samples were collected during well installation at 287, 330, 471 and 493 feet bgs. PCE was detected in two of the grab samples at 33.2 ug/l in the 287-foot perched sample and at 2.49 ug/l in the 497-foot perched grab sample. Indoor air sampling was also performed by Ramboll Environ in 2009 in the Ontario Plaza building. PCE was detected in all 15 commercial units with concentrations ranging from 11 ug/m^3 (Video Star unit) to 5,500 ug/m^3 (Fabricare unit) in March of 2009. These numbers dropped significantly during a re-testing in May of 2009. In 2010 Ramboll Environ installed a Soil Vapor Extraction (SVE) system on Site to remediate the PCE in soil and soil gas under DTSC oversight. The system operated from March 4, 2011 to June 5, 2012, with approximately 758 pounds of total VOCs removed. In 2012 and 2013, Ramboll Environ installed additional soil gas probes, collected additional indoor air samples and prepared a Human Health Risk Assessment (HHRA). All but one of the PCE soil gas detections were below the Residential Risk-Based Target Concentration (RBTC). Indoor air sampling indicated elevated levels within the Laundromat, Fabricare and the rod and reel shop. A mushroom fan was installed within the Fabricare unit and indoor air detections were found to be significantly reduced. Per Ramboll, the elevated levels inside the Plaza Laundromat unit were found to be from off-gassing from dry-cleaned clothing taken to the unit from the Fabricare unit. At this point, JAFAM terminated Fabricare's usage of the Laundromat. In their HHRA, Ramboll indicated that PCE exceeded its residential RBTC from vapor at 14 of 18 locations on Site. Per these findings, Ramboll Environ recommended that the western portion of the Site be designated for commercial redevelopment. They also recommended an additional four semi-annual soil gas confirmation sampling events. This confirmation sampling was performed in 2013 and 2014. PCE concentrations in soil gas were noted to be stable, or decreasing over the four sampling events except at a few locations where the detections were already below the RBTC levels. Groundwater sampling was performed in June of 2015 with a maximum PCE detection of 4.01 ug/l at 498.57' bgs.

Based on their findings, Ramboll Environ requested a deed-restricted "No Further Action" (NFA) designation for Area B (essentially the area of the Ontario Plaza Building) with a commercial / industrial land use restriction and an unrestricted "no further action" designation for Area A (the remainder of the site).

The current owner recorded a land use covenant for the Site on December 13, 2017 with restrictions for area B. The DTSC issued an NFA letter on December 15, 2018. The NFA limits the site usage / development as discussed above.

2.2.3 Interviews with Persons Familiar with the Site

Mr. Trevor Fabeck identified himself as the current owner's (JAFAM) representative. He was interviewed in conjunction with this ESA and provided the following information:

- Mr. Fabeck has worked with JAFAM in this position from 2016 to 2019 and then was recently re-hired last month.
- He worked on site during the tail end of the Site clean-up work.
- The post office building is approximately the same age as the Ontario Plaza building,
- Some of the Site buildings were demolished for a proposed Walgreen's store. The Walgreen's development deal subsequently fell through.
- An NPDES permit exists for site run-off and is still open.
- He did not know of the 1970 listing at 1038 West 4th street for Pat's Cleaners that was listed in a historical directory.
- He indicated that JAFAM has owned the site since 1954.
- Edison has an easement across the Site.
- No water wells exist on Site
- No USTs or ASTs have ever been located on Site.
- Other than the dry-cleaning issues (PCE), no hazardous materials were used on Site.
- Trash is hauled away semi-weekly from the site.
- Drums were formerly located / used on Site to store spoils from the soil gas and water well installation / remediation work.
- Other than the PCE issue, no other environmental problems or permitting issues are known.
- He did not know of any PCB's being used or located on Site.
- He did not know of any septic systems on Site.
- He has no knowledge of any PCB-containing hydraulic equipment or transformers on the property and was not aware of any environmental hazards currently or historically at the Site other than the PCE issues from dry cleaning.

Information regarding the above referenced contacts is provided in Table 2.

2.3 General Site Environmental Conditions

2.3.1 Underground Storage Tanks / Above-Ground Storage Tanks

Mr. Fabeck indicated that he had no knowledge of any Underground Storage Tanks (USTs) or Above Ground Storage Tanks (ASTs) ever existing on Site. No records have been received to date indicating that USTs or ASTs have ever existed on Site and reviews of the RWQCB's Geotracker and the DTSC's Envirostor online databases indicate that no records are available for the Site regarding UST or AST usage.

2.3.2 *Hazardous Materials/Hazardous Waste*

Mr. Fabeck indicated that he had no knowledge of any hazardous materials or hazardous waste ever being used or stored at the Site other than the PCE issues discussed previously. As discussed earlier, drums were stored on Site as part of the Site clean-up effort. No obvious stained soil or stained concrete areas were observed on Site.

2.3.3 *Asbestos*

Asbestos is a generic term for a group of naturally occurring fibrous minerals that were utilized routinely in many building materials until 1978. These building materials included acoustic ceiling tiles, duct insulation, vinyl floor tiles, floor tile mastic, plaster, stucco, drywall joint compounds, roofing mastic, and other materials. Under certain circumstances, tiny fibers from these materials can break off, become airborne, and enter the body through inhalation and/or ingestion. There are numerous potential health effects associated with exposure to excessive amounts of asbestos fibers. As a result, Asbestos Containing Materials (ACMs) that are friable and contain more than 1% asbestos fibers by weight are regulated. These materials must be identified and removed by a licensed contractor prior to initiating any project (e.g. re-modeling or demolition) that would result in the disturbance of ACMs. The Ontario Plaza and the Post Office site buildings appear to have been constructed prior to 1978 based upon personal interviews, review of historic topographic maps, and aerial photographs. Accordingly, an evaluation of ACM's should be conducted in the building prior to the demolition of that structure.

2.3.4 *Lead Based Paint*

Paints with relatively high concentrations of lead were used in many structures prior to 1987. In 1987, the Department of Consumer Affairs established a standard that limited the lead content in residential paints to 0.06% or 600 ppm. Paints with lead contents in excess of 0.5% or 5,000 ppm are typically classified as Lead Based Paints (LBP) by the Environmental Protection Agency (EPA) and the Housing and Urban Development Department (HUD). Lead is a developmental and neurological toxin that can cause a number of adverse health effects. Children are particularly susceptible to lead exposure due to their rapidly developing nervous system and their tendency to absorb more lead through the ingestion of paint, dust, and/or soil through normal hand to mouth activity. If maintained in good condition, LBPs are generally not hazardous. However, if LBPs begin to flake and deteriorate, the paint particles and associated dust may be hazardous. The Ontario Plaza building was observed to be painted at the time of our recent Site reconnaissance. The Ontario Plaza and the Post Office buildings were constructed prior to 1987. Accordingly, screening for the presence of

lead-based paints should be conducted prior to demolition of any structures at the Site.

2.3.5 Solid Waste Disposal

According to Mr. Fabeck, domestic waste / refuse is removed bi-weekly by the City of Ontario.

2.3.6 PCBs/Fluorescent Lights

Ten power poles were observed on Site, four of which included pole-mounted transformers. A total of ten (10) transformers were observed on site and all appeared to be in good condition and free from obvious staining or leakage.

Fluorescent light fixtures (which may contain PCBs) were observed to be present within the units on Site. Mr. Fabeck indicated that transformers or hydraulic equipment containing PCBs were not used or stored at the Site during his tenure.

2.3.7 Radon Gas

The Department of Health Services (DHS) in conjunction with the United States Environmental Protection Agency (EPA) has conducted a California State Radon Survey. The California survey is a part of an on-going program by the EPA to measure levels of radon in all states in the country to identify areas with the potential for elevated indoor radon levels. In this report, California was organized into nine sampling regions using general geology, climate, and existing radon distribution knowledge. The EPA later weighted the geographically distributed results for population distribution. The subject Site is located in Region 9, which includes Los Angeles, Riverside, San Bernardino, Orange, Imperial, and San Diego Counties. The results of the survey indicate that 100 percent of all the sites tested in this region have radon concentrations below 4 pico curies per liter of air (pCi/L). The average radon levels for San Bernardino County (2) are shown in the following table:

Area	Average Activity
Living Area – 1st Floor	0.300 pCi/L
Living Area – 2nd Floor	Not Reported
Basement	Not Reported

The average activity reported above for San Bernardino County (2) is well below the EPA action limit of 4 pCi/L. However, these levels are general for this region and do not reflect actual radon levels that might be detected in any onsite or proposed structures.

2.3.8 Vapor Migration (Soil Gas)

ASTM E 1527-13 requires that potential Site vapor migration (soil gas) issues be addressed in addition to soil and groundwater issues. Many contaminants partition into adsorbed (soil), liquid, and vapor phases. Volatile substances tend to off-gas from either groundwater and / or soil into the unsaturated pore space in soils. As such, testing of soil gas may be necessary to fully investigate the nature and extent of any suspected volatile contaminants.

Based on a review of site records / history, former dry-cleaning operations were performed on site. Subsequent investigations have indicated that soil, soil gas and groundwater PCE contamination have existed on Site. This was discussed in detail in Section 2.2.2.

2.4 Adjacent and Nearby Properties

North A newly constructed church and single-family residences exist just north of the Site. Based on a review of historical aerial photographs and topographic maps, the properties north of the Site were previously used for agriculture / orchards until at least 1954.

East Single-family residences exist just east of the Site. Based on a review of historical aerial photographs and topographic maps, the properties east of the Site were previously used for agriculture / orchards until at least 1954.

South Fourth Street exists just south of the Site. The property just south of Fourth Street is being used as a large strip mall. Based on a review of historical aerial photographs and topographic maps, the property south of Fourth Street was previously used for agriculture / orchards until at least 1954.

West Mountain Avenue exists just west of the Site. The property just west of Mountain Avenue is being used as a small strip mall. Jasmine's Cleaners is located within this mall. Based on a review of historical aerial photographs and topographic maps, the property west of Mountain Avenue was previously used for agriculture / orchards until at least 1954.

2.4.1 General Regional Site Use

The regional property use within the vicinity of the Site is generally commercial and low density residential. The Site is located approximately 0.6 miles south of Interstate 10 and approximately 2.6 miles southeast of the Ontario International Airport.

2.5 Physical Setting

Topography: Relatively flat with a surface gradient of ~2.0% descending to the southwest.

Elevation: 1087 to 1102 feet above MSL.

2.5.1 Surficial Soil

The Site is located in an area that consists generally of a gently sloping alluvial plain. The surficial soils in the area generally consist of coarse-grained soils consisting of sands, sands with fines, and silty sand, although some clay exists in the area. Available Soil Conservation Service documentation regarding the soil type and characteristics is provided in Appendix C. The average surface elevation of the Site is approximately 1095 feet above mean sea level (MSL - USGS, 1981). Significant physiographic features in the vicinity of the Site are shown in Figure 3.

2.5.2 Surface Water

Existing and historic surface water, on or near the Site was evaluated by a review of available publications from the Federal Emergency Management Agency (FEMA), the United States Geological Survey (USGS), and the Chino Basin Watermaster. Historic aerial photographs and topographic maps were reviewed in this regard as well. Existing conditions were documented during our recent Site reconnaissance. The 8th Street basin and the associated West Cucamonga Channel are located approximately 2.0 miles northeast of the Site, while the San Antonio Channel is located approximately 2.0 miles west of the Site. The EDR site map (Appendix C) indicates that the Site lies approximately 1,500 feet west of a 500-year flood zone. The northern margin of the Prado Flood Control Basin is located approximately 8.0 miles to the south of the Site.

2.5.3 Regional Geology

The coastal area of southern California includes parts of the Coast Ranges, the Transverse Ranges, and the Peninsular Ranges Geomorphic Provinces. The subject Site lies within the Peninsular Ranges Geomorphic Province (Morton, 1995). The Peninsular Ranges consist of an 800-mile long northwest to southeast trending mountain range that extends along the entire Baja Peninsula and 130-miles into California, where they merge into the Los Angeles Basin. The Peninsular Ranges Geomorphic Province in southern California is characterized by a parallel series of northwest to southeast trending fault valleys and intervening mountain ranges. The project area is situated within the Chino Basin that lies between the Chino Hills to the southwest, the San Gabriel and San Bernardino Mountains to the north, the Jurupa Hills to the east, and the La Sierra Hills to the south. The Cucamonga Fault is located approximately 4.5 miles north of the Site while the Chino / Central Avenue Fault Zone is located approximately 5.5 miles southwest of the Site. This Chino fault is a north to northwest trending reverse fault that dips steeply towards the southwest. The Chino / Central Avenue Fault Zone acts as a groundwater barrier along the western margin of the Chino Basin.

2.5.4 *Local Geology*

The Site is located at the center of the USGS Ontario 7.5-minute Quadrangle in the north central portion of the Chino Basin. The sediments within the Chino Basin in the vicinity of the subject property generally consist of relatively recent (Holocene) alluvial and fluvial deposits associated with the ancestral Cucamonga Creek and Santa Ana River. These deposits are believed to overlie a relatively thick sequence of older (Pleistocene) alluvial fan deposits. Sedimentary bedrock assigned to the Miocene-age Puente Formation is believed to be present at a depth of approximately 500 to 1,000 feet bgs. In the nearby Chino Hills, this deposit consists of interbedded sequences of marine sandstone and siltstone (Morton, 1995). The younger alluvial deposits are estimated to have a total thickness of approximately 50 to 100 feet. In the vicinity of the subject property the sequence typically consists predominantly of fine silty sands with scattered gravel interbedded with layers of silty clay. The older underlying alluvial deposits are generally comprised of well-indurated, reddish brown silty, gravelly sands with interbedded silt and clay. The Puente Formation rocks are underlain by older (middle Miocene to Cretaceous age) sedimentary rocks. Granitic basement rocks are believed to underlie the sedimentary sequence at a depth of approximately 5,000 feet bgs.

2.5.5 *Groundwater Conditions*

The Site lies within the Chino Groundwater Basin. The reported groundwater elevation at the Site is approximately 625 feet above MSL (Wildermuth, 2005); this corresponds to a depth of approximately 470 feet below the ground surface. This approximate depth was confirmed by the groundwater investigation performed by Ramboll Environ in 2015. Contours depicting the groundwater elevation reported by the Chino Basin Water Master in the vicinity of the Site are shown in Figure 4, the general direction of groundwater flow is towards the southwest. It should be noted that zones of perched groundwater might be present above the surface of the regional groundwater table that is represented in Figure 4. The Chino Groundwater Basin consists of approximately 225 square miles of the Upper Santa Ana River Watershed. The basin is a relatively flat alluvial valley that lies at the intersection of the Transverse and Peninsular Ranges. The valley slopes from the north to the south at elevations ranging from approximately 2,000 feet near the foothills in the north, to about 500 feet at Prado Dam in the south. Alluvium in the basin can be more than 1,100 feet in thickness, and averages about 500 feet in thickness. This basin forms one of the largest groundwater reservoirs in southern California.

3.0 ENVIRONMENTAL AGENCY INFORMATION

A search of environmental records was conducted as part of this ESA, and requests for

information consistent with the Freedom of Information Act (FOIA) were submitted to a number of local regulatory agencies. The results of the database review are provided in Appendix C and summarized in Sections 3.1 and 3.2 below.

3.1 Current Environmental Agency Database Records

3.1.1 Site Agency Database Records

The Site was listed in thirteen (13) of the environmental databases that were reviewed in conjunction with this ESA. The following paragraphs provide a brief explanation of the database listings and the nature of the associated databases:

ENVIROSTOR: The DTSC ENVIROSTOR database identifies sites that have known contamination, or sites for which there may be reasons to investigate further. The Ontario Plaza Site is listed in this database and an active voluntary clean-up site as of October of 2020 for dry cleaning usage with PCE confirmed contamination of soil and soil vapor. Additional information on this listing is provided in Appendix C of this report.

VCP: The DTSC VCP database contains a list of low-level properties with confirmed or un-confirmed releases where project proponents have requested DTSC oversight. The Ontario Plaza site is listed in this database with a date of October 2020 in regard to the ENVIROSTOR listing noted above. No additional information is provided regarding this listing.

DEED: The DTSC DEED database contains a list of sites with deed / land-use restrictions. Per the VCP, the Ontario Plaza Site is listed as having deed / land-use restrictions. No additional information is provided regarding this listing.

NPDES: The NPDES database provides a listing of NPDES permits, including stormwater. The Ontario Plaza site is listed in the NPDES database as active, effective in 2014. This listing is for construction and is likely in reference to the control of surface runoff due to the removal of the some of the site buildings. No other information is provided for this listing in this database.

CIWQS: The California Integrated Water Quality System (CIWQS) database tracks information about places / sites of environmental interest by the RWQCB. The regulatory measure is listed as “storm water construction”. No additional information is provided regarding this listing.

CERS: This CalEPA database combines information about environmentally regulated sites and facilities into a single database. Several violations are listed in the database regarding storm water management, most notably, "failure to submit reports". Additional information about this listing is provided in Appendix C of this report.

FINDS: The Facility Index System / Facility Registry System contains both facility information and 'pointers' to other sources that contain more detail. The Ontario Plaza site is listed in FINDS due to the storm water construction issues listed above. No additional information is provided regarding this listing.

ECHO: The ECHO database provides integrated compliance and enforcement information for about 800,000 regulated facilities nationwide. The Ontario Plaza Site is listed in this database. No other additional information is provided.

EDR Hist Cleaner: The EDR Hist Cleaner database provides lists of potential dry cleaner sites available in selected collections of business directories. Rohmund Enterprises is listed in the database as performing dry cleaning operations at 1026 W. Fourth St from 1969 to 1995. No other additional information is provided.

RCRA-NonGen / NLR: RCRA information is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976, and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. Transporters are individuals or entities that move hazardous wastes from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store or dispose of the waste. Non-Gen / NLR's do not presently generate waste. Fabricare Center at 1026 W. Fourth St. is listed in the RCRA-Non-Gen / NLR database. The site is listed as "not a generator", and no violations were listed. No other information is provided in this database.

DRYCLEANERS: The DRYCLEANERS database lists drycleaner facilities that have EPA ID numbers. Fabricare Center at 1026 W. Fourth Street is listed in the database as having dry cleaning equipment in 1982 using PCE. It is also listed in 1987 to 2020 as being a dry-cleaning facility. No additional information is provided regarding this listing.

EMI: The EMI database provides Emission Inventory Data of toxics and criteria pollutants collected by the ARB and local air pollution agencies.

The Fabricare business is listed in the EMI database as emitting between 1 and 3 tons of organic hydrocarbon gases, one site between 1987 and 1995. No other information is provided for this site in this database.

San Bern. Co. Permit: The San Bernardino County Permit database provides a listing of permits from San Bernardino County. Fabricare Center is listed as having permits in 2021 for "Hazardous Materials 1-3 Chemicals" and as a "Conditionally Exempt Small Quantity Generator". Casa Jimenez Mexican Restaurant is listed as having permits in 2010 as a "Bulk CO2 at Retail Food Facility". No other information is provided in the San Bern. Co. Permit databases for the two sites.

No other details for the Site are provided. The results of the database review are provided in Appendix C.

3.1.2 Surrounding Site Agency Database Records

Twenty-four (24) surrounding properties were listed within the specified search distances in eighteen (18) separate environmental databases that were reviewed in conjunction with this ESA. Some of the properties are listed in more than one database. The following paragraphs provide a brief explanation of the database listings and the nature of the associated database:

RCRA-SQG: RCRA information is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976, and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. Small quantity generators generate between 100 kg and 1,000 kg of hazardous waste per month. Three sites are listed in this database within the specified search distance. Additional information on these sites is provided in Appendix C of this report.

RCRA-VSQG: RCRA information is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976, and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. Very small quantity generators generate less than 100 kg of hazardous waste or less than 1 kg of acutely hazardous per month. One site is listed in this database within the specified search distance. Additional information on this site is provided in Appendix C of this report.

ENVIROSTOR: The DTSC ENVIROSTOR database identifies sites that have known contamination, or sites for which there may be reasons to investigate further. Two sites are listed in this database within the specified search distance. One site, Mountain Square Cleaners, is a dry-cleaning site under voluntary clean-up with noted PCE contamination in soil and soil vapor. The other site is a school site with noted pesticide contamination. Additional information on the sites is provided in Appendix C of this report.

LUST: The Leaking Underground Storage Tank Information System, which is maintained by the Regional Water Quality Control Board (RWQCB), records incidences of leaking underground storage tanks (USTs). Six sites are listed in this database within the specified search distances of the subject Site. The closest LUST site is approximately 150 feet southwest of the Site just across the 4th Street and Mountain Avenue intersection. All six cases are listed as affecting soil only, and all are listed as closed. Additional information on these sites is provided in Appendix C of this report.

UST: The Underground Storage Tank database contains sites with registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data comes from the State Water Resources Control Board's Hazardous Substance Storage Container Database. One site is listed in this database within the specified search distances of the subject Site. The listed site is not noted as having a leaking UST in the past. No other information on this site is provided in the UST database. Information on this site is provided in Appendix C of this report.

CERS HAZ WASTE: The CERS HAZ WASTE database lists sites falling under hazardous chemical management by the Cal EPA. Seven surrounding sites are listed in this database within the specified search distances of the subject Site. Additional information on these sites is provided in Appendix C of this report.

SWEEPS UST: The SWEEPS UST database is for statewide environmental evaluation and planning and identifies properties with USTs. It was maintained by the SRWCB in the early 1990's and is no longer maintained. A total of three sites are listed in this database within the specified search distance of the subject Site. Only one of the sites was listed as having a Leaking Underground Storage Tank (LUST) in the past. No other information is provided in this database.

HIST UST: The HIST UST database contains a historical listing of UST sites. Three sites are listed in this database within the specified search distance. Two of the sites are listed as having a Leaking Underground Storage Tank (LUST) in the past. Additional information on these sites is provided in Appendix C of this report.

CERS TANKS: The CERS TANKS database lists sites falling under aboveground and underground storage tank regulatory programs by the Cal EPA. One (1) surrounding site is listed in this database within the specified search distances of the subject Site. The site is listed as having an underground ground storage tank and as having a leaking UST in the past. No additional information is provided in this database.

CA FID UST: The Facility Inventory Database contains a historical listing of active and inactive UST locations from the State Water Resources Control Board. A total of three sites are listed in this database within the specified search distance of the subject Site. Two of the sites are listed as having a Leaking Underground Storage Tank (LUST) in the past. Additional information on these sites is provided in Appendix C of this report.

RCRA-NonGen / NLR: RCRA information is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976, and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. Transporters are individuals or entities that move hazardous wastes from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store or dispose of the waste. Non-Gen / NLR's do not presently generate waste. Ten (10) surrounding sites are listed on the RCRA-Non-Gen / NLR databases within the specified search distance of the subject Site. One site, Jasmine Cleaners, is a drycleaner located just west of the Site across Mountain Avenue. No violations were listed at the site and no other information is provided in this database.

CORTESE: The CORTESE database sites are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS) and the DTSC. Six sites are listed in this database within the specified search distance due to LUST cases. Additional information on these sites is provided in Appendix C of this report.

DRYCLEANERS: The DRYCLEANERS database lists drycleaner facilities that have EPA ID numbers. One site, Jasmine's Cleaners is listed in the database within the specified search distance. The site is just

west and across Mountain Avenue from the subject Site and is listed as having dry cleaning equipment using PCE. It is also listed from 1987 to 2020 as being a dry-cleaning facility. The site is not listed on either the Geotracker or Envirostor websites and no significant violations were noted in the records for this site. Additional information on this site is provided in Appendix C of this report.

HIST CORTESE: The HIST CORTESE database sites are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS) and the DTSC. This listing is no longer updated. Five sites are listed in this database within the specified search distance due to LUST cases. Additional information on these sites is provided in Appendix C of this report.

San Bern. Co. Permit: The San Bernardino County Permit database provides a listing of permits from San Bernardino County. Ten (10) surrounding site names were listed as having San Bernardino County Permits within the specified search distances of the subject Site. Additional information on these sites is provided in Appendix C of this report.

NOTIFY 65: The NOTIFY 65 database identifies Proposition 65 incidents reported to counties by the State Water Resources Control Board and RWQCB. The database is no longer updated. Three surrounding sites are listed in this database within the specified search distances of the subject Site. Information on these sites is provided in Appendix C of this report.

EDR Hist Auto: The EDR Hist Auto database provides lists of potential gas station / filling station site sites available in selected collections of business directories. Two sites are located within the specified search distances of the subject Site and have been included in other previously listed databases. No other additional information is provided.

EDR Hist Cleaner: The EDR Hist Cleaner database provides lists of potential dry cleaner sits available in selected collections of business directories. One site, Jasmine Cleaners, is listed in the database within the specified search distances of the subject Site. The site was discussed in an earlier database write-up. No other additional information is provided.

No other details for the surrounding sites are provided. The results of the database review are provided in Appendix C.

3.2 Summary of Freedom of Information Act Documents

A request for documents related to environmental issues at the Site was made under the Freedom of Information Act (FOIA) for the site addresses (1000 to 1060 West 4th Street and 1118 to 1126 North Mountain Avenue. FOIA request letters were sent to the Santa Ana Regional Water Quality Control Board (RWQCB) in Riverside, California; The San Bernardino County Fire Department (SBCFD); The South Coast Air Quality Management District (AQMD), The San Bernardino County Department of Public Health (SBCDPH), the Department of Toxic Substances (DTSC) and the City of Ontario. GeoKinetics received responses from the City of Ontario and the SBCDPH stating that they maintain files for the Site. Copies of some of those files were subsequently obtained for review in conjunction with this ESA. No responses have been received to date from the SBCFD or AQMD. When and if records are obtained and environmentally relevant information is uncovered after the published date of this report, an addendum will be prepared summarizing the changes as necessary. Table 3 presents a list of persons and agencies that were contacted under the Freedom of Information Act.

The RWQCB and DTSC have indicated that records are available on-line at Geotracker or Envirostor, respectively. As such, in addition to the above listed search, a review of the RWQCB's Geotracker and the DTSC's Envirostor online databases was performed. The Site is not listed in the Geotracker database. One surrounding site, Mobil, #18-543, located southwest of the Site, is listed as a LUST cleanup site (and was discussed in Section 3.1.2 in this report). The case is listed as affecting soil only, and listed as closed in 1987. The Envirostor database indicates that the Ontario Plaza Site has entered into a voluntary clean-up agreement with the State DTSC. Twenty-nine (29) documents related to this work are provided in the Envirostor database. No sites in the surrounding area are listed in the Envirostor database.

3.2.1 Summary of City of Ontario Records

Documents pertaining to the Site were obtained from the City of Ontario. The City of Ontario documents included permits for electrical, plumbing, lighting, roofing, remodeling and signage work, as well as miscellaneous business licenses. No violations were noted in any of the records. No other documents or information were provided and no environmentally significant documents were reviewed.

3.2.2 Summary of San Bernardino County Environmental Health

Documents pertaining to the Site were obtained from the San Bernardino County Department of Environmental Health. The SBCDPH documents all consisted of well installation permits and subsequent abandonment permits dating from 2009 to 2017. No other documents or information were provided.

4.0 HISTORIC REFERENCES

Several historic references were reviewed to gain additional information regarding the Site history. These references included aerial photographs, USGS topographic maps, and chain-of-title documentation. These references are discussed below:

4.1 Aerial Photograph Review

Aerial photographs for the Site and surrounding area were obtained from Environmental Data Resources, Milford, Connecticut. Aerial photographs were reviewed for the years 1938, 1946, 1949, 1953, 1959, 1964, 1966, 1975, 1985, 1990, 1994, 2002, 2006, 2009, 2012 and 2016. Review of the aerial photographs was used to corroborate the information presented in the Site Description portion of this report. A list of the reviewed aerial photographs and the associated scale is presented in Section 7.0. The aerial photographs that were reviewed in conjunction with this ESA are shown on Figure 5. The following represents a summary of the key features noted in each of the photographs:

1938: The subject property appears to be under cultivation. Orchard trees cover the entire Site. No buildings are shown on Site. Fourth Street and Mountain Avenue, as well as most of the surrounding cross streets, exist at their present locations. The surrounding properties appear to be under cultivation, most likely orchards.

1946: The Site and surrounding areas appear relatively unchanged from the previous photograph.

1949: The Site and surrounding areas appear relatively unchanged from the previous photograph.

1953: The Site appears relatively unchanged from the previous photograph. Residential properties now exist southeast of the Site. The remainder of the surrounding areas are still covered by orchard crops.

1959: The Site area has been cleared of the orchard and the western half of the Ontario Plaza building and western half of the easternmost building now exist on Site. The surrounding properties are now almost completely used for residential and commercial usage. A church appears to be located north of the Site and the property south of the Site, across Fourth Street, now contains a large strip mall.

1964: The Ontario Plaza and easternmost building(s) are now fully constructed. More residential and commercial properties exist in the surrounding areas, including the strip mall west of Mountain Avenue.

1966: The Site and surrounding areas appear relatively unchanged from the previous photograph.

1975: The Site and surrounding areas appear relatively unchanged from the previous photograph.

1985: The Site and surrounding areas appear relatively unchanged from the previous photograph.

1990: The Site and surroundings appear relatively unchanged from the previous photograph.

1994: The Site and surroundings appear relatively unchanged from the previous photograph.

2002: The Site appears relatively unchanged from the previous photograph. The strip mall south of the Site, across Fourth Street, has been completely re-configured. The remainder of the surrounding areas appear relatively unchanged from the previous photograph.

2006: The Site appears relatively unchanged from the previous photograph. The church property, north of the Site, has been cleared of all buildings. The remainder of the surrounding areas appear relatively unchanged from the previous photograph.

2009: The Site and surroundings appear relatively unchanged from the previous photograph.

2012: The Site and surroundings appear relatively unchanged from the previous photograph.

2016: The western half of the Ontario Plaza building and the entire easternmost building is now gone. The Church property, north of the Site, now has a newly constructed building. The remainder of the surroundings appear relatively unchanged from the previous photograph.

The information obtained from our review of the aerial photographs described above generally appears to corroborate the Site history information obtained from the interviews and FOIA documents.

4.2 Historic Topographic Maps

Historic topographic maps prepared by the USGS for the years 1897, 1900, 1903, 1933, 1942, 1944, 1954, 1954, 1967, 1973, 1976, 1981, 2012, 2015 and 2018 of the Cucamonga and Ontario Quadrangles, depicting the Site and surrounding area, were obtained and reviewed in conjunction with this ESA. These maps were used to corroborate the information presented in the Site Description portion of this

report. A list of the reviewed topographic maps and the associated scale are presented in Section 7.0. Figures 6 through 19 depict the Site location on the historic topographic maps. The following presents a summary of the key features noted in each of these maps:

- *1897, 1900, 1903:* The Site is shown as undeveloped land. Mountain Avenue and Fourth Street are shown at the current locations. Most of the existing cross streets and the City of Ontario are shown to exist at the current locations. The Topeka & Santa Fe and Southern / Union Pacific railroad lines are shown north and south of the Site, respectively.

- *1933:* The Site and surrounding areas are areas appear unchanged from the previous map.

- *1942:* The Site and surrounding areas are areas appear unchanged from the previous map.

- *1944:* The Site is shown as being used for orchard cultivation and one structure is shown in the southwest corner of the Site. Many of the surrounding properties are now being used for agriculture, most notably, for orchards.

- *1954:* The Site is shown as still being used for orchard cultivation. The structure in the southwest corner of the Site is no longer shown. The surrounding areas appear unchanged from the previous map. Interstate 10 is shown to be under construction in this map.

- *1967:* The Ontario Plaza building(s) and easternmost building are now located on Site. The church building just north of the Site is also shown on this map. Most of the surrounding areas are now shown to be developed (residential and commercial), rather than used for orchard cultivation.

- *1973:* The Site and surrounding areas appear unchanged from the previous map.

- *1976:* Although the Site buildings are not shown on this map, the Site and surrounding areas appear unchanged from the previous map.

- *1981:* The Site buildings are now shown similarly to the 1973 map, and the Site and surrounding areas appear unchanged from the previous map.

- *2012:* Buildings are not shown on this map. The street configuration is similar to that shown on previous maps.

- *2015:* The Site and surrounding areas appear unchanged from the previous map.

- *2018:* A post office is now shown as being located on the northwestern corner of the Site. The remainder of the Site and surrounding areas appear unchanged from the previous map.

4.3 Property Ownership

Property profile information was reviewed in conjunction with part of this ESA. The available County records indicate the property is owned by JAFAM Corporation.

4.4 Sanborn Fire Insurance Maps

A search was performed in conjunction with this ESA and it was determined that there is no Sanborn Map coverage for the Site.

4.5 City Directories

A search was conducted by EDR for City Directory Abstracts for business directories including city, cross reference and telephone directories. City Directory coverage was available for the Site and surrounding areas from 1956 to 2017. The following presents a summary of the key features noted in each of these listings:

Site – 1000 to 1024 West Fourth Street: Businesses were listed as being located at this building from 1970 to 2017 and include Mail Plus, Marble Plus, a construction company, a garage door company, Faith Community Church of Inland Empire, 24-7 Locksmith and a beauty salon. Individual residents / phone numbers were listed for the site from 1972 to 2017. No environmental issues were noted in the listings / businesses reviewed.

Site – 1026 West Fourth Street: Poly Clean Center is listed in 1964 and 1970 while Fabricare Center is listed from 1975 to 2017 in the easternmost unit of Ontario Plaza. The Site is under a voluntary clean-up due to PCE releases from this unit.

Site - 1028 to 1060 West Fourth Street: Various businesses are listed in the other units of Ontario Plaza from 1960 to 2017 and include a shoe repair shop, a rod and reel shop, a Christian science reading room, a Kirby vacuum service center, a printing shop, a tv repair shop, a stationers, a bicycle shop, a liquor store, a real estate office, a dance studio, a drinking water store, a foot doctor, a travel bureau, a pharmacy, a barber shop, a meat store, a Mexican restaurant, a realty office, a hair stylist, a finance office, C&R clothiers, and a video store. The address at 1038 W. 4th Street is listed as Pats Cleaners in 1970. Other than the dry-cleaning listing, no other environmental issues were noted in the listings / business reviewed.

Site – 1118 North Mountain Avenue: Ontario Plaza Laundramatic & Dry Cleaners is listed in 1960 and shown to operate at that location under that, and other names until 2009. The site is under a voluntary clean-up due to dry cleaning releases on Site, although no issues were shown to be directly related to this unit.

Site – 1126 North Mountain Avenue: The US Post Office is listed at this address from 1970 to 2017. No environmental issues were noted in the listings / businesses reviewed.

Off-Site Address: 1129 North Mountain Avenue: Jasmine Cleaners is listed at this address from 1994 to 2017. The business is located directly across the street from the subject Site. The site is not listed in the Geotracker or Envirostor databases.

Off-Site Address: 1055 North Mountain Avenue: The service station diagonally across the intersection of Fourth and Mountain is listed at this address from 1964 to 2014. The site is listed in the Geotracker database for having a leaking underground storage tank.

4.6 Data Gaps and Data Failures

The Standard Practice for Environmental Site Assessments (ASTM E 1527-13) stipulates that the use of the property in question should be identified at no more than five-year intervals beginning in 1940. As described above, aerial photographs of the subject property were not reviewed at five-year intervals beginning in 1940. Supplemental information regarding past Site usage was obtained through interviews with Site owners / operators and through the review of historic topographic maps. However, the potential for a data gap remains with respect to the five-year identification interval described above. We understand the retrieval / review of chain of title records and associated easements, restrictions, and related information is being performed by the user and has specifically been excluded from this assessment. This should be considered a data gap with respect to the ASTM protocol.

5.0 FINDINGS & CONCLUSIONS

We have made the following primary observations regarding the past use and condition of the property, as well as the presence of any recognized environmental conditions:

- Due to former dry-cleaning operations, the site was investigated and subsequently remediated for Tetrachloroethene (PCE) contamination in soil, soil gas and groundwater under DTSC oversight. The DTSC issued a deed-restricted (commercial / industrial land use restriction) No Further Action letter for portions of the site with an unrestricted "no further action" designation for the remainder of the site. All future site development must follow the guidelines in the Land Use Covenant, the deed restriction, and the No Further Action letter.

- The Site was utilized for agricultural purposes between the early 1900's to at least 1954. As a result of the past agricultural uses, the potential exists for the presence of organic and inorganic pesticides within the surficial soils. Consideration should be given to the collection and analysis of soil samples to screen for the presence of these compounds.

- The Ontario Plaza and Post Office buildings may contain ACMs, LBP, or other regulated materials based upon the apparent ages of the structures. Accordingly, these materials should be screened for prior to any demolition activities. If they are found to be present, special handling and disposal procedures may be required.

- Ten power poles currently exist on site and four of the power poles are equipped with transformers. All of the electrical equipment / transformers observed appeared to be in good condition and free from obvious staining or leakage. If leaking transformers / equipment are found during any future Site work, and are found to contain PCBs, special handling and disposal procedures may be required.

- Fluorescent light fixtures (which may contain PCBs) may be present within the Ontario Plaza and Post Office buildings. Mr. Fabeck indicated that transformers or hydraulic equipment containing PCBs were not used or stored at the Site since they have operated on Site. An evaluation of the fluorescent light fixtures for the presence of ballasts (which may contain PCBs) should be conducted prior to demolition of any structures at the Site. If the light ballasts are found to contain PCBs, special handling and disposal procedures may be required.

No other recognized environmental conditions were identified by our investigation. Except as noted above, appropriate inquiry has been made into the previous ownership and uses of the Site consistent with good commercial and customary practice.

6.0 QUALIFICATIONS & LIMITATIONS

We have performed this Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 for the subject property. Any exceptions to, or deletions from, this practice are described in Section 4.6 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property except as is identified above. We have completed the research and observations for this project with the degree of skill and care ordinarily exercised by Engineers and Geologists practicing in this and similar localities. No other warranty, expressed or implied, is given regarding the conclusions or professional opinions given in this report. The scope of this report is limited to the matters expressly covered. This report is prepared for the sole benefit of Watermarke Properties and may not be relied upon by any other person or entity without the written authorization of GeoKinetics. In preparing this report, we have relied on information derived from secondary sources. Except as set forth in this report, we have made no independent investigation as to the accuracy of the information derived from secondary sources, and have assumed that such information is accurate and complete. More extensive studies may be performed to reduce any inherent uncertainties. All observations, findings, and conclusions stated in this report are based upon facts and circumstances as they existed at the time the associated investigation was performed. A change in any fact or circumstance upon which this report is based may necessitate re-evaluation and/or modification of the findings and conclusions presented in this report. No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. The completion of a Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a property, and this practice recognizes reasonable limits of time and cost.

Figure 2

1006

Explanation

Chino Groundwater Basin and Management Zones

Unconsolidated Sediments

Consolidated Bedrock

Flood Control and Conservation Basins

Fault

Solid where known; Dashed where approximate;
Dotted where concealed; queried where uncertain;
Large dots where probable and barrier to groundwater flow

N

0 2.0 4.0 mi

Approximate Scale

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following records. For more information on this property see page 9 of the attached EDR Radius Map report:

Site	Database(s)	EPA ID
ONTARIO PLAZA 1028 WEST 4TH STREET ONTARIO, CA 91762	ENVIROSTOR Facility Id: 60001166 Status: Active VCP Status: Active Facility Id: 60001166 DEED Status: ACTIVE Envirostor ID: 60001166	N/A

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/20/2022 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/24/2022 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 3 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/20/2022 has revealed that there are 13 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 05/13/2022 has revealed that there is 1 FINDS site within approximately 0.001 miles of the target property.

CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CERS list, as provided by EDR, and dated 01/18/2022 has revealed that there is 1 CERS site within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violations:
Site ID: 386901
Site Name: AutoZone #3328
Violation Date: 02-20-2019
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 02/20/2019. OBSERVATION: (1) 55 gallon drum of waste absorbent was observed open when not in use. CORRECTED ON SITE: Waste absorbent drum was properly closed during the inspection.
Violation Division: San Bernardino County Fire Department
Violation Program: HW

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

MOUNTAIN MOTORSPORTS (Continued) **S103620751**

	6.5, Section(s) Multiple Sections
Violation Description:	Haz Waste Generator Program - Operations/Maintenance - General
Violation Notes:	Returned to compliance on 06/17/2016. Failure to note accumulation start date on labels (CCR 66262.34(f)(2)) Accumulation start date missing from hazardous waste containers.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	50354
Site Name:	MOUNTAIN MOTORSPORTS
Violation Date:	03-21-2016
Citation:	HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Description:	Haz Waste Generator Program - Operations/Maintenance - General
Violation Notes:	Returned to compliance on 06/17/2016. Hazardous waste accumulation time exceeded (CCR 66262.34(a)) Accumulation time could not be determined as accumulation start date was missing from the label and disposal records were not available for review.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	50354
Site Name:	MOUNTAIN MOTORSPORTS
Violation Date:	04-04-2019
Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	Returned to compliance on 05/06/2019. OBSERVATION: During the time of inspection Waste Manifests for waste fuel were not available at the time of inspection. CORRECTIVE ACTION: Locate a copy of all manifests for waste fuel and submit copies of the two most recent manifest record to the CUPA.

Site ID: 272952
Site Name: El Super #50
Violation Date: 05-30-2019
Citation: Un-Specified
Violation Description: Hazardous Waste Generator Program - Administration/Documentation - General Local Ordinance
Violation Notes: Returned to compliance on 06/21/2019. OBSERVATION: Facility is subject to a Hazardous Waste Generator Permit with this Division based on inventory observed at time of inspection. CORRECTIVE ACTION: Pay applicable fees for Hazardous Waste Generator Permit upon receipt of invoice. Once payment has been submitted sign and submit a Certificate of Compliance (CofC) located at the end of this report to the inspector email provided.
Violation Division: San Bernardino County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 272952
Site Name: El Super #50
Violation Date: 05-30-2019
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 06/18/2019. OBSERVATION: Inventory observed on site is inconsistent with inventory submitted via the California Environmental Reporting System (CERS) on 02/19/2019. CERS Identification Number- 10618423. CORRECTIVE ACTION: Using CERS submit a complete and accurate inventory within 30 days of this report. Reference the inventory provided. Once changes have been made submit a signed Certificate of Compliance (CofC) located at the end of this report to the inspector email provided on this report.

CERS Description: Chemical Storage Facilities

Violations:
Site ID: 55138
Site Name: United Pacific 0650
Violation Date: 06-21-2016
Citation: HSC 6.7 29291(b) - California Health and Safety Code, Chapter 6.7, Section(s) 29291(b)
Violation Description: Failure of the UST system to be designed and constructed with a monitoring system capable of detecting the entry of the hazardous substance into the secondary containment.
Violation Notes: Returned to compliance on 06/29/2016. OBSERVATION: THE 91 STP SUMP CONTAINED A STANDING FUEL MIXTURE ON THE SENSOR SIDE OF THE SUMP (SENSOR WAS NOT IN ALARM). THE SOURCE OF THE LEAK WAS NOT DETERMINED; HOWEVER, IT APPEARS THAT FUEL IS SEEPING FROM THE PRODUCT PIPE UNION AND/OR FROM THE VAPOR RECOVERY PIPING (THE TANK BUNG WHERE THE VAPOR RECOVERY PIPING IS ATTACHED DISPLAYED EVIDENCE OF FUEL ACCUMULATION; UNKNOWN REASON). REQUIREMENT: IMMEDIATELY TROUBLE SHOOT THE CAUSE OF THE APPARENT FUEL LEAK WITHIN THE 91 STP SUMP. ONCE NECESSARY REPAIRS ARE DETERMINED, SUBMIT PLANS AND OBTAIN A UST MODIFICATION PERMIT (IF APPLICABLE; NOTE: ANY MODIFICATION TO THE PIPING, ASIDE FROM TIGHTENING OF FITTINGS, WILL REQUIRE AN APPROVED SCOPE OF WORK). SHOULD PLANS BE NECESSARY, SUBMIT FOR REVIEW AND OBTAIN A PERMIT WITHIN 30 DAYS. PROVIDE NOTIFICATION OF ANY NON-PERMITTED WORK TO JKOOYMAN@SBCFIRE.ORG.
Violation Division: San Bernardino County Fire Department
Violation Program: UST
Violation Source: CERS,

Site ID: 55138
Site Name: United Pacific 0650
Violation Date: 07-02-2013
Citation: HSC 6.95 25505(a) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)
Violation Description: Owner/Operator failed to complete and/or submit a Hazardous Materials Business Plan when storing hazardous materials at or above the thresholds quantities of 55 gallons/500 lbs/200 cubic feet.
Violation Notes: Returned to compliance on 07/01/2014.

UNION OIL SERVICE STATION 641 (Continued) **U001570165**

16, Section(s) 2641(j)
Violation Description: Failure of the leak detection equipment to be installed, calibrated, operated, and/or maintained properly.
Violation Notes: Returned to compliance on 06/02/2021. OBSERVATION: At the time of inspection, UDC s 1/2, 5/6 and 9/10 failed testing. CORRECTIVE ACTION: The controllers and sensors in UDC s 1/2, 5/6 and 9/10 were replaced with like for like components and were re-tested during the inspection. Violation abated.
Violation Division: San Bernardino County Fire Department
Violation Program: UST
Violation Source: CERS,

Site ID: 55138
Site Name: United Pacific 0650
Violation Date: 06-02-2021
Citation: 23 CCR 16 2643(b)(3) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2643(b)(3)
Violation Description: Failure of the continuous in-tank leak detection (CITLD) system to perform a 0.2 gallon-per-hour leak test that determines the leak status of the tank at least once every 30 days.
Violation Notes: Returned to compliance on 06/10/2021. OBSERVATION: The Diesel ATG tank test (189 mi drawn every 15 minutes for a total of 8 samples) Failed. CORRECTIVE ACTION: Conduct the Diesel ATG test within 30 days.
Violation Division: San Bernardino County Fire Department
Violation Program: UST
Violation Source: CERS,

Site ID: 55138
Site Name: United Pacific 0650
Violation Date: 06-25-2019
Citation: 23 CCR 16 2641(j) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(j)
Violation Description: Failure of the leak detection equipment to be installed, calibrated, operated, and/or maintained properly.
Violation Notes: Returned to compliance on 06/25/2019. OBSERVATION: At the time of the inspection, the controller unit for sensor VR-001 at UDC 2 was not working. CORRECTIVE ACTION: The controller was replaced during the inspection with like for like components. Violation abated during the inspection

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/27/2022
Date Data Arrived at EDR: 05/05/2022
Date Made Active in Reports: 05/31/2022

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

AQUEOUS FOAM: Former Fire Training Facility Assessments Listing

Airports shown on this list are those believed to use Aqueous Film Forming Foam (AFFF), and certified by the Federal Aviation Administration (FAA) under Title 14, Code of Federal Regulations (CFR), Part 139 (14 CFR Part 139). This list was created by SWRCB using information available from the FAA. Location points shown are from the latitude and longitude listed on the FAA airport master record.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services

Elevation:	1096 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	12016009 ONTARIO, CA
Version Date:	2018

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

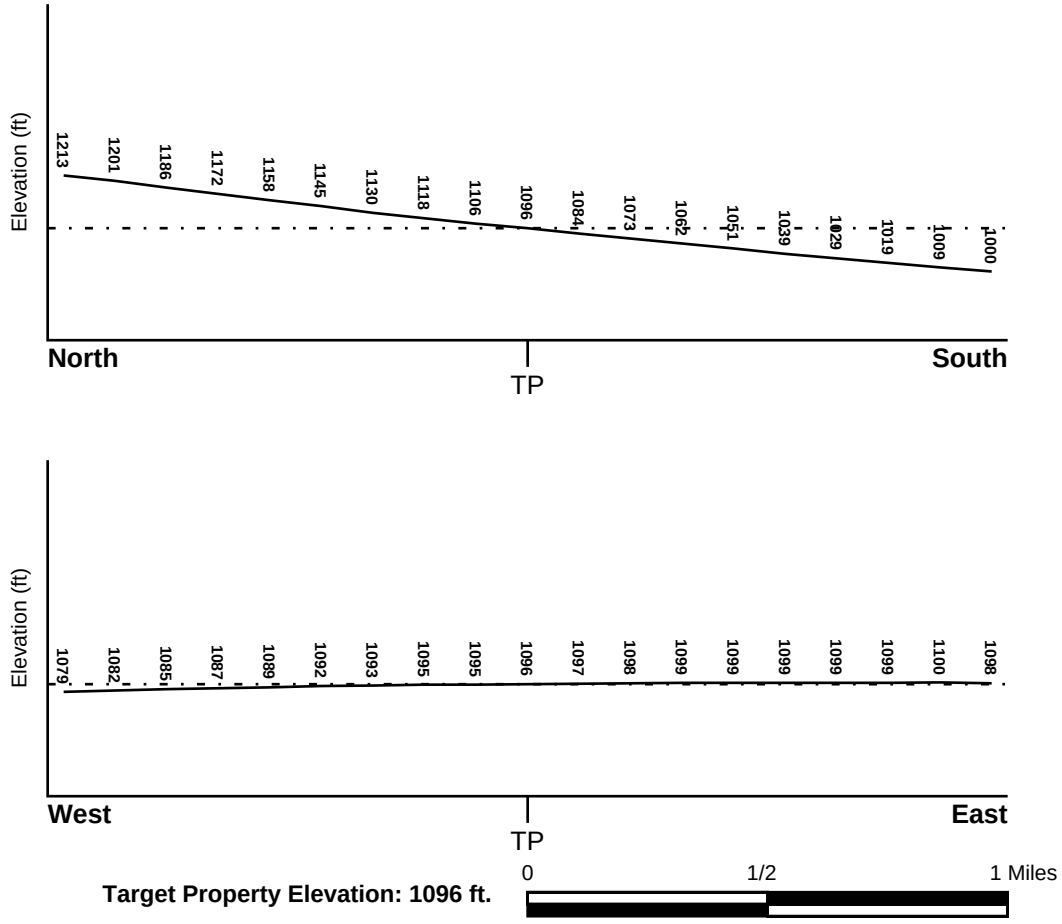
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1750F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
ONTARIO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/8 - 1/4 Mile NNW	S
1G	1/8 - 1/4 Mile NNW	S

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1
2	18 inches	59 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

OFFICIAL RECORDS
1987 FEB 10 AM 11: 32
SAN BERNARDINO
CO., CALIF.

State of California
OFFICE OF THE SECRETARY OF STATE

I, MARCH FONG EU, *Secretary of State of the State of California, hereby certify:*

That on the 23rd *day of* December, 19 86,
there was filed in this office a Certificate of Ownership
merging NEWDAN, INC.,
a California corporation into JAPAN CORPORATION,
, *a California corporation*
and the surviving corporation, by the terms of said agreement.

Further, that according to our records said merged California corporation has ceased to exist as a separate corporate entity.

IN WITNESS WHEREOF, I execute this certificate and affix the Great Seal of the State of California this 30th day of January, 1987.

March Fong Eu

Secretary of State

GRANT DEED *

FOR A VALUABLE CONSIDERATION, receipt of which is hereby acknowledged, ~~George~~ Jacobs and ~~Jacqueline Jacobs~~, husband and wife
Do hereby GRANT to ~~George~~ Jacobs and ~~Jacqueline Jacobs, husband and wife~~
the real property in the City of Ontario, County of San Bernardino, State of California, described as follows:

Parcel 1 of Record of Survey recorded in Book 18 of Records of Survey, page 32, records of said County.

* **This deed is being recorded solely for the purpose of conforming the legal description of the subject land with survey performed to establish the boundary of the property.**

Dated: March 11, 1998.

George Jacobs
Jacqueline Jacobs

CALIFORNIA ALL-PURPOSE ACKNOWLEDGMENT No. 5907

State of California
County of San Bernardino

On March 11, 1998 (DATE) before me, Sandra C. Kinos (NAME, TITLE OF OFFICER - E.G., "JANE DOE, NOTARY PUBLIC"),
personally appeared George Jacobs and Jacqueline Jacobs (NAME(S) OF SIGNER(S)),

☒ personally known to me - **OR** - ☐ proved to me on the basis of satisfactory evidence to be the person(s) whose name(s) is/are subscribed to the within instrument and acknowledged to me that he/she/they executed the same in his/her/their authorized capacity(ies), and that by his/her/their signature(s) on the instrument the person(s), or the entity upon behalf of which the person(s) acted, executed the instrument.

SANDRA C. KINOS
Commission # 1117710
Notary Public — California
San Bernardino County
My Comm. Expires Nov 27, 2000

WITNESS my hand and official seal.

APPENDIX E

RESUMES OF KEY GEOKINETICS PERSONNEL

GeoKinetics
Geotechnical & Environmental Engineers

Kevin J. Lea, P.E.
Professional Engineer

Education

MBA, University of California at Irvine, 1993
BS in Electrical Engineering, University of California at San Diego, 1986

Professional History

Senior Project Engineer, December 2007 to Present
GeoKinetics Inc., Irvine, California
Professional Civil Engineer / Project Manager, 1998 to December 2007
Carlin Environmental Consulting, Tustin, California
Quality Control Engineer / Source Manager, 1997 to 2002
Northrop-Grumman, Rolling Meadows, Illinois
Senior Systems Engineer, 1986 to 1993
Loral Aerospace, Newport Beach, California

Certifications and Professional Organizations

Qualified SWPPP Developer (QSD) & Qualified SWPPP Practitioner (QSP)

Member and Consultant to the Los Angeles Department of Building and Safety's "Methane Experts Task Force".

Experience

Mr. Lea has extensive experience in the investigation and mitigation of subsurface biogenic and petrogenic combustible gases. He has been responsible for the subsurface gas investigations at several hundred properties in the past 15 years. He has also been responsible for the subsequent design and construction of the mitigation measures required, based on the investigation results. His design experience has been focused on both new building applications as well as retrofit designs incorporated into existing buildings. Typical designs have included sub-slab ventilation piping, Liquid Boot® membranes, HDPE membranes, passive and active vent riser systems, sub-slab pressure sensors, electronic gas detection and alarm systems, mechanical ventilation systems, dewatering systems, trench dams and conduit seals.

Mr. Lea has extensive experience with the specific requirements of numerous governmental agencies with regard to combustible gas mitigation systems. Because of the significant requirement differences among oversight agencies, he has been able to work with several regulatory agencies to either modify or clarify their applicable code sections so that they remain consistent with typical industry standards. Because of this inter-departmental knowledge, he has been able to facilitate many teams of architects and civil, mechanical and electrical engineers into modifying building designs that can more easily incorporate these mitigation designs.

Mr. Lea has extensive experience in the location, investigation, and abandonment of oil and gas wells to current DOGGR standards. He has been responsible for the incorporation of the abandoned well location and its subsequent mitigation into numerous future building mitigation systems.

Mr. Lea has extensive experience in the installation of fluid applied membranes for all types of foundation and building types including slab on grade (one and two pour

systems), pile driven foundations, mat slab foundations, grade beams, sump pits, elevator pits and shotcrete, CMU and poured in place sub-grade wall systems. Because of this knowledge, he has been able to advise construction professionals not only on the best methods to apply mitigation designs, but on the budgeting aspects of their projects so that the most cost effective solutions can be utilized.

Mr. Lea has experience in the design and installation of subsurface gas mitigation systems as they apply to Volatile Organic Compound (VOC) site mitigation. This experience includes the knowledge of the chemical compatibility of spray applied membranes with respect to the specific vapor barrier application.

Mr. Lea has experience in most construction techniques for residential and commercial buildings. This experience includes the review of design drawings, hands-on field construction observation and inspection, and the investigation, assessment and litigation of alleged construction defects.

Mr. Lea has extensive experience in the completion of Phase I and Phase II environmental site assessments and investigations. He has performed hundreds of initial site screening assessments in order to advise and assist clients in regard to real estate transactional environmental issues. He has written, clarified, reviewed, edited, proof-read and published these engineering reports. He has been involved in the development, design, cost estimation, permitting, construction and/or operation of remediation systems for properties contaminated with petroleum hydrocarbons, heavy metals, PCB's, solvents and pesticides. He is knowledgeable of the application of numerous remediative techniques including vapor extraction, soil venting, air-stripping and granular activated carbon groundwater filtration systems for several remediation projects including those caused by underground storage tanks, chemical usage, oil wells, refineries, natural gas and oil seeps and landfills.

Mr. Lea has extensive experience in CAD-based information systems. He has created and illustrated numerous project drawing sets and exhibits for use in explaining and developing project concepts and solving project problems. He has extensive experience in illustrating project specific information using aerial, topographic, CAD-based and environmental/oil field map making and interpretation tasks. Based on this knowledge, he has been able to directly assist architects and civil, mechanical and electrical engineers in their building design drawings and applications.

Mr. Lea has shown multidisciplinary engineering knowledge throughout his career. As listed above, he has training and experience in the environmental and civil engineering fields. He also has site management experience within the geotechnical field as well as training and experience in the electrical and aerospace engineering fields. His electrical and aerospace experience includes participation in the design, testing and integration of several electro-optical systems for several military products. This experience aids Mr. Lea's ability to solve system level engineering problems both in the laboratory and in the field. This multidisciplinary engineering experience has allowed Mr. Lea to arrive at system level solutions to project level problems by evaluating issues from several engineering viewpoints.

Site: **Watermarke Project**
Assessor's Parcel Number (APN) 1008-522-02
1028 W. 4th Street
Ontario, California 91762

Dear Mr. Fabeck:

SCS Engineers (SCS) is pleased to present this SMP for the above-described Site. The work described in this SMP was performed by SCS in general accordance with Agreement for Services 010766222 (herein referred to as Exhibit 00) and the Agreement for Professional Services (Contract) between SCS and JAFAM Corporation (Client). The Contract and Exhibit 00 were fully executed on July 28, 2022.

If we can be of further assistance, or if you have any questions regarding the above scope of work, please contact one of the undersigned at (858) 571-5500 or the provided email addresses.

Sincerely,

Allison O'Neal

DISCLAIMER

This SMP has been prepared with specific application to the property located at 1028 West 4th Street, Ontario, California, in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein. Aside from review by the lead regulatory agency, the California Environmental Protection Agency (EPA) Department of Toxic Substances Control (DTSC), no other party, known or unknown to SCS, is intended as a beneficiary of this work product, its content, or information embedded therein. Third parties use this report at their own risk.

1 BACKGROUND

INTRODUCTION AND OBJECTIVES

SCS Engineers (SCS) was retained by JAFAM Corporation (Client), to prepare this Soil Management Plan (SMP) to be used during redevelopment grading and other tasks at the proposed Watermarke Project (Project) at the real property located at 1028 W. 4th Street, Ontario, California (Site) (Figure 1). The SMP documents the proposed soil screening and mitigation methods for excavation activities for a proposed mixed use residential and commercial redevelopment project in areas of known subsurface contamination and for soil with visual or other indications of impacts that may be encountered in other areas of the Site during redevelopment.

Based on conversations with the Client, the proposed mixed-use Project for the Site will consist of 360 multifamily residential dwellings (including some on the ground floor) and 4,000 square feet, 2-story retail space constructed within four stories above grade elevation (Figure 2) around a six-story tall parking structure that will be situated toward the central portion of the Site. Regulatory oversight for the Site has been provided by the State of California Department of Toxic Substance Control (DTSC). This SMP was prepared based on our understanding of the existing environmental dataset for the Site, additional soil and soil vapor sampling activities that were conducted by SCS in October of 2022 in connection with the proposed redevelopment project, our discussions with the Client, and experience with similar projects.

The objective of this SMP is to provide guidance for managing chemicals of potential concern (COPCs)-bearing soil and soil vapor that primarily contains tetrachloroethene (PCE) from former on-Site dry-cleaning facilities that will be excavated during construction activities, and summarizes vapor intrusion mitigation system engineering controls proposed for the new Site buildings associated with redevelopment of the Site. As part of redevelopment, the existing Site buildings including the United States Postal Service (USPS) office building on the northwestern portion of the Site will be demolished. According to the *Geotechnical Report* dated November 27, 2019 and prepared by Partner Assessment Corporation (Partner), excavations on-Site to depths of up to 4 feet below grade (fbg) are recommended for building foundations and/or slabs on grade, and up to 15 fbg for drilled shaft foundations. The SMP for the Site calls for removal and off-Site disposal of locally impacted volatile organic compound (VOC)-bearing soil in areas of proposed redevelopment excavation, with concentrations of COPCs that are reported to exceed DTSC Recommended Screening Levels for residential soil. Large quantities of waste soil are not anticipated to be generated during these activities based on a review of the proposed redevelopment plans and the prior shallow soil sampling data available for the Site. Since soil suspected of being impacted by COPCs may be encountered in other areas during grading or other redevelopment activities, the SMP also provides guidance for testing as well as managing this soil. In addition, since redevelopment activities could expose areas of soil with the potential for release of VOC vapors or fugitive dust, the SMP describes monitoring and mitigation measures to be completed during mass grading activities regarding these issues.

SETTING AND SITE HISTORY

SCS understands that the Site consists of County of San Bernardino Assessor Parcel Number 1008-522-02 comprising approximately 5.8 acres of land in Ontario, California (Figure 1). The Site is located on the northeast corner of West 4th Street and North Mountain Avenue in Ontario, California. Reportedly, the Site is developed with two commercial buildings – one that is currently occupied by a United States Postal Service (USPS) office, and the other currently a commercial retail building that is currently occupied by various small retail tenants, and was previously occupied by a dry cleaner. Note that the western portion of the commercial retail building has been demolished, with the

eastern portion of this building still present and occupied. The Site is bounded to the north by church property and single-family residences, to the east by single-family residences, to the west by North Mountain Avenue, and to the south by West 4th Street. Please refer to Figure 2 for a graphical depiction of the Site including the proposed redevelopment plans, location of the former dry cleaner, and existing commercial deed restriction extents.

Based on reports and documents available for the Site from the DTSC EnviroStor website[1], the former dry-cleaning tenant previously experienced a release of chlorinated solvents including the chlorinated volatile organic compound tetrachloroethene (PCE) impacting soil and soil vapor, which was remediated using soil vapor extraction under regulatory oversight from the DTSC. The unauthorized release case was closed by the DTSC with land use restrictions in place on December 21, 2017 (See Appendix A). The land use restrictions consist of a land use covenant for commercial/industrial land use only on the portion of the Site where the former dry-cleaning release occurred, and is depicted on Figure 2. The proposed parking structure for the Project has been designed to encompass the entire area of the land use covenant.

The Site was used for agriculture beginning some time prior to 1938, when the Site was a citrus grove; this use continued until at least 1954. Commercial development began at the Site in approximately 1957, and by 1963, the configuration of the buildings at the Site was approximately as it is today. Since that date, these properties have been developed for commercial/retail uses.

Current businesses at the Site include the United States Postal Service (post office; 1126 North Mountain Avenue), William Computer Repair (computer repair; 1044 West 4th Street), Corks & Cans Liquor (liquor store; 1040 West 4th Street); Bumsteads Bicycles (retail and bicycle repair; 1038 West 4th Street), Quality Drinking Water (retail; 1034 West 4th Street), B&F Rod & Reel Fishing Tackle (retail; 1028 West 4th Street).

A former dry-cleaning establishment, Ontario Plaza Laundromat/Cleaners (formerly located in the northwest corner of the commercial retail building at 1118 North Mountain Avenue in the portion of the building that was previously demolished) was identified at the Site from approximately 1960 to 2008. The Fabricare Dry Cleaner (1026 West 4th Street in the eastern portion of the commercial retail building that is still standing and used for commercial retail purposes) occupied the farthest east side of the Site building reportedly from 1964 until February 2020. Although the County of San Bernardino Fire Department Certified Unified Program Agency records indicate that waste perchlorate was permitted at the Fabricare Dry Cleaner until 2019, current Site owner representatives report that on-Site use of PCE was discontinued in 2017. Extensive soil and soil vapor sampling and remedial measures have previously been conducted at the Site to address the former dry-cleaning land uses, and several soil screening and mitigation measures are proposed to be carried out during construction of the proposed commercial project at the Site, as discussed in this SMP.

HISTORICAL ENVIRONMENTAL ASSESSMENT AND MITIGATION SUMMARY

Regulatory Oversight and Subsurface Assessment (2005-2010)

Prior to regulatory agency oversight, several subsurface investigations were conducted by Shaw and Bureau Veritas (BV) to evaluate the potential presence, nature, and extent of PCE in the subsurface of the Site. Shaw conducted a limited investigation in the area of the Ontario Plaza Laundromat & Dry Cleaner and Fabricare Dry Cleaning involving the collection of soil and soil vapor samples in 2005 and 2008 (Shaw, 2005 and 2008). BV conducted a soil vapor survey and collected soil

[1] https://www.envirostor.dtsc.ca.gov/public/profile_report?global_id=60001166

samples in 2007 (BV, 2008a) and conducted an additional soil vapor survey in 2008 (BV, 2008b). Based on the results of these investigations, Environ conducted a supplemental soil vapor survey, installed two groundwater monitoring wells, and conducted indoor air sampling at the Site in 2009 (ENVIRON, 2009) to further evaluate the nature and extent of PCE in the subsurface. Based on the results of these investigations and Environ's recommendations, JAFAM entered into a voluntary cleanup program with the DTSC in June 2009. With the oversight of the DTSC, Environ conducted an additional investigation in 2010 (ENVIRON, 2011) to further evaluate the extent of PCE in the subsurface at the Site and install three quad-nested soil vapor extraction (SVE) wells in previously identified PCE source areas.

Soil Vapor Extraction (SVE) Remediation (2011-2012)

Based on Environ's supplemental investigations performed in 2009 and 2010, and under the direction of DTSC, JAFAM implemented a SVE remedy to address the PCE in soil and soil vapor at the Site.

The SVE system started operation on March 4, 2011. The system consisted of three 12-inch-diameter, quad-nested vapor extraction wells designated (SVE-1, SVE-2, and SVE-3). Each SVE well consisted of screened intervals from approximately 10 to 40 feet fbg (Zone A), 50 to 80 fbg (Zone B), 100 to 130 (Zone C) and 160 to 190 feet fbg (Zone D). The SVE wells were connected to the SVE unit with 2-inch-diameter pipes.

Ramboll reported the theoretical removal of approximately 758 pounds of total VOCs from the Site subsurface via operation of the SVE system according to their calculations including total air flow rate recorded from the SVE system and laboratory analytical results of extracted VOC-bearing vapor. The results of the SVE remediation and detailed operation activities are summarized in a report prepared by Environ (Environ) titled, *Soil Vapor Extraction Pilot Test Study and Progress Report* dated October 2011 (ENVIRON, 2011). At the direction of DTSC, the SVE system was shut down on June 5, 2012.

Confirmation Soil Vapor Sampling, Indoor Air Quality Sampling, and Human Health Risk Assessment (2012-2013)

In August and September 2012, Environ conducted soil vapor sampling, indoor air sampling, and completed a human health risk assessment (HHRA) to assess efficacy of the SVE activities and evaluate potential health risks associated with potential redevelopment. Environ collected 13 indoor air samples and ambient outdoor air samples to support the completion of a HHRA, including the collection of an indoor air sample inside the Site building where the USPS is intending on remaining throughout and subsequent to the proposed Site redevelopment. The results of the confirmation soil vapor sampling, indoor air quality sampling, and HHRA were provided to the DTSC in Environ's *Progress Report* dated April 2013 (ENVIRON, 2013a).

PCE results of the indoor air sampling completed within the USPS building were reported to be 2.8 micrograms per square meter ($\mu g/m^3$). Under the direction of DTSC, Environ conducted a HHRA at the Site using post-remediation soil vapor characterization data to evaluate potential health risks to future on-Site commercial workers and residents potentially exposed to chemicals through inhalation of soil vapor migrating from the subsurface to indoor and/or ambient air.

The technical approach used by Environ in the HHRA involved developing Site-specific risk-based target concentrations (RBTCs) for chemicals detected in soil vapor. The Site-specific RBTCs were developed for the potentially exposed populations and exposure pathways identified for the Site. The potentially complete exposure pathways identified for on-Site commercial workers and residents include inhalation of volatile chemicals migrating from soil vapor in the subsurface into indoor or

ambient air. Because the exposure to vapors migrating to indoor air is the most conservative evaluation based on the chemical concentration in air, the soil vapor to ambient air pathway was not quantitatively evaluated in this report.

Screening soil vapor RBTCs were conservatively calculated assuming the soil vapor sampling depth was immediately below the engineered fill of the building. A comparison of Site data to the screening soil vapor RBTCs showed that all detected chemicals, with the exception of PCE at a few locations, were below their RBTCs.

Based on the results of the confirmation soil vapor sampling, indoor air quality sampling, and HHRA, Environ recommended that the western portion of the Site be designated for commercial redevelopment and that grading and construction activities proceed without the implementation of additional mitigation measures. In addition, Environ concluded that no further indoor air sampling was warranted at the Site. The DTSC approved the report and its recommendations in a letter dated June 20, 2013.

TOPOGRAPHY

The Site and surrounding area has a generally flat topography with a slight slope to the south-southwest. The Site is situated approximately 1,000 feet above mean sea level (MSL). According to the United States Geological Survey (USGS), 7.5 minute topographic map of Ontario, California dated 1981, the Site is located in the southeast one quarter of Section 13, Township 1 South, Range 8 West, San Bernardino Baseline and Meridian.

GEOLOGY AND HYDROGEOLOGY

Geologically, the Site is located in the eastern portion of the Inland Valley, also known as the Inland Empire, within the Peninsular Ranges Geomorphic Province of California. The Inland Valley is bounded by the San Bernardino Mountains to the northeast, the San Gabriel Mountains to the north, the Chino Hills to the southwest, and hilly uplands to the southeast that separate it from the San Jacinto Basin.

Based on a review of the available information and boring logs the Site is underlain by Quaternary-aged surficial sediments with shallow soils and unconsolidated sediments consisting of alternating beds of well-graded, fine- to coarse-grained sands with varying amounts of gravel, cobbles, and silty sand to a depth of approximately 515 feet.[2] Localized silt to sandy silt layers, ranging from approximately 2 to 20 feet in thickness, are present from approximately 90 feet below ground surface (fbg) to approximately 500 feet fbg. A 10-foot -thick silt layer was encountered in the two deep well borings at the Site at approximately 190 feet fbg. Another 10- to 14-foot-thick silt/clay layer was encountered at approximately 400 feet fbg.

The Site is located in the Chino Subbasin of the Upper Santa Ana Valley Groundwater Basin. The water-bearing units in the Chino Subbasin include Holocene and Upper Pleistocene alluvium. The Holocene alluvium consists mainly of alluvial-fan deposits, with maximum thickness of approximately 150 feet. In the vicinity of the Site, these sediments are typically 150 feet thick. The alluvium is coarsest in and near the mouths of the canyons, and is finer away from canyon mouths in the southern part of the sub-basin. In the vicinity of the Site, the alluvium is coarse and unsaturated.

Thin, discontinuous perched water zones exist beneath the Site at approximate depths of 290 feet fbg (near on-Site Well ENB-2) and approximately 330 feet fbg (near on-Site Well ENB-1A). A regional

---

[2] Dibblee Jr., Thomas W., and edited by Minch, John A., Geologic Map of the San Dimas and Ontario Quadrangles, Los Angeles and San Bernardino Counties, California, California Geological Survey, 2002.

groundwater aquifer is present at approximately 470 feet fbg. The limited available data suggest that the perched water is isolated from the regional groundwater aquifer.

2 FIELD ACTIVITIES

SOIL SAMPLING AND ANALYSIS

In order to assess current concentrations of COPCs in shallow soil (i.e., upper 3 to 4 feet deep) that may be encountered during grading and excavation activities as part of the proposed Project, on October 4, 2022, SCS advanced 16 soil borings with a direct drill rig (borings SCS1, SCS2, SCS3, SCS4, SCS5, SCS6, SCS7, SCS8, SCS9, SCS10, SCS11, SCS12, SCS13, SCS14, SCS15, and SCS16) to total depths of up to 8 fbg at the Site (Figure 3). Due to resistant soil conditions, recovery of soil samples at 1 or 2 feet below the ground surface was not possible in borings SCS1, SCS5, SCS7, SCS12, SCS13, and SCS16. The following table summarizes the completed soil borings with depths and laboratory analysis for soil samples.

Boring ID	Boring Depth (feet bgs)	Boring Locations/Rationale	Lab Analysis/ Sample Depths	Number of Samples Analyzed
SCS1 and SCS2	8	Shallow soil in the vicinity of previous soil borings SB-3 and BV-9 reported to potentially be in the vicinity of a sewer utility historically servicing the Site building that contained the dry cleaners.	TPH – 2 fbg in SCS1 and 1 fbg in SCS2 CAM 17 Metals – 2 fbg in SCS1 and 1 fbg in SCS2 VOCs – 1 and 3 fbg	2 TPH 2 Metals 4 VOCs
SCS3, SCS4, SCS5, SCS6, SCS7, SCS8, SCS9	8	Shallow soil in the vicinity of the former dry cleaners and previous soil boring SB-4 were historically reported to contain the highest concentration of PCE-bearing soil	TPH – 1 fbg, except 3 fbg in SCS5 and SCS7 CAM 17 Metals – 1 foot fbg, except 3 fbg in SCS5 and SCS7 VOCs – 1 and 3 fbg, except 3 and 4 fbg in SCS5 and SCS7	7 TPH 7 Metals 14 VOCs
SCS10	8	Former dumpster area in the vicinity of historical soil sample ENB-2.	TPH – 1 fbg CAM 17 Metals – 1 fbg VOCs – 1 and 3 fbg	1 TPH 1 Metals 2 VOCs
SCS11, SCS12, SCS13, SCS14, SCS15, SCS16	8	Select additional locations to provide additional lateral delineation to dry cleaner building releases and spatially variable shallow soil quality throughout the Project extent.	TPH – 1 foot bgs, except 2 fbg in SCS13 and SCS16, and 3 fbg in SCS12 CAM 17 Metals – 1 fbg, except 2 fbg in SCS13 and SCS16, and 3 fbgfin SCS12 VOCs – 1 and 3 fbg, except 2 and 3 fbg in SCS13 and SCS16, and 3 fbg in SCS12	6 TPH 6 Metals 11 VOCs

Notes:
TPH: Extended range total petroleum hydrocarbons as gasoline (TPHg), TPH as diesel (TPHd), and TPH as oil (TPHo) in accordance with EPA Method 8015B
Metals: CAM 17 Metals in accordance with EPA method 6010B/7000

VOCs: Volatile organic compounds in accordance with EPA Method 8260B
Lead: Lead in accordance with EPA Method 6010B
WET Lead: Waste extraction test for lead concentration above the CA Title 22 Soluble Threshold Limit Concentration in accordance with EPA Method 6010B

Soil samples collected with the direct-push drilling method used a stainless steel drilling rod with an internal clear acetate liner. After selecting the targeted depth intervals from the liner and separation the ends of each sample were covered with Teflon® sheeting and closed with end caps for handling and transportation. The sampler liners, sheeting, and end caps all arrived at the Site clean in manufacturer's packaging and the sampling equipment was decontaminated on-Site between soil samples to minimize the likelihood of "cross-contaminating" the samples and to minimize the potential for a "false positive" in the soil samples analyzed. For the direct-push drilling activities, no soil cuttings were generated. The direct-push borings were backfilled with hydrated bentonite granules after completion.

The sample containers were labeled and delivered to an off-Site laboratory for analysis. Chain-of-custody procedures were implemented for sample tracking. A copy of the laboratory analytical report is provided in Appendix B.

SOIL VAPOR SAMPLING AND ANALYSIS

On October 11, 2022, SCS oversaw the drilling and installation of 20 soil vapor probes (SVP-1 SVP-2, SVP-3, SVP-4, SVP-5, SVP-6, SVP-7, SVP-8, SVP-9, SVP-10, SVP-11, SVP-12, SVP-13, SVP-14, SVP-15, SVP-16, SVP-17, SVP-18, SVP-19, and SVP-20) to assess the area of the proposed structures at Site for the conceptual design of a vapor intrusion mitigation system (VIMS). Locations of soil vapor samples are included in Figure 3.

The soil vapor sample probes SVP-1 through SVP-20 were advanced with a direct-push drilling rig to depths of approximately 5 fbg. The vapor probes were constructed with vapor inlets constructed at 5 fbg which were attached to the sealable surface completions with eighth of an inch diameter Nylaflow tubing. For each soil vapor probe, the 5 fbg vapor inlet was topped with dry bentonite from 4.5 to 4.8 fbg above the sand, and topped with hydrated granular bentonite seal extending to grade in a flush mount vault.

Soil vapor sampling activities were conducted in general accordance with the Department of Toxic Substances Control (DTSC), Los Angeles RWQCB, and San Francisco RWQCB Advisory on Active Soil Gas Investigations, dated July 2015. A temporary soil vapor well, consisting of Nylaflow™ tubing attached to a soil vapor probe tip, was installed near the bottom of each boring. An appropriate sand pack a minimum of 6 inches thick was placed around the soil vapor probe tip, and the borings were backfilled with at least 6 inches of dry granular bentonite above each sample port and topped with hydrated granular bentonite to the surface. The soil vapor sampling probes were allowed to stabilize for approximately 2 hours prior to sampling, followed by removing the DTSC-default of three purge volumes, and performing a shut-in test and leak test to confirm no leaks in the probe construction and vapor sampling train existed prior to sample collection.

Soil vapor samples were collected from the soil vapor sampling probes by collecting soil vapor drawn through the probes into laboratory-provided summa canisters. Soil vapor samples were handed to an on-Site state-certified, mobile laboratory (H&P Mobile Geochemistry) and analyzed for VOCs in general accordance with U.S. Environmental Protection Agency (EPA) Method TO-15. In accordance with the DTSC guidance, one replicate sample was analyzed (SVP-11-5 Rep). Chain-of-custody procedures were implemented for sample tracking.

3 FINDINGS

LABORATORY ANALYTICAL RESULTS

Soil Sample Analytical Results

The results of the soil samples collected and analyzed during the above-described sampling activities on October 4, 2022, are summarized below and are tabulated in Tables 2 and 3, and depicted on Figures 4 and 5. Copies of the laboratory reports are included in Appendix B.

Total Petroleum Hydrocarbons (TPH)

A total of 15 soil samples were analyzed for extended-range TPH in accordance with EPA Method 8015B. Concentrations of TPHg were not reported above the laboratory reporting limits in any of the samples analyzed. Concentrations of TPHd was reported in 1 of the 15 samples analyzed with a reported detection of 10 mg/kg in sample SCS6-1. Concentrations above the laboratory reporting limit of TPHo were reported in 11 of the 15 samples analyzed, with detections ranging from 66 mg/kg in sample SCS6-1 to a maximum of 2,900 mg/kg in sample SCS3-1. In our experience, the presence of TPHo in the reported range of concentrations coupled with the depth below grade that the samples were collected appear to the presence of asphalt paving used in the overlying parking lot.

Volatile Organic Compounds (VOCs)

A total of 31 samples collected from the Site were analyzed for VOCs in accordance with EPA Method 8260B. Detectable PCE above the laboratory reporting limit was reported in 1 of the 31 samples analyzed, sample SCS10-1 at 5.8 micrograms per kilogram (µg/kg). All the other samples were not reported to contain VOCs above the respective reporting limits.

Lead and Other Metals

Soil analytical results for lead and other metals indicated metals were detected above laboratory reporting limits in several samples. Only one of the analyzed soil samples (SCS12-3') was reported to contain a lead concentration (95 mg/kg) above the Regional Water Quality Control Board (RWQCB) Soil Screening Level (SSL) for waste (i.e., soil export) which is 23.9 mg/kg. Tier 1 SSLs are the criteria by which soil is judged to be "inert waste soils that can be reused without restriction" as developed by the RWQCB (Waiver). The data are presented in Table 3.

Soil Vapor Sample Analytical Results

A summary of the laboratory analytical results for soil vapor is presented below. A complete listing of the results is presented in the laboratory analytical report included in Appendix B. The data are presented in Table 4 and depicted on Figure 6.

VOCs in Soil Vapor

A total of twenty-one soil vapor samples, identified as SVP-1 SVP-2, SVP-3, SVP-4, SVP-5, SVP-6, SVP-7, SVP-8, SVP-9, SVP-10, SVP-11, SVP-11 Rep, SVP-12, SVP-13, SVP-14, SVP-15, SVP-16, SVP-17, SVP-18, SVP-19, and SVP-20, were analyzed for VOCs in general accordance with EPA Method TO-15.

Dichlorodifluoromethane (F12), carbon disulfide, chloroform, trichlorofluoromethane (F11), PCE, bromodichloromethane, and toluene, and were reported to be present above the respective

laboratory reporting limits in one or more of the soil vapor samples collected at the Site. All other VOCs analyzed were reported to be below the respective laboratory reporting limits.

The uses and presence of these VOCs are summarized below:

- PCE is used as a solvent in industry as well as the dry cleaning and auto repair industry. It's moderately to highly likely that the presence of this solvent in soil vapor beneath the Site is a result of spills or release(s) from the former dry-cleaning facility on-Site. Concentrations of PCE were reported in all 21 samples analyzed, and ranged from 53 micrograms per cubic meters (µg/m^3) in sample SVP-13-5 to a maximum of 10,000 µg/m^3 in sample SVP-5-5.
- F12 and F11 are used as refrigerant compounds and for aerosol spray propellant. Concentrations of F12 were reported in 17 of the 21 samples analyzed, and ranged from 7.4 µg/m^3 in sample SVP-12-5 to a maximum of 51 µg/m^3 in sample SVP-16-5. Concentrations of F11 was reported in 1 of the 21 samples analyzed, sample SVP-20-5 at 7.1 µg/m^3.
- Carbon disulfide is used to make rubber, viscose rayon, cellophane, and carbon tetrachloride. Concentrations of carbon disulfide were reported in 2 of the 21 samples analyzed, and ranged from 7.1 µg/m^3 in sample SVP-1-5 to a maximum of 31 µg/m^3 in sample SVP-16-5.
- Chloroform is commonly found in municipal water systems as a disinfectant by-product and is typically found near municipal water sources such as irrigation lines, hose spigots, and water lines. It is also used as a solvent for lacquers, floor polishes, resins, adhesives, alkaloids, fats, oils, and rubber, and in the building, paper, and board industries, and in pesticide and film production. Chloroform concentrations in soil vapor beneath the Site appear to be what would typically be associated with municipal water treatment, except sample SVP-16 which is somewhat elevated. Concentrations of chloroform were reported in 6 of the 21 samples analyzed, and ranged from 8.8 µg/m^3 in sample SVP-14-5 to a maximum of 220 µg/m^3 in sample SVP-16-5.
- Bromodichloromethane has formerly been used as a flame retardant, and a solvent for fats and waxes and because of its high density for mineral separation. Now it is only used as a reagent or intermediate in organic chemistry. Concentrations of bromodichloromethane were reported in 1 of the 21 samples analyzed, sample SVP-9-5 at 43 µg/m^3.
- Toluene is a typical constituent associated with petroleum hydrocarbons such as gasoline. Concentrations of toluene were reported 3 of the 21 samples analyzed, and ranged from 4.4 µg/m^3 in sample SVP-19-5 to a maximum of 5.6 µg/m^3 in sample SVP-4-5.

Based on the relatively low but consistent concentrations of F12, F11, carbon disulfide, bromodichloromethane, and toluene throughout the Site, it's not clear whether these VOCs in soil vapor beneath the Site resulted from an on- or off-Site source.

4 VAPOR INTRUSION RISK SCREENING (VIRS)

Since VOCs (including F12, carbon disulfide, chloroform, F11, PCE, bromodichloromethane, and toluene) were reported to be present in soil vapor above the laboratory reporting limits, a VIRS was conducted (Table 4) to assess the potential for Significant human health risk posed to occupants of the existing commercial and future residential and commercial use Site building due to the upward migration of VOCs in soil vapor.

Approach

VOC-bearing soil vapor may originate from impacted soil or groundwater. In this case, VOCs in soil vapor are interpreted to be from possible subsurface impacts in connection with the former dry cleaning operations at the Site. The highest soil vapor concentration detected beneath the Site was conservatively assumed to be present beneath the entire Site to estimate conservative-case-scenario predicted indoor air concentrations for the existing and future commercial use buildings and future residential land use proposed for the Site. The estimates of the theoretical indoor air concentrations were then compared against the most recently published screening levels[3] to assess the potential for Significant human health risk posed to potential building occupants due to the upward migration of VOCs in soil vapor.

The VIRS was conducted using the DTSC default Attenuation Factors (AF)[4] for existing commercial, future residential, and future commercial use buildings (0.001, 0.001, and 0.0005, respectively). To be conservative, the AF was then applied to the highest reported concentration of each constituent reported in soil vapor. The resulting values were compared against the DTSC-Modified Screening Levels (DTSC-SLs) provided in DTSC Human Health Risk Assessment (HHRA) Note 3[5] in conjunction with DTSC HHRA Note 4[6].

Note that it is our understanding that based on recent projects with DTSC oversight as well as their presentation at the National Brownfields Conference in December 2019 and their more recent presentation at the Center for Creative Land Use Recycling (CCLR) U.S. EPA Region 9 Conference in June 2022, as well as in the DTSC August 2022 Vapor Intrusion Update[7], the DTSC is continuing to allow the use of the DTSC 2011 Vapor Intrusion Guidance and attenuation factors. Therefore, the DTSC 2011 Guidance is used herein.

VIRS Results

In the table below, the highest reported concentration of each constituent reported in soil vapor was multiplied by the default attenuation factors for an existing commercial use/future residential use and a proposed commercial use from the DTSC 2011 Guidance to obtain a predicted indoor air concentration. To evaluate for a potential vapor intrusion risk, the resulting values were compared against the DTSC-Modified Screening Levels (DTSC-SLs) provided in DTSC Human Health Risk Assessment (HHRA) Note 3, or, if a DTSC-SL has not been established for a constituent (e.g., chloroform), the Environmental Protection Agency (EPA) Regional Screening Level (RSL) dated November 2022, was used.

7 DTSC Vapor Intrusion Advisory, August 2022, accessed at <https://dtsc.ca.gov/wp-content/uploads/sites/31/2022/08/Vapor-Intrusion-Update-August-2022-006.pdf>

VOC	Maximum Concentration Detected at the Site	Predicted Indoor Air Concentration for Existing Commercial and Future Residential Use [1]	Predicted Indoor Air Concentration for Future Commercial Use [2]	DTSC/EPA Screening Levels[3] Commercial/ Residential	Action Recommended (based on attenuation factors described herein)
	($\mu g/m^3$)				
F12	51	0.051	0.0255	440/100	No
Carbon disulfide	31	0.031	0.0155	3,100/730	No
Chloroform	220	0.22	0.11	0.53/0.12	Yes
F11	7.1	0.0071	0.00355	5,300/1,300	No
PCE	10,000	10	5	2/0.46	Yes
Bromodichloro methane	43	0.043	0.0215	0.33/0.076	No
Toluene	5.6	0.0056	0.0028	1,300/310	No

Notes:

$\mu g/m^3$ – micrograms per cubic meter.

1 Maximum soil vapor concentration multiplied by the default Department of Substances Control (DTSC) attenuation factor of 0.001 for an existing commercial building and future residential building, per Table 2 - Attenuation Factors for Preliminary Screening Evaluations of the *Final Guidance for the Evaluation and Mitigation of Subsurface Intrusion to Indoor Air* (Vapor Intrusion Guidance), prepared by the DTSC and dated October 2011.

2 Maximum soil vapor concentration multiplied by the default DTSC attenuation factor of 0.0005 for a future commercial building, per Table 2 - Attenuation Factors for Preliminary Screening Evaluations of the Vapor Intrusion Guidance.

3 Human Health Risk Assessment Note 3 - DTSC-Modified Screening Levels (DTSC-SLs), Table 3 - Screening Levels for Ambient Air. Commercial/Industrial June 2020 Update, Revised May 2022. For constituents for which a DTSC-SL is not available (chloroform, dichlorodifluoromethane, ethylbenzene, 1,2,4- and 1,3,5-trimethylbenzene, and xylenes), the Regional Screening Level (RSL) provided by the U.S. Environmental Protection Agency (EPA) and updated November 2022 was used.

DTSC 2011 Attenuation Factor Results:

After applying the applicable DTSC attenuation factor of 0.001 for the existing commercial land use and future residential use, and 0.0005 for the future commercial land use to the maximum reported concentrations of VOCs in soil vapor beneath the Site, theoretical concentrations of PCE in indoor air exceed the commercial and residential screening levels for PCE of 2.0 $\mu g/m^3$ and 0.46 $\mu g/m^3$ respectively, indicating a potential Significant human health risk for both the current commercial[8] and future residential and commercial buildings at the Site as a result of vapor intrusion of PCE. In addition, theoretical concentrations of chloroform in indoor air exceed the residential screening levels for chloroform of 0.12 $\mu g/m^3$, indicating a potential Significant human health risk for the future residential buildings at the Site as a result of vapor intrusion of chloroform.

The maximum theoretical concentration for all other VOCs in indoor air at the Site are below the commercial and residential screening levels using the DTSC attenuation factors for an

8 The Closure Request Report (Report) dated July 26, 2016 submitted to DTSC on August 28, 2016 by Ramboll Environ International Corporation concluded that post remediation concentrations of PCE in soil vapor beneath the Site were observed to be within health based acceptable levels suitable for unrestricted land use in Area A and commercial/industrial land use only in Area B which comprises the land use covenant area. The DTSC approved the report and its recommendations in a letter dated June 20, 2013.

existing commercial/future residential land use (0.001) and future commercial land use (0.0005).

In our experience, the possible human health risk as a result of vapor intrusion for the existing and proposed residential use at the Site can be mitigated through the use of engineering controls, such as:

- Increasing building pressurization and/or ventilation
- Sealing potential conduits where vapors may be entering the building
- Treating indoor air (carbon filtration, air purifiers)
- Installing and operating engineered exposure controls (sub-slab depressurization systems beneath existing structures, or installation of a VIMS beneath proposed structures)
- Temporarily relocating building occupants

In addition, to further evaluate the potential for a human health risk at the Site resulting from vapor intrusion, additional diagnostic work using radon as a tracer (i.e., a radon attenuation study) could be conducted to evaluate the building slab and determine a Site- or building-specific attenuation factor, which could then be used to obtain a more accurate prediction of actual indoor air concentrations. Indoor air sampling of existing or future buildings could be conducted for direct measurements of indoor air concentrations as well.

5 PRELIMINARY VIMS DESIGN

Based on the results of the VIRS indicating a possible human health risk as a result of vapor intrusion and the proposed redevelopment of the Site with the Project, installation of a vapor intrusion mitigation system (VIMS) is proposed beneath the ground-level portions of the proposed buildings to mitigate potential vapor phase migration of residual VOCs. The proposed VIMS design will consist of a passive vent system with the option to convert to an active system should the future need arise.

The vapor barrier will conform to the general requirements and specifications presented by the DTSC in the Vapor Intrusion Mitigation Advisory Final Revision 1, dated October 2011 and the San Francisco Bay Regional Water Quality Control Board VIMS Guidance issued in June 2022[9], and will be designed in a fashion that it can be converted from a passive to an active system, if necessary. SCS anticipates the proposed vapor barrier design will include, but not be limited to, the following:

- 4-inch layer of permeable coarse sand with a hydraulic conductivity at least 10^{-3} centimeters per second (cm/s).
- Low-profile, 1-inch sub-slab Multi-flow (or equivalent) vent piping installed within the coarse sand layer, which will transition to 3-inch solid polyvinyl chloride (PVC) pipe where penetration though building footers occurs.
- The solid PVC pipe will then transition to 4-inch carbon steel vent risers, installed on the outside walls of the buildings, which will terminate above the roof line with rainguards.
- T-60 non-woven geotextile base fabric installed over the sand layer.
- CETCO Liquid Boot VI-20 geomembrane installed over the base fabric layer.
- 40-mil CETCO Liquid Boot 500 soil VOC vapor barrier installed over the VI-20 geomembrane layer (for a total membrane thickness of 60 mil).

9 https://www.waterboards.ca.gov/rwqcb2/water_issues/programs/sitecleanup/2022_VIM_Guidance.pdf

- Quality assessment/quality control (QA/QC) of vapor barrier using industry standard smoke testing.
- 8 oz. geotextile protection course installed over the soil VOC vapor membrane.
- An optional 2-inch thick clean sand layer installed over the geotextile layer to protect the VIMS membrane during building construction.

A preliminary VIMS design is included in C, which includes discussion on design components.

6 MITIGATION CRITERIA FOR CONSTITUENT OF CONCERN-BEARING SOIL

Soil Mitigation Criteria are used in this SMP for comparison of the reported soil sample results to applicable risk-based and waste-based soil for the suspected CoCs, which include VOCs such as PCE, lead, and TPH. The applicable regulatory soil screening levels for the identified CoCs used herein are summarized in the below table, and are further defined below the table.

Mitigation Criteria/ Mitigation Measure	Constituent of Concern	Analyte (Lab method)	Regulatory Threshold
Waste-Based Pertains to soil export only. Soil with exceedances to be exported as a non-hazardous regulated waste at a minimum	Previously detected CoCs at the Site (i.e., PCE and TPH) and potential CoCs (i.e. Title 22 metals)	TPH (EPA 8015B)	Any detectable concentrations
		VOCs (EPA 8260B)	
		Lead (EPA 6010B)	>80 mg/kg with Site-wide 95 UCL[1]
Risk-Based Mitigation Criteria Soil with exceedances to be properly managed (either exported as regulated waste, or buried on-Site beneath a soil cap)	PCE	VOCs (EPA Method 8260B)	>0.59 mg/kg[1]
	Lead	Lead (EPA 6010B)	>80 mg/kg with Site-wide 95 UCL
		WET Lead (CCR 66261.100)	<5 mg/L[2]
	Petroleum hydrocarbons	TPHo (EPA 8015B)	>1,600 mg/kg[3]
			<14,000 mg/kg[3]
		TPHd (EPA 8015B)	>260 mg/kg[3]
			<10,000 mg/kg[3]
		TPHg (EPA 8015B)	>100 mg/kg[3]
			<5,600 mg/kg[3]

Notes:
mg/kg: milligrams per kilogram.
mg/L: milligrams per liter.
TPHg, TPHd, TPHo: Total petroleum hydrocarbons as gasoline, diesel, and oil.
VOCs: Volatile organic compounds.
UCL: Upper confidence limit.
1: Per Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note Number 3, June 2020.
2: Per the California Code of Regulations, Title 22 Article 3, July 20, 2005.
3: Per San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) Tier 1 Environmental Screening Levels (ESLs), 2019, Revision 2.

Waste-Based Mitigation Criteria - in the event that soil is exported from the Site. Also, based on our experience with similar projects, it is recommended that soil that is classified as a hazardous waste (if encountered) be exported to an appropriately licensed facility rather than be left on-Site.

- For characterizing soil as hazardous waste, the California Code of Regulations, Title 22 Article 3, July 20, 2005, was used.
    - Soil is characterized as a California hazardous waste, at a minimum, upon exceedance of the total concentrations of a CoC to the Total Threshold Limit Concentration (TTLC), and/or by comparing the results of a Waste Extraction Test (WET) to the Soluble Threshold Limit Concentration (STLC).
    - Soil is characterized as a federal or Resource, Conservation, and Recovery Act (RCRA) hazardous waste through an exceedance of Toxicity Characteristic Leaching Procedure (TCLP) laboratory results upon comparison to the respective Maximum Contaminant Concentration for the Toxicity Characteristic (MCCTC).

Risk-Based Mitigation Criteria - to screen soil for possible risks to residential users and workers at the Site:

- **For Lead and VOCs,** the DTSC Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note Number 3, June 2020: recommended Screening Levels (SLs) for residential soil and cancer endpoint. For constituents where the DTSC SLs are not established, the United States Environmental Protection Agency (EPA) Regional Screening levels (RSLs) for residential soil, were used.

- **For TPH,** SCS uses the SFRQCB Tier 1 ESLs (2019, Revision 2), which provide conservative screening levels for soil impacted with petroleum hydrocarbons. The ESLs are intended to help expedite the identification and evaluation of potential environmental concerns.

7 SUBSURFACE SOIL CHARACTERIZATION

Please refer to Figure 3 for a graphical depiction of the proposed Site redevelopment with all historical soil sample data collected from within the shallowest 12 feet of subsurface soil. COPC-bearing soil that would be required to be excavated in accordance with proposed grading activities may require additional assessment for characterization and waste disposal purposes.

CHEMICALS OF CONCERN AND ASSOCIATED HUMAN HEALTH RISKS

PCE

Dry cleaning operations have been reportedly conducted at the Site from approximately 1964 to approximately 2020. PCE is present in the soil and soil vapor at the Site from an undocumented release of dry cleaning solvents containing chlorinated volatile organic compounds (CVOCs) including PCE. Based on reported findings of previously completed subsurface investigations, three localized areas of CVOC-bearing soil are present at the Site, which include the former Fabricare Dry Cleaner location, a sewer line located north of the Fabricare Dry Cleaner; and the area in the vicinity of ESG-1 and ESG-9 (Figure 3), where a historic dumpster had been located and used by Fabricare Dry Cleaner. CVOC-bearing soil vapor has also been characterized in the subsurface of the Site with maximum depths of CVOC-bearing soil vapor identified to a depth of at least 160 fbg.

The potentially complete soil exposure pathways at the Site include dermal contact with soil, and volatilization from soil to soil vapor, indoor air, and ambient air. Potential exposures to PCE in relation to Site redevelopment include any construction personnel involved in the Site

redevelopment that may come into contact with subsurface soils, and PCE-bearing soil vapor intrusion into future residential and commercial-use occupied buildings. The exposure pathway from soil to groundwater to a human receptor is not considered complete due to the low concentration of PCE reported in groundwater and the distance from the Site to a conveyance pathway, e.g., the closest groundwater production well.

SITE DEVELOPMENT PLANS

The design for redevelopment calls for removing the existing Site buildings, slab, and surrounding hardscape located at 1000 through 1060 West 4th Street, which contain the former Fabricare Dry Cleaning suite and also removing the existing USPS building located at 1126 North Mountain Avenue. After demolition and earthwork has been completed, a mixed-use multi-family residence with parking structure, and commercial retail space will be constructed (Figure 2). The buildings will consist of:

- A 4-story mixed use building with 297 multi-family residential units averaging 823 square feet per unit and 4,000 square feet of ground level commercial retail space, which are located approximately along the perimeter of the Site and not within the commercial use deed restriction.
- A 6-story parking structure with 664 parking stalls, including 16 designated for retail, which is located in the southern-central portion of the Site and is within the commercial use deed restriction.

The development plans call for the demolition of all buildings, pads, and surrounding hardscape, over excavation and recompaction of the approximate upper five feet of soil and grading the Site to create building pads to allow the new buildings to be constructed on geotechnically sound soil, and construction of the new buildings summarized above. Soil will be disturbed during the initial removal of impacted soil, and drilling activities associated with foundation design, the over-excavation and compaction and final grading processes, and then again when trenches are cut for footings and utilities.

AREAS OF MITIGATIVE ACTION

Based on the available soil data for the Site, additional shallow soil assessment was warranted in the vicinity of the following historical soil sampling locations and/or features of concern to obtain contemporaneous shallow soil analytical data to inform the proper management of any COPC-bearing soil that exceeds DTSC RSLs for residential soil located within the proposed excavation areas redevelopment plans necessitate it. The location of the proposed soil sampling areas are depicted on Figure 3 and described below.

- Shallow soil in the vicinity of the former dry cleaners and previous soil boring SB-4 were historically reported to contain the highest concentration of PCE-bearing soil (12.7 milligrams per kilogram [mg/kg] at 5 fbg) in the subsurface of the Site.
- Former dumpster area in the vicinity of historical soil sample ENB-2.
- Shallow soil in the vicinity of previous soil borings SB-3 and BV-9 reported to potentially be in the vicinity of a sewer utility historically servicing the Site building that contained the dry cleaners.
- Throughout the footprint of the proposed mixed use building to assess shallow conditions.

These areas were sampled to provide contemporaneous data for the locations depicted on Figure 3. If VOCs are reported to be present in shallow soil proposed to be excavated during grading activities or in soil at grade where future occupants could potentially come into contact with the soil will be

segregated, temporarily stockpiled, and disposed of per the procedures described in the "Construction Activities" section below. Figure 4 depicts the interpreted limits of PCE-bearing soil that may exceed the residential health risk screening level requiring excavation and off-Site disposal to accommodate the geotechnical requirements of the Project. Assuming the PCE-bearing soil extent shown on Figure 4 requires excavation to a depth of 5 feet below grade the approximate cubic yardage of this volume of soil is estimated to be 630 cubic yards and assuming 1.6 tons per cubic yard yields a tonnage of 1,008 tons.

8 PRE-CONSTRUCTION ACTIVITIES

REGULATORY FRAMEWORK

The following regulatory issues, related to impacted or potentially impacted soil, apply to redevelopment activities that might be conducted at the Site.

At least three working days prior to conducting any subsurface work, Dig Alert (Underground Service Alert) must be contacted, and is anticipated to be completed by others.

A Storm Water Pollution Prevention Plan (SWPPP) for construction, which will be prepared by others, will need to be in place prior to the start of grading.

As the lead regulatory agency for the Site, DTSC will be notified at least three days prior to conducting any on-Site excavation or other activity that will result in the generation of soil.

Contractors performing work directly involving impacted soil will be required to possess a Class A Haz license.

Other agency involvement will be necessary, including items such as filing of a grading plan with the City of Ontario, which will be completed by others.

HEALTH AND SAFETY PLAN

A site-specific Health and Safety Plan (HASP) will be in effect for soil sampling and other SCS activities at the Site. Contractors working on the Site are expected to be operating under their own health and safety plans.

ENVIRONMENTAL MONITORING

Notification and plan preparation is required by South Coast Air Quality Management District (SCAQMD) Rule 1166 if discolored or odorous soil in excess of 1 cubic yard is encountered during grading activities and inspection of recently exposed VOC-bearing soil surface will be completed with a calibrated photo ionization detector (PID). Should the encountered VOC-bearing soil generate PID readings in excess of 50 parts per million for total VOCs notification will be provided to the SCAQMD as regulations stipulate. Based on the existing body of environmental data monitoring for fugitive dust and nuisance odors during excavation in accordance with SCAQMD Rules 402 and 403 are not anticipated to be triggered at the Site.

ROLES & RESPONSIBILITIES

Environmental Consultant

SCS will act as the environmental consultant and provide field oversight and management services for implementation of this SMP. SCS personnel may include a Program Manager and Field

Coordinator. The SCS Field Coordinator or alternate will have current health and safety certifications necessary to properly implement this SMP.

The Environmental Program Manager (EPM) for this project is: Mr. Keith Etchells

The Environmental Field Coordinator (EFC) for this project is: TBD

Contractor: TBD will act as the general contractor for the project and provide oversight and management services for all aspects of the grading and redevelopment.

The Superintendent for this project is: TBD

The Field Coordinator for this project is: TBD

Owner's Participants

The Owner's Project Director is: TBD

INDIVIDUAL RESPONSIBILITIES

Environmental Consultant's Program Manager (EPM)

The EPM will perform the following tasks:

- Monitor the work of the EFC;
- Communicate field activities to the Owner's Project Director;
- Communicate with the EFC to investigate unknown features and other unknown environmental conditions, if encountered;
- Evaluate results of all soil sampling conducted;
- After consultation with the EFC and the Owner's Project Director, characterize, delineate, and supervise the proper management of unknown features, and other unanticipated environmental conditions; and
- Prepare reports of field activities.

Environmental Field Coordinator (EFC)

The EFC will perform the following tasks:

- Monitor grading operations visually and with the appropriate monitoring equipment to assess potential unknowns in the field and respond to requests based on questions and findings from the contractor's representative;
- Provide oversight of the implementation of the SMP and Health and Safety Plan including air monitoring;
- Collect soil samples and arrange for laboratory analyses if needed;
- Maintain records of soil sample locations;
- Report suspected unknown features and other unanticipated environmental conditions to the EPM;
- The EPM will initiate and approve all non-emergency contacts with the appropriate agencies; and
- Supervise activities related to investigating and remediating unknown features and other unanticipated environmental conditions.

Contractor's Field Coordinator

The Contractor's Field Coordinator shall be responsible for the following tasks:

Coordinate with the EPM regarding identification and removal of impacted soil or other unknown structures found during grading.

9 CONSTRUCTION ACTIVITIES

SOIL HANDLING

Prior to soil excavation, areas with known impacts that are to be disturbed will be marked with stakes, chalk, or flagging. All soil stockpiling and remedial excavations will conform to applicable regulations including Cal/OSHA Construction Safety Orders and SCAQMD Rule 1166.

The specific equipment, means, and methods that will be utilized for soil removal, handling, and disposition will be selected based on the nature of the work to be conducted and its location on the Site. The following is a summary of potential soil removal and handling tasks; however, it is possible that certain activities will not involve all of the listed tasks:

- Mobilization of equipment, supplies, and manpower. Anticipated equipment to be used may include excavators, backhoes, dump trucks, loaders, and a water truck. Support facilities such as phones, toilets, fencing, and signage will also be located on-Site.
- The excavation areas will be secured by temporary fencing and/or caution tape, as appropriate. Exclusion and support zones, if any, staging areas, and decontamination pads will also be delineated.
- Provide traffic control signage and flagging as necessary.
- Provide for appropriate dust and vapor control.

The EFC will be present full-time during soil removal and handling activities in areas of known impacts. This individual will be responsible for observations of soil conditions, air monitoring as necessary, maintaining communications, ensuring compliance with this SMP, and any oversight of sampling.

If excavation is conducted during the rainy season, provisions will be made to prevent off-Site migration of sediment in runoff. Best management practices will be implemented for runoff control in accordance with regulatory requirements and the SWPPP (prepared by others). Measures may include placement of sandbags, straw rolls, and/or hay bales to control runoff and to act as filters. If precipitation accumulates within any excavation it will be pumped out and disposed in accordance with federal, state, and local regulations.

FUGITIVE DUST AND VAPOR CONTROL

Appropriate procedures will be implemented to control the generation of airborne dust by soil removal activities, including, but not limited to, some or all of the following:

- Generation of dust during Site redevelopment activities will be minimized, as necessary, by the use of water as a dust suppressant. The water will be available from on-Site water service, via a water truck, or through a metered discharge from a fire hydrant located on or proximate to the Site. When necessary, the grading contractor will control dust generation by spraying water prior to daily work activities, during excavation/loading activities (as necessary to maintain concentrations below action levels), and at truck staging locations.

During the Site construction activities, watering equipment will be continuously available to provide proper dust control.

- Activities that have the potential to generate fugitive dust will cease in the event wind conditions change and create an uncontrollable condition. If required, the EFC will monitor on-Site meteorological instrumentation and/or coordinate with off-site meteorological professionals to identify conditions that require cessation of work.
- Similar control measures (water spray, etc.) will be employed to address VOC emissions, as necessary.

SOIL EXCAVATION AND STOCKPILING

Impacted soil that is excavated and not immediately removed from the Site will be stockpiled on and covered with plastic sheeting to control dust and minimize exposure to precipitation. The edges of the plastic sheeting will have an overlap of at least 24 inches. Plastic sheeting will be secured at the base of the stockpile and along seams of overlapping plastic sheeting, if any, with sandbags or by equivalent means. If a stockpile remains on Site during the rainy season (October through May), a perimeter sediment barrier, constructed of material such as straw bales or fiber roll, will also be installed. The stockpiles will remain covered until the soil is ready for final disposition.

Biweekly inspection of stockpiles will be conducted, as appropriate, to verify cover integrity. Any gaps, tears, or other deficiencies will be corrected immediately. Records will be kept of stockpile inspections and any repairs made. During stockpile removal only the working face of the stockpile will be uncovered.

If the stockpiled impacted soil is to be transported off Site for disposal or recycling, the soil will be profiled for waste characteristics. Waste profiling will consist of collecting soil samples for laboratory analyses at the frequency required by the disposal/recycling facility to which the soil is to be transported. If the facility has no specified sampling frequency, the following is recommended:

- One sample per 100 cubic yards excavated or less.
- Two samples per 100 to 500 cubic yards excavated.
- One sample per 500 cubic yards excavated up to 2,500 cubic yards, and then above 2,500 cubic yards, one sample per 2,500 cubic yards.

Sampling will be conducted in conformance with DTSC standards and any modifications stipulated by the supervising professional. Soil samples will be analyzed as required by the disposal/recycling facility and are anticipated to include, at the least, VOCs in accordance with EPA Method 8260B. If no specific analytical program is required by the disposal/recycling facility, analysis will include the substances listed in the following section on soil testing.

Fully signed waste manifests will be required to be filled out for the export of any regulated waste soils from the Site. Obtaining a contained in determination from the Arizona Department of Environmental Quality could potentially enable the disposal of PCE-bearing soil excavated from the Site as a California hazardous waste in a properly licensed facility in Arizona.

CONFIRMATION SAMPLING DURING EXCAVATION OF COC-BEARING SOIL

The known areas of VOC-bearing soil (waste soil) that exceed the Health Risk-Based Mitigation Criteria for PCE of 0.59 mg/kg as depicted on Figure 4 will be excavated during mass grading activities. For verification of the planned removal of the waste soil at the Site that exceeds the Health Risk-Based Mitigation Criteria for PCE which may require the collection of additional confirmation soil samples in this areas for documentation purposes. The previous soil samples representing PCE-

bearing soil and removal depths were collected between 2007 and October of 2022, and are still considered representative of current Site conditions, since the existing land use of the Site has not changed and construction or excavation activities are not known to have occurred at the Site.

In addition, sidewall confirmation soil samples are not proposed to be collected, since in SCS' opinion there is sufficient prior data that is still considered representative of Site conditions that will be relied upon to provide lateral control for the proposed petroleum hydrocarbon-bearing soil excavations. However, additional confirmation soil samples can be collected for further confidence in the existing waste soil estimates. The horizontal extent of CoC-bearing soil is assumed to extend to either half the distance to nearby samples that were previously reported to be below the Health Risk-Based Mitigation Criteria.

However, the use of a PID meter is proposed on the excavation sidewalls to further delineate the lateral and vertical extent of the waste soils during the excavation. Therefore, the areas and depths of waste soil that is excavated and exported may vary from what is depicted on Figure 4.

For discoveries during grading of possible currently unknown releases, the number and frequency of the confirmation samples will be left to the practical judgement of the environmental professional[10] conducting the mitigation, but generally adhering to the criteria of one sample per every 1,000 square feet, and sidewall samples every 5 vertical feet for larger excavations. If the releases of petroleum hydrocarbons and/or VOCs extend beyond the CEE and outside of the Site boundaries, an attempt will be made to assess the horizontal and vertical extent of the residual concentrations to the extent practical with the means and methods of this mitigation if concentrations of CoCs are above the Risk-Based Mitigation Criteria.

A Priori Confirmation Soil Sampling

Note that the Client may elect to "pre" collect confirmation soil samples, also referred to as *a priori* confirmation soil sampling, in order to further delineate the extent of COPC-bearing soil, and to expedite the excavation and construction schedule. *A priori* confirmation soil sampling will follow the same confirmation sampling procedures as described in the SMP, by collecting samples within the minimum sample area and depth frequencies and per the same screening criteria as specified in the "Confirmation Sampling During Excavation of CoC-Bearing Soil" section above.

A priori samples will guide the excavation for the respective area, and additional confirmation bottom samples will not be considered necessary unless other localized portions of the area are observed/screened via PID during grading to extend significantly deeper than the *a priori* confirmation sample depth. SCS will still be on-Site during grading to observe for staining and/or odors.

RESPONDING TO UNKNOWN CONDITIONS

If previously unknown impacted soil is suspected (based on visual staining, odors, PID readings, or other observations), the area will be delineated and construction activity will cease in this area. The EFC will notify DTSC immediately to report the findings and consultation for sampling strategies

[10] An "environmental professional" is a person having demonstrated knowledge of and professional experience in the observation and documentation of environmental excavating activities, environmental and geologic conditions, including burn ash and releases of lead-containing materials in the Site, and recognition of and testing for hazardous materials and conditions. A competent person also must have current Occupational Safety and Health Administration (OSHA) training and certificates pertinent to this type of work, and the delegated authority to respond to changed conditions. A competent environmental professional will be a state-licensed geologist or engineer with sufficient knowledge of local conditions and environmental regulations, or a person working under the direct supervision of such a professional geologist or engineer.

(sample numbers and analytical methods) to be performed at the unknown material. Resulting analytical results will be compared to applicable EPA and DTSC soil screening levels to guide health risk decisions and waste disposal management. Additionally, the EFC will also notify the contractor and EPM of the condition. Based on this comparison, a determination will be made regarding soil disposition (reuse on site, off-site transport, and disposal/recycling, etc.). The number of and the methods used to collect the soil samples and the analyses to be performed will be informed by discussions with the DTSC. Samples will be collected in glass jars, brass tubes, or other appropriate containers, which will be sealed, uniquely labeled, and stored in an ice chest filled with ice to keep the samples chilled. Field preservation methods will be employed as appropriate. The samples will be shipped to an analytical laboratory accredited by the Environmental Laboratory Accreditation Program using chain of custody procedures.

Re-useable soil sampling equipment (hand augers, shovels, etc.) will be decontaminated using the following steps to reduce the potential for cross-contamination.

- Wash and scrub in non-phosphate detergent and potable water.
- Rinse in potable water.
- Rinse in deionized water and air dry.

Investigation-derived residuals, including decontamination water, will be managed in accordance with regulatory requirements.

Upon completion of any required action, the Contractor will be notified by the EPM that they can resume work in the area.

IMPORT FILL SOIL REQUIREMENTS

As appropriate, import soils brought to the Site for use as backfill (import fill) will be tested in general conformance with the DTSC Information Advisory Clean Imported Fill Material document (2001). Import fill will be tested for target compounds based on knowledge of the fill source area; however, as a minimum, the fill should be tested for the following constituents (or have been tested and documented at the source):

- TPH-cc using EPA Method 8015
- VOCs using EPA Method 8260B
- Title 22 metals using EPA Methods 6010B/7242

Other analyses may be required contingent on the source of the import fill or recommendations by the supervising professional. The following table summarizes the quantity of samples that will be collected based on the volume of imported soil.

Volume of Borrow Area Stockpile	Samples per Volume
Up to 1,000 cubic yards	1 sample per 250 cubic yards
1,000 to 5,000 cubic yards	4 samples for first 1000 cubic yards +1 sample per each additional 500 cubic yards
Greater than 5,000 cubic yards	12 samples for first 5,000 cubic yards + 1 sample per each additional 1,000 cubic yards

10 POST-CONSTRUCTION ACTIVITIES

DOCUMENTATION

Following the completion of construction, excavation, and disposition activities, a summary report will be prepared. This document will report on activities related to mitigation measures that occurred during this phase of project implementation. The report will include a summary of activities, locations of soil excavation, and final disposition and quantities of soil removed from the Site along with copies of signed manifests if provided by the waste disposal facility. Documentation such as photographs, daily field reports, and monitoring data sheets will be appended.

Notes:
Soil samples collected by SCS Engineers on 10/4/2022.
Soil samples were analyzed for total lead by Environmental Protection Agency (EPA) Method 6010B and selected soil samples were additionally analyzed for Title 22 metals by EPA Method 6010B and 7471A.
mg/L : milligrams per liter.
mg/kg : milligrams per kilogram.
< : less than the laboratory reporting limit.
ND: Not detected above the laboratory reporting limit.
1) Health Risk-Based Criteria - For lead, the Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note Number: 3, June 2020, Revised May 2022, using the recommended Screening Levels (SL) for residential soil and cancer endpoint (noncancer endpoint provided if if no cancer endpoint is), or, for other metals not listed in HHRA Note 3, the Regional Screening levels for residential soil, provided by the EPA and updated as of November 2022 were used.
*For arsenic, although the DTSC RSL is 0.36 mg/kg, naturally occuring arsenic typically exceeds human health risk screening criteria. Therefore, the DTSC upper-bound background concentration for arsenic of 12 mg/kg was used.
2) Hazardous Waste Criteria: Values shown from CA code of regulations, Title 22 Article 3, July 20, 2005 regarding characteristics of hazardous waste.
Exceedances of the Total Threshold Limit Concentration (TTLC) would be considered a California hazardous waste, at a minimum.
3) Waste-Based Screening Criteria: California Code of Regulations, Title 22 Article 3, July 20, 2005
NA : Not applicable.
NE : Screening criteria not established.
STLC: Soluble threshold limit concentration.
TCLP: Toxicity characteristic leaching procedure.
Red font : Constituent result above the Health Risk-Based regulatory screening criteria.

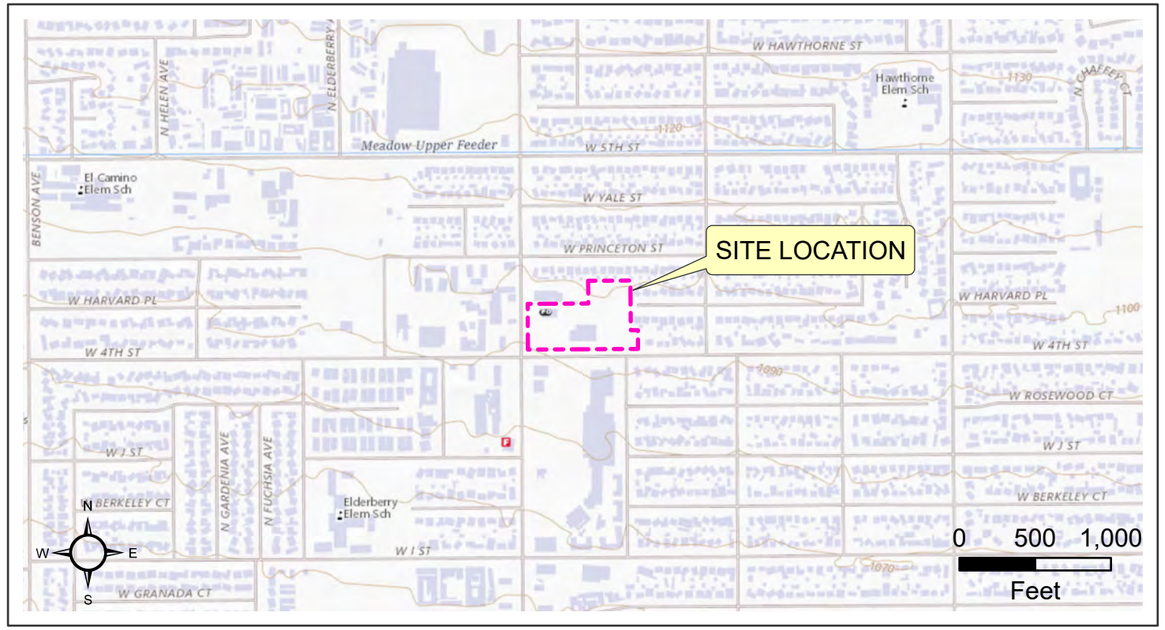
Notes:
Soil vapor samples collected by SCS Engineers on October 11, 2022 and analyzed for Volatile Organic Compounds (VOCs) in general accordance with EPA Method TO-15.
< : less than the indicated laboratory reporting limit.
ND: Group of constituents not detected above the laboratory reporting limits.
Bold font indicates concentrations above the indicated laboratory reporting limits.

1: Maximum soil vapor concentration multiplied by the default Department of Substances Control (DTSC) attenuation factor of 0.001 for an existing commercial and future residential building, per Table 2 - Attenuation Factors for Preliminary Screening Evaluations of the Final Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air (Vapor Intrusion Guidance), prepared by the DTSC and dated October 2011.



2: Maximum soil vapor concentration multiplied by the default DTSC attenuation factor of 0.0005 for a future commercial building, per Table 2 - Attenuation Factors for Preliminary Screening Evaluations of the Vapor Intrusion Guidance.

3: Human Health Risk Assessment Note 3 - DTSC-Modified Screening Levels (DTSC-SLs), Table 3 - Screening Levels for Ambient Air. Commercial/Industrial and Residential. June 2020 Update, Revised May 2022.

^ A DTSC-SL has not been established for this constituent. The Environmental Protection Agency (EPA) Regional Screening Level (RSL) dated May 2022, was used for this constituent.

NA = Not applicable.

Legend

- Approximate soil sample locations collected by SCS Engineers on October 4, 2022
- Approximate location of former deed restriction area
- Approximate location of former dry cleaner
- Approximate perimeter of slab-on-grade commercial parking structure used for parking purposes only
- Approximate Site Boundary

NOTE:
Soil samples were analyzed for total lead by Environmental Protection Agency (EPA) Method 6010B and selected soil samples were additionally analyzed for Title 22 metals by EPA Method 6010B and 7471A.
mg/L : milligrams per liter.
mg/kg : milligrams per kilogram.
<: less than the laboratory reporting limit.
ND: Not detected above the laboratory reporting limit.
1) Health Risk-Based Criteria - For lead, the Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note Number: 3, June 2020, Revised May 2022, using the recommended Screening Levels (SL) for commercial/ industrial soil and cancer endpoint, or, for other metals not listed in HHRA Note 3, the Regional Screening levels for commercial/industrial soil,
provided by the EPA and updated as of November 2022 were used.
For arsenic, although the DTSC RSL is 0.36 mg/kg, naturally occurring arsenic typically exceeds human health risk screening criteria. Therefore, the DTSC upper-bound background concentration for arsenic of 12 mg/kg was used.
2) Hazardous Waste Criteria: Values shown from CA code of regulations, Title 22 Article 3, July 20, 2005 regarding characteristics of hazardous waste. Exceedances of the Total Threshold Limit Concentration (TTLC) would be considered a California hazardous waste, at a minimum.
NA : Not applicable.
NE : Screening criteria not established.
STLC: Soluble threshold limit concentration
TCLP: Toxicity characteristic leaching procedure.
Red font: Constituent result above the Health Risk-Based regulatory screening criteria.

NO FURTHER ACTION DETERMINATION FOR THE ONTARIO PLAZA,
WEST 4TH STREET AND NORTH MOUNTAIN AVENUE, ONTARIO, CALIFORNIA
(SITE CODE: 401488-11)

Dear Mr. Fabeck:

The California Department of Toxic Substances Control (DTSC) has reviewed the Final Preliminary Endangerment Assessment Report (PEA) dated February 23, 2017 and submitted to DTSC on February 24, 2017 by Ramboll Environ International Corporation (Ramboll) on behalf of JAFAM Corporation (JAFAM) for the Ontario Plaza site (Site). A deed restriction was recorded to restrict sensitive land use at the property. Based on the above, DTSC determined that no further remedial action is required at the Site.

The objective of the PEA was to further assess the site for possible presence of elevated concentrations of various chemical compounds at the Site. The general scope of the activities consisted of the completion of a soil gas survey, collection of soil matrix samples for various chemicals and preparation of a PEA report. The final PEA was to provide additional information in response to DTSC's comments regarding the PEA report, dated April 12 and October 25, 2016. DTSC's comments regarding the PEA had been adequately addressed in the Final report. DTSC approved the final PEA on March 16, 2017.

The Final PEA concluded that except for a small area, the risks and hazards related to the contaminants of concern are acceptable throughout the Site for unrestricted usage; however, within this small area, the risks are acceptable for commercial or industrial development/occupation only. The PEA also stated that an institutional control (i.e., deed restriction) is required to assure the Site is developed or occupied in a manner in which acceptable exposures/risk occurs.

On December 13, 2017, a deed restriction in the form of a Covenant to Restrict the Use of Property (Land Use Covenant or LUC) has been recorded with the County of San Bernardino to insure the full protection of human health and the environment (enclosed). The LUC identifies specific activities that are restricted at the Site. DTSC and the current property owner signed the LUC on December 12 and 13, 2017. As such, violation of this LUC shall be grounds for DTSC to pursue administrative, civil or criminal actions.

DTSC must be notified of any proposed land uses that are restricted in the LUC. As with any real property, if previously unidentified contamination is discovered at the Site, additional assessment, investigation and/or cleanup may be required.

Thank you for your diligence in protecting public health and the environment at this Site. If you have any questions regarding this letter, please contact me at (714) 484-5310 or my supervisor Mr. Robert Senga, at (714) 484-5436.

Sincerely,

Angela Garcia

LAND USE COVENANT AND AGREEMENT

ENVIRONMENTAL RESTRICTIONS

County of San Bernardino, Portions of Assessor Parcel Number: 1008-522-02-000
Ontario Plaza
DTSC Site Code 401488

This Land Use Covenant and Agreement ("Covenant") is made by and between JAFAM Corporation (the "Covenantor"), the current owner of property located on the corner of West 4th Street and North Mountain Avenue, Ontario, in the County of San Bernardino, State of California (the "Property"), and the Department of Toxic Substances Control (the "Department"). Pursuant to Civil Code section 1471, the Department has determined that this Covenant is reasonably necessary to protect present or future human health or safety or the environment as a result of the presence on the land of hazardous materials as defined in Health and Safety Code section 25260. The Covenantor and the Department hereby agree that, pursuant to Civil Code section 1471 and Health and Safety Code section 25355.5, the use of the Property be restricted as set forth in this Covenant and that the Covenant conforms with the requirements of California Code of Regulations, title 22, section 67391.1.

ARTICLE I

STATEMENT OF FACTS

1.1. Property Location. The Property that is subject to this Covenant, totaling approximately 23,384 square feet, is more particularly described in the attached Exhibit A, "Legal Description," and depicted in Exhibit B, "Parcel Map." The Property is located in the area generally bounded to the north by asphalt parking lot, to the east by retail buildings and residential structures, to the south by Fourth Street and retail/commercial buildings, and to the west by retail buildings and Mountain Avenue. The Property identified as portions of San Bernardino County Assessor Parcel Number 1008-522-02-0000.

1.2. Remediation of Property. This Property is a portion of a site that has been investigated and/or remediated under the Department's oversight. The Department approved a Preliminary Endangerment Assessment Report ("PEA") in accordance with Health and Safety Code, division 20, chapter 6.8. No remediation activities were conducted at the Property. Hazardous substances, including tetrachloroethene (PCE) at 4.5 micrograms per liter at 1.0 feet below ground surface, remain at the Property above levels acceptable for unrestricted land use.

1.3. Basis for Environmental Restrictions. As a result of the presence of hazardous substances, which are also hazardous materials as defined in Health and Safety Code section 25260, at the Property, the Department has concluded that it is reasonably necessary to restrict the use of the Property in order to protect present or future human health or safety or the environment, and that this Covenant is required as part of the Department-approved remedy for the Property. The Department has also concluded that the Property, as remediated and when used in compliance with the Environmental Restrictions of this Covenant, does not present an unacceptable risk to present and future human health or safety or the environment.

ARTICLE II

DEFINITIONS

2.1. Department. "Department" means the California Department of Toxic

Substances Control and includes its successor agencies, if any.

2.2. Environmental Restrictions. "Environmental Restrictions" means all protective provisions, covenants, restrictions, requirements, prohibitions, and terms and conditions as set forth in this Covenant.

2.3. Improvements. "Improvements" includes, but is not limited to buildings, structures, roads, driveways, improved parking areas, wells, pipelines, or other utilities.

2.4. Lease. "Lease" means lease, rental agreement, or any other document that creates a right to use or occupy any portion of the Property.

2.5. Occupant. "Occupant" or "Occupants" means Owner and any person or entity entitled by ownership, leasehold, or other legal relationship to the right to occupy any portion of the Property.

2.6. Owner. "Owner" or "Owners" means the Covenantor, and any successor in interest including any heir and assignee, who at any time holds title to all or any portion of the Property.

ARTICLE III
GENERAL PROVISIONS

3.1. Runs with the Land. This Covenant sets forth Environmental Restrictions that apply to and encumber the Property and every portion thereof no matter how it is improved, held, used, occupied, leased, sold, hypothecated, encumbered, or conveyed. This Covenant: (a) runs with the land pursuant to Civil Code section 1471 and Health and Safety Code section 25355.5; (b) inures to the benefit of and passes with each and every portion of the Property; (c) is for the benefit of, and is enforceable by the Department; and (d) is imposed upon the entire Property unless expressly stated as applicable only to a specific portion thereof.

3.2. Binding upon Owners/Occupants. This Covenant: (a) binds all Owners of the Property, their heirs, successors, and assignees; and (b) the agents, employees, and lessees of the Owners and the Owners' heirs, successors, and assignees. Pursuant to Civil Code section 1471, all successive Owners of the Property are expressly bound hereby for the benefit of the Department; this Covenant, however, is binding on all Owners and Occupants, and their respective successors and assignees,

only during their respective periods of ownership or occupancy except that such Owners or Occupants shall continue to be liable for any violations of, or non-compliance with, the Environmental Restrictions of this Covenant or any acts or omissions during their ownership or occupancy.

3.3. Incorporation into Deeds and Leases. This Covenant shall be incorporated by reference in each and every deed and Lease for any portion of the Property.

3.4. Conveyance of Property. The Owner and new Owner shall provide Notice to the Department not later than 30 calendar days after any conveyance or receipt of any ownership interest in the Property (excluding Leases, and mortgages, liens, and other non-possessory encumbrances). The Notice shall include the name and mailing address of the new Owner of the Property and shall reference the site name and site code as listed on page one of this Covenant. The notice shall also include the Assessor's Parcel Number noted on page one. If the new Owner's property has been assigned a different Assessor Parcel Number, each such Assessor Parcel Number that covers the Property must be provided. The Department shall not, by reason of this Covenant, have authority to approve, disapprove, or otherwise affect proposed conveyance, except as otherwise provided by law or by administrative order.

3.5. Costs of Administering the Covenant to Be Paid by Owner. The Department has already incurred and will in the future incur costs associated with this Covenant. Therefore, the Covenantor hereby covenants for the Covenantor and for all subsequent Owners that, pursuant to California Code of Regulations, title 22, section 67391.1(h), the Owner agrees to pay the Department's costs in administering, implementing, and enforcing of this Covenant.

ARTICLE IV
RESTRICTIONS AND REQUIREMENTS

4.1. Prohibited Uses. The Property shall not be used for any of the following purposes without prior written approval by the Department:

(a) A residence, including any mobile home or factory built housing, constructed or installed for use as residential human habitation.

(b) A hospital for humans.

(c) A public or private school for persons under 18 years of age.

(d) A day care center for children.

4.2. Access for Department. The Department shall have reasonable right of entry and access to the Property for inspection, investigation, remediation, monitoring, and other activities as deemed necessary by the Department in order to protect human health or safety or the environment.

4.3. Access for Implementing Operation and Maintenance. The entity or person responsible for implementing the operation and maintenance activities, if any, shall have reasonable right of entry and access to the Property for the purpose of implementing such operation and maintenance activities until the Department determines that no further operation and maintenance activity is required.

4.4. Inspection and Reporting Requirements. The Owner shall conduct an annual inspection of the Property verifying compliance with this Covenant and shall submit an annual inspection letter report to the Department for its approval by March 1st of each year. The annual inspection letter report must include the dates, times, and names of those who conducted the inspection and reviewed the annual inspection report. It also shall describe how the observations that were the basis for the statements and conclusions in the annual inspection report were performed (e.g., drive by, fly over, walk in, etc.). If any violation is noted, the annual inspection letter report must detail the steps taken to correct the violation and return to compliance. If the Owner identifies any violations of this Covenant during the annual inspection or at any other time, the Owner must within 10 calendar days of identifying the violation: (a) determine the identity of the party in violation; (b) send a letter advising the party of the violation of the Covenant; and (c) demand that the violation cease immediately. Additionally, a copy of any correspondence related to the violation of this Covenant shall be sent to the Department within 10 calendar days of its original transmission.

4.5 Five-Year Review. In addition to the annual reviews noted above, after a period of five (5) years from March 1, 2018 and every five (5) years thereafter, Owner shall submit a Five-Year Review letter report documenting its review of the remedy

implemented and its evaluation to determine if human health and the environment are being adequately protected by the remedy as implemented. The letter report shall describe the results of all inspections, sampling analyses, tests and other data generated or received by Owner and evaluate the adequacy of the implemented remedy in protecting human health and the environment. As a result of any review work performed, DTSC may require Owner to perform additional review work or modify the review work previously performed by Owner.

ARTICLE V
ENFORCEMENT

5.1. Enforcement. Failure of the Owner or Occupant to comply with this Covenant shall be grounds for the Department to require modification or removal of any Improvements constructed or placed upon any portion of the Property in violation of this Covenant. Violation of this Covenant, such as failure to submit (including submission of any false statement) record or report to the Department, shall be grounds for the Department to pursue administrative, civil, or criminal actions, as provided by law.

ARTICLE VI
VARIANCE, REMOVAL AND TERM

6.1. Variance from Environmental Restrictions. Any person may apply to the Department for a written variance from any of the Environmental Restrictions imposed by this Covenant. Such application shall be made in accordance with Health and Safety Code section 25223.

6.2 Removal of Environmental Restrictions. Any person may apply to the Department to remove any of the Environmental Restrictions imposed by this Covenant or terminate the Covenant in its entirety. Such application shall be made in accordance with Health and Safety Code section 25224.

6.3 Term. Unless ended in accordance with paragraph 6.2, by law, or by the Department in the exercise of its discretion, this Covenant shall continue in effect in perpetuity.

ARTICLE VII
MISCELLANEOUS

7.1. No Dedication Intended. Nothing set forth in this Covenant shall be construed to be a gift or dedication, or offer of a gift or dedication, of the Property, or any portion thereof, to the general public or anyone else for any purpose whatsoever.

7.2. Recordation. The Covenantor shall record this Covenant, with the referenced Exhibit, in the County of Orange within 10 calendar days of the Covenantor's receipt of a fully executed original.

7.3. Notices. Whenever any person gives or serves any Notice ("Notice" as used herein includes any demand or other communication with respect to this Covenant), each such Notice shall be in writing and shall be deemed effective: (a) when delivered, if personally delivered to the person being served or to an officer of a corporate party being served; or (b) five calendar days after deposit in the mail, if mailed by United States mail, postage paid, certified, return receipt requested:

To Owner: JAFAM Corporation

Attn: Clayton Trevor Fabeck

And

To Department: John E. Scandura, Branch Chief
Department of Toxic Substances Control
Brownfields and Environmental Restoration Program
5796 Corporate Avenue
Cypress, California 90630

Any party may change its address or the individual to whose attention a Notice is to be sent by giving advance written Notice in compliance with this paragraph.

7.4. Partial Invalidity. If this Covenant or any of its terms are determined by a court of competent jurisdiction to be invalid for any reason, the surviving portions of this Covenant shall remain in full force and effect as if such portion found invalid had not been included herein.

7.5. Statutory References. All statutory or regulatory references include successor provisions.

7.6. Incorporation of Exhibits. All exhibits and attachments to this Covenant are incorporated herein by reference.

IN WITNESS WHEREOF, the Covenantor and the Department hereby execute this Covenant.

ENTHALPY ANALYTICAL

Case Narrative

SCS Engineers 8799 Balboa #290 San Diego, CA 92123 Keith Etchells	Lab Job Number: 470175 Project No: WATERMARK ONTARIO Location: 1028 W. 4th St., Ontario, CA - Supplemental Report 1 Date Received: 10/04/22

This data package contains sample and QC results for thirty three soil samples, requested for the above referenced project on 10/04/22. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015B):

- Many samples were diluted due to the dark color of the sample extracts.
- No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):

- High surrogate recovery was observed for dibromofluoromethane in SCS7-4 (lab # 470175-037); no target analytes were detected in the sample.
- No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A) Soil:

- Low recoveries were observed for antimony in the MS/MSD of SCS12-4 (lab # 470175-066); the LCS was within limits, the associated RPD was within limits, and these low recoveries were not associated with any reported results.
- Low recoveries were observed for antimony in the MS/MSD of SCS1-2 (lab # 470175-001); the LCS was within limits, and the associated RPD was within limits.
- No other analytical problems were encountered.

Metals (EPA 6010B) WET Leachate:

No analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: SCS Engineers Project: _____

Date Received: 10/04/22 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 8.3 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 2.1 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✔		
Are sample IDs present?	✔		
Are sampling dates & times present?	✔		
Is a relinquished signature present?	✔		
Are the tests required clearly indicated on the COC?	✔		
Are custody seals present?		✔	
If custody seals are present, were they intact?			✔
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✔		
Did all samples arrive intact? If no, indicate in Section 4 below.	✔		
Did all bottle labels agree with COC? (ID, dates and times)	✔		
Were the samples collected in the correct containers for the required tests?	✔		
Are the containers labeled with the correct preservatives?			✔
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✔
Was a sufficient amount of sample submitted for the requested tests?	✔		

Section 5 Explanations/Comments

SAMPLES WERE SUBMERGED IN ICE WATER UPON LABELING. WATER WAS DISCOVERED IN MOST ACETATE SLEEVES. ZP.

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: RKC Date/Time 10/4/22 ☑ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 10/4/22

Hi Ranjit,

Please run the below additional analysis for the attached on a normal TAT:

- the WET analysis for lead on sample SCS12-3
- Lead (6010B) for samples SCS12-1 (if this sample is there, or is there a sample SCS12-2?), SCS12-4, and SCS12-5

Thank you,

Allison O'Neal

H&P Project: SCS101122-13
Client Project: 01222196.00 / Ontario, CA

Dear Keith Etchells:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 11-Oct-22 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody
- Sampling Logs (if applicable)

Unless otherwise noted, I certify that all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Lisa Eminhizer
Laboratory Director

H&P Mobile Geochemistry, Inc. is certified under the California ELAP and the National Environmental Laboratory Accreditation Conference (NELAC) for the fields of proficiency and analytes listed on those certificates. H& P is approved as an Environmental Testing Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs for the fields of proficiency and analytes included in the certification process and to the extent offered by the accreditation agency . Unless otherwise noted, accreditation certificate numbers, expiration of certificates, and scope of accreditation can be found at: www.handpmg.com/about/certifications. Fields of services and analytes contained in this report that are not listed on the certificates should be considered uncertified or unavailable for certification.

Notes and Definitions

LCC	Leak Check Compound
ND	Analyte NOT DETECTED at or above the reporting limit
MDL	Method Detection Limit
%REC	Percent Recovery
RPD	Relative Percent Difference

All soil results are reported in wet weight.

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs through PJLA, accreditation number 69070 for EPA Method TO-15, EPA Method 8260B and H&P 8260SV.

H&P is approved by the State of California as an Environmental Laboratory and Mobile Laboratory in conformance with the Environmental Laboratory Accreditation Program (ELAP) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste, certification numbers 2740, 2741, 2743 & 2745.

H&P is approved by the State of Louisiana Department of Environmental Quality under the National Environmental Laboratory Accreditation Conference (NELAC) certification number 04138

The complete list of stationary and mobile laboratory certifications along with the fields of testing (FOTs) and analyte lists are available at www.handpmg.com/about/certifications.

APPENDIX C

Conceptual VIMS Design

December 12, 2022
File No. 01222196.00

DESIGN BASIS MEMORANDUM

TO: JAFAM Corporation
Mr. Trevor Fabeck
3200 Inland Empire Boulevard, Suite 220
Ontario, California 91764

FROM: Alissa Barrow, P.E., Keith Etchells, P.G, CHg

SUBJECT: **Watermarke Ontario (Project) Vapor Intrusion Mitigation System (VIMS)**
1028 West 4th Street, Ontario, California

Dear Mr. Fabeck:

SCS Engineers (SCS) was retained by the JAFAM Corporation (Client or JAFAM), to provide engineering services for the design of a vapor intrusion mitigation system (VIMS) for the proposed construction of the Watermarke Ontario (Project), located at 1028 W. 4th Street, (Site) in Ontario, California. This Design Basis Memorandum (DBM) provides a basis of design with information on Site conditions, regulatory considerations, engineering assumptions, and vendor information, for initial review and concurrence by JAFAM. Upon concurrence from JAFAM, SCS will prepare construction level design drawings for a VIMS for the Project.

1 SITE BACKGROUND

SCS understands that the Site consists of County of San Bernardino Assessor Parcel Number 1008-522-02 comprising approximately 4.4 acres of land in Ontario, California (Figure 1). The Site is located on the northeast corner of West 4th Street and North Mountain Avenue in Ontario, California. Reportedly, the Site is developed with two buildings – one that is currently occupied by a United States Postal Service (USPS) office, and the other a commercial retail building that is currently occupied by various small retail tenants, and was previously occupied by a dry cleaner. The Site is bounded to the north by a church property and single-family residences, to the east by single-family residences, to the west by North Mountain Avenue, and to the south by West 4th Street.

A former dry cleaning establishment, Ontario Plaza Laundromat/Cleaners (formerly located in the northwest corner of the building at 1118 North Mountain Avenue) was located at the Site from approximately 1960 to 2008. The Fabricare Dry Cleaner (1026 West 4th Street) occupied the farthest east side of the Site building reportedly from 1964 until February 2020.

Based on reports and documents available for the Site from the Department of Toxic Substances Control (DTSC) EnviroStor website, the former dry cleaning tenant previously experienced a release of chlorinated solvents including the chlorinated volatile organic compound tetrachloroethene (PCE) impacting soil and soil vapor, which was remediated using soil vapor extraction under regulatory oversight from the DTSC. The unauthorized release case was closed by the DTSC with land use restrictions in place on December 21, 2017.

Extensive soil and soil vapor sampling and remedial measures have previously been conducted at the Site to address the former dry cleaning land uses at the Site. Soil screening and mitigation measures are proposed to be carried out during construction of the proposed commercial project at the Site, including implementation of a VIMS, as described herein.

Based on a review of the construction plans, SCS understands that the proposed Project will include construction of an approximately 145,310 square foot, mixed use facility with multifamily residences, parking structure, commercial retail space, and a new post office building. The new buildings will consist of:

- A 4-story mixed use building with 297 multi-family residential units averaging 823 square feet per unit and 4,000 square feet of ground level retail space, which are located approximately along the perimeter of the Site and not within the commercial use deed restriction.
- A 6-story parking structure with 664 parking stalls, including 16 designated for retail, which is located in the southern-central portion of the Site and is within the commercial use deed restriction.
- A new 1-story post office building with 24 parking spaces, which is located in the south/southwest portion of the Site.

2 JUSTIFICATION OF VIMS IN PROJECT DESIGN

SOIL VAPOR SAMPLING AND ANALYSIS

On October 11, 2022, SCS oversaw the drilling and installation of 20 soil vapor probes (SVP-1 SVP-2, SVP-3, SVP-4, SVP-5, SVP-6, SVP-7, SVP-8, SVP-9, SVP-10, SVP-11, SVP-12, SVP-13, SVP-14, SVP-15, SVP-16, SVP-17, SVP-18, SVP-19, and SVP-20) to assess the area encompassing the proposed structures of the Project for the presence of vapor-phase VOCs and assess the necessity of completing a conceptual VIMS design. Locations of soil vapor samples are included in Figure 2.

The soil vapor sample borings SVP-1 through SVP-20 were advanced with a direct-push drilling rig to depths of approximately 5 feet below. After sampling, the soil vapor borings were backfilled with hydrated bentonite to depths of approximately 5 feet below grade.

Soil vapor sampling activities were conducted in general accordance with the DTSC, Los Angeles RWQCB, and San Francisco RWQCB Advisory on Active Soil Gas Investigations, dated July 2015. A temporary soil vapor well, consisting of Nylaflow™ tubing attached to a soil gas probe tip, was installed near the bottom of each boring. An appropriate sand pack a minimum of 6 inches thick was placed around the soil gas probe tip, and the borings were backfilled with at least 6 inches of dry granular bentonite above each sample port and topped with hydrated granular bentonite to the surface. The soil vapor sampling probes were allowed to stabilize for approximately 2 hours prior to sampling, followed by removing the DTSC-default of three purge volumes, and performing a shut-in test and leak test.

Soil vapor samples were collected from the soil vapor sampling probes by collecting soil vapor drawn through the probes into laboratory-provided summa canisters. Soil vapor samples were handed to an on-Site state certified, mobile laboratory (H&P Mobile Geochemistry) and analyzed for VOCs in general accordance with U.S. Environmental Protection Agency (EPA) Method TO-15. In accordance with the DTSC guidance, one replicate sample was analyzed (SVP-11-5 Rep). Chain-of-custody procedures were implemented for sample tracking.

VOCS IN SOIL VAPOR

A total of twenty-one soil vapor samples, identified as SVP-1 SVP-2, SVP-3, SVP-4, SVP-5, SVP-6, SVP-7, SVP-8, SVP-9, SVP-10, SVP-11, SVP-11 Rep, SVP-12, SVP-13, SVP-14, SVP-15, SVP-16, SVP-17, SVP-18, SVP-19, and SVP-20, were analyzed for VOCs in general accordance with EPA Method TO-15.

Tetrachloroethene (PCE) was reported to be present in all 20 vapor samples collected beneath the proposed Project with concentrations in excess of the applicable residential screening level (480 micrograms per cubic meter [ug/m^3]) in all locations except SVP-1 and SVP-2 in the northeast corner, and SVP-13 in the southeast corner of the Site. Due to the continued presence and concentrations of PCE in shallow soil vapor beneath the Site, the understanding that the proposed buildings share a foundation slab, and the assumption that the Project will be vetted by the DTSC, a VIMS is recommended to be incorporated into the Project.

3 PRELIMINARY VIMS DESIGN

The proposed VIMS would be installed beneath the ground-level portions of the proposed buildings to mitigate potential vapor phase migration of residual VOCs. The proposed VIMS design will consist of a passive vent system with the option to convert to an active system should the future need arise.

The vapor barrier will conform to the general requirements and specifications presented by the DTSC in the Vapor Intrusion Mitigation Advisory Final Revision 1, dated October 2011, and will be designed in a fashion that it can be converted from a passive to an active system, if necessary. SCS anticipates the proposed vapor barrier design will include, but not be limited to, the following:

- 4-inch layer of permeable coarse sand with a hydraulic conductivity at least 10^{-3} centimeters per second (cm/s).
- Low-profile, 1-inch sub-slab Multi-flow (or equivalent) vent piping installed within the coarse sand layer, which will transition to 3-inch solid polyvinyl chloride (PVC) pipe where penetration though building footers occurs.
- The solid PVC pipe will then transition to 4-inch carbon steel vent risers, installed on the outside walls of the buildings, which will terminate above the roof line with rainguards.
- T-60 non-woven geotextile base fabric installed over the sand layer.
- CETCO Liquid Boot VI-20 geomembrane installed over the base fabric layer.
- 40-mil CETCO Liquid Boot 500 soil VOC vapor barrier installed over the VI-20 geomembrane layer (for a total membrane thickness of 60 mil).
- Quality assessment/quality control (QA/QC) of vapor barrier using industry standard smoke testing.
- 8 oz. geotextile protection course installed over the soil VOC vapor membrane.
- An optional 2-inch thick clean sand layer installed over the geotextile layer to protect the VIMS membrane during building construction.

A preliminary VIMS design is included in Figures 3 and 4, and design components are further described below. Upon concurrence from JAFAM, SCS will prepare construction level design drawings of a VIMS for the Project, which would presumably be submitted to the DTSC, as well as potentially local planning agencies if required, for review and concurrence.

VIMS DESIGN COMPONENTS

Passive Sub-Slab Venting System

The passive sub-slab venting system will allow VOCs to be passively diverted into the ventilation system and safely discharged to the atmosphere by means of vertical vent risers terminating at the building roofline. The venting system will consist of a sub-slab coarse sand layer beneath the entire footprint of the buildings that contains low-profile, 1-inch sub-slab Multi-flow (or equivalent) vapor collection pipes, which will transition to 3-inch solid PVC pipe where penetration though building footers occurs. The collection pipes will be connected to steel vertical risers along the building exterior that terminate above the roof line. Venting system components include the following:

- Venting layer under membrane: Clean coarse sand with a minimum hydraulic conductivity of 10^{-3} cm/s will be used to construct the permeable ventilation/depressurization layer.

- Sub-slab passive vent piping will consist of 1-inch diameter, factory slotted low profile, 1 inch high by 1 foot wide, Multi-flow vent pipe (or equivalent) placed in the venting layer, which will transition to 3-inch Schedule (Sch.) 40 PVC pipe where penetration though building footers occurs. The piping will be located so that no portion of the slab is greater than 35 feet from a sub-slab collection pipe. The piping will be networked together, and will transition vent risers attached to the exterior building walls and extending to the roofline (Figures 3 and 4).

- Vertical vent riser piping will be used to manage potential VOC vapor through passive venting via the sub-slab piping to the roofline for the proposed building footprint. Each vertical vent riser will be located a minimum of 10 feet from air intakes or openings into the building (i.e., windows or doors), and will terminate a minimum of 1 foot above the building roofline. Vertical vent riser pipe will consist of 4-inch diameter Sch 40, threaded carbon steel pipe. A minimum of twelve (12) vent risers will be provided for the 145,309 square foot first floor/ground level footprint of the development. Preliminary vent riser locations are depicted on Figure 2, but are subject to change based on input from the Project design team (architect, etc.).

Impervious Membrane

The membrane barrier will be installed above the sub-slab passive venting system and beneath the entire extent of the building footprint. The membrane barrier will consist of a minimum cured thickness of 60 mil (0.06 inches) Liquid Boot Plus VI-20 geomembrane. Liquid boot is a fluid/mono applied, single course, high-build polymer chloroprene modified asphalt (CMA) emulsion overlaid onto a VI 20 geomembrane. VI 20 is a 20 mil, 7-layer, co-extruded ethylene-vinyl alcohol copolymer (EVOH) geomembrane manufactured by CETCO Inc., and consists of a copolymer of polyethylene, polyvinyl alcohol, and ethylene vinyl alcohol. The material is flexible, chemically resistant, stress resistant, crack resistant, and virtually impermeable to VOCs.

The membrane will be placed between two (2) layers of non-woven, needle-punched polypropylene geotextile fabric. An optional 2-inch thick clean sand layer can be applied over the membrane barrier on top of the geotextile layer to protect the membrane during building construction.

Seals are to be installed at all pipe or conduit penetrations through the sub-slab liner. Utility perforations through the membrane liner will be sealed in accordance with the membrane manufacturer's recommendations and design detail provided on the drawings. Seals should be provided where the sub-slab liner attaches to interior and perimeter footings.

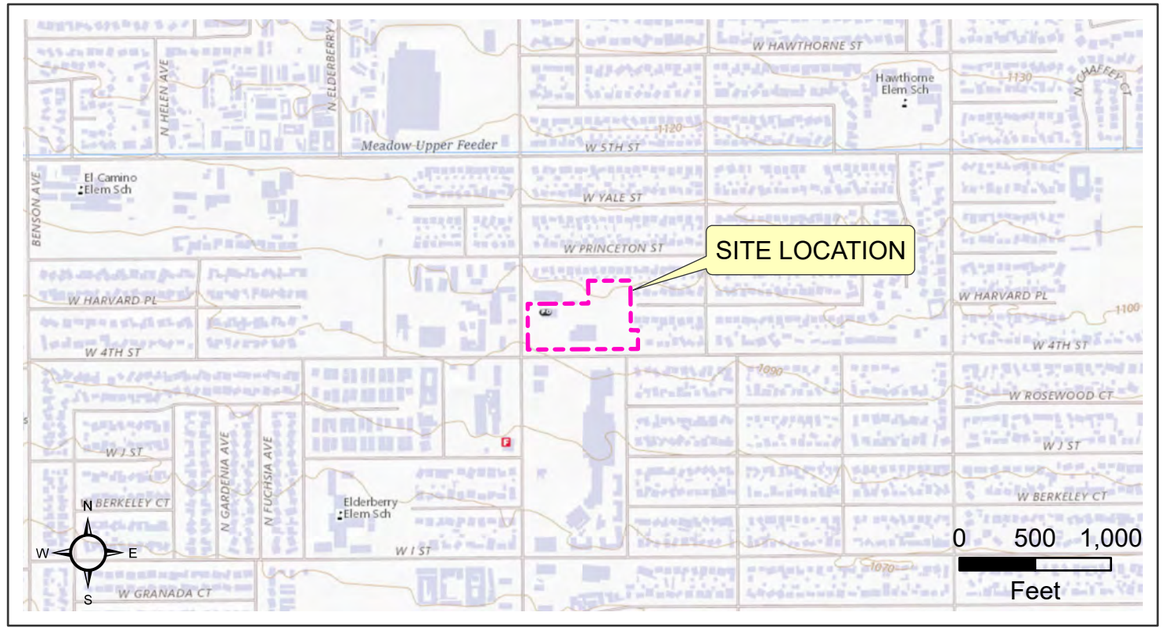
Sub-slab Monitoring Probes

Monitoring probes will be placed within the sand layer and terminate in monitoring vaults or utility boxes outside the building perimeter wall. Sub-slab vapor monitoring probes will be used to monitor soil vapor VOC and/or radon concentrations under the slab.

A minimum of twenty (20) monitoring probes will be provided for the approximately 145,310 square foot first level building footprint.

Utility Trench Dams and Electrical Conduit Seals

Utility trench dams constructed of a bentonite-concrete slurry are required for all utility trenches that extend beneath and/or through the building foundation from outside areas, and will be placed immediately adjacent to the exterior perimeter of the building foundation. Utility trench dams will extend a minimum of 3 feet from the perimeter of the building and at least 6 inches around all conduits and pipes.



Electrical conduit seals, either end seals or EYS seals, will be installed approximately 18 inches above the location where the conduit penetrates the building floor slab. Electrical conduit seals consisting of a sealing compound with fiber dams will be installed to fill the void space and to prevent the infiltration of subsurface VOCs into interior spaces.

Signage

Upon completion of construction, warning signs will be posted at prominent locations that incorporate the following language:

"WARNING: A vapor intrusion mitigation system is installed beneath the building floor slab to prevent vapor intrusion from the soil. Any proposed penetration or alteration of the floor slab requires prior written notification to the owner. It is illegal to remove this sign." In addition, soil vapor notification labels that provide information regarding the vent designation and purpose will be attached to all vent risers.

Appendix B: Noise Modeling Data

LIST OF ABBREVIATED TERMS

ADT	average daily traffic
dBA	A-weighted sound level
CEQA	California Environmental Quality Act
CNEL	community equivalent noise level
L_{dn}	day-night noise level
dB	decibel
L_{eq}	equivalent noise level
FHWA	Federal Highway Administration
FTA	Federal Transit Administration
HVAC	heating ventilation and air conditioning
Hz	hertz
in/sec	inches per second
L_{max}	maximum noise level
µPa	micropascals
L_{min}	minimum noise level
PPV	peak particle velocity
RMS	root mean square
VdB	vibration velocity decibels

1 INTRODUCTION

This report documents the results of an Acoustical Assessment completed for the Watermarke Ontario Planned Unit Development Project (Project). The purpose of this Acoustical Assessment is to evaluate the potential construction and operational noise and vibration levels associated with the Project and determine the level of impact the Project would have on the environment.

This analysis has been undertaken to analyze whether the proposed Project would result in any new or substantially more severe significant environmental impacts as compared to the conclusions discussed in The Ontario Plan 2050, certified Final Supplemental Environmental Impact Report (General Plan EIR) (State Clearinghouse No. 2021070364). The purpose of this analysis is to support an Addendum EIR that will document whether any new noise-related impacts would occur from the Project (described below) compared to the level of significance that was identified in the General Plan EIR pursuant to State California Environmental Quality Act (CEQA) Guidelines Section 15162 (et seq.).

1.1 Project Location

The project site is located on the northeast corner of the intersection of Mountain Avenue and 4th Street. The project site currently consists of a United States Post Office building and a commercial building with various retail uses. The City of Ontario is located in the San Bernardino Valley within San Bernardino County approximately 60 miles east of Los Angeles, California; see Exhibit 1: Regional Location Map and Exhibit 2: Project Vicinity Map.

1.2 Project Description

The applicant proposes to demolish the existing uses and proposes the development of a four-story Type V warp building containing multifamily residential and retail uses as well as a six level Type III above grade parking structure. The Project would include the development of 357 multi-family dwelling units, approximately 2,700 square feet (sf) of leasing, 5,700 sf of amenity space, and 3,800 sf of retail on 5.8 acres; refer to Exhibit 3: Conceptual Site Plan.

2 ACOUSTIC FUNDAMENTALS

2.1 Sound and Environmental Noise

Acoustics is the science of sound. Sound can be described as the mechanical energy of a vibrating object transmitted by pressure waves through a medium (e.g., air) to human (or animal) ear. If the pressure variations occur frequently enough (at least 20 times per second), they can be heard and are called sound. The number of pressure variations per second is called the frequency of sound and is expressed as cycles per second, or hertz (Hz).

Noise is defined as loud, unexpected, or annoying sound. The fundamental acoustics model consists of a noise source, a receptor, and the propagation path between the two. The loudness of the noise source, obstructions, or atmospheric factors affecting the propagation path, determine the perceived sound level and noise characteristics at the receptor. Acoustics deal primarily with the propagation and control of sound. A typical noise environment consists of a base of steady background noise that is the sum of many distant and indistinguishable noise sources. The sound from individual local sources is superimposed on this background noise. These sources can vary from an occasional aircraft or train passing by to continuous noise from traffic on a major highway. Perceptions of sound and noise are highly subjective from person to person.

Measuring sound directly in terms of pressure would require a large range of numbers. To avoid this, the decibel (dB) scale was devised. The dB scale uses the hearing threshold of 20 micropascals (µPa) as a point of reference, defined as 0 dB. Other sound pressures are then compared to this reference pressure, and the logarithm is taken to keep the numbers in a practical range. The dB scale allows a million-fold increase in pressure to be expressed as 120 dB, and changes in levels correspond closely to human perception of relative loudness. Table 1: Typical Noise Levels provides typical noise levels.

Table 1: Typical Noise Levels

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	– 110 –	Rock Band
Jet fly-over at 1,000 feet		
	– 100 –	
Gas lawnmower at 3 feet		
	– 90 –	
Diesel truck at 50 feet at 50 miles per hour		Food blender at 3 feet
	– 80 –	Garbage disposal at 3 feet
Noisy urban area, daytime		
Gas lawnmower, 100 feet	**– 70 –**	Vacuum cleaner at 10 feet
Commercial area		Normal Speech at 3 feet
Heavy traffic at 300 feet	**– 60 –**	
		Large business office
Quiet urban daytime	**– 50 –**	Dishwasher in next room
Quiet urban nighttime	**– 40 –**	Theater, large conference room (background)
Quiet suburban nighttime		
	– 30 –	Library
Quiet rural nighttime		Bedroom at night, concert hall (background)
	– 20 –	
		Broadcast/recording studio
	– 10 –	
Lowest threshold of human hearing	**– 0 –**	Lowest threshold of human hearing

Noise Descriptors

The dB scale alone does not adequately characterize how humans perceive noise. The dominant frequencies of a sound have a substantial effect on the human response to that sound. Several rating scales have been developed to analyze the adverse effect of community noise on people. Because environmental noise fluctuates over time, these scales consider that the effect of noise on people is largely dependent on the total acoustical energy content of the noise, as well as the time of day when the noise occurs. Most commonly, environmental sounds are described in terms of equivalent noise level (L_{eq}) that has the same acoustical energy as the summation of all the time-varying events. While L_{eq} represents the continuous sound pressure level over the measurement period, the day-night noise level (L_{dn}) and Community Equivalent Noise Level (CNEL) are measures of energy average during a 24-hour period, with dB weighted sound levels from 7:00 PM to 7:00 AM. Each is applicable to this analysis and defined in Table 2: Definitions of Acoustical Terms.

Table 2: Definitions of Acoustical Terms

Term	Definitions
Decibel (dB)	A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in µPa (or 20 micronewtons per square meter), where 1 pascal is the pressure resulting from a force of 1 newton exerted over an area of 1 square meter. The sound pressure level is expressed in dB as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e.g., 20 µPa). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency (Hz)	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and ultrasonic sounds are above 20,000 Hz.
A-Weighted Sound Level (dBA)	The sound pressure level in dB as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level (L_{eq})	The average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.
Maximum Noise Level (L_{max}) Minimum Noise Level (L_{min})	The maximum and minimum dBA during the measurement period.
Exceeded Noise Levels (L_{01}, L_{10}, L_{50}, L_{90})	The dBA values that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day-Night Noise Level (L_{dn})	A 24-hour average L_{eq} with a 10 dBA weighting added to noise during the hours of 10:00 PM to 7:00 AM to account for noise sensitivity at nighttime. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.4 dBA L_{dn}.
Community Noise Equivalent Level (CNEL)	A 24-hour average L_{eq} with a 5 dBA weighting during the hours of 7:00 AM to 10:00 AM and a 10 dBA weighting added to noise during the hours of 10:00 PM to 7:00 m to account for noise sensitivity in the evening and nighttime, respectively. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.7 dBA CNEL.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.

Table 2: Definitions of Acoustical Terms	
Term	**Definitions**
Intrusive	That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends on its amplitude, duration, frequency, and time of occurrence and tonal or informational content as well as the prevailing ambient noise level.

Because sound levels can vary markedly over a short period of time, a method for describing either the sound's average character (L_{eq}) or the variations' statistical behavior (L_{XX}) must be utilized. The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about plus or minus 1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The predicted models' accuracy depends on various factors, such as the distance between the noise receptor and the noise source, the character of the ground surface (e.g., hard or soft), and the presence or absence of structures (e.g., walls or buildings) or topography, and how well model inputs reflect these conditions.

A-Weighted Decibels

The perceived loudness of sounds is dependent on many factors, including sound pressure level and frequency content. However, within the usual range of environmental noise levels, perception of loudness is relatively predictable and can be approximated by dBA values. There is a strong correlation between dBA and the way the human ear perceives sound. For this reason, the dBA has become the standard tool of environmental noise assessment. All noise levels reported in this document are in terms of dBA, but are expressed as dB, unless otherwise noted.

Addition of Decibels

The dB scale is logarithmic, not linear, and therefore sound levels cannot be added or subtracted through ordinary arithmetic. Two sound levels 10 dB apart differ in acoustic energy by a factor of 10.[1] When the standard logarithmic dB is A-weighted, an increase of 10 dBA is generally perceived as a doubling in loudness. For example, a 70-dBA sound is half as loud as an 80-dBA sound and twice as loud as a 60-dBA sound.[2] When two identical sources are each producing sound of the same loudness, the resulting sound level at a given distance would be 3 dBA higher than one source under the same conditions.[3] Under the dB scale, three sources of equal loudness together would produce an increase of approximately 5 dBA.

Sound Propagation and Attenuation

Sound spreads (propagates) uniformly outward in a spherical pattern, and the sound level decreases (attenuates) at a rate of approximately 6 dB for each doubling of distance from a stationary or point source. Sound from a line source, such as a highway, propagates outward in a cylindrical pattern. Sound levels attenuate at a rate of approximately 3 dB for each doubling of distance from a line source, such as a roadway, depending on ground surface characteristics.[4] No excess attenuation is assumed for hard

surfaces like a parking lot or a body of water. Soft surfaces, such as soft dirt or grass, can absorb sound, so an excess ground-attenuation value of 1.5 dB per doubling of distance is normally assumed in this report.

Noise levels may also be reduced by intervening structures; generally, a single row of buildings between the noise receptor and the noise source reduces the noise level by about 5 dBA, while a solid wall or berm can reduce noise levels by 5 to 15 dBA.[5] The way older homes in California were constructed generally provides a reduction of exterior-to-interior noise levels of about 20 to 25 dBA with closed windows. The exterior-to-interior reduction of newer residential units is generally 30 dBA or more.

Human Response to Noise

The human response to environmental noise is subjective and varies considerably from individual to individual. Noise in the community has often been cited as a health problem, not in terms of actual physiological damage, such as hearing impairment, but in terms of inhibiting general well-being and contributing to undue stress and annoyance. The health effects of noise in the community arise from interference with human activities, including sleep, speech, recreation, and tasks that demand concentration or coordination. Hearing loss can occur at the highest noise intensity levels.

Noise environments and consequences of human activities are usually well represented by median noise levels during the day or night or over a 24-hour period. Environmental noise levels are generally considered low when the CNEL is below 60 dBA, moderate in the 60 to 70 dBA range, and high above 70 dBA. Examples of low daytime levels are isolated, natural settings with noise levels as low as 20 dBA and quiet, suburban, residential streets with noise levels around 40 dBA.[6] Noise levels above 45 dBA at night can disrupt sleep. Examples of moderate-level noise environments are urban residential or semi-commercial areas (typically 55 to 60 dBA) and commercial locations (typically 60 dBA). People may consider louder environments adverse, but most will accept the higher levels associated with noisier urban residential or residential-commercial areas (60 to 75 dBA) or dense urban or industrial areas (65 to 80 dBA). Regarding increases in dBA, the following relationships should be noted[7]:

- Except in carefully controlled laboratory experiments, a 1-dBA change cannot be perceived by humans.
- Outside of the laboratory, a 3-dBA change is considered a just-perceivable difference.
- A minimum 5-dBA change is required before any noticeable change in community response would be expected. A 5-dBA increase is typically considered substantial.
- A 10-dBA change is subjectively heard as an approximate doubling in loudness and would almost certainly cause an adverse change in community response.

Effects of Noise on People

Hearing Loss. While physical damage to the ear from an intense noise impulse is rare, a degradation of auditory acuity can occur even within a community noise environment. Hearing loss occurs mainly due to chronic exposure to excessive noise but may be due to a single event such as an explosion. Natural hearing loss associated with aging may also be accelerated from chronic exposure to loud noise. The Occupational Safety and Health Administration has a noise exposure standard that is set at the noise threshold where hearing loss may occur from long-term exposures. The maximum allowable level is 90 dBA averaged over 8 hours. If the noise is above 90 dBA, the allowable exposure time is correspondingly shorter.[8]

Annoyance. Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that causes for annoyance include interference with speech, radio and television, house vibrations, and interference with sleep and rest. The L_{dn} as a measure of noise has been found to provide a valid correlation of noise level and the percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise and ground transportation noise. There continues to be disagreement about the relative annoyance of these different sources. A noise level of about 55 dBA L_{dn} is the threshold at which a substantial percentage of people begin to report annoyance[9].

2.2 Groundborne Vibration

Sources of groundborne vibrations include natural phenomena (earthquakes, volcanic eruptions, sea waves, landslides, etc.) or man-made causes (explosions, machinery, traffic, trains, construction equipment, etc.). Vibration sources may be continuous (e.g., factory machinery) or transient (e.g., explosions or heavy equipment use during construction). Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One is the peak particle velocity (PPV); another is the root mean square (RMS) velocity. The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave and is expressed in terms of inches-per- second (in/sec). The RMS velocity is defined as the average of the squared amplitude of the signal and is expressed in terms of velocity decibels (VdB). The PPV and RMS vibration velocity amplitudes are used to evaluate human response to vibration.

Table 3: Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibrations, displays the reactions of people and the effects on buildings produced by continuous vibration levels. The annoyance levels shown in the table should be interpreted with care since vibration may be found to be annoying at much lower levels than those listed, depending on the level of activity or the individual's sensitivity. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage. In high noise environments, which are more prevalent where groundborne vibration approaches perceptible levels, this rattling phenomenon may also be produced by loud airborne environmental noise causing induced vibration in exterior doors and windows.

[8] U.S. Department of Labor, Occupational Safety and Health Standards, *29 CFR 1910* (Occupational Noise Exposure).
[9] Federal Interagency Committee on Noise, Federal Agency Review of Selected Airport Noise Analysis Issues, August 1992.

Ground vibration can be a concern in instances where buildings shake, and substantial rumblings occur. However, it is unusual for vibration from typical urban sources such as buses and heavy trucks to be perceptible. Common sources for groundborne vibration are planes, trains, and construction activities such as earth-moving which requires the use of heavy-duty earth moving equipment. For the purposes of this analysis, a PPV descriptor with units of inches per second (in/sec) is used to evaluate construction-generated vibration for building damage and human complaints.

Table 3: Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibrations

Maximum PPV (in/sec)	Vibration Annoyance Potential Criteria	Vibration Damage Potential Threshold Criteria	FTA Vibration Damage Criteria
0.008	--	Extremely fragile historic buildings, ruins, ancient monuments	--
0.01	Barely Perceptible	--	--
0.04	Distinctly Perceptible	--	--
0.1	Strongly Perceptible	Fragile buildings	--
0.12	--	--	Buildings extremely susceptible to vibration damage
0.2	--	--	Non-engineered timber and masonry buildings
0.25	--	Historic and some old buildings	--
0.3	--	Older residential structures	Engineered concrete and masonry (no plaster)
0.4	Severe	--	--
0.5	--	New residential structures, Modern industrial/commercial buildings	Reinforced-concrete, steel or timber (no plaster)

PPV = peak particle velocity; in/sec = inches per second; FTA = Federal Transit Administration

Source: California Department of Transportation, *Transportation and Construction Vibration Guidance Manual*, 2020 and Federal Transit administration, Transit Noise and Vibration Assessment Manual, 2018.

3 REGULATORY SETTING

To limit population exposure to physically or psychologically damaging as well as intrusive noise levels, the federal government, the State of California, various county governments, and most municipalities in the State have established standards and ordinances to control noise.

3.1 State of California

California Government Code

California Government Code Section 65302(f) mandates that the legislative body of each county and city adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines established by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of "normally acceptable", "conditionally acceptable", "normally unacceptable", and "clearly unacceptable" noise levels for various land use types. Single-family homes are "normally acceptable" in exterior noise environments up to 60 CNEL and "conditionally acceptable" up to 70 CNEL. Multiple-family residential uses are "normally acceptable" up to 65 CNEL and "conditionally acceptable" up to 70 CNEL. Schools, libraries, and churches are "normally acceptable" up to 70 CNEL, as are office buildings and business, commercial, and professional uses.

Title 24 – Building Code

The State's noise insulation standards are codified in the California Code of Regulations, Title 24: Part 1, Building Standards Administrative Code, and Part 2, California Building Code. These noise standards are applied to new construction in California for interior noise compatibility from exterior noise sources. The regulations specify that acoustical studies must be prepared when noise-sensitive structures, such as residential buildings, schools, hotel rooms, or hospitals, are located near major transportation noise sources, and where such noise sources create an exterior noise level of 65 dBA CNEL or higher. Acoustical studies that accompany building plans must demonstrate that the structure has been designed to limit interior noise in habitable rooms to acceptable noise levels. For new multi-family residential buildings and habitable rooms (including hotels), the acceptable interior noise limit for new construction is 45 dBA CNEL.

3.2 Local

City of Ontario – The Ontario Plan Safety Element

The Safety and Land Use Elements of The Ontario Plan (TOP) set forth goals, policies, and land use guidelines to protect residential neighborhoods and noise-sensitive receptors from excessive noise levels. The City uses the Noise Level Exposure and Land Use Compatibly Guidelines (shown in Table 4 below) when siting new development and making land use decisions.

Table 4: Noise Level Exposure and Land Use Compatibility Guidelines

Land Use Categories		Community Noise Equivalent Level (CNEL)			
Category	**Uses**	**Clearly Acceptable[1]**	**Normally Acceptable[2]**	**Normally Unacceptable[3]**	**Clearly Unacceptable[4]**
Residential/Lodging	Single Family/Duplex	<60	60-65	65-70	70-85
	Multi-Family	<60	60-65	65-75	75-85
	Mobile Homes	<60	60-65	-	65-85
	Hotel/Motel	<65	65-70	70-80	80-85
Public/Institutional	Schools/Hospitals	<60	60-65	65-70	70-85

	Crop Agriculture	<55-85	-	-	-

Source: The Ontario Plan
[1] No special noise insulation required, assuming buildings of normal conventional construction.
[2] Acoustical reports will be required for major new residential construction. Conventional construction with closed windows and fresh air supply systems of air conditions will normally suffice
[3] New construction should be discouraged. Noise/aviation easements required for all new construction. If new construction does proceed, a detailed analysis of noise reduction requirements must be made, and necessary noise insulation features included.
[4] No new construction should be permitted.

The following goals and policies from TOP Safety Element are directly relevant to the proposed project:

Goal S4 An environment where noise does not adversely affect the public's health, safety, and welfare

Goal S4-1 Noise Mitigation. Utilize the City's Noise Ordinance, building codes and subdivision and development codes to mitigate noise impacts.

Goal S4-2 Coordination with Transportation Authorities. Collaborate with airport owners, FAA, Caltrans, SANBAG, SCAG, neighboring jurisdictions, and other transportation providers in the preparation and maintenance of, and updates to transportation related plans to minimize noise impacts and provide appropriate mitigation measures.

Goal S4-4 Truck Traffic. Manage truck traffic to minimize noise impacts on sensitive land uses.

Goal S4-5 Roadway Design. Design streets and highways to minimize noise impacts.

City of Ontario Municipal Code

The City of Ontario enforces noise limits through the Municipal Code Chapter 29, *Noise.* Table 5 summarizes the City of Ontario's noise limits.

Table 5: Exterior Noise Standards – City of Ontario

Land Use	Allowed Equivalent Noise Level, L_{eq}	
	7:00 AM to 10:00 PM	10:00 PM to 7:00 AM
Single-Family Residential	65 dBA	45 dBA
Multi-Family Residential, Mobile Home Parks	65 dBA	50 dBA
Commercial Property	65 dBA	60 dBA
Residential Portion of Mixed Use	70 dBA	70 dBA
Manufacturing and Industrial, Other Uses	70 dBA	70 dBA

Source: City of Ontario Municipal Code, Chapter 29 *Noise – Section 5-29.04 Exterior* Noise *Standards,* 2022.

The noise limits summarized in Table 5 are subject to the following:

- The noise standard for the applicable zone for any fifteen-minute (15) period; and
- A maximum instantaneous (single instance) noise level equal to the value of the noise standard plus twenty (20) dBA for any period of time (measured using A-weighted slow response).
- In the event the ambient noise level exceeds the noise standard, the maximum allowable noise level under such category shall be increased to reflect the maximum ambient noise level.
- The Noise Zone IV (residential portion of mixed use) standard shall apply to that portion of residential property falling within one hundred (100) feet of a commercial property or use, if the noise originates from that commercial property or use.
- If the measurement location is on a boundary between two (2) different noise zones, the lower noise level standard applicable to the noise zone shall apply.
- Section 5-29.11, the noise standards assigned to Noise Zone I (single-family residential) also apply to the outdoor use area of any school, day care center, hospital or similar health care institution, library or museum while it is in use.
- Section 5-29.06(e), noise sources associated with construction, repair, remodeling, demolition or grading of a public right-of-way is exempt from the provisions of the Municipal Code.
- Section 5-29.09 addresses construction noise and states that no person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 AM and 6:00 PM or on Saturday or Sunday between the hours of 9:00 AM and 6:00 PM.

4 EXISTING CONDITIONS

4.1 Existing Noise Sources

Much of the City of Ontario has been developed with residential, commercial and industrial land uses. Transportation related noise is the primary noise source in the City. Other noise sources include noise generated from commercial, residential, institutional, and recreational activities.

Mobile Sources

Existing roadway noise levels were calculated for the roadway segments in the Project vicinity. This task was accomplished using the Federal Highway Administration (FHWA) Highway Traffic Noise Prediction Model (FHWA-RD-77-108) and existing traffic volumes from the *Traffic Study for the Proposed Watermarke Ontario Project in the City of Ontario* (prepared by Kimley-Horn and Associates, 2023). The noise prediction model calculates the average noise level at specific locations based on traffic volumes, average speeds, roadway geometry, and site environmental conditions. The average vehicle noise rates (also referred to as energy rates) used in the FHWA model have been modified to reflect average vehicle noise rates identified for California by the California Department of Transportation (Caltrans). The Caltrans data indicates that California automobile noise is 0.8 to 1.0 dBA higher than national levels and that medium and heavy truck noise is 0.3 to 3.0 dBA lower than national levels. The average daily noise levels along roadway segments proximate to the project site are included in Table 6: Existing Traffic Noise Levels.

Table 6: Existing Traffic Noise Levels

Roadway	Segment	ADT	dBA CNEL[1]
Mountain Avenue	North of 4th Street	23,130	65.9
	South of 4th Street	20,380	65.4
4th Street	West of Mountain Avenue	6,740	58.1
	Mountain Avenue to Palmetto Avenue	8,390	59.1
	East of Palmetto Avenue	8,150	59.0
Palmetto Avenue	South of 4th Street	600	42.1

ADT = average daily traffic; dBA = A-weighted decibels; CNEL = community noise equivalent level

1. Traffic noise levels are at 100 feet from the roadway centerline. The actual sound level at any receptor location is dependent upon such factors as the source-to-receptor distance and the presence of intervening structures, barriers, and topography.

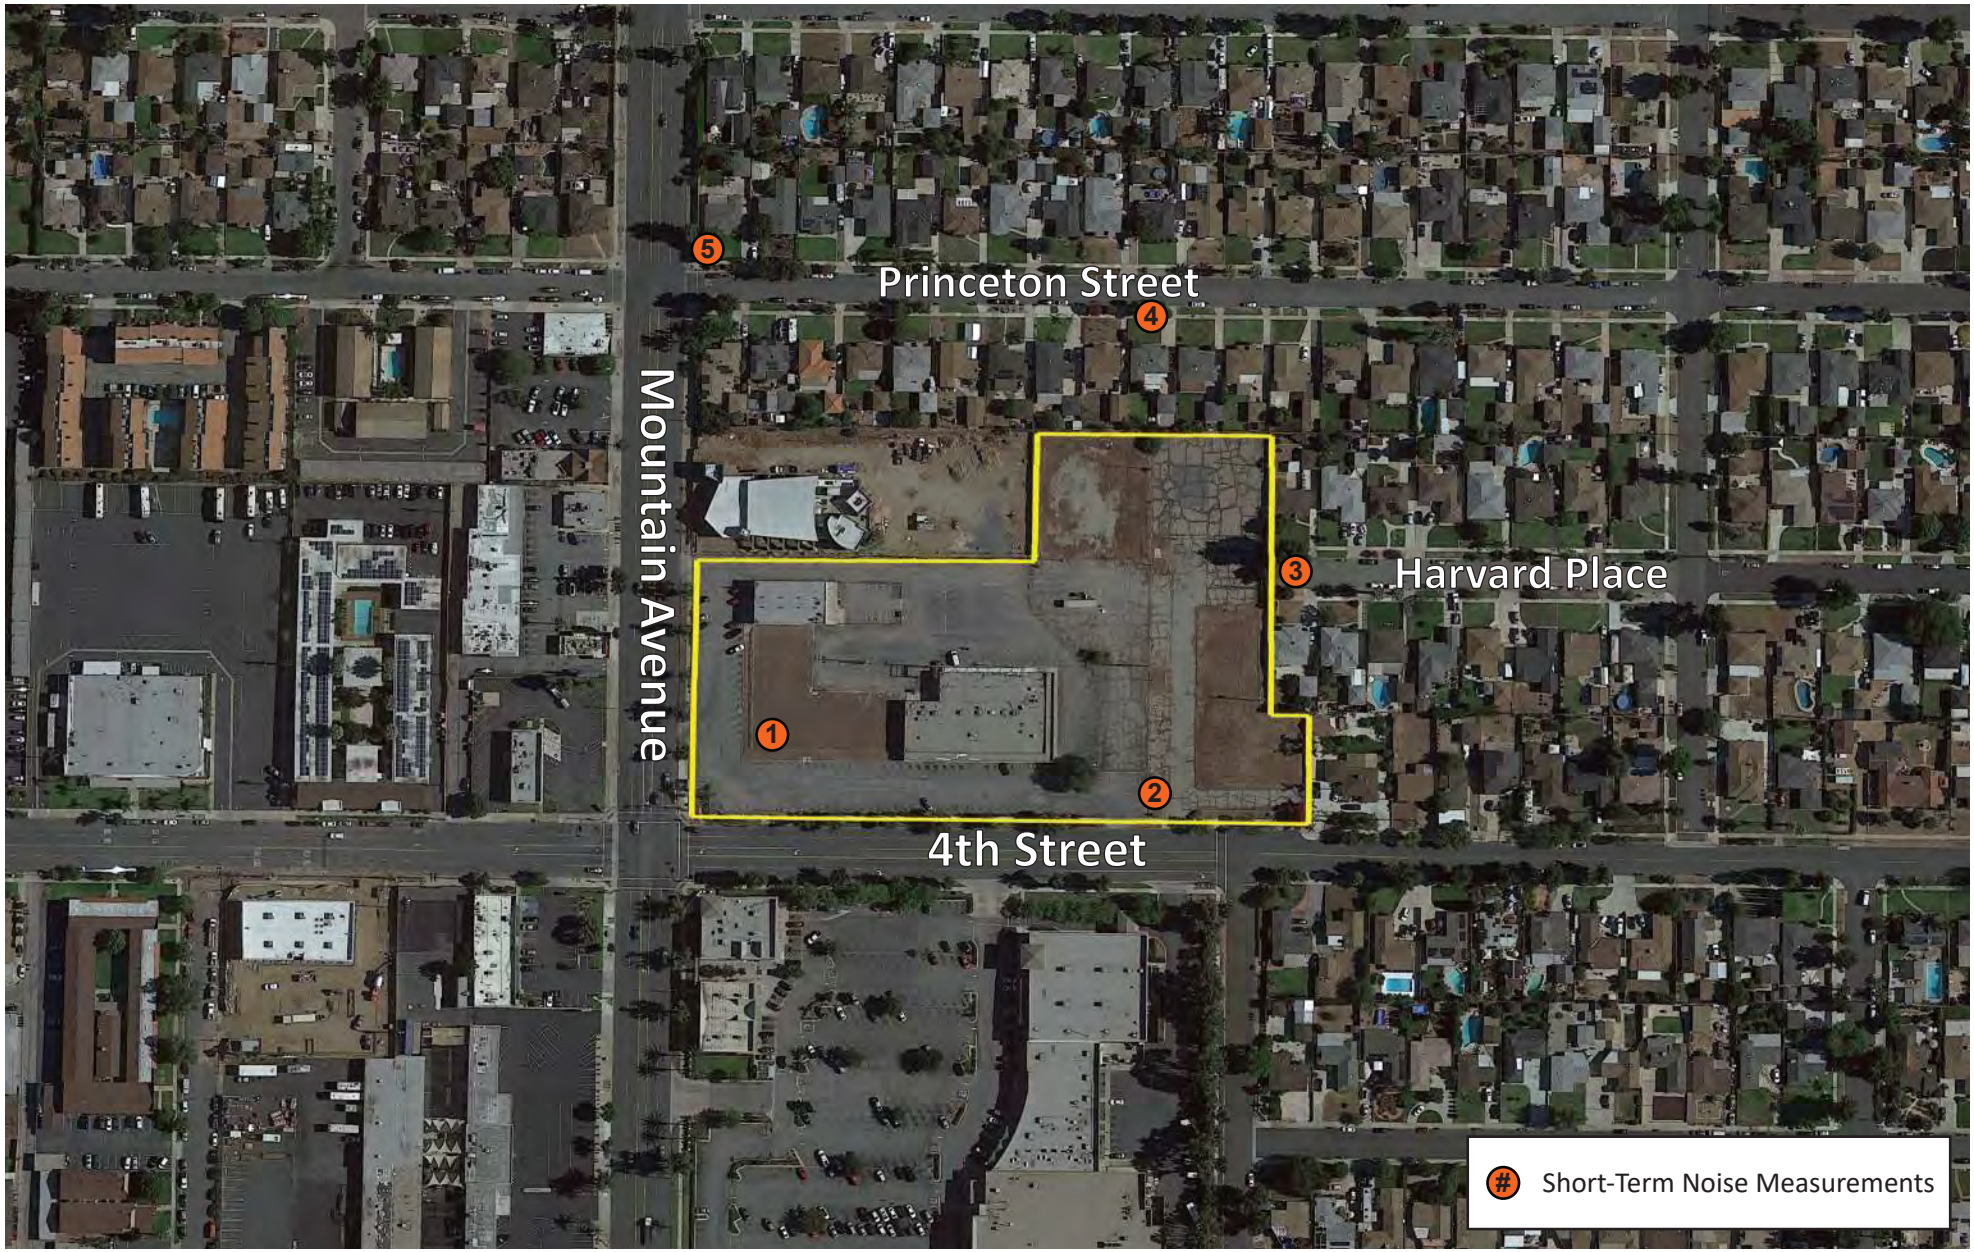
Source: *Traffic Study for the Proposed Watermarke Ontario Project in the City of Ontario*, prepared by Kimley-Horn and Associates, 2023. Refer to Appendix B for traffic noise modeling assumptions and results.

As identified in Table 6, the existing traffic-generated noise level on project-vicinity roadways currently ranges from 42.1 dBA CNEL to 65.9 dBA CNEL 100 feet from the centerline. As previously described, CNEL is 24-hour average noise level with a 5 dBA "weighting" during the hours of 7:00 PM to 10:00 PM and a 10 dBA "weighting" added to noise during the hours of 10:00 PM to 7:00 AM to account for noise sensitivity in the evening and nighttime, respectively.

Stationary Sources

The stationary noise sources in the vicinity of the project site are existing residential properties to the north and east and commercial properties to the west and south. Noise sources from residential commercial uses typically include mechanical equipment such as HVAC, automobile-related noise such as

cars starting and doors slamming, and landscaping equipment. The noise associated with these sources may represent a single-event noise occurrence or short-term noise.



4.2 Noise Measurements

The Project area is primarily occupied by commercial and residential uses. To quantify existing ambient noise levels in the Project area, Kimley-Horn conducted five short-term noise measurements on July 26, 2023; see Appendix A: Existing Ambient Noise Measurements. The noise measurement sites were representative of typical existing noise exposure within and immediately adjacent to the project site. The 10-minute measurements were taken between 11:58 AM and 12:54 PM on a Wednesday. Measurements of L_{eq} are considered representative of the noise levels throughout the day. The average noise levels and sources of noise measured at each location are listed in Table 7: Existing Noise Measurements and shown on Exhibit 4: Noise Measurement Locations.

Table 7: Existing Noise Measurements

Site	Location	Measurement Period	Duration	L_{eq} (dBA)
Short-Term Noise Measurements				
1	At the intersection of N Mountain Ave and W 4th Street, inside the parking lot	12:11 – 12:21 PM	10 Minutes	71.4
2	W 4th Street, sidewalk near southeastern entrance to parking lot.	12:30 – 12:40 PM	10 Minutes	68.5
3	End of W Harvard Place	12:44 – 12:54 PM	10 Minutes	57.2
4	Sidewalk on the south side of the W Princeton Street (eastbound) (10th house down)	12:58 – 1:08 PM	10 Minutes	52.0
5	At the NE corner of the intersection of N Mountain Ave and W Princeton Street	11:58 – 12:08 PM	10 Minutes	71.4

4.3 Sensitive Receptors

Noise exposure goals for various types of land uses reflect the varying noise sensitivities associated with those uses. Noise sensitive uses typically include residences, hospitals, schools, childcare facilities, and places of assembly. Vibration sensitive receivers are generally similar to noise sensitive receivers but may also include businesses, such as research facilities and laboratories that use vibration-sensitive equipment. The project site is surrounded by a mix of residential and commercial properties to the west, north, east, and south. Noise sensitive land uses nearest to the project site are listed in **Error! Reference source not found.** and shown on Exhibit 4: Noise Measurement Locations.

Table 8: Sensitive Receptors

Sensitive Receptor Number	Receptor Description	Distance and Direction from the Project
1	Single-family Residences	Adjacent to the east
2	Single-family Residences	Adjacent to the north
3	Church	23 feet to the north
4	Single-family Residences	75 feet to the southeast

5 SIGNIFICANCE CRITERIA AND METHODOLOGY

5.1 CEQA Thresholds

State CEQA Guidelines Appendix G contains analysis guidelines related to noise and vibration. These guidelines have been used by the City to develop thresholds of significance for this analysis. A project would create a significant environmental impact if it would:

- Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- Generate excessive groundborne vibration or groundborne noise levels; and
- For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels.

Thresholds

Construction Noise

The City of Ontario has not established quantitative construction noise standards; therefore, this analysis conservatively uses the FTA's threshold of 80 dBA (8-hour L_{eq}) for residential uses and 90 dBA (8-hour L_{eq}) for non-residential uses to evaluate construction noise impacts. The City Municipal Code states that construction is only permitted between the hours of 7:00 AM and 6:00 PM, Monday through Saturday and 9:00 AM to 6:00 PM on Sunday.

Operational Noise

Non-Transportation Noise

Non-transportation related noise generators are commonly called "stationary," "fixed," "area," or "point" sources of noise. Industrial processing, mechanical equipment, pumping stations, and heating, ventilating, and air conditioning (HVAC) equipment are examples of fixed location, non-transportation noise sources.

Operational noise is evaluated based on the standards within the City's Noise Ordinance (Ontario Municipal Code, Section 5-29.04, Exterior Noise Standards) and the City's General Plan. In general, exterior noise levels within multi-family residential and commercial areas are limited to 65 dBA in the daytime, between 7:00 AM and 10:00 PM. Nighttime noise thresholds, between 10:00 PM and 7:00 AM, are limited to 50 dBA for multi-family residential uses and 60 dBA for commercial uses (refer to Table 5). These noise limits are used as significance thresholds for the impact of stationary noise sources on receptors located within the City of Ontario.

Mobile Noise

Traffic noise, including automobiles, trucks, and other motor vehicles is the most pervasive source of noise in the City of Ontario. Traffic generated noise impacts are evaluated based on standards within the

General Plan. A project will normally have a significant effect on the environment related to noise if it will substantially increase the ambient noise levels for adjoining areas. Most people can detect changes in sound levels of approximately 3 dBA under normal, quiet conditions, and changes of 1 to 3 dBA are detectable under quiet, controlled conditions. Changes of less than 1 dBA are usually indiscernible. A change of 5 dBA is readily discernible to most people in an exterior environment. Based on this, the following thresholds of significance are used to assess traffic noise impacts at sensitive receptor locations:[10]

- Greater than 1.5 dBA increase for ambient noise environments of 65 dBA CNEL and higher;
- Greater than 3 dBA increase for ambient noise environments of 60 -64 CNEL; and
- Greater than 5 dBA increase for ambient noise environments of less than 60 dBA CNEL.

Vibration

Architectural Damage

The cities of Ontario and Chino do not have established vibration damage criteria, therefore the United States Department of Transportation Federal Transit Administration (FTA) criteria for acceptable levels of ground-borne vibration for various types of buildings is used for this analysis. Structures that amplify ground borne vibration and wood-frame buildings, such as typical residential structures, are more affected by ground vibration than heavier buildings. The level at which ground borne vibration is strong enough to cause architectural damage has not been determined conclusively. The most conservative estimates are reflected in the FTA standards shown in Table 9: Ground borne Vibration Criteria – Architectural Damage.

Table 9: Groundborne Vibration Criteria - Architectural Damage

Building Category		PPV (in/sec)
I.	Reinforced concrete, steel, or timber (no plaster)	0.5
II.	Engineered concrete and masonry (no plaster)	0.3
III.	Non-engineered timber and masonry buildings	0.2
IV.	Buildings extremely susceptible to vibration damage	0.12

Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018.

5.2 Plans, Programs, and Policies

PPP N-1 The proposed project shall comply with City of Ontario MC Chapter 29, Exterior Noise Standards and Section 5-29.09, which limits construction activities to weekdays between the hours of 7:00 am and 6:00 pm or on Saturday or Sunday between the hours of 9:00 am and 6:00 pm.

[10] City of Ontario, The Ontario Plan 2050 Environmental Impact Report, 2022.

5.3 Methodology

Construction

Construction noise levels were based on typical noise levels generated by construction equipment published by the Federal Transit Administration (FTA) and the Federal Highway Administration (FHWA). Construction noise is assessed in dBA L_{eq}. This unit is appropriate because L_{eq} can be used to describe noise level from operation of each piece of equipment separately, and levels can be combined to represent the noise level from all equipment operating during a given period.

Construction noise modeling was conducting using the FHWA Roadway Construction Noise Model (RCNM). Reference noise levels are used to estimate operational noise levels at nearby noise-sensitive receptors based on a standard noise attenuation rate of 6 dB per doubling of distance (line-of-sight method of sound attenuation for point sources of noise). Noise level estimates do not account for the presence of intervening structures or topography, which may reduce noise levels at receptor locations. Therefore, the noise levels presented herein represent a conservative, reasonable worst-case estimate of actual temporary construction noise. The City of Ontario does not establish quantitative construction noise standards. As noted above, this analysis conservatively uses the FTA's threshold of 80 dBA (8-hour L_{eq}) for residential uses and 85 dBA (8-hour L_{eq}) for commercial/non-residential uses to evaluate construction noise impacts.

Operations

The analysis of the Without Project and With Project noise environments is based on noise prediction modeling and empirical observations. Reference noise level data are used to estimate the Project operational noise impacts from stationary sources. Noise levels are collected from field noise measurements and other published sources from similar types of activities are used to estimate noise levels expected with the Project's stationary sources. The reference noise levels are used to represent a worst-case noise environment as noise level from stationary sources can vary throughout the day. Operational noise is evaluated based on the standards within the City's Noise Ordinance and TOP. The Without Project and With Project traffic noise levels in the Project vicinity were calculated using the FHWA Highway Noise Prediction Model (FHWA-RD-77-108). The actual sound level at any receptor location is dependent upon such factors as the source-to-receptor distance and the presence of intervening structures (walls and buildings), barriers, and topography. The noise attenuating effects of changes in elevation, topography, and intervening structures were not included in the model. Therefore, the modeling effort is considered a worst-case representation of the roadway noise. In general, a 3-dBA increase in traffic noise is barely perceptible to people, while a 5-dBA increase is readily noticeable.

Vibration

Groundborne vibration levels associated with construction-related activities for the Project were evaluated utilizing typical groundborne vibration levels associated with construction equipment, obtained from FTA published data for construction equipment. Potential groundborne vibration impacts related to building/structure damage and interference with sensitive existing operations were evaluated, considering the distance from construction activities to nearby land uses and typically applied criteria.

Construction vibration levels were calculated using the following formula:

$$PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$$

where: PPV_{equip} = the peak particle velocity in in/sec of the equipment adjusted for the distance
PPV_{ref} = the reference vibration level in in/sec from Table 7-4 of the Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, 2018.
D = the distance from the equipment to the receiver

6 POTENTIAL IMPACTS AND MITIGATION

6.1 Acoustical Impacts

Previous Significance Determination

The 2022 Final Supplemental EIR for The Ontario Plan 2050 concluded that implementation of The Ontario Plan would result in significant and unavoidable impacts relative to construction noise and vibrations. The EIR determined that development under the General Plan could generate construction noise levels in excess of 80 dBA L_{eq} and generate disturbances for prolonged periods of time at noise-sensitive receptors. **MM 12-4** would reduce potential noise impacts to the extent feasible however construction could still result in increase in noise levels above ambient conditions and exceed the 80 dBA L_{eq} threshold. However, the EIR determined that operation noise, including stationary sources and traffic noise would not result in new or a substantial increase noise. Therefore, although operational noise would not exceed City thresholds, construction noise impacts would remain significant and unavoidable impact.

The Certified EIR also determined that development of the General Plan could generate varying degrees of vibrations based on the type of construction equipment used and the distance from receptors. **MM 12-2** would reduce the potential impacts associated with construction vibration to extent feasible. However, due to the potential proximity of construction activities, the number of construction projects occurring, and the potential duration of construction activities, the EIR concluded that impacts associated with construction related vibrations would be significant and unavoidable.

The Final EIR also concluded that residents and other sensitive receptors located within the Ontario International Airport noise contour would be exposed to excessive noise levels from airport operations, and consequently indoor and exterior noise environments would be exposed to elevated noise levels from aircraft overflights. With the implementation of **MM 12-1**, impacts to future sensitive receptors from excessive airport-related noise would be reduced to interior noise levels of 45 dBA CNEL or less. However, exterior noise levels may continue to exceed noise compatibility standards for the City, therefore airport noise impacts were determined to be significant and unavoidable.

Threshold 6.1 Would the Project generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Construction

Construction noise typically occurs intermittently and varies depending on the construction activity's nature or phase (e.g., land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. During construction, exterior noise levels could affect noise-sensitive receptors near the construction site. The nearest sensitive receptors to the project site construction area are existing residential uses to the north and east, located adjacent to the Project property boundary. However, it is noted that construction activities would occur throughout the project site and would not be concentrated at a single point near noise-sensitive receptors.

Construction activities would include demolition, site preparation, grading, building construction, paving, and architectural coating. Such activities would require:

- Industrial saws, excavators, and dozers during demolition;
- Dozers and tractors during site preparation;
- Excavators, graders, dozers, and tractors during grading;
- Cranes, forklifts, generators, tractors, and welders during building construction;
- Pavers, rollers, and paving equipment during paving; and
- Air compressors during architectural coating.

Typical noise levels associated with individual construction equipment are listed in Table 10: Typical Construction Noise Levels. For safety reasons, heavy duty construction equipment and machinery are assumed to stay a minimum of 25 feet from the boundaries of occupied properties.

Table 10: Typical Construction Noise Levels

Equipment	Typical Noise Level (dBA) at 50 feet from Source	Typical Noise Level (dBA) at 25 feet from Source[1]
Air Compressor	80	86
Backhoe	80	86
Compactor	82	88
Concrete Mixer	85	91
Concrete Pump	82	88
Concrete Vibrator	76	82
Crane, Mobile	83	89

1. Calculated using the inverse square law formula for sound attenuation: $dBA_2 = dBA_1+20Log(d_1/d_2)$
Where: dBA_2 = estimated noise level at receptor; dBA_1 = reference noise level; d_1 = reference distance; d_2 = receptor location distance

Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018.

Although the construction equipment noise levels in Table 10 are from FTA's 2018 *Transit Noise and Vibration Impact Assessment Manual*, the noise levels are based on measured data from a U.S.

Environmental Protection Agency report which uses data from the 1970s,[11] the FHWA Roadway Construction Noise Model which uses data from the early 1990s, and other measured data. Since that time, construction equipment has been required to meet more stringent emissions standards and the additional necessary exhaust systems also reduce noise from what is shown in the table.

Section 5-29.09 (Construction Activity Noise Regulations) of the City of Ontario Municipal Code restricts noise sources associated with construction activities between the hours of 7:00 AM to 6:00 PM on weekdays and 9:00 AM to 6:00 PM on Saturday. While the City establishes limits to the hours during which construction activity may take place, it does not identify specific noise level limits for construction noise levels. The City's permitted hours of construction are required in recognition that construction activities undertaken during daytime hours are a typical part of living in an urban environment and do not cause a significant impact.

Quantitative Construction Noise Assessment

However, this analysis conservatively uses the FTA's threshold of 80 dBA and 85 dBA (8-hour L_{eq}) to evaluate construction noise impacts for residential and commercial uses, respectively.[12] It should be noted that although Table 10 shows that some equipment would exceed 80 dBA at 25 feet, the FTA's noise threshold is measured over an eight hour period, meaning that a single piece equipment would need to be stationary and operating continuously for eight hours to exceed the 80 dBA threshold. In addition, standard construction provides 25 dBA of exterior-to-interior noise attenuation with windows closed and 15 dBA with windows open.[13] Therefore, it can be assumed that exterior noise levels of 94 dBA (jack hammer) would equal 69 dBA when measured from the interior with windows closed.

Following FTA's methodology for quantitative construction noise assessments, construction-generated noise levels associated with the Project were calculated using FHWA's RCNM computer program. RCNM enables the prediction of construction noise levels for a variety of construction operations based on a compilation of empirical data and the application of acoustical propagation formulas. When calculating construction noise, all construction equipment is assumed to operate simultaneously at the center of the active construction zone to represent an average distance throughout the day. See Appendix B: Noise Modeling Data for more information regarding the construction assumptions used in this analysis.

The noise levels calculated in Table 11: Project Construction Noise Levels, show estimated exterior construction noise. Construction noise would increase ambient noise in the project's vicinity. Generally, noise increases of less than 3 dBA is barely perceptible to people, while a 5-dBA increase is readily noticeable. Therefore, ambient noise level increases greater than 5 dBA would be considered significant. As shown in Table 11, construction noise would lead to an increase in ambient noise levels by a maximum of 15.6 dBA. However, the combined noise level would remain below the 80 dBA construction threshold for residential uses. Thus, construction noise would be considered less than significant.

Combined Building Construction and Architectural Coating [3]	71.1		No		71.3	No [4]

1. Federal Transit Administration noise threshold of 80 dBA for residences.
2. Based on the construction schedule, building construction and paving activities are anticipated to overlap. Therefore, the equipment from these two activities have been combined.
3. Based on the construction schedule, building construction and architectural coating activities are anticipated to overlap. Therefore, the equipment from these two activities have been combined.
4. Combined Noise level remains below the 80 dBA construction noise threshold for residential uses.

Source: Federal Highway Administration, *Roadway Construction Noise Model,* 2006. Refer to Appendix B for noise modeling results.

Operations

Project implementation would create new sources of noise in the site vicinity. The mixed-use development's major noise sources including the following:

- Stationary Noise Sources - mechanical equipment (i.e., trash compactors, air conditioners, etc.);
- Parking areas (i.e., car door slamming, car radios, engine start-up, and car pass-by); and
- Off-site traffic noise

Stationary Noise Sources

The project site is located near residential properties to the north and east, while properties to the south and west are primarily commercial. The nearest sensitive receptors are located to the north and east, adjacent to the Project's property boundary. Potential stationary noise sources related to long-term operation of the project site would include mechanical equipment. Mechanical equipment (e.g., heating ventilation and air conditioning [HVAC] equipment) typically generates noise levels of approximately 52 dBA at 50 feet[14]. At the closest sensitive receptor, approximately 160 feet away, mechanical equipment noise levels would attenuate to 41.9 dBA, which is below the City's ambient noise standards of 60 to 65 dBA for residential receptors (refer to **Error! Reference source not found.**). The ambient noise level at Sensitive Receptor 1 was measured at 57.2 dBA (refer to Table 7) and would increase by 0.1 dBA with the inclusion of the HVAC equipment. This increase would be below the 3 dBA perceptibility threshold.

[14] Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden, *Noise Navigator Sound Level Database with Over 1700 Measurement Values*, July 6, 2010.

Parking Noise

All parking would be provided on the project site with a six level above grade parking structure. Traffic associated with parking lots is typically not of sufficient volume to exceed community noise standards, which are based on a time-averaged scale such as the CNEL scale. The instantaneous maximum sound levels generated by a car door slamming, engine starting up, and car pass-bys range from 53 to 61 dBA.[15] Conversations in parking areas may also be an annoyance to adjacent sensitive receptors. Sound levels of speech typically range from 33 dBA at 50 feet for normal speech to 50 dBA at 50 feet for very loud speech.[16] It should be noted that parking lot noises are instantaneous noise levels compared to noise standards in the hourly L_{eq} metric, which are averaged over the entire duration of a time period. As a result, actual noise levels over time resulting from parking lot activities would be far lower than the reference levels identified above.

For the purpose of providing a conservative, quantitative estimate of the noise levels that would be generated from the vehicles entering and exiting the parking lot, the methodology recommended by FTA for the general assessment of stationary transit noise sources is used. Using the methodology, the Project's peak hourly noise level that would be generated by the on-site parking levels was estimated using the following FTA equation for a parking lot:

$$L_{eq(h)} = SEL_{ref} + 10 \log (NA/1{,}000) - 35.6$$

Where:

$L_{eq(h)}$ = hourly L_{eq} noise level at 50 feet

SEL_{ref} = reference noise level for stationary noise source represented in sound exposure level (SEL) at 50 feet

NA = number of automobiles per hour

35.6 is a constant in the formula, calculated as 10 times the logarithm of the number of seconds in an hour

Based on the peak hour trip generation rates in the Traffic Study, approximately 76 trips during the AM peak hour and 81 trips during the PM peak hour would be made to the project site each day. Using the FTA's reference noise level of 92 dBA SEL[17] at 50 feet from the noise source, the Project's highest peak hour vehicle trips would generate noise levels of approximately 45.5 dBA L_{eq} at 50 feet from the parking lot. The nearest residential property is 180 feet north of the parking structure entrance, on the opposite side of the church (currently under construction). Based strictly on distance attenuation, parking lot noise at the nearest receptor would be 34.4 dBA which is below the City's residential and residential noise standards of 65 dBA daytime and 45 dBA nighttime noise standards. The ambient noise level at Sensitive Receptor 2, which is located nearest to a parking structure entrance/exit, was measured at 52.0 dBA (refer Table 7) and would increase by 0.1 dBA with the inclusion of parking structure noise. This increase would be below the 3 dBA perceptibility threshold.

16 Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden. Noise Navigator Sound Level Database with Over 1700 Measurement Values, July 6, 2010.

17 Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018.

Off-Site Traffic Noise

Implementation of the Project would generate increased traffic volumes along nearby roadway segments. According to the Traffic Analysis, the Project Buildout would generate a total of 8,820 daily trips which would result in noise increases on Project area roadways. In general, a traffic noise increase of less than 3 dBA is barely perceptible to people, while a 5-dBA increase is readily noticeable. Generally, traffic volumes on Project area roadways would have to approximately double for the resulting traffic noise levels to increase by 3 dBA. Therefore, permanent increases in ambient noise levels of less than 3 dBA are considered to be less than significant.

Traffic noise levels for roadways primarily affected by the Project were calculated using the FHWA's Highway Noise Prediction Model (FHWA-RD-77-108). Traffic noise modeling was conducted for conditions With and Without the Project, based on traffic volumes from the Traffic Analysis. Table 12: Project Traffic Noise Levels identifies Project traffic-generated noise levels. Noise levels on Project area roadways under With Project conditions would range between 44.3 dBA CNEL and 66.5 dBA CNEL at 100 feet from the centerline, and the Project would result in a maximum increase of 0.2 dBA CNEL along 4th Street. Noise impacts from off-site traffic would be less than significant.

Table 12: Project Traffic Noise Levels

Roadway	Segment	Opening Year		Opening Year Plus Project		Project Change from No Build Conditions	Significant Impact?
		ADT	dBA CNEL[1]	ADT	dBA CNEL[1]		
Mountain Avenue	North of 4th Street	25,605	66.4	26,035	66.5	0.1	No
	South of 4th Street	21,715	65.7	21,845	65.7	0.0	No
4th Street	West of Mountain Avenue	7,320	58.5	7,450	58.6	0.1	No
	Mountain Avenue to Palmetto Avenue	9,106	59.4	9,366	59.6	0.2	No
	East of Palmetto Avenue	8,866	59.3	8,996	59.4	0.1	No
Palmetto Avenue	South of 4th Street	1,004	44.3	1,004	44.3	0.0	No

ADT = average daily traffic; dBA = A-weighted decibels; CNEL = community noise equivalent level

1. Traffic noise levels are at 100 feet from the roadway centerline. The actual sound level at any receptor location is dependent upon such factors as the source-to-receptor distance and the presence of intervening structures, barriers, and topography.

Source: *Traffic Study for the Proposed Watermarke Ontario Project in the City of Ontario*, prepared by Kimley-Horn and Associates, 2023. Refer to Appendix B for traffic noise modeling assumptions and results.

2022 The Ontario Plan 2050 FEIR Mitigation Measures. The FEIR includes measures to reduce potential impacts associated with the implementation of The Ontario Plan 2050. The following measures from the FEIR are applicable to the proposed Project:

MM 12-4 Construction activities associated with new development that occurs near sensitive receptors shall be evaluated for potential noise impacts. Construction contractors shall implement the following measures for construction activities conducted in the City of Ontario. Construction plans submitted to the City shall identify these measures on demolition, grading, and construction plans submitted to the City. The City of Ontario Planning and Building Departments shall verify that grading, demolition, and/or

construction plans submitted include these notations prior to issuance of demolition, grading, and/or building permits.

- Construction activity is limited to the hours: Between 7:00 AM and 6:00 PM Monday through Friday and 9:00 AM to6:00 PM Saturdays and Sundays, as prescribed in Municipal Code Section 5-29.09.

- During the entire active construction period, equipment and trucks used for project construction shall use the best-available noise control techniques (e.g., improved mufflers, equipment re-design, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds) wherever feasible.

- Impact tools (e.g., jack hammers and hoe rams) shall be hydraulically or electronically powered whenever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools.

- Stationary equipment, such as generators and air compressors shall be located as far as feasible from nearby noise-sensitive uses.

- Stockpiling shall be located as far as feasible from nearby noise-sensitive receptors.

- Construction traffic shall be limited, to the extent feasible, to approved haul routes established by the City's Engineering Department.

- At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours, as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report the action to the City.

- Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes.

- During the entire construction period and to the extent feasible, the use of noise-producing signals, including horns, whistles, alarms, and bells, shall be safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level or switch of back-up alarms and replace with human spotters in compliance with all safety requirements and laws.

- Erect temporary noise barriers (at least as high as the exhaust of equipment and breaking line-of-sight between noise sources and sensitive receptors) as necessary and feasible, to maintain construction noise levels at or below the performance standard of 80 dBA L_{eq}. Barriers shall be constructed with a solid material that has a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier and may be lined on the construction side with an acoustical blanket, curtain, or equivalent absorptive material.

Level of Significance: Less than significant impact.

Conclusion

As demonstrated in Table 11 and Table 12, implementation of the Project would not result in substantial temporary or permanent increases in ambient noise levels. Table 11 confirms that construction of the Project would not exceed construction noise thresholds. In addition, Table 12 demonstrates that operational noise levels from the Project would not exceed applicable noise standards during the Project's opening year. Noise impacts related to the proposed Project are less than the significant and unavoidable impacts identified in The Ontario Plan 2050 Final EIR. No new impacts or a substantial increase in the severity of a previously identified significant impact evaluated in the Final EIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Final EIR was certified is available that would alter the Final EIR's significance finding.

Threshold 6.2 Would the Project generate excessive groundborne vibration or groundborne noise levels?

Construction Vibration

Construction can generate varying degrees of ground vibration, depending on the construction procedures and equipment. Operation of construction equipment generates vibrations that spread through the ground and diminish with distance from the source. Construction on the project site would have the potential to result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used and the operations involved.

The FTA has published standard vibration velocities for construction equipment operations. In general, the FTA architectural damage criterion for continuous vibrations (i.e., 0.2 in/sec) appears to be conservative. The types of construction vibration impacts include human annoyance and building damage. Human annoyance occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. Building damage can be cosmetic or structural. Ordinary buildings that are not particularly fragile would not experience any cosmetic damage (e.g., plaster cracks) at distances beyond 30 feet. This distance can vary substantially depending on the soil composition and underground geological layer between vibration source and receiver. In addition, not all buildings respond similarly to vibration generated by construction equipment. For example, for a building that is constructed with reinforced concrete with no plaster, the FTA guidelines show that a vibration level of up to 0.20 in/sec is considered safe and would not result in any construction vibration damage.

Table 13: Typical Construction Equipment Vibration Levels, lists vibration levels at 25 feet for typical construction equipment and at 5 feet, the distance from the Project boundary to the nearest existing structure (Sensitive Receptor 1). In addition, vibration levels at 23 feet, the distance from the nearest

construction area to an existing structure is also included, as heavy construction equipment would not be operated at the project boundary next to sensitive receptors. As indicated in Table 13, based on FTA data, vibration velocities from typical heavy construction equipment operations that would be used during Project construction range from 0.003 to 0.101 in/sec PPV at 23 feet from the source of activity.

Table 13: Typical Construction Equipment Vibration Levels

Equipment	Peak Particle Velocity at 25 Feet (in/sec)	Peak Particle Velocity at 5 Feet (in/sec)[1]	Peak Particle Velocity at 23 Feet (in/sec)[1]
Large Bulldozer	0.089	0.9951	0.101
Caisson Drilling	0.089	0.9951	0.101
Loaded Trucks	0.076	0.8497	0.086
Jackhammer	0.035	0.3913	0.040
Small Bulldozer/Tractors	0.003	0.0335	0.003

1. Calculated using the following formula: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$, where: PPV_{equip} = the peak particle velocity in in/sec of the equipment adjusted for the distance; PPV_{ref} = the reference vibration level in in/sec from Table 7-4 of the Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, 2018; D = the distance from the equipment to the receiver.

Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, 2018.

Table 13 shows that at 23 feet, the vibration velocities from construction equipment would exceed 0.101 in/sec PPV which is below the FTA's 0.20 in/sec PPV threshold for building damage. It is also acknowledged that construction activities would occur throughout the Project site and would not be concentrated at the point closest to the nearest structure. Therefore, vibration impacts associated with Project construction would be less than significant.

Operational Vibration

Once operational, the Project would not be a significant source of groundborne vibration. Groundborne vibration surrounding the Project currently result from heavy-duty vehicular travel (e.g., refuse trucks, heavy duty trucks, delivery trucks, and transit buses) on the nearby local roadways. Operations of the proposed Project would include activities associated with residential development that typically would not cause excessive ground-borne vibrations. Due to the rapid drop-off rate of groundborne vibration and the short duration of the associated events, vehicular traffic-induced groundborne vibration is rarely perceptible beyond the roadway right-of-way, and rarely results in vibration levels that cause damage to buildings in the vicinity. According to the FTA Noise and Vibration Manual, trucks rarely create vibration levels that exceed 70 VdB (equivalent to 0.012 in/sec PPV) when they are on roadways. Therefore, automobiles accessing the project site or traveling along surrounding roadways would not exceed FTA thresholds for building damage. Vibration impacts associated with Project operations would be less than significant in this regard.

2022 The Ontario Plan 2050 FEIR Mitigation Measures. The FEIR includes measures to reduce potential impacts associated with the implementation of The Ontario Plan 2050. The following measures from the FEIR are applicable to the proposed Project:

MM 12-2 Prior to issuance of a building permit, individual projects that involve vibration-intensive construction activities, such as pile drivers, jack hammers, and vibratory rollers near sensitive receptors shall be evaluated for potential vibration impacts. Construction within 135 feet of fragile structures, such as historical resources, 100 feet of non-engineered

timber and masonry buildings (e.g., most residential buildings), or within 75 feet of engineered concrete and masonry (no plaster); or a vibratory roller within 25 feet of any structure, the project applicant shall prepare a noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to these activities. This noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed FTA architectural damage thresholds (e.g., 0.12 in/sec PPV for fragile or historical resources, 0.2 in/sec PPV for non-engineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses such as drilling piles as opposed to pile driving and static rollers as opposed to vibratory rollers shall be used. If necessary, construction vibration monitoring shall be conducted to ensure vibration thresholds are exceeded.

Level of Significance: Less than significant impact.

Conclusion

As demonstrated in Table 13 and discussed above, implementation of the Project would not result in excessive groundborne vibration levels. Vibration impacts related to the proposed Project are less than the significant and unavoidable impacts identified in The Ontario Plan 2050 Final EIR. No new impacts or a substantial increase in the severity of a previously identified significant impact evaluated in the Final EIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Final EIR was certified is available that would alter the Final EIR's significance finding.

Threshold 6.3 For a Project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the Project area to excessive noise levels?

The nearest airport to the Project site is the Ontario International Airport located approximately three miles to the southeast. Therefore, the Project is not within two miles of the Ontario Airport, and it is outside the 60 CNEL noise contour. [18] Additionally, there are no private airstrips located within the Project vicinity. Therefore, the Project would not expose people working in the Project area to excessive airport related noise levels and no mitigation is required.

2022 The Ontario Plan 2050 FEIR Mitigation Measures. The FEIR includes measures to reduce potential impacts associated with the implementation of The Ontario Plan 2050. The following measures from the FEIR are applicable to the proposed Project:

MM 12-1 Prior to the issuance of building permits for any project that involves a noise-sensitive use within the 65 dBA CNEL contour of the Ontario International Airport, the project property owner/developers shall retain an acoustical engineer to conduct an acoustic analysis and identify, where appropriate, site design features and/or required building acoustical improvements (e.g., sound transmission class rated windows, doors, and attic baffling), to ensure compliance with the City's Noise Compatibility Criteria and the California State

[18] City of Ontario, *The Ontario Plan 2050*, *Safety Element, S-4 Noises Hazards. Figure S-06c Airport Noise Contours*, 2020.

Building Code and California Noise Insulation Standards (Titles 24 and 21 of the California Code of Regulations).

Level of Significance: Less than significant impact.

Conclusion

The Project site is located outside the Ontario International Airport noise contours and Project impacts are less than the significant unavoidable impacts identified in The Ontario Plan 2050 Final EIR. No new impact relative to airport noise or a substantial increase in the severity of a previously identified significant impact evaluated in the Final EIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Final EIR was certified is available that would alter the Final EIR's significance finding.

6.2 Cumulative Noise Impacts

Cumulative Construction Noise

The Project's construction activities would not result in a substantial temporary increase in ambient noise levels. Construction noise would be periodic and temporary noise impacts that would cease upon completion of construction activities. The Project would contribute to other proximate construction project noise impacts if construction activities were conducted concurrently. However, based on the noise analysis above, the Project's construction-related noise impacts would be less than significant.

Construction activities at other planned and approved projects near the project site would be required to comply with applicable City rules related to noise and would take place during daytime hours on the days permitted by the applicable Municipal Code, and projects requiring discretionary City approvals would be required to evaluate construction noise impacts, comply with the City's standard conditions of approval, and implement mitigation, if necessary, to minimize noise impacts. Construction noise impacts are by nature localized. Based on the fact that noise dissipates as it travels away from its source, noise impacts would be limited to the project site and vicinity. Therefore, Project construction would not result in a cumulatively considerable contribution to significant cumulative impacts, assuming such a cumulative impact existed. Impacts in this regard are not cumulatively considerable.

Cumulative Operational Noise

Cumulative Off-Site Traffic Noise

Cumulative noise impacts describe how much noise levels are projected to increase over existing conditions with the development of the proposed Project and other foreseeable projects. Cumulative noise impacts would occur primarily as a result of increased traffic on local roadways due to buildout of the proposed Project and other projects in the vicinity. Cumulative increases in traffic noise levels were estimated by comparing the Existing and Opening Year Without Project scenarios to the Opening Year Plus Project scenario. The traffic analysis considers cumulative traffic from future growth assumed in the transportation model, as well as cumulative projects.

A project's contribution to a cumulative traffic noise increase would be considered significant when the combined effect exceeds perception level (i.e., auditory level increase) threshold. The following criteria is used to evaluate the combined and incremental effects of the cumulative noise increase.

- **Combined Effect**. The cumulative with Project noise level ("Cumulative With Project") would cause a significant cumulative impact if a 3.0 dB increase over "Existing" conditions occurs and the resulting noise level exceeds the applicable exterior standard at a sensitive use. Although there may be a significant noise increase due to the proposed Project in combination with other related projects (combined effects), it must also be demonstrated that the Project has an incremental effect. In other words, a significant portion of the noise increase must be due to the proposed Project.

- **Incremental Effects**. The "Cumulative With Project" causes a 1.0 dBA increase in noise over the "Cumulative Without Project" noise level.

A significant impact would result only if both the combined and incremental effects criteria have been exceeded. Noise by definition is a localized phenomenon and reduces as distance from the source increases. Consequently, only the proposed Project and growth due to occur in the general area would contribute to cumulative noise impacts.

Table 14: Cumulative Off-Site Traffic Noise Levels identifies the traffic noise effects along roadway segments in the Project vicinity for "Existing," "Opening Year Without Project," and "Opening Year With Project," conditions, including incremental and net cumulative impacts.

Table 14: Cumulative Off-Site Traffic Noise Levels

Roadway	Segment	Existing dBA CNEL[1]	Opening Year Without Project dBA CNEL[1]	Opening Year With Project dBA CNEL[1]	Combined Effects	Incremental Effects	Cumulatively Significant
					Difference in dBA Between Existing and Opening Year With Project	Difference in dBA Between Opening Year With and Without Project	
Mountain Avenue	North of 4th Street	65.9	66.4	66.5	0.6	0.1	No
	South of 4th Street	65.4	65.7	65.7	0.3	0.0	No
4th Street	West of Mountain Avenue	58.1	58.5	58.6	0.5	0.1	No
	Mountain Avenue to Palmetto Avenue	59.1	59.4	59.6	0.5	0.2	No
	East of Palmetto Avenue	59.0	59.3	59.4	0.4	0.1	No
Palmetto Avenue	South of 4th Street	42.1	44.3	44.3	0.2	0.0	No

ADT = average daily traffic; dBA = A-weighted decibels; CNEL = community noise equivalent level

1. Traffic noise levels are at 100 feet from the roadway centerline. The actual sound level at any receptor location is dependent upon such factors as the source-to-receptor distance and the presence of intervening structures, barriers, and topography.

Source: *Traffic Study for the Proposed Watermarke Ontario Project in the City of Ontario*, prepared by Kimley-Horn and Associates, 2023. Refer to Appendix B for traffic noise modeling assumptions and results.

A significant impact would result only if both the combined and incremental effects criteria have been exceeded, and the resultant noise level exceeds the Normally Acceptable land use compatibility noise

standard. Noise by definition is a localized phenomenon and reduces as distance from the source increases. Consequently, only the proposed Project and growth due to occur in the general area would contribute to cumulative noise impacts.

Table 14 shows that off-site traffic noise will not exceed both the combined and incremental noise thresholds used to identify cumulative impacts. As discussed above, a cumulative traffic noise impact would only occur if both the combined and incremental effects criteria are exceeded, and the resultant noise level exceeds the Normally Acceptable land use compatibility standard. Therefore, cumulative traffic impacts from the proposed Project would be less than significant.

Cumulative Stationary Noise

Stationary noise sources of the proposed Project would result in an incremental increase in non-transportation noise sources in the vicinity of the project site. However, as discussed above, operational noise caused by the proposed Project would be less than significant. Similar to the proposed Project, other planned and approved projects would be required to mitigate for stationary noise impacts at nearby sensitive receptors, if necessary. As stationary noise sources are generally localized, there is a limited potential for other projects to contribute to cumulative noise impacts.

No known past, present, or reasonably foreseeable projects would combine with the operational noise levels generated by the Project to increase noise levels above acceptable standards because each project must comply with applicable City regulations that limit operational noise. Therefore, the Project, together with other projects, would not create a significant cumulative impact, and even if there was such a significant cumulative impact, the Project would not make a cumulatively considerable contribution to significant cumulative operational noises.

Given that noise dissipates as it travels away from its source, operational noise impacts from on-site activities and other stationary sources would be limited to the project site and vicinity. Thus, cumulative operational noise impacts from related projects, in conjunction with Project specific noise impacts, would not be cumulatively significant.

Level of Significance: Less than significant impact.

Conclusion

As demonstrated in Table 14 and discussed above, implementation of the Project would not result in cumulatively significant off-site traffic noise or stationary noise. Cumulative noise impacts related to the proposed Project are less than the significant and unavoidable impacts identified in The Ontario Plan 2050 Final EIR. No new impacts or a substantial increase in the severity of a previously identified significant impact evaluated in the Final EIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Final EIR was certified is available that would alter the Final EIR's significance finding.

TRAFFIC STUDY
FOR THE PROPOSED
WATERMARKE ONTARIO PROJECT
IN THE CITY OF ONTARIO

INTRODUCTION

Purpose and Study Objectives

This traffic study has been prepared to address the traffic-related effects of the proposed Watermarke Ontario project in the City of Ontario. This traffic study has been conducted in accordance with the traffic study requirements of the City of Ontario and the San Bernardino Association of Governments (SANBAG) Congestion Management Program (CMP).

This report includes a description of existing traffic conditions in the surrounding area, estimated project trip generation and distribution, future traffic growth, and an assessment of project-related effects on the transportation system. Where necessary, circulation system improvements have been identified to address project-related effects at the study locations.

Project Overview

The project site is located on the northeast corner of the intersection of Mountain Avenue and 4th Street in the City of Ontario. The project site is shown in its regional setting on **Figure 1.** The proposed site is bounded by vacant and residential uses to the north, residential uses to the east, 4th Street to the south, and Mountain Avenue to the west.

The project site currently consists of a United States Post Office building and a commercial building with various retail uses. The applicant proposes to demolish the existing uses and construct 357 multi-family dwelling units and 3,800 square feet (SF) of retail on 5.8 acres. A copy of the project site plan is provided on **Figure 2**.

Direct vehicular access provisions for the project site would consist of one main entry full-movement driveway on 4th Street and one full-movement driveway on Mountain Avenue that provides access to the parking garage for residents.

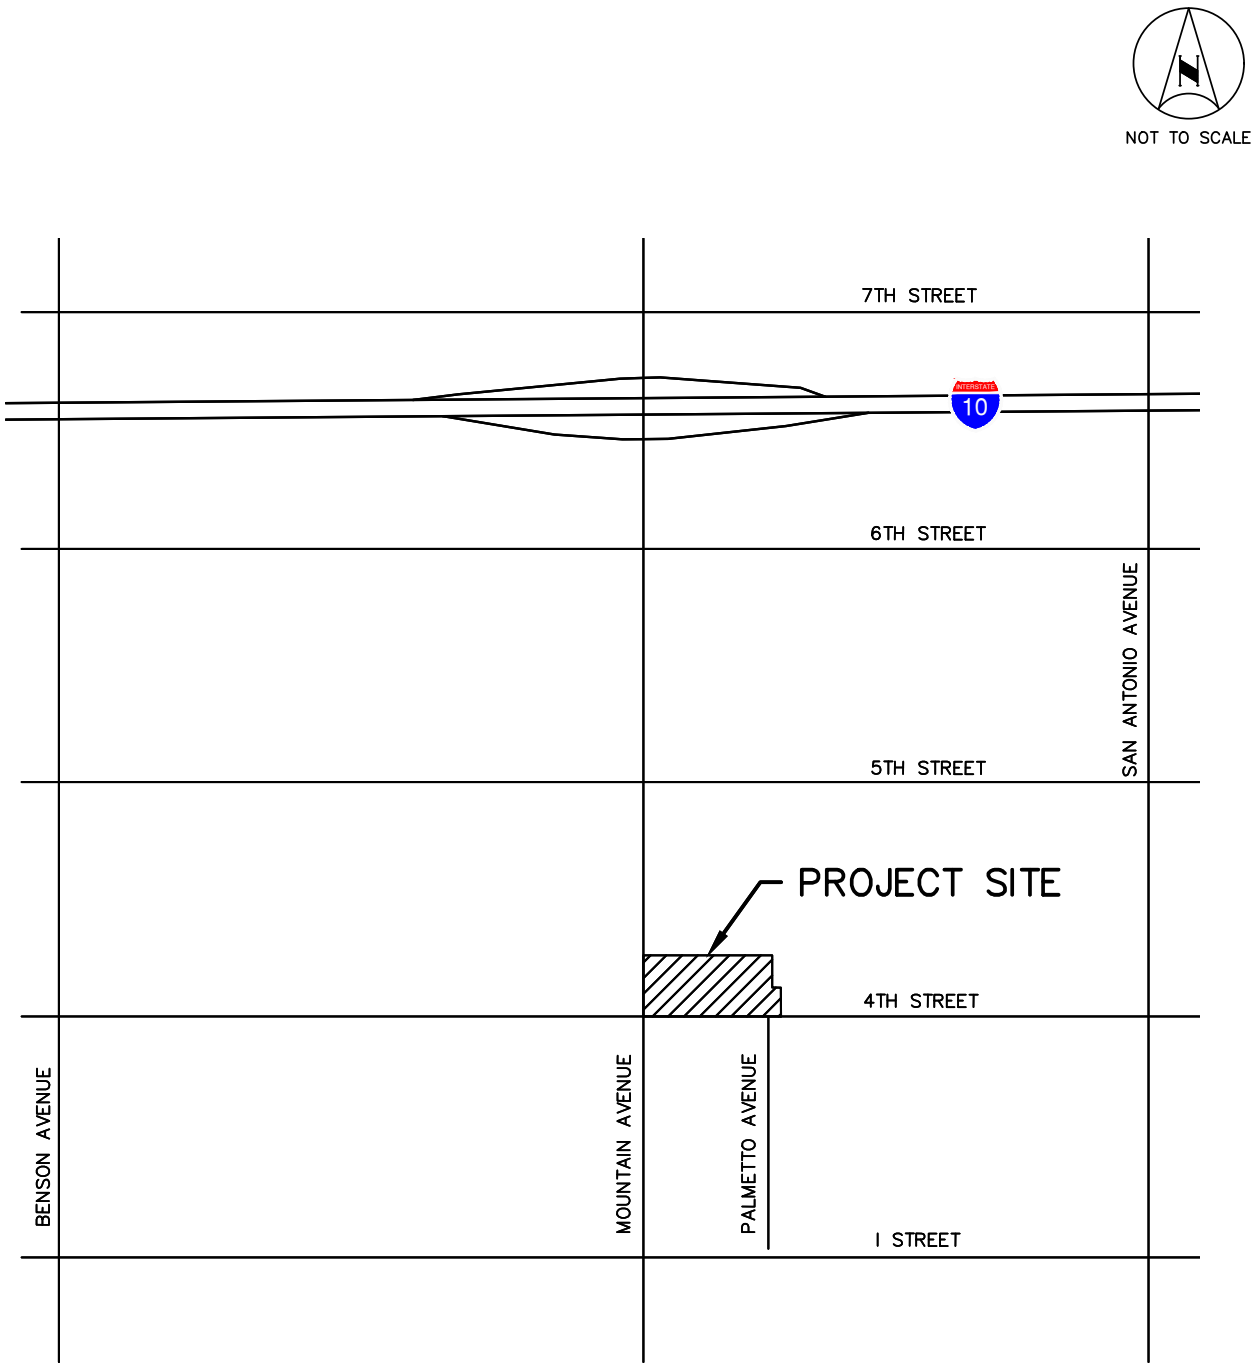

FIGURE 1
VICINITY MAP

1981

NOT TO SCALE

FIGURE 2
PROJECT SITE PLAN

ANALYSIS SCENARIOS AND METHODOLOGY

The analysis scenarios and methodology were established in consultation with City of Ontario staff through the Scoping Agreement process. A copy of the approved Scoping Agreement is provided in ***Appendix A***.

Analysis Scenarios

In accordance with the traffic study requirements of the City of Ontario, the project will be evaluated in the morning and evening peak hours for the following conditions:

- Existing Conditions
- Opening Year 2025 Cumulative (Existing Plus Ambient Growth Plus Cumulative Projects)
- Opening Year 2025 Cumulative Plus Project

Intersection Analysis – HCM Methodology

Peak hour intersection operations at the study intersections and driveways were evaluated using the methods prescribed in the Highway Capacity Manual 7th Edition (HCM), consistent with the traffic study requirements of the City of Ontario. The intersection analysis was conducted using the Vistro software program and using the input parameters specified in the San Bernardino County CMP.

For signalized intersections, the HCM methodology estimates the average delay (in average seconds per vehicle) for each of the movements through the intersection, considering a number of factors, including the number of lanes, volume of traffic, and the signal timing phasing.

For unsignalized intersections, the HCM methodology analysis determines the average total delay for each vehicle making any movement from the stop-controlled minor street, as well as left turns from the major street. Delay values are calculated based on the relationship between traffic on the major street and the availability of acceptable gaps in the traffic stream through which conflicting traffic movements can be made.

The HCM delay forecast translates to a Level of Service (LOS) designation, ranging from LOS A to LOS F. A summary of each LOS and the corresponding delay is provided in the following chart:

LEVEL OF SERVICE DEFINITIONS	
Level of Service	**Description**
A	No approach phase is fully utilized by traffic and no vehicle waits longer than one red indication. Typically, the approach appears quite open, turns are made easily and nearly all drivers find freedom of operation.
B	This service level represents stable operation, where an occasional approach phase is fully utilized, and a substantial number are approaching full use. Many drivers begin to feel restricted within platoons of vehicles.
C	This level still represents stable operating conditions. Occasionally drivers may have to wait through more than one red signal indication, and backups may develop behind turning vehicles. Most drivers feel somewhat restricted but not objectionably so.
D	This level encompasses a zone of increasing restriction, approaching instability at the intersection. Delays to approaching vehicles may be substantial during short peaks within the peak period; however, enough cycles with lower demand occur to permit periodic clearance of developing queues, thus preventing excessive backups.
E	Capacity occurs at the upper end of this service level. It represents the most vehicles that any particular intersection approach can accommodate. Full utilization of every signal cycle is seldom attained no matter how great the demand.
F	This level describes forced flow operations at low speeds, where volumes exceed capacity. These conditions usually result from queues of vehicles backing up from a restriction downstream. Speeds are reduced substantially, and stoppages may occur for short or long periods of time due to the congestion. In the extreme case, both speed and volume can drop to zero.

LEVEL OF SERVICE CRITERIA FOR SIGNALIZED AND UNSIGNALIZED INTERSECTIONS		
Level of Service	**Signalized Intersection (Average delay per vehicle, in seconds) [1]**	**Unsignalized Intersections (Average delay per vehicle, in seconds) [2]**
A	≤ 10	0 – 10
B	> 10 – 20	> 10 – 15
C	> 20 – 35	> 15 – 25
D	> 35 – 55	> 25 – 35
E	> 55 – 80	> 35 – 50
F	> 80	> 50

[1] Source: Highway Capacity Manual (HCM 7th Edition), Exhibit 19-8.

[2] Source: Highway Capacity Manual (HCM 7th Edition), Exhibit 20-2.

Level of Service Standards and Measure of Significance

The City of Ontario minimum LOS standards require that intersections operate at LOS D or better during the morning and evening peak hours.

If the project traffic causes operations at an intersection to go from an acceptable to an unacceptable LOS, the project would have a project-related effect at the intersection. Where necessary, recommended improvements will be identified to achieve acceptable intersection operation at deficient study intersections.

STUDY AREA

This traffic study includes documentation of existing conditions, future conditions, and identification of project-related effects at the following study locations:

Intersections:

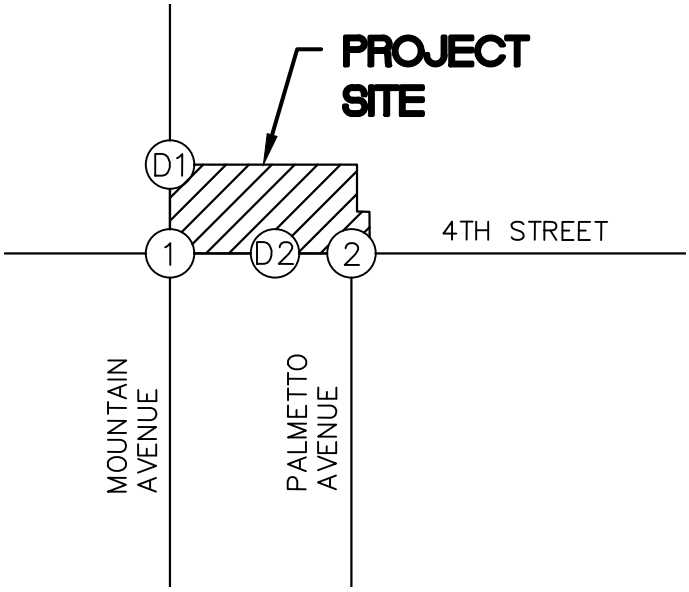
1. Mountain Avenue at 4th Street
2. Palmetto Avenue at 4th Street

D1. Mountain Avenue at Project Driveway

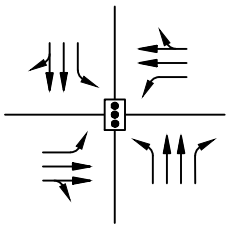
D2. 4th Street at Project Driveway

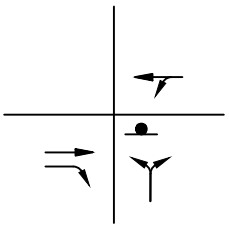
The study locations were established in consultation with City of Ontario staff through the Scoping Agreement process. A copy of the approved Scoping Agreement is provided in ***Appendix A***.

AREA CONDITIONS



Existing Street System





Regional access to the site is provided primarily by the Interstate 10 (I-10) Freeway and State Route 83 (SR-83) Freeway. Direct access to the project site is provided via Mountain Avenue and 4th Street.

Existing lane configurations and intersection controls at the study intersections are shown on **Figure 3**. A copy of the City of Ontario Mobility Element Roadway Classifications is provided on **Figure 4**. The following provides a description of the roadways surrounding the project site.

Mountain Avenue – Mountain Avenue is a north-south divided roadway with two lanes in each direction and a center left-turn lane within the project vicinity. On-street parking is prohibited along the roadway, and the posted speed limit is 40 miles per hour (mph). Mountain Avenue is designated as a Principal Arterial in the City of Ontario Mobility Element.

FIGURE 3
EXISTING LANE CONFIGURATION
AND TRAFFIC CONTROL

1986

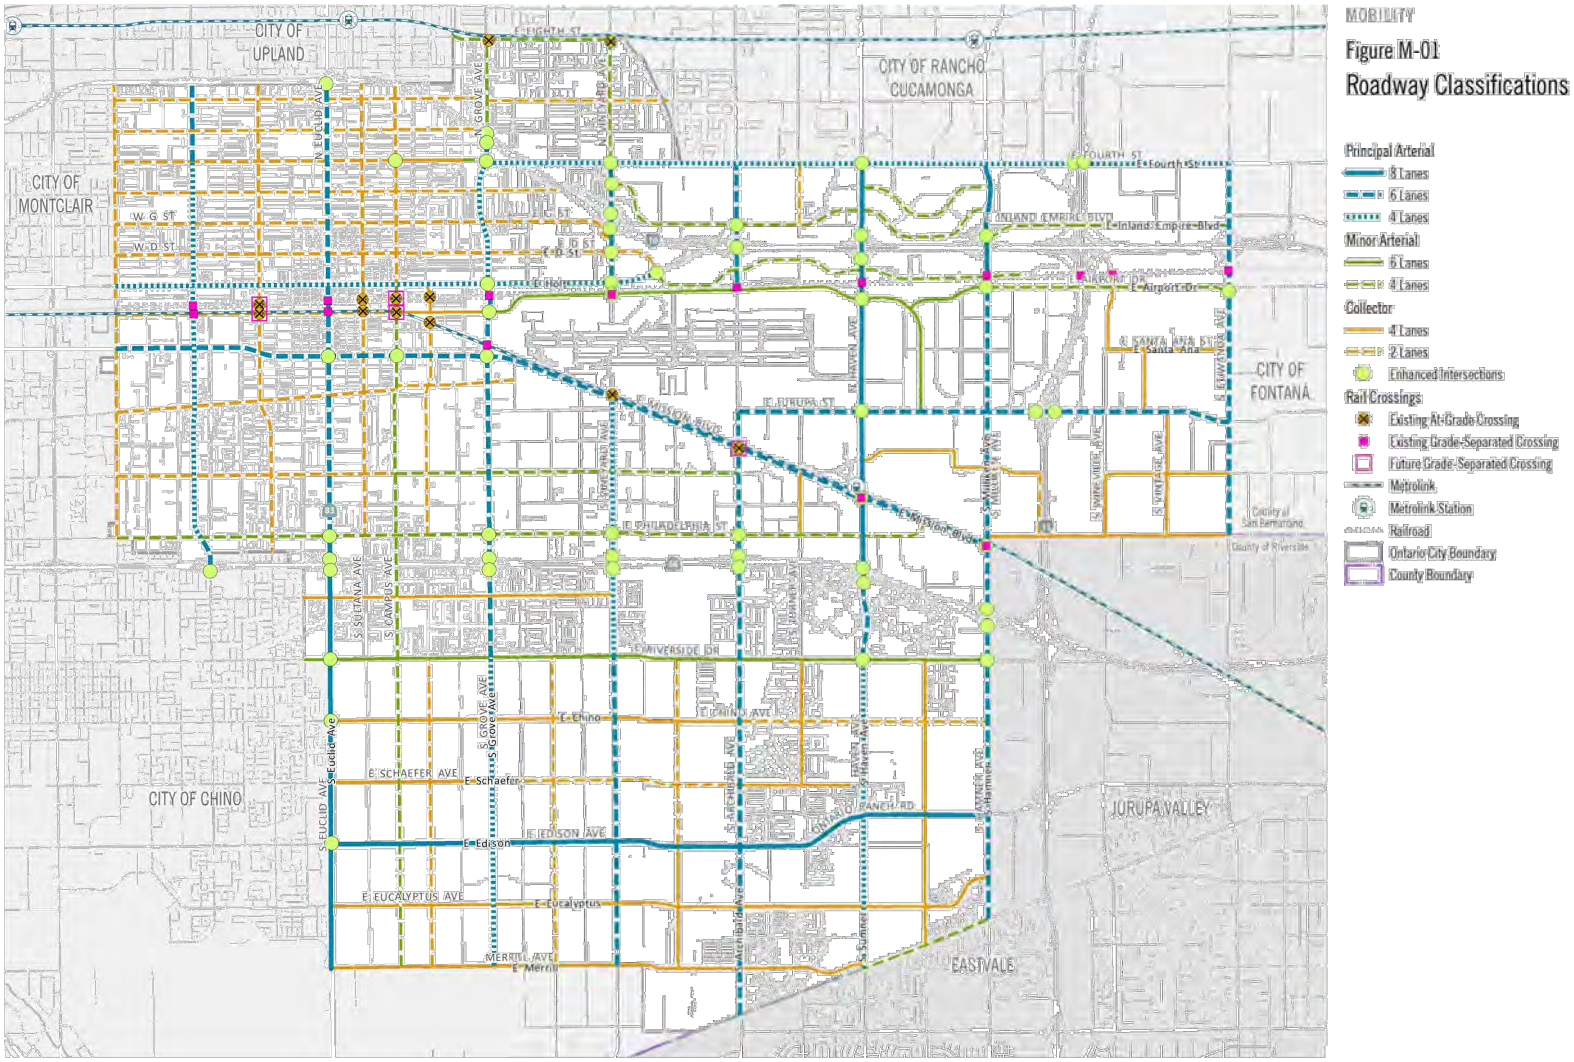

FIGURE 4
CITY OF ONTARIO MOBILITY ELEMENT
ROADWAY CLASSIFICATIONS

Palmetto Avenue – Palmetto Avenue is a north-south undivided roadway with one lane in each direction within the project vicinity. On-street parking is permitted along the roadway.

4th Street – 4th Street is an east-west divided roadway with one to two lanes in each direction and a center left-turn lane within the project vicinity. On-street parking is generally prohibited along the roadway within the project vicinity, and the posted speed limit is 35 mph. 4th Street is designated as a Collector in the City of Ontario Mobility Element within the project vicinity.

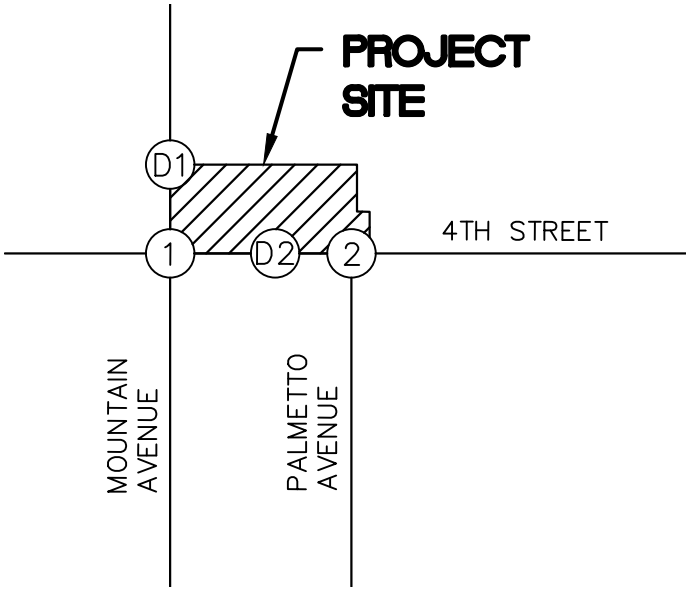
Transit Service

Transit service within the project area is provided by OmniTrans, which serves the City of Ontario and other surrounding communities. The closest bus stop in the project vicinity is located at the intersection of Mountain Avenue and 4th Street. A description of the bus route serving the project area is provided below.

Route 84 – Route 84 operates within the communities of Ontario, Chino, and Upland, traveling along Mountain Avenue. Route 84 operates on weekdays from approximately 5:45 AM to 9:00 PM with approximately 60-minute headways (the time between bus arrivals). On the weekends, Route 84 operates from approximately 6:00 AM to 7:55 PM with approximately 60-minute headways.

Existing Traffic Volumes

Existing morning peak hour and evening peak hour counts were conducted at the study intersections in May 2023.



Existing morning and evening peak hour volumes are presented on **Figure 5**. Peak hour intersection traffic count worksheets are provided in ***Appendix B***.

Peak Hour Operating Conditions

Intersection LOS analysis was conducted for the morning and evening peak hours using the analysis procedures and assumptions described previously in this report. The results of the intersection analysis for Existing Conditions are shown on **Table 1**. Copies of Existing Conditions intersection analysis worksheets are provided in ***Appendix C***.

Review of this table indicates that all study intersections currently operate at an acceptable LOS.

FUTURE CONDITIONS

Opening Year 2025 Cumulative

The project Opening Year (the year the project would be constructed and occupied) is anticipated to be Year 2025. An ambient growth rate of 2% per year to Opening Year 2025 was applied to existing traffic volumes. Cumulative Project traffic was also added to Opening Year 2025 volumes and is detailed below.

Cumulative Projects

In addition to ambient growth, Cumulative Project traffic volumes are added to existing traffic volumes. Information about Cumulative Projects in the area was provided by the City of Ontario and the City of Upland. Cumulative Projects consist of any project that has been approved but is not yet constructed/occupied, and projects that are in various stages of the application and approval process but have not yet been approved. A summary of Cumulative Projects in the project vicinity and the trip generation associated with each is provided on **Table 2**. The locations of the Cumulative Projects are shown on **Figure 6**.

Trip generation information for the Cumulative Projects was derived either from approved traffic studies, where available; or developed by Kimley-Horn if approved traffic studies were not available. Likewise, trip distribution and assignment for the Cumulative Projects were either derived from approved traffic studies, where available; or were developed by Kimley-Horn if approved traffic studies were not available. Project information and trip distribution assumptions for Cumulative Projects are provided in ***Appendix D***. Traffic volumes associated with Cumulative Projects were compiled for each of the study intersections and are shown on **Figure 7**.

The ambient growth and the traffic volumes from the Cumulative Projects were added to the Existing peak hour volumes to develop Opening Year 2025 Cumulative traffic forecasts. The resulting traffic volumes are shown in **Figure 8**.

Peak Hour Operating Conditions

Intersection LOS analysis was conducted for the morning and evening peak hours for the Opening Year 2025 Cumulative conditions. The results are shown on **Table 3**. Intersection analysis worksheets for this scenario are provided in ***Appendix C***.

Review of this table indicates that all study intersections would continue to operate an acceptable LOS.

PROJECT TRAFFIC

Trip Generation

Trip estimates for existing and proposed uses were calculated using the trip generation rates published in the Institute of Transportation Engineers (ITE) Trip Generation Manual, (11th Edition) for Multifamily Housing (Low-Rise) (ITE Land Use 220), United States Post Office (ITE Land Use 732), and Strip Retail Plaza (<40k) (ITE Land Use 822). Pass-by reduction factors were applied to applicable uses based on the ITE Trip Generation Manual, (11th Edition).

The trip generation rates, and the resulting trip generation estimates for the proposed Watermarke Ontario project are summarized on **Table 4**. After applying existing use credits and pass-by reduction factors, the project is estimated to generate approximately 1,269 net new vehicle trips on a daily basis, 76 net new trips (4 fewer inbound and 80 outbound) in the AM peak hour, and 81 net new trips (64 inbound and 17 outbound) in the PM peak hour.

Trip Distribution and Assignment

Trip distribution assumptions for the project were based on the proximity to regional and local roadways and existing travel patterns. Trip distribution percentages at each study intersection were applied to the project trip generation to determine the project trips through each intersection. Project trip distribution for the project is shown on **Figure 9**, and project-related traffic volumes are shown on **Figure 10**.

FUTURE CONDITIONS PLUS PROJECT

Opening Year 2025 Cumulative Plus Project

Project-related traffic was added to the Opening Year 2025 Cumulative traffic volumes, and the resulting morning and evening peak hour volumes are presented on **Figure 11**.

Peak Hour Operating Conditions

Intersection LOS analysis was conducted for the morning and evening peak hours for the Opening Year 2025 Cumulative Plus Project Conditions. The results of the intersection analysis are shown on **Table 5**. Copies of intersection analysis worksheets for this scenario are provided in ***Appendix C***.

Review of this table indicates that all study intersections would continue to operate an acceptable LOS.

S = Signalized
U = Unsignalized

ALL-WAY STOP WARRANT ANALYSIS

Per request from City staff, an all-way stop warrant analysis was conducted for the existing side-street stop-controlled (SSSC) intersection of Palmetto Avenue and 4th Street (intersection #2). The warrant analysis was based on the methodologies noted in Section 2B.07 of the *California Manual on Uniform Traffic Control Devices* (CA MUTCD).

4th Street is a roadway that runs in the east and west direction with one lane in each direction east of Palmetto Avenue and two lanes in each direction west of Palmetto Avenue within the project vicinity. 4th Street has a posted speed limit of 35 mph. Palmetto Avenue is a two-lane undivided roadway with no posted speed limit. The eastbound and westbound 4th Street approaches at the intersection are free-flow, while the northbound Palmetto Avenue approach at the intersection is stop-controlled.

Unlike a signal warrant analysis, formal warrants are not identified to justify the installation of an all-way stop control; rather, the CA MUTCD outlines criteria to be "considered" as part of an engineering study. The following is a brief description of the criteria considered, as outlined in the CA MUTCD.

Criterion A – Interim Traffic Control

Criterion A considers intersections where a traffic signal is justified. A 4-way stop control condition can be implemented as a temporary condition to facilitate traffic, while permanent traffic signal equipment is being constructed/installed. As permanent signal equipment is not being installed, this criterion does not apply.

Criterion Findings

As permanent signal equipment is not being installed, this criterion does not apply.

Criterion B – Crash Rate

Criterion B considers crash frequency at the studied intersection. A 4-way stop control condition shall be considered if 5 or more crashes occur at the studied intersection within a 12-month period, that can be addressed by implementing said condition. Such crashes include right-turn and left-turn collisions, as well as right-angle collisions.

Criterion Findings

Collision data was pulled from the Statewide Integrated Traffic Records System (SWITRS) for a 5-year period between January 1, 2014 and December 31, 2018. During this time period, there were three collisions reported at the intersection of Palmetto Avenue and 4th Street. The collision data indicates that Criterion B has not been met.

Criterion C – Minimum Volumes

Criterion C establishes vehicular volume thresholds for which a 4-way stop control condition shall be considered for installation. The CA MUTCD identifies 3 thresholds:

1. The vehicular volume entering the intersection from the major street approaches (total of both approaches) averages at least 300 vehicles per hour for any 8 hours of an average day; and
2. The combined vehicular, pedestrian, and bicycle volume entering the intersection form the minor street approaches (total of both approaches) averages at least 200 units per hour for the same 8 hours, with an average delay to minor-street vehicular traffic of at least 30 second per vehicle during the highest hour; but'
3. If the 85th-percentile approach speed of the major-street traffic exceeds 40 mph, the minimum vehicular volume warrants are 70 percent of the values provided in items 1 and 2.

Criterion Findings

24-hour traffic volumes were collected in July 2023 at the existing approaches for the intersection of Palmetto Avenue at 4th Street, and the data collection worksheets are provided in ***Appendix E***. Due to the closure of schools for summer break, an adjustment factor was calculated based on a comparison of May 2023 and July 2023 traffic counts at intersection #2 (Palmetto Avenue at 4th Street). The peak hour intersection traffic count worksheets are provided in ***Appendix B***. Based on a comparison of the May 2023 and July 2023 traffic count data, an adjustment factor of 27% was applied to the 24-hour traffic volumes that were collected in July 2023. The adjusted existing hourly approach volumes are summarized on **Table 6**.

As shown in Table 6, the total major street approach volume reaches at least 300 vehicles per hour during 15 hours of the day. The total minor street approach volume does not reach at least 200 vehicles during any hour of the day. Since the minimum total volumes for the major and minor approaches are not met during at least the same 8 hours, Criterion C has not been met.

Conclusions

An all-way stop warrant analysis was conducted for the existing side-street stop-controlled (SSSC) intersection of Palmetto Avenue and 4th Street. The warrant analysis was based on the methodologies noted in Section 2B.07 of the *California Manual on Uniform Traffic Control Devices* (CA MUTCD). The warrant takes into consideration vehicular volumes and other criteria.

Table 7 summarizes if the study intersection fulfilled the criteria evaluated. The results of the analysis indicate that the unsignalized intersection of Palmetto Avenue at 4th Street does not satisfy CA MUTCD all-way stop warrant criteria A, B, and C.

Notes:
- **Bold** values indicate when certain thresholds are met.

[1] The total major approach volume is at least 300 vehicles per hour.

[2] The total minor approach volume is at least 200 vehicles per hour.

Table 7 – Summary of All-Way Stop Warrants

Criteria	Criteria Satisfied?
Criterion A – Interim Traffic Control	N/A
Criterion B – Crash Rate	Not Satisfied
Criterion C – Minimum Volumes	Not Satisfied

RECOMMENDED IMPROVEMENTS

Based on the LOS standards and criteria noted earlier in the report (see page 6), no improvements are required for the project.

SITE ACCESS

Vehicular access for the project site would be provided via one main entry full-movement driveway on 4th Street and one full-movement driveway on Mountain Avenue that provides access to the parking garage for residents.

Trucks would enter the project site on Mountain Avenue. The turn radius for trucks entering the site on Mountain Avenue is shown on a truck turning diagram provided in ***Appendix F***.

STORAGE CAPACITY AT LEFT-TURN POCKETS

Queue lengths at the left-turn pockets were assessed at the following locations:

- Mountain Avenue at 4th Street
  - Westbound Left Turn

- 4th Street at Project Driveway
  - Eastbound Left Turn

A summary of the left-turn pocket storage capacity, as well as 95th percentile queue lengths at the locations noted above are summarized on **Table 8**. The table shows that all left-turn pockets would have adequate storage capacity for 95th percentile queues under Existing, Opening Year 2025 Cumulative, and Opening Year 2025 Cumulative Plus Project conditions.

The left-turn pocket capacities are provided in the intersection analysis worksheets in ***Appendix C*** of this report.

TABLE 8
SUMMARY OF LEFT-TURN POCKET STORAGE CAPACITY
WATERMARKE ONTARIO PROJECT

Intersection	Movement	Storage Capacity (ft/ln)	Peak Hour	Queue Length (ft/ln)		
				Existing	Opening Year 2025 Cumulative	Opening Year 2025 Cumulative Plus Project
				95th Percentile	95th Percentile	95th Percentile

			PM	49	49	52
4th Street at Project Driveway	EBL	150	AM	-	-	0
			PM	-	-	1

REQUIRED PARKING

The City of Ontario Development Code has established regulations regarding minimum parking requirements for all development sites, based on the type of land use. The City's parking requirements for the proposed uses on the site, as indicated in Section 9-1.3010 of the City of Ontario Development Code, are as follows:

Multi-Family Dwellings

- Studio Unit: 1.5 parking spaces per unit
- One Bedroom Unit: 1.75 parking spaces per unit
- Two Bedroom Unit: 2 parking spaces per unit

Retail

- 1 parking space for each 250 square feet of gross floor area

A summary of the City's parking requirements for the project site is provided on **Table 9**. Per the parking requirements noted above, the proposed parking requirement for the project site is 655 parking spaces. The site will provide 657 parking spaces, resulting in a surplus of 2 parking spaces, compared to City code.

TABLE 9
SUMMARY OF PARKING REQUIREMENTS

Building / Use	Unit	Quantity/ Capacity	Parking Code [1]	Required Parking
Multi-Family Dwellings (Studio Unit)	Rooms	47	1.5	71
Multi-Family Dwellings (One Bedroom Unit)	Rooms	202	1.75	354
Multi-Family Dwellings (Two Bedroom Unit)	Rooms	107	2.0	214
Retail	SF	3,800	0.004	16
			TOTAL Parking Required	655
			TOTAL Parking Provided	657
			Parking Surplus	2

VEHICLE MILES TRAVELED (VMT) ANALYSIS

Senate Bill 743 (SB 743) was approved by California legislature in September 2013. SB 743 requires changes to California Environmental Quality Act (CEQA), specifically directing the Governor's Office of Planning and Research (OPR) to develop alternative metrics to the use of vehicular "Level of Service" (LOS) for evaluating transportation projects. OPR has prepared a technical advisory ("OPR Technical Advisory") for evaluating transportation impacts in CEQA and has recommended that Vehicle Miles Traveled (VMT) replace LOS as the primary measure of transportation impacts. The Natural Resources Agency has adopted updates to CEQA Guidelines to incorporate SB 743 that requires VMT for the purposes of determining a significant transportation impact under CEQA.

The City of Ontario's *Resolution adopting Vehicle Miles Traveled Thresholds* (June 2020) provide details on appropriate screening thresholds that can be used to identify when a proposed land use project is anticipated to result in a less-than-significant impact without conducting a more detailed level analysis. Screening thresholds are broken down into the following criteria:

1. Transit Priority Area (TPA) Screening
2. Low VMT Area Screening
3. Low Trip Generating Uses
4. Project Type Screening by Land Use Type

Land development projects that meet one or more of the above screening thresholds may be presumed to create a less-than-significant impact on transportation and circulation. The screening thresholds were reviewed and evaluated for this project.

Transit Priority Area (TPA) Screening

Projects located within a TPA may be presumed to have a less-than-significant impact. A TPA is defined as a half-mile area around an existing major transit stop of an existing stop along a high-quality transit corridor. 'Major transit stop' means a site containing an existing rail station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and evening peak commute periods. A 'high-quality transit corridor' means a corridor with a fixed route bus service with service intervals no longer than 15 minutes during the peak commute hours.

Based on the San Bernardino County Transportation Authority (SBCTA) VMT Screening Tool, the project is not located within a TPA.

The TPA Screening criteria is not met.

Low VMT Area Screening

Projects located within a low VMT generating area (<-15% below County Baseline) may be presumed to have a less-than-significant impact. Based on the SBCTA VMT Screening Tool, the project is located in a Low VMT Area. The SBCTA VMT Screening Tool results are provided in the Approved Scoping Agreement in ***Appendix A***.

The Low VMT Area Screening criteria is met.

Low Trip Generating Uses

A project generating less than 110 Average Daily Trips (ADT) is presumed to have a less-than-significant impact based on the City's guidelines. As mentioned previously, the project is estimated to generate 1,269 net new daily trips. Therefore, the project would not screen out under Low Trip Generating Uses.

The Low Trip Generating Uses Screening threshold is not met.

Project Type Screening

Projects which serve the local community and have the potential to reduce VMT should not be required to complete a VMT assessment. These projects are noted below:

- Local-Serving Retail less than 50,000 SF
- Local-Serving K-12 Schools
- Local Parks
- Day Care Centers
- Local-Serving Gas Stations
- Local-Serving Banks
- Local-Serving Hotels
- Student Housing Projects
- Local Serving Community Colleges
- Projects generating less than 110 daily vehicle trips

The Project Type Screening criteria is not met.

Based on review of the VMT screening criteria, the project meets the Low VMT Area Screening threshold. Therefore, the project would result in a less-than-significant transportation impact, and no additional VMT analysis is required.

SUMMARY OF FINDINGS AND CONCLUSIONS

- The project site is located on the northeast corner of the intersection of Mountain Avenue and 4th Street in the City of Ontario.

- The project proposes to demolish the existing uses and construct 357 multi-family dwelling units and 3,800 SF of retail on 5.8 acres.

- Vehicular access for the project site would be provided via one main entry full-movement driveway on 4th Street and one full-movement driveway on Mountain Avenue that provides access to the parking garage for residents.

- Under Existing Conditions, all study intersections currently operate at an acceptable LOS.

- Under Opening Year 2025 Cumulative conditions, all study intersections would continue to operate at an acceptable LOS.

- The project is estimated to generate approximately 1,269 net new daily trips with 76 net new trips in the AM peak hour and 81 net new trips in the PM peak hour.

- Under Opening Year 2025 Cumulative Plus Project conditions, all study intersections would continue to operate at an acceptable LOS.

- An all-way stop warrant analysis was conducted for the existing side-street stop-controlled intersection of Palmetto Avenue and 4th Street. The results of the analysis indicate that the unsignalized intersection of Palmetto Avenue at 4th Street does not satisfy CA MUTCD all-way stop warrant criteria A, B, and C.

- Per the City's parking requirements, the proposed parking requirement for the project site is 655 parking spaces. The site will provide 657 parking spaces, resulting in a surplus of 2 parking spaces, compared to City code.

- Based on review of the VMT screening criteria, the project meets the Low VMT Area Screening threshold. Therefore, the project would result in a less-than-significant transportation impact, and no additional VMT analysis is required.

APPENDIX A

APPROVED SCOPING AGREEMENT

From: Jaime Maciel-Carrera <JMCarrera@ontarioca.gov>

Subject: RE:

Good Morning John,

We've reviewed the updated scoping agreement and would like to approve it as noted with the following minor comments:

1) We'd like the "Specific Issues" section updated to evaluate the left turn queuing on Fourth Street at Mountain Avenue and the proposed driveway to determine if there will be any conflicts between westbound left turn queues at Mountain and eastbound left turn queues at the driveway. We want to confirm that there is adequate left turn stacking available in both directions.

2) The VMT screening threshold used must be Below County Baseline (-15%). Also please confirm the project opening year as 2023. Please update the VMT screening screenshot on the formal submittal.

Please proceed with preparation of the analyses based on the comments above.

Thanks,

Jaime Maciel-Carrera, T.E.
Senior Associate Engineer
City of Ontario
909-395-2151

MEMORANDUM

To: Jonny Schneider
Watermarke Properties

From: Trevor Briggs, P.E. (C87664)
Kimley-Horn and Associates, Inc.

Date: May 12, 2023

Subject: ***Traffic Scoping Agreement for the Proposed Watermarke Ontario Project in the City of Ontario, California***

Kimley-Horn and Associates, Inc. is submitting this Traffic Scoping Agreement to the City of Ontario regarding the traffic study scope and assumptions for the proposed Watermarke Ontario project located in the City of Ontario, California. The proposed traffic scope and assumptions for the project are presented below.

PROJECT DESCRIPTION

The project site is located on the northeast corner of the intersection of Mountain Avenue and 4th Street. The project site currently consists of a United States Post Office building and a commercial building with various retail uses. The applicant proposes to demolish the existing uses and construct 357 multi-family dwelling units and 3,800 square feet (SF) of retail on 5.8 acres. The project is shown in its local setting on **Figure 1**. A copy of the project site plan is shown on **Figure 2**.

Access to the project site would be provided via one main entry full-movement driveway on 4th Street and one full-movement driveway on Mountain Avenue that provides access to the parking garage for residents. Each project driveway would be unsignalized.

SCOPE OF STUDY

Project Trip Generation

Trip estimates for existing and proposed uses were calculated using the trip generation rates published in the Institute of Transportation Engineers (ITE) Trip Generation Manual, (11th Edition) for Multifamily Housing (Low-Rise) (ITE Land Use 220), United States Post Office (ITE Land Use 732), and Strip Retail Plaza (<40k) (ITE Land Use 822). Pass-by reduction factors were applied to applicable uses based on the ITE Trip Generation Manual, (11th Edition).

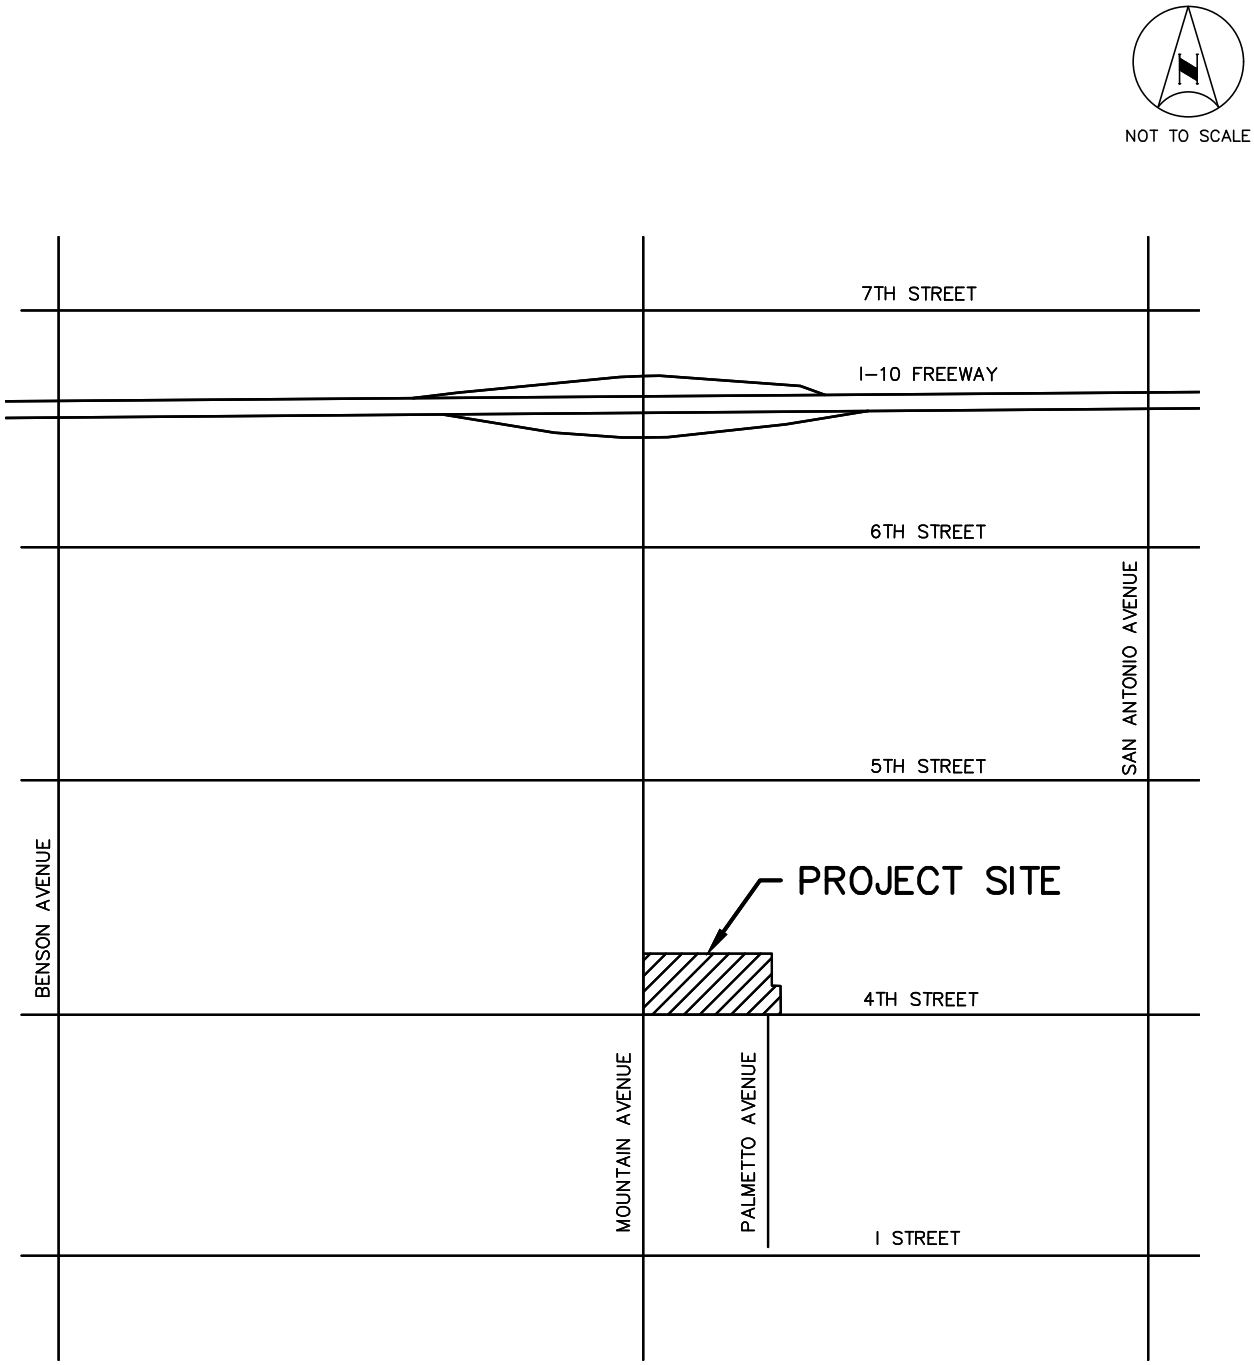

FIGURE 1
VICINITY MAP

NOT TO SCALE

PROJECT DRIVEWAY

FIGURE 2
PROJECT SITE PLAN

Kimley»Horn

Trip generation rates and the resulting trip generation estimates for the existing and proposed uses are summarized on **Table 1**. The project is estimated to generate approximately 1,269 net new trips on a daily basis, with 76 net new trips (4 fewer inbound and 80 outbound) in the AM peak hour, and 81 net new trips (64 inbound and 17 outbound) in the PM peak hour.

Project Trip Distribution

Project distribution assumptions were developed based on existing travel patterns, and the likely origins and destinations of the proposed project. Trip distribution assumptions are shown on **Figure 3**.

Study Area

A Level of Service (LOS) analysis will be conducted at the following study intersections (see **Figure 3**):

1. Mountain Avenue at 4th Street
2. Palmetto Avenue at 4th Street

D1. Mountain Avenue at Project Driveway
D2. 4th Street at Project Driveway

Study Scenarios

- Existing Conditions
- Opening Year 2025 (Existing + Ambient Growth + Cumulative Projects)
- Opening Year 2025 Plus Project

A 2.0% annual ambient growth rate will be applied to the existing traffic counts up to Opening Year 2025.

Specific Issues

Per request from City staff, the following specific issues will be analyzed as part of the traffic study:

- An All-Way Stop Warrant analysis at the intersection of Palmetto Avenue at 4th Street.
- A truck turning template for trucks turning into the project site on 4th Street.
- A Queuing Analysis at the following intersections:
    - Westbound Left-Turn at the intersection of Mountain Avenue at 4th Street
    - Eastbound Left-Turn at the intersection of 4th Street at Project Driveway

2020

VEHICLE MILES TRAVELED (VMT) SCREENING

The City of Ontario *Resolution adopting Vehicle Miles Traveled Thresholds* (June 2020) provides details on appropriate screening thresholds that can be used to identify when a proposed land use project is anticipated to result in a less-than-significant impact without conducting a more detailed analysis. Screening thresholds are broken into the following three steps:

1. Transit Priority Area (TPA) Screening
2. Low VMT Area Screening
3. Low Trip Generating Uses
4. Project Type Screening by Land Use Type

Transit Priority Area (TPA) Screening

A project located within a TPA as determined by the San Bernardino County Transportation Authority (SBCTA) VMT Screening Tool would be considered to have a less-than-significant transportation impact. Based on the SBCTA VMT Screening Tool results, the proposed project is not located within a TPA.

The TPA Screening threshold is not met.

Low VMT Area Screening

A project located within a low VMT generating area as determined by the City's guidelines and the SBCTA VMT Screening Tool would be considered to have a less-than-significant transportation impact. Based on the SBCTA VMT Screening Tool results (see **Attachment A**), the proposed project is located within a low VMT area (<-15% below County Baseline).

The Low VMT Area Screening threshold is met.

Low Trip Generating Uses

A project generating less than 110 Average Daily Trips (ADT) is presumed to have a less-than-significant impact based on the City's guidelines. As mentioned previously, the project is estimated to generate 1,269 net new daily trips. Therefore, the project would not screen out under Low Trip Generating Uses.

The Low Trip Generating Uses Screening threshold is not met.

Project Type Screening by Land Use Type

Some project types have been identified as having the presumption of a less-than-significant impact. These projects include residential projects within a high-quality transit corridor, local serving retail less than 50,000 square feet, certain transportation projects that do not add vehicle capacity, local serving K–12 public schools, local/neighborhood parks, childcare facilities, affordable housing, community institutions, senior housing facilities and non-destination small hotels. Based on the City's guidelines, the proposed project would not screen out of VMT based on Project Type.

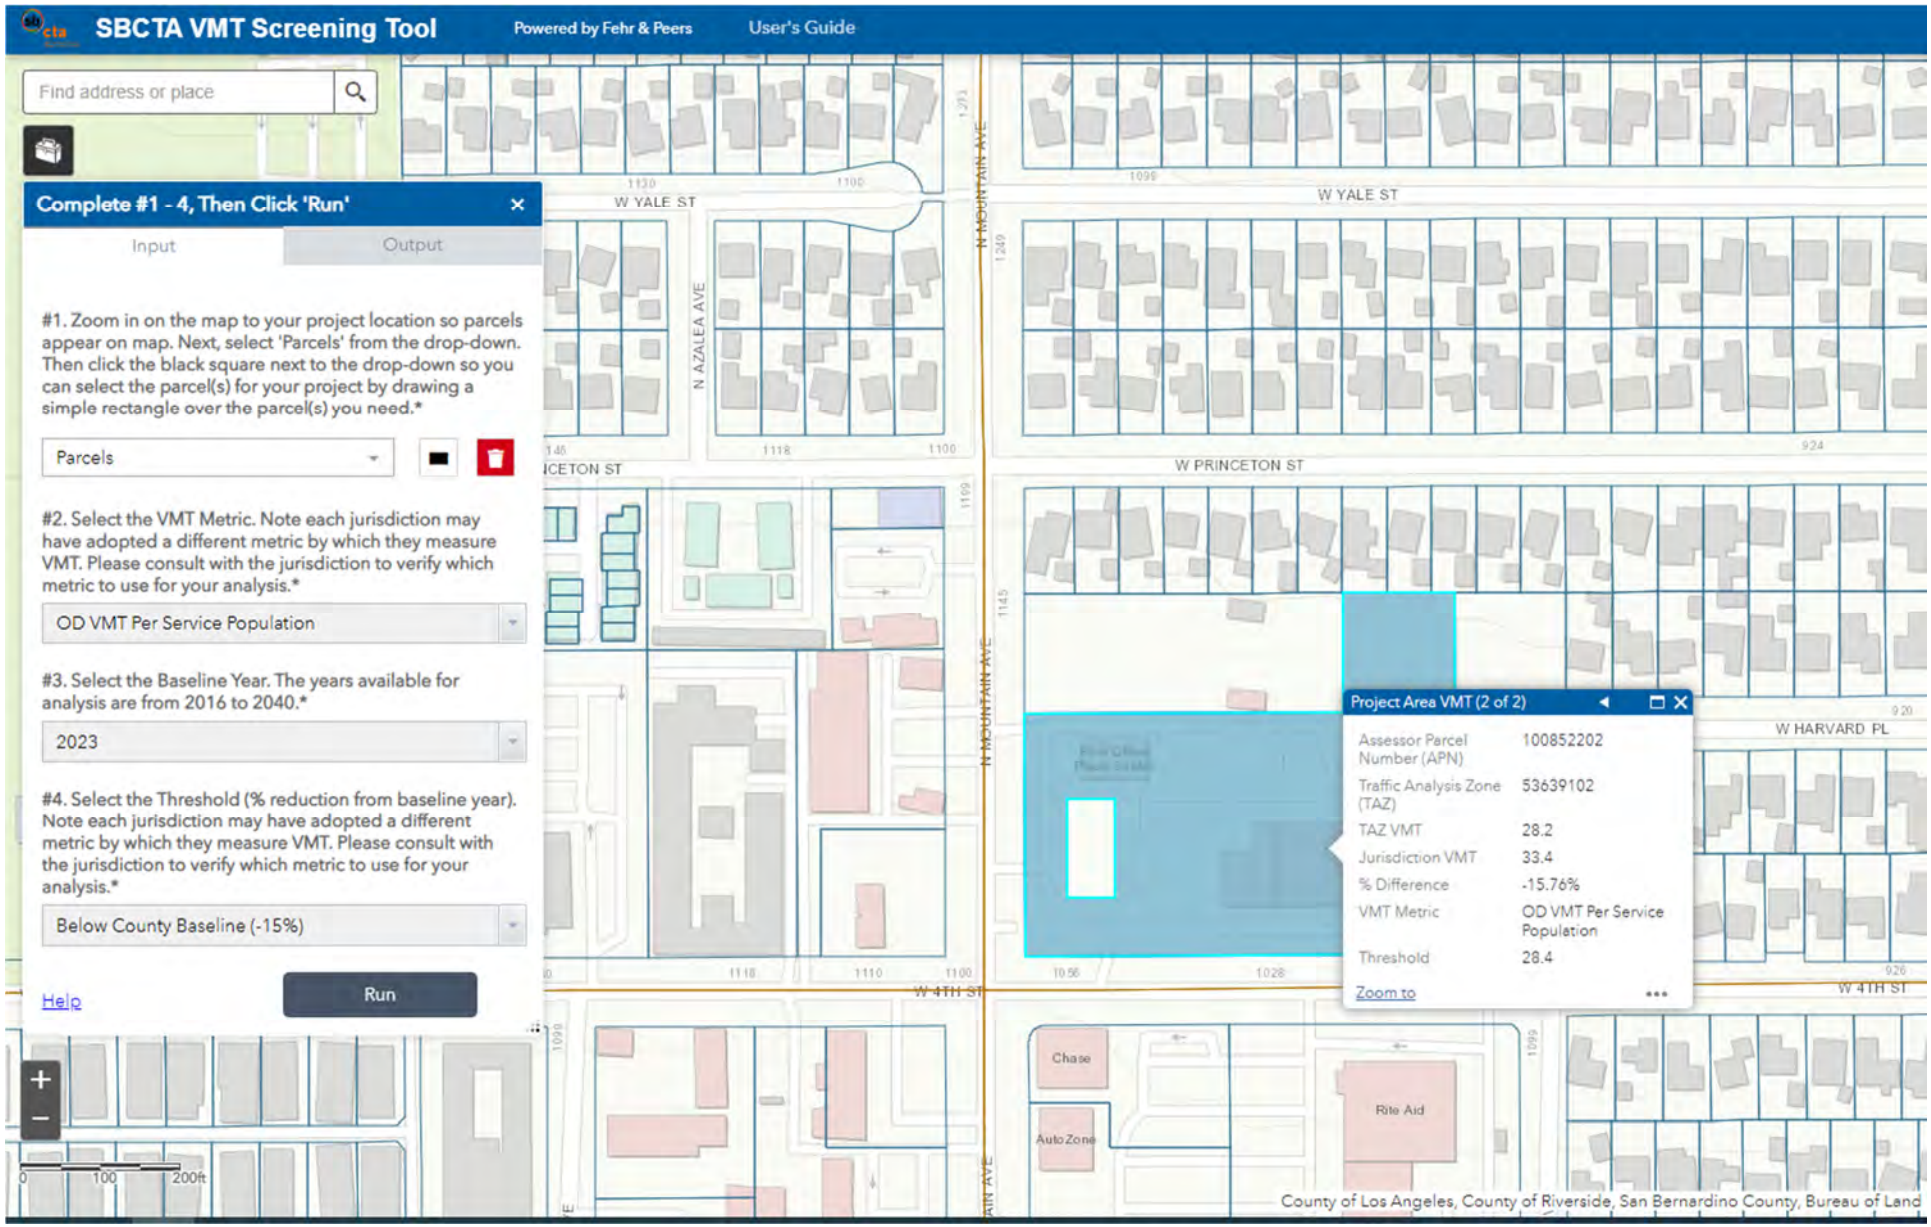
The Project Type Screening threshold is not met.

TRAFFIC CONSISTENCY WITH THE ONTARIO PLAN (TOP) EIR

The project site is located within The Ontario Plan (TOP) area in the City of Ontario. The Environmental Impact Report (EIR) for The Ontario Plan was approved in January 2010 and later amended in August 2022. The approved EIR serves as an environmental review for the economic mix-used development of approximately 50 square miles of retail, office, and civic uses in the City of Ontario. The entire 32,022-acre area was included in the environmental documentation for The Ontario Plan.

Level of Service was the applicable threshold when the City certified the VGMP EIR. The mandate requiring lead agencies to use VMT as a threshold for evaluating traffic impacts was adopted in 2018 and effective in 2020. It does not constitute as "new information" requiring additional environmental review nor does it affect the assessment of project environmental impacts or mitigation measures compared to those analyzed in the VGMP EIR.

In the TOP, the project site is zoned as a Mixed-Use Neighborhood Activity Hub (MU-NH) for the Neighborhood Center of Mountain Avenue and 4th Street. The TOP allows for a mixture of retail and residential uses within a density of 20 to 75 dwelling units per acre and 1.0 Floor Area Ratio (FAR) for retail.



As noted previously, the project consists of 357 dwelling units on 5.8 acres, which equates to approximately 61 dwelling units per acre. Therefore, the density of the proposed project is within the land use and zoning assumptions in The Ontario Plan, and increase in population generated by the site has already been anticipated by SCAG.

FINDINGS AND CONCLUSIONS

Based on the City's guidelines and the project trip generation, a Level of Service (LOS) analysis is required for the proposed project. The proposed project would screen out of VMT based on the project being located within a Low VMT Area. As such, the proposed project would be presumed to have a less-than-significant impact. Therefore, no further VMT analysis is required for the proposed project.

Please contact me if you have any questions or comments.

APPENDIX C

INTERSECTION ANALYSIS WORKSHEETS

APPENDIX C-1

INTERSECTION ANALYSIS WORKSHEETS – EXISTING CONDITIONS

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Mountain Avenue at 4th Street	Signalized	HCM 7th Edition	EB Left	0.397	14.7	B
2	Palmetto Avenue at 4th Street	Two-way stop	HCM 7th Edition	NB Left	0.046	11.7	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Mountain Avenue at 4th Street

Control Type:	Signalized	Delay (sec / veh):	14.7
Analysis Method:	HCM 7th Edition	Level Of Service:	B
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.397

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Mountain Avenue at 4th Street	Signalized	HCM 7th Edition	EB Left	0.412	16.2	B
2	Palmetto Avenue at 4th Street	Two-way stop	HCM 7th Edition	NB Left	0.038	13.4	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

APPENDIX C-2

INTERSECTION ANALYSIS WORKSHEETS – OPENING YEAR 2025 CUMULATIVE

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Mountain Avenue at 4th Street	Signalized	HCM 7th Edition	EB Left	0.440	16.1	B
2	Palmetto Avenue at 4th Street	Two-way stop	HCM 7th Edition	NB Left	0.052	12.3	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Mountain Avenue at 4th Street

Control Type:	Signalized	Delay (sec / veh):	16.1
Analysis Method:	HCM 7th Edition	Level Of Service:	B
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.440

Intersection Setup

APPENDIX C-3

INTERSECTION ANALYSIS WORKSHEETS – OPENING YEAR 2025 CUMULATIVE PLUS PROJECT

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Mountain Avenue at 4th Street	Signalized	HCM 7th Edition	EB Left	0.442	16.3	B
2	Palmetto Avenue at 4th Street	Two-way stop	HCM 7th Edition	NB Left	0.052	12.4	B
101	Mountain Avenue at Project Driveway	Two-way stop	HCM 7th Edition	WB Right	0.103	14.0	B
102	4th Street at Project Driveway	Two-way stop	HCM 7th Edition	SB Left	0.025	12.1	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Mountain Avenue at 4th Street

Control Type:	Signalized	Delay (sec / veh):	16.3
Analysis Method:	HCM 7th Edition	Level Of Service:	B
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.442

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Mountain Avenue at 4th Street	Signalized	HCM 7th Edition	EB Left	0.460	17.9	B
2	Palmetto Avenue at 4th Street	Two-way stop	HCM 7th Edition	NB Left	0.044	14.4	B
101	Mountain Avenue at Project Driveway	Two-way stop	HCM 7th Edition	WB Right	0.019	13.8	B
102	4th Street at Project Driveway	Two-way stop	HCM 7th Edition	SB Left	0.007	14.0	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report

TRUCK TURNING DIAGRAM

1) ENLARGED TRASH ROOM 1
SCALE: 1/16" = 1'-0"

2) ENLARGED TRASH ROOM 2
SCALE: 1/16" = 1'-0"

MULTIFAMILY REQUIRES 1.5 CUBIC YARDS PER 4 DWELLING UNITS

1.5 CY / 4 DU = .375 CY PER UNIT

357 DU X .375 CY = 134 CUBIC YARDS

134 CY / 3 CY WASTE BINS = 44.67 BINS

44.67 WASTE BINS (3 CY EACH) / 3 PICK UPS PER WEEK = 15 WASTE BINS MINIMUM REQUIRED.

Refuse and recycling enclosure to City standards for ___ trash bin(s) and ___ recycling bin(s), or ___ ___ cubic yard compactor(s) per City standards.

MULTI-FAMILY REFUSE AND RECYCLING STANDARDS
BIN COLLECTION

Container Storage Standards:

A. Through circulation shall be provided for solid waste vehicles.
B. All refuse enclosures shall be located on major drives within developments to achieve adequate circulation of refuse vehicles.
C. A five foot wide concrete apron, with a 2% maximum pitch, shall be placed in front of all
refuse enclosures to allow for safe and efficient removal of bins. No drainage V-ditches or
catch basins shall be allowed within the five foot apron.
D. To encourage recycling, enclosures designed for a maximum of one (1) bin are prohibited.
Enclosures shall allow for storage of recycling bins or cans in addition to refuse bins.
E. Enclosures must be designed so that refuse and recycling containers may be accessed by
the generator and serviced by the service provider without moving other bins.
F. Pedestrian access shall be independent of service provider doors.
G. Enclosures must be designed so that bin lids face the pedestrian access location.
H. Enclosures must be designed with a roof or overhang at least 8 vertical feet from the ground. Enclosures shall be constructed with a solid roof meeting architectural and structural design criteria from Planning and Building Departments.
I. Enclosures shall be located so that refuse vehicles can pull to within 5 feet of gates.
J. Enclosures located closer than 5 feet to an adjacent structure shall be protected by automatic fire sprinklers approved by the Ontario Fire Department.
K. Gate stop bollards shall be installed to prevent enclosure gates from swinging into adjacent
parking stalls. Steel cane bolt sleeves shall be installed in the ground outside of bin enclosure gates to prevent gates from swinging shut.
L. Enclosures shall be screened with plant material whenever possible.
M. Refer to City of Ontario Enclosure Drawings—p. 9, 10, 11

Vehicle Access Standards:

A. Refuse vehicle turning radii
Inside radius ……28 feet
Outside radius ……42 feet
B. Refuse vehicle height clearance ……15 feet
C. Refuse vehicle width clearance ……15 feet
D. Refuse vehicle backing: Straight only. Distance determined on case by case basis.
E. A minimum 25 foot distance must be maintained in front of a bin enclosure. The enclosure must face the driveway, not parking spaces.
F. Alleys must be a minimum of 20 feet in width, and have enough room to allow for a 28 foot minimum turning radius when making turns at 90 degree intersections in the alley.
G. Containers must not obstruct travel path of refuse vehicle, or compromise the ability of the refuse vehicle to safely service the containers.

RESOLUTION NO. PC24-004

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING CITY COUNCIL ADOPTION OF FILE NO. PUD22-006, THE WATERMARKE ONTARIO PLANNED UNIT DEVELOPMENT, ESTABLISHING DEVELOPMENT STANDARDS AND DESIGN GUIDELINES FOR A 5.81-ACRE PROJECT SITE LOCATED AT THE NORTHEAST CORNER OF MOUNTAIN AVENUE AND FOURTH STREET, AND MAKING FINDINGS IN SUPPORT THEREOF— APNS: 1008-513-16, 1008-522-01, 1008-522-02, AND 1008-522-03.

WHEREAS, JAT LAND DEVELOPMENT LLC (hereinafter referred to as "Applicant") has filed an Application for the approval of the Watermarke Ontario Planned Unit Development (“PUD”), File No. PUD22-006, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 5.81 acres of land located at the northeast corner of Mountain Avenue and Fourth Street, within the Mixed Use – Neighborhood Hub 8b – Mountain and Fourth (MU-NH 8b) zoning district, and is presently improved with commercial development and post office; and

WHEREAS, the properties to the north of the Project site are within the MU-8b (Mountain/Fourth Mixed Use) and Low-Density Residential (LDR-5) zoning districts and are developed with a church (currently under construction) and existing single-family land uses, the property to the south is within the Neighborhood Commercial (CN) zoning district and is developed with commercial land uses, the properties to the east are within the Low-Density Residential (LDR-5) zoning district and is developed with single-family land uses, and the property to the west is within the Neighborhood Commercial (CN) zoning district and is developed with commercial land uses; and

WHEREAS, the Project was submitted in conjunction with a Development Plan (File No. PDEV22-042) which proposes the construction of a mixed-use building containing residential and commercial floor area, for a total of 357 apartment units and 3,800 square feet of commercial space, at a density of 61.4 dwelling units per acre and a commercial Floor Area Ratio (FAR) of 0.015; and

WHEREAS, the PUD outlines the Project’s (a) objectives, including its consistency with The Ontario Plan; (b) land use plan, including zoning, phasing and build-out, and permitted land uses; (c) development regulations, including intensity and density, building envelope, vehicle access and parking facilities, parking supply and design, residential open space and common amenities, service facilities, signs, landscape and hardscape, fences and walls, public right-of-way improvements, infrastructure, and overall development standards; (d) design criteria, including those for building orientation, access

and parking facilities, service facilities, pedestrian linkages, architectural character, massing and scale, articulation and fenestration, architectural details, storefronts, materials and colors, roofs and rooftop equipment, non-residential outdoor dining areas, residential outdoor space and common recreation amenities, and landscape/hardscape elements; and (e) administration, including items not addressed in the PUD, requirements for Development Plans and other applications, and administrative exceptions; and

WHEREAS, Project approval is contingent on Planning Commission approval of the related Development Plan application and City Council approval of the Watermarke Ontario PUD; and

WHEREAS, The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) was certified on August 16, 2022, (hereinafter referred to as "Certified SEIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the Certified SEIR, an Addendum to the Certified SEIR (hereinafter referred to as "SEIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the environmental impacts of this project were thoroughly analyzed in the SEIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified SEIR, and that the Certified SEIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an SEIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make recommendation to the City Council on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on January 23, 2024, the Planning Commission voted to continue the Project to the February 27, 2024, public hearing, to allow staff to correct a noticing deficiency with the Notice of Filing sign on the project site; and

WHEREAS, as the first action on the Project, on February 27, 2024, the Planning Commission voted to recommend the City Council adopt the SEIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on February 27, 2024, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, recommending the City Council approve the Application and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending body for the Project, the Planning Commission has reviewed and considered the information contained in the Addendum, the initial study, and the administrative record for the Project, including all written and oral evidence provided

during the comment period. Based upon the facts and information contained in the Addendum, the initial study, and the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of the Project were reviewed in conjunction with an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The SEIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The SEIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the SEIR Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Certified SEIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified SEIR that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared, that will require major revisions to the

Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified SEIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified SEIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified SEIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending body for the Project, the Planning Commission finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 4: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the

recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in Sections 1 through 4, above, the Planning Commission hereby concludes as follows:

(1) ***The proposed PUD, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The Project is consistent with the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan in that the mixed-use standards and guidelines specified in the PUD align with The Ontario Plan. The Watermarke Ontario Planned Unit Development ("PUD") Objectives section titled "Consistency with The Ontario Plan", describes how the PUD complies with the Policy Plan goals, policies, and plans.

(2) ***The proposed PUD, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The Planning Commission has required certain safeguards through conditions of approval, which have been established to ensure that: [i] the purposes of the Planned Unit Development are maintained; [ii] the project will not endanger the public health, safety or general welfare; [iii] the project will not result in any significant environmental impacts; [iv] the project will be in harmony with the area in which it is located; and [v] the project will be in full conformity with the Vision, City Council Priorities and Policy Plan components of The Ontario Plan.

(3) ***In the case of an application affecting specific property(ies), the proposed PUD, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The adjacent neighborhoods consist of existing single-family dwellings and commercial development. The Watermarke Ontario Planned Unit Development was prepared to ensure that on-site development is sensitive to and complementary of the surrounding development, and the surrounding development is compatible with the proposed residential and commercial mixed-use development. Therefore, the Project does not affect the harmonious relationship with adjacent properties and land uses.

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** In preparing the PUD, a thorough review and analysis of the proposed Project and the subject site's physical suitability for the Project was completed, including analysis of the Project size and shape, intensity of development, building height and setbacks, site access, site landscaping and drainage, fences and walls, vehicle and pedestrian circulation, availability of mass transit, necessary street dedication and easements, public right-of-way improvements, availability of utilities and other infrastructure needs, off-street parking, building orientation and streetscapes, architectural character, building materials and character, and site signage. Based upon this review and analysis, the subject site has been deemed physically suitable, including but not limited to parcel size, shape, access, and availability of utilities for the proposed PUD and proposed development.

(5) ***The proposed PUD is superior to that which could be obtained through the application of the Development Code or a specific plan.*** The PUD will establish minimum building setbacks, parking and open space requirements, private storage provisions, a planting palette, allowable land uses preferable to support the proposed development and the surrounding community, and more. These standards will facilitate the development of up to 357 dwelling units and 3,800 square feet of commercial space and accompanying improvements. The proposed PUD will allow for subsequent development that is superior to that which could be obtained through the application of the Development Code by itself, by means of facilitating the development of high-density apartments, restaurants, retail shops, and other commercial services that will serve to achieve the City's goals of economic revitalization of an underutilized commercial center. Lastly, the PUD will further serve to implement the vision of the Mixed Use – Neighborhood Hub 8b – Mountain and Fourth (MU-NH 8b) zoning district, and the Mixed Use - Neighborhood Activity Hub: 20.0 to 75.0 du/ac; 1.0 FAR office/retail (MU-NH) land use district of the Policy Plan by allowing for this vibrant and well-designed mixed-use development.

SECTION 6: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 through 5, above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVES the herein described Watermarke Ontario Planned Unit Development, attached hereto as "Attachment A", subject to each and every condition set forth in the Department reports attached hereto and incorporated herein by this reference.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify

the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 27th day of February 2024, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Nancy DeDiemar
Planning Commission Chairperson

ATTEST:

Henry K. Noh
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA)
COUNTY OF SAN BERNARDINO)
CITY OF ONTARIO)

I, Gwen Berendsen, Secretary Pro Tempore of the Planning Commission of the City of Ontario, DO HEREBY CERTIFY that foregoing Resolution No. PC24-004, was duly passed and adopted by the Planning Commission of the City of Ontario at their regular meeting held on February 27, 2024, by the following roll call vote, to wit:

AYES: Anderson, DeDiemar, Del Turco, Gage, Lampkin, Ricci

NOES: None

ABSENT: Dean

ABSTAIN: None

INTRODUCTION

This document is intended to function as a set of planning and design principles, development regulations and performance standards to guide and govern the development of a 5.81-acre land area located on the northeast corner of Mountain Avenue and Fourth Street.

The project site is located within The Ontario Plan (TOP) Mixed Use – Neighborhood Activity Hubs (MU- NH), which requires the establishment of a Planned Unit Development (PUD) prior to development. This PUD fulfills the requirements of Mountain/Fourth Avenue Mixed Use (MU-8b) zoning district, as set forth in Ontario Development Code Section 4.01.030 (Planned Unit Developments (PUD) and Amendments). The Watermarke Ontario Planned Unit Development (PUD) will establish development standards that apply to the affected property. Unless otherwise defined herein, definitions and interpretations contained in the Development Code shall apply. City staff and private developers will rely on this PUD to determine whether precise plans for development ("Development Plans") will adequately meet the City's land use and design objectives.

LOCATION

The Project is located in the City of Ontario in the County of San Bernardino. The PUD area occupies 5.81 acres of the northeast corner of Mountain Avenue and Fourth Street and includes four parcels (APNs 1008-513-16, 1008-522-01, 1008-522-02, and 1008-522-03). Regional access to the Project area would be facilitated through Interstate 10 (I-10) approximately 0.6 miles north of the site, and State Route 83 (SR- 83) approximately 0.9 miles east of the site.

OBJECTIVES

Consistency with the Ontario Plan

The Ontario Plan (TOP) is the primary planning document for the City and is intended to guide City growth for the next 20 years. The Ontario Plan includes six components:

1. The **Vision** component summarizes the City's major goals for the foreseeable future as well as the preferred character to be reinforced throughout the future growth.
2. The **Governance Manual** summarizes the City's guidelines regarding decision-making authorities and actions for City leadership in order to reinforce the City's intended character.
3. The **Policy Plan** acts as the City's General Plan and includes the City's goals and policies meant to guide growth through the general plan planning period.
4. The **City Council Priorities** outlines the Council's goals for a given year.
5. The **Implementation** component summarizes the methods with which the City will execute goals and policies included in the general plan.
6. The **Tracking and Feedback** component, once updated, will catalogue the City's progress in implementing the goals and policies of the Policy Plan and Vision component.

The City's Policy Plan's goals and policies are intended to guide the City's continued growth. These goals extend to the Project's proposed residential and commercial uses and the Project area's Mixed Use – Neighborhood Activity Hub (MU-NH) land use designation. The MU-NH land use designations are intended to allow for the development of low-rise mixtures of retail and residential uses which may serve the surrounding residents.

This PUD is designed to achieve the purpose of this land use designation and comply with applicable goals and policies such as the following:

2·0·5·0 THE ONTARIO PLAN

Land Use Element

Goal LU-1: A community has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

- **Policy LU-1.1: Strategic Growth.** We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.
- **PUD Consistency.** Mountain Avenue is classified as an arterial road as well as a Class I multipurpose trail, these classifications lend themselves to high volumes of pedestrian and vehicular traffic. Additionally, mass transit bus stops are located at the southwest and northeast corners of the Mountain Avenue and Fourth Street intersection. The PUD would enable the development of multifamily residential uses adjacent to higher capacity roadways as well as available mass transit stops.
- **Policy LU-1.6: Complete Community.** We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.
- **PUD Consistency.** The PUD would allow for the development of residential and retail uses within the PUD site. The requirements presented in the PUD encourage the development of neighborhood scale commercial opportunities which would serve residents within the PUD as well as surrounding areas.

Goal LU-2: Compatibility between a wide range of uses and resultant urban patterns and forms.

- **Policy LU-2.1: Land Use Decisions.** We minimize adverse impacts on adjacent properties when considering land use and zoning requests.
- **PUD Consistency.** The PUD area's MU-8b zoning designation requires that a PUD be implemented for to establish specific development standards, land use regulations and design guidelines. The permitted uses within PUD have been established to provide residential and commercial uses to serve internal residents and surrounding residential area.

Goal LU-3: Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the Vision.

- **Policy LU-3.2: Design Incentives.** We offer design incentives to help projects achieve the Vision.
- **PUD Consistency.** MU-8b zones require the creation of a PUD to establish specific development standards for a given area. Standards within a PUD may vary from the established development standards of the City's development code to achieve the City's vision more adequately or efficiently. This PUD includes design standards which strive to maintain the City's vision for stable, dynamic growth while maintaining overall quality throughout all components of the development.

Goal LU-4: Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.

- **Policy LU-4.4: Shared Infrastructure.** We encourage and facilitate the use of shared infrastructure (including shared or managed parking) in urban, mixed use, and transit-oriented Place Types.
- **PUD Consistency.** The PUD area encourages the integration of residential and nonresidential uses through mixed use development. Development standards within this PUD, therefore, encourage shared infrastructure such as parking and utility facilities. The Project includes a single central parking garage which contains all parking spaces for both the residential and retail uses in the PUD area. Additionally, the Project would provide for shared garbage collection between residential and retail uses.

Housing Element

Goal H-1: Stable neighborhoods of quality housing, ample community services and public facilities, well- maintained infrastructure, and public safety that foster a positive sense of identity.

- **Policy H-1.2: Neighborhood Conditions.** We direct efforts to improve the long-term sustainability of neighborhoods through comprehensive planning, provision of neighborhood amenities, rehabilitation and maintenance of housing, and community building efforts.
- **PUD Consistency.** The PUD describes standards which can be used to develop a mixed-use residential community with attached retail uses. These standards include open space requirements which include the creation of recreational amenities. While the PUD includes designs for a specific project, this document allows for the development of other developments if the proposed Project is removed or redeveloped. The standards within this PUD would ensure that high-quality mixed-use developments can continue to be developed within the PUD area.
- **Policy H-1.3: Community Amenities.** We shall provide adequate public services, infrastructure, open space, parking and traffic management, pedestrian, bicycle, and equestrian routes and public safety for neighborhoods consistent with City master plans and neighborhood plans.
- **PUD Consistency.** The PUD includes parameters which require the development of private and community open space areas and recreational uses. The PUD also encourages the creation of a shared parking structure to serve both residents and retail customers and employees. The PUD also presents parking standards for passenger vehicles and bicycles that meet or exceed the City's current standards. Development standards specifically focused on site security and emergency access are included in this PUD.

Goal H-2: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

- **Policy H-2.5: Housing Design.** We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.
- **PUD Consistency.** The PUD includes development standards which allow for a variety of multi-family residential units near community scale retail uses. Standards presented in this PUD are designed to enable development which remains consistent with the character of the City while maintaining a modern, visually appealing aesthetic.

Community Economics Element

Goal CE-1: A complete community that provides for all incomes and stages of life.

- **Policy CE-1.6: Diversity of Housing.** We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.
- **PUD Consistency.** The PUD would provide for the development of a multi-family mixed use development in an area of the City which currently contains single family residential uses and commercial uses. This would increase the variety of housing in the area and promote neighborhood retail uses near residents as well as mass transit bus stops and higher capacity arterial roadways.

Goal CE-2: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.

- **Policy CE-2.1: Development Projects.** We require new development and redevelopment to create unique, high-quality places that add value to the community.
- **PUD Consistency.** The PUD will seek to ensure a mix of residential and retail uses that will provide a variety of goods and services for both the internal residents and the surrounding area. The PUD provides standards which require the development of distinctive, visually appealing structures.

Safety Element

Goal S-3: Reduced risk of death, injury, property damage and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.

- **Policy S-3.8: Fire Prevention through Environmental Design.** We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open spaces, and buildings.
- **PUD Consistency.** The PUD would incorporate fire prevention infrastructure such as fire extinguishers and smoke alarms. Additionally, the Project would provide additional fire hydrants and fire access points for fire abatement.

Goal S-7: Residential neighborhoods, commercial areas, and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, and community involvement in public safety.

- **Policy S-7.4: Crime Prevention through Environmental Design (CPTED).** We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces, and buildings.
- **PUD Consistency.** The PUD requires the use of security lighting as well as the placement of a gated perimeter between existing developments bordering the Project area. Additionally, the PUD restricts access to residential neighborhoods from all entities except emergency personnel.

Community Design Element

Goal CD-1: A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.

- **Policy CD-1.2: Place Types.** We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.
- **PUD Consistency.** The PUD presents development standards which require the creation of well designed, community centric mixed-use developments. The PUD establishes standards within the PUD area which would establish quality architectural and visual consistency.

Goal CD-2: A high level of design quality resulting in neighborhoods, commercial areas, public spaces, parks, and streetscapes that are attractive, safe, functional, human- scale, and distinct.

- **Policy CD-2.1: Quality Building Design and Architecture.** We encourage all development projects to convey visual interest and character through:
  1. Building volume, massing, and height to provide context-appropriate scale and proportion;
  2. A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and
  3. Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.
- **PUD Consistency.** The PUD will seek to accommodate the City's residential growth and enhance its economic growth by creating residential and retail opportunities within a mixed-use zone. The PUD area will be distinctive through the requirement of well-designed project(s) through standards focused on:
  - Appropriate scale and massing
  - Architectural style and design that are complementary and appropriate to for its setting.
  - The use of high-quality materials that will create visual interest, high quality, durable and appropriate for the architectural style.
  - Appropriate site planning to ensure building orientation visibility from the street, adequate number of driveways and sidewalks, building setbacks, parking lot orientation, adequate refuse storage areas and well-designed street frontages.
- **Policy CD-2.2: Neighborhood Design.** We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as:
  1. A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services;
  2. Varied parcel sizes and lot configurations to accommodate a diversity of housing types;
  3. Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access;
  4. Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and
  5. Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.
- **PUD Consistency.** The PUD allows for the development of mixed-use residential structures at a human scale through the use of pedestrian walkways and minimal internal roadways. The PUD also requires the orientation of buildings to form along the public roadway. The PUD also includes standards which require appropriate site planning to ensure building orientation visibility from the street, an adequate number of driveways and sidewalks, building setbacks, parking lot orientation, adequate refuse storage areas and well-designed street frontages.
- **Policy CD-2.4: Urban, Mixed Use, and Transit-oriented Areas.** We establish Place Types to require mixed use, urban, and transit-oriented areas to be designed and developed as pedestrian oriented areas that are integrated with adjacent neighborhoods and promote a vibrant, comfortable, and functional environment, as defined for each Place Type.
- **PUD Consistency.** The permitted uses within PUD have been established to provide residential and retail uses to serve the City's neighborhood activity hub and surrounding residential area. The PUD will ensure a mix of residential and retail uses that can be easily accessed by internal residents as well as surrounding residents.
- **Policy CD-2.8: Safe Design.** We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.
- **PUD Consistency.** The PUD provides for secure development through the placement of walls and fences between the PUD area, public roadways, and adjacent residential communities. Additionally, the PUD encourages the placement of pedestrian walkways in highly visible areas as well as the use of shielded exterior lighting fixtures. PUD standards allow for the visibility of access points from public vantage points while using secure barriers to prevent unauthorized entry.
- **Policy CD-2.9: Landscape Design.** We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.
- **PUD Consistency.** The PUD requires the creation of a Landscape Plan which would be consistent with City regulations and would provide for the usage of native and drought-resistant foliage.

- **Policy CD-2.10: Parking Areas.** We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include:
  1. Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field.
  2. Structured parking: facade articulation, screening, appropriate lighting, and landscaping.
  3. Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.
- **PUD Consistency.** The PUD would require parking areas to be shielded from public view through the placement of parking away from public roadways and behind buildings. PUD standards require adequate lighting for all common areas, including parking areas, and the landscaping of all areas which do not have improvements. The Project proposes a central parking structure inset within the PUD area.
- **Policy CD-2.11: Entry Statements.** We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.
- **PUD Consistency.** The PUD would require the development of private open space amenities for residents of the PUD area as well as a clearly noted and unique frontage along Fourth Street.

Goal CD-3: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.

- **Policy CD-3.1: Unique Identity.** We promote development that heightens the unique character and identity of each Place Type by requiring compatible land uses and land planning, site design, and building design that promotes an active public realm.
- **PUD Consistency.** The PUD would encourage a sense of place by implementing design standards which provide for consistent building orientation and architectural guidelines. Additionally, the PUD provides for the creation of pedestrian accessways that allow for human scale development.
- **Policy CD-3.4: Context-Aware and Appropriate Design.** We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.
- **PUD Consistency.** The PUD establishes standards which would encourage a sense of place within the PUD area through the use of consistent landscaping and architectural design. Buffer areas are required between the PUD area and surrounding residential uses as well as walls which further limit visibility between internal and external residents.
- **Policy CD-3.5: Active Frontages.** We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).
- **PUD Consistency.** The PUD requires the enhancement of building frontages along Fourth Street frontage through the use of visually interesting architectural features and materials as well as landscaping and pedestrian accessways. Specifically, retail uses are required to present visually appealing storefronts which complement the surrounding architecture and create a distinct entryway.

City Council Priorities

- Invest in the Growth and Evolution of the City's Economy
- Focus Resource in Ontario's Commercial and residential Neighborhoods
- Maintain the Current High Level of Public Safety

Watermarke Ontario Objectives

This PUD establishes the architectural and development standards which will be applied to the Project. Implementation of these standards will ensure a consistent quality in design throughout the planned community.

The objectives of the PUD are to:

- Create a pedestrian-scale walkable community within the City,
- Provide additional retail uses in close proximity to residential uses,
- Expand retail opportunities within the City,
- Provide a variety of high-quality residential units nearby commercial uses,
- Provide for flexible design and development standards to allow for the development of more urban walkable mixed-use development,
- Promote the redevelopment of an underutilized site and provide additional housing opportunities,
- Facilitate high-density residential development within the City for families and individuals, and
- Provide housing at different price points to accommodate multiple income levels.

LAND USE PLAN

Land Use Designation

The Project is located on parcels within the City which have been categorized with a MU-NH land use designation. This land use designation allows the Project to develop multifamily residential units as well as multiple retail and neighborhood commercial uses. The Project area is zoned with a MU-8B zoning designation.

Permitted Uses

Permitted and conditionally permitted uses shall be allowed as identified in the City of Ontario Development Code, Chapter 5.0, Table 5.02-1: Land Use Matrix.

DEVELOPMENT STANDARDS

This section sets forth the standards to govern the placement, height, and bulk of permitted buildings and structures; to establish locational criteria for vehicular access to site, parking and loading requirements, landscape, sign standards; and identify historic preservation features to be incorporated and/or considered for development plans. Unless otherwise stated herein, all development within the Project area shall meet the applicable standards and requirements of the City's Development Code for MU-8b developments.

The purpose of these standards is to encourage a high-quality residential/mixed-use development. These standards establish flexible guidelines to encourage such development, ensure that it is of a minimum standard of appearance, and compatible with the neighborhoods.

Table 1: Applicable Development Standards on the next page summarizes the City' development standards present within the entire Watermarke Ontario Project area as well as the surrounding uses. These development standards are based on those found in the Ontario Development Code. However, in the event of discrepancies between the development standards presented in this document and those in the Ontario Development Code, this document will act as the primary regulatory document.

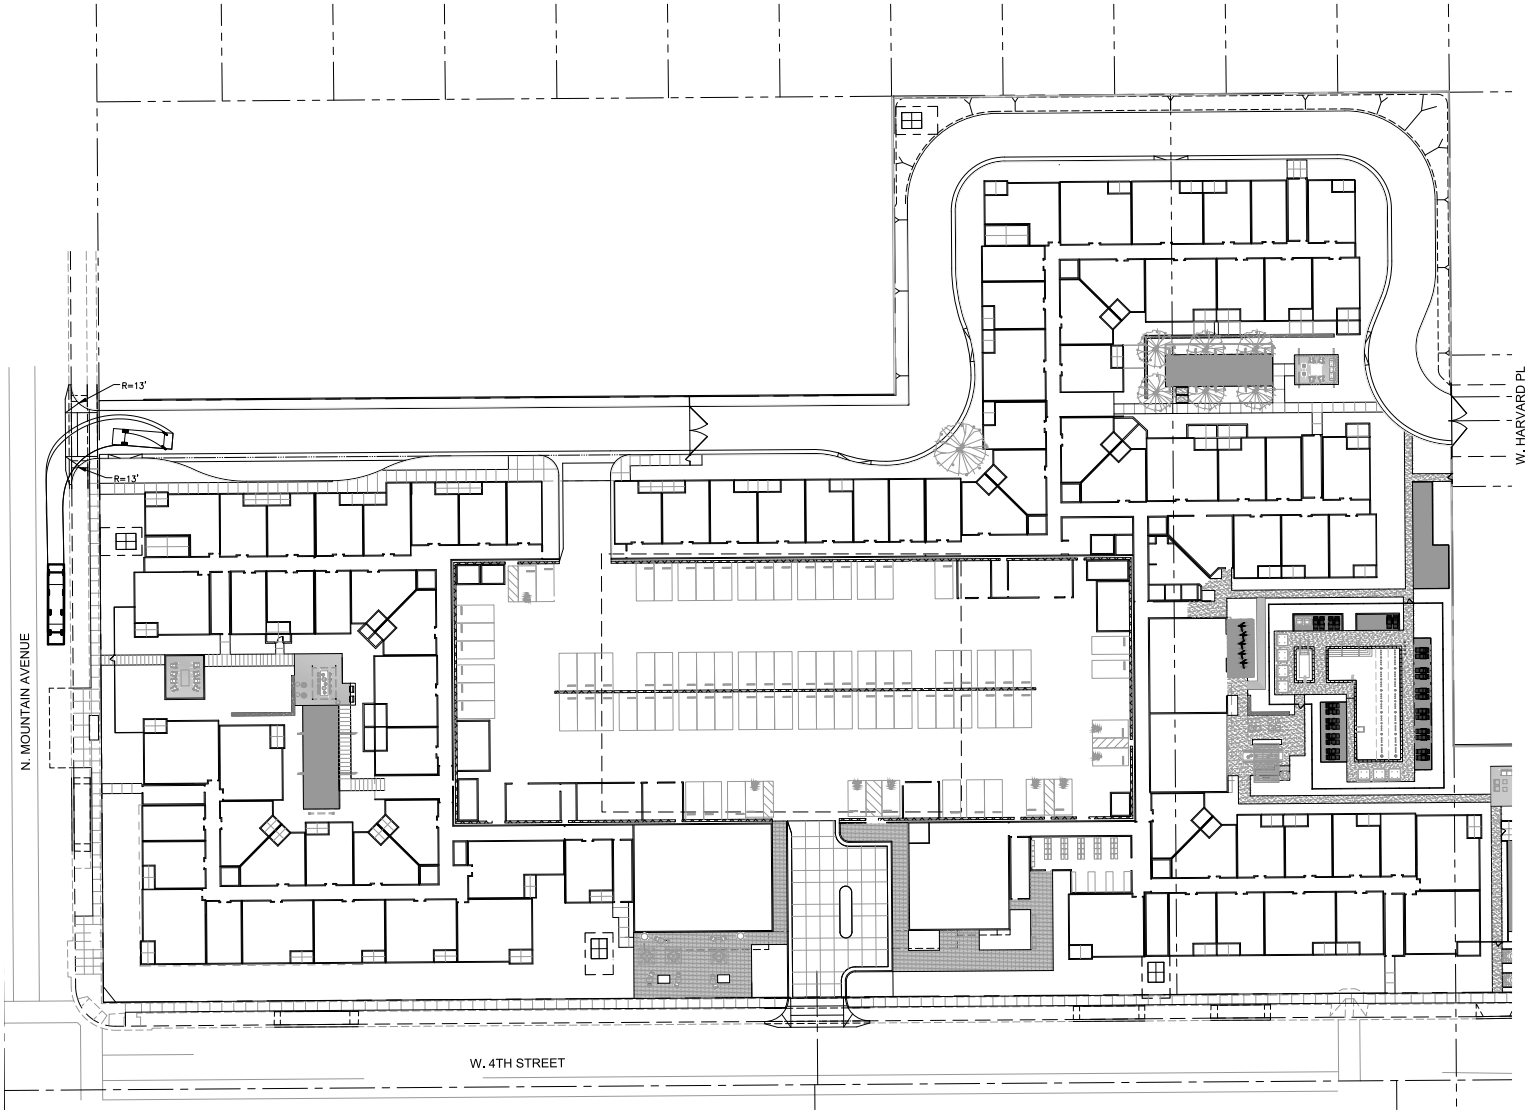

Table 1: Applicable Development Standards

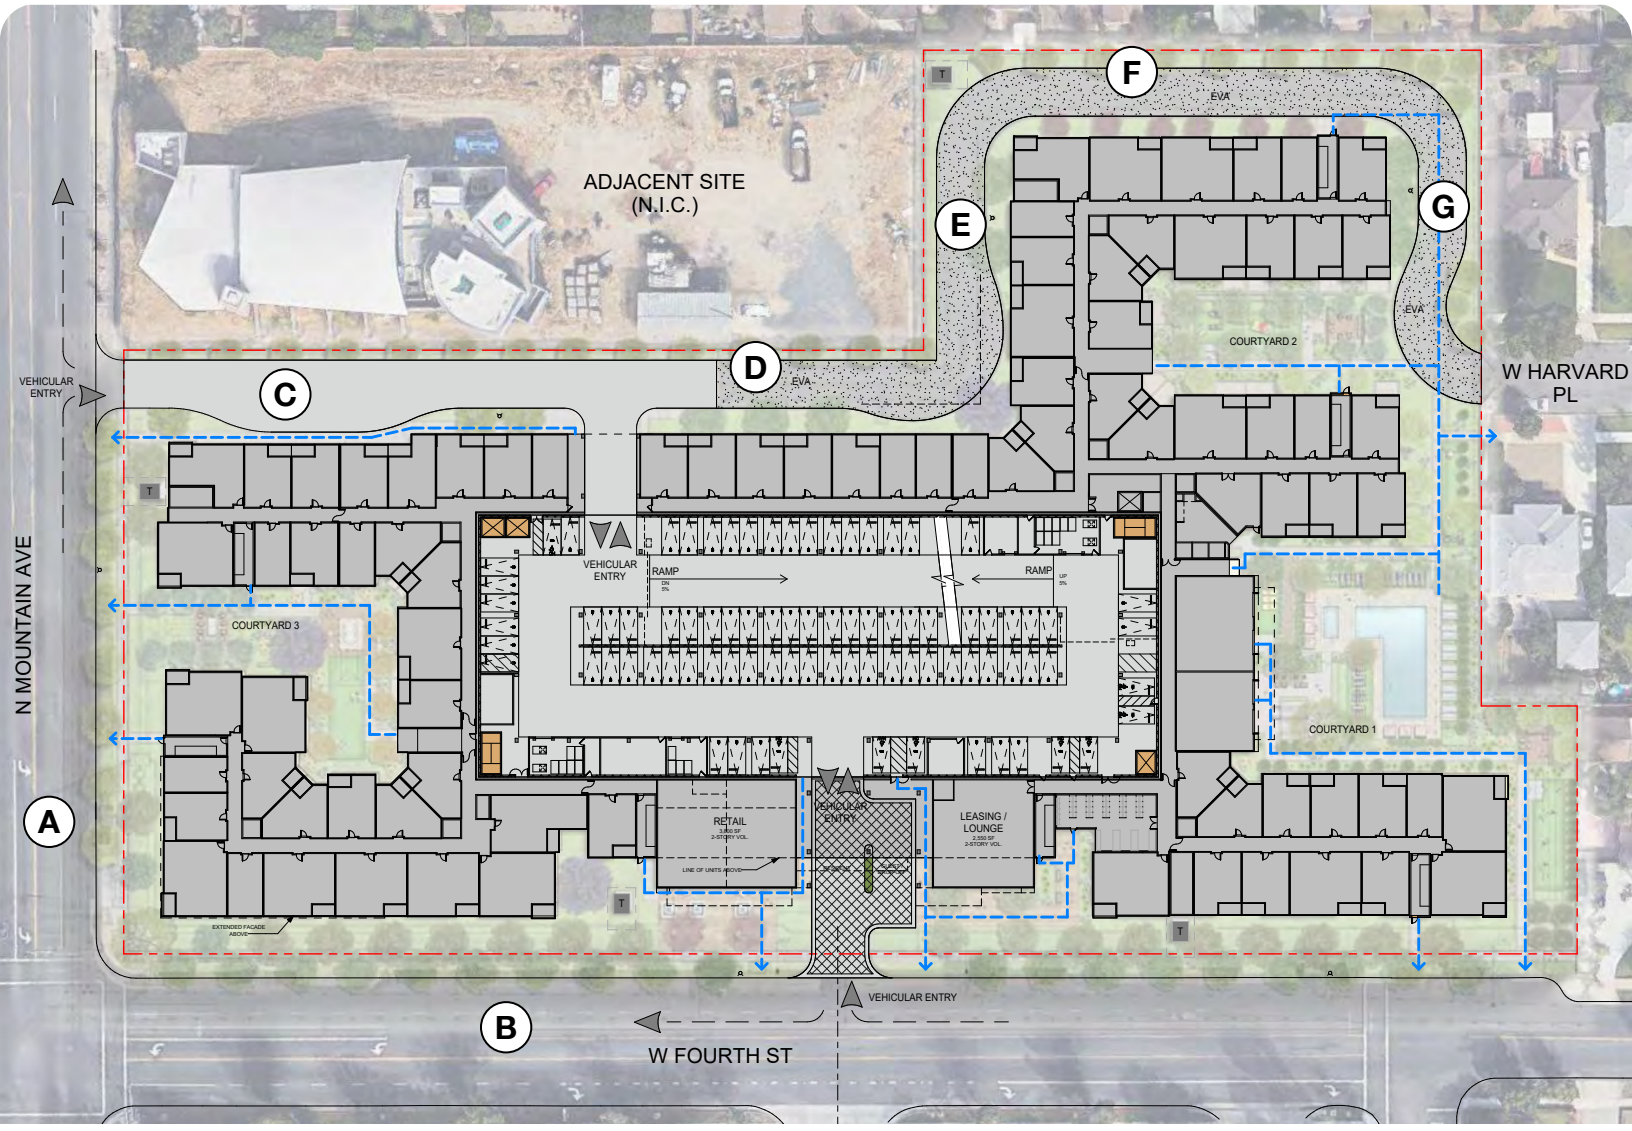
Development Standard	Requirement	Consistency Discussion
Residential Density	20 – 75 du/ac	Development Strategy
Maximum Retail/Office (Nonresidential floor area)	1.0 FAR	Development Strategy
Max Building Height	5 Stories	Design Standards
Setbacks	None Specified	Design Guidelines
Min Multiple-Family Residential Parking Ratio.	1.2 spaces per bedroom 1.2 spaces per unit for studio units	Circulation
Min Retail Trade Parking Ratio	1 space per 250 sf	Circulation
Min Bicycle Parking Ratio	Residential 1 rack per 30 stalls Retail (short term) 5% of stalls (2 minimum)	Circulation
Min Landscaping	The entirety of the project site (excluding areas devoted to building area, paving, and/or outdoor loading and storage areas that are screened from public view)	Landscape Standards



du = dwelling unit
ac = acre
FAR = Floor Area Ratio
sf = square feet

CIRCULATION

Circulation improvements within the PUD area should include adequate vehicular and pedestrian accessways throughout the PUD area. Improvements within the PUD area shall include points of access to Fourth Street and Mountain Avenue. Proposed improvements to roadways and pedestrian accessways shall be approved by the City Engineer.

The Project provides circulation improvements within the PUD area, including a primary and secondary driveway along Fourth Street and Mountain Avenue, respectively. The primary driveway consists of a two-lane gated entry along Fourth Street which leads to the southern entrance of the central parking structure. A secondary driveway connects to Mountain Avenue in the northwestern portion of the Project site and continues east toward the eastern boundary of the Project site. The secondary driveway includes a connection to the northern entrance of the central parking structure. Once past the northern entrance of the central parking structure, the secondary driveway continues east, transitioning into an Emergency Vehicle Access (EVA) lane which terminates at the eastern boundary of the Project site.

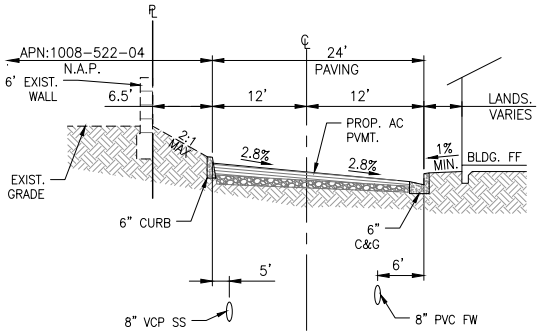
Internal circulation improvements also include a series of ramps within the central parking structure to allow vehicular access to each of the six parking levels. The ramps will allow for a bidirectional flow of traffic. The first and sixth level of the central parking structure will include a turnaround space for vehicles to change direction to either continue upwards or downwards on the ramp.

Accessible route from public right of way to building entrance

Building vehicular entry/exit

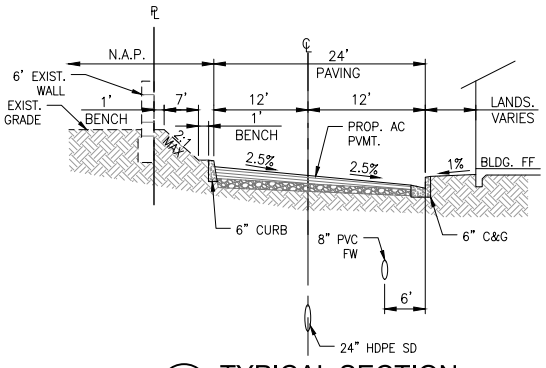
Pedestrian entry/exit

ROADWAY INFRASTRUCTURE



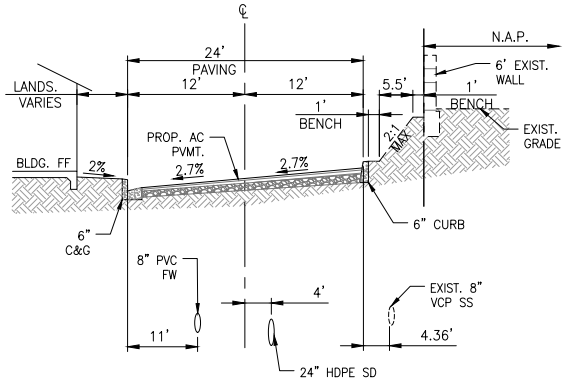
Internal Roadway Improvements

Access to the PUD site is provided through roadway connections to both Mountain Avenue and Fourth Street. External roadway access points (e.g., driveways) shall be developed at a minimum width of 24 feet. This not only allows for a bidirectional flow of passenger vehicle traffic, but also provides adequate space for the bidirectional travel for larger service vehicles (e.g., fire engines and garbage trucks).



Access to the PUD site via Harvard Place shall be limited to EVA connections. EVA lane access to the PUD site shall be prohibited for non-emergency vehicles and pedestrians. EVA connections to Harvard Place shall be secured via a gated entry which shall remain closed and locked except when in use by emergency personnel.

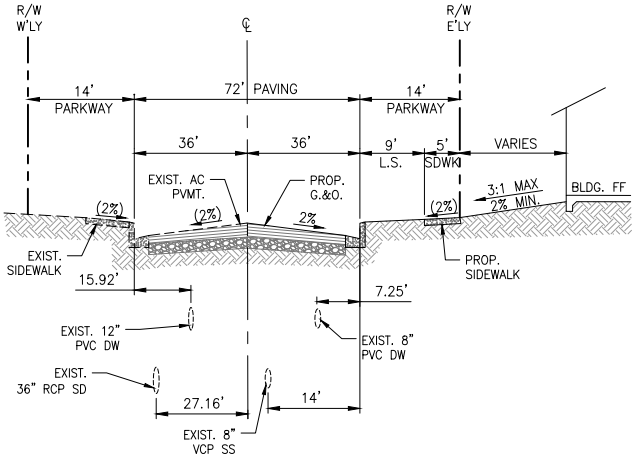
The Project's proposed internal roadway improvements include two driveways, multiple ramps connecting the different levels of the central parking structure, and an EVA lane.



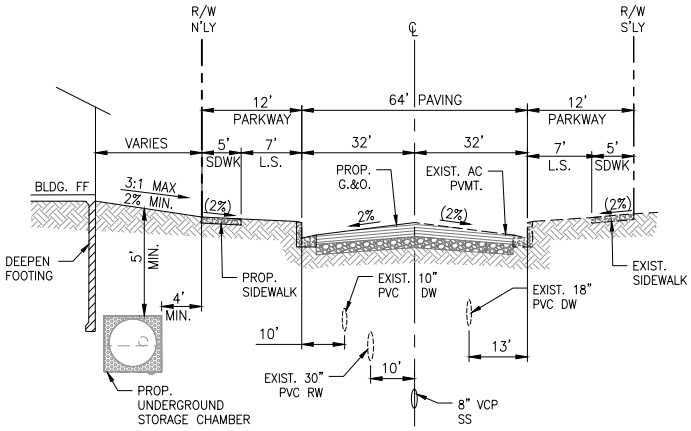
- The main entryway connects to Fourth Street via a 28.5-ft wide driveway, which continues into a 26-ft wide gated entry for the central parking structure. A 20-ft wide guest drop-off lane is attached to the main entryway. These driveways are separated by a 6-ft wide landscape island.
- The secondary entryway connects to Mountain Avenue via a 24-ft wide driveway leading to a 90-degree connection to a 24-ft wide entry into the central parking structure.
- An EVA lane will connect to the secondary entryway, continuing the 24-ft wide driveway east to Harvard Place. The EVA lane will consist of paved portions of the northeast perimeter of the Project area. The EVA lane will terminate at a 6-foot-tall gate placed at the EVA lane's point of connection to Harvard Place.
- The 6 levels of the parking structure will be connected by 24-ft wide ramps that connect each of the parking levels to the surrounding residential structure.

E TYPICAL SECTION N.T.S.

F TYPICAL SECTION N.T.S.

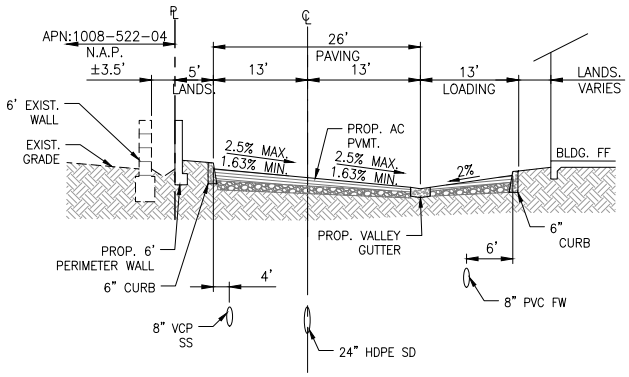


G TYPICAL SECTION N.T.S.

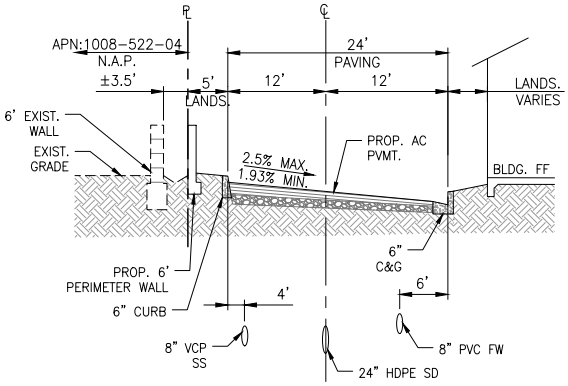


Public Right of Way Improvements

The public right-of-way improvements required are to include but are not limited to the following: street pavement, curb and gutter, parkway landscaping, parkway irrigation, public sidewalk, traffic signing and striping, streetlights, bus stop, bus shelters, and amenities.



Development along public rights-of-way must be approved by the City.



A N. MOUNTAIN AVENUE
N.T.S.

B W. FOURTH STREET
N.T.S.

C TYPICAL SECTION
N.T.S.

D TYPICAL SECTION
N.T.S.

Parking

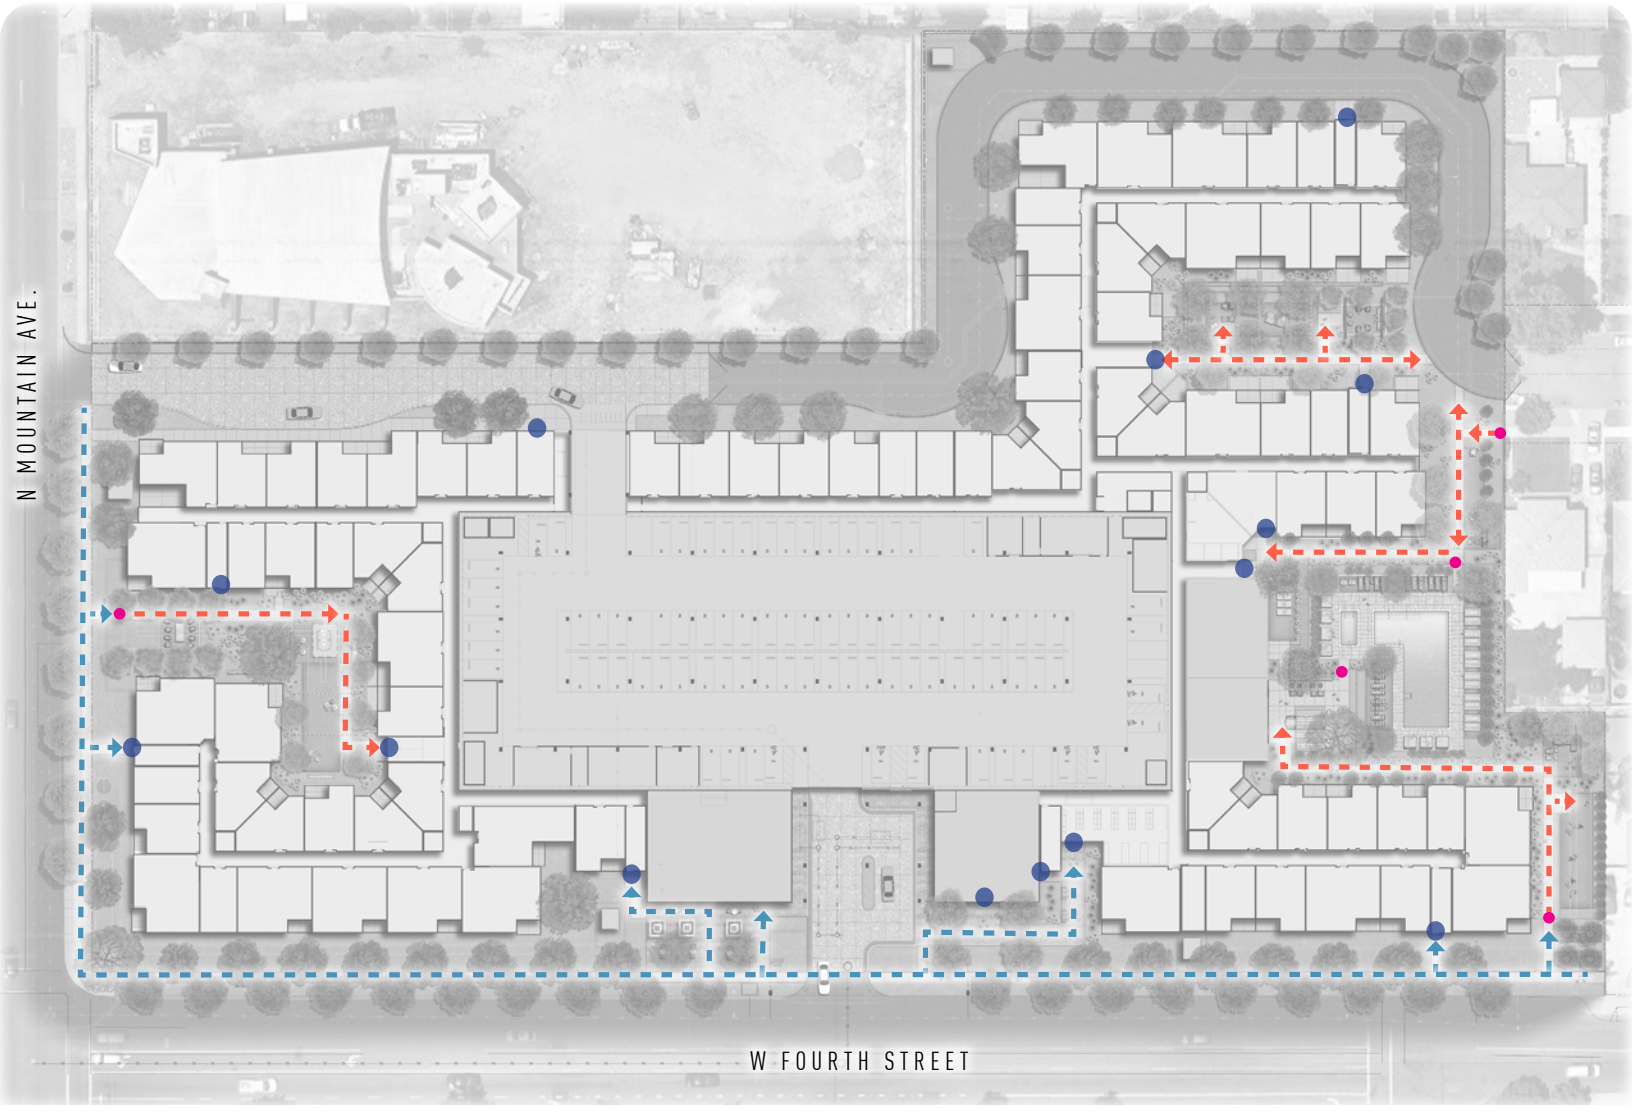
Parking should be provided within the PUD area for residential and retail uses. Residential parking shall be provided at a rate of at least 1.2 spaces per bedroom (includes guest parking). Studio unit parking shall also be provided at a rate of 1.2 spaces per unit. Retail uses parking shall be provided at a rate of 1 parking space for each 250 sf of commercial floor area.

Parking space dimensions, drive aisles, etc. shall conform to the design standards set forth in Division 6.03 (Off-Street Parking and Loading) of the Ontario Development Code. On-street vehicular parking along Fourth Street and Mountain Avenue shall be prohibited. Fourth Street and Mountain Avenue are both public streets and may not be designated for guest parking. On-street parking may not be used to meet the requirements for on-site parking as indicated in Division 6.03 of the Ontario Development Code.

Parking requirements for each unit type are summarized in **Table 1: Applicable Development Standards**.

The Project will provide 643 residential parking spaces and 16 retail parking spaces within the central parking structure for a total of 659 parking spaces. Retail parking spaces will be located on the ground floor of the parking structure with the remaining spaces utilized for residential parking. Twenty-four bicycle parking stations will be provided based on a ratio of 1 bicycle rack per 30 parking stalls. The amount of residential provided bicycle racks will exceed the required 22 stalls based on e 643 provided residential parking stalls. **Table 2: Project Parking Consistency** summarizes the Project's proposed parking counts compared to the standards established for the PUD.

Table 2: Project Parking Consistency



Standard	PUD Requirement	Project Consistency
Residential Parking Ratio	1.2 spaces per bedroom (1.2 spaces per studio unit)	1.4 spaces per bedroom (including studio units)
Minimum Residential Spaces	555 Spaces	643 Spaces
Minimum Retail/Office Parking Ratio	1 space per 250 sf	
Minimum Retail/Office Parking Spaces	16 Spaces	16 Spaces
Minimum Bicycle Parking Ratio	Residential: 1 rack per 30 stalls Retail (short term): 5% of stalls (2 minimum)	
Minimum Residential Bicycle Racks	22 Racks	22 Racks
Minimum Bicycle Racks	2 Racks	2 Racks

Pedestrian Connections

Pedestrian connections shall be provided to the PUD site from Mountain Avenue and Fourth Street. Private pedestrian accessways shall be developed between each building and dwelling unit within the PUD site. The PUD area shall be developed such that internal vehicular traffic is limited to parking areas and main driveways. Pedestrian accessways within the PUD area outside of parking structures should be landscaped and be made of complimentary materials to the building theme.

The Project will connect to existing pedestrian sidewalks along Fourth Street and Mountain Avenue. Internal pedestrian circulation will include pathways between buildings and dwelling units and the parking structure. Residents will be able to access all areas of Watermarke Ontario, including amenity areas, through walking paths and paved sidewalks. Vehicular traffic will be limited to the central parking structure, its entryways, and external roadways.

Pathways within the Project which are adjacent to amenities and open space areas will be created with various materials, including stone, concrete, and wood paneling to give each area of the Project site its own unique character.

Private Walks Public Walks Resident Access Gate Building Entry

INFRASTRUCTURE AND UTILITIES

Utility infrastructure within the PUD area such as water, sewer, recycled water, and electricity facilities shall connect to existing City infrastructure systems along Mountain Avenue and Fourth Street and propose new facilities within existing utility easements and rights of way. Each utility shall be buried at varying depths, based on City standard, to create a separated, identifiable system.

Telecommunications

Residential developments within the PUD shall include connections to telecommunications services either through existing overhead cable and telephone lines, through the placement of fiber optic cable, or undergrounding based on site conditions and the City's discretion.

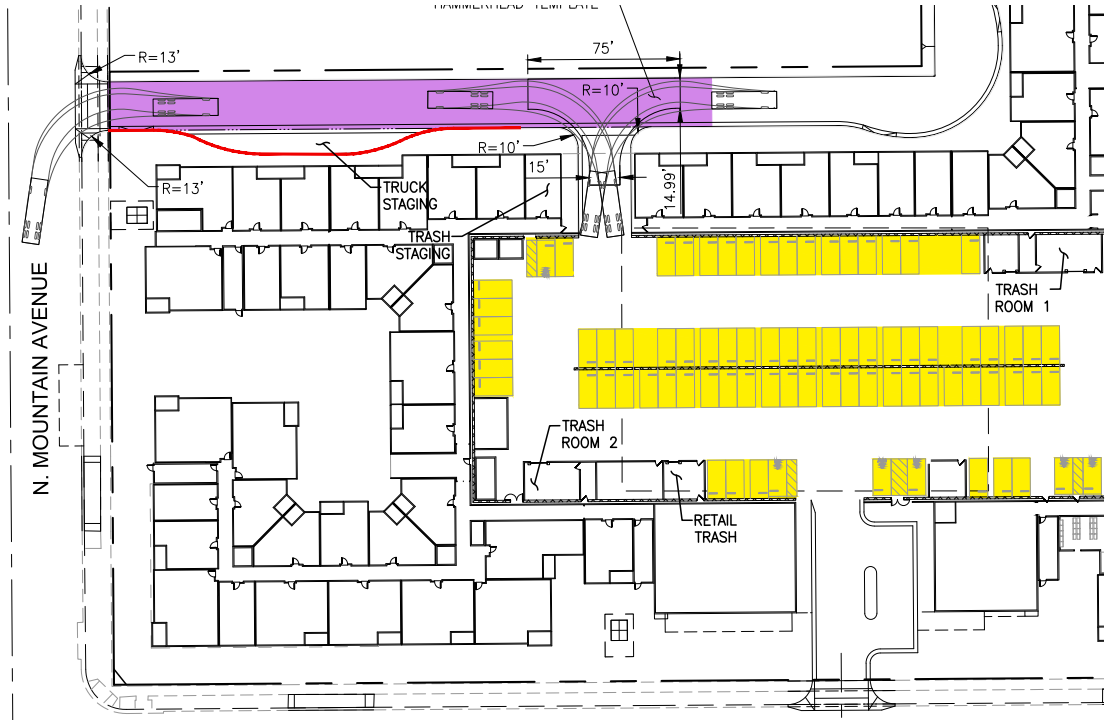
The Project includes the placement of new fiber optic cable along the northern, southern, and western portions of the Project site with multiple connections made to each building.

Water, Sewer, and Stormwater

Domestic water connections shall be made via the existing domestic water main running below Fourth Street along the southern portion of the PUD area.

The Project includes the placement of one domestic water meter, one domestic water master meter, and one domestic water backflow in the southern portion of the Project site. The Project includes a new recycled water meter connection along the southern portion of the site which would connect to the existing recycled water main below Fourth Street.

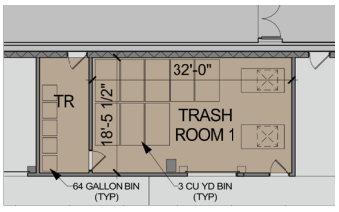
The Project proposes a new fire water line connection to the existing domestic water line beneath Mountain Avenue via a double check detector assembly (DCDA). The Project fire water line will follow the path of the secondary driveway and EVA lane to the PUD area's eastern perimeter where it will continue south along the Project site perimeter. The Project fire water line will then connect to the existing domestic water main below Fourth Street via a DCDA. Multiple points of connection from the fire water line to Project structures will be made within the northern portion of the Project site. Additional fire hydrants will be placed along the southern and western portions of the Project site.



Sewer infrastructure proposed for the Project site will run along the secondary northern driveway and continue along the EVA lane before terminating at a sewer lateral on the northwester portion of the EVA lane. An additional sewer line will branch from the northern line at the secondary entrance of the central parking structure and cross the site from north to south, connecting to a proposed line below Fourth Street. The Project proposed public sewer main below Fourth Street connecting to an existing sewer main below the intersection of Mountain Avenue and Fourth Street. Multiple sewer lateral connections will be made to the existing sewer main within the sanitary sewer easement adjacent to the eastern border of the Project site. The existing sewer main runs north-south along the Project site before transitioning east between Harvard Place and Fourth Street. Multiple laterals placed along the proposed and existing sewer facilities will form connections to each unit and retail use.

Developments within the PUD area shall provide on-site stormwater drainage facilities which comply with the San Bernardino County Stormwater Program's Water Quality Management Plan (WQMP) requirements. These facilities may include vegetated swales, depressed landscaped basins, pervious concrete pavement, and underground stormwater retention/infiltration vaults. All proposed Development Plans must prepare a Preliminary Water Quality Management Plan to ensure water quality management.

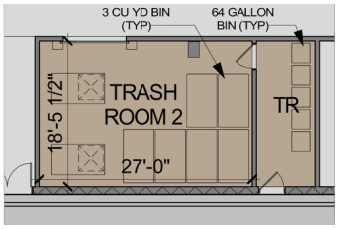
One underground retarding basin and one underground infiltration chamber will be placed on the western and southwestern portions of the Project site, respectively. A dry well will be placed in the southeastern portion of the site and will connect to the proposed onsite storm drain system.



New storm drainage lines will connect to existing storm drain facilities below Mountain Avenue. The Project storm drain lines will run along the inner perimeter of the PUD area. An underground infiltration chamber will be placed below the southwestern corner of the Project site. Additionally, an underground retarding basin will be placed below Courtyard 3. A modular wetland, a pump, and a flow control structure will be placed along the southeastern portion of the PUD area.

Solid Waste

Individual refuse containers should be provided for each residential unit and collected in group waste bins within trash enclosures for pickup by City Integrated Waste Department. Refuse and recyclable materials collection facilities shall be designed consistent with the City's Building and Development Code and shall be designed to be consistent with the overall theme of the surrounding PUD area, including materials and aesthetic elements of both the specific area and the overall PUD area. Trash enclosures should be placed throughout the site to allow for waste collection and shall be shielded from pedestrian view. The PUD roadways shall be designed to allow for utility service vehicles (such as waste collection vehicles) to enter and exit the site via Mountain Avenue.



All refuse enclosures shall be located on major drives aisles within developments to achieve adequate circulation for refuse vehicles. Enclosures must be designed so that refuse and recycling containers may be accessed by the generator and serviced by the service provider without moving other bins. To encourage recycling, enclosures designed for a maximum of one (1) bin are prohibited.

ENLARGED TRASH ROOM 1
N.T.S.

All Priority Land Use (PLU) areas (areas which include mixed uses containing residential densities of at least 10 dwelling units per acre) within this Development Plan shall comply with the statewide Trash Provisions adopted by the State Water Resources Control Board (SWRCB) and trash requirements in the most current San Bernardino County Area-Wide MS4 Permit.

Individual refuse and recyclable materials collection pick up and storage locations have been designed for the project. Trash and recycling bins shall be provided for each unit. Two residential trash rooms will be placed in the northeast and southwest corner of the parking structure. First floor residents are able to dispose of their trash in either of these rooms. Each subsequent floor of the residential structure will have access to garbage chutes also located in the northeast and southwest corner of the parking structure. These chutes deposit refuse directly into the first-floor trash rooms.
A retail trash enclosure is also provided in the southwest corner of the central parking structure.

ENLARGED TRASH ROOM 2
N.T.S.

Scout trucks will be used to consistently monitor trash levels and transfer full containers to the main trash enclosure on the north side of the PUD area. The bins within the trash enclosure will be picked up by the City's Integrated Waste Department. The City's Integrated Waste Department will utilize the secondary northern driveway as site access. This process of trash retrieval will be shielded from view will be made efficient through the creation of a truck access lane attached to the secondary entrance driveway.

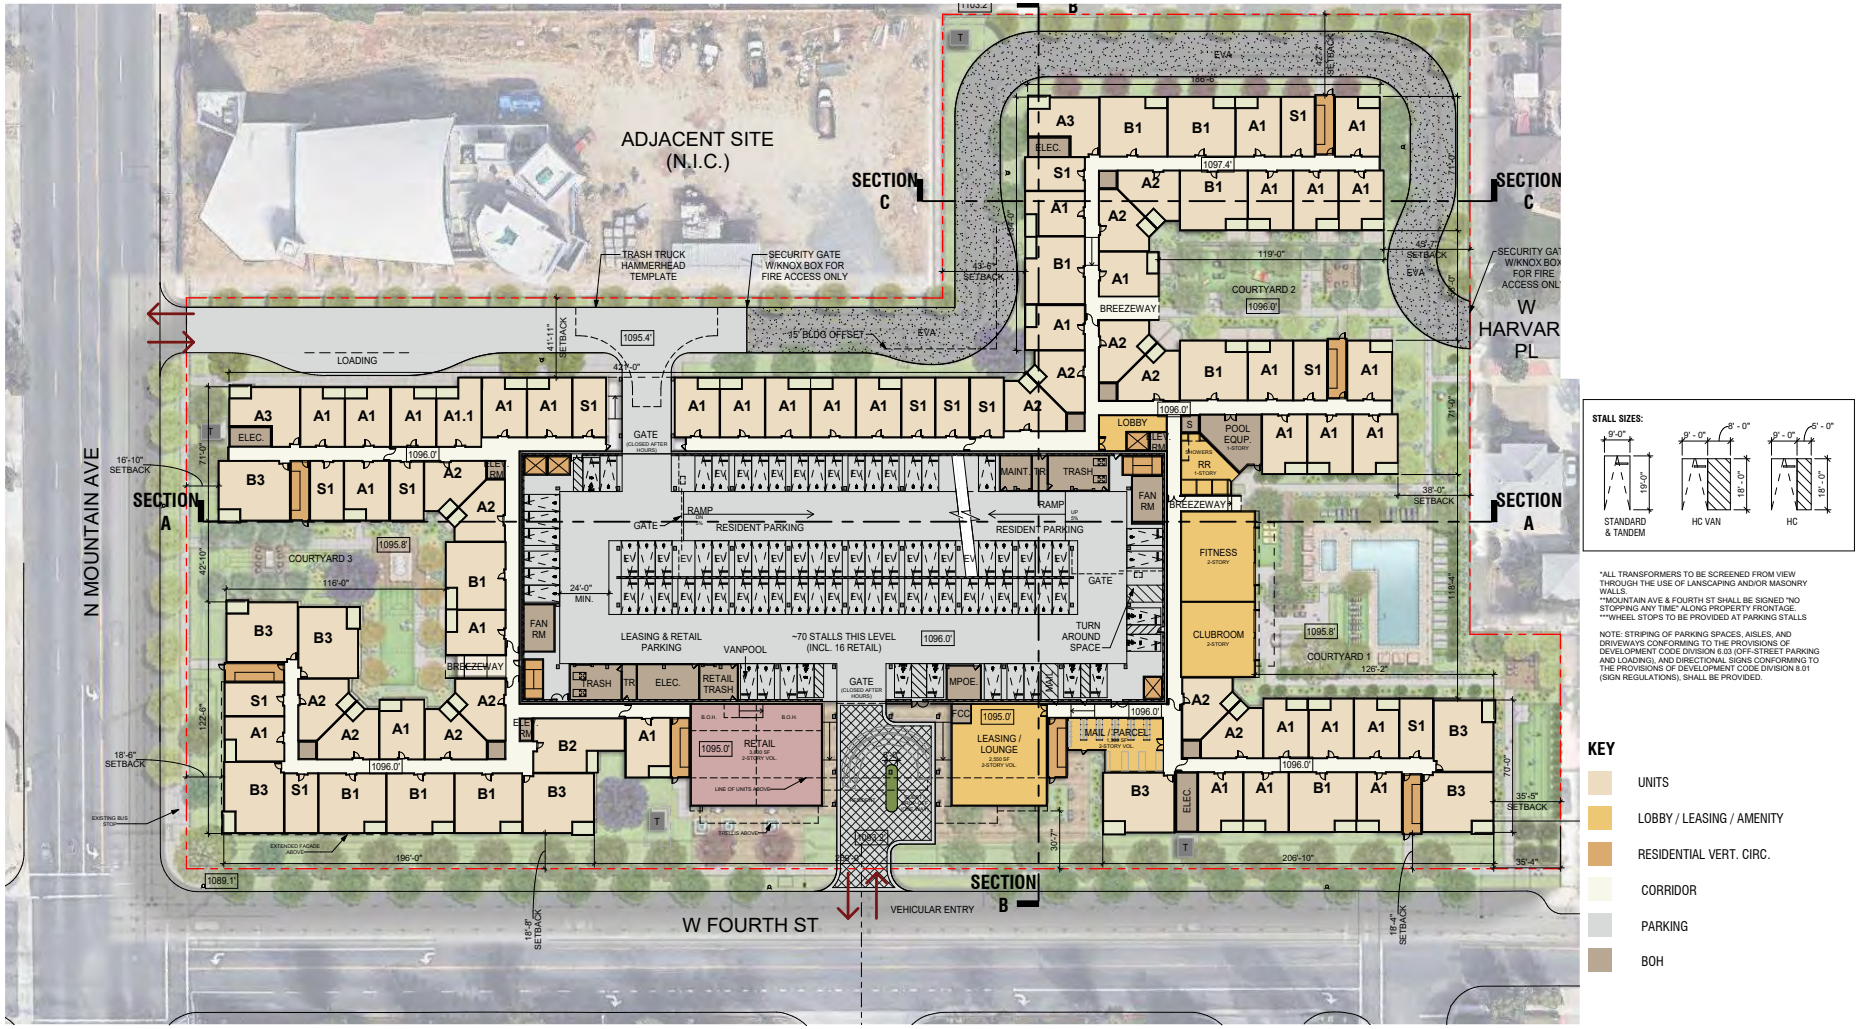
Utility Screening

All ground mounted equipment within the PUD area shall be screened and designed to not detract from the architecture of the Project site. Air conditioners, and other utilities, shall be screened from adjoining properties and public rights or way by a visual barrier. Water, sewer, telecommunication, and electricity utility lines shall be buried underneath roadways to not only shield them from public view, but also to ensure their protection from hazards such as precipitous weather and rodents.

Utility buildings shall be installed/designed to incorporate architectural elements or screening or to be placed in a manner to reduce visual impacts to the community. Roof mounted equipment, including ladders and antenna devices, shall be located and/or screened so that it is not visible from streets and adjacent buildings; or shall be designed to be integrated to the building's form where possible. Roof decks and rooftop mechanical units may be visible from adjacent developments and therefore shall be screened and painted to match the finish of the roofing material in order to be as unobtrusive as possible. Rooftop levels shall therefore be developed with parapets which encircles and rooftop area which contains rooftop mechanical equipment in order to further shield them from view. Rooftop parapets should be designed to match the materials and color scheme of the adjacent portion of the building. Roof decks should be designed to match or compliment materials and colors used in the adjacent portions of the building and create a sense of consistency between building components.

DEVELOPMENT STRATEGY

Nonresidential uses (i.e., retail and office), within the PUD area shall be developed at a maximum intensity of 1.0 FAR. Residential density within the PUD area shall range from a minimum of 25 du/ac to a maximum of 75 du/ac. These densities are consistent with development standards established for City's MU-8b zones.



The Project proposes the creation of 3,800 square feet of retail/office space along the PUD area's Fourth Street frontage. Project retail/office uses are proposed at an intensity of 0.02 FAR. The Watermarke Ontario Project proposes the creation of 357 multifamily residential units with an overall density of 61.5 du/ac.

The Project's 357 residential units would consist of studio, 1-bedroom, and 2-bedroom apartment units. The studio units are available in one floorplan and the 1- and 2-bedroom units are available in three floorplans. The PUD floorplans range in size from 576 square feet to 1,172 square feet. **Table 3: Floor Plan Standards** details the dimensions and development standard of each of the three available floor plans.

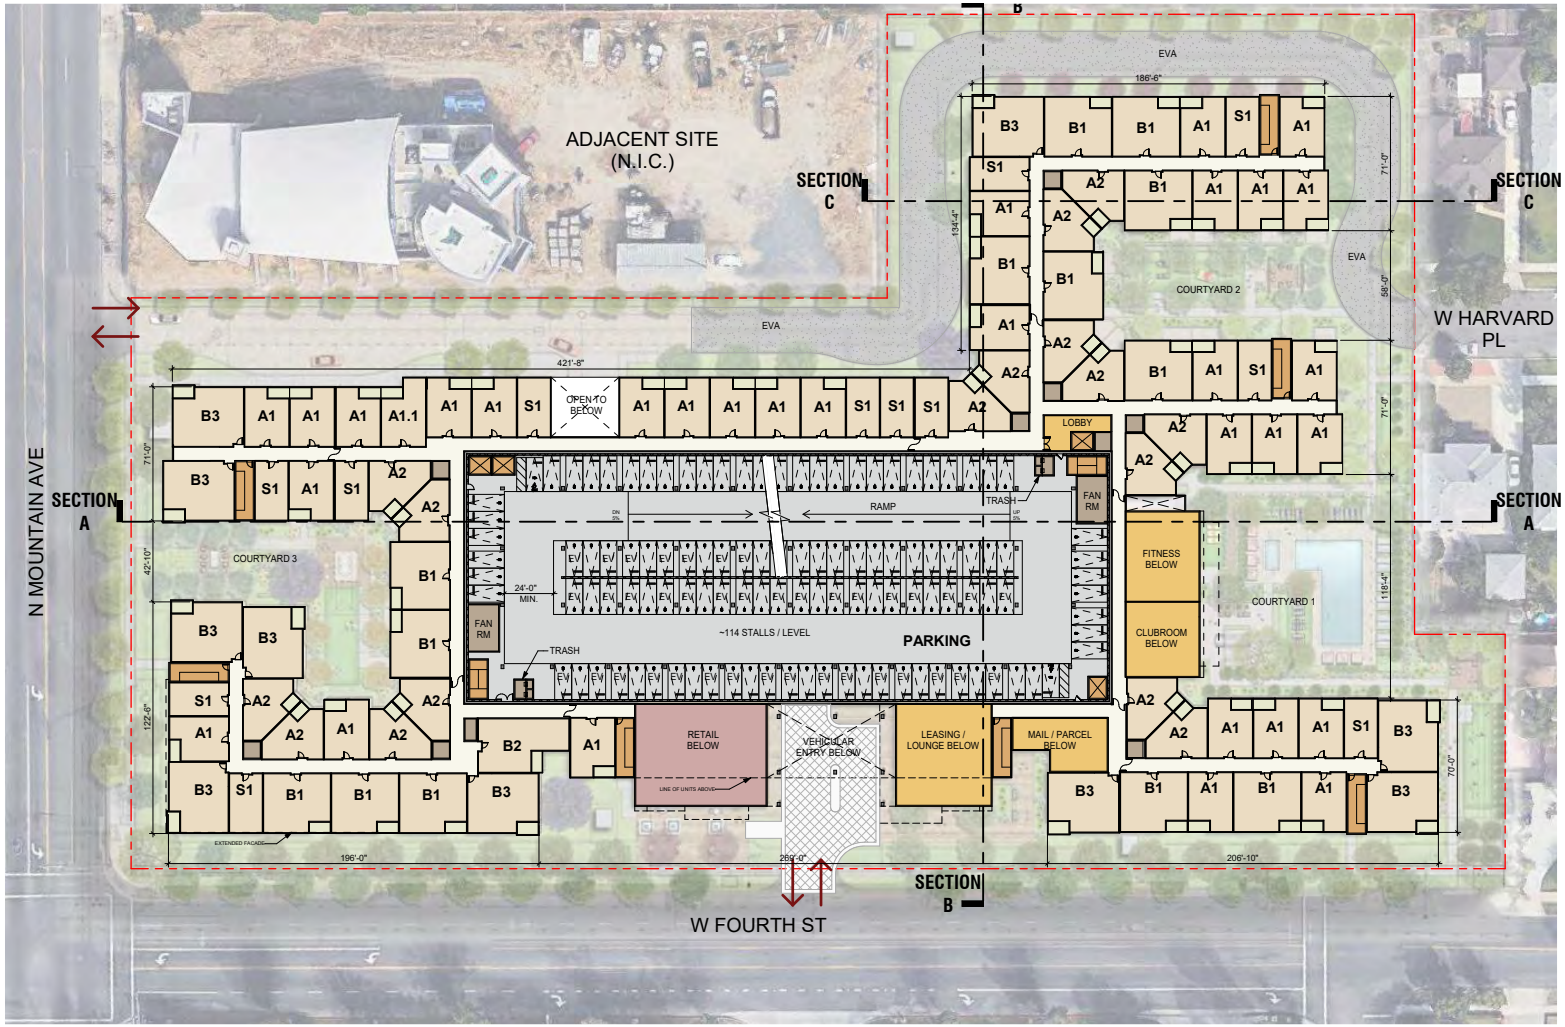


Table 3: Floor Plan Standards

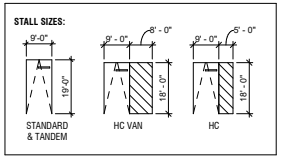

Floor Plan #		Bedrooms	Bathrooms	Square Feet	Unit Count
5	**1**	Studio	1	576	50
A	**1**	1	1	696	138
	2			707	62
	3			891	2
B	**1**	2	2	1,080	62
	2			1,172	6
	3			1,138	37

DESIGN GUIDELINES

The following design guidelines are intended as a reference to assist the designer in understanding the City's goals and objectives for high quality commercial development. The guidelines contained here are consistent with the standards presented in **Table 1: Applicable Development Standards** above.

The design guidelines provided in this section are designed to be compatible with the vision of the Mixed-Use Neighborhood Activity Hub and provide site specific guidance for the development of the project area. The design guidelines in this PUD are intended to provide direction to developments within the PUD area. The guidelines will be utilized during the City's development review process to encourage the highest level of design quality, while at the same time providing the flexibility necessary to encourage creativity on the part of the project designer(s).

Building Orientation

Building frontages shall be oriented towards Fourth Street. Frontages should be enhanced with entry elements, interesting architecture, enhanced materials, and pedestrian scale to provide connection between the development and the street. Fourth Street shall provide primary access to the site with Mountain Avenue acting as a secondary access point. Retail uses developed within the PUD area shall have entrances oriented toward Fourth Street. Indoor residential amenities (e.g., gyms and common areas) may be oriented towards interior pedestrian open spaces.

The Project will consist of one large multifamily building with integrated retail and parking uses. The Project will be developed as a wrapped style development with one central multilevel parking structure surrounded on all sides by residential units, retail uses, and amenities. The building will be developed with inset amenity spaces, courtyards, and additional pedestrian accessways. This will allow a natural, organic buffer to occur between the building and any surrounding roadway or development. Each side of the building will be designed to be aesthetically pleasing to any passersby; however, the main side will be oriented toward Fourth Street. The rear entry, adjacent to Mountain Avenue, will be a secondary elevation/frontage. Residential units will have their entryways oriented toward the inside of the complex with balconies and windows facing the exterior of the complex. Pathways to each unit will also be placed within the complex and connect with separate pedestrian pathways that lead to external portions of the complex.

North Elevation

Setbacks

Buildings within the PUD area shall maintain a minimum setback of 10 feet from the front and interior side PUD area boundaries. Additionally, buildings within the PUD area shall maintain a minimum setback of 10 feet from adjacent arterial, collector, and local streets.

Landscaping shall be used within each setback to soften each building's appearance as well as designed with windows or design elements. The use of a 10-foot setback for the sides of buildings adjacent to adjacent residentially zoned parcels would allow for a softer transition to nearby residential uses.

The Project will maintain a minimum setback of 10 feet for front, side, and all street setbacks. All unimproved setback areas within the Project area will be landscaped.

Architectural Character/Details

Building frontages along Fourth Street must be developed to be visually appealing with enhanced materials and landscaping. Building signage and addresses should be clearly visible from the street. Residential and Non-Residential land uses should be visually distinguishable from each other while maintaining an overall theme with the building frontage through the use of similar materials and color palette.

Buildings within the PUD area should be designed so that each side of the building is visually consistent within itself while not needing to be consistent with other sides. However, the complimentary usage of materials and color pallets should be implemented to ensure unity among each side of the building.

The Project's main building will include a break in design between the first floor and the remaining floors to create a natural separation between the mixed uses present on the ground floor and the residential uses in subsequent floors. The overall building will be designed in a contemporary modern style with aesthetically pleasing geometric symmetry between features and units as well a mixture of materials and colors.

Architectural variety will also be used in each façade through a blending of materials including cement board tiles and stone veneer and balconies with metal panel railings. Each level beyond the first story will be expanded beyond the footprint of the first level.

Important or unique portions of the building (such as the retail use or leasing office) will be emphasized through an expanded footprint and large glass frontages. The extended footprint will terminate at the third story and provide differentiation of the points of interest from the remaining residential units. The retail and leasing office will also act as the building frontage, with both on either side of the main entryway.

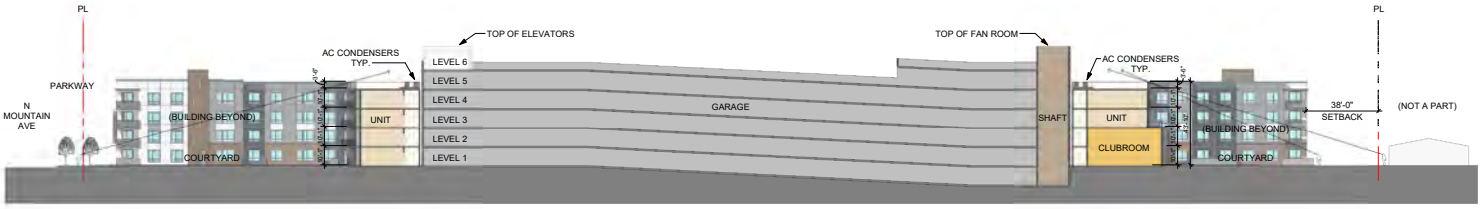
South Elevation

Massing and Scale

Parking areas should be inset within the PUD area and placed behind buildings. Parking areas within the PUD area shall be a maximum of two stories higher than the nearest residential building.

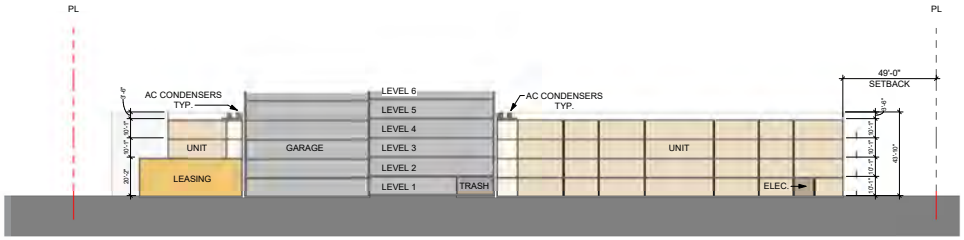
Taller structures should be centered within the PUD area, with shorter structures developed along the perimeter of the PUD area and the tallest structure at the center of the PUD area. Shorter structures shall not be placed behind taller structures along roadway adjacent portions of the site. This will allow for adequate shielding form views along public roadways. No buildings shall exceed a maximum height of 65 feet, inclusive of rooftop utility facilities and attachments.

Buildings shall not be placed continuously along the entirety of the PUD perimeter. The PUD perimeter shall be broken up with buildings, landscaping, courtyards, and other pedestrian features in order to encourage visual dynamism.



Material and/or color variations should be applied to building facades based on internal architecture. For example, balconies and stairwells should vary in design from the outer walls of residential or retail uses. These variations should be implemented through the use of complimentary materials and colors.

First story developments should be distinguishable from subsequent stories along each building through the use of separate, but complimentary design features such as materials and colors.



The Project will be developed as a wrapped mixed use apartment complex with a single building encircling a central multi-level parking structure. All unit entries will be accessed within a central hallway and around internal courtyards within the site and around centralized amenity spaces within the lot. All four levels of the mixed use building will present the same footprint, with the only variance being a reduced footprint for third and fourth floor units directly above the leasing office and retail use. Third floor balconies will be extended to create overhangs adjacent to the western portion of Courtyard 1 and above the leasing office and retail use.

The central parking structure will be six stories in the center of the apartment complex. The parking structure will extend beyond the overall height of the residential structures but will not expand the overall footprint. The Project's proposed central parking structure will be the tallest building on the Project site with an approximate 63-foot elevation. Ground level amenities will be within interior courtyards and along the outer perimeter of the main building. These amenities are intended to be accessed with minimal walls/structures blocking access to the facilities. Each building and amenity is designed to be accessed via pedestrian travel with vehicular access capability limited to the entry driveways and the central parking structure. Emergency vehicles may also utilize the EVA running between the Mountain Avenue entrance to Harvard Place.

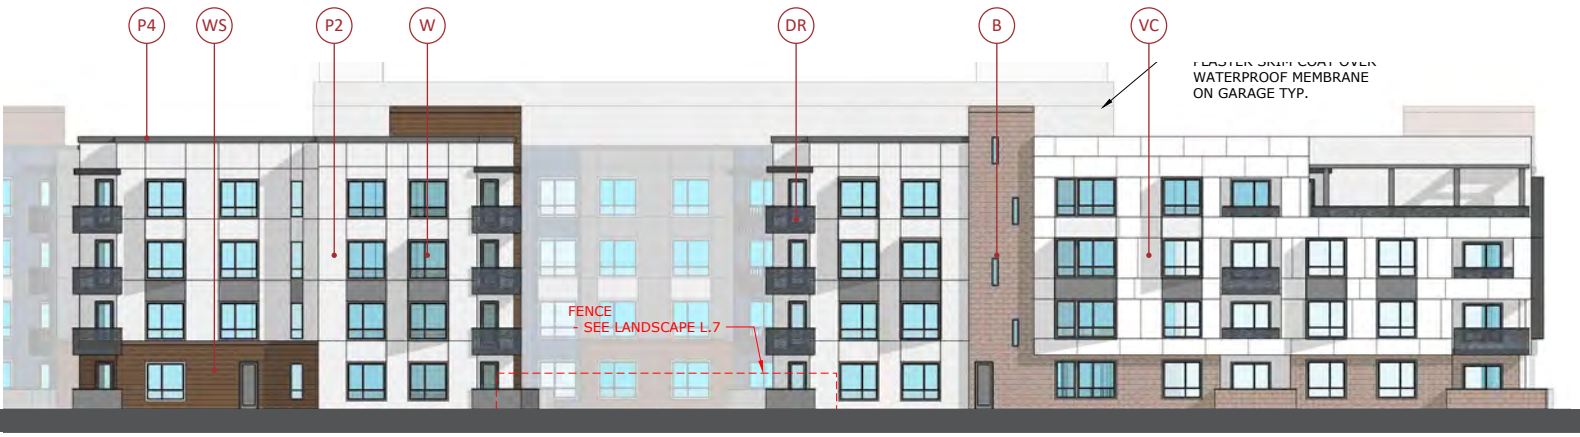
KEY MAP



Materials and Color

Materials used within the PUD area should exhibit permanence and quality, thematically unifying a building's appearance on all sides; materials and colors should accentuate the architectural details of the building and promote visual harmony. Brick, tile, pre-cast architectural concrete, wood, stone veneers, metal grating, or stucco are preferred.

Multiple materials and colors should be used on each building façade to create a sense of visual dynamism and interest.

Materials and colors present in the Project will consist of a blending of naturally occurring colors found in organic landscaping components as well as complimentary earth tones to create a bright, visually appealing and modern structure. **Table 4: Material Palette** and **Table 5: Color Palette** and summarize both the non-landscape colors and materials present within the Project.

Partial West Elevation

Partial North Elevation

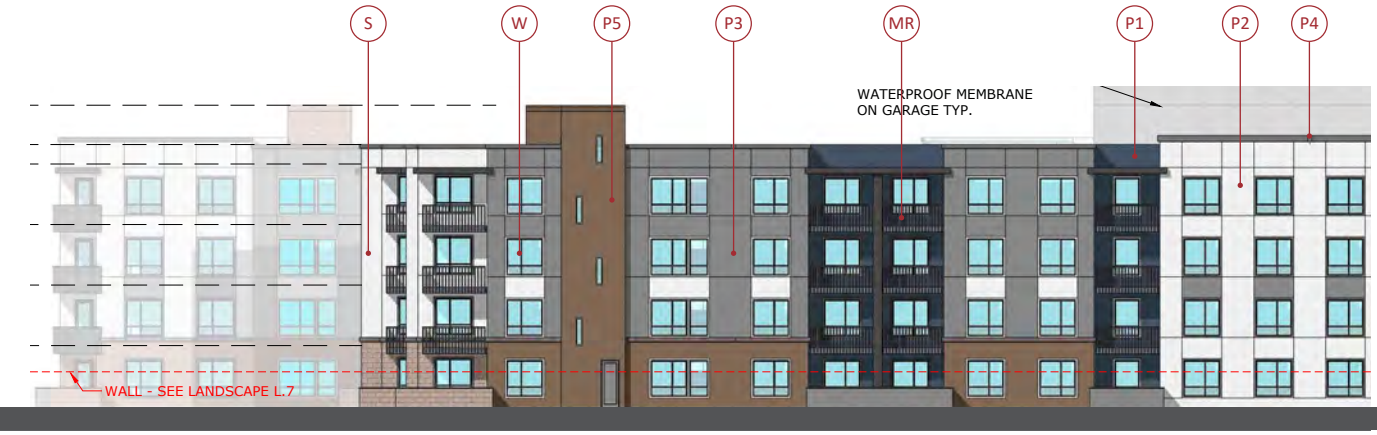


Table 4: Material Palette

	Material	Location
	(P) Plaster	Main material; north, south, east, and west façade.
	(B) Block Veneer	Accent material; north, south, east, and west façade.
	(WS) Wood-Like Siding Accent	Accent material; west façade.
	(VC) Vertical Cement Board Tiles	Main material; south and west façade.
	(SF) Storefront	Retail use; north façade.
	(DR) Decorative Metal Panel Railing	Main material; south, east, and west units. Accent material; north façade.
	(MR)Metal Picket Railing	Main material; north, east, and west façade.

Table 5: Color Palette

	Color	Location
	(1) Needlepoint	Accent color; north and south façade.
	(2) Snowberry	Accent color; north and south façade. Main color, east and west façade.
	(3) Tin Lizzie	Accent color; east façade. Main color; north and south façade.
	(4) Grizzle Gray	Trim color; north, south, east, and west façade.
	(5) Umber Rust	Accent color; north, east, and west façade.

LANDSCAPE STANDARDS

A conceptual landscape plan shall be submitted along with the Development Plan for any project within the PUD area for review by the City Landscape Planning Division. The plan shall specify all landscaping and hardscape for the entire project site. Detailed Landscape and Irrigation Plans shall be required prior to the issuance of building permits. The detailed plans shall show location of ground mounted utility boxes and equipment, along with the methods of screening for these items from the public right-of-way and adjacent residences where possible. The irrigation system shall be designed to utilize recycled water pursuant to State and local codes, ordinances, and laws, and applicable building and plumbing codes.

The Landscape Plan should support and enhance the mixture of retail and residential uses within the PUD area. Landscaping within the PUD area should be used to accentuate transitions from adjacent uses, define circulation patterns within the PUD area, screen parking areas from the street, highlight entries, provide shade for parking areas and outdoor seating areas, and to soften the appearance of any buildings.

Landscaping shall be completed for any setback areas from public roadways and internal communal or gathering spaces, excluding areas devoted to building area, paving, and/or outdoor loading and storage areas that are screened from public view.

The Project's building design creates a series of open courtyards between each wing of the building providing a private, attractive open space area for the tenants use. These spaces are further enhanced with distinctive planting, landscape and amenity features, making them unique and enjoyable to the residents. The planting palette for the Project was chosen to establish a strong, memorable landscape while also providing a buffer between the PUD area and external uses. Exciting recreational structures and well landscaped pathways lead and invite residents to enjoy the central open space amenities or create a convenient walking path for evening exercise.

Open Space Areas

Private open space shall be provided for each dwelling consistent with development code standards and may include balconies or ground level patios. When located on the ground level, private open space shall be screened from public view by landscaping, courtyard walls or privacy fences. Common open space shall be provided to allow for passive and active types of recreation, along with site landscaping amenities for residents and their guests.

The Watermarke Ontario Project includes the following open space areas:

- Three courtyards,
- One pocket park,
- Intimate seating areas,
- A lounge deck,
- And retail frontage.

West Courtyard

The West Courtyard functions as a communal outdoor dining space for residents. This outdoor space includes a built-in barbecue grill structure and large communal dining table. An attached yard provides multipurpose uses with lounge seating and an open lawn area that can be used for a variety of purposes. The West Courtyard is located on the western portion of the PUD area.

Pool Courtyard

The Pool Courtyard provides a private, resort style pool experience for residents to. The courtyard's pool deck includes one 60'x18' resort pool and an 8'x16' spa. The surrounding areas include lounge chairs, chaise lounges, and pool chairs. Additional amenities within the Pool Courtyard include an outdoor fitness area directly outside of the indoor fitness room, and shaded dining areas.

The pool courtyard includes an adjacent seating area for residents to sit and relax along internal pathways leading from the pool area to Fourth Street.

The Hangout Courtyard

The Hangout Courtyard provides a casual recreational setting for Project residents. This courtyard allows for recreational activity within a multi-activity game lawn. Residents may rest beneath the specimen tree grove or on other benches provided within this courtyard. Nighttime activity is encouraged through the use of festival lighting throughout this courtyard.

Pocket Parks

One pocket parks will be provided adjacent to the eastern boundary of the PUD area. The pocket park provides small open spaces for the community to access. The Game Court pocket park open space area includes a corn hole play area, a tree allee, and lounge seating. Pocket parks within the PUD are private and for resident use only.

Fourth Level Lounge

The southwest corner of the main building's fourth level will include a lounge and dining area for residents. The lounge area will include larger and smaller group seating areas. The lounge also features a built-in barbecue for meal preparation and a large banquet style island table. The outer perimeter of the lounge will be landscaped to provide a more natural aesthetic and create a sense of privacy within the lounge area. The lounge will provide residents with scenic views of the western and southern portions of the City and surrounding area.

Residents may access the lounge via a private door on the southwest corner of the fourth-floor hallway.

Retail Frontage

The retail use will include the development of an outdoor seating area with café tables and umbrellas. Retail frontage will be required to employ enhanced landscaping and decorative accents. These may include pottery decorations, and unique foliage. The retail entryway should have a unique character that remains thematically consistent with the overall development within the PUD. Seating may be provided within the retail frontage. Landscaping along the retail frontage may include potted or in-ground flowers and in-ground shrubs. Trees may not be used as a part of retail frontage, this area is intended to provide amenity space for residents and commercial visitors. Retail stores shall comply with the sign requirements as set forth in the City of Ontario Development Code.

Vegetation

Vegetation within the Watermarke Ontario PUD includes a mixture of ornamental trees, shrubs, and fruiting, edible plant species. A total of 188 trees will be utilized for open space within the PUD area. A mixture of 50 (27%) native and 138 (73%) non-native trees will be planted in the PUD area. Additionally, a mixture of large and medium shrubs will be utilized throughout the PUD site. Vegetation plans must be reviewed by the Landscape Planning Division.

Fruiting trees and shrubs are placed around the community and recreational areas to create a more natural environment for residents.

Lighting

All lighting of facades, decorative fixtures, store window interiors, awnings, and signs shall be designed in accordance with the criteria set forth in Ontario's Development Code. Exterior lighting fixtures should be decorative and reinforce the architectural style of the building. Outdoor lighting within the PUD area should consist of warm color temperatures except for security or emergency lighting in order to remain unobtrusive to surrounding residential developments and internal residential developments. Colder color temperatures would be more obtrusive to residents and would create a less organic lighting effect.

On-site lighting shall be directed away and shielded from adjacent streets and adjacent properties. All exterior lighting shall be of an indirect nature, placed/situated/etc. under eaves and canopies, or ground level within landscaped areas.

Light within the PUD's communal areas should be warm colored and unobtrusive. Light sources for the Project should be LED or metal halide.

Walls and Fencing

Walls and fencing should be used to define private and communal spaces within the PUD site. Walls can be used to enhance design, create privacy, and help maintain boundaries within the open space areas. Fences and walls within the project area shall be made of decorative materials compatible with the overall architectural character of the development. All fences and walls shall be in scale with the development to fulfill such needs as screening and security.

Fences, walls and hedges within the project area shall comply with Engineering Corner Sight Distance Standards and other applicable standards. Decorative walls, monuments and/or other similar features shall not encroach into the public street right-of-way. Walls should be an integrated design of the building architecture and feature similar finished material, reveal lines, trim, etc.

Walls shall be limited to a maximum height of 6 feet in height.

The eastern boundary of the PUD area shall be walled entirely from adjacent properties. Gated EVA access to Harvard Place shall be constructed to be 6 feet in height and shall be designed with styles and materials which completely obstruct views through the gate. Gated EVA access to Harvard Place shall always remain locked except when in use by authorized emergency personnel. Access controls for the EVA gates shall be limited to property managers and emergency responders, exclusively.

Signs

All signs for the project shall be subject to the requirements of the City Development Code.….

ADMINISTRATION

Items not Addressed in this PUD

Any terms, requirements, or regulations not addressed within the PUD document shall be governed by the City of Ontario Development Code and City Standards.

Development Applications

Development Plans for the development of each individual parcel within the PUD area, along with fees and other required items, shall be submitted for review and approval per the requirements contained in Chapter 2, Administration and Procedures, of the City of Ontario Development Code and the General Application.

Administrative Exceptions

Deviation from the development standards set forth in this document may be granted up to a maximum of ten (10%) percent by the Zoning Administrator. Any deviation that is greater than (10%) percent shall require Variance approval.

Severability

If any portion of this Planned Unit Development is held to be invalid, unconstitutional, or unenforceable by a court of competent jurisdiction, the determination shall not affect the validity of the remaining portions of this Planned Unit Development. Moreover, the decision shall not affect, impair, or nullify this Planned Unit Development, either in whole or in part, and the remainder of this Planned Unit Development shall continue in full force and effect.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING THE USE OF AN ADDENDUM TO THE ONTARIO PLAN 2050 SUPPLEMENTAL ENVIRONMENTAL IMPACT REPORT, PURSUANT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NOS. PUD22-006 AND PDEV22-042.

WHEREAS, JAT LAND DEVELOPMENT LLC (hereinafter referred to as "Applicant") has filed an Application for the approval of the Watermarke Ontario Planned Unit Development, File No. PUD22-006, establishing the development standards and design guidelines for the 5.81-acre Project site, in conjunction with a Development Plan, File No. PDEV22-042, to construct 357 apartment units and 3,800 square feet of commercial space on the Project site, on land located at the northeast corner of Mountain Avenue and Fourth Street, in the City of Ontario, California (hereinafter referred to as "Application" or "Project"); and

WHEREAS, The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) was certified on August 16, 2022, (hereinafter referred to as "Certified SEIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified SEIR (hereinafter referred to as "SEIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the SEIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified SEIR, and that the Certified SEIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000, et seq. — (hereinafter referred to as "CEQA") and an EIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified SEIR was appropriate; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application and the requested approval to construct and otherwise undertake the Project; and

WHEREAS, the City Council has reviewed and considered the SEIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent of supplemental EIR have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the SEIR Addendum for the Project is on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, and is available for inspection by any interested person at that location and is, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on January 23, 2024, the Planning Commission of the City of Ontario voted to continue the item to the February 27, 2024, hearing date; and

WHEREAS, on February 27, 2024, the Planning Commission of the City of Ontario conducted a hearing to consider the SEIR Addendum and the Project, and concluded said hearing on that date, voting to issue Resolution No. PC24-003, recommending the City Council adopt the SEIR Addendum, and voting to issue Resolution No. PC24-004, recommending the City Council approve the Application; and

WHEREAS, as the first action on the Project, on March 19, 2024, the City Council issued a Resolution adopting the SEIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on March 19, 2024, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the City Council finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 2: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

SECTION 3: ***Environmental Determination and Findings.*** As the decision-making authority for the Project, the City Council has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts

and information contained in the administrative record, including all written and oral evidence presented, the City Council finds as follows:

(1) The environmental impacts of this Project were reviewed in conjunction with an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The SEIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of Project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The SEIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the City Council; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the Project may result in significant environmental impacts.

SECTION 4: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the City Council, and the specific findings set forth in Sections 1 through 3, above, the City Council finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified SEIR that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared, that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified SEIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified SEIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified SEIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 5: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 4, above, the City Council hereby APPROVES the herein described Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 6: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 7: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 19th day of March, 2024.

1.0 INTRODUCTION

1.1 PURPOSE

This Addendum has been prepared in accordance with the provisions of the California Environmental Quality Act (CEQA) (California Public Resources Code [PRC] Section 21000 et seq.); the CEQA Guidelines (Title 14, California Code of Regulations [CCR] Section 15000 et seq.); and the rules, regulations, and procedures for implementing CEQA as set forth by the City. The City is the lead agency under the CEQA.

Section 15164(a) of the CEQA Guidelines states that "the lead agency or a responsible agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary, but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred." Pursuant to Section 15162(a) of the CEQA Guidelines, a subsequent Environmental Impact Report (SEIR) or Negative Declaration is only required when:

(1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

(2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or Negative Declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

(3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the Negative Declaration was adopted, shows any of the following:

    (A) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;

    (B) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

    (C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

    (D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

The Ontario Plan 2050 (TOP 2050), is an updated to the City's General Plan, The Ontario Plan, used to guide the City's development and conservation for the next 30 years through 2050. This Addendum to TOP 2050, with the inclusion of the Project, describes how the potential environmental effects of the proposed Project are appropriately and adequately addressed in the Supplemental Environmental Impact Report (SEIR) for the TOP 2050, approved in August 2022 (Approved SEIR). The Approved SEIR adopted in

August 2022, addressed the environmental effects associated with implementation of the updated to The Ontario Plan. The focus of the analysis is the adequacy of the previously Approved SEIR, relative to the Project in its current environmental context.

1.2 INTENDED USE OF THIS ADDENDUM, PROJECT DISCRETIONARY ACTIONS

This Addendum will serve as the City of Ontario's (City's) environmental review of the Watermarke Ontario Planned Unit Development (PUD) Project (Project) as required under CEQA. The City may also employ this Addendum in any subsequent review or consideration of the individual development proposals within the Project area.

Discretionary actions, permit and related consultation(s) necessary to approve and implement the Project include, but are not limited to, the following.

CEQA Section 15124 states in pertinent part that if "a public agency must make more than one decision on a project, all its decisions subject to CEQA should be listed." Requested decisions, or discretionary actions, necessary to realize the Project include the following:

- Certification of this Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (Approved SEIR) adopted in August 2022;
- Adoption of the -Watermarke Ontario Mixed Use Development Plan (File no. PDEV22-042);
- Approval of Infrastructure Improvement Plan, including but not limited to: roads, sewer, water, and stormwater management systems;
- Approval of Planned Unit Development (File No. PUD22-006).

CEQA Section 15124 also states that environmental documentation should, to the extent known, list other permits or approvals required to implement the Project. Based on the current Project design concept, in addition to City permits and approvals, anticipated permits necessary to realize the proposal will likely include, but are not limited to the following:

- Permitting may be required by/through the Regional Water Quality Control Board (RWQCB) pursuant to requirements of the City's National Pollutant Discharge Elimination System (NPDES) Permit;
- Permitting may be required by/through the South Coast Air Quality Management District (SCAQMD) for certain equipment or land uses that may be implemented within the Project area;
- Various construction, grading, and encroachment permits allowing implementation of the Project facilities.

1.3 PROJECT BACKGROUND

This Addendum to the Approved SEIR has been prepared in response to the application of the Project which will establish development standards for the existing zoning district designations and zoning standards that apply to the Project site. The Project is located in the northwestern portion of the City, within the County of San Bernardino (County).

The Ontario Plan (TOP 2050) was adopted in 2022. The TOP 2050 is intended to guide the City's development and conservation for the next 30 years through 2050. TOP 2050 describes the community's direction at a point in time (2009) and integrates it into a single guidance system that would shape Ontario 20 years or more into the future with a horizon year of 2050. TOP 2050 is the City's policy and implementation framework that guides the long-term growth and improvement of the Ontario community through six interrelated components of city governance:

A **Vision** that provides a sense of purpose and mission for city governance and sets the tone for the other components of TOP. The Vision's central theme is a sustained, community-wide prosperity that continuously adds value and yields benefits.

A **Governance Manual** that establishes a set of goals and policies to promote consistent City leadership based on the principles of regional leadership, transparency, long-term value, accountability, and inclusivity.

A **Policy Plan** that serves as the City's legally required general plan and that states long-term goals, principles, and policies to achieve Ontario's Vision. This component acts as the direct guide for continued growth and development within the City and fully defines each aspect of life within the City. The policy plan addresses each aspect of life within the City through nine elements:

- Land Use
- Housing
- Parks and Recreation
- Environmental Resources
- Community Economics
- Safety
- Mobility
- Community Design
- Social Resources

A list of **City Council Priorities** that shape the City's ongoing annual budgeting process, with a focus on a variety of short- and long-term goals and objectives.

An **Implementation Plan** that identifies the actions needed to carry out TOP's policies. This includes initiatives by the City such as establishing consistent land use zoning and creating objective development and design standards, as well as decisions on public and private development projects, and City activity programs.

A **Tracking and Feedback** system that charts the City's progress toward achieving the Policy Plan goals, providing data and analysis that enables decision makers to make strategic course corrections in response to changing circumstances and monitor ongoing operational effectiveness.

The Project is located within the Mixed-Use Neighborhood Activity Hubs (MU-NH) land use designation. The TOP 2050 contains goals and policies which apply to the MU-NH land use designations. The MU-NH land use designation is intended to allow for the development of low-rise mixtures of retail and residential uses that could serve the surrounding residents. The Project area is currently zoned as Mountain/Fourth Mixed Use (MU-8b) Zoning District. A MU-8b zone accommodates commercial uses at a maximum density of 1.0 Floor Area Ratio (FAR) and residential uses of 20 to 75 dwelling units per acre (du/ac). Additionally,

the TOP 2050 Figure LU-03 estimates that future buildout for the MU-NH land use area specific to Mountain and Fourth would include the development of up to 251 residential units, and 75,008 square feet of nonresidential uses.[1] As previously stated, the Project allow for the development of 357 residential units and 3,800 sq ft of nonresidential uses. Although the Project would exceed the estimated residential buildout of the Approved SEIR for the Mountain/Fourth Mixed Use (MU-8b) Zoning District by 106 units, the Project's nonresidential uses would be below the buildout estimates by 71,208 sq ft. Additionally, the Project would remain consistent with the development density standards of MU-NH land use areas.[2]

The Project is designed to achieve the purpose of this land use designation and complies with all applicable goals and policies. The Project would function as a set of planning and design principles, development regulations, and performance standards to guide and govern the development within the Project site.

The Ontario Plan (TOP) 2050 SEIR[3]

TOP 2050 focuses on technical updates to the Policy Plan to comply with state housing mandates and conform with new state laws related to community health, environmental justice, climate adaptation, resiliency, and mobility. The majority of updates created through TOP 2050 is located throughout the nine broad categories of the existing structure of the Policy Plan including, the land use element, housing element, parks and recreation element, environmental resources element, community economics element, safety element, mobility element, community design element, and social resources element. Furthermore, the land use designations for TOP 2050 are the same as the TOP 2010 Certified EIR.

TOP 2050 would increase population, dwelling units, and nonresidential buildings but would result in a small decrease in employment. The decrease in employment at buildout is largely because of automation in the industrial sector, with large warehousing and logistics buildings expected to create fewer new jobs through 2050 than a similarly sized industrial building was expected to create at the time of TOP 2010. TOP 2050 land use changes are intended to improve growth areas by encouraging the use of alternative forms of transportation and promoting healthier communities through land use planning that encourages walking and biking, promotes vibrant communities, puts residents in proximity to resources (i.e., jobs, grocery stores, retail), and aligns growth with planned infrastructure improvements and regional transportation goals.

1.4 DOCUMENT ORGANIZATION

This Addendum is presented in four (4) sections, as follows:

- **Section 1.0**, "Introduction," provides an overview of the Project, its context, and environmental documentation applicable to the proposed development. An Environmental Impact Analysis summary from TOP 2050 is included in this section, and mitigation measures applicable to the Project are identified. No new or substantially modified mitigation measures are required.

[3] The Ontario Plan 2050 Draft Supplemental Environmental Impact Report. Page 3-13 through 3-23

- **Section 2.0**, "Description of Proposed Project," presents the Project in greater detail, and describes its relationship to existing and anticipated location.
- **Section 3.0,** "Environmental Analysis," assesses potential environmental impacts of the Project. The analysis considers potential effects of the Project for all environmental topics addressed in Approved EIR.
- **Section 4.0,** "Determination," presents the determination regarding the appropriate environmental document for the Project.

2.0 DESCRIPTION OF PROPOSED PROJECT

2.1 PROJECT SETTING AND LOCATION

The Project site is located in the City, within the County of San Bernardino. The Project area occupies 5.81 acres of the northeast corner of Mountain Avenue and Fourth Street and includes four parcels (APNs 1008-513-16, 1008-522-01, 1008-522-02, and 1008-522-03); refer to **Figure 1: Regional Vicinity and Figure 2: Local Vicinity,** which provides an aerial view of the Project site and surrounding land uses. Regional access to the Project area is provided by Interstate 10 (I-10) approximately 0.6 miles north of the Project site, and State Route 83 (SR- 83) approximately 0.9 miles east of the Project site.

OmniTrans Transit Agency provides local transit service throughout San Bernardino County, including Ontario. OmniTrans provides countywide bus service and currently has five bus routes in the City that provide connections between rail stations, Ontario International Airport, major employment and shopping centers, and residential areas. Additionally, commuter train service in the City is provided by Metrolink, the Riverside County Line runs between Los Angeles Union Station and downtown Riverside, passing through the City. There is one Metrolink station in the City, located approximately 5.6 miles southeast of the Project site off of Haven Avenue on Francis Street.

The Project site is currently disturbed and developed with commercial and governmental uses. The southern portion of the Project site contains a strip mall structure occupied by commercial businesses, and the northwestern portion of the Project site contains a United States Post Office Building. The Post Office Building is in active use as of September 2023. The remainder of the Project site is paved with portions painted with parking stalls. Vegetation is present within the landscaped portions of the Project perimeter along Mountain Avenue and Fourth Street. Additionally, two trees are present within planters in the eastern portion of the Project site away from West Fourth Street.

An existing church and single-family residences are located immediately north of the Project site, and single-family residences are located immediately east of the Project site. Additional commercial uses are located west and south of the Project site.

The surrounding land use designations include:

North: Low Density Residential

South: Neighborhood Commercial

East: Neighborhood Commercial

West: Low Density Residential

2.2 PROJECT SITE GENERAL PLAN AND ZONING

The Project site's General Plan land use and zoning designations are as follows:

- General Plan Land Use: Mixed Use – Neighborhood Activity Hubs (MU-NH)
- Zoning: Mountain/Fourth Mixed Use (MU-8b)

This land use designation permits the Project to develop multifamily residential units as well as multiple retail and neighborhood commercial uses.

2.3 PROJECT DESCRIPTION

2.3.1 Proposed Planned Unit Development

Chapter 4 of the City Development Code §4.01.030 "Planned Unit Developments (PUD) and Amendments" establishes the regulations and procedures for the approval of a PUD with the following intent:

A. Purpose

2. The PUD is intended to:

    a. Secure a fuller realization of the Policy Plan component of The Ontario Plan than would result from the strict application of present zoning district regulations;

    b. Promote high standards in urban design;

    c. Encourage the development of exceptionally high quality, mixed-use, high intensity projects, while establishing regulations and standards for uses with unique regulatory and design needs; and

    d. Ensure harmonious relationships with surrounding land uses.

The PUD would follow closely to the existing City Development Code standards and provisions and would also provide additional standards and guidelines that only apply to the Project site.

Proposed Development Regulations

The purpose of these standards is to encourage a high-quality residential development. These standards establish flexible guidelines to encourage such development, ensure that it is of a minimum standard of appearance, and compatible with the neighborhoods. However, the Project would also comply with TOP 2050 land use designations. The specific objectives are:

- Allow flexibility in lot size and configuration, and facilitate residential development within acceptable densities;
- Provide clear development standards that promote compatibility between new and existing development; and
- Encourage efficient land use by facilitating compact, motorcourt style single-family units.

Table 1: Summarized Development Standards summarizes the development standards present within the entire Project PUD. These development standards are based on those found in the City Development Code. In the event of discrepancies between the development standards presented in the Project PUD and those in the City Development Code, this document will act as the primary regulatory document.

Table 1: Summarized Development Standards

Definition	City Requirement	Project Standard
Maximum Residential Density	20 – 75 du/ac	61.5 du/ac
Maximum Nonresidential Density	1.0 FAR	0.02 FAR
Maximum Building Height	Up to 5 Stories	Maximum building height of 65 feet or 5 stories
Minimum Residential Parking Ratio	1.2 spaces per bedroom	1.4 spaces per bedroom
Minimum Retail Parking Ratio	1 space per 250 sq ft (16 required)	16 spaces provided
Minimum Bicycle Parking Ratio	1 per 30 residential parking spaces 5% of retail spaces (2 minimum) Total 22 racks required	22 racks provided
Minimum Landscaping	The entirety of the project site (excluding areas devoted to building area, paving, and/or outdoor loading and storage areas that are screened from public view)	Same as City Requirement

Notes:
du = dwelling unit
ac = acre
FAR = Floor Area Ratio
sf = square feet

2.3.2 Proposed Development

The Project would develop 357 multifamily residential units along with 3,800 square feet (sq ft) of retail uses on an approximately 5.8-acre site. The Project would include the following open space areas: three courtyards, one pocket park, intimate seating areas, a lounge deck, and retail frontage. The West Courtyard would function as a communal outdoor dining space for residents and would include a built-in barbecue grill structure and a large communal dining table. The Pool Courtyard would provide a private pool for residents to use. The Hangout Courtyard would provide a recreational setting for the Project residents. The Pocket Park would provide a small open space for Project residents to use. The Fourth Level Lounge would include a lounge and dining area for residents. The retail frontage would include the development of an outdoor seating area with café tables and umbrellas.

The Project would consist of a four-story wrap style building circling a six-level centralized parking structure. The Project's 357 proposed residential units would consist of 50 studio units, 202 one-bedroom units, and 105 two-bedroom units (refer to **Figure 3: Ground Level Floor Plan** through **Figure 9: Basement Level Floor Plan** for a diagram of each floor level**;** and **Figure 10: North Elevation** through **Figure 13: West Elevation** for a diagram of each elevation). In addition, the Project would include a total of 659 parking spaces, 643 of the spaces would be parking designated for the residential units, and 16 parking spaces would be for retail use. The Project would also include 22 racks for resident and retail bicycle parking on the basement and second level of the central parking structure. The 22 bicycle parking racks would be provided based on a ratio of 1 bicycle rack per 30 parking stalls; each bicycle rack provides parking for 8 to 12 bicycles. California Green Building Standards Code (CALGreen), Title 24, Part 11, Section A4.106.9.2 requires that multifamily buildings provide bicycle spaces at a rate of one space per two dwelling units.

This would require approximately 179 bicycle spaces for the 357-unit Project. CALGreen Title 24, Part 11, Section 5.106.4.1.1 requires the placement of bicycle parking nearby nonresidential uses at a rate of 5 percent of provided nonresidential parking spaces, with a minimum of one 2-space bicycle rack. The Project would therefore provide 2 bicycle parking spaces based on the 16 nonresidential parking spaces provided.

Based on a conservative estimate of eight spaces per bicycle rack, the 22 bicycle Project would provide 176 total bicycle spaces. However, eight-space bicycle racks are the lowest capacity bicycle racks proposed for the Project. The majority of Bicycle racks have a 10-bicycle capacity and would therefore provide for two additional bicycle spaces per rack. One 12-space bicycle parking rack would be provided on the second story of the central parking structure to accommodate the two retail spaces required for the Project.

2.3.3 Project Design

The Project would consist of one large multifamily building with integrated retail and parking uses. The Project would be developed as a wrapped style development with one central multilevel parking structure surrounded on all sides by residential units, retail uses, and amenities. The Project would include amenity spaces, courtyards, and additional pedestrian accessways. The main side would be oriented toward Fourth Street. The rear entry of the Project building, adjacent to Mountain Avenue, would be a secondary elevation/frontage. Residential units would have their entryways oriented toward the inside of the building with balconies and windows facing the exterior. Pathways to each residential unit would connect with separate pedestrian pathways that lead to external portions of the building. As discussed above, the Project would include the following open space areas: three courtyards, one pocket park, intimate seating areas, a lounge deck, and retail frontage.

The Project would have a maximum building height of 63 feet. The Project's building would include a break in design between the first floor and the remaining floors to create a separation between the commercial uses on the ground floor and the residential uses in second, third, and fourth floors. The Project would be designed in a contemporary modern style with geometric symmetry between features and units and a mixture of colors, and materials such as: stone veneer finish, cement board tiles, decorative metal panel railing, metal picket railing, plaster finish, storefront, wood-like siding accent, and vinyl windows.

2.3.4 Sustainability

The Project site would utilize a mix of Water Use Classification of Landscape Species (WUCOLS) plants throughout the Project site. Throughout the Project site 40 percent of trees would be classified by WUCOLS as low water use, and 60percent of trees would be classified by WUCOLS as moderate water use. Additionally, 25 percent of trees used throughout the Project area would be a California native species. The Project would also utilize recycled water resources for nonpotable and irrigation uses, further reducing potable water demand on the Project site.

In addition, shrubs used throughout the Project site would be mainly low water use species. The Project site would also use a drip irrigation system with recycled water to water landscaping. The Project would also incorporate energy efficient measures such as LED or metal halide lighting. The Project would also comply with the California Energy Commission (CEC) Building Energy Efficiency Standards, which

encourage efficient electric heat pumps, establishes electric-ready requirements for new efficient electric heat pumps, expands solar photovoltaic and battery storage standards for residential development.[4]
Project Access

Regional access to the Project area would be facilitated through Interstate 10 (I-10) approximately 0.6 miles north of the Project site, and State Route 83 (SR- 83) approximately 0.9 miles east of the Project site.

Local

Local access to the Project site is provided via two entry driveways along Fourth Street and Mountain Avenue. The main entryway to the Project connects to Fourth Street via a 28.5-ft wide driveway that would continue into a 26-ft wide gated entry to the central parking garage. A 20-ft wide guest drop-off lane is attached to the main entryway. The main entry to the parking garage and the guest drop-off lane will be separated by a 6-ft wide landscape island. The secondary entryway would connect to Mountain Avenue via a 24-ft wide driveway leading to the central parking structure and continuing east and transitioning into an Emergency Vehicle Access (EVA) lane. Additionally, the Project is served by OmniTrans and Metrolink. The closest OmniTrans bus route to the Project site is Route 83. There is a bus stop for this route at Euclid Avenue and Fourth Street approximately 0.96 mile to the east of the Project site. There is one Metrolink station in the City, located 5.6 miles to the southeast of the Project site off of Haven Avenue on Francis Street, this station is served by OmniTrans Bus Route 81.

Additionally, a new circulation network would be created as part of the Project and would include a two-lane gated entry along Fourth Street to the south of the Project area. A secondary driveway would connect to Mountain Avenue and continue east to the rear entrance of the central parking structure. The driveway would become the EVA lane once past the northern parking structure entrance and would continue east, terminating at Harvard Place.

Internal roadways would also include a network of ramps within the central wrapped parking structure to allow access to each parking level. Each ramp would allow for a bidirectional flow of traffic. The first and sixth level of the parking structure would include a turnaround space for vehicles to change direction to continue upwards or downwards the ramp. The Project would provide a total of 659 parking spaces within the central parking structure, with 16 of these spaces reserved for retail parking. The retail parking would be located on the ground floor of the six-story parking structure with the remaining spaces utilized for residential parking. Retail bicycle spaces would be located on the second floor of the central parking structure, with residential bicycle parking available on the second floor and basement level of the central parking structure.

Pedestrian Access

Pedestrian access to the Project site would connect to existing pedestrian sidewalks along Fourth Street and Mountain Avenue. The Project site would also include a Leasing Office and retail stores on the ground floor that are accessible from the Fourth Street parking structure entrance.

[4] California Energy Commission. 2023. 2022 Building Energy Efficiency Standards. Retrieved from: https://www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/2022-building-energy-efficiency. (Accessed September 2023).

Internal pedestrian circulation would include outdoor pathways between buildings, and internal hallways residential units, and the parking structure. Residents will be able to access all Project areas, including amenity areas, through ground level walking paths and paved sidewalks. Pathways within the Project site which are adjacent to amenities and open space areas would be created with various materials, including stone, concrete, and wood paneling. Vehicular traffic will be limited to the central parking structure, its entryways, and external roadways.

2.3.5 Infrastructure and Utilities

Utility Infrastructure improvements within the Project area include the placement of underground water, sanitary sewer, and stormwater facilities.

The Project includes the placement of one domestic water meter, one domestic water master meter, and one domestic water backflow in the southern portion of the Project site. One underground retarding basin and one underground infiltration chamber will be placed on the western and southwestern portions of the Project site, respectively. A dry well will be placed in the southeastern portion of the site and will connect to the proposed onsite storm drain system. The Project includes a new recycled water meter connection along the southern portion of the site which would connect to the existing recycled water main below Fourth Street. The Project also proposes a new fire water line connection to the existing domestic water line beneath Mountain Avenue via a double check detector assembly (DCDA).

Sewer infrastructure proposed for the Project site will run along the secondary northern driveway and continue along the EVA lane before terminating at a sewer lateral on the northwester portion of the EVA lane. An additional sewer line will branch from the northern line at the secondary entrance of the central parking structure and cross the site from north to south, connecting to a proposed line below Fourth Street. The Project proposed public sewer main below Fourth Street connecting to an existing sewer main below the intersection of Mountain Avenue and Fourth Street. Multiple sewer lateral connections will be made to the existing sewer main within the sanitary sewer easement adjacent to the eastern border of the Project site.

New storm drainage lines will connect to existing storm drain facilities below Mountain Avenue. The Project storm drain lines will run along the inner perimeter of the Project area. An underground infiltration chamber will be placed below the southwestern corner of the Project site. Additionally, an underground retarding basin will be placed below Courtyard 3. A modular wetland, a pump, and a flow control structure will be placed along the southeastern portion of the Project area.

Water, sewer, telecommunication, and electricity utility lines would be buried underneath roadways to not only shield them from public view, but also to ensure their protection from hazards such as precipitous weather and rodents. Each utility would be buried at varying depths to create a separated, identifiable system.

2.3.6 Open Space and Amenities

The Project would include the development of three courtyards on the ground level, one pocket park, intimate seating areas, a lounge deck, and a fourth story outdoor lounge facing the corner of Mountain Avenue and Fourth Street. The West Courtyard would function as a communal outdoor dining space for

residents, and would include a built-in barbecue grill structure and a large communal dining table. The West Courtyard would also include an attached yard that would provide multipurpose uses with lounge seating and an open lawn area.

The Pool Courtyard would provide a private pool and spa for residents. The area surrounding the pool and spa would include lounge chairs, chaise lounges, and pool chairs. Additional amenities within the Pool Courtyard would include an outdoor fitness area directly outside the indoor fitness room, and shaded dining areas. The Pool Courtyard includes an adjacent seating area for residents along internal pathways leading from the pool area to Fourth Street.

The third courtyard, the Hangout Courtyard would allow for recreational activity within a multi-activity game lawn.

The Pocket Park would be adjacent to the eastern boundary of the Project area, on the ground floor, and would provide small open spaces for residents to access. The Fourth Level Lounge would be located in the southwest corner of the Project building's fourth level and would include a lounge and dining area for residents. This lounge area would include larger and smaller group seating areas, a built-in barbecue for meal preparation, and a large banquet style island table. The outer perimeter of the lounge would be landscaped to provide a more natural aesthetic and create a sense of privacy within the lounge area. The Project courtyards and pocket park would provide approximately 28,000 square feet of community open space to allow for passive and active types of recreation, along with Project site landscaping amenities for future residents and their guests.

Landscaping

Landscaping within and along the perimeter of the Project site would consist of ornamental trees, shrubs, and fruiting and edible plant species. The Project would utilize native trees and non-native trees throughout its landscaped areas. In addition to these trees, a mixture of large and medium shrubs would be utilized throughout the Project site.

2.3.7 Lighting and Signage

All lighting of facades, decorative fixtures, store window interiors, awnings, and signs for the Project site would be designed in accordance with the criteria set forth in Ontario's Development Code. Exterior lighting fixtures would be decorative and reinforce the architectural style of the Project site building. Additionally, outdoor lighting within the Project area would consist of warm color temperatures except for security or emergency lighting in order to remain unobtrusive to surrounding residential developments and internal residential developments. On-site lighting would be directed away and shielded from adjacent streets and adjacent properties. Exterior lighting on the Project side would be indirect, placed under eaves and canopies, or ground level within landscaped areas. Light within Project site communal areas would be warm colored and unobtrusive. Light sources for the Project would be LED or metal halide.

Additionally, all signs for the Project would be subject to the requirements of the City Development Code Chapter 8.0 Sign Regulations.[5]

2.3.8 Site Excavation and Grading Activities

Construction of the Project would require 5,147 cubic yards (cy) of cut soil and 12,200 cy of fill soil. As such, the Project is anticipated to import approximately 7,063 cy of soil; refer to **Figure 14: Conceptual Grading Plan East** and **Figure 15: Conceptual Grading Plan West**.

2.3.9 Construction Schedule

Construction is anticipated to begin in June 2024 and is anticipated to require 2.5 years (30 months), concluding in December 2026 (est.).

2.3.10 Project Approvals

The City is the Lead Agency as set forth in CEQA Statute Section 21067 and is responsible for reviewing and approving the Addendum to TOP 2050 with the addition of the Project. In addition to the Addendum, the City will consider the following discretionary approvals for the Project:

Development Plan (PDEV22-042): Approval of the proposed modifications to the site and building improvements including the proposed site plan and architectural designs for the development of 357 residential multi-family units, and up to 3,800 sq ft of retail uses.

Planned Unit Development (PUD22-006): Approval of the PUD would allow the Project PUD to serve as the underlying standards and requirements and contain design and development standards, provisions, procedures, and permitted uses for the Project.

3.0 TOP 2050 SEIR ENVIRONMENTAL IMPACT ANALYSIS SUMMARY

No Impact:

- Aesthetics (Impacts 5.1-2)
- Agriculture and Forestry Resources (Impacts 5.2-1 and 5.2-3)

Less Than Significant Impact:

- Aesthetics (Impacts 5.1-1, 5.1-3, 5.1-4)
- Agriculture and Forestry Resources (Impacts 5.2-2 and 5.2-4)
- Air Quality (Impact 5.3-5)
- Biological Resources (Impacts 5.4-1 through 5.4-5)
- Cultural Resources (Impact 5.5-3)
- Energy (Impacts 5.6-1 through 5.6-2)
- Geology and Soils (Impacts 5.7-1 through 5.7-5)
- Greenhouse Gas Emissions (Impacts 5.8-1 through 5.8-2)
- Hazards and Hazardous Materials (Impacts 5.9-1 through 5.9-5)
- Hydrology and Water Quality (Impacts 5.10-1 through 5.10-5)
- Land Use and Planning (Impacts 5.11-1 through 5.11-2)
- Mineral Resources (Impact 5.12-1)
- Noise (Impact 5.13-2)
- Population And Housing (Impacts 5.14-1 through 5.14-2)
- Public Services (Impacts 5.15-1 through 5.15-4)
- Recreation (Impacts 5.16-1 through 5.16-2)
- Transportation (Impacts 5.17-1 and 5.17-3)
- Utilities and Service Systems (Impacts 5.19-1 through 5.19-4)
- Wildfire (Impacts 5.20-1 through 5.20-2)

Less Than Significant Impact with Incorporation of Mitigation:

- Cultural Resources (Impact 5.5-2)
- Geology and Soils (Impact 5.7-6)
- Tribal Cultural Resources (Impact 5.18-1)

Significant and Unavoidable Impact:

- Air Quality (Impacts 5.3-1 through 5.3-4)

- Cultural Resources (Impact 5.5-1)
- Noise (Impact 5.13-1 and 5.13-3 and 5.13-4)
- Transportation (Impact 5.17-2)

4.0 ENVIRONMENTAL ANALYSIS

4.1 INTRODUCTION

The scope of the City's review of the Project is set forth in CEQA and the CEQA Guidelines. This review is limited to evaluating the environmental effects associated with the Project when compared to TOP 2050. This Addendum also reviews new information, if any, of substantial importance that was not known and could not have been known with the exercise of reasonable due diligence at the time the SEIR was approved. This evaluation includes a determination as to whether the changes proposed for the Project would result in any new significant impacts or more severe significant impact.

Although CEQA Guidelines Section 15164 does not stipulate the format or content of an Addendum, the topical areas identified in top 2050 were used as guidance for this Addendum. In addition, Section 15164 (c) of the CEQA Guidelines states that "A brief explanation of the decision not to prepare a subsequent EIR pursuant to Section 15162 should be included in an addendum to an EIR, the lead agency's findings on the Project, or elsewhere in the record. The explanation must be supported by substantial evidence." This comparative analysis provides the City with the factual basis for determining whether any changes in the Project, any changes in circumstances, or any new information since the Approved SEIR was certified would require additional environmental review or preparation of an SEIR.

Pursuant to CEQA Guidelines Section 15162, the City has determined, on the basis of substantial evidence in the light of the whole record, that implementation of the Project does not propose substantial changes to the Approved SEIR, no substantial changes in circumstances would occur which would require major revisions to the Approved SEIR, and no new information of substantial importance has been revealed since the certification of Approved SEIR that would result in either new significant effects or an increase in the severity of previously analyzed significant effects.

A Mitigation Monitoring and Reporting Program (MMRP) was adopted as a part of the Approved SEIR that minimized impacts associated with implementation of the Approved SEIR. The previously adopted Approved SEIR mitigation measures applicable to the Project would be collectively imposed as the Project's MMRP, which is contained in **Appendix A**.

4.2 AESTHETICS

4.2.1 Summary of Previous Environmental Analysis

The Approved SEIR concluded impacts associated with scenic resources, long-term visual character, and light/glare were determined to be less than significant. No mitigation measures were deemed necessary.

4.2.2 Analysis of Proposed Project

Threshold (a) Have a substantial adverse effect on a scenic vista? [Approved SEIR Impact 5.1-1]

No New or More Severe Impacts: The Project would not have a more severe or substantial adverse effect on a scenic vista than what was originally analyzed in TOP. The Approved SEIR cited the San Gabriel Mountains as the main scenic vista visible from the City. The Approved SEIR noted that compliance with the City's Municipal Code and policies would ensure that increased development in the City would not impact scenic vistas.[6] Additionally, it is not likely that development within low-lying areas of the City would alter scenic views of the San Gabriel Mountains as the peaks rise to 7,000 feet above mean sea level.[7]

Development associated with the Project would occur within City limits and would not require zoning or land use amendments for the property parcels. The PUD would allow for the development of structures one story higher than current zoning standards allow. However, the PUD would ensure minimal effects on views by requiring the placement of the taller parking structure in the center of the Project site, surrounded by the Project residential building. This would obscure views of the taller parking structure behind the outer residential structure based on pedestrian-level lines of sight from the street at the Perimeter of the Project site. Further, the Project would comply with Policy CD-1.5 which would ensure major north-south streets would be designed and redeveloped to feature views of the San Gabriel Mountains. The maximum Project building height would be 63 feet. While panoramic views of the San Gabriel Mountains would from public vantage points immediately south of the Project site would be impacted by Project development, the Project would only exceed allowed building heights by one story. Additionally, the sixth and final story of the Project would be comprised of the top of the central parking structure, with the highest point being approximately 9.5 feet higher than the ceiling of the fourth floor. Assuming a consistent 10-foot height for each story, this would account for a 1.5-foot shorter fifth story and would otherwise be within allowed building heights. While the Project does introduce new taller structures in the Project site, in comparison to existing structures, newly proposed structures do not substantially exceed allowed standards for the area and would not exceed the height of an average 5-story building. The Approved SEIR analysis was based on a maximum building height of 5 stories or 65 feet for buildings within the Project's land use designation. The Project would exceed this by one story. However, the Project's sixth story is comprised of an open final level of the central Parking structure. The final enclosed story is the fifth story of the central parking structure. Additionally, the Project does not propose improvements within the public ROW which would affect views north/south of the San Gabriel

[6] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page 5.1-5 Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).
[7] Ibid.

Mountains along Mountain Avenue. Therefore, the Project would not result in new or a substantial increase in magnitude of impacts.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Although the Project proposes increased building heights compared to existing conditions, the maximum building height would be 63 feet (the central parking structure) and would not obscure scenic views of the San Gabriel Mountains. Additionally, the sixth story would constitute the upper level of a parking structure, with the final average height enclosed story being the fifth story. The Project would result in a less than significant impact. Therefore, no new and/or modified mitigation measures are required for issues related to scenic vistas. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Substantially damage scenic resources, including, but not limited to, trees, rock, outcroppings, and historic buildings within a scenic highway? [Approved SEIR Impact 5.1-2]

Threshold (c) Conflict with zoning or other regulations governing scenic quality? [Approved SEIR Impact 5.1-3]

No New or More Severe Impacts: As discussed in the Approved SEIR, the City does not have any state scenic highways through or in the vicinity of the City.[8] The closest designated state scenic highway is a portion of State Route 142 in Chino Hills, approximately five miles west of the City limit and approximately 7 miles southwest of the Project site.[9] The Euclid Avenue corridor and the Mission Boulevard corridor are the primary scenic corridors located in the City and are not near the Project Site as the Euclid Avenue corridor is located approximately one mile east of the Project site and the Mission Boulevard Corridor is located approximately three miles southeast of the Project site. These corridors are not designated as state scenic highways.[10]

The Project fulfills most requirements of the MU-8b zoning district only exceeding the 5-story limitation of the MU-8B zone. The Project does, however, include the preparation of a site-specific PUD. The Project PUD was prepared in accordance with PUD requirements set forth in City Development Code Section 4.01.030 (Planned Unit Developments and Amendments). The Project PUD will act as primary development standards for the Project site in cases where conflicts exist between the PUD and the existing zone standards. Additionally, MU-8b zoning districts allow for the development of retail uses and residential uses such as those proposed by the Project.

[8] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.1-6 Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).
[9] Ibid.
[10] California State Scenic Highway System Map. 2023. Retrieved from: https://caltrans.maps.arcgis.com/apps/webappviewer/index.html?id=465dfd3d807c46cc8e8057116f1aacaa. (Accessed April 2023).

The Project would be consistent with policies presented in TOP 2050 to ensure new development would be compatible with the existing community. Specifically, the Project would be consistent with Policy CD-2.1 which would encourage all development to have visual interest and character through the use of exterior building materials that are high quality and appropriate for the geometric architectural style that would be carried out in all aspects of building and Project site design, as well as incorporating appropriate scale and proportions in building design. The Project would also comply with Policy CD-2.2 which would create neighborhoods that include floorplans that encourage views onto the street instead of facing garages. Furthermore, Policy CD-2.10 would ensure landscaping is included in parking areas to make them more aesthetically pleasing. Policy CD-3.5 encourages the use of lively pedestrian streetscapes that require business and residential entrances, outdoor dining, and storefronts to be located on ground floors adjacent to sidewalks and public spaces for a more aesthetically pleasing environment. Therefore, the Project would not result in new or a substantial increase in magnitude of impacts.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Although the Project proposes six stories of building development compared to five stories assumed for the Project land use type, the Project would be developed as a wrapped style development with the tallest structure (six story central multilevel parking structure) would be surrounded on all sides by four story residential buildings, ground level-retail uses, and community amenities. Each side of the proposed buildings would be designed to be aesthetically pleasing, and provide visual appeal to the community and surrounding area. Furthermore, ground-level view of the sixth story of the central parking structure would be obscured by the surrounding four-story residential structures; shielding it from general public view. Therefore, Project would result in a less than significant impact and, no new and/or modified mitigation measures are required for issues related to scenic vistas. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (d) Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area? [Approved SEIR Impact 5.1-4]

No New or More Severe Impacts: The Project would have the potential to result in new sources of light and glare from new development. The PUD, and subsequent Project, would require adequate shielding of outdoor light sources, including parking lighting, security lighting, entry lighting, residential balconies, and lighting in common areas. Additionally, the Project would include the addition of building materials, such as windows, which could produce glare. All lighting facades, decorative fixtures, store window interiors, awnings, and signs would be in compliance with the City Development Code.

Lighting located on the Project site would be directed or shielded away from adjacent streets and properties and exterior lighting would be indirect in nature, coming from under eaves and canopies, or at ground level within landscaped areas. Light sources within communal areas would be warm colored and unobtrusive. Furthermore, light sources would be LED or metal halide. Additionally, reflective surfaces, such as windows, would be treated to minimize glare. However, as noted in the Approved SEIR adherence

to the design standards of the City Development Code would ensure that light and glare from new development would be minimized, and significant impacts would not occur.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Although the Project proposes additional lighting and reflective surfaces compared to current conditions, lighting would remain shielded and reflective surfaces would be minimized per City design standards and consistent with the conditions analyzed in the Approved SEIR. Therefore, Project would result in a less than significant impact and, no new and/or modified mitigation measures are required for issues related to light and glare. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.2.3 Overall Aesthetics Impact Conclusion

With regard to CEQA Statute Section 21166 and the CEQA Guidelines Section 15162(a), the Project would not result in any new or more severe impacts with respect to aesthetics. Therefore, the preparation of a SEIR is not warranted.

4.3 AGRICULTURE AND FORESTRY RESOURCES

4.3.1 Summary of TOP 2050 Analysis

The Approved SEIR concluded the City has no land designated for agricultural use, and the existing agricultural uses exist as non-conforming uses. TOP 2050 re-designated agricultural land to nonagricultural land uses provided that equivalent Important Farmland is preserved elsewhere, or funds associated with the 1988 Park Bond Act are returned. Consequently, buildout of TOP 2050 would ultimately result in the conversion of all existing Important Farmland within the City to nonagricultural uses. However, because the City's land use plan does not designate agricultural uses in the City, TOP 2050 does not convert Prime Farmland, Unique farmland, and Farmland of Statewide Importance to nonagricultural uses. Additionally, the Approved SEIR does not consider any lands within the City to be forest lands, therefore development would not result in the loss or conversion of timberland to non-forest uses.

4.3.2 Analysis of Proposed Project

Threshold (a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance in Ontario to nonagricultural use? [Approved SEIR Impact 5.2-1]

Threshold (b) Conflict with existing zoning for agricultural use or a Williamson Act contract? [Approved SEIR Impact 5.2-2]

Threshold (c) Conflict with existing zoning for, or cause rezoning of, forest land, timberland, or timberland zoned Timberland Production? [Approved SEIR Impact 5.2-3]

Threshold (d) Result in the loss of forest land or conversion of forest land to non-forest use? [Approved SEIR Impact 5.2-4]

Threshold (e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use? [Approved SEIR Impact 5.2-5]

No New or More Severe Impacts: The 2010 Certified EIR for the TOP disclosed that buildout of the TOP would result in significant and unavoidable impacts to Prime Farmland, Unique Farmland, and Farmland of Statewide Importance because it converted all of the then-existing land under these categories to residential, commercial, mixed-use, and industrial land uses. Because the City of Ontario's land use plan no longer designates agricultural land uses in the City, and the TOP was the baseline for the TOP 2050 SEIR, TOP 2050 SEIR – the Approved SEIR - disclosed that TOP 2050 would not, itself, plan for the conversion of Prime Farmland, Unique Farmland, and Farmland of Statewide Importance to nonagricultural uses and would have no impact on land zoned for the purpose of agricultural uses.[11]

The Project site consists of nonagricultural uses and is surrounded by urban lands. The Project is not located in land used for Prime Farmland, Unique Farmland, or Farmland of Statewide Importance.

[11] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.2-12 Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).

Additionally, the Project is not located on forest land, timberland, or timberland zoned Timberland Production. The Project site is zoned MU-8b and is able to accommodate the commercial and residential uses. The Approved SEIR concluded that any land held in a Williamson Act contract would have to be filed for nonrenewal, and the contract would have to be allowed to expire before development.[12] The Approved SEIR resulted in the cancellation or nonrenewal of Williamson Acts contracts, and therefore there were no further impacts to Williamson Act lands.[13] The Approved SEIR also noted that there are no land use designations or zoning for forest land, timberland, or timberland zoned Timberland Production in the City.[14] Therefore, the Project would not result in the loss of agricultural or forest lands, or conversion of forest land to non-forest use. Therefore, the Project would not result in new or a substantial increase in magnitude of impacts.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

As previously stated, the Project site is not located on agricultural lands or forest land. Therefore, the Project would not result in impacts and no new and/or modified mitigation measures are required. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.3.3 Overall Agriculture and Forestry Resources Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new or more severe impacts with respect to agricultural and forestry resources. Therefore, preparation of a SEIR is not warranted.

[13] Ibid.
[14] Ibid, Page 5.2-13

4.4 AIR QUALITY

4.4.1 Summary of TOP 2050 Analysis

The Approved SEIR concluded that air quality would be temporarily impacted during construction activities and project-related construction emissions could potentially exceed the South Coast Air Quality Management District (SCAQMD) significance thresholds on a project-by-project and cumulative basis. Additionally, development under TOP 2050 would generate toxic air contaminants (TACs) that could contribute to elevated levels of risk.

4.4.2 Analysis of Proposed Project

Threshold (a) Conflict with or obstruct implementation of the applicable air quality plan? [Approved SEIR Impact 5.3-1]

No New or More Severe Impacts:

In compliance with Mitigation Measure (**MM**) AQ-1 of the Approved SEIR, an Air Quality analysis was created for the Project. As part of its enforcement responsibilities, the Environmental Protection Agency (EPA) requires each state with nonattainment areas to prepare and submit a State Implementation Plan that demonstrates the means to attain the federal standards. The State Implementation Plan must integrate federal, state, and local plan components and regulations to identify specific measures to reduce pollution in nonattainment areas, using a combination of performance standards and market-based programs. Similarly, under state law, the California Clean Air Act (CCAA) requires an air quality attainment plan to be prepared for areas designated as nonattainment regarding the state and federal ambient air quality standards. Air quality attainment plans outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date.

The Project is located within the South Coast Air Basin (SCAB), which is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). The SCAQMD is required, pursuant to the Federal Clean Air Act (FCAA), to reduce emissions of criteria pollutants for which the SCAB is in nonattainment. To reduce such emissions, the SCAQMD drafted the 2016 Air Quality Management Plan (AQMP) and 2022 AQMP. The 2016 AQMP establishes a program of rules and regulations directed at reducing air pollutant emissions and achieving California Ambient Air Quality Standards (CAAQS) and National Ambient Air Quality Standards (NAAQS). The primary purpose of the 2022 AQMP is to identify, develop, and implement strategies and control measures to meet the 2015 8-hour ozone NAAQS. Air quality management planning is a regional and multi-agency effort including the SCAQMD, the California Air Resources Board (CARB), the Southern California Association of Governments (SCAG), and the EPA. The plan's pollutant control strategies are based on the latest scientific and technical information and planning assumptions, including SCAG's 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), updated emission inventory methodologies for various source categories, and SCAG's latest growth forecasts. SCAG's latest growth forecasts were defined in consultation with local governments and with reference to local general plans. The Project is subject to the SCAQMD's AQMP.

Criteria for determining consistency with the AQMP are defined by the following indicators:

- **Consistency Criterion No. 1**: The Project will not result in an increase in the frequency or severity of existing air quality violations, or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.
- **Consistency Criterion No. 2**: The Project will not exceed the assumptions in the AQMP or increments based on the years of the Project build-out phase.

According to the SCAQMD's CEQA Air Quality Handbook, the purpose of the consistency finding is to determine if a project is inconsistent with the assumptions and objectives of the regional air quality plans, and thus if it would interfere with the region's ability to comply with CAAQS and NAAQS.

The violations to which Consistency Criterion No. 1 refers are exceedances of CAAQS and NAAQS. As shown in **Table 2: Construction-Related Emissions** and **Table 3: Operational Emissions**, the Project would not exceed construction or operation emission standards. Therefore, the Project would not contribute to an existing air quality violation. Thus, the Project is consistent with the first criterion.

Concerning Consistency Criterion No. 2, the AQMP contains air pollutant reduction strategies based on SCAG's latest growth forecasts, and SCAG's growth forecasts were defined in consultation with local governments and with reference to local general plans.

The Project site is currently designated as Mixed-Use Neighborhood Activity Hub (MU-NH) which allows for 20 to 75 du/ac and 1.0 FAR for retail uses. Therefore, the Project is to be consistent with the current AQMP regional emissions inventory for the SCAB. Thus, the Project is consistent with the second criterion. As noted above (and discussed further in Threshold 5.3-2, below), Project implementation would not result in air pollutant emissions that exceed SCAQMD's construction and operational emission thresholds. In addition, the Project would also not delay timely attainment of air quality standards or interim emission reductions specified in the AQMP. Therefore, the Project would be consistent with the AQMP, resulting in a less than significant impact.

Additional mitigation measures from the Approved SEIR would be applied to further reduce potential impacts associated with Project implementation. Specifically, MM 3-2 would be applied through the Project's inclusion of internal and external pedestrian connections as well as the placement of bicycle racks and the Project's proximity to multiple bus stations. Additionally, the Air Quality Assessment is included as Appendix B to this Addendum, per MM AQ-1 and MM 3-1.

Mitigation Measures

The Approved SEIR includes measures to reduce potential impacts associated with the implementation of TOP 2050. The following measures from the Approved SEIR are applicable to the proposed Project:

MM 3-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with SCAQMD methodology for assessing air quality impacts. If construction-related criteria air

pollutants are determined to have the potential to exceed the SCAQMD adopted thresholds of significance, the City of Ontario Building Department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:

- Require fugitive dust control measures that exceed SCAQMD 's Rule 403, such as:
    - Requiring use of nontoxic soil stabilizers to reduce wind erosion.
    - Applying water every four hours to active soil disturbing activities
    - Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.
- Using construction equipment rated by U.S. EPA as having Tier 4 interim or higher exhaust emission limits.
- Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.
- Limiting nonessential idling of construction equipment to no more than five consecutive minutes.
- Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufacturers can be found on the SCAQMD's website.

These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.

In compliance with MM 3-1, An Air Quality Assessment was prepared for the Project in August 2023 that analyzes the construction-phase-related air quality impacts of the Project, for additional information see **Appendix B.**

MM 3-2 The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g., sidewalks).

In compliance with MM **3-2**, the Project design has included pedestrian connections to the Project site from Mountain Avenue and Fourth Street to existing pedestrian sidewalks.

MM AQ-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with SCAQMD methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the SCAQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible

mitigation measures to reduce long-term emissions could include, but are not limited to the following:

- For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.
- Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use.
- Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485).
- Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures).
- Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).
- Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures).
- Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).
- Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star–certified or equivalent appliances shall be verified by the City during plan check.

In compliance with **MM AQ-1,** an Air Quality analysis was created for the Project in August 2023 that analyzes the operation-phase-related air quality impacts of the Project, for additional information see **Appendix B.**

Conclusion

Air quality impacts related to the proposed Project are less than the significant and unavoidable impacts identified in Approved SEIR (Approved SEIR Impacts 5.3-1, 5.3-2, 5.3-3, and 5.3-4) and would not directly require mitigation. Regardless, the implementation of mitigation measures from the Approved SEIR would further reduce impacts. The Project would comply with **MM 3-1**, **MM 3-2**, and **MM AQ-1**, an Air Quality Assessment was conducted for the Project and is included as **Appendix B1** and the Project would undergo City review. No new impact relative to air quality or a substantial increase in the severity of a previously identified significant impact evaluated in the Approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard? [Approved SEIR Impact 5.3-2]

Construction Emissions

No New or More Severe Impacts: Construction associated with the Project would generate short-term emissions of criteria air pollutants. The criteria pollutants of primary concern within the Project area include Ozone (O_3)-precursor pollutants (i.e., Reactive Organic Gases (ROG) and Nitrogen Oxides (NOX)) and Particulate Matter 10 microns or less (PM10) and Particulate Matter 2 microns or less (PM2.5). Construction-generated emissions are short term and of temporary duration, lasting only as long as construction activities occur, but would be considered a significant air quality impact if the volume of pollutants generated exceeds the SCAQMD's thresholds of significance.

Construction results in the temporary generation of emissions resulting from Project site grading, road paving, motor vehicle exhaust associated with construction equipment and worker trips, and the movement of construction equipment, especially on unpaved surfaces. Emissions of airborne particulate matter are largely dependent on the amount of ground disturbance associated with Project site preparation activities as well as weather conditions and the appropriate application of water. Fugitive dust emissions may have a substantial, temporary impact on local air quality. In addition, fugitive dust may be a nuisance to those living and working in the Project vicinity. Uncontrolled dust from construction can become a nuisance and potential health hazard to those living and working nearby.

The Project's construction emissions were calculated using the CARB-approved CalEEMod computer program, which is designed to model emissions for land use development projects, based on typical construction requirements. See **Appendix B** for more information regarding the construction assumptions used in this analysis. Predicted maximum daily construction-generated emissions for the Project are summarized in in **Table 2: Construction-Related Emissions**.

Table 2: Construction-Related Emissions

Construction Year	Emissions (Maximum Pounds Per Day) [1]					
	ROG	NO_X	CO	SO_2	PM_{10}	$PM_{2.5}$
Year 2024	8.48	83.3	79.7	0.13	13.0	7.3
Year 2025	33.0	22.8	54.7	0.06	7.03	2.14
Year 2026	2.73	14.3	41.2	0.04	5.98	1.72
SCAQMD Threshold	*75*	*100*	*550*	*150*	*150*	*55*
Exceed SCAQMD Threshold?	**No**	**No**	**No**	**No**	**No**	**No**

ROG = Reactive Organic Gases; NO_X = Nitrogen Oxides; CO = Carbon Monoxide; SO_2 = Sulfur Dioxide; PM_{10} = Particulate Matter 10 microns in diameter or less; $PM_{2.5}$ = Particulate Matter 2.5 microns in diameter or less

1. SCAQMD Rule 403 Fugitive Dust applied. The Rule 403 reduction/credits include the following: properly maintain mobile and other construction equipment; water exposed surfaces three times daily; and limit speeds on unpaved roads to 15 miles per hour. Reductions percentages from the SCAQMD CEQA Handbook (Tables XI-A through XI-E) were applied. No mitigation was applied to construction equipment. Refer to Appendix B for Model Data Outputs.

Source: CalEEMod version 2022.1.1.14. Refer to Appendix B for model outputs.

As shown in **Table 2: Construction-Related Emissions**, all criteria pollutant emissions would remain below their respective thresholds.

Operational Emissions

No New or More Severe Impacts: Project-generated emissions would be primarily associated with motor vehicle use and area sources, such as the use of landscape maintenance equipment and architectural coatings. Long-term operational emissions attributable to the Project are summarized in **Table 3: Operational Emissions**.

Table 3: Operational Emissions

Source	Emissions (Maximum Pounds Per Day)					
	ROG	NO_X	CO	SO_2	PM_{10}	$PM_{2.5}$
Mobile	4.63	3.84	33.3	0.08	6.82	1.77
Area Source Emissions	11.0	5.33	34.3	0.03	0.43	0.44
Energy Emissions	0.06	1.01	0.44	0.01	0.08	0.08
Total Emissions	15.69	10.18	68.04	0.12	7.33	2.29
SCAQMD Threshold	*55*	*55*	*550*	*150*	*150*	*55*
Exceeds Threshold?	**No**	**No**	**No**	**No**	**No**	**No**

ROG = Reactive Organic Gases; NO_X = Nitrogen Oxides; CO = Carbon Monoxide; SO_2 = Sulfur Dioxide; PM_{10} = Particulate Matter 10 microns in diameter or less; $PM_{2.5}$ = Particulate Matter 2.5 microns in diameter or less

Source: CalEEMod version 2020.4.0. Refer to Appendix B for model outputs.

As shown in **Table 3: Operational Emissions**, all criteria pollutant emissions would remain below their respective thresholds.

Cumulative Short-Term Emissions

No New or More Severe Impacts: The SCAB is designated nonattainment for Ozone (O_3), Particulate Matter 10 microns in diameter or less (PM_{10}), and Particulate Matter 2.5 microns in diameter or less ($PM_{2.5}$) for state standards and nonattainment for O_3 and $PM_{2.5}$ for Federal standards. Appendix D of the SCAQMD White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution (2003) notes that projects that result in emissions that do not exceed the project specific SCAQMD regional thresholds of significance should result in a less than significant impact on a cumulative basis unless there is other pertinent information to the contrary. Therefore, if a project is estimated to result in emissions that do not exceed the thresholds, the project's contribution to the cumulative impact on air quality in the SCAB would not be cumulatively considerable. As shown in **Table 3: Operational Emissions**, construction emissions of the Project would not exceed the SCAQMD significance thresholds, and the construction impacts would be less than significant levels. Therefore, the Project would not generate a cumulatively considerable contribution to air pollutant emissions during construction.

Cumulative Long-Term Impacts

No New or More Severe Impacts: The SCAQMD has not established separate significance thresholds for cumulative operational emissions. The nature of air emissions is largely a cumulative impact. As a result, no single project is sufficient in size to, by itself, result in nonattainment of ambient air quality standards. Instead, individual project emissions contribute to existing cumulatively significant adverse air quality impacts. The SCAQMD developed the operational thresholds of significance based on the level above which individual project emissions would result in a cumulatively considerable contribution to the SCAB's existing air quality conditions. Therefore, a project that exceeds the SCAQMD operational thresholds would also be a cumulatively considerable contribution to a significant cumulative impact.

As shown in **Table 3: Operational Emissions**, the Project operational emissions would not exceed SCAQMD thresholds. As a result, operational emissions associated with the Project would not result in a cumulatively considerable contribution to significant cumulative air quality impacts. Additionally, adherence to SCAQMD rules and regulations would alleviate potential impacts related to cumulative conditions on a project-by-project basis. Project operations would not contribute a cumulatively considerable net increase of any nonattainment criteria pollutant.

Plans, Programs, and Policies:

The following includes existing requirements that are based on local, State, or federal regulations or laws that are frequently required independent of CEQA review. Typical standard conditions and requirements include compliance with the provisions of the Building Code, SCAQMD Rules, etc. The City may impose additional conditions during the approval process, as appropriate. Because these requirements are neither project specific nor a result of project development, they are not Mitigation Measures.

PPP AIR-1 New buildings are required to achieve the current California Building Energy Efficiency Standards (Title 24, Part 6) and California Green Building Standards Code (CALGreen) (Title 24, Part 11).

PPP AIR-2 Construction activities will be conducted in compliance with 13 California Code of Regulations (CCR) Section 2499, which requires that nonessential idling of construction equipment is restricted to five minutes or less.

PPP AIR-3 Construction activities will be conducted in compliance with any applicable SCAQMD rules and regulations, including but not limited to the following:

- Rule 403, Fugitive Dust, for controlling fugitive dust and avoiding nuisance.
- Rule 402, Nuisance, which states that a project shall not "discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property."
- Rule 1113, which limits the volatile organic compound content of architectural coatings.

As stated in Impact 4.4.2(a) above, an Air Quality Assessment was created for the Project in August 2023 and is included as **Appendix B** to this Addendum, in keeping with MM AQ-1 and MM 3-1.

Mitigation Measures

Refer to **MM 3-2** and **AQ-1** from Approved SEIR, discussed above under Threshold (a).

Conclusion

The Project's emissions would not exceed the SCAQMD thresholds during both construction and operations. Thus, the impact would not be cumulatively considerable. With the implementation of mitigation measure measures in the TOP 2050 SEIR air quality impacts related to the proposed Project are

less than the significant and unavoidable impacts identified in the Approved SEIR (Approved SEIR Impacts 5.3-1, 5.3-2, 5.3-3, and 5.3-4). No new impacts or a substantial increase in the severity of a previously identified significant impact evaluated in the Approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (c) Expose sensitive receptors to substantial pollutant concentrations? [Approved SEIR Impact 5.3-3]

Localized Construction Significance Analysis

No New or More Severe Impacts: The nearest sensitive receptors are single-family residential dwellings located adjacent to the north and east of the Project site. To identify impacts to sensitive receptors, the SCAQMD recommends addressing Local Significant Thresholds (LSTs) for construction. LSTs were developed in response to SCAQMD Governing Boards' Environmental Justice Enhancement Initiative (I-4). The SCAQMD provided the Final Localized Significance Threshold Methodology (dated June 2003 [revised 2008]) for guidance. The LST methodology assists lead agencies in analyzing localized impacts associated with Project-specific emissions.

Since CalEEMod calculates construction emissions based on the number of equipment hours and the maximum daily soil disturbance activity possible for each piece of equipment, **Table 4: Equipment-Specific Grading Rates**, Equipment-Specific Grading Rates is used to determine the maximum daily disturbed acreage for comparison to LSTs. The appropriate SRA for the localized significance thresholds is the Southwest San Bernardino Valley (SRA 33) since this area includes the Project. LSTs apply to NO2, CO, PM10, and PM2.5. The SCAQMD produced look-up tables for projects that disturb areas less than or equal to five acres in size. Project construction is anticipated to disturb a maximum of four acres in a single day. As the LST guidance provides thresholds for projects disturbing 1-, 2-, and 5-acres in size and the thresholds increase with size of the Project site, the LSTs for a 3.5-acre threshold were interpolated and utilized for this analysis.

Table 4: Equipment-Specific Grading Rates

Construction Phase	Equipment Type	Equipment Quantity	Acres Graded per 8-Hour Day	Operating Hours per Day	Acres Graded per Day
Site Preparation	Tractors	4	0.5	8	2.0
	Graders	0	0.5	8	0.0
	Dozers	3	0.5	8	1.5
	Scrapers	0	1	8	0.0
				Total Acres Graded per Day	**3.5**

Source: CalEEMod version 2022.1.1.14. Refer to Appendix B for model outputs.

The SCAQMD's methodology states that "off-site mobile emissions from the Project should not be included in the emissions compared to LSTs." Therefore, only emissions included in the CalEEMod "on-site" emissions outputs were considered. LST thresholds are provided for distances to sensitive receptors of 25, 50, 100, 200, and 500 meters. SCAQMD's LST guidance recommends using the 25-meter threshold for receptors located 25 meters or less from the Project site. Therefore, the LSTs for 3.5 acres at 25 meters were used for the construction analysis which is consistent with the SCAQMD LST methodology. **Table 5:**

Localized Significance of Construction Emissions presents the results of unmitigated localized emissions during each construction activity. **Table 5: Localized Significance of Construction Emissions** shows that emissions of these pollutants on the peak day of construction would not result in significant concentrations of pollutants at nearby sensitive receptors.

Table 5: Localized Significance of Construction Emissions

Construction Activity	Emissions (Maximum Pounds Per Day)[1]			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Demolition (2024)	24.9	21.7	2.1	1.2

Exceed SCAQMD Threshold?	**No**	**No**	**No**	**No**

NO_X = Nitrogen Oxides; CO = Carbon Monoxide; PM_{10} = Particulate Matter 10 microns in diameter or less; $PM_{2.5}$ = Particulate Matter 2.5 microns in diameter or less

1. SCAQMD Rule 403 Fugitive Dust applied. The Rule 403 reduction/credits include the following: properly maintain mobile and other construction equipment; water exposed surfaces three times daily; and limit speeds on unpaved roads to 15 miles per hour. Reductions percentages from the SCAQMD CEQA Handbook (Tables XI-A through XI-E) were applied. No mitigation was applied to construction equipment. Refer to Appendix B for Model Data Outputs.

Source: CalEEMod version 2022.1.1.14. Refer to Appendix B for model outputs.

Localized Operational Significance Analysis

The operational phase LST protocol applies to on-site emissions sources (area and energy sources). It is noted that the SCAQMD's LSTs are screening thresholds for localized emissions based on location, distance, and Project site size. LSTs thresholds for receptors located at 25 meters or less in SRA 33 were utilized in this analysis because the closest receptor is located adjacent to the east. Although the Project site is approximately 5.8 acres, the 5-acre LST threshold was also conservatively used for the Project, as the LSTs increase with the size of the site. **Table 6: Localized Significance of Operational Emissions** shows that the maximum daily emissions of these pollutants during operations would not result in significant concentrations of pollutants at nearby sensitive receptors.

Table 6: Localized Significance of Operational Emissions

Activity	Emissions (Maximum Pounds Per Day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
On-Site Emissions	6.3	34.7	0.5	0.5

Criteria Pollutant Health Impacts

On December 24, 2018, the California Supreme Court issued an opinion identifying the need to provide sufficient information connecting a project's air emissions to health impacts or explain why such information could not be ascertained (*Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502). The SCAQMD has set its CEQA significance thresholds based on the FCAA, which defines a major stationary source (in extreme O_3 nonattainment areas such as the SCAB) as emitting 10 tons per year. The thresholds correlate with the trigger levels for the federal New Source Review (NSR) Program and SCAQMD Rule 1303 for new or modified sources. The NSR Program[15] was created by the FCAA to ensure that stationary sources of air pollution are constructed or modified in a manner that is consistent with attainment of health-based federal ambient air quality standards. The federal ambient air quality standards establish the levels of air quality necessary, with an adequate margin of safety, to protect the public health. Therefore, projects that do not exceed the SCAQMD's LSTs and mass emissions thresholds would not violate any air quality standards or contribute substantially to an existing or projected air quality violation and no criteria pollutant health impacts.

NO_X and ROG are precursor emissions that form O_3 in the atmosphere in the presence of sunlight where the pollutants undergo complex chemical reactions. It takes time and the influence of meteorological conditions for these reactions to occur, so O_3 may be formed at a distance downwind from the sources. Breathing ground-level O_3 can result health effects that include reduced lung function, inflammation of airways, throat irritation, pain, burning, or discomfort in the chest when taking a deep breath, chest tightness, wheezing, or shortness of breath. In addition to these effects, evidence from observational studies strongly indicates that higher daily O_3 concentrations are associated with increased asthma attacks, increased hospital admissions, increased daily mortality, and other markers of morbidity. The consistency and coherence of the evidence for effects upon asthmatics suggests that O_3 can make asthma symptoms worse and can increase sensitivity to asthma triggers.

The SCAQMD's 2022 AQMP focuses on the 2015 8-hour ozone standard with achieving attainment in 2037. The largest source of NO_X emissions (an O_3 precursor) in 2018 were related to on-road sources. The 2022 AQMP also emphasizes a shift in focus beyond on-road emissions to off-road sources. The 2022 AQMP identifies a 67 percent NO_X reduction beyond what we would achieve through current programs by 2037 and about 83 percent below current levels. In order to achieve this, the SCAQMD identifies the need for widespread adoption of zero emissions (ZE) technologies across all mobile sectors and stationary sources.

The control strategy for the 2022 AQMP includes aggressive new regulations and the development of incentive programs to support early deployment of advanced technologies. The two key areas for incentive programs are (1) promoting widespread deployment of available ZE and low NOX technologies and (2) developing new ZE and ultra-low NOX technologies for use in cases where the technology is not currently available. SCAQMD will prioritize distribution of incentive funding in environmental justice (EJ) areas and seek opportunities to focus benefits on the most disadvantaged communities. The 2022 AQMP includes a total of 49 control measures. In addition to the NOX measures, the 2022 AQMP relies on co-

[15] Code of Federal Regulation (CFR) [i.e. PSD (40 CFR 52.21, 40 CFR 51.166, 40 CFR 51.165 (b)), Non-attainment NSR (40 CFR 52.24, 40 CFR 51.165, 40 CFR part 51, Appendix S)

benefits from climate and energy efficiency programs for further reductions, limited strategic measures for VOC reductions, and other actions.

The SCAQMD's air quality modeling demonstrates that NOX reductions prove to be much more effective in reducing O3 levels and will also lead to significant improvement in PM2.5 concentrations. NOX-emitting stationary sources regulated by the SCAQMD include Regional Clean Air Incentives Market (RECLAIM) facilities (e.g., refineries, power plants, etc.), natural gas combustion equipment (e.g., boilers, heaters, engines, burners, flares) and other combustion sources that burn wood or propane.

There are significant challenges with correlating specific health effects that will occur as a result of a project's significant criteria air pollutant emissions. Generally, models that correlate criteria air pollutant concentrations with specific health effects focus on regulatory decision-making that will apply throughout an entire air basin or region. These models focus on the region-wide health effects of pollutants so that regulators can assess the costs and benefits of adopting a proposed regulation that applies to an entire category of air pollutant sources, rather than the health effects related to emissions from a specific proposed project or source. Because of the scale of these analyses, any one project is likely to have only very small incremental effects which may be difficult to differentiate from the effects of air pollutant concentrations in an entire air basin. In addition, such modeling efforts are costly, and the value of a project-specific analysis may be modest in relation to that cost. Furthermore, the results, while costly to produce, may not be particularly useful. For regional pollutants, it is difficult to trace a particular project's criteria air pollutant emissions to a specific health effect. Moreover, the modeled results may be misleading because the margin of error in such modeling is large enough that, even if the modeled results report a given health effect, the model is sufficiently imprecise that the actual effect may differ from the reported results; that is, the modeled results suggest precision, when in fact available models cannot be that precise on a project level.

As discussed above, the mass emissions thresholds developed by SCAQMD and used by CEQA lead agencies throughout southern California to determine potential significance of project-related regional changes in the environment are not directly indicative of exceedances of applicable ambient air standards. Meteorology, the presence of sunlight, and other complex chemical factors all combine to determine the ultimate concentration and location of O3 or PM. The effects on ground-level ambient concentrations of pollutants that may be breathed by people are also influenced by the spatial and temporal patterns of the emission sources. In other words, the effect on O3 and PM concentrations from a given mass of pollutants emitted in one location may vary from the effect if that same mass of pollutants was emitted in an entirely different location in the SCAB. The same effect may be observed when the daily and seasonal variation of emissions is taken into account. Regional-scale photochemical modeling, typically performed only for NAAQS attainment demonstration and rule promulgation, account for these changes in the spatial, temporal, and chemical nature of regional emissions.

Emissions from the construction and operation of the Project would vary by time of day, month, and season, and the majority of Project-related emissions, being generated by mobile sources driving to and from the Project site, would be emitted throughout a wide area defined by the origins and destinations

of people traveling to and from the Project. As SCAQMD has stated, "it takes a large amount of additional precursor emissions to cause a modeled increase in ambient ozone levels over an entire region."[16]

Specifically, for extremely large regional projects, the SCAQMD states that it has been able to correlate potential health outcomes for very large emissions sources – as part of their rulemaking activity, specifically 6,620 pounds per day of NOX and 89,180 pounds per day of VOC were expected to result in approximately 20 premature deaths per year and 89,947 school absences due to O3. Based on its recent experiences applying regional scale models to relatively small increase in emissions, SCAQMD's Amicus Brief in the Friant Ranch case stated: "[A] project emitting only 10 tons per year of NOX or VOC is small enough that its regional impact on ambient ozone levels may not be detected in the regional air quality models that are currently used to determine ozone levels." The Brief makes it clear that SCAQMD does not believe that there must be a quantification of a project's health risks in CEQA documents prepared for individual projects since it would be difficult to quantify health impacts for criteria pollutants. Also, the Project does not generate anywhere near 6,620 pounds per day of NOX or 89,190 pounds per day of ROG (VOC) emissions, which SCAQMD stated was a large enough emission to quantify O3-related health impacts. Therefore, the Project's emissions are not sufficiently high enough to use a regional modeling program to correlate health effects on a basin-wide level.

As previously discussed, localized effects of on-site Project emissions on nearby receptors for the Project would be less than significant (refer to **Table 5: Localized Significance of Construction Emissions** and **Table 6: Localized Significance of Operational Emissions**). The LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable state or federal ambient air quality standard. The LSTs were developed by the SCAQMD based on the ambient concentrations of that pollutant for each SRA and distance to the nearest sensitive receptor. The ambient air quality standards establish the levels of air quality necessary, with an adequate margin of safety, to protect public health, including protecting the health of sensitive populations. However, as discussed above, neither the SCAQMD nor any other air district currently have methodologies that would provide Lead Agencies and CEQA practitioners with a consistent, reliable, and meaningful analysis to correlate specific health impacts that may result from a proposed project's mass emissions. Information on health impacts related to exposure to ozone and particulate matter emissions published by the U.S. EPA and CARB have been summarized above and discussed in the Regulatory Framework section. Health studies are used by these agencies to set the NAAQS and CAAQS.

Although it may be misleading and unreliable to attempt to specifically and numerically quantify the Project's health risks, this analysis provides extensive information concerning the Project's potential health risks. While the Project is expected to exceed the SCAQMD's numeric regional mass daily thresholds for ROG and NOX, this does not in itself constitute a significant health impact to the population adjacent to the Project and within the SCAB. The reason for this is that the mass daily thresholds are in pounds per day emitted into the air whereas health effects are determined based on the concentration of emissions in the air at particular receptor (e.g., parts per million by volume of air, or micrograms per cubic meter of air).

[16] Ibid. Page 34.

The NAAQS and CAAQS were developed to protect the most susceptible population groups from adverse health effects and were established in terms of parts per million or micrograms per cubic meter for the applicable emissions. As stated earlier, the mass emission thresholds were established primarily in conjunction with federal permitting "major source" thresholds. If emissions were below these "de minimis" emission rates, then the proposed Project is presumed to conform with the NAAQS. While based on the status of an air basin level of attainment of the health-based NAAQS, emissions in excess of the mass emission thresholds from one project does not mean the air basin would experience measurably higher ground level concentrations, or more frequent occurrences of ground level concentrations in exceedance of standards or delay timely attainment of a particular NAAQS.

Ozone concentrations are dependent upon a variety of complex factors, including the presence of sunlight and precursor pollutants, natural topography, nearby structures that cause building downwash, atmospheric stability, and wind patterns. Because of the complexities of predicting ground-level ozone concentrations in relation to the NAAQS and CAAQS, none of the health-related information can be directly correlated to the pounds/day or tons/year of emissions estimated from a single, proposed project. Therefore, it is impossible to correlate significant criteria pollutants from an individual project to health risk. **Table 2: Construction-Related Emissions** includes a list of criteria pollutants and summarizes common sources and effects. Thus, this analysis is reasonable and intended to foster informed decision making. Due to the uncertainty in the relationship between project-level mass emissions and regional ozone formation as well as limitations with currently available technical tools, the resulting health effects associated with the Project cannot be identified. Given this is speculative, no meaningful conclusion can be drawn with respect to potential health effects from the criteria pollutant emissions of the proposed Project.

Carbon Monoxide Hotspots

An analysis of CO "hot spots" is needed to determine whether the change in the level of service of an intersection resulting from the Project would have the potential to result in exceedances of the CAAQS or NAAQS. It has long been recognized that CO exceedances are caused by vehicular emissions, primarily when vehicles are idling at intersections. Vehicle emissions standards have become increasingly stringent in the last 20 years. Currently, the CO standard in California is a maximum of 3.4 grams per mile for passenger cars (requirements for certain vehicles are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of control technology on industrial facilities, CO concentrations have steadily declined. Accordingly, with the steadily decreasing CO emissions from vehicles, even very busy intersections do not result in exceedances of the CO standard.

The SCAB was re-designated as attainment in 2007 and is no longer addressed in the SCAQMD's AQMP. The 2003 AQMP is the most recent version that addresses CO concentrations. As part of the SCAQMD CO Hotspot Analysis, the Wilshire Boulevard and Veteran Avenue intersection, one of the most congested intersections in Southern California with an average daily traffic (ADT) volume of approximately 100,000 vehicles per day, was modeled for CO concentrations. This modeling effort identified a CO concentration high of 4.6 ppm, which is well below the 35-ppm Federal standard. The Project considered herein would not produce the volume of traffic required to generate a CO hot spot in the context of SCAQMD's CO Hotspot Analysis. As the CO hotspots were not experienced at the Wilshire Boulevard and Veteran Avenue

intersection even as it accommodates 100,000 vehicles daily, it can be reasonably inferred that CO hotspots would not be experienced at any vicinity intersections resulting from 1,269 additional total vehicle trips attributable to the Project and distributed throughout the roadway network. Therefore, impacts would be less than significant.

As stated in Impact 4.4.2(a) above, the Air Quality Assessment is included as an appendix to this Addendum, per **MM AQ-1** and **MM 3-1**.

Mitigation Measures

Refer to **MM 3-1** and **AQ-1** from Approved SEIR, discussed above under Threshold (a).

Conclusion

Air quality impacts related to the proposed Project are less than the significant and unavoidable impacts identified in the Approved SEIR. With the implementation of mitigation measure measures in the TOP 2050 SEIR no new impact relative to air quality or a substantial increase in the severity of a previously identified significant impact evaluated in the Approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people)? [Approved SEIR Impact 5.3-4]

Construction

No New or More Severe Impacts: Odors that could be generated by construction activities are required to follow SCAQMD Rule 402 to prevent odor nuisances on sensitive land uses. SCAQMD Rule 402, Nuisance, states:

> *A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.*

During construction, emissions from construction equipment, such as diesel exhaust, and volatile organic compounds from architectural coatings and paving activities may generate odors. However, these odors would be temporary, are not expected to affect a substantial number of people and would disperse rapidly. Therefore, impacts related to odors associated with the Project's construction-related activities would be less than significant.

Operations

No New or More Severe Impacts: The SCAQMD *CEQA Air Quality Handbook* identifies certain land uses as sources of odors. These land uses include agriculture (farming and livestock), wastewater treatment plants, food processing plants, chemical plants, composting facilities, refineries, landfills, dairies, and

fiberglass molding. The Project would not include any of the land uses that have been identified by the SCAQMD as odor sources. Therefore, the Project would not create objectionable odors.

Mitigation Measures

No mitigation measures are required, and impacts would be less than significant.

Conclusion

Odors and other emissions related to the proposed Project are similar to the less than significant impacts identified in Approved SEIR. No new impact relative to air quality or a substantial increase in the severity of a previously identified significant impact evaluated in the Approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.4.3 Overall Air Quality Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to air quality. Therefore, preparation of a SEIR is not warranted.

4.5 BIOLOGICAL RESOURCES

4.5.1 Summary of TOP 2050 Analysis

The City is almost completely developed with urban and agricultural uses, with no large open areas of native habitat. TOP 2050 includes policies to ensure that special-status species and habitat are protected through compliance with state and federal regulations (e.g., Policies ER-5.1 and ER-5.2). Projects under TOP 2050 that undergo independent CEQA review would be required to determine whether there is potential habitat on-site for sensitive species. If potential habitat were found on-site, focused surveys for those sensitive species potentially present would be required.

Implementation of TOP 2050 would not result in direct vegetation removal in surface water areas in the City; however, projects approved pursuant to TOP 2050 could indirectly result in such removal.

4.5.2 Analysis of Proposed Project

Threshold (a) Have a substantial effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? [Approved SEIR Impact 5.4-1]

Threshold (b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service? [Approved SEIR Impact 5.4-2]

Threshold (c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means? [Approved SEIR Impact 5.4-3]

No New or More Severe Impacts: The Project is located within TOP 2050 Mixed Use – Neighborhood Activity Hubs (MU-NH). The Approved SEIR indicated that much of the City is developed with urban and agricultural uses, with very little native habitat remaining. Vacant land in the City would have low habitat value, because much of it is barren ground and does not support vegetation, and many areas of vacant land are small, surrounded by developed urban uses, and isolated from other vacant areas.[17] TOP 2050 includes policies to ensure that special-status species and habitat are protected through compliance with state and federal regulations. The Approved SEIR found that implementation of TOP 2050 would not result in direct vegetation removal in surface water areas in the City. Additionally, adherence to Policy ER-5.1 of TOP 2050 would support avoidance of adverse impacts to protected wetlands, waters of the United States, and waters of the State. Per the Approved SEIR detention basins would be designated as Open Space-Non-recreation or Open Space-Parkland.[18] Surface waters in the City such as detention basins and man-made lakes are assumed to contain sensitive natural communities if they support plants such as

[17] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.4-29 Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).
[18] Ibid, Page 30.

mulefat and willow.[19] As the Project site is not designated Open Space-Non-recreation or Open Space-Parkland, it would not contain habitat classifiable as naturally sensitive basin. Furthermore, the Project site has been developed with active use structures and contains paved surfaces over the majority of the area. Therefore, no new impacts to riparian habitat or other sensitive natural community would be caused by Project implementation.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact on natural habitats and sensitive species. A less than significant impact was identified in the Approved SEIR with respect to natural habitats and sensitive species. The Project would be designed consistent with the applicable guidelines and standards within the Approved SEIR, and City Development Code. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites? [Approved SEIR Impact 5.4-4]

No New or More Severe Impacts: As previously discussed much of the City is developed, and no regional wildlife movement corridors have been identified in the City.[20] The flood control channels and the Southern California Edison (SCE) corridors could serve as local corridors for movement within the City and between the San Gabriel Mountains to the north and the Prado Basin to the south.[21] There are trees and shrubs scattered throughout the City that may be used for nesting or roosting by migrating birds. The Project site contains two ornamental trees which could potentially form a habitat for nesting birds. However, Project construction and operation would be required to comply with the Migratory Bird Treaty Act (MBTA) [California Fish and Game Code Sections 3503, 3503.5, 3511, and 3513] which prohibits the take, possession, or destruction of birds, their nests or eggs. Therefore, the proposed Project would not result in new impacts or a substantial increase in the magnitude of impacts to wildlife movement.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact on wildlife movement and migratory patterns. A less than significant impact was identified in the Approved SEIR with respect to natural habitats and sensitive species. Additionally, no new information of substantial importance that was not known and

[19] Ibid.
[20] Ibid, Page 5.4-33
[21] Ibid.

could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance? [Approved SEIR Impact 5.4-5]

Threshold (f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan? [Approved SEIR Impact 5.4-5]

No New or More Severe Impacts: There is one habitat conservation plan (HCP) in the City, a 19-acre area near the intersection of Greystone Drive and the eastern city boundary established to protect the Delhi Sands Flower-Loving Fly (DSFLF).[22] This HCP area would remain designated Industrial under TOP 2050. Additionally, any project proposed for development within this HCP pursuant to TOP 2050 would be required to consult with the USFWS regarding project impacts on DSFLF and mitigation of any such impacts. As previously discussed, the Project is located in the MU-8b zoning district of the City, out of the HCP and therefore would not impact the DSFLF HCP.

Mitigation Measures

None identified in the approved SEIR.

Conclusion

The Project would not result in new or more severe impact to established policies, plans, or ordinances protecting biological resources and no new or more severe impact to approved local, regional, or state habitat conservation plans. A less than significant impact was identified in the Approved SEIR with respect to established policies and plans. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.5.3 Overall Biological Resources Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new or more severe impacts with respect to biological resources. Therefore, preparation of a SEIR is not warranted.

[22] Ibid, Page 5.4-34

4.6 CULTURAL RESOURCES

4.6.1 Summary of TOP 2050 Analysis

TOP 2050 determined, with compliance to local, state and federal regulations restricting alteration, relocation, and demolition of historical resources, would ensure development would not result in adverse impacts to identified historic and cultural resources. Regulatory compliance would also ensure impacts to archaeological and paleontological resources would be less than significant. Additionally, no known native American gravesites or cemeteries are located in the City, although grading activities could potentially disturb human remains, including those outside of formal cemeteries. However Regulatory compliance would reduce impacts to be less than significant.

4.6.2 Analysis of Proposed Project

A Cultural Resources Assessment (CRA) was prepared for the Project by BCR Consulting LLC (BCR) in October 2023. The CRA was prepared based on research conducted through both a field survey of the Project area as well as record searches of the National Register of Historic Places (National Register), the California Register of Historic Places (California Register), and documents and inventories published by the California Office of Historic Preservation (COHP). The results of the CRA are summarized herein and included as Appendix C to this Addendum.

Threshold (a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5? [Approved SEIR Impact 5.5-1]

No New or More Severe Impacts: The Approved SEIR found that despite implementation of mitigation measures, buildout of the Approved SEIR would still present a significant impact to historical resources.

A records search conducted for the Project found that six cultural resources studies had taken place within a half-mile of the Project site. However, no cultural resources were identified. BCR's field survey of the Project site was conducted in April 2023 and May 2023. During the field survey, one historic-period Post Office, and one historic-period commercial retail building were identified.[23] The historic-period buildings were evaluated based on the four National Register criteria for historical landmarks:

1. It is associated with the events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the U.S.;
2. It is associated with the lives of persons important to local, California, or U.S. history;
3. It embodies the distinctive characteristics of a type, period, region, or method of construction, represents the work of a master, possesses high artistic values; and/or;
4. It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

The two historic period structures were also evaluated against the City Development Code's (City Development Code §9-2615) criteria:

a. It exemplifies or reflects special elements of the City's history;

[23] BCR Consulting LLC. 2023. *Cultural Resource Assessment Euclid Mixed Use Specific Plan Project*. Page. 10.

b. It is identified with persons or events significant in local, state, or national history;

c. It is representative of the work of a notable builder, designer, architect, or artist;

d. It embodies distinguishing architectural characteristics of a style, type, period, or method of construction;

e. It is a noteworthy example of the use of indigenous materials or craftsmanship;

f. It embodies elements that represent a significant structural, engineering, or architectural achievement or innovation;

g. It has a unique location, a singular physical characteristic, or is an established and familiar visual feature of a neighborhood, community or the City; or

h. It is one of the few remaining examples in the City, region, state, or nation possessing distinguishing characteristics of an architectural or historical type or specimen.

Based on the previously listed criteria for both the National Register and the City's Development Code, it was determined that both historical period structures were not eligible for the California Register, and would not qualify as a City Historical Landmark. Department of Parks and Recreation (DPR) 523 forms were also completed for each historic era building. These forms include digital photographs of each structure, a summary description of each structure, and a cataloguing of resources present for each structure. Additional cultural data collected on the Project site as well as all completed DPR 523 forms are included in **Appendix C**. Neither the historic-period Post Office or commercial retail building meet the criteria for listing on the California Register, and do not quality as a historical resource under Section 15064.5.[24] Therefore, impacts would be less than significant.

Mitigation Measures

Mitigation Measures from TOP 2050 SEIR

The Approved SEIR includes measures to reduce potential impacts associated with the implementation of TOP 2050. The following measures from the Approved SEIR are applicable to the proposed Project:

MM 5-1 Historic or potentially historic resources in the City shall be evaluated for historic significance through the City's tier system prior to the issuance of plan or development approvals. Pursuant to City's Development Code (Chapter 4, Permits, Actions, and Decisions, and Chapter 7, Historic Preservation), mitigation measures for all Tier III Historic Resources shall include the following:

a) Each historic resource shall be fully documented and cataloged pursuant to Historic American Building Survey/Historic American Engineering Record (HABS/HAER) standards, to provide a record of the resource, including but not limited to: [i] the preparation of site plans, floor plans, exterior and interior elevations, and detail drawings of character defining features (such as moldings, stairs, etc.); and [ii] photographs of the resource, including the exterior, interior, and interior and exterior character defining features (such as moldings, light fixtures, trim patterns, etc.).

[24] BCR Consulting LLC. 2023. *Cultural Resource Assessment Euclid Mixed Use Specific Plan Project*. Page. 11.

b) A mitigation fee established pursuant to Section 7.01.030 (Historic Preservation Mitigation Fee) shall be paid to the City prior to the issuance of a demolition permit for Tier III historic resources. Fees for Tier I and II historic resources shall be determined during the Environmental Impact Report process. The fees established for Tier III will be used as a reference point for establishing fees for Tier I and II historic resources.

c) A Certificate of Appropriateness shall not be issued for the demotion of an historic resource, either in whole or in part, until such time that a demolition permit application and a replacement structure has been approved by the City, and appropriate permits have been issued for its construction, unless: [i] a waiver is granted pursuant to Subsection H (Replacement Structure Waiver for Historic Resources Located within Industrial Zoning Districts) of Section 4.02.050; [ii] a deferral of the replacement structure requirement is granted pursuant to Subsection G (Replacement Structure Deferral) of Section 4.02.050; or [iii] demolition is required pursuant to Section 7.01.050 (Unsafe or Dangerous Conditions) of this Development Code.

d) In an effort to preserve features and artifacts from historic resources, a determination whether items within or on the resource should be salvaged must be made by the Planning Department and may include the local historical society prior to the issuance of the demolition permit. The applicant shall be responsible for the removal, relocation, storage, and donation of such items selected for salvaging. The applicant shall provide an inventory of salvaged items to the Planning Department, and shall include a list of each item name, description, and dimension as necessary, and the location of each item on a floor plan.

In compliance with **MM 5-1,** a CRA was prepared for the Project in October 2023 which analyzed the two historic period structures on the Project site. Based on criteria for both the National Register and the City's Development Code, both historical period structures were not eligible for the California Register, and would not qualify as a City Historical Landmark. See **Appendix C** for additional details.

Conclusion

With the implementation of mitigation measures in the Approved SEIR, the Project would not result in a new or more severe impact to historical resources. A significant and unavoidable impact was identified in the Approved SEIR with respect to historical resources. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5? [Approved SEIR Impact 5.5-2]

No New or More Severe Impacts: The Approved SEIR found that after compliance with existing federal, state, local regulations, and mitigation measures impacts to archeological resources or paleontological resources would be less than significant.

The CRA determined that significant archaeological deposits were not present on the Project site during the records search and field survey. However, ground-disturbing activities have the potential to reveal buried deposits not observed on the surface. In keeping with MM 5-2 of the Approved SEIR, prior to the initiation of ground-disturbing activities, field personnel should be alerted to the possibility of buried prehistoric or historic cultural deposits. In the event that field personnel encounter buried cultural material, work in the immediate vicinity of the find should ceased and a qualified archaeologist should be retained to assess the significance of the find. The qualified archaeologist should have the authority to stop or divert construction excavation as necessary. If the qualified archaeologist finds that any cultural resources present meet eligibility requirements for listing on the California Register or the National Register, plans for the treatment, evaluation, and mitigation of impacts to the find will need to be developed. Despite the lack of known archeological resources on the Project site, compliance with mitigation measures and State regulations would lead to a less than significant impact.

Mitigation Measures from TOP 2050 SEIR

The Approved SEIR includes measures to reduce potential impacts associated with the implementation of TOP 2050. The following measures from the Approved SEIR are applicable to the proposed Project:

MM 5-2 In areas of documented or inferred archeological and/or paleontological resources presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:

a) Archeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.

b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.

c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including catalog with museum numbers.

In compliance with **MM 5-2,** a CRA was prepared for the Project site in October 2023 and determined that significant archaeological deposits were not present on the Project site during the records search and field survey. Prior to ground disturbing activities the Project site developer would alert field personnel to the possibility of buried prehistoric or historic cultural deposits, see **Appendix C** for additional details.

Conclusion

With the implementation of mitigation measure measures in the TOP 2050 SEIR the Project would not result in a new or more severe impact to archaeological resources. A less than significant impact with mitigation was identified in the Approved SEIR with respect to archaeological resources. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (c) Disturb any human remains, including those interred outside of dedicated cemeteries? [Approved SEIR Impact 5.5-3]

No New or More Severe Impacts: If human remains are encountered, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are prehistoric, the Coroner will notify the NAHC to determine a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC. Human remains were not identified during field exploration of the Project site. Additionally, the disturbed state of the Project site further reduces the potential to encounter buried remains. However, ground disturbing activities have the potential to reveal unknown human remains. Despite this, proper compliance with State Health and Safety Code Section 7050.5 would ensure proper handling and treatment of the remains. Impacts would, therefore, remain less than significant.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact to the disturbance of human remains. A less than significant impact was identified in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.6.3 Overall Cultural Resources Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162 (a), the Project would not result in any new or more severe impacts with respect to cultural resources. Therefore, preparation of an SEIR is not warranted.

4.7 ENERGY

4.7.1 Summary of TOP 2050 Analysis

The Approved SEIR concluded that upon implementation of regulatory requirements, standard conditions of approval, and mitigation measures impacts to energy would be less than significant.

4.7.2 Analysis of Proposed Project

Threshold (a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation? [Approved SEIR Impact 5.6-1]

Construction Impacts

Project construction would create temporary increased demands for electricity and vehicle fuels compared to existing conditions and would result in short-term transportation-related energy use. Energy consumption during construction (2024 through 2026) was calculated using the CalEEMod, Version 2022.1 computer model, and the results are shown in **Table 7**: **Construction-Related Fuel Usage**.

Table 7: Construction-Related Fuel Usage

Project Component	Gasoline (Gallons)	Diesel (Gallons)
Construction Worker Commute	152,741	0
Construction Hauling/Vendor Trips	0	77,047
Construction Off-Road Equipment	0	87,694
Total	195,564	164,741
Notes: Refer to Appendix D for Model Data Outputs.		
Source: CalEEMod Version 2022.1;		

Electrical Energy

Construction activities associated with the land uses accommodated under the Project would require electricity use to power the construction equipment. The electricity use during construction would vary during different phases of construction, where the majority of construction equipment during demolition and grading would be gasoline-powered or diesel-powered, and the later construction phases would be electricity-powered, such as interior construction and architectural coatings. Overall, the use of electricity would be temporary in nature and would fluctuate according to the phase of construction. Additionally, it is anticipated that the majority of electric-powered construction equipment would be hand tools (e.g., power drills, table saws, compressors) and lighting, which would result in minimal electricity usage during construction activities. Therefore, Project-related construction activities would not result in wasteful or unnecessary electricity demands and impacts would be less than significant.

Natural Gas Energy

It is not anticipated that construction equipment used for the Project would be powered by natural gas, and no natural gas demand is anticipated during construction. Therefore, impacts would be less than significant with respect to natural gas usage.

Transportation Energy

Transportation energy use depends on the type and number of trips, Vehicular Miles Traveled (VMT), fuel efficiency of vehicles, and travel mode. Transportation energy used during construction would come from the transport and use of construction equipment, delivery vehicles and haul trucks, and construction employee vehicles that would use diesel fuel and/or gasoline. It is anticipated that the majority of off-road construction equipment, such as those used during demolition and grading activities, would be gasoline-powered or diesel-powered.

The use of energy resources by vehicles and equipment would fluctuate according to the phase of construction. To limit wasteful and unnecessary energy consumption, the construction contractors are anticipated to minimize non-essential idling of construction equipment during construction in accordance with Section 2449 of the CCR, Title 13, Article 4.8, Chapter 9. In addition, electrical energy would be available for use during construction from existing power lines and connection, which could minimize or avoid the use of generators that are less efficient than tying into existing SCE infrastructure. Furthermore, construction trips would not result in unnecessary use of energy since the Project site is centrally located and is served by numerous regional freeway systems (e.g., Interstate 10 [I-10], State Route 83 [SR 83], and State Route 60 [SR 60]) that provides the most direct and shortest routes from various areas of the region. Moreover, all construction-equipment operation would cease upon completion of Project construction. Thus, impacts related to transportation energy use during construction would be temporary and would not require expanded energy supplies or the construction of new infrastructure. Additionally, over time as fuel efficiencies and fuel technologies improve, it is likely that transportation energy consumption will decrease. Overall, it is expected that construction fuel associated with land use developments accommodated under the Project would not be any more inefficient, wasteful, or unnecessary than similar development projects. Therefore, impacts would be less than significant with respect to transportation energy.

Operational Impacts

Project operation would create additional demands for electricity and natural gas compared to existing conditions and would result in increased transportation energy use. Operational use of energy would include heating, cooling, and ventilation of buildings; water heating; operation of electrical systems, use of on-site equipment and appliances; and indoor, outdoor, perimeter, and parking lot lighting.

Electrical Energy

Operation of the existing facility consumes electricity for various purposes, including, but not limited to heating, cooling, and ventilation of buildings, water heating, operation of electrical systems, security and control center functions, lighting, and use of on-site equipment and appliances. The proposed electricity consumption for the apartments, retail use, and associated parking lot are shown in **Table 8: Electricity Consumption**.

Table 8: Electricity Consumption

Land Use	Electricity
Apartments	1,540,870
Retail	118,686
Parking Structure	740,570
Proposed Project Total	2,400,126
Source: CalEEMod Version 2022.1	
Notes: kWh = kilowatt hour Refer to Appendix D for Model Data Outputs.	

Electrical service to the Project would be provided by SCE through connections to existing offsite electrical lines and new on-site infrastructure. As shown in the table, the Project would have an annual electricity demand of 2,400,126 kilowatt hours (kWh)/year. While the Project would increase energy demand at the Project site compared to existing conditions, it would be required to comply with the applicable Building Energy Efficiency Standards and the CALGreen Code. Because the Project would be consistent with the requirements of these energy-related regulations, it would not result in wasteful or unnecessary electricity demands. Therefore, the Project would not result in a significant impact related to electricity.

Natural Gas Energy

The proposed natural gas consumption for the Project site is shown in **Table 9: Natural Gas Consumption**. As seen in the table, natural gas demand would total 4,012,198 kilo-British Thermal Units (kBTU)/year with the Project. Because the Project would be built to meet the Building Energy Efficiency Standards, it would not result in wasteful or unnecessary natural gas demands. Therefore, operation of the Project would result in less than significant impacts with respect to natural gas usage.

Table 9: Natural Gas Consumption

Land Use	Natural Gas (kBTU/year)
Apartment	3,940,273
Retail	71,925
Parking Structure	0
Proposed Project Total	4,012,198
Notes: kBTU = kilo-British thermal unit Refer to Appendix D for Model Data Outputs.	
Source: CalEEMod Version 2022.1	

Transportation Energy

The Project would consume transportation energy during operations from the use of motor vehicles. Because the efficiency of the motor vehicles in use, such as the average miles per gallon for motor vehicles involved with the Project are unknown, estimates of transportation energy use is assessed based on the overall VMT and related transportation energy use. The Project-related VMT would primarily come from future employees and for the commercial uses. As seen in **Table 10: Operation-Related Fuel Usage**, the VMT for the Project is estimated to be 3,479,538. However, the Project would involve the construction of residential and retail uses that would provide more opportunities for employment for residents of the City

and would be within an urbanized area with nearby amenities such as regional parks and public transit options like OmniTrans and Metrolink. Two bus stops are within 100 feet of the Project and Anthony Munoz Park is approximately 0.2 miles west of the Project site. Overall, it is expected that operation-related fuel usage associated with the Project would not be any more inefficient, wasteful, or unnecessary than similar development projects. Therefore, impacts would be less than significant with respect to operation-related fuel usage.

Table 10: Operation-Related Fuel Usage

Vehicle Type	Gasoline		Diesel	
	VMT	Gallons	VMT	Gallons
Passenger Vehicles	3,206,728	148,460	0	0
Light/Medium Trucks	0	0	210,228	12,223
Heavy Trucks	0	0	62,582	10,259
Total	3,206,728	148,460	272,810	22,482
Notes: Refer to Appendix D for Model Data Outputs.				
Source: CalEEMod Version 2022.1				

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in new or more severe impact due to energy and electricity usage and production. A less than significant impact was identified in the Approved SEIR with respect to established policies and plans. The Project would be designed consistent with the applicable guidelines and standards within the Approved SEIR, and City Development Code. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency? [Approved SEIR Impact 5.6-2]

Local Plans

City of Ontario Community Climate Action Plan (CAP)

The primary purpose of the City's Community CAP is to design a feasible strategy to reduce GHG emissions generated by community activities that is consistent with statewide CARB Scoping Plan GHG reduction efforts. The City has identified a series of reduction measures to be implemented by the City. These reduction measures include programs that relate to the energy efficiency of projects within the City. As shown in **Table 15: Community Climate Action Consistency**, the Project would comply and would not conflict with the measures and goals established by the City's Community CAP. Therefore, implementation of the project would be consistent with the energy efficiency and renewable energy standards of a City's local plan.

Top 2050

Table 11: Consistency with the TOP evaluates the consistency of the Project to the applicable policies of TOP. As shown in the table, the Project would generally be consistent with the applicable policies of TOP. For example, the sustainable design strategies in the Approved SEIR includes use of energy efficient LEDs, implementation of passive design such as building orientation, landscaping, and strategic colors to improve building energy performance, and use of high-performance dual pane window glazing in retail storefronts. Therefore, overall, the Project would be consistent and would not interfere with the Approved SEIR.

Table 11: Consistency with the TOP

Goal/Policy No.	Goal/ Policy	Consistency
Policy ER3-1	**Conservation Strategy**: Require conservation as the first strategy to be employed to meet applicable energy saving standards.	**Consistent:** The proposed Project incorporates energy-saving conservation strategies into its design guidelines by addressing lighting, bicycle parking, sustainable landscaping, and energy efficiency. Sustainable design strategies include incorporation of LED or metal halide lighting and energy efficient appliances.
Policy ER3-2	**Green Development – Communities:** Encourage the use of LEED Neighborhood Development rating system, or similar mechanism, to guide the planning and development of all new communities.	**Consistent:** Development of land uses accommodated under the Project would comply with the CALGreen Code, and implement strategies such as the use of low water use landscaping, and modern Heating, Ventilation, and Air Conditioning (HVAC) systems.
Policy ER3-3	**Building and Site Design:** Require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar and natural ventilation.	**Consistent:** The proposed Project includes the use of passive design to improve building energy performance through low water use landscaping. Additionally, the development of land uses accommodated under the proposed Project would also be designed in compliance with the CALGreen Code.
Policy ER3-4	**Green Development – Public Buildings:** We require all new and substantially renovated City buildings in excess of 10,000 sq ft achieve a LEED Silver Certification standard, as determined by the U.S. Green Building Council.	**Not Applicable:** This policy is applicable to City-owned buildings.
Policy ER3-5	**Fuel Efficient and Alternative Energy Vehicles and Equipment:** We purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use renewable sources of energy.	**Not Applicable:** This policy is applicable to City-owned vehicles and equipment.
Source: City of Ontario. 2022. *TOP 2050, Environmental Resources Element*. https://www.ontarioca.gov/about-ontario-ontario-plan-policy-plan/environmental-resources. (Accessed August 2023).		

The State's electricity grid is transitioning to renewable energy under California's RPS Program. Renewable sources of electricity include wind, small hydropower, solar, geothermal, biomass, and biogas. The statewide RPS requirements do not directly apply to individual development projects, but to utilities and energy providers such as SCE, whose compliance with RPS requirements would contribute to the State of

California objective of transitioning to renewable energy. SCE's Pathway 2045 concludes that reaching California's 2045 GHG goals requires the decarbonization of electricity, electrification of transportation, electrification of buildings, and utilization of low carbon fuels.[25] Achieving 100 percent renewable energy would be feasible with continued technical advances including the following:[26]

- Better weather forecasting technology is making it much easier for grid operators to precisely how much wind or solar generation we can depend on at any given time.
- The cost of zero-carbon generation sources like wind and solar have dramatically decreased in the past decade and continue to decline.
- The cost of energy storage technologies, which will help us be able to use renewables when the wind isn't blowing and the sun isn't shining, also continues to decline.
- New advancements in the ability of large and small electricity users to shift usage towards times when electricity is cheaper and when the supply of renewables is most abundant are helping to make the grid more flexible and able to accommodate very high levels of renewable energy.
- Grid operators around the western United States are coordinating to gain access to larger markets for renewables and other carbon-free flexible grid resources.
- Targeting energy efficiency during times of the day when renewables are less abundant (after the sun sets) will also help the grid operate more efficiently.

As discussed herein, the Project would comply with the Building Energy Efficiency Standards, the CALGreen Code, and energy efficiency measures implemented by the City CAP. Consistent with the CAP, the buildings developed under the Project would have rooftops that can support solar panels (i.e., solar-ready) which will comply with solar ready requirements of the Building Energy Efficiency Standards, which would enable future tenants to install a PV system. Therefore, implementation of the Project would support the statewide goal of decarbonization by 2045.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact due to conflicts with fossil fuel energy or renewable energy plan. A less than significant impact was identified in the Approved SEIR with respect to fossil fuel energy or renewable energy plans. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.7.3 Overall Energy Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new or more severe impacts with respect to energy resources. Therefore, preparation of a SEIR is not warranted.

4.8 GEOLOGY AND SOILS

4.8.1 Summary of TOP 2050 Analysis

The Approved EIR concluded that upon implementation of regulatory requirements, standard conditions of approval, and mitigation measures impacts to geology and soils would be less than significant.

4.8.2 Analysis of Proposed Project

Threshold (a) Directly or indirectly cause potential substantial adverse effects, including the risk loss, injury, or death involving: [Approved SEIR Impact 5.7-1]

(i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the state Geologist for the area or based on other substantial evidence of a known fault.

(ii) Strong seismic ground shaking

(iii) Seismic-related ground failure, including liquefaction

(iv) Landslides

No New or More Severe Impacts: There are no Alquist-Priolo Earthquake Fault Zone's located within the City.[27] The southern section of the San Andreas Fault is estimated to be capable of generating the greatest magnitude earthquake, 8.0. However, projects considered for approval under TOP 2050 would be required to comply with seismic safety provisions of the California Building Code (CBC) (Title 24, Part 2 of the California Code of Regulations).[28] Compliance with these regulations would reduce hazards arising from ground shaking to less than significant.

The Project site is in a developed area of the City and is not on or near a hillside. The Project site is relatively flat with a slight gradient to the southwest.[29] Therefore, the Project is not located in an area susceptible to landslides. The Approved SEIR found that groundwater levels throughout the City are greater than 50 feet below ground surface, so there is currently no potential for liquefaction in the City. In addition, the Approved SEIR found that implementation of projects in the pursuant to TOP 2050 could indirectly increase the number of people and structures in the City that could be subjected to earthquake-related hazards.[30] Projects developed pursuant to TOP 2050 would be required to meet the most current seismic safety requirements in the CBC. Although the proposed Project would result in an increased development compared to existing land uses, proposed development within the Project site would be within the assumptions made in the Approved SEIR and would not result in development of new,

[27] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.7-18. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).
[28] Ibid.
[29] GeoKinetics. 2022. Phase I Environmental Site Assessment Ontario Plaza 1000 – 1060 West Fourth Street & 1118 – 1126 North Mountain Avenue Ontario, Page 6. California. Irvine, CA: GeoKinetics
[30] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.7-19. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).

previously undeveloped areas of Ontario. After compliance with safety provisions of the CBC, implementation of the Project would have less than significant impacts from seismic hazards.

Mitigation Measures

None found relevant to this Project.

Conclusion

The Project would not result in a new or more severe impact due to the exacerbation or exposure to hazards associated with seismicity, liquefaction, and landslide. A less than significant impact was identified in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Result in substantial soil erosion or the loss of topsoil? [Approved SEIR Impact 5.7-2]

No New or More Severe Impacts: Per the Approved SEIR underlying the City is young alluvial sediment and wind-blown sand that is generally granular, poorly consolidated, and very susceptible to erosion.[31] Grading will increase the potential for erosion by removing protective vegetation, changing natural drainage patterns, and constructing slopes. In addition, per the Approved SEIR the City requires an erosion/dust control plan for projects located within this area. Future projects' adoption of National Pollutant Discharge Elimination System (NPDES) permits and accompanied Stormwater Pollution Prevention Plans (SWPPPs) would reduce potential risks of erosion. The Project would comply with all requirements set forth in the NPDES permit for construction activities (e.g., implementation of Best Management Practices [BMPs] through preparation of a SWPPP), reducing potential impacts to less than significant levels. Additionally, compliance with the CBC and review of grading plans for individual projects by the City Engineer would ensure no significant impacts would occur. The Project site is currently developed and paved. Renovation of the Project site would involve earthmoving activities which could expose soil, but these activities would be temporary. Permanent ground covering structure and improvements would be placed which would generate a minimal chance of erosion. Therefore, after compliance with the safety provisions of the City's applicable regulations CBC, and appropriate implementation of development practices, the proposed Project would have less than significant impacts from soil erosion.

Mitigation Measures

No mitigation measures are required in TOP 2050, and impacts would be less than significant.

Conclusion

Erosion impacts related to the proposed Project are less than the significant. The Project would not result in a new or more severe impact relative to erosion, a less than significant impact was identified in the

[31] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.7-19. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).

Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would later the Approved SEIR's significance finding.

Threshold (c) Be located on a geological unit or soil that is unstable, or that would become unstable as a result of the project and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse? [Approved SEIR Impact 5.7-3]

Threshold (d) Be located on expansive soil, as defined in Table 18-1B of the Uniform building Code (1994), creating substantial direct or indirect risks to life or property? [Approved SEIR Impact 5.7-4]

Threshold (e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of waste water? [Approved SEIR Impact 5.7-5]

No New or More Severe Impacts: Projects considered for approval under TOP 2050 could expose structures or persons to potentially significant hazards from ground subsidence and expansive soils.[32] However, compliance with CBC and review of grading plans for individual projects by the City Building Official would ensure that impacts would be minimal.[33] The young sediments underlying the City are generally dry and loose in the upper few feet, and are susceptible to compression.[34] Therefore, projects approved pursuant to TOP 2050 could expose persons or structures to potentially significant hazards from compressible soils.[35] However, as previously mentioned compliance with the CBC and review of grading plans for individual projects by the City Building Official would lead to less than significant impacts.

The proposed Project does not propose the use of septic tanks and would connect to existing sewer lines. Therefore, the Project would not result in new impacts or a substantial increase in the magnitude of impacts to geology and soils.

Mitigation Measures

No mitigation measures are required in TOP 2050, and impacts would be less than significant.

Conclusion

Soil hazard impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to soil hazards, a less than significant impact was identified in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

[32] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.7-20. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).
[33] Ibid.
[34] Ibid, Page 5.7-21
[35] Ibid.

Threshold (f) Directly or indirectly destroy a unique paleontological resource or site or unique geological feature? [TOP 2050 5.7-6]

No New or More Severe Impacts: The Approved SEIR found that buildout of the TOP 2050 would not result in impacts to paleontological resources with the implementation of **MM 5-2**. Ontario is underlain by deposits of Quaternary and upper-Pleistocene sediments deposited during Pliocene and early Pleistocene time. Quaternary Older Alluvial sediments may contain significant, nonrenewable, paleontological resources and are therefore considered to have high sensitivity. Grading and construction activities associated with TOP 2050 in undeveloped areas or redevelopment that requires more intensive soil excavation than in the past could potentially cause the disturbance of paleontological resources. Therefore, future development that would be accommodated by TOP 2050 could potentially unearth previously unrecorded resources. Paleontological resources are recognized as nonrenewable and receive protection under the California Public Resources Code (Section 21083.2) and CEQA. Review and protection of paleontological resources are also afforded by CEQA for individual development projects that would be accommodated by TOP 2050, would be subject to discretionary actions that are implemented in accordance with the land use plan of TOP 2050. With implementation of **MM 5-2** Project impacts to unique paleontological resources or unique geological features would be less than significant.

Mitigation Measures

The Approved SEIR includes measures to reduce potential impacts associated with the implementation of TOP 2050. **MM 5-2** from the Approved SEIR would be applied to the proposed Project.

In compliance with **MM 5-2,** a CRA was prepared for the Project in October 2023 that provides recommendations should archaeological and/or paleontological resources be discovered during ground disturbing activities. However, no archeological or paleontological resources were identified. See **Appendix C** for additional details.

Conclusion

The Project would not result in a new or more severe impact to a unique paleontological resource or site or unique geological feature. A less than significant impact was identified in the Approved SEIR with respect to paleontological resources or site or unique geological features. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.8.3 Overall Geology and Soils Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new or more severe impacts with respect to geology and soils. Therefore, preparation of a SEIR is not warranted.

4.9 GREENHOUSE GAS EMISSIONS

4.9.1 Summary of TOP 2050 Analysis

TOP 2050 includes an update to the City's Community Climate Action Plan (CCAP) which was adopted in 2014. The CCAP is a plan to reduce greenhouse gas (GHG) emissions and improve community resilience to hazardous conditions associated with climate change. The update to the CCAP includes updated emissions inventories; updated emissions forecasts; identifies GHG emissions reduction targets to achieve the GHG reduction goals of the City, consistent with Senate Bill 32, Executive Order S-03-05, and substantial progress toward the State's carbon neutrality goals of Executive Order B-55-18; and measures, that when quantified, achieve the GHG reduction targets for the City.

4.9.2 Analysis of Proposed Project

Threshold (a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment. [Approved SEIR Impact 5.8-1]

Construction Greenhouse Gas Emissions

No New or More Severe Impacts: The Project would result in direct emissions of Carbon Dioxide (CO_2), Nitrous Oxide (N_2O), and Methane (CH_4) from construction equipment and the transport of materials and construction workers to and from the Project site. The GHG emissions only occur during temporary construction activities and would be cease once construction is complete. The total GHG emissions (in Carbon Dioxide Equivalent [CO_2e]) generated during construction are shown in **Table 12: Construction-Related Greenhouse Gas Emissions**.

Table 12: Construction-Related Greenhouse Gas Emissions

Category	$MTCO_2e$	30-Year Amortized $MTCO_2e$
Construction Year 2024	587	19.57
Construction Year 2025	1,245	41.50
Construction Year 2026	1,118	37.27
Total Construction Emissions	*2,950*	*98.33* [1]

Note: Total does not sum due to rounding.
Source: CalEEMod version 2020.4.0. Refer to Appendix B for model outputs.

As shown in **Table 12: Construction-Related Greenhouse Gas Emissions**, the Project would result in the generation of approximately 2,950 Metric Tons of Carbon Dioxide Equivalent ($MTCO_2e$) over the course of construction. Construction GHG emissions are typically summed and amortized over a 30-year period and then added to the operational emissions. The amortized Project construction emissions would be 98.33 $MTCO_2e$ per year. Once construction is complete, the generation of these GHG emissions would cease.

Operational Greenhouse Gas Emissions

No New or More Severe Impacts: Operational emissions occur over the life of the Project. GHG emissions would result from direct emission sources such as Project generated vehicular traffic, on-site combustion of natural gas, and operation of any landscaping equipment. Operational GHG emissions would also result

from indirect sources, such as off-site generation of electrical power, the energy required to convey water to, and wastewater from the Project, the emissions associated with solid waste generated from the Project, and any fugitive refrigerants from air conditioning or refrigerators.

Prior to issuance of a building permit, the City would review and verify that future development plans within the Project area demonstrate compliance with the current version of the Building and Energy Efficiency Standards. Development would also be required to adhere to the provisions of CALGreen, which establishes planning and design standards for sustainable Project site development, and energy efficiency. Construction activities would be required to monitor air quality emissions using applicable regulatory guidance such as the SCAQMD Rules.

GHG emissions associated with the Project are summarized in **Table 13: Operational Greenhouse Gas Emissions**. As shown in **Table 13: Operational Greenhouse Gas Emissions**, the Project's emissions would be 2,186.85 $MTCO_2e$ annually from both construction and operations.

Table 13: Operational Greenhouse Gas Emissions

Emissions Source	Annual Emissions
	MTCO2e per Year
Total Construction Emissions Amortized Over 30 Years	98.3
Area Source	84.3
Energy	593.0
Mobile	1,285.0
Waste	86.5
Water and Wastewater	39.4
Refrigerants	0.35
Total	**2,186.85**
Emissions per Dwelling Unit	6.13
2022 CCAP Update Threshold for residential developments completed between 2020 and 2030, emissions per Dwelling Unit	5.85
Exceeds Threshold?	**Yes**
Source: CalEEMod version 2020.4.0. Refer to Appendix B for model outputs.	

The Project includes 357 dwelling units; therefore, annual GHG emissions would equal 6.13 MTCO2e per unit, exceeding the 5.85 MTCO2e per unit threshold for residential projects completed before 2030. As such, the Project must achieve a minimum of 100 points on the Screening Table to show consistency with the 2022 CCAP Update.

Screening Table

To show consistency with 2022 CCAP Update the Project shall include selected Screening Table Measures that achieve a minimum of 100 points. The City shall verify that Screening Table Measures achieving a minimum of 100 points are incorporated in development plans prior to the issuance of building permit(s)

and/or Project site plans. The City shall also verify implementation of the selected Screening Table Measures prior to the issuance of Certificate(s) of Occupancy. By achieving the 100-point minimum, the Project would be consistent with the 2022 CCAP Update and thus the Project is considered to have a less than significant individual and cumulatively considerable impact on GHG emissions. An example of how the proposed Project could achieve a minimum of 100 Screening Table Points is provided in **Table 14: Example of GHG Performance Standards for Multi-Family Development**.

Table 14: Example of GHG Performance Standards for Multi-Family Development

Reduction Measure	Description	Feature	Points
Measure 1: Building Electrification	Replacement of gas appliance with efficient electric appliance	Electric Space Heater Electric Water Heater Electric Stove Electric Dryer	6 8 5 1
		Total for measure	**20**
Measure 4: Transit Oriented Communities	New development is located in a transit-oriented community	Development site is located within ½ mile radius of one or more of the following: a Bus Rapid Transit (BRT) stop, bus transit center, light rail station, the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods, and/or High Quality Transit Corridor defined as a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.	10
		Total for measure	**10**
Measure 6: Vehicle Electrification	Installation of EV charging stations for resident vehicle parking space	Installation of Level 2 EV or higher charging stations at a rate of 5-10% of required vehicle parking spaces.	10
		Total for measure	**10**
Measure 7: Active Transportation	Installation or improvement of bicycle facilities	Bicycle parking facilities with 1:1 ratio of bicycle parking to guest vehicle parking space.	3
	Installation or improvement of pedestrian facilities	Two or three pedestrian infrastructure improvements to street design on private streets, including, but not limited to curb extensions, raised crosswalks, speed humps/bumps, street tree plantings in parkways or street medians, and elevated pavement markings.	3
		Total for measure	**6**
Measure 10: Waste Diversion	Design and plan multi-family housing developments to include onsite areas for municipal compost/green waste and recycling bins/containers	Site design allocates sufficient space for storage and collection of green waste, organic waste, and recyclables.	33
		Total for measure	**33**

Reduction Measure	Description	Feature	Points
Measure 11: Water Conservation	Implement indoor water efficiency measures	Implement water efficient showerheads and faucets.	1
		Install on-demand water circulators on all showers/baths	2
	Incorporate outdoor water efficiency measures	Design and plan outdoor landscapes planted with drought-tolerant, low maintenance plants with a 1) drip irrigation system or 2) sprinkler irrigation system with a weather-based irrigation controller.	4
		Total for measure	**7**
Additional Measures	AR-1: Meet CalGreen	CalGreen Tier 2 Compliance	10
	AR-2: Generate energy from on-site solar PV	Solar PV that generates 30%-49% of residential energy needs on multifamily residential buildings that are 4 stories in height or taller.	5
		Total for measure	**15**
TOTAL POINTS			**101**

Source: City of Ontario, *Ontario Community Climate Action Plan: Greenhouse Gas Emissions Screening Tables*, Table 3, page 10. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/CCAP/Screening%20Table/Ontario-CCAP_Screening-Tables-MARCH%202023.pdf. (Accessed August 2023).

Conclusion

GHG emission impacts related to the proposed Project are similar to the less than significant impacts identified in Approved SEIR. No new impact relative to GHG emissions or a substantial increase in the severity of a previously identified significant impact evaluated in the Approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Mitigation Measures

None provided in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact to GHG emissions, a less than significant impact was identified in the Approved SEIR with respect to GHG. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases. [Approved SEIR Impact 5.8-2]

City of Ontario Community Climate Action Plan Consistency

No New or More Severe Impacts: The primary purpose of the City's Community Climate Action Plan (CCAP) is to design a feasible strategy to reduce GHG emissions generated by community activities that is consistent with statewide Scoping Plan GHG reduction efforts. The City has identified a series of reduction measures to be implemented by the City. These reduction measures include programs that improve

building energy efficiency, increase use of public and active transit, and decrease VMT, increase use of alternative-fueled vehicles, increase use of renewable energy, reduce water consumption, and reduce waste.

Table 15: Community Climate Action Plan Consistency, evaluates the consistency of the proposed Project to the applicable measures of the CCAP. As discussed in the table, the proposed Project would be consistent with all applicable measures. By using energy more efficiently, harnessing renewable energy to power buildings, recycling waste, and enhancing access to sustainable transportation modes, the City can keep dollars in local economy, create new green jobs, and improve community quality of life. As shown in **Table 15: Community Climate Action Plan Consistency**, the Project would not conflict with the goals of the CCAP.

Table 15: Community Climate Action Plan Consistency

CCAP Measure Name	Measure Description	Consistency	
Energy			
Energy – Strategy 1	**Building electrification.** Promote and incentivize the phase-out of gas appliances in new and existing homes and businesses throughout the community to advance GHG reductions, increase energy efficiency, and protect public safety and environmental health.	N/A:	This measure is to be taken at the City level. However, implementation of the Project would not conflict with this strategy.
Energy – Strategy 2	**Onsite solar energy for existing residential development.** Continue to support and facilitate installation of rooftop solar photovoltaic and onsite solar energy systems in existing residential development.	N/A:	This measure only applies to existing residential development.
Energy – Strategy 3	**Onsite Solar Energy Systems for Nonresidential Development:** Ensure new large non-residential development, including City facilities, includes onsite renewable energy to support the site's energy needs by requiring solar photovoltaic panels or other appropriate onsite renewable energy generation systems for the following types of projects: • New commercial and office buildings, or existing commercial and office building expansions greater or equal to 45,000 sq ft in size. • New industrial or existing industrial buildings expansions greater or equal to 100,000 sq ft in size.	N/A:	The Project Proposes the development of a large residential structure with smaller (3,800 sq ft) of retail uses.
Energy – Strategy 4	**Green roofs.** Promote and incentivize residents and business owners to install green roofs to conserve energy and reduce surface water runoff.	N/A:	This measure is to be taken at the City level. However, implementation of the Project would not conflict with this strategy.
Energy – Strategy 5	**Urban Cooling:** Maintain and expand the City's existing tree canopy, with a goal of planting 500 trees annually through 2050 and promote the use of pervious concrete and cool pavement for pavement projects.	Consistent:	The Proposed Project would include landscape installation and pervious concrete pavement.
Energy – Strategy 6	**Energy efficiency retrofits for low-income households.** Promote and incentivize voluntary energy efficiency	N/A:	This measure is not applicable to the proposed Project, as

CCAP Measure Name	Measure Description	Consistency	
	retrofits of homes to reduce natural gas and electricity usage, with the goal of retrofitting 9,000 low-income homes by 2050. Partner with community services agencies to fund energy efficiency projects, including heating, ventilation, air conditioning, indoor lighting, water heating equipment, insulation, and weatherization for low-income residents.		retrofits only apply to existing structures.
Energy – Strategy 7	**Energy efficiency retrofits.** Promote and incentivize voluntary energy efficiency retrofits to reduce in natural gas and electricity usage. Partner with regional agencies to expand access to existing energy efficiency and conservation opportunities, incentives, and technical assistance for residents and businesses.	N/A:	This measure is not applicable to the proposed Project, as retrofits only apply to existing structures.
Energy – Strategy 8	**Smart Growth and Infill.** Encourage revitalization of neighborhoods through higher-density, mixed-use, infill development and creative reuse of underutilized sites within the urban core.	Consistent:	The Project would construct multifamily residential and commercial retail land uses on an underutilized site in the City.
Transportation			
Transportation – Strategy 9	**Transit-Oriented Development:** Encourage development of compact, mixed-use, and transit-oriented development to improve the regional jobs-housing balance, especially on corridors served by high-ridership transit and bus rapid transit, such as Holt Avenue.	Consistent:	The proposed Project would provide a mixed-use development along a Mountain Avenue, a high-volume corridor with existing public transit.
Transportation – Strategy 10	**Increase Transportation Ridership.** Ensure a reliable and responsive transit system with dedicated and secure funding and resources to support increased ridership.	N/A:	This measure is to be taken at a City level. However, implementation of the Project would not conflict with this strategy.
Transportation – Strategy 11	**Traffic signal synchronization and roadway management.** Implement traffic and roadway management strategies to improve mobility and efficiency and reduce associated emissions.	N/A:	This measure is to be taken at the City level. However, implementation of the Project would not conflict with this strategy.
Transportation – Strategy 12	**Community vehicle electrification.** Promote and incentivize the adoption of electric vehicles (EV) citywide, including light-duty and heavy-duty vehicles, for municipal, commercial, and residential uses.	N/A:	This measure is to be taken at the City level. However, implementation of the Project would not conflict with this strategy.
Transportation – Strategy 13	**Active Transportation Networks:** Work with transit agencies, school districts, and employers to facilitate an interconnected transportation system that allows a shift in travel from private passenger vehicles to alternative modes, including public transit, ride sharing, car sharing, bicycling, and walking.	Consistent:	The proposed Project would develop multifamily residential units near public transportation provided by OmniTrans.
Transportation – Strategy 14	**Vehicle Idling:** Limit idling of heavy-duty trucks. Support the SCAMQD and CARB anti-idling requirements and provide signage in key areas where	Consistent:	Commercial motor vehicles are required to comply with California Code of Regulations Section 2485 which would limit the idling of Diesel fueled

CCAP Measure Name	Measure Description	Consistency	
	idling that is not consistent with SCAMQD or CARB requirements might occur.		vehicles to no more than five minutes.
Transportation – Strategy 15	**Parking policy and event parking.** Adopt a comprehensive parking policy that encourages carpooling and the use of alternative transportation, including providing parking spaces for car-share vehicles at convenient locations with access to public transportation.	N/A:	This measure is to be taken at a City level. However, implementation of the Project would not conflict with this strategy.
Off-road Equipment			
Off-Road Equipment – Strategy 16	**Electrification of construction and landscaping equipment.** Promote and incentivize the transition to electric construction and landscaping equipment.	N/A:	This measure is to be taken at the City level. However, implementation of the Project would not conflict with this strategy.
Off-Road Equipment – Strategy 17	**Idling Ordinance for Construction Equipment:** Limit idling of heavy-duty off-road construction equipment to reduce air pollution and GHG emissions from construction activity.	Consistent:	Construction would be required to comply with California Code of Regulations Section 2485 and 2499 which would limit the idling of heavy-duty construction equipment to no more than five minutes.
Waste			
Waste – Strategy 18	**Methane capture at landfills.** Support efforts to reduce methane emissions from regional landfills.	N/A:	This measure is not applicable to the proposed Project.
Waste – Strategy 19	**Waste Diversion:** Exceed waste diversion goals recommended by AB 939 and CALGreen by adopting a citywide diversion target of at least 75 percent of waste.	Consistent:	The proposed Project would be subject to all applicable local, State, and federal waste diversion requirement.
Waste – Strategy 20	**Construction and Demolition Waste Recovery Ordinance:** Increase the amount of waste recycled during construction and demolition of buildings.	Consistent:	Contractors are required to comply with CALGreen Code Sections 4.408 and 5.408, requiring the recycling of a minimum of 65 percent of construction and demolition waste, refer to **PPP GHG-3**.
Water			
Water – Strategy 21	**Indoor water efficiency.** Encourage water-efficient retrofits of new and existing buildings by working with water providers and regional agencies.	Consistent:	The Project would comply with CALGreen Code Section 4.303 and require the installation of low flow fixtures.
Water – Strategy 22	**Water Efficient Landscapes and Water Recycling:** Promote drought-tolerant and fire-wise landscaping. Encourage increased use of reclaimed water for landscape irrigation, agricultural, and industrial use.	Consistent:	The proposed Project plans to incorporate native drought tolerant landscaping and would use recycled water to irrigate landscape areas as required by the City of Ontario Recycled Water Master Plan.
Water – Strategy 23	**Water system and wastewater operations efficiency.** Maximize efficiency at drinking water treatment,	N/A:	This measure is not applicable to the proposed Project.

CCAP Measure Name	Measure Description	Consistency	
	pumping, and distribution facilities, including development of off-peak demand schedules for heavy commercial and industrial users.		
Water – Strategy 24	**Methane capture for wastewater treatment.** Work with Inland Empire Utilities Agency (IEUA), the local wastewater treatment provider, to increase methane capture rate.	N/A:	This measure is not applicable to the proposed Project.
Other			
Strategy 25	**Methane capture for dairy operations.** Encourage and incentivize local dairy operations to reduce methane emissions through methane capture technology.	N/A:	This measure is not applicable to the proposed Project.
Strategy 26	**Climate change awareness and education.** Promote climate change awareness and GHG reduction community-wide through a variety of mechanisms, including through support of climate change education in schools or community colleges.	N/A:	This measure is to be taken at the City level.
Strategy 27	**Carbon sequestration.** Establish a citywide carbon sequestration project and sequestration goal of 5,000 MT CO_2 per year.	N/A:	This measure is to be taken at the City level.
Strategy 28	**Green jobs.** Support green job trainings and opportunities to create sustainable, living wage, quality employment opportunities.	N/A:	This measure is to be taken at the City level.

Source: City of Ontario, 2022. *Ontario Community Climate Action Plan*. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/CCAP/Ontario-CCAP_Adopted_20220816.pdf. (Accessed August 2023).

SCAG's Connect SoCal

On September 3, 2020, SCAG's Regional Council adopted Connect SoCal (*2020 - 2045 Regional Transportation Plan/Sustainable Communities Strategy* [2020 RTP/SCS]). The RTP/SCS is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. The RTP/SCS embodies a collective vision for the region's future and is developed with input from local governments, county transportation commissions, tribal governments, nonprofit organizations, businesses, and local stakeholders in the counties of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura. SCAG's RTP/SCS establishes GHG emissions goals for automobiles and light-duty trucks for 2020 and 2035 as well as an overall GHG target for the Project region consistent with both the target date of AB 32 and the post-2020 GHG reduction goals of Executive Orders 5-03-05 and B-30-15.

The RTP/SCS contains over 4,000 transportation projects, ranging from highway improvements, railroad grade separations, bicycle lanes, new transit hubs and replacement bridges. These future investments were included in county plans developed by the six county transportation commissions and seek to reduce traffic bottlenecks, improve the efficiency of the region's network, and expand mobility choices for everyone. The RTP/SCS is an important planning document for the region, allowing project sponsors to qualify for federal funding.

The plan accounts for operations and maintenance costs to ensure reliability, longevity, and cost effectiveness. The RTP/SCS is also supported by a combination of transportation and land use strategies that help the region achieve state GHG emissions reduction goals and FCAA requirements, preserve open space areas, improve public health and roadway safety, support our vital goods movement industry, and utilize resources more efficiently. GHG emissions resulting from development-related mobile sources are the most potent source of emissions, and therefore Project comparison to the RTP/SCS is an appropriate indicator of whether the Project would inhibit the post-2020 GHG reduction goals promulgated by the state. The Project's consistency with the RTP/SCS goals is analyzed in detail in **Table 16: Regional Transportation Plan/Sustainable Communities Strategy Consistency**.

Table 16: Regional Transportation Plan/Sustainable Communities Strategy Consistency

SCAG Goals		Compliance	
GOAL 1:	Encourage regional economic prosperity and global competitiveness.	Consistent:	The Project would draw new residents and retail businesses to the area, contributing to regional economic prosperity.
GOAL 2:	Improve mobility, accessibility, reliability, and travel safety for people and goods.	Consistent:	Although this Project is not a transportation improvement project, the Project is located near an existing transportation route along I-10.
GOAL 3:	Enhance the preservation, security, and resilience of the regional transportation system.	N/A:	This is not a transportation improvement project and is therefore not applicable.
GOAL 4:	Increase person and goods movement and travel choices within the transportation system.	N/A:	This is not a transportation improvement project and is therefore not applicable. However, implementation of the Project would not conflict with this goal.
GOAL 5:	Reduce greenhouse gas emissions and improve air quality.	Consistent:	The Project is located within an urban area in proximity to existing transportation routes and freeways. Location of the project within a developed area would reduce trip lengths, which would reduce GHG and air quality emissions. Additionally, the Project would achieve a minimum of 100 points on the City GHG Screening Table, thereby reducing GHG emission impacts to less than significant levels.
GOAL 6:	Support healthy and equitable communities	Consistent:	The Project includes a mix of uses including housing and neighborhood-serving retail proximate to employment, reducing vehicle miles traveled (VMT), promoting walkability, and contributing to a jobs/housing balance.
GOAL 7:	Adapt to a changing climate and support an integrated regional development pattern and transportation network.	Consistent:	The Project would be an infill development in an underutilized area which will provide housing in close proximity to designated public transit facilities and routes. Specifically, two OmniTrans bus stops are located within 100 feet of the Project site.
GOAL 8:	Leverage new transportation technologies and data-driven solutions that result in more efficient travel.	N/A:	This is not a transportation improvement project and is therefore not applicable. However, implementation of the Project would not conflict with this goal.

SCAG Goals		Compliance	
GOAL 9:	Encourage development of diverse housing types in areas that are supported by multiple transportation options.	Consistent:	The Project involves development of a mix of uses (residential and commercial) that would provide diverse housing options that would be served by OmniTrans bus service on the southwest corner of the Project site, and approximately 60 feet southwest of the Project site.
GOAL 10:	Promote conservation of natural and agricultural lands and restoration of habitats.	Consistent:	The Project proposes a mix of residential and commercial land uses in an urbanized area and would therefore not interfere with conservation of natural or agricultural lands. The Project site is not considered vital habitat land and therefore would not conflict with restoration of habitats.
Source: Southern California Association of Governments, *Connect SoCal (2020 - 2045 Regional Transportation Plan/Sustainable Communities Strategy,* 2020.			

The goals stated in the RTP/SCS were used to determine consistency with the planning efforts previously stated. As shown in **Table 16: Regional Transportation Plan/Sustainable Communities Strategy Consistency**, the Project would be consistent with the stated goals of the RTP/SCS. Therefore, the Project would not result in any significant impacts or interfere with SCAG's ability to achieve the region's post-2020 mobile source GHG reduction targets.

California Air Resource Board Scoping Plan Consistency

Adopted December 15, 2022, CARB's *2022 Scoping Plan for Achieving Carbon Neutrality* (2022 Scoping Plan) sets a path to achieve targets for carbon neutrality and reduce anthropogenic GHG emissions by 85 percent below 1990 levels by 2045 in accordance with AB 1279. To achieve the targets of AB 1279, the 2022 Scoping Plan relies on existing and emerging fossil fuel alternatives and clean technologies, as well as carbon capture and storage. Specifically, the 2022 Scoping Plan focuses on zero-emission transportation; phasing out use of natural gas use for heating homes and buildings; reducing chemical and refrigerants with high GWP; providing communities with sustainable options for walking, biking, and public transit; displacement of fossil-fuel fired electrical generation through use of renewable energy alternatives (e.g., solar arrays and wind turbines); and scaling up new options such as green hydrogen. The 2022 Scoping Plan sets one of the most aggressive approaches to reach carbon neutrality in the world. Unlike the 2017 Scoping Plan, CARB no longer includes a numeric per capita threshold and instead advocates for compliance with a local GHG reduction strategy (i.e., Climate Action Plan) consistent with CEQA Guidelines section 15183.5.

The key elements of the 2022 CARB Scoping Plan focus on transportation. Specifically, the 2022 Scoping Plan aims to rapidly move towards zero-emission (ZE) transportation (i.e., electrifying cars, buses, trains, and trucks), which constitutes California's single largest source of GHGs. The regulations that impact the transportation sector are adopted and enforced by CARB on vehicle manufacturers and are outside the jurisdiction and control of local governments. The 2022 Scoping Plan accelerates development of new regulations as well as amendments to strengthen regulations and programs already in place. Statewide strategies to reduce GHG emissions in the latest 2022 Scoping Plan include:

- Implementing SB 100 (achieve 100 percent clean electricity by 2045);
- Achieving 100 percent zero emission vehicle sales in 2035 through Advanced Clean Cars II; and

- Implementing the Advanced Clean Fleets regulation to deploy zero-emission vehicle (ZEV) buses and trucks.

Additional transportation policies include the Off-Road Zero-Emission Targeted Manufacturer rule, Clean Off-Road Fleet Recognition Program, In-use Off-Road Diesel-Fueled Fleets Regulation, Clean Off-Road Fleet Recognition Program, and Amendments to the In-use Off-Road Diesel-Fueled Fleets Regulation. The 2022 Scoping Plan would continue to implement SB 375. GHGs would be further reduced through the Cap-and-Trade Program carbon pricing and SB 905. SB 905 requires CARB to create the Carbon Capture, Removal, Utilization, and Storage Program to evaluate, demonstrate, and regulate carbon dioxide removal projects and technology.

As indicated above, GHG reductions are also achieved as a result of State of California energy and water efficiency requirements for new residential developments. These efficiency improvements correspond to reductions in secondary GHG emissions. For example, in 2021 approximately 38 percent of the total electricity net generation in California was derived from natural gas combustion. Therefore, energy saving measures, such as Title 24, reduces GHG emissions from the power generation facilities by reducing load demand.

Scoping Plan Appendix D, Local Actions

Included in the 2022 Scoping Plan is a set of Local Actions (2022 Scoping Plan Appendix D) aimed at providing local jurisdictions without a CEQA-qualified CAP with the tools needed to reduce GHGs and assist the state in meeting the ambitious targets set forth in the 2022 Scoping Plan. CARB Scoping Plan Appendix D includes a section on evaluating plan-level and project-level alignment with the State's Climate Goals in CEQA GHG analyses. In this section, CARB identifies several recommendations and strategies that should be considered for new development in order to determine consistency with the 2022 Scoping Plan. Notably, this section is focused on Residential and Mixed-Use Projects.[36] CARB specifically states that Appendix D does not address other land uses (e.g., industrial).[37] However, CARB plans to explore new approaches for other land use types in the future.[38]

CARB Scoping Plan Appendix D lists potential actions that support the State's climate goals. However, the Scoping Plan notes that the applicability and performance of the actions may vary across the regions. The document is organized into two categories (A) examples of plan-level GHG reduction actions that could be implemented by local governments and (B) examples of on-site project design features, mitigation measures, that could be required of individual projects under CEQA, if feasible, when the local jurisdiction is the lead agency.

Appendix D notes that project consistency with the Scoping Plan can be determined through consistency with a qualified CAP, and absent consistency with a qualified CAP the State recommends that residential and mixed-use projects meet the following three priority areas will reduce GHG emissions and should accommodate growth in a manner consistent with State GHG reduction and equity prioritization goals. These project attributes are intended to help local jurisdictions qualitatively identify projects that are

[36] California Air Resources Board, 2022 Scoping Plan for Achieving Carbon Neutrality, Appendix D: Local Actions, Page 21, November 2022.
[37] California Air Resources Board, 2022 Scoping Plan for Achieving Carbon Neutrality, Appendix D: Local Actions, Page 4, November 2022.
[38] California Air Resources Board, 2022 Scoping Plan for Achieving Carbon Neutrality, Appendix D: Local Actions, Page 21, November 2022.

clearly consistent with the Scoping Plan. Appendix D also notes that lead agencies may determine, with adequate additional supporting evidence, that projects that incorporate some, but not all, of the key project attributes are consistent with the State's climate goals.[39]

- Transportation Electrification. Table 3 in the 2022 Scoping Plan, Appendix D, notes that to be clearly consistent with the State's goals, projects should provide EV charging infrastructure that, at minimum, meets the most ambitious voluntary standard in the CALGreen code.
- VMT Reduction. The Scoping Plan notes that to be consistent with the VMT reduction attribute, projects should be located on sites that are surrounded by existing urban uses and reuses or redevelops previously undeveloped or underutilized land; do not result in the loss or conversion of natural and working lands; and consist of transit-supportive densities (minimum of 20 residential dwelling units per acre).
- Building Decarbonization. Building decarbonization involves maximizing energy efficiency and reducing the use of fossil fuel energy.

However, as discussed previously, the City of Ontario has adopted a CEQA-qualified CAP and as shown in **Table 15: Community Climate Action Consistency**, the Project is consistent with the Ontario CCAP. As noted in Scoping Plan Appendix D, consistency with a qualified CAP ensures consistency with the Scoping Plan. Therefore, the Project is consistent with 2022 Scoping Plan and would comply with all applicable regulatory requirements.

Conclusion

The Project would be consistent with the Ontario CCAP, SCAG's RTP/SCS, and the CARB Scoping Plan. The Project would be required to comply with all existing regulations, including applicable measures from the City's General Plan.

As shown in **Table 13: Operational Greenhouse Gas Emissions**, approximately 86 percent of the Project Total GHG emissions are from energy and mobile sources which would be further reduced by the 2022 Scoping Plan goals (including achieve 100 percent clean electricity by 2045 [SB 100], achieving 100 percent zero emission vehicle sales in 2035 [Advanced Clean Cars II], and implementing the Advanced Clean Fleets regulation [ZEV buses and trucks]). Mobile source emissions would further decline in the future due to statewide measures discussed above (including the reduction in fuels' carbon content, CARB's Advanced Clean Car Program, CARB's Mobile Source Strategy, fuel efficiency standards, etc.), as well as cleaner technology and fleet turnover. SCAG's 2020 RTP/SCS is also expected to help California reach its GHG reduction goals, with reductions in per capita transportation emissions of 19 percent by 2035.[40] The Project includes a mix of a residential and commercial land uses that would potentially reduce the need to travel long distances for some residents and reduce associated GHG emissions.

At this time, it is not possible to quantify the emissions savings from future regulatory measures that have not yet been developed; nevertheless, it can be anticipated that Project operations would benefit from applicable measures are enacted to meet State GHG reduction goals. The Project would not impede the

[39] California Air Resources Board, *2022 Scoping Plan for Achieving Carbon Neutrality, Appendix D: Local Actions*, Page 23, November 2022.
[40] California Air Resources Board, *SB 375 Regional Plan Climate Targets*, Retrieved from: https://ww2.arb.ca.gov/our-work/programs/sustainable-communities-program/regional-plan-targets.

State's progress towards carbon neutrality by 2045 under the 2022 Scoping Plan. The Project would be required to comply with applicable current and future regulatory requirements promulgated through the 2022 Scoping Plan.

In addition, the Ontario CCAP establishes a points system that assigns values for each GHG emissions mitigation design element or operational program feature incorporated into a given development project. The CCAP Screening Tables point values correspond to the minimum GHG emissions reduction expected from each feature. Projects with features that yield at least 100 Screening Table points are considered consistent with the reduction quantities anticipated in the City's CCAP. Such projects would be determined to have a less than significant individual and cumulative GHG emissions impact. Achieving 100 points ensures that the Project would not impede California's statewide GHG reduction goals for 2030 and 2050.

In conclusion, the Project does not conflict with the applicable plans that are discussed above and therefore, the Project does not have a significant impact.

Mitigation Measures

None provided in the Approved SEIR.

Conclusion

GHG emission impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to GHG emissions, a less than significant impact was identified in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.9.3 Overall Greenhouse Gas Emissions Impact Conclusion

With regard to CEQA Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to GHG emissions. Therefore, preparation of a SEIR is not warranted.

4.10 HAZARDS AND HAZARDOUS MATERIALS

4.10.1 Summary of TOP 2050 Analysis

The Approved EIR concluded that upon implementation of regulatory requirements and TOP policies and programs, impacts to hazards and hazardous materials would be less than significant.

4.10.2 Analysis of Proposed Project

Threshold (a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? [Approved SEIR Impact 5.9-1]

No New or More Severe Impacts: Implementation of the Project would increase the number of businesses and residents in the City, thereby increasing the amount of hazardous materials being transported, stored, and manufactured, and the number of people exposed to these materials. The Approved SEIR concluded that buildout of TOP 2050 would result in an increase in the frequency of transport, use, and disposal of hazardous materials associated with commercial and industrial growth in the City.[41] The storage, handling, use, and disposal of these materials are regulated by Federal and State requirements. The proposed Project would adhere to these regulations, including the Federal Occupational Safety and Health Act and Hazardous Materials Transportation Act; Title 8 of the California Code of Regulations (CalOSHA), and the State Unified Hazardous Waste and Hazardous Materials Management Regulatory Program. As a result, potential effects stemming from the routine transport and use of hazardous materials during construction would be reduced and would not be substantial. Therefore, impacts are anticipated to be less than significant and would not pose new or additional impacts compared to the Approved SEIR.

Mitigation Measures

None provided in the Approved SEIR.

Conclusion

The routine transport of hazardous materials impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to the routine transport of hazardous materials, a less than significant impact was identified in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? [Approved SEIR Impact 5.9-1]

Threshold (c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substance, or waste within one-quarter mile of an existing or proposed school? [Approved SEIR Impact 5.9-1]

[41] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.9-37. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).

Threshold (d) Be located on a site which is included on a list of hazardous materials compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment [Approved SEIR Impact 5.9-2]

No New or More Severe Impact: A Phase I Environmental Site Assessment (ESA) was prepared for Project in August 2022 by GeoKinetics Geotechnical and Environmental Engineers (GeoKinetics) (refer to **Appendix E**). GeoKinetics prepared their ESA using data collected via a reconnaissance survey of the Project site; an evaluation of historical uses of the Project site and surrounding uses; and the review of available federal, state, and local environmental records.

The ESA concluded that the Project site contained no underground storage sites (USTs) or above-ground storage tanks (ASTs). Asbestos containing materials (ACMs) may be encountered on the Project site during demolition activities due to the age of the structures (some structures like the post office are older than 1978). Lead Based Paint (LBP) may also be encountered on the Project site during demolition of existing structures due to their age. LBPs may be present in some structures such as the post office which were constructed prior to the limitation of lead content paints by the Department of Consumer affairs in 1987.

A dry-cleaning operation was previously operational on the Project site and has since been closed and left vacant. The area which the dry-cleaning operation formerly occupied has undergone several phases of subsurface investigations and remedial actions through the Department of Toxic Substance Control's (DTSC's) Voluntary Cleanup Program (VCP). Tetrachloroethene (PCB) contaminants were discovered in harmful concentrations during soil gas testing, groundwater sampling, and indoor air sampling. Based on the results of the samplings, it was recommended that the western portion of the Project site be designated for commercial redevelopment. Additionally, it was recommended that an additional four semi-annual soil gas confirmation sampling events be performed in 2013 and 2014. PCE concentrations in soil gas were noted to be stable, or decreasing over the four sampling events except at a few locations where the detections were already below the Risk-Based Target Concentration (RBTC) levels. The DTSC issued a No Further Action (NFA) letter on December 15, 2017, for Area B (essentially the area of the Ontario Plaza Building) and established a commercial/industrial land use deed restriction and an unrestricted "no further action" designation for Area A (the remainder of the site) (refer to **Figure 16: Deed Restriction Overlay**). All future Project site development must follow the guidelines in existing the Land Use Covenant, the deed restriction, and the NFA Letter. No other hazardous materials or waste was discovered on the Project site.[42]

Hazardous materials which would be encountered on the Project site have been previously remediated and has been designated as no further action by the DTSC. Furthermore, as shown in **Figure 16: Deed Restriction Overlay**, the Project parking garage would occupy the entire area formerly restricted to commercial and industrial uses, further separating future residential structures from being erected within the area containing the commercial/industrial deed restriction. Furthermore, the Project would be required to comply with federal and state regulations, City ordinances, and TOP 2050 policies guiding construction activities and adequate treatment of hazardous materials such as LBPs and ACMs. Compliance with federal and state regulations would require adequate handling of hazardous substances

[42] GeoKinetics. 2022. Phase I Environmental Site Assessment Ontario Plaza 1000 - 1060 West Fourth Street & 1118 - 1126 North Mountain Avenue Ontario, California. Irvine, CA: GeoKinetics

to reduce potential releases; exposure; and risks of transporting, storing, treating, and disposing of hazardous materials and wastes. Therefore, impacts associated with additional hazardous waste transport, use, and/or disposal that would occur would be less than significant with adherence to the existing regulations.

Mitigation Measures

None provided in the Approved SEIR.

Conclusion

Hazardous materials impacts related to the proposed Project are less than the significant. The Project would not result in a new or more severe impact, a less than significant impact was identified in the Approved SEIR with respect to hazardous materials. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (e) For a project located within an airport land use plan, or where such a plan has not been adopted, within two miles of a public airport or public use airport, would result in a safety hazard or excessive noise for people residing or working in the project area? [Approved SEIR Impact 5.9-3]

No New or More Severe Impacts: The Federal Aviation Administration and Caltrans Division of Aeronautics provide guidance for land use safety near airports. With adherence to these guidelines, high concentrations of people are not exposed to potential airplane accidents along runways or near airports while airplanes are departing and arriving. The Project is within the Airport Influence Area (AIA) of the Ontario International Airport and therefore should be consistent with the adopted ONT ALUCP and should meet standards and recommendations of Part 77 of the FAA, adopted through Ordinance 2758 in the Ontario Municipal Code.[43] A consistency determination analysis for ONT was prepared by the City and submitted to ONT-IAC, and it was found that TOP 2050 is consistent with ALUCP for the Ontario International Airport (ONT-IAC 2022).[44] The Chino Airport is predominantly a recreational airport.[45] Since the airport is not planned for expansion and would remain primarily recreational, and only lower elevation buildings surround it and would continue to surround it upon project implementation, the Chino Airport poses no unique hazards.[46] Additionally, the Project site is outside of any of the ONT ALUCP safety zones.[47] Thus, TOP 2050 ensures compatibility with ONT and Chino Airport. The Proposed project would not result in new or a substantial increase in magnitude of impacts.

[43] Ontario Airport Planning. 2018. Ontario International Airport Land Use Compatibility Plan, Map 2-1: Compatibility Policy Map: Airport Influence Area. Retrieved from: https://www.ont-iac.com/wp-content/uploads/2019/02/ONT-AIA-policy-map-2-1.pdf (Accessed September 2023).

Mitigation Measures

None provided in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact due to proximity to an airport or airport land use plan, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? [Approved SEIR Impact 5.9-4]

No New or More Severe Impacts: As part of TOP 2050, a Vulnerability Analysis was conducted that determined, the threat of flood is Ontario's greatest hazard as large portions of the City are within a flood zone.[48] The City's Roadway Classification map identifies that there are substantial improvements in transportation infrastructure planned to accommodate the increase in population in the City in the event of an emergency. Additionally, the Ontario Fire Department reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance. The Project would include the placement of an EVA lane which allows emergency personnel access to the Project in moments of emergency. Therefore, the Project would not result in new impacts or a substantial increase in the magnitude of impacts.

Mitigation Measures

None proposed in the Approved SEIR.

Conclusion

The Project would not result in a new impact relative to established emergency plans, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires? [Approved SEIR Impact 5.9-5]

No New or More Severe Impacts: The City is outside of the State Responsibility Area (SRA), but the California Department of Fire and Forestry (CAL FIRE) has determined that the City contains no areas subject to very high wildfire risk.[49] However, the City acknowledges that even though fuel loading is light and fire risk comes primarily from urban fires, not wildfires, there is some risk related to wildfires.[50] There are many resources available to address wildland fires should they arise, including the CAL FIRE *2019 Strategic Fire Plan for California*, the California Fire Code, County of San Bernardino Multi-jurisdiction

[48] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.7-41. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).
[49] Ibid.
[50] Ibid.

Hazard Management Plan, the Ontario LHMP, and fire services from the Ontario Fire Department. With adherence to these building practices, development of the Project would not exacerbate risk or result in post-wildfire hazards (landslides, mudflows, and flooding).

Mitigation Measures

None proposed in the Approved SEIR.

Conclusion

Wildfire risk impacts related to the proposed Project are less than the significant, a less than significant impact was evaluated in the Approved SEIR. The Project would not result in a new impact relative to wildfire risk. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.10.3 Overall Hazards and Hazardous Materials Impact Conclusion

With regard to CEQA Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to hazards or hazardous materials. Therefore, preparation of a SEIR is not warranted.

4.11 HYDROLOGY AND WATER QUALITY

4.11.1 Summary of TOP 2050 Analysis

The Approved SEIR concluded that compliance with the MS4 permit includes implementation of Project site design and source control BMPs that reduce the potential for pollutants to enter runoff and treatment control BMPs that remove pollutants from stormwater. Additionally, after compliance with permits impacts would be less than significant.

4.11.2 Analysis of Proposed Project

Threshold (a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality? [Approved SEIR Impact 5.10-1]

No New or More Severe Impacts: Implementation of TOP 2050 was found to not substantially alter the amount of developed land in the City. However, most of Ontario Ranch is agricultural land which is designated for future urban use development by the TOP 2050. Based on the Approved SEIR findings, implementation of National Pollution Discharge Elimination System (NPDES) and Stormwater Pollution Prevention Plan (SWPPP) Best Management Practices (BMPs) would effectively minimize the construction impacts associated with water quality. BMPs included in these permits may include actions such as:

- Project site design standards that maximize permeable areas, use porous pavements, and focus on natural drainage systems;
- Structural source control that minimizes pollution of stormwater by such means as paving trash storage areas and fueling areas with impervious surfaces, and grading such areas to block run-off; and
- Treatment Control measures that Remove pollutants from stormwater by filtration, media absorption, or other means.

Additionally, the Project would be required to control pollutants in discharges of stormwater from postconstruction activities through preparation of a Water Quality Management Plan (WQMP). As discussed in 4.10, Hazards and Hazardous Materials above, hazardous contamination found in the groundwater within the Project area was remediated and found to require no further action according to DTSC.[51] .

During Project operation, the residential and retail uses within the Project site would utilize newly placed sewer systems improved within the site, including a grease interceptors and additional sewer facilities.

The Project would comply with Federal, state, and local regulations regarding the maintenance of water quality standards and therefore impacts would be less than significant.

Mitigation Measures

None identified in the Approved SEIR.

[51] GeoKinetics. 2022. Phase I Environmental Site Assessment Ontario Plaza 1000 – 1060 West Fourth Street & 1118 – 1126 North Mountain Avenue Ontario, California. Irvine, CA: GeoKinetics

Conclusion

Water quality degradation impacts related to the proposed Project are less than the significant. The Project would not result in a new or more severe impact relative to water quality, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin? [Approved SEIR Impact 5.10-2]

No New or More Severe Impacts: Nearly all of the Project site is impermeable surfaces which are unideal for groundwater recharge. Regardless, projects considered for approval under TOP 2050 would have to meet the following requirements for limiting impacts to groundwater recharge:

- BMPs for compliance with NPDES regulations, for instance, preservation of existing vegetation.
- Preparation of project-specific hydrology studies estimating project impacts on drainage, in accordance with procedures in the *San Bernardino County Technical Guidance Document for WQMPs (2013)*.

According to the Approved SEIR the TOP 2050 contains policies that would promote infiltration of runoff and groundwater recharge, that encourage the use of low impact development (LID) strategies to intercept runoff, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.[52] Application of these policies would further lead to less than significant impacts due to groundwater resources. Furthermore, the Chino Groundwater Basin is adjudicated and is considered by DWR to be a very low priority groundwater basin.[53] Therefore, the Project would not deplete or otherwise substantially degrade surface or groundwater quality, nor would it substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basins. Therefore, the proposed Project would not result in a new or a substantial increase in magnitude of impacts that would impede sustainable groundwater management of the basin.

Mitigation Measures

No mitigation measures are required in the Approved SEIR, and impacts would be less than significant.

Conclusion

Groundwater supply impacts related to the proposed Project are less than the significant. The Project would not result in a new impact or more severe relative to groundwater supply, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance

[52] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page. 5.10-22. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (Accessed September 2023).
[53] Ibid, Page. 5.10-23.

that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: [Approved SEIR Impact 5.10-3]

i) Result in a substantial erosion or siltation on- or off-site.

ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite.

iii) Create or contribute to runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff.

iv) Impede or redirect flood flows.

No New or More Severe Impacts: Future development associated with the Project would involve site improvements that require grading, excavation, and soil exposure during construction, with the potential for erosion or siltation to occur. To minimize these impacts and as discussed in the Approved SEIR, the Project would be required to comply with the requirements in the State Water Resources Control Board's (SWRCB's) Construction General Permit (CGP) including the preparation of a notice of intent and SWPPP prior to the start of construction activities. Additionally, to comply with MS4 Permit and San Bernardino County Stormwater Program, the Project would also be mandated to install stormwater treatment BMP's that retain the 2-year, 24-hour rainfall event.

As previously discussed, the Project would be required to attain an NPDES permit and associated SWPPP. These two processes and the associated BMPs would adequately minimize potential off-site water quality impacts. Construction-related BMPs would be identified based on site-specific conditions during preparation of a SWPPP for the Project. Long term operational BMPs would be identified through issuance of an NPDES permit through the RWQCB and would include water quality features to ensure that runoff is treated prior to discharge into the storm drain or regional conveyance facilities. The Project would also include the development of stormwater facilities designed to adequately convey and manage stormwater flows experienced within the Project site.

Additionally, according to the Federal Emergency Management Act (FEMA) National Flood Hazards Map, the Project is located in an area of minimal flood hazard.[54] Additionally, only small portions of the City adjacent to flood control channels, detention basins, and creeks are in the 100-year flood plain. However, as discussed above the proposed Project is located in an area of minimal flood hazard.[55]

The Project would include connections to existing stormwater systems but would not include modifications to stormwater facilities which would impede or redirect stormwater flows. As well, the Project site is currently disturbed with impermeable surfaces over the majority of the site. The development of the Project would not introduce substantial amounts of impermeable surfaces beyond

[54] FEMA's National Flood Hazard Layer. *06071C8608H*. Retrieved at: https://hazards-fema.maps.arcgis.com/apps/webappviewer/index.html?id=8b0adb51996444d4879338b5529aa9cd. (Accessed July 2023)
[55] Ibid.

what exists on the Project site currently. See **Figure 17: Project Utility Layout** for a diagram of utilities proposed for the Project.

As such, the Project would result in no new or more severe impact from erosion or siltation and would not create or contribute runoff water that would exceed the capacity of existing drainage systems. The Project site is not located in an area prone to the previously mentioned natural or manmade disasters. Thus, the Project would not substantially alter the existing drainage pattern of the Project site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would create the above-mentioned disasters. A less than significant impact is anticipated from Project implementation. No new impact or increase in the severity of an identified impact would therefore occur with implementation of the Project.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Drainage pattern impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to drainage patterns, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation. [Approved SEIR Impact 5.10-4]

No New or More Severe Impacts: The Approved SEIR determined that only small portions of Ontario are in the 100-year floodplain, adjacent to flood control channels, detention basins, and creeks. Under TOP 2050, to reduce impacts of potential developments within 100-year flood zones the City will require any new development partially or entirely in 100-year flood zones to provide detailed floodplain mapping for 100- and 200-year storm events as part of the development process. The City will also require that facilities using hazardous materials comply with state and federal law and do not permit facilities using, storing, or otherwise involved with substantial quantities of onsite hazardous materials to be located in the 100-year or 500-year flood zone unless all standards of elevation, floodproofing, and storage have been implemented to the satisfaction of the Building Department. As discussed above the Project site is located in an area of minimal flood hazard. Nevertheless, the Project would comply with all applicable policies of the TOP 2050.

Additionally, there are no large bodies of water that would result in a seiche during seismic activity. The reservoirs/aboveground water tanks within the City are enclosed, thereby minimizing the possibility of a seiche. The Project location is inland and approximately 30 miles from the ocean and is not at risk of flooding from tsunamis. Therefore, impacts associated with release of pollutants due to inundation would be less than significant. No new impact or increase in the severity of an identified impact would therefore occur with implementation of the Project.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Tsunami and flood hazard impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to tsunami and flood hazard, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. [TOP 2050 Impact 5.10-5]

No New or More Severe Impacts: The City's groundwater supplies are from the Chino Groundwater Basin, which is adjudicated and managed by the Chino Basin Watermaster. The Chino Basin is exempt from legislative requirements under the Sustainable Groundwater Management Act (SGMA) because it is an adjudicated basin and is not required to prepare a groundwater sustainability plan. As discussed in the Approved SEIR, projects approved under TOP 2050 would be required to comply with the Santa Ana River Bain Plan and to control pollutants in discharges of stormwater from postconstruction activities under NPDES Permit No. CAS618036 through preparation of a WQMP identifying BMPs for prevention of stormwater pollution during the post-construction phase, including site-design, source-control, and/or treatment of BMPs. Additionally, adherence to the State CGP, implementation of the SWPPP, and adherence to the City's Erosion and Sediment Control Plan requirements, would ensure that surface and groundwater quality are not adversely impacted during construction of the Project. Therefore, the proposed Project would not obstruct or conflict with the RWQCB's Basin Plan or any groundwater management plan, and impacts would be less than significant.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Water quality control plan impacts related to the proposed Project are less than significant. A less than significant impact was evaluated in the Approved SEIR. The Project would not result in a new or more severe impact relative to water quality control plans. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.11.3 Overall Hydrology and Water Quality Impact Conclusion

With regard to CEQA Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to hydrology and water quality. Therefore, preparation of a SEIR is not warranted.

4.12 LAND USE AND PLANNING

4.12.1 Summary of TOP 2050 Analysis

According to the Approved SEIR, implementation of the TOP 2050 would not divide an established community. Additionally, the Approved SEIR concluded that implementation of the TOP 2050 would not conflict with established plans adopted for the purpose of avoiding or mitigating an environmental effect.

4.12.2 Analysis of Proposed Project

Threshold (a) Physically divide an established community? [Approved SEIR Impact 5.11-1]

No New or More Severe Impacts: According to TOP 2050, the Project would be built on land zoned for multi-family mixed use development and is surrounded by a variety of urban land uses. Thus, Project implementation would not physically divide an established community. The Project would be developed consistently with the preferred land uses of the MU-NH land use designation and the MU-8b zoning district. Therefore, there are no new or more severe impacts.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Land use and planning impacts related to the division of an established community related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to land use and planning, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect? [Approved SEIR Impact 5.11-2]

No New or More Severe Impacts: As discussed in the Approved SEIR, TOP 2050 is intended to be a framework for planning and development in the City for the next 30 or more years. Additionally, buildout of TOP 2050 Land Use Plan would provide sufficient dwelling units, population, and employment capacity to exceed SCAG's projections for 2050.

Less than significant impacts related to land use and planning are identified in the Approved SEIR. Specifically, the Approved SEIR concluded that the TOP 2050 Land Use Plan would not introduce incompatible land uses to the City and would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. The Project would remain consistent with the vision and goals of the TOP 2050 by providing additional dwelling units and employment opportunities and would not require a modification of land use designation for the Project site. Additionally, the TOP 2050 encouraged the development of mixed-use developments within the Project site through the implementation of a MU-NH land use

designation. Specifically, the TOP 2050 estimated that future buildout of the MU-NH Mountain and Fourth land use area would allow for the development of 251 dwelling units and 75,008 square feet of nonresidential uses. While the Project would exceed estimated residential buildout by 106 units, the Project's nonresidential uses would be below the buildout estimates by 71,208 sq ft. Additionally, the Project would remain consistent with the development density standards of MU-NH land use areas.[56]

The Project would be developed within the standards of this land use designation and would not propose or necessitate a general plan amendment due to conflicts with the goals or standards of this land use type. Furthermore, the Project would further the City's goal of generating manageable growth that can be accommodated by commercial or amenity uses within the City.

Furthermore, the Project would include the creation of a PUD, as required by the City Development Code, to designate site-specific development standards for the Project site which would act as the presiding standards for this Project and future developments. These standards are able to vary from established standards within the City Development Code but would be required to remain consistent with the TOP 2050. Additionally, **Table 11: Consistency with the TOP**, **Table 15: Community Climate Action Consistency**, and **Table 16: Regional Transportation Plan/Sustainable Communities Strategy Consistency** summarize the Project's consistency with established regional and local land use plans. Therefore, development of the roadway with open space amenities would not create new impacts.

Mitigation Measures

None identified in the Approved SEIR

Conclusion

Land use and planning impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to land use and planning, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.12.3 Overall Land Use Impact Conclusion

With regard to CEQA Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to hydrology and land use and planning. Therefore, preparation of a SEIR is not warranted.

[56] City of Ontario. 2022. City of Ontario Policy Plan Land Use Element. Figure LU-03 Future Buildout Table. Page 19. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/Land%20Use/Figure%20LU-03%20Future%20Buildout%20Table_5.pdf

4.13 MINERAL RESOURCES

4.13.1 Summary of TOP 2050 Analysis

The Approved EIR concluded that buildout associated with TOP 2050 would not impact mineral resources of statewide, regional, or local value. Additionally, the TOP 2050 would allow mineral extraction only in areas both within Mineral Resource Zone-2 (MRZ-2) and within a Mineral Resource Sector. Areas which do not have both classifications would not be available for mineral extraction.

4.13.2 Analysis of Proposed Project

Threshold (a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? [Approved SEIR Impact 5.12-1]

Threshold (b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan? [Approved SEIR Impact 5.12-1]

No New or More Severe Impacts: As described in Section 5.12.2 of the Approved SEIR there are two areas in Ontario that are designated MRZ-2, where significant mineral resources are known or are likely. The remainder of the City is designated MRZ-3, where the significance of mineral deposits is unknown. The Project development in an MRZ-3 area would not result in significant impacts because mineral resources of statewide or local importance are not identified on the California Geological Survey's P-C maps. Additionally, the Project site would fall outside of a Mineral Resource Sector and would not allow for mineral extraction. Therefore, the Project would not result in the loss of availability of a known mineral resource in Ontario and impacts to mineral resources would be less than significant.

Mitigation Measures

None identified in the Approved SEIR

Conclusion

Mineral resource impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to mineral resources, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.13.3 Overall Mineral Resources Impact Conclusion

With regard to CEQA Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to hydrology and land use and planning. Therefore, preparation of a SEIR is not warranted.

4.14 NOISE

4.14.1 Summary of TOP 2050 Analysis

The Approved SEIR concluded that buildout associated with TOP 2050 would contribute to considerable increases in ambient and construction-related noise. Additionally, TOP 2050 concluded that since details of individual development projects in the City are currently unknown, potentially significant impacts may not be reduced to less than significant levels by **MM 12-2** and **MM 12-4**.

4.14.2 Analysis of Proposed Project

Threshold (a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. [Approved SEIR Impact5.13-1 and Impact 5.13-2]

Construction

Construction noise typically occurs intermittently and varies depending on the construction activity's nature or phase (e.g., land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. During construction, exterior noise levels could affect noise-sensitive receptors near the construction site. The nearest sensitive receptors to the Project site construction area are existing residential uses to the north and east, adjacent to the Project property boundary. However, it is noted that construction activities would occur throughout the Project site and would not be concentrated at a single point near noise-sensitive receptors.

Construction activities would include demolition, Project site preparation, grading, building construction, paving, and architectural coating. Such activities would require:

- Industrial saws, excavators, and dozers during demolition;
- Dozers and tractors during Project site preparation;
- Excavators, graders, dozers, and tractors during grading;
- Cranes, forklifts, generators, tractors, and welders during building construction;
- Pavers, rollers, and paving equipment during paving; and
- Air compressors during architectural coating.

Typical noise levels associated with individual construction equipment are listed in **Table 17: Typical Construction Noise Levels**. For safety reasons, heavy duty construction equipment and machinery are assumed to stay a minimum of 25 feet from the boundaries of occupied properties.

Table 17: Typical Construction Noise Levels

Equipment	Typical Noise Level (dBA) at 50 feet from Source	Typical Noise Level (dBA) at 25 feet from Source[1]
Air Compressor	80	86
Backhoe	80	86
Compactor	82	88
Concrete Mixer	85	91
Concrete Pump	82	88
Concrete Vibrator	76	82
Crane, Mobile	83	89
Dozer	85	91
Generator	82	88
Grader	85	91
Impact Wrench	85	91
Jack Hammer	88	94
Loader	80	86
Paver	85	91
Pneumatic Tool	85	91
Pump	77	83
Roller	85	91
Saw	76	82
Scraper	85	91
Shovel	82	88
Truck	84	90
1. Calculated using the inverse square law formula for sound attenuation: $dBA_2 = dBA_1+20Log(d_1/d_2)$ Where: dBA_2 = estimated noise level at receptor; dBA_1 = reference noise level; d_1 = reference distance; d_2 = receptor location distance		
Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, September 2018.		

Although the construction equipment noise levels in **Table 17: Typical Construction Noise Levels** are from the Federal Transit Administration's (FTA's) 2018 *Transit Noise and Vibration Impact Assessment Manual*, the noise levels are based on measured data from an EPA report which uses data from the 1970s,[57] the Federal Highway Administration (FHWA) Roadway Construction Noise Model (RCNM) which uses data from the early 1990s, and other measured data. Since that time, construction equipment has been required to meet more stringent emissions standards and the additional necessary exhaust systems also reduce noise from what is shown in the table.

Section 5-29.09 (Construction Activity Noise Regulations) of the City of Ontario Municipal Code restricts noise sources associated with construction activities between the hours of 7:00 AM to 6:00 PM on weekdays and 9:00 AM to 6:00 PM on Saturday. While the City establishes limits to the hours during which construction activity may take place, it does not identify specific noise level limits for construction noise levels. The City's permitted hours of construction are required in recognition that construction activities undertaken during daytime hours are a typical part of living in an urban environment and do not cause a significant impact.

[57] U.S. Environmental Protection Agency, Noise from Construction Equipment and Operations, Building Equipment and Home Appliances, NTID300.1, December 31, 1971.

Quantitative Construction Noise Assessment

However, this analysis conservatively uses the FTA's threshold of 80 A-weighted decibels (dBA) and 85 dBA (8-hour Equivalent Continuous Sound Pressure Level [L_{eq}]) to evaluate construction noise impacts for residential and commercial uses, respectively.[58] It should be noted that although **Table 17: Typical** Construction Noise Levels shows that some equipment would exceed 80 dBA at 25 feet, the FTA's noise threshold is measured over an eight hour period, meaning that a single piece equipment would need to be stationary and operating continuously for eight hours to exceed the 80 dBA threshold. In addition, standard construction provides 25 dBA of exterior-to-interior noise attenuation with windows closed and 15 dBA with windows open.[59] Therefore, it can be assumed that exterior noise levels of 94 dBA (jackhammer) would equal 69 dBA when measured from the interior with windows closed.

Following FTA's methodology for quantitative construction noise assessments, construction-generated noise levels associated with the Project were calculated using FHWA's RCNM computer program. RCNM enables the prediction of construction noise levels for a variety of construction operations based on a compilation of empirical data and the application of acoustical propagation formulas. When calculating construction noise, all construction equipment is assumed to operate simultaneously at the center of the active construction zone to represent an average distance throughout the day. See Noise Modeling Data in **Appendix G** for more information regarding the construction assumptions used in this analysis.

The noise levels calculated in **Table 18: Project Construction Noise Levels**, show estimated exterior construction noise. Construction noise would increase ambient noise in the Project's vicinity. Generally, noise increases of less than 3 dBA is barely perceptible to people, while a 5-dBA increase is readily noticeable. Therefore, ambient noise level increases greater than 5 dBA would be considered significant. As shown in **Table 18: Project Construction Noise Levels**, construction noise would lead to an increase in ambient noise levels by a maximum of 15.6 dBA. However, the combined noise level would remain below the 80 dBA construction threshold for residential uses. Thus, construction noise would be considered less than significant.

Table 18: Project Construction Noise Levels

Construction Phase	Modeled Exterior Construction Noise Level at Nearest Residence (dBA L_{eq})	Noise Threshold (dBA L_{eq}) [1]	Exceed Threshold?	Ambient Noise Level (dBA L_{eq})	Construction + Ambient Combined Noise Level (dBA L_{eq})	Exceed Threshold?
Demolition	71.5	80	No	57.2	71.7	No [4]
Site Preparation	72.7		No		72.8	No [4]
Grading	72.3		No		72.4	No [4]
Combined Building Construction and Paving [2]	71.8		No		71.9	No [4]
Combined Building Construction and Architectural Coating [3]	71.1		No		71.3	No [4]
1. Federal Transit Administration noise threshold of 80 dBA for residences.						

[58] Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, Table 7-2, Page 179, September 2018.
[59] United States Environmental Protection Agency, *Protective Noise Levels (EPA 550/9-79-100)*, 1979.

Construction Phase	Modeled Exterior Construction Noise Level at Nearest Residence (dBA L_{eq})	Noise Threshold (dBA L_{eq}) [1]	Exceed Threshold?	Ambient Noise Level (dBA L_{eq})	Construction + Ambient Combined Noise Level (dBA L_{eq})	Exceed Threshold?
2. Based on the construction schedule, building construction and paving activities are anticipated to overlap. Therefore, the equipment from these two activities have been combined. 3. Based on the construction schedule, building construction and architectural coating activities are anticipated to overlap. Therefore, the equipment from these two activities have been combined. 4. Combined Noise level remains below the 80 dBA construction noise threshold for residential uses.						
Source: Federal Highway Administration, *Roadway Construction Noise Model,* 2006. Refer to Appendix G for noise modeling results.						

Operations

Project implementation would create new sources of noise in the site vicinity. The mixed-use development's major noise sources including the following:

- Stationary Noise Sources - mechanical equipment (i.e., trash compactors, air conditioners, etc.);
- Parking areas (i.e., car door slamming, car radios, engine start-up, and car pass-by); and
- Off-site traffic noise.

Stationary Noise Sources

The Project site is located near residential properties to the north and east, while properties to the south and west are primarily commercial. The nearest sensitive receptors are located to the north and east, adjacent to the Project's property boundary. Potential stationary noise sources related to long-term operation of the Project site would include mechanical equipment. Mechanical equipment (e.g., heating ventilation and air conditioning [HVAC] equipment) typically generates noise levels of approximately 52 dBA at 50 feet[60]. At the closest sensitive receptor, approximately 160 feet away, mechanical equipment noise levels would attenuate to 41.9 dBA, which is below the City's ambient noise standards of 60 to 65 dBA for residential receptors. The ambient noise level at Sensitive Receptor 1 was measured at 57.2 dBA and would increase by 0.1 dBA with the inclusion of the HVAC equipment. This increase would be below the 3 dBA perceptibility threshold.

Parking Noise

All parking would be provided on the Project site with a six level above grade parking structure. Traffic associated with parking lots is typically not of sufficient volume to exceed community noise standards, which are based on a time-averaged scale such as the Community Noise Equivalent Level (CNEL) scale. The instantaneous maximum sound levels generated by a car door slamming, engine starting up, and car pass-bys range from 53 to 61 dBA.[61] Conversations in parking areas may also be an annoyance to adjacent sensitive receptors. Sound levels of speech typically range from 33 dBA at 50 feet for normal speech to 50 dBA at 50 feet for very loud speech.[62] It should be noted that parking lot noises are instantaneous noise levels compared to noise standards in the hourly L_{eq} metric, which are averaged over the entire duration

[60] Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden, *Noise Navigator Sound Level Database with Over 1700 Measurement Values*, July 6, 2010.
[61] Kariel, H. G., *Noise in Rural Recreational Environments*, Canadian Acoustics 19(5), 3-10, 1991.
[62] Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden. Noise Navigator Sound Level Database with Over 1700 Measurement Values, July 6, 2010.

of a time period. As a result, actual noise levels over time resulting from parking lot activities would be far lower than the reference levels identified above.

For the purpose of providing a conservative, quantitative estimate of the noise levels that would be generated from the vehicles entering and exiting the parking lot, the methodology recommended by FTA for the general assessment of stationary transit noise sources is used. Using the methodology, the Project's peak hourly noise level that would be generated by the on-site parking levels was estimated using the following FTA equation for a parking lot:

$$L_{eq(h)} = SEL_{ref} + 10 \log (NA/1{,}000) - 35.6$$

Where:

$L_{eq(h)}$ = hourly L_{eq} noise level at 50 feet

SEL_{ref} = reference noise level for stationary noise source represented in sound exposure level (SEL) at 50 feet

NA = number of automobiles per hour

35.6 is a constant in the formula, calculated as 10 times the logarithm of the number of seconds in an hour.

Based on the peak hour trip generation rates in the Traffic Study, approximately 76 trips during the AM peak hour and 81 trips during the PM peak hour would be made to the Project site each day. Using the FTA's reference noise level of 92 dBA SEL[63] at 50 feet from the noise source, the Project's highest peak hour vehicle trips would generate noise levels of approximately 45.5 dBA L_{eq} at 50 feet from the parking lot. The nearest residential property is 180 feet north of the parking structure entrance, on the opposite side of the church (currently under construction). Based strictly on distance attenuation, parking lot noise at the nearest receptor would be 34.4 dBA which is below the City's residential and residential noise standards of 65 dBA daytime and 45 dBA nighttime noise standards. The ambient noise level at Sensitive Receptor 2, which is located nearest to a parking structure entrance/exit, was measured at 52.0 dBA and would increase by 0.1 dBA with the inclusion of parking structure noise. This increase would be below the 3 dBA perceptibility threshold.

Off-Site Traffic Noise

Implementation of the Project would generate increased traffic volumes along nearby roadway segments. According to the Traffic Analysis, the Project Buildout would generate a total of 8,820 daily trips which would result in noise increases on Project area roadways. In general, a traffic noise increase of less than 3 dBA is barely perceptible to people, while a 5 dBA increase is readily noticeable. Generally, traffic volumes on Project area roadways would have to approximately double for the resulting traffic noise levels to increase by 3 dBA. Therefore, permanent increases in ambient noise levels of less than 3 dBA are considered to be less than significant.

[63] Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, September 2018.

Traffic noise levels for roadways primarily affected by the Project were calculated using the FHWA's Highway Noise Prediction Model (FHWA-RD-77-108). Traffic noise modeling was conducted for conditions With and Without the Project, based on traffic volumes from the Traffic Analysis. **Table 19: Project Traffic Noise Levels** identifies Project traffic-generated noise levels. Noise levels on Project area roadways would range between 44.3 dBA CNEL and 66.5 dBA CNEL at 100 feet from the centerline, and the Project would result in a maximum increase of 0.2 dBA CNEL along 4th Street. Noise impacts from off-site traffic would be less than significant.

Table 19: Project Traffic Noise Levels

Roadway	Segment	Opening Year		Opening Year Plus Project		Project Change from No Build Conditions	Significant Impact?
		ADT	dBA CNEL[1]	ADT	dBA CNEL[1]		
Mountain Avenue	North of 4th Street	25,605	66.4	26,035	66.5	0.1	No
	South of 4th Street	21,715	65.7	21,845	65.7	0.0	No
4th Street	West of Mountain Avenue	7,320	58.5	7,450	58.6	0.1	No
	Mountain Avenue to Palmetto Avenue	9,106	59.4	9,366	59.6	0.2	No
	East of Palmetto Avenue	8,866	59.3	8,996	59.4	0.1	No
Palmetto Avenue	South of 4th Street	1,004	44.3	1,004	44.3	0.0	No

ADT = average daily traffic; dBA = A-weighted decibels; CNEL = community noise equivalent level

1. Traffic noise levels are at 100 feet from the roadway centerline. The actual sound level at any receptor location is dependent upon such factors as the source-to-receptor distance and the presence of intervening structures, barriers, and topography.

Source: *Traffic Study for the Proposed Watermarke Ontario Project in the City of Ontario*, prepared by Kimley-Horn and Associates, 2023. Refer to Appendix G for traffic noise modeling assumptions and results.

The Approved SEIR includes measures to reduce potential impacts associated with the implementation of TOP 2050. The following measures from the Approved SEIR are applicable to the proposed Project:

Mitigation Measures

The Approved SEIR includes measures to reduce potential impacts associated with the implementation of TOP 2050. The following measures from the Approved SEIR are applicable to the Project:

MM 12-4 Construction activities associated with new development that occurs near sensitive receptors shall be evaluated for potential noise impacts. Construction contractors shall implement the following measures for construction activities conducted in the City of Ontario. Construction plans submitted to the City shall identify these measures on demolition, grading, and construction plans submitted to the City. The City of Ontario Planning and Building Departments shall verify that grading, demolition, and/or construction plans submitted include these notations prior to issuance of demolition, grading, and/or building permits.

- Construction activity is limited to the hours: Between 7:00 AM and 6:00 PM Monday through Friday and 9:00 AM to 6:00 PM Saturdays and Sundays, as prescribed in Municipal Code Section 5-29.09.

- During the entire active construction period, equipment and trucks used for Project construction shall use the best-available noise control techniques (e.g., improved mufflers, equipment re-design, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds) wherever feasible.
- Impact tools (e.g., jackhammers and hoe rams) shall be hydraulically or electronically powered whenever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools.
- Stationary equipment, such as generators and air compressors shall be located as far as feasible from nearby noise-sensitive uses.
- Stockpiling shall be located as far as feasible from nearby noise-sensitive receptors.
- Construction traffic shall be limited, to the extent feasible, to approved haul routes established by the City's Engineering Department.
- At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours, as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report the action to the City.
- Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes.
- During the entire construction period and to the extent feasible, the use of noise-producing signals, including horns, whistles, alarms, and bells, shall be safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level or switch of back-up alarms and replace with human spotters in compliance with all safety requirements and laws.
- Erect temporary noise barriers (at least as high as the exhaust of equipment and breaking line-of-sight between noise sources and sensitive receptors) as necessary and feasible, to maintain construction noise levels at or below the performance standard of 80 dBA L_{eq}. Barriers shall be constructed with a solid material that has a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier and may be lined on the construction side with an acoustical blanket, curtain, or equivalent absorptive material.

In compliance with MM 12-4, the City Planning and Building Departments would verify that Project grading, demolition, and/or construction plans submitted for review include the measures described above to limit noise impacts to the surrounding area, prior to issuance of demolition, grading, and/or building permits.

Conclusion

As demonstrated in **Table 18: Project Construction Noise Levels** and **Table 19: Project Traffic Noise Levels,** implementation of the Project would not result in substantial temporary or permanent increases in ambient noise levels. **Table 18: Project Construction Noise Levels** confirms that construction of the Project would not exceed construction noise thresholds. In addition, **Table 19: Project Traffic Noise Levels** demonstrates that operational noise levels from the Project would not exceed applicable noise standards during the Project's opening year. Noise impacts related to the proposed Project are less than the significant and unavoidable impacts identified in Approved SEIR. No new impacts or a substantial increase in the severity of a previously identified significant impact evaluated in the Approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Generation of excessive groundborne vibration or groundborne noise levels. [Approved SEIR Impact 5.13-3]

Construction Vibration

No New or More Severe Impacts: Construction can generate varying degrees of ground vibration, depending on the construction procedures and equipment. Operation of construction equipment generates vibrations that spread through the ground and diminish with distance from the source. Construction on the Project site would have the potential to result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used and the operations involved.

The FTA has published standard vibration velocities for construction equipment operations. In general, the FTA architectural damage criterion for continuous vibrations (i.e., 0.2 in/sec) appears to be conservative. The types of construction vibration impacts include human annoyance and building damage. Human annoyance occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. Building damage can be cosmetic or structural. Ordinary buildings that are not particularly fragile would not experience any cosmetic damage (e.g., plaster cracks) at distances beyond 30 feet. This distance can vary substantially depending on the soil composition and underground geological layer between vibration source and receiver. In addition, not all buildings respond similarly to vibration generated by construction equipment. For example, for a building that is constructed with reinforced concrete with no plaster, the FTA guidelines show that a vibration level of up to 0.20 in/sec is considered safe and would not result in any construction vibration damage.

Table 20: Typical Construction Equipment Vibration Levels, lists vibration levels at 25 feet for typical construction equipment and at 5 feet, the distance from the Project boundary to the nearest existing structure (Sensitive Receptor 1). In addition, vibration levels at 23 feet, the distance from the nearest construction area to an existing structure is also included, as heavy construction equipment would not be operated at the Project boundary next to sensitive receptors. As indicated in **Table 20: Typical Construction Equipment Vibration Levels**, based on FTA data, vibration velocities from typical heavy

construction equipment operations that would be used during Project construction range from 0.003 to 0.101 in/sec Peak Particle Velocity (PPV) at 23 feet from the source of activity.

Table 20: Typical Construction Equipment Vibration Levels

Equipment	Peak Particle Velocity at 25 Feet (in/sec)	Peak Particle Velocity at 5 Feet (in/sec)[1]	Peak Particle Velocity at 100 Feet (in/sec)[1]
Large Bulldozer	0.089	0.9951	0.101
Caisson Drilling	0.089	0.9951	0.101
Loaded Trucks	0.076	0.8497	0.086
Jackhammer	0.035	0.3913	0.040
Small Bulldozer/Tractors	0.003	0.0335	0.003

1. Calculated using the following formula: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$, where: PPV_{equip} = the peak particle velocity in in/sec of the equipment adjusted for the distance; PPV_{ref} = the reference vibration level in in/sec from Table 7-4 of the Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, 2018; D = the distance from the equipment to the receiver.

Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, 2018.

Table 20: Typical Construction Equipment Vibration Levels shows that at 23 feet, the vibration velocities from construction equipment would exceed 0.101 in/sec PPV which is below the FTA's 0.20 in/sec PPV threshold for building damage. It is also acknowledged that construction activities would occur throughout the Project site and would not be concentrated at the point closest to the nearest structure. Therefore, vibration impacts associated with Project construction would be less than significant.

Operational Vibration

No New or More Severe Impacts: Once operational, the Project would not be a significant source of groundborne vibration. Groundborne vibration surrounding the Project currently result from heavy-duty vehicular travel (e.g., refuse trucks, heavy duty trucks, delivery trucks, and transit buses) on the nearby local roadways. Operations of the proposed Project would include activities associated with residential development that typically would not cause excessive ground-borne vibrations. Due to the rapid drop-off rate of groundborne vibration and the short duration of the associated events, vehicular traffic-induced groundborne vibration is rarely perceptible beyond the roadway right-of-way, and rarely results in vibration levels that cause damage to buildings in the vicinity. According to the FTA Noise and Vibration Manual, trucks rarely create vibration levels that exceed 70 VdB (equivalent to 0.012 in/sec PPV) when they are on roadways. Therefore, automobiles accessing the Project site or traveling along surrounding roadways would not exceed FTA thresholds for building damage. Vibration impacts associated with Project operations would be less than significant in this regard.

Mitigation Measures

The Approved SEIR includes measures to reduce potential impacts associated with the implementation of TOP 2050. The following measures from the Approved SEIR are applicable to the Project:

MM 12-2 Prior to issuance of a building permit, individual projects that involve vibration-intensive construction activities, such as pile drivers, jackhammers, and vibratory rollers near sensitive receptors shall be evaluated for potential vibration impacts. Construction within 135 feet of fragile structures, such as historical resources, 100 feet of non-engineered

timber and masonry buildings (e.g., most residential buildings), or within 75 feet of engineered concrete and masonry (no plaster); or a vibratory roller within 25 feet of any structure, the project applicant shall prepare a noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to these activities. This noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed FTA architectural damage thresholds (e.g., 0.12 in/sec PPV for fragile or historical resources, 0.2 in/sec PPV for non-engineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses such as drilling piles as opposed to pile driving and static rollers as opposed to vibratory rollers shall be used. If necessary, construction vibration monitoring shall be conducted to ensure vibration thresholds are exceeded.

In compliance with **MM 12-2**, an Acoustical Assessment was conducted for the Project, that analyzes vibration impacts associated with Project site construction. See **Appendix G** for additional details. Additionally, the City would review grading, demolition, and/or construction plans prior to the issuance of demolition, grading, and/or building permits.

Conclusion

As demonstrated in **Table 20: Typical Construction Equipment Vibration Levels** and discussed above, implementation of the Project would not result in excessive groundborne vibration levels. Vibration impacts related to the proposed Project are less than the significant and unavoidable impacts identified in the Approved SEIR. No new impacts or a substantial increase in the severity of a previously identified significant impact evaluated in the Approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, if the project would expose people residing or working in the project area to excessive noise levels. [Approved SEIR Impact 5.13-4]

No New or More Severe Impacts: The nearest airport to the Project site is the Ontario International Airport located approximately three miles to the southeast. Although the Project is within the AIA of the Ontario International Airport, the Project is not within two miles of the Ontario Airport, and is also outside the 60-65 CNEL noise contour.[64] Additionally, there are no private airstrips located within the Project vicinity. An acoustical assessment prepared for the Project in August 2023 and determined As such, the Project would remain consistent with **MM 12-1** proposed within the Approved SEIR. Therefore, the Project would not expose people working in the Project area to excessive airport related noise levels and no mitigation is required.

[64] City of Ontario, The Ontario Plan 2050, Safety Element, S-4 Noises Hazards. Figure S-06c Airport Noise Contours, 2020.

Mitigation Measures

The Approved SEIR includes measures to reduce potential impacts associated with the implementation of TOP 2050. The following measures from the Approved SEIR are applicable to the proposed Project.

MM 12-1 Prior to the issuance of building permits for any project that involves a noise-sensitive use within the 65 dBA CNEL contour of the Ontario International Airport, the Project property owner/developers shall retain an acoustical engineer to conduct an acoustic analysis and identify, where appropriate, site design features and/or required building acoustical improvements (e.g., sound transmission class rated windows, doors, and attic baffling), to ensure compliance with the City's Noise Compatibility Criteria and the California State Building Code and California Noise Insulation Standards (Titles 24 and 21 of the California Code of Regulations

Conclusion

The Project site is located outside the Ontario International Airport noise contours and Project impacts are less than the significant unavoidable impacts identified in Approved SEIR. No new impact relative to airport noise or a substantial increase in the severity of a previously identified significant impact evaluated in the Approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.14.3 Overall Noise Impact Conclusion

With regard to CEQA Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to noise. Therefore, preparation of a SEIR is not warranted.

4.15 POPULATION AND HOUSING

4.15.1 Summary of TOP 2050 Analysis

According to the Approved SEIR, implementation of the TOP 2050 SEIR would not result in any significant impacts to population and housing. As such, the Approved SEIR concluded that impacts in this regard would be less than significant, and no mitigation measures were recommended.

4.15.2 Analysis of Proposed Project

Threshold (a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure). [Approved SEIR Impact 5.14-1]

No New or More Severe Impacts: One of the purposes of TOP 2050 is to adequately plan and accommodate future growth. Implementation of TOP 2050 was determined to generate and accommodates population growth through land use designations, goals, and policies that provide a vision and guide growth in the city. Additionally, the Approved SEIR concluded that through implementation of TOP 2050 the City's jobs-housing ratio would be more closely aligned to the Southern California Association of Governments (SCAG) projections. As discussed in the Approved SEIR implementation of TOP 2050 would also promote growth that is consistent with SCAG's Connect SoCal Priority Growth Areas, as the land changes under TOP 2050 would encourage walking and biking, put residents in proximity to resources, and align future growth in the City with planned infrastructure improvements and regional transportation goals.

The Project would be consistent with the proposed densities of MU-NH land use areas, and MU-8b zoning districts. Both the MU-NH and MU-8b allow for a maximum residential density of 75 du/ac and a maximum nonresidential density of 1.0 FAR. As shown in **Table 1: Summarized Development Standards** the Project would allow for the development of residential uses at a scale of 61.5 du/ac and a nonresidential density of 0.02 FAR. The Project densities would be within the scale of development assumed for the TOP 2050 and the Approved SEIR. Therefore, the Project would not induce substantial unplanned population growth in an area and impacts would be less than significant.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Population growth impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to population growth, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere? [Approved SEIR Impact 5.14-2]

No New or More Severe Impacts: Under the TOP 2050 Land Use Plan, land use changes would increase opportunities for housing in the City. The Project would involve the redevelopment of the Project area from commercial and public uses to mixed use residential uses. The Project site does not contain existing residential uses. Therefore, the Project would not displace existing housing in a manner that would necessitate the construction of additional housing elsewhere.

Mitigation Measures

None identified in the Approved SEIR

Conclusion

Displacement of existing housing impacts related to the proposed Project are less than significant. The Project would not result in a new or more severe impact relative to housing, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.15.3 Overall Population and Housing Conclusion

With regard to CEQA Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to noise. Therefore, preparation of a SEIR is not warranted.

4.16 PUBLIC SERVICES

4.16.1 Summary of TOP 2050 Analysis

Buildout associated with TOP 2050 would require and involve the future expansion of City public services as the population would continue to grow. However, these impacts were anticipated to remain less than significant since the City would review each future project on a case-by-case basis for consistency with City policies, including development fees.

4.16.2 Analysis of Proposed Project

Threshold (a) Result in a substantial adverse physical impact associated with the provisions of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which would cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection services, police protection services, school services, parks services, and other public facilities? [Approved SEIR Impact 5.15-1, 5.15-2, 5.15-3, 5.15-4]

No New or More Severe Impacts: The Project would allow the development of 357 residential units at a residential density of 61.5 du/ac and a nonresidential FAR of 0.02. While the proposed residential uses would exceed residential buildout estimates of the Mountain and Fourth area by 106 units, the Project's nonresidential uses would be below the buildout estimates by 71,208 sq ft.[65] Despite this, the allowed density of the MU-NH land use designation implemented in the TOP 2050 and analyzed in the Approved SEIR allows for greater residential development than estimated in the future buildout table. This is due to the buildout table's use of expected growth trends which are not strictly based on a full buildout per the standards of the MU-NH land use designated areas. However, due to the Project's consistency with the Project area's land use standards, growth and service demands associated with development of the Project area would be consistent with what was analyzed in the Approved SEIR. Additionally, the Project's payment of the General City Development Impact Fees, a portion of which is allocated to the fire department(s), would aid in offsetting any potential impacts.

The Project does not include or require construction of any new or physically altered fire protection, police protection, school, or other public facilities. Prior to commencement of construction activities, the Project plans would be reviewed by applicable local agencies to ensure compliance with the City of Ontario Municipal Code, as well as all applicable regulations to ensure adequate site signage, lighting, and other crime safety preventative measures. Additionally, to help minimize impacts to public services the Project developer would be required to pay a Development Impact Fee of $5.026 per sq ft.[66] The nearest Ontario Fire Department (OFD) station is OFD Station 3 located approximately 500 feet southwest of the Project site. The Ontario Police Department (OPD) station is approximately 5.2 miles southeast of the Project site.

[65] City of Ontario. 2022. City of Ontario Polic y Plan Land Use Element. Figure LU-03 Future Buildout Table. Page 19. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/Land%20Use/Figure%20LU-03%20Future%20Buildout%20Table_5.pdf.

[66] City of Ontario. 2023. *Development Impact Fees*. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Building/Development%20Impact%20Fees%20(Effective%2001.01.23).pdf (accessed October 2023).

Construction of the Project would not result in adverse physical impacts associated with the provision of or need for new or physically altered public facilities. The Project does not include the removal of existing public service facilities, including fire and police stations, school facilities, or libraries. A post office structure present on site would be removed as a part of the Project. However, the United States Postal Service would vacate their lease of the structure prior to Project initiation and would relocate elsewhere within the City. The Project would not directly cause the removal of post office uses in the Project site. Additionally, the Project is consistent with the assumed development of the Project area, growth and service demands associated with development of the Project area would be consisted with what is analyzed in the Approved SEIR. Compliance with applicable local regulations would ensure that Project construction would result in a less than significant impact to public services.

The Project would be developed within the development intensity required by the MU-NH land use designation and subsequently analyzed by the Approved SEIR. As such, the Project would be consistent with the City's development growth estimates and public service facility needs. Therefore, the Project would not uniquely necessitate additional public service facilities such as police and fire stations due to its specific implementation. Additionally, since the Project site is already served by the existing fire and police station, and the Project would be constructed pursuant to existing California Fire Code regulations, the Project would not result in the need for new or physically altered police and/or fire department facilities that could cause significant environmental impacts. As discussed in the Approved SEIR the OFD recommends that three additional fire stations would be needed in the Ontario Ranch region of the City. The police services required to cover the new development and population growth in the City would be assessed and acquired appropriately based on the needs of the City. It is possible that buildout of TOP 2050 would require additional facilities to support the OPD. While the construction of the future facilities could result in potential environmental impacts, future environmental review would occur once specific locations have been determined. Without a definitive location for the development of future facilities, the analysis of potential impacts is too speculative.

Additionally, the Project site is within the Chaffey Joint Union High School District (CJUHSD) and Ontario-Montclair School District (OMSD) area. As discussed in the Approved SEIR, the CJUHSD has existing capacity to accommodate additional residential development in the City. While, the OMSD indicated that an increase in residential development would impact OMSD school facilities; further assessment would be needed to ensure accommodations for increased populations. Information provided by OMSD showed that most of its schools can accommodate the District's projections for the next 10 years, some schools would not be able to accommodate projected increase capacity over the next 10 years. Therefore, it is possible that OMSD would need additional facilities by 2050. Despite this, the Project is consistent with the development standards of the Project site and therefore would not introduce conditions which would uniquely generate impacts to school capacity. Although the increased demand on school facilities would have to potential to impact one or more of the school districts that serve the City, payment of impact fees in compliance with SB 50 would further reduce impacts to an acceptable level.

The Approved SEIR concluded that implementation of TOP 2050 would have less that significant impacts on other public facilities, such as libraries. The City has one library facilities within its library system: the Ovitt Family Community Library at 215 East C Street. An additional joint use library facility is also located within the City: the Lewis Family Branch at 3850 East Riverside Drive. The Project would result in an

increase in demand for library services in the City based on an increase in population. Environmental impacts could result from the construction of future facilities; however, future library development would not uniquely be driven by the Project since it would be developed according to the standards analyzed in the Approved SEIR. In addition, future projects would be reviewed by the City on an individual basis and would be required to comply with requirements in effect at the time building permits are issued (i.e., payment of development impact fees).

Therefore, impacts to fire protection, police protection, schools, and other public facilities are anticipated to be less than significant.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Impacts to public services would be less than significant and would be similar to the Approved SEIR. The Project would not result in new or more severe impacts to public services. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would later the Approved SEIR's significance finding.

4.16.3 Overall Public Services Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to public services. Therefore, preparation of a SEIR is not warranted.

4.17 RECREATION

4.17.1 Summary of TOP 2050 Analysis

TOP 2010 generated additional residents, which in turn increased the use of existing park and recreational facilities and could result in environmental impacts from the provision of new and/or expanded recreational facilities. However, TOP 2010 implemented regulatory compliance and impacts were less than significant. TOP 2050 provides land use opportunities for public parks to be developed in line with future development and is in compliance with relevant goals, policies, and programs that align with the demographic trends and recreational needs of the City residents. TOP 2050 would not result in new impacts or a substantial increase in the magnitude of impacts to the use of existing park and recreational facilities compared to TOP 2010 Certified EIR.

4.17.2 Analysis of Proposed Project

Threshold (a) Would increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? [Approved SEIR Impact 5.16-1]

No New or More Severe Impacts: Currently, the City uses the established parkland standard of three acres per 1,000 residents but strives for five acres per 1,000 residents for parks in Ontario Ranch. The City has approximately 481 acres of parkland, based on a population of 179,597 the City currently requires 539 acres of parkland. Buildout of the Project would generate additional residents in the City. However, the Project would include common open space including: three courtyards, one pocket park, intimate seating areas, and a lounge deck for residents of the Project. As the Project would provide recreational resources for its future residents, demand for external recreational facilities would be minimized. Additionally, the Quimby Act is a funding mechanism for parkland acquisition. Under this Act and pursuant to the City's Municipal Code, residential subdivisions must dedicate parkland or pay in-lieu fees to enable the City to acquire a ratio of three acres of parkland per 1,000 residents. The Project does not include the development of parkland to offsite the City's existing parkland deficit. After payment of development impact fees, the Project would not result in new impacts or a substantial increase in the magnitude of impacts to the use of existing park and recreational facilities.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

Recreational facility impacts related to the proposed Project are less than significant and similar to the Approved SEIR. The Project would not result in a new impact relative to recreational facilities. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

Threshold (b) Includes recreational facilities or requires the construction or expansion of recreational facilities which might have an adverse physical effect on the environment? [Approved SEIR Impact 5.16-2]

No New or More Severe Impacts: The proposed Project includes construction of the following open space areas: three courtyards, one pocket park, intimate seating areas, and a lounge deck. Development of the Project, inclusive of these recreational areas are discussed throughout this Addendum SEIR. Consequently, the proposed Project would not result in significant impacts in this regard.

Mitigation Measures

None identified in the Approved SEIR

Conclusion

Recreational facilities impacts related to the proposed Project are less than significant and similar to the Approved SEIR. The Project would not result in a new or more severe impact relative to recreational facilities. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.17.3 Overall Recreation Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to recreation. Therefore, preparation of a SEIR is not warranted.

4.18 TRANSPORTATION

4.18.1 Summary of TOP 2050 Analysis

The TOP 2050 analysis identified that the increase in total vehicle miles traveled (VMT) would create a potentially significant impact. Buildout of TOP 2050 would increase traffic in residential land use throughout the City, mitigation measure 12-1 was proposed to reduce this impact. Potential impacts due to the implementation of the Project relating to plans addressing the City circulation system, increased hazards due to geometric design features, and inadequate emergency vehicle access were found to be less than significant without the need for mitigation.

4.18.2 Analysis of Proposed Project

Threshold (a) Would the Proposed Project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. [Approved SEIR Impact 5.17-1]

No New or More Severe Impacts: The TOP 2050 established classifications for the Project site's surrounding roadways. Mountain Avenue is classified as a six-lane principal arterial roadway, and Fourth Street is classified as a two-lane collector roadway.[67] These roadways allow for a greater volume of vehicles. Additionally, TOP 2050 classifies Mountain Avenue as a Class I multipurpose trail, and Fourth Street as a Class III bike route. Both roadways contain infrastructure which allows for pedestrian traversal along roadways.[68] The Project is consistent with these road classifications and does not propose alterations to the existing surrounding roadways. Furthermore, Project development would not include reductions to roadway capacity or the removal of pedestrian or bicycle infrastructure.

The Project would include a new internal circulation network within the Project area which would include a two-lane gated entry along West Fourth Street to the south of the Project area. A secondary driveway connecting to North Mountain Avenue and would connect to the northern entrance of the central parking structure and continue east across the Project site as an EVA lane terminating at Harvard Place. Vehicular traffic within the Project site would be limited to the central parking structure, its entryways, and external roadways.

The City has presented requirements for vehicle and bicycle parking within the Project site. **Table 21: Project Parking Consistency** summarizes the Project's consistency with the City's standards.

Table 21: Project Parking Consistency

Standard	Requirement	Project Consistency
Residential Parking Ratio	1.2 spaces per bedroom (1.2 spaces per studio unit)	1.4 spaces per bedroom (including studio units)
Minimum Residential Spaces	555 Spaces	643 Spaces
Minimum Retail/Office Parking Ratio	1 space per 250 sf	
Minimum Retail/Office Parking Spaces	16 Spaces	16 Spaces
Minimum Bicycle Parking Ratio	Residential: 1 rack per 30 stalls Retail (short term): 5% of stalls (2 minimum)	
Minimum Residential Bicycle Racks	22 Racks	22 Racks
Minimum Bicycle Racks	2 Racks	2 Racks

[67] City of Ontario. 2021. The Ontario Plan 2050 Draft Supplemental Environmental Impact Report. Figure 5.17-3. Page 5.17-15. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf (Accessed September 2023)
[68] Ibid. Page 5.17-21

As shown in **Table 21: Project Parking Consistency**, the Project would provide parking and bicycle facilities at a rate equal or greater than required by the City.

The Project would include 22 bicycle racks for resident and retail bicycle storage on the basement and second level of the central parking structure. One 12-space bicycle parking rack would be provided on the second story of the central parking structure to accommodate the two retail spaces required for the Project with the remainder located in the basement level. The 22 residential bicycle parking racks would be provided based on a ratio of 1 bicycle rack per 30 parking stalls; each bicycle rack provides parking for 8 to 12 bicycles. California Green Building Standards Code (CALGreen), Title 24, Part 11, Section A4.106.9.2 requires that multifamily buildings provide bicycle spaces at a rate of one space per two dwelling units. This would require approximately 179 bicycle spaces for the 357-unit Project. CALGreen Title 24, Part 11, Section 5.106.4.1.1 requires the placement of bicycle parking nearby nonresidential uses at a rate of 5 percent of provided nonresidential parking spaces, with a minimum of one 2-space bicycle rack. The Project would therefore provide 2 bicycle parking spaces based on the 16 nonresidential parking spaces provided.

Based on a conservative estimate of eight spaces per bicycle rack, the 22 bicycle Project would provide 176 total bicycle spaces. However, eight-space bicycle racks are the lowest capacity bicycle racks proposed for the Project. The majority of Project bicycle racks have a 10-bicycle capacity and would therefore provide for two additional bicycle spaces per rack.

Pedestrian connections would be provided to each building and dwelling unit from the public street within the Project site. The Project would make use of the existing pedestrian network which provides sidewalks along Fourth Street and Mountain Avenue. The Project pedestrian network would include pathways between buildings and dwelling units and the parking structure. Residents would have access to all areas of the Project, including amenity areas, through walking paths and paved sidewalks.

The Project does not propose roadway improvements that would modify pedestrian, mass transit, or bicycle infrastructure outside of the Project site. Roadways would continue to function under their current form. Additionally, internal roadways and infrastructure would be developed consistently with City standards. Therefore, no new or more significant impacts are anticipated.

Mitigation Measures

None applicable to this impact.

Conclusion

The Project would not conflict with traffic plans established within the City. No new impacts or a substantial increase in the severity of the previously identified significant impact evaluated in the approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified that would impact the prior finding under this issue area.

Threshold (b) Would the Proposed Project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b). [Approved SEIR Impact 5.17-2]

No New or More Severe Impacts: Kimley-Horn completed a VMT Screening Memorandum in May 2023 which concluded that the Project would screen out of VMT analysis (refer to **Appendix H**). Per the City's Resolution adopting Vehicle Miles Traveled Thresholds, a project would screen out of VMT if it would meet one of four screening thresholds:

1. Transit Priority Area (TPA) Screening
2. Low VMT Area Screening
3. Low Trip Generating Uses
4. Project Type Screening by Land Use Type

According to the VMT screening memorandum, the Project would qualify for screening under the Low VMT Area criteria. According to the City's Resolution adopting Vehicle Miles Traveled Thresholds, a project located within a low VMT generating area as determined by the City's guidelines and the San Bernardino County Transportation Authority (SBCTA) VMT Screening Tool would be considered to have a less-than-significant transportation impact. Based on the SBCTA VMT Screening Tool results (see **Appendix H**), the Project is located within a low VMT area (<-15% below County Baseline).

Therefore, with respect to CEQA Guidelines section 15064.3 regarding the Project's VMT impact, the Project is screened out from VMT. The Approved SEIR concluded a significant and unavoidable impact regarding VMT due to the projected growth of residential uses within the City. As such, the Project would result in a less than significant transportation impact, and no additional VMT analysis is required. The TOP 2050 would have significant and unavoidable impacts because there would be a significant transportation impact related to VMT, primarily due to population increase from TOP 2050 buildout.

Mitigation Measures

None applicable to the proposed Project.

Threshold (c) Would the Proposed Project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? [Approved SEIR Impact 5.17-3]

Threshold (d) Would the Proposed Project result in inadequate emergency access? [Approved SEIR Impact 5.17-3]

No New or More Severe Impacts: An all-way stop warrant analysis was conducted for the Project at the request of the City, see **Appendix H** for additional information. The analysis was conducted for the existing side-street stop-controlled (SSSC) intersection of Palmetto Avenue and Fourth Street. The warrant analysis was based on the methodologies noted in Section 2B.07 of the California Manual on Uniform Traffic Control Devices (CA MUTCD). The analysis outlines criteria that would be used to add project improvements to be "considered" as part of a roadway improvement engineering. The analysis also identifies Project intersections which would be otherwise hazardous for vehicular traffic and which may need modification or mitigation. The Project did not satisfy any of the three criterion which would create

a consideration for additional roadway improvements. As such, the Project's intersections would not be considered dangerous in a manner which would require additional safety modifications and, therefore, additional roadway improvements would not be required as a component of the Project (refer to **Appendix H**).

A review of emergency access is included as part of the City's Design Review process. According to the City's Local Hazard Mitigation Plan, interstate highways would serve as major emergency response and evacuation routes.[69] OFD also reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance. In addition, to ensure adequacy emergency access the Project's design would include the development of an EVA lane that connects to the secondary entryway, continuing to a controlled gate at Harvard Place.

Mitigation Measures

None applicable to the proposed Project.

Conclusion

The Project would not conflict with traffic plans established within the City. No new impacts or a substantial increase in the severity of the previously identified significant impact evaluated in the approved SEIR would occur. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified that would impact the prior finding under this issue area.

4.18.3 Overall Transportation Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to transportation. Therefore, preparation of a SEIR is not warranted.

[69] City of Ontario. 2018. City of Ontario Local Hazard Mitigation Plan. Pg. 4-102. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Fire/Ready%20Ontario/city_of_ontario_2018_hmp.pdf. (Accessed August 2023).

4.19 TRIBAL CULTURAL RESOURCES

4.19.1 Summary of TOP 2050 Analysis

As part of the TOP 2050 update process, the City requested a local government tribal consultation list from the NAHC on June 9, 2021. The tribal consultation list was requested in accordance with SB 18 and AB 52 requirements. The NAHC responded on June 22, 2021, and provided a list of tribes for the City to contact regarding a potential consultation. The City was also notified by the NAHC that the result of the Sacred Lands File (SLF) check conducted through the Native American Heritage Commission was negative. The City sent initial notification letters to California Native American tribes and tribal contacts on July 2, 2021. None of the tribes contacted as part of the TOP 2050 update requested consultation.

4.19.2 Analysis of Proposed Project

Threshold (a) Cause a substantial adverse change in the significance of a Tribal Cultural Resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California native American tribe that is: [Approved SEIR Impact 5.18-1]

i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or

ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

No New or More Severe Impacts: Assembly Bill (AB) 52, does not apply to this Project as this document is an Addendum to the Approved SEIR and not subject to the provisions of AB 52. Furthermore, record searches and the field survey did not reveal the presence of tribal cultural resources or burial sites within the area.

As part of analysis for the Approved SEIR and in accordance with AB 52 and SB 18, the City sent invitation letters to the Native American contacts provided by the Native American Heritage Commission (NAHC) on July 2, 2021, formally inviting tribes to consult with the City on the general plan update. The Agua Caliente Band of Cahuilla Indians and the Quechan Tribe of the Fort Yuma Reservation both responded that the City is not within the tribe's traditional use area, and they defer to other tribes in the area. The Gabrieleño Band of Mission Indians-Kizh Nation responded stating that the tribal government concurs with the updated plan and in the event of future construction or any ground disturbance, the tribal government would like to consult with the lead agency. The San Manuel Band of Mission Indians responded that TOP 2050 may impact projects in Serrano ancestral territory, and therefore is of interest to the tribe. The tribe requested additional information concerning whether the general plan updates would include any plans for museums, cultural enters or interpretive sites. The tribe saw no conflicts with zoning changes;

however, when specific projects are planned and implemented, the tribe might have comments and/or request formal consultation with the lead agency pursuant to CEQA and PRC 21080.3.1. Additionally, an SLF search conducted for the Approved SEIR resulted in a negative determination.

Evidence collected during the creation of the CRA indicated a lack of tribal cultural resources, thereby minimizing potential for the discovery of previously undocumented cultural resources within the Project area. However, Standard Condition No. 1 from Public Resources Code Section 5097.98 would be implemented to ensure that any tribal cultural resource encountered during Project development would be handled correctly and respectfully. Based on the above, and with the implementation of **MM 5-4, MM TCR-1**, and **MM TCR-2**, a less than significant impact would occur.

Mitigation Measures

Mitigation Measures from TOP 2050 SEIR

TOP 2050 incorporates **MM 5-4** from the Cultural Resources section that was taken directly from the 2010 Certified EIR. Additionally, TOP 2050 incorporates new **MM TCR-1** and **MM TCR-2**. The new mitigation measures would incorporate an archaeological monitoring plan (AMP), and a plan for treatment and disposition of cultural resources. **MM 5-4** and new **MMs TCR-1** and **TCR-2**, would be implemented to reduce impact levels.

MM 5-4 Prior to the issuance of grading permits for a proposed project for which the CEQA document defines cultural resource mitigation for potential tribal resources, the project applicant shall contact the designated tribe(s) to notify them of the grading, excavation, and monitoring program. The applicant shall coordinate with the City and the tribal representative(s) to develop mitigation measures that address the designation, responsibilities, and participation of tribal monitors during grading, excavation, and ground-disturbing activities; scheduling; terms of compensation; and treatment and final disposition of a cultural resources, sacred sites, and human remains discovered on the site. The City shall be the final arbiter of the conditions for project's within the City's jurisdiction.

In compliance with **MM 5-4**, tribal consultation was conducted for the Approved SEIR. As discussed above AB 52 does not apply to this Project as this document is an Addendum to the Approved SEIR and not subject to the provisions of AB 52.

MM TCR-1 Tribal Cultural Resources Monitoring. The project archaeologist, in consultation with interested tribes, the developer, and the City of Ontario, shall develop an archaeological monitoring plan (AMP) to address the details, timing, and responsibility of archaeological and cultural activities that will occur on the project site. Details in the AMP shall include:

- Project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) and development scheduling;
- The development of a rotating or simultaneous schedule in coordination with the developer and the project archeologist for designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing

activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all project archaeologists (if the tribes cannot come to an agreement on the rotating or simultaneous schedule of tribal monitoring, the Native American Heritage Commission shall designate the schedule for the onsite Native American Tribal Monitor for the proposed project);

- The protocols and stipulations that the developer, City, Tribes, and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.

  At least 30 days prior to application for a grading permit and before any brush clearance, grading, excavation, and/or ground disturbing activities on the site, the developer shall retain a tribal cultural monitor to monitor all ground disturbing activities in an effort to identify any unknown archaeological resources.

  Pursuant to the AMP, a tribal monitor from the consulting tribe shall be present during the initial grading activities. If tribal resources are found during grubbing activities, the tribal monitoring shall be present during site grading activities.

In compliance with **MM TCR-1**, the Project site developer would develop an AMP and retain a tribal cultural monitor at least 30 days prior to application for a grading permit or grubbing activities.

MM TCR-2 Treatment and Disposition of Cultural Resources. In the event that Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., for the proposed project, the following procedures will be carried out for treatment and disposition of the discoveries:

- Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process;
- Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and nonhuman remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Ontario with evidence of same:
- Accommodate the process for on-site reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloguing, basic analysis, other analyses as recommended by the project archaeologist and approved by consulting tribes, and basic recordation have been completed; all documentation should be at a level of standard professional practice to allow the writing of a report of professional quality;

- A curation agreement with an appropriate qualified repository in San Bernardino County that meets federal standards per 36 CFR Part 79, and therefore the resource would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility in San Bernardino County, to be accompanied by payment of the fees necessary for permanent curation;
- For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, materials shall be curated at the San Bernardino County Museum by default;
- At the completion of grading, excavation, and ground-disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pregrade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the City, County Museum, and consulting tribes.

In compliance with **MM TCR-2**, in the event that Native American cultural resources are discovered during ground-disturbing activities as part of the Project site development, the Project site developer would comply with the requirements described above.

Conclusion

The Project would not result in a new or more severe impact to tribal cultural resources. A less than significant impact with mitigation was identified in the Approved SEIR with respect to tribal cultural resources. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would alter the Approved SEIR's significance finding.

4.20 UTILITIES AND SERVICE SYSTEMS

4.20.1 Summary of TOP 2050 Analysis

The Approved SEIR determined that implementation of TOP 2050 would not lead to an inadequate capacity for wastewater treatment, solid waste capture, or water supply. Despite the need for expanded utility infrastructure, the impacts were determined to be less than significant since the future infrastructure projects would require City review and approval prior to their development. Additionally, fair share costs would be leveraged to aid in the expansion or renovation of utility facilities.

4.20.2 Analysis of Proposed Project

Threshold (a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects? [Approved SEIR Impact 5.19-1; 5.19-2; 5.19-3; 5.19-4]

No New or More Severe Impacts: The TOP 2050 includes the establishment of a revised land use map which shows the scale of development for parcels throughout the City. The Project would be developed at an intensity consistent with what was assumed for MU-NH land use categories within the associated Project parcels. Additionally, as discussed in the Approved SEIR TOP 2050 has policies in place to require improvements to sewer infrastructure as part of new development and redevelopment projects and has processes in place to ensure that any sewer improvement projects are implemented prior to or during new development. In regards to wastewater treatment, the City is served by two Inland Empire Utilities Agency (IEUA) facilities (RP-1 and RP-5). The current combined capacity of these two facilities is 60.3 mgd and would increase to 66.5 mgd once the expansion project that is currently under construction at RP-5 is completed. The two facilities would have capacity to handle the additional flow rate from buildout of TOP 2050.

The Project would include the placement of new water, wastewater, stormwater, energy, and telecommunications facilities within the Project site and form connections to existing facilities within the public Right-of-Way (ROW) (See **Figure 17: Project Utility Layout**). These improvements would include conveyance facilities for water, wastewater, and stormwater, as well as wiring and line connections for electricity, natural gas, and telecommunications. The majority of these improvements would occur within the Project site. ROW improvements would amount to service connections and would have minimal effect on exterior infrastructure (See **Figure 17: Project Utility Layout**). Each utility would be buried at varying depths, based on City standard. Effects stemming from utility improvements have been accounted for in impact discussion throughout Sections 4.2 through 4.21 of this Addendum EIR. Additionally, the Project has undergone design review by the City, including utility plan review under Project number PDEV22-042. While the Project does propose new utility infrastructure within the public ROW, the Project does not propose the expansion of existing utility infrastructure beyond the Project site or the public ROW. Therefore, no new or more severe impact from a previously identified significant impact evaluated in the Approved SEIR would occur.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact as it pertains to placement of utilities and service systems, a less than significant impact was evaluated in the Approved SEIR. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would impact the prior finding of no significant impact.

Threshold (b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years? [Approved SEIR Impact 5.19-2]

No New or More Severe Impacts: The Approved SEIR determined that the City would have sufficient water supplies throughout the buildout of the TOP 2050. This determination was based on a water demand factor of 50 gallon/person/day (gpd) for all residential uses, and a required reduction 20 percent reduction in water use for nonresidential uses. However, as the Project would be developed prior to 2030, the 55 gpd requirement would be used.[70]

The California Department of Finance (DOF) estimated the City's average household size in 2023 to be 3.33 persons per household.[71] Conservatively assuming that each unit within the Project would be occupied by an entire household and generate water demand at a rate of 55 gpd, this would lead to a residential water demand of approximately 65,385 gpd, or approximately 74-acre feet of water per year (AFY). For the 3,800 sq ft of Project retail uses, an estimated 11 employees would generate a water demand of 605 gpd, or 0.7 AFY.[72] Total Project water demand would therefore be approximately 75 AFY. This would account for 0.1 percent of both the City's conservative 60,000 AFY estimate, and the Urban Water Management Plan (UWMP) 73,688 AFY estimate.[73] Water demands generated by the Project would therefore be negligible and would not create a substantial effect to the City's water supplies. Additionally, the Project would utilize recycled water for irrigation and landscaped areas, tying into existing recycled water facilities below Fourth Street.

Therefore, no new or more severe impact from a previously identified significant impact evaluated in the Approved SEIR would occur.

[73] City of Ontario. 2021. *The Ontario Plan 2050 Draft Supplemental Environmental Impact Report*. Page 5.19-30. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf (Accessed September 2023).

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact as it pertains to water supply and demand. Impacts related to the Project would be similar to the Approved SEIR and would be less than significant. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would impact the prior finding of no significant impact.

Threshold (c) Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments? [Approved SEIR Impact 5.19-1]

No New or More Severe Impacts: The Approved SEIR concluded that the City would have sufficient wastewater treatment infrastructure and capacity through implementation of TOP 2050. The City is in the Inland Empire Utilities Agency (IEUA) service area for wastewater treatment. Subsequently, the City utilizes the IEUA wastewater generation factor of 270 gpd per Equivalent Dwelling Unit (EDU).[74] The Project, being a multifamily residential use, per IEUA, would generate wastewater using a scale of 0.7 EDU per housing unit.[75] The Project's 357 units would therefore generate 67,473 gpd or 0.06 million gallons per day (mgd) of wastewater.

IEUA operates four WWTPs that provide recycled water to the western part of San Bernardino County. Two IEUA wastewater treatment plants (WWTPs) are utilized by the City. Regional Water Recycling Plant #1 (RP-1) and Regional Water Recycling Plant #5 (RP-5) currently process and treat the City's generated wastewater with a combined treatment capacity of 60.3 mgd. An expansion to RP-5 is anticipated to increase the wastewater treatment capacity in 2025.[76] **Table 22: Wastewater Treatment Capacity** summarizes the existing and planned WWTP capacity within the City as well as the Project's effects.

Table 22: Wastewater Treatment Capacity

Structure	Current Capacity (mgd)	2025 Expanded Capacity (mgd)
RP-1	44	44
RP-5	16.3	22.5
Total Capacity	60.3	66.5
Current Flow Rate	33	33
Remaining Capacity	27.3	33.5
Project Generation	0.06	0.06
Remaining Capacity	27.2	33.4

Source:
City of Ontario. 2021. The Ontario Plan 2050 Draft Supplemental Environmental Impact Report. Page 5.19-30. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf (Accessed September 2023)

[74] Ibid Page 5.19-11
[75] Inland Empire Utilities Agency. 2023. Explanation of Fees. Retrieved from: https://www.ieua.org/view-fees-rates/ (Accessed September 2023)
[76] Ibid. Page 5.19-10

Furthermore, the Project plans to use recycled water treated by the two RPs during irrigation and nonpotable uses. As shown in **Table 22: Wastewater Treatment Capacity** the Project would have a negligible effect on the City's ability to process wastewater. Therefore, no new or more severe impact from a previously identified significant impact evaluated in the Approved SEIR would occur.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact as it pertains to wastewater generation. Impacts related to the Project would be similar to the Approved SEIR and would be less than significant. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would impact the prior finding of no significant impact.

Threshold (d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals? [Approved SEIR Impact 5.19-3]

Threshold (e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste? [Approved SEIR Impact 5.19-3]

No New or More Severe Impacts: The Approved SEIR determined that the TOP 2050 would not result in significant impacts relative to solid waste. Implementation of the Project would be expected to generate additional waste during the temporary, short-term construction phase, as well as the long-term operational phase. However, as discussed in the Approved SEIR the combined excess capacity of the Badlands Sanitary Landfill and the El Sobrante Landfill is 7,046 tons/day. These landfills would easily accommodate the additional waste from buildout of TOP 2050, and both landfills have closure dates beyond 2050.

The City provides its own solid waste collection service via the City's Integrated Waste Department. Solid waste service for the City is collected and sent to the Badlands Sanitary Landfill located southeast of the City of El Sobrante Landfill located southeast of the City. Per the California Department of Resources Recycling and Recovery (CalRecycle), the Badlands Sanitary Landfill has a maximum throughput of 5,000 tons per day. This landfill has a maximum permitted capacity of approximately 82.3 million cubic yards, and the landfill has a remaining capacity of approximately 7.8 million cubic yards. The landfill has an expected operational life through 2058.[77] According to CalRecycle, the El Sobrante Landfill has a maximum throughput of 16,054 tons per day. This landfill has a maximum permitted capacity of approximately 209.9 million cubic yards, and the landfill has a remaining capacity of approximately 144 million cubic yards. The landfill has an expected operational life through 2051.[78]

[77] CalRecycle. 2021. SWIS Facility/Site Activity Details Badlands Sanitary Landfill (33-AA-0006) Retrieved from: https://www2.calrecycle.ca.gov/SolidWaste/SiteActivity/Details/2245?siteID=2367 (Accessed September 2023).
[78] CalRecycle. 2021. *SWIS Facility/Site Activity Details El Sobrante Landfill (33-AA-0217)* Retrieved from: https://www2.calrecycle.ca.gov/SolidWaste/SiteActivity/Details/2280?siteID=2402 (Accessed September 2023).

According to the Approved SEIR, solid waste is generated at a rate of 9.1 pounds per person per day (lbpd), and 13.5 lbpd per employee. Utilizing the DOF 3.33-person average household size as well as the estimated 11-employee retail uses would conclude a daily solid waste generation of approximately 11,900 pounds per day (lbd), or 5.95 tons per day. This would constitute approximately 0.04 percent of the El Sobrante Landfill daily throughput.

Additionally, the Project, as with all other development in the City, would be required to adhere to City ordinances with respect to waste reduction and recycling. As a result, no impacts related to State and local statutes governing solid waste are anticipated and no mitigation is required. Consistent with the Approved SEIR, the Project would have a less than significant impact.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in new or more severe impact as it pertains to solid waste. Impacts related to the Project would be similar to the Approved SEIR and would be less than significant. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would impact the prior finding of no significant impact.

4.20.3 Overall Utilities and Service Systems Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to utilities. Therefore, preparation of a SEIR is not warranted.

4.21 WILDFIRE

4.21.1 Summary of TOP 2050 Analysis

The Approved SEIR found that the TOP adequately addressed and accounted for emergency actions and protections in the case of wildfire risk. Additionally, the City was determined to be outside of wildfire hazard areas, especially those pertaining to woodland fires.

4.21.2 Analysis of Proposed Project

Threshold (a) Substantially impair an adopted emergency response plan or emergency evacuation plan? [Approved SEIR Impact 5.20-1]

Threshold (b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire? [Approved SEIR Impact 5.20-2]

Threshold (c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment? [Approved SEIR Impact 5.20-2]

Threshold (d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes? [Approved SEIR Impact 5.20-2]

No New or More Severe Impacts: The Approved SEIR assessed that the City was at increased risk of wildfire hazards due to its location within Southern California and that although the City's fire risk comes primarily from urban fires, not wildfires, there is some risk related to wildfires. However, the development of modern fire-resistant materials and tools have greatly reduced these risks. As well, the City's continued compliance with State Fire Codes further reduce the risks of wildfire. Additionally, a review of emergency access is included as part of the City's Design Review process. According to the City's Local Hazard Mitigation Plan (LHMP), interstate highways would serve as major emergency response and evacuation routes.

According to CAL FIRE's Fire and Resources Assessment Program (FRAP), the Project site is not located within or adjacent to land designated as a very high fire hazard severity zone (VHFHSZ).[79] Furthermore, the Project site is located in a flat/leveled area which does not include wild habitat and is not located near hillsides. The Project site is surrounded by a residential development to the north and east, as well as commercial development to the south and west. As previously discussed, the Project site is not exposed to flooding, landslides, runoff conditions. Finally, the Approved SEIR assessed that there are many resources available to address wildland fires should they arise – CAL Fire's 2019 Strategic Fire Plan for California, the CFC, County of San Bernardino Multi-Jurisdictional Hazard Mitigation Plan, the City LHMP,

[79] CAL FIRE FRAP (2021). *Fire Hazard Severity Zone Viewer*. Retrieved from: https://osfm.fire.ca.gov/divisions/community-wildfire-preparedness-and-mitigation/wildfire-preparedness/fire-hazard-severity-zones/ (Accessed September 2023).

and fire services from OFD. Therefore, with adherence to these building practices, a less than significant impact is expected to occur.

Mitigation Measures

None identified in the Approved SEIR.

Conclusion

The Project would not result in a new or more severe impact as it pertains to wildfire. Impacts related to the Project would be similar to the Approved SEIR and would be less than significant. Additionally, no new information of substantial importance that was not known and could not have been known at the time the Approved SEIR was certified is available that would impact the prior finding of no significant impact.

4.21.3 Overall Wildfire Impact Conclusion

With regard to CEQA Statute Section 21166 and CEQA Guidelines Section 15162(a), the changes proposed by the Project would not result in any new impacts, or increase the severity of the previously identified impacts, with respect to wildfire hazards. Therefore, preparation of a SEIR is not warranted.

5.0 DETERMINATION OF APPROPRIATE CEQA DOCUMENTATION

The following discussion lists the appropriate subsections of Sections 15162 and 15164 of the State CEQA Guidelines and provides justification for the City to determine that the Addendum is the appropriate CEQA document for the Project, based on the environmental analysis provided above.

This section also includes a discussion of the revisions to the State CEQA Guidelines that have occurred since certification of the Approved SEIR, including the most recently adopted 2018 revisions. In 2018, the OPR transmitted its proposal for the comprehensive updates to the CEQA Guidelines to the California Natural Resources Agency. Included were proposed updates related to analyzing transportation impacts pursuant to SB 743, proposed updates to the analysis of GHG emissions, and revised Section 15126.2(a) in response to the California Supreme Court's decision in *California Building Industry Association v. Bay Area Air Quality Management District* (2015) 62 Cal.4th 369. The updated Guidelines became effective on December 28, 2018.

CEQA Guidelines Section 15162 – Subsequent EIRs and Negative Declarations

(a) When an EIR has been certified or a negative declaration adopted for a project, no subsequent EIR shall be prepared for that Project unless the lead agency determines, on the basis of substantial evidence in light of the whole record, one or more of the following:

(1) Substantial changes are proposed in the Project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

The City proposes to implement the Project within the context of the Approved SEIR, as described in this Addendum. As discussed in the Environmental Impact Analysis section of this Addendum, no new or more severe significant environmental effects beyond what was evaluated in the Approved SEIR would occur.

(2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

As documented herein, no circumstances associated with the location, type, setting, or operations of the Project have substantively changed beyond what was evaluated in the Approved SEIR; and none of the Project elements would result in new or more severe significant environmental effects than previously identified. No major revisions to the Approved SEIR are required.

(3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:

(A) The project will have one or more significant environmental effects not discussed in the previous EIR or negative declaration;

No new significant environmental effects beyond those addressed in the Approved SEIR were identified.

> *(B) Significant effects previously examined will be substantially more severe than shown in the previous EIR;*

Significant Project-related effects previously examined would not be more severe than were disclosed in the Approved SEIR as a result of the Project. Impacts associated with all environmental resource areas would be the same as or less than disclosed in the adopted Approved SEIR. Implementation of the Project within the context of the Approved SEIR would not substantially increase the severity of previously identified impacts.

> *(C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or*

No mitigation measures or alternatives were found infeasible in the certified Approved SEIR.

> *(D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.*

No other mitigation measures or feasible alternatives have been identified that would substantially reduce significant impacts.

(b) If changes to a project or its circumstances occur or new information becomes available after adoption of a negative declaration, the lead agency shall prepare a subsequent EIR if required under subsection (a). Otherwise, the lead agency shall determine whether to prepare a subsequent negative declaration, an addendum, or no further documentation.

Subsequent to certification of the Approved SEIR in 2007, additional technical analyses were performed for the Project and are the subject of this Addendum. Based on the analyses in this document, the Project would not result in any new significant environmental effects nor would it increase the severity of significant effects previously identified in the Approved SEIR. None of the conditions listed under subsection (a) would occur that would require preparation of a subsequent EIR.

(c) Once a project has been approved, the lead agency's role in project approval is completed, unless further discretionary approval on that project is required. Information appearing after an approval does not require reopening of that approval. If after the project is approved, any of the conditions described in subsection (a) occurs, a subsequent EIR or negative declaration shall only be prepared by the public agency which grants the next discretionary approval for the project, if any. In this situation, no other Responsible Agency shall grant an approval for the project until the subsequent EIR has been certified or subsequent negative declaration adopted.

None of the conditions listed in subsection (a) would occur as a result of the Project. No SEIR is required.

CEQA Guidelines Section 15164 – Addendum to an EIR or Negative Declaration

(a) The lead agency or responsible agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary, but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred.

As described above, none of the conditions described in the CEQA Guidelines Section 15162 calling for the preparation of a SEIR have occurred.

(b) An addendum to an adopted negative declaration may be prepared if only minor technical changes or additions are necessary or none of the conditions described in Section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred.

None of the conditions described in Section 15162 calling for preparation of a subsequent EIR would occur as a result of the Project. Therefore, an addendum to the certified Approved SEIR is the appropriate CEQA document for the Project.

(c) An addendum need not be circulated for public review but can be included in or attached to the Approved EIR or adopted negative declaration.

This Addendum will be attached to the Approved SEIR and maintained in the administrative record files at the City.

(d) The decision-making body shall consider the addendum with the Approved EIR or adopted negative declaration prior to making a decision on the project.

The City will consider this Addendum with the Approved EIR prior to making a decision on the Project.

(e) A brief explanation of the decision not to prepare a subsequent EIR pursuant to Section 15162 should be included in an addendum to an EIR, the lead agency's required findings on the Project, or elsewhere in the record. The explanation must be supported by substantial evidence.

This document provides substantial evidence for City records to support the preparation of this Addendum for the Project.

6.0 CONCLUSION

The analysis presented in this document substantiates that the Approved SEIR for TOP 2050 is sufficient to satisfy CEQA requirements for the approval of the proposed PUD and development application. That is, implementation and operation of the proposed Project described herein would not result in any new or substantially more severe environmental impacts than were previously considered and addressed in the Approved SEIR. Further, the Project would implement all applicable mitigation measures presented in the Approved SEIR. As such, potential environmental impacts of the Project are considered to be adequately and appropriately addressed by analysis presented in the Approved SEIR. The Project does not require any major revision of the Certified SEIR, nor would the Project result in conditions that would require preparation of a Subsequent or Supplemental EIR as described in Sections 15162 and 15163 of the CEQA Guidelines.

ORDINANCE NO._____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PUD22-006, THE WATERMARKE ONTARIO PLANNED UNIT DEVELOPMENT, ESTABLISHING DEVELOPMENT STANDARDS AND DESIGN GUIDELINES FOR A 5.81-ACRE PROJECT SITE LOCATED AT THE NORTHEAST CORNER OF MOUNTAIN AVENUE AND FOURTH STREET, AND MAKING FINDINGS IN SUPPORT THEREOF— APNS: 1008-513-16, 1008-522-01, 1008-522-02, AND 1008-522-03.

WHEREAS, JAT LAND DEVELOPMENT LLC (hereinafter referred to as "Applicant") has filed an Application for the approval of the Watermarke Ontario Planned Unit Development (“PUD”), File No. PUD22-006, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 5.81 acres of land located at the northeast corner of Mountain Avenue and Fourth Street, within the Mixed Use – Neighborhood Hub 8b – Mountain and Fourth (MU-NH 8b) zoning district, and is presently improved with commercial development and post office; and

WHEREAS, the properties to the north of the Project site are within the MU-8b (Mountain/Fourth Mixed Use) and Low-Density Residential (LDR-5) zoning districts and are developed with a church (currently under construction) and existing single-family land uses, the property to the south is within the Neighborhood Commercial (CN) zoning district and is developed with commercial land uses, the properties to the east are within the Low-Density Residential (LDR-5) zoning district and is developed with single-family land uses, and the property to the west is within the Neighborhood Commercial (CN) zoning district and is developed with commercial land uses; and

WHEREAS, the Project was submitted in conjunction with a Development Plan (File No. PDEV22-042) which proposes the construction of a mixed-use building containing residential and commercial floor area, for a total of 357 apartment units and 3,800 square feet of commercial space, at a density of 61.4 dwelling units per acre and a commercial Floor Area Ratio (FAR) of 0.015; and

WHEREAS, the PUD outlines the Project’s (a) objectives, including its consistency with The Ontario Plan; (b) land use plan, including zoning, phasing and build-out, and permitted land uses; (c) development regulations, including intensity and density, building envelope, vehicle access and parking facilities, parking supply and design, residential open space and common amenities, service facilities, signs, landscape and hardscape, fences and walls, public right-of-way improvements, infrastructure, and overall development standards; (d) design criteria, including those for building orientation, access and parking facilities, service facilities, pedestrian linkages, architectural character, massing and scale, articulation and fenestration, architectural details, storefronts, materials and colors, roofs and rooftop equipment, non-residential outdoor dining areas, residential outdoor space and common recreation amenities, and landscape/hardscape

elements; and (e) administration, including items not addressed in the PUD, requirements for Development Plans and other applications, and administrative exceptions; and

WHEREAS, Project approval is contingent on Planning Commission approval of the related Development Plan application and City Council approval of the Watermarke Ontario PUD; and

WHEREAS, The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) was certified on August 16, 2022, (hereinafter referred to as "Certified SEIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the Certified SEIR, an Addendum to the Certified SEIR (hereinafter referred to as "SEIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the environmental impacts of this project were thoroughly analyzed in the SEIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified SEIR, and that the Certified SEIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an SEIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the authority to review and act on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan

(hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on January 23, 2024, the Planning Commission voted to continue the Project to the February 27, 2024, hearing date; and

WHEREAS, as the first action on the Project, on February 27, 2024, the Planning Commission voted to issue Resolution No. PC24-003 recommending the City Council adopt the SEIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on February 27, 2024, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, voting to issue Resolution No. PC24-004 recommending the City Council approve the Application and concluded said hearing on that date; and

WHEREAS, on March 19, 2024, the City Council of the City of Ontario conducted a hearing to consider the Addendum and the Project, and concluded said hearing on that date; and

WHEREAS, as the first action on the Project, on March 19, 2024, the City Council approved a resolution adopting an Addendum to a previous Certified SEIR prepared pursuant to CEQA, the State CEQA Guidelines and the City of Ontario Local CEQA Guidelines, which indicated that all potential environmental impacts from the Project were less than significant or could be mitigated to a level of significance; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending body for the Project, the City Council has reviewed and considered the information contained in the Addendum, the initial study, and the administrative record for the Project, including all written and oral evidence provided during the comment period. Based upon the facts and information contained in the Addendum, the initial study, and the administrative record, including all written and oral evidence presented, the City Council finds as follows:

(1) The environmental impacts of the Project were reviewed in conjunction with an Addendum to The Ontario Plan 2050 Supplemental Environmental

Impact Report (State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022, in conjunction with File No. PGPA20-002; and

(2) The SEIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The SEIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the City Council; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the SEIR Addendum, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Certified SEIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified SEIR that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified SEIR was prepared, that will require major revisions to the Certified SEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified SEIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified SEIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified SEIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified SEIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the City Council finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 4: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Sections 1 through 4, above, the City Council hereby concludes as follows:

(1) ***The proposed PUD, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The Project is consistent with the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan in that the mixed-use standards and guidelines specified in the PUD align with The Ontario Plan. The Watermarke Ontario Planned Unit Development ("PUD") Objectives section titled "Consistency with The Ontario Plan", describes how the PUD complies with the Policy Plan goals, policies, and plans.

(2) ***The proposed PUD, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The City Council has required certain safeguards through conditions of approval, which have been established to ensure that: [i] the purposes of the Planned Unit Development are maintained; [ii] the project will not endanger the public health, safety or general welfare; [iii] the project will not result in any significant environmental impacts; [iv] the project will be in harmony with the area in which it is located; and [v] the project will be in full conformity with the Vision, City Council Priorities and Policy Plan components of The Ontario Plan.

(3) ***In the case of an application affecting specific property(ies), the proposed PUD, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The adjacent neighborhoods consist of existing single-family dwellings and commercial development. The Watermarke Ontario Planned Unit Development was prepared to ensure that on-site development is sensitive to and complementary of the surrounding development, and the surrounding development is compatible with the proposed residential and commercial mixed-use development. Therefore, the Project does not affect the harmonious relationship with adjacent properties and land uses.

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** In preparing the PUD, a thorough review and analysis of the proposed Project and the subject site's physical suitability for the Project was completed, including analysis of the Project size and shape, intensity of development, building height and setbacks, site access, site landscaping and drainage, fences and walls, vehicle and pedestrian circulation, availability of mass transit, necessary street dedication and easements, public right-of-way improvements, availability of utilities and other infrastructure needs, off-street parking, building orientation and

streetscapes, architectural character, building materials and character, and site signage. Based upon this review and analysis, the subject site has been deemed physically suitable, including but not limited to parcel size, shape, access, and availability of utilities for the proposed PUD and proposed development.

(5) ***The proposed PUD is superior to that which could be obtained through the application of the Development Code or a specific plan.*** The PUD will establish minimum building setbacks, parking and open space requirements, private storage provisions, a planting palette, allowable land uses preferable to support the proposed development and the surrounding community, and more. These standards will facilitate the development of up to 357 dwelling units and 3,800 square feet of commercial space and accompanying improvements. The proposed PUD will allow for subsequent development that is superior to that which could be obtained through the application of the Development Code by itself, by means of facilitating the development of high-density apartments, restaurants, retail shops, and other commercial services that will serve to achieve the City's goals of economic revitalization of an underutilized commercial center. Lastly, the PUD will further serve to implement the vision of the Mixed Use – Neighborhood Hub 8b – Mountain and Fourth (MU-NH 8b) zoning district, and the Mixed Use - Neighborhood Activity Hub: 20.0 to 75.0 du/ac; 1.0 FAR office/retail (MU-NH) land use district of the Policy Plan by allowing for this vibrant and well-designed mixed-use development.

SECTION 6: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 5, above, the City Council hereby APPROVES the herein described Watermarke Ontario Planned Unit Development, attached hereto as "Attachment B", subject to each and every condition set forth in the Department reports attached hereto and incorporated herein by this reference.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9: ***Severability.*** If any section, sentence, clause or phrase of this Ordinance or the application thereof to any entity, person or circumstance is held for any reason to be invalid or unconstitutional, such invalidity or unconstitutionality shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this Ordinance are

severable. The People of the City of Ontario hereby declare that they would have adopted this Ordinance and each section, sentence, clause or phrase thereof, irrespective of the fact that any one or more section, subsections, sentences, clauses or phrases be declared invalid or unconstitutional.

SECTION 10: ***Effective Date.*** This Ordinance shall become effective 30 days following its adoption.

SECTION 11: ***Publication and Posting.*** The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within 15 days following the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

PASSED, APPROVED, AND ADOPTED this _____ day of _____ 2024.

APPROVED AS TO FORM:

_____
BEST BEST & KRIEGER LLP
CITY ATTORNEY

STATE OF CALIFORNIA)
COUNTY OF SAN BERNARDINO)
CITY OF ONTARIO)

I, SHEILA MAUTZ, City Clerk of the City of Ontario, DO HEREBY CERTIFY that foregoing Ordinance No. _____ was duly introduced at a regular meeting of the City Council of the City of Ontario held _____ and adopted at the regular meeting held _____, 2024 by the following roll call vote, to wit:

AYES: COUNCIL MEMBERS:

NOES: COUNCIL MEMBERS:

ABSENT: COUNCIL MEMBERS:

_____
SHEILA MAUTZ, CITY CLERK

(SEAL)

I hereby certify that the foregoing is the original of Ordinance No. _____ duly passed and adopted by the Ontario City Council at their regular meeting held _____ and that Summaries of the Ordinance were published on _____ and _____, in the Inland Valley Daily Bulletin newspaper.

_____
SHEILA MAUTZ, CITY CLERK

INTRODUCTION

This document is intended to function as a set of planning and design principles, development regulations and performance standards to guide and govern the development of a 5.81-acre land area located on the northeast corner of Mountain Avenue and Fourth Street.

The project site is located within The Ontario Plan (TOP) Mixed Use – Neighborhood Activity Hubs (MU- NH), which requires the establishment of a Planned Unit Development (PUD) prior to development. This PUD fulfills the requirements of Mountain/Fourth Avenue Mixed Use (MU-8b) zoning district, as set forth in Ontario Development Code Section 4.01.030 (Planned Unit Developments (PUD) and Amendments). The Watermarke Ontario Planned Unit Development (PUD) will establish development standards that apply to the affected property. Unless otherwise defined herein, definitions and interpretations contained in the Development Code shall apply. City staff and private developers will rely on this PUD to determine whether precise plans for development ("Development Plans") will adequately meet the City's land use and design objectives.

LOCATION

The Project is located in the City of Ontario in the County of San Bernardino. The PUD area occupies 5.81 acres of the northeast corner of Mountain Avenue and Fourth Street and includes four parcels (APNs 1008-513-16, 1008-522-01, 1008-522-02, and 1008-522-03). Regional access to the Project area would be facilitated through Interstate 10 (I-10) approximately 0.6 miles north of the site, and State Route 83 (SR- 83) approximately 0.9 miles east of the site.

OBJECTIVES

Consistency with the Ontario Plan

The Ontario Plan (TOP) is the primary planning document for the City and is intended to guide City growth for the next 20 years. The Ontario Plan includes six components:

1. The **Vision** component summarizes the City's major goals for the foreseeable future as well as the preferred character to be reinforced throughout the future growth.
2. The **Governance Manual** summarizes the City's guidelines regarding decision-making authorities and actions for City leadership in order to reinforce the City's intended character.
3. The **Policy Plan** acts as the City's General Plan and includes the City's goals and policies meant to guide growth through the general plan planning period.
4. The **City Council Priorities** outlines the Council's goals for a given year.
5. The **Implementation** component summarizes the methods with which the City will execute goals and policies included in the general plan.
6. The **Tracking and Feedback** component, once updated, will catalogue the City's progress in implementing the goals and policies of the Policy Plan and Vision component.

The City's Policy Plan's goals and policies are intended to guide the City's continued growth. These goals extend to the Project's proposed residential and commercial uses and the Project area's Mixed Use – Neighborhood Activity Hub (MU-NH) land use designation. The MU-NH land use designations are intended to allow for the development of low-rise mixtures of retail and residential uses which may serve the surrounding residents.

This PUD is designed to achieve the purpose of this land use designation and comply with applicable goals and policies such as the following:

2·0·5·0 THE ONTARIO PLAN

Land Use Element

Goal LU-1: A community has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

- **Policy LU-1.1: Strategic Growth.** We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.
- **PUD Consistency.** Mountain Avenue is classified as an arterial road as well as a Class I multipurpose trail, these classifications lend themselves to high volumes of pedestrian and vehicular traffic. Additionally, mass transit bus stops are located at the southwest and northeast corners of the Mountain Avenue and Fourth Street intersection. The PUD would enable the development of multifamily residential uses adjacent to higher capacity roadways as well as available mass transit stops.
- **Policy LU-1.6: Complete Community.** We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.
- **PUD Consistency.** The PUD would allow for the development of residential and retail uses within the PUD site. The requirements presented in the PUD encourage the development of neighborhood scale commercial opportunities which would serve residents within the PUD as well as surrounding areas.

Goal LU-2: Compatibility between a wide range of uses and resultant urban patterns and forms.

- **Policy LU-2.1: Land Use Decisions.** We minimize adverse impacts on adjacent properties when considering land use and zoning requests.
- **PUD Consistency.** The PUD area's MU-8b zoning designation requires that a PUD be implemented for to establish specific development standards, land use regulations and design guidelines. The permitted uses within PUD have been established to provide residential and commercial uses to serve internal residents and surrounding residential area.

Goal LU-3: Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the Vision.

- **Policy LU-3.2: Design Incentives.** We offer design incentives to help projects achieve the Vision.
- **PUD Consistency.** MU-8b zones require the creation of a PUD to establish specific development standards for a given area. Standards within a PUD may vary from the established development standards of the City's development code to achieve the City's vision more adequately or efficiently. This PUD includes design standards which strive to maintain the City's vision for stable, dynamic growth while maintaining overall quality throughout all components of the development.

Goal LU-4: Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.

- **Policy LU-4.4: Shared Infrastructure.** We encourage and facilitate the use of shared infrastructure (including shared or managed parking) in urban, mixed use, and transit-oriented Place Types.
- **PUD Consistency.** The PUD area encourages the integration of residential and nonresidential uses through mixed use development. Development standards within this PUD, therefore, encourage shared infrastructure such as parking and utility facilities. The Project includes a single central parking garage which contains all parking spaces for both the residential and retail uses in the PUD area. Additionally, the Project would provide for shared garbage collection between residential and retail uses.

Housing Element

Goal H-1: Stable neighborhoods of quality housing, ample community services and public facilities, well- maintained infrastructure, and public safety that foster a positive sense of identity.

- **Policy H-1.2: Neighborhood Conditions.** We direct efforts to improve the long-term sustainability of neighborhoods through comprehensive planning, provision of neighborhood amenities, rehabilitation and maintenance of housing, and community building efforts.
- **PUD Consistency.** The PUD describes standards which can be used to develop a mixed-use residential community with attached retail uses. These standards include open space requirements which include the creation of recreational amenities. While the PUD includes designs for a specific project, this document allows for the development of other developments if the proposed Project is removed or redeveloped. The standards within this PUD would ensure that high-quality mixed-use developments can continue to be developed within the PUD area.
- **Policy H-1.3: Community Amenities.** We shall provide adequate public services, infrastructure, open space, parking and traffic management, pedestrian, bicycle, and equestrian routes and public safety for neighborhoods consistent with City master plans and neighborhood plans.
- **PUD Consistency.** The PUD includes parameters which require the development of private and community open space areas and recreational uses. The PUD also encourages the creation of a shared parking structure to serve both residents and retail customers and employees. The PUD also presents parking standards for passenger vehicles and bicycles that meet or exceed the City's current standards. Development standards specifically focused on site security and emergency access are included in this PUD.

Goal H-2: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

- **Policy H-2.5: Housing Design.** We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.
- **PUD Consistency.** The PUD includes development standards which allow for a variety of multi-family residential units near community scale retail uses. Standards presented in this PUD are designed to enable development which remains consistent with the character of the City while maintaining a modern, visually appealing aesthetic.

Community Economics Element

Goal CE-1: A complete community that provides for all incomes and stages of life.

- **Policy CE-1.6: Diversity of Housing.** We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.
- **PUD Consistency.** The PUD would provide for the development of a multi-family mixed use development in an area of the City which currently contains single family residential uses and commercial uses. This would increase the variety of housing in the area and promote neighborhood retail uses near residents as well as mass transit bus stops and higher capacity arterial roadways.

Goal CE-2: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.

- **Policy CE-2.1: Development Projects.** We require new development and redevelopment to create unique, high-quality places that add value to the community.
- **PUD Consistency.** The PUD will seek to ensure a mix of residential and retail uses that will provide a variety of goods and services for both the internal residents and the surrounding area. The PUD provides standards which require the development of distinctive, visually appealing structures.

Safety Element

Goal S-3: Reduced risk of death, injury, property damage and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.

- **Policy S-3.8: Fire Prevention through Environmental Design.** We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open spaces, and buildings.
- **PUD Consistency.** The PUD would incorporate fire prevention infrastructure such as fire extinguishers and smoke alarms. Additionally, the Project would provide additional fire hydrants and fire access points for fire abatement.

Goal S-7: Residential neighborhoods, commercial areas, and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, and community involvement in public safety.

- **Policy S-7.4: Crime Prevention through Environmental Design (CPTED).** We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces, and buildings.
- **PUD Consistency.** The PUD requires the use of security lighting as well as the placement of a gated perimeter between existing developments bordering the Project area. Additionally, the PUD restricts access to residential neighborhoods from all entities except emergency personnel.

Community Design Element

Goal CD-1: A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.

- **Policy CD-1.2: Place Types.** We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.
- **PUD Consistency.** The PUD presents development standards which require the creation of well designed, community centric mixed-use developments. The PUD establishes standards within the PUD area which would establish quality architectural and visual consistency.

Goal CD-2: A high level of design quality resulting in neighborhoods, commercial areas, public spaces, parks, and streetscapes that are attractive, safe, functional, human- scale, and distinct.

- **Policy CD-2.1: Quality Building Design and Architecture.** We encourage all development projects to convey visual interest and character through:
  1. Building volume, massing, and height to provide context-appropriate scale and proportion;
  2. A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and
  3. Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.
- **PUD Consistency.** The PUD will seek to accommodate the City's residential growth and enhance its economic growth by creating residential and retail opportunities within a mixed-use zone. The PUD area will be distinctive through the requirement of well-designed project(s) through standards focused on:
  - Appropriate scale and massing
  - Architectural style and design that are complementary and appropriate to for its setting.
  - The use of high-quality materials that will create visual interest, high quality, durable and appropriate for the architectural style.
  - Appropriate site planning to ensure building orientation visibility from the street, adequate number of driveways and sidewalks, building setbacks, parking lot orientation, adequate refuse storage areas and well-designed street frontages.
- **Policy CD-2.2: Neighborhood Design.** We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as:
  1. A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services;
  2. Varied parcel sizes and lot configurations to accommodate a diversity of housing types;
  3. Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access;
  4. Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and
  5. Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.
- **PUD Consistency.** The PUD allows for the development of mixed-use residential structures at a human scale through the use of pedestrian walkways and minimal internal roadways. The PUD also requires the orientation of buildings to form along the public roadway. The PUD also includes standards which require appropriate site planning to ensure building orientation visibility from the street, an adequate number of driveways and sidewalks, building setbacks, parking lot orientation, adequate refuse storage areas and well-designed street frontages.
- **Policy CD-2.4: Urban, Mixed Use, and Transit-oriented Areas.** We establish Place Types to require mixed use, urban, and transit-oriented areas to be designed and developed as pedestrian oriented areas that are integrated with adjacent neighborhoods and promote a vibrant, comfortable, and functional environment, as defined for each Place Type.
- **PUD Consistency.** The permitted uses within PUD have been established to provide residential and retail uses to serve the City's neighborhood activity hub and surrounding residential area. The PUD will ensure a mix of residential and retail uses that can be easily accessed by internal residents as well as surrounding residents.
- **Policy CD-2.8: Safe Design.** We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.
- **PUD Consistency.** The PUD provides for secure development through the placement of walls and fences between the PUD area, public roadways, and adjacent residential communities. Additionally, the PUD encourages the placement of pedestrian walkways in highly visible areas as well as the use of shielded exterior lighting fixtures. PUD standards allow for the visibility of access points from public vantage points while using secure barriers to prevent unauthorized entry.
- **Policy CD-2.9: Landscape Design.** We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.
- **PUD Consistency.** The PUD requires the creation of a Landscape Plan which would be consistent with City regulations and would provide for the usage of native and drought-resistant foliage.

- **Policy CD-2.10: Parking Areas.** We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include:
  1. Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field.
  2. Structured parking: facade articulation, screening, appropriate lighting, and landscaping.
  3. Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.
- **PUD Consistency.** The PUD would require parking areas to be shielded from public view through the placement of parking away from public roadways and behind buildings. PUD standards require adequate lighting for all common areas, including parking areas, and the landscaping of all areas which do not have improvements. The Project proposes a central parking structure inset within the PUD area.
- **Policy CD-2.11: Entry Statements.** We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.
- **PUD Consistency.** The PUD would require the development of private open space amenities for residents of the PUD area as well as a clearly noted and unique frontage along Fourth Street.

Goal CD-3: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.

- **Policy CD-3.1: Unique Identity.** We promote development that heightens the unique character and identity of each Place Type by requiring compatible land uses and land planning, site design, and building design that promotes an active public realm.
- **PUD Consistency.** The PUD would encourage a sense of place by implementing design standards which provide for consistent building orientation and architectural guidelines. Additionally, the PUD provides for the creation of pedestrian accessways that allow for human scale development.
- **Policy CD-3.4: Context-Aware and Appropriate Design.** We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.
- **PUD Consistency.** The PUD establishes standards which would encourage a sense of place within the PUD area through the use of consistent landscaping and architectural design. Buffer areas are required between the PUD area and surrounding residential uses as well as walls which further limit visibility between internal and external residents.
- **Policy CD-3.5: Active Frontages.** We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).
- **PUD Consistency.** The PUD requires the enhancement of building frontages along Fourth Street frontage through the use of visually interesting architectural features and materials as well as landscaping and pedestrian accessways. Specifically, retail uses are required to present visually appealing storefronts which complement the surrounding architecture and create a distinct entryway.

City Council Priorities

- Invest in the Growth and Evolution of the City's Economy
- Focus Resource in Ontario's Commercial and residential Neighborhoods
- Maintain the Current High Level of Public Safety

Watermarke Ontario Objectives

This PUD establishes the architectural and development standards which will be applied to the Project. Implementation of these standards will ensure a consistent quality in design throughout the planned community.

The objectives of the PUD are to:

- Create a pedestrian-scale walkable community within the City,
- Provide additional retail uses in close proximity to residential uses,
- Expand retail opportunities within the City,
- Provide a variety of high-quality residential units nearby commercial uses,
- Provide for flexible design and development standards to allow for the development of more urban walkable mixed-use development,
- Promote the redevelopment of an underutilized site and provide additional housing opportunities,
- Facilitate high-density residential development within the City for families and individuals, and
- Provide housing at different price points to accommodate multiple income levels.

LAND USE PLAN

Land Use Designation

The Project is located on parcels within the City which have been categorized with a MU-NH land use designation. This land use designation allows the Project to develop multifamily residential units as well as multiple retail and neighborhood commercial uses. The Project area is zoned with a MU-8B zoning designation.

Permitted Uses

Permitted and conditionally permitted uses shall be allowed as identified in the City of Ontario Development Code, Chapter 5.0, Table 5.02-1: Land Use Matrix.

DEVELOPMENT STANDARDS

This section sets forth the standards to govern the placement, height, and bulk of permitted buildings and structures; to establish locational criteria for vehicular access to site, parking and loading requirements, landscape, sign standards; and identify historic preservation features to be incorporated and/or considered for development plans. Unless otherwise stated herein, all development within the Project area shall meet the applicable standards and requirements of the City's Development Code for MU-8b developments.

The purpose of these standards is to encourage a high-quality residential/mixed-use development. These standards establish flexible guidelines to encourage such development, ensure that it is of a minimum standard of appearance, and compatible with the neighborhoods.

Table 1: Applicable Development Standards on the next page summarizes the City' development standards present within the entire Watermarke Ontario Project area as well as the surrounding uses. These development standards are based on those found in the Ontario Development Code. However, in the event of discrepancies between the development standards presented in this document and those in the Ontario Development Code, this document will act as the primary regulatory document.

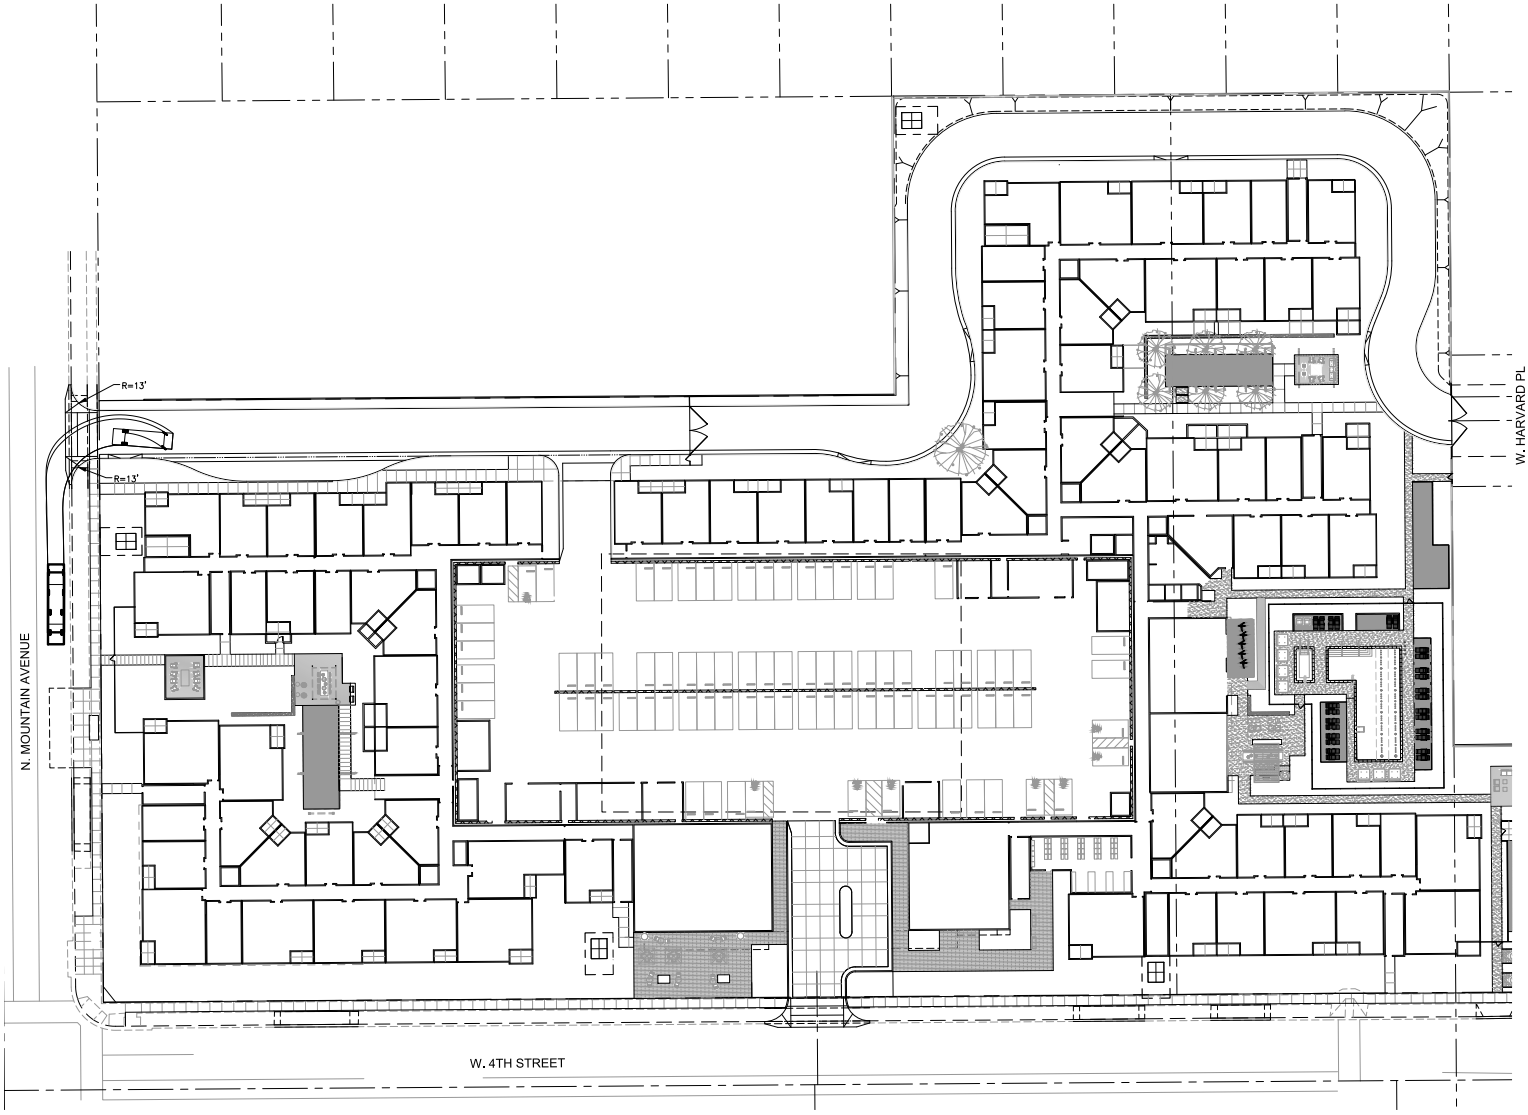

Table 1: Applicable Development Standards

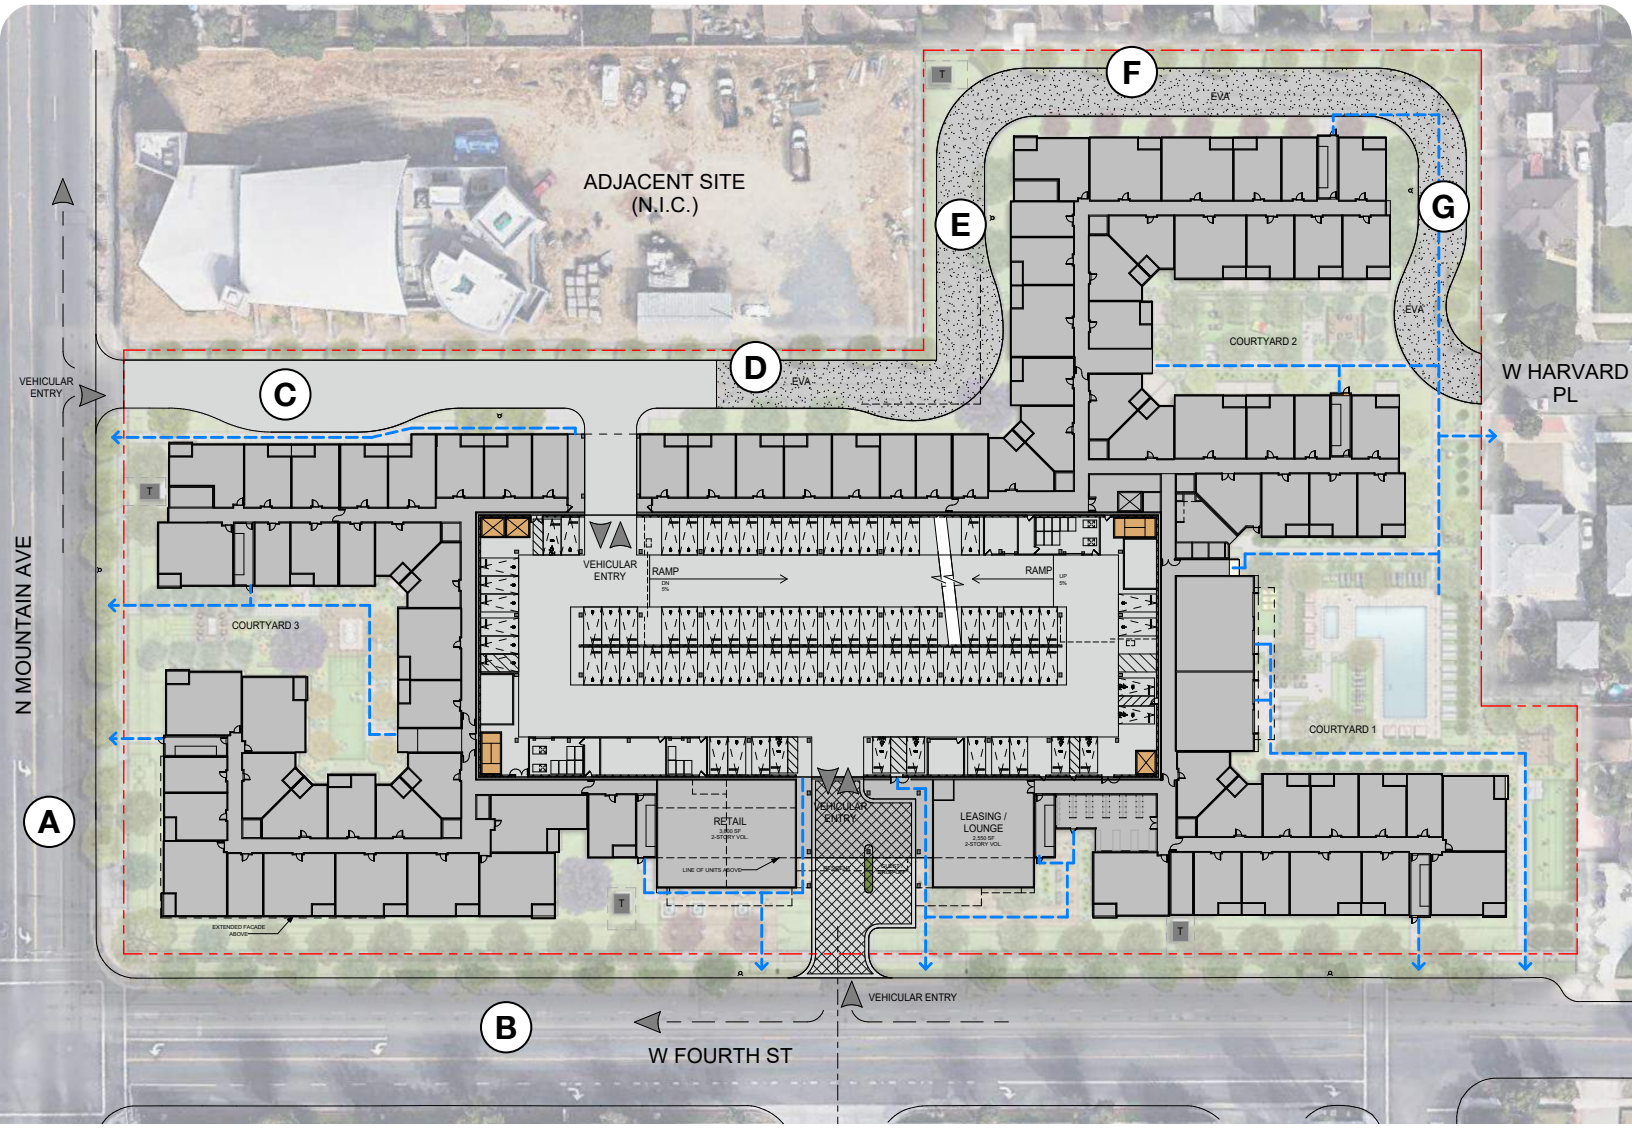
Development Standard	Requirement	Consistency Discussion
Residential Density	20 – 75 du/ac	Development Strategy
Maximum Retail/Office (Nonresidential floor area)	1.0 FAR	Development Strategy
Max Building Height	5 Stories	Design Standards
Setbacks	None Specified	Design Guidelines
Min Multiple-Family Residential Parking Ratio.	1.2 spaces per bedroom 1.2 spaces per unit for studio units	Circulation
Min Retail Trade Parking Ratio	1 space per 250 sf	Circulation
Min Bicycle Parking Ratio	Residential 1 rack per 30 stalls Retail (short term) 5% of stalls (2 minimum)	Circulation
Min Landscaping	The entirety of the project site (excluding areas devoted to building area, paving, and/or outdoor loading and storage areas that are screened from public view)	Landscape Standards



du = dwelling unit
ac = acre
FAR = Floor Area Ratio
sf = square feet

CIRCULATION

Circulation improvements within the PUD area should include adequate vehicular and pedestrian accessways throughout the PUD area. Improvements within the PUD area shall include points of access to Fourth Street and Mountain Avenue. Proposed improvements to roadways and pedestrian accessways shall be approved by the City Engineer.

The Project provides circulation improvements within the PUD area, including a primary and secondary driveway along Fourth Street and Mountain Avenue, respectively. The primary driveway consists of a two-lane gated entry along Fourth Street which leads to the southern entrance of the central parking structure. A secondary driveway connects to Mountain Avenue in the northwestern portion of the Project site and continues east toward the eastern boundary of the Project site. The secondary driveway includes a connection to the northern entrance of the central parking structure. Once past the northern entrance of the central parking structure, the secondary driveway continues east, transitioning into an Emergency Vehicle Access (EVA) lane which terminates at the eastern boundary of the Project site.

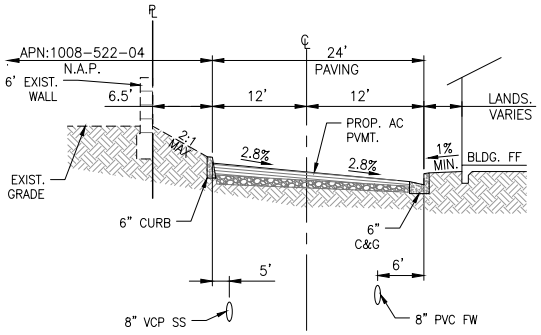
Internal circulation improvements also include a series of ramps within the central parking structure to allow vehicular access to each of the six parking levels. The ramps will allow for a bidirectional flow of traffic. The first and sixth level of the central parking structure will include a turnaround space for vehicles to change direction to either continue upwards or downwards on the ramp.

Accessible route from public right of way to building entrance

Building vehicular entry/exit

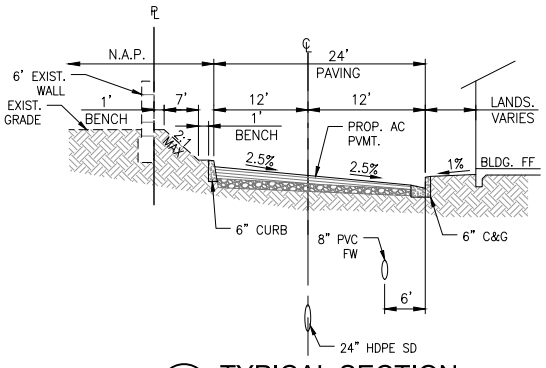
Pedestrian entry/exit

ROADWAY INFRASTRUCTURE



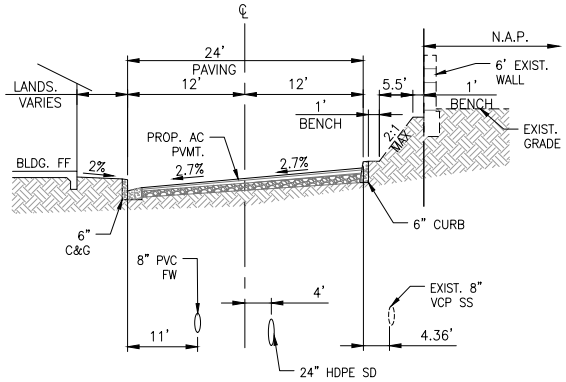
Internal Roadway Improvements

Access to the PUD site is provided through roadway connections to both Mountain Avenue and Fourth Street. External roadway access points (e.g., driveways) shall be developed at a minimum width of 24 feet. This not only allows for a bidirectional flow of passenger vehicle traffic, but also provides adequate space for the bidirectional travel for larger service vehicles (e.g., fire engines and garbage trucks).



Access to the PUD site via Harvard Place shall be limited to EVA connections. EVA lane access to the PUD site shall be prohibited for non-emergency vehicles and pedestrians. EVA connections to Harvard Place shall be secured via a gated entry which shall remain closed and locked except when in use by emergency personnel.

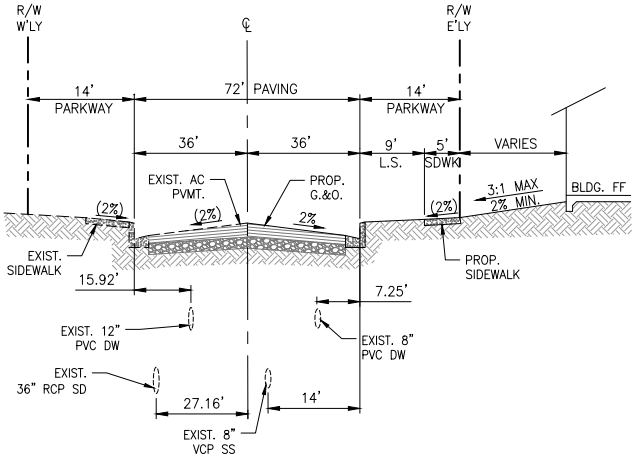
The Project's proposed internal roadway improvements include two driveways, multiple ramps connecting the different levels of the central parking structure, and an EVA lane.



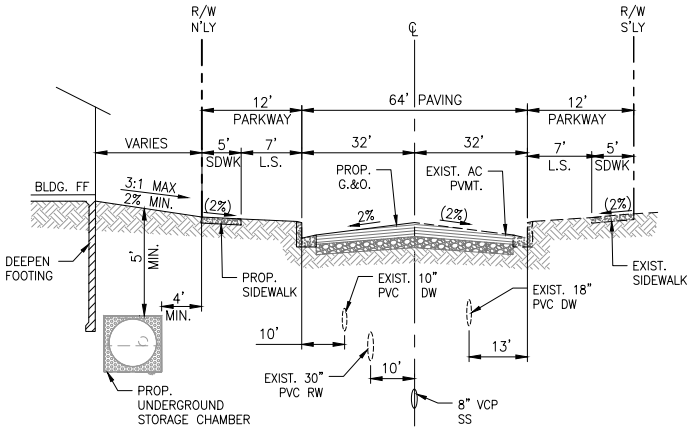
- The main entryway connects to Fourth Street via a 28.5-ft wide driveway, which continues into a 26-ft wide gated entry for the central parking structure. A 20-ft wide guest drop-off lane is attached to the main entryway. These driveways are separated by a 6-ft wide landscape island.
- The secondary entryway connects to Mountain Avenue via a 24-ft wide driveway leading to a 90-degree connection to a 24-ft wide entry into the central parking structure.
- An EVA lane will connect to the secondary entryway, continuing the 24-ft wide driveway east to Harvard Place. The EVA lane will consist of paved portions of the northeast perimeter of the Project area. The EVA lane will terminate at a 6-foot-tall gate placed at the EVA lane's point of connection to Harvard Place.
- The 6 levels of the parking structure will be connected by 24-ft wide ramps that connect each of the parking levels to the surrounding residential structure.

E TYPICAL SECTION N.T.S.

F TYPICAL SECTION N.T.S.

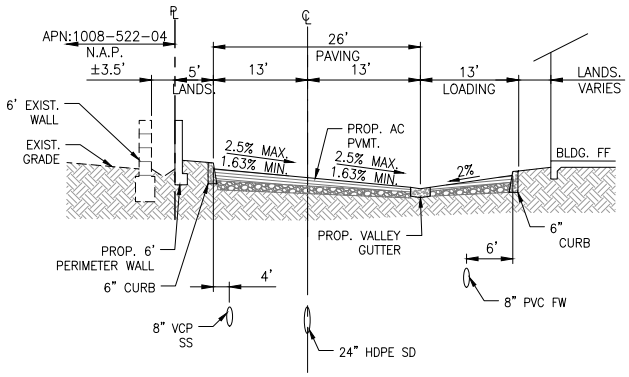


G TYPICAL SECTION N.T.S.

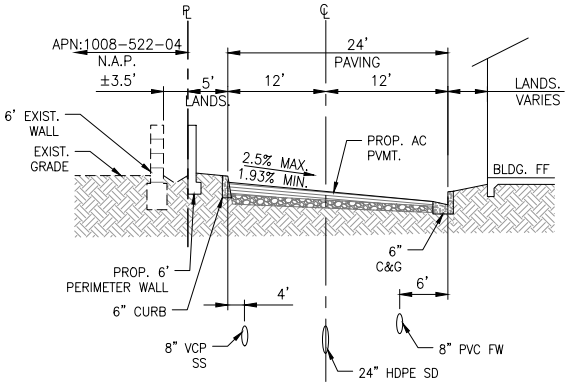


Public Right of Way Improvements

The public right-of-way improvements required are to include but are not limited to the following: street pavement, curb and gutter, parkway landscaping, parkway irrigation, public sidewalk, traffic signing and striping, streetlights, bus stop, bus shelters, and amenities.



Development along public rights-of-way must be approved by the City.



A N. MOUNTAIN AVENUE
N.T.S.

B W. FOURTH STREET
N.T.S.

C TYPICAL SECTION
N.T.S.

D TYPICAL SECTION
N.T.S.

Parking

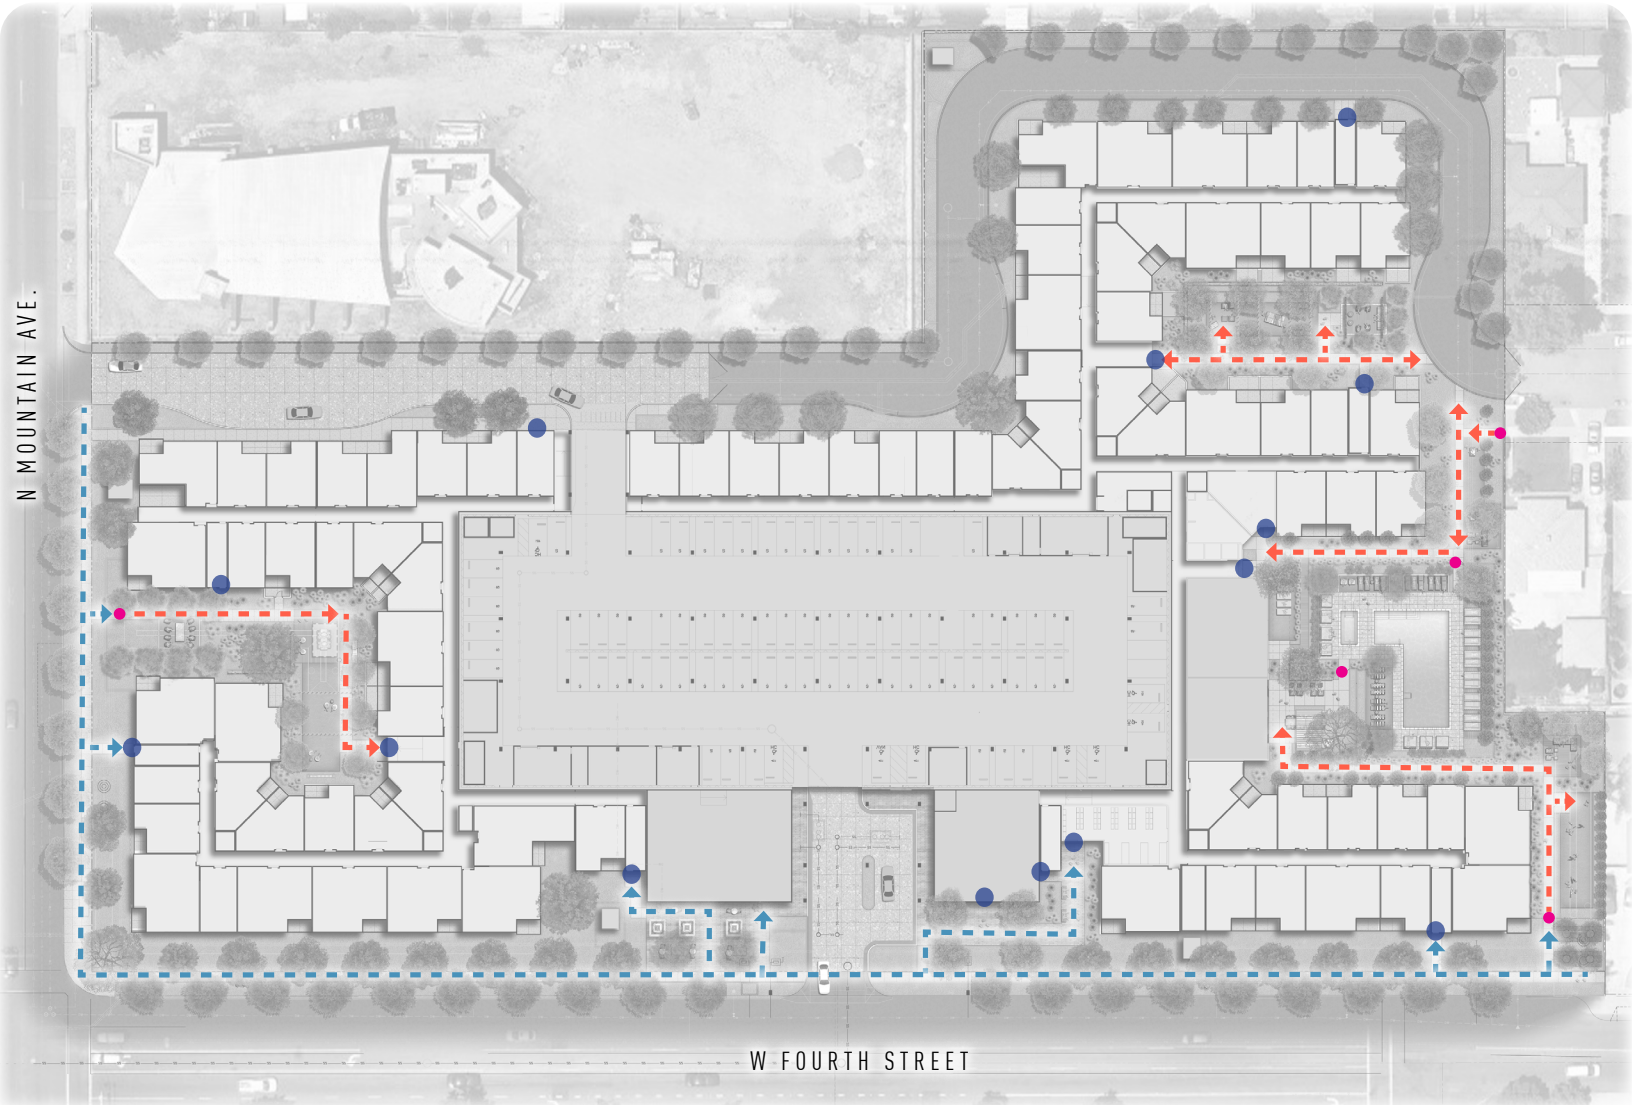
Parking should be provided within the PUD area for residential and retail uses. Residential parking shall be provided at a rate of at least 1.2 spaces per bedroom (includes guest parking). Studio unit parking shall also be provided at a rate of 1.2 spaces per unit. Retail uses parking shall be provided at a rate of 1 parking space for each 250 sf of commercial floor area.

Parking space dimensions, drive aisles, etc. shall conform to the design standards set forth in Division 6.03 (Off-Street Parking and Loading) of the Ontario Development Code. On-street vehicular parking along Fourth Street and Mountain Avenue shall be prohibited. Fourth Street and Mountain Avenue are both public streets and may not be designated for guest parking. On-street parking may not be used to meet the requirements for on-site parking as indicated in Division 6.03 of the Ontario Development Code.

Parking requirements for each unit type are summarized in **Table 1: Applicable Development Standards**.

The Project will provide 643 residential parking spaces and 16 retail parking spaces within the central parking structure for a total of 659 parking spaces. Retail parking spaces will be located on the ground floor of the parking structure with the remaining spaces utilized for residential parking. Twenty-four bicycle parking stations will be provided based on a ratio of 1 bicycle rack per 30 parking stalls. The amount of residential provided bicycle racks will exceed the required 22 stalls based on e 643 provided residential parking stalls. **Table 2: Project Parking Consistency** summarizes the Project's proposed parking counts compared to the standards established for the PUD.

Table 2: Project Parking Consistency



Standard	PUD Requirement	Project Consistency
Residential Parking Ratio	1.2 spaces per bedroom (1.2 spaces per studio unit)	1.4 spaces per bedroom (including studio units)
Minimum Residential Spaces	555 Spaces	643 Spaces
Minimum Retail/Office Parking Ratio	1 space per 250 sf	
Minimum Retail/Office Parking Spaces	16 Spaces	16 Spaces
Minimum Bicycle Parking Ratio	Residential: 1 rack per 30 stalls Retail (short term): 5% of stalls (2 minimum)	
Minimum Residential Bicycle Racks	22 Racks	22 Racks
Minimum Bicycle Racks	2 Racks	2 Racks

Pedestrian Connections

Pedestrian connections shall be provided to the PUD site from Mountain Avenue and Fourth Street. Private pedestrian accessways shall be developed between each building and dwelling unit within the PUD site. The PUD area shall be developed such that internal vehicular traffic is limited to parking areas and main driveways. Pedestrian accessways within the PUD area outside of parking structures should be landscaped and be made of complimentary materials to the building theme.

The Project will connect to existing pedestrian sidewalks along Fourth Street and Mountain Avenue. Internal pedestrian circulation will include pathways between buildings and dwelling units and the parking structure. Residents will be able to access all areas of Watermarke Ontario, including amenity areas, through walking paths and paved sidewalks. Vehicular traffic will be limited to the central parking structure, its entryways, and external roadways.

Pathways within the Project which are adjacent to amenities and open space areas will be created with various materials, including stone, concrete, and wood paneling to give each area of the Project site its own unique character.

INFRASTRUCTURE AND UTILITIES

Utility infrastructure within the PUD area such as water, sewer, recycled water, and electricity facilities shall connect to existing City infrastructure systems along Mountain Avenue and Fourth Street and propose new facilities within existing utility easements and rights of way. Each utility shall be buried at varying depths, based on City standard, to create a separated, identifiable system.

Telecommunications

Residential developments within the PUD shall include connections to telecommunications services either through existing overhead cable and telephone lines, through the placement of fiber optic cable, or undergrounding based on site conditions and the City's discretion.

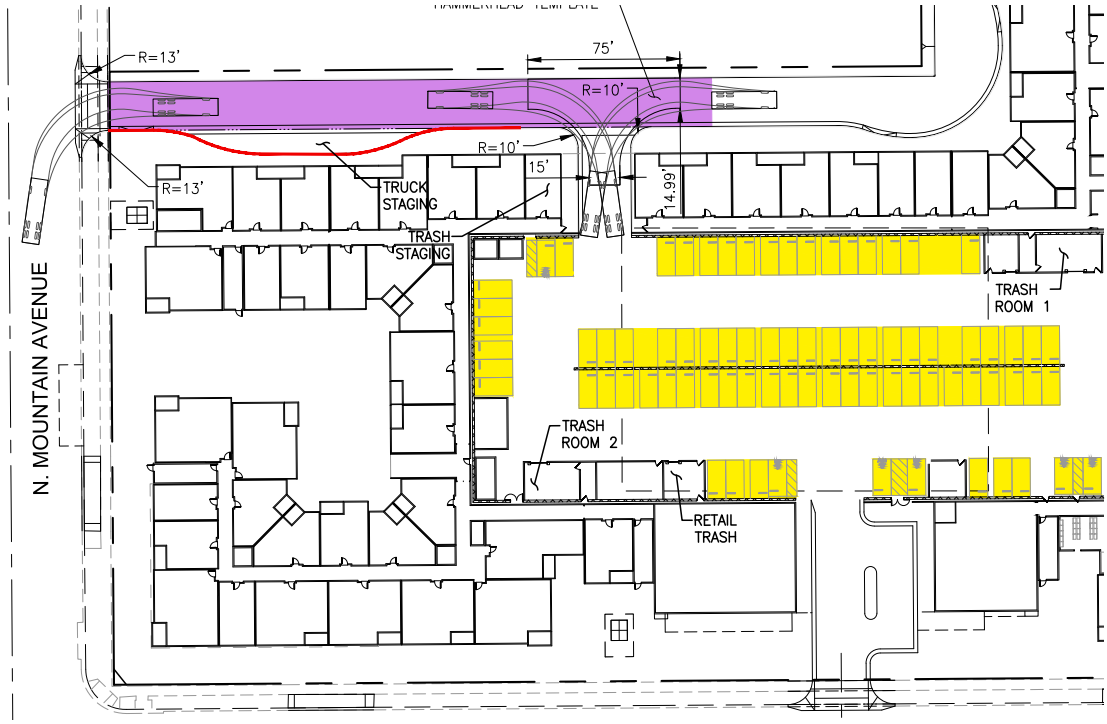
The Project includes the placement of new fiber optic cable along the northern, southern, and western portions of the Project site with multiple connections made to each building.

Water, Sewer, and Stormwater

Domestic water connections shall be made via the existing domestic water main running below Fourth Street along the southern portion of the PUD area.

The Project includes the placement of one domestic water meter, one domestic water master meter, and one domestic water backflow in the southern portion of the Project site. The Project includes a new recycled water meter connection along the southern portion of the site which would connect to the existing recycled water main below Fourth Street.

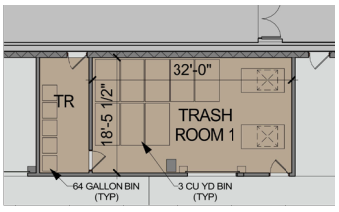
The Project proposes a new fire water line connection to the existing domestic water line beneath Mountain Avenue via a double check detector assembly (DCDA). The Project fire water line will follow the path of the secondary driveway and EVA lane to the PUD area's eastern perimeter where it will continue south along the Project site perimeter. The Project fire water line will then connect to the existing domestic water main below Fourth Street via a DCDA. Multiple points of connection from the fire water line to Project structures will be made within the northern portion of the Project site. Additional fire hydrants will be placed along the southern and western portions of the Project site.



Sewer infrastructure proposed for the Project site will run along the secondary northern driveway and continue along the EVA lane before terminating at a sewer lateral on the northwester portion of the EVA lane. An additional sewer line will branch from the northern line at the secondary entrance of the central parking structure and cross the site from north to south, connecting to a proposed line below Fourth Street. The Project proposed public sewer main below Fourth Street connecting to an existing sewer main below the intersection of Mountain Avenue and Fourth Street. Multiple sewer lateral connections will be made to the existing sewer main within the sanitary sewer easement adjacent to the eastern border of the Project site. The existing sewer main runs north-south along the Project site before transitioning east between Harvard Place and Fourth Street. Multiple laterals placed along the proposed and existing sewer facilities will form connections to each unit and retail use.

Developments within the PUD area shall provide on-site stormwater drainage facilities which comply with the San Bernardino County Stormwater Program's Water Quality Management Plan (WQMP) requirements. These facilities may include vegetated swales, depressed landscaped basins, pervious concrete pavement, and underground stormwater retention/infiltration vaults. All proposed Development Plans must prepare a Preliminary Water Quality Management Plan to ensure water quality management.

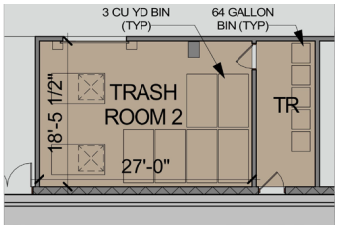
One underground retarding basin and one underground infiltration chamber will be placed on the western and southwestern portions of the Project site, respectively. A dry well will be placed in the southeastern portion of the site and will connect to the proposed onsite storm drain system.



New storm drainage lines will connect to existing storm drain facilities below Mountain Avenue. The Project storm drain lines will run along the inner perimeter of the PUD area. An underground infiltration chamber will be placed below the southwestern corner of the Project site. Additionally, an underground retarding basin will be placed below Courtyard 3. A modular wetland, a pump, and a flow control structure will be placed along the southeastern portion of the PUD area.

Solid Waste

Individual refuse containers should be provided for each residential unit and collected in group waste bins within trash enclosures for pickup by City Integrated Waste Department. Refuse and recyclable materials collection facilities shall be designed consistent with the City's Building and Development Code and shall be designed to be consistent with the overall theme of the surrounding PUD area, including materials and aesthetic elements of both the specific area and the overall PUD area. Trash enclosures should be placed throughout the site to allow for waste collection and shall be shielded from pedestrian view. The PUD roadways shall be designed to allow for utility service vehicles (such as waste collection vehicles) to enter and exit the site via Mountain Avenue.



All refuse enclosures shall be located on major drives aisles within developments to achieve adequate circulation for refuse vehicles. Enclosures must be designed so that refuse and recycling containers may be accessed by the generator and serviced by the service provider without moving other bins. To encourage recycling, enclosures designed for a maximum of one (1) bin are prohibited.

ENLARGED TRASH ROOM 1
N.T.S.

All Priority Land Use (PLU) areas (areas which include mixed uses containing residential densities of at least 10 dwelling units per acre) within this Development Plan shall comply with the statewide Trash Provisions adopted by the State Water Resources Control Board (SWRCB) and trash requirements in the most current San Bernardino County Area-Wide MS4 Permit.

Individual refuse and recyclable materials collection pick up and storage locations have been designed for the project. Trash and recycling bins shall be provided for each unit. Two residential trash rooms will be placed in the northeast and southwest corner of the parking structure. First floor residents are able to dispose of their trash in either of these rooms. Each subsequent floor of the residential structure will have access to garbage chutes also located in the northeast and southwest corner of the parking structure. These chutes deposit refuse directly into the first-floor trash rooms.
A retail trash enclosure is also provided in the southwest corner of the central parking structure.

ENLARGED TRASH ROOM 2
N.T.S.

Scout trucks will be used to consistently monitor trash levels and transfer full containers to the main trash enclosure on the north side of the PUD area. The bins within the trash enclosure will be picked up by the City's Integrated Waste Department. The City's Integrated Waste Department will utilize the secondary northern driveway as site access. This process of trash retrieval will be shielded from view will be made efficient through the creation of a truck access lane attached to the secondary entrance driveway.

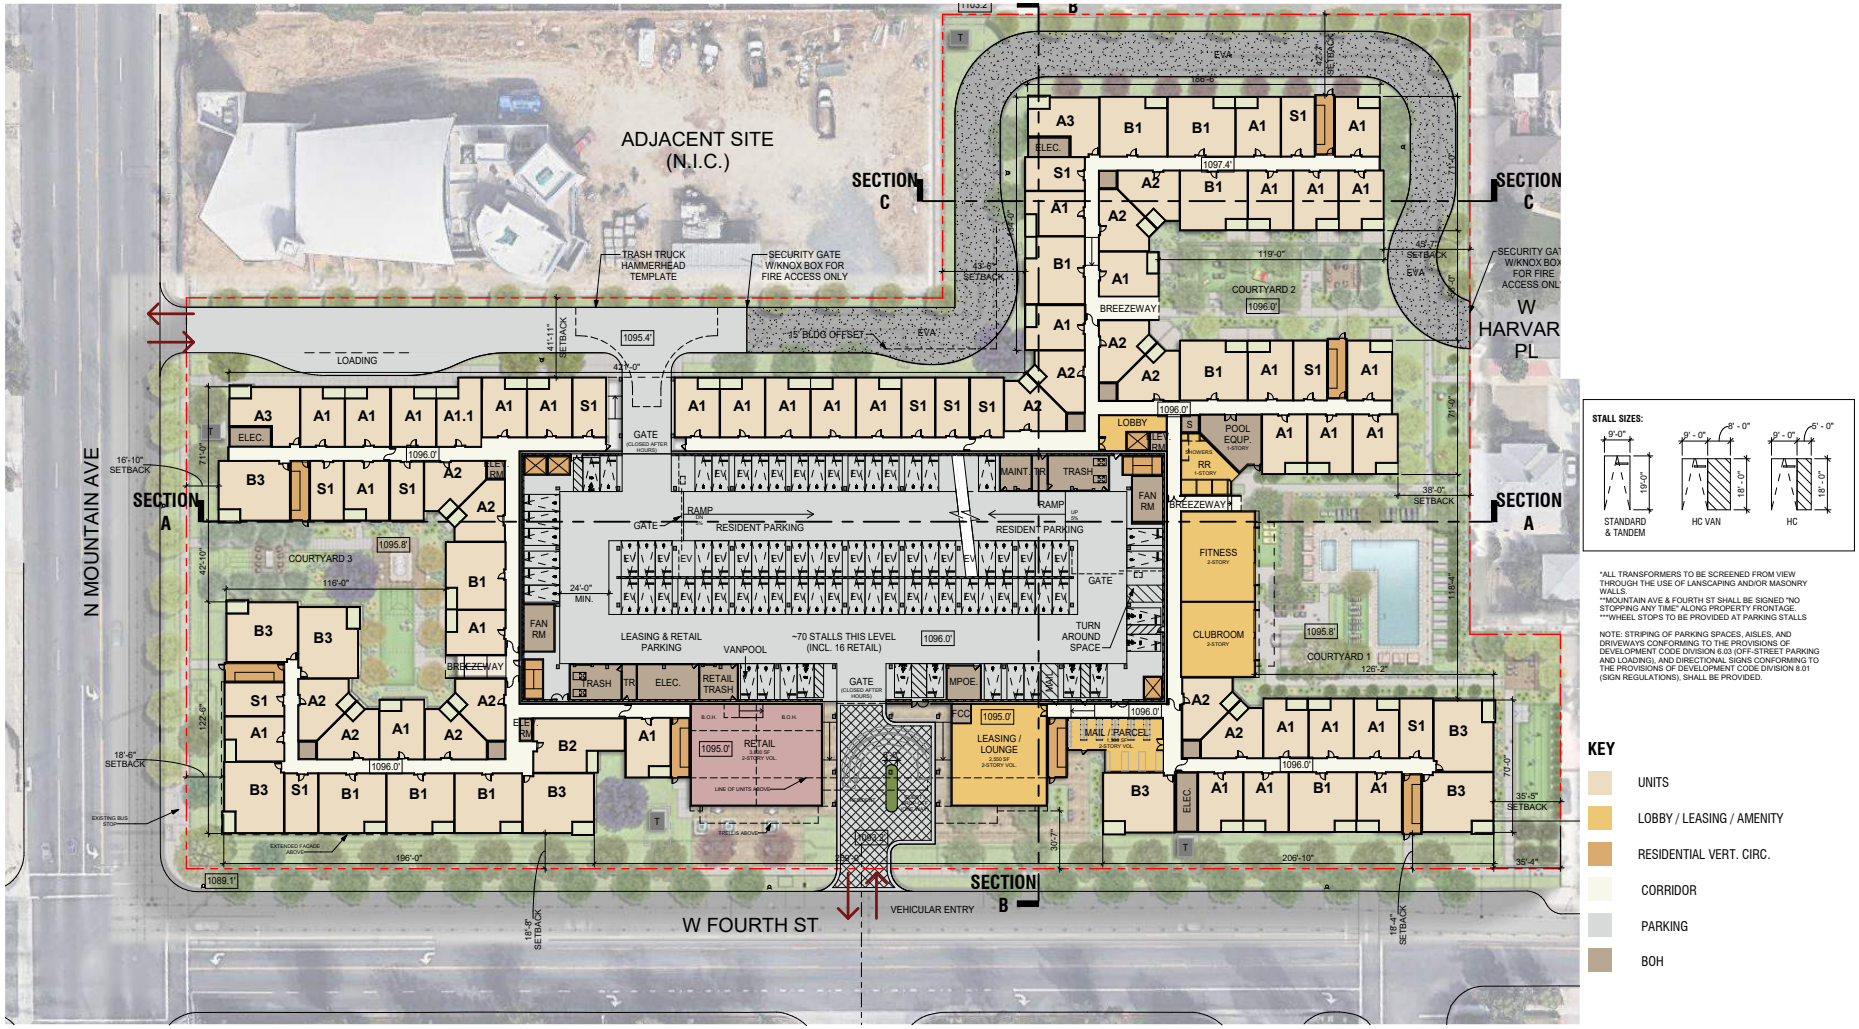
Utility Screening

All ground mounted equipment within the PUD area shall be screened and designed to not detract from the architecture of the Project site. Air conditioners, and other utilities, shall be screened from adjoining properties and public rights or way by a visual barrier. Water, sewer, telecommunication, and electricity utility lines shall be buried underneath roadways to not only shield them from public view, but also to ensure their protection from hazards such as precipitous weather and rodents.

Utility buildings shall be installed/designed to incorporate architectural elements or screening or to be placed in a manner to reduce visual impacts to the community. Roof mounted equipment, including ladders and antenna devices, shall be located and/or screened so that it is not visible from streets and adjacent buildings; or shall be designed to be integrated to the building's form where possible. Roof decks and rooftop mechanical units may be visible from adjacent developments and therefore shall be screened and painted to match the finish of the roofing material in order to be as unobtrusive as possible. Rooftop levels shall therefore be developed with parapets which encircles and rooftop area which contains rooftop mechanical equipment in order to further shield them from view. Rooftop parapets should be designed to match the materials and color scheme of the adjacent portion of the building. Roof decks should be designed to match or compliment materials and colors used in the adjacent portions of the building and create a sense of consistency between building components.

DEVELOPMENT STRATEGY

Nonresidential uses (i.e., retail and office), within the PUD area shall be developed at a maximum intensity of 1.0 FAR. Residential density within the PUD area shall range from a minimum of 25 du/ac to a maximum of 75 du/ac. These densities are consistent with development standards established for City's MU-8b zones.



The Project proposes the creation of 3,800 square feet of retail/office space along the PUD area's Fourth Street frontage. Project retail/office uses are proposed at an intensity of 0.02 FAR. The Watermarke Ontario Project proposes the creation of 357 multifamily residential units with an overall density of 61.5 du/ac.

The Project's 357 residential units would consist of studio, 1-bedroom, and 2-bedroom apartment units. The studio units are available in one floorplan and the 1- and 2-bedroom units are available in three floorplans. The PUD floorplans range in size from 576 square feet to 1,172 square feet. **Table 3: Floor Plan Standards** details the dimensions and development standard of each of the three available floor plans.

Table 3: Floor Plan Standards

Floor Plan #		Bedrooms	Bathrooms	Square Feet	Unit Count
5	**1**	Studio	1	576	50
A	**1**	1	1	696	138
	2			707	62
	3			891	2
B	**1**	2	2	1,080	62
	2			1,172	6
	3			1,138	37

DESIGN GUIDELINES

The following design guidelines are intended as a reference to assist the designer in understanding the City's goals and objectives for high quality commercial development. The guidelines contained here are consistent with the standards presented in **Table 1: Applicable Development Standards** above.

The design guidelines provided in this section are designed to be compatible with the vision of the Mixed-Use Neighborhood Activity Hub and provide site specific guidance for the development of the project area. The design guidelines in this PUD are intended to provide direction to developments within the PUD area. The guidelines will be utilized during the City's development review process to encourage the highest level of design quality, while at the same time providing the flexibility necessary to encourage creativity on the part of the project designer(s).

Building Orientation

Building frontages shall be oriented towards Fourth Street. Frontages should be enhanced with entry elements, interesting architecture, enhanced materials, and pedestrian scale to provide connection between the development and the street. Fourth Street shall provide primary access to the site with Mountain Avenue acting as a secondary access point. Retail uses developed within the PUD area shall have entrances oriented toward Fourth Street. Indoor residential amenities (e.g., gyms and common areas) may be oriented towards interior pedestrian open spaces.

The Project will consist of one large multifamily building with integrated retail and parking uses. The Project will be developed as a wrapped style development with one central multilevel parking structure surrounded on all sides by residential units, retail uses, and amenities. The building will be developed with inset amenity spaces, courtyards, and additional pedestrian accessways. This will allow a natural, organic buffer to occur between the building and any surrounding roadway or development. Each side of the building will be designed to be aesthetically pleasing to any passersby; however, the main side will be oriented toward Fourth Street. The rear entry, adjacent to Mountain Avenue, will be a secondary elevation/frontage. Residential units will have their entryways oriented toward the inside of the complex with balconies and windows facing the exterior of the complex. Pathways to each unit will also be placed within the complex and connect with separate pedestrian pathways that lead to external portions of the complex.

North Elevation

Setbacks

Buildings within the PUD area shall maintain a minimum setback of 10 feet from the front and interior side PUD area boundaries. Additionally, buildings within the PUD area shall maintain a minimum setback of 10 feet from adjacent arterial, collector, and local streets.

Landscaping shall be used within each setback to soften each building's appearance as well as designed with windows or design elements. The use of a 10-foot setback for the sides of buildings adjacent to adjacent residentially zoned parcels would allow for a softer transition to nearby residential uses.

The Project will maintain a minimum setback of 10 feet for front, side, and all street setbacks. All unimproved setback areas within the Project area will be landscaped.

Architectural Character/Details

Building frontages along Fourth Street must be developed to be visually appealing with enhanced materials and landscaping. Building signage and addresses should be clearly visible from the street. Residential and Non-Residential land uses should be visually distinguishable from each other while maintaining an overall theme with the building frontage through the use of similar materials and color palette.

Buildings within the PUD area should be designed so that each side of the building is visually consistent within itself while not needing to be consistent with other sides. However, the complimentary usage of materials and color pallets should be implemented to ensure unity among each side of the building.

The Project's main building will include a break in design between the first floor and the remaining floors to create a natural separation between the mixed uses present on the ground floor and the residential uses in subsequent floors. The overall building will be designed in a contemporary modern style with aesthetically pleasing geometric symmetry between features and units as well a mixture of materials and colors.

Architectural variety will also be used in each façade through a blending of materials including cement board tiles and stone veneer and balconies with metal panel railings. Each level beyond the first story will be expanded beyond the footprint of the first level.

Important or unique portions of the building (such as the retail use or leasing office) will be emphasized through an expanded footprint and large glass frontages. The extended footprint will terminate at the third story and provide differentiation of the points of interest from the remaining residential units. The retail and leasing office will also act as the building frontage, with both on either side of the main entryway.

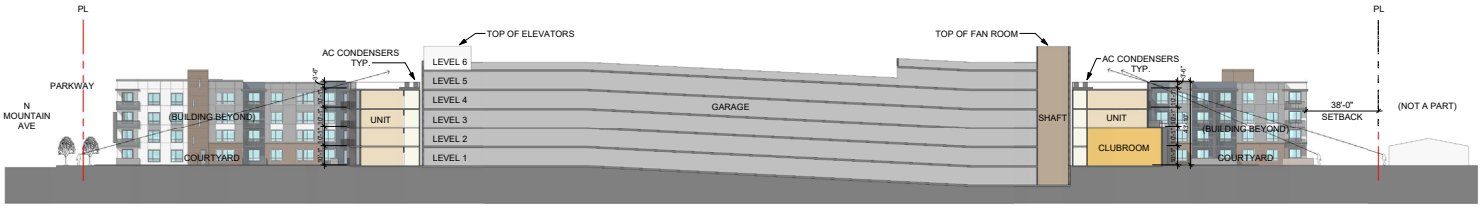
South Elevation

Massing and Scale

Parking areas should be inset within the PUD area and placed behind buildings. Parking areas within the PUD area shall be a maximum of two stories higher than the nearest residential building.

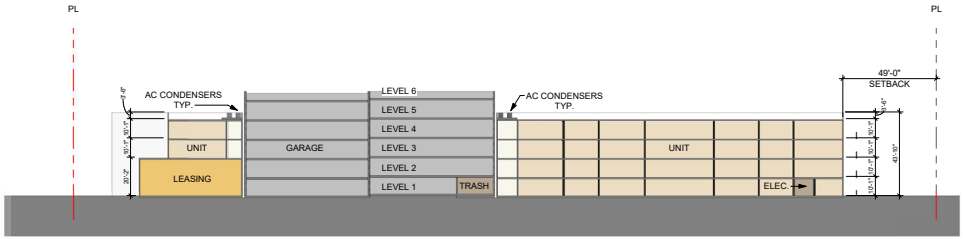
Taller structures should be centered within the PUD area, with shorter structures developed along the perimeter of the PUD area and the tallest structure at the center of the PUD area. Shorter structures shall not be placed behind taller structures along roadway adjacent portions of the site. This will allow for adequate shielding form views along public roadways. No buildings shall exceed a maximum height of 65 feet, inclusive of rooftop utility facilities and attachments.

Buildings shall not be placed continuously along the entirety of the PUD perimeter. The PUD perimeter shall be broken up with buildings, landscaping, courtyards, and other pedestrian features in order to encourage visual dynamism.



Material and/or color variations should be applied to building facades based on internal architecture. For example, balconies and stairwells should vary in design from the outer walls of residential or retail uses. These variations should be implemented through the use of complimentary materials and colors.

First story developments should be distinguishable from subsequent stories along each building through the use of separate, but complimentary design features such as materials and colors.



The Project will be developed as a wrapped mixed use apartment complex with a single building encircling a central multi-level parking structure. All unit entries will be accessed within a central hallway and around internal courtyards within the site and around centralized amenity spaces within the lot. All four levels of the mixed use building will present the same footprint, with the only variance being a reduced footprint for third and fourth floor units directly above the leasing office and retail use. Third floor balconies will be extended to create overhangs adjacent to the western portion of Courtyard 1 and above the leasing office and retail use.

The central parking structure will be six stories in the center of the apartment complex. The parking structure will extend beyond the overall height of the residential structures but will not expand the overall footprint. The Project's proposed central parking structure will be the tallest building on the Project site with an approximate 63-foot elevation. Ground level amenities will be within interior courtyards and along the outer perimeter of the main building. These amenities are intended to be accessed with minimal walls/structures blocking access to the facilities. Each building and amenity is designed to be accessed via pedestrian travel with vehicular access capability limited to the entry driveways and the central parking structure. Emergency vehicles may also utilize the EVA running between the Mountain Avenue entrance to Harvard Place.

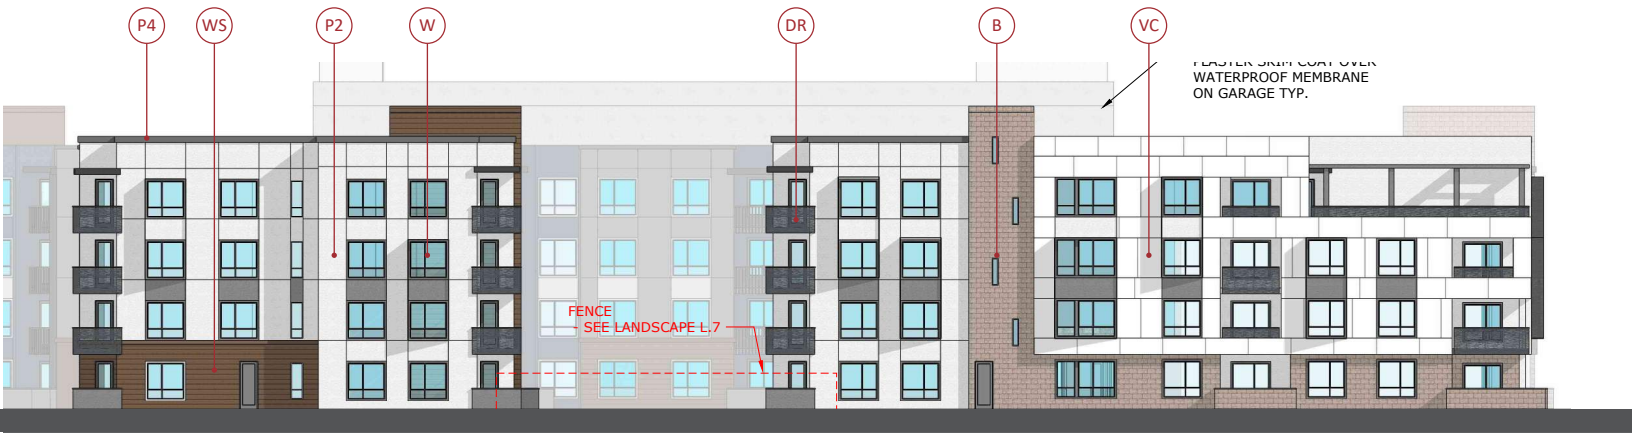
KEY MAP



Materials and Color

Materials used within the PUD area should exhibit permanence and quality, thematically unifying a building's appearance on all sides; materials and colors should accentuate the architectural details of the building and promote visual harmony. Brick, tile, pre-cast architectural concrete, wood, stone veneers, metal grating, or stucco are preferred.

Multiple materials and colors should be used on each building façade to create a sense of visual dynamism and interest.

Materials and colors present in the Project will consist of a blending of naturally occurring colors found in organic landscaping components as well as complimentary earth tones to create a bright, visually appealing and modern structure. **Table 4: Material Palette** and **Table 5: Color Palette** and summarize both the non-landscape colors and materials present within the Project.

Partial West Elevation

Partial North Elevation

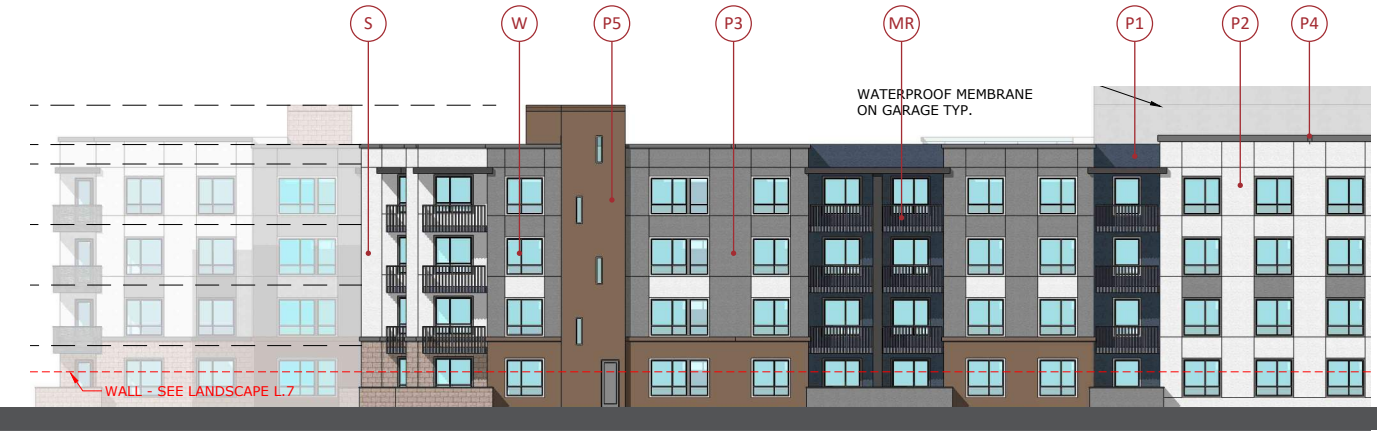


Table 4: Material Palette

	Material	Location
	(P) Plaster	Main material; north, south, east, and west façade.
	(B) Block Veneer	Accent material; north, south, east, and west façade.
	(WS) Wood-Like Siding Accent	Accent material; west façade.
	(VC) Vertical Cement Board Tiles	Main material; south and west façade.
	(SF) Storefront	Retail use; north façade.
	(DR) Decorative Metal Panel Railing	Main material; south, east, and west units. Accent material; north façade.
	(MR)Metal Picket Railing	Main material; north, east, and west façade.

Table 5: Color Palette

	Color	Location
	(1) Needlepoint	Accent color; north and south façade.
	(2) Snowberry	Accent color; north and south façade. Main color, east and west façade.
	(3) Tin Lizzie	Accent color; east façade. Main color; north and south façade.
	(4) Grizzle Gray	Trim color; north, south, east, and west façade.
	(5) Umber Rust	Accent color; north, east, and west façade.

LANDSCAPE STANDARDS

A conceptual landscape plan shall be submitted along with the Development Plan for any project within the PUD area for review by the City Landscape Planning Division. The plan shall specify all landscaping and hardscape for the entire project site. Detailed Landscape and Irrigation Plans shall be required prior to the issuance of building permits. The detailed plans shall show location of ground mounted utility boxes and equipment, along with the methods of screening for these items from the public right-of-way and adjacent residences where possible. The irrigation system shall be designed to utilize recycled water pursuant to State and local codes, ordinances, and laws, and applicable building and plumbing codes.

The Landscape Plan should support and enhance the mixture of retail and residential uses within the PUD area. Landscaping within the PUD area should be used to accentuate transitions from adjacent uses, define circulation patterns within the PUD area, screen parking areas from the street, highlight entries, provide shade for parking areas and outdoor seating areas, and to soften the appearance of any buildings.

Landscaping shall be completed for any setback areas from public roadways and internal communal or gathering spaces, excluding areas devoted to building area, paving, and/or outdoor loading and storage areas that are screened from public view.

The Project's building design creates a series of open courtyards between each wing of the building providing a private, attractive open space area for the tenants use. These spaces are further enhanced with distinctive planting, landscape and amenity features, making them unique and enjoyable to the residents. The planting palette for the Project was chosen to establish a strong, memorable landscape while also providing a buffer between the PUD area and external uses. Exciting recreational structures and well landscaped pathways lead and invite residents to enjoy the central open space amenities or create a convenient walking path for evening exercise.

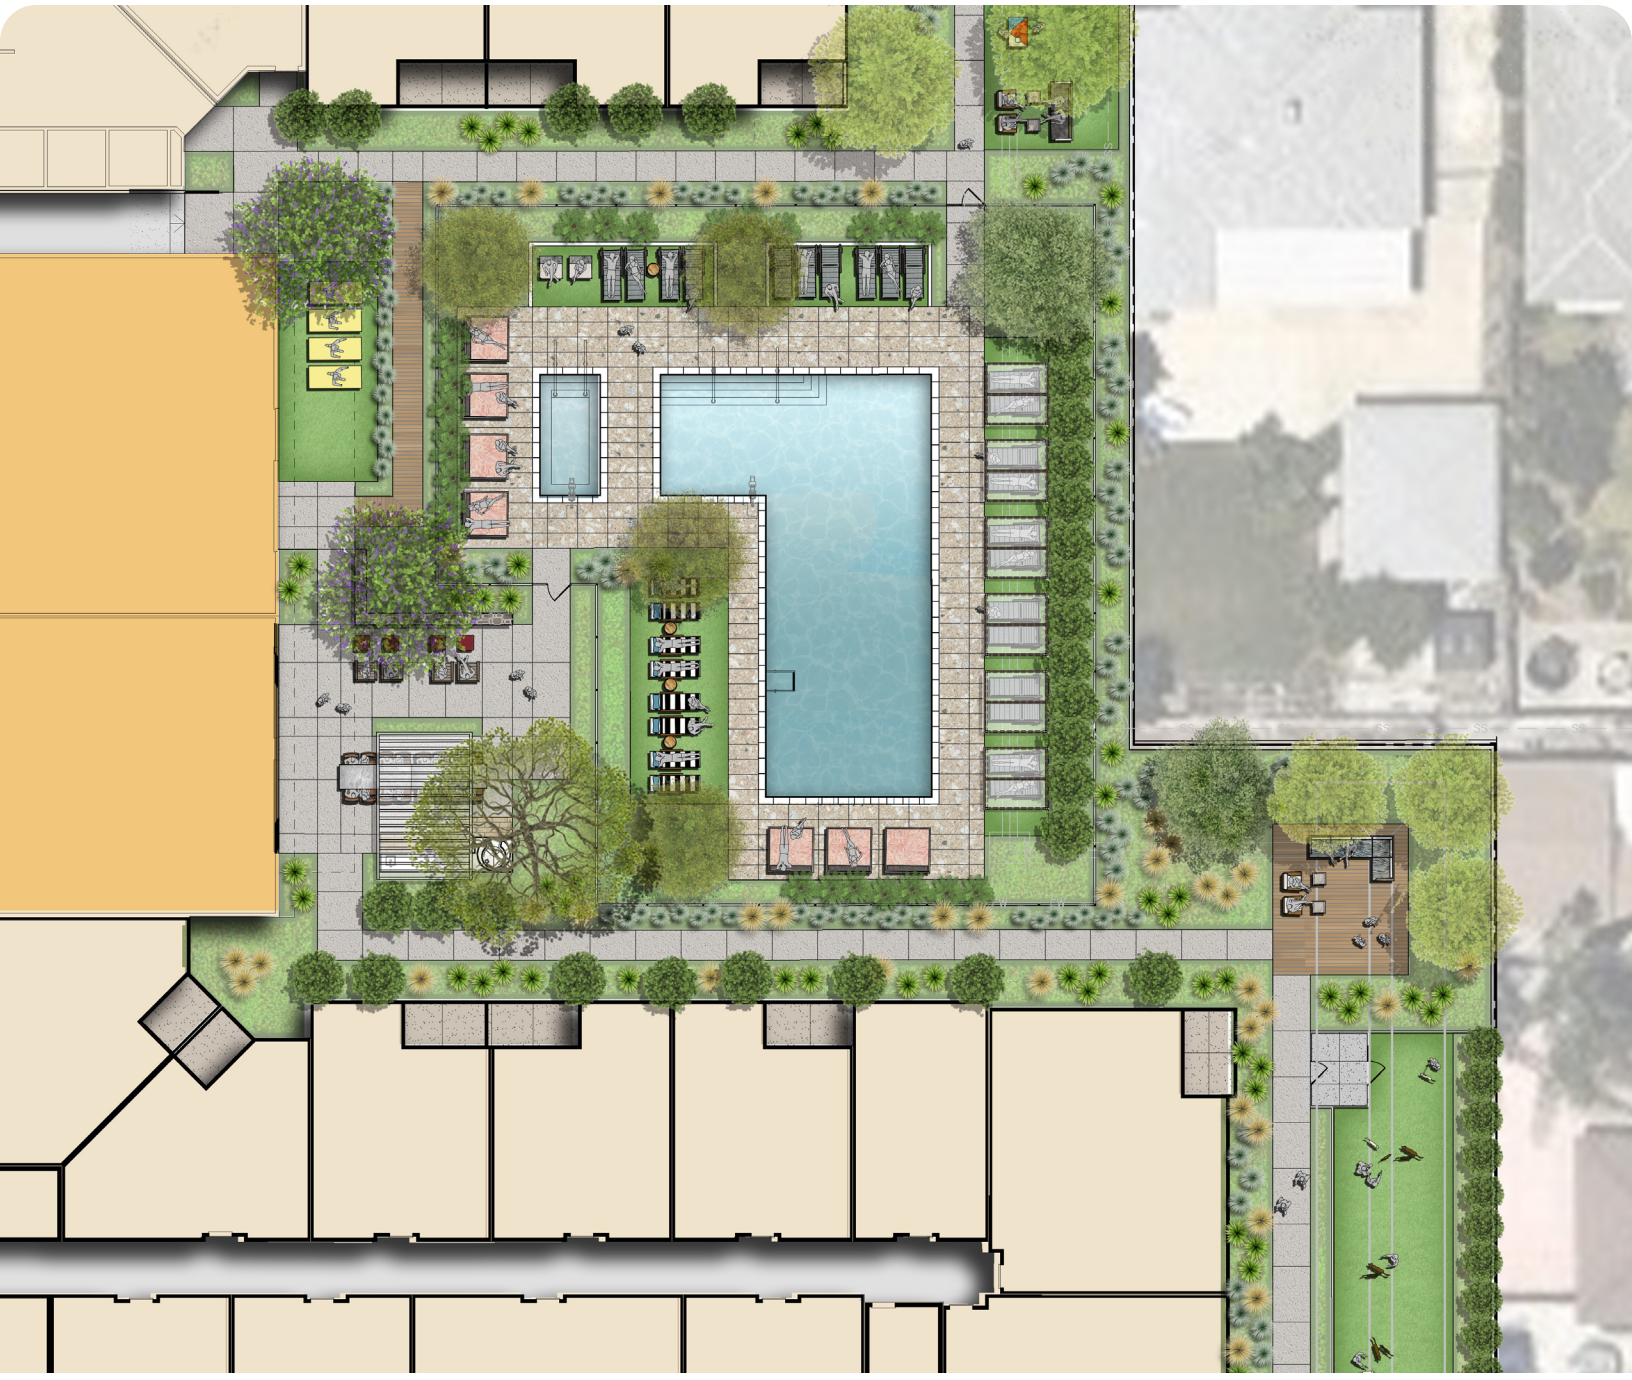
Open Space Areas

Private open space shall be provided for each dwelling consistent with development code standards and may include balconies or ground level patios. When located on the ground level, private open space shall be screened from public view by landscaping, courtyard walls or privacy fences. Common open space shall be provided to allow for passive and active types of recreation, along with site landscaping amenities for residents and their guests.

The Watermarke Ontario Project includes the following open space areas:

- Three courtyards,
- One pocket park,
- Intimate seating areas,
- A lounge deck,
- And retail frontage.

West Courtyard



The West Courtyard functions as a communal outdoor dining space for residents. This outdoor space includes a built-in barbecue grill structure and large communal dining table. An attached yard provides multipurpose uses with lounge seating and an open lawn area that can be used for a variety of purposes. The West Courtyard is located on the western portion of the PUD area.

Pool Courtyard

The Pool Courtyard provides a private, resort style pool experience for residents to. The courtyard's pool deck includes one 60'x18' resort pool and an 8'x16' spa. The surrounding areas include lounge chairs, chaise lounges, and pool chairs. Additional amenities within the Pool Courtyard include an outdoor fitness area directly outside of the indoor fitness room, and shaded dining areas.

The pool courtyard includes an adjacent seating area for residents to sit and relax along internal pathways leading from the pool area to Fourth Street.

The Hangout Courtyard

The Hangout Courtyard provides a casual recreational setting for Project residents. This courtyard allows for recreational activity within a multi-activity game lawn. Residents may rest beneath the specimen tree grove or on other benches provided within this courtyard. Nighttime activity is encouraged through the use of festival lighting throughout this courtyard.

Pocket Parks

One pocket parks will be provided adjacent to the eastern boundary of the PUD area. The pocket park provides small open spaces for the community to access. The Game Court pocket park open space area includes a corn hole play area, a tree allee, and lounge seating. Pocket parks within the PUD are private and for resident use only.

Fourth Level Lounge

The southwest corner of the main building's fourth level will include a lounge and dining area for residents. The lounge area will include larger and smaller group seating areas. The lounge also features a built-in barbecue for meal preparation and a large banquet style island table. The outer perimeter of the lounge will be landscaped to provide a more natural aesthetic and create a sense of privacy within the lounge area. The lounge will provide residents with scenic views of the western and southern portions of the City and surrounding area.

Residents may access the lounge via a private door on the southwest corner of the fourth-floor hallway.

Retail Frontage

The retail use will include the development of an outdoor seating area with café tables and umbrellas. Retail frontage will be required to employ enhanced landscaping and decorative accents. These may include pottery decorations, and unique foliage. The retail entryway should have a unique character that remains thematically consistent with the overall development within the PUD. Seating may be provided within the retail frontage. Landscaping along the retail frontage may include potted or in-ground flowers and in-ground shrubs. Trees may not be used as a part of retail frontage, this area is intended to provide amenity space for residents and commercial visitors. Retail stores shall comply with the sign requirements as set forth in the City of Ontario Development Code.

Vegetation

Vegetation within the Watermarke Ontario PUD includes a mixture of ornamental trees, shrubs, and fruiting, edible plant species. A total of 188 trees will be utilized for open space within the PUD area. A mixture of 50 (27%) native and 138 (73%) non-native trees will be planted in the PUD area. Additionally, a mixture of large and medium shrubs will be utilized throughout the PUD site. Vegetation plans must be reviewed by the Landscape Planning Division.

Fruiting trees and shrubs are placed around the community and recreational areas to create a more natural environment for residents.

Lighting

All lighting of facades, decorative fixtures, store window interiors, awnings, and signs shall be designed in accordance with the criteria set forth in Ontario's Development Code. Exterior lighting fixtures should be decorative and reinforce the architectural style of the building. Outdoor lighting within the PUD area should consist of warm color temperatures except for security or emergency lighting in order to remain unobtrusive to surrounding residential developments and internal residential developments. Colder color temperatures would be more obtrusive to residents and would create a less organic lighting effect.

On-site lighting shall be directed away and shielded from adjacent streets and adjacent properties. All exterior lighting shall be of an indirect nature, placed/situated/etc. under eaves and canopies, or ground level within landscaped areas.

Light within the PUD's communal areas should be warm colored and unobtrusive. Light sources for the Project should be LED or metal halide.

Walls and Fencing

Walls and fencing should be used to define private and communal spaces within the PUD site. Walls can be used to enhance design, create privacy, and help maintain boundaries within the open space areas. Fences and walls within the project area shall be made of decorative materials compatible with the overall architectural character of the development. All fences and walls shall be in scale with the development to fulfill such needs as screening and security.

Fences, walls and hedges within the project area shall comply with Engineering Corner Sight Distance Standards and other applicable standards. Decorative walls, monuments and/or other similar features shall not encroach into the public street right-of-way. Walls should be an integrated design of the building architecture and feature similar finished material, reveal lines, trim, etc.

Walls shall be limited to a maximum height of 6 feet in height.

The eastern boundary of the PUD area shall be walled entirely from adjacent properties. Gated EVA access to Harvard Place shall be constructed to be 6 feet in height and shall be designed with styles and materials which completely obstruct views through the gate. Gated EVA access to Harvard Place shall always remain locked except when in use by authorized emergency personnel. Access controls for the EVA gates shall be limited to property managers and emergency responders, exclusively.

Signs

All signs for the project shall be subject to the requirements of the City Development Code.….

ADMINISTRATION

Items not Addressed in this PUD

Any terms, requirements, or regulations not addressed within the PUD document shall be governed by the City of Ontario Development Code and City Standards.

Development Applications

Development Plans for the development of each individual parcel within the PUD area, along with fees and other required items, shall be submitted for review and approval per the requirements contained in Chapter 2, Administration and Procedures, of the City of Ontario Development Code and the General Application.

Administrative Exceptions

Deviation from the development standards set forth in this document may be granted up to a maximum of ten (10%) percent by the Zoning Administrator. Any deviation that is greater than (10%) percent shall require Variance approval.

Severability

If any portion of this Planned Unit Development is held to be invalid, unconstitutional, or unenforceable by a court of competent jurisdiction, the determination shall not affect the validity of the remaining portions of this Planned Unit Development. Moreover, the decision shall not affect, impair, or nullify this Planned Unit Development, either in whole or in part, and the remainder of this Planned Unit Development shall continue in full force and effect.
