount of coverage.

16.5 DOIA shall deliver to City a "certificate of insurance" and an "additional insured endorsement", both documents countersigned by the insurance carrier or its authorized representative, on forms satisfactory to the City Attorney, which set forth the above provisions. The DOIA shall submit this certificate of insurance by March 19, 2024.

16.6 The countersigned certificate, along with the additional insured endorsement, shall state: "The City of Ontario, the Ontario Successor Agency, their officers, agents and employees are named as additional insureds under this policy. This insurance is primary to the coverage of the City of Ontario and the Ontario Successor Agency. Neither the City nor the Ontario Successor Agency or any of their insurers shall be required to contribute to any loss. This policy contains a severability of interest clause. The issuing company shall mail thirty (30) days advance notice to the City of any policy cancellation, termination or reduction in the amount of coverage."

16.7 Additionally, the certificate of insurance shall state if any claim has been paid or is currently pending under the policy, and if so, the amount of the claim(s) and the amount of liability limits as lowered by the paid or pending claim(s). Any deductibles or self-insured retentions shall be set forth on the certificate and shall be subject to City's review and approval.

16.8 Workers' Compensation Insurance. DOIA understands and agrees that all persons furnishing services to DOIA under this Agreement are, for the purpose of workers' compensation liability, employees solely of DOIA and not of City. DOIA shall bear the sole responsibility and liability for furnishing workers' compensation benefits to its employees, or anyone it directly or indirectly employs, for injuries arising out of or connected with services performed on behalf of DOIA.

16.8.1 At its own expense, DOIA shall obtain, pay for, and maintain for the duration of the Agreement, complete workers' compensation insurance. DOIA shall provide proof of workers' compensation coverage by delivering to City either an insurance certificate or a certificate of consent to self-insure. The City shall not be responsible for any claims at law or in equity caused by DOIA's failure to comply with this paragraph. All workers' compensation insurance policies shall bear an endorsement, or shall attach a rider, which provides that the insurer will notify City, by registered mail, at least thirty (30) days in advance of the policy's expiration, termination or cancellation and which provides a waiver of subrogation as to the City.

16.9 DOIA's Failure to Obtain, Pay For, or Maintain Insurance. DOIA shall deliver to City the required certificate(s) of insurance and endorsement(s) before City signs this Agreement. DOIA's failure to obtain, pay for, or maintain any required insurance shall constitute a material breach upon which City may immediately terminate or suspend this Agreement. In the event of any termination or suspension, City may use the services of another consultant or consultants, without City incurring any liability to DOIA. At its sole discretion, City may obtain or renew DOIA's insurance, and City

may pay all or part of the premiums. Upon demand, DOIA shall pay City all monies paid to obtain or renew the insurance. City may offset the cost of the premium against any monies due DOIA from City.

17. Laws. The DOIA shall comply with all laws, statutes, ordinances and rules of all applicable governmental authorities unless the Owner is contesting or has affirmed its intention to contest any such law, statute, ordinance, rule, regulation, order, or requirements pursuant thereto and the City provides written agreement such contest is valid.

18. Indemnification. Throughout the term of this Agreement, as and from the date hereof, DOIA agrees to defend, indemnify and hold harmless to the maximum extent permitted by law, the City of Ontario, the Ontario Successor Agency, its officers agents and employees ("Indemnitees"), from and against any and all liabilities, suits, proceedings, judgments, claims, charges, damages, liens, causes of action, losses or injuries (whether in contract or in tort, including personal injury, accidental death or property damage, and regardless of whether the allegations are false, fraudulent or groundless), costs and expenses (including attorney's fees for counsel acceptable to City, litigation, arbitration, mediation, appeal expenses) which in whole or in part arise out of or are connected with acts or omissions of, performance of, or breach of this Agreement by DOIA or DOIA's independent contractors, agents, employees or delegates. In the event of any such claim, demand, proceeding or lawsuit against the Indemnitees, DOIA agrees to assume the immediate defense of Indemnitees by hiring and paying for legal counsel acceptable to City. DOIA's obligations under this paragraph shall apply, regardless of any sole, active and/or passive negligence of City, regardless of any willful misconduct of Indemnitees, and regardless of the degree of DOIA's or Indemnitee's fault in causing the harm that results in the claim, demand, proceeding or lawsuit.

19. Political Prohibition. Subject to applicable State and Federal laws, monies paid pursuant to this Agreement shall not be used for political purposes, sponsoring or conducting candidate's meetings, engaging in voter registration activity, nor for publicity or propaganda purposes designed to support or defeat legislation pending before federal, state or local government.

20. Conflict of Interest

20.1 DOIA certifies that no member of, or delegate to the Congress of the United States shall be permitted to share or take part in this Agreement or in any benefit arising therefrom.

20.2 DOIA certifies that no member, officer, or employee of the City who exercises any functions or responsibilities with respect to the programs or projects covered by this Agreement, shall have any interest, direct or indirect in this Agreement, or in its proceeds during his/her tenure or for one year thereafter.

20.3 DOIA shall immediately notify the City of any real or possible conflict of interest between work performed for the City and for other clients served by DOIA.

20.4 DOIA warrants and represents, to the best of its present knowledge, that no employee of the City who has been involved in the making of this Agreement, or who is a member of a City Council, board, or commission which has been involved in the making of this Agreement whether in an advisory or decision-making capacity, has or

will receive a direct or indirect financial interest in this Agreement in violation of the rules contained in California Government Code Section 1090 *et seq*., pertaining to conflicts of interest in public contracting. DOIA shall exercise due diligence to ensure that no such employee will receive such an interest.

20.5 DOIA further warrants and represents, to the best of its present knowledge and excepting any written disclosures as to these matters already made by DOIA to City, that no employee of the City who has participated in decision-making concerning this Agreement or has used his or her official position to influence decisions regarding this Agreement, has an economic interest in DOIA or this Agreement. For purposes of this paragraph, an official is deemed to have an "economic interest" in any (a) for-profit business entity in which the official has a direct or indirect investment worth $2,000 or more, (b) any real property in which the official has a direct or indirect interest worth $2,000 or more, (c) any for-profit or non-profit business entity in which the official is a director, officer, partner, trustee, employee or manager, or (d) any source of income or donors of gifts to the official (including non-profit entities) if the income or value of the gift totaled more than $500 the previous year. DOIA agrees to promptly disclose to City in writing any information it may receive concerning any such potential conflict of interest. DOIA's attention is directed to the conflict of interest rules applicable to governmental decision-making contained in the Political Reform Act (California Government Code Section 87100 *et seq*.) and its implementing regulations (California Code of Regulations, Title 2, Section 18700 *et seq*.).

20.6 DOIA shall incorporate or cause to be incorporated into all subcontracts for work to be performed under this Agreement a provision governing conflict of interest in substantially the same form set forth herein.

21. No Waiver. Nothing herein is intended to waive any applicable federal, state or local conflict of interest law or regulation.

22. Remedies and Sanctions. In addition to the rights and remedies otherwise available to the City under this Agreement and under federal, state and local law, DOIA understands and agrees that, if the City reasonably determines that DOIA has failed to make a good faith effort to avoid an improper conflict of interest situation or is responsible for the conflict situation, the City may (1) suspend payments under this Agreement, (2) terminate this Agreement, and (3) require reimbursement by DOIA to the City of any amounts disbursed under this Agreement. In addition, the City may suspend payments or terminate this Agreement whether or not DOIA is responsible for the conflict of interest situation.

23. Assignment. DOIA shall not assign or otherwise transfer any rights, duties, obligations or interest in this Agreement or arising hereunder to any person, persons, consultant or sub-consultant, entity or entities whatsoever without the prior written consent of City and any attempt to assign or transfer without such prior written consent shall be void. Consent to any single assignment or transfer shall not constitute consent to any further assignment or transfer.

24. Time of the Essence. Time is of the essence in the performance of this Agreement.

25. Commencement, Completion and Close Out. It shall be the responsibility of the DOIA to coordinate and schedule the work to be performed so that commencement and completion take place in accordance with the provisions of this Agreement. Any time extension granted to DOIA to enable DOIA to complete the work must be in writing and shall not constitute a waiver of rights the City may have under this Agreement. Should the DOIA not complete the work by the scheduled date or by an extended date, the City shall be released from all of its obligations under this Agreement.

26. Governing Law and Venue. This agreement shall be governed by the laws of the State of California. Venue shall be held exclusively in the County of San Bernardino.

27. Notices. If either party shall desire or be required to give notice to the other, such notice shall be given in writing, and shall be determined to be provided when personally delivered or when placed in the U.S. certified or registered postage, addressed to recipient as follows:

For the City of Ontario:
City of Ontario
303 E. B Street
Ontario, CA 91764
Attn: Mr. Scott Ochoa, City Manager

For DOIA:
Downtown Ontario Improvement Association
425 N. Euclid Avenue
Ontario, CA 91762
Attn: Mr. Alex Barorian, President

28. Entire Agreement of the Parties. This Agreement supersedes any and all agreements, either oral or written, between the Parties with respect to the rendering of Disbursement Duties by DOIA for City with regard to the Downtown Ontario Community Benefit District and contains all of the representations, covenants and agreements between the Parties with respect to the rendering of those duties. Each Party to this Agreement acknowledges that no representations, inducements, promises or agreements, orally or otherwise, have been made by any Party, or anyone acting on behalf of any Parties, which are not contained in this Agreement, and that no other agreement, statement or promise not contained in this Agreement will be valid or binding.

29. Modification. Any alteration, change or modification of or to this Agreement shall not be effective unless made in writing in each instance signed on behalf of each Party.

30. Severability. If any term, provision, or covenant of this Agreement, or its application to any Party or circumstances shall be held by a court of competent jurisdiction, to be to any extent, invalid, void or unenforceable, the remaining provisions will continue in full force and effect without being impaired or invalidated in any way.

CITY OF ONTARIO *Agenda Report* **March 19, 2024**	**SECTION:** **CONSENT CALENDAR**
Department: Utilities Prepared By: Dennice Raygoza Staff Member Presenting: Scott Burton, Utilities General Manager Reviewed By: Dennice Raygoza, Albert G Gastelum, Michael Sigsbee Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 13

SUBJECT: **AN AMENDMENT TO PROFESSIONAL SERVICES AGREEMENT WITH ADVANCED UTILITY SYSTEMS FOR SOFTWARE LICENSING, MAINTENANCE AND SUPPORT SERVICES FOR THE CUSTOMER INFORMATION SYSTEM (CIS)**

RECOMMENDATION: That the City Council approve and authorize the City Manager, or his designee to execute Amendment No. 2 to Professional Services Agreement with Advanced Utility Systems, a subsidiary of Harris Computer Systems of Ottawa, Ontario, Canada for utility billing system software licensing, maintenance and support services in the amount of $1,707,215 for a three year period, with the option to extend the term for two successive one-year periods, for a new total not-to-exceed amount of $5,284,481 which includes the initial purchase and implementation.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Operate in a Businesslike Manner
Invest in the Growth and Evolution of the City's Economy
Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)

FISCAL IMPACT: The Fiscal Year 2023-24 Budget includes appropriations from the Information Technology, Water, Sewer, and Integrated Waste Operating Funds for these services. Additionally, appropriations in the Information Technology, Water, Sewer and Integrated Waste Operating Fund will be included in the Fiscal Year 2024-25 Proposed Budget.

The City and Advance Utility Systems (AUS) have agreed to annual license fees that may escalate as new City users are added and up to 5% per year based on inflation factors. The fees for calendar year 2024 are $232,062, for the CIS Infinity software, Infinity Link software, Infinity Mobile Enterprise – Service Link software, and for the fixed billing rates for additional on-call as-needed technical support and training services. AUS will be compensated for the annual license fees and completion of the scope of work as required by the City at the approved billing rates. The total compensation paid to the consultant in any year under the terms of the agreement will be commensurate with the City Council approved plans and budgets. There is no impact to the General Fund.

BACKGROUND & ANALYSIS: Through the CIS Infinity software (System), staff produces about 40,000 monthly bills for City utility customers for their water, sewer, integrated waste and storm drain charges and services generating approximately $125 million in annual revenue. The System also provides online bill paying for utility customers, and it provides staff with customer service order management for new water meter installations, temporary water hydrant meter rentals for construction activities, and scheduling of integrated waste services such as residential bulky item pickups, can replacements, and temporary commercial bin and roll-off bin rentals.

In 2018, the City contracted with AUS for the purchase and implementation of the System to replace the PeopleSoft CIS software that had been in use for over 18 years. Working with City Staff, AUS was responsible for the System configuration, data extraction and conversion of customer and billing information from the PeopleSoft CIS databases, System testing, initial staff training and System implementation at a cost of approximately $3.6 million. The new System went "live" for customer billing and service order management on June 8, 2020.

The City pays AUS annual user license fees for routine troubleshooting and technical support as problems arise, regular testing to ensure all functionality is programmed correctly, as well as routine training for City staff. The scope of work for the proposed Amendment also provides for optional on-call as-needed support services for System enhancements and upgrades, software modifications requested due to changes in business practices, and for critical interfaces with other City software systems such as the Workday Financial Enterprise Resource Planning software, as well as additional enhanced training options as the City adds new Staff and expands cross-training and staff responsibilities.

Advanced Utility Systems, a subsidiary of Harris Computer Systems, is recommended as a sole source to provide these services based on the proprietary nature of the System, their unique detailed knowledge of the System, and completion of the previous Agreement.

AMENDMENT NO. 2 TO THE PROFESSIONAL SERVICES AGREEMENT BETWEEN THE CITY OF ONTARIO AND ADVANCED UTLITY SYSTEMS, A SUBSIDIARY OF HARRIS COMPUTER SYSTEMS

1. Parties and Date.

This Amendment No. 2 to the Agreement (as defined herein) is made and entered as of __ _____, by and between the City of Ontario ("City") and **Advanced Utility Systems, a Subsidiary of Harris Computer Systems, a Corporation** (Consultant). City and Consultant are sometimes individually referred to as "Party" and collectively as "Parties."

2. Recitals.

2.1 Agreement. The City and Consultant have entered into an agreement entitled "**Implementation of CIS Infinity Billing Software**" dated **March 22, 2018** ("Agreement"). The parties have hereafter entered into Amendment No. 1 on June 15, 2021 to increase the not-to-exceed compensation, and extend the term of the Agreement.

2.2 Amendment Purpose. The City and Consultant desire to amend this Agreement to increase the compensation by **One Million, Seven Hundred and Seven Thousand, and Two-Hundred and Fifteen Dollars ($1,707,215)** for a total not-to-exceed compensation of Five Million, Two Hundred and Eighty-Four Thousand, and Four Hundred and Eighty One Dollars, and to provide support and maintenance, maintain software license agreement, and to provide as needed services as shown in Exhibit "A"

2.3 Amendment Authority. This Amendment No. 2 is authorized pursuant to Section 4 of the Agreement.

3. Terms.

3.1 Amendment.

Section 3 Compensation is hereby amended in its entirety to read as follows:

a. City shall pay for such services in accordance with the Schedule of Charges set forth

in Exhibit "B".

b. In no event shall the total amount paid for services rendered by Consultant under this Agreement exceed the sum of Five Million, Two Hundred and Eighty-Four Thousand, and Four Hundred and Eighty-One Dollars. This amount is to cover all license, professional services, software, travel costs and five years of fees; the City will not pay any additional fees without an approved Scope of Work and Notice to Proceed. Periodic payments shall be made within 30 days of receipt of an invoice which includes a detailed description of the work performed. Payments to Consultant for work performed will be made on a monthly billing basis.

Section 6 Time of Performance of the Agreement is hereby amended in its entirety to read as follows:

Consultant shall perform its services in a prompt and timely manner and shall commence performance upon receipt of written notice from the City of proceed ("Notice to Proceed"). Consultant shall complete the services required hereunder within the time frame in the Statement of Work or as agreed upon by the City and Consultant. The Notice to Proceed shall set forth the date of commencement of work. The term of this Agreement shall be from March 19, 2024 until March 19, 2026, with the option to extend for two one-successive one year periods.

Exhibit "A" and "B" is hereby deleted in its entirety and replaced with Attachment "A" and "B" attached hereto and incorporated herein by reference.

3.2 Continuing Effect of Agreement. Except as amended by this Amendment No. 2, all other provisions of the Agreement remain in full force and effect and shall govern the actions of the parties under this Amendment No. 2. From and after the date of this Amendment No. 2, whenever the term "Agreement" appears in the Agreement, it shall mean the Agreement as amended by this Amendment No. 2.

3.3 Adequate Consideration. The Parties hereto irrevocably stipulate and agree that they have each received adequate and independent consideration for the performance of the obligations they have undertaken pursuant to this Amendment No. 2.

3.4 Severability. If any portion of this Amendment No. 2 is declared invalid, illegal, or otherwise unenforceable by a court of competent jurisdiction, the remaining provisions shall continue in full force and effect.

3.5 Integration. This Amendment represents the entirety of the Parties' understanding relating to the subject of this Amendment, including written or verbal communications between the Parties, which shall have no relevance unless expressly incorporated herein. This is an integrated amendment.

***Annual License cost are negotiated on an annual basis and will not exceed 5%.**

Notes: Exhibit B to the Agreement is supplemented with Exhibits B-1, B-2, B-3, B4, and B-5 to this Amendment.

CITY OF ONTARIO *Agenda Report* **March 19, 2024**	**SECTION:** **CONSENT CALENDAR**
Department: City Manager's Office Prepared By: Jordan T Villwock Staff Member Presenting: Darlene M. Sanchez, Assistant City Manager Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 14

SUBJECT: ACCEPTANCE OF FUNDING FROM THE COUNTY OF SAN BERNARDINO WHICH WILL BE PASSED THROUGH TO THE LEAVEN KIDS FOUNDATION FOR EDUCATION RESOURCES AND PROGRAMS TO SUPPORT AT-RISK YOUTH

RECOMMENDATION: That the City Council authorize the City Manager or designee to execute all documents necessary to accept funding from the County of San Bernardino in the amount of $200,000 to be passed through to the Leaven Kids Foundation for education resources and programs to support at-risk youth.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Pursue City's Goals and Objectives by Working with Other Governmental Agencies

FISCAL IMPACT: Additional appropriations of $200,000 will be included in the General Fund on the next quarterly budget update as well as the corresponding reimbursement revenue of $200,000.

BACKGROUND & ANALYSIS: The Board of Supervisors work with community partners through services provided by San Bernardino County to identify programs, projects, and initiatives. The County is providing the City of Ontario with $200,000 to pass through to the Leaven Kids Foundation to use towards educational resources and programs throughout the City to support at-risk youth.

The City of Ontario is committed to empowering underserved children within our community by providing them with educational resources, mentorship, and a safe and supportive environment to help them excel in school and reach their full potential. The funding from the County of San Bernardino will help to provide additional resources available at our centers. These funds will be allocated towards the following initiatives:

- Expand our outreach efforts to engage more at-risk youth in the community
- Enhance our academic support services, including tutoring and homework assistance
- Develop and implement mentorship programs to pair at-risk youth with positive adult role models
- Offer recreational activities to foster social connections

IT IS HEREBY AGREED AS FOLLOWS*:*

WHEREAS, it is the policy of the Board of Supervisors (Board) to work with community partners through services provided by San Bernardino County (County) and contractual agreements to identify programs, projects, and initiatives, that support the mission of the County, and to provide services to citizens that promote health, safety, economic well-being, education, recreation, and other public services that enhance quality of life, and meet the needs of the County's citizens; and

WHEREAS, under Government Code sections 26224 and 26227 the Board may contract with certain entities to provide certain services to County residents; and

WHEREAS, on September 21, 2021 (Item No. 18), the Board approved the Board of Supervisors Discretionary Fund – District Specific Priorities Program (Priorities Program) and allocated $4 million to each of the five supervisorial districts; and

WHEREAS, on November 16, 2021 (Item No. 33), the Board approved an additional allocation of $7 million to each of the five supervisorial districts under the Priorities Program; and

WHEREAS, on February 6, 2024 (Item No.61), the Board approved an additional allocation of $6 million to each of the five supervisorial districts under the Priorities Program; and

WHEREAS, County desires to provide funding to the City of Ontario (City or Contractor) towards educational resources and programs throughout the City to support at-risk youth; and

WHEREAS, the County would like the City to provide these services; and

WHEREAS, the County finds Contractor qualified to provide educational resources and programs to at-risk youth; and

WHEREAS, providing funding to Contractor serves the public purpose of providing for the educational, health, safety, and social service needs of residents; and

WHEREAS, the residents of the City and the surrounding communities of the Fourth District will be served by efforts to support at-risk youth through educational resources and programs; and

WHEREAS, the County desires that such services be provided by Contractor and Contractor agrees to perform these services as set forth below.

NOW, THEREFORE, the County and Contractor mutually agree to the following terms and conditions:

A. PURPOSE OF CONTRACT

This contract (the Contract) is made for the purpose of providing funding to support Contractor in providing educational resources and programs for at-risk youth to meet the needs of the residents of the City and surrounding communities (Services).

B. CONTRACTOR RESPONSIBILITIES AND SCOPE OF SERVICES

B.1 Funding arising out of this Contract will be used for a Scope of Services to provide funding towards the following educational resources and programs throughout the City to support at-risk youth:

1. Expand outreach efforts to engage more at-risk youth in the community.
2. Enhance academic support services, including tutoring and homework assistance.
3. Develop and implement mentorship programs to pair at-risk youth with positive adult role models.
4. Provide recreational activities to foster social connections.

B.2 Contractor shall allow the County, its officers, agents and employees the privilege and right to on-site inspection of the offices in the City used to provide the educational resources and programs to at-risk youth for the duration of this Contract. Contractor will ensure that its employees or agents furnish any information that in the judgment of the County, may be relevant to a question of compliance with contractual conditions, or the effectiveness, legality, and achievements of the program.

B.3 Contractor shall provide the County all documentation regarding the scope of services covered by this Contract that the County requests from Contractor within 10 days of County's request unless a different time is agreed to, in writing by the City and County.

B.4 Contractor shall provide the County with documentation supporting completion of the Services within 60 days of completion of the Services.

C. GENERAL CONTRACT REQUIREMENTS

C.1 Recitals

The recitals set forth above are true and correct and incorporated herein by this reference.

C.2 Contract Amendments

Contractor agrees any alterations, variations, modifications, or waivers of the provisions of the Contract, shall be valid only when reduced to writing, executed and attached to the original Contract and approved by the person(s) authorized to do so on behalf of Contractor and County.

C.3 Contract Assignability

Without the prior written consent of the County, the Contract is not assignable by Contractor either in whole or in part. Any attempt by Contractor to assign any performance of the terms of this Contract shall be null and void and shall constitute a material breach of this Contract.

C.4 Contract Exclusivity

This is not an exclusive Contract. The County reserves the right to enter into a contract with other contractors for the same or similar services. The County does not guarantee or represent that the Contractor will be permitted to perform any minimum amount of work, or receive compensation other than on a per order basis, under the terms of this Contract.

C.5 Attorney's Fees and Costs

If any legal action is instituted to enforce any party's rights hereunder, each party shall bear its own costs and attorney fees, regardless of who is the prevailing party. This paragraph shall not apply to those costs and attorney fees directly arising from a third-party legal action against a party hereto and payable under Indemnification and Insurance Requirements.

C.6 Background Checks for Contractor Personnel

Contractor shall ensure that its personnel (a) are authorized to work in the jurisdiction in which they are assigned to perform Services; (b) do not use legal or illegal substances in any manner which will impact their ability to provide Services on behalf of the County; and (c) are not otherwise disqualified from performing the Services under applicable law. If requested by the County and not in violation of applicable law, Contractor shall conduct a background check, at Contractor's sole expense, on all its personnel providing Services. If requested by the County, Contractor shall provide the results of the background check of each individual to the County. Such background check shall be in the form generally used by Contractor in its initial hiring of employees or contracting for contractors or, as applicable, during the employment-screening process but must, at a minimum, have been performed within the preceding 12-month period. Contractor personnel who do not meet the County's hiring criteria, in County's sole discretion, shall not be assigned to work on County property or Services, and County shall have the right, at its sole option, to refuse access to any Contractor personnel to any County facility.

C.7 Change of Address

Contractor shall notify the County in writing, of any change in mailing address within ten (10) business days of the change.

C.8 Choice of Law

This Contract shall be governed by and construed according to the laws of the State of California.

C.9 Compliance with County Policy

In performing the Services and while at any County facilities, Contractor personnel (including subcontractors) shall (a) conduct themselves in a businesslike manner; (b) comply with the policies, procedures, and rules of the County regarding health and safety, and personal, professional and ethical conduct; (c) comply with the finance, accounting, banking, Internet, security, and/or other applicable standards, policies, practices, processes, procedures, and controls of the County; and (d) abide by all laws applicable to the County facilities and the provision of the Services, and all amendments and modifications to each of the documents listed in subsections (b), (c), and (d) (collectively, "County Policies"). County Policies, and additions or modifications thereto, may be communicated orally or in writing to Contractor or Contractor personnel or may be made available to Contractor or Contractor personnel by conspicuous posting at a County facility, electronic posting, or other means generally used by County to disseminate such information to its employees or contractors. Contractor shall be responsible for the promulgation and distribution of County Policies to Contractor personnel to the extent necessary and appropriate.

County shall have the right to require Contractor's employees, agents, representatives and

subcontractors to exhibit identification credentials issued by County in order to exercise any right of access under this Contract.

C.10 Confidentiality

Contractor and County shall protect from unauthorized use or disclosure names and other identifying information concerning persons receiving Services pursuant to this Contract, except for statistical information not identifying any participant. Contractor and County shall not use or disclose any identifying information for any other purpose other than carrying out the obligations under this Contract, except as may be otherwise required by law. This provision will remain in force even after the termination of the Contract.

C.11 Primary Point of Contact

Contractor will designate an individual to serve as the primary point of contact for the Contract. Contractor or designee must respond to County inquiries within two (2) business days. Contractor shall not change the primary contact without written acknowledgement to the County. Contractor will also designate a back-up point of contact in the event the primary contact is not available.

C.12 County Representative

The Fourth District Supervisor or his/her designee shall represent the County in all matters pertaining to the Services to be rendered under this Contract, including termination and assignment of this Contract, and shall be the final authority in all matters pertaining to the Services/Scope of Work by Contractor. Except as provided under Section D of this Contract, if this Contract was initially approved by the San Bernardino County Board of Supervisors, then the Board of Supervisors must approve all amendments to this Contract.

C.13 Damage to County Property

Contractor shall repair, or cause to be repaired, at its own cost, all damages to County vehicles, facilities, buildings or grounds caused by the willful or negligent acts of Contractor or its employees or agents. Such repairs shall be made immediately after Contractor becomes aware of such damage, but in no event later than thirty (30) days after the occurrence, unless the nature of the repair requires additional time for repair and in such event the time for repair will be agreed upon in writing by the Contractor and County.

If the Contractor fails to make timely repairs, the County may make any necessary repairs. The Contractor, as determined by the County, shall repay all costs incurred by the County for such repairs, by cash payment upon demand, or County may deduct such costs from any amounts due to the Contractor from the County, as determined at the County's sole discretion.

C.14 Debarment and Suspension

Contractor certifies that neither it nor its principals or subcontractors is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any federal department or agency. (See the following United States General Services Administration's System for Award Management website https://www.sam.gov). Contractor further certifies that if it or any of its subcontractors are business entities that must be registered with the California Secretary of State, they are registered and in good standing with the Secretary of State.

C.15 Drug and Alcohol Free Workplace

In recognition of individual rights to work in a safe, healthful and productive work place, as a material condition of this Contract, the Contractor agrees that the Contractor and the Contractor's employees, while performing Service for the County, on County property, or while using County equipment:

C.15.1 Shall not be in any way impaired because of being under the influence of alcohol or an illegal or controlled substance.

C.15.2 Shall not possess an open container of alcohol or consume alcohol or possess or be under the influence of an illegal or controlled substance.

C.15.3 Shall not sell, offer, or provide alcohol or an illegal or controlled substance to another person, except where Contractor or Contractor's employee who, as part of the performance of normal job duties and responsibilities, prescribes or administers medically prescribed drugs.

The Contractor shall inform all employees that are performing Service for the County on County property, or using County equipment, of the County's objective of a safe, healthful and productive work place and the prohibition of drug or alcohol use or impairment from same while performing such Service for the County.

The County may terminate for default or breach of this Contract and any other Contract the Contractor has with the County, if the Contractor or Contractor's employees are determined by the County not to be in compliance with above.

C.16 Duration of Terms

This Contract, and all of its terms and conditions, shall be binding upon and shall inure to the benefit of the heirs, executors, administrators, successors, and assigns of the respective parties, provided no such assignment is in violation of the provisions of this Contract.

C.17 Employment Discrimination

During the term of the Contract, Contractor shall not discriminate against any employee or applicant for employment because of race, religious creed, color, national origin, ancestry, physical disability, mental disability, medical condition, genetic information, marital status, sex, gender, gender identity, gender expression, sexual orientation, age, or military and veteran status. Contractor shall comply with Executive Orders 11246, 11375, 11625, 12138, 12432, 12250, 13672, Title VI and Title VII of the Civil Rights Act of 1964, the California Fair Employment and Housing Act and other applicable Federal, State and County laws and regulations and policies relating to equal employment and contracting opportunities, including laws and regulations hereafter enacted.

C.18 Environmental Requirements

In accordance with County Policy 11-08, the County prefers to acquire and use products with higher levels of post-consumer recycled content. Environmentally preferable goods and materials must perform satisfactorily and be available at a reasonable price. The County requires Contractor to use recycled paper for any printed or photocopied material created as a result of this Contract. Contractor is also required to use both sides of paper sheets for reports submitted to the County whenever practicable.

To assist the County in meeting the reporting requirements of the California Integrated Waste Management Act of 1989 (AB 939), Contractor must be able to annually report the County's environmentally preferable purchases. Contractor must also be able to report on environmentally preferable goods and materials used in the provision of their service to the County, utilizing a County approved form, to be provided by the County.

C.19 Improper Influence

Contractor shall make all reasonable efforts to ensure that no County officer or employee, whose position in the County enables him/her to influence any award of the Contract or any competing offer, shall have any direct or indirect financial interest resulting from the award of the Contract or shall have any relationship to the Contractor or officer or employee of the Contractor.

C.20 Improper Consideration

Contractor shall not offer (either directly or through an intermediary) any improper consideration such as, but not limited to cash, discounts, service, the provision of travel or entertainment, or any

items of value to any officer, employee or agent of the County in an attempt to secure favorable treatment regarding this Contract.

The County, by written notice, may immediately terminate this Contract if it determines that any improper consideration as described in the preceding paragraph was offered to any officer, employee or agent of the County with respect to the proposal and award process. This prohibition shall apply to any amendment, extension or evaluation process once a contract has been awarded.

Contractor shall immediately report any attempt by a County officer, employee or agent to solicit (either directly or through an intermediary) improper consideration from Contractor. The report shall be made to the supervisor or manager charged with supervision of the employee or the County Administrative Office. In the event of a termination under this provision, the County and the Contractor are entitled to pursue any available legal remedies.

C.21 Informal Dispute Resolution

In the event the County determines that Service is unsatisfactory, or in the event of any other dispute, claim, question or disagreement arising from or relating to this Contract or breach thereof, the parties hereto shall use their best efforts to settle the dispute, claim, question or disagreement. To this effect, they shall consult and negotiate with each other in good faith and, recognizing their mutual interests, attempt to reach a just and equitable solution satisfactory to both parties.

C.22 Legality and Severability

The parties' actions under the Contract shall comply with all applicable laws, rules, regulations, court orders and governmental agency orders. The provisions of this Contract are specifically made severable. If a provision of the Contract is terminated or held to be invalid, illegal or unenforceable by a court of competent jurisdiction, the validity, legality and enforceability of the remaining provisions shall remain in full effect.

C.23 Licenses, Permits and/or Certifications

Contractor shall ensure that it has all necessary licenses, permits and/or certifications required by the laws of Federal, State, County, and municipal laws, ordinances, rules and regulations. The Contractor shall maintain these licenses, permits and/or certifications in effect for the duration of this Contract. Contractor will notify County immediately of loss or suspension of any such licenses, permits and/or certifications. Failure to maintain a required license, permit and/or certification may result in immediate termination of this Contract.

C.24 Material Misstatement/Misrepresentation

If during the course of the administration of this Contract, the Contractor or the County determines that the other has made a material misstatement or misrepresentation or that materially inaccurate information has been provided to the other party, this Contract may be immediately terminated. If this Contract is terminated according to this provision, the terminating party is entitled to pursue any available legal remedies.

C.25 Mutual Covenants

The parties to this Contract mutually covenant to perform all of their obligations hereunder, to exercise all discretion and rights granted hereunder, and to give all consents in a reasonable manner consistent with the standards of "good faith" and "fair dealing".

C.26 Nondisclosure

Contractor shall hold as confidential and use reasonable care to prevent unauthorized access by, storage, disclosure, publication, dissemination to and/or use by third parties of, confidential information that is either: (1) provided by the County to Contractor or an agent of Contractor or otherwise made available to Contractor or Contractor's agent in connection with this Contract; or, (2) acquired, obtained, or learned by Contractor or an agent of Contractor in the performance of this Contract. For purposes of this provision, confidential information means any data, files, software,

information or materials in oral, electronic, tangible or intangible form and however stored, compiled or memorialize and includes, but is not limited to, technology infrastructure, architecture, financial data, trade secrets, equipment specifications, user lists, passwords, research data, and technology data.

C.27 Notice of Delays

Except as otherwise provided herein, when either party has knowledge that any actual or potential situation is delaying or threatens to delay the timely performance of this Contract, that party shall, within twenty-four (24) hours, give written notice thereof, including all relevant information with respect thereto, to the other party.

C.28 Ownership of Documents

All documents, data, products, graphics, computer programs and reports prepared by Contractor pursuant to the Contract shall be considered property of the County upon payment for Services (and products, if applicable). All such items shall be delivered to County at the completion of work under the Contract, subject to the requirements of Section IV–Term of the Contract. Unless otherwise directed by County, Contractor may retain copies of such items.

C.29 RESERVED.

C.30 Air, Water Pollution Control, Safety and Health

Contractor shall comply with all air pollution control, water pollution, safety and health ordinances and statutes, which apply to the work performed pursuant to this Contract.

C.31 Records

Contractor shall maintain all records and books pertaining to the delivery of Services under this Contract and demonstrate accountability for Contract performance in a reasonable manner agreed upon by the parties. All records shall be complete and current and comply with all Contract requirements. Failure to maintain acceptable records shall be considered grounds for withholding of payments for invoices submitted and/or termination of the Contract.

All records relating to the Contractor's personnel, consultants, subcontractors, Services/Scope of Work and expenses pertaining to this Contract shall be kept in a generally acceptable accounting format. Records should include primary source documents. Fiscal records shall be kept in accordance with Generally Accepted Accounting Principles and must account for all funds, tangible assets, revenue and expenditures. Fiscal records must comply with the appropriate Office of Management and Budget (OMB) Circulars, which state the administrative requirements, cost principles and other standards for accountancy.

C.32 Relationship of the Parties

Nothing contained in this Contract shall be construed as creating a joint venture, partnership, or employment arrangement between the parties hereto, nor shall either party have the right, power or authority to create an obligation or duty, expressed or implied, on behalf of the other party hereto.

C.33 Release of Information

No news releases, advertisements, public announcements or photographs arising out of the Contract or Contractor's relationship with County may be made or used without prior written approval of the County.

C.34 Representation of the County

In the performance of this Contract, Contractor, its agents and employees, shall act in an independent capacity and not as officers, employees, or agents of the San Bernardino County.

C.35 Strict Performance

Failure by a party to insist upon the strict performance of any of the provisions of this Contract by the other party, or the failure by a party to exercise its rights upon the default of the other party, shall not constitute a waiver of such party's right to insist and demand strict compliance by the other party with the terms of this Contract thereafter.

C.36 Subcontracting

Contractor shall obtain County's written consent, which County may withhold in its sole discretion, before entering into Contracts with or otherwise engaging any subcontractors who may supply any part of the Services to County. At County's request, Contractor shall provide information regarding the subcontractor's qualifications and a listing of a subcontractor's key personnel including, if requested by the County, resumes of proposed subcontractor personnel. Contractor shall remain directly responsible to County for its subcontractors and shall indemnify County for the actions or omissions of its subcontractors under the terms and conditions specified in Section G. All approved subcontractors shall be subject to the provisions of this Contract applicable to Contractor personnel.

For any subcontractor, Contractor shall:

C.36.1 Be responsible for subcontractor compliance with the Contract and the subcontract terms and conditions; and

C.36.2 Ensure that the subcontractor follows County's reporting formats and procedures as specified by County.

C.36.3 Include in the subcontractor's subcontract substantially similar terms as are provided in Sections B. Contractor Responsibilities and C. General Contract Requirements.

Upon expiration or termination of this Contract for any reason, County will have the right to enter into direct contracts with any of the subcontractors. Contractor agrees that its arrangements with Subcontractors will not prohibit or restrict such subcontractors from entering into direct contracts with County.

C.37 Subpoena

In the event that a subpoena or other legal process commenced by a third party in any way concerning the Services provided under this Contract is served upon Contractor or County, such party agrees to notify the other party in the most expeditious fashion possible following receipt of such subpoena or other legal process. Contractor and County further agree to cooperate with the other party in any lawful effort by such other party to contest the legal validity of such subpoena or other legal process commenced by a third party as may be reasonably required and at the expense of the party to whom the legal process is directed, except as otherwise provided herein in connection with defense obligations by Contractor for County.

C.38 Termination for Convenience

The County and the Contractor each reserve the right to terminate the Contract, for any reason, with a thirty (30) day written notice of termination. Such termination may include all or part of the Services described herein. Upon such termination, payment will be made to the Contractor for Services rendered and expenses reasonably incurred prior to the effective date of termination. Upon receipt of termination notice Contractor shall promptly discontinue Services unless the notice directs otherwise. Contractor shall deliver promptly to County and transfer title (if necessary) all completed work, and work in progress, including drafts, documents, plans, forms, data, products, graphics, computer programs and reports.

County may immediately terminate this Contract upon the termination, suspension, discontinuation or substantial reduction in County funding for the Contract activity or if for any reason the timely completion of the scope of work described in Section A or B under this Contract is rendered improbable, infeasible or impossible. Upon such termination, payment will be made to the Contractor for Services rendered and expenses reasonably incurred prior to the effective date of termination.

Upon Contract termination, Contractor shall immediately transfer to County all County Funds on hand at the time of expiration , minus any payment due for Services rendered and expenses reasonably incurred prior to the effective date of termination, and any accounts receivable attributable to the use of County Funds.

C.39 Time of the Essence

Time is of the essence in performance of this Contract and of each of its provisions.

C.40 Venue

The parties acknowledge and agree that this Contract was entered into and intended to be performed in San Bernardino County, California. The parties agree that the venue of any action or claim brought by any party to this Contract will be the Superior Court of California, San Bernardino County, San Bernardino District. Each party hereby waives any law or rule of the court, which would allow them to request or demand a change of venue. If any action or claim concerning this Contract is brought by any third party and filed in another venue, the parties hereto agree to use their best efforts to obtain a change of venue to the Superior Court of California, San Bernardino County, San Bernardino District.

C.41 Conflict of Interest

Contractor shall make all reasonable efforts to ensure that no conflict of interest exists between its officers, employees, or subcontractors and the County. Contractor shall make a reasonable effort to prevent employees, Contractor, or members of governing bodies from using their positions for purposes that are, or give the appearance of being motivated by a desire for private gain for themselves or others such as those with whom they have family business, or other ties. Officers, employees, and agents of cities, counties, districts, and other local agencies are subject to applicable conflict of interest codes and state law. In the event the County determines a conflict of interest situation exists, any increase in costs, associated with the conflict of interest situation, may be disallowed by the County and such conflict may constitute grounds for termination of the Contract. This provision shall not be construed to prohibit employment of persons with whom Contractor's officers, employees, or agents have family, business, or other ties so long as the employment of such persons does not result in increased costs over those associated with the employment of any other equally qualified applicant.

C.42 Former County Administrative Officials

Contractor agrees to provide, or has already provided information on former San Bernardino County administrative officials (as defined below) who are employed by or represent Contractor. The information provided includes a list of former County administrative officials who terminated County employment within the last five years and who are now officers, principals, partners, associates or members of the Contractor. The information also includes the employment with or representation of Contractor. For purposes of this provision, "County administrative official" is defined as a member of the Board of Supervisors or such officer's staff, County Executive Officer or member of such officer's staff, County department or group head, assistant department or group head, or any employee in the Exempt Group, Management Unit or Safety Management Unit.

C.43 Disclosure of Criminal and Civil Procedures

The County reserves the right to request the information described herein from the Contractor. Failure to provide the information may result in a termination of the Contract. The County also reserves the right to obtain the requested information by way of a background check performed by an investigative firm. The Contractor also may be requested to provide information to clarify initial responses. Negative information discovered may result in Contract termination.

Contractor is required to disclose whether the City, or any of its partners, principals, members, associates or key employees (as that term is defined herein), within the last ten years, has been indicted on or had charges brought against it or them (if still pending) or convicted of any crime or offense arising directly or indirectly from the conduct of the City's business, or whether the City,

or any of its partners, principals, members, associates or key employees, has within the last ten years, been indicted on or had charges brought against it or them (if still pending) or convicted of any crime or offense involving financial misconduct or fraud. If the response is affirmative, the Contractor will be asked to describe any such indictments or charges (and the status thereof), convictions and the surrounding circumstances in detail.

In addition, the Contractor is required to disclose whether the City, or any of its partners, principals, members, associates or key employees, within the last ten years, has been the subject of legal proceedings as defined herein arising directly from the provision of services by the City or those individuals. "Legal proceedings" means any civil actions filed in a court of competent jurisdiction, or any matters filed by an administrative or regulatory body with jurisdiction over the City or the individuals. If the response is affirmative, the Contractor will be asked to describe any such legal proceedings (and the status and disposition thereof) and the surrounding circumstances in detail.

For purposes of this provision "key employees" includes any individuals providing direct service to the County. "Key employees" do not include clerical personnel providing service at the City's offices or locations.

C.44 Copyright

County shall have a royalty-free, non-exclusive and irrevocable license to publish, disclose, copy, translate, and otherwise use, copyright or patent, now and hereafter, all reports, studies, information, data, statistics, forms, designs, plans, procedures, systems, and any other materials or properties developed under this Contract including those covered by copyright, and reserves the right to authorize others to use or reproduce such material. All such materials developed under the terms of this Contract shall acknowledge the San Bernardino County as the funding agency and Contractor as the creator of the publication. No such materials, or properties produced in whole or in part under this Contract shall be subject to private use, copyright or patent right by Contractor in the United States or in any other country without the express written consent of County. Copies of all educational and training materials, curricula, audio/visual aids, printer material, and periodicals, assembled pursuant to this Contract must be filed with the County prior to publication.

C.45 Artwork, Proofs and Negatives

All artwork, proofs, and/or negatives in either print or digital format for anything produced under the terms of this Contract are the property of the County. These items must be returned to the County within ten (10) days, upon written notification to the Contractor. In the event of a failure to return the documents, the County is entitled to pursue any available legal remedies. In addition, the Contractor will be barred from all future solicitations, for a period of at least six (6) months.

C.46 Reserved

C.47 California Consumer Privacy Act

To the extent applicable, if Contractor is a business that collects the personal information of a consumer(s) in performing Services pursuant to this Contract, Contractor must comply with the provisions of the California Consumer Privacy Act (CCPA). (Cal. Civil Code §§1798.100, et seq.). For purposes of this provision, "business," "consumer," and "personal information" shall have the same meanings as set forth at Civil Code section 1798.140. Contractor must contact the County immediately upon receipt of any request by a consumer submitted pursuant to the CCPA that requires any action on the part of the County, including but not limited to, providing a list of disclosures or deleting personal information. Contractor must not sell, market or otherwise disclose personal information of a consumer provided by the County unless specifically authorized pursuant to terms of this Contract. Contractor must immediately provide to the County any notice provided by a consumer to Contractor pursuant to Civil Code section 1798.150(b) alleging a violation of the CCPA, that involves personal information received or maintained pursuant to this

Contract. Contractor must immediately notify the County if it receives a notice of violation from the California Attorney General pursuant to Civil Code section 1798.155(b).

D. TERM OF CONTRACT

The Services to be provided by Contractor shall commence on March 26, 2024, and shall be completed by March 25, 2025, but may be terminated earlier in accordance with provisions of this Contract.

The County Chief Executive Officer, at the direction of the Fourth District Supervisor, may extend the term of the Contract, in writing, to allow Contractor to complete all requirements in the Contract under the following conditions:

a. In aggregate all extensions do not exceed twelve (12) calendar months;
b. Are specifically requested by Contractor;
c. Will not change the project goals or scope of services;
d. Are in the best interests of County and Contractor in performing the scope of services under this Contract; and
e. Do not alter the amount of compensation under this Contract.

E. RESERVED.

F. FISCAL PROVISIONS

F.1 The maximum amount of payment under this Contract shall not exceed $200,000. The consideration to be paid to Contractor, as provided herein, shall be in full payment for Contractor providing the Services and all expenses incurred in the performance hereof, including travel and per diem.

F.2 Any costs in excess of the amount available in this section shall be the sole responsibility of Contractor. However, Contractor shall not be obligated to perform any Services or to incur any additional expenses in excess of the amount available in this section and a refusal not to perform due to a lack of funds shall not constitute a breach of this Contract. This condition however, does not preclude County from providing additional funding at its sole discretion. For the purpose of this Contract, County shall disburse compensation and monitor the Contractor's performance in satisfying the scope of work obligations under the terms of this Contract.

Disbursement of funds to Contractor shall be made in one lump sum. Upon review/approval by County, County shall make payment to Contractor within thirty (30) working days after receipt of Contractor's invoice or the resolution of any billing dispute. Contractor shall email County the Contractor's invoice requesting one lump sum payment. The invoice(s) shall reflect the Entity Payable To Name and Address, Invoice Date, Invoice Number, Project Name, Contract Number, County-Issued Purchase Order (if applicable), the text "Final Invoice", amount due, in a format acceptable to the County for the Services performed under this Contract. Contractor shall email invoice to County Administrative Office-Finance and Administration (County Finance) and shall include in the Subject Line: BOS – ENTITY NAME – PROJECT NAME – CONTRACT NUMBER – PO # [PURCHASE ORDER NUMBER]" (i.e. BOS-SAN BERNARDINO COUNTY-EDUCATION PROGRAM — 21-NNN – PO 4100NNNNNN).

Contractor shall submit a final expenditure report documented with "audit ready" supportive evidence of each expenditure and proof of payment until all funds have been justified 60 days after Service completion. Documentation shall be submitted electronically, and Contractor shall supply hard copies upon request by County. Supportive evidence shall include, but is not limited to, copy of County's approval email to Contractor, quotes, copy(ies) of purchase order, packing slips, **a copy** of the invoice submitted by Contractor requesting one lump sum payment from County, invoices paid by the Contractor for the Service, proof of payment, etc., to County Finance. Email to County Finance shall include in the Subject Line: BOS – ENTITY NAME – PROJECT NAME – CONTRACT NUMBER – PO # [PURCHASE ORDER NUMBER]"-SUPPORTIVE DOCUMENTS.

F.3 Contractor shall accept all payments from County via electronic funds transfer (EFT) directly deposited into the Contractor's designated checking or other bank account. Contractor shall promptly comply with directions and accurately complete forms provided by County required to process EFT payments.

F.4 County is exempt from Federal excise taxes and no payment shall be made for any personal property taxes levied on Contractor or on any taxes levied on employee wages. The County shall only pay for any State or local sales or use taxes on the Services rendered or equipment and/or parts supplied to the County pursuant to the Contract.

F.5 Costs for Services under the terms of this Contract shall be incurred during the contract period except as approved by County. Contractor shall not use current year funds to pay prior or future year obligations.

F.6 Funds made available under this Contract shall not supplant any federal, state or any governmental funds intended for services of the same nature as this Contract. Contractor shall not claim reimbursement or payment from County for, or apply sums received from County with respect to that portion of its obligations that have been paid by another source of revenue. Contractor agrees that it will not use funds received pursuant to this Contract, either directly or indirectly, as a contribution or compensation for purposes of obtaining funds from another revenue source without prior written approval of the County.

F.7 Contractor shall adhere to the County's Travel Management Policy (8-02 and 08-02SP1, a copy of which to be provided by County) when travel is pursuant to this Contract and for which reimbursement is sought from the County. In addition, Contractor is encouraged to utilize local transportation services, including but not limited to, the Ontario International Airport.

F.8 Contractor understands and agrees that any and all legal fees or costs associated with lawsuits concerning this Contract against the County shall be the Contractor's sole expense and shall not be charged as a cost under this Contract.

F.9 If the Contractor does not use the County funds provided under this Contract to pay appropriate costs associated with the Scope of Services by the termination date of this Contract, the Contractor shall return the County funds, or any unused portion thereof, to the County in accordance with any directions issued by County staff, within 60 days of written demand for the return of the County funds.

G. INDEMNIFICATION AND INSURANCE REQUIREMENTS

G.1 Indemnification

The Contractor agrees to indemnify, defend (with counsel reasonably approved by County) and hold harmless the County and its authorized officers, employees, agents and volunteers from any and all claims, actions, losses, damages and/or liability arising out of this Contract from any cause whatsoever, including the acts, errors or omissions of any person and for any costs or expenses incurred by the County on account of any claim except where such indemnification is prohibited by law. This indemnification provision shall apply regardless of the existence or degree of fault of indemnities. The Contractor indemnification obligation applies to the County's "active" as well as "passive" negligence but does not apply to the County's "sole negligence" or "willful misconduct" within the meaning of Civil Code section 2782.

The County agrees to indemnify, defend (with counsel reasonably approved by Contractor) and hold harmless the Contractor and its authorized officers, employees, agents and volunteers from any and all claims, actions, losses, damages and/or liability arising out of this Contract from any cause whatsoever, including the acts, errors or omissions of any person and for any costs or expenses incurred by the Contractor on account of any claim except where such indemnification is prohibited by law. This indemnification provision shall apply regardless of the existence or degree of fault of indemnities. The County indemnification obligation applies to the Contractor's

"active" as well as "passive" negligence but does not apply to the Contractor's "sole negligence" or "willful misconduct" within the meaning of Civil Code section 2782.

G.2 Additional Insured

All policies, except for Worker's Compensation, Errors and Omissions and Professional Liability policies shall contain additional endorsements naming the County and its officers, employees, agents and volunteers as additional named insured with respect to liabilities arising out of the performance of Services hereunder. The additional insured endorsements shall not limit the scope of coverage for the County to vicarious liability but shall allow coverage for the County to the full extent provided by the policy. Such additional insured coverage shall be at least as broad as Additional Insured (Form B) endorsement form ISO, CG 2010.11 85.

G.3 Waiver of Subrogation Rights

The Contractor shall require the carriers of required coverages to waive all rights of subrogation against the County, its officers, employees, agents, volunteers, contractors and subcontractors. All general or auto liability insurance coverage provided shall not prohibit the Contractor and Contractor's employees or agents from waiving the right of subrogation prior to a loss or claim. The Contractor hereby waives all rights of subrogation against the County.

G.4 Policies Primary and Non-Contributory

All policies required herein are to be primary and non-contributory with any insurance or self-insurance programs carried or administered by the County.

G.5 Severability of Interests

The Contractor agrees to ensure that coverage provided to meet these requirements is applicable separately to each insured and there will be no cross liability exclusions that preclude coverage for suits between the Contractor and the County or between the County and any other insured or additional insured under the policy.

G.6 Proof of Coverage

The Contractor shall furnish Certificates of Insurance to the County Department administering the Contract evidencing the insurance coverage at the time the Contract is executed, additional endorsements, as required shall be provided prior to the commencement of performance of Services hereunder, which certificates shall provide that such insurance shall not be terminated or expire without thirty (30) days written notice to the Department, and Contractor shall maintain such insurance from the time Contractor commences performance of Services hereunder until the completion of such Services. Within fifteen (15) days of the commencement of this Contract, the Contractor shall furnish a copy of the Declaration page for all applicable policies and will provide complete certified copies of the policies and endorsements immediately upon request.

G.7 Acceptability of Insurance Carrier

Unless otherwise approved by Risk Management, insurance shall be written by insurers authorized to do business in the State of California and with a minimum "Best" Insurance Guide rating of "A- VII".

G.8 Deductibles and Self-Insured Retention

Any and all deductibles or self-insured retentions in excess of $10,000 shall be declared to and approved by Risk Management.

G.9 Failure to Procure Coverage

In the event that any policy of insurance required under this Contract does not comply with the requirements, is not procured, or is canceled and not replaced, the County has the right but not the obligation or duty to cancel the Contract or obtain insurance if it deems necessary and any premiums paid by the County will be promptly reimbursed by the Contractor or County payments to the Contractor will be reduced to pay for County purchased insurance.

G.10 Insurance Review

Insurance requirements are subject to periodic review by the County. The Director of Risk Management or designee is authorized, but not required, to reduce, waive or suspend any insurance requirements whenever Risk Management determines that any of the required insurance is not available, is unreasonably priced, or is not needed to protect the interests of the County. In addition, if the Department of Risk Management determines that heretofore unreasonably priced or unavailable types of insurance coverage or coverage limits become reasonably priced or available, the Director of Risk Management or designee is authorized, but not required, to change the above insurance requirements to require additional types of insurance coverage or higher coverage limits (not to exceed what is included herein), provided that any such change is reasonable in light of past claims against the County, inflation, or any other item reasonably related to the County's risk.

Any change requiring additional types of insurance coverage or higher coverage limits must be made by amendment to this Agreement and agreed upon by both parties. Contractor agrees to execute any such amendment within thirty (30) days of receipt.

Any failure, actual or alleged, on the part of the County to monitor or enforce compliance with any of the insurance and indemnification requirements will not be deemed as a waiver of any rights on the part of the County.

G.11 The Contractor agrees to provide insurance set forth in accordance with the requirements herein. If the Contractor uses existing coverage to comply with these requirements and that coverage does not meet the specified requirements, the Contractor agrees to amend, supplement or endorse the existing coverage to do so.

Without in anyway affecting the indemnity herein provided and in addition thereto, the Contractor shall secure and maintain throughout the contract term the following types of insurance with limits as shown:

G.11.1 Workers' Compensation/Employer's Liability – A program of Workers' Compensation insurance or a state-approved, self-insurance program in an amount and form to meet all applicable requirements of the Labor Code of the State of California, including Employer's Liability with $250,000 limits covering all persons including volunteers providing services on behalf of the Contractor and all risks to such persons under this contract.

If Contractor has no employees, it may certify or warrant to the County that it does not currently have any employees or individuals who are defined as "employees" under the Labor Code and the requirement for Workers' Compensation coverage will be waived by the County's Director of Risk Management.

With respect to Contractors that are non-profit corporations organized under California or Federal law, volunteers for such entities are required to be covered by Workers' Compensation insurance.

G.11.2 Commercial/General Liability Insurance – The Contractor shall carry General Liability Insurance covering all operations performed by or on behalf of the Contractor providing coverage for bodily injury and property damage with a combined single limit of not less than one million dollars ($1,000,000), per occurrence. The policy coverage shall include:

a. Premises operations and mobile equipment.
b. Products and completed operations.
c. Broad form property damage (including completed operations).
d. Explosion, collapse and underground hazards.
e. Personal injury.

f. Contractual liability.
g. $2,000,000 general aggregate limit.

G.11.3 Automobile Liability Insurance – Primary insurance coverage shall be written on ISO Business Auto coverage form for all owned, hired and non-owned automobiles or symbol 1 (any auto). The policy shall have a combined single limit of not less than one million dollars ($1,000,000) for bodily injury and property damage, per occurrence.

If the Contractor is transporting one or more non-employee passengers in performance of contract services, the automobile liability policy shall have a combined single limit of two million dollars ($2,000,000) for bodily injury and property damage per occurrence.

If the Contractor owns no autos, a non-owned auto endorsement to the General Liability policy described above is acceptable.

G.11.4 Umbrella Liability Insurance – An umbrella (over primary) or excess policy may be used to comply with limits or other primary coverage requirements. When used, the umbrella policy shall apply to bodily injury/property damage, personal injury/advertising injury and shall include a "dropdown" provision providing primary coverage for any liability not covered by the primary policy. The coverage shall also apply to automobile liability.

G.11.5 **Abuse/Molestation Insurance** – Contractor shall have abuse or molestation insurance providing coverage for all employees for the actual or threatened abuse or molestation by anyone of any person in the care, custody, or control of any insured, including negligent employment, investigation and supervision. The policy shall provide coverage for both defense and indemnity with liability limits of not less than one million dollars ($1,000,000) with a two million dollars ($2,000,000) aggregate limit.

H. RIGHT TO MONITOR AND AUDIT

H.1 The County, State and Federal government shall have absolute right to review and audit all records, books, papers, documents, corporate minutes, and other pertinent items as requested, and shall have absolute right to monitor the performance of Contractor in the delivery of Services provided under this Contract. Contractor shall give full cooperation, in any auditing or monitoring conducted. Contractor shall cooperate with the County in the implementation, monitoring, and evaluation of this Contract and comply with any and all reporting requirements established by the County.

H.2 All records pertaining to Services delivered and all fiscal, statistical and management books and records shall be available for examination and audit by County representatives for a period of three years after final payment under this Contract or until all pending County, State and Federal audits are completed, whichever is later.

I. CORRECTION OF PERFORMANCE DEFICIENCIES

I.1 Failure by Contractor or County to comply with any of the provisions, covenants, requirements or conditions of this Contract shall be a material breach of this Contract.

I.2 In the event of a non-cured breach, either party may, at its sole discretion and in addition to any other remedies available at law, in equity, or otherwise specified in this Contract:

a. Afford the other party thereafter a time period within which to cure the breach, which period shall be established at the sole discretion of the nonbreaching party; and/or
b. Discontinue reimbursement to Contractor for and during the period in which Contractor is in breach, which reimbursement shall be entitled to later recovery upon satisfactory cure of such breach; and/or
c. Withhold funds pending duration of the breach; and/or

d. Terminate this Contract immediately and be relieved of the payment of any consideration to Contractor, except for Services rendered and expenses incurred at time of termination. In the event of such termination, the County may proceed with the work in any manner deemed proper by the County.

J. NOTICES

All written notices provided for in this Contract or which either party desires to give to the other shall be deemed fully given, when made in writing and either served personally, or by facsimile, or deposited in the United States mail, postage prepaid, and addressed to the other party as follows:

San Bernardino County CAO – Finance and Administration 385 N. Arrowhead Ave., Fourth Floor San Bernardino, CA 92415 Attn: BOS Finance Analyst	City of Ontario 303 East B Street Ontario, CA 91761 Attn: Jordan Villwock, Management Services Director

Notice shall be deemed communicated two (2) County working days from the time of mailing if mailed as provided in this paragraph.

K. ENTIRE AGREEMENT

This Contract, including all Exhibits and other attachments, which are attached hereto and incorporated by reference, and other documents incorporated herein, represents the final, complete and exclusive agreement between the parties hereto. Any prior agreement, promises, negotiations or representations relating to the subject matter of this Contract not expressly set forth herein are of no force or effect. This Contract is executed without reliance upon any promise, warranty or representation by any party or any representative of any party other than those expressly contained herein. Each party has carefully read this Contract and signs the same of its own free will.

L. CONTRACT EXECUTION

This Contract may be executed in any number of counterparts, each of which so executed shall be deemed to be an original, and such counterparts shall together constitute one and the same Contract. The parties shall be entitled to sign and transmit an electronic signature of this Contract (whether by facsimile, PDF or other email transmission), which signature shall be binding on the party whose name is contained therein. Each party providing an electronic signature agrees to promptly execute and deliver to the other party an original signed Contract upon request.

IN WITNESS WHEREOF, the San Bernardino County and the Contractor have each caused this Contract to be subscribed by its respective duly authorized officers, on its behalf.

CITY OF ONTARIO *Agenda Report* **March 19, 2024**	**SECTION:** **PUBLIC HEARINGS**
Department: Planning Prepared By: Diane Ayala Staff Member Presenting: Scott Murphy, Executive Director Community Development Reviewed By: Kimberly Ruddins, Henry Noh Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 15

SUBJECT: **A PUBLIC HEARING TO CONSIDER FILE NO. PUD23-002, A PLANNED UNIT DEVELOPMENT FOR A 1.22-ACRE PARCEL OF LAND LOCATED AT 218 EAST D STREET; SUBMITTED BY EUCLID INVESTMENT GROUP, LLC.**

RECOMMENDATION: That the City Council introduce and waive further reading of an Ordinance Approving File No. PUD23-002, the Downtown Ontario Luxury Apartments (Phase II) Planned Unit Development, establishing development standards and design guidelines to facilitate a multiple-family residential development at 218 East D Street.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Operate in a Businesslike Manner
Focus Resources in Ontario's Commercial and Residential Neighborhoods

FISCAL IMPACT: There is not a direct fiscal impact associated with this action. Implementation of the Planned Unit Development would result in an increase in property taxes from future development and the one-time payment to the City for plan check fees and development impacts fees.

BACKGROUND & ANALYSIS: On July 14, 2023, Euclid Investment Group, LLC., filed a Planned Unit Development ("PUD") application, File No. PUD23-002, in conjunction with a Development Plan, File No. PDEV23-017, to facilitate the construction and operation of 69 multiple-family residential units.

The Project site is comprised of 1.22 acres of land located on the south side of D Street, west of Plum Avenue, and east of Lemon Avenue at 218 East D Street. The site is within the MU-1 (Downtown Mixed Use) zoning district and is presently improved with a paved public parking lot. The property south across the public alley is within the Civic (Civ) zoning district and is developed with the Ovitt Family Community Library. The property to the north is within the OL (Office Light) and MDR-18 (Medium Density Residential) zoning districts and is developed with a mixture of commercial and residential land uses. The property to the east is within the MU-1 (Mixed Use Downtown) zoning district and is developed with the University of La Verne. The properties to the

west are within the MU-1 (Mixed Use Downtown) zoning district and are developed with a public parking structure and the Downtown Ontario Luxury Apartments (Phase I), which is currently under construction.

The Policy Plan (General Plan) of The Ontario Plan (TOP) specifies that the development of the Downtown Mixed-Use area is to be implemented through the approval of an Area Plan or PUD prior to the development of the properties. In compliance with this requirement, the Applicant has submitted the Downtown Ontario Luxury Apartments PUD (included as Attachment A to the Ordinance), which is consistent with the vision, goals, and policies of the Policy Plan. A PUD is comparable to a Specific Plan in that it establishes development regulations that are unique to a specific area. However, unlike a Specific Plan, a Planned Unit Development is typically intended to apply to a single development project or several interrelated development projects that function together as a single, comprehensive project.

PLANNED UNIT DEVELOPMENT: Key components of the PUD include the following:

Land Use and Development Regulations — The MU-1 (Downtown Mixed Use) zoning district allows for residential development at a density of 25.1 to 75 dwelling units per acre. Consistent with the MU-1 zoning district and TOP Downtown District Place Type, the PUD allows for residential development of 30 to 91 dwelling units, with a maximum building height of 40 feet (3 stories) and up to 55 feet for architectural projections.

Landscaping — The landscaping concept is centered around the use of sustainable and low water use plant materials. As an example, varying species of evergreen and deciduous trees with interest in form and foliage color may be integrated into the landscape design. Pattern and planting should accentuate the common open space areas and create a visible connection to pedestrian pathways and sidewalks. The PUD also requires the landscaping and irrigation be drought tolerant and meet the current Water Use Classifications of Landscape Species requirements.

Parking and Circulation — In order to achieve the preferred density, the PUD encourages podium style residential development above ground floor structured parking for residents and guests.

Access to Mass Transit — An existing bus stop is located on the northeast corner of Euclid Avenue and D Street for Omnitrans Route 83. Additionally, located near Euclid Avenue on Holt Boulevard is Omnitrans Route 61 which has been identified as the future West Valley Connector Bus Rapid Transit (BRT), which is starting construction. A stop is planned for Holt Boulevard between Lemon and Plum Avenues.

Architectural Character — The PUD includes architectural design guidelines specific to the downtown location and residential building type and establishes the following design principles:

- Create an architectural character that reflects the various styles within the historic downtown by using similar proportions, building details and building material;

- New buildings should appear to fit in contextually with existing historic buildings by using similar proportions, articulation, building details and building material;

- The overall character should feel like a modern interpretation of a traditional American small town; and

- Create compatibility between the mixed-use architecture and the residential architecture within the downtown area; the introduction of unifying elements such as similar materials and colors should be considered; however, "sameness" is discouraged. As this is Phase 2 of the Downtown Ontario Luxury Apartments PUD, the architecture will utilize many of the similar/compatible elements and colors to those planned for Phase 1.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan. On April 19, 2011, the City Council approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

ENVIRONMENTAL REVIEW: The Project is categorically exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15332 (Class 32, In-fill Development Projects) of the CEQA Guidelines, and meets all the following conditions:

- The proposed Project is consistent with the applicable General Plan designation and all applicable General Plan policies as well as with applicable zoning designation and regulations. The proposed Project is located within the Downtown Mixed Use land use designation of the Policy Plan (General Plan) Land Use Map, and the MU-1 (Downtown Mixed Use) zoning district. The proposed Project is consistent with all applicable Policy Plan policies, as well as with the requirements of the MU-1 (Downtown Mixed Use) zoning district and the related proposed Downtown Ontario Luxury Apartments, Phase II Planned Unit Development, which, at the Project location, intends to accommodate housing units at a density of 25 to 75 du/ac.

• The proposed development occurs within city limits on a project site of no more than five acres substantially surrounded by urban uses. The Project is proposed within the established boundaries of the City of Ontario, on a project site totaling 1.22-acres of land, which is surrounded by established development on all sides and consists of a mix of multiple-family, civic, retail, and commercial land uses.

• The Project site has no value as habitat for endangered, rare, or threatened species. The site is located in an urbanized area, is devoid of any flora or fauna, is regularly used for passenger vehicle parking by library/City Hall patrons, retail customers, and neighboring residents, and, as such, is not suitable habitat for any endangered, rare, or threatened species.

• Approval of the Project would not result in any significant effects relating to traffic, noise, air quality, or water quality. The residential development is similar to, and of no greater impact than other allowed uses and development projects within the MU-1 (Downtown Mixed Use) zoning district. The Project would not result in any significant impacts through implementation of required state, regional, and local development and performance standards, and as demonstrated in the GHG and Traffic analysis, noise and parking studies, Arborist Report, and the Preliminary Water Quality Management Plan ("PWQMP") prepared for the Project.

• The site is adequately served by all required utilities and public services. All necessary wet and dry utilities are within the public street and are readily available for connection; and

• The application of the categorical exemption is not barred by one of the exceptions set forth in CEQA Guidelines Section 15300.2.

PLANNING COMMISSION REVIEW: On February 27, 2024, the Planning Commission conducted a public hearing to consider the Project and concluded the hearing on that date. After considering all public testimony on the application, the Planning Commission voted 6-0 to approve Resolution PC24-007, recommending that the City Council approve the PUD. At the same meeting, the Planning Commission approved the related Development Plan, contingent upon City Council approval of the PUD.

CITY OF ONTARIO PLANNING DEPARTMENT

PLANNING COMMISSION AGENDA REPORT

February 27, 2024

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

FILE NOS: PUD23-002 and PDEV23-017

SUBJECT: A public hearing to consider a Planned Unit Development (File No. PUD23-002) to establish development standards and design guidelines for the project site in conjunction with a Development Plan (File No. PDEV23-017) to construct 69 multiple-family dwellings on approximately 1.22 acres of land located at 218 East D Street, within the MU-1 (Downtown Mixed Use) zoning district. (APNs: 1048-556-01, 1048-556-02, 1048-556-03, 1048-556-04, 1048-556-05, and 1048-556-14); **submitted by Euclid Investment Group, LLC. City Council action is required for approval of File No. PUD23-002.**

PROPERTY OWNER: City of Ontario

RECOMMENDED ACTION: That the Planning Commission 1) consider and approve File No. PDEV23-017 and 2) recommend that the City Council adopt File No. PUD23-002 pursuant to the facts and reasons contained in the staff report and attached resolutions, and subject to the conditions of approval appended to the attached resolutions as "Attachment A."

PROJECT SETTING: The Project site is comprised of 1.22-acres of land located south of D Street, west of Plum Avenue, and east of Lemon Avenue at 218 East D Street, which is depicted in Exhibit A: Project Location Map, attached. The existing site is currently developed with a paved public parking lot. On the same block, across the public alley to the south, is the Ovitt Family Community Library, the University of La Verne is to the east, a mixture of commercial and residential land uses are to the north, and the C Street public parking structure is to the west. Also, to the west and currently under construction, is phase 1 of Downtown Ontario Luxury Apartments. Phase 1 is a new 4-story, mixed-use building consisting of 144 residential apartment units and approximately 4,500 square feet of ground floor commercial. The existing

Hearing Body	*Date*	*Decision*	*Action*
DAB	2/21/24	Approval	Recommend (File No. PDEV23-017)
PC	2/27/24	Approve Approval	Final (File No. PDEV23-017) Recommend (File No. PUD23-002)
CC	3/19/24		Final (File No. PUD23-002)

surrounding land uses, zoning, and Policy Plan (general plan) land use designations are summarized in the "Surrounding Zoning & Land Uses" table located in the Technical Appendix of this report.

PROJECT ANALYSIS:

(1) Background — On October 26, 2021, the Planning Commission approved Development Plan, File No. PDEV20-020, to construct the Downtown Ontario Luxury Apartments (phase 1) and construction began early in 2023. The development is expected to be fully operational by 2025.

On December 6, 2022, the City Council approved a Disposition and Development Agreement ("DDA") with the Applicant for a mutual benefit that would further The Ontario Plan (TOP) Policy Plan (general plan) goals of an intensive mixture of retail, office, and residential uses in a pedestrian friendly atmosphere, while ensuring that the historic character of the Downtown is preserved. The DDA includes requirements for the Applicant to adhere to certain deadlines for project entitlement and construction completion for the disposition of the property.

The Applicant has filed a request for approval of the Downtown Ontario Luxury Apartments, Phase II Planned Unit Development ("PUD"), File No. PUD23-002, and a Development Plan, File No. PDEV23-017. Final approval of the Development Plan is contingent upon the City Council adoption of the PUD for the Project site.

On February 21, 2024, the Development Advisory Board considered the subject Development Plan and recommended approval to the Planning Commission with conditions of approval.

(2) Planned Unit Development (File No. PUD23-002) — The MU-1 (Downtown Mixed-Use) zoning district, requires the preparation and approval of a PUD to establish the development standards and design guidelines for the site. The proposed Downtown Ontario Luxury Apartments, Phase II Planned Unit Development, appended to the attached resolution as "Attachment A," identifies the following components:

(a) Land Use and Development Regulations — The MU-1 (Downtown Mixed Use) zoning district allows for residential development at a density of 25.1 to 75 dwelling units per acre. Consistent with the MU-1 zoning district and TOP Downtown District Place Type, the PUD allows for residential development of 30 to 91 dwelling units, with a maximum building height of 40 feet (3 stories) and up to 55 feet for architectural projections.

(b) Landscaping — The landscaping concept is centered around the use of sustainable and low water use plant materials. As an example, varying species of evergreen and deciduous trees with interest in form and foliage color may be integrated in the landscape design. Pattern and planting should accentuate the common open space areas and create a visible connection to pedestrian pathways and sidewalks. The

PUD also requires the landscaping and irrigation be drought tolerant and meet the current Water Use Classifications of Landscape Species requirements.

(c) Parking and Circulation — In order to achieve the preferred density, the PUD encourages podium style residential development above ground floor structured parking for residents and guests.

(d) Access to Mass Transit — An existing bus stop is located on the northeast corner of Euclid Avenue and D Street for Omnitrans Route 83. Additionally, located near Euclid Avenue on Holt Boulevard is Omnitrans Route 61 which has been identified as the future West Valley Connector Bus Rapid Transit (BRT).

(e) Architectural Character — The PUD includes architectural design guidelines, specific to the downtown location and residential building type, and establishes the following design principles:

(i) Create an architectural character that reflects the various styles within the historic downtown by using similar proportions, building details and building material.

(ii) New buildings should appear to fit in contextually with existing historic buildings by using similar proportions, articulation, building details and building material.

(iii) The overall character should feel like a modern interpretation of a traditional American small town.

(iv) Create compatibility between the mixed-use architecture and the residential architecture within the downtown area; the introduction of unifying elements such as similar materials and colors should be considered; however, "sameness" is discouraged.

(3) Development Plan (File No. PDEV23-017)

(a) Site Design/Building Layout — The Project proposes the construction of one building consisting of 69 residential apartment units, at a density of 56.6 dwelling units per acre as depicted in Exhibit B: Site Plan, attached. The proposed rectangular-shaped building will have 3-stories, with an overall average height of 38 feet, and constructed with an approximate 12-foot setback from Lemon Avenue, a 6-foot setback (including a 2-foot architectural projection) from D Street, a 4-foot setback (including a 2-foot architectural projection) from Plum Avenue, and a 5.5-foot setback from the alley.

Oriented towards Lemon Avenue, the main lobby, leasing office, and mail room are centrally located on the ground floor and are flanked by 3 residential units. The remainder of the ground floor will serve as the parking garage for residents and guests. The stacked-flat residential unit configuration located on the second and third floors will provide one

and 2-bedroom apartments centered around a podium level green courtyard. Residential units, as described in the table below, will be accessible from interior hallways, one on-site elevator, and 3 stairwells. Each unit will have a minimum of one private deck 90 square feet in size and units located on the podium level that front onto the courtyard will have additional private patio area ranging in size from 78 to 113 square feet, and are depicted in Exhibit C: Floor Plans, attached.

(b) Site Access/Circulation — The Project will have pedestrian access points to the site along D Street through a secured gate, through the main lobby on Lemon Avenue, and through 2 secured doorways that lead to enclosed stairwells located on the west and east sides of the alley. Additional secured access points that lead to the first-floor interior lobby and the elevator are from Lemon Avenue and the alley. Access to the units will be from a series of interior lobbies. Vehicular access to the site is provided from a 15-foot-wide one-way public alley where two 24-foot-wide, gated garage entry bays are located.

(c) Parking — The Project requires 124 vehicle parking spaces as specified in the proposed PUD and the Project proposes 126 vehicle parking spaces, which exceeds the minimum parking required for the Project. The off-street parking calculations for the Project are summarized in the table below:

Parking Summary

Type of Use	***No. of units***	***Parking Ratio***	***Spaces Required***	***Spaces Provided***
Residential Units	69 (110 bedrooms)	1 space per bedroom	110	110
Residential Guest	69 units	0.20 space per unit	14	16
TOTAL			**124**	**126**

The Project site is currently developed with a surface parking lot that provides 113 parking spaces for public use. Development of the Project will result in relocation of the public parking spaces to curb adjacent street parking and in nearby public parking lots. A Parking Inventory was prepared by RK Engineering Group, Inc. on January 23, 2024 to determine the number of existing and temporary off-street and street parking spaces located within 4 blocks of the Project site, and is provided in Exhibit H: Downtown Parking Inventory.

As the Inventory demonstrates, there are currently 704 public parking spaces and 326 street (curb adjacent) parking spaces for a total of 1,030 parking spaces for public use. The City is preparing to grade, slurry and stripe approximately 2 acres of land located on the 400 block of North Euclid Avenue, south of East E Street, north of East D Street and west of North Lemon Avenue, for use as temporary public parking that will provide 207 off-street parking spaces. Additionally, construction has commenced on a parking structure located mid-block on North Sultana Avenue, south of East D Street and north of East B Street that will provide 821 public parking spaces. Once these improvements have

been completed, the availability of parking will increase by approximately 960 parking spaces from1,030 to 1,990 spaces, to serve the Civic Center. The current parking supply, along with the ability to deliver additional parking spaces, makes the proposed development of the public parking lot feasible.

(d) Architecture — The building will be designed in a contemporary architectural style to compliment the Downtown Ontario Luxury Apartments (phase 1) and is depicted in Exhibit D: Exterior Elevations and Exhibit E: Project Rendering, attached. The main lobby entrance is designed as a traditional storefront with a bulkhead (base), large windows, transom windows and entry door with a kick plate. A mid-panel floor has been added to distinguish the ground (garage) level from the upper residential levels, vertically dividing the building. Large decorative metal security screens will cover the garage bay openings which have been designed to maintain the window fenestration. Brick veneer, in a variety of color and texture, will emphasize the first story of the building and on upper levels at key locations to create articulation in the building modulation. Upper stories will have a combination of smooth trowel finish, scored horizontal and vertical reveals, and horizontal cementitious siding. Vertical panels with windows will be inset from the exterior wall face and metal awnings are strategically placed over first and third story windows to provide visual relief. The building has a parapet roof with decorative cornice.

The Project illustrates the type of high-quality residential development and architecture promoted by the proposed Downtown Ontario Luxury Apartments, Phase II PUD, the Downtown Design Guidelines and the Ontario Development Code. This is exemplified through the use of:

- Articulation in building footprint and in dipartite and tripartite divisions, creating breaks in horizontal massing; and

- Articulation in storefront modulation through color and material change, bulkhead/base, transom windows, glass entry doors with kickplate, and mid-floor panels; and

- Articulation in the building parapet and roof lines, which serves to accentuate the building's entries and openings, and breaks up large expanses of building wall; and

- Recessed and symmetrically arranged upper floor windows; and

- A mix of exterior materials, finishes, fixtures, and color blocking.

(e) Landscaping, Common Open Space and Amenities — Landscaping is provided for the full length of the Project street frontages, alley, and recreation area for a total of 7,923 square feet, which meets the minimum 15 percent landscape coverage requirement for the Project. A variety of accent and shade trees in 24-inch, 36-inch, and 48-inch box and 15-gallon sizes, as well as 1, 5, and 15- gallon size shrubs, groundcover,

and vines will be planted in a variety of species throughout the site to create landscape areas that are aesthetically pleasing while having low or moderate water usage. Decorative paving and lighting will be provided at entries, pedestrian walkways, and other key locations throughout the Project, as depicted in Exhibit F: Landscape Plan, attached.

Existing parkway trees located on Lemon Avenue and Plum Avenue will be preserved and 24-inch box Sycamores will be planted in a new curb adjacent parkway along D Street to match the Civic Center. Existing streetlight posts will be replaced with King standard lamppost to achieve maximum compatibility.

Approximately 9,000 square feet of common open space and recreation area are provided within the podium courtyard located on the second level, as depicted in Exhibit G: Common Open Space Plan. The courtyard is enhanced with decorative tile and paving and is landscaped with a variety of 36-inch box trees that enclose the perimeter, creating a semi-private area. Barbeques, counter tops, built in benches with tile back and seat, and raised planters are located at each end of the courtyard.

A total of 15,180 square feet of private and common open space is required for the Project and a total of 16,533 square feet has been provided, exceeding the minimum standard.

(f) Signage — All Project signage is required to comply with sign regulations provided in Ontario Development Code Division 8.1. Prior to the issuance of a Building Permit for the installation of any new on-site signage, the Applicant is required to submit Sign Plans for Planning Department review and approval.

(g) Utilities (drainage, sewer) — Public utilities (water and sewer) are available to serve the Project. Furthermore, the Applicant has submitted a Preliminary Water Quality Management Plan ("PWQMP"), which establishes the Project's compliance with storm water discharge/water quality requirements. The PWQMP includes site design measures that capture runoff and pollutant transport by minimizing impervious surfaces and maximizes low impact development ("LID") best management practices ("BMPs"), such as retention and infiltration, biotreatment, and evapotranspiration. The PWQMP proposes the use of an underground storm capture detention and pre-treatment systems located at the southwest portion of the project area. Any overflow drainage will be conveyed to the public street by way of parkway drains and culverts.

PUBLIC NOTIFICATION: The subject application was advertised as a public hearing in at least one newspaper of general circulation in the City of Ontario (the Inland Valley Daily Bulletin newspaper). In addition, notices were mailed to all owners of real property located within a minimum of 300 feet of the exterior boundaries of the property that is the subject of the hearing, as shown on the records of the County Assessor.

CORRESPONDENCE: As of the preparation of this Agenda Report, Planning Department staff has not received any written or verbal communications from the owners or

occupants of properties surrounding the Project site or from the public in general, regarding the subject application.

AGENCY/DEPARTMENT REVIEWS: Each City agency/department has been provided the opportunity to review and comment on the subject application and recommend conditions of approval to be imposed upon the application. At the time of the Resolution preparation, recommended conditions of approval were provided and are appended to the attached Resolutions as "Attachment A."

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making and recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (general plan), and City Council Priorities components of The Ontario Plan ("TOP"). More specifically, the goals and policies of TOP that are furthered by the proposed Project are as follows:

(1) City Council Goals.

- Invest in the Growth and Evolution of the City's Economy
- Operate in a Businesslike Manner
- Focus Resources in Ontario's Commercial and Residential Neighborhoods

(2) Vision.

Distinctive Development:

- Commercial and Residential Development

➢ Development quality that is broadly recognized as distinctive and not exclusively tied to the general suburban character typical of much of Southern California.

(3) Governance.

Decision Making:

- Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

➢ G 1-2. Long-term Benefit. We require decisions to demonstrate and document how they add value to the community and support the Ontario Vision.

(4) Policy Plan (General Plan)

Land Use Element:

- Goal LU-1 Balance: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

➢ LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

➢ LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

- Goal LU-2 Compatibility: Compatibility between a wide range of uses and a resultant urban patterns and forms.

➢ LU-2.6 Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character.

Housing Element:

- Goal H-2 Housing Supply & Diversity: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

➢ H-2.5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.

Community Economics Element:

▪ Goal CE-1 Complete Community: A complete community that provides for all incomes and stages of life.

➢ CE-1.6 Diversity of Housing. We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.

▪ Goal CE-2 Placemaking: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.

➢ CE-2.1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.

➢ CE-2.2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.

➢ CE-2.4 Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.

➢ CE-2.5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

Safety Element:

▪ Goal S-1 Seismic & Geologic Hazards: Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by earthquake-induced and other geologic hazards.

➢ S-1.1 Implementation of Regulations and Standards. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.

Community Design Element:

- Goal CD-1 Image & Identity: A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.

  - CD-1.1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing, enhancing, and preserving the character of our existing viable neighborhoods.

  - CD-1.2 Place Types. We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.

  - CD-1.3 Existing Neighborhoods. We require the existing character of viable residential and non-residential neighborhoods be preserved, protected, and enhanced.

- Goal CD-2 Design Quality: A high level of design quality resulting in neighborhoods, public spaces, parks, and streetscapes that are attractive, safe, functional, human-scale, and distinct.

  - CD-2.1 Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through:

    - Building volume, massing, and height to provide context-appropriate scale and proportion;
    - A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and
    - Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.

  - CD-2.2 Neighborhood Design. We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as:

    - A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services;
    - Varied parcel sizes and lot configurations to accommodate a diversity of housing types;
    - Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access;
    - Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and
    - Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.

- CD-2.7 Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping, and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials, and construction techniques.

- CD-2.8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.

- CD-2.9 Landscape Design. We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.

- CD-2.12 Site and Building Signage. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.

- CD-2.13 Entitlement Process. We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.

- Goal CD-3 Urban, Mixed Use, and Transit-Oriented Place Types: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.

- CD-3.2 Comfortable, Human-Scale Public Realm. We require that public spaces, including streets, parks, and plazas on both public and private property be designed to maximize safety, comfort and aesthetics and connect to the citywide pedestrian, vehicular, and bicycle networks.

- *CD-3.3* Complete and Connected Network. We require that pedestrian, vehicular, and bicycle circulation on both public and private property be coordinated to provide connections internally and externally to adjacent neighborhoods and properties (existing and planned) through a system of local roads and trails that promote walking and biking to nearby destinations (including existing and planned parks, commercial areas, and transit stops) and are designed to maximize safety, comfort, and aesthetics.

- CD-3.4 Context-Aware and Appropriate Design. We require appropriate building and site design that complements existing development, respects the intent and

identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.

- CD-3.5 Active Frontages. We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).

- CD-3.6 Managed Infrastructure. We collaborate with developers and property owners to facilitate development that realizes the envisioned character and functionality of the Place Type through the use of green and shared infrastructure within each Place Type.

- Goal CD-5 Protection of Investment: A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the property values and encourages additional public and private investments.

- CD-5.1 Maintenance of Buildings and Property. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.

- CD-5.2 Maintenance of Infrastructure. We require the continual maintenance of infrastructure.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (general plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

ENVIRONMENTAL REVIEW: The Project is categorically exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15332 (Class 32, In-fill Development Projects) of the CEQA Guidelines, and meets all the following conditions:

(a) *The proposed Project is consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations.* The proposed Project is located within the Downtown Mixed Use land use designation of the Policy Plan (general plan) Land Use Map, and the MU-1 (Downtown Mixed Use) zoning district. The proposed Project is consistent with all applicable Policy Plan policies, as well as with the requirements of the MU-1 (Downtown Mixed Use) zoning district and the related proposed Downtown Ontario Luxury Apartments, Phase II Planned Unit Development, which, at the Project location, intends to accommodate housing units at a density of 25 to 75 du/ac.

(b) *The proposed development occurs within city limits on a project site of no more than five acres substantially surrounded by urban uses.* The Project is proposed within the established boundaries of the City of Ontario, on a project site totaling 1.22-acres of land, which is surrounded by established development on all sides and consists of a mix of multiple-family, civic, retail, and commercial land uses.

(c) *The Project site has no value as habitat for endangered, rare, or threatened species.* The site is located in an urbanized area, is devoid of any flora or fauna, is regularly used for passenger vehicle parking by neighboring residents, and as such not suitable habitat for any endangered, rare, or threatened species.

(d) *Approval of the Project would not result in any significant effects relating to traffic, noise, air quality, or water quality.* The residential development is similar to, and of no greater impact than other allowed uses and development projects within the MU-1 (Downtown Mixed Use) zoning district. The Project would not result in any significant impacts through implementation of required state, regional, and local development and performance standards, and as demonstrated in the GHG and Traffic analysis, noise and parking studies, Arborist Report, and the Preliminary Water Quality Management Plan ("PWQMP") prepared for the Project.

(e) *The site is adequately served by all required utilities and public services.* All necessary wet and dry utilities are within the public street and are readily available for connection; and

(f) The application of the categorical exemption is not barred by one of the exceptions set forth in CEQA Guidelines Section 15300.2.

[1] Per the Ontario Devlopment Code, dated 12.01.2020, the standard parking space dimension for parallel parking is 8 feet wide by 24 feet long.

[2] East C Street from Cherry Avenue to Sultana Avenue will be vacated in the future parking phase.

RESOLUTION NO. PC24-007

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING CITY COUNCIL APPROVAL OF FILE NO. PUD23-002, A PLANNED UNIT DEVELOPMENT TO ESTABLISH DEVELOPMENT STANDARDS AND DESIGN GUIDELINES FOR THE PROJECT SITE, LOCATED AT 218 EAST D STREET WITHIN THE MU-1 (MIXED USE DOWNTOWN) ZONING DISRICT AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 1048-556-01, 1048-556-02, 1048-556-03, 1048-556-04, 1048-556-05, AND 1048-556-14

WHEREAS, Euclid Investment Group, LLC. ("Applicant") has filed an Application for the approval of a Planned Unit Development, File No. PUD23-002, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 1.22 acres of land located on the south side of D street, west of Plum Avenue, and east of Lemon Avenue at 218 East D Street, within the MU-1 (Downtown Mixed Use) zoning district, and is presently improved with a paved public parking lot; and

WHEREAS, the property south across the public alley is within the Civic zoning district and is developed with the Ovitt Family Community Library. The property to the north is within the OL (Office Light) and MDR-18 (Medium Density Residential) and is developed with a mixture of commercial and residential land uses. The property to the east is within the MU-1 (Mixed Use Downtown) and developed with the University of La Verne. The properties to the west are within the MU-1 (Mixed Use Downtown) zoning district and are developed with C Street public parking structure and the Downtown Ontario Luxury Apartments (Phase I) which is currently under construction; and

WHEREAS, an existing bus stop is located on the northeast corner of Euclid Avenue and D Street for Omnitrans Route 83. Additionally, located near Euclid Avenue on Holt Boulevard is Omnitrans Route 61 which has been identified as the future West Valley Connector Bus Rapid Transit (BRT); and

WHEREAS, the MU-1 (Downtown Mixed Use) zoning district allows for residential development at a density of 25.1 to 75 dwelling units per acre. Consistent with the MU-1 zoning district and TOP Downtown District Place Type, the Downtown Ontario Luxury Apartments (Phase II) PUD allows for residential development of 19 to 59 dwelling units, with a maximum building height of 40 feet (3 stories) and up to 55 feet for architectural projections; and

WHEREAS, the PUD requires a minimum of 1 resident parking space per bedroom and 0.20 guest parking per dwelling unit; and

WHEREAS, the PUD includes architectural design guidelines, specific to the downtown location, and establishes the following design principles:

(a) Create an architectural character that reflects the various styles within the historic downtown by using similar proportions, building details and building material.

(b) New buildings should appear to fit in contextually with existing historic buildings by using similar proportions, articulation, building details and building material.

(c) The overall character should feel like a modern interpretation of a traditional American small town.

(d) Create compatibility between the existing mixed use and commercial architecture and the new residential architecture within the downtown area; the introduction of unifying elements such as similar materials and colors should be considered; however, “sameness” is discouraged; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act, commencing with Public Resources Code Section 21000 (hereinafter referred to as "CEQA"); and

WHEREAS, the Project is exempt from CEQA pursuant to a categorical exemption (listed in CEQA Guidelines Article 19, commencing with Section 15300) and the application of that categorical exemption is not barred by one of the exceptions set forth in CEQA Guidelines Section 15300.2; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make recommendation to the City Council on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan

(hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on February 27, 2024, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending authority for the Project, the Planning Commission has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The administrative record has been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(2) The Project is categorically exempt from environmental review pursuant to Section 15332 (Class 32, In-fill Development Projects) of the CEQA Guidelines, and meets all the following conditions:

(a) *The proposed Project is consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations.* The proposed Project is located within the Downtown Mixed Use land use designation of the Policy Plan (general plan) Land Use Map, and the MU-1 (Downtown Mixed Use) zoning district. The proposed Project is consistent with all applicable Policy Plan policies, as well as with the requirements of the MU-1 (Downtown Mixed Use) zoning district and the related proposed Downtown Ontario Luxury Apartments, Phase II Planned Unit Development, which, at the Project location, intends to accommodate housing units at a density of 25 to 75 du/ac.

(b) *The proposed development occurs within city limits on a project site of no more than five acres substantially surrounded by urban uses.* The Project is proposed within the established boundaries of the City of Ontario, on a project site totaling 1.22-acres of land, which is surrounded by established development on all sides and consists of a mix of multiple-family, civic, retail, and commercial land uses.

(c) *The Project site has no value as habitat for endangered, rare, or threatened species.* The site is located in an urbanized area, is devoid of any flora or fauna, is regularly used for passenger vehicle parking by neighboring residents, and as such not suitable habitat for any endangered, rare, or threatened species.

(d) *Approval of the Project would not result in any significant effects relating to traffic, noise, air quality, or water quality.* The residential development is similar to, and of no greater impact than other allowed uses and development projects within the MU-1 (Downtown Mixed Use) zoning district. The Project would not result in any significant impacts through implementation of required state, regional, and local development and performance standards, and as demonstrated in the GHG and Traffic analysis, noise and parking studies, Arborist Report, and the Preliminary Water Quality Management Plan ("PWQMP") prepared for the Project.

(e) *The site is adequately served by all required utilities and public services.* All necessary wet and dry utilities are within the public street and are readily available for connection; and

(3) The application of the categorical exemption is not barred by one of the exceptions set forth in CEQA Guidelines Section 15300.2; and

(4) The determination of CEQA exemption reflects the independent judgment of the Planning Commission.

SECTION 2: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending authority for the Project, the Planning Commission finds that based on the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 3: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must

be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending authority for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 4: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in Sections 1 through 3, above, the Planning Commission hereby concludes as follows:

(1) ***The proposed PUD, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The Project is consistent with Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan. Described within the PUD are The Ontario Plan objectives in which the Project complies with the Policy Plan goals and policies.

(2) ***The proposed PUD, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The PUD has been established to ensure that: [i] the purposes of the Planned Unit Development are maintained; [ii] the project will not endanger the public health, safety or general welfare; [iii] the project will not result in any significant environmental impacts; [iv] the project will be in harmony with the area in which it is located; and [v] the project will be in full conformity with the Vision, City Council Priorities and Policy Plan components of The Ontario Plan.

(3) ***In the case of an application affecting specific property(ies), the proposed PUD, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The Downtown Ontario Luxury

Apartments (Phase II) PUD area is situated in the heart of Ontario's downtown and is adjacent to residential, commercial, educational, and civic land uses and development. The surrounding development supports the objective of the PUD for residential development. The Project does not affect the harmonious relationship with adjacent properties and land use.

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** In preparing the proposed Downtown Ontario Luxury Apartments (Phase II) PUD, a thorough review and analysis of the proposed Project and the subject site's physical suitability for the Project was completed, including analysis of the project size, shape, intensity of development, building height, building setbacks, site access, site landscaping and drainage, fences and walls, vehicle circulation, pedestrian connections, availability of mass transit, necessary street dedication and easements, public right-of-way improvements, availability of utilities and other infrastructure needs, off-street parking and circulation, building orientation and streetscapes, architectural character, building materials and color, and site signage. Based upon this review and analysis, the subject site has been deemed physically suitable, including but not limited to parcel size, shape, access, and availability of utilities, for the proposed Planned Unit Development and the proposed development.

(5) ***The proposed PUD is superior to that which could be obtained through the application of the Development Code or a specific plan.*** The Downtown Ontario Luxury Apartments (Phase II) PUD will establish minimum building setbacks, parking and open space requirements, allow on-street parking, and establish a planting palette. These standards will facilitate the residential development of 69 apartment units, parking facilities and private and common open space areas. The proposed Downtown Ontario Luxury Apartments (Phase II) PUD will allow for subsequent development that is superior to that which could be obtained through the application of the Development Code by itself.

SECTION 5: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 through 4, above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVES the herein described Application, subject to each and every condition set forth in the Department reports attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 6: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 7: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 8: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 27th day of February, 2024 and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Nancy DeDiemar
Planning Commission Chairman

ATTEST:

Henry K. Noh
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA)
COUNTY OF SAN BERNARDINO)
CITY OF ONTARIO)

I, Gwen Berendsen, Secretary Pro Tempore of the Planning Commission of the City of Ontario, DO HEREBY CERTIFY that foregoing Resolution No. PC24-007, was duly passed and adopted by the Planning Commission of the City of Ontario at their regular meeting held on February 27, 2024, by the following roll call vote, to wit:

AYES: Anderson, DeDiemar, Del Turco, Gage, Lampkin, Ricci

NOES: None

[THIS PAGE INTENTIONALLY LEFT BLANK]

1. Introduction

The Downtown Ontario Luxury Apartments, Phase II Planned Unit Development ("PUD") is intended to function as a set of planning and design principles, development regulations, and performance standards to guide and govern the development of a 1.19-acre site that consists of six (6) parcels (APNs: 1048-556-01, -02, -03, -04,-05, -14). The Project site is located south of East D Street, west of Plum Avenue, and east of North Lemon Avenue in the City of Ontario (see *Exhibit 1-1: Project Location*). This property is situated within the City of Ontario's Downtown Civic Center District. The PUD is designed to provide highly functional development standards and design guidelines that work in tandem with The Ontario Plan (TOP) and the Ontario Development Code to facilitate the development of a high-density, multiple-family residential project that is compatible with adjacent land uses and the surrounding community character.

The Project site is located within the Ontario Plan Downtown Mixed-Use District, which requires the establishment of a Planned Unit Development (PUD) prior to development. The PUD fulfills the requirements of a Downtown Mixed-Use District Planned Unit Development (PUD), as set forth in Ontario Development Code Section 4.01.030 (Planned Unit Developments (PUD) and Amendments). Upon approval, the PUD will replace the existing zone district designations and zoning standards that apply to the affected properties. Unless otherwise defined herein, definitions and interpretations contained in the Development Code shall apply to this PUD.

City staff and private developers shall rely upon this PUD to determine whether precise plans for development ("Development Plans") will adequately meet the City's land use and design objectives. These objectives have been curated over the past 20+ years to maintain the historic character of Downtown Ontario while simultaneously promoting sustainable and innovative architectural designs that add to the beauty and functionality of this vital part of the City.

KTGY Architecture + Planning

Exhibit 1-1: Project Location

2. Objectives

2.1 The Ontario Plan Objectives

The Ontario Plan (TOP) Policy Plan (General Plan) designates the Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) area as Mixed Use – Downtown (MU-Downtown). *Exhibit 2-1: TOP Land Use Plan* identifies the land use designation for the PUD area and surrounding properties. The MU-Downtown land use category accommodates an intensive vertical and horizontal mixture of retail and office uses at a maximum intensity of 2.0 floor-to-area ratio (FAR), and residential uses within a density range of 25.0 to 75.0 dwelling units per acre. Development projects within the MU-Downtown area are intended to maintain a pedestrian friendly atmosphere, while also enhancing the historic character of the area.

In addition to the MU-Downtown designation, the PUD area is also situated within the Civic Center District, which contributes to the unique character of the area. Comprised of notable buildings like City Hall, the Public Library, and the Community Center, the Civic Center District is a defining feature of the community. The Civic Center has significant outdoor spaces that can be linked with Downtown to create an enjoyable pedestrian experience, showcasing a mix of attractive open spaces and streetscapes combined with interesting shopping and dining options. Together, these elements culminate in a unique and pedestrian-friendly downtown atmosphere. A well-integrated Civic Center can serve as a valuable resource in the revitalization of Downtown.

The PUD aligns with the principles, goals, and policies outlined within The Ontario Plan's Vision, Governance, Policy Plan, and City Council Goals components. In particular, the proposed Project advances several goals and policies outlined in TOP, which include:

City Council Goals

- Invest in the Growth and Evolution of the City's Economy
- Maintain the Current High Level of Public Safety
- Focus Resources in Ontario's Commercial and Residential Neighborhoods

Vision

Dynamic Stability

- An appreciation for the "personality and charm" of this community, preserving important characteristics and values even as growth and change occur, all the while retaining a distinctive local feel where people love to be.

Distinctive Development

- **Commercial and Residential Development.** A demonstrated ability to attract housing in pursuit of our acknowledged responsibility to balance housing with the job growth that drives our quality of life.
- **Development Quality.** Superior quality and design of the built environment and open spaces through careful attention to detail at every scale, including public and private spaces and structures.

Exhibit 2-1: TOP Land Use Plan

Land Use Designation	Residential Density & Non-Residential Intensity	Intention
Low-Medium Density	5.1 to 11.0 dwelling units per acre	Single/multi-family attached and detached residences, including small lot subdivisions, townhouses, and courtyard homes.
Medium Density	11.1 to 25.0 dwelling units per acre	Single/multi-family attached and detached residences including townhouses, stacked flats, courtyard homes, and small lot single-family subdivisions.
Mixed Use - Downtown	25.0 to 75.0 dwelling units per acre 2.0 FAR for retail and office uses	Envisioned as an intensive vertical and horizontal mixture of retail, office, and residential uses in a pedestrian friendly atmosphere. The historic character is enhanced. The most intensive uses are envisioned along Euclid and Holt Avenues.
Office/Commercial	0.75 FAR	An intense mixture of professional office, supported by regional serving retail, service, tourist-serving, entertainment, dining, and supporting service uses that capitalize on strategic locations in Ontario. This designation also allows for professional offices such as financial, legal, insurance, medical, and other similar uses in a neighborhood setting and/or as adaptive reuse.
Open Space - Parkland	Not applicable	Recreational facilities, such as tot-lots, parks, golf courses, and sports complexes and joint-use facilities with schools, utilities, and drainage facilities.
Public Facility	Not applicable	Public facilities including civic centers, governmental institutions, police and fire stations, transportation facilities, museums, and public libraries.

Governance

Decision Making

- **Goal G1 Decision Making:** Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.
  - **Policy G1-1: Consistency with Policies.** We require that staff recommendations to the City Council be consistent with adopted City Council Priorities (Goals and Objectives) and The Policy Plan.
  - **Policy G1-2: Consistency with Policies.** We require that staff recommendations to the City Council be consistent with adopted City Council Priorities (Goals and Objectives) and The Policy Plan.

Policy Plan (General Plan)

Land Use Element

- **Goal LU-1 Balance:** A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.
  - **Policy LU-1.1: Strategic Growth.** We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

Housing Element

- **Goal H-2 Housing Supply & Diversity:** Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.
  - **Policy H-2.5: Housing Design.** We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.
  - **Policy H-2.6: Infill Development.** We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.
- **Goal H-3 Governmental Regulations:** A City regulatory environment that balances the need for creativity and excellence in residential design, flexibility and predictability in the project approval process, and the provision of an adequate supply and prices of housing.
  - **Policy H-3.2: Flexible Standards.** We allow flexibility in the application of residential and mixed-use development standards in order to gain benefits such as exceptional design quality, economic advantages, sustainability, or other benefits that would otherwise be unrealized.
  - **Policy H-3.3: Development Review.** We maintain a residential development review process that provides certainty and transparency for project stakeholders and the public, yet allows for the appropriate review to facilitate quality housing development.

Community Economics Element

- **Goal CE-2 Placemaking:** A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.
  - **Policy CE-2.1: Development Projects.** We require new development and redevelopment to create unique, high-quality places that add value to the community.
  - **Policy CE-2.2: Development Review.** We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.
  - **Policy CE-2.4: Protection of Investment.** We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.
  - **Policy CE-2.5: Private Maintenance.** We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

Community Design Element

- **Goal CD-1 Image & Identity:** A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.
  - **Policy CD-1.1: City Identity.** We take actions that are consistent with the City being a leading urban center in Southern California while recognizing, enhancing, and preserving the character of our existing viable neighborhoods.
  - **Policy CD-1.2: Place Types.** We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.
  - **Policy CD-1.3: Existing Neighborhoods.** We require the existing character of viable residential and non-residential neighborhoods be preserved, protected, and enhanced.
- **Goal CD-2 Design Quality:** A high level of design quality resulting in neighborhoods, commercial areas, public spaces, parks, and streetscapes that are attractive, safe, functional, human- scale, and distinct.
  - **Policy CD-2.1: Quality Building Design and Architecture.** We encourage all development projects to convey visual interest and character through:
    i. Building volume, massing, and height to provide context-appropriate scale and proportion;
    ii. A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and
    iii. Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.
  - **Policy CD-2.2: Neighborhood Design.** We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as:
    i. A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services;
    ii. Varied parcel sizes and lot configurations to accommodate a diversity of housing types;

iii. Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access;

iv. Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and

v. Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.

- **Policy CD-2.7: Sustainability.** We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping, and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials, and construction techniques.
- **Policy CD-2.8: Safe Design.** We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.
- **Policy CD-2.9: Landscape Design.** We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.
- **Policy CD-2.10: Parking Areas.** We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include:

  i. Structured parking: facade articulation, screening, appropriate lighting, and landscaping.

  ii. Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.

- **Goal CD-3 Urban, Mixed Use, and Transit-Oriented Place Types:** Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.
  - **Policy CD-3.1: Unique Identity.** We promote development that heightens the unique character and identity of each Place Type by requiring compatible land uses and land planning, site design, and building design that promotes an active public realm.
  - **Policy CD-3.2: Comfortable, Human-Scale Public Realm.** We require that public spaces, including streets, parks, and plazas on both public and private property be designed to maximize safety, comfort and aesthetics and connect to the citywide pedestrian, vehicular, and bicycle networks.
  - **Policy CD-3.4: Context-Aware and Appropriate Design.** We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.

- **Policy CD-3.5: Active Frontages.** We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).
- **Policy CD-3.6: Managed Infrastructure.** We collaborate with developers and property owners to facilitate development that realizes the envisioned character and functionality of the Place Type through the use of green and shared infrastructure within each Place Type.

- **Goal CD-5 Protection of Investment:** A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the property values and encourages additional public and private investments.
  - **Policy CD-5.1: Maintenance of Buildings and Property.** We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.

2.2 Downtown Ontario Luxury Apartments, Phase II Planned Unit Development Objectives

The primary objective of the PUD is to establish standards and guidelines for land uses, building massing, architectural elements, landscape, open space, and parking that align with the goals of the City while also facilitating the development of a top-notch, high-density residential project. Specifically, the objectives of the PUD are as follows:

- To establish comprehensive land use and design principles that contribute towards the creation of innovative, functional, and sustainable housing.
- Promote the revitalization of the Downtown area and foster economic growth by establishing a high-density residential development within the historic Downtown setting.
- To establish harmonious connections between new development and the neighboring residential land uses.
- To integrate high-density housing development into the surrounding community in a way that respects the character and cultural diversity of the area.
- To establish quality standards that ensure long-term maintenance and aesthetics.

3. Land Use

3.1 Residential Use

The Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) area will be developed with a high-density multiple-family residential development. The development will feature a podium-style building with three (3) stories of apartment-style units. This design will provide a modern, attractive, and functional living space for residents, while remaining in line with the overall layout and architectural style of the community. The first floor will contain a parking garage, along with the lobby and leasing office, and three (3) residential units. The second floor will contain residential units alongside a courtyard for residents and guests to enjoy. The third floor will contain residential units with a view of the courtyard below. In total, the development will include sixty-nine (69) units on 1.22 acres, resulting in a density of 56.6 dwelling units per acre (DU/AC). *Exhibit 3-1: Site Plan* provides an illustrative overview of the proposed development.

3.2 Permitted Uses

The permitted land uses within the Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) are as follows:

- Multiple-family residential dwellings;
- Leasing/Administrative Office (for on-site property and facilities management only);
- Motor vehicle parking ancillary to a multiple-family residential development project;
- Recreation facilities ancillary to multiple-family residential development projects, for use by project residents and their guests, including, but not limited to, pools, spas, tennis courts, clubhouse or recreation building, courtyards, playgrounds or tot lots, and other similar amenities appropriate to serve a multiple-family residential development project;
- Home occupations within residential units, in accordance with the Ontario Development Code;
- Temporary uses (as permitted within the residential districts of the City of Ontario Development Code subject to an Administrative Permit).

Other land use compatible with multiple-family residential development projects, as determined appropriate by the Zoning Administrator.

4. Development Regulations

4.1 Project Density

Residential land uses within the Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) shall be consistent with the Mixed-Use – Downtown (MU-Downtown) land use designation allowing for residential uses at a density of 25 to 75 dwelling units per acre (DU/AC) or non-residential development at a floor-to-area ratio (FAR) of up to 2.0 for retail and office uses.

4.2 Building Height

Total building height (to flat roofline) shall not exceed 40 feet above the highest existing sidewalk elevation. Architectural projections, such as parapets, roofed towers and gable roofs, or elevator towers may extend up to 55 feet above the highest existing sidewalk elevation. Any rooftop mechanical, venting, or communication equipment shall be located within the roof structure or otherwise screened to ensure that the equipment remains concealed from public sightlines or neighboring buildings.

4.3 Building Setbacks

Building setbacks for the PUD are provided in Table 4-3 below.

Table 4-3: Minimum Building Setbacks

Setback	Distance	Allowed Architectural Projection Encroachment
Minimum Street Setbacks	--	--
▪ North Lemon Ave	10 ft.	2 ft.
▪ East D St	6 ft.	2 ft.
▪ Plum Ave	4 ft.	2 ft.
Minimum Rear Setback	5 ft.	N/A

4.4 Vehicular Access

Vehicle access is provided via two (2) driveways along the southern boundary of the Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) area. The driveways provide direct access to the ground-level parking garage and are located off an alley (one-way) that connects North Lemon Avenue and Plum Avenue.

4.5 On-Street and Off-Street Parking

Parking requirements are based on the number of bedrooms contained within each dwelling unit. Parking spaces shall be provided pursuant to *Table 4-5: Minimum Parking Requirements*.

Table 4-5: Minimum Parking Requirements

Use	Parking Space
Multiple-Family Dwellings – Resident Parking ▪ One-Bedroom Unit ▪ Two-Bedroom Unit	1.00 spaces per dwelling (at least one space shall be in a garage or carport) 2.00 spaces per dwelling (at least one space shall be in a garage or carport)
Multiple-Family Dwellings – Guest Parking ▪ Portion of dwellings < 100	0.20 spaces per dwelling

The Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) parking requirements are as follows:

- All required resident parking spaces shall be provided on-site;
- Tandem parking spaces may be counted toward a maximum of 60 percent of the resident parking space requirement established by *Table 4-5: Minimum Parking Requirements.* Tandem spaces are limited to 2-bedroom units and will be assigned as such to eliminate competition or confusion of parking space;
- On-street parking may be utilized to satisfy guest-parking requirements, subject to the following:
    i. On-street parking may be used to satisfy guest parking requirements only, and shall not be used for required resident parking;
    ii. On-street parking shall only be counted along the public streets surrounding the project site, on the side of the street adjoining the project
    iii. All on-street parking locations shall be subject to approval by the City Engineer; and
    iv. On-street parallel parking spaces shall be calculated by the length of unobstructed curb adjacent to the project site.

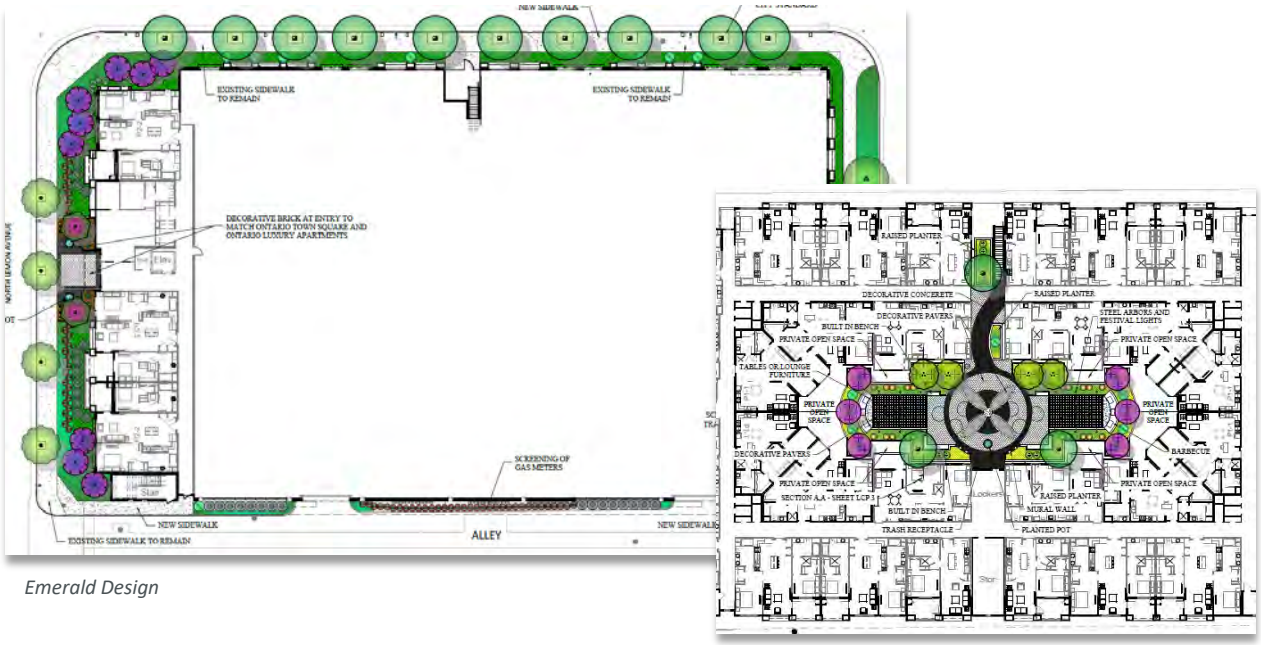
4.6 Common Open Space

Common open space shall be provided at a minimum of 130 square feet per residential unit (average). This provision allows for a wide range of both passive and active, indoor and outdoor spaces, open landscaped and hardscaped areas with fountains, seating, fire pits, or play structures, pool, and an indoor fitness center.

4.7 Private Open Space

Private open space shall be provided for each residential unit at a minimum of 90 square feet per unit. This provision allows for balconies, decks, and patios, provided that the minimum dimension is no less

than 6 feet in any direction. Each private open space must also have direct access to its corresponding residential unit.



4.8 Landscaping

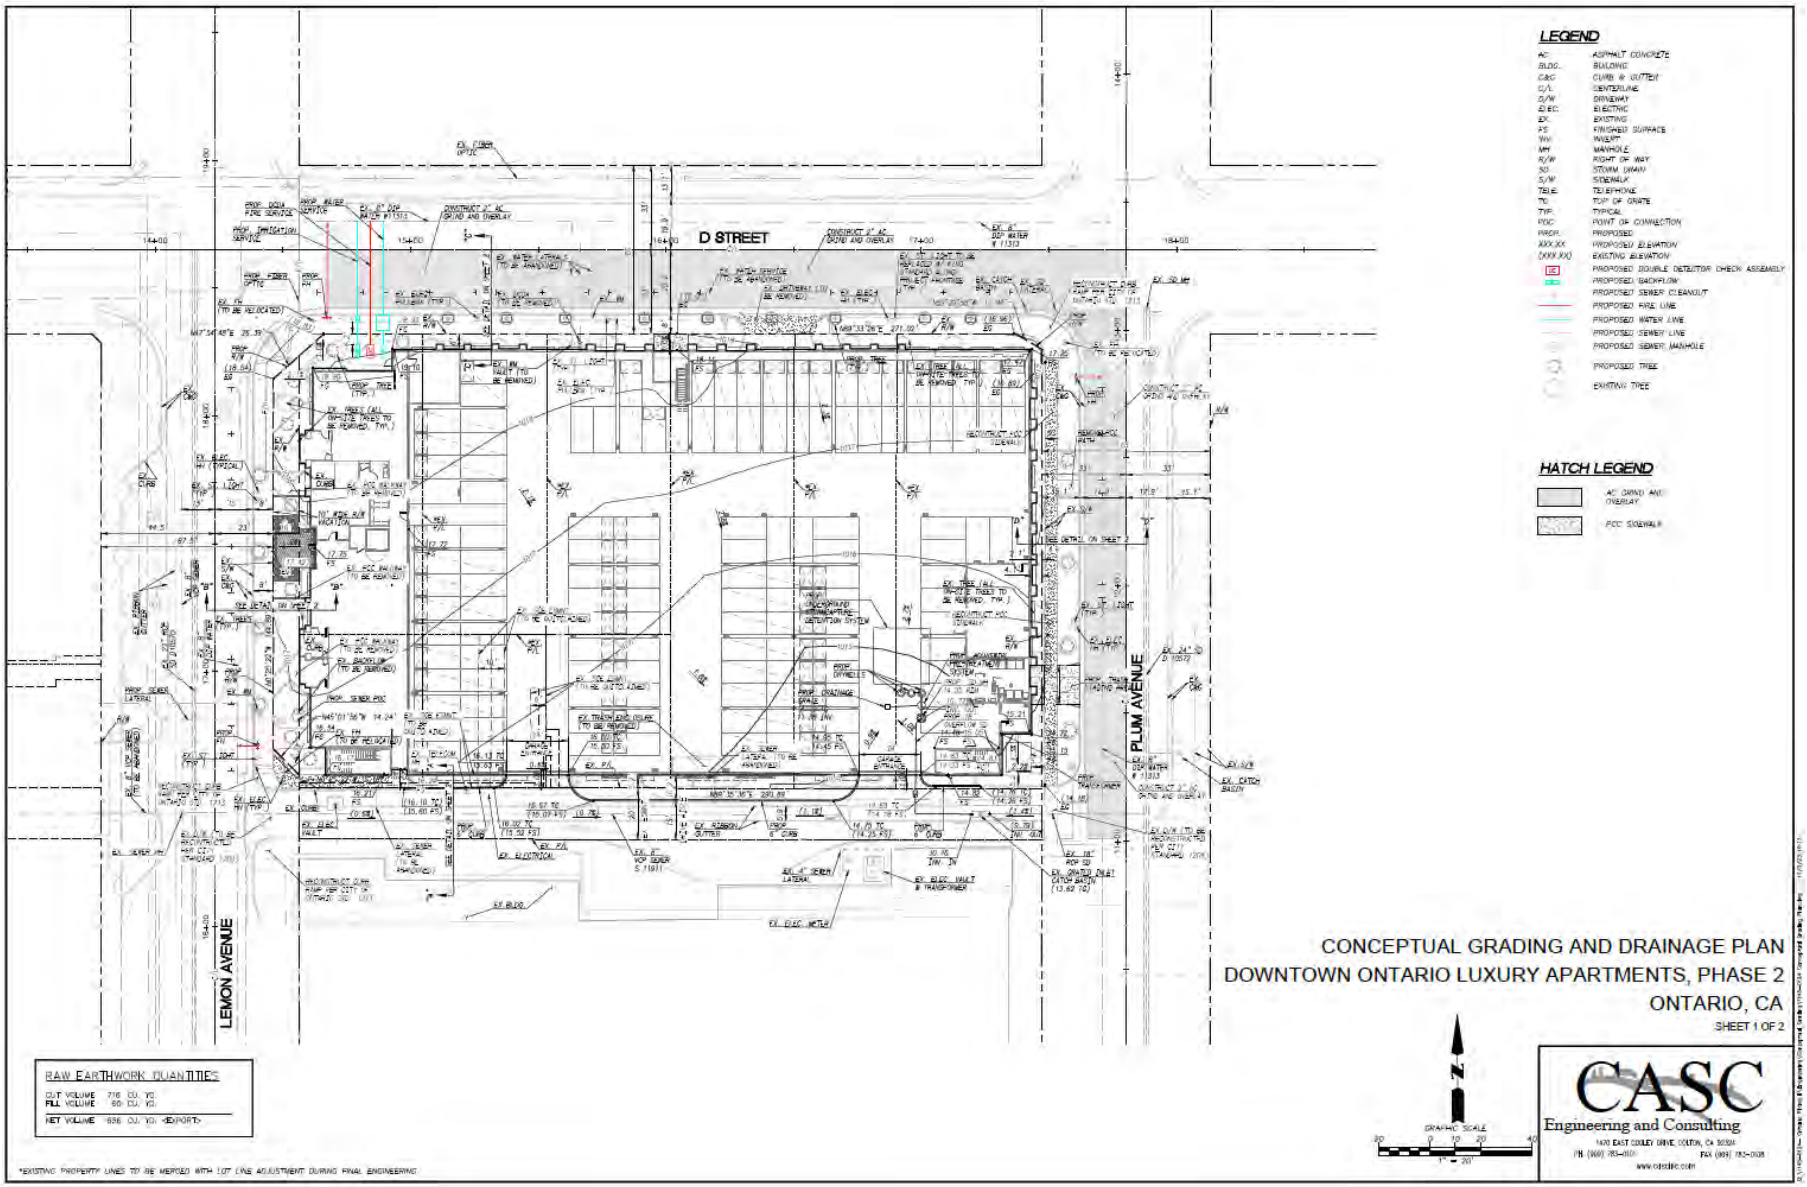
Landscaping shall be incorporated into new development and designed to integrate with the surrounding community by providing an aesthetically pleasing and sustainable environment. A conceptual landscape plan shall be submitted with the Development Plan for the PUD. The plan shall specify all landscape and hardscape elements for the development plan area including common open space areas, perimeter yards along the street rights-of-way, and all street trees. Landscape screening methods for ground-level utility boxes and mechanical equipment shall also be included in the plan. The minimum landscape coverage required for the PUD area is 15 percent of the total area.

All landscaping elements must be carefully chosen to provide a seamless transition between new construction and existing structures. Landscape elements should be utilized to reinforce pedestrian connections through attractive paving and planting design. Additionally, landscape pattern and planting should accentuate common open space areas within the PUD area. The use of native plant species is encouraged to minimize water consumption and promote biodiversity. Water conservation shall be considered, and low water using plant materials and water efficient irrigation shall be utilized. The landscape plan shall be drought tolerant and meet the current Water Use Classifications of Landscape Species requirements.

4.9 Tree Removal

Four (4) mature Australian Willow trees and four (4) mature Arizona Sycamore trees within the PUD area shall remain and be incorporated into the overall design of the development plan. The Australian Willow trees are currently located in the right-of-way on North Lemon Avenue and the Arizona Sycamore trees are located in the right-of-way on Plum Avenue. The additional forty-one (41) trees that are located within the existing surface parking lot will be removed and an arborist report shall be prepared for the PUD area.

Emerald Design



4.10 Infrastructure

Infrastructure within the Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) consists of the following improvements:

- Roadway (dedications/easements)
- Drainage
- Public Utilities (water and sewer)

Roadway, drainage, and public utilities are planned as illustrated in *Exhibit 3.2: Conceptual Grading and Drainage Plan.* All proposed public improvements shall be designed and constructed pursuant to the City of Ontario guidelines and specifications and per San Bernardino County and the State of California Water Resources Control Board guidelines for stormwater treatment.

Exhibit 3-2: Conceptual Grading and Drainage Plan

5. Design Guidelines

5.1 Building Orientation and Frontages

The building shall be oriented towards North Lemon Avenue and vehicular access shall be oriented towards the southern boundary of the PUD area. Pedestrian entries may be located along East D Street and Plum Avenue provided that strong pedestrian connection is maintained through landscaped sidewalks and appropriately scaled lighting.

5.2 Architectural Character

The Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) strikes an impressive balance between the sleek design features of contemporary architecture and the charm and character of the historic Downtown area. The PUD integrates traditional materials with modern design elements to create an innovative development that embraces a timeless appeal. The careful selection and utilization of traditional, durable materials reflects the rich architectural heritage of the area and speaks to the history and character of the community. By combining traditional materials with modern design features, including minimalism, clean lines, and sleek finishes, the development exudes a refined aesthetic.

5.3 Architectural Details

New development should incorporate façade articulation techniques that reduce the perceived scale of large buildings and add visual interest from all observable scales. Buildings shall:

- Incorporate architectural enhancements such as recessed windows, balconies, decorative cornices, and awnings along all street frontages.
- Incorporate rooflines that are visually dynamic in a way that complements the building and surrounding area's composition. This can be achieved through the utilization of sculpted roof forms or an attractive cornice with detailed design elements.

5.4 Materials and Colors

A color and material board shall be submitted with the Development Plan for the PUD to ensure the following:

- Materials and color scheme shall be compatible with, and complementary to the overall style of the development project.

KTGY Architecture + Planning

- A combination of dark and light colors shall be utilized to accentuate architectural features and breakup large building planes.
- Materials should include a mixture of stucco, horizontal siding, and brick veneer, in a variety of earth tone colors.

5.5 On-Site Lighting

- All lighting of facades, decorative fixtures, awnings, and signs shall be designed in accordance with the criteria set forth in Section 2D of the Downtown Ontario Design Guidelines.
- Exterior light fixtures shall be designed to complement the architectural style of the building.
- On-site lighting shall be directed away or shielded from adjacent streets and properties. All exterior lighting must be mounted in such a way that it does not project excessive light upwards, either by situating it beneath building eaves or integrating a shield such as a hood.

5.6 Signage

Signs within the PUD area shall comply with Division 8.01 (Sign Regulations) of the Ontario Development Code.

6. Administration

6.1 Applicability

All development within the Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) shall be designed and constructed pursuant to the standards and guidelines herein. Where the PUD is silent on a standard, then the City of Ontario Development Code and the City's Standard Conditions of Approval (COA) for New Development Projects Resolution No. R2017-027 shall govern. In the event of a conflict between the provisions of the PUD and the provisions of the Ontario Development Code and the City's Standard COA, the PUD Standards shall supersede.

6.2 Planning Applications to Facilitate PUD Implementation

Development Plan approval, pursuant to the requirements of Ontario Development Code Section 4.02.025 (Development Plans), shall be required for the physical alteration of a lot, the construction of a building, or the addition or significant alteration of an existing building. A Development Plan application shall be submitted to the Planning Department on a City application form pursuant to the requirements of Ontario Development Code Division 2.02 (Application Filing and Processing), commencing with Subsection B (Discretionary Permits and Actions) of Section 2.02.015 (Application Processing Procedures).

6.3 Administrative Exceptions

Deviation from the development standards set forth in this document may be granted up to a maximum of ten (10%) percent by the Zoning Administrator pursuant to the Ontario Development Code.

ORDINANCE NO._____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PUD23-002, A PLANNED UNIT DEVELOPMENT TO ESTABLISH DEVELOPMENT STANDARDS AND DESIGN GUIDELINES FOR THE PROJECT SITE, LOCATED AT 218 EAST D STREET WITHIN THE MU-1 (MIXED USE DOWNTOWN) ZONING DISRICT AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 1048-556-01, 1048-556-02, 1048-556-03, 1048-556-04, 1048-556-05, AND 1048-556-14

WHEREAS, Euclid Investment Group, LLC. ("Applicant") has filed an Application for the approval of a Planned Unit Development, File No. PUD23-002, as described in the title of this Ordinance (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 1.22 acres of land located on the south side of D street, west of Plum Avenue, and east of Lemon Avenue at 218 East D Street, within the MU-1 (Downtown Mixed Use) zoning district, and is presently improved with a paved public parking lot; and

WHEREAS, the property south across the public alley is within the Civic zoning district and is developed with the Ovitt Family Community Library. The property to the north is within the OL (Office Light) and MDR-18 (Medium Density Residential) and is developed with a mixture of commercial and residential land uses. The property to the east is within the MU-1 (Mixed Use Downtown) and developed with the University of La Verne. The properties to the west are within the MU-1 (Mixed Use Downtown) zoning district and are developed with C Street public parking structure and the Downtown Ontario Luxury Apartments (Phase I) which is currently under construction; and

WHEREAS, an existing bus stop is located on the northeast corner of Euclid Avenue and D Street for Omnitrans Route 83. Additionally, located near Euclid Avenue on Holt Boulevard is Omnitrans Route 61 which has been identified as the future West Valley Connector Bus Rapid Transit (BRT); and

WHEREAS, the MU-1 (Mixed Use Downtown) zoning district allows for residential development at a density of 25.1 to 75 dwelling units per acre. Consistent with the MU-1 zoning district and TOP Downtown District Place Type, the Downtown Ontario Luxury Apartments (Phase II) PUD allows for residential development of 19 to 59 dwelling units, with a maximum building height of 40 feet (3 stories) and up to 55 feet for architectural projections; and

WHEREAS, the PUD requires a minimum of 1 resident parking space per bedroom and 0.20 guest parking per dwelling unit; and

WHEREAS, the PUD includes architectural design guidelines, specific to the downtown location, and establishes the following design principles:

(a) Create an architectural character that reflects the various styles within the historic downtown by using similar proportions, building details and building material.

(b) New buildings should appear to fit in contextually with existing historic buildings by using similar proportions, articulation, building details and building material.

(c) The overall character should feel like a modern interpretation of a traditional American small town.

(d) Create compatibility between the existing mixed use and commercial architecture and the new residential architecture within the downtown area; the introduction of unifying elements such as similar materials and colors should be considered; however, “sameness” is discouraged; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA"); and

WHEREAS, the Project is exempt from CEQA pursuant to a categorical exemption (listed in CEQA Guidelines Article 19, commencing with Section 15300) and the application of that categorical exemption is not barred by one of the exceptions set forth in CEQA Guidelines Section 15300.2; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport ("ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (ALUCP), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on February 27, 2024, the Planning Commission of the City of Ontario conducted a hearing to consider the initial study, Addendum, and the Project, and concluded said hearing on that date, voting to issue Resolution No. PC24-007 recommending the City Council approve the Application; and

WHEREAS, on March 19, 2024, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND ORDAINED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The administrative record has been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(2) The Project is categorically exempt from environmental review pursuant to Section 15332 (Class 32, In-fill Development Projects) of the CEQA Guidelines, and meets all the following conditions:

(a) *The proposed Project is consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations.* The proposed Project is located within the Downtown Mixed Use land use designation of the Policy Plan (general plan) Land Use Map, and the MU-1 (Downtown Mixed Use) zoning district. The proposed Project is consistent with all applicable Policy Plan policies, as well as with the requirements of the MU-1 (Downtown Mixed Use) zoning district and the related proposed Downtown Ontario Luxury Apartments, Phase II Planned Unit Development, which, at the Project location, intends to accommodate housing units at a density of 25 to 75 du/ac.

(b) *The proposed development occurs within city limits on a project site of no more than five acres substantially surrounded by urban uses.* The Project is proposed within the established boundaries of the City of Ontario, on a project site totaling 1.22-acres of land, which is surrounded by established development on all sides and consists of a mix of multiple-family, civic, retail, and commercial land uses.

(c) *The Project site has no value as habitat for endangered, rare, or threatened species.* The site is located in an urbanized area, is devoid of any flora or fauna, is regularly used for passenger vehicle parking by neighboring residents, and as such not suitable habitat for any endangered, rare, or threatened species.

(d) *Approval of the Project would not result in any significant effects relating to traffic, noise, air quality, or water quality.* The residential development is similar to, and of no greater impact than other

allowed uses and development projects within the MU-1 (Downtown Mixed Use) zoning district. The Project would not result in any significant impacts through implementation of required state, regional, and local development and performance standards, and as demonstrated in the GHG and Traffic analysis, noise and parking studies, Arborist Report, and the Preliminary Water Quality Management Plan ("PWQMP") prepared for the Project.

(e) *The site is adequately served by all required utilities and public services.* All necessary wet and dry utilities are within the public street and are readily available for connection; and

(3) The application of the categorical exemption is not barred by one of the exceptions set forth in CEQA Guidelines Section 15300.2; and

(4) The determination of CEQA exemption reflects the independent judgment of the City Council.

SECTION 2: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 3: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 2, above, the City Council hereby concludes as follows:

(1) ***The proposed PUD, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The Project is consistent with Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan. Described within the PUD are The Ontario Plan objectives in which the Project complies with the Policy Plan goals and policies.

(2) ***The proposed PUD, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The PUD has been established to ensure that: [i] the purposes of the Planned Unit Development are maintained; [ii] the project will not endanger the public health, safety or general welfare; [iii] the project will not result in any significant environmental impacts; [iv] the project will be in harmony with the area in which it is located; and [v] the project will be in full conformity with the Vision, City Council Priorities and Policy Plan components of The Ontario Plan.

(3) ***In the case of an application affecting specific property(ies), the proposed PUD, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The Downtown Ontario Luxury Apartments (Phase II) PUD area is situated in the heart of Ontario's downtown and is adjacent to residential, commercial, educational, and civic land uses and development. The surrounding development supports the objective of the PUD for residential development. The Project does not affect the harmonious relationship with adjacent properties and land use.

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** In preparing the proposed Downtown Ontario Luxury Apartments (Phase II) PUD, a thorough review and analysis of the proposed Project and the subject site's physical suitability for the Project was completed, including analysis of the project size, shape, intensity of development, building height, building setbacks, site access, site landscaping and drainage, fences and walls, vehicle circulation, pedestrian connections, availability of mass transit, necessary street dedication and easements, public right-of-way improvements, availability of utilities and other infrastructure needs, off-street parking and circulation, building orientation and streetscapes, architectural character, building materials and color, and site signage. Based upon this review and analysis, the subject site has been deemed physically suitable, including but not limited to parcel size, shape, access, and availability of utilities, for the proposed Planned Unit Development and the proposed development.

(5) ***The proposed PUD is superior to that which could be obtained through the application of the Development Code or a specific plan.*** The

Downtown Ontario Luxury Apartments (Phase II) PUD will establish minimum building setbacks, parking and open space requirements, allow on-street parking, and establish a planting palette. These standards will facilitate the residential development of 69 apartment units, parking facilities and private and common open space areas. The proposed Downtown Ontario Luxury Apartments (Phase II) PUD will allow for subsequent development that is superior to that which could be obtained through the application of the Development Code by itself.

SECTION 4: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 3, above, the City Council hereby APPROVES the herein described Planned Unit Development, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 5: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 6: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 7: ***Severability.*** If any section, sentence, clause or phrase of this Ordinance or the application thereof to any entity, person or circumstance is held for any reason to be invalid or unconstitutional, such invalidity or unconstitutionality shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this Ordinance are severable. The People of the City of Ontario hereby declare that they would have adopted this Ordinance and each section, sentence, clause or phrase thereof, irrespective of the fact that any one or more section, subsections, sentences, clauses or phrases be declared invalid or unconstitutional.

SECTION 8: ***Effective Date.*** This Ordinance shall become effective 30 days following its adoption.

SECTION 9: ***Publication and Posting.*** The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within 15 days following the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

PASSED, APPROVED, AND ADOPTED this _____ day of _____ 2024.

1. Introduction

The Downtown Ontario Luxury Apartments, Phase II Planned Unit Development ("PUD") is intended to function as a set of planning and design principles, development regulations, and performance standards to guide and govern the development of a 1.19-acre site that consists of six (6) parcels (APNs: 1048-556-01, -02, -03, -04,-05, -14). The Project site is located south of East D Street, west of Plum Avenue, and east of North Lemon Avenue in the City of Ontario (see *Exhibit 1-1: Project Location*). This property is situated within the City of Ontario's Downtown Civic Center District. The PUD is designed to provide highly functional development standards and design guidelines that work in tandem with The Ontario Plan (TOP) and the Ontario Development Code to facilitate the development of a high-density, multiple-family residential project that is compatible with adjacent land uses and the surrounding community character.

The Project site is located within the Ontario Plan Downtown Mixed-Use District, which requires the establishment of a Planned Unit Development (PUD) prior to development. The PUD fulfills the requirements of a Downtown Mixed-Use District Planned Unit Development (PUD), as set forth in Ontario Development Code Section 4.01.030 (Planned Unit Developments (PUD) and Amendments). Upon approval, the PUD will replace the existing zone district designations and zoning standards that apply to the affected properties. Unless otherwise defined herein, definitions and interpretations contained in the Development Code shall apply to this PUD.

City staff and private developers shall rely upon this PUD to determine whether precise plans for development ("Development Plans") will adequately meet the City's land use and design objectives. These objectives have been curated over the past 20+ years to maintain the historic character of Downtown Ontario while simultaneously promoting sustainable and innovative architectural designs that add to the beauty and functionality of this vital part of the City.

KTGY Architecture + Planning

Exhibit 1-1: Project Location

2. Objectives

2.1 The Ontario Plan Objectives

The Ontario Plan (TOP) Policy Plan (General Plan) designates the Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) area as Mixed Use – Downtown (MU-Downtown). *Exhibit 2-1: TOP Land Use Plan* identifies the land use designation for the PUD area and surrounding properties. The MU-Downtown land use category accommodates an intensive vertical and horizontal mixture of retail and office uses at a maximum intensity of 2.0 floor-to-area ratio (FAR), and residential uses within a density range of 25.0 to 75.0 dwelling units per acre. Development projects within the MU-Downtown area are intended to maintain a pedestrian friendly atmosphere, while also enhancing the historic character of the area.

In addition to the MU-Downtown designation, the PUD area is also situated within the Civic Center District, which contributes to the unique character of the area. Comprised of notable buildings like City Hall, the Public Library, and the Community Center, the Civic Center District is a defining feature of the community. The Civic Center has significant outdoor spaces that can be linked with Downtown to create an enjoyable pedestrian experience, showcasing a mix of attractive open spaces and streetscapes combined with interesting shopping and dining options. Together, these elements culminate in a unique and pedestrian-friendly downtown atmosphere. A well-integrated Civic Center can serve as a valuable resource in the revitalization of Downtown.

The PUD aligns with the principles, goals, and policies outlined within The Ontario Plan's Vision, Governance, Policy Plan, and City Council Goals components. In particular, the proposed Project advances several goals and policies outlined in TOP, which include:

City Council Goals

- Invest in the Growth and Evolution of the City's Economy
- Maintain the Current High Level of Public Safety
- Focus Resources in Ontario's Commercial and Residential Neighborhoods

Vision

Dynamic Stability

- An appreciation for the "personality and charm" of this community, preserving important characteristics and values even as growth and change occur, all the while retaining a distinctive local feel where people love to be.

Distinctive Development

- Commercial and Residential Development. A demonstrated ability to attract housing in pursuit of our acknowledged responsibility to balance housing with the job growth that drives our quality of life.
- Development Quality. Superior quality and design of the built environment and open spaces through careful attention to detail at every scale, including public and private spaces and structures.

Exhibit 2-1: TOP Land Use Plan

Land Use Designation	Residential Density & Non-Residential Intensity	Intention
Low-Medium Density	5.1 to 11.0 dwelling units per acre	Single/multi-family attached and detached residences, including small lot subdivisions, townhouses, and courtyard homes.
Medium Density	11.1 to 25.0 dwelling units per acre	Single/multi-family attached and detached residences including townhouses, stacked flats, courtyard homes, and small lot single-family subdivisions.
Mixed Use - Downtown	25.0 to 75.0 dwelling units per acre 2.0 FAR for retail and office uses	Envisioned as an intensive vertical and horizontal mixture of retail, office, and residential uses in a pedestrian friendly atmosphere. The historic character is enhanced. The most intensive uses are envisioned along Euclid and Holt Avenues.
Office/Commercial	0.75 FAR	An intense mixture of professional office, supported by regional serving retail, service, tourist-serving, entertainment, dining, and supporting service uses that capitalize on strategic locations in Ontario. This designation also allows for professional offices such as financial, legal, insurance, medical, and other similar uses in a neighborhood setting and/or as adaptive reuse.
Open Space - Parkland	Not applicable	Recreational facilities, such as tot-lots, parks, golf courses, and sports complexes and joint-use facilities with schools, utilities, and drainage facilities.
Public Facility	Not applicable	Public facilities including civic centers, governmental institutions, police and fire stations, transportation facilities, museums, and public libraries.

Governance

Decision Making

- Goal G1 Decision Making: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.
  - Policy G1-1: Consistency with Policies. We require that staff recommendations to the City Council be consistent with adopted City Council Priorities (Goals and Objectives) and The Policy Plan.
  - Policy G1-2: Consistency with Policies. We require that staff recommendations to the City Council be consistent with adopted City Council Priorities (Goals and Objectives) and The Policy Plan.

Policy Plan (General Plan)

Land Use Element

- Goal LU-1 Balance: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.
  - Policy LU-1.1: Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

Housing Element

- Goal H-2 Housing Supply & Diversity: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.
  - Policy H-2.5: Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.
  - Policy H-2.6: Infill Development. We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.
- Goal H-3 Governmental Regulations: A City regulatory environment that balances the need for creativity and excellence in residential design, flexibility and predictability in the project approval process, and the provision of an adequate supply and prices of housing.
  - Policy H-3.2: Flexible Standards. We allow flexibility in the application of residential and mixed-use development standards in order to gain benefits such as exceptional design quality, economic advantages, sustainability, or other benefits that would otherwise be unrealized.
  - Policy H-3.3: Development Review. We maintain a residential development review process that provides certainty and transparency for project stakeholders and the public, yet allows for the appropriate review to facilitate quality housing development.

Community Economics Element

- Goal CE-2 Placemaking: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.
  - Policy CE-2.1: Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.
  - Policy CE-2.2: Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.
  - Policy CE-2.4: Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.
  - Policy CE-2.5: Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

Community Design Element

- Goal CD-1 Image & Identity: A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.
  - Policy CD-1.1: City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing, enhancing, and preserving the character of our existing viable neighborhoods.
  - Policy CD-1.2: Place Types. We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.
  - Policy CD-1.3: Existing Neighborhoods. We require the existing character of viable residential and non-residential neighborhoods be preserved, protected, and enhanced.
- Goal CD-2 Design Quality: A high level of design quality resulting in neighborhoods, commercial areas, public spaces, parks, and streetscapes that are attractive, safe, functional, human- scale, and distinct.
  - Policy CD-2.1: Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through:
    i. Building volume, massing, and height to provide context-appropriate scale and proportion;
    ii. A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and
    iii. Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.
  - Policy CD-2.2: Neighborhood Design. We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as:
    i. A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services;
    ii. Varied parcel sizes and lot configurations to accommodate a diversity of housing types;

iii. Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access;

iv. Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and

v. Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.

- Policy CD-2.7: Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping, and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials, and construction techniques.
- Policy CD-2.8: Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.
- Policy CD-2.9: Landscape Design. We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.
- Policy CD-2.10: Parking Areas. We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include:

  i. Structured parking: facade articulation, screening, appropriate lighting, and landscaping.

  ii. Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.

- Goal CD-3 Urban, Mixed Use, and Transit-Oriented Place Types: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.
  - Policy CD-3.1: Unique Identity. We promote development that heightens the unique character and identity of each Place Type by requiring compatible land uses and land planning, site design, and building design that promotes an active public realm.
  - Policy CD-3.2: Comfortable, Human-Scale Public Realm. We require that public spaces, including streets, parks, and plazas on both public and private property be designed to maximize safety, comfort and aesthetics and connect to the citywide pedestrian, vehicular, and bicycle networks.
  - Policy CD-3.4: Context-Aware and Appropriate Design. We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.

- Policy CD-3.5: Active Frontages. We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).
- Policy CD-3.6: Managed Infrastructure. We collaborate with developers and property owners to facilitate development that realizes the envisioned character and functionality of the Place Type through the use of green and shared infrastructure within each Place Type.

- Goal CD-5 Protection of Investment: A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the property values and encourages additional public and private investments.
  - Policy CD-5.1: Maintenance of Buildings and Property. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.

2.2 Downtown Ontario Luxury Apartments, Phase II Planned Unit Development Objectives

The primary objective of the PUD is to establish standards and guidelines for land uses, building massing, architectural elements, landscape, open space, and parking that align with the goals of the City while also facilitating the development of a top-notch, high-density residential project. Specifically, the objectives of the PUD are as follows:

- To establish comprehensive land use and design principles that contribute towards the creation of innovative, functional, and sustainable housing.
- Promote the revitalization of the Downtown area and foster economic growth by establishing a high-density residential development within the historic Downtown setting.
- To establish harmonious connections between new development and the neighboring residential land uses.
- To integrate high-density housing development into the surrounding community in a way that respects the character and cultural diversity of the area.
- To establish quality standards that ensure long-term maintenance and aesthetics.

3. Land Use

3.1 Residential Use

The Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) area will be developed with a high-density multiple-family residential development. The development will feature a podium-style building with three (3) stories of apartment-style units. This design will provide a modern, attractive, and functional living space for residents, while remaining in line with the overall layout and architectural style of the community. The first floor will contain a parking garage, along with the lobby and leasing office, and three (3) residential units. The second floor will contain residential units alongside a courtyard for residents and guests to enjoy. The third floor will contain residential units with a view of the courtyard below. In total, the development will include sixty-nine (69) units on 1.22 acres, resulting in a density of 56.6 dwelling units per acre (DU/AC). *Exhibit 3-1: Site Plan* provides an illustrative overview of the proposed development.

3.2 Permitted Uses

The permitted land uses within the Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) are as follows:

- Multiple-family residential dwellings;
- Leasing/Administrative Office (for on-site property and facilities management only);
- Motor vehicle parking ancillary to a multiple-family residential development project;
- Recreation facilities ancillary to multiple-family residential development projects, for use by project residents and their guests, including, but not limited to, pools, spas, tennis courts, clubhouse or recreation building, courtyards, playgrounds or tot lots, and other similar amenities appropriate to serve a multiple-family residential development project;
- Home occupations within residential units, in accordance with the Ontario Development Code;
- Temporary uses (as permitted within the residential districts of the City of Ontario Development Code subject to an Administrative Permit).

Other land use compatible with multiple-family residential development projects, as determined appropriate by the Zoning Administrator.

4. Development Regulations

4.1 Project Density

Residential land uses within the Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) shall be consistent with the Mixed-Use – Downtown (MU-Downtown) land use designation allowing for residential uses at a density of 25 to 75 dwelling units per acre (DU/AC) or non-residential development at a floor-to-area ratio (FAR) of up to 2.0 for retail and office uses.

4.2 Building Height

Total building height (to flat roofline) shall not exceed 40 feet above the highest existing sidewalk elevation. Architectural projections, such as parapets, roofed towers and gable roofs, or elevator towers may extend up to 55 feet above the highest existing sidewalk elevation. Any rooftop mechanical, venting, or communication equipment shall be located within the roof structure or otherwise screened to ensure that the equipment remains concealed from public sightlines or neighboring buildings.

4.3 Building Setbacks

Building setbacks for the PUD are provided in Table 4-3 below.

Table 4-3: Minimum Building Setbacks

Setback	Distance	Allowed Architectural Projection Encroachment
Minimum Street Setbacks	--	--
▪ North Lemon Ave	10 ft.	2 ft.
▪ East D St	6 ft.	2 ft.
▪ Plum Ave	4 ft.	2 ft.
Minimum Rear Setback	5 ft.	N/A

4.4 Vehicular Access

Vehicle access is provided via two (2) driveways along the southern boundary of the Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) area. The driveways provide direct access to the ground-level parking garage and are located off an alley (one-way) that connects North Lemon Avenue and Plum Avenue.

4.5 On-Street and Off-Street Parking

Parking requirements are based on the number of bedrooms contained within each dwelling unit. Parking spaces shall be provided pursuant to *Table 4-5: Minimum Parking Requirements*.

Table 4-5: Minimum Parking Requirements

Use	Parking Space
Multiple-Family Dwellings – Resident Parking ▪ One-Bedroom Unit ▪ Two-Bedroom Unit	1.00 spaces per dwelling (at least one space shall be in a garage or carport) 2.00 spaces per dwelling (at least one space shall be in a garage or carport)
Multiple-Family Dwellings – Guest Parking ▪ Portion of dwellings < 100	0.20 spaces per dwelling

The Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) parking requirements are as follows:

- All required resident parking spaces shall be provided on-site;
- Tandem parking spaces may be counted toward a maximum of 60 percent of the resident parking space requirement established by *Table 4-5: Minimum Parking Requirements.* Tandem spaces are limited to 2-bedroom units and will be assigned as such to eliminate competition or confusion of parking space;
- On-street parking may be utilized to satisfy guest-parking requirements, subject to the following:
  i. On-street parking may be used to satisfy guest parking requirements only, and shall not be used for required resident parking;
  ii. On-street parking shall only be counted along the public streets surrounding the project site, on the side of the street adjoining the project
  iii. All on-street parking locations shall be subject to approval by the City Engineer; and
  iv. On-street parallel parking spaces shall be calculated by the length of unobstructed curb adjacent to the project site.

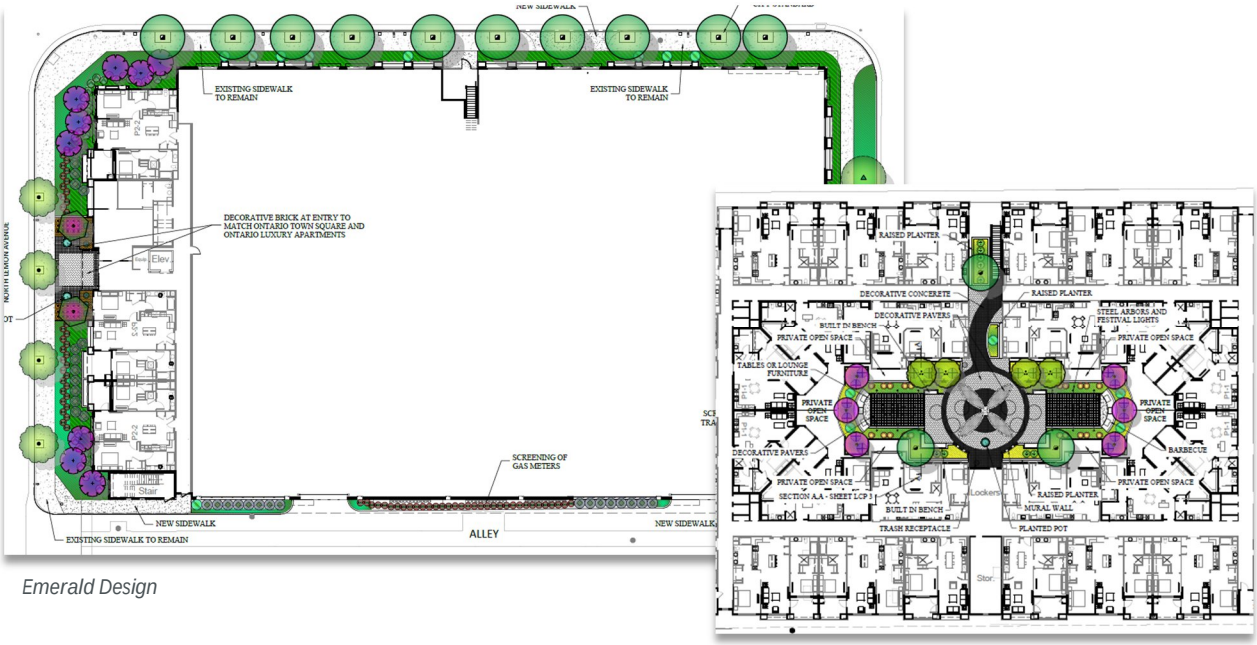
4.6 Common Open Space

Common open space shall be provided at a minimum of 130 square feet per residential unit (average). This provision allows for a wide range of both passive and active, indoor and outdoor spaces, open landscaped and hardscaped areas with fountains, seating, fire pits, or play structures, pool, and an indoor fitness center.

4.7 Private Open Space

Private open space shall be provided for each residential unit at a minimum of 90 square feet per unit. This provision allows for balconies, decks, and patios, provided that the minimum dimension is no less

than 6 feet in any direction. Each private open space must also have direct access to its corresponding residential unit.



4.8 Landscaping

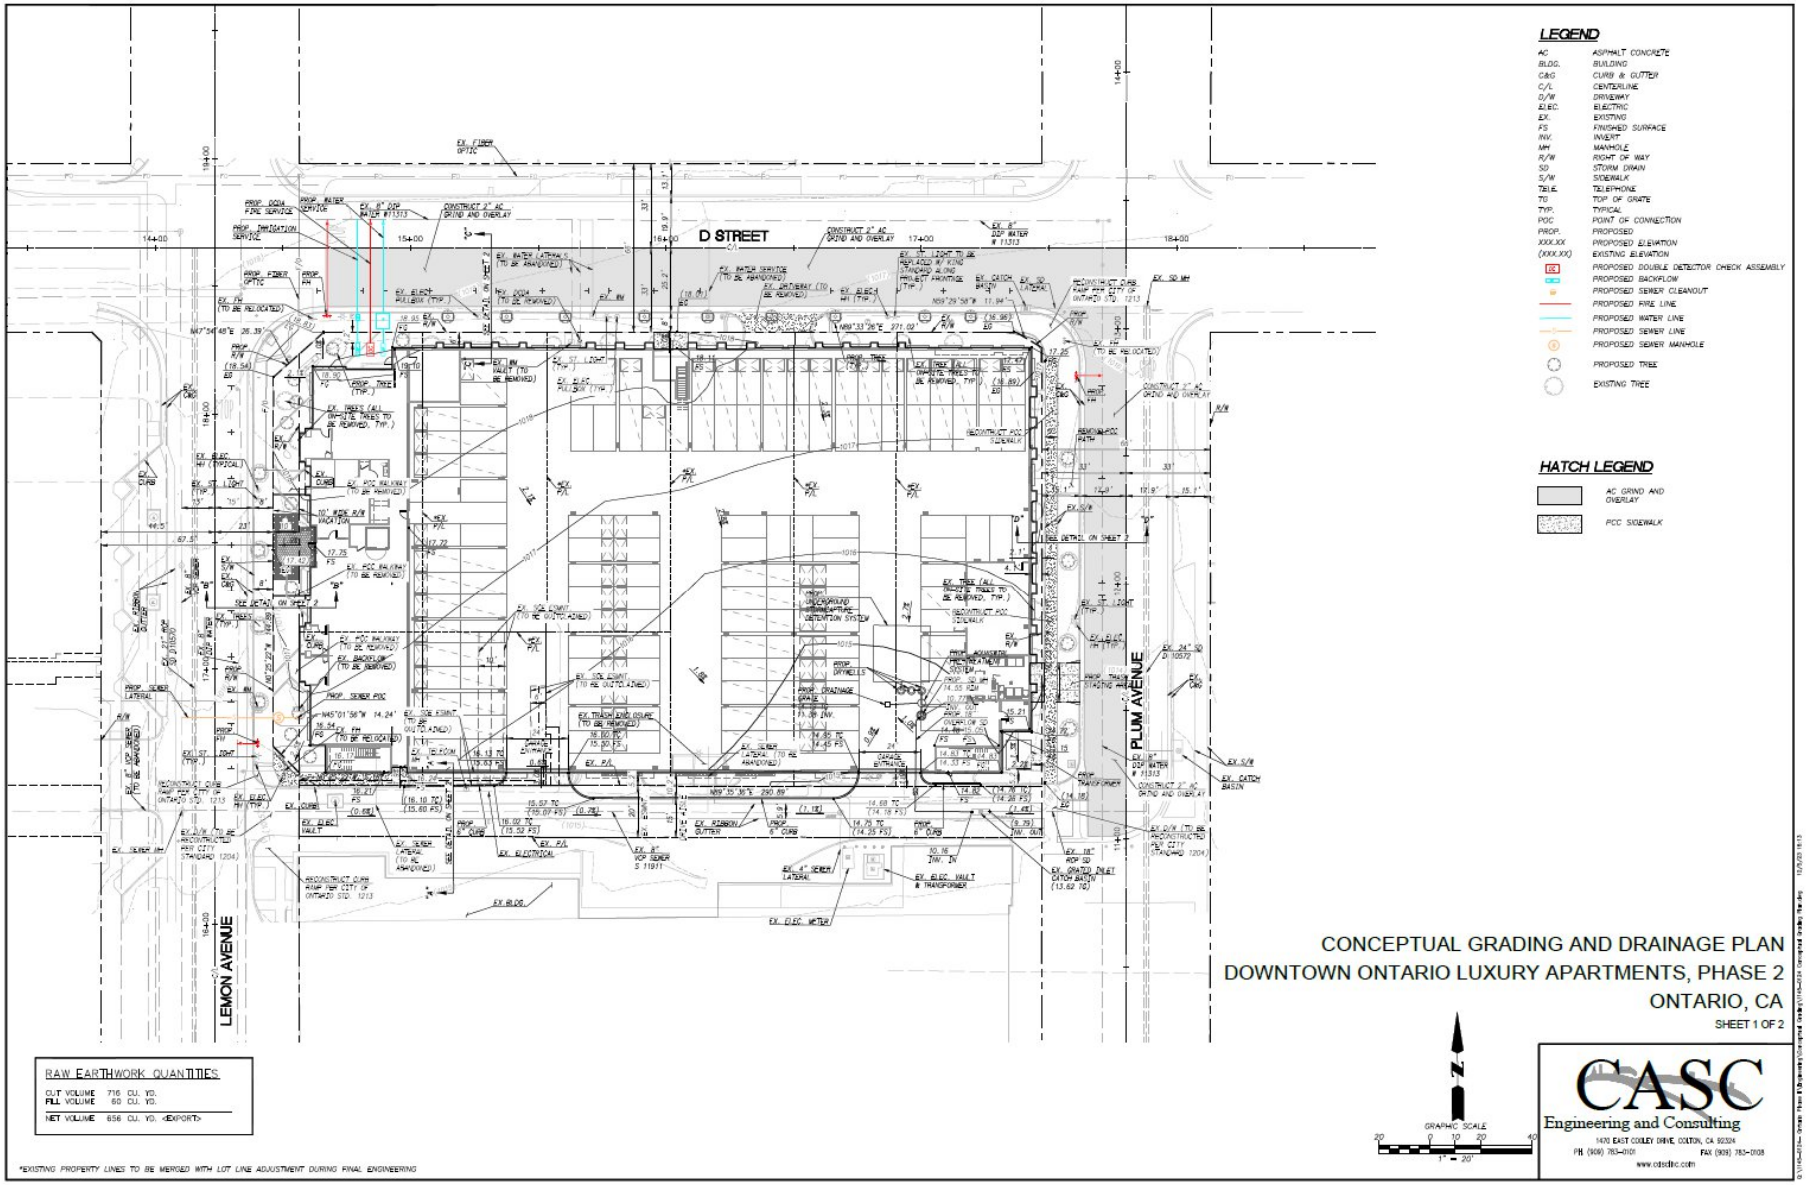
Landscaping shall be incorporated into new development and designed to integrate with the surrounding community by providing an aesthetically pleasing and sustainable environment. A conceptual landscape plan shall be submitted with the Development Plan for the PUD. The plan shall specify all landscape and hardscape elements for the development plan area including common open space areas, perimeter yards along the street rights-of-way, and all street trees. Landscape screening methods for ground-level utility boxes and mechanical equipment shall also be included in the plan. The minimum landscape coverage required for the PUD area is 15 percent of the total area.

All landscaping elements must be carefully chosen to provide a seamless transition between new construction and existing structures. Landscape elements should be utilized to reinforce pedestrian connections through attractive paving and planting design. Additionally, landscape pattern and planting should accentuate common open space areas within the PUD area. The use of native plant species is encouraged to minimize water consumption and promote biodiversity. Water conservation shall be considered, and low water using plant materials and water efficient irrigation shall be utilized. The landscape plan shall be drought tolerant and meet the current Water Use Classifications of Landscape Species requirements.

4.9 Tree Removal

Four (4) mature Australian Willow trees and four (4) mature Arizona Sycamore trees within the PUD area shall remain and be incorporated into the overall design of the development plan. The Australian Willow trees are currently located in the right-of-way on North Lemon Avenue and the Arizona Sycamore trees are located in the right-of-way on Plum Avenue. The additional forty-one (41) trees that are located within the existing surface parking lot will be removed and an arborist report shall be prepared for the PUD area.

Emerald Design



4.10 Infrastructure

Infrastructure within the Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) consists of the following improvements:

- Roadway (dedications/easements)
- Drainage
- Public Utilities (water and sewer)

Roadway, drainage, and public utilities are planned as illustrated in *Exhibit 3.2: Conceptual Grading and Drainage Plan.* All proposed public improvements shall be designed and constructed pursuant to the City of Ontario guidelines and specifications and per San Bernardino County and the State of California Water Resources Control Board guidelines for stormwater treatment.

Exhibit 3-2: Conceptual Grading and Drainage Plan

5. Design Guidelines

5.1 Building Orientation and Frontages

The building shall be oriented towards North Lemon Avenue and vehicular access shall be oriented towards the southern boundary of the PUD area. Pedestrian entries may be located along East D Street and Plum Avenue provided that strong pedestrian connection is maintained through landscaped sidewalks and appropriately scaled lighting.

5.2 Architectural Character

The Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) strikes an impressive balance between the sleek design features of contemporary architecture and the charm and character of the historic Downtown area. The PUD integrates traditional materials with modern design elements to create an innovative development that embraces a timeless appeal. The careful selection and utilization of traditional, durable materials reflects the rich architectural heritage of the area and speaks to the history and character of the community. By combining traditional materials with modern design features, including minimalism, clean lines, and sleek finishes, the development exudes a refined aesthetic.

5.3 Architectural Details

New development should incorporate façade articulation techniques that reduce the perceived scale of large buildings and add visual interest from all observable scales. Buildings shall:

- Incorporate architectural enhancements such as recessed windows, balconies, decorative cornices, and awnings along all street frontages.
- Incorporate rooflines that are visually dynamic in a way that complements the building and surrounding area's composition. This can be achieved through the utilization of sculpted roof forms or an attractive cornice with detailed design elements.

KTGY Architecture + Planning

5.4 Materials and Colors

A color and material board shall be submitted with the Development Plan for the PUD to ensure the following:

- Materials and color scheme shall be compatible with, and complementary to the overall style of the development project.

- A combination of dark and light colors shall be utilized to accentuate architectural features and breakup large building planes.
- Materials should include a mixture of stucco, horizontal siding, and brick veneer, in a variety of earth tone colors.

5.5 On-Site Lighting

- All lighting of facades, decorative fixtures, awnings, and signs shall be designed in accordance with the criteria set forth in Section 2D of the Downtown Ontario Design Guidelines.
- Exterior light fixtures shall be designed to complement the architectural style of the building.
- On-site lighting shall be directed away or shielded from adjacent streets and properties. All exterior lighting must be mounted in such a way that it does not project excessive light upwards, either by situating it beneath building eaves or integrating a shield such as a hood.

5.6 Signage

Signs within the PUD area shall comply with Division 8.01 (Sign Regulations) of the Ontario Development Code.

6. Administration

6.1 Applicability

All development within the Downtown Ontario Luxury Apartments, Phase II Planned Unit Development (PUD) shall be designed and constructed pursuant to the standards and guidelines herein. Where the PUD is silent on a standard, then the City of Ontario Development Code and the City's Standard Conditions of Approval (COA) for New Development Projects Resolution No. R2017-027 shall govern. In the event of a conflict between the provisions of the PUD and the provisions of the Ontario Development Code and the City's Standard COA, the PUD Standards shall supersede.

6.2 Planning Applications to Facilitate PUD Implementation

Development Plan approval, pursuant to the requirements of Ontario Development Code Section 4.02.025 (Development Plans), shall be required for the physical alteration of a lot, the construction of a building, or the addition or significant alteration of an existing building. A Development Plan application shall be submitted to the Planning Department on a City application form pursuant to the requirements of Ontario Development Code Division 2.02 (Application Filing and Processing), commencing with Subsection B (Discretionary Permits and Actions) of Section 2.02.015 (Application Processing Procedures).

6.3 Administrative Exceptions

Deviation from the development standards set forth in this document may be granted up to a maximum of ten (10%) percent by the Zoning Administrator pursuant to the Ontario Development Code.

CITY OF ONTARIO *Agenda Report* **March 19, 2024**	**SECTION:** **PUBLIC HEARINGS**
Department: Planning Prepared By: Thomas Grahn Staff Member Presenting: Scott Murphy, Executive Director Community Development Reviewed By: Kimberly Ruddins, Henry Noh, Rudy Zeledon Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 16

SUBJECT: **A PUBLIC HEARING TO CONSIDER ADOPTION OF THE WATERMARKE ONTARIO PLANNED UNIT DEVELOPMENT (FILE NO. PUD22-006) ON A 5.81-ACRE PROJECT SITE LOCATED AT THE NORTHEAST CORNER OF MOUNTAIN AVENUE AND FOURTH STREET, SUBMITTED BY JAT LAND DEVELOPMENT**

RECOMMENDATION: That the City Council adopt a Resolution approving the use of an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report and introduce and waive further reading of an Ordinance approving the Watermarke Ontario Planned Unit Development (File No. PUD22-006).

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Operate in a Businesslike Manner
Focus Resources in Ontario's Commercial and Residential Neighborhoods

FISCAL IMPACT: There is not a direct fiscal impact associated with this action. The proposed Watermarke Ontario Planned Unit Development (PUD) establishes development standards and guidelines to facilitate a mixed-use commercial and residential development. Implementation of the PUD would result in an increase in property taxes from future development and the one-time payment to the City for plan check fees and development impact fees.

BACKGROUND & ANALYSIS: On August 16, 2022, the Ontario City Council certified The Ontario Plan 2050 (TOP 2050) Supplemental Environmental Impact Report (SEIR, State Clearinghouse No. 2021070364) in conjunction with File No. PGPA20-002. The SEIR analyzed the Project site and 1.4 acres of land to the northwest of the Project site, also located within the same mixed-use district, and established guidelines for development. These guidelines include, but are not limited to, general land use (mixed-use residential and commercial), maximum density and development intensity (20-75 dwelling units per acre and 1.0 non-residential floor area ratio ("FAR"), respectively), and assumed dwelling units and commercial square footage (251 dwelling units and 70,008 SF, respectively). An Addendum to the SEIR was submitted in conjunction with the Project and is

explained, in detail, within the Environmental Review section of this report.

On September 8, 2022, the Applicant filed a Development Plan application (File No. PDEV22-042) to construct 357 dwelling units and 3,800 square feet of ground-floor commercial space on the 5.81-acre Project site. The request was submitted in conjunction with a Planned Unit Development ("PUD") application (File No. PUD22-006), to establish the development standards and design guidelines for the Project site.

PLANNED UNIT DEVELOPMENT: The MU-NH 8b zoning district requires the preparation and approval of a PUD to establish the development standards and design guidelines for the site. The proposed Watermarke Ontario PUD, included as Attachment A to the attached Ordinance, identifies the following components:

Objectives — The Objectives component of the PUD outlines the Project's consistency with The Ontario Plan, including its Vision, Governance Manual, Policy Plan (General Plan), City Council Priorities, Implementation, and Tracking and Feedback. The City's Policy Plan's goals and policies guide the City's continued growth. These goals extend to the Project's proposed residential and commercial land uses and the Project area's Mixed Use – Neighborhood Activity Hub (MU-NH) land use designation. The MU-NH land use designations allow for the development of low-rise mixtures of retail and residential land uses, which serve the surrounding residents.

The PUD is designed to achieve the purpose of the Policy Plan land use designations and comply with applicable goals and policies of The Ontario Plan. The PUD analyses several elements of The Ontario Plan, identifies specific policies, and reviews how the PUD is consistent with the identified policy. Specifically, the PUD analyses various goals and policies of the Land Use, Housing, Community Economics, Safety, and Community Design.

Additionally, from an economic development standpoint, the City of Ontario views this as a critical project to further serve the Ontario Vision and boost economic development activity. The City has been taking a targeted approach to revitalize underutilized shopping centers to bring in much needed housing units, as well as high-quality retail for our residents. The Project will replace dated retail space and provide a high-quality housing product with opportunity for retail spaces to provide the residents and surrounding community with food, beverage, service, and/or miscellaneous retail opportunities.

Policy Plan (General Plan) — The Policy Plan (General Plan) includes the Land Use Element, which designates the subject parcels within the PUD as "MU – Mixed-Use" to facilitate a horizontal and/or vertical mix of retail, service, office, restaurant, entertainment, cultural, and residential uses. The MU – Mixed-Use designation is further broken down into sub-categories to refine the type of mixed-use development desired by the City. The Project site is located within sub-area MU-NH – Mixed Use Neighborhood Activity Hub. This designation envisions low-rise buildings (three to five stories) with a mix of retail and residential land uses that will create identity and place and serve surrounding residents. This category allows for residential densities ranging from 20 to 75 dwelling units per acre and non-residential development intensity of 1.00 FAR. The build-out of the 7.21-acre sub-area is projected to be 251 dwelling units and 70,008 square feet of non-residential development.

The PUD regulates the redevelopment of 5.81 acres of this sub-area with the intent to create a

mixed-use project providing a total of 357 dwelling units and 3,800 non-residential square feet. The remaining 1.4 acres of the sub-area is located north of the PUD's boundary and is currently being developed with a church. The PUD would allow the total number of residential units to exceed the 251 units identified in the TOP 2050 build-out projection within this sub-area, resulting from the proposed multi-family development; however, the exceedance is offset by a significant reduction in the build-out of non-residential square footage.

Land Use Plan — The Land Use Plan briefly describes the land use designation allowing the Project to develop multifamily residential as well as multiple retail and neighborhood commercial land uses. Permitted land uses are those permitted and conditionally permitted uses allowed under the Development Code, Division 5.02 (General Land Use Provisions), Section 5.02.010 (Allowed Land Uses, Activities and Facilities), Table 5.02-1 (Land Use Matrix) for the Mixed Use (MU-8B) zoning district.

Development Regulations — The Development Regulations section establishes standards that govern development of the site, including the following topics: placement, height, and bulk of permitted buildings and structures, establish locational criteria for vehicular access to the site, parking and loading requirements, landscaping, and signage standards. These standards encourage a high-quality residential/mixed use development and also establishes flexible guidelines to encourage site development and ensure that the project meets a minimum standard of appearance and is compatible with the surrounding neighborhoods. The PUD proposes a maximum FAR of 1.0 and density of 20-75 dwelling units per acre; a maximum building height of 65 feet; minimum street and interior setbacks of 10 feet; and a minimum of 1.2 parking spaces per bedroom for residential uses and one space per 250 square feet of non-residential uses.

Design Guidelines/Landscape Standards — New development implemented under the PUD will generate new uses and design aesthetics to fulfill the design goals and policies of TOP. It will be guided by design criteria to provide articulation, dynamic materials and colors, and avoidance of bulky and monotonous elevations. Street trees and landscaped street setback areas will provide opportunities to frame the street, create and prioritize safe, attractive, and well-shaded pedestrian access from the public rights-of-way, and minimize building bulk from the public right-of-way. The proposed development will be subject to and governed by policies and goals regarding building orientation, access and parking facilities, service facilities, pedestrian linkages, architectural character, massing and scale, articulation and fenestration, architectural details, storefronts, materials and colors, roofs and rooftop equipment, non-residential outdoor dining areas, residential outdoor spaces and common recreational amenities, and landscape and hardscape elements.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan 2050.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (general plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

AIRPORT LAND USE COMPATIBILITY: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for File No. PUD22-006 for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2); [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3); [3] Airspace protection Zones (ONT ALUCP Map 2-4); and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

ENVIRONMENTAL REVIEW: The environmental impacts of this Project were reviewed in conjunction with an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002. This Application introduces no new significant environmental impacts. All previously adopted mitigation measures are a condition of Project approval and are incorporated herein by this reference.

NEIGHBORHOOD MEETING: A neighborhood meeting regarding File No. PDEV22-042 was held at the Ontario Senior Center on June 22, 2023. Several members of the public attended and requested additional information about the Project, including the Project's scope of work, conceptual site planning, building design, and traffic. City staff provided additional information to the community members at the meeting and considered their input during Project review.

PUBLIC COMMENTS: As of the preparation of this Agenda Report, Planning Department staff has not received any correspondence regarding the proposed Planned Unit Development. However, staff did receive two written communications regarding the environmental addendum and the Development Plan. Please see the attached Planning Commission Staff Report dated February 27, 2024, for details.

PLANNING COMMISSION REVIEW: On February 27, 2024, the Planning Commission conducted a public hearing and voted 6-0 to recommend that the City Council consider and approve File No. PUD22-006 and adopt an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report, pursuant to the facts and reasons contained in the staff report and attached Ordinance, and subject to the conditions of approval.

CITY OF ONTARIO PLANNING DEPARTMENT

PLANNING COMMISSION AGENDA REPORT

February 27, 2024

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

FILE NOS: PUD22-006 and PDEV22-042

SUBJECT: A public hearing to consider the use of an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report ("Certified SEIR") for the following: [1] a Planned Unit Development (File No. PUD22-006) to establish development standards and design guidelines for the 5.81-acre project site; and [2] a Development Plan (File No. PDEV22-042) to construct 357 apartment units and 3,800 square feet of commercial space on 5.81 acres of land, located at the northeast corner of Mountain Avenue and Fourth Street, within the MU-8b (Mountain/Fourth Mixed Use) zoning district. **Submitted by JAT Land Development LLC. City Council action is required for File No. PUD22-006.**

PROPERTY OWNER: JAFAM Corporation

RECOMMENDED ACTION: That the Planning Commission, 1) consider and approve File No. PDEV22-042, and 2) recommend that the City Council adopt File No. PUD22-006 and the accompanying Addendum to the TOP 2050 Subsequent Certified Environmental Impact Report, pursuant to the facts and reasons contained in the staff report and attached resolutions, and subject to the conditions of approval appended to the attached resolutions as "Attachment A". A summary of the resolution attachments has been provided in the Agency/Department Reviews and Resolutions Section below.

Figure 1: Project Location

PROJECT SETTING: The Project site is comprised of 5.81 acres of land located at the northeast corner of Mountain Avenue and Fourth Street, within the Mixed Use – Neighborhood Hub 8b – Mountain and Fourth (MU-NH 8b) zoning district. The site is currently developed with commercial uses and a post office. The properties to the north of the Project site are within the MU-8b (Mountain/Fourth Mixed Use) and Low-Density Residential (LDR-5) zoning districts and are developed with a church (currently under

construction) and existing single-family land uses. The property to the south is within the Neighborhood Commercial (CN) zoning district and developed with commercial land uses. The properties to the east are within the Low-Density Residential (LDR-5) zoning district and developed with single-family land uses. The property to the west is within the Neighborhood Commercial (CN) zoning district and developed with commercial land uses. The existing surrounding land uses, zoning, and Policy Plan (general plan) and specific plan land use designations are summarized in the "Surrounding Zoning & Land Uses" table located in the Technical Appendix of this report.

PROJECT ANALYSIS:

(1) Background — On August 16, 2022, the Ontario City Council certified The Ontario Plan 2050 ("TOP") Supplemental Environmental Impact Report ("SEIR") (State Clearinghouse No. 2021070364) in conjunction with File No. PGPA20-002. The SEIR analyzed the Project site and 1.4 acres of land to the northwest of the Project site, also located within the same mixed-use district, and established guidelines for development. These guidelines include, but are not limited to, general land use (mixed-use residential and commercial), maximum density and development intensity (20-75 dwelling units per acre and 1.0 non-residential floor area ratio ("FAR"), respectively), and assumed dwelling units and commercial square footage (251 dwelling units and 70,008 SF, respectively). An Addendum to the SEIR was submitted in conjunction with the Project and is explained in detail within the Environmental Review section of this report.

On September 8, 2022, the Applicant filed a Development Plan application (File No. PDEV22-042) to construct 357 dwelling units and 3,800 square feet of ground-floor commercial space on the 5.81-acre Project site. A comprehensive Development Plan set, including the site plan, elevations, floor plans, landscape plan, renderings, colors and materials, and development summary sheet, is attached to this report as "Attachment A – Development Plan Set." The request was submitted in conjunction with a Planned Unit Development ("PUD") application (File No. PUD22-006), to establish the development standards and design guidelines for the Project site.

On December 18, 2023, the Development Advisory Board considered the subject Development Plan application and recommended approval to the Planning Commission with the Project conditions of approval.

On January 23, 2024, the Planning Commission voted to continue the Project to the February 27, 2024, public hearing, to allow staff to correct a noticing deficiency with the Notice of Filing sign on the project site. Updated public hearing information regarding the Project was posted to the Notice of Filing sign on January 26, 2024.

(2) Planned Unit Development (File No. PUD22-006) — The MU-NH 8b zoning district requires the preparation and approval of a PUD to establish the development standards and design guidelines for the site. The proposed Watermarke Ontario PUD, appended to the attached resolution as "Attachment A," identifies the following components:

(a) Introduction/Location — A brief introduction of the Project site and intent of the Planned Unit Development document.

(b) Objectives — The Objectives component of the PUD outlines the Project's consistency with The Ontario Plan, including its Vision, Governance Manual, Policy Plan (General Plan), City Council Priorities, Implementation, and Tracking and Feedback. The City's Policy Plan's goals and policies guide the City's continued growth. These goals extend to the Project's proposed residential and commercial land uses and the Project area's Mixed Use – Neighborhood Activity Hub (MU-NH) land use designation. The MU-NH land use designations allow for the development of low-rise mixtures of retail and residential land uses, which serve the surrounding residents.

The PUD is designed to achieve the purpose of the Policy Plan land use designations and comply with applicable goals and policies of The Ontario Plan. The PUD analyses several elements of The Ontario Plan, identifies specific policies, and reviews how the PUD is consistent with the identified policy. Specifically, the PUD analyses various goals and policies of the Land Use, Housing, Community Economics, Safety, and Community Design.

Additionally, from an economic development standpoint, the City of Ontario views this as a critical project to further serve the Ontario Vision and boost economic development activity. The City has been taking a targeted approach to revitalize underutilized shopping centers to bring in much needed housing units as well as high-quality retail for our residents. The Project will replace dated retail space and provide a high-quality housing product with opportunity for retail spaces to provide the residents and surrounding community with food, beverage, service, and/or miscellaneous retail opportunities.

(c) Policy Plan (General Plan) — The Policy Plan (General Plan) includes the Land Use Element, which designates the subject parcels within the PUD as "MU – Mixed-Use" to facilitate a horizontal and/or vertical mix of retail, service, office, restaurant, entertainment, cultural, and residential uses. The MU – Mixed-Use designation is further broken down into sub-categories to refine the type of mixed-use development desired by the City. The Project site is located within sub-area MU-NH – Mixed Use Neighborhood Activity Hub. This designation envisions low-rise buildings (three to five stories) with a mix of retail and residential land uses that will create identity and place and serve surrounding residents. This category allows for residential densities ranging from 20 to 75 dwelling units per acre and non-residential development intensity of 1.00 FAR. The build-out of the 7.21-acre sub-area is projected to be 251 dwelling units and 70,008 square feet of non-residential development.

The PUD regulates the redevelopment of 5.81 acres of this sub-area with the intent to create a mixed-use project providing a total of 357 dwelling units and 3,800 non-residential square feet. The remaining 1.4 acres of the sub-area is located north of the PUD's boundary and is currently being developed with a church. The PUD would allow

the total number of residential units to exceed the 251 units identified in the TOP 2050 build-out projection within this sub-area, resulting from the proposed multi-family development; however, the exceedance is offset by a significant reduction in the build-out of non-residential square footage.

Implementation of the PUD will achieve numerous City goals and policies as outlined in the Policy Plan (General Plan). Briefly, these goals are listed in the *"Compliance with the Ontario Plan"* section of the report, below.

(d) Land Use Plan — The Land Use Plan briefly describes the land use designation allowing the Project to develop multifamily residential as well as multiple retail and neighborhood commercial land uses. Permitted land uses are those permitted and conditionally permitted uses allows under the Development Code, Division 5.02 (General Land Use Provisions), Section 5.02.010 (Allowed Land Uses, Activities and Facilities), Table 5.02-1 (Land Use Matrix) for the Mixed Use (MU-8B) zoning district.

(e) Development Standards/Circulation/Roadway Infrastructure/Infrastructure and Utilities/Development Strategy — The Development Regulations section establishes standards that govern development of the site, including the following topics: placement, height, and bulk of permitted buildings and structures, establish locational criteria for vehicular access to the site, parking and loading requirements, landscaping, and signage standards. These standards encourage a high-quality residential/mixed use development and also establish flexible guidelines to encourage site development and ensure that is of a minimum standard of appearance, and compatible with the surrounding neighborhoods. The PUD proposes a maximum FAR of 1.0 and density of 20-75 dwelling units per acre; a maximum building height of 65 feet; minimum street and interior setbacks of 10 feet; and a minimum of 1.2 parking spaces per bedroom for residential uses and 1 space per 250 square feet of non-residential uses.

(f) Design Guidelines/Landscape Standards — New development implemented under the PUD will generate new uses and design aesthetics to fulfill the design goals and policies of TOP and will be guided by design criteria to provide articulation, dynamic materials and colors, and avoidance of bulky and monotonous elevations. Street trees and landscaped street setback areas will provide opportunities to frame the street, create and prioritize safe, attractive, and well-shaded pedestrian access from the public rights-of-way, and minimize building bulk from the public right-of-way. The proposed development will be subject to and governed by policies and goals regarding building orientation, access and parking facilities, service facilities, pedestrian linkages, architectural character, massing and scale, articulation and fenestration, architectural details, storefronts, materials and colors, roofs and rooftop equipment, non-residential outdoor dining areas, residential outdoor spaces and common recreational amenities, and landscape and hardscape elements.

(g) Administration — The PUD establishes that applications for Development Plans and other entitlement proposals are subject to the Ontario Development Code submittal, review, and processing requirements.

(3) Development Plan (File No. PDEV22-042) — A Development Plan was submitted in conjunction with the PUD to facilitate construction of the Project site. A comprehensive Development Plan set, including the site plan, elevations, floor plans, landscape plan, renderings, colors and materials, and development summary sheet, is attached to this report as "Attachment A – Development Plan Set."

(a) Previous Project Site Approvals — In 2007, the Planning Commission approved a Development Plan (File No. PDEV05-072) to construct a mixed use project consisting of a 4-story 177 unit market rate senior apartment complex, the remodel of the existing post office, and 19,729 square feet of commercial floor area (including a 13,570 square-foot Walgreens including a drive-thru pharmacy, and 6,159 square feet of commercial floor area on the ground floor of the apartment building). In 2011, the City Council approved a Development Plan Modification (File No. PDEV10-013) for a phasing plan of the proposed project; however, both development applications have since expired.

(b) Prior Use of the Project Site – As originally developed, the Project site contained a Post Office and an L-shaped multi-tenant commercial building. In 2015, the westerly half of the commercial building was demolished, leaving the existing easterly half of the commercial building and Post Office remaining. The existing portion of the commercial building previously included a dry-cleaning business; this tenant is no longer in operation. The Post Office has an existing 5-year lease that expires in 2025, at which time they will close the existing facility. The City and applicant are unaware of the Post Office's plans for a potential relocation or closure of the existing facility and have advised the applicant that they will address this issue at a later date. Due to site contamination from the past dry-cleaning business the California Department of Toxic Substance Control ("DTSC") investigated the Project site and identified the site as requiring remediation resulting in the issuance of a "No Further Action" letter for the site, including a land use covenant restricting the central portion of the Project site to commercial/industrial land uses, is attached to this report as "Attachment B – DTSC Report of Findings Approval". In compliance with the site covenant, the proposed parking structure is located in the central portion of the Project site, completely encapsulating the site contamination area. The applicant continues to work with DTSC to ensure compliance and will obtain all necessary approvals and/or permits prior to the issuance of grading and building permits from the City.

In June 2023, the DTSC mailed a community survey to surrounding residents as part of their public participation process. The survey was designed to gauge interest and generally inform the community about the site. Specific information regarding DTSC activities specific to the Project site (i.e., community involvement, site specific documents, maps, and CalEnviroScreen data) is available on the DTSC EnviroStor

website. Access the following link (https://www.envirostor.dtsc.ca.gov) and search for Ontario Plaza.

(c) Site Design/Building Layout — The Project proposes the construction of a 6-story parking structure at the center of the Project site, wrapped by a 4-story residential apartment building. The residential component proposes 357 apartment units on 5.81 acres, at a density of 61.4 dwelling units per acre, and 3,800 square feet of ground-floor commercial floor area, at an intensity of 0.015 FAR. The 4-story apartment building is largely oriented in an east-west configuration with building wings that project towards all four corners of the project site. The proposed apartment building is set back approximately 43 feet from the north property line and approximately 35 to 45 feet from the east property line. The building set back area provides opportunities for Project improvements, including landscaping, several rows of trees, and the emergency access road to assist in mitigating the visual impacts to the surrounding single-family residences. Building projections provide opportunities for tenant courtyards providing passive and active recreational facilities. The commercial floor area and leasing office are situated on either side of the Fourth Street driveway and are accessible through either walk-up pedestrian access or through guest parking located on the first floor of the parking structure. As depicted in Attachment A – Development Plan Set, page A-7 for the Ground Level Building Plan; pages A-8 to A-12 for Floor Plans 2 to 6; and pages L.1 to L.5 for the landscape plan and courtyard/paseo design.

The Project's 357 proposed residential units consists of 50 studio units, 202 one-bedroom units, and 105 two-bedroom units and are summarized in the "Dwelling Units Statistics" table located in the Technical Appendix of this report.

(d) Site Access/Circulation — Access to the Project site is provided via entry driveways from both Fourth Street and Mountain Avenue. The main entryway to the Project connects to Fourth Street via a 28.5-foot wide driveway that continues to a 26-foot wide gated entry for the 6-story parking structure. A 20-foot wide guest drop-off lane is located along the east side of the main driveway. Entrance to the parking structure and the guest drop-off lane are separated by a 6-foot wide landscape island. A secondary entryway connects to Mountain Avenue via a 26-foot wide 2- way driveway leading to the parking structure access, transitioning as it continues east to a 24-foot wide Emergency Vehicle Access (EVA) lane that extends along the northeastern project boundary to an emergency access only security gate at the terminus of Harvard Place. The view obscuring security gate shall be designed with a Knox Box for Fire access only and no pedestrian access allowed. The commercial portion of the Project will have direct access from Fourth Street, and the residential portion of the Project will have entry access points for both vehicles and pedestrians from Fourth Street and Mountain Avenue. Pedestrian circulation is provided throughout the Project site via sidewalks and decorative drive aisle crossings.

Internal roadways include a network of ramps within the central wrapped parking structure to allow tenant access to each parking level. Each ramp would allow for a

bidirectional flow of traffic. The first and sixth level of the parking structure include a turnaround space for vehicles to change direction or continue on to the upwards or downwards ramp. The commercial and leasing parking is located on the ground floor of the six-story parking structure with the remaining spaces utilized for residential parking.

The church located adjacent to northwest corner of the Project site does not provide a physical driveway or pedestrian connection between the two sites and there are no reciprocal access agreements between the adjacent properties.

(e) Parking — The number of off-street parking spaces provided exceeds the minimum parking requirement for the Project. The off-street parking calculations and provisions for the Project are summarized below and in detail within Attachment A – Development Plan Set.

Parking Summary

Type of Use	*Number of Bedrooms*	*Building Area (in SF)*	*Parking Ratio*	*Spaces Required*	*Spaces Provided*
Residential Units	462	N/A	1.2 spaces per bedroom/studio unit (Inclusive of guest parking)	555	643
Commercial	N/A	3,800 SF	1 space/250 sq. ft.	16	16
TOTAL				**571**	**659**

The Project provides a total of 659 parking spaces within the central 6-story parking structure, with 16 of these spaces reserved for retail parking. Parking for the commercial area and leasing office are located on the ground level of the building plan, access gates separate resident parking areas from commercial and leasing parking areas. No on-street parking is permitted adjacent to the Project site. Conditions of approval for the project will require a parking management plan to be submitted for Planning Department review and approval, to accompany a rental/lease agreement for the site's residents and businesses.

(f) Architecture — The buildings are designed in a contemporary architectural style, as depicted in the elevations, renderings, and materials summary provided in Attachment A – Development Plan Set on sheets A-15 through A-20 (elevations), A-14 and A-22 (renderings), and A-25 (materials summary). An assortment of complementary colors, materials, and textures are proposed, including exterior plaster, concrete block veneer, wood-like siding, vertical cement board tiles, decorative metal panel railing, metal picket railing, and aluminum storefront windows. The color palette largely consists of neutral earth tones but also includes vibrant color accent panels for each building in brown, gray, off-white, and navy. The residential units feature balconies, and a rooftop deck will be provided at the southwest corner of the Project site.

The ground floor commercial and residential leasing office are centrally located along the Fourth Street frontage. The commercial storefronts will include metal awnings and

trellises to provide visual interest at the retail tenant entries. Additional features of the commercial frontage include an outdoor seating area with café tables and shade umbrellas.

(g) Common Open Space, Amenities, and Landscaping — Common open space as well as indoor and outdoor recreation amenities are provided. Project open space provides 3 courtyards and a roof top deck and includes the following amenities:

- **The West Courtyard provides:**
  - Communal outdoor dining table
  - Built-in barbecue
  - Game lawn
  - Outdoor movie wall
  - Lounge seating
  - Accent landscaping with shade trees
- **The Hangout provides:**
  - Specimen tree grove
  - Game lawn
  - Lounge seating
  - Accent landscaping with shade trees
- **The Pool Courtyard provides:**
  - Game court
  - Pool/spa
  - Cabanas/Umbrellas
  - Built-in barbecue and pizza oven
  - Lounge furnishings
  - Accent landscaping with shade trees
  - Dog park with grass, gated vestibule, and hedge screening
- **The Roof Top Deck provides:**
  - Build-in barbecue
  - Lounge furnishings
  - Banquet seating
  - Accent landscaping

Pursuant to Ontario Development Code Sections 6.01.010 and 6.05, all areas of a multiple-family development project not covered by structures, drive aisles, off-street parking facilities, or hardscape shall be fully landscaped and provided with a permanent automatic irrigation system prior to Certificate of Occupancy issuance. Landscaping is provided for these unpaved areas, including the full length of the Project street frontages, along pedestrian walkways and recreation areas, and throughout the parking lot, for a total of 43,024 square feet (17.0 percent) of landscape coverage for the Project site. A variety of accent and shade trees in 15-gallon to 60-inch box sizes, as well as one- to five-gallon shrubs, groundcovers, and vines, will be planted throughout the site. Decorative paving and lighting will be provided at entries, pedestrian walkways, and other key

locations throughout the Project site, as depicted in Attachment A – Development Plan Set, pages L.1 to L.12.

(h) Signage — All Project signage is required to comply with the sign regulations provided in Ontario Development Code Division 8.1 as well as in the PUD. Prior to the issuance of a Building Permit for the installation of any new on-site signage, the Applicant is required to submit a Master Sign Program for the Project site and Sign Plans for the proposed signs for Planning Department review and approval.

(i) Utilities (drainage, sewer) — Public utilities (water and sewer) are available to serve the Project. Furthermore, the Applicant has submitted a Preliminary Water Quality Management Plan ("PWQMP"), which establishes the Project's compliance with storm water discharge/water quality requirements. The PWQMP includes site design measures that capture runoff and pollutant transport by minimizing impervious surfaces and maximizes low impact development ("LID") best management practices ("BMPs"), such as retention and infiltration, biotreatment, and evapotranspiration. The PWQMP proposes the minimized use of impervious hardscape in conjunction with on-site biotreatment basins/trenches with underdrains, where the soil type is poorly draining. Any overflow drainage will be conveyed to the public street by way of parkway drains and culverts.

NEIGHBORHOOD MEETING: A neighborhood meeting regarding File No. PDEV22-042 was held at the Ontario Senior Center on June 22, 2023. Several members of the public attended and requested additional information about the Project, including the Project's scope of work, conceptual site planning, building design, and traffic. City staff provided additional information to the community members at the meeting and considered their input during Project review.

PUBLIC NOTIFICATION: The subject application was advertised as a public hearing in at least one newspaper of general circulation in the City of Ontario (the Inland Valley Daily Bulletin newspaper). In addition, the Project site was posted with two large public notification signs and notices were mailed to all owners of real property located within a minimum of 300 feet of the exterior boundaries of the property that is the subject of the hearing, as shown on the records of the County Assessor.

CORRESPONDENCE: As of the preparation of this Agenda Report, Planning Department staff received the following written communications from the owners or occupants of properties surrounding the Project site or from the public in general:

- Mark Terzano, the property owner of 944 W. Harvard Place submitted emails on January 20, 2024, and January 24, 2024. His emails include the following comments (shown in **bold** text):

    1. **The addition of 643 parking spaces for residences would drastically increase traffic flow on Mountain Ave going north which is presently overly**

congested now. Additionally, entrances to this project from Mountain and or 4th St would create additional potential for auto accidents created by left hand turns into project. Also the traffic light at Mountain and 4th will create additional backups due to the impact of 643 autos per day.

Staff Response: The proposed Project would generate additional trips and increase traffic volumes at the Mountain Avenue and Fourth Street intersection and along Fourth Street. However, compared to existing traffic patterns, the Project would not significantly increase delays at surrounding intersections (see Table 5 in Appendix H of the Addendum). These increased delays would range from an average of 0.1 to 0.2 additional seconds per intersection approach.

An All-Way Stop Warrant Analysis completed for the proposed Project assessed the Palmetto and Fourth Street intersection, which would be near the main Project entrance on Fourth Street. The all way stop analysis considered the intersections qualification for an all-way stop based on signalization, crash rates, and traffic volumes. Implementation of the proposed Project was not found to necessitate an all-way stop in the intersection. Existing crash rates at the intersection were found to be below the threshold for all-way stop consideration.

Additionally, the Traffic Study concluded that the Project is estimated to generate approximately 1,269 net new daily trips with 76 net new AM peak hour trips and 81 net new PM peak hour trips.

2. **Per DTSC there will be a need to clean up hazardous VOCs in the soil and disturbing the earth will spew this hazardous waste into the air where the typically easterly blowing winds will blow it to residences adjacent to site particularly W Harvard PL.**

Staff Response: Soil remediation efforts are centralized in an area of the site, which would not be occupied by residences. Remediation efforts include dust control measures such as soil dampening. Soil dampening can be accomplished with various liquid compounds, or simply water, and greatly reduce the potential for fugitive dust since the damp dust will bond to itself and be too heavy to be carried in the air. (See Section 4.4.2, Threshold a; and Section 4.8.2, Threshold b).

Appendix F of the Addendum also describes fugitive dust control measures which would be taken during ground disturbing activities, including the removal of toxic soil substances. Pages 17 – 19 of the Project's Soil Management Plan (Appendix F) summarizes soil handling requirements during Project construction. These measures include the limiting of activity

during wind events, the use of water as a dust suppressant, and the covering of potentially stockpiled soil beneath plastic sheeting.

As well, redevelopment of the hazardous site will remove hazardous materials that would otherwise continue to exist and fester within the Project area.

3. **Addition of 643 parking spaces will drastically increase air pollution in the surrounding neighborhoods.**

   Staff Response: While the increased parking provided by the proposed Project would increase mobile source emissions from the Project site, the increased vehicular traffic would not exceed expected emissions as assessed for the area in the City's General Plan Update (see Section 4.4.2, Air Quality, Threshold b of the Addendum).

4. **As this project is surrounded by homes the impact of odors will indeed affect a substantial number of people.**

   Staff Response: Construction odors associated with Project development would occur on-site during construction activities; however, these effects would be temporary and intermittent. The Project does not propose uses that would generate harmful odors according to the South Coast Air Quality Management District CEQA Air Quality Handbook (see Section 4.4.2, Threshold d of the Addendum).

5. **The addition of 643 cars on surrounding streets would indeed create additional traffic noise and the report does not reference noise levels on W Harvard Place just east of the project or Princeton Ave just north of the project.**

   Staff Response: The Project was concluded to generate additional traffic noise; however, noise levels associated with the Project were modeled against existing sources and the City's noise thresholds. For both construction and operational noise, the Project was found to be within the acceptable noise range. Further, the Project would be required, as is City policy, to properly notify neighboring sensitive receptors of impending construction activities and erect noise barriers as feasible to minimize noise leakage (see Section 4.14.2, Threshold a of the Addendum).

6. **Doesn't the city have an ordinance that does not allow noise generation from equipment before 8 am.**

   Staff Response: The Ontario Municipal Code Section 5-29.09 (Construction Activity Noise Regulations) restricts noise sources associated with

construction activities between the hours of 7:00 AM to 6:00 PM on weekdays and 9:00 AM to 6:00 PM on Saturday (see Section 4.14.2, Threshold a of the Addendum).

7. **In previous meetings with the Ontario Planning Commission and City Council it has been agreed that the barrier at the west end of West Harvard PL bordering the project will be replaced by a locked emergency access only gate. It is imperative the existing barrier or locked gate for emergency access is in place throughout construction so there is no access to the construction site by construction vehicles or personal. This is in the interest of the health and welfare of the residents on West Harvard PL as the pollution, noise, traffic, and parking that would result on West Harvard Pl would endanger the health and safety of the residents and children.**

   Staff Response: Planning Department Conditions of Approval establish that the Emergency Vehicle Access (EVA) connection to Harvard Place will be controlled with a view obscuring gate, that no pedestrian access is permitted between the Project site and Harvard Place, and that no construction vehicle or personnel access is permitted between the Project site and Harvard Place.

8. **Page 120 0f 1798 indicates mitigation "to require fugitive dust control measures that exceed SCAQMD's Rule 403.**

   "Applying water every four hours to active soil disturbing activities." Who will monitor this to ensure its compliance? This needs to also include undisturbed soil that can be blown as dust in an easterly direction. Could City of Ontario water restrictions affect this operation in the future?

   Staff Response: The referenced South Coast Air Quality Management District (SCAQMD) Rule 403 is included in The Ontario Plan (TOP) 2050 Supplemental Environmental Impact Report (SEIR) and is addressed under the environmental analysis of Air Quality impacts. All projects are subject to the SCAQMD rules and regulations in effect at the time construction, and this includes among other rules, Rule 403 relating to fugitive dust.

   Rule 403 is intended to reduce the amount of particulate matter entrained in the ambient air as a result of man-made dust sources by requiring actions to prevent, reduce, or mitigate fugitive dust emissions. Rule 403 applies to any activity or man-made condition capable of generating fugitive dust and requires the implementation of best available dust control measures (BACM) to be applied during active operations capable of generating fugitive dust. Control measures typically include pre-watering prior to grading and applying water to stabilize the soil during and after grading activities to prevent fugitive dust generation.

To ensure compliance with SCAQMD standards the Project site will be posted with signage to indicate who to contact if fugitive dust is being generated. The construction manager will be required to monitor for proper dust control soil watering and ensure that it is completed at least every four hours. Watering activity will cover disturbed areas and based on existing conditions, most of the Project site will be disturbed during grading. City inspectors will also monitor the site and require that dust control measures be implemented should fugitive dust occur. Finally, as a part of construction activity, and to ensure environmental quality, dust control measures such as soil watering would continue to be employed should domestic water restrictions occur.

For soil watering, recycled (i.e., non-potable) water is commonly used for construction in additional to chemical stabilizers and the use of other techniques such as tarping and wind breaks. Mitigation Measure (MM) 3-1 requires compliance with SCAQMD Rule 403 and does not require the use of potable water during construction. Additionally, PPP AIR-3 requires compliance with SCAQMD Rule 402 (Nuisance) and Rule 403. Violations are subject to Criminal and Civil penalties according to the California Health and Safety Code, starting with Section 42400. Additionally, the SCAQMD would stop the work from operating out of compliance, issue an Order For Abatement, and impose additional conditions such as stricter watering, installing wind fencing, using chemical stabilizers, and installing wind monitoring.

AGENCY/DEPARTMENT REVIEWS AND RESOLUTIONS: Each City agency/department has been provided the opportunity to review and comment on the subject application and recommend conditions of approval to be imposed upon the application. At the time of the Resolution preparation, recommended conditions of approval were provided and are appended to the attached Resolution as "Attachment A."

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for File No. PDEV22-042, and as the recommending body for File No. PUD22-006 for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and

supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (general plan), and City Council Priorities components of The Ontario Plan ("TOP"). More specifically, the goals and policies of TOP that are furthered by the proposed Project are as follows:

(1) City Council Goals.

- Invest in the Growth and Evolution of the City's Economy
- Operate in a Businesslike Manner
- Focus Resources in Ontario's Commercial and Residential Neighborhoods

(2) Vision.

Distinctive Development:

- Commercial and Residential Development

➢ Development quality that is broadly recognized as distinctive and not exclusively tied to the general suburban character typical of much of Southern California.

(3) Governance.

Decision Making:

- Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

➢ G 1-2. Long-term Benefit. We require decisions to demonstrate and document how they add value to the community and support the Ontario Vision.

(4) Policy Plan (General Plan)

Land Use Element:

- Goal LU-1 Balance. A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

  - LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

  - LU-1.5 Jobs-Housing Balance. We coordinate land use, infrastructure, and transportation planning and analysis with regional, county, and other local agencies to further regional and sub-regional goals for jobs-housing balance.

  - LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

- Goal LU-2 Compatibility. Compatibility between a wide range of uses and a resultant urban patterns and forms.

  - LU-2.1 Land Use Decisions. We minimize adverse impacts on adjacent properties when considering land use and zoning requests.

  - LU-2.2 Buffers. We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur. Additional mitigation is required when new uses could negatively impact environmental justice areas.

  - LU-2.6 Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character.

- Goal LU-4 Phased Growth. Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.

  - LU-4.3 Infrastructure Timing. We require that the necessary infrastructure and services be in place prior to or concurrently with development.

  - LU-4.4 Shared Infrastructure. We encourage and facilitate the use of shared infrastructure (including shared or managed parking) in urban, mixed use, and transit-oriented Place Types.

Housing Element:

- Goal H-2 Housing Supply & Diversity. Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

  - H-2.1 Corridor Housing. We revitalize transportation corridors by encouraging the production of higher density residential and mixed-uses that are architecturally, functionally, and aesthetically suited to corridors.

  - H-2.5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.

  - H-2.6 Infill Development. We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.

- Goal H-3 Governmental Regulations. A City regulatory environment that balances the need for creativity and excellence in residential design, flexibility and predictability in the project approval process, and the provision of an adequate supply and prices of housing.

  - H-3.2 Flexible Standards. We allow flexibility in the application of residential and mixed-use development standards in order to gain benefits such as exceptional design quality, economic advantages, sustainability, or other benefits that would otherwise be unrealized.

- Goal H-5 Special Needs. A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age, or other status.

  - H-5.2 Family Housing. We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation, and other amenities.

Environmental Resources Element:

- Goal ER-1 Water & Wastewater. A reliable and cost-effective system that permits the City to manage its diverse water resources and needs.

  - ER-1.4 Supply-Demand Balance. We require that available water supply and demands be balanced.

  - ER-1.6 Urban Run-off Quantity. We encourage the use of low impact development strategies, including green infrastructure, to intercept run-off, slow the

discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.

- ER-1.7 Urban Run-off Quality. We require control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.

- ER-1.8 Wastewater Management. We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.

Energy Element:

- Goal ER-3 Energy. Cost-effective and reliable energy system sustained through a combination of low-impact buildings, site and neighborhood energy conservation, and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.

- ER-3.3 Building and Site Design. We require new construction to incorporate energy-efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.

- Goal ER-4 Air Quality. Improved indoor and outdoor air quality and reduced locally-generated pollutant emissions.

- ER-4.1 Land Use. We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.

Community Economics Element:

- Goal CE-1 Complete Community. A complete community that provides for all incomes and stages of life.

- CE-1.6 Diversity of Housing. We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.

- CE-1.7 Retail Goods and Services. We seek to ensure a mix of retail businesses that provide the full continuum of goods and services for the community.

- Goal CE-2 Placemaking. A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.

- CE-2.1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.

- CE-2.2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.

- CE-2.4 Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.

- CE-2.5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

Safety Element:

- Goal S-1 Seismic & Geologic Hazards. Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by earthquake-induced and other geologic hazards.

- S-1.1 Implementation of Regulations and Standards. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.

- S-1.2 Entitlement and Permitting Process. We follow state guidelines and the California Building Code to determine when development proposals must conduct geotechnical and geological investigations.

- Goal S-2 Flood Hazards. Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by flooding and inundation hazards.

- S-2.5 Stormwater Management. We maintain the storm drain system to convey a 100-year storm, when feasible, and encourage environmental site design practices to minimize flooding and increase groundwater recharge, including natural drainage, green infrastructure, and permeable ground surfaces.

- Goal S-3 Fire & Rescue Hazards. Reduced risk of death, injury, property damage, and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.

- S-3.1 Prevention Services. We proactively mitigate or reduce the negative effects of fire, hazardous materials release, and structural collapse by implementing the regularly-adopted California Fire Code and California Building Code.

- S-3.8 Fire Prevention. through Environmental Design. We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open spaces, and buildings.

- Goal S-4 Noise Hazards. An environment where noise does not adversely affect the public's health, safety, and welfare.

- S-4.1 Noise Mitigation. We utilize the City's Noise Ordinance, building codes, and subdivision and development codes to mitigate noise impacts.

- Goal S-5 Wind-Related Hazards. Minimize the risk of injury, property damage, and economic loss resulting from windstorms and wind-related hazards.

- S-5.1 Dust Control Measures. We require the implementation of Best Management Practices for dust control at all excavation and grading projects.

- Goal S-7 Law Enforcement. Residential neighborhoods, commercial areas, and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, and community involvement in public safety.

- S-7.4 Crime Prevention through Environmental Design (CPTED). We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces, and buildings.

Community Design Element:

- Goal CD-1 Image & Identity. A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.

- CD-1.1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing, enhancing, and preserving the character of our existing viable neighborhoods.

- CD-1.2 Place Types. We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.

- CD-1.3 Existing Neighborhoods. We require the existing character of viable residential and non-residential neighborhoods be preserved, protected, and enhanced.

- Goal CD-2 Design Quality. A high level of design quality resulting in neighborhoods, public spaces, parks, and streetscapes that are attractive, safe, functional, human-scale, and distinct.

➢ CD-2.1 Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through:

- Building volume, massing, and height to provide context-appropriate scale and proportion;
- A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and
- Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.

➢ CD-2.2 Neighborhood Design. We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as:

- A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services;
- Varied parcel sizes and lot configurations to accommodate a diversity of housing types;
- Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access;
- Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and
- Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.

➢ CD-2.4 Urban, Mixed Use, and Transit-oriented Areas. We establish Place Types to require mixed use, urban, and transit-oriented areas to be designed and developed as pedestrian-oriented areas that are integrated with adjacent neighborhoods and promote a vibrant, comfortable, and functional environment, as defined for each Place Type.

➢ CD-2.7 Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping, and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials, and construction techniques.

➢ CD-2.8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.

- CD-2.9 Landscape Design. We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.

- CD-2.10 Parking Areas. We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include:

  - Structured parking: facade articulation, screening, appropriate lighting, and landscaping; and
  - Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.

- CD-2.11 Entry Statements. We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.

- CD-2.12 Site and Building Signage. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.

- CD-2.13 Entitlement Process. We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.

- Goal CD-3 Urban, Mixed Use, and Transit-Oriented Place Types. Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.

- CD-3.1 Unique Identity. We promote development that heightens the unique character and identity of each Place Type by requiring compatible land uses and land planning, site design, and building design that promotes an active public realm.

- CD-3.4 Context-Aware and Appropriate Design. We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.

➢ CD-3.5 Active Frontages. We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).

▪ Goal CD-5 Protection of Investment. A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the property values and encourages additional public and private investments.

➢ CD-5.1 Maintenance of Buildings and Property. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.

➢ CD-5.2 Maintenance of Infrastructure. We require the continual maintenance of infrastructure.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (general plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

ENVIRONMENTAL REVIEW: An Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364, certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002) was prepared for this Project. TOP SEIR considered the direct physical changes and reasonably foreseeable indirect physical changes in the environment that would be caused by TOP. TOP SEIR focused on impacts from changes to land use associated with buildout of the City and impacts from the resulting population and employment growth. The proposed project is consistent and compatible with existing and planned uses in the surrounding area and would only differ by having 106 (42%) more residential units, but 66,208 (700%) less non-residential square footage with the PUD. The overall construction of the PUD project is generally consistent with the level of development outlined in TOP and its SEIR. The Addendum also included studies and assessments to support the findings that the Project will not have a significant environmental affect not already covered by TOP 2050 SEIR (see Appendices A through H to Attachment A – Addendum). A summary of each study is as follows:

a) Air Quality ("AQ") and Greenhouse Gas Assessment ("GHG") – The Air Quality Assessment was prepared to evaluate potential construction and operational emissions associated with the Project and determine the level of impact the Project would have on the environment. The purpose of the Greenhouse Gas Emissions Assessment is to evaluate the potential construction and operational emissions associated with the Project and determine the level of impact the Project would have on the environment. The analysis was undertaken to analyze whether the proposed Project would result in any

new or substantially more severe significant environmental impacts as compared to the conclusions discussed in The Ontario Plan 2050, certified Final Supplemental Environmental Impact Report (FSEIR). The AQ Assessment concluded that air quality impacts related to the proposed Project are less than the significant and unavoidable impacts identified in The Ontario Plan 2050 FSEIR. No new impacts relative to air quality or a substantial increase in the severity of a previously identified significant impact evaluated in the FSEIR would occur. GHG emission impacts related to the proposed Project are similar to the less than significant impacts identified in The Ontario Plan 2050 FSEIR. No new impacts relative to GHG emissions or a substantial increase in the severity of a previously identified significant impact evaluated in the FSEIR would occur.

b) Cultural Resources Assessment ("CR") – A cultural resources records search, additional research, intensive-level pedestrian field survey, and California Register of Historical Resources (California Register) eligibility evaluations were conducted for the project pursuant to the California Environmental Quality Act (CEQA). The Cultural Resources Assessment evaluated the two buildings on-site, these being a post office and commercial retail building. The report found that neither building met any of the four Criterion established by the California Register of Historic Resources or any of the eight City of Ontario designation criteria as a historic resource.

c) Phase 1 Environmental Assessment – The purpose of the Phase 1 Environmental Assessment was to perform a screening level survey for indications of the potential presence of hazardous and/or toxic materials on the Project site. Due to a former dry-cleaning business on the Project site the site was investigated and subsequently remediated for Tetrachloroethene (PCE) contamination in soil, soil gas and groundwater under the Department of Toxic Substance Control (DTSC) oversight. The DTSC issued a deed-restricted (commercial/industrial land use restriction) No Further Action letter for portions of the site, with an unrestricted "no further action" designation for the remainder of the site. All future development must follow the guidelines in the Land Use Covenant, the deed restriction, and the No Further Action letter.

d) Soil Management Plan ("SMP") – The SMP documents the proposed soil screening and mitigation methods for excavation activities for a proposed mixed use residential and commercial redevelopment project in areas of known subsurface contamination and for soil with visual or other indications of impacts that may be encountered in other areas of the Project site during development. The objective of the SMP is to provide guidance for managing chemicals of potential concern (COPCs)-bearing soil and soil vapor that primarily contains tetrachloroethene (PCE) from a former on-site dry-cleaning facility that will be excavated during construction activities, and summarizes vapor intrusion mitigation system engineering controls proposed for the new site buildings associated with development of the Project site.

e) Acoustical Assessment – The purpose of the Acoustical Assessment is to evaluate the potential construction and operational noise and vibration levels associated with the Project and determine the level of impact the Project would have

on the environment. The report concludes that implementation of the Project would not result in substantial temporary or permanent increases in ambient noise levels. Construction of the Project would not exceed construction noise thresholds and operational noise levels, nor would exceed applicable noise standards during the Project's opening year. Additionally, implementation of the Project would not result in excessive ground borne vibration levels or cumulatively significant off-site traffic noise or stationary noise.

f) Traffic Study – The traffic study was prepared to address the traffic-related effects of the proposed Project in accordance with the traffic study requirements of the City of Ontario and the San Bernardino County Transportation Authority (SBCTA) Congestion Management Program (CMP). The report includes a description of existing traffic conditions in the surrounding area, estimated Project trip generation Vehicle Miles Traveled (VMT) and distribution, future traffic growth, and an assessment of project-related effects on the transportation system. The report concludes that the Project will generate 1,269 net new daily trips with 76 net new AM and 81 net new PM peak hour trips, and the Project meets the Low VMT Area Screening threshold. The report concludes that the Project would result in a less-than-significant transportation impact, and no additional VMT analysis is required. Under existing conditions, all study intersections currently operate at an acceptable level of Service (LOS). Under opening year 2025 cumulative conditions, all study intersections would continue to operate at an acceptable LOS.

TECHNICAL APPENDIX:

Surrounding Zoning and Land Use:

	Existing Land Use	*Policy Plan Designation*	*Zoning Designation*	*Specific Plan Land Use*

WATERMARKE ONTARIO

DISCRETIONARY PERMIT RESUBMITTAL

AUGUST 15, 2023

TCA ARCHITECTS

PROJECT DESCRIPTION

Located at the corner of West 4th Street and North Mountain Avenue, Watermarke Ontario is a four story Type V wrap building with a six Level Type III above grade parking structure. The site is bound by West 4th Street on the south, North Mountain Avenue on the West, an existing church site and single family homes along the north, and single family homes on the east. The project will contain approximately 2,700 SF of Leasing, 5,760 SF of Amenity Space and 3,800 SF of new Retail (existing retail and post office to be removed / relocated). A roof deck amenity is located at the top floor of the corner of Mountain and 4th.

Fire Access is achieved from Mountain Avenue, 4th Street and a proposed fire lane that connect West Harvard Place to Mountain Avenue along the north property line. Primary vehicular project entries are located on 4th Street (aligned with vehicular drive of retail across the street) and Mountain (secondary access) with loading off of Mountain.

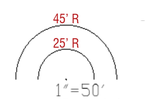
Fire Apparatus Access Roads

Fire apparatus access roads, sometimes referred to as fire lanes, shall be provided for every facility or building when any portion of the facility and/or the exterior wall of the first story of a building is located more than 150 feet from a public roadway, as measured along an approved route around the exterior of the building. Extenuating circumstances, increased hazards, and additional fire safety features may affect these requirements. CFC Section 503 and Appendix D Specific criteria pertaining to the design of fire access roadways are detailed below.

1. Fire Apparatus Access Road Construction – Fire apparatus access roads must be designed with an asphalt, concrete or other approved all-weather driving surface and engineered to support the imposed load of fire apparatus weighing at least 75,000 pounds. Roadways must be designed to facilitate turning radii of apparatus (see OFD Standard B-005) and meet requirements for gradient, height clearance, and width.

2. Vehicular Access During Construction – Unless given an exception by the OFD or this standard, the development and each phase shall have at least two (2) points of vehicular access for Fire Department and other emergency vehicles as well as for routes of egress for evacuations. Fire apparatus access roads shall be constructed and approved prior to combustibles being brought onto the site. Temporary "NO PARKING FIRE LANE" signs shall be posted during construction.

3. Fire Access Roads in a Special Fire Protection Area (SFPA) – To determine if a project is within a SFPA, contact the OFD, Bureau of Fire Prevention for information on the delineation of these areas. Std. #B-004 Fire ApparatusAccess Roads Page 2 of 7 Revised 03-08-17



4. Number of Fire Apparatus Access Roads Required:
e) Multiple-Family Residential Developments having more than 100 dwelling units shall have at least two separate fire apparatus access roads.
Exception: Developments having up to 200 dwelling units may have a single fire apparatus access road when all buildings, including nonresidential buildings, are equipped throughout with an approved automatic fire sprinkler system.

5. Width of Fire Apparatus Access Roads:
c) Fire apparatus access roads in the immediate vicinity of buildings greater than 30 feet in height shall be at least 26 feet in width. At least one of the access roads required under 5c below shall be located no closer than 15 feet and no farther than 30 feet from the building, and provided parallel to at least one entire side of the building.

7. Vertical Clearance – Fire apparatus access roads shall have an unobstructed vertical clearance of not less than 13 feet 6 inches. If trees are located adjacent to the fire apparatus access road, maintain all vegetation overhanging the fire apparatus access road as needed to provide a clear height of 13 feet 6 inches at all times.

14. Access to Multi-Family Residential Occupancies: Unless given an exception by the OFD, all multifamily residential occupanciesshall be within one hundred fifty feet (150') of the edge of the travel way of an improved public alley, street, or fire apparatus access road.

Min Turning Radius: 25' Inside and 45' Outside

Minimum Turning Radius-
25 feet inside
45 feet outside

*SITE PLAN SHALL MEET ALL ENGINEERING & NPDES REQUIREMENTS

**MOUNTAIN AVE & FOURTH ST SHALL BE SIGNED "NO STOPPING ANY TIME" ALONG PROPERTY FRONTAGE.

1) ENLARGED TRASH ROOM 1
SCALE: 1/16" = 1'-0"

2) ENLARGED TRASH ROOM 2
SCALE: 1/16" = 1'-0"

MULTIFAMILY REQUIRES 1.5 CUBIC YARDS PER 4 DWELLING UNITS

1.5 CY / 4 DU = .375 CY PER UNIT

357 DU X .375 CY = 134 CUBIC YARDS

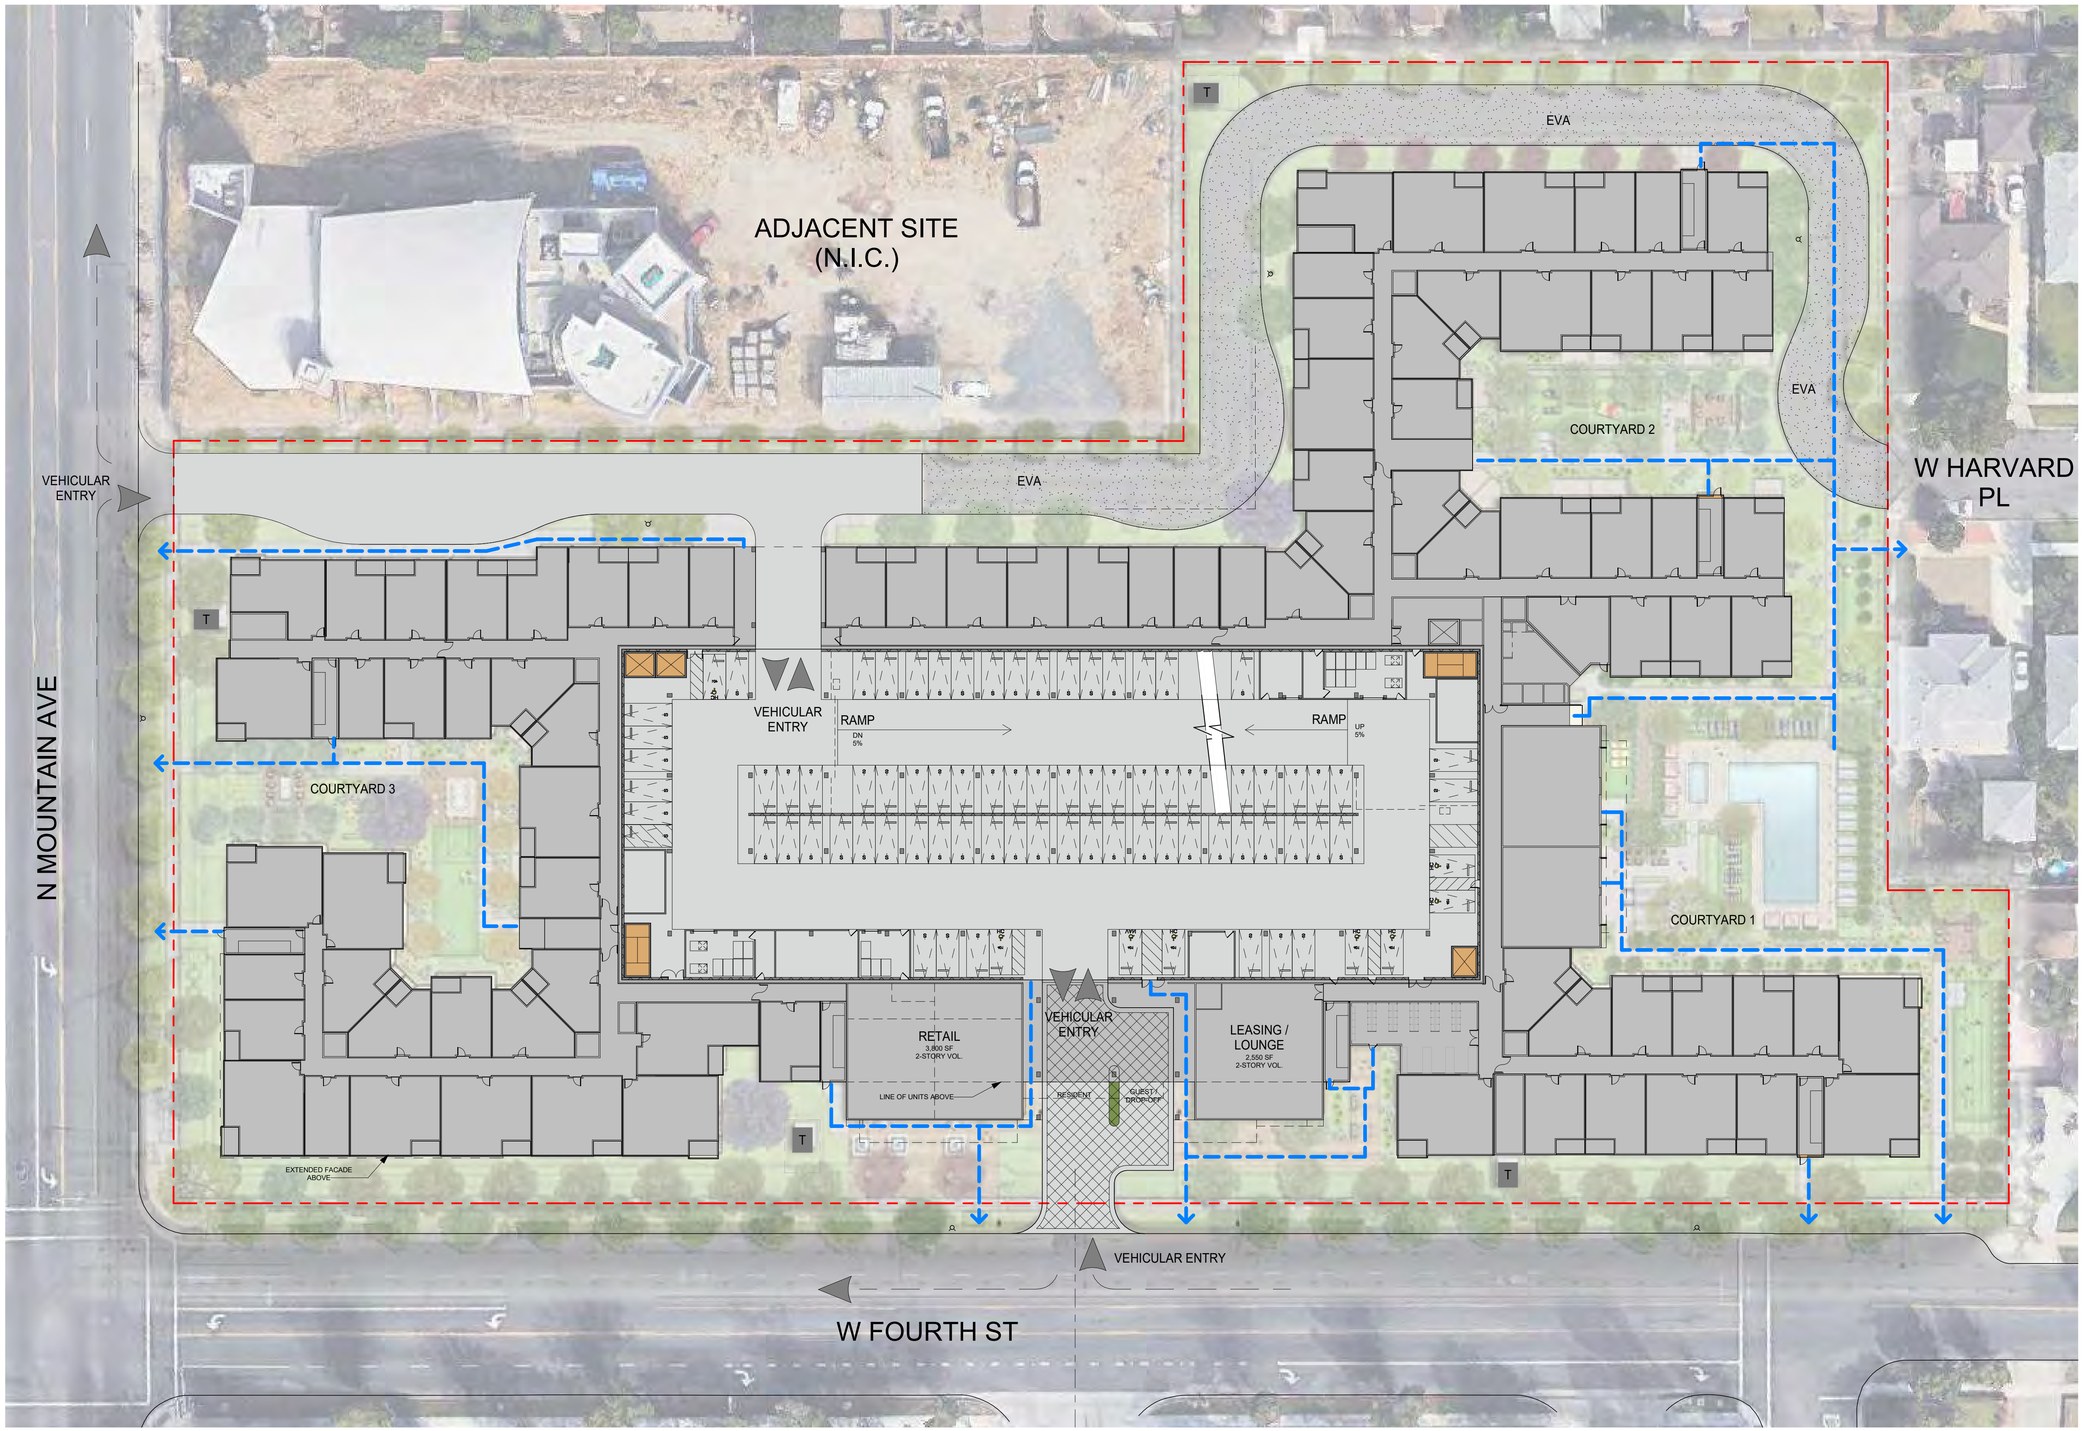
134 CY / 3 CY WASTE BINS = 44.67 BINS

44.67 WASTE BINS (3 CY EACH) / 3 PICK UPS PER WEEK = 15 WASTE BINS MINIMUM REQUIRED.

Refuse and recycling enclosure to City standards for ___ trash bin(s) and ___ recycling bin(s), or ___ ___ cubic yard compactor(s) per City standards.

MULTI-FAMILY REFUSE AND RECYCLING STANDARDS
BIN COLLECTION

Container Storage Standards:



A. Through circulation shall be provided for solid waste vehicles.
B. All refuse enclosures shall be located on major drives within developments to achieve adequate circulation of refuse vehicles.
C. A five foot wide concrete apron, with a 2% maximum pitch, shall be placed in front of all
refuse enclosures to allow for safe and efficient removal of bins. No drainage V-ditches or
catch basins shall be allowed within the five foot apron.
D. To encourage recycling, enclosures designed for a maximum of one (1) bin are prohibited.
Enclosures shall allow for storage of recycling bins or cans in addition to refuse bins.
E. Enclosures must be designed so that refuse and recycling containers may be accessed by
the generator and serviced by the service provider without moving other bins.
F. Pedestrian access shall be independent of service provider doors.
G. Enclosures must be designed so that bin lids face the pedestrian access location.
H. Enclosures must be designed with a roof or overhang at least 8 vertical feet from the ground. Enclosures shall be constructed with a solid roof meeting architectural and structural design criteria from Planning and Building Departments.
I. Enclosures shall be located so that refuse vehicles can pull to within 5 feet of gates.
J. Enclosures located closer than 5 feet to an adjacent structure shall be protected by automatic fire sprinklers approved by the Ontario Fire Department.
K. Gate stop bollards shall be installed to prevent enclosure gates from swinging into adjacent
parking stalls. Steel cane bolt sleeves shall be installed in the ground outside of bin enclosure gates to prevent gates from swinging shut.
L. Enclosures shall be screened with plant material whenever possible.
M. Refer to City of Ontario Enclosure Drawings—p. 9, 10, 11

Vehicle Access Standards:

A. Refuse vehicle turning radii
Inside radius ……28 feet
Outside radius ……42 feet
B. Refuse vehicle height clearance ……15 feet
C. Refuse vehicle width clearance ……15 feet
D. Refuse vehicle backing: Straight only. Distance determined on case by case basis.
E. A minimum 25 foot distance must be maintained in front of a bin enclosure. The enclosure must face the driveway, not parking spaces.
F. Alleys must be a minimum of 20 feet in width, and have enough room to allow for a 28 foot minimum turning radius when making turns at 90 degree intersections in the alley.
G. Containers must not obstruct travel path of refuse vehicle, or compromise the ability of the refuse vehicle to safely service the containers.

MULCH RING NOTE

8' DIAMETER OF MULCH ONLY SHOULD BE INSTALLED AT NEW TREES. 12' DIAMETER OF MULCH ONLY SHOULD BE INSTALLED AT EXISTING TREES. IRRIGATION DRIPLINE SHOULD BE INSTALLED OUTSIDE OF MULCH RING.

SCREENING NOTE

ALL UTILITIES, TRASH ENCLOSURES AND TRANSFORMERS TO BE SCREENED WITH EVERGREEN HEDGING OR SHRUBS

LANDSCAPE NOTE

6' DIAMETER OF MULCH SHALL BE SHOWN AROUND NEW TREES. IRRIGATION DETAIL SHALL SHOW DRIPLINE OUTSIDE OF MULCHED ROOT ZONE.

LANDSCAPE NOTE

LANDSCAPE AREAS WHERE COMPACTION HAS OCCURRED DUE TO GRADING ACTIVITIES AND WHERE TREES OR STORMWATER INFILTRATION AREAS ARE LOCATED SHALL BE LOOSENED BY SOIL FRACTURING. FOR TREES, A 12'X12'X18" DEEP AREA; FOR STORMWATER INFILTRATION, THE ENTIRE AREA SHALL BE LOOSENED. ADD THE FOLLOWING INFORMATION ON THE PLANS: THE BACKHOE METHOD OF SOIL FRACTURING SHALL BE USED TO BREAK UP COMPACTION. A 4" LAYER OF COMPOST IS SPREAD OVER THE SOIL SURFACE BEFORE FRACTURING IS BEGUN. THE BACKHOE SHALL DIG INTO THE SOIL LIFTING AND THEN DROP THE SOIL IMMEDIATELY BACK INTO THE HOLE. THE BUCKET THEN MOVES TO THE ADJACENT SOIL AND REPEATS. THE COMPOST FALLS INTO THE SPACES BETWEEN THE SOIL CHUNKS CREATED. FRACTURING SHALL LEAVE THE SOIL SURFACE QUITE ROUGH WITH LARGE SOIL CLODS. THESE MUST BE BROKEN BY ADDITIONAL TILLING. TILLING IN MORE COMPOST TO THE SURFACE AFTER FRACTURING PER THE SOIL REPORT WILL HELP CREATE AN A HORIZON SOIL. IMPORTED OR REUSED TOPSOIL CAN BE ADDED ON TOP OF THE FRACTURED SOIL AS NEEDED FOR GRADING. THE LANDSCAPE ARCHITECT SHALL BE PRESENT DURING THIS PROCESS AND PROVIDE CERTIFICATION OF THE SOIL FRACTURING. FOR ADDITIONAL REFERENCE, SEE URBAN TREE FOUNDATION – PLANTING SOIL SPECIFICATIONS.

IRRIGATION HYDROZONES

		WATER TYPE
	HYDRO-ZONE 1 - NORTHEAST FACING (24,469 S.F.) IRRIGATION TECHNIQUE SUB SURFACE DRIP IRRIGATION	RECYCLED
	HYDRO-ZONE 2 - SOUTHWEST FACING (23,361 S.F.) IRRIGATION TECHNIQUE SUB SURFACE DRIP IRRIGATION	RECYCLED
	HYDRO-ZONE 1 - NORTHEAST FACING (1,379 S.F.) IRRIGATION TECHNIQUE SUB SURFACE DRIP IRRIGATION	POTABLE
	HYDRO-ZONE 2 - SOUTHWEST FACING (1,119 S.F.) IRRIGATION TECHNIQUE SUB SURFACE DRIP IRRIGATION	POTABLE

TOTAL LANDSCAPE AREA

TOTAL LANDSCAPE AREA: 50,266 S.F. TOTAL LANDSCAPE ACREAGE: 1.15 ACRES
SITE NET ACREAGE: 5.81 AC (253,083 S.F.)
TOTAL LANDSCAPE ACREAGE / TOTAL NET ACREAGE = 20% LANDSCAPE AREA

IRRIGATION CONCEPT STATEMENT:

IRRIGATION ZONES: IRRIGATION HYDRO-ZONES SHALL HAVE PLANTS GROUPED with SIMILAR WATERING REQUIREMENTS.

DEPTH OF IRRIGATION LINES: ALL ON-GRADE LATERAL LINES SHALL BE BURIED TO A DEPTH OF 18" MIN. ALL ON-GRADE MAINLINES SHALL BE BURIED TO A DEPTH OF 24" MIN.

BACKFLOW PREVENTOR: BACKFLOW PREVENTOR SHALL BE A REDUCED PRESSURE PRINCIPAL BACKFLOW PREVENTOR (FEBCO 825Y OR EQUAL) TYPE AS APPROVED BY WATER SURVEYOR and SCREENED with LANDSCAPING from PUBLIC VIEW.

IRRIGATION EMITTERS: ALL SHRUB AREAS SHALL BE IRRIGATED USING DRIP IRRIGATION SYSTEM. ALL TREES SHALL BE IRRIGATED USING BUBBLER AND/OR DRIP IRRIGATION SYSTEM. ALL GROUNDCOVER AREAS SHALL BE IRRIGATED USING DRIP IRRIGATION SYSTEM.

IRRIGATION CONTROLLER: CONTROLLER SHALL BE AUTOMATIC with MULTIPLE PROGRAMMING CAPABILITY. CONTROLLER TO BE REPROGRAMMED SEASONALLY TO MINIMIZE RUNOFF and OVER WATERING. "SMART" CONTROLLER WEATHER TRACKING DEVICES SHALL BE UTILIZED TO CONTROL IRRIGATION CYCLES ACCORDING TO SPECIFIC IRRIGATION REQUIREMENTS.

CLASS OF IRRIGATION PIPE: ALL MAINLINE SHALL BE CLASS 315 PVC. ALL LATERAL LINES SHALL BE CLASS 200 PVC.
THE IRRIGATION DESIGN SHALL COMPLY with THE CRITERIA OF CITY OF ONTARIO WATER CONSERVATION POLICIES and REQUIREMENTS.

NOTE: LANDSCAPE AREAS WITHIN THE POOL FENCE SHALL BE IRRIGATED WITH A POTABLE SERVICE WITH BACKFLOW.

WATER EFFICIENT LANDSCAPE WORKSHEET

Reference Evapotranspiration (ETo) 49.34 ETAF for MAWA 0.55 (Residential)

Hydrozone # /Planting Description*	Plant Factor (PF)	Irrigation Method*	Irrigation Efficiency (IE)**	ETAF (PF/IE)	Landscape Area (sq. ft.)	ETAF x Area	Estimated Total Water Use (ETWU)***
Regular Landscape Areas							
H1: Northeastern Sun Exposure Moderate Water Plants	0.350	drip	0.81	0.43	25,848	11,169	341,665
H2: Southwestern Sun Exposure Moderate Water Plants	0.50	drip	0.81	0.62	24,480	15,111	462,261
			0.81				
			0.81				
			0.81				
				Totals	50,328	26,280	803,926
Special Landscape Areas							
			1.00				
			1.00				
			1.00				
				Totals			
						ETWU Total	803,926
						Maximum Allowed Water Allowance (MAWA)***	846,256

*Hydrozone #/Planting Description
E.g.
1) front lawn
2) low water use plantings
3) medium water use planting

**Irrigation Method
overhead spray or drip

**Irrigation Efficiency
0.75 for spray head
0.81 for drip

***ETWU (Annual Gallons Required) = Eto x 0.62 x ETAF x Area
Where 0.62 is a conversion factor that converts acre-inches per acre per year to gallons per square foot per year

***MAWA (Annual Gallons Allowed) = (Eto) (0.62) [(ETAF x LA) + (1-ETAF) x SLA)]
where Eto is the reference evapotranspiration (inches per year, LA is the total landscape area in square feet, SLA is the total special landscape area in square feet, and ETAF is .55 for residential areas and 0.45 for non-residential areas.

ETAC Calculations

Regular Landscape Areas

Total ETAF x Area	26,280
Total Area	50,328
Average ETAF	0.52

Average ETAF for Regular Landscape Areas must be 0.55 or below for residential areas, and 0.45 or below for non-residential areas.

Watermarke - Ontario MWELO - Copy.xlsx printed 8/4/2023

NOTE: Compaction to be no greater than 85% in landscape areas. Slopes to be maximum 3:1. All finished grades at 1 ½" below finished surfaces.

	SCONCE	BUILDING ENTRIES

* FOR REFERENCE ONLY *

LIGHTING CONCEPT

THE OUTDOOR LIGHTING CONCEPT IS TO PROVIDE LEVELS OF LIGHTING SUFFICIENT TO MEET SAFETY AND ORIENTATION NEEDS.

WITHIN PUBLIC AREAS LIGHTING WILL BE WARM COLORED AND UNOBTRUSIVE. LIGHT SOURCES WILL BE L.E.D. OR METAL HALIDE.

LIGHTING SOURCES FOR THE LANDSCAPE AND PAVED AREAS WILL BE CONCEALED AND THE LIGHTING INDIRECT NOT VISIBLE FROM A PUBLIC VIEWPOINT. LIGHT SOURCES SHOULD BE DIRECTED SO THAT IT DOES NOT FALL OUTSIDE THE AREA TO BE LIGHTED. SHIELDS WILL BE USE TO DIRECT LIGHT DOWNWARD.

ALL EXTERIOR SURFACE AND ABOVE-GROUND MOUNTED FIXTURES WILL BE SYMPATHETIC AND COMPLIMENTARY TO THE ARCHITECTURAL THEME.

GENERAL SITE LIGHTING NOTES

1 ALL LIGHTING FIXTURES AND ELECTRICAL INSTALLATION SHALL BE IN CONFORMANCE WITH THE NATIONAL ELECTRICAL CODES AND LOCAL GOVERNMENT AGENCY.

2 CONTRACTOR SHALL VERIFY LOCATION OF ALL UTILITIES PRIOR TO CONSTRUCTION AND SHALL BE HELD LIABLE FOR ALL DAMAGES INCURRED.

3 THE CONTRACTOR SHALL OBTAIN ALL NECESSARY PERMITS REQUIRED TO PERFORM THE WORK INDICATED HEREIN BEFORE BEGINNING WORK.

4 ALL CONSTRUCTION SHALL CONFORM TO THE CURRENT UNIFORM BUILDING CODES, PERMIT REQUIREMENTS AND STATE AND HEALTH SAFETY REQUIREMENTS.

5 ALL ELECTRICAL FIXTURES ARE SHOWN SCHEMATICALLY FOR LOCATIONS AND QUANTITIES REQUIRED. CONTRACTOR SHALL VERIFY EXISTING CONDITIONS PRIOR TO CONSTRUCTION AND INSTALL FIXTURES PER MANUFACTURERS SPECIFICATIONS.

PHOTOMETRICS TO BE PROVIDED BY ELECTRICAL ENGINEER CONSULTANT AS SEPARATE SUBMITTAL.

Product Data Sheet

Bench
- Bench ships fully assembled.
- The bench is only available backless.
- Bench is available in exterior or interior woods.
- Available in two lengths, the 72" and 96" bench.
- Freestanding or surface mounting available.

	DEPTH	WIDTH	HEIGHT	PRODUCT WEIGHT
	19.5"	72"	16"	200 lb
	19.5"	96"	16"	250 lb

Finishes
- Exterior woods are unfinished and will weather to a soft pewter gray, requiring no future maintenance.
- Interior woods are finished with Landscape Forms' exclusive LF-80 wood finish, a clear, catalyzed acrylic lacquer.
- Metal is finished with Landscape Forms' proprietary Pangard II® polyester powdercoat, a hard yet flexible finish that resists rusting, chipping, peeling and fading.

To Specify
- Select Palisade bench. Specify bench length. For wood, specify wood type. Select mounting style, freestanding or surface mount.

FURTHER ACTION DETERMINATION AND APPROVAL OF REPORT OF FINDINGS FOR ONTARIO PLAZA, 1028 WEST 4TH STREET, ONTARIO, CALIFORNIA 91762 (SITE CODE: 402025-11 & DOCKET NO. HSA FY22/23-063)

Dear Jonny Schneider:

The Department of Toxic Substances Control (DTSC) has reviewed the *Draft Report of Findings* (Report), prepared by SCS Engineers, Inc. (SCS) and dated August 3, 2023, under the framework of the executed California Land Reuse and Revitalization Act Agreement (CLRRA) between DTSC and Watermarke Properties, Docket No. HSA FY 22/23-063 for Ontario Plaza, 1028 West 4th Street, Ontario, California 91762 (Site).

The Site is approximately 5.8-acres and has been used for commercial purposes since 1957. The Site is planned to be developed as a 360-unit mixed-use residential and commercial facility with a parking garage. Historical site investigations have identified volatile organic compounds (VOCs), primarily tetrachloroethene (PCE), in soil and soil vapor relating to a historical dry cleaner located in the central portion of the Site. DTSC issued a No Further Action letter for the Site in 2017, with a land use covenant restricting the central portion of the Site to commercial/industrial use. In October 2022, SCS conducted a soil and soil vapor investigation to assess then current Site conditions to determine suitability for proposed development of mixed-use multifamily housing and retail space.

This Report presents the results from additional soil and soil vapor sampling conducted in May 2023, under the framework of the *Site Assessment Plan* approved on May 11, 2023, to evaluate the potential for off-site migration of VOCs in soil vapor and organochlorine pesticides (OCP) in shallow soil. VOCs, Title 22 metals, and total petroleum hydrocarbons were not found in soil above DTSC screening levels during this

investigation. In soil sample SCS22-0.5' dieldrin was found at a concentration of 280 µg/kg and all other organochlorine pesticides detections were below the health risk-based screening levels. PCE, toluene, carbon disulfide, chloroform, F11, F12, and bromodichloromethane were detected in soil vapor with PCE being the primary health risk driver.

DTSC has determined that current or past hazardous material management practices have resulted in the release or threatened release of hazardous substances which may pose a threat to public health or the environment. Therefore, DTSC concurs with the conclusion that further action is required and hereby approves the Report. Further action should include the submittal of a Response Plan that will be developed in accordance with a pre-submittal scoping meeting that will be scheduled shortly.

If you have any questions, please contact me at maryam.tasnif-abbasi@dtsc.ca.gov , or you may contact the project manager, Anthony Rosas at anthony.rosas@dtsc.ca.gov.

Ontario Planning Department

Ontario City Council

Reference Development of residential project at Mountain Ave and 4th St file No. PDEV22-042

Upon review of the Environmental Impact Report on Jan 19 at Ontario City Hall I find it to gloss over many environmental impact issues.

-page 198 of 1798 indicating no impacts on traffic

-the addition of 643 parking spaces for residences would drastically increase traffic flow on Mountain Ave going north which is presently overly congested now. Additionally, entrances to this project from Mountain and or 4th St would create additional potential for auto accidents created by left hand turns into project. Also the traffic light at Mountain and 4th will create additional backups due to the impact of 643 autos per day

-page 121 of 1798 indicating no impact on air quality

-per DTSC there will be a need to clean up hazardous VOCs in the soil and disturbing the earth will spew this hazardous waste into the air where the typically easterly blowing winds will blow it to residences adjacent to site particularly W Harvard PL.

-addition of 643 parking spaces will drastically increase air pollution in the surrounding neighborhoods.

-page 131 odors from project

-as this project is surrounded by homes the impact of odors will indeed affect a substantial number of people

-page 182 traffic noise levels

- The addition of 643 cars on surrounding streets would indeed create additional traffic noise and the report does not reference noise levels on W Harvard Place just east of the project or Princeton Ave just north of the project.

-page 182 construction activity 7 am t0 6PM

-doesn't the city have an ordinance that does not allow noise generation from equipment before 8 am

As residents of the surrounding area of this project we would like to have these issues addressed at the City Council meeting on Jan 23 2024 as this proposed project is on the agenda.

Mark Terzano 944 W Harvard Pl Ontario CA.

Ontario Planning Commission January 24 2024

Ontario City Hall

Follow up to “Reference Development of residential project at Mountain Ave and 4th St file No. PDEV22-042” on file with the Ontario Planning Department and Ontario City Council presented by Mark Terzano residing at 944 W Harvard PL Ontario.

-in previous meetings with the Ontario Planning Commission and City Council it has been agreed that the barrier at the west end of West Harvard PL bordering the project will be replaced by a locked emergency access only gate. It is imperative the existing barrier or locked gate for emergency access is in place throughout construction so there is no access to the construction site by construction vehicles or personal. This is in the interest of the health and welfare of the residents on West Harvard PL as the pollution, noise, traffic, and parking that would result on West Harvard Pl would endanger the health and safety of the residents and children.

-page 120 0f 1798 indicates mitigation “to require fugitive dust control measures that exceed SCAQMD’s Rule 403.

-“applying water every four hours to active soil disturbing activities” Who will monitor this to insure it’s compliance? This needs to also include undisturbed soil that can be blown as dust in an easterly direction. Could City of Ontario water restrictions affect this operation in the future?

RESOLUTION NO. PC24-003

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO RECOMMENDING CITY COUNCIL APPROVAL OF AN ADDENDUM TO THE ONTARIO PLAN 2050 SUPPLEMENTAL ENVIRONMENTAL IMPACT REPORT, PURSUANT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NOS. PUD22-006 AND PDEV22-042.

WHEREAS, JAT LAND DEVELOPMENT LLC (hereinafter referred to as "Applicant") has filed an Application for the approval of the Watermarke Ontario Planned Unit Development, File No. PUD22-006, establishing the development standards and design guidelines for the 5.81-acre Project site, in conjunction with a Development Plan, File No. PDEV22-042, to construct 357 apartment units and 3,800 square feet of commercial space on the Project site, on land located at the northeast corner of Mountain Avenue and Fourth Street, in the City of Ontario, California (hereinafter referred to as "Application" or "Project"); and

WHEREAS, The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) was certified on August 16, 2022, (hereinafter referred to as "Certified SEIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified SEIR (hereinafter referred to as "SEIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the SEIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified SEIR, and that the Certified SEIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified SEIR was appropriate; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the Planning Commission is the recommending authority for the requested approval to construct and otherwise undertake the Project; and

WHEREAS, the Planning Commission has reviewed and considered the SEIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent of supplemental EIR have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the SEIR Addendum for the Project is on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, and is available for inspection by any interested person at that location and is, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending authority for the Project, the Planning Commission has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of this Project were reviewed in conjunction with an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The SEIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of Project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The SEIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the Project may result in significant environmental impacts.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified SEIR that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared, that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified SEIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified SEIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified SEIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending authority for the Project, the Planning Commission finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 4: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 through 3, above, the Planning Commission hereby recommends the City Council finds that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified SEIR, and does hereby approve the SEIR Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 5: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 6: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 7: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 27th day of February 2024, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

1.0 INTRODUCTION

1.1 PURPOSE

This Addendum has been prepared in accordance with the provisions of the California Environmental Quality Act (CEQA) (California Public Resources Code [PRC] Section 21000 et seq.); the CEQA Guidelines (Title 14, California Code of Regulations [CCR] Section 15000 et seq.); and the rules, regulations, and procedures for implementing CEQA as set forth by the City. The City is the lead agency under the CEQA.

Section 15164(a) of the CEQA Guidelines states that "the lead agency or a responsible agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary, but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred." Pursuant to Section 15162(a) of the CEQA Guidelines, a subsequent Environmental Impact Report (SEIR) or Negative Declaration is only required when:

(1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

(2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or Negative Declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

(3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the Negative Declaration was adopted, shows any of the following:

    (A) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;

    (B) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

    (C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

    (D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

The Ontario Plan 2050 (TOP 2050), is an updated to the City's General Plan, The Ontario Plan, used to guide the City's development and conservation for the next 30 years through 2050. This Addendum to TOP 2050, with the inclusion of the Project, describes how the potential environmental effects of the proposed Project are appropriately and adequately addressed in the Supplemental Environmental Impact Report (SEIR) for the TOP 2050, approved in August 2022 (Approved SEIR). The Approved SEIR adopted in

August 2022, addressed the environmental effects associated with implementation of the updated to The Ontario Plan. The focus of the analysis is the adequacy of the previously Approved SEIR, relative to the Project in its current environmental context.

1.2 INTENDED USE OF THIS ADDENDUM, PROJECT DISCRETIONARY ACTIONS

This Addendum will serve as the City of Ontario's (City's) environmental review of the Watermarke Ontario Planned Unit Development (PUD) Project (Project) as required under CEQA. The City may also employ this Addendum in any subsequent review or consideration of the individual development proposals within the Project area.

Discretionary actions, permit and related consultation(s) necessary to approve and implement the Project include, but are not limited to, the following.

CEQA Section 15124 states in pertinent part that if "a public agency must make more than one decision on a project, all its decisions subject to CEQA should be listed." Requested decisions, or discretionary actions, necessary to realize the Project include the following:

- Certification of this Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (Approved SEIR) adopted in August 2022;
- Adoption of the -Watermarke Ontario Mixed Use Development Plan (File no. PDEV22-042);
- Approval of Infrastructure Improvement Plan, including but not limited to: roads, sewer, water, and stormwater management systems;
- Approval of Planned Unit Development (File No. PUD22-006).

CEQA Section 15124 also states that environmental documentation should, to the extent known, list other permits or approvals required to implement the Project. Based on the current Project design concept, in addition to City permits and approvals, anticipated permits necessary to realize the proposal will likely include, but are not limited to the following:

- Permitting may be required by/through the Regional Water Quality Control Board (RWQCB) pursuant to requirements of the City's National Pollutant Discharge Elimination System (NPDES) Permit;
- Permitting may be required by/through the South Coast Air Quality Management District (SCAQMD) for certain equipment or land uses that may be implemented within the Project area;
- Various construction, grading, and encroachment permits allowing implementation of the Project facilities.

1.3 PROJECT BACKGROUND

This Addendum to the Approved SEIR has been prepared in response to the application of the Project which will establish development standards for the existing zoning district designations and zoning standards that apply to the Project site. The Project is located in the northwestern portion of the City, within the County of San Bernardino (County).

The Ontario Plan (TOP 2050) was adopted in 2022. The TOP 2050 is intended to guide the City's development and conservation for the next 30 years through 2050. TOP 2050 describes the community's direction at a point in time (2009) and integrates it into a single guidance system that would shape Ontario 20 years or more into the future with a horizon year of 2050. TOP 2050 is the City's policy and implementation framework that guides the long-term growth and improvement of the Ontario community through six interrelated components of city governance:

A **Vision** that provides a sense of purpose and mission for city governance and sets the tone for the other components of TOP. The Vision's central theme is a sustained, community-wide prosperity that continuously adds value and yields benefits.

A **Governance Manual** that establishes a set of goals and policies to promote consistent City leadership based on the principles of regional leadership, transparency, long-term value, accountability, and inclusivity.

A **Policy Plan** that serves as the City's legally required general plan and that states long-term goals, principles, and policies to achieve Ontario's Vision. This component acts as the direct guide for continued growth and development within the City and fully defines each aspect of life within the City. The policy plan addresses each aspect of life within the City through nine elements:

- Land Use
- Housing
- Parks and Recreation
- Environmental Resources
- Community Economics
- Safety
- Mobility
- Community Design
- Social Resources

A list of **City Council Priorities** that shape the City's ongoing annual budgeting process, with a focus on a variety of short- and long-term goals and objectives.

An **Implementation Plan** that identifies the actions needed to carry out TOP's policies. This includes initiatives by the City such as establishing consistent land use zoning and creating objective development and design standards, as well as decisions on public and private development projects, and City activity programs.

A **Tracking and Feedback** system that charts the City's progress toward achieving the Policy Plan goals, providing data and analysis that enables decision makers to make strategic course corrections in response to changing circumstances and monitor ongoing operational effectiveness.

The Project is located within the Mixed-Use Neighborhood Activity Hubs (MU-NH) land use designation. The TOP 2050 contains goals and policies which apply to the MU-NH land use designations. The MU-NH land use designation is intended to allow for the development of low-rise mixtures of retail and residential uses that could serve the surrounding residents. The Project area is currently zoned as Mountain/Fourth Mixed Use (MU-8b) Zoning District. A MU-8b zone accommodates commercial uses at a maximum density of 1.0 Floor Area Ratio (FAR) and residential uses of 20 to 75 dwelling units per acre (du/ac). Additionally,

the TOP 2050 Figure LU-03 estimates that future buildout for the MU-NH land use area specific to Mountain and Fourth would include the development of up to 251 residential units, and 75,008 square feet of nonresidential uses.[1] As previously stated, the Project allow for the development of 357 residential units and 3,800 sq ft of nonresidential uses. Although the Project would exceed the estimated residential buildout of the Approved SEIR for the Mountain/Fourth Mixed Use (MU-8b) Zoning District by 106 units, the Project's nonresidential uses would be below the buildout estimates by 71,208 sq ft. Additionally, the Project would remain consistent with the development density standards of MU-NH land use areas.[2]

The Project is designed to achieve the purpose of this land use designation and complies with all applicable goals and policies. The Project would function as a set of planning and design principles, development regulations, and performance standards to guide and govern the development within the Project site.

The Ontario Plan (TOP) 2050 SEIR[3]

TOP 2050 focuses on technical updates to the Policy Plan to comply with state housing mandates and conform with new state laws related to community health, environmental justice, climate adaptation, resiliency, and mobility. The majority of updates created through TOP 2050 is located throughout the nine broad categories of the existing structure of the Policy Plan including, the land use element, housing element, parks and recreation element, environmental resources element, community economics element, safety element, mobility element, community design element, and social resources element. Furthermore, the land use designations for TOP 2050 are the same as the TOP 2010 Certified EIR.

TOP 2050 would increase population, dwelling units, and nonresidential buildings but would result in a small decrease in employment. The decrease in employment at buildout is largely because of automation in the industrial sector, with large warehousing and logistics buildings expected to create fewer new jobs through 2050 than a similarly sized industrial building was expected to create at the time of TOP 2010. TOP 2050 land use changes are intended to improve growth areas by encouraging the use of alternative forms of transportation and promoting healthier communities through land use planning that encourages walking and biking, promotes vibrant communities, puts residents in proximity to resources (i.e., jobs, grocery stores, retail), and aligns growth with planned infrastructure improvements and regional transportation goals.

1.4 DOCUMENT ORGANIZATION

This Addendum is presented in four (4) sections, as follows:

- **Section 1.0**, "Introduction," provides an overview of the Project, its context, and environmental documentation applicable to the proposed development. An Environmental Impact Analysis summary from TOP 2050 is included in this section, and mitigation measures applicable to the Project are identified. No new or substantially modified mitigation measures are required.

[3] The Ontario Plan 2050 Draft Supplemental Environmental Impact Report. Page 3-13 through 3-23

- **Section 2.0**, "Description of Proposed Project," presents the Project in greater detail, and describes its relationship to existing and anticipated location.
- **Section 3.0,** "Environmental Analysis," assesses potential environmental impacts of the Project. The analysis considers potential effects of the Project for all environmental topics addressed in Approved EIR.
- **Section 4.0,** "Determination," presents the determination regarding the appropriate environmental document for the Project.

2.0 DESCRIPTION OF PROPOSED PROJECT

2.1 PROJECT SETTING AND LOCATION

The Project site is located in the City, within the County of San Bernardino. The Project area occupies 5.81 acres of the northeast corner of Mountain Avenue and Fourth Street and includes four parcels (APNs 1008-513-16, 1008-522-01, 1008-522-02, and 1008-522-03); refer to **Figure 1: Regional Vicinity and Figure 2: Local Vicinity,** which provides an aerial view of the Project site and surrounding land uses. Regional access to the Project area is provided by Interstate 10 (I-10) approximately 0.6 miles north of the Project site, and State Route 83 (SR- 83) approximately 0.9 miles east of the Project site.

OmniTrans Transit Agency provides local transit service throughout San Bernardino County, including Ontario. OmniTrans provides countywide bus service and currently has five bus routes in the City that provide connections between rail stations, Ontario International Airport, major employment and shopping centers, and residential areas. Additionally, commuter train service in the City is provided by Metrolink, the Riverside County Line runs between Los Angeles Union Station and downtown Riverside, passing through the City. There is one Metrolink station in the City, located approximately 5.6 miles southeast of the Project site off of Haven Avenue on Francis Street.

The Project site is currently disturbed and developed with commercial and governmental uses. The southern portion of the Project site contains a strip mall structure occupied by commercial businesses, and the northwestern portion of the Project site contains a United States Post Office Building. The Post Office Building is in active use as of September 2023. The remainder of the Project site is paved with portions painted with parking stalls. Vegetation is present within the landscaped portions of the Project perimeter along Mountain Avenue and Fourth Street. Additionally, two trees are present within planters in the eastern portion of the Project site away from West Fourth Street.

An existing church and single-family residences are located immediately north of the Project site, and single-family residences are located immediately east of the Project site. Additional commercial uses are located west and south of the Project site.

The surrounding land use designations include:

North: Low Density Residential

South: Neighborhood Commercial

East: Neighborhood Commercial

West: Low Density Residential

2.2 PROJECT SITE GENERAL PLAN AND ZONING

The Project site's General Plan land use and zoning designations are as follows:

- General Plan Land Use: Mixed Use – Neighborhood Activity Hubs (MU-NH)
- Zoning: Mountain/Fourth Mixed Use (MU-8b)

This land use designation permits the Project to develop multifamily residential units as well as multiple retail and neighborhood commercial uses.

2.3 PROJECT DESCRIPTION

2.3.1 Proposed Planned Unit Development

Chapter 4 of the City Development Code §4.01.030 "Planned Unit Developments (PUD) and Amendments" establishes the regulations and procedures for the approval of a PUD with the following intent:

A. Purpose

2. The PUD is intended to:

    a. Secure a fuller realization of the Policy Plan component of The Ontario Plan than would result from the strict application of present zoning district regulations;

    b. Promote high standards in urban design;

    c. Encourage the development of exceptionally high quality, mixed-use, high intensity projects, while establishing regulations and standards for uses with unique regulatory and design needs; and

    d. Ensure harmonious relationships with surrounding land uses.

The PUD would follow closely to the existing City Development Code standards and provisions and would also provide additional standards and guidelines that only apply to the Project site.

Proposed Development Regulations

The purpose of these standards is to encourage a high-quality residential development. These standards establish flexible guidelines to encourage such development, ensure that it is of a minimum standard of appearance, and compatible with the neighborhoods. However, the Project would also comply with TOP 2050 land use designations. The specific objectives are:

- Allow flexibility in lot size and configuration, and facilitate residential development within acceptable densities;
- Provide clear development standards that promote compatibility between new and existing development; and
- Encourage efficient land use by facilitating compact, motorcourt style single-family units.

Table 1: Summarized Development Standards summarizes the development standards present within the entire Project PUD. These development standards are based on those found in the City Development Code. In the event of discrepancies between the development standards presented in the Project PUD and those in the City Development Code, this document will act as the primary regulatory document.

Table 1: Summarized Development Standards

Definition	City Requirement	Project Standard
Maximum Residential Density	20 – 75 du/ac	61.5 du/ac
Maximum Nonresidential Density	1.0 FAR	0.02 FAR
Maximum Building Height	Up to 5 Stories	Maximum building height of 65 feet or 5 stories
Minimum Residential Parking Ratio	1.2 spaces per bedroom	1.4 spaces per bedroom
Minimum Retail Parking Ratio	1 space per 250 sq ft (16 required)	16 spaces provided
Minimum Bicycle Parking Ratio	1 per 30 residential parking spaces 5% of retail spaces (2 minimum) Total 22 racks required	22 racks provided
Minimum Landscaping	The entirety of the project site (excluding areas devoted to building area, paving, and/or outdoor loading and storage areas that are screened from public view)	Same as City Requirement

Notes:
du = dwelling unit
ac = acre
FAR = Floor Area Ratio
sf = square feet

2.3.2 Proposed Development

The Project would develop 357 multifamily residential units along with 3,800 square feet (sq ft) of retail uses on an approximately 5.8-acre site. The Project would include the following open space areas: three courtyards, one pocket park, intimate seating areas, a lounge deck, and retail frontage. The West Courtyard would function as a communal outdoor dining space for residents and would include a built-in barbecue grill structure and a large communal dining table. The Pool Courtyard would provide a private pool for residents to use. The Hangout Courtyard would provide a recreational setting for the Project residents. The Pocket Park would provide a small open space for Project residents to use. The Fourth Level Lounge would include a lounge and dining area for residents. The retail frontage would include the development of an outdoor seating area with café tables and umbrellas.

The Project would consist of a four-story wrap style building circling a six-level centralized parking structure. The Project's 357 proposed residential units would consist of 50 studio units, 202 one-bedroom units, and 105 two-bedroom units (refer to **Figure 3: Ground Level Floor Plan** through **Figure 9: Basement Level Floor Plan** for a diagram of each floor level**;** and **Figure 10: North Elevation** through **Figure 13: West Elevation** for a diagram of each elevation). In addition, the Project would include a total of 659 parking spaces, 643 of the spaces would be parking designated for the residential units, and 16 parking spaces would be for retail use. The Project would also include 22 racks for resident and retail bicycle parking on the basement and second level of the central parking structure. The 22 bicycle parking racks would be provided based on a ratio of 1 bicycle rack per 30 parking stalls; each bicycle rack provides parking for 8 to 12 bicycles. California Green Building Standards Code (CALGreen), Title 24, Part 11, Section A4.106.9.2 requires that multifamily buildings provide bicycle spaces at a rate of one space per two dwelling units.

This would require approximately 179 bicycle spaces for the 357-unit Project. CALGreen Title 24, Part 11, Section 5.106.4.1.1 requires the placement of bicycle parking nearby nonresidential uses at a rate of 5 percent of provided nonresidential parking spaces, with a minimum of one 2-space bicycle rack. The Project would therefore provide 2 bicycle parking spaces based on the 16 nonresidential parking spaces provided.

Based on a conservative estimate of eight spaces per bicycle rack, the 22 bicycle Project would provide 176 total bicycle spaces. However, eight-space bicycle racks are the lowest capacity bicycle racks proposed for the Project. The majority of Bicycle racks have a 10-bicycle capacity and would therefore provide for two additional bicycle spaces per rack. One 12-space bicycle parking rack would be provided on the second story of the central parking structure to accommodate the two retail spaces required for the Project.

2.3.3 Project Design

The Project would consist of one large multifamily building with integrated retail and parking uses. The Project would be developed as a wrapped style development with one central multilevel parking structure surrounded on all sides by residential units, retail uses, and amenities. The Project would include amenity spaces, courtyards, and additional pedestrian accessways. The main side would be oriented toward Fourth Street. The rear entry of the Project building, adjacent to Mountain Avenue, would be a secondary elevation/frontage. Residential units would have their entryways oriented toward the inside of the building with balconies and windows facing the exterior. Pathways to each residential unit would connect with separate pedestrian pathways that lead to external portions of the building. As discussed above, the Project would include the following open space areas: three courtyards, one pocket park, intimate seating areas, a lounge deck, and retail frontage.

The Project would have a maximum building height of 63 feet. The Project's building would include a break in design between the first floor and the remaining floors to create a separation between the commercial uses on the ground floor and the residential uses in second, third, and fourth floors. The Project would be designed in a contemporary modern style with geometric symmetry between features and units and a mixture of colors, and materials such as: stone veneer finish, cement board tiles, decorative metal panel railing, metal picket railing, plaster finish, storefront, wood-like siding accent, and vinyl windows.

2.3.4 Sustainability

The Project site would utilize a mix of Water Use Classification of Landscape Species (WUCOLS) plants throughout the Project site. Throughout the Project site 40 percent of trees would be classified by WUCOLS as low water use, and 60percent of trees would be classified by WUCOLS as moderate water use. Additionally, 25 percent of trees used throughout the Project area would be a California native species. The Project would also utilize recycled water resources for nonpotable and irrigation uses, further reducing potable water demand on the Project site.

In addition, shrubs used throughout the Project site would be mainly low water use species. The Project site would also use a drip irrigation system with recycled water to water landscaping. The Project would also incorporate energy efficient measures such as LED or metal halide lighting. The Project would also comply with the California Energy Commission (CEC) Building Energy Efficiency Standards, which

encourage efficient electric heat pumps, establishes electric-ready requirements for new efficient electric heat pumps, expands solar photovoltaic and battery storage standards for residential development.[4]
Project Access

Regional access to the Project area would be facilitated through Interstate 10 (I-10) approximately 0.6 miles north of the Project site, and State Route 83 (SR- 83) approximately 0.9 miles east of the Project site.

Local

Local access to the Project site is provided via two entry driveways along Fourth Street and Mountain Avenue. The main entryway to the Project connects to Fourth Street via a 28.5-ft wide driveway that would continue into a 26-ft wide gated entry to the central parking garage. A 20-ft wide guest drop-off lane is attached to the main entryway. The main entry to the parking garage and the guest drop-off lane will be separated by a 6-ft wide landscape island. The secondary entryway would connect to Mountain Avenue via a 24-ft wide driveway leading to the central parking structure and continuing east and transitioning into an Emergency Vehicle Access (EVA) lane. Additionally, the Project is served by OmniTrans and Metrolink. The closest OmniTrans bus route to the Project site is Route 83. There is a bus stop for this route at Euclid Avenue and Fourth Street approximately 0.96 mile to the east of the Project site. There is one Metrolink station in the City, located 5.6 miles to the southeast of the Project site off of Haven Avenue on Francis Street, this station is served by OmniTrans Bus Route 81.

Additionally, a new circulation network would be created as part of the Project and would include a two-lane gated entry along Fourth Street to the south of the Project area. A secondary driveway would connect to Mountain Avenue and continue east to the rear entrance of the central parking structure. The driveway would become the EVA lane once past the northern parking structure entrance and would continue east, terminating at Harvard Place.

Internal roadways would also include a network of ramps within the central wrapped parking structure to allow access to each parking level. Each ramp would allow for a bidirectional flow of traffic. The first and sixth level of the parking structure would include a turnaround space for vehicles to change direction to continue upwards or downwards the ramp. The Project would provide a total of 659 parking spaces within the central parking structure, with 16 of these spaces reserved for retail parking. The retail parking would be located on the ground floor of the six-story parking structure with the remaining spaces utilized for residential parking. Retail bicycle spaces would be located on the second floor of the central parking structure, with residential bicycle parking available on the second floor and basement level of the central parking structure.

Pedestrian Access

Pedestrian access to the Project site would connect to existing pedestrian sidewalks along Fourth Street and Mountain Avenue. The Project site would also include a Leasing Office and retail stores on the ground floor that are accessible from the Fourth Street parking structure entrance.

[4] California Energy Commission. 2023. 2022 Building Energy Efficiency Standards. Retrieved from: https://www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/2022-building-energy-efficiency. (Accessed September 2023).

Internal pedestrian circulation would include outdoor pathways between buildings, and internal hallways residential units, and the parking structure. Residents will be able to access all Project areas, including amenity areas, through ground level walking paths and paved sidewalks. Pathways within the Project site which are adjacent to amenities and open space areas would be created with various materials, including stone, concrete, and wood paneling. Vehicular traffic will be limited to the central parking structure, its entryways, and external roadways.

2.3.5 Infrastructure and Utilities

Utility Infrastructure improvements within the Project area include the placement of underground water, sanitary sewer, and stormwater facilities.

The Project includes the placement of one domestic water meter, one domestic water master meter, and one domestic water backflow in the southern portion of the Project site. One underground retarding basin and one underground infiltration chamber will be placed on the western and southwestern portions of the Project site, respectively. A dry well will be placed in the southeastern portion of the site and will connect to the proposed onsite storm drain system. The Project includes a new recycled water meter connection along the southern portion of the site which would connect to the existing recycled water main below Fourth Street. The Project also proposes a new fire water line connection to the existing domestic water line beneath Mountain Avenue via a double check detector assembly (DCDA).

Sewer infrastructure proposed for the Project site will run along the secondary northern driveway and continue along the EVA lane before terminating at a sewer lateral on the northwester portion of the EVA lane. An additional sewer line will branch from the northern line at the secondary entrance of the central parking structure and cross the site from north to south, connecting to a proposed line below Fourth Street. The Project proposed public sewer main below Fourth Street connecting to an existing sewer main below the intersection of Mountain Avenue and Fourth Street. Multiple sewer lateral connections will be made to the existing sewer main within the sanitary sewer easement adjacent to the eastern border of the Project site.

New storm drainage lines will connect to existing storm drain facilities below Mountain Avenue. The Project storm drain lines will run along the inner perimeter of the Project area. An underground infiltration chamber will be placed below the southwestern corner of the Project site. Additionally, an underground retarding basin will be placed below Courtyard 3. A modular wetland, a pump, and a flow control structure will be placed along the southeastern portion of the Project area.

Water, sewer, telecommunication, and electricity utility lines would be buried underneath roadways to not only shield them from public view, but also to ensure their protection from hazards such as precipitous weather and rodents. Each utility would be buried at varying depths to create a separated, identifiable system.

2.3.6 Open Space and Amenities

The Project would include the development of three courtyards on the ground level, one pocket park, intimate seating areas, a lounge deck, and a fourth story outdoor lounge facing the corner of Mountain Avenue and Fourth Street. The West Courtyard would function as a communal outdoor dining space for

residents, and would include a built-in barbecue grill structure and a large communal dining table. The West Courtyard would also include an attached yard that would provide multipurpose uses with lounge seating and an open lawn area.

The Pool Courtyard would provide a private pool and spa for residents. The area surrounding the pool and spa would include lounge chairs, chaise lounges, and pool chairs. Additional amenities within the Pool Courtyard would include an outdoor fitness area directly outside the indoor fitness room, and shaded dining areas. The Pool Courtyard includes an adjacent seating area for residents along internal pathways leading from the pool area to Fourth Street.

The third courtyard, the Hangout Courtyard would allow for recreational activity within a multi-activity game lawn.

The Pocket Park would be adjacent to the eastern boundary of the Project area, on the ground floor, and would provide small open spaces for residents to access. The Fourth Level Lounge would be located in the southwest corner of the Project building's fourth level and would include a lounge and dining area for residents. This lounge area would include larger and smaller group seating areas, a built-in barbecue for meal preparation, and a large banquet style island table. The outer perimeter of the lounge would be landscaped to provide a more natural aesthetic and create a sense of privacy within the lounge area. The Project courtyards and pocket park would provide approximately 28,000 square feet of community open space to allow for passive and active types of recreation, along with Project site landscaping amenities for future residents and their guests.

Landscaping

Landscaping within and along the perimeter of the Project site would consist of ornamental trees, shrubs, and fruiting and edible plant species. The Project would utilize native trees and non-native trees throughout its landscaped areas. In addition to these trees, a mixture of large and medium shrubs would be utilized throughout the Project site.

2.3.7 Lighting and Signage

All lighting of facades, decorative fixtures, store window interiors, awnings, and signs for the Project site would be designed in accordance with the criteria set forth in Ontario's Development Code. Exterior lighting fixtures would be decorative and reinforce the architectural style of the Project site building. Additionally, outdoor lighting within the Project area would consist of warm color temperatures except for security or emergency lighting in order to remain unobtrusive to surrounding residential developments and internal residential developments. On-site lighting would be directed away and shielded from adjacent streets and adjacent properties. Exterior lighting on the Project side would be indirect, placed under eaves and canopies, or ground level within landscaped areas. Light within Project site communal areas would be warm colored and unobtrusive. Light sources for the Project would be LED or metal halide.

Additionally, all signs for the Project would be subject to the requirements of the City Development Code Chapter 8.0 Sign Regulations.[5]

2.3.8 Site Excavation and Grading Activities

Construction of the Project would require 5,147 cubic yards (cy) of cut soil and 12,200 cy of fill soil. As such, the Project is anticipated to import approximately 7,063 cy of soil; refer to **Figure 14: Conceptual Grading Plan East** and **Figure 15: Conceptual Grading Plan West**.

2.3.9 Construction Schedule

Construction is anticipated to begin in June 2024 and is anticipated to require 2.5 years (30 months), concluding in December 2026 (est.).

2.3.10 Project Approvals

The City is the Lead Agency as set forth in CEQA Statute Section 21067 and is responsible for reviewing and approving the Addendum to TOP 2050 with the addition of the Project. In addition to the Addendum, the City will consider the following discretionary approvals for the Project:

Development Plan (PDEV22-042): Approval of the proposed modifications to the site and building improvements including the proposed site plan and architectural designs for the development of 357 residential multi-family units, and up to 3,800 sq ft of retail uses.

Planned Unit Development (PUD22-006): Approval of the PUD would allow the Project PUD to serve as the underlying standards and requirements and contain design and development standards, provisions, procedures, and permitted uses for the Project.

3.0 TOP 2050 SEIR ENVIRONMENTAL IMPACT ANALYSIS SUMMARY

No Impact:

- Aesthetics (Impacts 5.1-2)
- Agriculture and Forestry Resources (Impacts 5.2-1 and 5.2-3)

Less Than Significant Impact:

- Aesthetics (Impacts 5.1-1, 5.1-3, 5.1-4)
- Agriculture and Forestry Resources (Impacts 5.2-2 and 5.2-4)
- Air Quality (Impact 5.3-5)
- Biological Resources (Impacts 5.4-1 through 5.4-5)
- Cultural Resources (Impact 5.5-3)
- Energy (Impacts 5.6-1 through 5.6-2)
- Geology and Soils (Impacts 5.7-1 through 5.7-5)
- Greenhouse Gas Emissions (Impacts 5.8-1 through 5.8-2)
- Hazards and Hazardous Materials (Impacts 5.9-1 through 5.9-5)
- Hydrology and Water Quality (Impacts 5.10-1 through 5.10-5)
- Land Use and Planning (Impacts 5.11-1 through 5.11-2)
- Mineral Resources (Impact 5.12-1)
- Noise (Impact 5.13-2)
- Population And Housing (Impacts 5.14-1 through 5.14-2)
- Public Services (Impacts 5.15-1 through 5.15-4)
- Recreation (Impacts 5.16-1 through 5.16-2)
- Transportation (Impacts 5.17-1 and 5.17-3)
- Utilities and Service Systems (Impacts 5.19-1 through 5.19-4)
- Wildfire (Impacts 5.20-1 through 5.20-2)

Less Than Significant Impact with Incorporation of Mitigation:

- Cultural Resources (Impact 5.5-2)
- Geology and Soils (Impact 5.7-6)
- Tribal Cultural Resources (Impact 5.18-1)

Significant and Unavoidable Impact:

- Air Quality (Impacts 5.3-1 through 5.3-4)

- Cultural Resources (Impact 5.5-1)
- Noise (Impact 5.13-1 and 5.13-3 and 5.13-4)
- Transportation (Impact 5.17-2)

4.0 ENVIRONMENTAL ANALYSIS

4.1 INTRODUCTION

The scope of the City's review of the Project is set forth in CEQA and the CEQA Guidelines. This review is limited to evaluating the environmental effects associated with the Project when compared to TOP 2050. This Addendum also reviews new information, if any, of substantial importance that was not known and could not have been known with the exercise of reasonable due diligence at the time the SEIR was approved. This evaluation includes a determination as to whether the changes proposed for the Project would result in any new significant impacts or more severe significant impact.

Although CEQA Guidelines Section 15164 does not stipulate the format or content of an Addendum, the topical areas identified in top 2050 were used as guidance for this Addendum. In addition, Section 15164 (c) of the CEQA Guidelines states that "A brief explanation of the decision not to prepare a subsequent EIR pursuant to Section 15162 should be included in an addendum to an EIR, the lead agency's findings on the Project, or elsewhere in the record. The explanation must be supported by substantial evidence." This comparative analysis provides the City with the factual basis for determining whether any changes in the Project, any changes in circumstances, or any new information since the Approved SEIR was certified would require additional environmental review or preparation of an SEIR.

Pursuant to CEQA Guidelines Section 15162, the City has determined, on the basis of substantial evidence in the light of the whole record, that implementation of the Project does not propose substantial changes to the Approved SEIR, no substantial changes in circumstances would occur which would require major revisions to the Approved SEIR, and no new information of substantial importance has been revealed since the certification of Approved SEIR that would result in either new significant effects or an increase in the severity of previously analyzed significant effects.

A Mitigation Monitoring and Reporting Program (MMRP) was adopted as a part of the Approved SEIR that minimized impacts associated with implementation of the Approved SEIR. The previously adopted Approved SEIR mitigation measures applicable to the Project would be collectively imposed as the Project's MMRP, which is contained in **Appendix A**.

4.2 AESTHETICS

4.2.1 Summary of Previous Environmental Analysis

The Approved SEIR concluded impacts associated with scenic resources, long-term visual character, and light/glare were determined to be less than significant. No mitigation measures were deemed necessary.

4.2.2 Analysis of Proposed Project

Threshold (a) Have a substantial adverse effect on a scenic vista? [Approved SEIR Impact 5.1-1]

No New or More Severe Impacts: The Project would not have a more severe or substantial adverse effect on a scenic vista than what was originally analyzed in TOP. The Approved SEIR cited the San Gabriel Mountains as the main scenic vista visible from the City. The Approved SEIR noted that compliance with the City's Municipal Code and policies would ensure that increased development in the City would not impact scenic vistas.[6] Additionally, it is not likely that development within low-lying areas of the City would alter scenic views of the San Gabriel Mountains as the peaks rise to 7,000 feet above mean sea level.[7]

Development associated with the Project would occur within City limits and would not require zoning or land use amendments for the property parcels. The PUD would allow for the development of structures one story higher than current zoning standards allow. However, the PUD would ensure minimal effects on views by requiring the placement of the taller parking structure in the center of the Project site, surrounded by the Project residential building. This would obscure views of the taller parking structure behind the outer residential structure based on pedestrian-level lines of sight from the street at the Perimeter of the Project site. Further, the Project would comply with Policy CD-1.5 which would ensure major north-south streets would be designed and redeveloped to feature views of the San Gabriel Mountains. The maximum Project building height would be 63 feet. While panoramic views of the San Gabriel Mountains would from public vantage points immediately south of the Project site would be impacted by Project development, the Project would only exceed allowed building heights by one story. Additionally, the sixth and final story of the Project would be comprised of the top of the central parking structure, with the highest point being approximately 9.5 feet higher than the ceiling of the fourth floor. Assuming a consistent 10-foot height for each story, this would account for a 1.5-foot shorter fifth story and would otherwise be within allowed building heights. While the Project does introduce new taller structures in the Project site, in comparison to existing structures, newly proposed structures do not substantially exceed allowed standards for the area and would not exceed the height of an average 5-story building. The Approved SEIR analysis was based on a maximum building height of 5 stories or 65 feet for buildings within the Project's land use designation. The Project would exceed this by one story. However, the Project's sixth story is comprised of an open final level of the central Parking structure. The final enclosed story is the fifth story of the central parking structure. Additionally, the Project does not propose improvements within the public ROW which would affect views north/south of the San Gabriel

[6] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page 5.1-5 Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).
[7] Ibid.

Mountains along Mountain Avenue. Therefore, the Project would not result in new or a substantial increase in magnitude of impacts.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Although the Project proposes increased building heights compared to existing conditions, the maximum building height would be 63 feet (the central parking structure) and would not obscure scenic views of the San Gabriel Mountains. Additionally, the sixth story would constitute the upper level of a parking structure, with the final average height enclosed story being the fifth story. The Project would result in a less than significant impact. Therefore, no new and/or modified mitigation measures are required for issues related to scenic vistas. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Substantially damage scenic resources, including, but not limited to, trees, rock, outcroppings, and historic buildings within a scenic highway? [Approved SEIR Impact 5.1-2]

Threshold (c) Conflict with zoning or other regulations governing scenic quality? [Approved SEIR Impact 5.1-3]

No New or More Severe Impacts: As discussed in the Approved SEIR, the City does not have any state scenic highways through or in the vicinity of the City.[8] The closest designated state scenic highway is a portion of State Route 142 in Chino Hills, approximately five miles west of the City limit and approximately 7 miles southwest of the Project site.[9] The Euclid Avenue corridor and the Mission Boulevard corridor are the primary scenic corridors located in the City and are not near the Project Site as the Euclid Avenue corridor is located approximately one mile east of the Project site and the Mission Boulevard Corridor is located approximately three miles southeast of the Project site. These corridors are not designated as state scenic highways.[10]

The Project fulfills most requirements of the MU-8b zoning district only exceeding the 5-story limitation of the MU-8B zone. The Project does, however, include the preparation of a site-specific PUD. The Project PUD was prepared in accordance with PUD requirements set forth in City Development Code Section 4.01.030 (Planned Unit Developments and Amendments). The Project PUD will act as primary development standards for the Project site in cases where conflicts exist between the PUD and the existing zone standards. Additionally, MU-8b zoning districts allow for the development of retail uses and residential uses such as those proposed by the Project.

[8] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.1-6 Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).
[9] Ibid.
[10] California State Scenic Highway System Map. 2023. Retrieved from: https://caltrans.maps.arcgis.com/apps/webappviewer/index.html?id=465dfd3d807c46cc8e8057116f1aacaa. (Accessed April 2023).

The Project would be consistent with policies presented in TOP 2050 to ensure new development would be compatible with the existing community. Specifically, the Project would be consistent with Policy CD-2.1 which would encourage all development to have visual interest and character through the use of exterior building materials that are high quality and appropriate for the geometric architectural style that would be carried out in all aspects of building and Project site design, as well as incorporating appropriate scale and proportions in building design. The Project would also comply with Policy CD-2.2 which would create neighborhoods that include floorplans that encourage views onto the street instead of facing garages. Furthermore, Policy CD-2.10 would ensure landscaping is included in parking areas to make them more aesthetically pleasing. Policy CD-3.5 encourages the use of lively pedestrian streetscapes that require business and residential entrances, outdoor dining, and storefronts to be located on ground floors adjacent to sidewalks and public spaces for a more aesthetically pleasing environment. Therefore, the Project would not result in new or a substantial increase in magnitude of impacts.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Although the Project proposes six stories of building development compared to five stories assumed for the Project land use type, the Project would be developed as a wrapped style development with the tallest structure (six story central multilevel parking structure) would be surrounded on all sides by four story residential buildings, ground level-retail uses, and community amenities. Each side of the proposed buildings would be designed to be aesthetically pleasing, and provide visual appeal to the community and surrounding area. Furthermore, ground-level view of the sixth story of the central parking structure would be obscured by the surrounding four-story residential structures; shielding it from general public view. Therefore, Project would result in a less than significant impact and, no new and/or modified mitigation measures are required for issues related to scenic vistas. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (d) Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area? [Approved SEIR Impact 5.1-4]

No New or More Severe Impacts: The Project would have the potential to result in new sources of light and glare from new development. The PUD, and subsequent Project, would require adequate shielding of outdoor light sources, including parking lighting, security lighting, entry lighting, residential balconies, and lighting in common areas. Additionally, the Project would include the addition of building materials, such as windows, which could produce glare. All lighting facades, decorative fixtures, store window interiors, awnings, and signs would be in compliance with the City Development Code.

Lighting located on the Project site would be directed or shielded away from adjacent streets and properties and exterior lighting would be indirect in nature, coming from under eaves and canopies, or at ground level within landscaped areas. Light sources within communal areas would be warm colored and unobtrusive. Furthermore, light sources would be LED or metal halide. Additionally, reflective surfaces, such as windows, would be treated to minimize glare. However, as noted in the Approved SEIR adherence

to the design standards of the City Development Code would ensure that light and glare from new development would be minimized, and significant impacts would not occur.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Although the Project proposes additional lighting and reflective surfaces compared to current conditions, lighting would remain shielded and reflective surfaces would be minimized per City design standards and consistent with the conditions analyzed in the Approved SEIR. Therefore, Project would result in a less than significant impact and, no new and/or modified mitigation measures are required for issues related to light and glare. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.2.3 Overall Aesthetics Impact Conclusion

With regard to CEQA Statute Section 21166 and the CEQA Guidelines Section 15162(a), the Project would not result in any new or more severe impacts with respect to aesthetics. Therefore, the preparation of a SEIR is not warranted.

4.3 AGRICULTURE AND FORESTRY RESOURCES

4.3.1 Summary of TOP 2050 Analysis

The Approved SEIR concluded the City has no land designated for agricultural use, and the existing agricultural uses exist as non-conforming uses. TOP 2050 re-designated agricultural land to nonagricultural land uses provided that equivalent Important Farmland is preserved elsewhere, or funds associated with the 1988 Park Bond Act are returned. Consequently, buildout of TOP 2050 would ultimately result in the conversion of all existing Important Farmland within the City to nonagricultural uses. However, because the City's land use plan does not designate agricultural uses in the City, TOP 2050 does not convert Prime Farmland, Unique farmland, and Farmland of Statewide Importance to nonagricultural uses. Additionally, the Approved SEIR does not consider any lands within the City to be forest lands, therefore development would not result in the loss or conversion of timberland to non-forest uses.

4.3.2 Analysis of Proposed Project

Threshold (a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance in Ontario to nonagricultural use? [Approved SEIR Impact 5.2-1]

Threshold (b) Conflict with existing zoning for agricultural use or a Williamson Act contract? [Approved SEIR Impact 5.2-2]

Threshold (c) Conflict with existing zoning for, or cause rezoning of, forest land, timberland, or timberland zoned Timberland Production? [Approved SEIR Impact 5.2-3]

Threshold (d) Result in the loss of forest land or conversion of forest land to non-forest use? [Approved SEIR Impact 5.2-4]

Threshold (e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use? [Approved SEIR Impact 5.2-5]

No New or More Severe Impacts: The 2010 Certified EIR for the TOP disclosed that buildout of the TOP would result in significant and unavoidable impacts to Prime Farmland, Unique Farmland, and Farmland of Statewide Importance because it converted all of the then-existing land under these categories to residential, commercial, mixed-use, and industrial land uses. Because the City of Ontario's land use plan no longer designates agricultural land uses in the City, and the TOP was the baseline for the TOP 2050 SEIR, TOP 2050 SEIR – the Approved SEIR - disclosed that TOP 2050 would not, itself, plan for the conversion of Prime Farmland, Unique Farmland, and Farmland of Statewide Importance to nonagricultural uses and would have no impact on land zoned for the purpose of agricultural uses.[11]

The Project site consists of nonagricultural uses and is surrounded by urban lands. The Project is not located in land used for Prime Farmland, Unique Farmland, or Farmland of Statewide Importance.

[11] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.2-12 Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).

Additionally, the Project is not located on forest land, timberland, or timberland zoned Timberland Production. The Project site is zoned MU-8b and is able to accommodate the commercial and residential uses. The Approved SEIR concluded that any land held in a Williamson Act contract would have to be filed for nonrenewal, and the contract would have to be allowed to expire before development.[12] The Approved SEIR resulted in the cancellation or nonrenewal of Williamson Acts contracts, and therefore there were no further impacts to Williamson Act lands.[13] The Approved SEIR also noted that there are no land use designations or zoning for forest land, timberland, or timberland zoned Timberland Production in the City.[14] Therefore, the Project would not result in the loss of agricultural or forest lands, or conversion of forest land to non-forest use. Therefore, the Project would not result in new or a substantial increase in magnitude of impacts.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

As previously stated, the Project site is not located on agricultural lands or forest land. Therefore, the Project would not result in impacts and no new and/or modified mitigation measures are required. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.3.3 Overall Agriculture and Forestry Resources Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new or more severe impacts with respect to agricultural and forestry resources. Therefore, preparation of a SEIR is not warranted.

[12] Ibid.
[13] Ibid.
[14] Ibid, Page 5.2-13

4.4 AIR QUALITY

4.4.1 Summary of TOP 2050 Analysis

The Approved SEIR concluded that air quality would be temporarily impacted during construction activities and project-related construction emissions could potentially exceed the South Coast Air Quality Management District (SCAQMD) significance thresholds on a project-by-project and cumulative basis. Additionally, development under TOP 2050 would generate toxic air contaminants (TACs) that could contribute to elevated levels of risk.

4.4.2 Analysis of Proposed Project

Threshold (a) Conflict with or obstruct implementation of the applicable air quality plan? [Approved SEIR Impact 5.3-1]

No New or More Severe Impacts:

In compliance with Mitigation Measure (**MM**) AQ-1 of the Approved SEIR, an Air Quality analysis was created for the Project. As part of its enforcement responsibilities, the Environmental Protection Agency (EPA) requires each state with nonattainment areas to prepare and submit a State Implementation Plan that demonstrates the means to attain the federal standards. The State Implementation Plan must integrate federal, state, and local plan components and regulations to identify specific measures to reduce pollution in nonattainment areas, using a combination of performance standards and market-based programs. Similarly, under state law, the California Clean Air Act (CCAA) requires an air quality attainment plan to be prepared for areas designated as nonattainment regarding the state and federal ambient air quality standards. Air quality attainment plans outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date.

The Project is located within the South Coast Air Basin (SCAB), which is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). The SCAQMD is required, pursuant to the Federal Clean Air Act (FCAA), to reduce emissions of criteria pollutants for which the SCAB is in nonattainment. To reduce such emissions, the SCAQMD drafted the 2016 Air Quality Management Plan (AQMP) and 2022 AQMP. The 2016 AQMP establishes a program of rules and regulations directed at reducing air pollutant emissions and achieving California Ambient Air Quality Standards (CAAQS) and National Ambient Air Quality Standards (NAAQS). The primary purpose of the 2022 AQMP is to identify, develop, and implement strategies and control measures to meet the 2015 8-hour ozone NAAQS. Air quality management planning is a regional and multi-agency effort including the SCAQMD, the California Air Resources Board (CARB), the Southern California Association of Governments (SCAG), and the EPA. The plan's pollutant control strategies are based on the latest scientific and technical information and planning assumptions, including SCAG's 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), updated emission inventory methodologies for various source categories, and SCAG's latest growth forecasts. SCAG's latest growth forecasts were defined in consultation with local governments and with reference to local general plans. The Project is subject to the SCAQMD's AQMP.

Criteria for determining consistency with the AQMP are defined by the following indicators:

- **Consistency Criterion No. 1**: The Project will not result in an increase in the frequency or severity of existing air quality violations, or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.
- **Consistency Criterion No. 2**: The Project will not exceed the assumptions in the AQMP or increments based on the years of the Project build-out phase.

According to the SCAQMD's CEQA Air Quality Handbook, the purpose of the consistency finding is to determine if a project is inconsistent with the assumptions and objectives of the regional air quality plans, and thus if it would interfere with the region's ability to comply with CAAQS and NAAQS.

The violations to which Consistency Criterion No. 1 refers are exceedances of CAAQS and NAAQS. As shown in **Table 2: Construction-Related Emissions** and **Table 3: Operational Emissions**, the Project would not exceed construction or operation emission standards. Therefore, the Project would not contribute to an existing air quality violation. Thus, the Project is consistent with the first criterion.

Concerning Consistency Criterion No. 2, the AQMP contains air pollutant reduction strategies based on SCAG's latest growth forecasts, and SCAG's growth forecasts were defined in consultation with local governments and with reference to local general plans.

The Project site is currently designated as Mixed-Use Neighborhood Activity Hub (MU-NH) which allows for 20 to 75 du/ac and 1.0 FAR for retail uses. Therefore, the Project is to be consistent with the current AQMP regional emissions inventory for the SCAB. Thus, the Project is consistent with the second criterion. As noted above (and discussed further in Threshold 5.3-2, below), Project implementation would not result in air pollutant emissions that exceed SCAQMD's construction and operational emission thresholds. In addition, the Project would also not delay timely attainment of air quality standards or interim emission reductions specified in the AQMP. Therefore, the Project would be consistent with the AQMP, resulting in a less than significant impact.

Additional mitigation measures from the Approved SEIR would be applied to further reduce potential impacts associated with Project implementation. Specifically, MM 3-2 would be applied through the Project's inclusion of internal and external pedestrian connections as well as the placement of bicycle racks and the Project's proximity to multiple bus stations. Additionally, the Air Quality Assessment is included as Appendix B to this Addendum, per MM AQ-1 and MM 3-1.

Mitigation Measures

The Approved SEIR includes measures to reduce potential impacts associated with the implementation of TOP 2050. The following measures from the Approved SEIR are applicable to the proposed Project:

MM 3-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with SCAQMD methodology for assessing air quality impacts. If construction-related criteria air

pollutants are determined to have the potential to exceed the SCAQMD adopted thresholds of significance, the City of Ontario Building Department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:

- Require fugitive dust control measures that exceed SCAQMD 's Rule 403, such as:
    - Requiring use of nontoxic soil stabilizers to reduce wind erosion.
    - Applying water every four hours to active soil disturbing activities
    - Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.
- Using construction equipment rated by U.S. EPA as having Tier 4 interim or higher exhaust emission limits.
- Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.
- Limiting nonessential idling of construction equipment to no more than five consecutive minutes.
- Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufacturers can be found on the SCAQMD's website.

These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.

In compliance with MM 3-1, An Air Quality Assessment was prepared for the Project in August 2023 that analyzes the construction-phase-related air quality impacts of the Project, for additional information see **Appendix B.**

MM 3-2 The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g., sidewalks).

In compliance with MM **3-2**, the Project design has included pedestrian connections to the Project site from Mountain Avenue and Fourth Street to existing pedestrian sidewalks.

MM AQ-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with SCAQMD methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the SCAQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible

mitigation measures to reduce long-term emissions could include, but are not limited to the following:

- For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.
- Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use.
- Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485).
- Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures).
- Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).
- Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures).
- Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).
- Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star–certified or equivalent appliances shall be verified by the City during plan check.

In compliance with **MM AQ-1,** an Air Quality analysis was created for the Project in August 2023 that analyzes the operation-phase-related air quality impacts of the Project, for additional information see **Appendix B.**

Conclusion

Air quality impacts related to the proposed Project are less than the significant and unavoidable impacts identified in Approved SEIR (Approved SEIR Impacts 5.3-1, 5.3-2, 5.3-3, and 5.3-4) and would not directly require mitigation. Regardless, the implementation of mitigation measures from the Approved SEIR would further reduce impacts. The Project would comply with **MM 3-1**, **MM 3-2**, and **MM AQ-1**, an Air Quality Assessment was conducted for the Project and is included as **Appendix B1** and the Project would undergo City review. No new impact relative to air quality or a substantial increase in the severity of a previously identified significant impact evaluated in the Approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard? [Approved SEIR Impact 5.3-2]

Construction Emissions

No New or More Severe Impacts: Construction associated with the Project would generate short-term emissions of criteria air pollutants. The criteria pollutants of primary concern within the Project area include Ozone (O_3)-precursor pollutants (i.e., Reactive Organic Gases (ROG) and Nitrogen Oxides (NOX)) and Particulate Matter 10 microns or less (PM10) and Particulate Matter 2 microns or less (PM2.5). Construction-generated emissions are short term and of temporary duration, lasting only as long as construction activities occur, but would be considered a significant air quality impact if the volume of pollutants generated exceeds the SCAQMD's thresholds of significance.

Construction results in the temporary generation of emissions resulting from Project site grading, road paving, motor vehicle exhaust associated with construction equipment and worker trips, and the movement of construction equipment, especially on unpaved surfaces. Emissions of airborne particulate matter are largely dependent on the amount of ground disturbance associated with Project site preparation activities as well as weather conditions and the appropriate application of water. Fugitive dust emissions may have a substantial, temporary impact on local air quality. In addition, fugitive dust may be a nuisance to those living and working in the Project vicinity. Uncontrolled dust from construction can become a nuisance and potential health hazard to those living and working nearby.

The Project's construction emissions were calculated using the CARB-approved CalEEMod computer program, which is designed to model emissions for land use development projects, based on typical construction requirements. See **Appendix B** for more information regarding the construction assumptions used in this analysis. Predicted maximum daily construction-generated emissions for the Project are summarized in in **Table 2: Construction-Related Emissions**.

Table 2: Construction-Related Emissions

Construction Year	Emissions (Maximum Pounds Per Day) [1]					
	ROG	NO_X	CO	SO_2	PM_{10}	$PM_{2.5}$
Year 2024	8.48	83.3	79.7	0.13	13.0	7.3
Year 2025	33.0	22.8	54.7	0.06	7.03	2.14
Year 2026	2.73	14.3	41.2	0.04	5.98	1.72
SCAQMD Threshold	*75*	*100*	*550*	*150*	*150*	*55*
Exceed SCAQMD Threshold?	**No**	**No**	**No**	**No**	**No**	**No**

ROG = Reactive Organic Gases; NO_X = Nitrogen Oxides; CO = Carbon Monoxide; SO_2 = Sulfur Dioxide; PM_{10} = Particulate Matter 10 microns in diameter or less; $PM_{2.5}$ = Particulate Matter 2.5 microns in diameter or less

1. SCAQMD Rule 403 Fugitive Dust applied. The Rule 403 reduction/credits include the following: properly maintain mobile and other construction equipment; water exposed surfaces three times daily; and limit speeds on unpaved roads to 15 miles per hour. Reductions percentages from the SCAQMD CEQA Handbook (Tables XI-A through XI-E) were applied. No mitigation was applied to construction equipment. Refer to Appendix B for Model Data Outputs.

Source: CalEEMod version 2022.1.1.14. Refer to Appendix B for model outputs.

As shown in **Table 2: Construction-Related Emissions**, all criteria pollutant emissions would remain below their respective thresholds.

Operational Emissions

No New or More Severe Impacts: Project-generated emissions would be primarily associated with motor vehicle use and area sources, such as the use of landscape maintenance equipment and architectural coatings. Long-term operational emissions attributable to the Project are summarized in **Table 3: Operational Emissions**.

Table 3: Operational Emissions

Source	Emissions (Maximum Pounds Per Day)					
	ROG	NO_X	CO	SO_2	PM_{10}	$PM_{2.5}$
Mobile	4.63	3.84	33.3	0.08	6.82	1.77
Area Source Emissions	11.0	5.33	34.3	0.03	0.43	0.44
Energy Emissions	0.06	1.01	0.44	0.01	0.08	0.08
Total Emissions	15.69	10.18	68.04	0.12	7.33	2.29
SCAQMD Threshold	*55*	*55*	*550*	*150*	*150*	*55*
Exceeds Threshold?	**No**	**No**	**No**	**No**	**No**	**No**

ROG = Reactive Organic Gases; NO_X = Nitrogen Oxides; CO = Carbon Monoxide; SO_2 = Sulfur Dioxide; PM_{10} = Particulate Matter 10 microns in diameter or less; $PM_{2.5}$ = Particulate Matter 2.5 microns in diameter or less

Source: CalEEMod version 2020.4.0. Refer to Appendix B for model outputs.

As shown in **Table 3: Operational Emissions**, all criteria pollutant emissions would remain below their respective thresholds.

Cumulative Short-Term Emissions

No New or More Severe Impacts: The SCAB is designated nonattainment for Ozone (O_3), Particulate Matter 10 microns in diameter or less (PM_{10}), and Particulate Matter 2.5 microns in diameter or less ($PM_{2.5}$) for state standards and nonattainment for O_3 and $PM_{2.5}$ for Federal standards. Appendix D of the SCAQMD White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution (2003) notes that projects that result in emissions that do not exceed the project specific SCAQMD regional thresholds of significance should result in a less than significant impact on a cumulative basis unless there is other pertinent information to the contrary. Therefore, if a project is estimated to result in emissions that do not exceed the thresholds, the project's contribution to the cumulative impact on air quality in the SCAB would not be cumulatively considerable. As shown in **Table 3: Operational Emissions**, construction emissions of the Project would not exceed the SCAQMD significance thresholds, and the construction impacts would be less than significant levels. Therefore, the Project would not generate a cumulatively considerable contribution to air pollutant emissions during construction.

Cumulative Long-Term Impacts

No New or More Severe Impacts: The SCAQMD has not established separate significance thresholds for cumulative operational emissions. The nature of air emissions is largely a cumulative impact. As a result, no single project is sufficient in size to, by itself, result in nonattainment of ambient air quality standards. Instead, individual project emissions contribute to existing cumulatively significant adverse air quality impacts. The SCAQMD developed the operational thresholds of significance based on the level above which individual project emissions would result in a cumulatively considerable contribution to the SCAB's existing air quality conditions. Therefore, a project that exceeds the SCAQMD operational thresholds would also be a cumulatively considerable contribution to a significant cumulative impact.

As shown in **Table 3: Operational Emissions**, the Project operational emissions would not exceed SCAQMD thresholds. As a result, operational emissions associated with the Project would not result in a cumulatively considerable contribution to significant cumulative air quality impacts. Additionally, adherence to SCAQMD rules and regulations would alleviate potential impacts related to cumulative conditions on a project-by-project basis. Project operations would not contribute a cumulatively considerable net increase of any nonattainment criteria pollutant.

Plans, Programs, and Policies:

The following includes existing requirements that are based on local, State, or federal regulations or laws that are frequently required independent of CEQA review. Typical standard conditions and requirements include compliance with the provisions of the Building Code, SCAQMD Rules, etc. The City may impose additional conditions during the approval process, as appropriate. Because these requirements are neither project specific nor a result of project development, they are not Mitigation Measures.

PPP AIR-1 New buildings are required to achieve the current California Building Energy Efficiency Standards (Title 24, Part 6) and California Green Building Standards Code (CALGreen) (Title 24, Part 11).

PPP AIR-2 Construction activities will be conducted in compliance with 13 California Code of Regulations (CCR) Section 2499, which requires that nonessential idling of construction equipment is restricted to five minutes or less.

PPP AIR-3 Construction activities will be conducted in compliance with any applicable SCAQMD rules and regulations, including but not limited to the following:

- Rule 403, Fugitive Dust, for controlling fugitive dust and avoiding nuisance.
- Rule 402, Nuisance, which states that a project shall not "discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property."
- Rule 1113, which limits the volatile organic compound content of architectural coatings.

As stated in Impact 4.4.2(a) above, an Air Quality Assessment was created for the Project in August 2023 and is included as **Appendix B** to this Addendum, in keeping with MM AQ-1 and MM 3-1.

Mitigation Measures

Refer to **MM 3-2** and **AQ-1** from Approved SEIR, discussed above under Threshold (a).

Conclusion

The Project's emissions would not exceed the SCAQMD thresholds during both construction and operations. Thus, the impact would not be cumulatively considerable. With the implementation of mitigation measure measures in the TOP 2050 SEIR air quality impacts related to the proposed Project are

less than the significant and unavoidable impacts identified in the Approved SEIR (Approved SEIR Impacts 5.3-1, 5.3-2, 5.3-3, and 5.3-4). No new impacts or a substantial increase in the severity of a previously identified significant impact evaluated in the Approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (c) Expose sensitive receptors to substantial pollutant concentrations? [Approved SEIR Impact 5.3-3]

Localized Construction Significance Analysis

No New or More Severe Impacts: The nearest sensitive receptors are single-family residential dwellings located adjacent to the north and east of the Project site. To identify impacts to sensitive receptors, the SCAQMD recommends addressing Local Significant Thresholds (LSTs) for construction. LSTs were developed in response to SCAQMD Governing Boards' Environmental Justice Enhancement Initiative (I-4). The SCAQMD provided the Final Localized Significance Threshold Methodology (dated June 2003 [revised 2008]) for guidance. The LST methodology assists lead agencies in analyzing localized impacts associated with Project-specific emissions.

Since CalEEMod calculates construction emissions based on the number of equipment hours and the maximum daily soil disturbance activity possible for each piece of equipment, **Table 4: Equipment-Specific Grading Rates**, Equipment-Specific Grading Rates is used to determine the maximum daily disturbed acreage for comparison to LSTs. The appropriate SRA for the localized significance thresholds is the Southwest San Bernardino Valley (SRA 33) since this area includes the Project. LSTs apply to NO2, CO, PM10, and PM2.5. The SCAQMD produced look-up tables for projects that disturb areas less than or equal to five acres in size. Project construction is anticipated to disturb a maximum of four acres in a single day. As the LST guidance provides thresholds for projects disturbing 1-, 2-, and 5-acres in size and the thresholds increase with size of the Project site, the LSTs for a 3.5-acre threshold were interpolated and utilized for this analysis.

Table 4: Equipment-Specific Grading Rates

Construction Phase	Equipment Type	Equipment Quantity	Acres Graded per 8-Hour Day	Operating Hours per Day	Acres Graded per Day
Site Preparation	Tractors	4	0.5	8	2.0
	Graders	0	0.5	8	0.0
	Dozers	3	0.5	8	1.5
	Scrapers	0	1	8	0.0
				Total Acres Graded per Day	**3.5**

Source: CalEEMod version 2022.1.1.14. Refer to Appendix B for model outputs.

The SCAQMD's methodology states that "off-site mobile emissions from the Project should not be included in the emissions compared to LSTs." Therefore, only emissions included in the CalEEMod "on-site" emissions outputs were considered. LST thresholds are provided for distances to sensitive receptors of 25, 50, 100, 200, and 500 meters. SCAQMD's LST guidance recommends using the 25-meter threshold for receptors located 25 meters or less from the Project site. Therefore, the LSTs for 3.5 acres at 25 meters were used for the construction analysis which is consistent with the SCAQMD LST methodology. **Table 5:**

Localized Significance of Construction Emissions presents the results of unmitigated localized emissions during each construction activity. **Table 5: Localized Significance of Construction Emissions** shows that emissions of these pollutants on the peak day of construction would not result in significant concentrations of pollutants at nearby sensitive receptors.

Table 5: Localized Significance of Construction Emissions

Construction Activity	Emissions (Maximum Pounds Per Day)[1]			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Demolition (2024)	24.9	21.7	2.1	1.2
Site Preparation (2024)	36.0	32.9	6.7	4.1
Grading (2024)	18.2	18.8	3.7	1.7
Building Construction (2024)	11.2	13.1	0.5	0.5
Building Construction (2025)	10.4	13.0	0.4	0.4
Paving (2025)	7.5	10.0	0.4	0.3

Combined Building Construction / Paving (2025)	17.9	23	0.8	0.7
Combined Building Construction / Architectural Coating (2025)	11.3	14.1	0.4	0.4
Building Construction (2026)	9.9	13.0	0.4	0.4
Maximum Daily Emissions	**36.0**	**32.9**	**6.7**	**4.1**
SCAQMD Localized Screening Threshold (adjusted for 3.5 acres at 25 meters)	*220*	*1,713*	*11*	*7*
Exceed SCAQMD Threshold?	**No**	**No**	**No**	**No**

NO_X = Nitrogen Oxides; CO = Carbon Monoxide; PM_{10} = Particulate Matter 10 microns in diameter or less; $PM_{2.5}$ = Particulate Matter 2.5 microns in diameter or less

1. SCAQMD Rule 403 Fugitive Dust applied. The Rule 403 reduction/credits include the following: properly maintain mobile and other construction equipment; water exposed surfaces three times daily; and limit speeds on unpaved roads to 15 miles per hour. Reductions percentages from the SCAQMD CEQA Handbook (Tables XI-A through XI-E) were applied. No mitigation was applied to construction equipment. Refer to Appendix B for Model Data Outputs.

Source: CalEEMod version 2022.1.1.14. Refer to Appendix B for model outputs.

Localized Operational Significance Analysis

The operational phase LST protocol applies to on-site emissions sources (area and energy sources). It is noted that the SCAQMD's LSTs are screening thresholds for localized emissions based on location, distance, and Project site size. LSTs thresholds for receptors located at 25 meters or less in SRA 33 were utilized in this analysis because the closest receptor is located adjacent to the east. Although the Project site is approximately 5.8 acres, the 5-acre LST threshold was also conservatively used for the Project, as the LSTs increase with the size of the site. **Table 6: Localized Significance of Operational Emissions** shows that the maximum daily emissions of these pollutants during operations would not result in significant concentrations of pollutants at nearby sensitive receptors.

Table 6: Localized Significance of Operational Emissions

Activity	Emissions (Maximum Pounds Per Day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
On-Site Emissions	6.3	34.7	0.5	0.5

Criteria Pollutant Health Impacts

On December 24, 2018, the California Supreme Court issued an opinion identifying the need to provide sufficient information connecting a project's air emissions to health impacts or explain why such information could not be ascertained (*Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502). The SCAQMD has set its CEQA significance thresholds based on the FCAA, which defines a major stationary source (in extreme O_3 nonattainment areas such as the SCAB) as emitting 10 tons per year. The thresholds correlate with the trigger levels for the federal New Source Review (NSR) Program and SCAQMD Rule 1303 for new or modified sources. The NSR Program[15] was created by the FCAA to ensure that stationary sources of air pollution are constructed or modified in a manner that is consistent with attainment of health-based federal ambient air quality standards. The federal ambient air quality standards establish the levels of air quality necessary, with an adequate margin of safety, to protect the public health. Therefore, projects that do not exceed the SCAQMD's LSTs and mass emissions thresholds would not violate any air quality standards or contribute substantially to an existing or projected air quality violation and no criteria pollutant health impacts.

NO_X and ROG are precursor emissions that form O_3 in the atmosphere in the presence of sunlight where the pollutants undergo complex chemical reactions. It takes time and the influence of meteorological conditions for these reactions to occur, so O_3 may be formed at a distance downwind from the sources. Breathing ground-level O_3 can result health effects that include reduced lung function, inflammation of airways, throat irritation, pain, burning, or discomfort in the chest when taking a deep breath, chest tightness, wheezing, or shortness of breath. In addition to these effects, evidence from observational studies strongly indicates that higher daily O_3 concentrations are associated with increased asthma attacks, increased hospital admissions, increased daily mortality, and other markers of morbidity. The consistency and coherence of the evidence for effects upon asthmatics suggests that O_3 can make asthma symptoms worse and can increase sensitivity to asthma triggers.

The SCAQMD's 2022 AQMP focuses on the 2015 8-hour ozone standard with achieving attainment in 2037. The largest source of NO_X emissions (an O_3 precursor) in 2018 were related to on-road sources. The 2022 AQMP also emphasizes a shift in focus beyond on-road emissions to off-road sources. The 2022 AQMP identifies a 67 percent NO_X reduction beyond what we would achieve through current programs by 2037 and about 83 percent below current levels. In order to achieve this, the SCAQMD identifies the need for widespread adoption of zero emissions (ZE) technologies across all mobile sectors and stationary sources.

The control strategy for the 2022 AQMP includes aggressive new regulations and the development of incentive programs to support early deployment of advanced technologies. The two key areas for incentive programs are (1) promoting widespread deployment of available ZE and low NOX technologies and (2) developing new ZE and ultra-low NOX technologies for use in cases where the technology is not currently available. SCAQMD will prioritize distribution of incentive funding in environmental justice (EJ) areas and seek opportunities to focus benefits on the most disadvantaged communities. The 2022 AQMP includes a total of 49 control measures. In addition to the NOX measures, the 2022 AQMP relies on co-

[15] Code of Federal Regulation (CFR) [i.e. PSD (40 CFR 52.21, 40 CFR 51.166, 40 CFR 51.165 (b)), Non-attainment NSR (40 CFR 52.24, 40 CFR 51.165, 40 CFR part 51, Appendix S)

benefits from climate and energy efficiency programs for further reductions, limited strategic measures for VOC reductions, and other actions.

The SCAQMD's air quality modeling demonstrates that NOX reductions prove to be much more effective in reducing O3 levels and will also lead to significant improvement in PM2.5 concentrations. NOX-emitting stationary sources regulated by the SCAQMD include Regional Clean Air Incentives Market (RECLAIM) facilities (e.g., refineries, power plants, etc.), natural gas combustion equipment (e.g., boilers, heaters, engines, burners, flares) and other combustion sources that burn wood or propane.

There are significant challenges with correlating specific health effects that will occur as a result of a project's significant criteria air pollutant emissions. Generally, models that correlate criteria air pollutant concentrations with specific health effects focus on regulatory decision-making that will apply throughout an entire air basin or region. These models focus on the region-wide health effects of pollutants so that regulators can assess the costs and benefits of adopting a proposed regulation that applies to an entire category of air pollutant sources, rather than the health effects related to emissions from a specific proposed project or source. Because of the scale of these analyses, any one project is likely to have only very small incremental effects which may be difficult to differentiate from the effects of air pollutant concentrations in an entire air basin. In addition, such modeling efforts are costly, and the value of a project-specific analysis may be modest in relation to that cost. Furthermore, the results, while costly to produce, may not be particularly useful. For regional pollutants, it is difficult to trace a particular project's criteria air pollutant emissions to a specific health effect. Moreover, the modeled results may be misleading because the margin of error in such modeling is large enough that, even if the modeled results report a given health effect, the model is sufficiently imprecise that the actual effect may differ from the reported results; that is, the modeled results suggest precision, when in fact available models cannot be that precise on a project level.

As discussed above, the mass emissions thresholds developed by SCAQMD and used by CEQA lead agencies throughout southern California to determine potential significance of project-related regional changes in the environment are not directly indicative of exceedances of applicable ambient air standards. Meteorology, the presence of sunlight, and other complex chemical factors all combine to determine the ultimate concentration and location of O3 or PM. The effects on ground-level ambient concentrations of pollutants that may be breathed by people are also influenced by the spatial and temporal patterns of the emission sources. In other words, the effect on O3 and PM concentrations from a given mass of pollutants emitted in one location may vary from the effect if that same mass of pollutants was emitted in an entirely different location in the SCAB. The same effect may be observed when the daily and seasonal variation of emissions is taken into account. Regional-scale photochemical modeling, typically performed only for NAAQS attainment demonstration and rule promulgation, account for these changes in the spatial, temporal, and chemical nature of regional emissions.

Emissions from the construction and operation of the Project would vary by time of day, month, and season, and the majority of Project-related emissions, being generated by mobile sources driving to and from the Project site, would be emitted throughout a wide area defined by the origins and destinations

of people traveling to and from the Project. As SCAQMD has stated, "it takes a large amount of additional precursor emissions to cause a modeled increase in ambient ozone levels over an entire region."[16]

Specifically, for extremely large regional projects, the SCAQMD states that it has been able to correlate potential health outcomes for very large emissions sources – as part of their rulemaking activity, specifically 6,620 pounds per day of NOX and 89,180 pounds per day of VOC were expected to result in approximately 20 premature deaths per year and 89,947 school absences due to O3. Based on its recent experiences applying regional scale models to relatively small increase in emissions, SCAQMD's Amicus Brief in the Friant Ranch case stated: "[A] project emitting only 10 tons per year of NOX or VOC is small enough that its regional impact on ambient ozone levels may not be detected in the regional air quality models that are currently used to determine ozone levels." The Brief makes it clear that SCAQMD does not believe that there must be a quantification of a project's health risks in CEQA documents prepared for individual projects since it would be difficult to quantify health impacts for criteria pollutants. Also, the Project does not generate anywhere near 6,620 pounds per day of NOX or 89,190 pounds per day of ROG (VOC) emissions, which SCAQMD stated was a large enough emission to quantify O3-related health impacts. Therefore, the Project's emissions are not sufficiently high enough to use a regional modeling program to correlate health effects on a basin-wide level.

As previously discussed, localized effects of on-site Project emissions on nearby receptors for the Project would be less than significant (refer to **Table 5: Localized Significance of Construction Emissions** and **Table 6: Localized Significance of Operational Emissions**). The LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable state or federal ambient air quality standard. The LSTs were developed by the SCAQMD based on the ambient concentrations of that pollutant for each SRA and distance to the nearest sensitive receptor. The ambient air quality standards establish the levels of air quality necessary, with an adequate margin of safety, to protect public health, including protecting the health of sensitive populations. However, as discussed above, neither the SCAQMD nor any other air district currently have methodologies that would provide Lead Agencies and CEQA practitioners with a consistent, reliable, and meaningful analysis to correlate specific health impacts that may result from a proposed project's mass emissions. Information on health impacts related to exposure to ozone and particulate matter emissions published by the U.S. EPA and CARB have been summarized above and discussed in the Regulatory Framework section. Health studies are used by these agencies to set the NAAQS and CAAQS.

Although it may be misleading and unreliable to attempt to specifically and numerically quantify the Project's health risks, this analysis provides extensive information concerning the Project's potential health risks. While the Project is expected to exceed the SCAQMD's numeric regional mass daily thresholds for ROG and NOX, this does not in itself constitute a significant health impact to the population adjacent to the Project and within the SCAB. The reason for this is that the mass daily thresholds are in pounds per day emitted into the air whereas health effects are determined based on the concentration of emissions in the air at particular receptor (e.g., parts per million by volume of air, or micrograms per cubic meter of air).

[16] Ibid. Page 34.

The NAAQS and CAAQS were developed to protect the most susceptible population groups from adverse health effects and were established in terms of parts per million or micrograms per cubic meter for the applicable emissions. As stated earlier, the mass emission thresholds were established primarily in conjunction with federal permitting "major source" thresholds. If emissions were below these "de minimis" emission rates, then the proposed Project is presumed to conform with the NAAQS. While based on the status of an air basin level of attainment of the health-based NAAQS, emissions in excess of the mass emission thresholds from one project does not mean the air basin would experience measurably higher ground level concentrations, or more frequent occurrences of ground level concentrations in exceedance of standards or delay timely attainment of a particular NAAQS.

Ozone concentrations are dependent upon a variety of complex factors, including the presence of sunlight and precursor pollutants, natural topography, nearby structures that cause building downwash, atmospheric stability, and wind patterns. Because of the complexities of predicting ground-level ozone concentrations in relation to the NAAQS and CAAQS, none of the health-related information can be directly correlated to the pounds/day or tons/year of emissions estimated from a single, proposed project. Therefore, it is impossible to correlate significant criteria pollutants from an individual project to health risk. **Table 2: Construction-Related Emissions** includes a list of criteria pollutants and summarizes common sources and effects. Thus, this analysis is reasonable and intended to foster informed decision making. Due to the uncertainty in the relationship between project-level mass emissions and regional ozone formation as well as limitations with currently available technical tools, the resulting health effects associated with the Project cannot be identified. Given this is speculative, no meaningful conclusion can be drawn with respect to potential health effects from the criteria pollutant emissions of the proposed Project.

Carbon Monoxide Hotspots

An analysis of CO "hot spots" is needed to determine whether the change in the level of service of an intersection resulting from the Project would have the potential to result in exceedances of the CAAQS or NAAQS. It has long been recognized that CO exceedances are caused by vehicular emissions, primarily when vehicles are idling at intersections. Vehicle emissions standards have become increasingly stringent in the last 20 years. Currently, the CO standard in California is a maximum of 3.4 grams per mile for passenger cars (requirements for certain vehicles are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of control technology on industrial facilities, CO concentrations have steadily declined. Accordingly, with the steadily decreasing CO emissions from vehicles, even very busy intersections do not result in exceedances of the CO standard.

The SCAB was re-designated as attainment in 2007 and is no longer addressed in the SCAQMD's AQMP. The 2003 AQMP is the most recent version that addresses CO concentrations. As part of the SCAQMD CO Hotspot Analysis, the Wilshire Boulevard and Veteran Avenue intersection, one of the most congested intersections in Southern California with an average daily traffic (ADT) volume of approximately 100,000 vehicles per day, was modeled for CO concentrations. This modeling effort identified a CO concentration high of 4.6 ppm, which is well below the 35-ppm Federal standard. The Project considered herein would not produce the volume of traffic required to generate a CO hot spot in the context of SCAQMD's CO Hotspot Analysis. As the CO hotspots were not experienced at the Wilshire Boulevard and Veteran Avenue

intersection even as it accommodates 100,000 vehicles daily, it can be reasonably inferred that CO hotspots would not be experienced at any vicinity intersections resulting from 1,269 additional total vehicle trips attributable to the Project and distributed throughout the roadway network. Therefore, impacts would be less than significant.

As stated in Impact 4.4.2(a) above, the Air Quality Assessment is included as an appendix to this Addendum, per **MM AQ-1** and **MM 3-1**.

Mitigation Measures

Refer to **MM 3-1** and **AQ-1** from Approved SEIR, discussed above under Threshold (a).

Conclusion

Air quality impacts related to the proposed Project are less than the significant and unavoidable impacts identified in the Approved SEIR. With the implementation of mitigation measure measures in the TOP 2050 SEIR no new impact relative to air quality or a substantial increase in the severity of a previously identified significant impact evaluated in the Approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people)? [Approved SEIR Impact 5.3-4]

Construction

No New or More Severe Impacts: Odors that could be generated by construction activities are required to follow SCAQMD Rule 402 to prevent odor nuisances on sensitive land uses. SCAQMD Rule 402, Nuisance, states:

> *A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.*

During construction, emissions from construction equipment, such as diesel exhaust, and volatile organic compounds from architectural coatings and paving activities may generate odors. However, these odors would be temporary, are not expected to affect a substantial number of people and would disperse rapidly. Therefore, impacts related to odors associated with the Project's construction-related activities would be less than significant.

Operations

No New or More Severe Impacts: The SCAQMD *CEQA Air Quality Handbook* identifies certain land uses as sources of odors. These land uses include agriculture (farming and livestock), wastewater treatment plants, food processing plants, chemical plants, composting facilities, refineries, landfills, dairies, and

fiberglass molding. The Project would not include any of the land uses that have been identified by the SCAQMD as odor sources. Therefore, the Project would not create objectionable odors.

Mitigation Measures

No mitigation measures are required, and impacts would be less than significant.

Conclusion

Odors and other emissions related to the proposed Project are similar to the less than significant impacts identified in Approved SEIR. No new impact relative to air quality or a substantial increase in the severity of a previously identified significant impact evaluated in the Approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.4.3 Overall Air Quality Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to air quality. Therefore, preparation of a SEIR is not warranted.

4.5 BIOLOGICAL RESOURCES

4.5.1 Summary of TOP 2050 Analysis

The City is almost completely developed with urban and agricultural uses, with no large open areas of native habitat. TOP 2050 includes policies to ensure that special-status species and habitat are protected through compliance with state and federal regulations (e.g., Policies ER-5.1 and ER-5.2). Projects under TOP 2050 that undergo independent CEQA review would be required to determine whether there is potential habitat on-site for sensitive species. If potential habitat were found on-site, focused surveys for those sensitive species potentially present would be required.

Implementation of TOP 2050 would not result in direct vegetation removal in surface water areas in the City; however, projects approved pursuant to TOP 2050 could indirectly result in such removal.

4.5.2 Analysis of Proposed Project

Threshold (a) Have a substantial effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? [Approved SEIR Impact 5.4-1]

Threshold (b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? [Approved SEIR Impact 5.4-2]

Threshold (c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means? [Approved SEIR Impact 5.4-3]

No New or More Severe Impacts: The Project is located within TOP 2050 Mixed Use – Neighborhood Activity Hubs (MU-NH). The Approved SEIR indicated that much of the City is developed with urban and agricultural uses, with very little native habitat remaining. Vacant land in the City would have low habitat value, because much of it is barren ground and does not support vegetation, and many areas of vacant land are small, surrounded by developed urban uses, and isolated from other vacant areas.[17] TOP 2050 includes policies to ensure that special-status species and habitat are protected through compliance with state and federal regulations. The Approved SEIR found that implementation of TOP 2050 would not result in direct vegetation removal in surface water areas in the City. Additionally, adherence to Policy ER-5.1 of TOP 2050 would support avoidance of adverse impacts to protected wetlands, waters of the United States, and waters of the State. Per the Approved SEIR detention basins would be designated as Open Space-Non-recreation or Open Space-Parkland.[18] Surface waters in the City such as detention basins and man-made lakes are assumed to contain sensitive natural communities if they support plants such as

[17] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.4-29 Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).
[18] Ibid, Page 30.

mulefat and willow.[19] As the Project site is not designated Open Space-Non-recreation or Open Space-Parkland, it would not contain habitat classifiable as naturally sensitive basin. Furthermore, the Project site has been developed with active use structures and contains paved surfaces over the majority of the area. Therefore, no new impacts to riparian habitat or other sensitive natural community would be caused by Project implementation.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact on natural habitats and sensitive species. A less than significant impact was identified in the Approved SEIR with respect to natural habitats and sensitive species. The Project would be designed consistent with the applicable guidelines and standards within the Approved SEIR, and City Development Code. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites? [Approved SEIR Impact 5.4-4]

No New or More Severe Impacts: As previously discussed much of the City is developed, and no regional wildlife movement corridors have been identified in the City.[20] The flood control channels and the Southern California Edison (SCE) corridors could serve as local corridors for movement within the City and between the San Gabriel Mountains to the north and the Prado Basin to the south.[21] There are trees and shrubs scattered throughout the City that may be used for nesting or roosting by migrating birds. The Project site contains two ornamental trees which could potentially form a habitat for nesting birds. However, Project construction and operation would be required to comply with the Migratory Bird Treaty Act (MBTA) [California Fish and Game Code Sections 3503, 3503.5, 3511, and 3513] which prohibits the take, possession, or destruction of birds, their nests or eggs. Therefore, the proposed Project would not result in new impacts or a substantial increase in the magnitude of impacts to wildlife movement.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact on wildlife movement and migratory patterns. A less than significant impact was identified in the Approved SEIR with respect to natural habitats and sensitive species. Additionally, no new information of substantial importance that was not known and

[19] Ibid.
[20] Ibid, Page 5.4-33
[21] Ibid.

could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance? [Approved SEIR Impact 5.4-5]

Threshold (f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan? [Approved SEIR Impact 5.4-5]

No New or More Severe Impacts: There is one habitat conservation plan (HCP) in the City, a 19-acre area near the intersection of Greystone Drive and the eastern city boundary established to protect the Delhi Sands Flower-Loving Fly (DSFLF).[22] This HCP area would remain designated Industrial under TOP 2050. Additionally, any project proposed for development within this HCP pursuant to TOP 2050 would be required to consult with the USFWS regarding project impacts on DSFLF and mitigation of any such impacts. As previously discussed, the Project is located in the MU-8b zoning district of the City, out of the HCP and therefore would not impact the DSFLF HCP.

Mitigation Measures

None identified in the approved SEIR.

Conclusion

The Project would not result in new or more severe impact to established policies, plans, or ordinances protecting biological resources and no new or more severe impact to approved local, regional, or state habitat conservation plans. A less than significant impact was identified in the Approved SEIR with respect to established policies and plans. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.5.3 Overall Biological Resources Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new or more severe impacts with respect to biological resources. Therefore, preparation of a SEIR is not warranted.

[22] Ibid, Page 5.4-34

4.6 CULTURAL RESOURCES

4.6.1 Summary of TOP 2050 Analysis

TOP 2050 determined, with compliance to local, state and federal regulations restricting alteration, relocation, and demolition of historical resources, would ensure development would not result in adverse impacts to identified historic and cultural resources. Regulatory compliance would also ensure impacts to archaeological and paleontological resources would be less than significant. Additionally, no known native American gravesites or cemeteries are located in the City, although grading activities could potentially disturb human remains, including those outside of formal cemeteries. However Regulatory compliance would reduce impacts to be less than significant.

4.6.2 Analysis of Proposed Project

A Cultural Resources Assessment (CRA) was prepared for the Project by BCR Consulting LLC (BCR) in October 2023. The CRA was prepared based on research conducted through both a field survey of the Project area as well as record searches of the National Register of Historic Places (National Register), the California Register of Historic Places (California Register), and documents and inventories published by the California Office of Historic Preservation (COHP). The results of the CRA are summarized herein and included as Appendix C to this Addendum.

Threshold (a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5? [Approved SEIR Impact 5.5-1]

No New or More Severe Impacts: The Approved SEIR found that despite implementation of mitigation measures, buildout of the Approved SEIR would still present a significant impact to historical resources.

A records search conducted for the Project found that six cultural resources studies had taken place within a half-mile of the Project site. However, no cultural resources were identified. BCR's field survey of the Project site was conducted in April 2023 and May 2023. During the field survey, one historic-period Post Office, and one historic-period commercial retail building were identified.[23] The historic-period buildings were evaluated based on the four National Register criteria for historical landmarks:

1. It is associated with the events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the U.S.;
2. It is associated with the lives of persons important to local, California, or U.S. history;
3. It embodies the distinctive characteristics of a type, period, region, or method of construction, represents the work of a master, possesses high artistic values; and/or;
4. It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

The two historic period structures were also evaluated against the City Development Code's (City Development Code §9-2615) criteria:

a. It exemplifies or reflects special elements of the City's history;

[23] BCR Consulting LLC. 2023. *Cultural Resource Assessment Euclid Mixed Use Specific Plan Project*. Page. 10.

b. It is identified with persons or events significant in local, state, or national history;

c. It is representative of the work of a notable builder, designer, architect, or artist;

d. It embodies distinguishing architectural characteristics of a style, type, period, or method of construction;

e. It is a noteworthy example of the use of indigenous materials or craftsmanship;

f. It embodies elements that represent a significant structural, engineering, or architectural achievement or innovation;

g. It has a unique location, a singular physical characteristic, or is an established and familiar visual feature of a neighborhood, community or the City; or

h. It is one of the few remaining examples in the City, region, state, or nation possessing distinguishing characteristics of an architectural or historical type or specimen.

Based on the previously listed criteria for both the National Register and the City's Development Code, it was determined that both historical period structures were not eligible for the California Register, and would not qualify as a City Historical Landmark. Department of Parks and Recreation (DPR) 523 forms were also completed for each historic era building. These forms include digital photographs of each structure, a summary description of each structure, and a cataloguing of resources present for each structure. Additional cultural data collected on the Project site as well as all completed DPR 523 forms are included in **Appendix C**. Neither the historic-period Post Office or commercial retail building meet the criteria for listing on the California Register, and do not quality as a historical resource under Section 15064.5.[24] Therefore, impacts would be less than significant.

Mitigation Measures

Mitigation Measures from TOP 2050 SEIR

The Approved SEIR includes measures to reduce potential impacts associated with the implementation of TOP 2050. The following measures from the Approved SEIR are applicable to the proposed Project:

MM 5-1 Historic or potentially historic resources in the City shall be evaluated for historic significance through the City's tier system prior to the issuance of plan or development approvals. Pursuant to City's Development Code (Chapter 4, Permits, Actions, and Decisions, and Chapter 7, Historic Preservation), mitigation measures for all Tier III Historic Resources shall include the following:

a) Each historic resource shall be fully documented and cataloged pursuant to Historic American Building Survey/Historic American Engineering Record (HABS/HAER) standards, to provide a record of the resource, including but not limited to: [i] the preparation of site plans, floor plans, exterior and interior elevations, and detail drawings of character defining features (such as moldings, stairs, etc.); and [ii] photographs of the resource, including the exterior, interior, and interior and exterior character defining features (such as moldings, light fixtures, trim patterns, etc.).

[24] BCR Consulting LLC. 2023. *Cultural Resource Assessment Euclid Mixed Use Specific Plan Project*. Page. 11.

b) A mitigation fee established pursuant to Section 7.01.030 (Historic Preservation Mitigation Fee) shall be paid to the City prior to the issuance of a demolition permit for Tier III historic resources. Fees for Tier I and II historic resources shall be determined during the Environmental Impact Report process. The fees established for Tier III will be used as a reference point for establishing fees for Tier I and II historic resources.

c) A Certificate of Appropriateness shall not be issued for the demotion of an historic resource, either in whole or in part, until such time that a demolition permit application and a replacement structure has been approved by the City, and appropriate permits have been issued for its construction, unless: [i] a waiver is granted pursuant to Subsection H (Replacement Structure Waiver for Historic Resources Located within Industrial Zoning Districts) of Section 4.02.050; [ii] a deferral of the replacement structure requirement is granted pursuant to Subsection G (Replacement Structure Deferral) of Section 4.02.050; or [iii] demolition is required pursuant to Section 7.01.050 (Unsafe or Dangerous Conditions) of this Development Code.

d) In an effort to preserve features and artifacts from historic resources, a determination whether items within or on the resource should be salvaged must be made by the Planning Department and may include the local historical society prior to the issuance of the demolition permit. The applicant shall be responsible for the removal, relocation, storage, and donation of such items selected for salvaging. The applicant shall provide an inventory of salvaged items to the Planning Department, and shall include a list of each item name, description, and dimension as necessary, and the location of each item on a floor plan.

In compliance with **MM 5-1,** a CRA was prepared for the Project in October 2023 which analyzed the two historic period structures on the Project site. Based on criteria for both the National Register and the City's Development Code, both historical period structures were not eligible for the California Register, and would not qualify as a City Historical Landmark. See **Appendix C** for additional details.

Conclusion

With the implementation of mitigation measures in the Approved SEIR, the Project would not result in a new or more severe impact to historical resources. A significant and unavoidable impact was identified in the Approved SEIR with respect to historical resources. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5? [Approved SEIR Impact 5.5-2]

No New or More Severe Impacts: The Approved SEIR found that after compliance with existing federal, state, local regulations, and mitigation measures impacts to archeological resources or paleontological resources would be less than significant.

The CRA determined that significant archaeological deposits were not present on the Project site during the records search and field survey. However, ground-disturbing activities have the potential to reveal buried deposits not observed on the surface. In keeping with MM 5-2 of the Approved SEIR, prior to the initiation of ground-disturbing activities, field personnel should be alerted to the possibility of buried prehistoric or historic cultural deposits. In the event that field personnel encounter buried cultural material, work in the immediate vicinity of the find should ceased and a qualified archaeologist should be retained to assess the significance of the find. The qualified archaeologist should have the authority to stop or divert construction excavation as necessary. If the qualified archaeologist finds that any cultural resources present meet eligibility requirements for listing on the California Register or the National Register, plans for the treatment, evaluation, and mitigation of impacts to the find will need to be developed. Despite the lack of known archeological resources on the Project site, compliance with mitigation measures and State regulations would lead to a less than significant impact.

Mitigation Measures from TOP 2050 SEIR

The Approved SEIR includes measures to reduce potential impacts associated with the implementation of TOP 2050. The following measures from the Approved SEIR are applicable to the proposed Project:

MM 5-2 In areas of documented or inferred archeological and/or paleontological resources presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:

a) Archeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.

b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.

c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including catalog with museum numbers.

In compliance with **MM 5-2,** a CRA was prepared for the Project site in October 2023 and determined that significant archaeological deposits were not present on the Project site during the records search and field survey. Prior to ground disturbing activities the Project site developer would alert field personnel to the possibility of buried prehistoric or historic cultural deposits, see **Appendix C** for additional details.

Conclusion

With the implementation of mitigation measure measures in the TOP 2050 SEIR the Project would not result in a new or more severe impact to archaeological resources. A less than significant impact with mitigation was identified in the Approved SEIR with respect to archaeological resources. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (c) Disturb any human remains, including those interred outside of dedicated cemeteries? [Approved SEIR Impact 5.5-3]

No New or More Severe Impacts: If human remains are encountered, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are prehistoric, the Coroner will notify the NAHC to determine a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. Human remains were not identified during field exploration of the Project site. Additionally, the disturbed state of the Project site further reduces the potential to encounter buried remains. However, ground disturbing activities have the potential to reveal unknown human remains. Despite this, proper compliance with State Health and Safety Code Section 7050.5 would ensure proper handling and treatment of the remains. Impacts would, therefore, remain less than significant.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact to the disturbance of human remains. A less than significant impact was identified in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.6.3 Overall Cultural Resources Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162 (a), the Project would not result in any new or more severe impacts with respect to cultural resources. Therefore, preparation of an SEIR is not warranted.

4.7 ENERGY

4.7.1 Summary of TOP 2050 Analysis

The Approved SEIR concluded that upon implementation of regulatory requirements, standard conditions of approval, and mitigation measures impacts to energy would be less than significant.

4.7.2 Analysis of Proposed Project

Threshold (a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation? [Approved SEIR Impact 5.6-1]

Construction Impacts

Project construction would create temporary increased demands for electricity and vehicle fuels compared to existing conditions and would result in short-term transportation-related energy use. Energy consumption during construction (2024 through 2026) was calculated using the CalEEMod, Version 2022.1 computer model, and the results are shown in **Table 7**: **Construction-Related Fuel Usage**.

Table 7: Construction-Related Fuel Usage

Project Component	Gasoline (Gallons)	Diesel (Gallons)
Construction Worker Commute	152,741	0
Construction Hauling/Vendor Trips	0	77,047
Construction Off-Road Equipment	0	87,694
Total	195,564	164,741
Notes: Refer to Appendix D for Model Data Outputs.		
Source: CalEEMod Version 2022.1;		

Electrical Energy

Construction activities associated with the land uses accommodated under the Project would require electricity use to power the construction equipment. The electricity use during construction would vary during different phases of construction, where the majority of construction equipment during demolition and grading would be gasoline-powered or diesel-powered, and the later construction phases would be electricity-powered, such as interior construction and architectural coatings. Overall, the use of electricity would be temporary in nature and would fluctuate according to the phase of construction. Additionally, it is anticipated that the majority of electric-powered construction equipment would be hand tools (e.g., power drills, table saws, compressors) and lighting, which would result in minimal electricity usage during construction activities. Therefore, Project-related construction activities would not result in wasteful or unnecessary electricity demands and impacts would be less than significant.

Natural Gas Energy

It is not anticipated that construction equipment used for the Project would be powered by natural gas, and no natural gas demand is anticipated during construction. Therefore, impacts would be less than significant with respect to natural gas usage.

Transportation Energy

Transportation energy use depends on the type and number of trips, Vehicular Miles Traveled (VMT), fuel efficiency of vehicles, and travel mode. Transportation energy used during construction would come from the transport and use of construction equipment, delivery vehicles and haul trucks, and construction employee vehicles that would use diesel fuel and/or gasoline. It is anticipated that the majority of off-road construction equipment, such as those used during demolition and grading activities, would be gasoline-powered or diesel-powered.

The use of energy resources by vehicles and equipment would fluctuate according to the phase of construction. To limit wasteful and unnecessary energy consumption, the construction contractors are anticipated to minimize non-essential idling of construction equipment during construction in accordance with Section 2449 of the CCR, Title 13, Article 4.8, Chapter 9. In addition, electrical energy would be available for use during construction from existing power lines and connection, which could minimize or avoid the use of generators that are less efficient than tying into existing SCE infrastructure. Furthermore, construction trips would not result in unnecessary use of energy since the Project site is centrally located and is served by numerous regional freeway systems (e.g., Interstate 10 [I-10], State Route 83 [SR 83], and State Route 60 [SR 60]) that provides the most direct and shortest routes from various areas of the region. Moreover, all construction-equipment operation would cease upon completion of Project construction. Thus, impacts related to transportation energy use during construction would be temporary and would not require expanded energy supplies or the construction of new infrastructure. Additionally, over time as fuel efficiencies and fuel technologies improve, it is likely that transportation energy consumption will decrease. Overall, it is expected that construction fuel associated with land use developments accommodated under the Project would not be any more inefficient, wasteful, or unnecessary than similar development projects. Therefore, impacts would be less than significant with respect to transportation energy.

Operational Impacts

Project operation would create additional demands for electricity and natural gas compared to existing conditions and would result in increased transportation energy use. Operational use of energy would include heating, cooling, and ventilation of buildings; water heating; operation of electrical systems, use of on-site equipment and appliances; and indoor, outdoor, perimeter, and parking lot lighting.

Electrical Energy

Operation of the existing facility consumes electricity for various purposes, including, but not limited to heating, cooling, and ventilation of buildings, water heating, operation of electrical systems, security and control center functions, lighting, and use of on-site equipment and appliances. The proposed electricity consumption for the apartments, retail use, and associated parking lot are shown in **Table 8: Electricity Consumption**.

Table 8: Electricity Consumption

Land Use	Electricity
Apartments	1,540,870
Retail	118,686
Parking Structure	740,570
Proposed Project Total	2,400,126
Source: CalEEMod Version 2022.1	
Notes: kWh = kilowatt hour Refer to Appendix D for Model Data Outputs.	

Electrical service to the Project would be provided by SCE through connections to existing offsite electrical lines and new on-site infrastructure. As shown in the table, the Project would have an annual electricity demand of 2,400,126 kilowatt hours (kWh)/year. While the Project would increase energy demand at the Project site compared to existing conditions, it would be required to comply with the applicable Building Energy Efficiency Standards and the CALGreen Code. Because the Project would be consistent with the requirements of these energy-related regulations, it would not result in wasteful or unnecessary electricity demands. Therefore, the Project would not result in a significant impact related to electricity.

Natural Gas Energy

The proposed natural gas consumption for the Project site is shown in **Table 9: Natural Gas Consumption**. As seen in the table, natural gas demand would total 4,012,198 kilo-British Thermal Units (kBTU)/year with the Project. Because the Project would be built to meet the Building Energy Efficiency Standards, it would not result in wasteful or unnecessary natural gas demands. Therefore, operation of the Project would result in less than significant impacts with respect to natural gas usage.

Table 9: Natural Gas Consumption

Land Use	Natural Gas (kBTU/year)
Apartment	3,940,273
Retail	71,925
Parking Structure	0
Proposed Project Total	4,012,198
Notes: kBTU = kilo-British thermal unit Refer to Appendix D for Model Data Outputs.	
Source: CalEEMod Version 2022.1	

Transportation Energy

The Project would consume transportation energy during operations from the use of motor vehicles. Because the efficiency of the motor vehicles in use, such as the average miles per gallon for motor vehicles involved with the Project are unknown, estimates of transportation energy use is assessed based on the overall VMT and related transportation energy use. The Project-related VMT would primarily come from future employees and for the commercial uses. As seen in **Table 10: Operation-Related Fuel Usage**, the VMT for the Project is estimated to be 3,479,538. However, the Project would involve the construction of residential and retail uses that would provide more opportunities for employment for residents of the City

and would be within an urbanized area with nearby amenities such as regional parks and public transit options like OmniTrans and Metrolink. Two bus stops are within 100 feet of the Project and Anthony Munoz Park is approximately 0.2 miles west of the Project site. Overall, it is expected that operation-related fuel usage associated with the Project would not be any more inefficient, wasteful, or unnecessary than similar development projects. Therefore, impacts would be less than significant with respect to operation-related fuel usage.

Table 10: Operation-Related Fuel Usage

Vehicle Type	Gasoline		Diesel	
	VMT	Gallons	VMT	Gallons
Passenger Vehicles	3,206,728	148,460	0	0
Light/Medium Trucks	0	0	210,228	12,223
Heavy Trucks	0	0	62,582	10,259
Total	3,206,728	148,460	272,810	22,482
Notes: Refer to Appendix D for Model Data Outputs.				
Source: CalEEMod Version 2022.1				

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in new or more severe impact due to energy and electricity usage and production. A less than significant impact was identified in the Approved SEIR with respect to established policies and plans. The Project would be designed consistent with the applicable guidelines and standards within the Approved SEIR, and City Development Code. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency? [Approved SEIR Impact 5.6-2]

Local Plans

City of Ontario Community Climate Action Plan (CAP)

The primary purpose of the City's Community CAP is to design a feasible strategy to reduce GHG emissions generated by community activities that is consistent with statewide CARB Scoping Plan GHG reduction efforts. The City has identified a series of reduction measures to be implemented by the City. These reduction measures include programs that relate to the energy efficiency of projects within the City. As shown in **Table 15: Community Climate Action Consistency**, the Project would comply and would not conflict with the measures and goals established by the City's Community CAP. Therefore, implementation of the project would be consistent with the energy efficiency and renewable energy standards of a City's local plan.

Top 2050

Table 11: Consistency with the TOP evaluates the consistency of the Project to the applicable policies of TOP. As shown in the table, the Project would generally be consistent with the applicable policies of TOP. For example, the sustainable design strategies in the Approved SEIR includes use of energy efficient LEDs, implementation of passive design such as building orientation, landscaping, and strategic colors to improve building energy performance, and use of high-performance dual pane window glazing in retail storefronts. Therefore, overall, the Project would be consistent and would not interfere with the Approved SEIR.

Table 11: Consistency with the TOP

Goal/Policy No.	Goal/ Policy	Consistency
Policy ER3-1	**Conservation Strategy**: Require conservation as the first strategy to be employed to meet applicable energy saving standards.	**Consistent:** The proposed Project incorporates energy-saving conservation strategies into its design guidelines by addressing lighting, bicycle parking, sustainable landscaping, and energy efficiency. Sustainable design strategies include incorporation of LED or metal halide lighting and energy efficient appliances.
Policy ER3-2	**Green Development – Communities:** Encourage the use of LEED Neighborhood Development rating system, or similar mechanism, to guide the planning and development of all new communities.	**Consistent:** Development of land uses accommodated under the Project would comply with the CALGreen Code, and implement strategies such as the use of low water use landscaping, and modern Heating, Ventilation, and Air Conditioning (HVAC) systems.
Policy ER3-3	**Building and Site Design:** Require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar and natural ventilation.	**Consistent:** The proposed Project includes the use of passive design to improve building energy performance through low water use landscaping. Additionally, the development of land uses accommodated under the proposed Project would also be designed in compliance with the CALGreen Code.
Policy ER3-4	**Green Development – Public Buildings:** We require all new and substantially renovated City buildings in excess of 10,000 sq ft achieve a LEED Silver Certification standard, as determined by the U.S. Green Building Council.	**Not Applicable:** This policy is applicable to City-owned buildings.
Policy ER3-5	**Fuel Efficient and Alternative Energy Vehicles and Equipment:** We purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use renewable sources of energy.	**Not Applicable:** This policy is applicable to City-owned vehicles and equipment.

The State's electricity grid is transitioning to renewable energy under California's RPS Program. Renewable sources of electricity include wind, small hydropower, solar, geothermal, biomass, and biogas. The statewide RPS requirements do not directly apply to individual development projects, but to utilities and energy providers such as SCE, whose compliance with RPS requirements would contribute to the State of

California objective of transitioning to renewable energy. SCE's Pathway 2045 concludes that reaching California's 2045 GHG goals requires the decarbonization of electricity, electrification of transportation, electrification of buildings, and utilization of low carbon fuels.[25] Achieving 100 percent renewable energy would be feasible with continued technical advances including the following:[26]

- Better weather forecasting technology is making it much easier for grid operators to precisely how much wind or solar generation we can depend on at any given time.
- The cost of zero-carbon generation sources like wind and solar have dramatically decreased in the past decade and continue to decline.
- The cost of energy storage technologies, which will help us be able to use renewables when the wind isn't blowing and the sun isn't shining, also continues to decline.
- New advancements in the ability of large and small electricity users to shift usage towards times when electricity is cheaper and when the supply of renewables is most abundant are helping to make the grid more flexible and able to accommodate very high levels of renewable energy.
- Grid operators around the western United States are coordinating to gain access to larger markets for renewables and other carbon-free flexible grid resources.
- Targeting energy efficiency during times of the day when renewables are less abundant (after the sun sets) will also help the grid operate more efficiently.

As discussed herein, the Project would comply with the Building Energy Efficiency Standards, the CALGreen Code, and energy efficiency measures implemented by the City CAP. Consistent with the CAP, the buildings developed under the Project would have rooftops that can support solar panels (i.e., solar-ready) which will comply with solar ready requirements of the Building Energy Efficiency Standards, which would enable future tenants to install a PV system. Therefore, implementation of the Project would support the statewide goal of decarbonization by 2045.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact due to conflicts with fossil fuel energy or renewable energy plan. A less than significant impact was identified in the Approved SEIR with respect to fossil fuel energy or renewable energy plans. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.7.3 Overall Energy Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new or more severe impacts with respect to energy resources. Therefore, preparation of a SEIR is not warranted.

4.8 GEOLOGY AND SOILS

4.8.1 Summary of TOP 2050 Analysis

The Approved EIR concluded that upon implementation of regulatory requirements, standard conditions of approval, and mitigation measures impacts to geology and soils would be less than significant.

4.8.2 Analysis of Proposed Project

Threshold (a) Directly or indirectly cause potential substantial adverse effects, including the risk loss, injury, or death involving: [Approved SEIR Impact 5.7-1]

(i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the state Geologist for the area or based on other substantial evidence of a known fault.

(ii) Strong seismic ground shaking

(iii) Seismic-related ground failure, including liquefaction

(iv) Landslides

No New or More Severe Impacts: There are no Alquist-Priolo Earthquake Fault Zone's located within the City.[27] The southern section of the San Andreas Fault is estimated to be capable of generating the greatest magnitude earthquake, 8.0. However, projects considered for approval under TOP 2050 would be required to comply with seismic safety provisions of the California Building Code (CBC) (Title 24, Part 2 of the California Code of Regulations).[28] Compliance with these regulations would reduce hazards arising from ground shaking to less than significant.

The Project site is in a developed area of the City and is not on or near a hillside. The Project site is relatively flat with a slight gradient to the southwest.[29] Therefore, the Project is not located in an area susceptible to landslides. The Approved SEIR found that groundwater levels throughout the City are greater than 50 feet below ground surface, so there is currently no potential for liquefaction in the City. In addition, the Approved SEIR found that implementation of projects in the pursuant to TOP 2050 could indirectly increase the number of people and structures in the City that could be subjected to earthquake-related hazards.[30] Projects developed pursuant to TOP 2050 would be required to meet the most current seismic safety requirements in the CBC. Although the proposed Project would result in an increased development compared to existing land uses, proposed development within the Project site would be within the assumptions made in the Approved SEIR and would not result in development of new,

[27] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.7-18. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).
[28] Ibid.
[29] GeoKinetics. 2022. Phase I Environmental Site Assessment Ontario Plaza 1000 – 1060 West Fourth Street & 1118 – 1126 North Mountain Avenue Ontario, Page 6. California. Irvine, CA: GeoKinetics
[30] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.7-19. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).

previously undeveloped areas of Ontario. After compliance with safety provisions of the CBC, implementation of the Project would have less than significant impacts from seismic hazards.

Mitigation Measures

None found relevant to this Project.

Conclusion

The Project would not result in a new or more severe impact due to the exacerbation or exposure to hazards associated with seismicity, liquefaction, and landslide. A less than significant impact was identified in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Result in substantial soil erosion or the loss of topsoil? [Approved SEIR Impact 5.7-2]

No New or More Severe Impacts: Per the Approved SEIR underlying the City is young alluvial sediment and wind-blown sand that is generally granular, poorly consolidated, and very susceptible to erosion.[31] Grading will increase the potential for erosion by removing protective vegetation, changing natural drainage patterns, and constructing slopes. In addition, per the Approved SEIR the City requires an erosion/dust control plan for projects located within this area. Future projects' adoption of National Pollutant Discharge Elimination System (NPDES) permits and accompanied Stormwater Pollution Prevention Plans (SWPPPs) would reduce potential risks of erosion. The Project would comply with all requirements set forth in the NPDES permit for construction activities (e.g., implementation of Best Management Practices [BMPs] through preparation of a SWPPP), reducing potential impacts to less than significant levels. Additionally, compliance with the CBC and review of grading plans for individual projects by the City Engineer would ensure no significant impacts would occur. The Project site is currently developed and paved. Renovation of the Project site would involve earthmoving activities which could expose soil, but these activities would be temporary. Permanent ground covering structure and improvements would be placed which would generate a minimal chance of erosion. Therefore, after compliance with the safety provisions of the City's applicable regulations CBC, and appropriate implementation of development practices, the proposed Project would have less than significant impacts from soil erosion.

Mitigation Measures

No mitigation measures are required in TOP 2050, and impacts would be less than significant.

Conclusion

Erosion impacts related to the proposed Project are less than the significant. The Project would not result in a new or more severe impact relative to erosion, a less than significant impact was identified in the

[31] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.7-19. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).

Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would later the Approved SEIR's significance finding.

Threshold (c) Be located on a geological unit or soil that is unstable, or that would become unstable as a result of the project and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse? [Approved SEIR Impact 5.7-3]

Threshold (d) Be located on expansive soil, as defined in Table 18-1B of the Uniform building Code (1994), creating substantial direct or indirect risks to life or property? [Approved SEIR Impact 5.7-4]

Threshold (e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of waste water? [Approved SEIR Impact 5.7-5]

No New or More Severe Impacts: Projects considered for approval under TOP 2050 could expose structures or persons to potentially significant hazards from ground subsidence and expansive soils.[32] However, compliance with CBC and review of grading plans for individual projects by the City Building Official would ensure that impacts would be minimal.[33] The young sediments underlying the City are generally dry and loose in the upper few feet, and are susceptible to compression.[34] Therefore, projects approved pursuant to TOP 2050 could expose persons or structures to potentially significant hazards from compressible soils.[35] However, as previously mentioned compliance with the CBC and review of grading plans for individual projects by the City Building Official would lead to less than significant impacts.

The proposed Project does not propose the use of septic tanks and would connect to existing sewer lines. Therefore, the Project would not result in new impacts or a substantial increase in the magnitude of impacts to geology and soils.

Mitigation Measures

No mitigation measures are required in TOP 2050, and impacts would be less than significant.

Conclusion

Soil hazard impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to soil hazards, a less than significant impact was identified in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

[32] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.7-20. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).

[34] Ibid, Page 5.7-21
[35] Ibid.

Threshold (f) Directly or indirectly destroy a unique paleontological resource or site or unique geological feature? [TOP 2050 5.7-6]

No New or More Severe Impacts: The Approved SEIR found that buildout of the TOP 2050 would not result in impacts to paleontological resources with the implementation of **MM 5-2**. Ontario is underlain by deposits of Quaternary and upper-Pleistocene sediments deposited during Pliocene and early Pleistocene time. Quaternary Older Alluvial sediments may contain significant, nonrenewable, paleontological resources and are therefore considered to have high sensitivity. Grading and construction activities associated with TOP 2050 in undeveloped areas or redevelopment that requires more intensive soil excavation than in the past could potentially cause the disturbance of paleontological resources. Therefore, future development that would be accommodated by TOP 2050 could potentially unearth previously unrecorded resources. Paleontological resources are recognized as nonrenewable and receive protection under the California Public Resources Code (Section 21083.2) and CEQA. Review and protection of paleontological resources are also afforded by CEQA for individual development projects that would be accommodated by TOP 2050, would be subject to discretionary actions that are implemented in accordance with the land use plan of TOP 2050. With implementation of **MM 5-2** Project impacts to unique paleontological resources or unique geological features would be less than significant.

Mitigation Measures

The Approved SEIR includes measures to reduce potential impacts associated with the implementation of TOP 2050. **MM 5-2** from the Approved SEIR would be applied to the proposed Project.

In compliance with **MM 5-2,** a CRA was prepared for the Project in October 2023 that provides recommendations should archaeological and/or paleontological resources be discovered during ground disturbing activities. However, no archeological or paleontological resources were identified. See **Appendix C** for additional details.

Conclusion

The Project would not result in a new or more severe impact to a unique paleontological resource or site or unique geological feature. A less than significant impact was identified in the Approved SEIR with respect to paleontological resources or site or unique geological features. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.8.3 Overall Geology and Soils Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new or more severe impacts with respect to geology and soils. Therefore, preparation of a SEIR is not warranted.

4.9 GREENHOUSE GAS EMISSIONS

4.9.1 Summary of TOP 2050 Analysis

TOP 2050 includes an update to the City's Community Climate Action Plan (CCAP) which was adopted in 2014. The CCAP is a plan to reduce greenhouse gas (GHG) emissions and improve community resilience to hazardous conditions associated with climate change. The update to the CCAP includes updated emissions inventories; updated emissions forecasts; identifies GHG emissions reduction targets to achieve the GHG reduction goals of the City, consistent with Senate Bill 32, Executive Order S-03-05, and substantial progress toward the State's carbon neutrality goals of Executive Order B-55-18; and measures, that when quantified, achieve the GHG reduction targets for the City.

4.9.2 Analysis of Proposed Project

Threshold (a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment. [Approved SEIR Impact 5.8-1]

Construction Greenhouse Gas Emissions

No New or More Severe Impacts: The Project would result in direct emissions of Carbon Dioxide (CO_2), Nitrous Oxide (N_2O), and Methane (CH_4) from construction equipment and the transport of materials and construction workers to and from the Project site. The GHG emissions only occur during temporary construction activities and would be cease once construction is complete. The total GHG emissions (in Carbon Dioxide Equivalent [CO_2e]) generated during construction are shown in **Table 12: Construction-Related Greenhouse Gas Emissions**.

Table 12: Construction-Related Greenhouse Gas Emissions

Category	$MTCO_2e$	30-Year Amortized $MTCO_2e$
Construction Year 2024	587	19.57
Construction Year 2025	1,245	41.50
Construction Year 2026	1,118	37.27
Total Construction Emissions	*2,950*	*98.33* [1]

Note: Total does not sum due to rounding.
Source: CalEEMod version 2020.4.0. Refer to Appendix B for model outputs.

As shown in **Table 12: Construction-Related Greenhouse Gas Emissions**, the Project would result in the generation of approximately 2,950 Metric Tons of Carbon Dioxide Equivalent ($MTCO_2e$) over the course of construction. Construction GHG emissions are typically summed and amortized over a 30-year period and then added to the operational emissions. The amortized Project construction emissions would be 98.33 $MTCO_2e$ per year. Once construction is complete, the generation of these GHG emissions would cease.

Operational Greenhouse Gas Emissions

No New or More Severe Impacts: Operational emissions occur over the life of the Project. GHG emissions would result from direct emission sources such as Project generated vehicular traffic, on-site combustion of natural gas, and operation of any landscaping equipment. Operational GHG emissions would also result

from indirect sources, such as off-site generation of electrical power, the energy required to convey water to, and wastewater from the Project, the emissions associated with solid waste generated from the Project, and any fugitive refrigerants from air conditioning or refrigerators.

Prior to issuance of a building permit, the City would review and verify that future development plans within the Project area demonstrate compliance with the current version of the Building and Energy Efficiency Standards. Development would also be required to adhere to the provisions of CALGreen, which establishes planning and design standards for sustainable Project site development, and energy efficiency. Construction activities would be required to monitor air quality emissions using applicable regulatory guidance such as the SCAQMD Rules.

GHG emissions associated with the Project are summarized in **Table 13: Operational Greenhouse Gas Emissions**. As shown in **Table 13: Operational Greenhouse Gas Emissions**, the Project's emissions would be 2,186.85 $MTCO_2e$ annually from both construction and operations.

Table 13: Operational Greenhouse Gas Emissions

Emissions Source	Annual Emissions
	MTCO2e per Year
Total Construction Emissions Amortized Over 30 Years	98.3
Area Source	84.3
Energy	593.0
Mobile	1,285.0
Waste	86.5
Water and Wastewater	39.4
Refrigerants	0.35
Total	**2,186.85**
Emissions per Dwelling Unit	6.13
2022 CCAP Update Threshold for residential developments completed between 2020 and 2030, emissions per Dwelling Unit	5.85
Exceeds Threshold?	**Yes**
Source: CalEEMod version 2020.4.0. Refer to Appendix B for model outputs.	

The Project includes 357 dwelling units; therefore, annual GHG emissions would equal 6.13 MTCO2e per unit, exceeding the 5.85 MTCO2e per unit threshold for residential projects completed before 2030. As such, the Project must achieve a minimum of 100 points on the Screening Table to show consistency with the 2022 CCAP Update.

Screening Table

To show consistency with 2022 CCAP Update the Project shall include selected Screening Table Measures that achieve a minimum of 100 points. The City shall verify that Screening Table Measures achieving a minimum of 100 points are incorporated in development plans prior to the issuance of building permit(s)

and/or Project site plans. The City shall also verify implementation of the selected Screening Table Measures prior to the issuance of Certificate(s) of Occupancy. By achieving the 100-point minimum, the Project would be consistent with the 2022 CCAP Update and thus the Project is considered to have a less than significant individual and cumulatively considerable impact on GHG emissions. An example of how the proposed Project could achieve a minimum of 100 Screening Table Points is provided in **Table 14: Example of GHG Performance Standards for Multi-Family Development**.

Table 14: Example of GHG Performance Standards for Multi-Family Development

Reduction Measure	Description	Feature	Points
Measure 1: Building Electrification	Replacement of gas appliance with efficient electric appliance	Electric Space Heater Electric Water Heater Electric Stove Electric Dryer	6 8 5 1
		Total for measure	**20**
Measure 4: Transit Oriented Communities	New development is located in a transit-oriented community	Development site is located within ½ mile radius of one or more of the following: a Bus Rapid Transit (BRT) stop, bus transit center, light rail station, the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods, and/or High Quality Transit Corridor defined as a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.	10
		Total for measure	**10**
Measure 6: Vehicle Electrification	Installation of EV charging stations for resident vehicle parking space	Installation of Level 2 EV or higher charging stations at a rate of 5-10% of required vehicle parking spaces.	10
		Total for measure	**10**
Measure 7: Active Transportation	Installation or improvement of bicycle facilities	Bicycle parking facilities with 1:1 ratio of bicycle parking to guest vehicle parking space.	3
	Installation or improvement of pedestrian facilities	Two or three pedestrian infrastructure improvements to street design on private streets, including, but not limited to curb extensions, raised crosswalks, speed humps/bumps, street tree plantings in parkways or street medians, and elevated pavement markings.	3
		Total for measure	**6**
Measure 10: Waste Diversion	Design and plan multi-family housing developments to include onsite areas for municipal compost/green waste and recycling bins/containers	Site design allocates sufficient space for storage and collection of green waste, organic waste, and recyclables.	33
		Total for measure	**33**

Reduction Measure	Description	Feature	Points
Measure 11: Water Conservation	Implement indoor water efficiency measures	Implement water efficient showerheads and faucets.	1
		Install on-demand water circulators on all showers/baths	2
	Incorporate outdoor water efficiency measures	Design and plan outdoor landscapes planted with drought-tolerant, low maintenance plants with a 1) drip irrigation system or 2) sprinkler irrigation system with a weather-based irrigation controller.	4
		Total for measure	**7**
Additional Measures	AR-1: Meet CalGreen	CalGreen Tier 2 Compliance	10
	AR-2: Generate energy from on-site solar PV	Solar PV that generates 30%-49% of residential energy needs on multifamily residential buildings that are 4 stories in height or taller.	5
		Total for measure	**15**
TOTAL POINTS			**101**

Source: City of Ontario, *Ontario Community Climate Action Plan: Greenhouse Gas Emissions Screening Tables*, Table 3, page 10. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/CCAP/Screening%20Table/Ontario-CCAP_Screening-Tables-MARCH%202023.pdf. (Accessed August 2023).

Conclusion

GHG emission impacts related to the proposed Project are similar to the less than significant impacts identified in Approved SEIR. No new impact relative to GHG emissions or a substantial increase in the severity of a previously identified significant impact evaluated in the Approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Mitigation Measures

None provided in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact to GHG emissions, a less than significant impact was identified in the Approved SEIR with respect to GHG. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases. [Approved SEIR Impact 5.8-2]

City of Ontario Community Climate Action Plan Consistency

No New or More Severe Impacts: The primary purpose of the City's Community Climate Action Plan (CCAP) is to design a feasible strategy to reduce GHG emissions generated by community activities that is consistent with statewide Scoping Plan GHG reduction efforts. The City has identified a series of reduction measures to be implemented by the City. These reduction measures include programs that improve

building energy efficiency, increase use of public and active transit, and decrease VMT, increase use of alternative-fueled vehicles, increase use of renewable energy, reduce water consumption, and reduce waste.

Table 15: Community Climate Action Plan Consistency, evaluates the consistency of the proposed Project to the applicable measures of the CCAP. As discussed in the table, the proposed Project would be consistent with all applicable measures. By using energy more efficiently, harnessing renewable energy to power buildings, recycling waste, and enhancing access to sustainable transportation modes, the City can keep dollars in local economy, create new green jobs, and improve community quality of life. As shown in **Table 15: Community Climate Action Plan Consistency**, the Project would not conflict with the goals of the CCAP.

Table 15: Community Climate Action Plan Consistency

CCAP Measure Name	Measure Description	Consistency	
Energy			
Energy – Strategy 1	**Building electrification.** Promote and incentivize the phase-out of gas appliances in new and existing homes and businesses throughout the community to advance GHG reductions, increase energy efficiency, and protect public safety and environmental health.	N/A:	This measure is to be taken at the City level. However, implementation of the Project would not conflict with this strategy.
Energy – Strategy 2	**Onsite solar energy for existing residential development.** Continue to support and facilitate installation of rooftop solar photovoltaic and onsite solar energy systems in existing residential development.	N/A:	This measure only applies to existing residential development.
Energy – Strategy 3	**Onsite Solar Energy Systems for Nonresidential Development:** Ensure new large non-residential development, including City facilities, includes onsite renewable energy to support the site's energy needs by requiring solar photovoltaic panels or other appropriate onsite renewable energy generation systems for the following types of projects: • New commercial and office buildings, or existing commercial and office building expansions greater or equal to 45,000 sq ft in size. • New industrial or existing industrial buildings expansions greater or equal to 100,000 sq ft in size.	N/A:	The Project Proposes the development of a large residential structure with smaller (3,800 sq ft) of retail uses.
Energy – Strategy 4	**Green roofs.** Promote and incentivize residents and business owners to install green roofs to conserve energy and reduce surface water runoff.	N/A:	This measure is to be taken at the City level. However, implementation of the Project would not conflict with this strategy.
Energy – Strategy 5	**Urban Cooling:** Maintain and expand the City's existing tree canopy, with a goal of planting 500 trees annually through 2050 and promote the use of pervious concrete and cool pavement for pavement projects.	Consistent:	The Proposed Project would include landscape installation and pervious concrete pavement.
Energy – Strategy 6	**Energy efficiency retrofits for low-income households.** Promote and incentivize voluntary energy efficiency	N/A:	This measure is not applicable to the proposed Project, as

CCAP Measure Name	Measure Description	Consistency	
	retrofits of homes to reduce natural gas and electricity usage, with the goal of retrofitting 9,000 low-income homes by 2050. Partner with community services agencies to fund energy efficiency projects, including heating, ventilation, air conditioning, indoor lighting, water heating equipment, insulation, and weatherization for low-income residents.		retrofits only apply to existing structures.
Energy – Strategy 7	**Energy efficiency retrofits.** Promote and incentivize voluntary energy efficiency retrofits to reduce in natural gas and electricity usage. Partner with regional agencies to expand access to existing energy efficiency and conservation opportunities, incentives, and technical assistance for residents and businesses.	N/A:	This measure is not applicable to the proposed Project, as retrofits only apply to existing structures.
Energy – Strategy 8	**Smart Growth and Infill.** Encourage revitalization of neighborhoods through higher-density, mixed-use, infill development and creative reuse of underutilized sites within the urban core.	Consistent:	The Project would construct multifamily residential and commercial retail land uses on an underutilized site in the City.
Transportation			
Transportation – Strategy 9	**Transit-Oriented Development:** Encourage development of compact, mixed-use, and transit-oriented development to improve the regional jobs-housing balance, especially on corridors served by high-ridership transit and bus rapid transit, such as Holt Avenue.	Consistent:	The proposed Project would provide a mixed-use development along a Mountain Avenue, a high-volume corridor with existing public transit.
Transportation – Strategy 10	**Increase Transportation Ridership.** Ensure a reliable and responsive transit system with dedicated and secure funding and resources to support increased ridership.	N/A:	This measure is to be taken at a City level. However, implementation of the Project would not conflict with this strategy.
Transportation – Strategy 11	**Traffic signal synchronization and roadway management.** Implement traffic and roadway management strategies to improve mobility and efficiency and reduce associated emissions.	N/A:	This measure is to be taken at the City level. However, implementation of the Project would not conflict with this strategy.
Transportation – Strategy 12	**Community vehicle electrification.** Promote and incentivize the adoption of electric vehicles (EV) citywide, including light-duty and heavy-duty vehicles, for municipal, commercial, and residential uses.	N/A:	This measure is to be taken at the City level. However, implementation of the Project would not conflict with this strategy.
Transportation – Strategy 13	**Active Transportation Networks:** Work with transit agencies, school districts, and employers to facilitate an interconnected transportation system that allows a shift in travel from private passenger vehicles to alternative modes, including public transit, ride sharing, car sharing, bicycling, and walking.	Consistent:	The proposed Project would develop multifamily residential units near public transportation provided by OmniTrans.
Transportation – Strategy 14	**Vehicle Idling:** Limit idling of heavy-duty trucks. Support the SCAMQD and CARB anti-idling requirements and provide signage in key areas where	Consistent:	Commercial motor vehicles are required to comply with California Code of Regulations Section 2485 which would limit the idling of Diesel fueled

CCAP Measure Name	Measure Description	Consistency	
	idling that is not consistent with SCAMQD or CARB requirements might occur.		vehicles to no more than five minutes.
Transportation – Strategy 15	**Parking policy and event parking.** Adopt a comprehensive parking policy that encourages carpooling and the use of alternative transportation, including providing parking spaces for car-share vehicles at convenient locations with access to public transportation.	N/A:	This measure is to be taken at a City level. However, implementation of the Project would not conflict with this strategy.
Off-road Equipment			
Off-Road Equipment – Strategy 16	**Electrification of construction and landscaping equipment.** Promote and incentivize the transition to electric construction and landscaping equipment.	N/A:	This measure is to be taken at the City level. However, implementation of the Project would not conflict with this strategy.
Off-Road Equipment – Strategy 17	**Idling Ordinance for Construction Equipment:** Limit idling of heavy-duty off-road construction equipment to reduce air pollution and GHG emissions from construction activity.	Consistent:	Construction would be required to comply with California Code of Regulations Section 2485 and 2499 which would limit the idling of heavy-duty construction equipment to no more than five minutes.
Waste			
Waste – Strategy 18	**Methane capture at landfills.** Support efforts to reduce methane emissions from regional landfills.	N/A:	This measure is not applicable to the proposed Project.
Waste – Strategy 19	**Waste Diversion:** Exceed waste diversion goals recommended by AB 939 and CALGreen by adopting a citywide diversion target of at least 75 percent of waste.	Consistent:	The proposed Project would be subject to all applicable local, State, and federal waste diversion requirement.
Waste – Strategy 20	**Construction and Demolition Waste Recovery Ordinance:** Increase the amount of waste recycled during construction and demolition of buildings.	Consistent:	Contractors are required to comply with CALGreen Code Sections 4.408 and 5.408, requiring the recycling of a minimum of 65 percent of construction and demolition waste, refer to **PPP GHG-3**.
Water			
Water – Strategy 21	**Indoor water efficiency.** Encourage water-efficient retrofits of new and existing buildings by working with water providers and regional agencies.	Consistent:	The Project would comply with CALGreen Code Section 4.303 and require the installation of low flow fixtures.
Water – Strategy 22	**Water Efficient Landscapes and Water Recycling:** Promote drought-tolerant and fire-wise landscaping. Encourage increased use of reclaimed water for landscape irrigation, agricultural, and industrial use.	Consistent:	The proposed Project plans to incorporate native drought tolerant landscaping and would use recycled water to irrigate landscape areas as required by the City of Ontario Recycled Water Master Plan.
Water – Strategy 23	**Water system and wastewater operations efficiency.** Maximize efficiency at drinking water treatment,	N/A:	This measure is not applicable to the proposed Project.

CCAP Measure Name	Measure Description	Consistency	
	pumping, and distribution facilities, including development of off-peak demand schedules for heavy commercial and industrial users.		
Water – Strategy 24	**Methane capture for wastewater treatment.** Work with Inland Empire Utilities Agency (IEUA), the local wastewater treatment provider, to increase methane capture rate.	N/A:	This measure is not applicable to the proposed Project.
Other			
Strategy 25	**Methane capture for dairy operations.** Encourage and incentivize local dairy operations to reduce methane emissions through methane capture technology.	N/A:	This measure is not applicable to the proposed Project.
Strategy 26	**Climate change awareness and education.** Promote climate change awareness and GHG reduction community-wide through a variety of mechanisms, including through support of climate change education in schools or community colleges.	N/A:	This measure is to be taken at the City level.
Strategy 27	**Carbon sequestration.** Establish a citywide carbon sequestration project and sequestration goal of 5,000 MT CO_2 per year.	N/A:	This measure is to be taken at the City level.
Strategy 28	**Green jobs.** Support green job trainings and opportunities to create sustainable, living wage, quality employment opportunities.	N/A:	This measure is to be taken at the City level.

Source: City of Ontario, 2022. *Ontario Community Climate Action Plan*. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/CCAP/Ontario-CCAP_Adopted_20220816.pdf. (Accessed August 2023).

SCAG's Connect SoCal

On September 3, 2020, SCAG's Regional Council adopted Connect SoCal (*2020 - 2045 Regional Transportation Plan/Sustainable Communities Strategy* [2020 RTP/SCS]). The RTP/SCS is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. The RTP/SCS embodies a collective vision for the region's future and is developed with input from local governments, county transportation commissions, tribal governments, nonprofit organizations, businesses, and local stakeholders in the counties of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura. SCAG's RTP/SCS establishes GHG emissions goals for automobiles and light-duty trucks for 2020 and 2035 as well as an overall GHG target for the Project region consistent with both the target date of AB 32 and the post-2020 GHG reduction goals of Executive Orders 5-03-05 and B-30-15.

The RTP/SCS contains over 4,000 transportation projects, ranging from highway improvements, railroad grade separations, bicycle lanes, new transit hubs and replacement bridges. These future investments were included in county plans developed by the six county transportation commissions and seek to reduce traffic bottlenecks, improve the efficiency of the region's network, and expand mobility choices for everyone. The RTP/SCS is an important planning document for the region, allowing project sponsors to qualify for federal funding.

The plan accounts for operations and maintenance costs to ensure reliability, longevity, and cost effectiveness. The RTP/SCS is also supported by a combination of transportation and land use strategies that help the region achieve state GHG emissions reduction goals and FCAA requirements, preserve open space areas, improve public health and roadway safety, support our vital goods movement industry, and utilize resources more efficiently. GHG emissions resulting from development-related mobile sources are the most potent source of emissions, and therefore Project comparison to the RTP/SCS is an appropriate indicator of whether the Project would inhibit the post-2020 GHG reduction goals promulgated by the state. The Project's consistency with the RTP/SCS goals is analyzed in detail in **Table 16: Regional Transportation Plan/Sustainable Communities Strategy Consistency**.

Table 16: Regional Transportation Plan/Sustainable Communities Strategy Consistency

SCAG Goals		Compliance	
GOAL 1:	Encourage regional economic prosperity and global competitiveness.	Consistent:	The Project would draw new residents and retail businesses to the area, contributing to regional economic prosperity.
GOAL 2:	Improve mobility, accessibility, reliability, and travel safety for people and goods.	Consistent:	Although this Project is not a transportation improvement project, the Project is located near an existing transportation route along I-10.
GOAL 3:	Enhance the preservation, security, and resilience of the regional transportation system.	N/A:	This is not a transportation improvement project and is therefore not applicable.
GOAL 4:	Increase person and goods movement and travel choices within the transportation system.	N/A:	This is not a transportation improvement project and is therefore not applicable. However, implementation of the Project would not conflict with this goal.
GOAL 5:	Reduce greenhouse gas emissions and improve air quality.	Consistent:	The Project is located within an urban area in proximity to existing transportation routes and freeways. Location of the project within a developed area would reduce trip lengths, which would reduce GHG and air quality emissions. Additionally, the Project would achieve a minimum of 100 points on the City GHG Screening Table, thereby reducing GHG emission impacts to less than significant levels.
GOAL 6:	Support healthy and equitable communities	Consistent:	The Project includes a mix of uses including housing and neighborhood-serving retail proximate to employment, reducing vehicle miles traveled (VMT), promoting walkability, and contributing to a jobs/housing balance.
GOAL 7:	Adapt to a changing climate and support an integrated regional development pattern and transportation network.	Consistent:	The Project would be an infill development in an underutilized area which will provide housing in close proximity to designated public transit facilities and routes. Specifically, two OmniTrans bus stops are located within 100 feet of the Project site.
GOAL 8:	Leverage new transportation technologies and data-driven solutions that result in more efficient travel.	N/A:	This is not a transportation improvement project and is therefore not applicable. However, implementation of the Project would not conflict with this goal.

SCAG Goals		Compliance	
GOAL 9:	Encourage development of diverse housing types in areas that are supported by multiple transportation options.	Consistent:	The Project involves development of a mix of uses (residential and commercial) that would provide diverse housing options that would be served by OmniTrans bus service on the southwest corner of the Project site, and approximately 60 feet southwest of the Project site.
GOAL 10:	Promote conservation of natural and agricultural lands and restoration of habitats.	Consistent:	The Project proposes a mix of residential and commercial land uses in an urbanized area and would therefore not interfere with conservation of natural or agricultural lands. The Project site is not considered vital habitat land and therefore would not conflict with restoration of habitats.
Source: Southern California Association of Governments, *Connect SoCal (2020 - 2045 Regional Transportation Plan/Sustainable Communities Strategy,* 2020.			

The goals stated in the RTP/SCS were used to determine consistency with the planning efforts previously stated. As shown in **Table 16: Regional Transportation Plan/Sustainable Communities Strategy Consistency**, the Project would be consistent with the stated goals of the RTP/SCS. Therefore, the Project would not result in any significant impacts or interfere with SCAG's ability to achieve the region's post-2020 mobile source GHG reduction targets.

California Air Resource Board Scoping Plan Consistency

Adopted December 15, 2022, CARB's *2022 Scoping Plan for Achieving Carbon Neutrality* (2022 Scoping Plan) sets a path to achieve targets for carbon neutrality and reduce anthropogenic GHG emissions by 85 percent below 1990 levels by 2045 in accordance with AB 1279. To achieve the targets of AB 1279, the 2022 Scoping Plan relies on existing and emerging fossil fuel alternatives and clean technologies, as well as carbon capture and storage. Specifically, the 2022 Scoping Plan focuses on zero-emission transportation; phasing out use of natural gas use for heating homes and buildings; reducing chemical and refrigerants with high GWP; providing communities with sustainable options for walking, biking, and public transit; displacement of fossil-fuel fired electrical generation through use of renewable energy alternatives (e.g., solar arrays and wind turbines); and scaling up new options such as green hydrogen. The 2022 Scoping Plan sets one of the most aggressive approaches to reach carbon neutrality in the world. Unlike the 2017 Scoping Plan, CARB no longer includes a numeric per capita threshold and instead advocates for compliance with a local GHG reduction strategy (i.e., Climate Action Plan) consistent with CEQA Guidelines section 15183.5.

The key elements of the 2022 CARB Scoping Plan focus on transportation. Specifically, the 2022 Scoping Plan aims to rapidly move towards zero-emission (ZE) transportation (i.e., electrifying cars, buses, trains, and trucks), which constitutes California's single largest source of GHGs. The regulations that impact the transportation sector are adopted and enforced by CARB on vehicle manufacturers and are outside the jurisdiction and control of local governments. The 2022 Scoping Plan accelerates development of new regulations as well as amendments to strengthen regulations and programs already in place. Statewide strategies to reduce GHG emissions in the latest 2022 Scoping Plan include:

- Implementing SB 100 (achieve 100 percent clean electricity by 2045);
- Achieving 100 percent zero emission vehicle sales in 2035 through Advanced Clean Cars II; and

- Implementing the Advanced Clean Fleets regulation to deploy zero-emission vehicle (ZEV) buses and trucks.

Additional transportation policies include the Off-Road Zero-Emission Targeted Manufacturer rule, Clean Off-Road Fleet Recognition Program, In-use Off-Road Diesel-Fueled Fleets Regulation, Clean Off-Road Fleet Recognition Program, and Amendments to the In-use Off-Road Diesel-Fueled Fleets Regulation. The 2022 Scoping Plan would continue to implement SB 375. GHGs would be further reduced through the Cap-and-Trade Program carbon pricing and SB 905. SB 905 requires CARB to create the Carbon Capture, Removal, Utilization, and Storage Program to evaluate, demonstrate, and regulate carbon dioxide removal projects and technology.

As indicated above, GHG reductions are also achieved as a result of State of California energy and water efficiency requirements for new residential developments. These efficiency improvements correspond to reductions in secondary GHG emissions. For example, in 2021 approximately 38 percent of the total electricity net generation in California was derived from natural gas combustion. Therefore, energy saving measures, such as Title 24, reduces GHG emissions from the power generation facilities by reducing load demand.

Scoping Plan Appendix D, Local Actions

Included in the 2022 Scoping Plan is a set of Local Actions (2022 Scoping Plan Appendix D) aimed at providing local jurisdictions without a CEQA-qualified CAP with the tools needed to reduce GHGs and assist the state in meeting the ambitious targets set forth in the 2022 Scoping Plan. CARB Scoping Plan Appendix D includes a section on evaluating plan-level and project-level alignment with the State's Climate Goals in CEQA GHG analyses. In this section, CARB identifies several recommendations and strategies that should be considered for new development in order to determine consistency with the 2022 Scoping Plan. Notably, this section is focused on Residential and Mixed-Use Projects.[36] CARB specifically states that Appendix D does not address other land uses (e.g., industrial).[37] However, CARB plans to explore new approaches for other land use types in the future.[38]

CARB Scoping Plan Appendix D lists potential actions that support the State's climate goals. However, the Scoping Plan notes that the applicability and performance of the actions may vary across the regions. The document is organized into two categories (A) examples of plan-level GHG reduction actions that could be implemented by local governments and (B) examples of on-site project design features, mitigation measures, that could be required of individual projects under CEQA, if feasible, when the local jurisdiction is the lead agency.

Appendix D notes that project consistency with the Scoping Plan can be determined through consistency with a qualified CAP, and absent consistency with a qualified CAP the State recommends that residential and mixed-use projects meet the following three priority areas will reduce GHG emissions and should accommodate growth in a manner consistent with State GHG reduction and equity prioritization goals. These project attributes are intended to help local jurisdictions qualitatively identify projects that are

[36] California Air Resources Board, 2022 Scoping Plan for Achieving Carbon Neutrality, Appendix D: Local Actions, Page 21, November 2022.
[37] California Air Resources Board, 2022 Scoping Plan for Achieving Carbon Neutrality, Appendix D: Local Actions, Page 4, November 2022.
[38] California Air Resources Board, 2022 Scoping Plan for Achieving Carbon Neutrality, Appendix D: Local Actions, Page 21, November 2022.

clearly consistent with the Scoping Plan. Appendix D also notes that lead agencies may determine, with adequate additional supporting evidence, that projects that incorporate some, but not all, of the key project attributes are consistent with the State's climate goals.[39]

- Transportation Electrification. Table 3 in the 2022 Scoping Plan, Appendix D, notes that to be clearly consistent with the State's goals, projects should provide EV charging infrastructure that, at minimum, meets the most ambitious voluntary standard in the CALGreen code.
- VMT Reduction. The Scoping Plan notes that to be consistent with the VMT reduction attribute, projects should be located on sites that are surrounded by existing urban uses and reuses or redevelops previously undeveloped or underutilized land; do not result in the loss or conversion of natural and working lands; and consist of transit-supportive densities (minimum of 20 residential dwelling units per acre).
- Building Decarbonization. Building decarbonization involves maximizing energy efficiency and reducing the use of fossil fuel energy.

However, as discussed previously, the City of Ontario has adopted a CEQA-qualified CAP and as shown in **Table 15: Community Climate Action Consistency**, the Project is consistent with the Ontario CCAP. As noted in Scoping Plan Appendix D, consistency with a qualified CAP ensures consistency with the Scoping Plan. Therefore, the Project is consistent with 2022 Scoping Plan and would comply with all applicable regulatory requirements.

Conclusion

The Project would be consistent with the Ontario CCAP, SCAG's RTP/SCS, and the CARB Scoping Plan. The Project would be required to comply with all existing regulations, including applicable measures from the City's General Plan.

As shown in **Table 13: Operational Greenhouse Gas Emissions**, approximately 86 percent of the Project Total GHG emissions are from energy and mobile sources which would be further reduced by the 2022 Scoping Plan goals (including achieve 100 percent clean electricity by 2045 [SB 100], achieving 100 percent zero emission vehicle sales in 2035 [Advanced Clean Cars II], and implementing the Advanced Clean Fleets regulation [ZEV buses and trucks]). Mobile source emissions would further decline in the future due to statewide measures discussed above (including the reduction in fuels' carbon content, CARB's Advanced Clean Car Program, CARB's Mobile Source Strategy, fuel efficiency standards, etc.), as well as cleaner technology and fleet turnover. SCAG's 2020 RTP/SCS is also expected to help California reach its GHG reduction goals, with reductions in per capita transportation emissions of 19 percent by 2035.[40] The Project includes a mix of a residential and commercial land uses that would potentially reduce the need to travel long distances for some residents and reduce associated GHG emissions.

At this time, it is not possible to quantify the emissions savings from future regulatory measures that have not yet been developed; nevertheless, it can be anticipated that Project operations would benefit from applicable measures are enacted to meet State GHG reduction goals. The Project would not impede the

[39] California Air Resources Board, *2022 Scoping Plan for Achieving Carbon Neutrality, Appendix D: Local Actions*, Page 23, November 2022.
[40] California Air Resources Board, *SB 375 Regional Plan Climate Targets*, Retrieved from: https://ww2.arb.ca.gov/our-work/programs/sustainable-communities-program/regional-plan-targets.

State's progress towards carbon neutrality by 2045 under the 2022 Scoping Plan. The Project would be required to comply with applicable current and future regulatory requirements promulgated through the 2022 Scoping Plan.

In addition, the Ontario CCAP establishes a points system that assigns values for each GHG emissions mitigation design element or operational program feature incorporated into a given development project. The CCAP Screening Tables point values correspond to the minimum GHG emissions reduction expected from each feature. Projects with features that yield at least 100 Screening Table points are considered consistent with the reduction quantities anticipated in the City's CCAP. Such projects would be determined to have a less than significant individual and cumulative GHG emissions impact. Achieving 100 points ensures that the Project would not impede California's statewide GHG reduction goals for 2030 and 2050.

In conclusion, the Project does not conflict with the applicable plans that are discussed above and therefore, the Project does not have a significant impact.

Mitigation Measures

None provided in the Approved SEIR.

Conclusion

GHG emission impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to GHG emissions, a less than significant impact was identified in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.9.3 Overall Greenhouse Gas Emissions Impact Conclusion

With regard to CEQA Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to GHG emissions. Therefore, preparation of a SEIR is not warranted.

4.10 HAZARDS AND HAZARDOUS MATERIALS

4.10.1 Summary of TOP 2050 Analysis

The Approved EIR concluded that upon implementation of regulatory requirements and TOP policies and programs, impacts to hazards and hazardous materials would be less than significant.

4.10.2 Analysis of Proposed Project

Threshold (a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? [Approved SEIR Impact 5.9-1]

No New or More Severe Impacts: Implementation of the Project would increase the number of businesses and residents in the City, thereby increasing the amount of hazardous materials being transported, stored, and manufactured, and the number of people exposed to these materials. The Approved SEIR concluded that buildout of TOP 2050 would result in an increase in the frequency of transport, use, and disposal of hazardous materials associated with commercial and industrial growth in the City.[41] The storage, handling, use, and disposal of these materials are regulated by Federal and State requirements. The proposed Project would adhere to these regulations, including the Federal Occupational Safety and Health Act and Hazardous Materials Transportation Act; Title 8 of the California Code of Regulations (CalOSHA), and the State Unified Hazardous Waste and Hazardous Materials Management Regulatory Program. As a result, potential effects stemming from the routine transport and use of hazardous materials during construction would be reduced and would not be substantial. Therefore, impacts are anticipated to be less than significant and would not pose new or additional impacts compared to the Approved SEIR.

Mitigation Measures

None provided in the Approved SEIR.

Conclusion

The routine transport of hazardous materials impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to the routine transport of hazardous materials, a less than significant impact was identified in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? [Approved SEIR Impact 5.9-1]

Threshold (c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substance, or waste within one-quarter mile of an existing or proposed school? [Approved SEIR Impact 5.9-1]

[41] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.9-37. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).

Threshold (d) Be located on a site which is included on a list of hazardous materials compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment [Approved SEIR Impact 5.9-2]

No New or More Severe Impact: A Phase I Environmental Site Assessment (ESA) was prepared for Project in August 2022 by GeoKinetics Geotechnical and Environmental Engineers (GeoKinetics) (refer to **Appendix E**). GeoKinetics prepared their ESA using data collected via a reconnaissance survey of the Project site; an evaluation of historical uses of the Project site and surrounding uses; and the review of available federal, state, and local environmental records.

The ESA concluded that the Project site contained no underground storage sites (USTs) or above-ground storage tanks (ASTs). Asbestos containing materials (ACMs) may be encountered on the Project site during demolition activities due to the age of the structures (some structures like the post office are older than 1978). Lead Based Paint (LBP) may also be encountered on the Project site during demolition of existing structures due to their age. LBPs may be present in some structures such as the post office which were constructed prior to the limitation of lead content paints by the Department of Consumer affairs in 1987.

A dry-cleaning operation was previously operational on the Project site and has since been closed and left vacant. The area which the dry-cleaning operation formerly occupied has undergone several phases of subsurface investigations and remedial actions through the Department of Toxic Substance Control's (DTSC's) Voluntary Cleanup Program (VCP). Tetrachloroethene (PCB) contaminants were discovered in harmful concentrations during soil gas testing, groundwater sampling, and indoor air sampling. Based on the results of the samplings, it was recommended that the western portion of the Project site be designated for commercial redevelopment. Additionally, it was recommended that an additional four semi-annual soil gas confirmation sampling events be performed in 2013 and 2014. PCE concentrations in soil gas were noted to be stable, or decreasing over the four sampling events except at a few locations where the detections were already below the Risk-Based Target Concentration (RBTC) levels. The DTSC issued a No Further Action (NFA) letter on December 15, 2017, for Area B (essentially the area of the Ontario Plaza Building) and established a commercial/industrial land use deed restriction and an unrestricted "no further action" designation for Area A (the remainder of the site) (refer to **Figure 16: Deed Restriction Overlay**). All future Project site development must follow the guidelines in existing the Land Use Covenant, the deed restriction, and the NFA Letter. No other hazardous materials or waste was discovered on the Project site.[42]

Hazardous materials which would be encountered on the Project site have been previously remediated and has been designated as no further action by the DTSC. Furthermore, as shown in **Figure 16: Deed Restriction Overlay**, the Project parking garage would occupy the entire area formerly restricted to commercial and industrial uses, further separating future residential structures from being erected within the area containing the commercial/industrial deed restriction. Furthermore, the Project would be required to comply with federal and state regulations, City ordinances, and TOP 2050 policies guiding construction activities and adequate treatment of hazardous materials such as LBPs and ACMs. Compliance with federal and state regulations would require adequate handling of hazardous substances

[42] GeoKinetics. 2022. Phase I Environmental Site Assessment Ontario Plaza 1000 - 1060 West Fourth Street & 1118 - 1126 North Mountain Avenue Ontario, California. Irvine, CA: GeoKinetics

to reduce potential releases; exposure; and risks of transporting, storing, treating, and disposing of hazardous materials and wastes. Therefore, impacts associated with additional hazardous waste transport, use, and/or disposal that would occur would be less than significant with adherence to the existing regulations.

Mitigation Measures

None provided in the Approved SEIR.

Conclusion

Hazardous materials impacts related to the proposed Project are less than the significant. The Project would not result in a new or more severe impact, a less than significant impact was identified in the Approved SEIR with respect to hazardous materials. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (e) For a project located within an airport land use plan, or where such a plan has not been adopted, within two miles of a public airport or public use airport, would result in a safety hazard or excessive noise for people residing or working in the project area? [Approved SEIR Impact 5.9-3]

No New or More Severe Impacts: The Federal Aviation Administration and Caltrans Division of Aeronautics provide guidance for land use safety near airports. With adherence to these guidelines, high concentrations of people are not exposed to potential airplane accidents along runways or near airports while airplanes are departing and arriving. The Project is within the Airport Influence Area (AIA) of the Ontario International Airport and therefore should be consistent with the adopted ONT ALUCP and should meet standards and recommendations of Part 77 of the FAA, adopted through Ordinance 2758 in the Ontario Municipal Code.[43] A consistency determination analysis for ONT was prepared by the City and submitted to ONT-IAC, and it was found that TOP 2050 is consistent with ALUCP for the Ontario International Airport (ONT-IAC 2022).[44] The Chino Airport is predominantly a recreational airport.[45] Since the airport is not planned for expansion and would remain primarily recreational, and only lower elevation buildings surround it and would continue to surround it upon project implementation, the Chino Airport poses no unique hazards.[46] Additionally, the Project site is outside of any of the ONT ALUCP safety zones.[47] Thus, TOP 2050 ensures compatibility with ONT and Chino Airport. The Proposed project would not result in new or a substantial increase in magnitude of impacts.

[43] Ontario Airport Planning. 2018. Ontario International Airport Land Use Compatibility Plan, Map 2-1: Compatibility Policy Map: Airport Influence Area. Retrieved from: https://www.ont-iac.com/wp-content/uploads/2019/02/ONT-AIA-policy-map-2-1.pdf (Accessed September 2023).

Mitigation Measures

None provided in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact due to proximity to an airport or airport land use plan, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? [Approved SEIR Impact 5.9-4]

No New or More Severe Impacts: As part of TOP 2050, a Vulnerability Analysis was conducted that determined, the threat of flood is Ontario's greatest hazard as large portions of the City are within a flood zone.[48] The City's Roadway Classification map identifies that there are substantial improvements in transportation infrastructure planned to accommodate the increase in population in the City in the event of an emergency. Additionally, the Ontario Fire Department reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance. The Project would include the placement of an EVA lane which allows emergency personnel access to the Project in moments of emergency. Therefore, the Project would not result in new impacts or a substantial increase in the magnitude of impacts.

Mitigation Measures

None proposed in the Approved SEIR.

Conclusion

The Project would not result in a new impact relative to established emergency plans, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires? [Approved SEIR Impact 5.9-5]

No New or More Severe Impacts: The City is outside of the State Responsibility Area (SRA), but the California Department of Fire and Forestry (CAL FIRE) has determined that the City contains no areas subject to very high wildfire risk.[49] However, the City acknowledges that even though fuel loading is light and fire risk comes primarily from urban fires, not wildfires, there is some risk related to wildfires.[50] There are many resources available to address wildland fires should they arise, including the CAL FIRE *2019 Strategic Fire Plan for California*, the California Fire Code, County of San Bernardino Multi-jurisdiction

[48] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.7-41. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).
[49] Ibid.
[50] Ibid.

Hazard Management Plan, the Ontario LHMP, and fire services from the Ontario Fire Department. With adherence to these building practices, development of the Project would not exacerbate risk or result in post-wildfire hazards (landslides, mudflows, and flooding).

Mitigation Measures

None proposed in the Approved SEIR.

Conclusion

Wildfire risk impacts related to the proposed Project are less than the significant, a less than significant impact was evaluated in the Approved SEIR. The Project would not result in a new impact relative to wildfire risk. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.10.3 Overall Hazards and Hazardous Materials Impact Conclusion

With regard to CEQA Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to hazards or hazardous materials. Therefore, preparation of a SEIR is not warranted.

4.11 HYDROLOGY AND WATER QUALITY

4.11.1 Summary of TOP 2050 Analysis

The Approved SEIR concluded that compliance with the MS4 permit includes implementation of Project site design and source control BMPs that reduce the potential for pollutants to enter runoff and treatment control BMPs that remove pollutants from stormwater. Additionally, after compliance with permits impacts would be less than significant.

4.11.2 Analysis of Proposed Project

Threshold (a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality? [Approved SEIR Impact 5.10-1]

No New or More Severe Impacts: Implementation of TOP 2050 was found to not substantially alter the amount of developed land in the City. However, most of Ontario Ranch is agricultural land which is designated for future urban use development by the TOP 2050. Based on the Approved SEIR findings, implementation of National Pollution Discharge Elimination System (NPDES) and Stormwater Pollution Prevention Plan (SWPPP) Best Management Practices (BMPs) would effectively minimize the construction impacts associated with water quality. BMPs included in these permits may include actions such as:

- Project site design standards that maximize permeable areas, use porous pavements, and focus on natural drainage systems;
- Structural source control that minimizes pollution of stormwater by such means as paving trash storage areas and fueling areas with impervious surfaces, and grading such areas to block run-off; and
- Treatment Control measures that Remove pollutants from stormwater by filtration, media absorption, or other means.

Additionally, the Project would be required to control pollutants in discharges of stormwater from postconstruction activities through preparation of a Water Quality Management Plan (WQMP). As discussed in 4.10, Hazards and Hazardous Materials above, hazardous contamination found in the groundwater within the Project area was remediated and found to require no further action according to DTSC.[51] .

During Project operation, the residential and retail uses within the Project site would utilize newly placed sewer systems improved within the site, including a grease interceptors and additional sewer facilities.

The Project would comply with Federal, state, and local regulations regarding the maintenance of water quality standards and therefore impacts would be less than significant.

Mitigation Measures

None identified in the Approved SEIR.

[51] GeoKinetics. 2022. Phase I Environmental Site Assessment Ontario Plaza 1000 – 1060 West Fourth Street & 1118 – 1126 North Mountain Avenue Ontario, California. Irvine, CA: GeoKinetics

Conclusion

Water quality degradation impacts related to the proposed Project are less than the significant. The Project would not result in a new or more severe impact relative to water quality, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin? [Approved SEIR Impact 5.10-2]

No New or More Severe Impacts: Nearly all of the Project site is impermeable surfaces which are unideal for groundwater recharge. Regardless, projects considered for approval under TOP 2050 would have to meet the following requirements for limiting impacts to groundwater recharge:

- BMPs for compliance with NPDES regulations, for instance, preservation of existing vegetation.
- Preparation of project-specific hydrology studies estimating project impacts on drainage, in accordance with procedures in the *San Bernardino County Technical Guidance Document for WQMPs (2013)*.

According to the Approved SEIR the TOP 2050 contains policies that would promote infiltration of runoff and groundwater recharge, that encourage the use of low impact development (LID) strategies to intercept runoff, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.[52] Application of these policies would further lead to less than significant impacts due to groundwater resources. Furthermore, the Chino Groundwater Basin is adjudicated and is considered by DWR to be a very low priority groundwater basin.[53] Therefore, the Project would not deplete or otherwise substantially degrade surface or groundwater quality, nor would it substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basins. Therefore, the proposed Project would not result in a new or a substantial increase in magnitude of impacts that would impede sustainable groundwater management of the basin.

Mitigation Measures

No mitigation measures are required in the Approved SEIR, and impacts would be less than significant.

Conclusion

Groundwater supply impacts related to the proposed Project are less than the significant. The Project would not result in a new impact or more severe relative to groundwater supply, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance

[52] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.10-22. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).
[53] Ibid, Page. 5.10-23.

that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: [Approved SEIR Impact 5.10-3]

i) Result in a substantial erosion or siltation on- or off-site.

ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite.

iii) Create or contribute to runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff.

iv) Impede or redirect flood flows.

No New or More Severe Impacts: Future development associated with the Project would involve site improvements that require grading, excavation, and soil exposure during construction, with the potential for erosion or siltation to occur. To minimize these impacts and as discussed in the Approved SEIR, the Project would be required to comply with the requirements in the State Water Resources Control Board's (SWRCB's) Construction General Permit (CGP) including the preparation of a notice of intent and SWPPP prior to the start of construction activities. Additionally, to comply with MS4 Permit and San Bernardino County Stormwater Program, the Project would also be mandated to install stormwater treatment BMP's that retain the 2-year, 24-hour rainfall event.

As previously discussed, the Project would be required to attain an NPDES permit and associated SWPPP. These two processes and the associated BMPs would adequately minimize potential off-site water quality impacts. Construction-related BMPs would be identified based on site-specific conditions during preparation of a SWPPP for the Project. Long term operational BMPs would be identified through issuance of an NPDES permit through the RWQCB and would include water quality features to ensure that runoff is treated prior to discharge into the storm drain or regional conveyance facilities. The Project would also include the development of stormwater facilities designed to adequately convey and manage stormwater flows experienced within the Project site.

Additionally, according to the Federal Emergency Management Act (FEMA) National Flood Hazards Map, the Project is located in an area of minimal flood hazard.[54] Additionally, only small portions of the City adjacent to flood control channels, detention basins, and creeks are in the 100-year flood plain. However, as discussed above the proposed Project is located in an area of minimal flood hazard.[55]

The Project would include connections to existing stormwater systems but would not include modifications to stormwater facilities which would impede or redirect stormwater flows. As well, the Project site is currently disturbed with impermeable surfaces over the majority of the site. The development of the Project would not introduce substantial amounts of impermeable surfaces beyond

[54] FEMA's National Flood Hazard Layer. *06071C8608H*. Retrieved at: https://hazards-fema.maps.arcgis.com/apps/webappviewer/index.html?id=8b0adb51996444d4879338b5529aa9cd. (Accessed July 2023)
[55] Ibid.

what exists on the Project site currently. See **Figure 17: Project Utility Layout** for a diagram of utilities proposed for the Project.

As such, the Project would result in no new or more severe impact from erosion or siltation and would not create or contribute runoff water that would exceed the capacity of existing drainage systems. The Project site is not located in an area prone to the previously mentioned natural or manmade disasters. Thus, the Project would not substantially alter the existing drainage pattern of the Project site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would create the above-mentioned disasters. A less than significant impact is anticipated from Project implementation. No new impact or increase in the severity of an identified impact would therefore occur with implementation of the Project.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Drainage pattern impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to drainage patterns, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation. [Approved SEIR Impact 5.10-4]

No New or More Severe Impacts: The Approved SEIR determined that only small portions of Ontario are in the 100-year floodplain, adjacent to flood control channels, detention basins, and creeks. Under TOP 2050, to reduce impacts of potential developments within 100-year flood zones the City will require any new development partially or entirely in 100-year flood zones to provide detailed floodplain mapping for 100- and 200-year storm events as part of the development process. The City will also require that facilities using hazardous materials comply with state and federal law and do not permit facilities using, storing, or otherwise involved with substantial quantities of onsite hazardous materials to be located in the 100-year or 500-year flood zone unless all standards of elevation, floodproofing, and storage have been implemented to the satisfaction of the Building Department. As discussed above the Project site is located in an area of minimal flood hazard. Nevertheless, the Project would comply with all applicable policies of the TOP 2050.

Additionally, there are no large bodies of water that would result in a seiche during seismic activity. The reservoirs/aboveground water tanks within the City are enclosed, thereby minimizing the possibility of a seiche. The Project location is inland and approximately 30 miles from the ocean and is not at risk of flooding from tsunamis. Therefore, impacts associated with release of pollutants due to inundation would be less than significant. No new impact or increase in the severity of an identified impact would therefore occur with implementation of the Project.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Tsunami and flood hazard impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to tsunami and flood hazard, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. [TOP 2050 Impact 5.10-5]

No New or More Severe Impacts: The City's groundwater supplies are from the Chino Groundwater Basin, which is adjudicated and managed by the Chino Basin Watermaster. The Chino Basin is exempt from legislative requirements under the Sustainable Groundwater Management Act (SGMA) because it is an adjudicated basin and is not required to prepare a groundwater sustainability plan. As discussed in the Approved SEIR, projects approved under TOP 2050 would be required to comply with the Santa Ana River Bain Plan and to control pollutants in discharges of stormwater from postconstruction activities under NPDES Permit No. CAS618036 through preparation of a WQMP identifying BMPs for prevention of stormwater pollution during the post-construction phase, including site-design, source-control, and/or treatment of BMPs. Additionally, adherence to the State CGP, implementation of the SWPPP, and adherence to the City's Erosion and Sediment Control Plan requirements, would ensure that surface and groundwater quality are not adversely impacted during construction of the Project. Therefore, the proposed Project would not obstruct or conflict with the RWQCB's Basin Plan or any groundwater management plan, and impacts would be less than significant.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Water quality control plan impacts related to the proposed Project are less than significant. A less than significant impact was evaluated in the Approved SEIR. The Project would not result in a new or more severe impact relative to water quality control plans. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.11.3 Overall Hydrology and Water Quality Impact Conclusion

With regard to CEQA Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to hydrology and water quality. Therefore, preparation of a SEIR is not warranted.

4.12 LAND USE AND PLANNING

4.12.1 Summary of TOP 2050 Analysis

According to the Approved SEIR, implementation of the TOP 2050 would not divide an established community. Additionally, the Approved SEIR concluded that implementation of the TOP 2050 would not conflict with established plans adopted for the purpose of avoiding or mitigating an environmental effect.

4.12.2 Analysis of Proposed Project

Threshold (a) Physically divide an established community? [Approved SEIR Impact 5.11-1]

No New or More Severe Impacts: According to TOP 2050, the Project would be built on land zoned for multi-family mixed use development and is surrounded by a variety of urban land uses. Thus, Project implementation would not physically divide an established community. The Project would be developed consistently with the preferred land uses of the MU-NH land use designation and the MU-8b zoning district. Therefore, there are no new or more severe impacts.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Land use and planning impacts related to the division of an established community related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to land use and planning, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect? [Approved SEIR Impact 5.11-2]

No New or More Severe Impacts: As discussed in the Approved SEIR, TOP 2050 is intended to be a framework for planning and development in the City for the next 30 or more years. Additionally, buildout of TOP 2050 Land Use Plan would provide sufficient dwelling units, population, and employment capacity to exceed SCAG's projections for 2050.

Less than significant impacts related to land use and planning are identified in the Approved SEIR. Specifically, the Approved SEIR concluded that the TOP 2050 Land Use Plan would not introduce incompatible land uses to the City and would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. The Project would remain consistent with the vision and goals of the TOP 2050 by providing additional dwelling units and employment opportunities and would not require a modification of land use designation for the Project site. Additionally, the TOP 2050 encouraged the development of mixed-use developments within the Project site through the implementation of a MU-NH land use

designation. Specifically, the TOP 2050 estimated that future buildout of the MU-NH Mountain and Fourth land use area would allow for the development of 251 dwelling units and 75,008 square feet of nonresidential uses. While the Project would exceed estimated residential buildout by 106 units, the Project's nonresidential uses would be below the buildout estimates by 71,208 sq ft. Additionally, the Project would remain consistent with the development density standards of MU-NH land use areas.[56]

The Project would be developed within the standards of this land use designation and would not propose or necessitate a general plan amendment due to conflicts with the goals or standards of this land use type. Furthermore, the Project would further the City's goal of generating manageable growth that can be accommodated by commercial or amenity uses within the City.

Furthermore, the Project would include the creation of a PUD, as required by the City Development Code, to designate site-specific development standards for the Project site which would act as the presiding standards for this Project and future developments. These standards are able to vary from established standards within the City Development Code but would be required to remain consistent with the TOP 2050. Additionally, **Table 11: Consistency with the TOP**, **Table 15: Community Climate Action Consistency**, and **Table 16: Regional Transportation Plan/Sustainable Communities Strategy Consistency** summarize the Project's consistency with established regional and local land use plans. Therefore, development of the roadway with open space amenities would not create new impacts.

Mitigation Measures

None identified in the Approved SEIR

Conclusion

Land use and planning impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to land use and planning, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.12.3 Overall Land Use Impact Conclusion

With regard to CEQA Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to hydrology and land use and planning. Therefore, preparation of a SEIR is not warranted.

[56] City of Ontario. 2022. City of Ontario Policy Plan Land Use Element. Figure LU-03 Future Buildout Table. Page 19. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/Land%20Use/Figure%20LU-03%20Future%20Buildout%20Table_5.pdf

4.13 MINERAL RESOURCES

4.13.1 Summary of TOP 2050 Analysis

The Approved EIR concluded that buildout associated with TOP 2050 would not impact mineral resources of statewide, regional, or local value. Additionally, the TOP 2050 would allow mineral extraction only in areas both within Mineral Resource Zone-2 (MRZ-2) and within a Mineral Resource Sector. Areas which do not have both classifications would not be available for mineral extraction.

4.13.2 Analysis of Proposed Project

Threshold (a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? [Approved SEIR Impact 5.12-1]

Threshold (b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan? [Approved SEIR Impact 5.12-1]

No New or More Severe Impacts: As described in Section 5.12.2 of the Approved SEIR there are two areas in Ontario that are designated MRZ-2, where significant mineral resources are known or are likely. The remainder of the City is designated MRZ-3, where the significance of mineral deposits is unknown. The Project development in an MRZ-3 area would not result in significant impacts because mineral resources of statewide or local importance are not identified on the California Geological Survey's P-C maps. Additionally, the Project site would fall outside of a Mineral Resource Sector and would not allow for mineral extraction. Therefore, the Project would not result in the loss of availability of a known mineral resource in Ontario and impacts to mineral resources would be less than significant.

Mitigation Measures

None identified in the Approved SEIR

Conclusion

Mineral resource impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to mineral resources, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.13.3 Overall Mineral Resources Impact Conclusion

With regard to CEQA Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to hydrology and land use and planning. Therefore, preparation of a SEIR is not warranted.

4.14 NOISE

4.14.1 Summary of TOP 2050 Analysis

The Approved SEIR concluded that buildout associated with TOP 2050 would contribute to considerable increases in ambient and construction-related noise. Additionally, TOP 2050 concluded that since details of individual development projects in the City are currently unknown, potentially significant impacts may not be reduced to less than significant levels by **MM 12-2** and **MM 12-4**.

4.14.2 Analysis of Proposed Project

Threshold (a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. [Approved SEIR Impact5.13-1 and Impact 5.13-2]

Construction

Construction noise typically occurs intermittently and varies depending on the construction activity's nature or phase (e.g., land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. During construction, exterior noise levels could affect noise-sensitive receptors near the construction site. The nearest sensitive receptors to the Project site construction area are existing residential uses to the north and east, adjacent to the Project property boundary. However, it is noted that construction activities would occur throughout the Project site and would not be concentrated at a single point near noise-sensitive receptors.

Construction activities would include demolition, Project site preparation, grading, building construction, paving, and architectural coating. Such activities would require:

- Industrial saws, excavators, and dozers during demolition;
- Dozers and tractors during Project site preparation;
- Excavators, graders, dozers, and tractors during grading;
- Cranes, forklifts, generators, tractors, and welders during building construction;
- Pavers, rollers, and paving equipment during paving; and
- Air compressors during architectural coating.

Typical noise levels associated with individual construction equipment are listed in **Table 17: Typical Construction Noise Levels**. For safety reasons, heavy duty construction equipment and machinery are assumed to stay a minimum of 25 feet from the boundaries of occupied properties.

Table 17: Typical Construction Noise Levels

Equipment	Typical Noise Level (dBA) at 50 feet from Source	Typical Noise Level (dBA) at 25 feet from Source[1]
Air Compressor	80	86
Backhoe	80	86
Compactor	82	88
Concrete Mixer	85	91
Concrete Pump	82	88
Concrete Vibrator	76	82
Crane, Mobile	83	89
Dozer	85	91
Generator	82	88
Grader	85	91
Impact Wrench	85	91
Jack Hammer	88	94
Loader	80	86
Paver	85	91
Pneumatic Tool	85	91
Pump	77	83
Roller	85	91
Saw	76	82
Scraper	85	91
Shovel	82	88
Truck	84	90
1. Calculated using the inverse square law formula for sound attenuation: $dBA_2 = dBA_1+20Log(d_1/d_2)$ Where: dBA_2 = estimated noise level at receptor; dBA_1 = reference noise level; d_1 = reference distance; d_2 = receptor location distance		
Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, September 2018.		

Although the construction equipment noise levels in **Table 17: Typical Construction Noise Levels** are from the Federal Transit Administration's (FTA's) 2018 *Transit Noise and Vibration Impact Assessment Manual*, the noise levels are based on measured data from an EPA report which uses data from the 1970s,[57] the Federal Highway Administration (FHWA) Roadway Construction Noise Model (RCNM) which uses data from the early 1990s, and other measured data. Since that time, construction equipment has been required to meet more stringent emissions standards and the additional necessary exhaust systems also reduce noise from what is shown in the table.

Section 5-29.09 (Construction Activity Noise Regulations) of the City of Ontario Municipal Code restricts noise sources associated with construction activities between the hours of 7:00 AM to 6:00 PM on weekdays and 9:00 AM to 6:00 PM on Saturday. While the City establishes limits to the hours during which construction activity may take place, it does not identify specific noise level limits for construction noise levels. The City's permitted hours of construction are required in recognition that construction activities undertaken during daytime hours are a typical part of living in an urban environment and do not cause a significant impact.

[57] U.S. Environmental Protection Agency, Noise from Construction Equipment and Operations, Building Equipment and Home Appliances, NTID300.1, December 31, 1971.

Quantitative Construction Noise Assessment

However, this analysis conservatively uses the FTA's threshold of 80 A-weighted decibels (dBA) and 85 dBA (8-hour Equivalent Continuous Sound Pressure Level [L_{eq}]) to evaluate construction noise impacts for residential and commercial uses, respectively.[58] It should be noted that although **Table 17: Typical** Construction Noise Levels shows that some equipment would exceed 80 dBA at 25 feet, the FTA's noise threshold is measured over an eight hour period, meaning that a single piece equipment would need to be stationary and operating continuously for eight hours to exceed the 80 dBA threshold. In addition, standard construction provides 25 dBA of exterior-to-interior noise attenuation with windows closed and 15 dBA with windows open.[59] Therefore, it can be assumed that exterior noise levels of 94 dBA (jackhammer) would equal 69 dBA when measured from the interior with windows closed.

Following FTA's methodology for quantitative construction noise assessments, construction-generated noise levels associated with the Project were calculated using FHWA's RCNM computer program. RCNM enables the prediction of construction noise levels for a variety of construction operations based on a compilation of empirical data and the application of acoustical propagation formulas. When calculating construction noise, all construction equipment is assumed to operate simultaneously at the center of the active construction zone to represent an average distance throughout the day. See Noise Modeling Data in **Appendix G** for more information regarding the construction assumptions used in this analysis.

The noise levels calculated in **Table 18: Project Construction Noise Levels**, show estimated exterior construction noise. Construction noise would increase ambient noise in the Project's vicinity. Generally, noise increases of less than 3 dBA is barely perceptible to people, while a 5-dBA increase is readily noticeable. Therefore, ambient noise level increases greater than 5 dBA would be considered significant. As shown in **Table 18: Project Construction Noise Levels**, construction noise would lead to an increase in ambient noise levels by a maximum of 15.6 dBA. However, the combined noise level would remain below the 80 dBA construction threshold for residential uses. Thus, construction noise would be considered less than significant.

Table 18: Project Construction Noise Levels

Construction Phase	Modeled Exterior Construction Noise Level at Nearest Residence (dBA L_{eq})	Noise Threshold (dBA L_{eq}) [1]	Exceed Threshold?	Ambient Noise Level (dBA L_{eq})	Construction + Ambient Combined Noise Level (dBA L_{eq})	Exceed Threshold?
Demolition	71.5	80	No	57.2	71.7	No [4]
Site Preparation	72.7		No		72.8	No [4]
Grading	72.3		No		72.4	No [4]

Combined Building Construction and Architectural Coating [3]	71.1		No		71.3	No [4]
1. Federal Transit Administration noise threshold of 80 dBA for residences.						

[58] Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, Table 7-2, Page 179, September 2018.
[59] United States Environmental Protection Agency, *Protective Noise Levels (EPA 550/9-79-100)*, 1979.

Construction Phase	Modeled Exterior Construction Noise Level at Nearest Residence (dBA L_{eq})	Noise Threshold (dBA L_{eq}) [1]	Exceed Threshold?	Ambient Noise Level (dBA L_{eq})	Construction + Ambient Combined Noise Level (dBA L_{eq})	Exceed Threshold?
2. Based on the construction schedule, building construction and paving activities are anticipated to overlap. Therefore, the equipment from these two activities have been combined. 3. Based on the construction schedule, building construction and architectural coating activities are anticipated to overlap. Therefore, the equipment from these two activities have been combined. 4. Combined Noise level remains below the 80 dBA construction noise threshold for residential uses.						
Source: Federal Highway Administration, *Roadway Construction Noise Model,* 2006. Refer to Appendix G for noise modeling results.						

Operations

Project implementation would create new sources of noise in the site vicinity. The mixed-use development's major noise sources including the following:

- Stationary Noise Sources - mechanical equipment (i.e., trash compactors, air conditioners, etc.);
- Parking areas (i.e., car door slamming, car radios, engine start-up, and car pass-by); and
- Off-site traffic noise.

Stationary Noise Sources

The Project site is located near residential properties to the north and east, while properties to the south and west are primarily commercial. The nearest sensitive receptors are located to the north and east, adjacent to the Project's property boundary. Potential stationary noise sources related to long-term operation of the Project site would include mechanical equipment. Mechanical equipment (e.g., heating ventilation and air conditioning [HVAC] equipment) typically generates noise levels of approximately 52 dBA at 50 feet[60]. At the closest sensitive receptor, approximately 160 feet away, mechanical equipment noise levels would attenuate to 41.9 dBA, which is below the City's ambient noise standards of 60 to 65 dBA for residential receptors. The ambient noise level at Sensitive Receptor 1 was measured at 57.2 dBA and would increase by 0.1 dBA with the inclusion of the HVAC equipment. This increase would be below the 3 dBA perceptibility threshold.

Parking Noise

All parking would be provided on the Project site with a six level above grade parking structure. Traffic associated with parking lots is typically not of sufficient volume to exceed community noise standards, which are based on a time-averaged scale such as the Community Noise Equivalent Level (CNEL) scale. The instantaneous maximum sound levels generated by a car door slamming, engine starting up, and car pass-bys range from 53 to 61 dBA.[61] Conversations in parking areas may also be an annoyance to adjacent sensitive receptors. Sound levels of speech typically range from 33 dBA at 50 feet for normal speech to 50 dBA at 50 feet for very loud speech.[62] It should be noted that parking lot noises are instantaneous noise levels compared to noise standards in the hourly L_{eq} metric, which are averaged over the entire duration

[60] Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden, *Noise Navigator Sound Level Database with Over 1700 Measurement Values*, July 6, 2010.
[61] Kariel, H. G., *Noise in Rural Recreational Environments*, Canadian Acoustics 19(5), 3-10, 1991.
[62] Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden. Noise Navigator Sound Level Database with Over 1700 Measurement Values, July 6, 2010.

of a time period. As a result, actual noise levels over time resulting from parking lot activities would be far lower than the reference levels identified above.

For the purpose of providing a conservative, quantitative estimate of the noise levels that would be generated from the vehicles entering and exiting the parking lot, the methodology recommended by FTA for the general assessment of stationary transit noise sources is used. Using the methodology, the Project's peak hourly noise level that would be generated by the on-site parking levels was estimated using the following FTA equation for a parking lot:

$$L_{eq(h)} = SEL_{ref} + 10 \log (NA/1{,}000) - 35.6$$

Where:

$L_{eq(h)}$ = hourly L_{eq} noise level at 50 feet

SEL_{ref} = reference noise level for stationary noise source represented in sound exposure level (SEL) at 50 feet

NA = number of automobiles per hour

35.6 is a constant in the formula, calculated as 10 times the logarithm of the number of seconds in an hour.

Based on the peak hour trip generation rates in the Traffic Study, approximately 76 trips during the AM peak hour and 81 trips during the PM peak hour would be made to the Project site each day. Using the FTA's reference noise level of 92 dBA SEL[63] at 50 feet from the noise source, the Project's highest peak hour vehicle trips would generate noise levels of approximately 45.5 dBA L_{eq} at 50 feet from the parking lot. The nearest residential property is 180 feet north of the parking structure entrance, on the opposite side of the church (currently under construction). Based strictly on distance attenuation, parking lot noise at the nearest receptor would be 34.4 dBA which is below the City's residential and residential noise standards of 65 dBA daytime and 45 dBA nighttime noise standards. The ambient noise level at Sensitive Receptor 2, which is located nearest to a parking structure entrance/exit, was measured at 52.0 dBA and would increase by 0.1 dBA with the inclusion of parking structure noise. This increase would be below the 3 dBA perceptibility threshold.

Off-Site Traffic Noise

Implementation of the Project would generate increased traffic volumes along nearby roadway segments. According to the Traffic Analysis, the Project Buildout would generate a total of 8,820 daily trips which would result in noise increases on Project area roadways. In general, a traffic noise increase of less than 3 dBA is barely perceptible to people, while a 5 dBA increase is readily noticeable. Generally, traffic volumes on Project area roadways would have to approximately double for the resulting traffic noise levels to increase by 3 dBA. Therefore, permanent increases in ambient noise levels of less than 3 dBA are considered to be less than significant.

[63] Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, September 2018.

Traffic noise levels for roadways primarily affected by the Project were calculated using the FHWA's Highway Noise Prediction Model (FHWA-RD-77-108). Traffic noise modeling was conducted for conditions With and Without the Project, based on traffic volumes from the Traffic Analysis. **Table 19: Project Traffic Noise Levels** identifies Project traffic-generated noise levels. Noise levels on Project area roadways would range between 44.3 dBA CNEL and 66.5 dBA CNEL at 100 feet from the centerline, and the Project would result in a maximum increase of 0.2 dBA CNEL along 4th Street. Noise impacts from off-site traffic would be less than significant.

Table 19: Project Traffic Noise Levels

Roadway	Segment	Opening Year		Opening Year Plus Project		Project Change from No Build Conditions	Significant Impact?
		ADT	dBA CNEL[1]	ADT	dBA CNEL[1]		
Mountain Avenue	North of 4th Street	25,605	66.4	26,035	66.5	0.1	No
	South of 4th Street	21,715	65.7	21,845	65.7	0.0	No
4th Street	West of Mountain Avenue	7,320	58.5	7,450	58.6	0.1	No
	Mountain Avenue to Palmetto Avenue	9,106	59.4	9,366	59.6	0.2	No
	East of Palmetto Avenue	8,866	59.3	8,996	59.4	0.1	No
Palmetto Avenue	South of 4th Street	1,004	44.3	1,004	44.3	0.0	No

ADT = average daily traffic; dBA = A-weighted decibels; CNEL = community noise equivalent level

1. Traffic noise levels are at 100 feet from the roadway centerline. The actual sound level at any receptor location is dependent upon such factors as the source-to-receptor distance and the presence of intervening structures, barriers, and topography.

Source: *Traffic Study for the Proposed Watermarke Ontario Project in the City of Ontario*, prepared by Kimley-Horn and Associates, 2023. Refer to Appendix G for traffic noise modeling assumptions and results.

The Approved SEIR includes measures to reduce potential impacts associated with the implementation of TOP 2050. The following measures from the Approved SEIR are applicable to the proposed Project:

Mitigation Measures

The Approved SEIR includes measures to reduce potential impacts associated with the implementation of TOP 2050. The following measures from the Approved SEIR are applicable to the Project:

MM 12-4 Construction activities associated with new development that occurs near sensitive receptors shall be evaluated for potential noise impacts. Construction contractors shall implement the following measures for construction activities conducted in the City of Ontario. Construction plans submitted to the City shall identify these measures on demolition, grading, and construction plans submitted to the City. The City of Ontario Planning and Building Departments shall verify that grading, demolition, and/or construction plans submitted include these notations prior to issuance of demolition, grading, and/or building permits.

- Construction activity is limited to the hours: Between 7:00 AM and 6:00 PM Monday through Friday and 9:00 AM to 6:00 PM Saturdays and Sundays, as prescribed in Municipal Code Section 5-29.09.

- During the entire active construction period, equipment and trucks used for Project construction shall use the best-available noise control techniques (e.g., improved mufflers, equipment re-design, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds) wherever feasible.
- Impact tools (e.g., jackhammers and hoe rams) shall be hydraulically or electronically powered whenever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools.
- Stationary equipment, such as generators and air compressors shall be located as far as feasible from nearby noise-sensitive uses.
- Stockpiling shall be located as far as feasible from nearby noise-sensitive receptors.
- Construction traffic shall be limited, to the extent feasible, to approved haul routes established by the City's Engineering Department.
- At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours, as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report the action to the City.
- Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes.
- During the entire construction period and to the extent feasible, the use of noise-producing signals, including horns, whistles, alarms, and bells, shall be safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level or switch of back-up alarms and replace with human spotters in compliance with all safety requirements and laws.
- Erect temporary noise barriers (at least as high as the exhaust of equipment and breaking line-of-sight between noise sources and sensitive receptors) as necessary and feasible, to maintain construction noise levels at or below the performance standard of 80 dBA L_{eq}. Barriers shall be constructed with a solid material that has a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier and may be lined on the construction side with an acoustical blanket, curtain, or equivalent absorptive material.

In compliance with MM 12-4, the City Planning and Building Departments would verify that Project grading, demolition, and/or construction plans submitted for review include the measures described above to limit noise impacts to the surrounding area, prior to issuance of demolition, grading, and/or building permits.

Conclusion

As demonstrated in **Table 18: Project Construction Noise Levels** and **Table 19: Project Traffic Noise Levels,** implementation of the Project would not result in substantial temporary or permanent increases in ambient noise levels. **Table 18: Project Construction Noise Levels** confirms that construction of the Project would not exceed construction noise thresholds. In addition, **Table 19: Project Traffic Noise Levels** demonstrates that operational noise levels from the Project would not exceed applicable noise standards during the Project's opening year. Noise impacts related to the proposed Project are less than the significant and unavoidable impacts identified in Approved SEIR. No new impacts or a substantial increase in the severity of a previously identified significant impact evaluated in the Approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Generation of excessive groundborne vibration or groundborne noise levels. [Approved SEIR Impact 5.13-3]

Construction Vibration

No New or More Severe Impacts: Construction can generate varying degrees of ground vibration, depending on the construction procedures and equipment. Operation of construction equipment generates vibrations that spread through the ground and diminish with distance from the source. Construction on the Project site would have the potential to result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used and the operations involved.

The FTA has published standard vibration velocities for construction equipment operations. In general, the FTA architectural damage criterion for continuous vibrations (i.e., 0.2 in/sec) appears to be conservative. The types of construction vibration impacts include human annoyance and building damage. Human annoyance occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. Building damage can be cosmetic or structural. Ordinary buildings that are not particularly fragile would not experience any cosmetic damage (e.g., plaster cracks) at distances beyond 30 feet. This distance can vary substantially depending on the soil composition and underground geological layer between vibration source and receiver. In addition, not all buildings respond similarly to vibration generated by construction equipment. For example, for a building that is constructed with reinforced concrete with no plaster, the FTA guidelines show that a vibration level of up to 0.20 in/sec is considered safe and would not result in any construction vibration damage.

Table 20: Typical Construction Equipment Vibration Levels, lists vibration levels at 25 feet for typical construction equipment and at 5 feet, the distance from the Project boundary to the nearest existing structure (Sensitive Receptor 1). In addition, vibration levels at 23 feet, the distance from the nearest construction area to an existing structure is also included, as heavy construction equipment would not be operated at the Project boundary next to sensitive receptors. As indicated in **Table 20: Typical Construction Equipment Vibration Levels**, based on FTA data, vibration velocities from typical heavy

construction equipment operations that would be used during Project construction range from 0.003 to 0.101 in/sec Peak Particle Velocity (PPV) at 23 feet from the source of activity.

Table 20: Typical Construction Equipment Vibration Levels

Equipment	Peak Particle Velocity at 25 Feet (in/sec)	Peak Particle Velocity at 5 Feet (in/sec)[1]	Peak Particle Velocity at 100 Feet (in/sec)[1]
Large Bulldozer	0.089	0.9951	0.101
Caisson Drilling	0.089	0.9951	0.101
Loaded Trucks	0.076	0.8497	0.086
Jackhammer	0.035	0.3913	0.040
Small Bulldozer/Tractors	0.003	0.0335	0.003

1. Calculated using the following formula: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$, where: PPV_{equip} = the peak particle velocity in in/sec of the equipment adjusted for the distance; PPV_{ref} = the reference vibration level in in/sec from Table 7-4 of the Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, 2018; D = the distance from the equipment to the receiver.

Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, 2018.

Table 20: Typical Construction Equipment Vibration Levels shows that at 23 feet, the vibration velocities from construction equipment would exceed 0.101 in/sec PPV which is below the FTA's 0.20 in/sec PPV threshold for building damage. It is also acknowledged that construction activities would occur throughout the Project site and would not be concentrated at the point closest to the nearest structure. Therefore, vibration impacts associated with Project construction would be less than significant.

Operational Vibration

No New or More Severe Impacts: Once operational, the Project would not be a significant source of groundborne vibration. Groundborne vibration surrounding the Project currently result from heavy-duty vehicular travel (e.g., refuse trucks, heavy duty trucks, delivery trucks, and transit buses) on the nearby local roadways. Operations of the proposed Project would include activities associated with residential development that typically would not cause excessive ground-borne vibrations. Due to the rapid drop-off rate of groundborne vibration and the short duration of the associated events, vehicular traffic-induced groundborne vibration is rarely perceptible beyond the roadway right-of-way, and rarely results in vibration levels that cause damage to buildings in the vicinity. According to the FTA Noise and Vibration Manual, trucks rarely create vibration levels that exceed 70 VdB (equivalent to 0.012 in/sec PPV) when they are on roadways. Therefore, automobiles accessing the Project site or traveling along surrounding roadways would not exceed FTA thresholds for building damage. Vibration impacts associated with Project operations would be less than significant in this regard.

Mitigation Measures

The Approved SEIR includes measures to reduce potential impacts associated with the implementation of TOP 2050. The following measures from the Approved SEIR are applicable to the Project:

MM 12-2 Prior to issuance of a building permit, individual projects that involve vibration-intensive construction activities, such as pile drivers, jackhammers, and vibratory rollers near sensitive receptors shall be evaluated for potential vibration impacts. Construction within 135 feet of fragile structures, such as historical resources, 100 feet of non-engineered

timber and masonry buildings (e.g., most residential buildings), or within 75 feet of engineered concrete and masonry (no plaster); or a vibratory roller within 25 feet of any structure, the project applicant shall prepare a noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to these activities. This noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed FTA architectural damage thresholds (e.g., 0.12 in/sec PPV for fragile or historical resources, 0.2 in/sec PPV for non-engineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses such as drilling piles as opposed to pile driving and static rollers as opposed to vibratory rollers shall be used. If necessary, construction vibration monitoring shall be conducted to ensure vibration thresholds are exceeded.

In compliance with **MM 12-2**, an Acoustical Assessment was conducted for the Project, that analyzes vibration impacts associated with Project site construction. See **Appendix G** for additional details. Additionally, the City would review grading, demolition, and/or construction plans prior to the issuance of demolition, grading, and/or building permits.

Conclusion

As demonstrated in **Table 20: Typical Construction Equipment Vibration Levels** and discussed above, implementation of the Project would not result in excessive groundborne vibration levels. Vibration impacts related to the proposed Project are less than the significant and unavoidable impacts identified in the Approved SEIR. No new impacts or a substantial increase in the severity of a previously identified significant impact evaluated in the Approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, if the project would expose people residing or working in the project area to excessive noise levels. [Approved SEIR Impact 5.13-4]

No New or More Severe Impacts: The nearest airport to the Project site is the Ontario International Airport located approximately three miles to the southeast. Although the Project is within the AIA of the Ontario International Airport, the Project is not within two miles of the Ontario Airport, and is also outside the 60-65 CNEL noise contour.[64] Additionally, there are no private airstrips located within the Project vicinity. An acoustical assessment prepared for the Project in August 2023 and determined As such, the Project would remain consistent with **MM 12-1** proposed within the Approved SEIR. Therefore, the Project would not expose people working in the Project area to excessive airport related noise levels and no mitigation is required.

[64] City of Ontario, The Ontario Plan 2050, Safety Element, S-4 Noises Hazards. Figure S-06c Airport Noise Contours, 2020.

Mitigation Measures

The Approved SEIR includes measures to reduce potential impacts associated with the implementation of TOP 2050. The following measures from the Approved SEIR are applicable to the proposed Project.

MM 12-1 Prior to the issuance of building permits for any project that involves a noise-sensitive use within the 65 dBA CNEL contour of the Ontario International Airport, the Project property owner/developers shall retain an acoustical engineer to conduct an acoustic analysis and identify, where appropriate, site design features and/or required building acoustical improvements (e.g., sound transmission class rated windows, doors, and attic baffling), to ensure compliance with the City's Noise Compatibility Criteria and the California State Building Code and California Noise Insulation Standards (Titles 24 and 21 of the California Code of Regulations

Conclusion

The Project site is located outside the Ontario International Airport noise contours and Project impacts are less than the significant unavoidable impacts identified in Approved SEIR. No new impact relative to airport noise or a substantial increase in the severity of a previously identified significant impact evaluated in the Approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.14.3 Overall Noise Impact Conclusion

With regard to CEQA Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to noise. Therefore, preparation of a SEIR is not warranted.

4.15 POPULATION AND HOUSING

4.15.1 Summary of TOP 2050 Analysis

According to the Approved SEIR, implementation of the TOP 2050 SEIR would not result in any significant impacts to population and housing. As such, the Approved SEIR concluded that impacts in this regard would be less than significant, and no mitigation measures were recommended.

4.15.2 Analysis of Proposed Project

Threshold (a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure). [Approved SEIR Impact 5.14-1]

No New or More Severe Impacts: One of the purposes of TOP 2050 is to adequately plan and accommodate future growth. Implementation of TOP 2050 was determined to generate and accommodates population growth through land use designations, goals, and policies that provide a vision and guide growth in the city. Additionally, the Approved SEIR concluded that through implementation of TOP 2050 the City's jobs-housing ratio would be more closely aligned to the Southern California Association of Governments (SCAG) projections. As discussed in the Approved SEIR implementation of TOP 2050 would also promote growth that is consistent with SCAG's Connect SoCal Priority Growth Areas, as the land changes under TOP 2050 would encourage walking and biking, put residents in proximity to resources, and align future growth in the City with planned infrastructure improvements and regional transportation goals.

The Project would be consistent with the proposed densities of MU-NH land use areas, and MU-8b zoning districts. Both the MU-NH and MU-8b allow for a maximum residential density of 75 du/ac and a maximum nonresidential density of 1.0 FAR. As shown in **Table 1: Summarized Development Standards** the Project would allow for the development of residential uses at a scale of 61.5 du/ac and a nonresidential density of 0.02 FAR. The Project densities would be within the scale of development assumed for the TOP 2050 and the Approved SEIR. Therefore, the Project would not induce substantial unplanned population growth in an area and impacts would be less than significant.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Population growth impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to population growth, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere? [Approved SEIR Impact 5.14-2]

No New or More Severe Impacts: Under the TOP 2050 Land Use Plan, land use changes would increase opportunities for housing in the City. The Project would involve the redevelopment of the Project area from commercial and public uses to mixed use residential uses. The Project site does not contain existing residential uses. Therefore, the Project would not displace existing housing in a manner that would necessitate the construction of additional housing elsewhere.

Mitigation Measures

None identified in the Approved SEIR

Conclusion

Displacement of existing housing impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to housing, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.15.3 Overall Population and Housing Conclusion

With regard to CEQA Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to noise. Therefore, preparation of a SEIR is not warranted.

4.16 PUBLIC SERVICES

4.16.1 Summary of TOP 2050 Analysis

Buildout associated with TOP 2050 would require and involve the future expansion of City public services as the population would continue to grow. However, these impacts were anticipated to remain less than significant since the City would review each future project on a case-by-case basis for consistency with City policies, including development fees.

4.16.2 Analysis of Proposed Project

Threshold (a) Result in a substantial adverse physical impact associated with the provisions of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which would cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection services, police protection services, school services, parks services, and other public facilities? [Approved SEIR Impact 5.15-1, 5.15-2, 5.15-3, 5.15-4]

No New or More Severe Impacts: The Project would allow the development of 357 residential units at a residential density of 61.5 du/ac and a nonresidential FAR of 0.02. While the proposed residential uses would exceed residential buildout estimates of the Mountain and Fourth area by 106 units, the Project's nonresidential uses would be below the buildout estimates by 71,208 sq ft.[65] Despite this, the allowed density of the MU-NH land use designation implemented in the TOP 2050 and analyzed in the Approved SEIR allows for greater residential development than estimated in the future buildout table. This is due to the buildout table's use of expected growth trends which are not strictly based on a full buildout per the standards of the MU-NH land use designated areas. However, due to the Project's consistency with the Project area's land use standards, growth and service demands associated with development of the Project area would be consistent with what was analyzed in the Approved SEIR. Additionally, the Project's payment of the General City Development Impact Fees, a portion of which is allocated to the fire department(s), would aid in offsetting any potential impacts.

The Project does not include or require construction of any new or physically altered fire protection, police protection, school, or other public facilities. Prior to commencement of construction activities, the Project plans would be reviewed by applicable local agencies to ensure compliance with the City of Ontario Municipal Code, as well as all applicable regulations to ensure adequate site signage, lighting, and other crime safety preventative measures. Additionally, to help minimize impacts to public services the Project developer would be required to pay a Development Impact Fee of $5.026 per sq ft.[66] The nearest Ontario Fire Department (OFD) station is OFD Station 3 located approximately 500 feet southwest of the Project site. The Ontario Police Department (OPD) station is approximately 5.2 miles southeast of the Project site.

[65] City of Ontario. 2022. City of Ontario Polic y Plan Land Use Element. Figure LU-03 Future Buildout Table. Page 19. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/Land%20Use/Figure%20LU-03%20Future%20Buildout%20Table_5.pdf.

[66] City of Ontario. 2023. *Development Impact Fees*. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Building/Development%20Impact%20Fees%20(Effective%2001.01.23).pdf (accessed October 2023).

Construction of the Project would not result in adverse physical impacts associated with the provision of or need for new or physically altered public facilities. The Project does not include the removal of existing public service facilities, including fire and police stations, school facilities, or libraries. A post office structure present on site would be removed as a part of the Project. However, the United States Postal Service would vacate their lease of the structure prior to Project initiation and would relocate elsewhere within the City. The Project would not directly cause the removal of post office uses in the Project site. Additionally, the Project is consistent with the assumed development of the Project area, growth and service demands associated with development of the Project area would be consisted with what is analyzed in the Approved SEIR. Compliance with applicable local regulations would ensure that Project construction would result in a less than significant impact to public services.

The Project would be developed within the development intensity required by the MU-NH land use designation and subsequently analyzed by the Approved SEIR. As such, the Project would be consistent with the City's development growth estimates and public service facility needs. Therefore, the Project would not uniquely necessitate additional public service facilities such as police and fire stations due to its specific implementation. Additionally, since the Project site is already served by the existing fire and police station, and the Project would be constructed pursuant to existing California Fire Code regulations, the Project would not result in the need for new or physically altered police and/or fire department facilities that could cause significant environmental impacts. As discussed in the Approved SEIR the OFD recommends that three additional fire stations would be needed in the Ontario Ranch region of the City. The police services required to cover the new development and population growth in the City would be assessed and acquired appropriately based on the needs of the City. It is possible that buildout of TOP 2050 would require additional facilities to support the OPD. While the construction of the future facilities could result in potential environmental impacts, future environmental review would occur once specific locations have been determined. Without a definitive location for the development of future facilities, the analysis of potential impacts is too speculative.

Additionally, the Project site is within the Chaffey Joint Union High School District (CJUHSD) and Ontario-Montclair School District (OMSD) area. As discussed in the Approved SEIR, the CJUHSD has existing capacity to accommodate additional residential development in the City. While, the OMSD indicated that an increase in residential development would impact OMSD school facilities; further assessment would be needed to ensure accommodations for increased populations. Information provided by OMSD showed that most of its schools can accommodate the District's projections for the next 10 years, some schools would not be able to accommodate projected increase capacity over the next 10 years. Therefore, it is possible that OMSD would need additional facilities by 2050. Despite this, the Project is consistent with the development standards of the Project site and therefore would not introduce conditions which would uniquely generate impacts to school capacity. Although the increased demand on school facilities would have to potential to impact one or more of the school districts that serve the City, payment of impact fees in compliance with SB 50 would further reduce impacts to an acceptable level.

The Approved SEIR concluded that implementation of TOP 2050 would have less that significant impacts on other public facilities, such as libraries. The City has one library facilities within its library system: the Ovitt Family Community Library at 215 East C Street. An additional joint use library facility is also located within the City: the Lewis Family Branch at 3850 East Riverside Drive. The Project would result in an

increase in demand for library services in the City based on an increase in population. Environmental impacts could result from the construction of future facilities; however, future library development would not uniquely be driven by the Project since it would be developed according to the standards analyzed in the Approved SEIR. In addition, future projects would be reviewed by the City on an individual basis and would be required to comply with requirements in effect at the time building permits are issued (i.e., payment of development impact fees).

Therefore, impacts to fire protection, police protection, schools, and other public facilities are anticipated to be less than significant.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Impacts to public services would be less than significant and would be similar to the Approved SEIR. The Project would not result in new or more severe impacts to public services. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would later the Approved SEIR's significance finding.

4.16.3 Overall Public Services Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to public services. Therefore, preparation of a SEIR is not warranted.

4.17 RECREATION

4.17.1 Summary of TOP 2050 Analysis

TOP 2010 generated additional residents, which in turn increased the use of existing park and recreational facilities and could result in environmental impacts from the provision of new and/or expanded recreational facilities. However, TOP 2010 implemented regulatory compliance and impacts were less than significant. TOP 2050 provides land use opportunities for public parks to be developed in line with future development and is in compliance with relevant goals, policies, and programs that align with the demographic trends and recreational needs of the City residents. TOP 2050 would not result in new impacts or a substantial increase in the magnitude of impacts to the use of existing park and recreational facilities compared to TOP 2010 Certified EIR.

4.17.2 Analysis of Proposed Project

Threshold (a) Would increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? [Approved SEIR Impact 5.16-1]

No New or More Severe Impacts: Currently, the City uses the established parkland standard of three acres per 1,000 residents but strives for five acres per 1,000 residents for parks in Ontario Ranch. The City has approximately 481 acres of parkland, based on a population of 179,597 the City currently requires 539 acres of parkland. Buildout of the Project would generate additional residents in the City. However, the Project would include common open space including: three courtyards, one pocket park, intimate seating areas, and a lounge deck for residents of the Project. As the Project would provide recreational resources for its future residents, demand for external recreational facilities would be minimized. Additionally, the Quimby Act is a funding mechanism for parkland acquisition. Under this Act and pursuant to the City's Municipal Code, residential subdivisions must dedicate parkland or pay in-lieu fees to enable the City to acquire a ratio of three acres of parkland per 1,000 residents. The Project does not include the development of parkland to offsite the City's existing parkland deficit. After payment of development impact fees, the Project would not result in new impacts or a substantial increase in the magnitude of impacts to the use of existing park and recreational facilities.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Recreational facility impacts related to the proposed Project are less than significant and similar to the Approved SEIR. The Project would not result in a new impact relative to recreational facilities. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Includes recreational facilities or requires the construction or expansion of recreational facilities which might have an adverse physical effect on the environment? [Approved SEIR Impact 5.16-2]

No New or More Severe Impacts: The proposed Project includes construction of the following open space areas: three courtyards, one pocket park, intimate seating areas, and a lounge deck. Development of the Project, inclusive of these recreational areas are discussed throughout this Addendum SEIR. Consequently, the proposed Project would not result in significant impacts in this regard.

Mitigation Measures

None identified in the Approved SEIR

Conclusion

Recreational facilities impacts related to the proposed Project are less than significant and similar to the Approved SEIR. The Project would not result in a new or more severe impact relative to recreational facilities. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.17.3 Overall Recreation Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to recreation. Therefore, preparation of a SEIR is not warranted.

4.18 TRANSPORTATION

4.18.1 Summary of TOP 2050 Analysis

The TOP 2050 analysis identified that the increase in total vehicle miles traveled (VMT) would create a potentially significant impact. Buildout of TOP 2050 would increase traffic in residential land use throughout the City, mitigation measure 12-1 was proposed to reduce this impact. Potential impacts due to the implementation of the Project relating to plans addressing the City circulation system, increased hazards due to geometric design features, and inadequate emergency vehicle access were found to be less than significant without the need for mitigation.

4.18.2 Analysis of Proposed Project

Threshold (a) Would the Proposed Project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. [Approved SEIR Impact 5.17-1]

No New or More Severe Impacts: The TOP 2050 established classifications for the Project site's surrounding roadways. Mountain Avenue is classified as a six-lane principal arterial roadway, and Fourth Street is classified as a two-lane collector roadway.[67] These roadways allow for a greater volume of vehicles. Additionally, TOP 2050 classifies Mountain Avenue as a Class I multipurpose trail, and Fourth Street as a Class III bike route. Both roadways contain infrastructure which allows for pedestrian traversal along roadways.[68] The Project is consistent with these road classifications and does not propose alterations to the existing surrounding roadways. Furthermore, Project development would not include reductions to roadway capacity or the removal of pedestrian or bicycle infrastructure.

The Project would include a new internal circulation network within the Project area which would include a two-lane gated entry along West Fourth Street to the south of the Project area. A secondary driveway connecting to North Mountain Avenue and would connect to the northern entrance of the central parking structure and continue east across the Project site as an EVA lane terminating at Harvard Place. Vehicular traffic within the Project site would be limited to the central parking structure, its entryways, and external roadways.

The City has presented requirements for vehicle and bicycle parking within the Project site. **Table 21: Project Parking Consistency** summarizes the Project's consistency with the City's standards.

Table 21: Project Parking Consistency

Standard	Requirement	Project Consistency
Residential Parking Ratio	1.2 spaces per bedroom (1.2 spaces per studio unit)	1.4 spaces per bedroom (including studio units)
Minimum Residential Spaces	555 Spaces	643 Spaces
Minimum Retail/Office Parking Ratio	1 space per 250 sf	
Minimum Retail/Office Parking Spaces	16 Spaces	16 Spaces
Minimum Bicycle Parking Ratio	Residential: 1 rack per 30 stalls Retail (short term): 5% of stalls (2 minimum)	
Minimum Residential Bicycle Racks	22 Racks	22 Racks
Minimum Bicycle Racks	2 Racks	2 Racks

[67] City of Ontario. 2021. The Ontario Plan 2050 Draft Supplemental Environmental Impact Report. Figure 5.17-3. Page 5.17-15. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf (Accessed September 2023)
[68] Ibid. Page 5.17-21

As shown in **Table 21: Project Parking Consistency**, the Project would provide parking and bicycle facilities at a rate equal or greater than required by the City.

The Project would include 22 bicycle racks for resident and retail bicycle storage on the basement and second level of the central parking structure. One 12-space bicycle parking rack would be provided on the second story of the central parking structure to accommodate the two retail spaces required for the Project with the remainder located in the basement level. The 22 residential bicycle parking racks would be provided based on a ratio of 1 bicycle rack per 30 parking stalls; each bicycle rack provides parking for 8 to 12 bicycles. California Green Building Standards Code (CALGreen), Title 24, Part 11, Section A4.106.9.2 requires that multifamily buildings provide bicycle spaces at a rate of one space per two dwelling units. This would require approximately 179 bicycle spaces for the 357-unit Project. CALGreen Title 24, Part 11, Section 5.106.4.1.1 requires the placement of bicycle parking nearby nonresidential uses at a rate of 5 percent of provided nonresidential parking spaces, with a minimum of one 2-space bicycle rack. The Project would therefore provide 2 bicycle parking spaces based on the 16 nonresidential parking spaces provided.

Based on a conservative estimate of eight spaces per bicycle rack, the 22 bicycle Project would provide 176 total bicycle spaces. However, eight-space bicycle racks are the lowest capacity bicycle racks proposed for the Project. The majority of Project bicycle racks have a 10-bicycle capacity and would therefore provide for two additional bicycle spaces per rack.

Pedestrian connections would be provided to each building and dwelling unit from the public street within the Project site. The Project would make use of the existing pedestrian network which provides sidewalks along Fourth Street and Mountain Avenue. The Project pedestrian network would include pathways between buildings and dwelling units and the parking structure. Residents would have access to all areas of the Project, including amenity areas, through walking paths and paved sidewalks.

The Project does not propose roadway improvements that would modify pedestrian, mass transit, or bicycle infrastructure outside of the Project site. Roadways would continue to function under their current form. Additionally, internal roadways and infrastructure would be developed consistently with City standards. Therefore, no new or more significant impacts are anticipated.

Mitigation Measures

None applicable to this impact.

Conclusion

The Project would not conflict with traffic plans established within the City. No new impacts or a substantial increase in the severity of the previously identified significant impact evaluated in the approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified that would impact the prior finding under this issue area.

Threshold (b) Would the Proposed Project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b). [Approved SEIR Impact 5.17-2]

No New or More Severe Impacts: Kimley-Horn completed a VMT Screening Memorandum in May 2023 which concluded that the Project would screen out of VMT analysis (refer to **Appendix H**). Per the City's Resolution adopting Vehicle Miles Traveled Thresholds, a project would screen out of VMT if it would meet one of four screening thresholds:

1. Transit Priority Area (TPA) Screening
2. Low VMT Area Screening
3. Low Trip Generating Uses
4. Project Type Screening by Land Use Type

According to the VMT screening memorandum, the Project would qualify for screening under the Low VMT Area criteria. According to the City's Resolution adopting Vehicle Miles Traveled Thresholds, a project located within a low VMT generating area as determined by the City's guidelines and the San Bernardino County Transportation Authority (SBCTA) VMT Screening Tool would be considered to have a less-than-significant transportation impact. Based on the SBCTA VMT Screening Tool results (see **Appendix H**), the Project is located within a low VMT area (<-15% below County Baseline).

Therefore, with respect to CEQA Guidelines section 15064.3 regarding the Project's VMT impact, the Project is screened out from VMT. The Approved SEIR concluded a significant and unavoidable impact regarding VMT due to the projected growth of residential uses within the City. As such, the Project would result in a less than significant transportation impact, and no additional VMT analysis is required. The TOP 2050 would have significant and unavoidable impacts because there would be a significant transportation impact related to VMT, primarily due to population increase from TOP 2050 buildout.

Mitigation Measures

None applicable to the proposed Project.

Threshold (c) Would the Proposed Project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? [Approved SEIR Impact 5.17-3]

Threshold (d) Would the Proposed Project result in inadequate emergency access? [Approved SEIR Impact 5.17-3]

No New or More Severe Impacts: An all-way stop warrant analysis was conducted for the Project at the request of the City, see **Appendix H** for additional information. The analysis was conducted for the existing side-street stop-controlled (SSSC) intersection of Palmetto Avenue and Fourth Street. The warrant analysis was based on the methodologies noted in Section 2B.07 of the California Manual on Uniform Traffic Control Devices (CA MUTCD). The analysis outlines criteria that would be used to add project improvements to be "considered" as part of a roadway improvement engineering. The analysis also identifies Project intersections which would be otherwise hazardous for vehicular traffic and which may need modification or mitigation. The Project did not satisfy any of the three criterion which would create

a consideration for additional roadway improvements. As such, the Project's intersections would not be considered dangerous in a manner which would require additional safety modifications and, therefore, additional roadway improvements would not be required as a component of the Project (refer to **Appendix H**).

A review of emergency access is included as part of the City's Design Review process. According to the City's Local Hazard Mitigation Plan, interstate highways would serve as major emergency response and evacuation routes.[69] OFD also reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance. In addition, to ensure adequacy emergency access the Project's design would include the development of an EVA lane that connects to the secondary entryway, continuing to a controlled gate at Harvard Place.

Mitigation Measures

None applicable to the proposed Project.

Conclusion

The Project would not conflict with traffic plans established within the City. No new impacts or a substantial increase in the severity of the previously identified significant impact evaluated in the approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified that would impact the prior finding under this issue area.

4.18.3 Overall Transportation Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to transportation. Therefore, preparation of a SEIR is not warranted.

[69] City of Ontario. 2018. City of Ontario Local Hazard Mitigation Plan. Pg. 4-102. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Fire/Ready%20Ontario/city_of_ontario_2018_hmp.pdf. (Accessed August 2023).

4.19 TRIBAL CULTURAL RESOURCES

4.19.1 Summary of TOP 2050 Analysis

As part of the TOP 2050 update process, the City requested a local government tribal consultation list from the NAHC on June 9, 2021. The tribal consultation list was requested in accordance with SB 18 and AB 52 requirements. The NAHC responded on June 22, 2021, and provided a list of tribes for the City to contact regarding a potential consultation. The City was also notified by the NAHC that the result of the Sacred Lands File (SLF) check conducted through the Native American Heritage Commission was negative. The City sent initial notification letters to California Native American tribes and tribal contacts on July 2, 2021. None of the tribes contacted as part of the TOP 2050 update requested consultation.

4.19.2 Analysis of Proposed Project

Threshold (a) Cause a substantial adverse change in the significance of a Tribal Cultural Resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California native American tribe that is: [Approved SEIR Impact 5.18-1]

i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or

ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

No New or More Severe Impacts: Assembly Bill (AB) 52, does not apply to this Project as this document is an Addendum to the Approved SEIR and not subject to the provisions of AB 52. Furthermore, record searches and the field survey did not reveal the presence of tribal cultural resources or burial sites within the area.

As part of analysis for the Approved SEIR and in accordance with AB 52 and SB 18, the City sent invitation letters to the Native American contacts provided by the Native American Heritage Commission (NAHC) on July 2, 2021, formally inviting tribes to consult with the City on the general plan update. The Agua Caliente Band of Cahuilla Indians and the Quechan Tribe of the Fort Yuma Reservation both responded that the City is not within the tribe's traditional use area, and they defer to other tribes in the area. The Gabrieleño Band of Mission Indians-Kizh Nation responded stating that the tribal government concurs with the updated plan and in the event of future construction or any ground disturbance, the tribal government would like to consult with the lead agency. The San Manuel Band of Mission Indians responded that TOP 2050 may impact projects in Serrano ancestral territory, and therefore is of interest to the tribe. The tribe requested additional information concerning whether the general plan updates would include any plans for museums, cultural enters or interpretive sites. The tribe saw no conflicts with zoning changes;

however, when specific projects are planned and implemented, the tribe might have comments and/or request formal consultation with the lead agency pursuant to CEQA and PRC 21080.3.1. Additionally, an SLF search conducted for the Approved SEIR resulted in a negative determination.

Evidence collected during the creation of the CRA indicated a lack of tribal cultural resources, thereby minimizing potential for the discovery of previously undocumented cultural resources within the Project area. However, Standard Condition No. 1 from Public Resources Code Section 5097.98 would be implemented to ensure that any tribal cultural resource encountered during Project development would be handled correctly and respectfully. Based on the above, and with the implementation of **MM 5-4, MM TCR-1**, and **MM TCR-2**, a less than significant impact would occur.

Mitigation Measures

Mitigation Measures from TOP 2050 SEIR

TOP 2050 incorporates **MM 5-4** from the Cultural Resources section that was taken directly from the 2010 Certified EIR. Additionally, TOP 2050 incorporates new **MM TCR-1** and **MM TCR-2**. The new mitigation measures would incorporate an archaeological monitoring plan (AMP), and a plan for treatment and disposition of cultural resources. **MM 5-4** and new **MMs TCR-1** and **TCR-2**, would be implemented to reduce impact levels.

MM 5-4 Prior to the issuance of grading permits for a proposed project for which the CEQA document defines cultural resource mitigation for potential tribal resources, the project applicant shall contact the designated tribe(s) to notify them of the grading, excavation, and monitoring program. The applicant shall coordinate with the City and the tribal representative(s) to develop mitigation measures that address the designation, responsibilities, and participation of tribal monitors during grading, excavation, and ground-disturbing activities; scheduling; terms of compensation; and treatment and final disposition of a cultural resources, sacred sites, and human remains discovered on the site. The City shall be the final arbiter of the conditions for project's within the City's jurisdiction.

In compliance with **MM 5-4**, tribal consultation was conducted for the Approved SEIR. As discussed above AB 52 does not apply to this Project as this document is an Addendum to the Approved SEIR and not subject to the provisions of AB 52.

MM TCR-1 Tribal Cultural Resources Monitoring. The project archaeologist, in consultation with interested tribes, the developer, and the City of Ontario, shall develop an archaeological monitoring plan (AMP) to address the details, timing, and responsibility of archaeological and cultural activities that will occur on the project site. Details in the AMP shall include:

- Project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) and development scheduling;
- The development of a rotating or simultaneous schedule in coordination with the developer and the project archeologist for designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing

activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all project archaeologists (if the tribes cannot come to an agreement on the rotating or simultaneous schedule of tribal monitoring, the Native American Heritage Commission shall designate the schedule for the onsite Native American Tribal Monitor for the proposed project);

- The protocols and stipulations that the developer, City, Tribes, and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.

  At least 30 days prior to application for a grading permit and before any brush clearance, grading, excavation, and/or ground disturbing activities on the site, the developer shall retain a tribal cultural monitor to monitor all ground disturbing activities in an effort to identify any unknown archaeological resources.

  Pursuant to the AMP, a tribal monitor from the consulting tribe shall be present during the initial grading activities. If tribal resources are found during grubbing activities, the tribal monitoring shall be present during site grading activities.

In compliance with **MM TCR-1**, the Project site developer would develop an AMP and retain a tribal cultural monitor at least 30 days prior to application for a grading permit or grubbing activities.

MM TCR-2 Treatment and Disposition of Cultural Resources. In the event that Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., for the proposed project, the following procedures will be carried out for treatment and disposition of the discoveries:

- Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process;
- Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and nonhuman remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Ontario with evidence of same:
- Accommodate the process for on-site reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloguing, basic analysis, other analyses as recommended by the project archaeologist and approved by consulting tribes, and basic recordation have been completed; all documentation should be at a level of standard professional practice to allow the writing of a report of professional quality;

- A curation agreement with an appropriate qualified repository in San Bernardino County that meets federal standards per 36 CFR Part 79, and therefore the resource would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility in San Bernardino County, to be accompanied by payment of the fees necessary for permanent curation;
- For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, materials shall be curated at the San Bernardino County Museum by default;
- At the completion of grading, excavation, and ground-disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pregrade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the City, County Museum, and consulting tribes.

In compliance with **MM TCR-2**, in the event that Native American cultural resources are discovered during ground-disturbing activities as part of the Project site development, the Project site developer would comply with the requirements described above.

Conclusion

The Project would not result in a new or more severe impact to tribal cultural resources. A less than significant impact with mitigation was identified in the Approved SEIR with respect to tribal cultural resources. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.20 UTILITIES AND SERVICE SYSTEMS

4.20.1 Summary of TOP 2050 Analysis

The Approved SEIR determined that implementation of TOP 2050 would not lead to an inadequate capacity for wastewater treatment, solid waste capture, or water supply. Despite the need for expanded utility infrastructure, the impacts were determined to be less than significant since the future infrastructure projects would require City review and approval prior to their development. Additionally, fair share costs would be leveraged to aid in the expansion or renovation of utility facilities.

4.20.2 Analysis of Proposed Project

Threshold (a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects? [Approved SEIR Impact 5.19-1; 5.19-2; 5.19-3; 5.19-4]

No New or More Severe Impacts: The TOP 2050 includes the establishment of a revised land use map which shows the scale of development for parcels throughout the City. The Project would be developed at an intensity consistent with what was assumed for MU-NH land use categories within the associated Project parcels. Additionally, as discussed in the Approved SEIR TOP 2050 has policies in place to require improvements to sewer infrastructure as part of new development and redevelopment projects and has processes in place to ensure that any sewer improvement projects are implemented prior to or during new development. In regards to wastewater treatment, the City is served by two Inland Empire Utilities Agency (IEUA) facilities (RP-1 and RP-5). The current combined capacity of these two facilities is 60.3 mgd and would increase to 66.5 mgd once the expansion project that is currently under construction at RP-5 is completed. The two facilities would have capacity to handle the additional flow rate from buildout of TOP 2050.

The Project would include the placement of new water, wastewater, stormwater, energy, and telecommunications facilities within the Project site and form connections to existing facilities within the public Right-of-Way (ROW) (See **Figure 17: Project Utility Layout**). These improvements would include conveyance facilities for water, wastewater, and stormwater, as well as wiring and line connections for electricity, natural gas, and telecommunications. The majority of these improvements would occur within the Project site. ROW improvements would amount to service connections and would have minimal effect on exterior infrastructure (See **Figure 17: Project Utility Layout**). Each utility would be buried at varying depths, based on City standard. Effects stemming from utility improvements have been accounted for in impact discussion throughout Sections 4.2 through 4.21 of this Addendum EIR. Additionally, the Project has undergone design review by the City, including utility plan review under Project number PDEV22-042. While the Project does propose new utility infrastructure within the public ROW, the Project does not propose the expansion of existing utility infrastructure beyond the Project site or the public ROW. Therefore, no new or more severe impact from a previously identified significant impact evaluated in the Approved SEIR would occur.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact as it pertains to placement of utilities and service systems, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would impact the prior finding of no significant impact.

Threshold (b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years? [Approved SEIR Impact 5.19-2]

No New or More Severe Impacts: The Approved SEIR determined that the City would have sufficient water supplies throughout the buildout of the TOP 2050. This determination was based on a water demand factor of 50 gallon/person/day (gpd) for all residential uses, and a required reduction 20 percent reduction in water use for nonresidential uses. However, as the Project would be developed prior to 2030, the 55 gpd requirement would be used.[70]

The California Department of Finance (DOF) estimated the City's average household size in 2023 to be 3.33 persons per household.[71] Conservatively assuming that each unit within the Project would be occupied by an entire household and generate water demand at a rate of 55 gpd, this would lead to a residential water demand of approximately 65,385 gpd, or approximately 74-acre feet of water per year (AFY). For the 3,800 sq ft of Project retail uses, an estimated 11 employees would generate a water demand of 605 gpd, or 0.7 AFY.[72] Total Project water demand would therefore be approximately 75 AFY. This would account for 0.1 percent of both the City's conservative 60,000 AFY estimate, and the Urban Water Management Plan (UWMP) 73,688 AFY estimate.[73] Water demands generated by the Project would therefore be negligible and would not create a substantial effect to the City's water supplies. Additionally, the Project would utilize recycled water for irrigation and landscaped areas, tying into existing recycled water facilities below Fourth Street.

Therefore, no new or more severe impact from a previously identified significant impact evaluated in the Approved SEIR would occur.

[73] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page 5.19-30. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf (Accessed September 2023).

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact as it pertains to water supply and demand. Impacts related to the Project would be similar to the Approved SEIR and would be less than significant. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would impact the prior finding of no significant impact.

Threshold (c) Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? [Approved SEIR Impact 5.19-1]

No New or More Severe Impacts: The Approved SEIR concluded that the City would have sufficient wastewater treatment infrastructure and capacity through implementation of TOP 2050. The City is in the Inland Empire Utilities Agency (IEUA) service area for wastewater treatment. Subsequently, the City utilizes the IEUA wastewater generation factor of 270 gpd per Equivalent Dwelling Unit (EDU).[74] The Project, being a multifamily residential use, per IEUA, would generate wastewater using a scale of 0.7 EDU per housing unit.[75] The Project's 357 units would therefore generate 67,473 gpd or 0.06 million gallons per day (mgd) of wastewater.

IEUA operates four WWTPs that provide recycled water to the western part of San Bernardino County. Two IEUA wastewater treatment plants (WWTPs) are utilized by the City. Regional Water Recycling Plant #1 (RP-1) and Regional Water Recycling Plant #5 (RP-5) currently process and treat the City's generated wastewater with a combined treatment capacity of 60.3 mgd. An expansion to RP-5 is anticipated to increase the wastewater treatment capacity in 2025.[76] **Table 22: Wastewater Treatment Capacity** summarizes the existing and planned WWTP capacity within the City as well as the Project's effects.

Table 22: Wastewater Treatment Capacity

Structure	Current Capacity (mgd)	2025 Expanded Capacity (mgd)
RP-1	44	44
RP-5	16.3	22.5
Total Capacity	60.3	66.5
Current Flow Rate	33	33
Remaining Capacity	27.3	33.5
Project Generation	0.06	0.06
Remaining Capacity	27.2	33.4

Source:
City of Ontario. 2021. The Ontario Plan 2050 Draft Supplemental Environmental Impact Report. Page 5.19-30. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf (Accessed September 2023)

[74] Ibid Page 5.19-11
[75] Inland Empire Utilities Agency. 2023. Explanation of Fees. Retrieved from: https://www.ieua.org/view-fees-rates/ (Accessed September 2023)
[76] Ibid. Page 5.19-10

Furthermore, the Project plans to use recycled water treated by the two RPs during irrigation and nonpotable uses. As shown in **Table 22: Wastewater Treatment Capacity** the Project would have a negligible effect on the City's ability to process wastewater. Therefore, no new or more severe impact from a previously identified significant impact evaluated in the Approved SEIR would occur.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact as it pertains to wastewater generation. Impacts related to the Project would be similar to the Approved SEIR and would be less than significant. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would impact the prior finding of no significant impact.

Threshold (d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals? [Approved SEIR Impact 5.19-3]

Threshold (e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste? [Approved SEIR Impact 5.19-3]

No New or More Severe Impacts: The Approved SEIR determined that the TOP 2050 would not result in significant impacts relative to solid waste. Implementation of the Project would be expected to generate additional waste during the temporary, short-term construction phase, as well as the long-term operational phase. However, as discussed in the Approved SEIR the combined excess capacity of the Badlands Sanitary Landfill and the El Sobrante Landfill is 7,046 tons/day. These landfills would easily accommodate the additional waste from buildout of TOP 2050, and both landfills have closure dates beyond 2050.

The City provides its own solid waste collection service via the City's Integrated Waste Department. Solid waste service for the City is collected and sent to the Badlands Sanitary Landfill located southeast of the City of El Sobrante Landfill located southeast of the City. Per the California Department of Resources Recycling and Recovery (CalRecycle), the Badlands Sanitary Landfill has a maximum throughput of 5,000 tons per day. This landfill has a maximum permitted capacity of approximately 82.3 million cubic yards, and the landfill has a remaining capacity of approximately 7.8 million cubic yards. The landfill has an expected operational life through 2058.[77] According to CalRecycle, the El Sobrante Landfill has a maximum throughput of 16,054 tons per day. This landfill has a maximum permitted capacity of approximately 209.9 million cubic yards, and the landfill has a remaining capacity of approximately 144 million cubic yards. The landfill has an expected operational life through 2051.[78]

[77] CalRecycle. 2021. SWIS Facility/Site Activity Details Badlands Sanitary Landfill (33-AA-0006) Retrieved from: https://www2.calrecycle.ca.gov/SolidWaste/SiteActivity/Details/2245?siteID=2367 (Accessed September 2023).
[78] CalRecycle. 2021. *SWIS Facility/Site Activity Details El Sobrante Landfill (33-AA-0217)* Retrieved from: https://www2.calrecycle.ca.gov/SolidWaste/SiteActivity/Details/2280?siteID=2402 (Accessed September 2023).

According to the Approved SEIR, solid waste is generated at a rate of 9.1 pounds per person per day (lbpd), and 13.5 lbpd per employee. Utilizing the DOF 3.33-person average household size as well as the estimated 11-employee retail uses would conclude a daily solid waste generation of approximately 11,900 pounds per day (lbd), or 5.95 tons per day. This would constitute approximately 0.04 percent of the El Sobrante Landfill daily throughput.

Additionally, the Project, as with all other development in the City, would be required to adhere to City ordinances with respect to waste reduction and recycling. As a result, no impacts related to State and local statutes governing solid waste are anticipated and no mitigation is required. Consistent with the Approved SEIR, the Project would have a less than significant impact.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in new or more severe impact as it pertains to solid waste. Impacts related to the Project would be similar to the Approved SEIR and would be less than significant. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would impact the prior finding of no significant impact.

4.20.3 Overall Utilities and Service Systems Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to utilities. Therefore, preparation of a SEIR is not warranted.

4.21 WILDFIRE

4.21.1 Summary of TOP 2050 Analysis

The Approved SEIR found that the TOP adequately addressed and accounted for emergency actions and protections in the case of wildfire risk. Additionally, the City was determined to be outside of wildfire hazard areas, especially those pertaining to woodland fires.

4.21.2 Analysis of Proposed Project

Threshold (a) Substantially impair an adopted emergency response plan or emergency evacuation plan? [Approved SEIR Impact 5.20-1]

Threshold (b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire? [Approved SEIR Impact 5.20-2]

Threshold (c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment? [Approved SEIR Impact 5.20-2]

Threshold (d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes? [Approved SEIR Impact 5.20-2]

No New or More Severe Impacts: The Approved SEIR assessed that the City was at increased risk of wildfire hazards due to its location within Southern California and that although the City's fire risk comes primarily from urban fires, not wildfires, there is some risk related to wildfires. However, the development of modern fire-resistant materials and tools have greatly reduced these risks. As well, the City's continued compliance with State Fire Codes further reduce the risks of wildfire. Additionally, a review of emergency access is included as part of the City's Design Review process. According to the City's Local Hazard Mitigation Plan (LHMP), interstate highways would serve as major emergency response and evacuation routes.

According to CAL FIRE's Fire and Resources Assessment Program (FRAP), the Project site is not located within or adjacent to land designated as a very high fire hazard severity zone (VHFHSZ).[79] Furthermore, the Project site is located in a flat/leveled area which does not include wild habitat and is not located near hillsides. The Project site is surrounded by a residential development to the north and east, as well as commercial development to the south and west. As previously discussed, the Project site is not exposed to flooding, landslides, runoff conditions. Finally, the Approved SEIR assessed that there are many resources available to address wildland fires should they arise – CAL Fire's 2019 Strategic Fire Plan for California, the CFC, County of San Bernardino Multi-Jurisdictional Hazard Mitigation Plan, the City LHMP,

[79] CAL FIRE FRAP (2021). *Fire Hazard Severity Zone Viewer*. Retrieved from: https://osfm.fire.ca.gov/divisions/community-wildfire-preparedness-and-mitigation/wildfire-preparedness/fire-hazard-severity-zones/ (Accessed September 2023).

and fire services from OFD. Therefore, with adherence to these building practices, a less than significant impact is expected to occur.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact as it pertains to wildfire. Impacts related to the Project would be similar to the Approved SEIR and would be less than significant. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would impact the prior finding of no significant impact.

4.21.3 Overall Wildfire Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to wildfire hazards. Therefore, preparation of a SEIR is not warranted.

5.0 DETERMINATION OF APPROPRIATE CEQA DOCUMENTATION

The following discussion lists the appropriate subsections of Sections 15162 and 15164 of the State CEQA Guidelines and provides justification for the City to determine that the Addendum is the appropriate CEQA document for the Project, based on the environmental analysis provided above.

This section also includes a discussion of the revisions to the State CEQA Guidelines that have occurred since certification of the Approved SEIR, including the most recently adopted 2018 revisions. In 2018, the OPR transmitted its proposal for the comprehensive updates to the CEQA Guidelines to the California Natural Resources Agency. Included were proposed updates related to analyzing transportation impacts pursuant to SB 743, proposed updates to the analysis of GHG emissions, and revised Section 15126.2(a) in response to the California Supreme Court's decision in *California Building Industry Association v. Bay Area Air Quality Management District* (2015) 62 Cal.4th 369. The updated Guidelines became effective on December 28, 2018.

CEQA Guidelines Section 15162 – Subsequent EIRs and Negative Declarations

(a) When an EIR has been certified or a negative declaration adopted for a project, no subsequent EIR shall be prepared for that Project unless the lead agency determines, on the basis of substantial evidence in light of the whole record, one or more of the following:

(1) Substantial changes are proposed in the Project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

The City proposes to implement the Project within the context of the Approved SEIR, as described in this Addendum. As discussed in the Environmental Impact Analysis section of this Addendum, no new or more severe significant environmental effects beyond what was evaluated in the Approved SEIR would occur.

(2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

As documented herein, no circumstances associated with the location, type, setting, or operations of the Project have substantively changed beyond what was evaluated in the Approved SEIR; and none of the Project elements would result in new or more severe significant environmental effects than previously identified. No major revisions to the Approved SEIR are required.

(3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:

(A) The project will have one or more significant environmental effects not discussed in the previous EIR or negative declaration;

No new significant environmental effects beyond those addressed in the Approved SEIR were identified.

> *(B) Significant effects previously examined will be substantially more severe than shown in the previous EIR;*

Significant Project-related effects previously examined would not be more severe than were disclosed in the Approved SEIR as a result of the Project. Impacts associated with all environmental resource areas would be the same as or less than disclosed in the adopted Approved SEIR. Implementation of the Project within the context of the Approved SEIR would not substantially increase the severity of previously identified impacts.

> *(C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or*

No mitigation measures or alternatives were found infeasible in the certified Approved SEIR.

> *(D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.*

No other mitigation measures or feasible alternatives have been identified that would substantially reduce significant impacts.

(b) If changes to a project or its circumstances occur or new information becomes available after adoption of a negative declaration, the lead agency shall prepare a subsequent EIR if required under subsection (a). Otherwise, the lead agency shall determine whether to prepare a subsequent negative declaration, an addendum, or no further documentation.

Subsequent to certification of the Approved SEIR in 2007, additional technical analyses were performed for the Project and are the subject of this Addendum. Based on the analyses in this document, the Project would not result in any new significant environmental effects nor would it increase the severity of significant effects previously identified in the Approved SEIR. None of the conditions listed under subsection (a) would occur that would require preparation of a subsequent EIR.

(c) Once a project has been approved, the lead agency's role in project approval is completed, unless further discretionary approval on that project is required. Information appearing after an approval does not require reopening of that approval. If after the project is approved, any of the conditions described in subsection (a) occurs, a subsequent EIR or negative declaration shall only be prepared by the public agency which grants the next discretionary approval for the project, if any. In this situation, no other Responsible Agency shall grant an approval for the project until the subsequent EIR has been certified or subsequent negative declaration adopted.

None of the conditions listed in subsection (a) would occur as a result of the Project. No SEIR is required.

CEQA Guidelines Section 15164 – Addendum to an EIR or Negative Declaration

(a) The lead agency or responsible agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary, but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred.

As described above, none of the conditions described in the CEQA Guidelines Section 15162 calling for the preparation of a SEIR have occurred.

(b) An addendum to an adopted negative declaration may be prepared if only minor technical changes or additions are necessary or none of the conditions described in Section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred.

None of the conditions described in Section 15162 calling for preparation of a subsequent EIR would occur as a result of the Project. Therefore, an addendum to the certified Approved SEIR is the appropriate CEQA document for the Project.

(c) An addendum need not be circulated for public review but can be included in or attached to the Approved EIR or adopted negative declaration.

This Addendum will be attached to the Approved SEIR and maintained in the administrative record files at the City.

(d) The decision-making body shall consider the addendum with the Approved EIR or adopted negative declaration prior to making a decision on the project.

The City will consider this Addendum with the Approved EIR prior to making a decision on the Project.

(e) A brief explanation of the decision not to prepare a subsequent EIR pursuant to Section 15162 should be included in an addendum to an EIR, the lead agency's required findings on the Project, or elsewhere in the record. The explanation must be supported by substantial evidence.

This document provides substantial evidence for City records to support the preparation of this Addendum for the Project.

6.0 CONCLUSION

The analysis presented in this document substantiates that the Approved SEIR for TOP 2050 is sufficient to satisfy CEQA requirements for the approval of the proposed PUD and development application. That is, implementation and operation of the proposed Project described herein would not result in any new or substantially more severe environmental impacts than were previously considered and addressed in the Approved SEIR. Further, the Project would implement all applicable mitigation measures presented in the Approved SEIR. As such, potential environmental impacts of the Project are considered to be adequately and appropriately addressed by analysis presented in the Approved SEIR. The Project does not require any major revision of the Certified SEIR, nor would the Project result in conditions that would require preparation of a Subsequent or Supplemental EIR as described in Sections 15162 and 15163 of the CEQA Guidelines.

APPENDIX A – MITIGATION MONITORING AND REPORTING PROGRAM

The Following Mitigation Measures from The Ontario Plan 2050 Supplemental Environmental Impact Report have been included in the Watermarke Ontario Planned Unit Development Project (Project) Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (Addendum EIR).

Table A-1: Mitigation Monitoring and Reporting Program

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
AIR QUALITY				
MM 3-1: Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Building Department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include: • Requiring fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as: • Requiring use of nontoxic soil stabilizers to reduce wind erosion. • Applying water every four hours to active soil disturbing activities. • Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials. • Using construction equipment rated by the United States Environmental Protection Agency as having Tier 3 or higher exhaust emission limits. • Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.	Project Applicant	Prior to individual project approvals and during construction activities	City of Ontario Planning/Building Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
• Limiting nonessential idling of construction equipment to no more than five consecutive minutes. • Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: http://www.aqmd.gov/prdas/brochures/Super-Compliant_AIM.pdf. These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.				
MM 3-2: The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g., sidewalks).	Project Applicant	Prior to individual project approvals	City of Ontario Building Department	
AQ-1: Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following: • For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions. • Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate	Project Applicant	Prior to individual project approvals	City of Ontario Building Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
applications to optimize renewable energy generation systems and avoid peak energy use. • Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485). • Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures). • Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures). • Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures). • Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures). • Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star–certified or equivalent appliances shall be verified by the City during plan check.				
CULTURAL RESOURCES				
MM 5-1: Historic or potentially historic resources in the City shall be evaluated for historic significance through the City's tier system prior to the issuance of plan or development approval. Pursuant to City's Development Code (Chapter 4, Permit, Actions, and Decisions, and Chapter 7, Historic Preservation), mitigation measures for all Tier III Historic Resources shall include the following: a) Each historic resource shall be fully documented and cataloged pursuant to Historic American Building Survey/Historic American Engineering Record (HABS/HAER) standards, to provide a record of the resource, including, but not limited to: [i] the preparation of site plans, floor plans, exterior and interior elevations, and detail drawings of character defining features (such as moldings, stairs,	Project Applicant	Prior to individual project approvals.	City of Ontario Building Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
etc.); and [ii] photographs of the resource, including the exterior, interior, and interior and exterior character defining features (such as moldings, light fixtures, trim patterns, etc.). b) A mitigation fee established pursuant to Section 7.01.030 (Historic Preservation Mitigation Fee) shall be paid to the City prior to the issuance of a demolition permit for Tier III historic resources. Fees for Tier I and II historic resources shall be determined during the Environmental Impact Report process. The fees established for Tier III will be used as a reference point for establishing fees for Tier I and II historic resources. c) A Certificate of Appropriateness shall not be issued for the demolition of an historic resource, either in whole or in part, until such time that a demolition permit application and a replacement structure has been approved by the City, and appropriate permits have been issued for its construction, unless: [i] a waiver is granted pursuant to Subsection H (Replacement Structure Waiver for Historic Resources Located within Industrial Zoning Districts) of Section 4.02.050; [ii] a deferral of the replacement structure requirement is granted pursuant to Subsection G (Replacement Structure Deferral) of Section 4.02.050; or [iii] demolition is required pursuant to Section 7.01.050 (Unsafe or Dangerous Conditions) of this Development Code. d) In an effort to preserve features and artifacts from historic resources, a determination whether items within or on the resource should be salvaged must be made by the Planning Department and may include the local historical society prior to the issuance of the demolition permit. The applicant shall be responsible for the removal, relocation, storage, and donation of such items selected for salvaging. The applicant shall provide an inventory of salvaged items to the Planning Department, and shall include a list of each item name, description, and dimension (as necessary), and the location of each item on a floor plan.				
MM 5-2: In areas of documented or inferred from evident archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:	Project Applicant	Prior to individual project approvals and during ground disturbing activities	City of Ontario Planning Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities. b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources. c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including catalog with museum numbers.				
NOISE				
MM 12-1: Prior to the issuance of building permits for any project that involves a noise-sensitive use within the 65 dBA CNEL contour of the Ontario International Airport, the Project property owner/developers shall retain an acoustical engineer to conduct an acoustic analysis and identify, where appropriate, site design features and/or required building acoustical improvements (e.g., sound transmission class rated windows, doors, and attic baffling), to ensure compliance with the City's Noise Compatibility Criteria and the California State Building Code and California Noise Insulation Standards (Titles 24 and 21 of the California Code of Regulations	Project Applicant	Prior to issuance of building permits	City of Ontario Planning Department	
MM 12-2: Prior to issuance of a building permit, individual projects that involve vibration-intensive construction activities, such as pile drivers, jack hammers, and vibratory rollers occurring near sensitive receptors shall be evaluated for potential vibration impacts. For construction within 135 feet of fragile structures, such as historical resources, within 100 feet of nonengineered timber and masonry buildings (e.g., most residential buildings), or within 75 feet of engineered concrete and masonry (no plaster); or a vibratory roller within 25 feet of any structure, the project applicant shall prepare a noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to these activities. This noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed Federal Transit Administration (FTA) architectural damage thresholds (e.g., 0.12 inches per second [in/sec] peak particle velocity [PPV] for fragile or historical resources, 0.2 in/sec PPV for nonengineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would	Project Applicant	Prior and during construction	City of Ontario Planning Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
exceed this threshold, alternative uses shall be used, such as drilling piles as opposed to pile driving and static rollers as opposed to vibratory rollers. If necessary, construction vibration monitoring shall be conducted to ensure vibration thresholds are not exceeded.				
MM 12-4: Construction activities associated with new development that occurs near sensitive receptors shall be evaluated for potential noise impacts. Construction contractors shall implement the following measures for construction activities in the City of Ontario. Construction plans submitted to the City shall identify these measures on demolition, grading, and construction plans. The City of Ontario Planning and Building Departments shall verify that grading, demolition, and/or construction plans submitted include these notations prior to issuance of demolition, grading, and/or building permits. • Construction activity is limited to the hours between 7:00 am and 6:00 pm Monday through Friday and 9:00 am to 6:00 pm • Saturdays and Sundays, as prescribed in Municipal Code Section 5-29.09. • During the entire active construction period, equipment and trucks used for project construction shall use the best-available noise control techniques wherever feasible (e.g., improved mufflers, equipment re-design, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds). • Impact tools (e.g., jack hammers and hoe rams) shall be hydraulically or electrically powered wherever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools. • Stationary equipment such as generators and air compressors shall be located as far as feasible from nearby noise-sensitive uses. • Stockpiling shall be located as far as feasible from nearby noise-sensitive receptors. • Construction traffic shall be limited, to the extent feasible, to approved haul routes established by the City's Engineering Department.	Project Applicant	Prior and during construction	City of Ontario Planning Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
• At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report the action to the City. • Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes. • During the entire active construction period and to the extent feasible, the use of noise-producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level or switch off back-up alarms and replace with human spotters in compliance with all safety requirements and laws. • Erect temporary noise barriers (at least as high as the exhaust of equipment and breaking line-of-sight between noise sources and sensitive receptors), as necessary and feasible, to maintain construction noise levels at or below the performance standard of 80 dBA Leq. Barriers shall be constructed with a solid material that has a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier and may be lined on the construction side with an acoustical blanket, curtain, or equivalent absorptive material.				
TRIBAL CULTURAL RESOURCES				
MM 5-4: Prior to the issuance of grading permits for a proposed project for which the CEQA document defines cultural resource mitigation for potential tribal resources, the project applicant shall contact the designated tribe(s) to notify them of the grading, excavation, and monitoring program. The applicant shall coordinate with the City of Ontario and the tribal representative(s) to develop mitigation measures that address the designation, responsibilities,	Project Applicant	Prior to issuance of grading permit(s)	City of Ontario Planning Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
and participation of tribal monitors during grading, excavation, and ground-disturbing activities; scheduling; terms of compensation; and treatment and final disposition of any cultural resources, sacred sites, and human remains discovered on the site. The City of Ontario shall be the final arbiter of the conditions for projects within the City's jurisdiction.				
TRC-1: Tribal Cultural Resources Monitoring. The project archaeologist, in consultation with interested tribes, the developer, and the City of Ontario, shall develop an archaeological monitoring plan (AMP) to address the details, timing, and responsibility of archaeological and cultural activities that will occur on the project site. Details in the AMP shall include: 1. Project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) and development scheduling; 2. The development of a rotating or simultaneous schedule in coordination with the developer and the project archeologist for designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all project archaeologists (if the tribes cannot come to an agreement on the rotating or simultaneous schedule of tribal monitoring, the Native American Heritage Commission shall designate the schedule for the onsite Native American Tribal Monitor for the proposed project); 3. The protocols and stipulations that the developer, City, Tribes, and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation. At least 30 days prior to application for a grading permit and before any brush clearance, grading, excavation, and/or ground disturbing activities on the site, the developer shall retain a tribal cultural monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources. Pursuant to the AMP, a tribal monitor from the consulting tribe shall be present during the initial grading activities. If tribal resources are found during grubbing activities, the tribal monitoring shall be present during site grading activities.	Project Applicant	Prior to and during construction	City of Ontario Planning Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
TRC-2: Treatment and Disposition of Cultural Resources. In the event that Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., for the proposed project, the following procedures will be carried out for treatment and disposition of the discoveries: 1. Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process; 2. Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and nonhuman remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Ontario with evidence of same: a. Accommodate the process for on-site reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloging, basic analysis, other analyses as recommended by the project archaeologist and approved by consulting tribes, and basic recordation have been completed; all documentation should be at a level of standard professional practice to allow the writing of a report of professional quality; b. A curation agreement with an appropriate qualified repository in San Bernardino County that meets federal standards per 36 CFR Part 79, and therefore the resource would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility in San Bernardino County, to be accompanied by payment of the fees necessary for permanent curation; c. For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project	Project Applicant	During construction	City of Ontario Planning Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
and cannot come to an agreement as to the disposition of cultural materials, materials shall be curated at the San Bernardino County Museum by default; d. At the completion of grading, excavation, and ground-disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pregrade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the City, County Museum, and consulting tribes.

1 INTRODUCTION

This report documents the results of an Air Quality Assessment completed for Watermarke Ontario Planned Unit Development Project (Project). The purpose of this Air Quality Assessment is to evaluate the potential construction and operational emissions associated with the Project and determine the level of impact the Project would have on the environment.

This analysis has been undertaken to analyze whether the proposed Project would result in any new or substantially more severe significant environmental impacts as compared to the conclusions discussed in The Ontario Plan 2050, certified Final Supplemental Environmental Impact Report (General Plan EIR) (State Clearinghouse No. 2021070364). The purpose of this analysis is to support an Addendum EIR that will document whether any new air quality-related impacts would occur from the Project (described below) compared to the level of significance that was identified in the General Plan EIR pursuant to State California Environmental Quality Act (CEQA) Guidelines Section 15162 (et seq.).

1.1 Project Location

The project site is located on the northeast corner of the intersection of Mountain Avenue and 4th Street. The project site currently consists of a United States Post Office building and a commercial building with various retail uses. The City of Ontario is located in the San Bernardino Valley within San Bernardino County approximately 60 miles east of Los Angeles, California; see Exhibit 1: Regional Location Map and Exhibit 2: Project Vicinity Map.

1.2 Project Description

The applicant proposes to demolish the existing uses and proposes the development of a four-story Type V warp building containing multifamily residential and retail uses as well as a six level Type III above grade parking structure. The Project would include the development of 357 multi-family dwelling units, approximately 2,700 square feet (sf) of leasing, 5,700 sf of amenity space, and 3,800 sf of retail on 5.8 acres; refer to Exhibit 3: Conceptual Site Plan.

2 ENVIRONMENTAL SETTING

2.1 Climate and Meteorology

The California Air Resources Board (CARB) divides the State into 15 air basins that share similar meteorological and topographical features. The Project is located within the South Coast Air Basin (SCAB), which includes the non-desert portions of Los Angeles, Riverside, and San Bernardino counties, as well as all of Orange County. The SCAB is on a coastal plain with connecting broad valleys and low hills, bounded by the Pacific Ocean on the southwest and high mountains forming the remainder of the perimeter[1]. Air quality in this area is determined by such natural factors as topography, meteorology, and climate, in addition to the presence of existing air pollution sources and ambient conditions. These factors along with applicable regulations are discussed below.

The SCAB is part of a semi-permanent high-pressure zone in the eastern Pacific. As a result, the climate is mild and tempered by cool sea breezes. This usually mild weather pattern is occasionally interrupted by periods of extreme heat, winter storms, and Santa Ana winds. The annual average temperature throughout the 6,645-square-mile SCAB ranges from low 60 to high 80 degrees Fahrenheit with little variance. With more oceanic influence, coastal areas show less variability in annual minimum and maximum temperatures than inland areas.

Contrasting the steady pattern of temperature, rainfall is seasonally and annually highly variable. Almost all annual rainfall occurs between the months of November and April. Summer rainfall is reduced to widely scattered thundershowers near the coast, with slightly heavier activity in the east and over the mountains.

Although the SCAB has a semiarid climate, the air closer to the Earth's surface is typically moist because of the presence of a shallow marine layer. Except for occasional periods when dry, continental air is brought into the SCAB by offshore winds, the "ocean effect" is dominant. Periods of heavy fog are frequent and low clouds known as high fog are characteristic climatic features, especially along the coast. Annual average humidity is 70 percent at the coast and 57 percent in the eastern portions of the SCAB.

Wind patterns across the SCAB are characterized by westerly or southwesterly on-shore winds during the day and easterly or northeasterly breezes at night. Wind speed is typically higher during the dry summer months than during the rainy winter. Between periods of wind, air stagnation may occur in both the morning and evening hours. Air stagnation is one of the critical determinants of air quality conditions on any given day. During winter and fall, surface high-pressure systems over the SCAB, combined with other meteorological conditions, result in very strong, downslope Santa Ana winds. These winds normally continue for a few days before predominant meteorological conditions are re-established.

The mountain ranges to the east affect the diffusion of pollutants by inhibiting the eastward transport of pollutants. Air quality in the SCAB generally ranges from fair to poor and is similar to air quality in most of coastal Southern California. The entire region experiences heavy concentrations of air pollutants during prolonged periods of stable atmospheric conditions.

In addition to the characteristic wind patterns that affect the rate and orientation of horizontal pollutant transport, two distinct types of temperature inversions control the vertical depth through which air pollutants are mixed. These inversions are the marine inversion and the radiation inversion. The height of

[1] South Coast Air Quality Management District, *CEQA Air Quality Handbook*, 1993.

the base of the inversion at any given time is called the "mixing height." The combination of winds and inversions is a critical determinant leading to highly degraded air quality for the SCAB in the summer and generally good air quality in the winter.

2.2 Air Pollutants of Concern

The air pollutants emitted into the ambient air by stationary and mobile sources are regulated by state and federal laws. These regulated air pollutants are known as "criteria air pollutants" and are categorized into primary and secondary pollutants.

Primary air pollutants are emitted directly from sources. Carbon monoxide (CO), reactive organic gases (ROG), nitrogen oxide (NO_X), sulfur dioxide (SO_2), coarse particulate matter (PM_{10}), fine particulate matter ($PM_{2.5}$), and lead are primary air pollutants. Of these, CO, NO_X, SO_2, PM_{10}, and $PM_{2.5}$ are criteria pollutants. ROG and NO_X are criteria pollutant precursors and form secondary criteria pollutants through chemical and photochemical reactions in the atmosphere. For example, the criteria pollutant ozone (O_3) is formed by a chemical reaction between ROG and NO_X in the presence of sunlight. O_3 and nitrogen dioxide (NO_2) are the principal secondary pollutants. Sources and health effects commonly associated with criteria pollutants are summarized in Table 1: Air Contaminants and Associated Public Health Concerns.

Table 1: Air Contaminants and Associated Public Health Concerns

Pollutant	Major Man-Made Sources	Human Health Effects
Particulate Matter (PM_{10} and $PM_{2.5}$)	Power plants, steel mills, chemical plants, unpaved roads and parking lots, wood-burning stoves and fireplaces, automobiles and others.	Increased respiratory symptoms, such as irritation of the airways, coughing, or difficulty breathing; asthma; chronic bronchitis; irregular heartbeat; nonfatal heart attacks; and premature death in people with heart or lung disease. Impairs visibility.
Ozone (O_3)	Formed by a chemical reaction between reactive organic gases/volatile organic compounds (ROG or VOC)[1] and nitrogen oxides (NO_X) in the presence of sunlight. Motor vehicle exhaust industrial emissions, gasoline storage and transport, solvents, paints and landfills.	Irritates and causes inflammation of the mucous membranes and lung airways; causes wheezing, coughing, and pain when inhaling deeply; decreases lung capacity; aggravates lung and heart problems. Damages plants; reduces crop yield.
Sulfur Dioxide (SO_2)	A colorless gas formed when fuel containing sulfur is burned and when gasoline is extracted from oil. Examples are petroleum refineries, cement manufacturing, metal processing facilities, locomotives, and ships.	Respiratory irritant. Aggravates lung and heart problems. In the presence of moisture and oxygen, sulfur dioxide converts to sulfuric acid which can damage marble, iron and steel. Damages crops and natural vegetation. Impairs visibility. Precursor to acid rain.
Carbon Monoxide (CO)	An odorless, colorless gas formed when carbon in fuel is not burned completely; a component of motor vehicle exhaust.	Reduces the ability of blood to deliver oxygen to vital tissues, affecting the cardiovascular and nervous system. Impairs vision, causes dizziness, and can lead to unconsciousness or death.
Nitrogen Dioxide (NO_2)	A reddish-brown gas formed during fuel combustion for motor vehicles and industrial sources. Sources include motor vehicles, electric utilities, and other sources that burn fuel.	Respiratory irritant; aggravates lung and heart problems. Precursor to O_3. Contributes to global warming and nutrient overloading which deteriorates water quality. Causes brown discoloration of the atmosphere.
Lead (Pb)	Lead is a metal found naturally in the environment as well as in manufactured products. The major sources of lead	Exposure to lead occurs mainly through inhalation of air and ingestion of lead in food, water, soil, or dust. It accumulates in the blood,

Table 1: Air Contaminants and Associated Public Health Concerns		
Pollutant	**Major Man-Made Sources**	**Human Health Effects**
	emissions have historically been motor vehicles (such as cars and trucks) and industrial sources. Due to the phase out of leaded gasoline, metals processing is the major source of lead emissions to the air today. The highest levels of lead in air are generally found near lead smelters. Other stationary sources are waste incinerators, utilities, and lead-acid battery manufacturers.	bones, and soft tissues and can adversely affect the kidneys, liver, nervous system, and other organs. Excessive exposure to lead may cause neurological impairments such as seizures, mental retardation, and behavioral disorders. Even at low doses, lead exposure is associated with damage to the nervous systems of fetuses and young children, resulting in learning deficits and lowered IQ.
[1] Volatile Organic Compounds (VOCs or Reactive Organic Gases [ROG]) are hydrocarbons/organic gases that are formed solely of hydrogen and carbon. There are several subsets of organic gases including ROGs and VOCs. Both ROGs and VOCs are emitted from the incomplete combustion of hydrocarbons or other carbon-based fuels. The major sources of hydrocarbons are combustion engine exhaust, oil refineries, and oil-fueled power plants; other common sources are petroleum fuels, solvents, dry cleaning solutions, and paint (via evaporation).		
Source: California Air Pollution Control Officers Association (CAPCOA), *Health Effects*, http://www.capcoa.org/health-effects/, Accessed June 2023.		

Toxic Air Contaminants

Toxic air contaminants (TACs) are airborne substances that can cause short-term (acute) or long-term (i.e. chronic, carcinogenic or cancer causing) adverse human health effects (i.e. injury or illness). TACs include both organic and inorganic chemical substances. They may be emitted from a variety of common sources including gasoline stations, automobiles, dry cleaners, industrial operations, and painting operations. The current California list of TACs includes more than 200 compounds, including particulate emissions from diesel-fueled engines.

CARB identified diesel particulate matter (DPM) as a toxic air contaminant. DPM differs from other TACs in that it is not a single substance but rather a complex mixture of hundreds of substances. Diesel exhaust is a complex mixture of particles and gases produced when an engine burns diesel fuel. DPM is a concern because it causes lung cancer; many compounds found in diesel exhaust are carcinogenic. DPM includes the particle-phase constituents in diesel exhaust. The chemical composition and particle sizes of DPM vary between different engine types (heavy-duty, light-duty), engine operating conditions (idle, accelerate, decelerate), fuel formulations (high/low sulfur fuel), and the year of the engine. Some short-term (acute) effects of diesel exhaust include eye, nose, throat, and lung irritation, and diesel exhaust can cause coughs, headaches, light-headedness, and nausea. DPM poses the greatest health risk among the TACs. Almost all diesel exhaust particle mass is 10 microns or less in diameter. Due to their extremely small size, these particles can be inhaled and eventually trapped in the bronchial and alveolar regions of the lung.

Ambient Air Quality

CARB monitors ambient air quality at approximately 250 air monitoring stations across the State. These stations usually measure pollutant concentrations ten feet above ground level; therefore, air quality is often referred to in terms of ground-level concentrations. Existing levels of ambient air quality, historical trends, and projections near the Project are documented by measurements made by the South Coast Air Quality Management District (SCAQMD), the air pollution regulatory agency in the SCAB that maintains air quality monitoring stations which process ambient air quality measurements.

Pollutants of concern in the SCAB include O_3, PM_{10}, and $PM_{2.5}$. The closest air monitoring station to the Project that monitors ambient concentrations of these pollutants is the Mira Loma Van Buren Monitoring

Station (located approximately 9 miles from the Project site). Local air quality data from 2019 to 2021 are provided in Table 2: Ambient Air Quality Data, which lists the monitored maximum concentrations and number of exceedances of state or federal air quality standards for each year.

Table 2: Ambient Air Quality Data

Criteria Pollutant	2019	2020	2021
Ozone (O_3) [1]			
1-hour Maximum Concentration (ppm)	0.131	0.158	0.124
8-hour Maximum Concentration (ppm)	0.107	0.123	0.100
Number of Days Standard Exceeded			
CAAQS 1-hour (>0.09 ppm)	31	82	42
NAAQS 8-hour (>0.070 ppm)	52	116	78
Carbon Monoxide (CO) [1]			
1-hour Maximum Concentration (ppm)	1.45	1.54	0.89
Number of Days Standard Exceeded			
NAAQS 1-hour (>35 ppm)	0	0	0
CAAQS 1-hour (>20 ppm)	0	0	0
Nitrogen Dioxide (NO_2) [1]			
1-hour Maximum Concentration (ppm)	0.0579	0.0554	0.0646
Number of Days Standard Exceeded			
NAAQS 1-hour (>0.100 ppm)	0	0	0
CAAQS 1-hour (>0.18 ppm)	0	0	0
Particulate Matter Less Than 10 Microns (PM_{10}) [1]			
National 24-hour Maximum Concentration	125.9	174.8	124.3
State 24-hour Maximum Concentration	—	—	—
State Annual Average Concentration (CAAQS=20 µg/m³)	—	—	—
Number of Days Standard Exceeded			
NAAQS 24-hour (>150 µg/m³)	0	1	0
CAAQS 24-hour (>50 µg/m³)	0	0	0
Particulate Matter Less Than 2.5 Microns ($PM_{2.5}$) [1]			
National 24-hour Maximum Concentration	—	—	—
State 24-hour Maximum Concentration	91.1	74.0	83.8
Number of Days Standard Exceeded			
NAAQS 24-hour (>35 µg/m³)	—	—	—

NAAQS = National Ambient Air Quality Standards; CAAQS = California Ambient Air Quality Standards; ppm = parts per million.
µg/m³ = micrograms per cubic meter; – = not measured

[1] Measurements taken at the Upland Monitoring Station at 1350 San Bernardino Road, Upland, California 91730 (CARB# 060711004)

Source: All pollutant measurements are from the CARB Aerometric Data Analysis and Management system database (https://www.arb.ca.gov/adam) except for CO, which were retrieved from the CARB Air Quality and Meteorological Information System (https://www.arb.ca.gov/aqmis2/aqdselect.php).

2.3 Sensitive Receptors

Sensitive populations are more susceptible to the effects of air pollution than is the general population. Sensitive receptors that are in proximity to localized sources of toxics are of particular concern. Land uses considered sensitive receptors include residences, schools, playgrounds, childcare centers, long-term health care facilities, rehabilitation centers, convalescent centers, and retirement homes. The Project site is mainly surrounded by residential land uses to the north and east, commercial land uses south and west, and a future church (under construction) to the north. Sensitive land uses nearest to the Project are shown in Table 3: Sensitive Receptors.

Table 3: Sensitive Receptors

Receptor Description	Distance and Direction from the Project
Single-family Residences	Adjacent to the east
Single-family Residences	Adjacent to the north
Church	23 feet to the north
Anthony Munoz Park	869 feet to the northwest
Elderberry Elementary School	1,101 feet to the southwest
Hawthorne Elementary School	1,820 feet to the northeast
Chaffey High School	2,869 feet to the east

3 REGULATORY SETTING

3.1 Federal

Federal Clean Air Act

Air quality is federally protected by the Federal Clean Air Act (FCAA) and its amendments. Under the FCAA, the United States Environmental Protection Agency (EPA) developed the primary and secondary National Ambient Air Quality Standards (NAAQS) for the criteria air pollutants including O_3, NO_2, CO, SO_2, PM_{10}, $PM_{2.5}$, and lead. Proposed projects in or near nonattainment areas could be subject to more stringent air-permitting requirements. The FCAA requires each state to prepare a State Implementation Plan to demonstrate how it will attain the NAAQS within the federally imposed deadlines.

The EPA can withhold certain transportation funds from states that fail to comply with the planning requirements of the FCAA. If a state fails to correct these planning deficiencies within two years of Federal notification, the EPA is required to develop a Federal implementation plan for the identified nonattainment area or areas. The provisions of 40 Code of Federal Regulations Parts 51 and 93 apply in all nonattainment and maintenance areas for transportation-related criteria pollutants for which the area is designated nonattainment or has a maintenance plan. Applicable federal standards are summarized in Table 4: State and Federal Ambient Air Quality Standards.

The FCAA was amended in 1990 to address the numerous air pollutants that are known to cause or may reasonably be anticipated to cause adverse effects to human health or adverse environmental effects. 188 specific pollutants and chemical groups were initially identified as hazardous air pollutants (HAPs), and the list has been modified over time. The FCAA Amendments included new regulatory programs to control acid deposition and for the issuance of stationary source operating permits.

In 2001, the U.S. EPA issued its first Mobile Source Air Toxics Rule, which identified 21 mobile source air toxic (MSAT) compounds as being HAPs that required regulation. A subset of six of these MSAT compounds were identified as having the greatest influence on health and included benzene, 1,3-butadiene, formaldehyde, acrolein, acetaldehyde, and DPM. More recently, the U.S. EPA issued a second MSAT Rule in February 2007, which generally supported the findings in the first rule and provided additional recommendations of compounds having the greatest impact on health. The rule also identified several engine emission certification standards that must be implemented. Unlike the criteria pollutants, toxics do not have NAAQS making evaluation of their impacts more subjective.

National Emissions Standards for Hazardous Air Pollutants (NESHAPs) were incorporated into a greatly expanded program for controlling toxic air pollutants. The provisions for the attainment and maintenance of the NAAQS were substantially modified and expanded. Other revisions included provisions regarding stratospheric O_3 protection, increased enforcement authority, and expanded research programs.

Section 112 of the FCAA Amendments governs the federal control program for HAPs. NESHAPs are issued to limit the release of specified HAPs from specific industrial sectors. These standards are technology-based, meaning that they represent the best available control technology an industrial sector could afford. The level of emissions controls required by NESHAPs are not based on health risk considerations because allowable releases and resulting concentrations have not been determined to be safe for the general

public. The FCAA does not establish air quality standards for HAPs that define legally acceptable concentrations of these pollutants in ambient air.

3.2 State of California

California Air Resources Board

CARB administers the air quality policy in California. The California Ambient Air Quality Standards (CAAQS) were established in 1969 pursuant to the Mulford-Carrell Act. These standards, included with the NAAQS in Table 4, are generally more stringent and apply to more pollutants than the NAAQS. In addition to the criteria pollutants, CAAQS have been established for visibility reducing particulates, hydrogen sulfide, and sulfates.

The California Clean Air Act (CCAA), requires that each local air district prepare and maintain an Air Quality Management Plan (AQMP) to achieve compliance with CAAQS. These AQMPs also serve as the basis for the preparation of the State Implementation Plan for meeting federal clean air standards for the State of California. Like the EPA, CARB also designates areas within California as either attainment or nonattainment for each criteria pollutant based on whether the CAAQS have been achieved. Under the CCAA, areas are designated as nonattainment for a pollutant if air quality data shows that a state standard for the pollutant was violated at least once during the previous three calendar years. Exceedances that are affected by highly irregular or infrequent events such as wildfires, volcanoes, etc. are not considered violations of a state standard, and are not used as a basis for designating areas as nonattainment. The applicable State standards are summarized in Table 4.

Table 4: State and Federal Ambient Air Quality Standards

Pollutant	Averaging Time	State Standards[1]	Federal Standards[2]
Ozone (O_3) [2, 5, 7]	8 Hour	0.070 ppm (137 µg/m³)	0.070 ppm
	1 Hour	0.09 ppm (180 µg/m³)	NA
Carbon Monoxide (CO)	8 Hour	9.0 ppm (10 mg/m³)	9 ppm (10 mg/m³)
	1 Hour	20 ppm (23 mg/m³)	35 ppm (40 mg/m³)
Nitrogen Dioxide (NO_2)	1 Hour	0.18 ppm (339 µg/m³)	0.10 ppm[11]
	Annual Arithmetic Mean	0.030 ppm (57 µg/m³)	0.053 ppm (100 µg/m³)
Sulfur Dioxide (SO_2) [8]	24 Hour	0.04 ppm (105 µg/m³)	0.14 ppm (365 µg/m³)
	1 Hour	0.25 ppm (655 µg/m³)	0.075 ppm (196 µg/m³)
	Annual Arithmetic Mean	NA	0.03 ppm (80 µg/m³)
Particulate Matter (PM_{10}) [1, 3, 6]	24-Hour	50 µg/m³	150 µg/m³
	Annual Arithmetic Mean	20 µg/m³	NA
Fine Particulate Matter ($PM_{2.5}$) [3, 4, 6, 9]	24-Hour	NA	35 µg/m³
	Annual Arithmetic Mean	12 µg/m³	12 µg/m³
Sulfates (SO_{4-2})	24 Hour	25 µg/m³	NA
Lead (Pb) [10, 11]	30-Day Average	1.5 µg/m³	NA
	Calendar Quarter	NA	1.5 µg/m³
	Rolling 3-Month Average	NA	0.15 µg/m³
Hydrogen Sulfide (H_2S)	1 Hour	0.03 ppm (42 µg/m³)	NA
Vinyl Chloride (C_2H_3Cl) [10]	24 Hour	0.01 ppm (26 µg/m³)	NA

Notes:

ppm = parts per million; µg/m³ = micrograms per cubic meter; mg/m³ = milligrams per cubic meter; – = no information available.

1 California standards for O_3, carbon monoxide (except Lake Tahoe), sulfur dioxide (1-hour and 24-hour), nitrogen dioxide, suspended particulate matter - PM_{10}, and visibility reducing particles are values that are not to be exceeded. The standards for sulfates, Lake Tahoe carbon monoxide, lead, hydrogen sulfide, and vinyl chloride are not to be equaled or exceeded. If the standard is for a 1-hour, 8-hour or 24-hour average (i.e. all standards except for lead and the PM_{10} annual standard), then some measurements may be excluded. Measurements are excluded that CARB determines would occur less than once per year on the average. The Lake Tahoe carbon monoxide standard is 6.0 ppm, a level one-half the national standard and two-thirds the State standard.

2 National standards shown are the "primary standards" designed to protect public health. National standards other than for O_3, particulates and those based on annual averages are not to be exceeded more than once a year. The 1-hour O_3 standard is attained if, during the most recent three-year period, the average number of days per year with maximum hourly concentrations above the standard is equal to or less than one. The 8-hour O_3 standard is attained when the 3-year average of the 4th highest daily concentrations is 0.070 ppm or less. The 24-hour PM_{10} standard is attained when the 3-year average of the 99th percentile of monitored concentrations is less than 150 µg/m$_3$. The 24-hour $PM_{2.5}$ standard is attained when the 3-year average of 98th percentiles is less than 35 µg/m³.

3 Except for the national particulate standards, annual standards are met if the annual average falls below the standard at every site. The national annual particulate standard for PM_{10} is met if the 3-year average falls below the standard at every site. The annual $PM_{2.5}$ standard is met if the 3-year average of annual averages spatially-averaged across officially designed clusters of sites falls below the standard. NAAQS are set by the EPA at levels determined to be protective of public health with an adequate margin of safety.

4 On October 1, 2015, the national 8-hour O_3 primary and secondary standards were lowered from 0.075 to 0.070 ppm. An area will meet the standard if the fourth-highest maximum daily 8-hour O_3 concentration per year, averaged over three years, is equal to or less than 0.070 ppm. EPA will make recommendations on attainment designations by October 1, 2016, and issue final designations October 1, 2017. Nonattainment areas will have until 2020 to late 2037 to meet the health standard, with attainment dates varying based on the O_3 level in the area.

5 The national 1-hour O_3 standard was revoked by the EPA on June 15, 2005.

6 In June 2002, CARB established new annual standards for $PM_{2.5}$ and PM_{10}.

7 The 8-hour California O_3 standard was approved by the CARB on April 28, 2005 and became effective on May 17, 2006.

8 On June 2, 2010, the EPA established a new 1-hour SO_2 standard, effective August 23, 2010, which is based on the 3-year average of the annual 99th percentile of 1-hour daily maximum concentrations. The existing 0.030 ppm annual and 0.14 ppm 24-hour SO_2 NAAQS however must continue to be used until one year following EPA initial designations of the new 1-hour SO_2 NAAQS.

9 In December 2012, EPA strengthened the annual $PM_{2.5}$ NAAQS from 15.0 to 12.0 µg/m³. In December 2014, the EPA issued final area designations for the 2012 primary annual $PM_{2.5}$ NAAQS. Areas designated "unclassifiable/attainment" must continue to take steps to prevent their air quality from deteriorating to unhealthy levels. The effective date of this standard is April 15, 2015.

10 CARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure below which there are no adverse health effects determined.

11 National lead standards, rolling 3-month average: final rule signed October 15, 2008. Final designations effective December 31, 2011.

3.3 Regional

South Coast Air Quality Management District

The SCAQMD is the air pollution control agency for Orange County and the urban portions of Los Angeles, Riverside, and San Bernardino Counties. The agency's primary responsibility is ensuring that state and federal ambient air quality standards are attained and maintained in the SCAB. The SCAQMD is also responsible for adopting and enforcing rules and regulations concerning air pollutant sources, issuing permits for stationary sources of air pollutants, inspecting stationary sources of air pollutants, responding to citizen complaints, monitoring ambient air quality and meteorological conditions, awarding grants to reduce motor vehicle emissions, conducting public education campaigns, and many other activities. All projects are subject to SCAQMD rules and regulations in effect at the time of construction.

The SCAQMD is also the lead agency in charge of developing the AQMP, with input from the Southern California Association of Governments (SCAG) and CARB. The AQMP is a comprehensive plan that includes control strategies for stationary and area sources, as well as for on-road and off-road mobile sources. SCAG has the primary responsibility for providing future growth projections and the development and implementation of transportation control measures. CARB, in coordination with federal agencies, provides the control element for mobile sources.

The 2016 AQMP was adopted by the SCAQMD Governing Board on March 3, 2017. The purpose of the AQMP is to set forth a comprehensive and integrated program that would lead the SCAB into compliance with the federal 24-hour $PM_{2.5}$ air quality standard, and to provide an update to the SCAQMD's commitments towards meeting the federal 8-hour O_3 standards. Specifically, the 2016 AQMP covers the following federal standards: 1979 1-hour O_3 NAAQS, 1997 8-hour O_3 NAAQS, 2006 24-hour $PM_{2.5}$ NAAQS, 2008 8-hour O_3 NAAQS, and the 2012 annual $PM_{2.5}$ NAAQS.

On October 1, 2015, the U.S. EPA strengthened the NAAQS for ground-level O_3. The 2022 AQMP, adopted by the SCAQMD Governing Board on December 2, 2022, was developed to address the requirements for meeting the 2015 8-hour O_3 standard. The 2022 AQMP builds upon measures already in place from previous AQMPs. It also includes a variety of additional strategies such as regulation, accelerated deployment of available cleaner technologies (e.g., zero emissions technologies, when cost-effective and feasible, and low NO_X technologies in other applications), best management practices, co-benefits from existing programs (e.g., climate and energy efficiency), incentives, and other FCAA measures to achieve the 2015 8-hour ozone standard. The 2022 AQMP incorporates the latest scientific and technological information and planning assumptions, including the *2020-2045 Regional Transportation Plan/Sustainable Communities Strategy* (RTP/SCS) and updated emission inventory methodologies for various source categories. The 2022 AQMP requires CARB's adoption before submittal for the U.S. EPA's final approval, which is expected to occur sometime in 2023.

The SCAQMD has published the *CEQA Air Quality Handbook* (approved by the SCAQMD Governing Board in 1993 and augmented with guidance for Local Significance Thresholds [LST] in 2008). The SCAQMD guidance helps local government agencies and consultants to develop environmental documents required by California Environmental Quality Act (CEQA) and provides identification of suggested thresholds of significance for criteria pollutants for both construction and operation (see discussion of thresholds below). With the help of the *CEQA Air Quality Handbook* and associated guidance, local land use planners and consultants are able to analyze and document how proposed and existing projects affect air quality

in order to meet the requirements of the CEQA review process. The SCAQMD periodically provides supplemental guidance and updates to the handbook on their website.

The SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino, and Imperial Counties and serves as a forum for regional issues relating to transportation, the economy, community development, and the environment. Under federal law, SCAG is designated as a Metropolitan Planning Organization and under State law as a Regional Transportation Planning Agency and a Council of Governments.

The state and federal attainment status designations for the SCAB are summarized in Table 5: South Coast Air Basin Attainment Status. The SCAB is currently designated as a nonattainment area with respect to the State O_3, PM_{10}, and $PM_{2.5}$ standards, as well as the federal 8-hour O_3 and $PM_{2.5}$ standards. The SCAB is designated as attainment or unclassified for the remaining state and federal standards.

Table 5: South Coast Air Basin Attainment Status

Pollutant	State	Federal
Ozone (O_3) (1 Hour Standard)	Non-Attainment	Non-Attainment (Extreme)
Ozone (O_3) (8 Hour Standard)	Non-Attainment	Non-Attainment (Extreme)
Particulate Matter ($PM_{2.5}$) (24 Hour Standard)	–	Non-Attainment (Serious)
Particulate Matter ($PM_{2.5}$) (Annual Standard)	Non-Attainment	Non-Attainment (Moderate)
Particulate Matter (PM_{10}) (24 Hour Standard)	Non-Attainment	Attainment (Maintenance)
Particulate Matter (PM_{10}) (Annual Standard)	Non-Attainment	–
Carbon Monoxide (CO) (1 Hour Standard)	Attainment	Attainment (Maintenance)
Carbon Monoxide (CO) (8 Hour Standard)	Attainment	Attainment (Maintenance)
Nitrogen Dioxide (NO_2) (1 Hour Standard)	Attainment	Unclassifiable/Attainment
Nitrogen Dioxide (NO_2) (Annual Standard)	Attainment	Attainment (Maintenance)
Sulfur Dioxide (SO_2) (1 Hour Standard)	Attainment	Unclassifiable/Attainment
Sulfur Dioxide (SO_2) (24 Hour Standard)	Attainment	–
Lead (Pb) (30 Day Standard)	–	Unclassifiable/Attainment
Lead (Pb) (3 Month Standard)	Attainment	–
Sulfates (SO_{4-2}) (24 Hour Standard)	Attainment	–
Hydrogen Sulfide (H_2S) (1 Hour Standard)	Unclassified	–

Source: South Coast Air Quality Management District, *Air Quality Management Plan*, 2022; United States Environmental Protection Agency, *Nonattainment Areas for Criteria Pollutants (Green Book)*, 2022.

The following is a list of SCAQMD rules that are required of construction activities associated with the Project:

- **Rule 402 (Nuisance)** – This rule prohibits the discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health, or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. This rule does not apply to odors emanating from agricultural operations necessary for the growing of crops or the raising of fowl or animals.

- **Rule 403 (Fugitive Dust)** – This rule requires fugitive dust sources to implement best available control measures for all sources, and all forms of visible particulate matter are prohibited from crossing any property line. This rule is intended to reduce PM_{10} emissions from any transportation, handling, construction, or storage activity that has the potential to generate fugitive dust. PM_{10} suppression techniques are summarized below.
    a) Portions of a construction site to remain inactive longer than a period of three months will be seeded and watered until grass cover is grown or otherwise stabilized.
    b) All on-site roads will be paved as soon as feasible or watered periodically or chemically stabilized.
    c) All material transported off-site will be either sufficiently watered or securely covered to prevent excessive amounts of dust.
    d) The area disturbed by clearing, grading, earthmoving, or excavation operations will be minimized at all times.
    e) Where vehicles leave a construction site and enter adjacent public streets, the streets will be swept daily or washed down at the end of the work day to remove soil tracked onto the paved surface.

- **Rule 445, Wood Burning** – Rule 445 prohibits permanently installed wood-burning devices into any new development. A wood-burning device means any fireplace, wood burning heater, or pellet-fueled wood heater, or any similarly enclosed, permanently installed, indoor or outdoor device burning any solid fuel for aesthetic or space-heating purposes, which has a heat input of less than one million British thermal units per hour.

- **Rule 1113 (Architectural Coatings)** – This rule requires manufacturers, distributors, and end users of architectural and industrial maintenance coatings to reduce ROG emissions from the use of these coatings, primarily by placing limits on the ROG content of various coating categories.

3.4 Local

The Ontario Plan 2050 (City of Ontario General Plan)

The Ontario Plan 2050 contains the following goals and policies that address air quality:

<u>The Ontario Plan 2050, Environmental Resources Element</u>

Goal ER-4 *Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.*

Policy ER-4.1 Land Use. We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.

Policy ER-4.2 Sensitive Land Uses. We prohibit the future siting of sensitive land uses within the distances defined by the California Air Resources Board for specific source categories, without sufficient mitigation.

Policy ER-4.4 Indoor Air Quality. We will comply with State Green Building Codes relative to indoor air quality. We seek funding to improve indoor air quality for households with poor indoor air quality, with priority for lower income households in environmental justice areas.

Policy ER-4.6 Particulate Matter. We support efforts to reduce particulate matter to meet State and Federal Clean Air Standards.

Policy ER-4.7 Other Agency Collaboration. We collaborate with other agencies within the South Coast Air Basin to improve regional air quality at the emission source, with a particular focus on sources that affect environmental justice areas in Ontario.

4 SIGNIFICANCE CRITERIA AND METHODOLOGY

4.1 Air Quality Thresholds

Based upon the criteria derived from Appendix G of the CEQA Guidelines, a Project normally would have a significant effect on the environment if it would:

- Conflict with or obstruct implementation of the applicable air quality plan.
- Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in nonattainment under an applicable state or federal ambient air quality standard.
- Expose sensitive receptors to substantial pollutant concentrations.
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.
- Exceed SCAQMD Thresholds

SCAQMD Thresholds

The significance criteria established by SCAQMD may be relied upon to make the above determinations. According to the SCAQMD, an air quality impact is considered significant if the Project would violate any ambient air quality standard, contribute substantially to an existing or projected air quality violation, or expose sensitive receptors to substantial pollutant concentrations. The SCAQMD has established thresholds of significance for air quality during construction and operational activities of land use development projects, as shown in Table 6: South Coast Air Quality Management District Emissions Thresholds.

Table 6: South Coast Air Quality Management District Emissions Thresholds

Criteria Air Pollutants and Precursors	Construction-Related	Operational-Related
	(Maximum Pounds Per Day)	
Reactive Organic Gases (ROG)	75	55
Carbon Monoxide (CO)	550	550
Nitrogen Oxides (NO_X)	100	55
Sulfur Oxides (SO_X)	150	150
Coarse Particulates (PM_{10})	150	150
Fine Particulates ($PM_{2.5}$)	55	55

Source: South Coast Air Quality Management District, *South Coast AQMD Air Quality Significance Thresholds*.

Localized Carbon Monoxide

In addition to the daily thresholds listed above, development associated with the Project would also be subject to the ambient air quality standards. These are addressed though an analysis of localized CO impacts. The significance of localized impacts depends on whether ambient CO levels near the Project site are above state and federal CO standards (the more stringent California standards are 20 ppm for 1-hour and 9 ppm for 8-hour). The SCAB has been designated as attainment under the 1-hour and 8-hour standards.

Localized Significance Thresholds

In addition to the CO hotspot analysis, the SCAQMD developed LSTs in response to SCAQMD Governing Boards' Environmental Justice Enhancement Initiative (I-4). The SCAQMD provided the *Final Localized Significance Threshold Methodology* (dated June 2003 [revised 2008]) for guidance. The LST methodology assists lead agencies in analyzing localized impacts associated with Project-specific emissions. The SCAQMD developed LSTs for emissions of NO_2, CO, PM_{10}, and $PM_{2.5}$ generated at new development sites (off-site mobile source emissions are not included in the LST analysis). LSTs represent the maximum emissions that can be generated at a project without expecting to cause or substantially contribute to an exceedance of the most stringent state or federal ambient air quality standards. LSTs are based on the ambient concentrations of that pollutant within the Project source receptor area (SRA), as demarcated by the SCAQMD, and the distance to the nearest sensitive receptor. LST analysis for construction is applicable for all projects that disturb 5 acres or less on a single day. The City of Ontario is located within SCAQMD SRA 33, Southwest San Bernardino Valley. Table 7: Local Significance Thresholds for Construction/Operations shows the LSTs for a 1-acre, 2-acre, 3.5-acre (interpolated), and 5-acre project in SRA 34. Because the nearest sensitive receptors are adjacent to the east of the Project site, the thresholds for distances of 25 meters or less are listed below.

Table 7: Local Significance Thresholds for Construction/Operations

Project Size	(Maximum Pounds Per Day)			
	Nitrogen Oxide (NO_X)	Carbon Monoxide (CO)	Coarse Particulates (PM_{10})	Fine Particulates ($PM_{2.5}$)
1 Acre	118/118	863/863	5/2	4/1
2 Acres	170/170	1,232/1,232	6/2	5/2
3.5 Acres	220/220	1,713/1,713	11/3	7/2
5 Acres	270/270	2,193/2,193	16/4	9/2

Source: South Coast Air Quality Management District, *Localized Significance Threshold Methodology,* July 2008.

LSTs associated with all acreage categories are provided in Table 7 for informational purposes. Table 7 shows that the LSTs increase as acreages increase. It should be noted that LSTs are screening thresholds and are therefore conservative. The construction LST acreage is determined based daily acreage disturbed. The operational LST acreage is based on the total area of the Project site. Although the Project site is greater than five acres, the 5-acre operational LSTs are conservatively used to evaluate the Project.

4.2 Plans, Programs, and Policies

Plans, programs, and policies (PPP) are based on local, state, or federal requirements that are frequently independent of CEQA review and typically include compliance with the provisions of the Building Code, SCAQMD Rules, etc. The City may impose additional requirements during the approval process, as appropriate. Because PPPs are neither Project specific nor a result of development of the Project, they are not considered to be either project design features or mitigation measures.

PPP AIR-1 New buildings are required to achieve the current California Building Energy Efficiency Standards (Title 24, Part 6) and California Green Building Standards Code (CALGreen) (Title 24, Part 11). The 2022 Building Energy Efficiency Standards became Effective January 1, 2023. The Building Energy Efficiency Standards and CALGreen are updated triennially with a goal to achieve zero net energy for residential buildings and nonresidential buildings in the future.

PPP AIR-2 New buildings are required to adhere to the California Green Building Standards Code (CALGreen) requirement to provide bicycle parking for new non-residential buildings, or meet local bicycle parking ordinances, whichever is stricter (CALGreen Section 5.106.4.1, 14.106.4.1, and Section 5.106.4.1.2).

PPP AIR-3 Construction activities will be conducted in compliance with 13 California Code of Regulations (CCR) Section 2499, which requires that nonessential idling of construction equipment is restricted to five minutes or less.

PPP AIR-4 Construction activities will be conducted in compliance with any applicable SCAQMD rules and regulations, including but not limited to the following:

- Rule 403, Fugitive Dust, for controlling fugitive dust and avoiding nuisance.
- Rule 402, Nuisance, which states that a project shall not "discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property."
- Rule 1113, which limits the volatile organic compound content of architectural coatings.

4.3 Methodology

This air quality impact analysis considers construction and operational impacts associated with the Project. Where criteria air pollutant quantification was required, emissions were modeled using the California Emissions Estimator Model (CalEEMod) 2022. CalEEMod is a Statewide land use emissions computer model designed to quantify potential criteria pollutant emissions associated with both construction and operations from a variety of land use projects. Air quality impacts were assessed according to methodologies recommended by CARB and the SCAQMD.

Construction

Construction equipment, trucks, worker vehicles, and ground-disturbing activities associated with Project construction would generate emissions of criteria air pollutants and precursors. Daily regional construction emissions are estimated by assuming construction occurs at the earliest feasible date (i.e., a conservative estimate of construction activities) and applying off-road, fugitive dust, and on-road emissions factors in CalEEMod. For the purpose of this analysis, the Project is anticipated to commence construction in June 2024 and continue over 30 months.

Operations

Project operations would result in emissions of area sources (consumer products, architectural coating, and landscape equipment), energy sources (natural gas usage), mobile sources (motor vehicles from Project generated vehicle trips), and off-road equipment. Project-generated operational emissions would

be predominantly associated with motor vehicle use. Emissions from each of these categories are discussed below.

- **Area Sources.** Area source emissions would be generated due to consumer products, on-site equipment, architectural coating, and landscaping. Consumer products are various solvents used in non-industrial applications, which emit VOCs during product use. These typically include cleaning supplies, kitchen aerosols, cosmetics, and toiletries. It should be noted that the default area source VOC emission factor developed for CalEEMod is based on a statewide factor. The CalEEMod default emissions rates were used.

- **Energy Sources.** Energy source emissions would be generated due to electricity and natural gas usage associated with the Project. Primary uses of electricity and natural gas by the Project would be from space heating and cooling, water heating, ventilation, lighting, appliances, and electronics. Energy source emissions were calculated in CalEEMod.

- **Mobile Sources.** Mobile sources are emissions from motor vehicles, including tailpipe and evaporative emissions. Depending upon the pollutant being discussed, the potential air quality impact may be of either regional or local concern. For example, ROG, NO_X, PM_{10}, and $PM_{2.5}$ are all pollutants of regional concern. NO_X and ROG react with sunlight to form O_3, known as photochemical smog. Additionally, wind currents readily transport PM_{10} and $PM_{2.5}$. However, CO tends to be a localized pollutant, dispersing rapidly at the source.

  Project-generated vehicle emissions are based on the trip generation within the *Traffic Scoping Agreement for the Proposed Watermarke Ontario Project in the City of Ontario, California* and incorporated into CalEEMod as recommended by the SCAQMD. Project trip generation from the Traffic Scoping Agreement is based on the following Institute of Transportation Engineers (ITE) land use categories:

  - ITE Land Use 220: Multifamily Housing (Low-rise) (357 dwelling units).
  - ITE Land Use 822: Strip Retail Plaza (3.8 thousand square feet).

  The Project would generate a total of 2,603 daily trips. When accounting for pass-by trips and trips from the existing uses, the Project would generate 1,269 new daily trips.

As discussed above, the SCAQMD provides significance thresholds for emissions associated with proposed Project construction and operations. The proposed Project's construction and operational emissions are compared to the daily criteria pollutant emissions significance thresholds in order to determine the significance of a Project's impact on regional air quality.

Localized Significance Thresholds

The localized effects from the Project's on-site emissions were evaluated in accordance with the SCAQMD's LST methodology, which uses on-site mass emissions rate look-up tables and Project-specific modeling. LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standards and are developed based on the ambient concentrations of that pollutant for each source receptor area and distance to the nearest sensitive receptor.

5 POTENTIAL IMPACTS AND MITIGATION

5.1 Air Quality Analysis

Previous Significance Determination

The 2022 Final Supplemental EIR for The Ontario Plan 2050 concluded that implementation of The Ontario Plan would result in significant and unavoidable impacts relative to air quality. The EIR determined that the that General Plan would be inconsistent with the AQMP because buildout under the General Plan would contribute to nonattainment of criteria pollutants in the SCAB. Implementation of **MM 3-2** and **AQ-1** would reduce emissions; however, no additional mitigation measures are available that would reduce impacts below SCAQMD thresholds, resulting in a significant and unavoidable impact.

The Certified EIR also determined General Plan would generate construction and operational emissions that would exceed SCAQMD's significance thresholds. **MM 3-1** would reduce construction related emissions to the extent feasible, however individual projects accommodated under the General Plan may exceed SCAQMD construction thresholds resulting in a significant and unavoidable impact. **MM 3-2** and **AQ-1** would reduce operational emissions to the extent feasible, however operational impacts would remain significant and unavoidable impact due to the increase in VOCs from residential development.

Threshold 5.1 Would the Project conflict with or obstruct implementation of the applicable air quality plan?

As part of its enforcement responsibilities, the EPA requires each state with nonattainment areas to prepare and submit a State Implementation Plan that demonstrates the means to attain the federal standards. The State Implementation Plan must integrate federal, state, and local plan components and regulations to identify specific measures to reduce pollution in nonattainment areas, using a combination of performance standards and market-based programs. Similarly, under State law, the CCAA requires an air quality attainment plan to be prepared for areas designated as nonattainment regarding the state and federal ambient air quality standards. Air quality attainment plans outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date.

The Project is located within the SCAB, which is under the jurisdiction of the SCAQMD. The SCAQMD is required, pursuant to the FCAA, to reduce emissions of criteria pollutants for which the SCAB is in nonattainment. To reduce such emissions, the SCAQMD drafted the 2016 AQMP and 2022 AQMP. The 2016 AQMP establishes a program of rules and regulations directed at reducing air pollutant emissions and achieving CAAQS and NAAQS. The primary purpose of the 2022 AQMP is to identify, develop, and implement strategies and control measures to meet the 2015 8-hour ozone NAAQS. Air quality management planning is a regional and multi-agency effort including the SCAQMD, the CARB, the SCAG, and the EPA. The plan's pollutant control strategies are based on the latest scientific and technical information and planning assumptions, including SCAG's 2020-2045 RTP/SCS, updated emission inventory methodologies for various source categories, and SCAG's latest growth forecasts. SCAG's latest growth forecasts were defined in consultation with local governments and with reference to local general plans. The Project is subject to the SCAQMD's AQMP.

Criteria for determining consistency with the AQMP are defined by the following indicators:

- **Consistency Criterion No. 1**: The Project will not result in an increase in the frequency or severity of existing air quality violations, or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

- **Consistency Criterion No. 2**: The Project will not exceed the assumptions in the AQMP or increments based on the years of the Project build-out phase.

According to the SCAQMD's *CEQA Air Quality Handbook*, the purpose of the consistency finding is to determine if a project is inconsistent with the assumptions and objectives of the regional air quality plans, and thus if it would interfere with the region's ability to comply with CAAQS and NAAQS.

The violations to which Consistency Criterion No. 1 refers are exceedances of CAAQS and NAAQS. As shown in Table 8 and Table 9, the Project would not exceed construction or operation emission standards. Therefore, the Project would not contribute to an existing air quality violation. Thus, the Project is consistent with the first criterion.

Concerning Consistency Criterion No. 2, the AQMP contains air pollutant reduction strategies based on SCAG's latest growth forecasts, and SCAG's growth forecasts were defined in consultation with local governments and with reference to local general plans.

The Project site is currently designated as Mixed Use Neighborhood Activity Hub (MU-NH) which allows for 20 to 75 dwelling units per acre and 1.0 FAR for retail uses. Therefore, the Project is assumed to be consistent with the current AQMP regional emissions inventory for the SCAB. Thus, the Project is consistent with the second criterion. As noted above (and discussed further in Threshold 5.2, below), Project implementation would not result in air pollutant emissions that exceed SCAQMD's construction and operational emission thresholds. In addition, the Project would also not delay timely attainment of air quality standards or interim emission reductions specified in the AQMP. Therefore, the Project would be consistent with the AQMP, resulting in a less than significant impact.

Mitigation Measures: refer to mitigation measures 3-2 and AQ-1 from The Ontario Plan 2050 Final EIR, discussed below under Threshold 5.2.

Level of Significance: Less than significant impact.

Conclusion

Air quality impacts related to the proposed Project are less than the significant and unavoidable impacts identified in The Ontario Plan 2050 Final EIR. No new impact relative to air quality or a substantial increase in the severity of a previously identified significant impact evaluated in the Final EIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Final EIR was certified is available that would alter the Final EIR's significance finding.

Threshold 5.2 Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable state or federal ambient air quality standard?

Construction Emissions

Construction associated with the Project would generate short-term emissions of criteria air pollutants. The criteria pollutants of primary concern within the Project area include O_3-precursor pollutants (i.e. ROG and NO_X) and PM_{10} and $PM_{2.5}$. Construction-generated emissions are short term and of temporary

duration, lasting only as long as construction activities occur, but would be considered a significant air quality impact if the volume of pollutants generated exceeds the SCAQMD's thresholds of significance.

Construction results in the temporary generation of emissions resulting from site grading, road paving, motor vehicle exhaust associated with construction equipment and worker trips, and the movement of construction equipment, especially on unpaved surfaces. Emissions of airborne particulate matter are largely dependent on the amount of ground disturbance associated with site preparation activities as well as weather conditions and the appropriate application of water. Fugitive dust emissions may have a substantial, temporary impact on local air quality. In addition, fugitive dust may be a nuisance to those living and working in the Project vicinity. Uncontrolled dust from construction can become a nuisance and potential health hazard to those living and working nearby.

The Project's construction emissions were calculated using the CARB-approved CalEEMod computer program, which is designed to model emissions for land use development projects, based on typical construction requirements. See Appendix A: Air Quality for more information regarding the construction assumptions used in this analysis. Predicted maximum daily construction-generated emissions for the Project are summarized in in Table 8: Construction-Related Emissions.

Table 8: Construction-Related Emissions

Construction Year	Emissions (Maximum Pounds Per Day) [1]					
	ROG	NO_X	CO	SO_2	PM_{10}	$PM_{2.5}$
Year 2024	8.48	83.3	79.7	0.13	13.0	7.3
Year 2024	33.0	22.8	54.7	0.06	7.03	2.14
Year 2026	2.73	14.3	41.2	0.04	5.98	1.72
SCAQMD Threshold	*75*	*100*	*550*	*150*	*150*	*55*
Exceed SCAQMD Threshold?	**No**	**No**	**No**	**No**	**No**	**No**

ROG = Reactive Organic Gases; NO_X = Nitrogen Oxides; CO = Carbon Monoxide; SO_2 = Sulfur Dioxide; PM_{10} = Particulate Matter 10 microns in diameter or less; $PM_{2.5}$ = Particulate Matter 2.5 microns in diameter or less

1. SCAQMD Rule 403 Fugitive Dust applied. The Rule 403 reduction/credits include the following: properly maintain mobile and other construction equipment; water exposed surfaces three times daily; and limit speeds on unpaved roads to 15 miles per hour. Reductions percentages from the SCAQMD CEQA Handbook (Tables XI-A through XI-E) were applied. No mitigation was applied to construction equipment. Refer to Appendix A for Model Data Outputs.

Source: CalEEMod version 2022.1.1.14. Refer to Appendix A for model outputs.

As shown in Table 8, all criteria pollutant emissions would remain below their respective thresholds.

Operational Emissions

Project-generated emissions would be primarily associated with motor vehicle use and area sources, such as the use of landscape maintenance equipment and architectural coatings. Long-term operational emissions attributable to the Project are summarized in Table 9: Operational Emissions.

Table 9: Operational Emissions						
Source	**Emissions (Maximum Pounds Per Day)**					
	ROG	**NO_X**	**CO**	**SO_2**	**PM_{10}**	**$PM_{2.5}$**
Mobile	4.63	3.84	33.3	0.08	6.82	1.77
Area Source Emissions	11.0	5.33	34.3	0.03	0.43	0.44
Energy Emissions	0.06	1.01	0.44	0.01	0.08	0.08
Total Emissions	15.69	10.18	68.04	0.12	7.33	2.29
SCAQMD Threshold	*55*	*55*	*550*	*150*	*150*	*55*
Exceeds Threshold?	**No**	**No**	**No**	**No**	**No**	**No**

Source: CalEEMod version 2020.4.0. Refer to Appendix A for model outputs.						

As shown in Table 9, all criteria pollutant emissions would remain below their respective thresholds.

Cumulative Short-Term Emissions

The SCAB is designated nonattainment for O_3, PM_{10}, and $PM_{2.5}$ for State standards and nonattainment for O_3 and $PM_{2.5}$ for Federal standards. Appendix D of the SCAQMD White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution (2003) notes that projects that result in emissions that do not exceed the project-specific SCAQMD regional thresholds of significance should result in a less than significant impact on a cumulative basis unless there is other pertinent information to the contrary. Therefore, if a project is estimated to result in emissions that do not exceed the thresholds, the project's contribution to the cumulative impact on air quality in the SCAB would not be cumulatively considerable. As shown in Table 8, construction emissions of the Project would not exceed the SCAQMD significance thresholds, and the construction impacts would be less than significant levels. Therefore, the proposed Project would not generate a cumulatively considerable contribution to air pollutant emissions during construction.

Cumulative Long-Term Impacts

The SCAQMD has not established separate significance thresholds for cumulative operational emissions. The nature of air emissions is largely a cumulative impact. As a result, no single project is sufficient in size to, by itself, result in nonattainment of ambient air quality standards. Instead, individual project emissions contribute to existing cumulatively significant adverse air quality impacts. The SCAQMD developed the operational thresholds of significance based on the level above which individual project emissions would result in a cumulatively considerable contribution to the SCAB's existing air quality conditions. Therefore, a project that exceeds the SCAQMD operational thresholds would also be a cumulatively considerable contribution to a significant cumulative impact.

As shown in Table 9, the Project operational emissions would not exceed SCAQMD thresholds. As a result, operational emissions associated with the Project would not result in a cumulatively considerable contribution to significant cumulative air quality impacts. Additionally, adherence to SCAQMD rules and regulations would alleviate potential impacts related to cumulative conditions on a project-by-project basis. Project operations would not contribute a cumulatively considerable net increase of any nonattainment criteria pollutant.

Plans, Programs, and Policies:

The following includes existing requirements that are based on local, State, or federal regulations or laws that are frequently required independent of CEQA review. Typical standard conditions and requirements include compliance with the provisions of the Building Code, SCAQMD Rules, etc. The City may impose additional conditions during the approval process, as appropriate. Because these requirements are neither project specific nor a result of project development, they are not Mitigation Measures.

PPP AIR-1 New buildings are required to achieve the current California Building Energy Efficiency Standards (Title 24, Part 6) and California Green Building Standards Code (CALGreen) (Title 24, Part 11).

PPP AIR-2 Construction activities will be conducted in compliance with 13 California Code of Regulations (CCR) Section 2499, which requires that nonessential idling of construction equipment is restricted to five minutes or less.

PPP AIR-3 Construction activities will be conducted in compliance with any applicable SCAQMD rules and regulations, including but not limited to the following:

- Rule 403, Fugitive Dust, for controlling fugitive dust and avoiding nuisance.
- Rule 402, Nuisance, which states that a project shall not "discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property."

- Rule 1113, which limits the volatile organic compound content of architectural coatings.

2022 The Ontario Plan 2050 FEIR Mitigation Measures. The FEIR includes measures to reduce potential impacts associated with the implementation of The Ontario Plan 2050. The following measures from the FEIR are applicable to the proposed Project:

MM 3-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with SCAQMD methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the SCAQMD adopted thresholds of significance, the City of Ontario Building Department shall feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:

- Require fugitive dust control measures that exceed SCAQMD 's Rule 403, such as:
    - Requiring use of nontoxic soil stabilizers to reduce wind erosion
    - Applying water every four hours to active soil disturbing activities

- Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.

- Using construction equipment rated by U.S. EPA as having Tier 4 interim or higher exhaust emission limits.

- Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.

- Limiting nonessential idling of construction equipment to no more than five consecutive minutes.

- Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the SCAQMD's website.

These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.

MM 3-2 The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g., sidewalks).

MM AQ-1 The Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with SCAQMD methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the SCAQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following:

- For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.

- Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use.

- Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485).

- Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures).

- Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).

- Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures).

- Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).
- Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star– certified or equivalent appliances shall be verified by the City during plan check.

Level of Significance: Less than significant impact.

Conclusion

The Project's emissions would not exceed the SCAQMD thresholds during both construction and operations. Thus, the impact would not be cumulatively considerable. Air quality impacts related to the proposed Project are less than the significant and unavoidable impacts identified in The Ontario Plan 2050 Final EIR. No new impacts or a substantial increase in the severity of a previously identified significant impact evaluated in the Final EIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Final EIR was certified is available that would alter the Final EIR's significance finding.

Threshold 5.3 Would the Project expose sensitive receptors to substantial pollutant concentrations?

Localized Construction Significance Analysis

The nearest sensitive receptors are single-family residential dwellings located adjacent to the north and east of the Project site. To identify impacts to sensitive receptors, the SCAQMD recommends addressing LSTs for construction. LSTs were developed in response to SCAQMD Governing Boards' Environmental Justice Enhancement Initiative (I-4). The SCAQMD provided the *Final Localized Significance Threshold Methodology* (dated June 2003 [revised 2008]) for guidance. The LST methodology assists lead agencies in analyzing localized impacts associated with Project-specific emissions.

Since CalEEMod calculates construction emissions based on the number of equipment hours and the maximum daily soil disturbance activity possible for each piece of equipment, Table 10, Equipment-

Specific Grading Rates is used to determine the maximum daily disturbed acreage for comparison to LSTs. The appropriate SRA for the localized significance thresholds is the Southwest San Bernardino Valley (SRA 33) since this area includes the Project. LSTs apply to NO_2, CO, PM_{10}, and $PM_{2.5}$. The SCAQMD produced look-up tables for projects that disturb areas less than or equal to five acres in size. Project construction is anticipated to disturb a maximum of four acres in a single day. As the LST guidance provides thresholds for projects disturbing 1-, 2-, and 5-acres in size and the thresholds increase with size of the site, the LSTs for a 3.5-acre threshold were interpolated and utilized for this analysis.

Table 10: Equipment-Specific Grading Rates

Construction Phase	Equipment Type	Equipment Quantity	Acres Graded per 8-Hour Day	Operating Hours per Day	Acres Graded per Day
Site Preparation	Tractors	4	0.5	8	2.0
	Graders	0	0.5	8	0.0
	Dozers	3	0.5	8	1.5
	Scrapers	0	1	8	0.0
				Total Acres Graded per Day	**3.5**

Source: CalEEMod version 2022.1.1.14. Refer to Appendix A for model outputs.

The SCAQMD's methodology states that "off-site mobile emissions from the Project should not be included in the emissions compared to LSTs." Therefore, only emissions included in the CalEEMod "on-site" emissions outputs were considered. LST thresholds are provided for distances to sensitive receptors of 25, 50, 100, 200, and 500 meters. SCAQMD's LST guidance recommends using the 25-meter threshold for receptors located 25 meters or less from the project site. Therefore, the LSTs for 3.5 acres at 25 meters were used for the construction analysis which is consistent with the SCAQMD LST methodology. Table 11, Localized Significance of Construction Emissions presents the results of unmitigated localized emissions during each construction activity. Table 11 shows that emissions of these pollutants on the peak day of construction would not result in significant concentrations of pollutants at nearby sensitive receptors.

Table 11: Localized Significance of Construction Emissions				
Construction Activity	**Emissions (Maximum Pounds Per Day)[1]**			
	NO_X	**CO**	**PM_{10}**	**$PM_{2.5}$**

Localized Operational Significance Analysis

The operational phase LST protocol applies to on-site emissions sources (area and energy sources). It is noted that the SCAQMD's LSTs are screening thresholds for localized emissions based on location, distance, and site size. LSTs thresholds for receptors located at 25 meters or less in SRA 33 were utilized in this analysis because the closest receptor is located adjacent to the east. Although the Project site is approximately 5.8 acres, the 5-acre LST threshold was also conservatively used for the Project, as the LSTs increase with the size of the site. Table 12, Localized Significance of Operational Emissions shows that the maximum daily emissions of these pollutants during operations would not result in significant concentrations of pollutants at nearby sensitive receptors.

Table 12: Localized Significance of Operational Emissions				
Activity	**Emissions (Maximum Pounds Per Day)**			
	NO_X	**CO**	**PM_{10}**	**$PM_{2.5}$**

Criteria Pollutant Health Impacts

On December 24, 2018, the California Supreme Court issued an opinion identifying the need to provide sufficient information connecting a project's air emissions to health impacts or explain why such information could not be ascertained (*Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502). The SCAQMD has set its CEQA significance thresholds based on the FCAA, which defines a major stationary source (in extreme O_3 nonattainment areas such as the SCAB) as emitting 10 tons per year. The thresholds correlate with the trigger levels for the federal New Source Review (NSR) Program and SCAQMD Rule 1303 for new or modified sources. The NSR Program[2] was created by the FCAA to ensure that stationary sources of air pollution are constructed or modified in a manner that is consistent with attainment of health-based federal ambient air quality standards. The federal ambient air quality standards establish the levels of air quality necessary, with an adequate margin of safety, to protect the public health. Therefore, projects that do not exceed the SCAQMD's LSTs and mass emissions thresholds would not violate any air quality standards or contribute substantially to an existing or projected air quality violation and no criteria pollutant health impacts.

NO_X and ROG are precursor emissions that form O_3 in the atmosphere in the presence of sunlight where the pollutants undergo complex chemical reactions. It takes time and the influence of meteorological conditions for these reactions to occur, so O_3 may be formed at a distance downwind from the sources. Breathing ground-level O_3 can result health effects that include reduced lung function, inflammation of airways, throat irritation, pain, burning, or discomfort in the chest when taking a deep breath, chest tightness, wheezing, or shortness of breath. In addition to these effects, evidence from observational studies strongly indicates that higher daily O_3 concentrations are associated with increased asthma attacks, increased hospital admissions, increased daily mortality, and other markers of morbidity. The consistency and coherence of the evidence for effects upon asthmatics suggests that O_3 can make asthma symptoms worse and can increase sensitivity to asthma triggers.

The SCAQMD's 2022 AQMP focuses on the 2015 8-hour ozone standard with achieving attainment in 2037. The largest source of NO_X emissions (an O_3 precursor) in 2018 were related to on-road sources. The 2022 AQMP also emphasizes a shift in focus beyond on-road emissions to off-road sources. The 2022 AQMP identifies a 67 percent NO_X reduction beyond what we would achieve through current programs by 2037 and about 83 percent below current levels. In order to achieve this, the SCAQMD identifies the need for widespread adoption of zero emissions (ZE) technologies across all mobile sectors and stationary sources.

The control strategy for the 2022 AQMP includes aggressive new regulations and the development of incentive programs to support early deployment of advanced technologies. The two key areas for incentive programs are (1) promoting widespread deployment of available ZE and low NO_X technologies and (2) developing new ZE and ultra-low NO_X technologies for use in cases where the technology is not currently available. SCAQMD will prioritize distribution of incentive funding in environmental justice (EJ) areas and seek opportunities to focus benefits on the most disadvantaged communities. The 2022 AQMP includes a total of 49 control measures. In addition to the NO_X measures, the 2022 AQMP relies on co-benefits from climate and energy efficiency programs for further reductions, limited strategic measures for VOC reductions, and other actions.

[2] Code of Federal Regulation (CFR) [i.e. PSD (40 CFR 52.21, 40 CFR 51.166, 40 CFR 51.165 (b)), Non-attainment NSR (40 CFR 52.24, 40 CFR 51.165, 40 CFR part 51, Appendix S)

The SCAQMD's air quality modeling demonstrates that NO_X reductions prove to be much more effective in reducing O_3 levels and will also lead to significant improvement in $PM_{2.5}$ concentrations. NO_X-emitting stationary sources regulated by the SCAQMD include Regional Clean Air Incentives Market (RECLAIM) facilities (e.g., refineries, power plants, etc.), natural gas combustion equipment (e.g., boilers, heaters, engines, burners, flares) and other combustion sources that burn wood or propane.

There are significant challenges with correlating specific health effects that will occur as a result of a project's significant criteria air pollutant emissions. Generally, models that correlate criteria air pollutant concentrations with specific health effects focus on regulatory decision-making that will apply throughout an entire air basin or region. These models focus on the region-wide health effects of pollutants so that regulators can assess the costs and benefits of adopting a proposed regulation that applies to an entire category of air pollutant sources, rather than the health effects related to emissions from a specific proposed project or source. Because of the scale of these analyses, any one project is likely to have only very small incremental effects which may be difficult to differentiate from the effects of air pollutant concentrations in an entire air basin. In addition, such modeling efforts are costly, and the value of a project-specific analysis may be modest in relation to that cost. Furthermore, the results, while costly to produce, may not be particularly useful. For regional pollutants, it is difficult to trace a particular project's criteria air pollutant emissions to a specific health effect. Moreover, the modeled results may be misleading because the margin of error in such modeling is large enough that, even if the modeled results report a given health effect, the model is sufficiently imprecise that the actual effect may differ from the reported results; that is, the modeled results suggest precision, when in fact available models cannot be that precise on a project level.

As discussed above, the mass emissions thresholds developed by SCAQMD and used by CEQA lead agencies throughout southern California to determine potential significance of project-related regional changes in the environment are not directly indicative of exceedances of applicable ambient air standards. Meteorology, the presence of sunlight, and other complex chemical factors all combine to determine the ultimate concentration and location of O_3 or PM. The effects on ground-level ambient concentrations of pollutants that may be breathed by people are also influenced by the spatial and temporal patterns of the emission sources. In other words, the effect on O_3 and PM concentrations from a given mass of pollutants emitted in one location may vary from the effect if that same mass of pollutants was emitted in an entirely different location in the SCAB. The same effect may be observed when the daily and seasonal variation of emissions is taken into account. Regional-scale photochemical modeling, typically performed only for NAAQS attainment demonstration and rule promulgation, account for these changes in the spatial, temporal, and chemical nature of regional emissions.

Emissions from the construction and operation of the Project would vary by time of day, month, and season, and the majority of Project-related emissions, being generated by mobile sources driving to and from the site, would be emitted throughout a wide area defined by the origins and destinations of people traveling to and from the Project. As SCAQMD has stated, "it takes a large amount of additional precursor emissions to cause a modeled increase in ambient ozone levels over an entire region."[3]

Specifically, for extremely large regional projects, the SCAQMD states that it has been able to correlate potential health outcomes for very large emissions sources – as part of their rulemaking activity, specifically 6,620 pounds per day of NO_X and 89,180 pounds per day of VOC were expected to result in approximately 20 premature deaths per year and 89,947 school absences due to O_3. Based on its recent

[3] Ibid. Page 34.

experiences applying regional scale models to relatively small increase in emissions, SCAQMD's Amicus Brief in the Friant Ranch case stated: "[A] project emitting only 10 tons per year of NO_X or VOC is small enough that its regional impact on ambient ozone levels may not be detected in the regional air quality models that are currently used to determine ozone levels."[4] The Brief makes it clear that SCAQMD does not believe that there must be a quantification of a project's health risks in CEQA documents prepared for individual projects since it would be difficult to quantify health impacts for criteria pollutants. Also, the Project does not generate anywhere near 6,620 pounds per day of NO_X or 89,190 pounds per day of ROG (VOC) emissions, which SCAQMD stated was a large enough emission to quantify O_3-related health impacts. Therefore, the Project's emissions are not sufficiently high enough to use a regional modeling program to correlate health effects on a basin-wide level.

As previously discussed, localized effects of on-site Project emissions on nearby receptors for the Project would be less than significant (refer to Table 11 and Table 12). The LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable state or federal ambient air quality standard. The LSTs were developed by the SCAQMD based on the ambient concentrations of that pollutant for each SRA and distance to the nearest sensitive receptor. The ambient air quality standards establish the levels of air quality necessary, with an adequate margin of safety, to protect public health, including protecting the health of sensitive populations. However, as discussed above, neither the SCAQMD nor any other air district currently have methodologies that would provide Lead Agencies and CEQA practitioners with a consistent, reliable, and meaningful analysis to correlate specific health impacts that may result from a proposed project's mass emissions. Information on health impacts related to exposure to ozone and particulate matter emissions published by the U.S. EPA and CARB have been summarized above and discussed in the Regulatory Framework section. Health studies are used by these agencies to set the NAAQS and CAAQS.

Although it may be misleading and unreliable to attempt to specifically and numerically quantify the Project's health risks, this analysis provides extensive information concerning the Project's potential health risks. While the Project is expected to exceed the SCAQMD's numeric regional mass daily thresholds for ROG and NO_X, this does not in itself constitute a significant health impact to the population adjacent to the Project and within the SCAB. The reason for this is that the mass daily thresholds are in pounds per day emitted into the air whereas health effects are determined based on the concentration of emissions in the air at particular receptor (e.g., parts per million by volume of air, or micrograms per cubic meter of air).

The NAAQS and CAAQS were developed to protect the most susceptible population groups from adverse health effects and were established in terms of parts per million or micrograms per cubic meter for the applicable emissions. As stated earlier, the mass emission thresholds were established primarily in conjunction with federal permitting "major source" thresholds. If emissions were below these "de minimis" emission rates, then the proposed Project is presumed to conform with the NAAQS.[5] While based on the status of an air basin level of attainment of the health-based NAAQS, emissions in excess of the mass emission thresholds from one project does not mean the air basin would experience measurably higher ground level concentrations, or more frequent occurrences of ground level concentrations in exceedance of standards, or delay timely attainment of a particular NAAQS.

[4] Ibid. Page 34.

[5] U.S. Environmental Protection Agency. Frequent Questions about General Conformity. Available: https://www.epa.gov/general-conformity/frequent-questions-about-general-conformity. Accessed August 2023.

Ozone concentrations are dependent upon a variety of complex factors, including the presence of sunlight and precursor pollutants, natural topography, nearby structures that cause building downwash, atmospheric stability, and wind patterns. Because of the complexities of predicting ground-level ozone concentrations in relation to the NAAQS and CAAQS, none of the health-related information can be directly correlated to the pounds/day or tons/year of emissions estimated from a single, proposed project. Therefore, it is impossible to correlate significant criteria pollutants from an individual project to health risk. Table 1 includes a list of criteria pollutants and summarizes common sources and effects. Thus, this analysis is reasonable and intended to foster informed decision making. Due to the uncertainty in the relationship between project-level mass emissions and regional ozone formation as well as limitations with currently available technical tools, the resulting health effects associated with the Project cannot be identified. Given this is speculative, no meaningful conclusion can be drawn with respect to potential health effects from the criteria pollutant emissions of the proposed Project.

Carbon Monoxide Hotspots

An analysis of CO "hot spots" is needed to determine whether the change in the level of service of an intersection resulting from the Project would have the potential to result in exceedances of the CAAQS or NAAQS. It has long been recognized that CO exceedances are caused by vehicular emissions, primarily when vehicles are idling at intersections. Vehicle emissions standards have become increasingly stringent in the last 20 years. Currently, the CO standard in California is a maximum of 3.4 grams per mile for passenger cars (requirements for certain vehicles are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of control technology on industrial facilities, CO concentrations have steadily declined. Accordingly, with the steadily decreasing CO emissions from vehicles, even very busy intersections do not result in exceedances of the CO standard.

The SCAB was re-designated as attainment in 2007 and is no longer addressed in the SCAQMD's AQMP. The 2003 AQMP is the most recent version that addresses CO concentrations. As part of the SCAQMD *CO Hotspot Analysis*, the Wilshire Boulevard and Veteran Avenue intersection, one of the most congested intersections in Southern California with an average daily traffic (ADT) volume of approximately 100,000 vehicles per day, was modeled for CO concentrations. This modeling effort identified a CO concentration high of 4.6 ppm, which is well below the 35-ppm Federal standard. The Project considered herein would not produce the volume of traffic required to generate a CO hot spot in the context of SCAQMD's *CO Hotspot Analysis*. As the CO hotspots were not experienced at the Wilshire Boulevard and Veteran Avenue intersection even as it accommodates 100,000 vehicles daily, it can be reasonably inferred that CO hotspots would not be experienced at any vicinity intersections resulting from 1,269 additional total vehicle trips attributable to the Project and distributed throughout the roadway network. Therefore, impacts would be less than significant.

Mitigation Measures: refer to mitigation measures 3-1 and AQ-1 from The Ontario Plan 2050 Final EIR, discussed above under Threshold 5.2.

Level of Significance: Less than significant impact.

Conclusion

Air quality impacts related to the proposed Project are less than the significant and unavoidable impacts identified in The Ontario Plan 2050 Final EIR. No new impact relative to air quality or a substantial increase in the severity of a previously identified significant impact evaluated in the Final EIR would occur.

Additionally, no new information of substantial importance that was not known and could not have been known at the time the Final EIR was certified is available that would alter the Final EIR's significance finding.

Threshold 5.4 Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Construction

Odors that could be generated by construction activities are required to follow SCAQMD Rule 402 to prevent odor nuisances on sensitive land uses. SCAQMD Rule 402, Nuisance, states:

> *A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.*

During construction, emissions from construction equipment, such as diesel exhaust, and volatile organic compounds from architectural coatings and paving activities may generate odors. However, these odors would be temporary, are not expected to affect a substantial number of people and would disperse rapidly. Therefore, impacts related to odors associated with the Project's construction-related activities would be less than significant.

Operations

The SCAQMD *CEQA Air Quality Handbook* identifies certain land uses as sources of odors. These land uses include agriculture (farming and livestock), wastewater treatment plants, food processing plants, chemical plants, composting facilities, refineries, landfills, dairies, and fiberglass molding. The Project would not include any of the land uses that have been identified by the SCAQMD as odor sources. Therefore, the Project would not create objectionable odors.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

Conclusion

Odors and other emissions related to the proposed Project are similar to the less than significant impacts identified in The Ontario Plan 2050 Final EIR. No new impact relative to air quality or a substantial increase in the severity of a previously identified significant impact evaluated in the Final EIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Final EIR was certified is available that would alter the Final EIR's significance finding.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	19.6	annual days of extreme heat
Extreme Precipitation	6.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	84.6

AQ-PM	97.7
AQ-DPM	54.7
Drinking Water	93.3
Lead Risk Housing	82.3
Pesticides	0.00
Toxic Releases	60.0
Traffic	89.5
Effect Indicators	—
CleanUp Sites	73.6
Groundwater	0.00
Haz Waste Facilities/Generators	64.6
Impaired Water Bodies	0.00
Solid Waste	22.1
Sensitive Population	—

1 INTRODUCTION

This report documents the results of a Greenhouse Gas (GHG) Emissions Assessment completed for Watermarke Ontario Planned Unit Development Project (Project). The purpose of this GHG Emissions Assessment is to evaluate the potential construction and operational emissions associated with the Project and determine the level of impact the Project would have on the environment.

This analysis has been undertaken to analyze whether the proposed Project would result in any new or substantially more severe significant environmental impacts as compared to the conclusions discussed in The Ontario Plan 2050, certified Final Supplemental Environmental Impact Report (General Plan EIR) (State Clearinghouse No. 2021070364). The purpose of this analysis is to support a Addendum EIR that will document whether any new air quality-related impacts would occur from the Project (described below) compared to the level of significance that was identified in the General Plan EIR pursuant to State California Environmental Quality Act (CEQA) Guidelines Section 15162 (et seq.).

1.1 Project Location

The project site is located on the northeast corner of the intersection of Mountain Avenue and 4th Street. The project site currently consists of a United States Post Office building and a commercial building with various retail uses. The City of Ontario is located in the San Bernardino Valley within San Bernardino County approximately 60 miles east of Los Angeles, California; see Exhibit 1: Regional Location Map and Exhibit 2: Project Vicinity Map.

1.2 Project Description

The applicant proposes to demolish the existing uses and proposes the development of a four-story Type V warp building containing multifamily residential and retail uses as well as a six level Type III above grade parking structure. The Project would include the development of 357 multi-family dwelling units, approximately 2,700 square feet (sf) of leasing, 5,700 sf of amenity space, and 3,800 sf of retail on 5.8 acres; refer to Exhibit 3: Conceptual Site Plan.

2 ENVIRONMENTAL SETTING

2.1 Greenhouse Gases and Climate Change

Certain gases in the earth's atmosphere classified as GHGs, play a critical role in determining the earth's surface temperature. Solar radiation enters the earth's atmosphere from space. A portion of the radiation is absorbed by the earth's surface and a smaller portion of this radiation is reflected back toward space. This absorbed radiation is then emitted from the earth as low-frequency infrared radiation. The frequencies at which bodies emit radiation are proportional to temperature. Because the earth has a much lower temperature than the sun, it emits lower-frequency radiation. Most solar radiation passes through GHGs; however, infrared radiation is absorbed by these gases. As a result, radiation that otherwise would have escaped back into space is instead "trapped," resulting in a warming of the atmosphere. This phenomenon, known as the greenhouse effect, is responsible for maintaining a habitable climate on earth.

The primary GHGs contributing to the greenhouse effect are carbon dioxide (CO_2), methane (CH_4), and nitrous oxide (N_2O). Fluorinated gases also make up a small fraction of the GHGs that contribute to climate change. Examples of fluorinated gases include chlorofluorocarbons (CFCs), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulfur hexafluoride (SF_6), and nitrogen trifluoride (NF_3); however, it is noted that these gases are not associated with typical land use development. Human-caused emissions of GHGs exceeding natural ambient concentrations are believed to be responsible for intensifying the greenhouse effect and leading to a trend of unnatural warming of the Earth's climate, known as global climate change or global warming.

GHGs are global pollutants, unlike criteria air pollutants and toxic air contaminants (TACs), which are pollutants of regional and local concern. Whereas pollutants with localized air quality effects have relatively short atmospheric lifetimes (about one day), GHGs have long atmospheric lifetimes (one to several thousand years). GHGs persist in the atmosphere for long enough time periods to be dispersed around the globe. Although the exact lifetime of a GHG molecule is dependent on multiple variables and cannot be pinpointed, more CO_2 is emitted into the atmosphere than is sequestered by ocean uptake, vegetation, or other forms of carbon sequestration. Of the total annual human-caused CO_2 emissions, approximately 55 percent is sequestered through ocean and land uptakes every year, averaged over the last 50 years, whereas the remaining 45 percent of human-caused CO_2 emissions remains stored in the atmosphere[1]. Table 1: Description of Greenhouse Gases describes the primary GHGs attributed to global climate change, including their physical properties.

In: Climate Change 2013: The Physical Science Basis*, *Contribution of Working Group I to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change*, 2013. http://www.climatechange2013.org/ images/report/WG1AR5_ALL_FINAL.pdf.

Table 1: Description of Greenhouse Gases

Greenhouse Gas	Description
Carbon Dioxide (CO_2)	CO_2 is a colorless, odorless gas that is emitted naturally and through human activities. Natural sources include decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungus; evaporation from oceans; and volcanic outgassing. Anthropogenic sources are from burning coal, oil, natural gas, and wood. The largest source of CO_2 emissions globally is the combustion of fossil fuels such as coal, oil, and gas in power plants, automobiles, and industrial facilities. The atmospheric lifetime of CO_2 is variable because it is readily exchanged in the atmosphere. CO_2 is the most widely emitted GHG and is the reference gas (Global Warming Potential of 1) for determining Global Warming Potentials for other GHGs.
Nitrous Oxide (N_2O)	N_2O is largely attributable to agricultural practices and soil management. Primary human-related sources of N_2O include agricultural soil management, sewage treatment, combustion of fossil fuels, and adipic and nitric acid production. N_2O is produced from biological sources in soil and water, particularly microbial action in wet tropical forests. The atmospheric lifetime of N_2O is approximately 120 years. The Global Warming Potential of N_2O is 298.
Methane (CH_4)	CH_4, a highly potent GHG, primarily results from off-gassing (the release of chemicals from nonmetallic substances under ambient or greater pressure conditions) and is largely associated with agricultural practices and landfills. Methane is the major component of natural gas, about 87 percent by volume. Human-related sources include fossil fuel production, animal husbandry, rice cultivation, biomass burning, and waste management. Natural sources of CH_4 include wetlands, gas hydrates, termites, oceans, freshwater bodies, non-wetland soils, and wildfires. The atmospheric lifetime of CH_4 is about 12 years and the Global Warming Potential is 25.
Hydrofluorocarbons (HFCs)	HFCs are typically used as refrigerants for both stationary refrigeration and mobile air conditioning. The use of HFCs for cooling and foam blowing is increasing, as the continued phase out of CFCs and HCFCs gains momentum. The 100-year Global Warming Potential of HFCs range from 124 for HFC-152 to 14,800 for HFC-23.
Perfluorocarbons (PFCs)	PFCs have stable molecular structures and only break down by ultraviolet rays about 60 kilometers above Earth's surface. Because of this, they have long lifetimes, between 10,000 and 50,000 years. Two main sources of PFCs are primary aluminum production and semiconductor manufacturing. Global Warming Potentials range from 6,500 to 9,200.
Chlorofluorocarbons (CFCs)	CFCs are gases formed synthetically by replacing all hydrogen atoms in methane or ethane with chlorine and/or fluorine atoms. They are nontoxic, nonflammable, insoluble, and chemically unreactive in the troposphere (the level of air at the earth's surface). CFCs were synthesized in 1928 for use as refrigerants, aerosol propellants, and cleaning solvents. The Montreal Protocol on Substances that Deplete the Ozone Layer prohibited their production in 1987. Global Warming Potentials for CFCs range from 3,800 to 14,400.
Sulfur Hexafluoride (SF_6)	SF_6 is an inorganic, odorless, colorless, and nontoxic, nonflammable gas. It has a lifetime of 3,200 years. This gas is manmade and used for insulation in electric power transmission equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas. The Global Warming Potential of SF_6 is 23,900.
Hydrochlorofluoro-carbons (HCFCs)	HCFCs are solvents, similar in use and chemical composition to CFCs. The main uses of HCFCs are for refrigerant products and air conditioning systems. As part of the Montreal Protocol, HCFCs are subject to a consumption cap and gradual phase out. The United States is scheduled to achieve a 100 percent reduction to the cap by 2030. The 100-year Global Warming Potentials of HCFCs range from 90 for HCFC-123 to 1,800 for HCFC-142b.
Nitrogen Trifluoride (NF_3)	NF_3 was added to Health and Safety Code section 38505(g)(7) as a GHG of concern. This gas is used in electronics manufacture for semiconductors and liquid crystal displays. It has a high global warming potential of 17,200.

3 REGULATORY SETTING

3.1 Federal

To date, national standards have not been established for nationwide GHG reduction targets, nor have any regulations or legislation been enacted specifically to address climate change and GHG emissions reduction at the project level. Various efforts have been promulgated at the federal level to improve fuel economy and energy efficiency to address climate change and its associated effects.

Energy Independence and Security Act of 2007

The Energy Independence and Security Act of 2007 (December 2007), among other key measures, requires the following, which would aid in the reduction of national GHG emissions:

- Increase the supply of alternative fuel sources by setting a mandatory Renewable Fuel Standard requiring fuel producers to use at least 36 billion gallons of biofuel in 2022.
- Set a target of 35 miles per gallon for the combined fleet of cars and light trucks by model year 2020 and direct the National Highway Traffic Safety Administration (NHTSA) to establish a fuel economy program for medium- and heavy-duty trucks and create a separate fuel economy standard for work trucks.
- Prescribe or revise standards affecting regional efficiency for heating and cooling products and procedures for new or amended standards, energy conservation, energy efficiency labeling for consumer electronic products, residential boiler efficiency, electric motor efficiency, and home appliances.

U.S. Environmental Protection Agency Endangerment Finding

The U.S. Environmental Protection Agency (U.S. EPA) authority to regulate GHG emissions stems from the U.S. Supreme Court decision in *Massachusetts v. EPA* (2007). The Supreme Court ruled that GHGs meet the definition of air pollutants under the existing Federal Clean Air Act (FCAA) and must be regulated if these gases could be reasonably anticipated to endanger public health or welfare. Responding to the Court's ruling, the U.S. EPA finalized an endangerment finding in December 2009. Based on scientific evidence it found that six GHGs (CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6) constitute a threat to public health and welfare. Thus, it is the Supreme Court's interpretation of the existing FCAA and the U.S. EPA's assessment of the scientific evidence that form the basis for the U.S. EPA's regulatory actions.

Federal Vehicle Standards

In response to the U.S. Supreme Court ruling discussed above, Executive Order 13432 was issued in 2007 directing the U.S. EPA, the Department of Transportation, and the Department of Energy to establish regulations that reduce GHG emissions from motor vehicles, non-road vehicles, and non-road engines by 2008. In 2009, the NHTSA issued a final rule regulating fuel efficiency and GHG emissions from cars and light-duty trucks for model year 2011, and in 2010, the U.S. EPA and NHTSA issued a final rule regulating cars and light-duty trucks for model years 2012–2016.

In 2010, an Executive Memorandum was issued directing the Department of Transportation, Department of Energy, U.S. EPA, and NHTSA to establish additional standards regarding fuel efficiency and GHG

reduction, clean fuels, and advanced vehicle infrastructure. In response to this directive, the U.S. EPA and NHTSA proposed stringent, coordinated federal GHG and fuel economy standards for model years 2017–2025 light-duty vehicles. The proposed standards projected to achieve 163 grams per mile of CO_2 in model year 2025, on an average industry fleet-wide basis, which is equivalent to 54.5 miles per gallon if this level were achieved solely through fuel efficiency. The final rule was adopted in 2012 for model years 2017–2021, and NHTSA intends to set standards for model years 2022–2025 in a future rulemaking. On January 12, 2017, the U.S. EPA finalized its decision to maintain the current GHG emissions standards for model years 2022–2025 cars and light trucks. It should be noted that the U.S. EPA is currently proposing to freeze the vehicle fuel efficiency standards at their planned 2020 level (37 mpg), canceling any future strengthening (currently 54.5 mpg by 2026).

In addition to the regulations applicable to cars and light-duty trucks described above, in 2011, the U.S. EPA and NHTSA announced fuel economy and GHG standards for medium- and heavy-duty trucks for model years 2014–2018. The standards for CO_2 emissions and fuel consumption are tailored to three main vehicle categories: combination tractors, heavy-duty pickup trucks and vans, and vocational vehicles. According to the U.S. EPA, this regulatory program will reduce GHG emissions and fuel consumption for the affected vehicles by 6 to 23 percent over the 2010 baselines.

In August 2016, the U.S. EPA and NHTSA announced the adoption of the phase two program related to the fuel economy and GHG standards for medium- and heavy-duty trucks. The phase two program will apply to vehicles with model year 2018 through 2027 for certain trailers, and model years 2021 through 2027 for semi-trucks, large pickup trucks, vans, and all types and sizes of buses and work trucks. The final standards are expected to lower CO_2 emissions by approximately 1.1 billion metric tons and reduce oil consumption by up to 2 billion barrels over the lifetime of the vehicles sold under the program.

In December 2021, the U.S. EPA finalized federal GHG emissions standards for passenger cars and light trucks for Model Years 2023 through 2026. These standards are the strongest vehicle emissions standards ever established for the light-duty vehicle sector and are based on an assessment of current and future technologies. The updated standards will result in avoiding more than 3 billion tons of GHG emissions through 2050[2] and are on track for the launch the U.S. EPA's next phase of standards for Model Years 2027 and beyond.

3.2 State of California

California Air Resources Board

The California Air Resources Board (CARB) is responsible for the coordination and oversight of State and local air pollution control programs in California. Various statewide and local initiatives to reduce California's contribution to GHG emissions have raised awareness about climate change and its potential for severe long-term adverse environmental, social, and economic effects. California is a significant emitter of CO_2 equivalents (CO_2e) in the world and produced 369 million metric tons of carbon dioxide equivalent ($MMTCO_2e$) in 2020.[3] The transportation sector is the State's largest emitter of GHGs, followed by industrial operations such as manufacturing and oil and gas extraction.

[2] U.S. EPA, *Final Rule to Revise Existing National GHG Emissions Standards for Passenger Cars and Light Trucks Through Model Year 2026*, 2021. Available at: https://www.epa.gov/regulations-emissions-vehicles-and-engines/final-rule-revise-existing-national-ghg-emissions, accessed August 2022.

[3] California Air Resources Board, *Current California GHG Emissions Inventory Data, 2000-2020 GHG inventory (2022 Edition)*, https://ww2.arb.ca.gov/ghg-inventory-data, accessed December 2022.

The State of California legislature has enacted a series of bills that constitute the most aggressive program to reduce GHGs of any state in the nation. Some legislation, such as the landmark Assembly Bill (AB) 32, *California Global Warming Solutions Act of 2006*, was specifically enacted to address GHG emissions. Other legislation, such as Title 24 building efficiency standards and Title 20 appliance energy standards, were originally adopted for other purposes such as energy and water conservation, but also provide GHG reductions. This section describes the major provisions of the legislation.

Assembly Bill 32 (California Global Warming Solutions Act of 2006)

AB 32 instructs the CARB to develop and enforce regulations for the reporting and verification of statewide GHG emissions. AB 32 also directed CARB to set a GHG emissions limit based on 1990 levels, to be achieved by 2020. It set a timeline for adopting a scoping plan for achieving GHG reductions in a technologically and economically feasible manner.

California Air Resource Board Scoping Plan

CARB adopted the 2022 Scoping Plan for Achieving Carbon Neutrality (2022 Scoping Plan) to achieve the goals of AB 32. The Scoping Plan establishes an overall framework for the measures that would be adopted to reduce California's GHG emissions. CARB determined that achieving the 1990 emissions level would require a reduction of GHG emissions of approximately 29 percent below what would otherwise occur in 2020 in the absence of new laws and regulations (referred to as "business-as-usual")[4]. The Scoping Plan evaluates opportunities for sector-specific reductions, integrates early actions and additional GHG reduction measures by both CARB and the State's Climate Action Team, identifies additional measures to be pursued as regulations, and outlines the adopted role of a cap-and-trade program[5]. Additional development of these measures and adoption of the appropriate regulations occurred through the end of 2013. Key elements of the Scoping Plan include:

- Expanding and strengthening existing energy efficiency programs, as well as building and appliance standards.
- Achieving a statewide renewables energy mix of 33 percent by 2020.
- Developing a California cap-and-trade program that links with other programs to create a regional market system and caps sources contributing 85 percent of California's GHG emissions (adopted in 2011).
- Establishing targets for transportation-related GHG emissions for regions throughout California and pursuing policies and incentives to achieve those targets (several sustainable community strategies have been adopted).
- Adopting and implementing measures pursuant to existing State laws and policies, including California's clean car standards, heavy-duty truck measures, the Low Carbon Fuel Standard

[4] CARB defines business-as-usual (BAU) in its Scoping Plan as emissions levels that would occur if California continued to grow and add new GHG emissions but did not adopt any measures to reduce emissions. Projections for each emission-generating sector were compiled and used to estimate emissions for 2020 based on 2002–2004 emissions intensities. Under CARB's definition of BAU, new growth is assumed to have the same carbon intensities as was typical from 2002 through 2004.

[5] The Climate Action Team, led by the secretary of the California Environmental Protection Agency, is a group of State agency secretaries and heads of agencies, boards, and departments. Team members work to coordinate statewide efforts to implement global warming emissions reduction programs and the State's Climate Adaptation Strategy.

(amendments to the Pavley Standard adopted 2009; Advanced Clean Car standard adopted 2012), goods movement measures, and the Low Carbon Fuel Standard (adopted 2009).

- Creating targeted fees, including a public goods charge on water use, fees on gasses with high global warming potential, and a fee to fund the administrative costs of the State of California's long-term commitment to AB 32 implementation.
- The California Sustainable Freight Action Plan was developed in 2016 and provides a vision for California's transition to a more efficient, more economically competitive, and less polluting freight transport system. This transition of California's freight transport system is essential to supporting the State's economic development in coming decades while reducing pollution.
- CARB's Mobile Source Strategy demonstrates how the State can simultaneously meet air quality standards, achieve GHG emission reduction targets, decrease health risk from transportation emissions, and reduce petroleum consumption over the next fifteen years. The mobile Source Strategy includes increasing ZEV buses and trucks.

In 2012, CARB released revised estimates of the expected 2020 emissions reductions. The revised analysis relied on emissions projections updated in light of current economic forecasts that accounted for the economic downturn since 2008, reduction measures already approved and put in place relating to future fuel and energy demand, and other factors. This update reduced the projected 2020 emissions from 596 $MMTCO_2e$ to 545 $MMTCO_2e$. The reduction in forecasted 2020 emissions means that the revised business-as-usual reduction necessary to achieve AB 32's goal of reaching 1990 levels by 2020 is now 21.7 percent, down from 29 percent. CARB also provided a lower 2020 inventory forecast that incorporated State-led GHG emissions reduction measures already in place. When this lower forecast is considered, the necessary reduction from business-as-usual needed to achieve the goals of AB 32 is approximately 16 percent.

Scoping Plan Update. CARB adopted the first major update to the Scoping Plan on May 22, 2014. The updated Scoping Plan summarizes the most recent science related to climate change, including anticipated impacts to California and the levels of GHG emissions reductions necessary to likely avoid risking irreparable damage. It identifies the actions California has already taken to reduce GHG emissions and focuses on areas where further reductions could be achieved to help meet the 2020 target established by AB 32. By 2016, California had reduced GHG emissions below 1990 levels, achieving AB 32's 2020 goal four years ahead of schedule.

2017 Scoping Plan. In 2016, the Legislature passed Senate Bill (SB) 32, which codifies a 2030 GHG emissions reduction target of 40 percent below 1990 levels. With SB 32, the Legislature passed companion legislation, AB 197, which provides additional direction for developing the Scoping Plan. On December 14, 2017 CARB adopted a second update to the Scoping Plan[6]. The 2017 Scoping Plan details how the State will reduce GHG emissions to meet the 2030 target set by Executive Order B-30-15 and codified by SB 32. Other objectives listed in the 2017 Scoping plan are to provide direct GHG emissions reductions; support climate investment in disadvantaged communities; and support the Clean Power Plan and other Federal actions.

2022 Scoping Plan. Adopted December 15, 2022, CARB's 2022 Scoping Plan sets a path to achieve targets for carbon neutrality and reduce anthropogenic GHG emissions by 85 percent below 1990 levels by 2045

[6] California Air Resources Board, *California's 2017 Climate Change Scoping Plan,* https://www.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf. Accessed May 9, 2018.

in accordance with AB 1279. To achieve the targets of AB 1279, the 2022 Scoping Plan relies on existing and emerging fossil fuel alternatives and clean technologies, as well as carbon capture and storage. Specifically, the 2022 Scoping Plan focuses on zero-emission transportation; phasing out use of fossil gas use for heating homes and buildings; reducing chemical and refrigerants with high GWP; providing communities with sustainable options for walking, biking, and public transit; displacement of fossil-fuel fired electrical generation through use of renewable energy alternatives (e.g., solar arrays and wind turbines); and scaling up new options such as green hydrogen. The 2022 Scoping Plan sets one of the most aggressive approaches to reach carbon neutrality in the world. Unlike the 2017 Scoping Plan, CARB no longer includes a numeric per capita threshold and instead advocates for compliance with a local GHG reduction strategy (i.e., Climate Action Plan) consistent with CEQA Guidelines section 15183.5.

The key elements of the 2022 CARB Scoping Plan focus on transportation. Specifically, the 2022 Scoping Plan aims to rapidly move towards zero-emission transportation (i.e., electrifying cars, buses, trains, and trucks), which constitutes California's single largest source of GHGs. The regulations that impact the transportation sector are adopted and enforced by CARB on vehicle manufacturers and are outside the jurisdiction and control of local governments. The 2022 Scoping Plan accelerates development of new regulations as well as amendments to strengthen regulations and programs already in place.

Included in the 2022 Scoping Plan is a set of Local Actions (2022 Scoping Plan Appendix D) aimed at providing local jurisdictions with tools to reduce GHGs and assist the state in meeting the ambitious targets set forth in the 2022 Scoping Plan. Appendix D to the 2022 Scoping Plan includes a section on evaluating plan-level and project-level alignment with the State's Climate Goals in CEQA GHG analyses. In this section, CARB identifies several recommendations and strategies that should be considered for new development in order to determine consistency with the 2022 Scoping Plan. Notably, this section is focused on Residential and Mixed-Use Projects.[7] CARB specifically states that Appendix D does not address other land uses (e.g., industrial).[8] However, CARB plans to explore new approaches for other land use types in the future.[9]

As such, it would be inappropriate to apply the requirements contained in Appendix D of the 2022 Scoping Plan to any land use types other than residential or mixed-use residential development. Therefore, Appendix D only applies to the residential portion of the Project as the Project proposes commercial, residential, public utilities, public park, and open space uses.

Senate Bill 32 (California Global Warming Solutions Act of 2006: Emissions Limit)

Signed into law in September 2016, SB 32 codifies the 2030 GHG reduction target in Executive Order B-30-15 (40 percent below 1990 levels by 2030). The bill authorizes CARB to adopt an interim GHG emissions level target to be achieved by 2030. CARB also must adopt rules and regulations in an open public process to achieve the maximum, technologically feasible, and cost-effective GHG reductions.

SB 375 (The Sustainable Communities and Climate Protection Act of 2008)

Signed into law on September 30, 2008, SB 375 provides a process to coordinate land use planning, regional transportation plans, and funding priorities to help California meet the GHG reduction goals

[7] California Air Resources Board. (2022). *2022 Scoping Plan for Achieving Carbon Neutrality*, *Appendix D: Local Actions*, Page 21. Available at: https://ww2.arb.ca.gov/our-work/programs/ab-32-climate-change-scoping-plan/2022-scoping-plan-documents (accessed August 2023).
[8] California Air Resources Board, 2022 Scoping Plan for Achieving Carbon Neutrality, Appendix D: Local Actions, Page 4, November 2022.
[9] California Air Resources Board, *2022 Scoping Plan for Achieving Carbon Neutrality*, *Appendix D: Local Actions*, Page 21, November 2022.

established by AB 32. SB 375 requires metropolitan planning organizations to include sustainable community strategies in their regional transportation plans for reducing GHG emissions, aligns planning for transportation and housing, and creates specified incentives for the implementation of the strategies.

AB 1493 (Pavley Regulations and Fuel Efficiency Standards)

AB 1493, enacted on July 22, 2002, required CARB to develop and adopt regulations that reduce GHGs emitted by passenger vehicles and light duty trucks. Implementation of the regulation was delayed by lawsuits filed by automakers and by the EPA's denial of an implementation waiver. The EPA subsequently granted the requested waiver in 2009, which was upheld by the by the U.S. District Court for the District of Columbia in 2011. The regulations establish one set of emission standards for model years 2009–2016 and a second set of emissions standards for model years 2017 to 2025. By 2025, when all rules will be fully implemented, new automobiles will emit 34 percent fewer CO_2e emissions and 75 percent fewer smog-forming emissions.

SB 1368 (Emission Performance Standards)

SB 1368 is the companion bill of AB 32, which directs the California Public Utilities Commission (CPUC) to adopt a performance standard for GHG emissions for the future power purchases of California utilities. SB 1368 limits carbon emissions associated with electrical energy consumed in California by forbidding procurement arrangements for energy longer than 5 years from resources that exceed the emissions of a relatively clean, combined cycle natural gas power plant. The new law effectively prevents California's utilities from investing in, otherwise financially supporting, or purchasing power from new coal plants located in or out of the State. The CPUC adopted the regulations required by SB 1368 on August 29, 2007. The regulations implementing SB 1368 establish a standard for baseload generation owned by, or under long-term contract to publicly owned utilities, for 1,100 pounds of CO_2 per megawatt-hour.

SB 1078, SB 107, and SBX1-2 (Renewable Electricity Standards)

SB 1078 (2002) required California to generate 20 percent of its electricity from renewable energy by 2017. SB 107 (2006) changed the due date to 2010 instead of 2017. On November 17, 2008, Governor Arnold Schwarzenegger signed Executive Order S-14-08, which established a Renewable Portfolio Standard target for California requiring that all retail sellers of electricity serve 33 percent of their load with renewable energy by 2020. Executive Order S-21-09 also directed CARB to adopt a regulation by July 31, 2010, requiring the State's load serving entities to meet a 33 percent renewable energy target by 2020. CARB approved the Renewable Electricity Standard on September 23, 2010 by Resolution 10-23. SBX1-2, which codified the 33 percent by 2020 goal.

SB 350 (Clean Energy and Pollution Reduction Act of 2015)

Signed into law on October 7, 2015, SB 350 implements the goals of Executive Order B-30-15. The objectives of SB 350 are to increase the procurement of electricity from renewable sources from 33 percent to 50 percent (with interim targets of 40 percent by 2024, and 25 percent by 2027) and to double the energy efficiency savings in electricity and natural gas end uses of retail customers through energy efficiency and conservation. SB 350 also reorganizes the Independent System Operator to develop more regional electricity transmission markets and improve accessibility in these markets, which will facilitate the growth of renewable energy markets in the western United States.

AB 398 (Market-Based Compliance Mechanisms)

Signed on July 25, 2017, AB 398 extended the duration of the Cap-and-Trade program from 2020 to 2030. AB 398 required CARB to update the Scoping Plan and for all GHG rules and regulations adopted by the State. It also designated CARB as the statewide regulatory body responsible for ensuring that California meets its statewide carbon pollution reduction targets, while retaining local air districts' responsibility and authority to curb toxic air contaminants and criteria pollutants from local sources that severely impact public health. AB 398 also decreased free carbon allowances over 40 percent by 2030 and prioritized Cap-and-Trade spending to various programs including reducing diesel emissions in impacted communities.

SB 150 (Regional Transportation Plans)

Signed on October 10, 2017, SB 150 aligns local and regional GHG reduction targets with State targets (i.e., 40 percent below their 1990 levels by 2030). SB 150 creates a process to include communities in discussions on how to monitor their regions' progress on meeting these goals. The bill also requires the CARB to regularly report on that progress, as well as on the successes and the challenges regions experience associated with achieving their targets. SB 150 provides for accounting of climate change efforts and GHG reductions and identify effective reduction strategies.

SB 100 (California Renewables Portfolio Standard Program: Emissions of Greenhouse Gases)

Signed into law in September 2018, SB 100 increased California's renewable electricity portfolio from 50 to 60 percent by 2030. SB 100 also established a further goal to have an electric grid that is entirely powered by clean energy by 2045.

AB 1346 (Air Pollution: Small Off-Road Engines)

Signed into Law in October 2021, AB 1346 requires CARB, to adopt cost-effective and technologically feasible regulations to prohibit engine exhaust and evaporative emissions from new small off-road engines, consistent with federal law, by July 1, 2022. The bill requires CARB to identify and, to the extent feasible, make available funding for commercial rebates or similar incentive funding as part of any updates to existing applicable funding program guidelines to local air pollution control districts and air quality management districts to implement to support the transition to zero-emission small off-road equipment operations.

AB 1279 (The California Climate Crisis Act)

AB 1279 establishes the policy of the State to achieve carbon neutrality as soon as possible, but no later than 2045; to maintain net negative GHG emissions thereafter; and to ensure that by 2045 statewide anthropogenic GHG emissions are reduced at least 85 percent below 1990 levels. The bill requires CARB to ensure that Scoping Plan updates identify and recommend measures to achieve carbon neutrality, and to identify and implement policies and strategies that enable CO^2 removal solutions and carbon capture, utilization, and storage technologies.

SB 1020 (100 Percent Clean Electric Grid)

Signed on September 16, 2022, SB 1020 provides additional goals for the path to the 2045 goal of 100 percent clean electricity retail sales. It creates a target of 90 percent clean electricity retail sales by 2035 and 95 percent clean electricity retail sales by 2040.

SB 905 (Carbon Sequestration Program)

Signed on September 16, 2022, SB 905 establishes regulatory framework and policies that involve carbon removal, carbon capture, utilization, and sequestration. It also prohibits the injecting of concentrated carbon dioxide fluid into a Class II injection well for the purpose of enhanced oil recovery.

AB 1757 (Nature-Based Solutions)

Signed on September 16, 2022, AB 1757 requires State agencies to develop a range of targets for natural carbon sequestration and nature-based climate solutions that reduce GHG emissions to meet the 2030, 2038, and 2045 goals which would be integrated into a scoping plan addressing natural and working lands

Executive Orders Related to GHG Emissions

California's Executive Branch has taken several actions to reduce GHGs using executive orders. Although not regulatory, they set the tone for the State and guide the actions of state agencies.

Executive Order S-3-05. Executive Order S-3-05 was issued on June 1, 2005, which established the following GHG emissions reduction targets:

- By 2010, reduce GHG emissions to 2000 levels.
- By 2020, reduce GHG emissions to 1990 levels.
- By 2050, reduce GHG emissions to 80 percent below 1990 levels.

The 2050 reduction goal represents what some scientists believe is necessary to reach levels that will stabilize the climate. The 2020 goal was established to be a mid-term target. Because this is an executive order, the goals are not legally enforceable for local governments or the private sector.

Executive Order S-01-07. Issued on January 18, 2007, Executive Order S 01-07 mandates that a statewide goal shall be established to reduce the carbon intensity of California's transportation fuels by at least 10 percent by 2020. The executive order established a Low Carbon Fuel Standard (LCFS) and directed the Secretary for Environmental Protection to coordinate the actions of the California Energy Commission, CARB, the University of California, and other agencies to develop and propose protocols for measuring the "life-cycle carbon intensity" of transportation fuels. CARB adopted the LCFS on April 23, 2009.

Executive Order S-13-08. Issued on November 14, 2008, Executive Order S-13-08 facilitated the California Natural Resources Agency development of the 2009 California Climate Adaptation Strategy. Objectives include analyzing risks of climate change in California, identifying and exploring strategies to adapt to climate change, and specifying a direction for future research.

Executive Order S-14-08. Issued on November 17, 2008, Executive Order S-14-08 expands the State's Renewable Energy Standard to 33 percent renewable power by 2020. Additionally, Executive Order S-21-09 (signed on September 15, 2009) directs CARB to adopt regulations requiring 33 percent of electricity sold in the State come from renewable energy by 2020. CARB adopted the Renewable Electricity Standard on September 23, 2010, which requires 33 percent renewable energy by 2020 for most publicly owned electricity retailers.

Executive Order S-21-09. Issued on July 17, 2009, Executive Order S-21-09 directs CARB to adopt regulations to increase California's Renewable Portfolio Standard (RPS) to 33 percent by 2020. This builds upon SB 1078 (2002), which established the California RPS program, requiring 20 percent renewable energy by 2017, and SB 107 (2006), which advanced the 20 percent deadline to 2010, a goal which was expanded to 33 percent by 2020 in the 2005 Energy Action Plan II.

Executive Order B-30-15. Issued on April 29, 2015, Executive Order B-30-15 established a California GHG reduction target of 40 percent below 1990 levels by 2030 and directs CARB to update the Climate Change Scoping Plan to express the 2030 target in terms of MMTCO2e. The 2030 target acts as an interim goal on the way to achieving reductions of 80 percent below 1990 levels by 2050, a goal set by Executive Order S-3-05. The executive order also requires the State's climate adaptation plan to be updated every three years and for the State to continue its climate change research program, among other provisions. With the enactment of SB 32 in 2016, the Legislature codified the goal of reducing GHG emissions by 2030 to 40 percent below 1990 levels.

Executive Order B-55-18. Issued on September 10, 2018, Executive Order B-55-18 establishes a goal to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net negative emissions thereafter. This goal is in addition to the existing statewide targets of reducing GHG emissions. The executive order requires CARB to work with relevant state agencies to develop a framework for implementing this goal. It also requires CARB to update the Scoping Plan to identify and recommend measures to achieve carbon neutrality. The executive order also requires state agencies to develop sequestration targets in the Natural and Working Lands Climate Change Implementation Plan.

Executive Order N-79-20. Signed in September 2020, Executive Order N-79-20 establishes as a goal that where feasible, all new passenger cars and trucks, as well as all drayage/cargo trucks and off-road vehicles and equipment, sold in California, will be zero-emission by 2035. The executive order sets a similar goal requiring that all medium and heavy-duty vehicles will be zero-emission by 2045 where feasible. It also directs CARB to develop and propose rulemaking for passenger vehicles and trucks, medium-and heavy-duty fleets where feasible, drayage trucks, and off-road vehicles and equipment "requiring increasing volumes" of new zero emission vehicles (ZEVs) "towards the target of 100 percent." The executive order directs the California Environmental Protection Agency, the California Geologic Energy Management Division (CalGEM), and the California Natural Resources Agency to transition and repurpose oil production facilities with a goal toward meeting carbon neutrality by 2045. Executive Order N-79-20 builds upon the CARB Advanced Clean Trucks regulation, which was adopted by CARB in July 2020.

California Regulations and Building Codes

California has a long history of adopting regulations to improve energy efficiency in new and remodeled buildings. These regulations have kept California's energy consumption relatively flat even with rapid population growth.

Title 20 Appliance Efficiency Regulations. The appliance efficiency regulations (California Code of Regulations [CCR] Title 20, Sections 1601-1608) include standards for new appliances. Twenty-three categories of appliances are included in the scope of these regulations. These standards include minimum levels of operating efficiency, and other cost-effective measures, to promote the use of energy- and water-efficient appliances.

Title 24 Building Energy Efficiency Standards. California's Energy Efficiency Standards for Residential and Nonresidential Buildings (CCR Title 24, Part 6) was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases GHG emissions. The CEC adopted the 2022 Energy Code on August 11, 2021, which was subsequently approved by the California Building Standards Commission for inclusion into the California Building Standards Code. The 2022 Energy Code encourages efficient electric heat pumps, establishes electric-ready requirements for new homes, expands solar photovoltaic and battery storage standards, strengthens ventilation standards, and more. Buildings whose permit applications are applied for on or after January 1, 2023, must comply with the 2022 Energy Code.

Title 24 California Green Building Standards Code. The California Green Building Standards Code (CCR Title 24, Part 11 code) commonly referred to as the CALGreen Code, is a statewide mandatory construction code developed and adopted by the California Building Standards Commission and the Department of Housing and Community Development. The CALGreen standards require new residential and commercial buildings to comply with mandatory measures under the topics of planning and design, energy efficiency, water efficiency/conservation, material conservation and resource efficiency, and environmental quality. CALGreen also provides voluntary tiers and measures that local governments may adopt that encourage or require additional measures in the five green building topics. The CEC adopted the 2022 CALGreen Code, which went into effect on January 1, 2023. The 2022 CALGreen Code includes voluntary Tier 2 standards, which exceed energy efficiency requirements by 15 percent. CALGreen voluntary Tier 2 standards are met through a variety of energy efficiency measures (e.g., on-site renewable energy, green power, bio-based construction materials, and reduced parking capacity) that exceed the mandatory CALGreen requirements.

3.3 Regional

South Coast Air Quality Management District Thresholds

The South Coast Air Quality Management District (SCAQMD) formed a GHG California Environmental Quality Act (CEQA) Significance Threshold Working Group to provide guidance to local lead agencies on determining significance for GHG emissions in their CEQA documents. This working group was formed to assist SCAQMD's efforts to develop a GHG significance threshold and is composed of a wide variety of stakeholders including the State Office of Planning and Research, CARB, the Attorney General's Office, a variety of city and county planning departments in the SCAB, various utilities such as sanitation and power companies throughout the SCAB, industry groups, and environmental and professional organizations. The Working Group has proposed a tiered approach to evaluating GHG emissions for development projects where SCAQMD is not the lead agency, wherein projects are evaluated sequentially through a series of "tiers" to determine whether the project is likely to result in a potentially significant impact due to GHG emissions.

With the tiered approach, a project is compared against the requirements of each tier sequentially and would not result in a significant impact if it complies with any tier. Tier 1 excludes projects that are specifically exempt from SB 97 from resulting in a significant impact. Tier 2 excludes projects that are consistent with a GHG reduction plan that has a certified final CEQA document and complies with AB 32 GHG reduction goals. Tier 3 excludes projects with annual emissions lower than a screening threshold. The SCAQMD has adopted a threshold of 10,000 metric tons of CO_2e ($MTCO_2e$) per year for industrial projects and a 3,000 $MTCO_2e$ threshold was proposed for non-industrial projects but has not been adopted. The SCAQMD concluded that projects with emissions less than the screening threshold would not result in a significant cumulative impact.

Tier 4 consists of three decision tree options. Under the Tier 4 first option, SCAQMD initially outlined that a project would be excluded if design features and/or mitigation measures resulted in emissions 30 percent lower than business as usual emissions. However, the Working Group did not provide a recommendation for this approach. The Working Group folded the Tier 4 second option into the third option. Under the Tier 4 third option, a project would be excluded if it was below an efficiency-based threshold of 4.8 $MTCO_2e$ per service population per year. Tier 5 would exclude projects that implement offsite mitigation (GHG reduction projects) or purchase offsets to reduce GHG emission impacts to less than the proposed screening level.

Tier 3 Screening Thresholds

When the tiered approach is applied to a proposed project, and the project is found not to comply with Tier 1 or Tier 2, the project's emissions are compared against a screening threshold, as described above, for Tier 3. The screening threshold formally adopted by SCAQMD is an "interim" screening threshold for stationary source industrial projects where the SCAQMD is the lead agency under CEQA. The threshold was termed "interim" because, at the time, SCAQMD anticipated that CARB would be adopting a statewide significance threshold that would inform and provide guidance to SCAQMD in its adoption of a final threshold. However, no statewide threshold was ever adopted, and the interim threshold remains in effect.

For projects for which SCAQMD is not a lead agency, no screening thresholds have been formally adopted. However, the SCAQMD Working Group has recommended a threshold of 10,000 $MTCO_2e$/year for industrial projects and 3,000 $MTCO_2e$/year for residential and commercial projects. SCAQMD determined that these thresholds would "capture" 90 percent of GHG emissions from these sectors, "capture" meaning that 90 percent of total emissions from all new projects would be subject to some type of CEQA analysis (i.e., found potentially significant).[10]

Southern California Association of Governments

On September 3, 2020, SCAG's Regional Council adopted Connect SoCal (2020 - 2045 Regional Transportation Plan/Sustainable Communities Strategy [2020 RTP/SCS]). The RTP/SCS charts a course for closely integrating land use and transportation so that the region can grow smartly and sustainably. The strategy was prepared through a collaborative, continuous, and comprehensive process with input from local governments, county transportation commissions, tribal governments, non-profit organizations,

[10] SCAQMD, "Staff Report: Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans," December 5, 2008, Attachment E: "Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold," October 2008, p. 3-2.

businesses and local stakeholders within the counties of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura. The RTP/SCS is a long-range vision plan that balances future mobility and housing needs with economic, environmental, and public health goals. The SCAG region strives toward sustainability through integrated land use and transportation planning. The SCAG region must achieve specific federal air quality standards and is required by state law to lower regional GHG emissions.

3.4 Local

City of Ontario Community Climate Action Plan

The City of Ontario initially adopted its Climate Action Plan on December 16, 2014 (2014 CAP). The 2014 CAP provided guidance on the City of Ontario's GHG Inventory reduction goals, policies, guidelines, and implementation programs. As part of the 2014 CAP, the City of Ontario published a guidance document titled "Greenhouse Gas Emissions, CEQA Thresholds and Screening Tables" (December 2014). Under this guidance, Projects that garner at least 100 points will be consistent with the reduction quantities in the City's CAP and are considered less than significant for GHG emissions.

The Ontario Plan (TOP) 2050 includes an update to the 2014 CAP, referred to as the 2022 Community Climate Action Plan Update (2022 CCAP Update). The 2022 CCAP Update furthers the City efforts to reduce GHG emissions and improve community resilience to hazardous conditions associated with climate change. The 2022 CCAP Update includes updated emissions inventories; updated emissions forecasts; identifies GHG emissions reduction targets to achieve the GHG reduction goals of the City of Ontario consistent with Senate Bill 32, Executive Order S-03-05, and substantial progress toward the State's carbon neutrality goals of Executive Order B-55-18; and measures, that when quantified, achieve the GHG reduction targets for the City.

Under the 2022 CCAP Update, projects that are subject to the City's Development Plan Review are required to show consistency with the 2022 CCAP. Table 2: Project Size Thresholds for Land Use Development identifies the maximum project size thresholds for new developments that are exempt from the City's Development Plan Review process. Projects that exceed this project size threshold must show consistency with the 2022 CCAP by showing that annual GHG emissions meet the CCAP reduction targets and reduction strategies through (1) GHG emission calculations or (2) by using Screening Tables.

Table 2: Project Size Thresholds for Land Use Development	
Project Type	**Project Size Threshold**
Single Family Residential (Single Family Detached)	60 Units
Apartments / Condominiums / Townhouse	20 Units
General Commercial / Retail / Office	20,000 square feet
Supermarket / Grocery / Discount Club	36,000 square feet
Restaurants (sit down)	8,200 square feet
Fast-Food Restaurants (with or without drive thru)	5,300 square feet
Gas Station	4,200 square feet
Logistics / Warehouse	45,000 square feet
Passive Park	200 acres
Active Park	60 acres
Source: City of Ontario, *Ontario Community Climate Action Plan; Greenhouse Gas Emissions Screening Tables*, 2023. Table 1. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/CCAP/Screening%20Table/Ontario-CCAP_Screening-Tables-MARCH%202023.pdf Accessed 7-27-2023.	

GHG Emission Calculations

The 2022 CCAP Update includes GHG emission targets for residential and nonresidential developments, there are also separate targets for projects completed by 2030, and those completed between 2031 and 2050. Projects that do not use the Screening Tables will need to demonstrate that they will generate annual GHG emissions that do not exceed the following thresholds:

- For residential development completed between 2020 and 2030, the project shall not produce GHG emissions greater than 5.85 $MTCO_2e$/dwelling unit.
- For residential development completed after 2030, the project shall not produce GHG emissions greater than 1.53 $MTCO_2e$/dwelling unit.
- For nonresidential developments of all types completed between 2020 and 2030, the project shall not produce GHG emissions greater than 8.84 $MTCO_2e$/2,500 square feet of conditioned space.
- For nonresidential developments of all types completed after 2030, the project shall not produce GHG emissions greater than 3.61 $MTCO_2e$/2,500 square feet of conditioned space.

Screening Tables

The Projects can also show consistency with 2022 CCAP Update by using the Screening Tables. Projects using this method must show that the Project shall include selected Screening Table Measures that achieve a minimum of 100 points. For mixed-use projects, measures can be used from more than one Screening Table as appropriate to reflect the Project's mix of uses.

4 SIGNIFICANCE CRITERIA AND METHODOLOGY

4.1 CEQA Thresholds and Significance Criteria

Based upon the criteria derived from Appendix G of the CEQA Guidelines, a project normally would have a significant effect on the environment if it would:

- Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment, based on any applicable threshold of significance; or
- Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs.

The Appendix G thresholds for GHG emissions do not prescribe specific methodologies for performing an assessment, do not establish specific thresholds of significance, and do not mandate specific mitigation measures. Rather, the CEQA Guidelines emphasize the lead agency's discretion to determine the appropriate methodologies and thresholds of significance consistent with the manner in which other impact areas are handled in CEQA.

Addressing GHG emissions generation impacts requires an agency to determine what constitutes a significant impact. The amendments to the CEQA Guidelines specifically allow lead agencies to determine thresholds of significance that illustrate the extent of an impact and are a basis from which to apply mitigation measures. This means that each agency is left to determine whether a project's GHG emissions will have a "significant" impact on the environment. The guidelines direct that agencies are to use "careful judgment" and "make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate" the project's GHG emissions[11].

GHG Thresholds

To address the State's requirement to reduce GHG emissions, the City adopted the 2022 CCAP with citywide GHG emission reduction targets of 40 percent below 1990 levels of emissions by 2030 and 80 percent below 1990 levels of emissions by 2050. Ontario's targets are consistent with State laws in effect at the time of the adoption, including SB 32, and ensure that the City is providing GHG reductions locally that will complement State and international efforts of stabilizing climate change.

GHG emission analysis of a nonexempt residential development project in the City of Ontario, completed between 2020 and 2030, requires the project demonstrate that it would not generate annual GHG emissions that exceed 5.85 $MTCO_2e$/dwelling unit or demonstrate that it will achieve a minimum of 100 Screening Table points in order to show consistency with the 2022 CCAP Update.

4.2 Plans, Programs, and Policies

Plans, programs, and policies (PPP) are based on local, state, or federal requirements that are frequently independent of CEQA review and typically include compliance with the provisions of the Building Code, SCAQMD Rules, etc. The City may impose additional requirements during the approval process, as

[11] 14 California Code of Regulations, Section 15064.4a

appropriate. Because PPPs are neither Project specific nor a result of development of the Project, they are not considered to be either project design features or mitigation measures.

PPP GHG-1 New buildings are required to achieve the current California Building Energy Efficiency Standards (Title 24, Part 6) and the CALGreen Code. The 2022 Building Energy Efficiency Standards become effective on January 1, 2023. The Building Energy Efficiency Standards and CALGreen Code are updated triannually with a goal to achieve 100 percent clean carbon neutrality by 2050 within the State.

PPP GHG-2 New buildings are required to adhere to the California Green Building Standards Code (CALGreen Code) requirement to provide bicycle parking for new non-residential buildings, or meet local bicycle parking ordinances, whichever is stricter (CALGreen Code Sections 5.106.4.1).

PPP GHG-3 California's Green Building Standards Code (CALGreen Code) requires the recycling and/or salvaging for reuse at minimum of 65 percent of the nonhazardous construction and demolition waste generated during most "new construction" projects (CALGreen Code Sections 4.408 and 5.408). Construction contractors are required to submit a construction waste management plan that identifies the construction and demolition waste materials to be diverted from disposal by recycling, reuse on the project, or salvaged for future use or sale and the amount (by weight or volume).

PPP GHG-4 Construction activities are required to adhere to Title 13 CCR 2499, which requires that nonessential idling of construction equipment is restricted to five minutes or less.

PPP GHG-5 New buildings are required to adhere to the CALGreen Code and Water Efficient Landscape Ordinance requirements to increase water efficiency and reduce urban per capita water demand.

4.3 Methodology

Global climate change is, by definition, a cumulative impact of GHG emissions. Therefore, there is no project-level analysis. The baseline against which to compare potential impacts of the project includes the natural and anthropogenic drivers of global climate change, including world-wide GHG emissions from human activities which almost doubled between 1970 and 2010 from approximately 27 gigatonnes (Gt) of CO_2/year to nearly 49 $GtCO_2$/year.[12] As such, the geographic extent of climate change and GHG emissions cumulative impact discussion is worldwide.

The Project will include 357 multi-family dwelling units which exceeds the maximum size threshold of 20 dwelling units listed in Table 2, therefore the Project must show consistency with the 2022 CCAP Update. The Project's construction and operational emissions were calculated using the California Emissions Estimator Model version 2022.1.1.14 (CalEEMod). Details of the modeling assumptions and emission factors are provided in Appendix A: Greenhouse Gas Emissions Data. If GHG annual GHG emissions exceed

[12] Intergovernmental Panel on Climate Change, *Climate Change 2014 Mitigation of Climate Change Working Group III Contribution to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change*, 2014.

GHG emission thresholds the Project will be required to achieve 100 points using the 2022 CCAP Update Screening Tables.

Construction

CalEEMod calculates emissions from off-road equipment usage and on-road vehicle travel associated with haul, delivery, and construction worker trips. GHG emissions during construction were forecasted based on the proposed construction schedule and applying the mobile-source and fugitive dust emissions factors derived from CalEEMod. The Project's construction-related GHG emissions would be generated from off-road construction equipment, on-road hauling and vendor (material delivery) trucks, and worker vehicles.

Operations

The Project's operational GHG emissions would be generated by vehicular traffic, off-road equipment, area sources (e.g., landscaping maintenance, consumer products), electrical generation, natural gas consumption, water supply and wastewater treatment, solid waste, air conditioning and refrigeration. These emissions categories are discussed below.

- **Area Sources**. Area source emissions occur from hearths, architectural coatings, landscaping equipment, and consumer products. The Project involves residential and commercial uses and would not include hearths.[13] Landscaping and consumer products (i.e., personal care products, home, lawn, and garden products, disinfectants, sanitizers, polishes, cosmetics, and floor finishes) would be part of the emissions from area sources. Additionally, the primary emissions from architectural coatings are volatile organic compounds, which are relatively insignificant as direct GHG emissions.

- **Energy Consumption**. Energy consumption consists of emissions from project consumption of electricity and natural gas. Primary uses of electricity and natural gas by the Project would be for miscellaneous residential appliances; space heating and cooling, water heating, ventilation, lighting, appliances, and electronics. Energy emissions are calculated based on consumption rates and emissions factors in CalEEMod. No changes were made to the default energy usage consumption rates or emissions factors.

- **Solid Waste**. Solid waste releases GHG emissions in the form of methane when these materials decompose. Solid waste emissions are calculated based on generation rates and emissions factors in CalEEMod.

- **Water and Wastewater**. Project GHG emissions would be generated from energy consumption associated with water and wastewater conveyance and treatment. No changes were made to the default water usage consumption rates or emissions factors.

- **Refrigerants**. Project refrigerants includes fugitive GHG emissions associated with building air conditioning and refrigeration equipment. Different types of refrigeration equipment are used by different types of land uses. For example, an office may use various types of air conditioning equipment, while a supermarket may use both air conditioning equipment and refrigeration

[13] South Coast Air Quality Management District Rule 445 prohibits the installation of wood burning devices in new developments. http://www.aqmd.gov/docs/default-source/rule-book/rule-iv/rule-445.pdf

equipment. CalEEMod automatically generates a default air conditioning and refrigeration equipment inventory for each project land use subtype based on industry data from the USEPA.[14]

- **Mobile Sources**. Mobile sources are emissions from motor vehicles, including tailpipe and evaporative emissions. Depending upon the pollutant being discussed, the potential air quality impact may be of either regional or local concern. For example, ROG, NO_X, PM_{10}, and $PM_{2.5}$ are all pollutants of regional concern. NO_X and ROG react with sunlight to form O_3, known as photochemical smog. Additionally, wind currents readily transport PM_{10} and $PM_{2.5}$. However, CO tends to be a localized pollutant, dispersing rapidly at the source.

  Project-generated vehicle emissions are based on the trip generation within the Traffic Study for the Proposed Watermarke Ontario Project in the City of Ontario (Traffic Study) prepared by Kimley-Horn and Associates (July 2023) and incorporated into CalEEMod as recommended by the SCAQMD. Project trip generation is based on the following Institute of Transportation Engineers (ITE) land use categories:

  - ITE Land Use 220: Multifamily Housing (Low Rise)
  - ITE Land Use 822: Strip Retail Plaza (<40K)

  The Project would generate 1,269 daily trips, or 463,185 trips per year. Trip lengths use CalEEMod default lengths for projects located in San Bernardino County. Based on these estimates the Project is anticipated to generate 3,479,538 VMT per year.

[14] U.S. Environmental Protection Agency, *Accounting Tool to Support Federal Reporting of Hydrofluorocarbon Emissions: Supporting Documentation,* October 2016.

5 POTENTIAL IMPACTS AND MITIGATION

5.1 Greenhouse Gas Emissions

Previous Significance Determination

The 2022 Final Supplemental EIR for The Ontario Plan 2050 concluded that implementation of The Ontario Plan would reduce GHG emissions to a less than significant level. The General Plan includes implementation of the Community Climate Action Plan update which reduces GHG emissions and is consistent with CARB's Scoping Plan and SCAG's Connect SoCal regional transportation plan.

Threshold 5.1 Would the Project generate GHG emissions, either directly or indirectly, that could have a significant impact on the environment?

Construction Greenhouse Gas Emissions

The Project would result in direct emissions of CO_2, N_2O, and CH_4 from construction equipment and the transport of materials and construction workers to and from the Project site. The GHG emissions only occur during temporary construction activities and would be cease once construction is complete. The total GHG emissions (in CO_2e) generated during construction are shown in Table 3: Construction-Related Greenhouse Gas Emissions.

Table 3: Construction-Related Greenhouse Gas Emissions

Category	$MTCO_2e$	30-Year Amortized $MTCO_2e$
Construction Year 2024	587	19.57
Construction Year 2025	1,245	41.50
Construction Year 2026	1,118	37.27
Total Construction Emissions	*2,950*	*98.33* [1]

Note: Total does not sum due to rounding.
Source: CalEEMod version 2020.4.0. Refer to Appendix A for model outputs.

As shown in Table 3, the Project would result in the generation of approximately 2,950 $MTCO_2e$ over the course of construction. Construction GHG emissions are typically summed and amortized over a 30-year period and then added to the operational emissions[15]. The amortized Project construction emissions would be 98.33 $MTCO_2e$ per year. Once construction is complete, the generation of these GHG emissions would cease.

Operational Greenhouse Gas Emissions

Operational emissions occur over the life of the Project. GHG emissions would result from direct emission sources such as Project generated vehicular traffic, on-site combustion of natural gas, and operation of any landscaping equipment. Operational GHG emissions would also result from indirect sources, such as off-site generation of electrical power, the energy required to convey water to, and wastewater from the

[15] The standard 30-year amortization period is based on the South Coast Air Quality Management District GHG CEQA Significance Thresholds Working Group (South Coast Air Quality Management District, *Minutes for the GHG CEQA Significance Threshold Stakeholder Working Group #13,* August 26, 2009).

Project, the emissions associated with solid waste generated from the Project, and any fugitive refrigerants from air conditioning or refrigerators.

Prior to issuance of a building permit, the City of Ontario would review and verify that future development plans within the Project area demonstrate compliance with the current version of the Building and Energy Efficiency Standards. Development would also be required to adhere to the provisions of CALGreen, which establishes planning and design standards for sustainable site development, and energy efficiency. Construction activities would be required to monitor air quality emissions using applicable regulatory guidance such as the SCAQMD Rules.

GHG emissions associated with the Project are summarized in Table 4: Operational Greenhouse Gas Emissions. As shown in Table 4, the Project's emissions would be 2,186.85 $MTCO_2e$ annually from both construction and operations.

Table 4: Operational Greenhouse Gas Emissions

Emissions Source	Annual Emissions
	$MTCO_2e$ per Year
Total Construction Emissions Amortized Over 30 Years	98.3
Area Source	84.3
Energy	593.0
Mobile	1,285.0
Waste	86.5
Water and Wastewater	39.4
Refrigerants	0.35
Total	**2,186.85**
Emissions per Dwelling Unit	6.13
2022 CCAP Update Threshold for residential developments completed between 2020 and 2030, emissions per Dwelling Unit	5.85
Exceeds Threshold?	**Yes**

Source: CalEEMod version 2020.4.0. Refer to Appendix A for model outputs.

The Project includes 357 dwelling units; therefore, annual GHG emissions would equal 6.13 $MTCO_2e$ per unit, exceeding the 5.85 $MTCO_2e$ per unit threshold for residential projects completed before 2030. As such, the Project must achieve a minimum of 100 points on the Screening Table to show consistency with the 2022 CCAP Update.

Screening Table

To show consistency with 2022 CCAP Update the Project shall include selected Screening Table Measures that achieve a minimum of 100 points. The City shall verify that Screening Table Measures achieving a minimum of 100 points are incorporated in development plans prior to the issuance of building permit(s) and/or site plans. The City shall also verify implementation of the selected Screening Table Measures prior

to the issuance of Certificate(s) of Occupancy. By achieving the 100-point minimum, the Project would be consistent with the 2022 CCAP Update and thus the Project is considered to have a less than significant individual and cumulatively considerable impact on GHG emissions. An example of how the proposed Project could achieve a minimum of 100 Screening Table Points is provided in Table 5: Example of GHG Performance Standards for Multi-Family Development.

Table 5: Example of GHG Performance Standards for Multi-Family Development

Reduction Measure	Description	Feature	Points
Measure 1: Building Electrification	Replacement of gas appliance with efficient electric appliance	Electric Space Heater Electric Water Heater Electric Stove Electric Dryer	6 8 5 1
		Total for measure	**20**
Measure 4: Transit Oriented Communities	New development is located in a transit-oriented community	Development site is located within ½ mile radius of one or more of the following: a Bus Rapid Transit (BRT) stop, bus transit center, light rail station, the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods, and/or High Quality Transit Corridor defined as a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.	10
		Total for measure	**10**
Measure 6: Vehicle Electrification	Installation of EV charging stations for resident vehicle parking space	Installation of Level 2 EV or higher charging stations at a rate of 5-10% of required vehicle parking spaces.	10
		Total for measure	**10**
Measure 7: Active Transportation	Installation or improvement of bicycle facilities	Bicycle parking facilities with 1:1 ratio of bicycle parking to guest vehicle parking space.	3
	Installation or improvement of pedestrian facilities	Two or three pedestrian infrastructure improvements to street design on private streets, including, but not limited to curb extensions, raised crosswalks, speed humps/bumps, street tree plantings in parkways or street medians, and elevated pavement markings.	3
		Total for measure	**6**
Measure 10: Waste Diversion	Design and plan multi-family housing developments to include onsite areas for municipal compost/green waste and recycling bins/containers	Site design allocates sufficient space for storage and collection of green waste, organic waste, and recyclables.	33

Table 5: Example of GHG Performance Standards for Multi-Family Development			
Reduction Measure	**Description**	**Feature**	**Points**
		Total for measure	**33**
Measure 11: Water Conservation	Implement indoor water efficiency measures	Implement water efficient showerheads and faucets. Install on-demand water circulators on all showers/baths	1 2
	Incorporate outdoor water efficiency measures	Design and plan outdoor landscapes planted with drought-tolerant, low maintenance plants with a 1) drip irrigation system or 2) sprinkler irrigation system with a weather-based irrigation controller.	4
		Total for measure	**7**
Additional Measures	AR-1: Meet CalGreen	CalGreen Tier 2 Compliance	10
	AR-2: Generate energy from on-site solar PV	Solar PV that generates 30%-49% of residential energy needs on multifamily residential buildings that are 4 stories in height or taller.	5
		Total for measure	**15**
		TOTAL POINTS	**101**

Source: City of Ontario, *Ontario Community Climate Action Plan: Greenhouse Gas Emissions Screening Tables*, Table 3, page 10. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/CCAP/Screening%20Table/Ontario-CCAP_Screening-Tables-MARCH%202023.pdf Accessed August 2023.

Conclusion

GHG emission impacts related to the proposed Project are similar to the less than significant impacts identified in The Ontario Plan 2050 Final EIR. No new impact relative to GHG emissions or a substantial increase in the severity of a previously identified significant impact evaluated in the Final EIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Final EIR was certified is available that would alter the Final EIR's significance finding.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact. Compliance with the CCAP will ensure that Project related GHG emissions remain less than significant.

5.2 Greenhouse Gas Reduction Plan Compliance

Threshold 5.2 Would the Project conflict with an applicable plan, policy, or regulation of an agency adopted for the purpose of reducing GHG emissions?

City of Ontario Community Climate Action Plan Consistency

The primary purpose of the City's CCAP is to design a feasible strategy to reduce GHG emissions generated by community activities that is consistent with statewide Scoping Plan GHG reduction efforts. The City has identified a series of reduction measures to be implemented by the City. These reduction measures include programs that improve building energy efficiency, increase use of public and active transit, and decrease VMT, increase use of alternative-fueled vehicles, increase use of renewable energy, reduce water consumption, and reduce waste.

Table 6: Community Climate Action Plan Consistency, evaluates the consistency of the proposed Project to the applicable measures of the CCAP. As discussed in the table, the proposed Project would be consistent with all applicable measures. By using energy more efficiently, harnessing renewable energy to power buildings, recycling waste, and enhancing access to sustainable transportation modes, the City can keep dollars in local economy, create new green jobs, and improve community quality of life. As shown in Table 6, the Project would not conflict with the goals of the CCAP.

Table 6: Community Climate Action Plan Consistency

CCAP Measure Name	Measure Description	Consistency	
Energy			
Energy – Strategy 1	**Building electrification.** Promote and incentivize the phase-out of gas appliances in new and existing homes and businesses throughout the community to advance GHG reductions, increase energy efficiency, and protect public safety and environmental health.	N/A:	This measure is to be taken at the City level. However, implementation of the Project would not conflict with this strategy.
Energy – Strategy 2	**Onsite solar energy for existing residential development.** Continue to support and facilitate installation of rooftop solar photovoltaic and onsite solar energy systems in existing residential development.	N/A:	This measure only applies to existing residential development.
Energy – Strategy 3	**Onsite Solar Energy Systems for Nonresidential Development:** Ensure new large non-residential development, including City facilities, includes onsite renewable energy to support the site's energy needs by requiring solar photovoltaic panels or other appropriate onsite renewable energy generation systems for the following types of projects: • New commercial and office buildings, or existing commercial and office building expansions greater or equal to 45,000 square feet in size. • New industrial or existing industrial buildings expansions greater or equal to 100,000 square feet in size.	Consistent:	The proposed Project would promote renewable energy sources including passive solar collection, subject to the City of Ontario policies and development regulations.
Energy – Strategy 4	**Green roofs.** Promote and incentivize residents and business owners to install green roofs to conserve energy and reduce surface water runoff.	N/A:	This measure is to be taken at the City level. However, implementation of the Project would not conflict with this strategy.

Table 6: Community Climate Action Plan Consistency			
CCAP Measure Name	**Measure Description**	**Consistency**	
Energy – Strategy 5	**Urban Cooling:** Maintain and expand the City's existing tree canopy, with a goal of planting 500 trees annually through 2050 and promote the use of pervious concrete and cool pavement for pavement projects.	Consistent:	The Proposed project would include landscape installation and pervious concrete pavement.
Energy – Strategy 6	**Energy efficiency retrofits for low-income households.** Promote and incentivize voluntary energy efficiency retrofits of homes to reduce natural gas and electricity usage, with the goal of retrofitting 9,000 low-income homes by 2050. Partner with community services agencies to fund energy efficiency projects, including heating, ventilation, air conditioning, indoor lighting, water heating equipment, insulation, and weatherization for low-income residents.	N/A:	This measure is not applicable to the proposed Project, as retrofits only apply to existing structures.
Energy – Strategy 7	**Energy efficiency retrofits.** Promote and incentivize voluntary energy efficiency retrofits to reduce in natural gas and electricity usage. Partner with regional agencies to expand access to existing energy efficiency and conservation opportunities, incentives, and technical assistance for residents and businesses.	N/A:	This measure is not applicable to the proposed Project, as retrofits only apply to existing structures.
Energy – Strategy 8	**Smart Growth and Infill.** Encourage revitalization of neighborhoods through higher-density, mixed-use, infill development and creative reuse of underutilized sites within the urban core.	Consistent:	The Project would construct multifamily residential and commercial retail land uses on an underutilized site in Ontario, CA.
Transportation			
Transportation – Strategy 9	**Transit-Oriented Development:** Encourage development of compact, mixed-use, and transit-oriented development to improve the regional jobs-housing balance, especially on corridors served by high-ridership transit and bus rapid transit, such as Holt Avenue.	Consistent:	The proposed Project would provide a mixed-use development along a Mountain Avenue, a high-volume corridor with existing public transit.
Transportation – Strategy 10	**Increase Transportation Ridership.** Ensure a reliable and responsive transit system with dedicated and secure funding and resources to support increased ridership.	N/A:	This measure is to be taken at a City level. However, implementation of the Project would not conflict with this strategy.
Transportation – Strategy 11	**Traffic signal synchronization and roadway management.** Implement traffic and roadway management strategies to improve mobility and efficiency and reduce associated emissions.	N/A:	This measure is to be taken at the City level. However, implementation of the Project would not conflict with this strategy.
Transportation – Strategy 12	**Community vehicle electrification.** Promote and incentivize the adoption of electric vehicles (EV) citywide, including light-duty and heavy-duty vehicles, for municipal, commercial, and residential uses.	N/A:	This measure is to be taken at the City level. However, implementation of the Project would not conflict with this strategy.

Table 6: Community Climate Action Plan Consistency

CCAP Measure Name	Measure Description	Consistency	
Transportation – Strategy 13	**Active Transportation Networks:** Work with transit agencies, school districts, and employers to facilitate an interconnected transportation system that allows a shift in travel from private passenger vehicles to alternative modes, including public transit, ride sharing, car sharing, bicycling, and walking.	Consistent:	The proposed Project would develop multifamily residential units near public transportation proved by OmniTrans.
Transportation – Strategy 14	**Vehicle Idling:** Limit idling of heavy-duty trucks. Support the SCAMQD and CARB anti-idling requirements and provide signage in key areas where idling that is not consistent with SCAMQD or CARB requirements might occur.	Consistent:	Commercial motor vehicles are required to comply with California Code of Regulations Section 2485 which would limit the idling of Diesel fueled vehicles to no more than five minutes.
Transportation – Strategy 15	**Parking policy and event parking.** Adopt a comprehensive parking policy that encourages carpooling and the use of alternative transportation, including providing parking spaces for car-share vehicles at convenient locations with access to public transportation.	N/A:	This measure is to be taken at a City level. However, implementation of the Project would not conflict with this strategy.
Off-road Equipment			
Off-Road Equipment – Strategy 16	**Electrification of construction and landscaping equipment.** Promote and incentivize the transition to electric construction and landscaping equipment.	N/A:	This measure is to be taken at the City level. However, implementation of the Project would not conflict with this strategy.
Off-Road Equipment – Strategy 17	**Idling Ordinance for Construction Equipment:** Limit idling of heavy-duty off-road construction equipment to reduce air pollution and GHG emissions from construction activity.	Consistent:	Construction would be required to comply with California Code of Regulations Section 2485 and 2499 which would limit the idling of heavy-duty construction equipment to no more than five minutes.
Waste			
Waste – Strategy 18	**Methane capture at landfills.** Support efforts to reduce methane emissions from regional landfills.	N/A:	This measure is not applicable to the proposed Project.
Waste – Strategy 19	**Waste Diversion:** Exceed waste diversion goals recommended by AB 939 and CALGreen by adopting a citywide diversion target of at least 75 percent of waste.	Consistent:	The proposed Project would be subject to all applicable local, State, and federal waste diversion requirement.
Waste – Strategy 20	**Construction and Demolition Waste Recovery Ordinance:** Increase the amount of waste recycled during construction and demolition of buildings.	Consistent:	Contractors are required to comply with CALGreen Code Sections 4.408 and 5.408, requiring the recycling of a minimum of 65 percent of construction and demolition waste, refer to **PPP GHG-3**.
Water			
Water – Strategy 21	**Indoor water efficiency.** Encourage water-efficient retrofits of new and existing buildings	Consistent:	The Project would comply with CALGreen Code Section 4.303 and

Table 6: Community Climate Action Plan Consistency			
CCAP Measure Name	**Measure Description**	**Consistency**	
	by working with water providers and regional agencies.		require the installation of low flow fixtures.
Water – Strategy 22	**Water Efficient Landscapes and Water Recycling:** Promote drought-tolerant and fire-wise landscaping. Encourage increased use of reclaimed water for landscape irrigation, agricultural, and industrial use.	Consistent:	The proposed Project plans to incorporate native drought tolerant landscaping and would use recycled water to irrigate landscape areas as required by the City of Ontario Recycled Water Master Plan.
Water – Strategy 23	**Water system and wastewater operations efficiency.** Maximize efficiency at drinking water treatment, pumping, and distribution facilities, including development of off-peak demand schedules for heavy commercial and industrial users.	N/A:	This measure is not applicable to the proposed Project.
Water – Strategy 24	**Methane capture for wastewater treatment.** Work with Inland Empire Utilities Agency (IEUA), the local wastewater treatment provider, to increase methane capture rate.	N/A:	This measure is not applicable to the proposed Project.
Other			
Strategy 25	**Methane capture for dairy operations.** Encourage and incentivize local dairy operations to reduce methane emissions through methane capture technology.	N/A:	This measure is not applicable to the proposed Project.
Strategy 26	**Climate change awareness and education.** Promote climate change awareness and GHG reduction community-wide through a variety of mechanisms, including through support of climate change education in schools or community colleges.	N/A:	This measure is to be taken at the City level.
Strategy 27	**Carbon sequestration.** Establish a citywide carbon sequestration project and sequestration goal of 5,000 MT CO_2 per year.	N/A:	This measure is to be taken at the City level.
Strategy 28	**Green jobs.** Support green job trainings and opportunities to create sustainable, living wage, quality employment opportunities.	N/A:	This measure is to be taken at the City level.

SCAG's Connect SoCal

On September 3, 2020, SCAG's Regional Council adopted Connect SoCal (*2020 - 2045 Regional Transportation Plan/Sustainable Communities Strategy* [2020 RTP/SCS]). The RTP/SCS is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. The RTP/SCS embodies a collective vision for the region's future and is developed with input from local governments, county transportation commissions, tribal governments, nonprofit organizations, businesses, and local stakeholders in the counties of Imperial, Los Angeles, Orange, Riverside, San

Bernardino, and Ventura. SCAG's RTP/SCS establishes GHG emissions goals for automobiles and light-duty trucks for 2020 and 2035 as well as an overall GHG target for the Project region consistent with both the target date of AB 32 and the post-2020 GHG reduction goals of Executive Orders 5-03-05 and B-30-15.

The RTP/SCS contains over 4,000 transportation projects, ranging from highway improvements, railroad grade separations, bicycle lanes, new transit hubs and replacement bridges. These future investments were included in county plans developed by the six county transportation commissions and seek to reduce traffic bottlenecks, improve the efficiency of the region's network, and expand mobility choices for everyone. The RTP/SCS is an important planning document for the region, allowing project sponsors to qualify for federal funding.

The plan accounts for operations and maintenance costs to ensure reliability, longevity, and cost effectiveness. The RTP/SCS is also supported by a combination of transportation and land use strategies that help the region achieve state GHG emissions reduction goals and Federal Clean Air Act (FCAA) requirements, preserve open space areas, improve public health and roadway safety, support our vital goods movement industry, and utilize resources more efficiently. GHG emissions resulting from development-related mobile sources are the most potent source of emissions, and therefore Project comparison to the RTP/SCS is an appropriate indicator of whether the Project would inhibit the post-2020 GHG reduction goals promulgated by the state. The Project's consistency with the RTP/SCS goals is analyzed in detail in Table 7: Regional Transportation Plan/Sustainable Communities Strategy Consistency.

Table 7: Regional Transportation Plan/Sustainable Communities Strategy Consistency

SCAG Goals		Compliance	
GOAL 1:	Encourage regional economic prosperity and global competitiveness.	Consistent:	The Project would draw new residents and retail businesses to the area, contributing to regional economic prosperity.
GOAL 2:	Improve mobility, accessibility, reliability, and travel safety for people and goods.	Consistent:	Although this Project is not a transportation improvement project, the Project is located near an existing transit route along I-10.
GOAL 3:	Enhance the preservation, security, and resilience of the regional transportation system.	N/A:	This is not a transportation improvement project and is therefore not applicable.
GOAL 4:	Increase person and goods movement and travel choices within the transportation system.	N/A:	This is not a transportation improvement project and is therefore not applicable. However, implementation of the Project would not conflict with this goal.
GOAL 5:	Reduce greenhouse gas emissions and improve air quality.	Consistent:	The Project is located within an urban area in proximity to existing transportation routes and freeways. Location of the project within a developed area would reduce trip lengths, which would reduce GHG and air quality emissions. Additionally, the Project would achieve a minimum of 100 points on the City GHG Screening Table, thereby reducing GHG emission impacts to less than significant levels.
GOAL 6:	Support healthy and equitable communities	Consistent:	The Project includes a mix of uses including housing and neighborhood-serving retail proximate to employment, reducing vehicle miles traveled (VMT), promoting walkability, and contributing to a jobs/housing balance.

Table 7: Regional Transportation Plan/Sustainable Communities Strategy Consistency

SCAG Goals		Compliance	
GOAL 7:	Adapt to a changing climate and support an integrated regional development pattern and transportation network.	Consistent:	The Project would be an infill development in an underutilized area which will provide housing in close proximity to designated public transit facilities and routes.
GOAL 8:	Leverage new transportation technologies and data-driven solutions that result in more efficient travel.	N/A:	This is not a transportation improvement project and is therefore not applicable. However, implementation of the Project would not conflict with this goal.
GOAL 9:	Encourage development of diverse housing types in areas that are supported by multiple transportation options.	Consistent:	The Project involves development of a mix of uses (residential and commercial) that would provide diverse housing options that would be served by OmniTrans bus sevice.
GOAL 10:	Promote conservation of natural and agricultural lands and restoration of habitats.	Consistent:	The Project proposes a mix of residential and commercial land uses in an urbanized area and would therefore not interfere with conservation of natural or agricultural lands. The Project site is not considered vital habitat land and therefore would not conflict with restoration of habitats.

Source: Southern California Association of Governments, *Connect SoCal (2020 - 2045 Regional Transportation Plan/Sustainable Communities Strategy,* 2020.

The goals stated in the RTP/SCS were used to determine consistency with the planning efforts previously stated. As shown in Table 7, the Project would be consistent with the stated goals of the RTP/SCS. Therefore, the Project would not result in any significant impacts or interfere with SCAG's ability to achieve the region's post-2020 mobile source GHG reduction targets.

California Air Resource Board Scoping Plan Consistency

Adopted December 15, 2022, CARB's *2022 Scoping Plan for Achieving Carbon Neutrality* (2022 Scoping Plan) sets a path to achieve targets for carbon neutrality and reduce anthropogenic GHG emissions by 85 percent below 1990 levels by 2045 in accordance with AB 1279. To achieve the targets of AB 1279, the 2022 Scoping Plan relies on existing and emerging fossil fuel alternatives and clean technologies, as well as carbon capture and storage. Specifically, the 2022 Scoping Plan focuses on zero-emission transportation; phasing out use of fossil gas use for heating homes and buildings; reducing chemical and refrigerants with high GWP; providing communities with sustainable options for walking, biking, and public transit; displacement of fossil-fuel fired electrical generation through use of renewable energy alternatives (e.g., solar arrays and wind turbines); and scaling up new options such as green hydrogen. The 2022 Scoping Plan sets one of the most aggressive approaches to reach carbon neutrality in the world. Unlike the 2017 Scoping Plan, CARB no longer includes a numeric per capita threshold and instead advocates for compliance with a local GHG reduction strategy (i.e., Climate Action Plan) consistent with CEQA Guidelines section 15183.5.

The key elements of the 2022 CARB Scoping Plan focus on transportation. Specifically, the 2022 Scoping Plan aims to rapidly move towards zero-emission (ZE) transportation (i.e., electrifying cars, buses, trains, and trucks), which constitutes California's single largest source of GHGs. The regulations that impact the transportation sector are adopted and enforced by CARB on vehicle manufacturers and are outside the

jurisdiction and control of local governments. The 2022 Scoping Plan accelerates development of new regulations as well as amendments to strengthen regulations and programs already in place. Statewide strategies to reduce GHG emissions in the latest 2022 Scoping Plan include:

- Implementing SB 100 (achieve 100 percent clean electricity by 2045);
- Achieving 100 percent zero emission vehicle sales in 2035 through Advanced Clean Cars II; and
- Implementing the Advanced Clean Fleets regulation to deploy zero-emission vehicle (ZEV) buses and trucks.

Additional transportation policies include the Off-Road Zero-Emission Targeted Manufacturer rule, Clean Off-Road Fleet Recognition Program, In-use Off-Road Diesel-Fueled Fleets Regulation, Clean Off-Road Fleet Recognition Program, and Amendments to the In-use Off-Road Diesel-Fueled Fleets Regulation. The 2022 Scoping Plan would continue to implement SB 375. GHGs would be further reduced through the Cap-and-Trade Program carbon pricing and SB 905. SB 905 requires CARB to create the Carbon Capture, Removal, Utilization, and Storage Program to evaluate, demonstrate, and regulate carbon dioxide removal projects and technology.

As indicated above, GHG reductions are also achieved as a result of State of California energy and water efficiency requirements for new residential developments. These efficiency improvements correspond to reductions in secondary GHG emissions. For example, in 2021 approximately 38 percent of the total electricity net generation in California was derived from natural gas combustion. Therefore, energy saving measures, such as Title 24, reduces GHG emissions from the power generation facilities by reducing load demand.

Scoping Plan Appendix D, Local Actions

Included in the 2022 Scoping Plan is a set of Local Actions (2022 Scoping Plan Appendix D) aimed at providing local jurisdictions without a CEQA-qualified CAP with the tools needed to reduce GHGs and assist the state in meeting the ambitious targets set forth in the 2022 Scoping Plan. CARB Scoping Plan Appendix D includes a section on evaluating plan-level and project-level alignment with the State's Climate Goals in CEQA GHG analyses. In this section, CARB identifies several recommendations and strategies that should be considered for new development in order to determine consistency with the 2022 Scoping Plan. Notably, this section is focused on Residential and Mixed-Use Projects.[16] CARB specifically states that Appendix D does not address other land uses (e.g., industrial).[17] However, CARB plans to explore new approaches for other land use types in the future.[18]

CARB Scoping Plan Appendix D lists potential actions that support the State's climate goals. However, the Scoping Plan notes that the applicability and performance of the actions may vary across the regions. The document is organized into two categories (A) examples of plan-level GHG reduction actions that could be implemented by local governments and (B) examples of on-site project design features, mitigation measures, that could be required of individual projects under CEQA, if feasible, when the local jurisdiction is the lead agency.

[16] California Air Resources Board, *2022 Scoping Plan for Achieving Carbon Neutrality*, *Appendix D: Local Actions*, Page 21, November 2022.
[17] California Air Resources Board, *2022 Scoping Plan for Achieving Carbon Neutrality*, *Appendix D: Local Actions*, Page 4, November 2022.
[18] California Air Resources Board, *2022 Scoping Plan for Achieving Carbon Neutrality*, *Appendix D: Local Actions*, Page 21, November 2022.

Appendix D notes that project consistency with the Scoping Plan can be determined through consistency with a qualified CAP, and absent consistency with a qualified CAP the State recommends that residential and mixed-use projects meet the following three priority areas will reduce GHG emissions and should accommodate growth in a manner consistent with State GHG reduction and equity prioritization goals. These project attributes are intended to help local jurisdictions qualitatively identify projects that are clearly consistent with the Scoping Plan. Appendix D also notes that lead agencies may determine, with adequate additional supporting evidence, that projects that incorporate some, but not all, of the key project attributes are consistent with the State's climate goals.[19]

- Transportation Electrification. Table 3 in the 2022 Scoping Plan, Appendix D, notes that to be clearly consistent with the State's goals, projects should provide EV charging infrastructure that, at minimum, meets the most ambitious voluntary standard in the CALGreen code.
- VMT Reduction. The Scoping Plan notes that to be consistent with the VMT reduction attribute, projects should be located on sites that are surrounded by existing urban uses and reuses or redevelops previously undeveloped or underutilized land; do not result in the loss or conversion of natural and working lands; and consist of transit-supportive densities (minimum of 20 residential dwelling units per acre).
- Building Decarbonization. Building decarbonization involves maximizing energy efficiency and reducing the use of fossil fuel energy.

However, as discussed previously, the City of Ontario has adopted a CEQA-qualified CAP and as shown in Table 6, the Project is consistent with the Ontario CCAP. As noted in Scoping Plan Appendix D, consistency with a qualified CAP ensures consistency with the Scoping Plan. Therefore, the Project is consistent with 2022 Scoping Plan and would comply with all applicable regulatory requirements.

Conclusion

The proposed Project would be consistent with the Ontario CCAP, SCAG's RTP/SCS, and the CARB Scoping Plan. The Project would be required to comply with all existing regulations, including applicable measures from the City's General Plan.

As shown in Table 4, approximately 86 percent of the Project Total GHG emissions are from energy and mobile sources which would be further reduced by the 2022 Scoping Plan goals (including achieve 100 percent clean electricity by 2045 [SB 100], achieving 100 percent zero emission vehicle sales in 2035 [Advanced Clean Cars II], and implementing the Advanced Clean Fleets regulation [ZEV buses and trucks]). Mobile source emissions would further decline in the future due to statewide measures discussed above (including the reduction in fuels' carbon content, CARB's Advanced Clean Car Program, CARB's Mobile Source Strategy, fuel efficiency standards, etc.), as well as cleaner technology and fleet turnover. SCAG's 2020 RTP/SCS is also expected to help California reach its GHG reduction goals, with reductions in per capita transportation emissions of 19 percent by 2035.[20] The Project includes a mix of a residential and

[19] California Air Resources Board, *2022 Scoping Plan for Achieving Carbon Neutrality, Appendix D: Local Actions*, Page 23, November 2022.

[20] California Air Resources Board, *SB 375 Regional Plan Climate Targets*, https://ww2.arb.ca.gov/our-work/programs/sustainable-communities-program/regional-plan-targets.

commercial land uses that would potentially reduce the need to travel long distances for some residents and reduce associated GHG emissions.

At this time, it is not possible to quantify the emissions savings from future regulatory measures that have not yet been developed; nevertheless, it can be anticipated that Project operations would benefit from applicable measures are enacted to meet State GHG reduction goals. The Project would not impede the State's progress towards carbon neutrality by 2045 under the 2022 Scoping Plan. The Project would be required to comply with applicable current and future regulatory requirements promulgated through the 2022 Scoping Plan.

In addition, the Ontario CCAP establishes a city points system that assigns values for each GHG emissions mitigation design element or operational program feature incorporated into a given development project. The CCAP Screening Tables point values correspond to the minimum GHG emissions reduction expected from each feature. Projects with features that yield at least 100 Screening Table points are considered consistent with the reduction quantities anticipated in the City's CCAP. Such projects would be determined to have a less than significant individual and cumulative GHG emissions impact. Achieving 100 points ensures that the Project would not impede California's statewide GHG reduction goals for 2030 and 2050.

In conclusion, the Project does not conflict with the applicable plans that are discussed above and therefore, the Project does not have a significant impact.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

Conclusion

The Project would not conflict with any applicable plan, policy, or regulation; GHG impacts related to the proposed Project are similar to the less than significant impacts identified in The Ontario Plan 2050 Final EIR. No new impact relative to GHG emissions or a substantial increase in the severity of a previously identified significant impact evaluated in the Final EIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Final EIR was certified is available that would alter the Final EIR's significance finding.

5.3 Cumulative Setting, Impacts, and Mitigation Measures

Cumulative Setting

Climate change is a global problem. GHGs are global pollutants, unlike criteria air pollutants and TACs, which are pollutants of regional and local concern. Whereas pollutants with localized air quality effects have relatively short atmospheric lifetimes (about 1 day), GHGs have much longer atmospheric lifetimes of 1 year to several thousand years that allow them to be dispersed around the globe.

Cumulative Impacts

Project-related GHG emissions are not confined to a particular air basin but are dispersed worldwide. Therefore, impacts under Impact Threshold 5.1 are not Project-specific impacts, but the proposed

Project's contribution to cumulative GHG impact. As discussed previously, the Project would achieve a minimum of 100 points on the 2022 CCAP Screening Tables. Projects with features that yield at least 100 Screening Table points are considered consistent with the reduction quantities anticipated in the City's CCAP and are determined to have a less than significant individual and cumulative GHG emissions impact.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

Conclusion

Cumulative GHG emission impacts related to the proposed Project are similar to the less than cumulatively considerable impacts identified in The Ontario Plan 2050 Final EIR. Consistency with the 2022 CCAP Update would achieve the state's GHG emissions efficiency target without implementation of additional local GHG reduction measures. No new impact relative to air quality or a substantial increase in the severity of a previously identified significant impact evaluated in the Final EIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Final EIR was certified is available that would alter the Final EIR's significance finding.

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Watermarke
Construction Start Date	6/1/2024
Operational Year	2026
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.80
Precipitation (days)	2.40
Location	34.07832560287942, -117.66957162919645
County	San Bernardino-South Coast
City	Ontario
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5235
EDFZ	10
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.14

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description

827

Apartments Mid Rise	357	Dwelling Unit	2.43	286,994	0.00	0.00	1,182	—
Strip Mall	12.2	1000sqft	0.14	12,200	0.00	0.00	—	retail/lease/amenities
Unenclosed Parking with Elevator	657	Space	1.59	262,800	0.00	0.00	—	—
City Park	1.62	Acre	1.62	0.00	70,558	0.00	—	—
Other Asphalt Surfaces	55.1	1000sqft	1.27	0.00	0.00	0.00	—	paving and off-site improvements

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-C	Water Unpaved Construction Roads
Construction	C-11	Limit Vehicle Speeds on Unpaved Roads
Construction	C-12	Sweep Paved Roads

2. Emissions Summary

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	19.6	annual days of extreme heat
Extreme Precipitation	6.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract

MANAGEMENT SUMMARY

BCR Consulting LLC (BCR Consulting) is under contract to Kimley-Horn to complete a Cultural Resources Assessment of the proposed Watermarke Project in the City of Ontario (City), San Bernardino County, California. A cultural resources records search, additional research, intensive-level pedestrian field survey, and California Register of Historical Resources (California Register) eligibility evaluations were conducted for the project in partial fulfillment of the California Environmental Quality Act (CEQA).

The records search has revealed that six previous cultural resources studies have taken place, within one half-mile of the project site, but none have assessed the project area. No archaeological resources have been previously recorded within one half-mile of the project location. During the research and field survey, two resources were identified, recorded, and evaluated for California Register listing eligibility (i.e. significance under CEQA). These include the historic-period post office at 1126 North Mountain Avenue, and a commercial retail building comprising 1028 through 1044 West 4th Street. California Register listing eligibility recommendations are summarized in the below table.

Non-Significant Properties. The historic-period post office at 1126 North Mountain Avenue and a commercial retail property comprised of and 1028 through 1044 West 4th Street have been evaluated and are recommended not eligible for California Register eligibility. They do not warrant further consideration.

Accidental Discoveries. If previously undocumented cultural resources are identified during earthmoving activities associated with development of the project site, a qualified archaeologist should be contacted to assess the nature and significance of the find, diverting construction excavation if necessary. The current study attempted to determine whether significant archaeological deposits were present on the proposed project site. Although none were yielded during the records search and field survey, ground-disturbing activities have the potential to reveal buried deposits not observed on the surface. Prior to the initiation of ground-disturbing activities, field personnel should be alerted to the possibility of buried prehistoric or historic cultural deposits. In the event that field personnel encounter buried cultural materials, work in the immediate vicinity of the find should cease and a qualified archaeologist should be retained to assess the significance of the find. The qualified archaeologist should have the authority to stop or divert construction excavation as necessary. If the qualified archaeologist finds that any cultural resources present meet eligibility requirements for listing on the California Register or the National Register of Historic Places (National Register), plans for the treatment, evaluation, and mitigation of impacts to the find will need to be developed. Prehistoric or historic cultural materials that may be encountered during ground-disturbing activities include:

- Historic-period artifacts such as glass bottles and fragments, cans, nails, ceramic and pottery fragments, and other metal objects;
- Historic-period structural or building foundations, walkways, cisterns, pipes, privies, and other structural elements;
- Prehistoric flaked-stone artifacts and debitage (waste material), consisting of obsidian, basalt, and or cryptocrystalline silicates;
- Groundstone artifacts, including mortars, pestles, and grinding slabs;
- Dark, greasy soil that may be associated with charcoal, ash, bone, shell, flaked stone, groundstone, and fire affected rocks;

- Human remains.

Human Remains. If human remains are encountered, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are prehistoric, the Coroner will notify the NAHC to determine a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC.

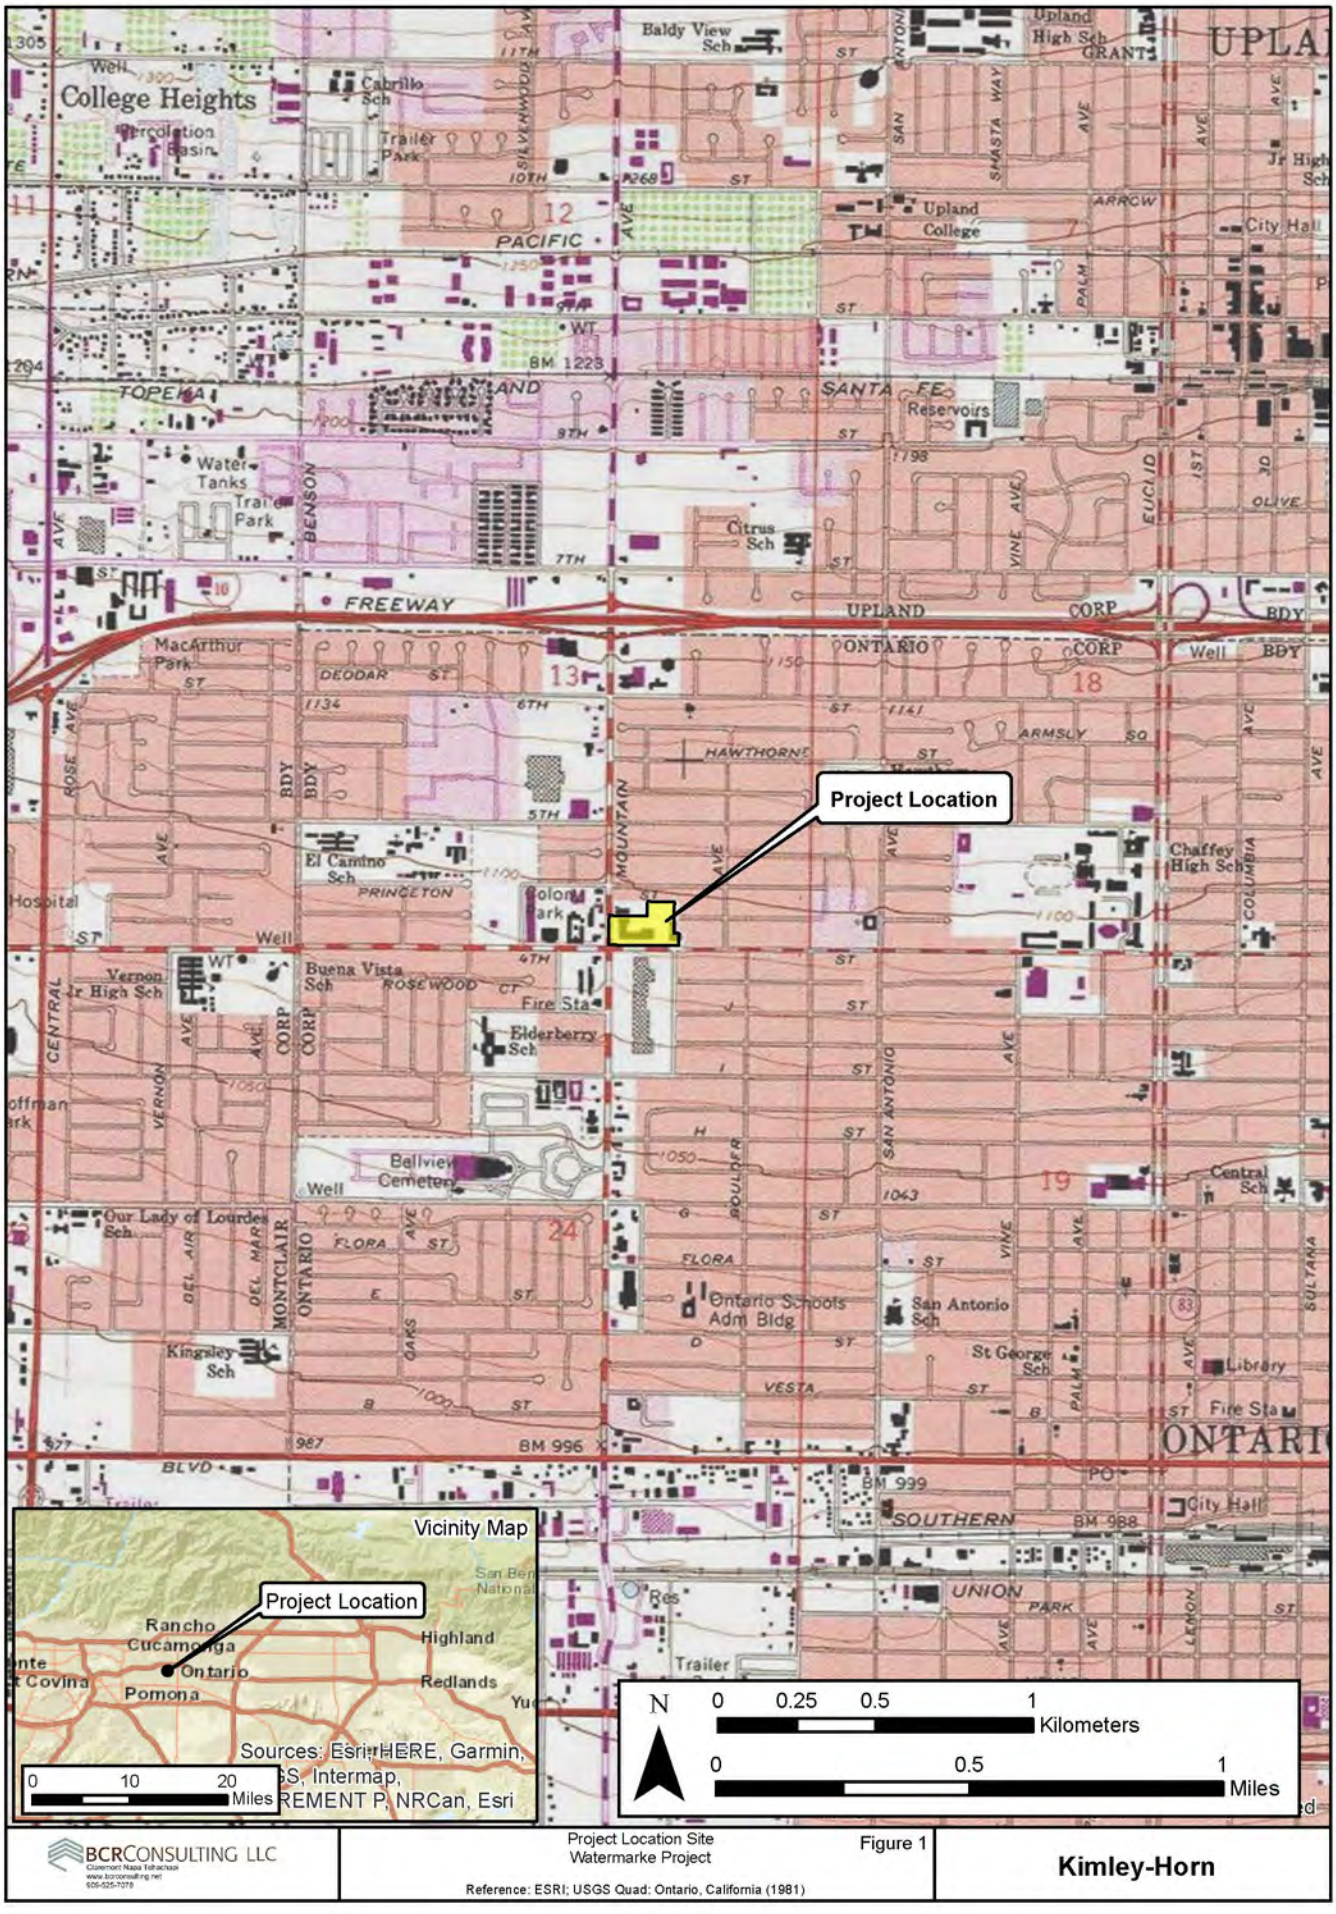
INTRODUCTION

BCR Consulting LLC (BCR Consulting) is under contract to Kimley-Horn to complete a Cultural Resources Assessment of the proposed Watermarke Project in the City of Ontario (City), San Bernardino County, California. The project is located at the northeast intersection of north Mountain Avenue and West 4th Street and occupies approximately 0.97 acres. It is bounded by commercial properties to the west and south, and residential units to the north and east. A cultural resources records search, additional research, intensive-level pedestrian field survey, and California Register of Historical Resources (California Register) eligibility evaluations were conducted for the project pursuant to the California Environmental Quality Act (CEQA). The project site is located in Section 13, Township 1 South, Range 8 West, San Bernardino Baseline and Meridian. It is depicted on the United States Geological Survey (USGS) *Ontario, California* (1981) 7.5-minute topographic quadrangles (Figure 1).



Regulatory Setting

The California Environmental Quality Act. CEQA applies to all discretionary projects undertaken or subject to approval by the state's public agencies (California Code of Regulations 14(3), § 15002(i)). Under CEQA, "A project with an effect that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment" (Cal. Code Regs. tit. 14(3), § 15064.5(b)). State CEQA Guidelines section 15064.5(a) defines a "historical resource" as a resource that meets one or more of the following criteria:

- Listed in, or eligible for listing in, the California Register of Historical Resources (California Register)
- Listed in a local register of historical resources (as defined at Cal. Public Res. Code § 5020.1(k))
- Identified as significant in a historical resource survey meeting the requirements of § 5024.1(g) of the Cal. Public Res. Code
- Determined to be a historical resource by a project's lead agency (Cal. Code Regs. tit. 14(3), § 15064.5(a))

A historical resource consists of "Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California…Generally, a resource shall be considered by the lead agency to be 'historically significant' if the resource meets the criteria for listing in the California Register of Historical Resources" (Cal. Code Regs. tit. 14(3), § 15064.5(a)(3)).

The significance of a historical resource is impaired when a project demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for the California Register. If an impact on a historical or archaeological resource is significant, CEQA requires feasible measures to minimize the impact (State CEQA Guidelines § 15126.4 (a)(1)). Mitigation of

Kimley-Horn

significant impacts must lessen or eliminate the physical impact that the project will have on the resource. Section 5024.1 of the Cal. Public Res. Code established the California Register. Generally, a resource is considered by the lead agency to be "historically significant" if the resource meets the criteria for listing in the California Register (Cal. Code Regs. tit. 14(3), § 15064.5(a)(3)). The eligibility criteria for the California Register are similar to those of the National Register of Historic Places (National Register), and a resource that meets one or more of the eligibility criteria of the National Register will be eligible for the California Register. The California Register program encourages public recognition and protection of resources of architectural, historical, archaeological, and cultural significance, identifies historical resources for state and local planning purposes, determines eligibility for state historic preservation grant funding and affords certain protections under CEQA. Criteria for Designation:

1. Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.
2. Associated with the lives of persons important to local, California or national history.
3. Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of a master or possesses high artistic values.
4. Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.

In addition to meeting one or more of the above criteria, the California Register requires that sufficient time has passed since a resource's period of significance to "obtain a scholarly perspective on the events or individuals associated with the resources." (CCR 4852 [d][2]). Fifty years is normally considered sufficient time for a potential historical resource, and in order that the evaluation remain valid for a minimum of five years after the date of this report, all resources older than 45 years (i.e. resources from the "historic-period") will be evaluated for California Register listing eligibility, or CEQA significance. The California Register also requires that a resource possess integrity. This is defined as the ability for the resource to convey its significance through seven aspects: location, setting, design, materials, workmanship, feeling, and association.

Finally, CEQA requires that significant effects on unique archaeological resources be considered and addressed. CEQA defines a unique archaeological resource as any archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

1. Contains information needed to answer important scientific research questions and there is a demonstrable public interest in that information.
2. Has a special and particular quality such as being the oldest of its type or the best available example of its type.
3. Is directly associated with a scientifically recognized important prehistoric or historic event or person.

CEQA Guidelines Section 15064.5 Appendix G includes significance criteria relative to archaeological and historical resources. These have been utilized as thresholds of significance here, and a project would have a significant environmental impact if it would:

a) cause a substantial adverse change in the significance of a historical resource as defined in section 10564.5;

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 10564.5;

c) Disturb any human remains, including those interred outside of formal cemeteries.

City of Ontario Designation Criteria. In addition to evaluation for California Register listing eligibility, the City of Ontario Development Code Article 26: Historic Preservation (Section 9-1.2615) provides the following designation criteria for a property to qualify as a City Historic Landmark:

a. It exemplifies or reflects special elements of the City's history;

b. It is identified with persons or events significant in local, state, or national history;

c. It is representative of the work of a notable builder, designer, architect, or artist;

d. It embodies distinguishing architectural characteristics of a style, type, period, or method of construction;

e. It is a noteworthy example of the use of indigenous materials or craftsmanship;

f. It embodies elements that represent a significant structural, engineering, or architectural achievement or innovation;

g. It has a unique location, a singular physical characteristic, or is an established and familiar visual feature of a neighborhood, community or the City; or

h. It is one of the few remaining examples in the City, region, state, or nation possessing distinguishing characteristics of an architectural or historical type or specimen.

Cultural resources would be subject to evaluation for the above City Historic Landmark designation criteria.

NATURAL SETTING

The project is located in the Chino Valley, which is bounded on the west by the San Jose Hills, on the south by the Chino Hills, on the north by the foothills of the San Gabriel Mountains, and on the east by La Sierra and the Jurupa Mountains (USGS 1981). Local rainfall ranges from 5 to 15 inches annually (Jaeger and Smith 1971:36-37). The area containing the project site exhibits a gradual southerly slope, and lies on a flood plain that feeds the Santa Ana River approximately five miles to the south (USGS 1981). The native biology of the region is difficult to reconstruct due to recent and historical agricultural, municipal, and industrial impacts. However, the project site is situated in the Upper Sonoran Life Zone, which is locally present between approximately 500 and 5,000 feet AMSL. This

zone typically comprises cismontane valleys and low mountain slopes dominated by mixed coastal sage scrub and chaparral vegetation communities (Williams 2008).

CULTURAL SETTING

Prehistoric Context

The project site is located within the traditional boundaries of the Gabrielino (Bean and Smith 1978; Kroeber 1925). The Gabrielino probably first encountered Europeans when Spanish explorers reached California's southern coast during the 15th and 16th centuries (Bean and Smith 1978; Kroeber 1925). The first documented encounter, however, occurred in 1769 when Gaspar de Portola's expedition crossed Gabrielino territory (Bean and Smith 1978). Other brief encounters took place over the years and are documented in McCawley 1996 (citing numerous sources). The Gabrielino name has been attributed by association with the Spanish mission of San Gabriel, and refers to a subset of people sharing speech and customs with other Cupan speakers (such as the Juaneño/Luiseño/Ajachemem) from the greater Takic branch of the Uto-Aztecan language family (Bean and Smith 1978). Gabrielino villages occupied the watersheds of various rivers (locally including the Santa Ana) and intermittent streams. Chiefs were usually descended through the male line and often administered several villages. Gabrielino society was somewhat stratified and is thought to have contained three hierarchically ordered social classes which dictated ownership rights and social status and obligations (Bean and Smith 1978:540-546). Plants utilized for food were heavily relied upon and included acorn-producing oaks, as well as seed-producing grasses and sage. Animal protein was commonly derived from rabbits and deer in inland regions, while coastal populations supplemented their diets with fish, shellfish, and marine mammals (Boscana 1933, Heizer 1968, Johnston 1962, McCawley 1996). Dog, coyote, bear, tree squirrel, pigeon, dove, mud hen, eagle, buzzard, raven, lizards, frogs, and turtles were specifically not utilized as a food source (Kroeber 1925:652).

History

Historic-era California is generally divided into three periods: the Spanish or Mission Period (1769 to 1821), the Mexican or Rancho Period (1821 to 1848), and the American Period (1848 to present).

Spanish Period. The first European to pass through the area is thought to be a Spaniard called Father Francisco Garces. Having become familiar with the area, Garces acted as a guide to Juan Bautista de Anza, who had been commissioned to lead a group across the desert from a Spanish outpost in Arizona to set up quarters at the Mission San Gabriel in 1771 near what today is Pasadena (Beck and Haase 1974). Garces was followed by Alta California Governor Pedro Fages, who briefly explored the region in 1772. Searching for San Diego Presidio deserters, Fages had traveled through Riverside to San Bernardino, crossed over the mountains into the Mojave Desert, and then journeyed westward to the San Joaquin Valley (Beck and Haase 1974).

Mexican Period. In 1821, Mexico overthrew Spanish rule and the missions began to decline. By 1833, the Mexican government passed the Secularization Act, and the missions,

reorganized as parish churches, lost their vast land holdings, and released their neophytes (Beattie and Beattie 1974).

American Period. The American Period, 1848–Present, began with the Treaty of Guadalupe Hidalgo. In 1850, California was accepted into the Union of the United States primarily due to the population increase created by the Gold Rush of 1849. The cattle industry reached its greatest prosperity during the first years of the American Period. Mexican Period land grants had created large pastoral estates in California, and demand for beef during the Gold Rush led to a cattle boom that lasted from 1849–1855. However, beginning about 1855, the demand for beef began to decline due to imports of sheep from New Mexico and cattle from the Mississippi and Missouri Valleys. When the beef market collapsed, many California ranchers lost their ranchos through foreclosure. A series of disastrous floods in 1861–1862, followed by a significant drought further diminished the economic impact of local ranching. This decline combined with ubiquitous agricultural and real estate developments of the late 19th century, set the stage for diversified economic pursuits that continue to this day (Beattie and Beattie 1974; Cleland 1941).

Ontario (see also Appendix B for references). In 1839, after Mexico gained independence from Spain, the Mexican government granted the 12,000-acre Rancho de Cucamonga to Tiburcio Tapia. Americans began settling in California in large numbers during the Gold Rush in the 1840s, and California statehood in 1850 accelerated the process statewide. In 1881, George and William Chaffey purchased part of Rancho Cucamonga in order to develop Etiwanda, where they tested their ground-breaking irrigation and town planning ideas. That same year, the brothers purchased 6,000 acres (along with water rights) west of Etiwanda, which became the cities of Ontario and Upland. In 1883, the Chaffeys added the Kincaid Ranch at the mouth of San Antonio Canyon to their holdings. They established the Ontario Land Company and subdivided the land into 10-acre farm lots, all of which had street frontage (Emick 2011:17, 20; Clucas 2009:7).

The Chaffeys set aside a town site for Ontario as well as land for an agricultural college, making water available to each parcel in order to encourage farmers to settle there. George Chaffey laid out a boulevard named Euclid, which stretched from the Southern Pacific Depot to the mesa at the north end of their holdings. The Chaffey brothers sold off their acreage and left California for Australia in 1886. Charles Frankish had moved to Ontario from Riverside that year to participate in the Chaffeys' "Model Colony," and invested in undeveloped land along Euclid Avenue. He recruited a group of investors and formed the Ontario Land and Improvement Company, which bought the Chaffey brothers' land holdings in 1886. Frankish acted as Manager and later President, and actively participated in the sale of real estate as well as planning and developing Ontario. Frankish carried out many of the Chaffey brothers' ideas. He extended Euclid past the depot to the south end of the company's holdings, platting the street grid and planting trees. In 1887, he organized the Ontario and San Antonio Heights Railroad Company (O&SA) as a subsidiary of the land company. In the 1890s, the O&SA constructed a hydro-electric plant at the mouth of San Antonio Canyon and electrified the system, making it the first electrified trolley west of Chicago. Ontario was officially incorporated as a city in 1891. In 1912, Frankish bought the land company's Ontario-area assets and formed the Frankish Company. Frankish installed electric streetlights in Ontario, established its first bank, and was involved in nearly every

aspect of local commerce and planning until his abrupt departure from the area in 1927 (Ontario City Library 2014:7, 8, 17, 18; Swett 1969:13, 19).

Aviation interests were introduced to Ontario in 1923 when Waldo Waterman and Archie Mitchell established Latimer Field in the city limits. As more people moved to Ontario, its urban growth forced aviators eastward until they established an airport at the current location of Ontario International Airport. During World War II, Ontario's airport brought many to the area for its pilot training facilities. It was about this time that the citrus industry that had contributed to Ontario's nascent years of growth started to experience a broad decline. Land values increased as more and more Americans began moving westward and settling in the area. In subsequent years and decades, farmers sold their land to incoming residential developers. The population of Ontario swelled, and by the late 1950s, the city's residential area had expanded south and east. Manufacturing, defense, and dairy industries began to take the place of citrus as the local economic staples drawing in new residents. By the late twentieth century, manufacturing had waned and was replaced by service industries and warehousing. Today, the city has expanded to a population of more than 166,000 people living within a 50 square-mile area. The city's economic base is now heavily dependent on industrial and manufacturing, and with three freeways, three major railroads, and Ontario International Airport, the region is rich in transportation resources (City of Ontario; Galvin & Associates 2004:40-41).

PERSONNEL

David Brunzell, M.A., RPA acted as the Project Manager and Principal Investigator for the current study. Mr. Brunzell meets the United States Secretary of the Interior Professional Qualification Standards for Archaeology and Architectural History. Mr. Brunzell wrote the technical report with contributions from Principal Architectural Historian, Kara Brunzell, M.A., BCR Consulting Archaeological Project Manager, Joseph Orozco, M.A, RPA. BCR Consulting Staff Archaeologist Doug Kazmier, B.A. completed the pedestrian survey. Ms. Brunzell completed the Department of Park and Recreation (DPR) 523 forms. Ms. Brunzell completed additional research, architectural descriptions, and historic-period built environment eligibility evaluations.

METHODS

This work was completed pursuant to CEQA, the Public Resources Code (PRC) Chapter 2.6, Section 21083.2, and California Code of Regulations (CCR) Title 14, Chapter 3, Article 5, Section 15064.5. The work is also completed pursuant to City Development Code Article 26: Historic Preservation. The pedestrian cultural resources survey was intended to locate and document previously recorded or new cultural resources, including archaeological sites, features, isolates, and historic-period buildings, that exceed 45 years in age within defined project boundaries. The project site was examined using 15-meter transect intervals, where accessible. This study is intended to determine whether cultural resources are located within the project boundaries, whether any cultural resources are significant pursuant to the above-referenced regulations and standards, and to develop specific mitigation measures that will address potential impacts to existing or potential resources. Tasks pursued to achieve that end include:

- Cultural resources records search to review the results of any studies conducted within a half-mile radius of the project boundaries;
- Additional research through various local and regional resources;
- Systematic pedestrian survey of the entire accessible project site;
- California Register eligibility evaluation for resources identified;
- Development of recommendations and mitigation measures for cultural resources documented within the project boundaries, following CEQA;
- Completion of DPR 523 forms for any discovered cultural resources.

Research

Records Search. On April 17th, 2023 a records search was conducted at the South Central Coastal Information Center (SCCIC) at California State University, Fullerton. This archival research reviewed the status of all recorded historic and prehistoric cultural resources, and survey and excavation reports completed within one half-mile of the project site. Additional resources reviewed included the National Register, the California Register, and documents and inventories published by the California Office of Historic Preservation. These resources include the lists of California Historical Landmarks, California Points of Historical Interest, Listing of National Register Properties, and the Inventory of Historic Structures.

Additional Research. BCR Consulting performed additional research through City of Ontario permit records, the Robert E. Ellingwood Model Colony History Room of the Ontario Library, the San Bernardino County Historical Archives, and through various internet resources. The research focused on consulting primary and secondary sources such as building permits, property title documents, newspaper articles, scholarly journal articles, and biographical sources.

Field Survey

An intensive-level cultural resources field survey of the project site was conducted on April 24, 2023 and May 15, 2023. The survey was conducted by walking parallel transects spaced approximately 15 meters apart across the accessible project site in areas that exhibited visible surface sediment. The historic-period buildings were recorded on DPR 523 forms. Digital photographs were taken at various points within the project. These included overviews as well as detail photographs of the buildings. Cultural resources were recorded per the California OHP *Instructions for Recording Historical Resources* in the field using:

- Detailed note taking for entry on DPR Forms (see Appendix B)
- Hand-held Garmin Global Positioning systems for mapping purposes
- Digital overviews and photographs of cultural resources (see Appendix B and C).

RESULTS

Research

Records Search. Data from the SCCIC revealed that six previous cultural resources studies have taken place within one half-mile of the project site. No cultural resources have been recorded within one half-mile of the project site. Records search results are summarized in Table A, and a records search bibliography is provided in Appendix A.

Table A. Cultural Resources and Reports Within One Half-Mile of the Project Site

USGS 7.5 Min Quad	Cultural Resources Within One Half-Mile of Project Site	Studies Within One Half-Mile of the Project Site
Ontario (1981), *California*	None	SB-02722, 03906, 04099, 05876, 06666, 06667

Additional Research. Additional research was performed for the project site to provide the background for the historic-period cultural properties within its boundaries (see also Field Survey Results, below). Please note that references and figures for this section are provided in Appendix B.

1126 N Mountain Avenue. The Plaza Center Station Post Office of Ontario building located at 1126 N Mountain Ave was built in 1956 and dedicated by the regional transportation manager of the U.S. Post Office, John E. Painter (San Bernardino County Sun 1956). The developer and first owner of the Plaza Center Station was Danelco Development Company (San Bernardino County Sun 1955). The Danelco Development Co. was started in 1955 by CEO William H. Oldknow and dissolved in 1988 (Bizapedia 2023). John F. Anderson, who lived in Ontario, was Danelco's President and publicly represented its local projects. William Oldknow was the owner of several California drive-in movie theaters; Anderson also had a background in theater management (Fresno Bee Republican 1951). Parcel ownership passed to Newdan Inc. at some point between 1957 and 1985 before ownership passed to the current owner, Jafam Corporation, in 1985. Jafam Corp. is a real estate company based in Ontario. The first postmaster of the Plaza Center Station was Charles F. Linck Junior (*San Bernardino County Sun* 1956). In 1965, mail vehicles referred to as "Mailsters" replaced foot carriers at the Ontario post offices (San Bernardino County Sun 1965). In the 1960s, Thomas G. Black worked as the window clerk for years before being promoted to foreman at the Plaza Center Station (San Bernardino County Sun 1967). In 1970, two of the Plaza Center Station postal carriers, Milton Powers and Duane Palmer, received national awards for eleven years of safe driving (The Daily Report 1970). When the main Ontario Post Office was replaced with a large new building in 1976 the Plaza Center Station stopped delivering mail; the location continued to offer post office boxes and stamps. Between 2014 and 2016, the Ontario Plaza Shopping Center was partially demolished, including the portion directly adjacent to the Plaza Center Station. In 2023, the USPS Plaza Center Station was still in use as a post office.

1028-1044 W 4th Street. The existing commercial complex, located at 1028-1044 W 4th St was constructed about 1959. The first known owner of the associated parcels was Danelco Development Co. The Danelco Development Co. was started in 1955 by CEO William H. Oldknow and dissolved in 1988 (Bizapedia 2023). John F. Anderson, who lived in Ontario, was Danelco's President and publicly represented its local projects. William Oldknow was the owner of several California drive-in movie theaters; Anderson also had a background in theater management (Fresno Bee Republican 1951). Parcel ownership passed to Newdan Inc. at some point between 1957 and 1985 before ownership passed to the current owner, Jafam Corporation in 1985 (San Bernardino County Assessor). Jafam Corp. is a real estate company based in Ontario.

The first Ontario Plaza Center buildings were originally constructed in 1956 along with the adjoining post office and bank (Progress Bulletin 1956). The Laundramatic laundromat was the original business between the bank and post office. In 1957, Bank of America opened at the southwestern corner of the property. Beginning in 1958, Danelco undertook a major expansion of Ontario Plaza, constructing several large adjoining stores on a larger parcel across 4th Street to the south. The extant section of the subject property (which faces 4th Street rather than Mountain Avenue) was constructed about 1959. Commercial space was leased to various vendors who formed the Ontario Plaza Merchants Association (San Bernardino County Sun 1961). In the 1960s and 1970s, the space at 1030 W 4th Street was leased as a reading room for Bible study with the First Church of Christ, Scientist on Euclid Avenue in Ontario (Daily Report 1970). In 1968, 1040 W 4th Street was Hazel's Fashions clothing store and 1038 W 4th Street was Ontario Beauty Supply (Upland News 1968; Montclair Tribune 1968). In 1969, 1034 W 4th Street housed Stella's Italian Kitchen (Montclair Tribune 1969). In 1975, 1038 W 4th Street housed Complete Office Outfitters (Montclair Tribune 1975). In 1986, 1044 W 4th Street was home to the Foot Clinic (Chino Champion 1986). From 1960 through the 1990s, 1058 W Fourth Street was home to the Household Finance Corporation (South Ontario News 1991). From 1990 until 2023, Cork and Can Liquor Store occupied 1040 W 4th Street (Daily Press 1990). In 2001, Quality Drinking Water was located at 1034 W 4th Street (Chino Champion 2001). The stores facing Mountain Avenue were demolished about 2015.

Field Survey

BCR Consulting Staff Archaeologist Doug Kazmier, B.A. completed the field survey on April 24, 2023 and a follow up survey was conducted by BCR Consulting Staff Historian George Brentner, B.A. on May 15, 2023. Surface visibility was approximately 5 percent as most of the project area was paved over apart from grass adjacent the sidewalk on 4th Street, and seasonal grasses and weeds protruding through pavement. One historic-period post office and one historic-period commercial retail building were recorded during the survey and are described in detail below.

SIGNIFICANCE EVALUATIONS

During the field survey, one historic-period Post Office, and one historic-period commercial retail building were identified. CEQA calls for the evaluation and recordation of historic and archaeological resources. The criteria for determining the significance of impacts to cultural resources are based on Section 15064.5 of the *CEQA Guidelines* and Guidelines for the Nomination of Properties to the California Register. Properties eligible for listing in the California Register and subject to review under CEQA are those meeting the criteria for listing in the California Register, or designation under a local ordinance. The post office and commercial retail properties are evaluated for significance below.

Significance Criteria

California Register of Historical Resources. The California Register criteria are based on National Register criteria. For a property to be eligible for inclusion on the California Register or as a City Landmark, one or more of the following criteria must be met:

1. It is associated with the events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the U.S.;
2. It is associated with the lives of persons important to local, California, or U.S. history;
3. It embodies the distinctive characteristics of a type, period, region, or method of construction, represents the work of a master, possesses high artistic values; and/or
4. It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

In addition to meeting one or more of the above criteria, the California Register requires that sufficient time has passed since a resource's period of significance to "obtain a scholarly perspective on the events or individuals associated with the resources." (CCR 4852 [d][2]). The California Register also requires that a resource possess integrity. This is defined as the ability for the resource to convey its significance through seven aspects: location, setting, design, materials, workmanship, feeling, and association.

City of Ontario Designation Criteria. In addition to evaluation for California Register listing eligibility, the City of Ontario Development Code Article 26: Historic Preservation (Section 9-1.2615) provides the following designation criteria for a property to qualify as a City Historic Landmark:

a. It exemplifies or reflects special elements of the City's history;
b. It is identified with persons or events significant in local, state, or national history;
c. It is representative of the work of a notable builder, designer, architect, or artist;
d. It embodies distinguishing architectural characteristics of a style, type, period, or method of construction;
e. It is a noteworthy example of the use of indigenous materials or craftsmanship;
f. It embodies elements that represent a significant structural, engineering, or architectural achievement or innovation;
g. It has a unique location, a singular physical characteristic, or is an established and familiar visual feature of a neighborhood, community or the City; or
h. It is one of the few remaining examples in the City, region, state, or nation possessing distinguishing characteristics of an architectural or historical type or specimen.

Evaluations

1126 N Mountain Avenue California Register Evaluation. Criterion 1: The Post Office at 1126 N Mountain Avenue was constructed within the general context of mid-century population expansion and civic/commercial development in Ontario. However, it was a secondary post office established long after the original main post office, and thus was not integral to the formation of the City. Research has revealed no significant association with important events related to the growth of that municipality, with development of the region,

postwar commercial development, or with any other important historic context. It is therefore recommended not eligible for the California Register under Criterion 1.

Criterion 2: Substantial research has not linked the subject property with individuals who have been notable in local, state, or national history; it lacks association with the lives of important persons in our history. For these reasons, it is recommended not eligible for the California Register under Criterion 2.

Criterion 3: The building is a rather handsome but simple example of a mid-century post office; its only decorative feature is the zigzag-patterned concrete masonry units on the north end of the main façade. Nor does the building feature the dramatic roof forms, blending of exterior with interior, lavish landscaping, or other elements that characterize architecturally significant mid-century buildings. Exterior materials such as aluminum and concrete as well as low-cost interior fixtures reflect cost-consciousness rather than design distinction. Research did not reveal an architect or important builder associated with its construction. The property does not embody the distinctive characteristics of a type, period, region, or method of construction, or represent the work of an important creative individual or possess high artistic values. It is a fairly utilitarian example of mid-century modern postal architecture, similar to hundreds of other post offices constructed in the 1950s and 1960s. Therefore, it is recommended not eligible for the California Register under Criterion 3.

Criterion 4: The building is a well understood building type, and as such the resource has not and is not likely to yield information important in prehistory or history. It is therefore recommended not eligible for the California Register under Criterion 4.

The subject property and its constituent historic-age building is therefore recommended not eligible under any of the four criteria for listing on the California Register, and as such does not qualify as a historical resource under the CEQA.

1126 N Mountain Avenue City of Ontario Designation Criteria. The property does not meet any of the eight City Designation Criteria, and as such does not qualify as a City Historic Landmark.

1028-1044 W 4th Street California Register Evaluation. Criterion 1: The Ontario Plaza Shopping Center at 1028-1044 W 4th Street was constructed within the general context of mid-century commercial development in Ontario, however, research has revealed no significant association with important events related to the founding of that municipality, with development of the region, postwar commercial development, or with any other important historic context. It is therefore recommended not eligible for the California Register under Criterion 1.

Criterion 2: Substantial research has not linked the subject property with individuals who have been notable in local, state, or national history. Its owners were ordinary businesspeople who leased the property to commercial businesses. Therefore, it lacks association with the lives of important persons in our history. It is recommended not eligible for the California Register under Criterion 2.

Criterion 3: The building is a simple example of a mid-century commercial property. Research did not reveal an important builder associated with its construction. Although research has not revealed historic photos of the extant section of the building, its details and materials do not match the associated buildings facing Mountain Avenue that were constructed around the same time, and it appears to have been altered outside the historic era. The property does not embody the distinctive characteristics of a type, period, region, or method of construction, or represent the work of an important creative individual or possess high artistic values. It is an ordinary commercial building and lacks architectural distinction. Therefore, it is recommended not eligible for the California Register under Criterion 3.

Criterion 4: The building is a well understood building type, and as such the resource has not and is not likely to yield information important in prehistory or history. It is therefore recommended not eligible for the California Register under Criterion 4.

The subject property and its constituent historic-age building is therefore recommended not eligible under any of the four criteria for listing on the National Register or the California Register, and as such does not qualify as a historical resource under CEQA.

1126 N Mountain Avenue City of Ontario Designation Criteria. The property does not meet any of the eight City Designation Criteria, and as such does not qualify as a City Historic Landmark.

RECOMMENDATIONS

BCR Consulting conducted a cultural resources assessment of the Watermarke Project in the City of Ontario, San Bernardino County, California. During the research and field survey, two resources were identified, recorded, and evaluated for California Register listing eligibility (i.e. significance under CEQA). These include the historic-period post office at 1126 N Mountain Avenue and a historic-period retail building at 1028-1044 W 4th Street.

Non-Significant Properties. The historic-period post office comprising 1126 North Mountain Avenue and the historic-period commercial retail building comprising 1028 through 1044 West 4th Street have been evaluated and are recommended not eligible for California Register eligibility. They do not not warrant further consideration.

Accidental Discoveries. If previously undocumented cultural resources are identified during earthmoving activities associated with development of the project site, a qualified archaeologist should be contacted to assess the nature and significance of the find, diverting construction excavation if necessary. The current study attempted to determine whether significant archaeological deposits were present on the proposed project site. Although none were yielded during the records search and field survey, ground-disturbing activities have the potential to reveal buried deposits not observed on the surface. Prior to the initiation of ground-disturbing activities, field personnel should be alerted to the possibility of buried prehistoric or historic cultural deposits. In the event that field personnel encounter buried cultural materials, work in the immediate vicinity of the find should cease and a qualified archaeologist should be retained to assess the significance of the find. The qualified archaeologist should have the authority to stop or divert construction excavation as necessary. If the qualified archaeologist finds that any cultural resources present meet eligibility requirements for listing on the California Register or the National Register of

Historic Places (National Register), plans for the treatment, evaluation, and mitigation of impacts to the find will need to be developed. Prehistoric or historic cultural materials that may be encountered during ground-disturbing activities include:

- Historic-period artifacts such as glass bottles and fragments, cans, nails, ceramic and pottery fragments, and other metal objects;
- Historic-period structural or building foundations, walkways, cisterns, pipes, privies, and other structural elements;
- Prehistoric flaked-stone artifacts and debitage (waste material), consisting of obsidian, basalt, and or cryptocrystalline silicates;
- Groundstone artifacts, including mortars, pestles, and grinding slabs;
- Dark, greasy soil that may be associated with charcoal, ash, bone, shell, flaked stone, groundstone, and fire affected rocks;
- Human remains.

Human Remains. If human remains are encountered during any project activities, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be prehistoric, the Coroner will notify the NAHC, which will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC.

d. UTM: Zone: N/A mE/ Elevation: 1,095' AMSL

e. Other Locational Data: The property is on the northeast corner of 4th Street and Mountain Avenue in Ontario, CA.

***P3a. Description:** The subject property is a 4.57-acre parcel occupied by a mid-century Post Office and commercial complex. The Post Office, which was constructed in 1956, is located at the northwest corner of the parcel set back about 75 feet from Mountain Avenue. It is rectangular in plan with a flat roof. It is constructed of concrete masonry units, with decorative concrete masonry units on the northern end of its primary (west) façade. A flagpole is affixed to the center of the decorative concrete masonry unit facade, which features a zigzag pattern in relief. A projecting flat roof shelters the main entrance, which is recessed and right of center. It is fitted with aluminum-framed double glass doors and is accessed by a small concrete ramp with a simple metal handrail. Large glass window panels fill the recessed area of the entryway adjacent to the doors. There is a sign and plaque on the upper façade above the main entrance, advertising the location as a United States Post Office. The north elevation has small horizontal windows with metal security grilles and an ancillary entrance near the rear of the building; the south elevation was originally adjacent to an adjoining commercial building and lacks fenestration or entrances. A low loading dock sheltered by a deep full-width awning occupies the rear elevation. The rear elevation has a service entrance with metal double doors and small horizontal windows with metal security grilles. There is a fenced parking area behind the building.

The main public entrance leads to a long hallway along the south end of the building which has post office boxes on its north wall. An interior glazed door with glass surround and transom leads north to the main lobby, which features the service counters and tall tables that characterize the public lobbies of US post offices. A flat wooden door at the north end of the lobby leads to the work areas, which were not accessible at the time of the field visit. Ceilings are acoustic tile, floors are vinyl tile, and lighting consists of hanging fluorescent fixtures. The interior space is utilitarian, lacking the decorative features and murals that are common in post office buildings constructed prior to 1945. The building is in good condition.

Ontario Historic Context

The Gabrielino Native American group inhabited the area before the arrival of Spanish missionaries in the late eighteenth century. In 1839, after Mexico gained independence from Spain, the Mexican government granted the 12,000-acre Rancho de Cucamonga to Tiburcio Tapia. Americans began settling in California in large numbers during the Gold Rush in the 1840s, and California statehood in 1850 accelerated the process statewide. Ontario, California was founded as a township in September 1882 by George and William B. Chaffey, named after their home of Ontario, Canada. The brothers purchased 6,218 acres of land with water rights and set aside 640 acres for the community of Ontario, half of which was deeded to the Chaffey Agricultural College as an endowment. In 1903, Ontario was proclaimed a "Model Irrigation Colony" by an Act of Congress. Ontario had many modern innovations, many of which still show their value today. An impressive 200 feet wide and 8 miles long, Euclid Avenue (on the National Register List of Historic Places) was the stately backbone of the colony. Provisions for an electric railway, water rights for each landowner, a local educational institution, electric lights, one of the first long distance telephone lines, and public access to water and transportation set a new standard for rural communities and irrigation practices and ensured the success of the Model Colony. Climate conditions in Ontario were similar to those in the Mediterranean with dry, hot summers and cool, moist winters. Ontario first developed as an agricultural community, largely devoted to the citrus industry. In addition to oranges, the production of peaches, walnuts, lemons, olives, and grapes were also important to the growth of Ontario and neighboring cities (City of Ontario; Galvin & Associates 2004:7).

Ontario officially incorporated as a city in 1891. Charles Frankish recruited investors and formed the Ontario Land and Improvement Company, which bought the Chaffey brothers' Ontario-area assets in 1886. In 1912, he formed the Frankish Company, which assumed control. Frankish installed electric streetlights in Ontario, established its first bank, and was involved in nearly every aspect of local commerce and planning until his abrupt departure from the area in 1927 (Ontario City Library 2014: 7, 8, 17, 18; Swett 1969:13, 19).

Aviation was introduced to Ontario in 1923 when Waldo Waterman and Archie Mitchell established Latimer Field in the city limits. As more people moved to Ontario, its urban growth forced the aviators eastward until they established an airport at the current location of Ontario International Airport. During World War II, Ontario's airport brought many to the area for its pilot training facilities. It was about this time that the citrus industry that had contributed to Ontario's nascent years of growth started to experience a broad decline. Land values increased as more and more Americans began moving westward and settling in the area after the war. In subsequent years, farmers sold their land to incoming residential developers. The population of Ontario swelled, and by the late 1950s, the city's residential area had expanded south and east. Manufacturing, defense, and dairy industries began to take the place of citrus as the local economic staples drawing in new residents. By the late twentieth century, manufacturing had waned and was replaced by service industries and warehousing. By 2020, the city had expanded to a population of more than 166,000 people living within a 50 square-mile area. The city's economic base is now heavily dependent on industrial and manufacturing, and with three freeways, three major railroads, and Ontario International Airport, the region is rich in transportation resources (City of Ontario; Galvin & Associates 2004:40-41).

US Postal Service Context

The US Postal Service was established in 1775 by the Continental Congress, taking over an existing system of British post offices. Its building program was small until the American population began substantially expanding in the late nineteenth century, and the number of post offices in the US peaked in 1901. Postal building construction halted during World War I and again after the stock market crash of 1929. In 1931, Congress allowed the U.S. Treasury Department's Office of the Supervisory Architect to employ outside professionals who were to increase employment of architects and architectural firms, one-half of which had failed during the Depression. Standard floor plans for post offices of varied sizes facilitated rapid construction of postal buildings in the 1930s under federal employment programs and 1,861 were constructed across the US by the end of the decade. Variation was allowed on exterior architecture, and styles included Spanish Revival, Stripped Classicism, and Colonial Revival (United States Postal Service 1982). U.S. entry into WWII halted non-military federal construction in 1942.

After the end of World War II, the Post Office was ready to use advances in transportation. By the 1950s, postal vehicles and surface routes were replacing trains for mail transport. Existing post offices struggled to serve the expanding population of the US and concomitant expansion of the mails. As mail volume steadily increased during the postwar years, sorting became an increasingly difficult logistical problem. In the 1950s, the Post Office began to use sorting machinery. Initially, the Post Office mechanized existing main post offices, but the machinery soon outgrew the available floor space in these buildings. In 1954, the Post Office launched a lease-purchase program as a creative way to expand facilities despite the fact that Congress had not appropriated funds for new construction. During this era, new post offices were either Modernist or simplified Colonial Revival in style and lacked the architectural variety and adornment that had characterized pre-war postal buildings (United States Postal Service, URS 2012).

In the early 1960s, the Post Office began constructing a nationwide system of Processing and Distribution Centers (P&DC) to hold the giant, purpose-built machinery that sorted the mail. The centers accepted mail from an 80 to 100-mile area and were constructed away from city centers and near airports, highways, and arterial roads whenever possible. The introduction of ZIP Codes in 1963 further centralized mail sorting and increased the speed of mail delivery (United States Postal Service, URS 2012).

Implementation of centralization accelerated the existing trend toward abandonment of rail for mail transportation infrastructure. Despite nearly a decade of focused effort at mechanization, during the late 1960s, the Post Office was still struggling to process the volume of mail and its payrolls continued to expand. At the end of the decade, however, mechanization accounted for half of mail sorting. In 1970, the Postal Reorganization Act led to the transition from the Postal Service to the United States Postal Service (USPS) (Vierick 2023). By 1971, the Post Office was able to process 87 billion pieces of mail annually, up from 27.7 billion pieces of mail in 1940 (United States Postal

Service, URS 2012). Over the years, the USPS workforce has shrunk from around nine-hundred thousand in 2000 to six-hundred thousand in 2014 (Leonard 2016).

Subject Property History

The Plaza Center Station Post Office of Ontario building located at 1126 N Mountain Ave was built in 1956 and dedicated by the regional transportation manager of the U.S. Post Office, John E. Painter (*San Bernardino County Sun* 1956). The developer and first owner of the Plaza Center Station was Danelco Development Company (*San Bernardino County Sun* 1955). The Danelco Development Co. was started in 1955 by CEO William H. Oldknow and dissolved in 1988 (Bizapedia 2023). John F. Anderson, who lived in Ontario, was Danelco's President and publicly represented its local projects. William Oldknow was the owner of several California drive-in movie theaters; Anderson also had a background in theater management (*Fresno Bee Republican* 1951). Parcel ownership passed to Newdan Inc. at some point between 1957 and 1985 before ownership passed to the current owner, Jafam Corporation, in 1985. Jafam Corp. is a real estate company based in Ontario. The first postmaster of the Plaza Center Station was Charles F. Linck Junior (*San Bernardino County Sun* 1956). In 1965, mail vehicles referred to as "Mailsters" replaced foot carriers at the Ontario post offices (*San Bernardino County Sun* 1965). In the 1960s, Thomas G. Black worked as the window clerk for years before being promoted to foreman at the Plaza Center Station (*San Bernardino County Sun* 1967). In 1970, two of the Plaza Center Station postal carriers, Milton Powers and Duane Palmer, received national awards for eleven years of safe driving (*The Daily Report* 1970). When the main Ontario Post Office was replaced with a large new building in 1976 the Plaza Center Station stopped delivering mail; the location continued to offer post office boxes and stamps. Between 2014 and 2016, the Ontario Plaza Shopping Center was partially demolished, including the portion directly adjacent to the Plaza Center Station. In 2023, the USPS Plaza Center Station was still in use as a post office.

Figure 2: Photograph of the Plaza Center Station and the part of Ontario Plaza that was demolished in 2014, 2009 (David Allen).

Evaluation

The National Register of Historic Places and California Register of Historical Resources require that a significance criterion from A-D or 1-4 (respectively) be met for a resource to be eligible. A resource is eligible if (A/1) it is associated with events that have made a significant contribution to the broad patterns of our history; (B/2) it is associated with the lives of persons important in our past; (C/3) it embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic value; or (D/4) it has yielded or is likely to yield information important in prehistory or history. The California Register also requires that sufficient time has passed since a resource's period of significance (normally 45 years) to "obtain a scholarly perspective on the events or individuals associated with the resources" (CCR 4852 [d][2]).

Criterion A/1: The Post Office at 1126 N Mountain Avenue was constructed within the general context of mid-century population expansion and civic/commercial development in Ontario. However, it was a secondary post office established long after the original main post office, and thus was not integral to the formation of the City. Research has revealed no significant association with important events related to the growth of that municipality, with development of the region, postwar commercial development, or with any other important historic context. It is therefore recommended not eligible for the National Register or the California Register under Criterion A/1.

Criterion B/2: Substantial research has not linked the subject property with individuals who have been notable in local, state, or national history; it lacks association with the lives of important persons in our history. For these reasons, it is recommended not eligible for the National Register or California Register under Criterion B/2.

Criterion C/3: The building is a rather handsome but simple example of a mid-century post office; its only decorative feature is the zigzag-patterned concrete masonry units on the north end of the main façade. Nor does the building feature the dramatic roof forms, blending of exterior with interior, lavish landscaping, or other elements that characterize architecturally significant mid-century buildings. Exterior materials such as aluminum and concrete as well as low-cost interior fixtures reflect cost-consciousness rather than design distinction. Research did not reveal an architect or important builder associated with its construction. The property does not embody the distinctive characteristics of a type, period, region, or method of construction, or represent the work of an important creative individual or possess high artistic values. It is a fairly utilitarian example of mid-century modern postal architecture, similar to hundreds of other post offices

constructed in the 1950s and 1960s. For these reasons, it is recommended not eligible for the National Register or California Register under Criterion C/3.

Criterion D/4: The building is a well understood building type, and as such the resource has not and is not likely to yield information important in prehistory or history. It is therefore recommended not eligible for the National Register or California Register under Criterion D/4.

The subject property and its constituent historic-age building is therefore recommended not eligible under any of the four criteria for listing on the National Register or the California Register, and as such does not qualify as a historical resource under the California Environmental Quality Act (CEQA). Thus, BCR Consulting recommends the National Register of Historic Places Status Code “6Z”.

d. UTM: Zone: N/A mE/ Elevation: 1,095' AMSL
e. Other Locational Data: The property is on the northeast corner of 4th Street and Mountain Avenue in Ontario, CA.

***P3a. Description:** The subject property is a 4.57-acre parcel occupied by a mid-century Post Office and commercial complex. The only extant Ontario Plaza Shopping Center building is located near the southwest corner of the property set back about 60 feet from 4th Avenue. The shopping center building was originally connected to the Post Office building by other retail building, but the connecting buildings between them have been demolished. The shopping center building is roughly rectangular in plan with a flat roof. It is clad in stucco with vertical groove plywood siding as accents and on the west elevation. Five storefronts face south toward a parking lot along 4th Avenue. Storefront entrances are sheltered by an arcade supported by heavy square brick columns. The storefront entrances on are fitted with aluminum-framed glazed doors that are accessed by a low concrete step. There are business signs on the plywood-clad soffit atop the arcade. Fenestration consists of aluminum-framed storefront windows on the south elevation. The north elevation of the building has service entrances to the businesses fitted with glazed aluminum-frame or flat panel doors sheltered by a projecting awning. There are no entrances at the shorter east and west elevations. The building is in fair condition.

Ontario Historic Context

The Gabrielino Native American group inhabited the area before the arrival of Spanish missionaries in the late eighteenth century. In 1839, after Mexico gained independence from Spain, the Mexican government granted the 12,000-acre Rancho de Cucamonga to Tiburcio Tapia. Americans began settling in California in large numbers during the Gold Rush in the 1840s, and California statehood in 1850 accelerated the process statewide. Ontario, California was founded as a township in September 1882 by George and William B. Chaffey, named after their home of Ontario, Canada. The brothers purchased 6,218 acres of land with water rights and set aside 640 acres for the community of Ontario, half of which was deeded to the Chaffey Agricultural College as an endowment. In 1903, Ontario was proclaimed a "Model Irrigation Colony" by an Act of Congress. Ontario had many modern innovations, many of which still show their value today. An impressive 200 feet wide and 8 miles long, Euclid Avenue (on the National Register List of Historic Places) was the stately backbone of the colony. Provisions for an electric railway, water rights for each landowner, a local educational institution, electric lights, one of the first long distance telephone lines, and public access to water and transportation set a new standard for rural communities and irrigation practices and ensured the success of the Model Colony. Climate conditions in Ontario were similar to those in the Mediterranean with dry, hot summers and cool, moist winters. Ontario first developed as an agricultural community, largely devoted to the citrus industry. In addition to oranges, the production of peaches, walnuts, lemons, olives, and grapes were also important to the growth of Ontario and neighboring cities (City of Ontario; Galvin & Associates 2004:7).

Ontario officially incorporated as a city in 1891. Charles Frankish recruited investors and formed the Ontario Land and Improvement Company, which bought the Chaffey brothers' Ontario-area assets in 1886. In 1912, he formed the Frankish Company, which assumed control. Frankish installed electric streetlights in Ontario, established its first bank, and was involved in nearly every aspect of local commerce and planning until his abrupt departure from the area in 1927 (Ontario City Library 2014: 7, 8, 17, 18; Swett 1969:13, 19).

Aviation was introduced to Ontario in 1923 when Waldo Waterman and Archie Mitchell established Latimer Field in the city limits. As more people moved to Ontario, its urban growth forced the aviators eastward until they established an airport at the current location of Ontario International Airport. During World War II, Ontario's airport brought many to the area for its pilot training facilities. It was about this time that the citrus industry that had contributed to Ontario's nascent years of growth started to experience a broad decline. Land values increased as more and more Americans began moving westward and settling in the area after the war. In subsequent years, farmers sold their land to incoming residential developers. The population of Ontario swelled, and by the late 1950s, the city's residential area had expanded south and east. Manufacturing, defense, and dairy industries began to take the place of citrus as the local economic staples drawing in new residents. By the late twentieth century, manufacturing had waned and was replaced by service industries and warehousing. By 2020, the city had expanded to a population of more than 166,000 people living within a 50 square-mile area. The city's economic base is now heavily dependent on industrial and manufacturing, and with three freeways, three major railroads, and Ontario International Airport, the region is rich in transportation resources (City of Ontario; Galvin & Associates 2004:40-41).

Subject Property History

The existing commercial complex, located at 1028-1044 W 4th St was constructed about 1959. The first known owner of the associated parcels was Danelco Development Co. The Danelco Development Co. was started in 1955 by CEO William H. Oldknow and dissolved in 1988 (Bizapedia 2023). John F. Anderson, who lived in Ontario, was Danelco's President and publicly represented its local projects. William Oldknow was the owner of several California drive-in movie theaters; Anderson also had a background in theater management (*Fresno Bee Republican* 1951).Parcel ownership passed to Newdan Inc. at some point between 1957 and 1985 before ownership passed to the current owner, Jafam Corporation in 1985 (San Bernardino County Assessor). Jafam Corp. is a real estate company based in Ontario.

The first Ontario Plaza Center buildings were originally constructed in 1956 along with the adjoining post office and bank (Progress Bulletin 1956). The Laundramatic laundromat was the original business between the bank and post office. In 1957, Bank of America opened at the southwestern corner of the property. Beginning in 1958, Danelco undertook a major expansion of Ontario Plaza, constructing several large adjoining stores on a larger parcel across 4th Street to the south. The extant section of the subject property (which faces 4th Street rather than Mountain Avenue) was constructed about 1959. Commercial space was leased to various vendors who formed the Ontario Plaza Merchants Association (*San Bernardino County Sun* 1961). In the 1960s and 1970s, the space at 1030 W 4th Street was leased as a reading room for Bible study with the First Church of Christ, Scientist on Euclid Avenue in Ontario (*Daily Report* 1970). In 1968, 1040 W 4th Street was Hazel's Fashions clothing store and 1038 W 4th Street was Ontario Beauty Supply (*Upland* News 1968; *Montclair Tribune* 1968). In 1969, 1034 W 4th Street housed Stella's Italian Kitchen (*Montclair Tribune* 1969). In 1975, 1038 W 4th Street housed Complete Office Outfitters (*Montclair Tribune* 1975). In 1986, 1044 W 4th Street was home to the Foot Clinic (*Chino Champion 1986)*. From 1960 through the 1990s, 1058 W Fourth Street was home to the Household Finance Corporation (*South Ontario News* 1991). From 1990 until 2023, Cork and Can Liquor Store occupied 1040 W 4th Street (*Daily Press* 1990). In 2001, Quality Drinking Water was located at 1034 W 4th Street (*Chino Champion* 2001). The stores facing Mountain Avenue were demolished about 2015.

Figure 2: Plaza Center Station and the section of Ontario Plaza that was demolished in 2014, 2009 (David Allen).

Evaluation

The National Register of Historic Places and California Register of Historical Resources require that a significance criterion from A-D or 1-4 (respectively) be met for a resource to be eligible. A resource is eligible if (A/1) it is associated with events that have made a significant contribution to the broad patterns of our history; (B/2) it is associated with the lives of persons important in our past; (C/3) it embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic value; or (D/4) it has yielded or is likely to yield information important in prehistory or history. The California Register also requires that sufficient time has passed since a resource's period of significance (normally 45 years) to "obtain a scholarly perspective on the events or individuals associated with the resources" (CCR 4852 [d][2]).

Criterion A/1: The Ontario Plaza Shopping Center at 1028-1044 W 4th Street was constructed within the general context of mid-century commercial development in Ontario, however, research has revealed no significant association with important events related to the founding of that municipality, with development of the region, postwar commercial development, or with any other important historic context. It is therefore recommended not eligible for the National Register or the California Register under Criterion A/1.

Criterion B/2: Substantial research has not linked the subject property with individuals who have been notable in local, state, or national history. Its owners were ordinary businesspeople who leased the property to commercial businesses. Therefore, it lacks association with the lives of important persons in our history. It is recommended not eligible for the National Register or California Register under Criterion B/2.

Criterion C/3: The building is a simple example of a mid-century commercial property. Research did not reveal an important builder associated with its construction. Although research has not revealed historic photos of the extant section of the building, its details and materials do not match the associated buildings facing Mountain Avenue that were constructed around the same time, and it appears to have been altered outside the historic era. The property does not embody the distinctive characteristics of a type, period, region, or method of construction, or represent the work of an important creative individual or possess high artistic values. It is an ordinary commercial building and lacks architectural distinction. For these reasons, it is recommended not eligible for the National Register or California Register under Criterion C/3.

Criterion D/4: The building is a well understood building type, and as such the resource has not and is not likely to yield information important in prehistory or history. It is therefore recommended not eligible for the National Register or California Register under Criterion D/4.

The subject property and its constituent historic-age building is therefore recommended not eligible under any of the four criteria for listing on the National Register or the California Register, and as such does not qualify as a historical resource under the California Environmental Quality Act (CEQA). Thus, BCR Consulting recommends the National Register of Historic Places Status Code "6Z".

1.0 INTRODUCTION

This report was prepared for Mr. Jonny Schneider (Client) by GeoKinetics, Inc. (GeoKinetics) to present the results of a Phase I Environmental Site Assessment (ESA) for a ±6.19-acre property located in the City of Ontario, San Bernardino County, California. The general location of the property is shown in Figure 1, while a recent aerial photograph illustrating the configuration of the Site is provided as Figure 2. This assessment was performed under the authorization of Mr. Jonny Schneider dated June 28, 2022. Numerous acronyms have been used throughout the text of this report to reduce its length. Definitions for these acronyms are presented in Appendix A.

1.1 Purpose and Scope of Services

This ESA has been performed in substantial conformance with the requirements of the ASTM "Standard on Environmental Site Assessments for Commercial Real Estate" (E 1527-13) unless noted otherwise in this report. The purpose of this assessment was to perform a screening level survey for indications of the potential presence of hazardous and/or toxic materials (otherwise known as "Recognized Environmental Conditions")[1] at the Ontario Plaza Site (Site) with listed addresses of 1000 to 1060 West 4th Street and 1118 to 1126 North Mountain Avenue, Ontario, California 91762 (Figure 1). This report is made pursuant to an inquiry into the prior ownership and uses of the Site; it is consistent with commercial and customary practices appropriate to a commercial purchaser or fee owner of real estate.

The scope of services for the project included the following:

- A reconnaissance survey of the Site and surrounding area to evaluate and collect photographic documentation of existing conditions. Photographs taken at the time of our site reconnaissance are included in Appendix B;

- An evaluation of the historical Site and adjacent area uses through the review of the following information:

  - Selected historic aerial photographs;
  - Interviews with people familiar with the site;
  - Freedom of Information Act Documents;
  - Historical United States Geological Survey (USGS) topographic maps;
  - Geologic maps and reports published by the California Geological Survey;

[1]Recognized environmental conditions (REC's) are defined by ASTM as the presence or likely presence of any hazardous substances or petroleum products on a Site under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the Site or into the ground, groundwater, or surface water of the Site. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate environmental agencies.

- Groundwater information published by the California Department of Water Resources and the Chino Basin Watermaster;
- FEMA Flood Insurance Rate Maps;
- US Fish and Wildlife National Wetlands Inventory; and
- Chain of Title or Property Profile (i.e. ownership) Information.

- A review of readily available environmental records from more than approximately 60 federal, state, and local regulatory agencies for the Site and the vicinity (i.e. regulatory database survey), as defined in the ASTM standard;

- Preparation of this report which presents the current findings, conclusions, and recommendations associated with the ESA.

The ESA activities described herein were conducted in accordance with generally accepted standards, practices, and procedures in effect at the time this assessment was conducted, relative to the Innocent Landowner Defense (as defined under the Comprehensive Environmental Response, Compensation and Liability Act [CERCLA] 42 USC Section 9601, et. seq.). Attempts were made to contact individuals for information about the Site and surrounding areas. Relevant information was also obtained from published sources (Referenced in Section 7.0).

1.2 Project Overview

Site Name:	Ontario Plaza
Size:	±6.19 - acres
Owner:	JAFAM Corporation
Location:	1000 to 1060 West 4th Street and 1118 to 1126 North Mountain Avenue
City, State:	Ontario, California 91762

1.3 Planned Transaction and Proposed Site Layout

It is our understanding Watermarke Properties is contemplating the purchase of this Site for mixed use re-development purposes. The specific configuration of the improvements that may be constructed at the Site is not presently available.

2.0 SITE DESCRIPTION

The property is located on the northeast corner of the intersection of 4th Street and Mountain Avenue in the northwestern corner of the City of Ontario, San Bernardino County, California. The listed addresses of the property are 1000 to 1060 West 4th Street and 1118 to 1126 North Mountain Avenue and the Site consists of four contiguous parcels. The general site location is shown in Figure 1, while a recent aerial photograph of the property is provided as Figure 2. As shown in Figure 2, the site is generally

rectangular in shape and currently improved with two buildings. The Site was formerly used for agriculture and more recently, as a retail plaza and post office.

The property is relatively flat with a slight gradient to the southwest. The lowest portion of the property is in the southwestern corner of the Site. The property is located in an area of extensive residential and retail development.

Information regarding the Site was obtained from the Client, interviews with the current owner's representative (Mr. Trevor Fabeck), Site reconnaissance, available publications (Section 7.0), historic aerial photographs (Section 4.0), and environmental agency information (Section 3.0).

2.1 General Site Information

Site Information:

Site:	Four Parcels
Assessor's Numbers:	1008-522-01-0000 to 1008-522-01-0000 and 1008-513-16-0000
Size of Site:	± 6.19-Acres
Current Zoning:	Unlisted
Current Property Usage:	A strip mall, a post office and vacant land
Current Facility Names:	Ontario Plaza & US Post Office
Prior Facility Names:	Ontario Plaza.

2.2 Site Reconnaissance

Site Reconnaissance Information:

Date of Site Visit:	July 26, 2022
Personnel:	Kevin Lea
Escort:	Ms. Diane Montague, Property Manager
Site Manager:	Ms. Diane Montague, Property Manager
Inaccessible Areas:	Interior of post office and the computer repair unit of the Ontario Plaza building.

2.2.1 Site History and Current Use

The subject property is owned by JAFAM Corporation and consists of four parcels currently used as a small strip mall and a post office. Based on previous Phase I Assessments and the current parcel profile reports, previous owners of the Site included George and Jacqueline Jacobs, Newdan Incorporated, Danelco and First Trust Bank. Based on the historical aerial photographs that were reviewed in conjunction with this assessment, the entire Site appears to have been under cultivation (orchard use) by 1938 until at least 1954. By 1959, the site had been cleared of the orchards and the eastern portion on the Ontario Plaza building, and the southern portion of the building at the easternmost parcel was developed. All of the site buildings had been constructed by 1967. The extent of the former and current site buildings is shown on Figure 2. By 2016, the

entire western half of the Ontario Plaza building was demolished, as well as the building on the easternmost parcel. A small strip mall still operates in the central portion of the Site and a US Post Office is currently located in the northwest corner of the Site.

Businesses currently located in the Ontario Plaza building include a computer repair shop, Corks & Cans Liquor, Bumstead's Bicycles, Crystal Ice Drinking Water and B&F Rod, Reel & Fishing Tackle. Former businesses in this building included Video Star Rentals and Fabricare Dry Cleaning. The unit formerly used by Video Star Rentals is now used as storage for the fishing tackle store and the former Fabricare Dry Cleaning and Laundry unit is now also used as storage. No former dry-cleaning equipment or environmental boring locations were visible inside the Fabricare unit due to the amount of material stored there. The interiors of the units can be seen in photograph #'s 73 to 141.

Various businesses have occupied the units of the former and current Ontario Plaza building from at least as early as 1960. These business included, Poly Clean Center (later Fabricare Dry Cleaning), a shoe repair shop, a rod and reel shop, a Christian science reading room, a Kirby vacuum service center, a printing shop, a tv repair shop, a stationers, a bicycle shop, a liquor store, a real estate office, a dance studio, a drinking water store, a foot doctor, a travel bureau, a pharmacy, a barber shop, a laundromat, a meat store, a Mexican restaurant, a realty office, a hair stylist, a finance office, C&R clothiers and a video store.

Former businesses in the easternmost building included Mail Plus, Marble Plus, a construction company, a garage door company, Faith Community Church of Inland Empire, several locksmith businesses and a beauty salon. Individual residents / phone numbers were listed in the easternmost building from 1972 to 2017 in the EDR City Directory (discussed in detail in Section 4.5).

The US Post Office is listed at its current location from at least as early as 1970 and is still in operation. A scale is located to the rear of the building for weighing parcels / freight.

As indicated earlier, historical dry-cleaning operations have been performed on Site. The easternmost unit in the Ontario Plaza Building (1026 West 4th Street) was occupied by a business called "Poly Clean Center" from as early as 1964. The business operated as a dry-cleaning facility until at least 2017 under the name Fabricare Dry Cleaners. Ontario Plaza Laundromatic & Dry Cleaners is listed in 1960 as operating in a unit adjacent to the post office and is shown to have operated on Site under that and other names until at least 2009. In recent years, Fabricare Dry Cleaner was reported to have used the Ontario Plaza Laundromatic & Dry Cleaner for garment intake and distribution. Finally, Pats Cleaners is listed at the address of 1038 W. 4th Street (one of the center units) in 1970. No evidence of the dry-cleaning operations was observed during our Site visit

since the businesses no longer exist. According to a November 22, 2004 Shaw Phase I Investigation site walk, "Two 55-gallon drums of dry-cleaning fluid sludge were stored adjacent to Fabricare's dry cleaning machine and one 15-gallon drum and one 55-gallon drum of what appears to be dry cleaning fluid also exists within the boiler room (located in the northeast corner of the Fabricare Dry Cleaner tenant space)." Details of the dry-cleaning investigations and Site remediation are provided in Section 2.2.2 of this report. Some of the well boxes and boring locations from the Site operations can be seen in photograph #'s 44, 45, 64, 65, 183, 184, 185, 186, 192, 193 & 200.

Three storm drain grates / inlets are located on Site. The locations of the drain inlets are shown on Figure 2 and can be seen in photographs 64, 65, 171, 217 & 218.

Ten power poles currently exist on Site, four of which are equipped with transformers. All of the transformers observed appeared to be in good condition and free from obvious staining or leakage. The locations of the power poles and transformers are shown on Figure 2 and can be seen in photograph #'s 15, 16, 23 to 26, 29, 30, 32, 33, 69 to 72, 143 to 147, 160 to 162 & 168 to 170.

A summary of general conditions that were observed at the site during our recent inspection is provided in Table 1. The approximate locations of the primary features discussed above are identified in Figure 2, while photographs taken at the time of the recent Site reconnaissance are presented in Appendix B.

2.2.2 Previous Site Investigations

Due to the former dry-cleaning operations, most notably at 1026 W. 4th Street (Fabricare Dry Cleaning), several phases of subsurface investigations and remedial actions have been performed / completed under the Department of Toxic Substances (DTSC's) Voluntary Clean-up (VCP) program. Shaw Environmental conducted soil gas investigations on site in 2005 and 2008. The highest Tetrachloroethene (PCE) soil gas detection was 2,700 ug/l in the vicinity of the Fabricare site at a depth of 30 feet bgs. Bureau Veritas performed additional soil and soil gas testing on Site in 2007 and 2008. The maximum PCE soil detection was 0.055 mg/kg, with a soil detection of 0.016 mg/kg at 71' bgs, while the maximum soil gas detection was 2,300 ug/l at 20 feet bgs. In 2009, Ramboll Environ conducted another soil gas investigation with a maximum soil gas detection of 2,290 ug/l. Ramboll Environ listed the likely source areas as the Fabricare cleaner unit, the sewer line north of the Fabricare unit and a dumpster area north of the cleaner. Ramboll Environ installed two groundwater wells in 2009 which were screened from 474 to 493 feet bgs. Soil samples collected during the installation of the two wells had PCE detections as deep as 230 feet bgs, with a maximum soil detection of 0.271 mg/kg at 90 feet bgs. Perched zone groundwater grab
