Violation Description: Failure of the overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.
Violation Notes: Returned to compliance on 01/28/2016. OVERFILL PREVENTION EXTERNAL ANNUNCIATOR WAS INOPERABLE WHEN ATTEMPTED TO BE TESTED. PER UST TECHNICIAN, NEW ELECTRICAL LINES WILL NEED TO BE RUN FOR THE EXTERNAL ANNUNCIATOR TO BE MADE OPERABLE. REPAIR INOPERABLE OVERFILL PREVENTION EXTERNAL ANNUNCIATOR IMMEDIATELY AND SCHEDULE A WITNESSED RE-INSPECTION WITH THIS DEPARTMENT. RED TAGS ARE ISSUED AND WILL NOT BE RELEASED UNTIL RE-INSPECTION AND OVERFILL ANNUNCIATOR WITNESSED OPERABLE.

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided

PRESTIGE STATIONS INC 769 (Continued) **U001570070**

the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: OBSERVATION: All UST s have external Audible/Visual (A/V) alarms only. When an overfill alarm is activated for one UST, additional overfill alarms for other tanks will not activate if the alarm for the first tank has not yet cleared. This effectively eliminates overfill protection for all but one tank if multiple tanks are filled at the same time. CORRECTIVE ACTION: UST systems that can only activate external alarms when the first UST overfill condition occurs, additional actions must be taken to ensure that each UST has a functional overfill prevention independent of the other UST s at the facility (i.e., installing a separate alarm unit or other appropriate overfill equipment for each tank). Currently, additional overfill alarms for other tanks will not activate if the alarm of the first tank has not yet cleared. Submit plans and apply for a permit to correct overfill prevention equipment deficiencies to this department within 30 days. (Health and Safety Code, [Truncated]

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation:	HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description:	Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes:	Returned to compliance on 04/03/2017. The following hazardous materials observed during this inspection were not disclosed on the business plan or were disclosed 100 percent less than what was onsite: (1) 55 gallon drum of drained used oil filters, (4) approximately 200-250 gallons and (1) 100 gallon cylinder of compressed oxygen gas, (1) 250 gallon used oil container, (1) 55 gallon drum of paint thinner, (2) 55 gallon drums of grease, (1) 55 gallon drum of oily dirt, and (1) 20 yard roll-off for hazardous waste roadside solids. Compliance Requirement: Using CERS update the hazardous material inventory of the Business Plan.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	15925
Site Name:	Caltrans-Ontario
Violation Date:	12-12-2016
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes:	Returned to compliance on 04/03/2017. The site map of the Business Plan was missing the following required information: the emergency response equipment (i.e. fire extinguishers, spill kits, etc.) and the evacuation staging area. Compliance Requirement: Using CERS update the Business Plan.
Violation Division:	San Bernardino County Fire Department
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	15925
Site Name:	Caltrans-Ontario
Violation Date:	03-26-2020
Citation:	HSC 6.67 25270.4.5 (a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5 (a)
Violation Description:	Failure to complete a review and evaluation of the SPCC Plan at least once every five years, document the completion of the review, and sign a statement as to whether the SPCC Plan will be amended.
Violation Notes:	Returned to compliance on 05/13/2020. OBSERVATION: Documentation for a 5-year review of the SPCC plan was not available; no dates after the initial date in 2013 were listed in the review log. CORRECTIVE ACTION: Submit a signed statement that the SPCC plan has been reviewed and revised as necessary.
Violation Division:	San Bernardino County Fire Department
Violation Program:	APSA
Violation Source:	CERS,

CALTRANS-ONTARIO (Continued) **S104770519**

Site ID:	15925
Site Name:	Caltrans-Ontario
Violation Date:	03-26-2020
Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	"Failure to test or inspect each aboveground container for integrity based on industry standards as discussed in the SPCC Plan: 1. On a regular schedule. 2. After making material repairs. 3. Use non-destructive testing. 4. Inspect each container s supports, foundations, and outside for signs of deterioration, discharges, or accumulation of oil inside diked areas."
Violation Notes:	Returned to compliance on 05/13/2020. OBSERVATION: Annual STI tank inspection documentation was not available and the used oil interstitial space is not being inspected. At the time of the inspection, oil was discovered in the used oil tank interstitial space. CORRECTIVE ACTION: Submit a copy of a completed annual STI tank inspection checklist along with a signed statement as to how the used oil tank will be managed, with respect to the oil found in the interstitial space.
Violation Division:	San Bernardino County Fire Department
Violation Program:	APSA
Violation Source:	CERS,

Site ID:	15925
Site Name:	Caltrans-Ontario
Violation Date:	12-12-2016
Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	Failure to test or inspect each aboveground container for integrity based on industry standards discussed in the SPCC Plan: 1. On a regular schedule. 2. After making material repairs. 3. Use non-destructive testing. 4. Inspect each container s supports, foundations, and outside for signs of deterioration, discharges, or accumulation of oil inside diked areas.
Violation Notes:	Returned to compliance on 05/13/2020. Inspection records were not available during the inspection demonstrating that the operator is conducting container/tank inspections in accordance with their SPCC Plan. The SPCC Plan states that STI SP001 monthly and annual inspections will be conducted. In addition for tank #1 a periodic integrity testing of the continuous monitoring system will be inspected and certified annually. Compliance Requirement: Test and inspect the tanks at the facility in accordance with the SPCC Plan and submit a signed statement indicating that tests/inspections of the containers are being conducted.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AIR EMISSIONS CLASSIFICATION UNKNOWN
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CERS Description: Chemical Storage Facilities

Violations:
Site ID: 72589
Site Name: SUPERIOR POOL PRODUCTS, LLC
Violation Date: 11-17-2016
Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes: Returned to compliance on 12/13/2016. Site map missing information.
Violation Division: San Bernardino County Fire Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 72589
Site Name: SUPERIOR POOL PRODUCTS, LLC
Violation Date: 12-16-2019
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a site map with all required content.
Violation Notes: Returned to compliance on 02/07/2020. OBSERVATION: Two trailers used for the bulk storage of the chlorine and muriatic acid were found on the east side of the building along the properly line. This was not shown on the facility map in CERS. CORRECTIVE ACTION: Submit an update to the site map into CERS to show the location of the two trailers used to store muriatic acid and liquid chlorine.

POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

KUDER ENGINEERING INC (Continued) **S102040238**

Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes: Returned to compliance on 06/14/2019. It was found that the plan submitted in July 2017 was missing the hazardous waste inventory, map and emergency response plan. Ensure that these are submitted.
Violation Division: San Bernardino County Fire Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 515698
Site Name: KUDER ENGINEERING INC
Violation Date: 02-05-2021
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 03/05/2021. OBSERVATION: A 55-gallon drum of waste EDM filters was observed stored on site for longer than 180 days. CORRECTIVE ACTION: Submit a copy of a waste manifest showing the removal of the waste EDM filters.
Violation Division: San Bernardino County Fire Department
Violation Program: HW

Violation Source: CERS,

Site ID: 2572
Site Name: ABBA ROLLER
Violation Date: 10-18-2016
Citation: HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.22
Violation Description: Failure to properly manage used oil and/or fuel filters in accordance with the requirements.
Violation Notes: Returned to compliance on 06/27/2017. Drained used oil filter containers shall be kept closed except for when filters are being added or removed. Drained used oil filters shall be managed in accordance with all laws and regulations. Used oil filters must be managed within one year of the date of accumulation. Observed one 55-gallon drum of drained used oil filters missing the proper labeling and start date. Compliance Requirement: -Submit a signed statement that the container of used oil filters has been labeled with the words Drained used oil filters and the accumulation start date.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Commercial Offsite Facility Types:	Not reported
Quarterly Update:	Lighting Resources LLC (LRL) originally operated under this EPA ID but the County of San Bernardino Fire Department requested LRL to change their ID in 2004. During the same time, they changed their name from Lighting Resources Inc to LLC so they made a Class 1 Permit Modification to reflect these changes and was issued a new permit with the updated name and EPA ID in 2005. Thus, this facility is being tracked under a new EPA ID # CAR000156125.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/26/2022

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/26/2022

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2019

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Version Date:	2018

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

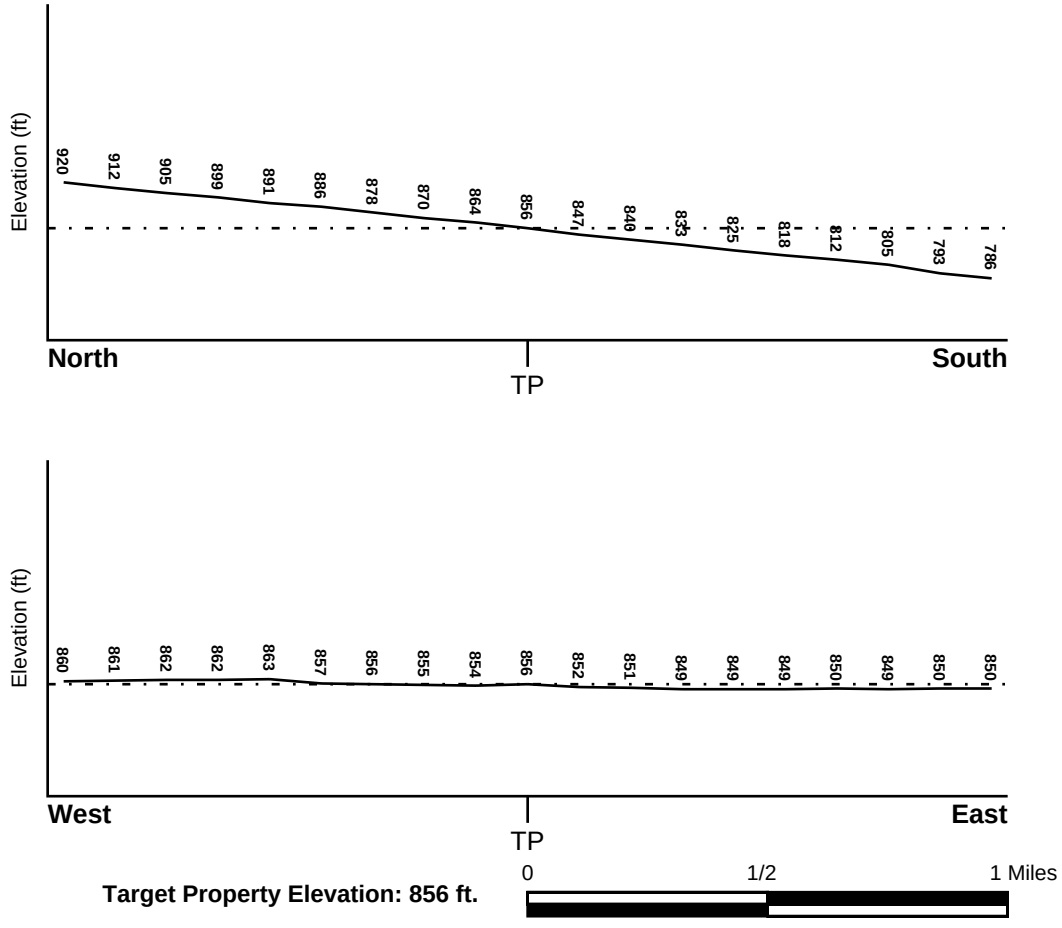
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1750F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

06071C8638H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
ONTARIO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1
2	18 inches	59 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: HILMAR

Soil Surface Texture: loamy fine sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	22 inches	loamy fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9
2	22 inches	59 inches	stratified loamy sand to loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

NO.	INSPECTION PARAMETERS	FINDINGS
1.	Are commercial process activities conducted outdoors?	No
2.	Are BMPs implemented in outdoor commercial process areas?	N/A
3.	Are raw materials, products, equipment, or wastes that have a potential to impact stormwater quality stored outside?	No
4.	Are BMPs implemented in outdoor storage areas?	Yes
5.	Is there a spill containment plan in place?	N/A
6.	Are there storm drain inlets on-site?	Yes
Comments: parkway drain		
7.	Do the storm drain inlets appear to be properly maintained and/or cleaned?	Yes
8.	Does this facility discharge authorized non-storm water to the storm drain system?	No
9.	Is there evidence of unauthorized non-storm water discharges, past spills, or illicit discharges to the storm drain system?	No
10.	Are there indoor drains or sinks connected to the storm drain system?	No
11.	Are landscaped areas properly maintained and free of erosion?	Yes
12.	Are parking areas properly maintained and free of debris and excessive oil?	Yes
13.	Is vehicle or equipment repair/maintenance performed on-site?	No
14.	Are vehicle or equipment repair/maintenance BMPs being implemented?	N/A
15.	Is vehicle, equipment, or exterior surface cleaning being performed on-site?	No
16.	Is a mobile wash contractor being used to clean vehicles, equipment, or exterior surfaces?	No
17.	Are vehicle, equipment, and exterior surface cleaning BMPs being implemented?	N/A
18.	Is the site free of litter and liquid waste?	Yes
19.	Are the contents of waste receptacles protected from contact with stormwater?	Yes

Additional Observations

No actions required.

The following signature acknowledge my receipt of this document on behalf of the business owner and my acknowledgment that a failure to make the required corrections may result in additional enforcement action by the City, County, and / or other government agencies:

Department of Toxic Substances Control

Barbara A. Lee, Director
9211 Oakdale Avenue
Chatsworth, California 91311

SUMMARY OF OBSERVATIONS

On 9/13/17, the Department of Toxic Substances Control (DTSC), California Environmental Protection Agency, conducted an inspection at:

Facility Name: HHS Construction
Facility Address: 2042 S Grove Ave
Ontario, CA, 91761
EPA ID Number: CALOOO406821 **County:** San Bernardino

Check box below as appropriate
DTSC will provide you a complete inspection report within 65 days of the date of this inspection.

☑ As a result of this inspection, no violations of hazardous waste laws, regulations, and requirements were discovered. DTSC greatly appreciates the efforts you have made to comply with the hazardous waste laws and regulations.

☐ As a result of this inspection, no violations of hazardous waste laws, regulations, and requirements were discovered. However, DTSC is still reviewing compliance information. Violations may be found after the site visit, and these will be identified in the Violation section of the inspection report.

☐ As a result of this inspection the issue(s) listed in Section IV require additional investigation. DTSC will address all unresolved issues in the inspection report. Violations may be found after the site visit, and these will be identified in the Violation section of the inspection report.

TREATED WOOD WASTE INSPECTION CHECKLIST

DTSC oversees the regulation and management of treated wood waste (TWW) in California. The regulations for TWW management in California can be found in the California Code of Regulations, Title 22, Chapter 34, and are commonly referred to as the Alternative Management Standards (AMS).

Inspection Date: 9/13/17

Facility Name: HTS Construction

TWW Facility Type:

Generator Site: ☑ Disposal Facility: ☐ Transfer Station/Load-Check: ☐

EPA ID # or State HW ID #: CAL000406821

Site Address: 2042 South Grove Ave, Ontario CA 91761

Owner/Operator Name: John Navarrete

Facility Telephone Number: (909) 393-3322

Inspector Name: Kevin Montevideo Title: Environmental Scientist

Inspector Name: Steve Brand Title: Environmental Scientist

Other Facility Representative(s) Present: Marvin Garcia

CONSENT TO INSPECT: Inspections may involve obtaining photographs, reviewing and copying records, sampling, and interviewing employees.

Consent Granted By: Marvin Garcia Title: Purchasing Manager

Date(s): 9/13/17 Time In: 9:50 Time Out: 11:30

DISCLAIMER

This checklist is intended to provide guidance only. This checklist does not replace or supersede relevant statutes and regulations. The information contained in this checklist is based upon the statutes and regulations in effect as of the date the checklist was signed. Interested parties are advised to keep apprised of subsequent changes to relevant statutes and regulations. Additional violations may be cited upon further review of documentation in the course of this inspection.

	Y	N	N/A	HAZARDOUS WASTE REQUIREMENTS FOR TWW
				Labeling
1			✓	Each unit and/or area of TWW is clearly marked and visible for inspection [California Code of Regulations, Title 22 [CCR] 67386.5(a)]
2			✓	Each area designated for accumulation of TWW is used solely for the accumulation of TWW [CCR 67386.5(a)]
3			✓	TWW is labeled or marked with the following: "Treated Wood Waste—Do not burn or scavenge" TWW Handler Name and Address _____ Accumulation Date _____ [CCR 67386.5(b)]
4			✓	No label or mark that identifies the wood as TWW shall be intentionally removed or defaced prior to disposal. [CCR 67386.3(b)]
				Accumulation
5			✓	Facility can demonstrate the length of time that the TWW has been accumulated from the date it is received or generated [CCR 67386.6(d)]
6			✓	Unauthorized access is prevented by visual controls or a physical barrier when not under the direct control of the person responsible for the TWW [CCR 67386.6(a)(1)]
TWW shall be accumulated in a manner that is protected from run-on and run-off, and placed on a surface sufficiently impervious to prevent, to the extent practical, contact with and leaching to soil or water, which may be accomplished by one of the following [CCR 67386.6.(a)(2)]				
				Block and Tarp
7			✓	TWW is elevated to prevent contact with the soil and run-on [CCR 67386.6(a)(2)(A)1]
8			✓	TWW is covered to protect from precipitation [CCR 67386.6(a)(2)(A)2]
9			✓	TWW is accumulated no longer than **90 days** from the date generated or received from another handler [CCR 67386.6(a)(2)(A)3]
				Containerized Storage
10			✓	The container is designed, constructed, maintained, and closed to prevent releases [CCR 67386.6(a)(2)(B)1]
11			✓	The container is water resistant if exposed to precipitation, run-on, and/or run-off [CCR 67386.6(a)(2)(B)2]
12			✓	The container is transported to a TWW facility within 90 days of being filled to capacity [CCR 67386.6(a)(2)(B)3]
13			✓	TWW is accumulated in containers no longer than **one year** from the date that it is generated or received from another handler [CCR 67386.6(a)(2)(B)]
				Containment Pad
14			✓	TWW is not in contact with soil [CCR 67386.6(a)(2)(D)1]
15			✓	TWW is protected from run-on and precipitation [CCR 67386.6(a)(2)(D)2 and 67386.6(a)(2)(D)3]
16			✓	TWW is accumulated no longer than **180 days** from the date the TWW is generated or received from another handler [CCR 67386.6(a)(2)(D)]

Y = Compliance; N = Not in Compliance; N/A = Not Applicable

	Y	N	N/A	HAZARDOUS WASTE REQUIREMENTS FOR TWW
			✓	**Storage Building**
17			✓	Storage building is structurally sound [CCR 67386.6(a)(2)(C)]
18			✓	Storage building has a water-resistant floor designed to prevent the movement of water into or out of the building [CCR 67386.6(a)(2)(C)]
19			✓	TWW is accumulated in containers no longer than **one year** from the date the it is generated or received from another handler [CCR 67386.6(a)(2)(C)]
			✓	**Other**
20			✓	TWW is protected from run-on and run-off [CCR 67386.6(a)(2)(E)]
21			✓	TWW is placed on impervious surface to prevent contact with and leaching to soil or water [CCR 67386.6(a)(2)(E)]
22			✓	TWW is accumulated no longer than **90 days** from the date generated or received from another handler [CCR 67386.6(a)(2)(E)]
A handler may accumulate TWW for longer than one year from the date the TWW is generated or received from another handler, if the accumulation is solely for the purpose of accumulation of quantities of TWW necessary to facilitate disposal pursuant to section 67386.11. However, the handler bears the burden of proving that the accumulation was solely for the purpose of accumulation of quantities of TWW necessary to facilitate proper disposal. [CCR 67386.6(c)]				
TWW generated which is incidental to the operation of a business and accumulated at the site of generation for a period not to exceed 30 days is exempt from the accumulation requirements of Section 67386.6 so long as the TWW is not physically altered, except as provided in section 67386.10, and the business accumulates no more than 1,000 pounds of TWW [CCR 67386.6(f)]				
	✓		✓ KM	**Disposal**
23	✓		✓	TWW is being disposed in either a Class I hazardous waste landfill or in an approved composite-lined portion of a solid waste landfill [CCR 67386.11(a)]
24			✓	A solid waste landfill that accepts TWW shall monitor the composite-lined portion of the landfill unit where the TWW is disposed [CCR 67386.11(b)(3)]
25			✓	If a release is verified at a solid waste landfill that accepts TWW, the department is notified that TWW is no longer being discharged to that landfill unit and notified again when corrective action results in cessation of the release [CCR 67386.11(b)(3)]
26			✓	A solid waste landfill that accepts TWW shall handle TWW pursuant to Cal OSHA requirements relating to hazardous waste [CCR 67386.11(b)(4)]
			✓	**Treatment**
27			✓	TWW treatment is prohibited except for resizing (to facilitate transport or reuse), sorting, and segregating [CCR 67386.10(a)]
28			✓	Resizing, sorting, and segregating TWW is conducted in a manner that prevents releases to the environment [CCR 67386.10(b)(1) and 67386.10(c)]
29			✓	Any sawdust, particles, or other materials less than one cubic inch are being captured and managed as TWW [CCR 67386.10(b)(2)]
			✓	**Prohibited Activities**
30			✓	TWW shall not be burned [CCR 67386.3(a)(1)]
31			✓	TWW shall not be scavenged [CCR 67386.3(a)(2)]
32			✓	TWW shall not be commingled with other waste prior to disposal, if previously segregated [CCR 67386.3(a)(3)]

Y = Compliance; N = Not in Compliance; N/A = Not Applicable

Printed on Recycled Paper

	Y	N	N/A	HAZARDOUS WASTE REQUIREMENTS FOR TWW
33			✓	TWW shall not be stored in contact with the ground [CCR 67386.3(a)(4)]
34			✓	TWW shall not be recycled, with or without treatment, except for reuse onsite in accordance with CCR 67386.3(c) [CCR 67386.3(a)(5)]
				Receipt of Shipments
35			✓	Record Retention: TWW handlers and facilities shall retain the records of all shipments and receipts for three years [CCR 67386.8(e)(2)]
36			✓	Records of TWW received at the facility contain the name and address of the originating TWW generator [CCR 67386.8(b)(1)]
37			✓	Records of TWW sent to a facility contain the name and address of the TWW facility to which the TWW was sent [CCR 67386.8(a)(1)]
38			✓	Records contain the weight of TWW or the estimated weight if scale is unavailable [CCR 67386.8(b)(2)] or [CCR 67386.8(a)(2)]
39			✓	Records contain the date the shipments were sent or received [CCR 67386.8(b)(3)] or [CCR 67386.8(a)(3)]
				Reporting Receipt of Shipments
40			✓	The facility submits semi-annual reports to DTSC for the periods ending June 30 and December 31 of each year [CCR 67386.8(c)]
41			✓	The reports are submitted in an electronic format within 30 days of the end of each reporting period [CCR 67386.8(c)]
42			✓	The reports include the facility name, location address, contact person's name, phone number, and identification number [CCR 67386.8(c)(1)1 and 67386.8(c)(1)2]
43			✓	If the shipment is received from a generator of TWW the report includes the generator's ID number, dates of shipments, and the weight of the TWW per shipment. If generator does not have an ID number the name, address, contact person's name, mailing address, and phone number for the generator is included [CCR 67386.8(c)(2)]
44			✓	If the shipment is received from another TWW facility the report includes the facility's ID number, dates of shipments, and the weight of the TWW per shipment. If facility does not have an ID number the name, address, contact person's name, mailing address, and phone number for the facility is included [CCR 67386.8(c)(5)]
45			✓	The report includes the weight summary of all TWW generated by households [CCR 67386.8(c)(3)]
46			✓	The report includes weight summary of all TWW found in load checks [CCR 67386.8(c)(4)]
				Offsite Shipments
47			✓	Handler only ships TWW to TWW facility, TWW approved landfill or to a consolidation site (if TWW is generated at remote site) [CCR 67386.7(a)]
48			✓	TWW is transported in a manner that prevents unauthorized access, exposure to precipitation, and releases [CCR 67386.7(d)]
				Satellite Accumulation
49			✓	The TWW is being transported by the generator, employees of the generator or by the generator's agent if the TWW is generated at a remote site [CCR 67386.7(c)(1)]

Y = Compliance; N = Not in Compliance; N/A = Not Applicable

	Y	N	N/A	HAZARDOUS WASTE REQUIREMENTS FOR TWW
50			✓	A shipping document accompanies the TWW while in transport to the consolidation site [CCR 67386.7(c)(2)]
The shipping document contains all of the following:				
51			✓	The quantity, by weight or volume, of TWW being transported. [CCR 67386.7(c)(2)(A)]
52			✓	The location of the remote site where the TWW was initially collected [CCR 67386.7(c)(2)(B)]
53			✓	The date that the generator first began to accumulate the TWW at the remote site, the date that the shipment leaves the remote site, and the date that the shipment arrives at the consolidation site [CCR 67386.7(c)(2)(C)]
54			✓	The name, address, and telephone number of the generator, and, if different, the address and telephone number of the consolidation site to which the TWW is being transported [CCR 67386.7(c)(2)(D)]
55			✓	The name of the individual or individuals who transport the TWW from the remote site to the consolidation site [CCR 67386.7(c)(2)(E)]
Notification				
56			✓	In any calendar year that a TWW handler generates more than 10,000 pounds of TWW, the handler shall obtain or maintain an Identification Number within 30 days of exceeding the weight threshold [CCR 67386.9 (a)]
57			✓	In any calendar year that a TWW handler generates more than 10,000 pounds of TWW, the handler shall send written notification to the Department within 30 days of exceeding the 10,000 pound limit [CCR 67386.9 (b)]
The notification shall include:				
58			✓	TWW handler's name and mailing address [CCR 67386.9 (c)(1)]
59			✓	generator's Identification Number[CCR 67386.9 (c)(2)]
60			✓	name and business telephone number of the person at the TWW handler's site who should be contacted regarding TWW management activities [CCR 67386.9 (c)(3)]
61			✓	address or physical location of the TWW management activities [CCR 67386.9 (c)(4)]
62			✓	date the TWW handler exceeded the 10,000 pound limit [CCR 67386.9 (c)(5)]
63			✓	a statement indicating that the handler is generating more than 10,000 pounds of TWW per calendar year [CCR 67386.9 (c)(6)]
Training				
64			✓	All employees that handle and/or treat TWW or may come into contact with TWW receive training [CCR 67386.12(a) and 67386.10(d)]
The training shall include the following:				
65			✓	All applicable requirements of Cal-OSHA rules, regulations and orders relating to hazardous waste [CCR 67386.12(a)(1) and 67386.10(d)(1)]
66			✓	Procedures for identifying and segregating TWW [CCR 67386.12(a)(2) and 67386.10(d)(2)]
67			✓	Safe handling practices [CCR 67386.12(a)(2) and 67386.10(d)(3)]
68			✓	Requirements of the alternative management standards [CCR 67386.12(a)(2) and 67386.10(d)(4)]
69			✓	Proper disposal methods [67386.12(a)(2) and 67386.10(d)(5)]

Y = Compliance; N = Not in Compliance; N/A = Not Applicable

TREATED WOOD WASTE INSPECTION OBSERVATIONS

Observations:

HHS Construction employs an exemption from the treated wood waste (TWW) alternative management standards (AMS) under California Health and Safety code 25143.1.5(b) in that they exclusively manage/handle utility telephone poles removed from service.

Recommendation:

Although HHS Construction employs an exemption under California Health and Safety code 25143.1.5(b), EERD recommends that the proper TWW label be applied to the TWW accumulation bin onsite. The label is called out in the TWW generator fact sheet which was supplied to HHS Construction. This recommendation is not mandatory, but is rather a suggestion to improve the already satisfactory job of TWW management by HHS Construction.

CUPA COMPLIANCE INSPECTION REPORT

NAME: HHS Construction Inc.	FACILITY ID: FA0015264
ADDRESS: 2042 S Grove Ave	CERS ID: 10476988
CITY: Ontario STATE: CA ZIP CODE: 91761	INSPECTION DATE: 3/24/2020

Consent granted by:

☒ Photograph ☒ Inspect **Name:** Hector Alvarez **Title:** Yard Manager

An inspection was conducted on 3/24/2020 to determine compliance with applicable hazardous materials and hazardous waste laws and regulations. Hector Alvarez, Yard Manager, was the escort during the inspection. Also present during document review was Micah Radnich, Fleet Manager.

This facility is a contractor for telecommunication construction sites. Hazardous waste such as used oil and waste antifreeze are generated on site from vehicle maintenance.

Inventory:

- (1) 240 gallon container, (1) 120 gallon container and (1) 55 gallon drum of new oil
- (1) 240 gallon container of used oil
- (3) 55 gallon drums of hydraulic oil
- (1) 55 gallon drum of waste antifreeze
- (1) 55 gallon drum of waste oily solids
- (1) 330 gallon tote and (1) 55 gallon drum of diesel exhaust fluid
- (1) 55 gallon drum of drained used oil filters
- (15) 8 gallon containers of propane
- (1) 55 gallon drum of acetone

Document Review

- CUPA program permits are current; expiration date of 2-28-2021.
- EPA ID # CAL000406821 was inactive at time of inspection.
- Business plan last submitted via California Environmental Reporting System (CERS) on 6-11-2019. CERS ID 10476988.
- Desert Environmental Services is the hazardous waste hauler. Disposal documentation was available for review at time of inspection.
- Facility generates approximately 120 gallons of hazardous waste per month.
- Employee safety training meetings are conducted weekly. Training documentation was available for review.

Submit the completed Certificate of Compliance (CofC) provided along with all requested documentation, to this Division within 30 days of inspection.

Please contact Aleasha Enciso at (909) 386-8401 or by email at aenciso@sbcfire.org with any questions regarding this report.

If you have any questions regarding CERS, please call the CERS Help Line at (909) 386-8432.

Refer to Title 19 and Title 22 of the California Code of Regulations (CCR), Chapters 6.5, 6.67 and 6.95 of the California Health Safety Code (CHSC), and Division 3 of Title 2 of the San Bernardino County Code (SBCC). The following lines marked in the V column are violations that must be corrected.

Violation:	**Container Management Requirements**			X
MINOR	Failure to meet the following container management requirements: Hazardous waste containers shall always be closed during storage, except when it is necessary to add or remove waste. A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak. 40 CFR 1 262.34(a)(2), 265.173 OBSERVATION: At time of inspection (1) 55 gallon drum of waste antifreeze and (1) 55 gallon drum of waste oily solids located in the hazardous waste storage area of the mechanics shop were observed open when not in use. CORRECTIVE ACTION: Close all the hazardous waste containers and submit photos to the CUPA demonstrating that the containers listed above have been properly closed.

CERTIFICATE OF COMPLIANCE

Return certification to inspector ALEASHA ENCISO within 30 days of inspection unless otherwise specified.

RESPONDENT: Hector Alvarez

VIOLATION(S) CITED ON: 3/24/2020

FACILITY NAME: HHS Construction Inc. FACILITY ID: **FA0015264**

SITE ADDRESS: 2042 S Grove Ave CERS ID: **10476988**

CITY: Ontario STATE: **CA** ZIP CODE: **91761**

Summary of Violations:

IMPORTANT- Attach all requested documentation when returning this certification.

W213	CORRECTIVE ACTION: Dispose of hazardous waste that has been stored over the applicable time limit and provide documentation that the violation has been corrected.
W216	CORRECTIVE ACTION: Close all the hazardous waste containers and submit photos to the CUPA demonstrating that the containers listed above have been properly closed.
W238	CORRECTIVE ACTION: Submit a copy of the inspection log to the CUPA demonstrating that the hazardous waste storage area is being inspected weekly.
W138	CORRECTIVE ACTION: Close and properly label the drum of drained used oil filters. Submit photos demonstrating violations have been corrected.
W110	CORRECTIVE ACTION: Properly label all hazardous waste containers and submit photos indicating all hazardous waste containers have been properly labeled.
W104	CORRECTIVE ACTION: Submit form #1358 to Department of Toxic Substances Control (DTSC) to reactivate EPA ID number CAL000406821. Submit a signed statement indicating form #1358 has been sent to DTSC within 30 days.
H209	CORRECTIVE ACTION: Submit an updated hazardous materials inventory via CERS within 30 days. CERS ID 10476988.
H211	CORRECTIVE ACTION: Submit accurate federal hazard category information for all items listed on hazardous materials inventory via CERS within 30 days.

I certify under penalty of law that:

- o Respondent has corrected violations specified in the above-entitled action.
- o I have personally examined any documentation attached to this certification to establish that the violations have been corrected.
- o Based on my examination of the attached documentation and inquiry of the individuals, who prepared or obtained them, I believe the information is true, accurate and complete.
- o I am authorized to file this certification on behalf of the Respondent.
- o I am aware there are significant penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations.

RE: HHS Construction LLC

Curry, Dave <DAVE@hhsconstruction.net>
To Enciso, Aleasha

Wed 6/17/2020 10:12 AM

Hi Aleasha,
I have been told the Acetone barrel was empty and it is no longer on the premises, so I won't add it to the inventory. Hopefully that is ok or do you need anything further?

Thanks,

Dave Curry

IMPORTANT NOTICE REGARDING THE DISPOSITION OF YOUR USED OIL

PLEASE SIGN AFTER READING

Desert Environmental Services, Inc. hereby advises _____ (Used Oil Generator) that _____ (Generator's) shipment of used oil may be transported to a facility that is required to comply with federal regulations applicable to management of used oil, but that is not required to comply with the more stringent requirements applicable to hazardous waste management facilities. California facilities that handle or process used oil are required to meet those more stringent requirements, and some out-of-state facilities that process used oil also meet those requirements. These include more stringent leak detection and prevention requirements, engineering certifications of tank integrity, and financial assurances for closure and accidental releases. It is lawful to send used oil to out-of-state facilities that comply only with federal used oil management standards and not these more stringent requirements.

This notification is for information purposes only.

SUBJECT: COMPLIANCE DEADLINE REMINDER NOTICE

FACILITY: FA0015264-HHS Construction Inc.
2042 S Grove Ave
Ontario, CA 91761

A post-inspection compliance review indicates that the following violations cited at the time of inspection on **March 24, 2020**, remain outstanding.

- Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met:
  (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms.
  (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f).
  (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days. CHSC 6.5 25123.3(h)(1); 22 CCR 12 66262.34(d)
- Failure to meet the following container management requirements:
  (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste.
  (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak. 40 CFR 1 262.34(d)(2), 265.173
- Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers. 40 CFR 1 262.34(d)(2), 265.174
- Failure to properly manage used oil and/or fuel filters in accordance with the requirements. 22 CCR 16 66266.130; CHSC 6.5 25250.22
- Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
- Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
- Failure to electronically update business plan within 30 days of any one of the following events:
  A 100 percent or more increase in the quantity of a previously disclosed material.
  Any handling of a previously undisclosed hazardous materials at or above reportable quantities.
  A change of business address, business ownership, or business name.
  A substantial change in the handler's operations that requires modification to any portion of the business plan.

- Failure to accurately complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities of 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases

If all compliance documentation has recently been submitted, please disregard this notice

IMPORTANT: All compliance documentation requested on the inspection report must be received by this Division within **30 days from the date of the violation** or as otherwise indicated in the inspection report. This CUPA (Certified Unified Program Agency) is required by the State of California to gain compliance from all facilities subject to hazardous materials and hazardous waste laws and regulations **Complying within 30 days of violation or as indicated in the inspection report, is the most efficient and the least inconvenient way for a facility to resolve outstanding violations.** If formal enforcement is necessary to gain compliance after 30 days, the facility will be **subject to substantial civil fines, costs and other penalties** pursuant to California Health and Safety Code (CHSC) 25404.1.1 & 25187.8.

If I can be of assistance in helping you correct the violations stated above or if you have any other questions, please don't hesitate to contact me at AENCISO@SBCFIRE.ORG or (909) 386-8401.

SUBJECT: INSPECTION COMPLIANCE REQUIREMENTS

FACILITY: FA0015264-HHS Construction Inc.
2042 S Grove Ave
Ontario, CA 91761

Dave Curry,

A recent review of our records indicates that the following violation(s) remain outstanding from the inspection conducted on January 30, 2017:

- Failure to obtain an EPA ID Number
- Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
- Hazardous waste containers labels not complete
- Failure to note accumulation start date on labels
- Failure to manage Used Oil filters lawfully

Failure to submit the signed and completed certificate of compliance with the previously requested documentation immediately may result in legal action.

If you have any questions, please call me at (909) 386-8401 or email me at JTAO@SBCFIRE.ORG.

JUSTIN TAO, REHS
Hazardous Materials Division

HAZARDOUS WASTE GENERATOR AND HAZARDOUS MATERIALS HANDLER INSPECTION REPORT

FA #: 0015264 Facility Name: HHS Construction Inspection Date: 1/30/17

Site Address: 2042 S Grove Phone #: (909) 345-3522

City: Ontario Zip Code: 91761 EPA ID #: CALD004068821

Consent Granted by:

☒ Inspect ☒ Photograph Name: Micah Radnich Title: Fleet Manager

Refer to Title 19 and Title 22 of the California Code of Regulations (CCR), Chapter 6.5 and 6.95 of the California Health and Safety Code (CHSC) and Division 3 of Title 2 of the San Bernardino County Code (CC)

THE FOLLOWING SECTIONS ARE IN VIOLATION IF THEY ARE CHECKED

General Requirements:

☐ 101. / 201. Hazardous Waste and/or Materials Permits not current. (CC 23.0602(a)) Permits are current - expire 2/28/17
Compliance requirement: Submit fees within 30 days of billing.

☒ 104. EPA ID Number not obtained for waste generation. (CCR 66262.12(a)) EPA ID # is inactive
↳ **Compliance Requirement**: Obtain permanent EPA ID Number by submitting Form 1358 to DTSC. Submit your EPA ID Number to this Division.

☐ 106. Facility not operated to prevent a spill or release. (CCR 66265.31) facility operated to prevent spill or release
Compliance Requirement: Facility must conduct housekeeping & operate to prevent all spills. Signature on certification below denotes compliance.

☐ 107. A Contingency Plan has not been established. (CCR 66265.51(a)) Inside: (2) 250-gl motor oil (1) 55-gl waste antifreeze (1) 55-gl drained used oil filters (2) 55-gl hydraulic oil (1) 55-gl waste solids (1) 250-gl DEF (4) 55-gl used oil (3) 55-gl new diesel (1) 55-gl degreaser (12) 8-gl propane

☐ 202. A Business Plan has not been established. (CHSC 25507)

☒ 206. Business Plan not updated w/in 12 months (CHSC 25508.2) ↳ last BP submitted on 1/7/14

☐ 203. A Business Plan has not been submitted. (CHSC 25508)
Compliance Requirement: Using the California Environmental Reporting System (CERS), submit Business Plan information into the statewide information management system.

☐ 131. Training documentation not complete or available. (CCR 66262.34(d)(2)) Training is provided bi-weekly
Compliance Requirement: Submit training documentation as required.

Container Storage and Labeling Requirements:

Waste: Republic Environmental Services

☒ 110. Hazardous waste containers are not labeled/marked. (CCR 66262.34(f)(3)) (1) 55-gl waste solid missing waste label

☒ 111. Hazardous waste label is incomplete. (CCR 66262.34(f)(3)) Waste labels incomplete

☒ 112. Accumulation start date is missing from tank/container. (CCR 66262.34(f)(2)) No accumulation start date available on all containers
↳ **Compliance Requirement**: Hazardous waste label is to be applied to the tank/container. All fields and lines are to be correctly completed.

☐ 113. Accumulation time exceeded. (CCR 66262.34) time not exceeded - last pick upon
Compliance Requirement: Dispose of waste using a licensed waste hauler within 30 days. Submit copies of disposal documents to this Division.

☐ 114. Hazardous waste container not sound. (CCR 66265.171) waste containers are sound

☐ 115. Hazardous waste container leaking. (CCR 66265.173(b)) Not leaking

☐ 116. Hazardous waste container open when not in use. (CCR 66265.173(a)) Closed when not in use
Compliance Requirement: Waste containers must be sound, not leaking and closed when not in use.

Waste Management:

☐ 119. Hazardous waste managed unlawfully. (CHSC 25154) waste managed lawfully
Compliance Requirement: Hazardous waste containers and aboveground tanks must be labeled, closed, and inspected (weekly or daily, as appropriate). Waste is to be removed by a licensed waste hauler within the allowed time periods.

☐ 128. Failure to retain **manifested** waste disposal records for 3 years. (CCR 66262.40(a)) N/A

☐ 137. Failure to retain **consolidated** waste disposal records for 3 years. (CHSC 25160.2(b)(3)) Disposal records available

Compliance Requirement: Submit copies of waste disposal records for the past N/A

☒ 138. Unlawful management of used oil filters. (CCR 66266.130) No start date available
↳ **Compliance Requirement**: Label all used oil filter containers with "DRAINED USED OIL FILTERS" and the accumulation start date.

INSPECTION NARRATIVE

An inspection was conducted to determine compliance with applicable hazardous waste and hazardous materials laws and regulations.

Permission to inspect and photograph granted by Dave Curry – Director of Safety. Mr. Curry also escorted inspectors, Obeso and Wade throughout the inspection.

HHS Construction, Inc is a contractor for the installation of communications systems. This facility recently relocated from 14455 Ramona Avenue, Chino, CA 91710. There are large vehicles and heavy equipment stored on site.

Inventory:
(1) Cylinder of Acetylene
(1) Cylinder of Oxygen
(4) Cylinders of Argon
(4) Cylinders of Nitrogen
(14) Cylinders of Propane
(18) 55-gal. drums of Tack Oil
(1) 55-gal. drum lube oil
(2) 55-gal. drums of waste oil
(2) 55-gal. drums of oil filters
(1) 55-gal. drum of spent antifreeze

☒ NOTICE OF VIOLATION: THE VIOLATIONS NOTED ABOVE MUST BE CORRECTED WITHIN 30 DAYS. FAILURE TO COMPLY MAY RESULT IN LEGAL ACTION. THE CERTIFICATE OF COMPLIANCE SHALL BE SUBMITTED WITHIN THE TIME PERIOD NOTED ABOVE.

Document Review:

No CUPA permits pending fee schedule restructuring. A CUPA Business Emergency/Contingency Plan has not been established/submitted. A complete Business Plan submittal is required via the California Environmental Reporting System (CERS). No CERS ID number exists for this facility. Waste disposal records were available for review but the EPA ID# used belongs to an employee. A valid EPA ID# has not been obtained.

Correct the following violations within 30 days of receipt of this report:

101. Failure to obtain a Hazardous Waste Generator Permit – CC23.0602(b)(1). Facilities that generate hazardous wastes are required to obtain a hazardous waste generator permit. Containers of waste oil, batteries, and waste antifreeze were observed during this inspection.

Compliance requirements: Pay the permit invoice upon receipt from this Department.

104. Failure to obtain an EPA ID # - CCR 66262.12(a) - Facilities that generate hazardous waste must dispose of waste using an EPA ID # that is specific to the facility. Current EPA ID # in use belongs to one of the employees. Application for an EPA ID # form was completed at the time of this inspection, but a number does not appear in the Hazardous Waste Tracking System.

Compliance requirements: Complete and submit the application for an EPA ID # and submit a copy of the EPA ID # to this Department.

107. Failure to establish a Contingency Plan – CCR 66265.51(a). No Contingency Plan available for review at the time of this inspection.

Compliance requirements: Establish a Contingency Plan and complete the Certificate of Compliance attached to this report and mail back to this Department.

110, 111, 112. Failure to affix complete Hazardous Waste Labels to tanks/containers of hazardous waste - CCR 66262.34(f)(3), CCR 66262.34(f)(2). Containers were observed to be

X NOTICE OF VIOLATION: THE VIOLATIONS NOTED ABOVE MUST BE CORRECTED WITHIN 30 DAYS. FAILURE TO COMPLY MAY RESULT IN LEGAL ACTION. THE CERTIFICATE OF COMPLIANCE SHALL BE SUBMITTED WITHIN THE TIME PERIOD NOTED ABOVE.

Consent Granted by: XInspect XPhotograph	NAME: DAVE CURRY	TITLE: DIRECTOR OF SAFETY	

either missing labels or labels were incomplete. Accumulation start dates were missing from the labels as well.

Compliance requirements: Attach completed Hazardous Waste labels to all waste storage containers. Include accumulation start dates and dispose of waste within the 180 day period.

118. Failure to inspect container storage area weekly – CCR 6626.174. No inspection program in place at the time of this visit.

Compliance requirements: conduct and document inspections. Submit copies of 3 weeks worth of inspections to this Department.

138. Failure to mange used oil filters lawfully – CCR 66266.130. 2 drums of used oil filters were stored without labels.

Compliance requirements: Attach completed labels to the drums and dispose of through appropriate channels.

201. Failure to obtain a Hazardous Materials Handler Permit – CC 23.0602(b)(3). A facility which handles hazardous materials is required to obtain a permit. No permit has been issued for this facility.

Compliance requirements: Pay the permit invoice upon receipt from this Department.

202, 203. Failure to establish and submit a Business Plan. All Plans are now required to be submitted electronically on the California Environmental Reporting System (CERS). No plans are on file in CERS or with this Department.

Compliance requirements: Submit a complete and accurate Business Plan on the CERS website. (Brochure left on site). Should you need assistance, you may call the CERS helpdesk at 909.386.8432.

X NOTICE OF VIOLATION: THE VIOLATIONS NOTED ABOVE MUST BE CORRECTED WITHIN 30 DAYS. FAILURE TO COMPLY MAY RESULT IN LEGAL ACTION. THE CERTIFICATE OF COMPLIANCE SHALL BE SUBMITTED WITHIN THE TIME PERIOD NOTED ABOVE.

INSPECTION NARRATIVE

An inspection was conducted to determine compliance with applicable hazardous waste and hazardous materials laws and regulations.

Permission to inspect and photograph granted by Dave Curry – Director of Safety. Mr. Curry also escorted inspectors, Obeso and Wade throughout the inspection.

HHS Construction, Inc is a contractor for the installation of communications systems. This facility recently relocated from 14455 Ramona Avenue, Chino, CA 91710. There are large vehicles and heavy equipment stored on site.

Inventory:

(1) Cylinder of Acetylene
(1) Cylinder of Oxygen
(4) Cylinders of Argon
(4) Cylinders of Nitrogen
(14) Cylinders of Propane
(18) 55-gal. drums of Tack Oil
(1) 55-gal. drum lube oil
(2) 55-gal. drums of waste oil
(2) 55-gal. drums of oil filters
(1) 55-gal. drum of spent antifreeze

SUPPLEMENTAL INSPECTION REPORT

ACILITY ID	FACILITY NAME:	FACILITY LOCATION:	INSPECTION DATE: 12.19.2013
	HHS CONSTRUCTION, INC	2042 S. GROVE AVENUE, ONTARIO, CA 91761	
Consent Granted by: XInspect XPhotograph	NAME DAVE CURRY	TITLE DIRECTOR OF SAFETY	

Document Review:

No CUPA permits pending fee schedule restructuring. A CUPA Business Emergency/Contingency Plan has not been established/submitted. A complete Business Plan submittal is required via the California Environmental Reporting System (CERS). No CERS ID number exists for this facility. Waste disposal records were available for review but the EPA ID# used belongs to an employee. A valid EPA ID# has not been obtained.

Correct the following violations within 30 days of receipt of this report:

101. Failure to obtain a Hazardous Waste Generator Permit – CC23.0602(b)(1). Facilities that generate hazardous wastes are required to obtain a hazardous waste generator permit. Containers of waste oil, batteries, and waste antifreeze were observed during this inspection.

Compliance requirements: Pay the permit invoice upon receipt from this Department.

104. Failure to obtain an EPA ID # - CCR 66262.12(a) - Facilities that generate hazardous waste must dispose of waste using an EPA ID # that is specific to the facility. Current EPA ID # in use belongs to one of the employees. Application for an EPA ID # form was completed at the time of this inspection, but a number does not appear in the Hazardous Waste Tracking System.

Compliance requirements: Complete and submit the application for an EPA ID # and submit a copy of the EPA ID # to this Department.

107. Failure to establish a Contingency Plan – CCR 66265.51(a). No Contingency Plan available for review at the time of this inspection.

Compliance requirements: Establish a Contingency Plan and complete the Certificate of Compliance attached to this report and mail back to this Department.

110, 111, 112. Failure to affix complete Hazardous Waste Labels to tanks/containers of hazardous waste - CCR 66262.34(f)(3), CCR 66262.34(f)(2). Containers were observed to be

X NOTICE OF VIOLATION: THE VIOLATIONS NOTED ABOVE MUST BE CORRECTED WITHIN 30 DAYS. FAILURE TO COMPLY MAY RESULT IN LEGAL ACTION. THE CERTIFICATE OF COMPLIANCE SHALL BE SUBMITTED WITHIN THE TIME PERIOD NOTED ABOVE.

Consent Granted by: XInspect XPhotograph	NAME DAVE CURRY	TITLE DIRECTOR OF SAFETY	

either missing labels or labels were incomplete. Accumulation start dates were missing from the labels as well.

Compliance requirements: Attach completed Hazardous Waste labels to all waste storage containers. Include accumulation start dates and dispose of waste within the 180 day period.

118. Failure to inspect container storage area weekly – CCR 6626.174. No inspection program in place at the time of this visit.

Compliance requirements: conduct and document inspections. Submit copies of 3 weeks worth of inspections to this Department.

138. Failure to mange used oil filters lawfully – CCR 66266.130. 2 drums of used oil filters were stored without labels.

Compliance requirements: Attach completed labels to the drums and dispose of through appropriate channels.

201. Failure to obtain a Hazardous Materials Handler Permit – CC 23.0602(b)(3). A facility which handles hazardous materials is required to obtain a permit. No permit has been issued for this facility.

Compliance requirements: Pay the permit invoice upon receipt from this Department.

202, 203. Failure to establish and submit a Business Plan. All Plans are now required to be submitted electronically on the California Environmental Reporting System (CERS). No plans are on file in CERS or with this Department.

Compliance requirements: Submit a complete and accurate Business Plan on the CERS website. (Brochure left on site). Should you need assistance, you may call the CERS helpdesk at 909.386.8432.

NOTICE OF VIOLATION: THE VIOLATIONS NOTED ABOVE MUST BE CORRECTED WITHIN 30 DAYS. FAILURE TO COMPLY MAY RESULT IN LEGAL ACTION. THE CERTIFICATE OF COMPLIANCE SHALL BE SUBMITTED WITHIN THE TIME PERIOD NOTED ABOVE.

CERTIFICATE OF COMPLIANCE

Return Certification within 30 Days of Receipt to Inspector Gail Obeso

In the Matter of Respondent: **Brett Johnson**

Violation(s) cited on: **12.19.2013** *FA #::* **TBD**

Facility Name: **HHS Construction, Inc.**

Site Address: **2042 S. Grove Avenue, Ontario, CA 91761**

Certificate of Compliance Date: **1.6.2014**

I certify under penalty of law that:

- *Respondent has corrected the violations specified in the above-entitled action.*
- *I have personally examined any documentation attached to this certification to establish that the violations have been corrected.*
- *Based on my examination of the attached documentation and inquiry of the individuals, who prepared or obtained them, I believe the information to be true, accurate and complete.*
- *I am authorized to file this certification on behalf of the Respondent.*
- *I am aware there are significant penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations.*

Signature	*Date*
Printed or Typed Name	*Title*

Attach the following documentation when returning the Certificate of Compliance:

EPA ID#

Copies of 3 weeks worth of waste storage area inspections

Documentation of CERS ID # and electronic Plan submittal

INSPECTION REPORT

HHS Construction
2042 South Grove Avenue
Ontario, CA 91762
CA OES Control 21-6884
WDID No. 8 36IN607220 - App ID: 544505

INSPECTED BY: Keith Elliott (Inland Storm Water RWQCB Staff)

INSPECTION DATE: December 7, 2021

INSPECTION START/END TIMES (HH24:MI): Time In 1 2 : 3 7 - Timeout 13:06

PURPOSE: Complaint - CA OES Control 21-6884

Santa Ana Regional Water Quality Control Board (Santa Ana Water Board) staff interviewed Messrs. Dave Curry; dcurry@hhsconstruction.net and Hector Alvarez halvarez@hhsconstruction.net. Mr Alvarez gave consent and accompanied staff on the inspection. Staff was given the business card for Dan Scanlan (Sr VP Operations) dscanlan@hhsconstruction.net.

Dave indicated dirt, asphalt, and concrete spoils are placed in the staging area at the back of the lot from the removal of the first few inches or feet of asphalt or concrete from the streets where trenches are excavated to install fiber optic cables. These spoils are then transported to a facility that grinds the concrete and asphalt for reuse or disposed off site. The transport off-site is done three to four times per year.

Once the asphalt or concrete cap is removed from the street, then the trench is further excavated by water jets and the water from the trench is removed by Vacuum Trucks. This water is then transported back to the 2042 South Grove Avenue location where it is disposed by dumping it into a small pond in the staging area of the site. The sediment laden water in this pond then infiltrates and evaporates. Periodically the pond area is scraped to remove the settled sediment that has dried. The water used for this purpose originated from a fire hydrant located at the Grove Avenue site and transported to the construction site by water truck.

Staff was familiar with this construction process used near petroleum pipelines. Dave indicated that they do not work in areas of petroleum pipelines. They use this method to insure they do not hit any water or gas pipes in residential streets where they install the fiber optic cables.

Staff did observe some discoloration in the “pond” used to dispose of the wastewater jet water it did not have a sheen on it. This coloration may be from the different soil types from the different project sites.

The “pond” appears to have been constructed by building dirt berms at the back of the 2042 S. Grove Avenue lot to contain the water and prevent it from running off-site. No surface water

was observed leaving from this pond.

Staff wasn't positive if any permits from the Water Board were required for this activity and would get back to Dan Scantan and Dave Curry if any permits were required. IGP coverage is not required for this site. The SIC for this activity is 1623 - Water, Sewer, Pipeline, and Communications and Power Line Construction.

SUBJECT: UNDERGROUND STORAGE TANK REMOVAL AT 2042 S. GROVE, ONTARIO, CA

This Department has reviewed the test results submitted by Centrum Analytical laboratories for soil samples taken on August 1, 1991 at the above subject location. The results indicate that the amount of contamination in the excavation where the 2 tank(s) were removed is below that which is generally considered a hazard. Further investigation at this site is not warranted at this time.

It is important to note that this does not constitute a release of liability for any remaining contamination not yet detected. Should site conditions alter so as to reveal contamination, this Department may require further investigation and remedial action.

If you have any questions please call (714) 387-3080.

NOTE: The State of California has determined that tanks used for the storage of any hazardous or flammable substance shall be considered hazardous even if all contents have been removed.

All storage tanks shall be hauled as hazardous waste, accompanied by a state hazardous waste manifest, and taken to a licensed treatment, storage and disposal facility (TSDF); or if the tanks are triple rinsed on site and the rinsate manifested and hauled to a licensed TSDF, the tank may be handled as nonhazardous.

For information on licensed TSDFs that can accept nonrinsed tanks, contact the State of California Department of Health Services, Toxic Substance Control at (800) 258-6942.

TEMPORARY CERTIFICATE OF OCCUPANCY

RE: 2042 S. Grove
Ontario, California

OWNER: Grove Lumber Company
2042 S. Grove Avenue
Ontario, California

BUILDING PERMIT NO: 66154
ISSUED ON: 1-28-88

Gentlemen:

You are notified that this property and its permitted improvements are released for temporary occupancy. Issuance of final certificate of occupancy is subject to final inspection by Planning Department for compliance with approved plans and applicable city building codes, zoning ordinances and special conditions as required by various city commissions and boards.

A final certificate of occupancy will be issued when clearance from the Planning Department has been recieved.

Sincerely,

Kenneth Gilman
Building Official

Ontario, Ca. 91764

FROM: Grove Lumber and Building Supplies
2042 South Grove Avenue
Ontario, Ca. 91761

RE: DAB 3422-S

Dear Kenneth N. Gilman,

As per our conversation, June 9, 1988, and at your request, this letter is to acknowledge that Grove Lumber will complete the on-site improvement for 3422-S. The requirement yet to be fulfilled is the installation of tennis windscreen on the north side of the property. Grove Lumber will need five weeks for completion due to the availability of materials. Grove Lumber will notify you upon completion for your approval. If you have any questions, please contact Faron Van Dissel or myself.

Sincerely,

Thomas A. Day
Owner / Grove Lumber and Building Supplies

Expiration Date _____ Contractor Signature _____

OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors License Law for the following reason (Sec. 7031.5, Business and Proffessions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law Chapter 9 (commencing with Sectin 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).:

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.).

1. Introduction

Roux Associates, Inc. (Roux) has prepared this *Phase II Subsurface Investigation Report* (Phase II Report) for First Industrial Realty Trust, Inc., First Industrial, L.P., First Industrial Acquisitions II, LLC and their affiliates and assigns (Client), to summarize the findings of a Phase II Subsurface Investigation (Phase II) conducted at 2042 South Grove Avenue, Ontario, California (Subject Property; Figure 1). The Subject Property, identified by Assessor Parcel Number 105-049-111, is currently developed with two buildings occupied by HHS Construction, a telecommunications company that installs telecommunication utilities above- and below-ground, which require excavation and trenching for installation of fiber optic cables (Figure 2). The Phase II was conducted to assess the following findings identified during a Phase I Environmental Site Assessment (ESA) concurrently prepared by Roux (Roux, 2022a), as well as to investigate shallow soil in preparation for future Subject Property development.

- **Staged Material Originating Off-Site.** During the site reconnaissance of the Subject Property, a construction materials staging area was observed in the exterior western lot ("staging area"). According to Mr. Hector Alvarez, the yard manager, construction materials, including dirt, asphalt, and concrete, are generated from trenching and excavation activities during the installation of fiber optic cables off-site. In addition, based on the records of an inspection by the Santa Ana Regional Water Quality Control Board (SA RWQCB) in December 2021, waterjets were also used during trenching and excavation activities. The water used for this purpose was obtained from a fire hydrant on the Subject Property and transported to construction sites by water truck. Vacuum trucks were used to contain the water from the excavations, which was then transferred to a small, temporary pond on the Subject Property, constructed using earthen berms within the staging area, where the water infiltrated and evaporated. According to the SA RWQCB inspection report, an industrial general permit is not required for the Subject Property, and no sheen or other suspect conditions were observed. Considering the trenching and excavation activities take place at various locations around the Los Angeles area, including commercial and industrial properties, the condition of off-site construction material and wastewater is unknown.

- **Historical Agricultural Use.** According to historical sources, the Subject Property was used for agricultural purposes as an orchard as early as 1946 through 1966. It is unknown if agricultural chemicals, such as pesticides, herbicides and fertilizers, have impacted soil on the Subject Property.

- **Former Gasoline and Diesel USTs.** According to records from the San Bernardino County Fire Department (SBCFD), a permit application was submitted for the installation of one 1,000-gallon gasoline UST and one 1,000-gallon diesel UST at the Subject Property. A permit application to remove the two USTs was submitted on July 30, 1990. Following UST removal in August 1990, one soil confirmation sample was collected approximately 2 feet beneath each UST. The sample collected beneath the gasoline UST was analyzed for gasoline, and the sample collected beneath the diesel UST was analyzed for diesel. Soil confirmation results reported concentrations below laboratory reporting limits (<0.3 milligrams per kilogram (mg/kg) for gasoline, <10 mg/kg for diesel). The SBCFD issued a no further action (NFA) letter on October 25, 1991. Although no release or impacts were identified, Roux notes that the current SBCFD UST removal standards require a minimum of two samples collected beneath each UST, and confirmation samples must be analyzed for the stored material and its breakdown or transformation products (SBCFD HMD, 2012).

- **Potential for Vapor Intrusion.** The northeastern General Electric Co – Jet Engine Test Cell Facility, located at 2264 East Avion Street (located approximately 1.82 miles northeast of the Subject Property) is an open – verification monitoring case as of February 5, 2010. According to the GeoTracker case (SL208133868), the facility has operated as an aircraft engine facility since 1965. Subsurface investigations have identified volatile organic compounds (VOCs), specifically trichloroethene (TCE) as the primary chemical of potential concern (COPC). Remedial efforts include

a soil vapor extraction (SVE) system with a total of 23 SVE wells from 1996 through 2005 and groundwater monitoring since 1991. Based on the Fourth Quarter 2021 Groundwater Monitoring Report, dated January 24, 2022, the nearest groundwater monitoring well (OW-11) is located approximately 300 feet southeast of the eastern boundary of the Subject Property. The OW-11 groundwater monitoring well was installed in the intermediate zone with a screen depth of 323.50 to 333.40 feet bgs and has a TCE concentration of 2.2 micrograms per liter (µg/L; Wood, 2022), below the maximum contaminant level (MCL) of 5 µg/L. It is noted that no evidence has been identified indicating that current or historical operations at the Subject Property have contributed to the regional groundwater contamination plume. However, it is unknown if the presence of VOCs in groundwater in close proximity to the Subject Property and possible lateral and vertical migration pose a potential vapor intrusion concern.

The Phase II investigation was conducted to evaluate the condition of the Subject Property relative to intended commercial/industrial use, which is being contemplated by Client.

1.1 Objectives

Based on the above findings identified during preparation of the concurrent Phase I ESA, and the planned development activities at the Subject Property, the Phase II had the following objectives:

1. Establish baseline conditions at the Subject Property and investigate shallow soil to inform potential future earthwork activities; and
2. Investigate the above findings identified during the concurrent Phase I ESA to evaluate whether they constitute a REC or not.

1.2 Scope of Work

To accomplish these objectives, soil and soil vapor samples were collected at the Subject Property. Refer to Figure 2 for sample locations.

The scope of work for Phase II activities included:

- Pre-field activities including:
- Preparation of a Site-specific Health and Safety Plan (HASP);
- Notification of Underground Service Alert of Southern California at least 2 working days before fieldwork began;
- Conducting a geophysical survey with a private geophysical services and utility locating company to evaluate the proposed boring locations for buried utility lines.
- Field activities including:
- Advancement of 10 soil borings (B-1 through B-10) via hand auger and direct push drill rig to depths ranging between 5 and 25 feet below ground surface (bgs);
- Installation and sampling of two soil vapor probes at seven locations at depths ranging between 5 and 20 feet bgs; and
- Containment of soil cuttings in Department of Transportation (DOT) approved drums, profiling and arrangement for disposal of the drums off-site at an appropriate facility.

1.3 Report Organization

The remaining sections of this Phase II Report are organized as follows:

- Section 2.0 presents Subject Property Background information, including Subject Property description, Subject Property history, geology and hydrogeology;
- Section 3.0 describes the Phase II Subsurface Investigation activities;
- Section 4.0 provides a summary of results;
- Section 5.0 provides a summary of a Limited Human Health Risk Assessment;
- Section 6.0 provides a discussion of the results and presents the summary of conclusions;
- Section 7.0 provides the Report closing; and
- Section 8.0 provides a list of references used in this Phase II Report.

2. Subject Property Background

2.1 Subject Property Description and Historical Use

The Subject Property consists of a 4.2-acre parcel located in the City of Ontario, San Bernardino County, California (Figures 1 and 2). Based on a review of available resources, the Subject Property was undeveloped prior to 1933. By 1933, the Subject Property had been developed with a single residential structure. By 1946, the remainder of the Subject Property had been cultivated for agricultural purposes (orchards) along with the surrounding properties. The Subject Property remained agricultural until 1966. According to the GTE General Telephone Company of California, the Subject Property was occupied by "GROVE LUMBER/BUILDING" and "SUPERIOR CONSTRUCTION" and operated as a lumberyard (storage, no processing) in 1985. This was confirmed by Mr. Hector Alvarez, the current yard manager, during the site reconnaissance of the Subject Property. The South Coast Air Quality Management District (SCAQMD) issued a permit to operate (ID 9007543) for a gasoline storage and dispensing facility for the former tenant, Grove Lumber & Building Supplies, on October 6, 1981. By 1985, the Subject Property was developed with two buildings, the present-day main building and another building to the south, and associated asphalt-parking areas. At this time, the exterior western lot was used as storage for lumber and construction material. By 1990, the exterior storage appears to extend to the immediately north property, which ceased by 1994. Based on records from the SBCFD, two 1,000-gallon underground storage tanks (USTs) (gasoline and diesel) were removed in August 1990. Results of confirmation soil sampling following removal of the USTs revealed no detectable concentrations of total petroleum hydrocarbons (TPH), and the SBCFD subsequently issued a No Further Action (NFA) letter in 1991. The City of Ontario issued a building permit for the installation of a 4,500 square foot storage area in May 1999. By 2002, the previous southern building had been demolished and replaced with the present-day secondary building, likely associated with the storage area building permit issued in 1999. It is noted the western and southern portion of the Subject Property also appeared unpaved by 2002, consistent with the present-day storage area for excavated material generated off-site. According to Ms. Kristin Jimenez, the general manager of the current tenant, HHS Construction has occupied the Subject Property since June 2009. By 2012, the exterior western lot was used to store vehicles and other material, consistent with present-day operations.

2.2 Subject Property and Regional Geology

Geographically, the Subject Property is located within the Ontario and Guasti, California 7.5-minute quadrangle topographic map (USGS, 2018). The Subject Property has an elevation of approximately 850 to 860 feet above mean sea level (AMSL).

The Subject Property is located along the southwestern portion of the Bunker Hill Basin, which consists of alluvial deposits of silt, gravel, and boulders interspersed with lenticular deposits of silt and sand (SBCFD HMD, 2000).

2.3 Subject Property and Regional Hydrogeology

The Subject Property is located within the Upper Santa Ana Valley basin and Chino subbasin (California Department of Water Resources Bulletin 118, Update 2003 and Interim Update 2016). Groundwater in the vicinity of the Subject Property is reportedly at a depth of approximately 270 to 295 feet bgs, according to groundwater monitoring data for a facility approximately 1.87 miles east-southeast of the Subject Property (SBCFD HMD, 2000).

The Subject Property is generally flat with a gradual slope to the east. Based on groundwater monitoring data for a facility approximately 1.82 miles to the northeast, expected groundwater gradient at the Subject Property is towards the west-southwest (Wood, 2022).

3. Phase II Subsurface Investigation

All activities performed and detailed as part of this Phase II Report were conducted under the supervision of a registered California Professional Geologist.

3.1 Pre-Field Activities

3.1.1 Health and Safety Plan

Prior to the start of field activities, Roux prepared a Subject Property-specific HASP to ensure worker safety. In addition to containing information regarding Roux's standard safety practices, the HASP describes potential hazards relating to Subject Property activities and provides the locations and contact information of nearby emergency services. The HASP was kept on the Subject Property when fieldwork occurred and was reviewed and signed by workers during the daily tailgate health and safety meeting prior to work each day.

3.1.2 Underground Service Alert

On April 6, 2022, at least 72 hours prior to beginning drilling activities, Roux pre-marked the Subject Property with white paint and notified Underground Service Alert of Southern California (Ticket No. A220960569-00A) to demarcate subsurface utilities. Based on the proximity to marked subsurface utilities, intended drilling locations were not significantly modified.

3.1.3 Geophysical Survey

On April 6, 2022, Spectrum Geophysics (Spectrum) of Chatsworth, California evaluated the proposed boring locations to mitigate the risk of encountering buried utility lines or other subsurface features. As part of the geophysical investigation, Spectrum used a variety of techniques including ground-penetrating radar, metal detection, and utility location. Based on the results of the geophysical survey, which indicated that no significant subsurface features were present in the vicinity of proposed boring locations, the intended drilling locations were not significantly altered, with the exception of boring B-9 which was moved adjacent to the on-site sewer line to evaluate potential conduit vapor intrusion that could have migrated to the Subject Property.

3.2 Field Activities

3.2.1 Boring Advancement and Soil Sampling

On April 13 and 14, ABC Liovin Drilling, Inc. (ABC) of Signal Hill, California (C-57 License #422904), under the direction of Roux, advanced 10 borings (B-1 to B-10) to depths ranging between 5 to 23 feet bgs using hand augers and a Geoprobe 6622 track mounted direct push technology (DPT) rig equipped with 2.25-inch diameter drill rods to enable soil sampling and temporary soil vapor probe installation at the seven selected soil vapor locations. Photo-ionization detector (PID) readings were collected at regular depth intervals from each boring. Borings were logged continuously under the supervision of a California Professional Geologist.

Above ground stockpiles were present at Borings 1, 2, 3, and 5 (staging area where off-site construction material is temporarily stored). Below ground fill was observed at Borings 1, 2, 3, 4 and 5. Three soil samples were collected from Boring 1 through 5, except for Boring 4 where only two samples were collected. Soil samples at Borings 1 through 5 were collected at depths informed by the PID screening values, ranging between 1 and 10 feet bgs, at depths including the aboveground stockpiles depths. In Borings 6 through 10,

soil samples were collected at 1 and 5 feet bgs and in Borings 6 through 9 an additional soil sample was collected at 15 feet bgs.

Soil samples collected between 1 and 5 feet bgs were collected directly from the hand auger buckets into laboratory provided 8 oz. glass jars and USEPA Method 5035 preserved VOC sampling kits, if a VOC sample was collected. Beyond 5 feet bgs, borings were advanced with a DPT rig and soil was collected in acetate sleeves. Soil samples were collected directly from the acetate sleeves and placed into laboratory provided 8 oz. glass jars or USEPA Method 5035 sampling kits.

A total of 31 soil samples (including three duplicate soil samples) were analyzed for the following:

- 27 samples for TPH (Gasoline Range Organics [GRO, C6 to C10], Diesel Range Organics [DRO, C10 to C28], and Oil Range Organics [ORO, C28 to C44]) by USEPA method 8015B;
- 27 samples for Title 22 Metals by USEPA method 6010B;
- 12 samples for Polychlorinated Biphenyls (PCBs) by USEPA method 8082;
- 12 samples for Organochlorine Pesticides (OCPs) by USEPA method 8081;
- 31 samples for VOCs by USEPA method 8260B; and
- 21 samples for asbestos by Occupational Safety and Health Administration (OSHA) method 191.

Soil samples collected for VOC analysis were prepared in the field in accordance with USEPA method 5035, which included the collection of 5-gram aliquots of soil from each soil sample using a plastic plunger (Terra Core). The 5-gram aliquots of soil were placed in 40-milliliter (mL) volatile organic analysis (VOA) vials that contained either sodium bisulfate or methanol preservative. Care was taken to exclude concrete, asphalt, plant debris, and other foreign objects, to the extent practicable.

All soil samples were labeled with the boring location, date, time, and depth. After collection, soil samples were placed on ice and transported under chain-of-custody to Eurofins Analytical (Eurofins) of Tustin, California, a California-certified laboratory.

3.2.2 Installation of Temporary Soil Vapor Probes

Following soil sampling on April 13 and 14, a total of 14 soil vapor probes (sampling ports between 5 and 20 feet bgs, not including above ground stockpile depths) were installed in seven of the boring locations (B-1, B-2, B-4, and B-6 through B-9). The soil vapor probes were installed in accordance with the Department of Toxic Substances Control's (DTSC's) October 2011 Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air (*Vapor Intrusion Guidance*) and the California Environmental Protection Agency (EPA), DTSC, Los Angeles Regional Water Quality Control Board, and San Francisco Regional Water Quality Control Board's July 2015 Advisory, Active Soil Gas Investigations (*Soil Gas Advisory*). Soil vapor probes were constructed with 1/4-inch Nylaflow tubing mounted with a terminal "bubbler" and set within one foot of sand followed by one foot of dry bentonite chips and sealed using hydrated bentonite. After the installation of each soil vapor probe, a minimum 48-hour equilibration period was observed prior to sampling, per the *Soil Gas Advisory*.

3.2.3 Soil Vapor Sampling

On April 18, 2022, Roux collected soil vapor samples from 14 soil vapor probes located at the seven boring locations across the Subject Property. A total of 15 soil vapor samples were collected, including one duplicate sample. After sample collection, these samples were delivered directly to Eurofins. Protocols and procedures utilized by Roux were in general accordance with the *Soil Gas Advisory*.

At each probe, a 60-second shut-in test was conducted prior to purging and collecting a sample. After conducting the shut-in test, a 1,1-Difluoroethane (1,1-DFA) gaseous leak check compound was applied to a clean rag and placed at the surface near the sample train connections and borehole opening. Three system volumes, including the probe inner-tubing, dry bentonite, and sand pack volumes, were purged from the probes at a rate not exceeding 200 milliliters per minute (mL/min) while maintaining a vacuum below 100 inches of water using a syringe and magnehelic vacuum gauge. For the vapor pin, purging was achieved by manually removing subsurface gas using a syringe attached to the sample train.

Soil vapor samples were collected in one-liter evacuated SUMMA® canisters and were analyzed for VOCs by USEPA method TO-15. Once sampled, soil vapor probes were abandoned by pulling the tubing and filling any void space in the probes with hydrated bentonite and patching in-kind at the surface with concrete.

3.2.4 Investigation Derived Waste

Investigation derived waste (IDW) generated from drilling and decontamination activities were containerized in one (1) 55-gallon drum and placed along the eastern edge of the Subject Property. The drum was labeled and temporarily stored on the Subject Property until laboratory data was received and the drum could be profiled for disposal. The IDW drum has been disposed of under proper analytical profiling as non-hazardous waste.

3.3 Field Sampling Quality Control

Field quality assurance/quality control samples were collected during the investigation to assess whether reported concentrations of chemicals identified through analytical testing were of acceptable quality, as follows:

- **Field Duplicates – Soil:** Soil sample field duplicates were collected to check for sampling and analytical precision. Three soil duplicates were collected, labeled, and stored in the same manner as the primary samples. All three duplicates were analyzed for VOCs, TPH, and metals. Two duplicates were analyzed for asbestos and only one duplicate was analyzed for PCBs, and OCPs. No significant anomalies were observed between primary and duplicate samples. The duplicate soil sample result is shown in italics beneath the primary soil sample results in Tables 1 through 5.

- **Field Duplicates – Soil Vapor:** A soil vapor sample field duplicate was collected to check for sampling and analytical precision. One soil vapor duplicate was collected, labeled, and stored in the same manner as the primary samples. The duplicate was analyzed for the same constituent, VOCs, as the primary samples. No significant anomalies were observed between primary and duplicate sample. The duplicate soil vapor sample result is shown in italics beneath the primary soil vapor samples results in Table 6.

4. Results

4.1 Lithology

Soils encountered at the Subject Property were generally comprised of sand and sandy silt, fine to medium in size, with trace silt and occasional gravel. The Subject Property soils were dry to moist and ranged in color from light olive brown, light yellow brown to dark yellow brown. In general, Roux observed no visual (i.e., staining, oily material) or olfactory indications of contamination in the soil samples, with the exception of boring B-5 where an odor was observed between one and four feet bgs. Above ground stockpiled soil was observed at borings B-1, B-2, B-3 and B-5. The stockpiles ranged from two to seven feet tall. Fill soil was observed below the surrounding grade (i.e. beneath the stockpiles) at boring locations B-1, B-2, B-3, B-4 and B-5 at depths ranging from one to three and a half feet bgs. Boring logs are included as Appendix A.

4.2 Soil Analytical Results

A total of 31 soil samples were collected, including three duplicate samples, from 10 boring locations placed across the Subject Property. Soil samples were analyzed for TPH, metals, PCBs, OCPs, VOCs and asbestos.

Soil results were compared to the following screening levels (SLs) and regional background levels, where applicable:

- DTSC Determination of a Southern California Regional Background Arsenic Concentration in Soil, Dated 2008;
- USEPA Industrial Soil Regional Screening Levels (RSLs), dated November 2021 (USEPA, 2021); and
- DTSC Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note Number 3 Commercial/Industrial Screening Levels (DTSC SLs), dated June 2020 (DTSC, 2020b).

The sections that follow summarize the laboratory analytical results of soil samples. Laboratory reports are provided in Appendix B.

4.2.1 TPH in Soil

A total of 27 soil samples (24 primary and three duplicate), ranging from 1 to 10 feet bgs, were collected and analyzed for TPH full carbon chain via USEPA method 8015B. No screening levels jurisdictionally apply for TPH, but a summary is presented below and in Table 1:

- TPH GRO (C6-C10) was not detected above the laboratory reporting limit (RL) in any of the 27 soil samples analyzed.
- TPH DRO (C10-C28) was detected above the laboratory RL in 19 of the 27 soil samples at concentrations ranging from 5.9 mg/kg (B-9-1) to 10,000 mg/kg (B-5-1). B-5-1 was collected from fill soil below grade (not in a stockpile) within the staging area.
- TPH ORO (C28-C44) was detected above the laboratory RL in 19 of the 27 soil samples at concentrations ranging from 5.6 mg/kg (B-9-1) to 4,910 mg/kg (B-5-1). B-5-1 was collected from fill soil below grade (not in a stockpile) within the staging area.

4.2.2 Metals in Soil

A total of 27 soil samples (24 primary and three duplicates), ranging from between 1 and 10 feet in depth, were collected and analyzed for metals. None of the reported concentrations exceeded any applicable SLs and/or applicable California background levels. A summary of results is presented below and in Table 2:

- Antimony was detected above the laboratory RL in one of the 27 soil samples at a concentration of 43.7 mg/kg (B-1-10), below the USEPA RSL of 470 mg/kg.
- Arsenic was detected above the laboratory RL in eight of the 27 soil samples at concentrations ranging from 3.12 mg/kg (B-10-1) to 5.30 mg/kg (B-5-3), below the California background level of 12 mg/kg.
- Barium was detected above the laboratory RL in all 27 soil samples at concentrations ranging from 26.8 mg/kg (B-9-5) to 94.1 mg/kg (B-10-5), below the USEPA RSL of 220,000 mg/kg.
- Cadmium was detected above the laboratory RL in 12 of the 27 soil samples at concentrations ranging from 0.838 mg/kg (B-3-1) to 1.84 mg/kg (B-3-8), below the USEPA RSL of 100 mg/kg.
- Chromium was detected above the laboratory RL in all 27 of the soil samples at concentrations ranging from 5.94 mg/kg (B-3-1) to 157 mg/kg (B-1-10). No screening level is defined for Chromium.
- Cobalt was detected above the laboratory RL in all 27 soil samples at concentrations ranging from 3.12 mg/kg (B-3-1) to 12.7 mg/kg (B-1-10), below the USEPA RSL of 350 mg/kg.
- Copper was detected above the laboratory RL in all 27 soil samples at concentrations ranging from 4.42 mg/kg (B-3-1) to 18.4 mg/kg (B-1-10), below the USEPA RSL of 47,000 mg/kg.
- Lead was detected above the laboratory RL in 26 of the 27 soil samples at concentrations ranging from 2.07 mg/kg (B-9-5) to 15.3 mg/kg (B-1-7-D), below the DTSC SL of 320 mg/kg.
- Molybdenum was detected above the laboratory RL in one of the 27 soil samples at a concentration of 4.67 mg/kg (B-1-10), below the USEPA RSL of 5,800 mg/kg.
- Nickel was detected above the laboratory RL in all 27 soil samples at concentrations ranging from 4.80 mg/kg (B-3-1) to 140 mg/kg (B-1-10), below the DTSC SL of 11,000 mg/kg.
- Vanadium was detected above the laboratory RL in all of the 27 soil samples at concentrations ranging from 15.9 mg/kg (B-3-1) to 39.9 mg/kg (B-10-5), below the USEPA RSL of 5,800 mg/kg.
- Zinc was detected above the laboratory RL in all of the 27 soil samples at concentrations ranging from 21.6 mg/kg (B-5-1) to 60.8 mg/kg (B-8-1), below the USEPA RSL of 350,000 mg/kg.
- Mercury was detected above the laboratory RL in one of the 27 soil samples at a concentration of 0.0883 mg/kg (B-10-5), below the DTSC SL of 4.4 mg/kg.

4.2.3 PCBs and OCPs in Soil

A total of 12 soil samples (11 primary and one duplicate), ranging from 1 to 10 feet bgs, were collected and analyzed for PCBs and OCPs. PCBs and OCPs were not reported above the laboratory RL in any of the 12 soil samples analyzed. A summary of results is presented in Table 3.

4.2.4 VOCs in Soil

A total of 31 soil samples (28 primary and three duplicate), ranging from 1 to 15 feet bgs, were collected and analyzed for VOCs. Reported VOCs did not exceed their applicable SLs. A summary of the VOCs that were reported above the laboratory RL is presented below and in Table 4:

- Acetone was detected above the laboratory RL in 19 of the 31 soil samples at concentrations ranging from 17 µg/kg (B-7-5) to 62 µg/kg (B-5-1), below the USEPA RSL of 1,100,000,000 µg/kg.
- Benzene was detected above the laboratory RL in three of the 31 soil samples at concentrations ranging from 0.98 µg/kg (B-1-1) to 2.2 µg/kg (B-10-5), below the DTSC SL of 1,400 µg/kg.
- Toluene was detected above the laboratory RL in two of the 31 soil samples at concentrations ranging from 1.0 µg/kg (B-3-3) to 1.4 µg/kg (B-10-5), below the DTSC SL of 5,300,000 µg/kg.

4.2.5 Asbestos in Soil

A total of 21 soil samples (19 primary and two duplicates), ranging from 1 to 10 feet bgs, were collected and analyzed for asbestos. Asbestos was not detected in any of the 21 soil samples analyzed. A summary of results is presented in Table 5.

4.3 Soil Vapor Analytical Results

A total of 15 soil vapor samples were collected, including one duplicate sample, from across the Subject Property at seven boring locations. The following sections summarize the laboratory analytical results of soil vapor samples. Laboratory reports are provided in Appendix B.

4.3.1 VOCs in Soil Vapor

A total of 15 soil vapor samples (14 primary and one duplicate) were collected between 5 and 20 feet bgs and analyzed for VOCs. A total of 12 VOC constituents were detected above the laboratory RL in one or more soil vapor samples. The 12 VOC constituents detected included: 1,3,5-trimethylbenzene, 2-butanone, acetone, chloroethane, chloromethane, ethylbenzene, isopropanol, m,p-xylene, o-xylene, tetrachloroethene (PCE), toluene, and trichlorofluoromethane. Of the 12 compounds detected, 11 were reported at concentrations below their respective screening levels, calculated using a very conservative attenuation factor of 0.03. A summary of the 12 detected VOC compounds is presented in Table 6. Due to these relatively low detections, they are not summarized in this section.

Only one of the 12 compounds detected above the laboratory RL, PCE, was reported at a concentration that exceeded the applicable SL calculated using a very conservative attenuation factor of 0.03. A summary of this compound is presented below and in Table 6:

- PCE was detected above the laboratory RL in seven of the 15 soil vapor samples at concentrations ranging from 3.8 µg/m^3 (SV-2-15) to 210 µg/m^3 (SV-7-5). Two of the detections at 86 µg/m^3 (SV-9-5) and 210 µg/m^3 (SV-7-5), exceeded the DTSC SL of 67 µg/m^3 but did not exceed the USEPA RSL of 1,567 µg/m^3.

5. Limited Human Health Risk Assessment

5.1 Risk Assessment Summary

Based on the soil vapor data summarized in Section 4.3.1, Roux prepared a limited Human Health Risk Assessment (HHRA) to provide a conservative evaluation of the potential risk to indoor commercial/industrial workers from exposure to chemicals detected in the soil vapor at the Subject Property. The limited HHRA calculated the estimated risks associated with the presence of these chemicals of potential concern (COPCs) where exposure pathways are considered potentially complete pursuant to the Department of Toxic Substance Control (DTSC) *Preliminary Endangerment Assessment Guidance Manual* (PEA Guidance; DTSC, 2015). The limited HHRA determined that carcinogenic risk and non-carcinogenic hazard to human receptors for current and future commercial/industrial indoor air scenarios at the Subject Property are within acceptable ranges.

The risk characterization process integrates the results of the data evaluation, exposure assessment, and toxicity assessment to provide a quantitative estimation of cumulative non-carcinogenic and carcinogenic risks for indoor commercial/industrial exposure to indoor air at the Subject Property as summarized in the table below.

Cumulative Cancer and Non-Cancer Risks

Risk	Target Threshold	Indoor Commercial/Industrial Exposure to Indoor Air	
		Estimated Risk	Exceed Risk Threshold?
Cancer Risk	1E-06 to 1E-04	3E-06	Within risk management target threshold range
Non-Cancer Hazard	1	4E-02	No

The cancer risk estimate for an indoor commercial/industrial scenario is within the risk management target cancer threshold range of 1E-06 to 1E-04. The non-cancer hazard estimate is below the non-cancer hazard target threshold of 1. As specified in DTSC HERO's Note 4 (DTSC, 2019b), risk estimates were calculated using USEPA's attenuation factor of 0.03.

6. Summary and Conclusions

From February 13 to February 18, 2022, Roux implemented a Phase II Subsurface Investigation at the Subject Property to assess the aforementioned findings identified during a Phase I ESA concurrently prepared by Roux and to evaluate potential impacts to soil and soil vapor prior to Client's potential Subject Property acquisition for commercial/industrial use.

The objectives of the investigation were met, and the bullet list below provides a summary of the investigation results:

- Of the 27 soil samples analyzed for TPH full carbon chain, the limited detections were in the diesel (C10-C28) and oil ranges (C28-C44). Refer to Table 1.

- Boring location B-5 at one-foot bgs, where the highest TPH concentrations were observed, was situated in a layer of below grade fill soil within the staging area where odor was observed at the time of sampling. The below grade fill soil layer extends from one to approximately three and a half feet bgs. Concentrations of TPH at the three- and five-foot soil samples beneath were significantly less than the one-foot sample. No screening levels or regulatory cleanup objectives jurisdictionally apply for TPH.

- Of the 27 soil samples analyzed for metals, 13 compounds were reported at concentrations above the laboratory RLs. None of the metal detections exceeded the applicable SLs presented in Table 2, with the exception of arsenic, which was detected above the laboratory RL (ranging between 3.12 mg/kg (B-10-1) to 5.30 mg/kg (B-5-3)). However, the typical background concentration of arsenic in California soils is 12 mg/kg. Refer to Table 2.

- Of the 12 soil samples collected and analyzed for PCBs or OCPs, none had reported concentrations of OCPs and PCBs. Refer to Table 3.

- Of the 31 soil samples analyzed for VOCs, only three compounds were reported at concentrations above the laboratory RLs. Detections of these compounds, acetone, benzene, and toluene were generally low and significantly below the applicable SLs presented in Table 4.

- Of the 21 samples collected and analyzed for asbestos, none had reported detections of asbestos. Refer to Table 5.

- A total of 12 VOC constituents were reported above the laboratory RL in the 15 soil vapor samples analyzed. Of the 12 constituents, only one, PCE, was detected at a concentration that exceeded the applicable DTSC SL calculated using a very conservative attenuation factor of 0.03. Refer to Table 6.

Conclusions

Based on the results of the Phase II investigation, Roux concludes the following:

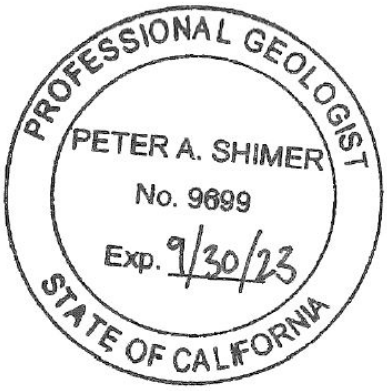
- In soil, VOCs, metals, PCBs, OCPs and asbestos are not considered to be COPCs at the locations sampled across the Subject Property.

- Limited detections of TPH in the diesel and motor oil ranges were identified in shallow soil at the area of below grade fill soil located in the southeast portion of the staging area. These soils can be removed as non-hazardous waste or evaluated for Subject Property wide blending during grading, pending geotechnical analysis. No screening levels or regulatory cleanup objectives jurisdictionally apply for TPH; however, Roux understands that the fill soil in the staging area will be excavated and

disposed of off-site in accordance with applicable regulations during future Subject Property redevelopment activities.

- In soil vapor, several VOCs were detected above laboratory RLs but below applicable SLs, with the exception of PCE in samples SV-7-5 and SV-9-5. PCE concentrations in these two samples exceeded the commercial/industrial DTSC Air SL with a very conservative 0.03 attenuation factor applied but did not exceed the USEPA RSL. It is noted that no potential source of PCE or other chlorinated solvents was identified in association with current or historical Subject Property operations.

- A Limited HHRA was conducted using the data generated during this Phase II investigation to evaluate if COPCs in soil vapor, collected by Roux in April 2022, pose an unacceptable level of risk to current and future indoor commercial/industrial worker receptors. Based on the limited HHRA, the cancer risk estimate for an indoor commercial/industrial scenario is within the risk management target cancer threshold range of 1E-06 to 1E-04. The non-cancer hazard estimate is below the non-cancer hazard target threshold of 1. The limited HHRA determined that carcinogenic risk and non-carcinogenic hazard to human receptors for current and future commercial/industrial indoor air scenarios at the Subject Property are within acceptable ranges.



7. Closing

Roux is available to answer any questions regarding this *Phase II Subsurface Investigation*. Please contact Peter Shimer at 310-879-4929 or via email at pshimer@rouxinc.com or Tony Ward at 310-879-4927 or via email at tward@rouxinc.com.

Respectfully submitted,

ROUX ASSOCIATES, INC.

Notes:
feet bgs = feet below ground surface
USEPA = United States Environmental Protection Agency
AF = attenuation factor
USEPA RSL = United States Environmental Protection Agency Regional Screening for industrial air, dated November 2021.
DTSC SL = California Department of Toxic Substances Control Human and Ecological Risk
Office Human Health Risk Assessment Note 3 Screening Level for industrial air, dated April 2019
NS indicates no screening level
Bold indicates concentration detected above laboratory method detection limit
Italics indicate duplicate sample
<X or ND = result does not exceed laboratory reporting limit
Highlight indicates sample exceeds one or more applicable screening level

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Roux Associates, Inc.
Job ID: 570-92602-1
Project/Site: First Industrial-Ontario / 3661.0016L

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 570-92602-1

Laboratory: Eurofins Calscience

Narrative

Job Narrative
570-92602-1

Comments
No additional comments.

Receipt
The samples were received on 4/13/2022 6:13 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.9º C.

Receipt Exceptions

The following sample was listed on the Chain of Custody (COC); however, no sample was received: B-9-1 (570-92602-5).

The clients office was contacted with the above sample receipt anomalies. The laboratory was provided written direction on how to proceed, please refer to the COC section of the report for further details.

GC/MS VOA
Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-227330.The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-227414. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-227596. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Antimony for preparation batch 440-671138 and analytical batch 440-671213 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for Zinc and Antimonypreparation batch 440-671137 and analytical batch 440-671269 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 4/13/2022 6:13 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.9º C.

Receipt Exceptions

The following sample was listed on the Chain of Custody (COC); however, no sample was received: B-9-1 (570-92602-5).

The clients office was contacted with the above sample receipt anomalies. The laboratory was provided written direction on how to proceed, please refer to the COC section of the report for further details.

Lab Admin
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Subcontract Work
Method Asbestos OSHA-ID 191: This method was subcontracted to EMSL Analytical Inc - LA Testing - Pasadena. The subcontract laboratory certification is different from that of the facility issuing the final report.

Some samples may contain asbestos fibers present in dimensions below PLM resolution limits.The limit of detection as stated in the method is 0.1%. EMSL Analytical Inc suggests that samples reported as <0.1% or none detected undergo additional analysis via TEM. The above test report relates only to the items tested. This report may not be reproduced, except in full, without written approval EMSL Analytical Inc. This test report must not be used by the client to claim product endorsement by NVLAP or any agency of the United States Government. EMSL Analytical Inc. bears no responsibility for sample collection activities, analytical method limitations, or the accuracy of results when requested to separate layered samples. EMSL Analytical Inc liability is limited to the cost of sample analysis.The test results contained within this report meet the requirements of NELAC unless otherwise noted. Samples received in good condition unless otherwise noted. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are

Samples analyzed by LA Testing South Pasadena, CA NVLAP Lab Code 200232-0, CA ELAP 2283

Soil is a problem matrix. Other analytical options are recommended such as EPA 600 PLM/TEM with milling prep.

Login Sample Receipt Checklist

Client: Roux Associates, Inc.

Job Number: 570-92602-2

Login Number: 92602
List Number: 1
Creator: Vitente, Precy

List Source: Eurofins Calscience

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Roux Associates, Inc. Job ID: 570-92671-1
Project/Site: First Industrial-Ontario / 3661.0016L

Qualifiers

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 570-92671-1

Laboratory: Eurofins Calscience

Narrative

Job Narrative
570-92671-1

Comments
No additional comments.

Receipt
The samples were received on 4/14/2022 5:04 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.7º C.

GC/MS VOA
Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-227414. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-227596. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for Arsenic, Beryllium, Cadmium, Cobalt, Chromium, Molybdenum, Nickel, Lead, Antimony, Selenium, Thallium, Vanadium and Silver preparation batch 440-671207 and analytical batch 440-671340 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B: The serial dilution performed of Barium and Zinc for the following sample associated with batch 440-671340 was outside control limits: (570-92539-A-1-E SD ^25)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

No additional comments.

Receipt
The samples were received on 4/14/2022 5:04 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.7º C.

Lab Admin
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Subcontract Work
Method Asbestos OSHA-ID 191: This method was subcontracted to EMSL Analytical Inc - LA Testing - Pasadena. The subcontract laboratory certification is different from that of the facility issuing the final report.

Method Summary

Client: Roux Associates, Inc.
Project/Site: First Industrial-Ontario / 3661.0016L

Some samples may contain asbestos fibers present in dimensions below PLM resolution limits.The limit of detection as stated in the method is 0.1%. EMSL Analytical Inc suggests that samples reported as <0.1% or none detected undergo additional analysis via TEM. The above test report relates only to the items tested. This report may not be reproduced, except in full, without written approval EMSL Analytical Inc. This test report must not be used by the client to claim product endorsement by NVLAP or any agency of the United States Government. EMSL Analytical Inc. bears no responsibility for sample collection activities, analytical method limitations, or the accuracy of results when requested to separate layered samples. EMSL Analytical Inc liability is limited to the cost of sample analysis.The test results contained within this report meet the requirements of NELAC unless otherwise noted. Samples received in good condition unless otherwise noted. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are

Samples analyzed by LA Testing South Pasadena, CA NVLAP Lab Code 200232-0, CA ELAP 2283

Soil is a problem matrix. Other analytical options are recommended such as EPA 600 PLM/TEM with milling prep.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Roux Associates, Inc. Job ID: 570-92691-1
Project/Site: First Indiustrial-Ontario / 3661.0016L

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The sample was received on 4/14/2022 5:04 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.7º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: Roux Associates, Inc.
Project/Site: First Indiustrial-Ontario / 3661.0016L

Job ID: 570-92691-1

Client Sample ID: IDW-Soil

Lab Sample ID: 570-92691-1

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
me	LCS Recovery is within Marginal Exdeedance (ME) control limit range (± 4 SD from the mean).

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
570-93118-1

Comments
No additional comments.

Receipt
The samples were received on 4/19/2022 7:20 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 22.0º C.

Air Toxics
Method TO-15: The following analyte(s) recovered outside control limits for the LCSD associated with analytical batch 570-228550: <AffectedAnalytes>. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Roux Associates, Inc.
Job ID: 570-93118-1
Project/Site: First Indiustrial-Ontario / 3661.0016L

Laboratory: Eurofins Calscience

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
California	State	2944	09-30-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
TO-15		Air	1,1,1-Trichloroethane
TO-15		Air	1,1,2,2-Tetrachloroethane
TO-15		Air	1,1,2-Trichloro-1,2,2-trifluoroethane
TO-15		Air	1,1,2-Trichloroethane
TO-15		Air	1,1-Dichloroethane
TO-15		Air	1,1-Dichloroethene
TO-15		Air	1,1-Difluoroethane
TO-15		Air	1,2,4-Trichlorobenzene
TO-15		Air	1,2,4-Trimethylbenzene
TO-15		Air	1,2-Dibromo-3-Chloropropane
TO-15		Air	1,2-Dibromoethane
TO-15		Air	1,2-Dichlorobenzene
TO-15		Air	1,2-Dichloroethane
TO-15		Air	1,2-Dichloropropane
TO-15		Air	1,3,5-Trimethylbenzene
TO-15		Air	1,3-Dichlorobenzene
TO-15		Air	1,4-Dichlorobenzene
TO-15		Air	2-Butanone
TO-15		Air	2-Hexanone
TO-15		Air	4-Ethyltoluene
TO-15		Air	4-Methyl-2-pentanone
TO-15		Air	Acetone
TO-15		Air	Benzene
TO-15		Air	Benzyl chloride
TO-15		Air	Bromodichloromethane
TO-15		Air	Bromoform
TO-15		Air	Bromomethane
TO-15		Air	Carbon disulfide
TO-15		Air	Carbon tetrachloride
TO-15		Air	Chlorobenzene
TO-15		Air	Chloroethane
TO-15		Air	Chloroform
TO-15		Air	Chloromethane
TO-15		Air	cis-1,2-Dichloroethene
TO-15		Air	cis-1,3-Dichloropropene
TO-15		Air	Dibromochloromethane
TO-15		Air	Dichlorodifluoromethane
TO-15		Air	Dichlorotetrafluoroethane
TO-15		Air	Ethylbenzene
TO-15		Air	Hexachloro-1,3-butadiene
TO-15		Air	Isopropanol
TO-15		Air	m,p-Xylene
TO-15		Air	Methylene Chloride
TO-15		Air	Methyl-t-Butyl Ether (MTBE)
TO-15		Air	n-Butylbenzene

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	Thermal preservation not required.
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Summa Canister Dilution Worksheet

Client: Roux Associates, Inc.
Project/Site: First Indiustrial-Ontario / 3661.0016L

Job No.: 570-93118-1

Formulae:

Preadjusted Volume (L) = ((Preadjusted Pressure ("Hg) + 29.92 "Hg) * Vol L) / 29.92 "Hg
Adjusted Volume (L) = ((Adjusted Pressure (psig) + 14.7 psig)* Vol L) / 14.7 psig
Dilution Factor = Adjusted Volume (L) / Preadjusted Volume (L)

Where:

29.92 "Hg = Standard atmospheric pressure in inches of Mercury (“Hg)
14.7 psig = Standard atmospheric pressure in pounds per square inch gauge (psig)

Ontario, California

December 14, 2022

Prepared By:

Ariel Newman, MS
Senior Scientist

Andrew Shapero, MPH
Senior Engineer

Executive Summary

On behalf of First Industrial Realty Trust, Inc., First Industrial, L.P., First Industrial Acquisitions II, LLC and their affiliates and assigns (Client), Roux Associates, Inc. (Roux) has prepared this limited *Human Health Risk Assessment* (HHRA) for the property located at 2042 South Grove Avenue, Ontario, California (the Subject Property). The objective of the limited HHRA was to provide a conservative evaluation of the potential risk to indoor commercial/industrial workers from exposure to chemicals detected in the soil vapor at the Subject Property in April 2022. The limited HHRA determined that carcinogenic risk and non-carcinogenic hazard to human receptors for current and future commercial/industrial indoor air scenarios at the Subject Property are within acceptable ranges.

The limited HHRA calculated the estimated risks associated with the presence of these chemicals of potential concern (COPCs) where exposure pathways are considered potentially complete pursuant to the Department of Toxic Substance Control (DTSC) *Preliminary Endangerment Assessment Guidance Manual* (PEA Guidance; DTSC, 2015).

The risk characterization process integrates the results of the data evaluation, exposure assessment, and toxicity assessment to provide a quantitative estimation of cumulative non-carcinogenic and carcinogenic risks for indoor commercial/industrial exposure to indoor air at the Subject Property as summarized in the table below.

Cumulative Cancer and Non-Cancer Risks

Risk	Target Threshold	Indoor Commercial/Industrial Exposure to Indoor Air	
		Estimated Risk	Exceed Risk Threshold?
Cancer Risk	1E-06 to 1E-04	3E-06	Within risk management target threshold range
Non-Cancer Hazard	1	4E-02	No

The cancer risk estimate for an indoor commercial/industrial scenario is within the risk management target cancer threshold range of 1E-06 to 1E-04. The non-cancer hazard estimate is below the non-cancer hazard target threshold of 1.

1. Introduction

On behalf of First Industrial Realty Trust, Inc., First Industrial, L.P., First Industrial Acquisitions II, LLC and their affiliates and assigns (Client), Roux Associates, Inc. (Roux) has prepared this limited *Human Health Risk Assessment* (HHRA) for the property located at 2042 South Grove Avenue, Ontario, California (the Subject Property). This limited HHRA was conducted to evaluate if chemicals of potential concern (COPCs) in soil vapor, collected by Roux in April 2022, pose an unacceptable level of risk to current and future indoor commercial/industrial worker receptors. To prepare the limited HHRA, Roux used the Department of Toxic Substance Control (DTSC) *Preliminary Endangerment Assessment Guidance Manual* (DTSC, 2015) as guidance. The HHRA consists of four components:

- **Evaluation of Exposure Pathways:** Exposure to chemicals may occur via inhalation of chemicals of potential concern (COPCs) present in soil vapor at the Subject Property.

- **Evaluation of Exposure to COPCs and Exposure Point Concentrations:** Identifies contaminants found in soil vapor at the Subject Property and determines appropriate exposure point concentrations (EPCs) for COPCs.

- **Evaluation of Chemical Toxicity:** Assesses the potential adverse effects of the COPCs and compiles non-carcinogenic and carcinogenic toxicity values for use in numerical risk estimates.

- **Risk Characterization:** Integrates the results of the hazard assessment to provide a quantitative estimation of non-carcinogenic and carcinogenic risks.

Default exposure parameters and toxicity criteria from the DTSC and United States Environmental Protection Agency (USEPA) were utilized to represent a Reasonable Maximum Exposure (RME) scenario. An RME scenario is the highest exposure that is reasonably expected to occur at a Subject Property. The limited HHRA evaluates current and future commercial/industrial worker exposure to indoor air at the Subject Property.

2. Background

The Subject Property consists of a 4.2-acre parcel located in the City of Ontario, San Bernardino County, California. From a review of available resources in the Phase I ESA concurrently completed by Roux, the Subject Property was undeveloped prior to 1933. By 1946, the Subject Property had been cultivated for agricultural purposes as an orchard. The Subject Property remained agricultural until 1966. The Subject Property was then operated as a lumberyard in 1985. The South Coast Air Quality Management District (SCAQMD) issued a permit to operate (ID 9007543) for a gasoline storage and dispensing facility for the former tenant, Grove Lumber & Building Supplies, on October 6, 1981. By 1985, the Subject Property was developed with two buildings, the present-day main building and another building to the south, and associated asphalt-parking areas. The Subject Property had two 1,000-gallon underground storage tanks (USTs) (gasoline and diesel) until their removal in August 1990. Results of confirmation soil sampling following removal of the USTs revealed no detectable concentrations of total petroleum hydrocarbons (TPH), and the San Bernardino County Fire Department (SBCFD) subsequently issued a No Further Action (NFA) letter in 1991. The City of Ontario issued a building permit for the installation of a 4,500 square foot storage area in May 1999. By 2002, the previous southern building had been demolished and replaced with the present-day secondary building, likely associated with the storage area building permit issued in 1999. It is noted the western and southern portion of the Subject Property appeared unpaved by 2002, consistent with the present-day storage area for excavated material generated off-site. HHS Construction has occupied the Subject Property since June 2009. Since 2012, the exterior western lot has been used to store vehicles and other material.

Based on the preliminary findings of the subject Phase I ESA, Roux performed a concurrent Phase II subsurface investigation at the Subject Property. The Phase II was conducted to assess the following:

- Staged material originating off-site;
- Historical agricultural use;
- Former gasoline and diesel underground storage tanks (USTs); and
- Potential for vapor intrusion.

Roux's *Phase II Subsurface Investigation Report* (Phase II Report) concluded the following:

- In soil (from the ground surface to 10 feet below ground surface (bgs)), volatile organic compounds (VOCs), metals, polychlorinated biphenyls (PCBs), organochlorine pesticides (OCPs) and asbestos are not considered to be COPCs at the locations sampled across the Subject Property.

- Limited detections of TPH in the diesel and motor oil ranges was identified in shallow soil in the area of below grade fill soil located in the southeast portion of the staging area. Roux understands that the fill soil in the staging area will be excavated and disposed of off-site in accordance with applicable regulations during future Subject Property redevelopment activities.

- In soil vapor, although several VOCs were detected above laboratory reporting limits, they were all below applicable screening levels, with the exception of tetrachloroethylene (PCE) in samples SV-7-5 and SV-9-5. PCE concentrations in these two samples exceeded the commercial/industrial DTSC Air Screening Level (SL) with a conservative 0.03 attenuation factor applied but did not exceed the USEPA Regional Screening Level (RSL).

3. Exposure Pathways and Media of Concern

Exposure pathways describe the course a chemical or physical agent takes from the source to the receptor (USEPA, 1989). Four components must be present for an exposure pathway to be complete:

- A primary source and mechanism of chemical release;
- A secondary source or transport medium (or media);
- A point of potential human contact with the contaminated medium (i.e., an exposure point); and
- An exposure route (e.g., ingestion, dermal contact, or inhalation).

The current and future intended use of the Subject Property is for industrial/commercial purposes, and this limited HHRA was completed to evaluate the current and future indoor commercial/industrial worker scenario. Use of the Subject Property for residential purposes was not quantitatively evaluated because there is no current or proposed residential use. However, residential use of the Subject Property is not prohibited by a Land Use Covenant (LUC). Future industrial/commercial receptor indoor air exposure is considered protective of current exposure because the maximum concentration or a 95% UCL of the mean concentration of COPCs in environmental soil vapor was assumed for the exposure scenario, regardless of sample location. As discussed below, points of potential future contact with COPCs are limited to indoor air.

3.1 Soil Pathway

Per the Phase II Report (Roux, 2022b), arsenic was detected in concentrations above screening values. However, the maximum detected arsenic concentration (5.30 mg/kg at B-5-3) was below the Southern California background arsenic concentration of 12 mg/kg (DTSC, 2020a). It is noted that limited detections of TPH were found in shallow soil at the area of below grade fill soil located within the staging area, which will reportedly be removed from the Subject Property. All other COPCs were detected at concentrations below screening values. As such, a quantitative evaluation of exposures to COPCs in soil was not completed as a part of this limited HHRA.

3.2 Groundwater/Surface Water Pathway

Per the Phase II Report (Roux, 2022b), depth to groundwater in the vicinity of the Subject Property is encountered at approximately 270 to 295 feet bgs. Roux did not collect groundwater data as part of the Phase I ESA or the Phase II Subsurface Investigation. Groundwater at the Subject Property is deeper than the maximum anticipated excavation depth during a construction worker scenario (down to 15 feet below surface). Consumption or ingestion of groundwater at the Subject Property is not prohibited; however, no groundwater wells are present on the Subject Property and current/future buildings are/will be connected to the municipal water source. As such, the groundwater pathway is not considered a complete exposure pathway and is not quantitatively evaluated as part of this limited HHRA.

3.3 Air Pathway

VOCs have been detected at the Subject Property in soil vapor samples that were collected 5 to 20 feet bgs. Therefore, vapor intrusion into indoor air is considered a potentially complete exposure pathway and was quantitatively evaluated in this HHRA.

3.4 Exposure Pathway Analysis

The current and future intended use of the Subject Property is for commercial/industrial space. Potential future receptors could include outdoor workers, construction workers, trespassers, and residents (as there is no LUC prohibiting residential use). However, based on the aforementioned information discussed in previous sections, this HHRA was limited to looking at the future indoor commercial/industrial receptor. Therefore, the conceptual site model (CSM) presented below illustrates potentially complete exposure pathways at the Subject Property evaluated in this limited HHRA:

Primary Source	Secondary Source	Exposure Media	Exposure Route	Receptor
Potential Historical Release(s)	Impacted Vadose Zone Soil Vapor	Indoor Air	Inhalation	•Indoor Commercial/Industrial Worker

4. Exposure Concentrations and Chemicals

4.1 Exposure Concentrations and Chemicals

Soil vapor sampling data utilized in the limited HHRA included samples collected by Roux in April 2022.

Exposure point concentrations (EPCs) for each media were equal to the following:

- **Soil vapor:** All compounds detected in soil vapor (VOCs) from the Roux April 2022 sampling event (Roux, 2022) were evaluated as COPCs:1,3,5-trimethylbenzene, 2-butanone, acetone, chloroethane, chloromethane, ethylbenzene, isopropanol, m,p-xylene, o-xylene, tetrachloroethene (PCE), toluene, and trichlorofluoromethane. For COPCs that were detected in ten or more samples, a 95% upper confidence limit (UCL) of the mean for samples up to 15 feet bgs was selected as the EPC for soil vapor. For the three contaminants detected in ten or more samples, no concentration measurements were statistical outliers (i.e., there are no hot spots). Therefore, the use of maximums and 95% UCLs is health protective. For COPCs that were detected in fewer than ten samples, the maximum detected concentration for samples up to 15 feet bgs was selected as the EPC for soil vapor. Roux April 2022 soil vapor samples were collected at 5 feet bgs, 10 feet bgs, 15 feet bgs, and 20 feet bgs. Soil vapor samples collected at 20 feet bgs (one sample) were excluded from this HHRA, consistent with guidance in Section 2A.3 of the Draft DTSC Supplemental Guidance (DTSC, 2020b).

Potential indoor air concentrations were calculated from soil vapor concentrations described above using methodology described in DTSC's *Preliminary Endangerment Assessment Guidance Manual* (PEA Guidance; DTSC, 2015) and DTSC's Vapor Intrusion Guidance (DTSC, 2011):

$$C_{indoor} = \alpha \times C_{soil\ vapor}$$

Where:

C_{indoor}= Indoor air concentration in µg/m^3
α= Attenuation factor (assumed to be equal to 0.03 consistent with assumptions for future commercial/industrial scenarios using HERO and USEPA media-specific assumptions, respectively per DTSC, 2015, DTSC, 2020b, and DTSC, 2011).
$C_{soil\ vapor}$=Soil vapor air concentration in µg/m^3

The table below provides a summary of the soil vapor data (excluding SV-1-20) utilized in the HHRA.

Summary of Soil Vapor Data Included in the HHRA

COPC	Number of Soil Vapor Samples	Number of Detections	Range of Detections (µg/m^3)	Soil Vapor Concentration (µg/m^3)	EPC Statistic
1,3,5-Trimethylbenzene	14	1	2.5 - 2.5	2.5E+00	Maximum
2-Butanone	14	10	4.3 - 17	1.1E+01	95% UCL
Acetone	14	14	6 - 100	4.7E+01	95% UCL
Chloroethane	14	1	1.4 - 1.4	1.4E+00	Maximum
Chloromethane	14	1	2.6 - 2.6	2.6E+00	Maximum
Ethylbenzene	14	1	3 - 3	3.0E+00	Maximum

COPC	Number of Soil Vapor Samples	Number of Detections	Range of Detections (µg/m^3)	Soil Vapor Concentration (µg/m^3)	EPC Statistic
Isopropanol	14	1	14 - 14	1.4E+01	Maximum
m,p-Xylene	14	1	11 - 11	1.1E+01	Maximum
o-Xylene	14	2	2.8 - 3.1	3.1E+00	Maximum
Tetrachloroethene	14	7	3.8 - 210	2.1E+02	Maximum
Toluene	14	9	2 - 6.3	6.3E+00	Maximum
Trichlorofluoromethane	14	12	7 - 110	8.2E+01	95% UCL

(1) µg/m^3 = micrograms per cubic meter.
(2) Data includes Roux April 2022 sampling event.
(3) Samples were collected from 13 unique location-depths. A duplicate sample was collected at SV-2-5.

4.2 Quantification of Exposure

This HHRA assumed default exposure factors in EPA RSL User's Guide for carcinogenic risk assessment of indoor worker exposure to air (USEPA, 2022b) and DTSC Note 1 (DTSC, 2019c). These exposure factors assume that the commercial/industrial worker is on-site 8 hours/day for 250 days/year for 25 years. For the cancer risk calculation, the lifetime averaging time is 70 years. If any of these default exposure assumptions is found to be invalid for this Subject Property, the HHRA may need to be revised. More details on calculation of risk and hazard from EPCs and the exposure factors presented here are described in **Sections 6.1 and 6.2**.

5. Toxicity Values

The toxicity assessment describes the quantitative relationship between the extent of exposure to a contaminant and the increased likelihood and/or severity of adverse effects. This quantitative relationship generally takes the form of toxicity values that are identified for use in risk evaluations. Toxicity values are used to quantify the chance of observing cancer or non-cancer effects in exposed receptors. Toxicity values may be based on epidemiological studies or animal studies.

Toxicity Values Utilized in the HHRA Indoor Air Evaluation

COPC	Non-Cancer Inhalation Reference Concentration (RfC) ($\mu g/m^3$)	Cancer Inhalation Unit Risk (IUR) $(\mu g/m^3)^{-1}$	Source
1,3,5-Trimethylbenzene	6.0E+01	--	EPA RSLs
2-Butanone	5.0E+03	--	EPA RSLs
Acetone	--	--	EPA RSLs
Chloroethane	4.0E+03	--	EPA RSLs
Chloromethane	9.0E+01	--	EPA RSLs
Ethylbenzene	1.0E+03	2.5E-06	EPA RSLs
Isopropanol	2.0E+02	--	EPA RSLs
m,p-Xylene	1.0E+02	--	EPA RSLs
o-Xylene	1.0E+02	--	EPA RSLs
Tetrachloroethene	4.0E+01	6.1E-06	DTSC Note 10
Toluene	3.0E+02	--	DTSC Note 10
Trichlorofluoromethane	1.2E+03	--	DTSC Note 10

(1) Only compounds detected in soil vapor samples were evaluated herein; compounds below the laboratory reporting limit in all samples were not evaluated.
(2) "--" = no toxicity value developed
(3) Toxicity values based on DTSC HHRA Note 10 (DTSC, 2019a) or USEPA's November 2022 RSLs (USEPA, 2022a).

5.1 Toxicity Information for Non-Carcinogenic Effects

In assessing the potential for non-cancer health effects, USEPA assumes there is a toxicological threshold below which no adverse health effects are observable (USEPA, 1993). These toxicological thresholds are represented by reference concentrations (RfCs) for inhalation exposures. The RfCs are estimates (with uncertainty spanning, in some cases, an order of magnitude) of daily exposures to the human population (including sensitive subgroups) that are likely to be without an appreciable risk of deleterious effects during a lifetime. USEPA derives RfCs using a standardized approach, considering available information from human and animal studies, which establish the levels below which toxicological effects are not observed and the uncertainties inherent in the available information (USEPA, 1993).

5.2 Toxicity Information for Carcinogenic Effects

USEPA uses a two-part evaluation in assessing potentially carcinogenic substances. In the first part, a chemical is assigned a weight-of-evidence classification, which reflects USEPA's assessment of the

likelihood that the chemical is a human carcinogen. For chemicals that are classified as possible, probable, or known human carcinogens, USEPA calculates an inhalation unit risk (IUR) for inhalation exposures when sufficient information is available to support the calculation. USEPA guidance indicates that a linear, no-threshold dose-response model is appropriate for carcinogenic risk assessment (USEPA, 2005). An extremely low level of exposure to a carcinogen may result in chromosomal or enzyme changes leading to cancer. Therefore, USEPA does not generally estimate thresholds for carcinogens. IURs are used to estimate the probability of a cancer effect occurring in a receptor exposed over their lifetime.

6. Risk Characterization Summary

The risk characterization process integrates the results of the data evaluation, exposure assessment, and toxicity assessment to provide a quantitative estimation of cumulative non-carcinogenic and carcinogenic risks for an indoor industrial/commercial worker's exposure to indoor air as summarized in the table below:

- **Indoor Commercial/Industrial Worker:** The cancer risk estimate for an indoor commercial/industrial scenario is within the risk management target cancer threshold range of 1E-06 to 1E-04. The non-cancer hazard estimate is below the non-cancer hazard target threshold of 1.

Cumulative Cancer and Non-Cancer Risks

Risk	Target Threshold	Indoor Commercial/Industrial Exposure to Indoor Air	
		Estimated Risk	Exceed Risk Threshold?
Cancer Risk	1E-06 to 1E-04	3E-06	Within risk management target threshold range
Non-Cancer Hazard	1	4E-02	No

As specified in DTSC HERO's Note 4 (DTSC, 2019b), risk estimates have been calculated using USEPA's attenuation factor of 0.03 (see **Table 1**).

6.1 Cancer Risks

For carcinogens, risk is expressed as the probability that an individual will develop cancer over a lifetime because of exposure to the carcinogen and is expressed as incremental lifetime cancer risk (ILCR). Carcinogenic risk for each compound is calculated according to the below equation, which is a modified version of the EPA RSL User's Guide carcinogenic screening level derivation equation indoor worker exposure to air (USEPA, 2022b):

$$ILCR = \frac{EPC \times IUR \times EF_{ind} \times ED_{ind} \times ET_{ind}}{LT \times C_1 \times C_2}$$

Where:
ILCR = incremental lifetime cancer risk (unitless)
EPC = indoor air concentration (µg/m^3)
IUR = inhalation unit risk (µg/m^3)$^{-1}$
EF_{ind} = exposure frequency (days/year)
ED_{ind} = exposure duration (years)
ET_{ind} = exposure time (hours)
LT = lifetime averaging time
C_1 = 365 days/year
C_2 = 24 hours/day

This HHRA assumed default exposure factors in EPA RSL User's Guide for carcinogenic risk assessment of indoor worker exposure to air (USEPA, 2022b) and DTSC Note 1 (DTSC, 2019c).

The combined risk from exposure to multiple constituents is evaluated by adding the risks from individual constituents, and multiple exposure pathways (as applicable) known as cumulative risk. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP; 40 CFR 300) indicates that the ILCR posed by a site should not exceed a range of 1E-04 to 1E-06. The estimated cancer risks at the Subject Property are within the risk management target cancer risk threshold range (1E-06 to 1E-04) for an indoor commercial/industrial worker.

Cumulative Cancer Risk

Media	Indoor Commercial/Industrial Exposure to Indoor Air	
	Estimated Risk	Exceed 1E-04?
Soil Vapor	3E-06	No

Risk estimates are provided in **Table 1**.

6.2 Non-Cancer Hazards

The non-carcinogenic hazard estimate is calculated according to the below equation to arrive at a Hazard Quotient (HQ) for each chemical. The below equation is a modified version of the EPA RSL User's Guide non-carcinogenic screening level derivation equation indoor worker exposure to air (USEPA, 2022b):[1]

$$HQ = \frac{\frac{EPC}{RfC} \times EF_{ind} \times ED_{ind} \times ET_{ind}}{ET_{ind} \times C_1 \times C_2}$$

Where:
HQ = hazard quotient (unitless)
EPC = indoor air concentration (µg/m^3)
RfC = reference concentration (µg/m^3)
EF_{ind} = exposure frequency (days/year)
ED_{ind} = exposure duration (years)
ET_{ind} = exposure time (hours)
C_1 = 365 days/year
C_2 = 24 hours/day

This HHRA assumed default exposure factors in EPA RSL User's Guide for non-carcinogenic risk assessment of indoor worker exposure to air (USEPA, 2022b) and DTSC Note 1 (DTSC, 2019c).

To assess the potential for non-carcinogenic health effects posed by exposure to multiple constituents, a Hazard Index (HI) approach is used. This approach assumes that non-carcinogenic hazards associated with exposure to more than one constituent are additive (HI = sum of the HQs). Synergistic or antagonistic interactions between constituents are not considered. The HI is then compared to the DTSC threshold of 1

[1] Per DTSC Note 3 (DTSC, 2022), DTSC uses the same equations as USEPA RSLs to derive its own DTSC screening levels.

(DTSC, 2015). The non-cancer hazard estimates for a future indoor commercial/industrial worker receptor does not exceed this threshold, as shown below.

Cumulative Non-Cancer Hazard

Media	Indoor Commercial/Industrial Exposure to Indoor Air	
	Estimated Risk	Exceed 1?
Soil Vapor	4E-02	No

Hazard estimates are provided in **Table 1.** For a more detailed description of the HHRA's conservative methodology, see the **Section 6.3**.

6.3 Uncertainty

Risk and hazard estimates resulting from application of this evaluation do not represent absolute estimates at a specific site because generic assumptions for commercial/industrial land use are utilized. Overall, carcinogenic excess lifetime cancer risk ILCR and non-carcinogenic HI presented in the HHRA are based upon conservative assumptions that are intended to be protective of human health by likely overestimating exposure to account for parameter uncertainty (RME exposure scenario). Therefore, the evaluation of current and future exposures in the HHRA is considered conservative.

Reliance on exposure point concentrations to quantify risk estimates inherently introduces uncertainty into risk and hazard estimates, due to uncertainty surrounding site characterization, and heterogeneity. Use of maximum concentrations or 95% UCLs of the mean as EPCs similarly introduces uncertainty, as these statistics almost certainly overestimate actual risk encountered. In particular, the maximum detected concentration was conservatively used to characterize the EPC for the main risk driver PCE. Additionally, for the indoor commercial/industrial worker indoor air exposure scenario, the attenuation factor of 0.03 is a conservative assumption, as DTSC will on occasion allow an attenuation factor of 0.0005 for vapor intrusion calculations.

For the indoor commercial/industrial worker exposure to indoor air pathway, toxicity values were not provided in DTSC HHRA Note 10 or USEPA 2022 RSLs for acetone. Therefore, this compound was not quantitatively evaluated in the HHRA. This omission is considered an area of uncertainty in the HHRA. However, given adoption of numerous conservative assumptions, this uncertainty is not considered to impact conclusions of the HHRA.

Uncertainty also lies in the exposure pathways and receptors evaluated. This limited HHRA only quantitatively evaluated indoor commercial/industrial worker exposure to indoor air. However, risk from the soil and groundwater consumption/ingestion pathways may exist, and other receptors may access the Subject Property in the future. Dermal contact with groundwater at the Subject Property for a construction worker is not considered given the depth to groundwater, but consumption or ingestion of groundwater at the Subject Property is possible as there are no restrictions on groundwater use at the Subject Property. No groundwater data was available, and if groundwater at the Subject Property becomes accessible in the future (through a potable or non-potable groundwater well) groundwater exposure would be a complete pathway

and the HHRA should be revised. Risk was not quantified for a construction worker, resident, outdoor commercial/industrial worker, or trespasser to soils. Even if TPH-soils are removed from the Subject Property in the future, other detected COPCs in soil that were well below screening levels may pose additional minimal, although non-zero, risk and hazard to construction workers, residents, outdoor commercial/industrial workers, and trespassers. The HHRA also did not evaluate the potential future residential exposure to indoor air, and the risk and hazard estimates from the commercial/industrial indoor air pathway evaluated in this HHRA would likely underestimate risk to residential receptors.

						Total ILCR:	**3E-06**	
						Total HI:	**4E-02**	

Exposure Factors and Conversion Factors: (5)

Lifetime (LT)=	70 years	C1 =	365 days/year
Exposure frequency (EFind)=	250 days/year	C2 =	24 hours/day
Exposure Duration (EDind)=	25 years		
Exposure Time (ETind)=	8 hours/day		

Notes:

(1) Indoor Air Exposure Point Concentration (EPC) = soil gas concentration (µg/m3)*AF where AF=steady state attenuation factor. AF assumed to be equal to 0.03 for Soil Gas in Table: Medium-Specific Attenuation Factors for VI to Indoor Air. DTSC's Supplemental Guidance: Screening and Evaluating Vapor Intrusion (Draft for Public Comments). February 2020.

(2) Toxicological values as provided in HHSE text; utilized Human Health Risk Assessment Note 10, and USEPA Regional Screening Levels (RSLs) dated November 2022 when unavailable in Note 10.

(3) ILCR = [EPC * IUR * EF_{ind} * ED_{ind} * ET_{ind} * (1/C2)]/(LT * C1)

(4) HQ = [EPC * (1/RfC) * EFind * ED_{ind} * ET_{ind} * (1/C2)]/(ED_{ind} * C1)

(5) This HHRA assumed default exposure factors in EPA RSL User's Guide for carcinogenic risk assessment of indoor worker exposure to air (USEPA, 2022b) and DTSC Note 1 (DTSC, 2019c).

(6) NC = Not carcinogenic, NS = No standard, -- = No Risk Estimate

(7) $\mu g/m^3$ = micrograms per cubic meter

MEMORANDUM

URBAN | CROSSROADS

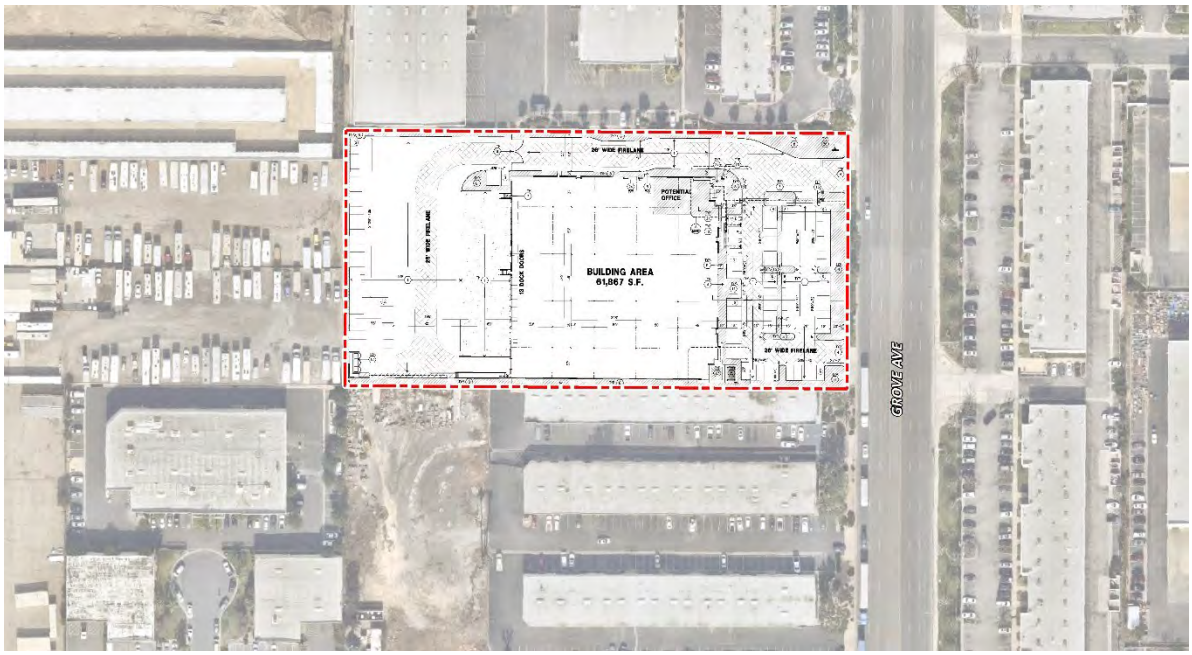
DATE: June 8, 2023
TO: Nicole Morse, T&B Planning, Inc.
FROM: Haseeb Qureshi
Ali Dadabhoy
Shannon Wong
JOB NO: 15067-02 AQ & GHG Assessment

FIRST GROVE AIR QUALITY & GREENHOUSE GAS ASSESSMENT

Nicole Morse,

Urban Crossroads, Inc. is pleased to provide the following Air Quality & Greenhouse Gas Assessment for the First Grove (**Project**), which is located north of E. Philadelphia Street and west of S. Grove Ave in the City of Ontario.

PROJECT OVERVIEW



It is our understanding that the Project is to consist of a 61,867 square foot industrial warehouse building on 4.20 acres (see Exhibit 1).

The Project site land use is currently designated as Business Park under The Ontario Plan (**TOP**) 2050. The currently adopted General Plan Business Park land use allows for the development of up to 109,817 square feet of business park use, calculated using a floor-to-area ratio (**FAR**) of 0.60. The Business Park land use designation is defined as "employee-intensive office uses including corporate offices, technology centers, research and development, "clean" industry, light manufacturing, and supporting retail within a business park setting."

SUMMARY OF FINDINGS

Results of the assessment indicate that the Project would result in a less than significant with respect to air quality and greenhouse gases.

EXHIBIT 1: SITE PLAN

PROJECT AIR QUALITY IMPACTS

AIR QUALITY SETTING

SOUTH COAST AIR BASIN (SCAB)

The Project site is located in the SCAB within the jurisdiction of South Coast Air Quality Management District (SCAQMD) (1). The SCAQMD was created by the 1977 Lewis-Presley Air Quality Management Act, which merged four county air pollution control bodies into one regional district. Under the Act, the SCAQMD is responsible for bringing air quality in areas under its jurisdiction into conformity with federal and state air quality standards. As previously stated, the Project site is located within the SCAB, a 6,745-square mile subregion of the SCAQMD, which includes portions of Los Angeles, Riverside, and San Bernardino Counties, and all of Orange County.

The SCAB is bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The Los Angeles County portion of the Mojave Desert Air Basin is bounded by the San Gabriel Mountains to the south and west, the Los Angeles / Kern County border to the north, and the Los Angeles / San Bernardino County border to the east. The Riverside County portion of the Salton Sea Air Basin is bounded by the San Jacinto Mountains in the west and spans eastward up to the Palo Verde Valley.

Regional Climate

The regional climate has a substantial influence on air quality in the SCAB. In addition, the temperature, wind, humidity, precipitation, and amount of sunshine influence the air quality.

The annual average temperatures throughout the SCAB vary from the low to middle 60s degrees Fahrenheit (°F). Due to a decreased marine influence, the eastern portion of the SCAB shows greater variability in average annual minimum and maximum temperatures. January is the coldest month throughout the SCAB, with average minimum temperatures of 47°F in downtown Los Angeles and 36°F in San Bernardino. All portions of the SCAB have recorded maximum temperatures above 100°F.

Although the climate of the SCAB can be characterized as semi-arid, the air near the land surface is quite moist on most days because of the presence of a marine layer. This shallow layer of sea air is an important modifier of SCAB climate. Humidity restricts visibility in the SCAB, and the conversion of sulfur dioxide (SO_2) to sulfates (SO_4) is heightened in air with high relative humidity. The marine layer provides an environment for that conversion process, especially during the spring and summer months. The annual average relative humidity within the SCAB is 71 percent (%) along the coast and 59% inland. Since the ocean effect is dominant, periods of heavy early morning fog are frequent and low stratus clouds are a characteristic feature. These effects decrease with distance from the coast.

More than 90% of the SCAB's rainfall occurs from November through April. The annual average rainfall varies from approximately nine inches in Riverside to fourteen inches in downtown Los Angeles. Monthly and yearly rainfall totals are extremely variable. Summer rainfall usually consists of widely scattered thunderstorms near the coast and slightly heavier shower activity in the eastern portion of the SCAB with frequency being higher near the coast.

Due to its generally clear weather, about three-quarters of available sunshine is received in the SCAB. The remaining one-quarter is absorbed by clouds. The ultraviolet portion of this abundant radiation is a key factor in photochemical reactions. On the shortest day of the year there are approximately 10 hours of possible sunshine, and on the longest day of the year there are approximately 14½ hours of possible sunshine.

The importance of wind to air pollution is considerable. The direction and speed of the wind determines the horizontal dispersion and transport of the air pollutants. During the late autumn to early spring rainy season, the SCAB is subjected to wind flows associated with the traveling storms moving through the region from the northwest. This period also brings five to ten periods of strong, dry offshore winds, locally termed "Santa Anas" each year. During the dry season, which coincides with the months of maximum photochemical smog concentrations, the wind flow is bimodal, typified by a daytime onshore sea breeze and a nighttime offshore drainage wind. Summer wind flows are created by the pressure differences between the relatively cold ocean and the unevenly heated and cooled land surfaces that modify the general northwesterly wind circulation over southern California. Nighttime drainage begins with the radiational cooling of the mountain slopes. Heavy, cool air descends the slopes and flows through the mountain passes and canyons as it follows the lowering terrain toward the ocean. Another characteristic wind regime in the SCAB is the "Catalina Eddy," a low level cyclonic (counterclockwise) flow centered over Santa Catalina Island which results in an offshore flow to the southwest. On most spring and summer days, some indication of an eddy is apparent in coastal sections.

In the SCAB, there are two distinct temperature inversion structures that control vertical mixing of air pollution. During the summer, warm high-pressure descending (subsiding) air is undercut by a shallow layer of cool marine air. The boundary between these two layers of air is a persistent

marine subsidence/inversion. This boundary prevents vertical mixing which effectively acts as an impervious lid to pollutants over the entire SCAB. The mixing height for the inversion structure is normally situated 1,000 to 1,500 feet above mean sea level.

A second inversion-type forms in conjunction with the drainage of cool air off the surrounding mountains at night followed by the seaward drift of this pool of cool air. The top of this layer forms a sharp boundary with the warmer air aloft and creates nocturnal radiation inversions. These inversions occur primarily in the winter when nights are longer and onshore flow is weakest. They are typically only a few hundred feet above mean sea level. These inversions effectively trap pollutants, such as nitrogen oxides (NO_X) and carbon monoxide (CO) from vehicles, as the pool of cool air drifts seaward. Winter is therefore a period of high levels of primary pollutants along the coastline.

Wind Patterns and Project Location

The distinctive climate of the Project area and the SCAB is determined by its terrain and geographical location. The SCAB is located in a coastal plain with connecting broad valleys and low hills, bounded by the Pacific Ocean in the southwest quadrant with high mountains forming the remainder of the perimeter.

Wind patterns across the south coastal region are characterized by westerly and southwesterly onshore winds during the day and easterly or northeasterly breezes at night. Winds are characteristically light although the speed is somewhat greater during the dry summer months than during the rainy winter season.

Criteria Pollutants

Both the U.S. Environmental Protection Agency (EPA) and the California Air Resources Board (CARB) have established ambient air quality standards for common pollutants. These ambient air quality standards are levels of contaminants representing safe levels that avoid specific adverse health effects associated with each pollutant. The ambient air quality standards cover what are called "criteria" pollutants because the health and other effects of each pollutant are described in criteria documents. The six criteria pollutants are ozone (O_3) (precursor emissions include NO_X and reactive organic gases (ROG), CO, particulate matter (PM), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), and lead. Areas that meet ambient air quality standards are classified as attainment areas, while areas that do not meet these standards are classified as nonattainment areas. The Riverside County portion of the SCAB is designated as a nonattainment area for the federal O_3 and $PM_{2.5}$ standards and is also a nonattainment area for the state standards for O_3, PM_{10}, and $PM_{2.5}$.

Toxic Air Contaminants (TAC) Trend

In 1984, as a result of public concern for exposure to airborne carcinogens, CARB adopted regulations to reduce the amount of TAC emissions resulting from mobile and area sources, such as cars, trucks, stationary products, and consumer products. According to the Ambient and Emission Trends of Toxic Air Contaminants in California journal article (2) which was prepared for CARB, results show that between 1990-2012, ambient concentration and emission trends for the seven TACs responsible for most of the known cancer risk associated with airborne exposure in California have declined significantly (between 1990 and 2012). The seven TACs studied include those that are derived from mobile sources: diesel particulate matter (DPM), benzene (C_6H_6), and

1,3-butadiene (C_4H_6); those that are derived from stationary sources: perchloroethylene (C_2Cl_4) and hexavalent chromium (Cr(VI)); and those derived from photochemical reactions of emitted VOCs: formaldehyde (CH_2O) and acetaldehyde (C_2H_4O)[1]. The decline in ambient concentration and emission trends of these TACs are a result of various regulations CARB has implemented to address cancer risk.

Some people are especially sensitive to air pollution and are given special consideration when evaluating air quality impacts from projects. These groups of people include children, the elderly, and individuals with pre-existing respiratory or cardiovascular illness. Structures that house these persons or places where they gather are defined as "sensitive receptors". These structures typically include uses such as residences, hotels, and hospitals where an individual can remain for 24 hours. Consistent with the LST Methodology, the nearest land use where an individual could remain for 24 hours to the Project site has been used to determine construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$, since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time.

Receptors in the Project study area are described below. All distances are measured from the Project site boundary to the outdoor living areas (e.g., backyards) or at the building façade, whichever is closer to the Project site. Receptors in the Project study area are shown on Exhibit 2 under the Localized Construction Emissions section later in the report.

- Receptor R1 represents the existing residence at 2125 S Cucamonga Ave, approximately 596 feet southwest of the Project site.
- Receptor R2 represents Home of the Christian-Bethel Church at 1147 E Philadelphia St, approximately 439 feet south of the Project site.
- Receptor R3 represents the existing residence at 1456 E Philadelphia St, approximately 824 feet southeast of the Project site.
- Receptor R4 represents The Grove Apartments at 1110 E Philadelphia St, approximately 756 feet south of the Project site.
- Receptor R5 represents Bon View Elementary at 2121 S Bon View Ave, approximately 1,521 feet west of the Project site.
- Receptor R6 represents Tech Industrial Machine Corp at 2124 S Grove Ave Unit J, adjacent south of the Project site.

REGULATORY BACKGROUND

FEDERAL REGULATIONS

The EPA is responsible for setting and enforcing the national ambient air quality standards (NAAQS) for O_3, CO, NO_X, SO_2, PM_{10}, and lead (Pb) (3). The EPA has jurisdiction over emissions sources that are under the authority of the federal government including aircraft, locomotives,

[1] It should be noted that ambient DPM concentrations are not measured directly. Rather, a surrogate method using the coefficient of haze (COH) and elemental carbon (EC) is used to estimate DPM concentrations.

and emissions sources outside state waters (Outer Continental Shelf). The EPA also establishes emission standards for vehicles sold in states other than California. Automobiles sold in California must meet the stricter emission requirements of CARB.

The Federal Clean Air Act (CAA) was first enacted in 1955 and has been amended numerous times in subsequent years (1963, 1965, 1967, 1970, 1977, and 1990). The CAA establishes the federal air quality standards, the NAAQS, and specifies future dates for achieving compliance (4). The CAA also mandates that each state submit and implement state implementation plans (SIPs) for local areas not meeting these standards. These plans must include pollution control measures that demonstrate how the standards will be met.

The 1990 amendments to the CAA that identify specific emission reduction goals for areas not meeting the NAAQS require a demonstration of reasonable further progress toward attainment and incorporate additional sanctions for failure to attain or to meet interim milestones. The sections of the CAA most directly applicable to the development of the Project site include Title I (Non-Attainment Provisions) and Title II (Mobile Source Provisions) (5) (6). Title I provisions were established with the goal of attaining the NAAQS for the following criteria pollutants O_3, NO_2, SO_2, PM_{10}, CO, $PM_{2.5}$, and Pb. The NAAQS were amended in July 1997 to include an additional standard for O_3 and to adopt a NAAQS for $PM_{2.5}$.

Mobile source emissions are regulated in accordance with Title II provisions. These provisions require the use of cleaner burning gasoline and other cleaner burning fuels such as methanol and natural gas. Automobile manufacturers are also required to reduce tailpipe emissions of hydrocarbons and NO_X. NO_X is a collective term that includes all forms of NO_X which are emitted as byproducts of the combustion process.

CALIFORNIA REGULATIONS

CARB

The CARB, which became part of the California EPA (CalEPA) in 1991, is responsible for ensuring implementation of the California Clean Air Act (AB 2595), responding to the federal CAA, and for regulating emissions from consumer products and motor vehicles. AB 2595 mandates achievement of the maximum degree of emissions reductions possible from vehicular and other mobile sources in order to attain the state ambient air quality standards by the earliest practical date. The CARB established the California ambient air quality standards (CAAQS) for all pollutants for which the federal government has NAAQS and, in addition, establishes standards for SO_4, visibility, hydrogen sulfide (H_2S), and vinyl chloride (C_2H_3Cl). However, at this time, H_2S and C_2H_3Cl are not measured at any monitoring stations in the SCAB because they are not considered to be a regional air quality problem. Generally, the CAAQS are more stringent than the NAAQS (7) (8).

Local air quality management districts, such as the SCAQMD, regulate air emissions from stationary sources such as commercial and industrial facilities. All air pollution control districts have been formally designated as attainment or non-attainment for each CAAQS.

Serious non-attainment areas are required to prepare Air Quality Management Plans (AQMP) that include specified emission reduction strategies in an effort to meet clean air goals. These plans are required to include:

- Application of Best Available Retrofit Control Technology to existing sources;
- Developing control programs for area sources (e.g., architectural coatings and solvents) and indirect sources (e.g. motor vehicle use generated by residential and commercial development);
- A District permitting system designed to allow no net increase in emissions from any new or modified permitted sources of emissions;
- Implementing reasonably available transportation control measures and assuring a substantial reduction in growth rate of vehicle trips and miles traveled;
- Significant use of low emissions vehicles by fleet operators;
- Sufficient control strategies to achieve a 5% or more annual reduction in emissions or 15% or more in a period of three years for ROGs, NO_X, CO and PM_{10}. However, air basins may use alternative emission reduction strategy that achieves a reduction of less than 5% per year under certain circumstances.

AQMP

Currently, the NAAQS and CAAQS are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of AQMP to meet the state and federal ambient air quality standards (9). AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy.

APPLICABLE REGULATORY REQUIRMENTS

SCAQMD Rules that are currently applicable during construction activity for this Project include but are not limited to Rule 403 (Fugitive Dust) and Rule 1113 (Architectural Coatings) (10) (11).

SCAQMD Rule 403

This rule is intended to reduce the amount of particulate matter entrained in the ambient air as a result of anthropogenic (human-made) fugitive dust sources by requiring actions to prevent and reduce fugitive dust emissions. Rule 403 applies to any activity or human-made condition capable of generating fugitive dust and requires best available control measures to be applied to earth moving and grading activities. This rule is intended to reduce PM_{10} emissions from any transportation, handling, construction, or storage activity that has the potential to generate fugitive dust. PM_{10} suppression techniques are summarized below.

- Portions of a construction site to remain inactive longer than a period of three months will be seeded and watered until grass cover is grown or otherwise stabilized.
- All onsite roads will be paved as soon as feasible or watered periodically or chemically stabilized.
- All material transported offsite will be either sufficiently watered or securely covered to prevent excessive amounts of dust.
- The area disturbed by clearing, grading, earthmoving, or excavation operations will be minimized at all times.

- Where vehicles leave a construction site and enter adjacent public streets, the streets will be swept daily or washed down at the end of the workday to remove soil tracked onto the paved surface.

SCAQMD Rule 1113

This rule serves to limit the volatile organic compound (VOC) content of architectural coatings used on projects in the SCAQMD. Any person who supplies, sells, offers for sale, or manufactures any architectural coating for use on projects in the SCAQMD must comply with the current VOC standards set in this rule.

METHODOLOGY

In May 2022, the California Air Pollution Control Officers Association (CAPCOA) in conjunction with other California air districts, including SCAQMD, released the latest version of the CalEEMod Version 2022.1. The purpose of this model is to calculate construction-source and operational-source criteria pollutant (VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$) and GHG emissions from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from mitigation measures (12). Accordingly, the latest version of CalEEMod has been used for this Project to determine construction and operational air quality and greenhouse gas emissions.

Standards of Significance

The criteria used to determine the significance of potential Project-related air quality impacts are taken from the California Environmental Quality Act Guidelines (CEQA Guidelines) (14 CCR §§15000, et seq.). Based on these thresholds, a project would result in a significant impact related to air quality if it would (13):

- **Threshold 1**: Conflict with or obstruct implementation of the applicable air quality plan.
- **Threshold 2**: Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard.
- **Threshold 3**: Expose sensitive receptors to substantial pollutant concentrations.
- **Threshold 4**: Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

AIR QUALITY REGIONAL EMISSIONS THRESHOLDS

The SCAQMD has developed regional significance thresholds for criteria pollutants, as summarized at Table 1 (14). The SCAQMD's CEQA Air Quality Significance Thresholds (April 2019) indicate that any projects in the South Coast Air Basin (SCAB) with daily emissions that exceed any of the indicated thresholds should be considered as having an individually and cumulatively significant air quality impact.

TABLE 1: MAXIMUM DAILY REGIONAL EMISSIONS THRESHOLDS

Pollutant	Construction	Operations
NO_X	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM_{10}	150 lbs/day	150 lbs/day
$PM_{2.5}$	55 lbs/day	55 lbs/day
SO_X	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day

lbs/day – Pounds Per Day

AIR QUALITY LOCALIZED EMISSIONS THRESHOLDS

For this Project, the appropriate SRA for the LST analysis is the SCAQMD Southwest San Bernardino Valley monitoring station (SRA 33). LSTs apply to CO, NO_2, PM_{10}, and $PM_{2.5}$. The SCAQMD produced look-up tables for projects less than or equal to 5 acres in size. The SCAQMD's screening look-up tables are utilized in determining localized impacts. It should be noted that since the look-up tables identify thresholds at only 1 acre, 2 acres, and 5 acres, linear regression has been utilized to determine localized significance thresholds. Consistent with SCAQMD guidance, the thresholds presented in Table 2 were calculated by interpolating the threshold values for the Project's disturbed acreage.

The acres disturbed is based on the equipment list and days in the demolition, site preparation, and grading phase according to the anticipated maximum number of acres a given piece of equipment can pass over in an 8-hour workday. The equipment-specific grading rates are summarized in the CalEEMod user's guide, Appendix A: Calculation Details for CalEEMod (15). It should be noted that the disturbed area per day is representative of a piece of equipment making multiple passes over the same land area. In other words, one Rubber Tired Dozer can make multiple passes over the same land area totaling 0.5 acres in a given 8-hour day. Appendix A of the CalEEMod User Manual only identifies equipment-specific grading rates for Crawler Tractors, Graders, Rubber Tired Dozers, and Scrapers; therefore, Tractors/Loaders/Backhoes equipment that was included in the demolition, site preparation and grading phase was replaced with Crawler Tractors. For analytical purposes, emissions associated with peak site demolition, preparation, and grading activities are considered for purposes of localized significance thresholds (LSTs) since this phase represents the maximum localized emissions that would occur. The Project's construction activities could disturb a maximum of approximately 1 acre per day for demolition, 3.5 acres per day for site preparation and 4 acres per day for grading activities. Any other construction phases of development would result in lesser emissions and consequently lesser impacts than what is disclosed herein. As such, Table 2 presents thresholds for localized construction and operational emissions.

TABLE 2: MAXIMUM DAILY LOCALIZED EMISSIONS THRESHOLDS

Source	Activity	Emissions (lbs/day)			
		VOC	NO_X	PM_{10}	$PM_{2.5}$
Construction	Demolition	118 lbs/day	863 lbs/day	92 lbs/day	28 lbs/day
	Site Preparation	220 lbs/day	1,713 lbs/day	95 lbs/day	36 lbs/day
	Grading	237 lbs/day	1,873 lbs/day	106 lbs/day	38 lbs/day
Operations	N/A	270 lbs/day	2,193 lbs/day	31 lbs/day	10 lbs/day

[1]Source of localized significance threshold (LSTs) is provided on page 20.

CONSTRUCTION ACTIVITIES

Construction activities associated with the Project would result in emissions of VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$. Construction related emissions are expected from the following construction activities:

- Demolition
- Site Preparation
- Grading (Import/Export)
- Building Construction
- Paving
- Architectural Coating

DEMOLITION ACTIVITIES

The Project site has existing uses that are currently active by a telecommunication company with vehicle maintenance operations on-site which will be demolished, resulting in approximately 25,000 square feet of demolished material.

GRADING ACTIVITIES

Dust is typically a major concern during grading activities. Because such emissions are not amenable to collection and discharge through a controlled source, they are called "fugitive emissions". Fugitive dust emissions rates vary as a function of many parameters (soil silt, soil moisture, wind speed, area disturbed, number of vehicles, depth of disturbance or excavation, etc.). CalEEMod was utilized to calculate fugitive dust emissions resulting from this phase of activity. Per client provided data, this analysis assumes that earthwork activities are expected to balance on site and no import or export of soils would be required. The CalEEMod default trip length of 20-miles will be used to analyze the emissions associated with export activities.

ON-ROAD TRIPS

Construction generates on-road vehicle emissions from vehicle usage for workers, vendors, and haul trucks commuting to and from the site. Worker and hauling trips are based on CalEEMod defaults. It should be noted that for vendor trips, specifically, CalEEMod only assigns vendor trips to the Building Construction phase. Vendor trips would likely occur during all phases of construction. As such, the CalEEMod defaults for vendor trips have been adjusted based on a ratio of the total vendor trips to the number of days of each subphase of activity.

CONSTRUCTION DURATION

For purposes of analysis, construction of Project is expected to commence in August 2024 and would last through August 2025. The construction schedule utilized in the analysis represents a "worst-case" analysis scenario should construction occur any time after the respective dates since emission factors for construction decrease as time passes and the analysis year increases due to emission regulations becoming more stringent[2]. The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required per CEQA Guidelines (16).

CONSTRUCTION EQUIPMENT

CalEEMod default parameters for equipment has been used. Consistent with industry standards and typical construction practices, each piece of equipment will operate up to a total of eight (8) hours per day, or more than two-thirds of the period during which construction activities are allowed pursuant to the code.

REGIONAL CONSTRUCTION EMISSIONS SUMMARY

The estimated maximum daily construction emissions are summarized on Table 3, and as shown, the Project construction-source emissions would not exceed SCAQMD regional thresholds. Thus, the Project would result in a less than significant impact associated with construction activities. Detailed construction model outputs are presented in Attachment A.

[2] As shown in the CalEEMod User's Guide Version 2022.1, Section 4.3 "Off-Road Equipment" as the analysis year increases, emission factors for the same equipment pieces decrease due to the natural turnover of older equipment being replaced by newer less polluting equipment and new regulatory requirements.

TABLE 3: REGIONAL CONSTRUCTION EMISSIONS SUMMARY

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
2024	3.74	36.04	34.41	0.06	7.49	4.21
2025	13.45	20.42	29.39	0.04	1.53	0.95
Winter						
2024	3.62	34.44	31.47	0.06	4.39	2.38
2025	1.33	11.73	15.82	0.03	0.88	0.53
Maximum Daily Emissions	**13.45**	**36.04**	**34.41**	**0.06**	**7.49**	**4.21**
SCAQMD Regional Threshold	75	100	550	150	150	55
Threshold Exceeded?	NO	NO	NO	NO	NO	NO

[1]PM_{10} and $PM_{2.5}$ source emissions reflect 3x daily watering per SCAQMD Rule 403 for fugitive dust.

REGIONAL OPERATIONAL EMISSIONS

Operational activities associated with the Project would result in emissions of VOCs, NO_X, CO, SO_X, PM_{10}, and $PM_{2.5}$. Operational related emissions are expected from the following primary sources: area source emissions, energy source emissions, and mobile source emissions.

The Project related operational air quality impacts derive primarily from vehicle trips generated by the Project. Trip characteristics available from the *First Grove Addendum Trip Generation Assessment* were utilized in this analysis (17).

To determine emissions from trucks for the proposed industrial uses, the analysis incorporated the SCAQMD recommended truck trip length 15.3 miles for 2-axle (LHDT1, LHDT2) trucks, 14.2 miles 3-axle (MHDT) trucks and 39.9 miles for 4+-axle (HHDT) trucks and weighting the average trip lengths using the traffic trip percentages taken from the *First Grove Addendum Trip Generation Assessment* (17). The trip length function for trucks in CalEEMod has been revised to 28.72 miles, with an assumption of 100% primary trips for the proposed industrial land uses. This trip length assumption is higher than the CalEEMod defaults for trucks.

It is common for warehouse buildings to require the operation of exterior yard trucks or cargo handling equipment (CHE) to move empty containers and empty chassis in the building's truck court areas. The cargo handling equipment is assumed to have a horsepower (hp) range of approximately 175 hp to 200 hp. Based on the latest available information from SCAQMD (18); for example, warehouse projects typically have 3.6-yard trucks/CHE per million square feet of building space. For this Project, on-site modeled operational equipment conservatively includes

up to one (1) 200 horsepower (hp), compressed natural gas or gasoline-powered tractors/loaders/backhoes operating at 4 hours a day[3] for 365 days of the year.

The estimated operation-source emissions from the Project are summarized on Table 4. Detailed operation model outputs are presented in Attachment B. As shown on Table 4, operational-source emissions would not exceed the applicable SCAQMD regional thresholds for emissions of any criteria pollutant.

TABLE 4: TOTAL PROJECT REGIONAL OPERATIONAL EMISSIONS

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer

THE ONTARIO PLAN (TOP) 2050

The Ontario Plan (**TOP**) 2050 Environmental Impact Report (**EIR**) (August 2022) designates the Project site as Business Park uses. Per the adopted TOP 2050, the Project site could be developed with up to 109,817 square feet of industrial use (assuming a 4.2-acre site and a floor-to-area-ratio of 0.60). The estimated operation-source emissions based on the TOP 2050 adopted Industrial land use designation are summarized on Table 5. Detailed operation model outputs for the TOP 2050 adopted Industrial land use designation are presented in Attachment D.

[3] Based on Table II-3, Port and Rail Cargo Handling Equipment Demographics by Type, from CARB's Technology Assessment: Mobile Cargo Handling Equipment document, a single piece of equipment could operate up to 2 hours per day (Total Average Annual Activity divided by Total Number Pieces of Equipment). As such, the analysis conservatively assumes that the tractor/loader/backhoes would operate up to 4 hours per day.

The Project related operational air quality impacts derive primarily from vehicle trips generated by the Project. Trip characteristics available from the *First Grove Addendum Trip Generation Assessment* were utilized in this analysis (17).

To determine emissions from trucks for the TOP 2050 industrial uses, the analysis incorporated the SCAQMD recommended truck trip length 15.3 miles for 2-axle (LHDT1, LHDT2) trucks, 14.2 miles 3-axle (MHDT) trucks and 39.9 miles for 4+-axle (HHDT) trucks and weighting the average trip lengths using the traffic trip percentages taken from the *First Grove Addendum Trip Generation Assessment* (17). The trip length function for trucks in CalEEMod has been revised to 29.84 miles, with an assumption of 100% primary trips for the TOP 2050 industrial land uses. This trip length assumption is higher than the CalEEMod defaults for trucks.

It is common for warehouse buildings to require the operation of exterior yard trucks or cargo handling equipment (CHE) to move empty containers and empty chassis in the building's truck court areas. The cargo handling equipment is assumed to have a horsepower (hp) range of approximately 175 hp to 200 hp. Based on the latest available information from SCAQMD (18); for example, warehouse projects typically have 3.6-yard trucks/CHE per million square feet of building space. For the TOP 2050 land use, on-site modeled operational equipment conservatively includes up to one (1) 200 horsepower (hp), compressed natural gas or gasoline-powered tractors/loaders/backhoes operating at 4 hours a day[4] for 365 days of the year.

PROJECT NET NEW OPERATIONAL EMISSIONS – COMPARISON TO TOP 2050

As shown in Table 6, the proposed Project is anticipated to generate less emissions per day for pollutants of VOC, NO_X, CO, SO_X, and $PM_{2.5}$ as compared to emissions generated by the TOP 2050 adopted Industrial land use designation, and operational-source emissions would not exceed the applicable SCAQMD regional thresholds.

EXISTING BUILDING OPERATIONAL EMISSIONS

The site is occupied by existing uses that are currently active by a telecommunication company with vehicle maintenance operations on-site, which are approximately 25,000 square feet combined. The estimated operation-source emissions from the existing building are summarized on Table 7. Detailed operation model outputs for the existing use are presented in Attachment E.

The Project related operational air quality impacts derive primarily from vehicle trips generated by the Project. Trip characteristics available from the *First Grove Addendum Trip Generation Assessment* were utilized in this analysis (17).

To determine emissions from trucks for the existing industrial uses, the analysis incorporated the SCAQMD recommended truck trip length 15.3 miles for 2-axle (LHDT1, LHDT2) trucks, 14.2 miles 3-axle (MHDT) trucks and 39.9 miles for 4+-axle (HHDT) trucks and weighting the average trip lengths using the traffic trip percentages taken from the *First Grove Addendum Trip Generation Assessment* (17). The trip length function for trucks in CalEEMod has been revised to 15.28 miles, with an assumption of 100% primary trips for the existing industrial land uses. This trip length assumption is higher than the CalEEMod defaults for trucks.

PROJECT NET NEW OPERATIONAL EMISSIONS – COMPARISON TO EXISTING BUILDING

As shown in Table 8, the proposed Project is anticipated to generate less emissions per day for pollutants of VOC, NO_X, CO, and $PM_{2.5}$ as compared to emissions generated by the existing buildings and operational-source emissions would not exceed the applicable SCAQMD regional thresholds.

TABLE 8: PROJECT NET NEW REGIONAL OPERATIONAL EMISSIONS

LOCALIZED CONSTRUCTION EMISSIONS

The analysis makes use of methodology included in the SCAQMD *Final Localized Significance Threshold Methodology* (LST Methodology) (19). The SCAQMD has established that impacts to air quality are significant if there is a potential to contribute or cause localized exceedances of the federal and/or state ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs). The SCAQMD established LSTs in response to the SCAQMD Governing Board's Environmental Justice Initiative I-4[5]. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the sensitive receptor.

[5] The purpose of SCAQMD's Environmental Justice program is to ensure that everyone has the right to equal protection from air pollution and fair access to the decision-making process that works to improve the quality of air within their communities. Further, the SCAQMD defines Environmental Justice as "…equitable environmental policymaking and enforcement to protect the health of all residents, regardless of age, culture, ethnicity, gender, race, socioeconomic status, or geographic location, from the health effects of air pollution."

The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses.

The SCAQMD recommends that the nearest sensitive receptor be considered when determining the Project's potential to cause an individual or cumulatively significant impact. The nearest land use where an individual could remain for 24 hours to the Project site has been used to determine localized construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$ (since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time). The nearest receptor used for evaluation of localized impacts of PM_{10} and $PM_{2.5}$ is location R1, represented by the existing residence at 2125 S Cucamonga Ave, approximately 596 feet (182 meters) southwest of the Project site. Receptors in the Project study area shown on Exhibit 2.

As previously stated, and consistent with LST Methodology, the nearest industrial/commercial use to the Project site is used to determine construction and operational LST air impacts for emissions of NO_X and CO as the averaging periods for these pollutants are shorter (8 hours or less) and it is reasonable to assume that an individual could be present at these sites for periods of one to 8 hours. The nearest receptor used for evaluation of localized impacts of NO_X and CO is location R6, represented by Tech Industrial Machine Corp at 2124 S Grove Ave Unit J, adjacent south of the Project site.

It should be noted that the *LST Methodology* explicitly states that "*It is possible that a project may have receptors closer than 25 meters. Projects with boundaries located closer than 25 meters to the nearest receptor should use the LSTs for receptors located at 25 meters* (19)." As such, for evaluation of localized NO_x and CO, a 25-meter distance will be used.

EXHIBIT 2: SENSITIVE RECEPTOR LOCATIONS

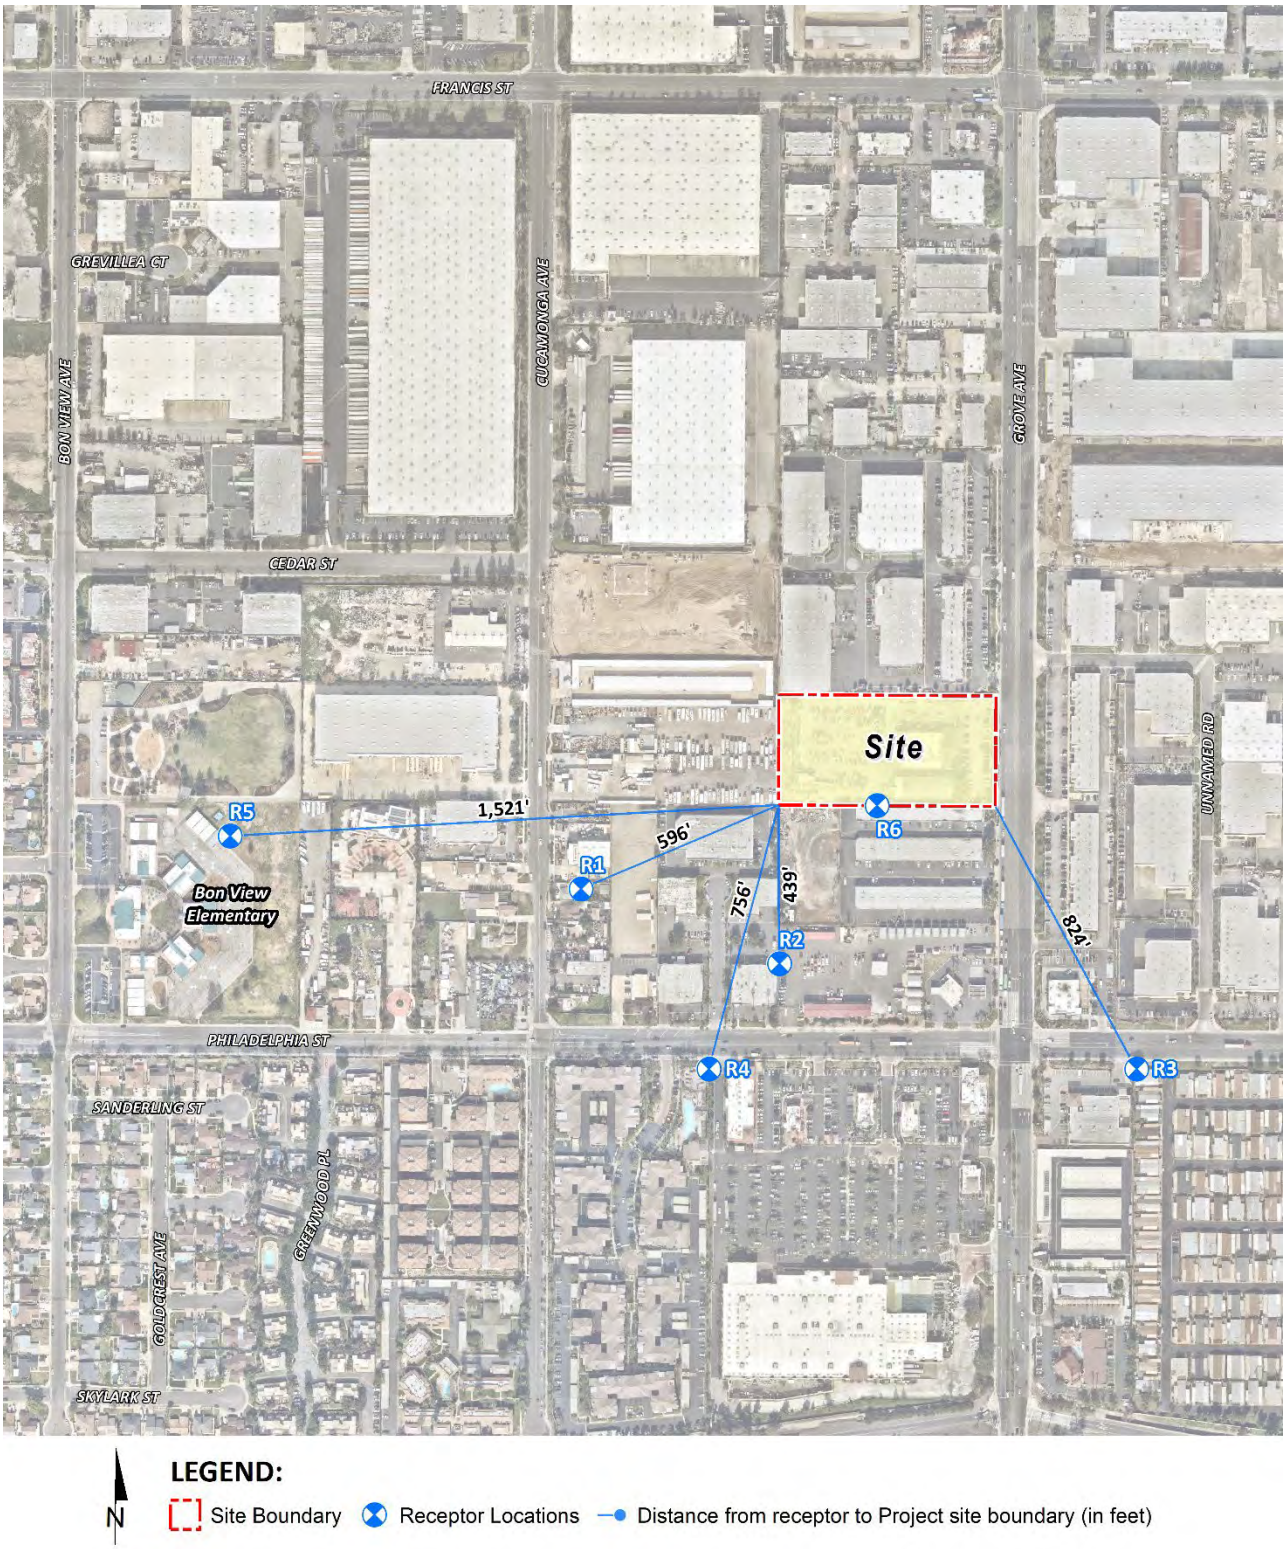

Table 9 identifies the localized impacts at the nearest receptor location in the vicinity of the Project. Outputs from the model runs for construction LSTs are provided in Attachment A. For analytical purposes, emissions associated with peak demolition, site preparation and grading activities are considered for purposes of LSTs since these phases represent the maximum localized emissions that would occur. Any other construction phases of development that overlap would result in less emissions and consequently lesser impacts than what is disclosed herein. As shown in Table 9, emissions resulting from the Project construction will not exceed the numerical thresholds of significance established by the SCAQMD for any criteria pollutant. Thus, a less than significant impact would occur for localized Project-related construction-source emissions and no mitigation is required.

TABLE 9: PROJECT LOCALIZED CONSTRUCTION IMPACTS

On-Site Emissions	Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Demolition				
Maximum Daily Emissions	24.89	21.74	1.90	1.10

Threshold Exceeded?	NO	NO	NO	NO
Grading				
Maximum Daily Emissions	34.29	30.17	4.12	2.31
SCAQMD Localized Threshold	237	1,873	106	38
Threshold Exceeded?	NO	NO	NO	NO

LOCALIZED OPERATIONAL EMISSIONS

Table 10 identifies the localized operational impacts at the nearest receptor location in the vicinity of the Project. In an effort to establish a maximum potential impact scenario for analytical purposes, the emissions shown on Table 10 represent all on-site Project-related stationary (area) sources and on-site mobile source emissions. It should be noted that the longest on-site distance is roughly 0.13 miles for both trucks and passenger vehicles. As such, a separate CalEEMod run for operational LSTs has been prepared which accounts for the 0.13-mile on-site travel distance. Outputs from the model runs for operational LSTs are provided in Attachment C. As shown in Table 10, emissions resulting from the Project operation will not exceed the numerical localized thresholds of significance established by the SCAQMD for any criteria pollutant. Thus, a less than significant impact would occur for localized Project-related operational-source emissions and no mitigation is required.

TABLE 10: PROJECT LOCALIZED OPERATIONAL IMPACTS

On-Site Emissions	Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Maximum Daily Emissions	1.19	21.47	0.08	0.07
SCAQMD Localized Threshold	270	2,193	31	10
Threshold Exceeded?	NO	NO	NO	NO

AIR QUALITY IMPACTS – CONSISTENCY WITH THRESHOLD NO. 1

Would the Project conflict with or obstruct implementation of the applicable air quality plan?

The Project site is located within the SCAB, which is characterized by relatively poor air quality. The SCAQMD has jurisdiction over an approximately 10,743 square-mile area consisting of the four-county Basin and the Los Angeles County and Riverside County portions of what use to be referred to as the Southeast Desert Air Basin. In these areas, the SCAQMD is principally responsible for air pollution control, and works directly with the Southern California Association of Governments (SCAG), county transportation commissions, local governments, as well as state and federal agencies to reduce emissions from stationary, mobile, and indirect sources to meet state and federal ambient air quality standards.

Currently, these state and federal air quality standards are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of AQMPs to meet the state and federal ambient air quality standards. AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy.

In December 2022, the SCAQMD released the Final 2022 AQMP (2022 AQMP). The 2022 AQMP continues to evaluate current integrated strategies and control measures to meet the CAAQS, as well as explore new and innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, state, and local levels (20). Similar to the 2016 AQMP, the 2022 AQMP incorporates scientific and technological information and planning assumptions, including the 2020-2045 RTP/SCS, a planning document that supports the integration of land use and transportation to help the region meet the federal CAA requirements (21). The Project's consistency with the AQMP will be determined using the 2022 AQMP as discussed below.

Criteria for determining consistency with the AQMP are defined in Chapter 12, Section 12.2 and Section 12.3 of the 1993 CEQA Handbook (22). These indicators are discussed below.

The proposed Project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

The violations that under this criterion refer to are the CAAQS and NAAQS. CAAQS and NAAQS violations would occur if regional or localized significance thresholds were exceeded.

CAAQS and NAAQS violations would occur if regional or localized significance thresholds were exceeded. As evaluated, the Project's regional and localized construction and operational-source emissions would not exceed applicable regional significance thresholds. As such, a less than significant impact is expected.

On the basis of the preceding discussion, the Project is determined to be consistent with the first criterion.

The Project will not exceed the assumptions in the AQMP based on the years of Project build-out phase.

The 2022 AQMP demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to the SCAG, which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in City of Ontario General Plan is considered to be consistent with the AQMP.

Peak day emissions generated by construction activities are largely independent of land use assignments, but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities. As such, when considering that no emissions thresholds will be exceeded, a less than significant impact would result.

The TOP 2050 adopted by the City in August 2022, designates the Project site as "Business Park (BP)" land uses. The BP designation allows for a maximum FAR of 0.60 for employee-intensive office uses including corporate offices, technology centers, research and development, "clean" industry, light manufacturing, and supporting retail within a business park setting (23).

The proposed Project includes the development of 61,867 square foot industrial warehouse building on 4.20 acres. As previously stated, the Project is consistent with the current land use and zoning designation. As such, the proposed Project would not conflict with the goals and objectives of the AQMP. Furthermore, the Project, as evaluated herein would not exceed the regional or localized air quality significance thresholds.

On the basis of the preceding discussion, the Project is determined to be consistent with the AQMP and a less than significant impact is expected.

AIR QUALITY IMPACTS – CONSISTENCY WITH THRESHOLD NO. 2

Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard?

The CAAQS designate the Project site as nonattainment for O_3, PM_{10}, and $PM_{2.5}$ while the NAAQS designates the Project site as nonattainment for O_3 and $PM_{2.5}$.

The SCAQMD has published a report on how to address cumulative impacts from air pollution: White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution (24). In this report the SCAQMD clearly states (Page D-3):

> *"...the SCAQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR. The only case where the significance thresholds for project specific and cumulative impacts differ is the Hazard Index (HI) significance threshold for TAC emissions. The project specific (project increment) significance threshold is HI > 1.0 while the cumulative (facility-wide) is HI > 3.0. It should be noted that the HI is only one of three TAC emission significance thresholds considered (when applicable) in a CEQA analysis. The other two are the maximum individual cancer risk (MICR) and the cancer burden, both of which use the same significance thresholds (MICR of 10 in 1 million and cancer burden of 0.5) for project specific and cumulative impacts.*
>
> *Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant."*

Therefore, this analysis assumes that individual projects that do not generate operational or construction emissions that exceed the SCAQMD's recommended daily thresholds for project-specific impacts would also not cause a cumulatively considerable increase in emissions for those pollutants for which SCAB is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact. Alternatively, individual project-related construction and operational emissions that exceed SCAQMD thresholds for project-specific impacts would be considered cumulatively considerable.

Construction Impacts

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that proposed Project construction-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, proposed Project construction-source emissions would be considered less than significant on a project-specific and cumulative basis.

Operational Impacts

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that proposed Project operational-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, the proposed Project operational-source emissions would be considered less than significant on a project-specific and cumulative basis.

AIR QUALITY IMPACTS – CONSISTENCY WITH THRESHOLD NO. 3

Would the expose sensitive receptors to substantial pollutant concentrations?

The potential impact of Project-generated air pollutant emissions at sensitive receptors has also been considered. Results of the LST analysis indicate that the Project will not exceed the SCAQMD localized significance thresholds during construction. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations during Project construction.

Additionally, the Project will not exceed the SCAQMD localized significance thresholds during operational activity. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations as the result of Project operations.

CO "HOT SPOT" ANALYSIS

As discussed below, the Project would not result in potentially adverse CO concentrations or "hot spots." Further, detailed modeling of Project-specific CO "hot spots" is not needed to reach this conclusion. An adverse CO concentration, known as a "hot spot", would occur if an exceedance of the state one-hour standard of 20 parts per million (ppm) or the eight-hour standard of 9 ppm were to occur.

It has long been recognized that CO hotspots are caused by vehicular emissions, primarily when idling at congested intersections. In response, vehicle emissions standards have become increasingly stringent in the last twenty years. Currently, the allowable CO emissions standard in California is a maximum of 3.4 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of increasingly sophisticated and efficient emissions control technologies, CO concentration in the SCAB is now designated as attainment. To establish a more accurate record of baseline CO concentrations affecting the SCAB, a CO "hot spot" analysis was conducted in 2003 for four busy intersections in Los Angeles at the peak morning and afternoon time periods[6]. This "hot spot" analysis did not predict any exceedance of the 1-hour (20.0 ppm) or 8-hour (9.0 ppm) CO standards, as shown on Table 11.

TABLE 11: CO MODEL RESULTS

Intersection Location	CO Concentrations (ppm)		
	Morning 1-hour	Afternoon 1-hour	8-hour
Wilshire Boulevard/Veteran Avenue	4.6	3.5	3.7
Sunset Boulevard/Highland Avenue	4	4.5	3.5
La Cienega Boulevard/Century Boulevard	3.7	3.1	5.2
Long Beach Boulevard/Imperial Highway	3	3.1	8.4

Notes: Federal 1-hour standard is 35 ppm and the deferral 8-hour standard is 9.0 ppm.

Based on the SCAQMD's 2003 AQMP and the 1992 Federal Attainment Plan for Carbon Monoxide (1992 CO Plan), peak carbon monoxide concentrations in the SCAB were a result of unusual meteorological and topographical conditions and not a result of traffic volumes and congestion at a particular intersection. As evidence of this, for example, 8.4 ppm 8-hr CO concentration measured at the Long Beach Blvd. and Imperial Hwy. intersection (highest CO generating intersection within the "hot spot" analysis), only 0.7 ppm was attributable to the traffic volumes and congestion at this intersection; the remaining 7.7 ppm were due to the ambient air measurements at the time the 2003 AQMP was prepared (25). In contrast, an adverse CO concentration, known as a "hot spot", would occur if an exceedance of the state one-hour standard of 20 parts per million (ppm) or the eight-hour standard of 9 ppm were to occur.

Similar considerations are also employed by other Air Districts when evaluating potential CO concentration impacts. More specifically, the Bay Area Air Quality Management District

[6] The CO "hot spot" analysis conducted in 2003 is the most current study used for CO "hot spot" analysis in the SCAB.

(BAAQMD) concludes that under existing and future vehicle emission rates, a given project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour (vph)—or 24,000 vph where vertical and/or horizontal air does not mix—in order to generate a significant CO impact (26). Traffic volumes generating the CO concentrations for the "hot spot" analysis is shown on Table 12. The busiest intersection evaluated was at Wilshire Boulevard and Veteran Avenue, which had AM/PM traffic volumes of 8,062 vph and 7,719 vph respectively (27). The 2003 AQMP estimated that the 1-hour concentration for this intersection was 4.6 ppm; this indicates that, should the hourly traffic volume increase four times to 32,248 vehicles per hour, CO concentrations (4.6 ppm x 4 = 18.4 ppm) would still not likely exceed the most stringent 1-hour CO standard (20.0 ppm). Although the intersection at Wilshire Boulevard and Veteran Avenue is near the Project site, there would be a negligible increase in trips at any study area intersection as the trip generation is significantly low. Since the Project will generate a reduction in approximately -66 net ADT, the Project would not generate sufficient ADT to cause a CO hotspot.

TABLE 12: CO MODEL RESULTS

Intersection Location	Peak Traffic Volumes (vph)				
	Eastbound (AM/PM)	Westbound (AM/PM)	Southbound (AM/PM)	Northbound (AM/PM)	Total (AM/PM)
Wilshire Boulevard/Veteran Avenue	4,954/2,069	1,830/3,317	721/1,400	560/933	8,062/7,719
Sunset Boulevard/Highland Avenue	1,417/1,764	1,342/1,540	2,304/1,832	1,551/2,238	6,614/5,374
La Cienega Boulevard/Century Boulevard	2,540/2,243	1,890/2,728	1,384/2,029	821/1,674	6,634/8,674
Long Beach Boulevard/Imperial Highway	1,217/2,020	1,760/1,400	479/944	756/1,150	4,212/5,514

AIR QUALITY IMPACTS – CONSISTENCY WITH THRESHOLD NO. 4

Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

The potential for the Project to generate objectionable odors has also been considered. Land uses generally associated with odor complaints include:

- Agricultural uses (livestock and farming)
- Wastewater treatment plants
- Food processing plants
- Chemical plants
- Composting operations
- Refineries
- Landfills
- Dairies
- Fiberglass molding facilities

The Project does not contain land uses typically associated with emitting objectionable odors. Potential odor sources associated with the proposed Project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the proposed Project's (long-term operational) uses. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the solid waste regulations. The proposed Project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the proposed Project construction and operations would be less than significant and no mitigation is required (28).

PROJECT GHG ANALYSIS

CLIMATE CHANGE SETTING

Global climate change (GCC) is the change in average meteorological conditions on the earth with respect to temperature, precipitation, and storms. The majority of scientists believe that the climate shift taking place since the Industrial Revolution is occurring at a quicker rate and magnitude than in the past. Scientific evidence suggests that GCC is the result of increased concentrations of GHGs in the earth's atmosphere, including carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), and fluorinated gases. The majority of scientists believe that this increased rate of climate change is the result of GHGs resulting from human activity and industrialization over the past 200 years.

An individual project like the proposed Project evaluated in this memo cannot generate enough GHG emissions to affect a discernible change in global climate. However, the proposed Project may participate in the potential for GCC by its incremental contribution of GHGs combined with the cumulative increase of all other sources of GHGs, which when taken together constitute potential influences on GCC. Because these changes may have serious environmental consequences, this memo will evaluate the potential for the proposed Project to have a significant effect upon the environment as a result of its potential contribution to the greenhouse effect.

GCC refers to the change in average meteorological conditions on the earth with respect to temperature, wind patterns, precipitation and storms. Global temperatures are regulated by naturally occurring atmospheric gases such as water vapor, CO_2, N_2O, CH_4, hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6). These particular gases are important due to their residence time (duration they stay) in the atmosphere, which ranges from 10 years to more than 100 years. These gases allow solar radiation into the earth's atmosphere, but prevent radiative heat from escaping, thus warming the earth's atmosphere. GCC can occur naturally as it has in the past with the previous ice ages.

Gases that trap heat in the atmosphere are often referred to as GHGs. GHGs are released into the atmosphere by both natural and anthropogenic activity. Without the natural GHG effect, the earth's average temperature would be approximately 61 degrees Fahrenheit (°F) cooler than it is

currently. The cumulative accumulation of these gases in the earth's atmosphere is considered to be the cause for the observed increase in the earth's temperature.

For the purposes of this analysis, emissions of CO_2, CH_4, and N_2O were evaluated because these gases are the primary contributors to GCC from development projects. Although there are other substances such as fluorinated gases that also contribute to GCC, these fluorinated gases were not evaluated as their sources are not well-defined and do not contain accepted emissions factors or methodology to accurately calculate these gases.

REGULATORY SETTING

Executive Order S-3-05

Former California Governor Arnold Schwarzenegger announced on June 1, 2005, through Executive Order S-3-05, the following reduction targets for GHG emissions:

- By 2010, reduce GHG emissions to 2000 levels.
- By 2020, reduce GHG emissions to 1990 levels.
- By 2050, reduce GHG emissions to 80% below 1990 levels.

The 2050 reduction goal represents what some scientists believe is necessary to reach levels that will stabilize the climate. The 2020 goal was established to be a mid-term target. Because this is an executive order, the goals are not legally enforceable for local governments or the private sector.

Assembly Bill (AB) 32

The California State Legislature enacted AB 32, which requires that GHGs emitted in California be reduced to 1990 levels by the year 2020. "GHGs" as defined under AB 32 include CO_2, CH_4, N_2O, hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6). Since AB 32 was enacted, a seventh chemical, nitrogen trifluoride, has also been added to the list of GHGs. CARB is the state agency charged with monitoring and regulating sources of GHGs. Pursuant to AB 32, CARB adopted regulations to achieve the maximum technologically feasible and cost-effective GHG emission reductions. AB 32 states the following:

"Global warming poses a serious threat to the economic well-being, public health, natural resources, and the environment of California. The potential adverse impacts of global warming include the exacerbation of air quality problems, a reduction in the quality and supply of water to the state from the Sierra snowpack, a rise in sea levels resulting in the displacement of thousands of coastal businesses and residences, damage to marine ecosystems and the natural environment, and an increase in the incidences of infectious diseases, asthma, and other human health-related problems."

CARB approved the 1990 GHG emissions level of 427 million metric ton of CO_2 equivalent per year ($MMTCO_2e$) on December 6, 2007 (29). Therefore, emissions generated in California in 2020 are required to be equal to or less than 427 $MMTCO_2e$. Emissions in 2020 in a "business as usual" (BAU) scenario were estimated to be 596 $MMTCO_2e$, which do not account for reductions from AB 32 regulations (30). At that level, a 28.4% reduction was required to achieve the 427 $MMTCO_2e$ 1990 inventory. In October 2010, CARB prepared an updated BAU 2020 forecast to account for the recession and slower forecasted growth. The forecasted inventory without the benefits of

adopted regulation is now estimated at 545 $MMTCO_2e$. Therefore, under the updated forecast, a 21.7% reduction from BAU is required to achieve 1990 levels (31).

Progress in Achieving AB 32 Targets and Remaining Reductions Required

The State has made steady progress in implementing AB 32 and achieving targets included in Executive Order S-3-05. The progress is shown in updated emission inventories prepared by CARB for 2000 through 2012 (32). The State has achieved the Executive Order S-3-05 target for 2010 of reducing GHG emissions to 2000 levels. As shown below, the 2010 emission inventory achieved this target.

- 1990: 427 $MMTCO_2e$ (AB 32 2020 target)
- 2000: 463 $MMTCO_2e$ (an average 8% reduction needed to achieve 1990 base)
- 2010: 450 $MMTCO_2e$ (an average 5% reduction needed to achieve 1990 base)

CARB has also made substantial progress in achieving its goal of achieving 1990 emissions levels by 2020. As described earlier in this section, CARB revised the 2020 BAU inventory forecast to account for new lower growth projections, which resulted in a new lower reduction from BAU to achieve the 1990 base. The previous reduction from 2020 BAU needed to achieve 1990 levels was 28.4% and the latest reduction from 2020 BAU is 21.7%.

- 2020: 545 $MMTCO_2e$ BAU (an average 21.7% reduction from BAU needed to achieve 1990 base)

Senate Bill (SB) 32

On September 8, 2016, Governor Jerry Brown signed the SB 32 and its companion bill, AB 197. SB 32 requires the state to reduce statewide GHG emissions to 40% below 1990 levels by 2030, a reduction target that was first introduced in Executive Order B-30-15. The new legislation builds upon the AB 32 goal of 1990 levels by 2020 and provides an intermediate goal to achieving S-3-05, which sets a statewide GHG reduction target of 80% below 1990 levels by 2050. AB 197 creates a legislative committee to oversee regulators to ensure that CARB not only responds to the Governor, but also the Legislature (33).

AB 197

A condition of approval for SB 32 was the passage of AB 197. AB 197 requires that CARB consider the social costs of GHG emissions and prioritize direct reductions in GHG emissions at mobile sources and large stationary sources. AB 197 also gives the California legislature more oversight over CARB through the addition of two legislatively appointed members to the CARB Board and the establishment a legislative committee to make recommendations about CARB programs to the legislature.

Executive Order B-55-18 and SB 100

Executive Order B-55-18 and SB 100. SB 100 and Executive Order B-55-18 were signed by Governor Brown on September 10, 2018. Under the existing RPS, 25% of retail sales are required to be from renewable sources by December 31, 2016, 33% by December 31, 2020, 40% by December 31, 2024, 45% by December 31, 2027, and 50% by December 31, 2030. SB 100 raises California's RPS requirement to 50% renewable resources target by December 31, 2026, and to achieve a 60% target by December 31, 2030. SB 100 also requires that retail sellers and local

publicly owned electric utilities procure a minimum quantity of electricity products from eligible renewable energy resources so that the total kilowatt hours of those products sold to their retail end-use customers achieve 44% of retail sales by December 31, 2024, 52% by December 31, 2027, and 60% by December 31, 2030. In addition to targets under AB 32 and SB 32, Executive Order B-55-18 establishes a carbon neutrality goal for the state of California by 2045; and sets a goal to maintain net negative emissions thereafter. The Executive Order directs the California Natural Resources Agency (CNRA), California Environmental Protection Agency (CalEPA), the Department of Food and Agriculture (CDFA), and CARB to include sequestration targets in the Natural and Working Lands Climate Change Implementation Plan consistent with the carbon neutrality goal.

Title 24 California Code of Regulations (CCR)

California Code of Regulations (CCR) Title 24 Part 6: The California Energy Code was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption.

The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. CCR, Title 24, Part 11: California Green Building Standards Code (CALGreen) is a comprehensive and uniform regulatory code for all residential, industrial, commercial, and school buildings that went in effect on August 1, 2009, and is administered by the California Building Standards Commission.

CALGreen is updated on a regular basis, with the most recent approved update consisting of the 2022 California Green Building Code Standards that was effective on January 1, 2023[7]. As construction of the Project is anticipated to be completed in 2025, the Project would be required to comply with the Title 24 standards in place at that time.

SCAQMD

SCAQMD is the agency responsible for air quality planning and regulation in the SCAB. The SCAQMD addresses the impacts to climate change of projects subject to SCAQMD permit as a lead agency if they are the only agency having discretionary approval for the project and acts as a responsible agency when a land use agency must also approve discretionary permits for the project. The SCAQMD acts as an expert commenting agency for impacts to air quality. This expertise carries over to GHG emissions, so the agency helps local land use agencies through the development of models and emission thresholds that can be used to address GHG emissions.

In 2008, SCAQMD formed a Working Group to identify GHG emissions thresholds for land use projects that could be used by local lead agencies in the SCAB. The Working Group developed several different options that are contained in the SCAQMD Draft Guidance Document – Interim CEQA GHG Significance Threshold, that could be applied by lead agencies. The working group has not provided additional guidance since release of the interim guidance in 2008. The SCAQMD Board has not approved the thresholds; however, the Guidance Document provides substantial evidence supporting the approaches to significance of GHG emissions that can be considered by the lead agency in adopting its own threshold. The current interim thresholds consist of the following tiered approach:

[7] The 2022 California Green Building Standard Code will be published July 1, 2022.

- Tier 1 consists of evaluating whether or not the project qualifies for any applicable exemption under CEQA.
- Tier 2 consists of determining whether the project is consistent with a GHG reduction plan. If a project is consistent with a qualifying local GHG reduction plan, it does not have significant GHG emissions.
- Tier 3 consists of screening values, which the lead agency can choose, but must be consistent with all projects within its jurisdiction. A project's construction emissions are averaged over 30 years and are added to the project's operational emissions. If a project's emissions are below one of the following screening thresholds, then the project is less than significant:
    - Residential and commercial land use: 3,000 metric ton of CO_2 equivalent ($MTCO_2e/yr$)
    - Industrial land use: 10,000 $MTCO_2e/yr$
    - Based on land use type: residential: 3,500 $MTCO_2e/yr$; commercial: 1,400 $MTCO_2e/yr$; or mixed use: 3,000 $MTCO_2e/yr$
- Tier 4 has the following options:
    - Option 1: Reduce Business-as-Usual (BAU) emissions by a certain percentage; this percentage is currently undefined.
    - Option 2: Early implementation of applicable AB 32 Scoping Plan measures
    - Option 3: 2020 target for service populations (SP), which includes residents and employees: 4.8 $MTCO_2e$ per SP per year for projects and 6.6 $MTCO_2e$ per SP per year for plans;
    - Option 3, 2035 target: 3.0 $MTCO_2e$ per SP per year for projects and 4.1 $MTCO_2e$ per SP per year for plans
- Tier 5 involves mitigation offsets to achieve target significance threshold.

The SCAQMD's interim thresholds used the Executive Order S-3-05-year 2050 goal as the basis for the Tier 3 screening level. Achieving the Executive Order's objective would contribute to worldwide efforts to cap CO_2 concentrations at 450 ppm, thus stabilizing global climate.

SCAQMD only has authority over GHG emissions from development projects that include air quality permits. At this time, it is unknown if the project would include stationary sources of emissions subject to SCAQMD permits. Notwithstanding, if the Project requires a stationary permit, it would be subject to the applicable SCAQMD regulations.

SCAQMD Regulation XXVII, adopted in 2009 includes the following rules:

- Rule 2700 defines terms and post global warming potentials.
- Rule 2701, Southern California (SoCal) Climate Solutions Exchange, establishes a voluntary program to encourage, quantify, and certify voluntary, high quality certified GHG emission reductions in the SCAQMD.

- Rule 2702, GHG Reduction Program created a program to produce GHG emission reductions within the SCAQMD. The SCAQMD will fund projects through contracts in response to requests for proposals or purchase reductions from other parties.

SCAQMD is the agency responsible for air quality planning and regulation in the SCAB. The SCAQMD addresses the impacts to climate change of projects subject to SCAQMD permit as a lead agency if they are the only agency having discretionary approval for the project and acts as a responsible agency when a land use agency must also approve discretionary permits for the project. The SCAQMD acts as an expert commenting agency for impacts to air quality. This expertise carries over to GHG emissions, so the agency helps local land use agencies through the development of models and emission thresholds that can be used to address GHG emissions.

City of Ontario Community Climate Action Plan (CCAP)

The Community Climate Action Plan (CCAP) contains further guidance on the City of Ontario's GHG Inventory reduction goals, policies, guidelines, and implementation programs. The purpose of the CCAP is to provide guidance on how to analyze GHG emissions and determine significance during the CEQA review of proposed development projects within the City of Ontario (34). The CCAP builds upon the Reduction Plan to address City-specific information and City-specific GHG reduction measures. To address the state's requirement to reduce GHG emissions, the CCAP was prepared with the goal of reducing GHG emissions within the City by 15% below 2008 levels by the year 2020. The City's target is consistent with the AB 32 target and ensures that the City of Ontario achieves GHG reductions locally that complement and are consistent with state efforts to reduce GHG emissions.

As part of the CCAP, the City of Ontario published a guidance document titled "Greenhouse Gas Emissions, CEQA Thresholds and Screening Tables" (December 2014). As part of this guidance, the CCAP determined that if GHG emissions of a given project exceeds 3,000 MTCO2e/yr, then project emissions would need to be reduced by 25 percent when compared to year 2008 emissions levels. Alternatively, the project would need to achieve a minimum of 100 points pursuant to measures identified in the Screening Tables.

The 2022 update to the Ontario Plan includes an update to the City's CCAP which was originally adopted on December 16, 2014. As stated in The Ontario Plan 2050 Draft Supplemental Environmental Impact Report (SEIR), the measures included in the 2022 update to the CCAP are not substantially different than that of the 2014 CCAP and therefore there is no change in the environmental impacts associated with the CCAP.

GHG IMPACTS

Standards of Significance

According to the CEQA Guidelines Appendix G thresholds, to determine whether impacts from GHG emissions are significant. Would the project:

- **Threshold 1**: Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?
- **Threshold 2**: Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs?

The evaluation of an impact under CEQA requires measuring data from a project against both existing conditions and a "threshold of significance." For establishing significance thresholds, the Office of Planning and Research's amendments to the CEQA Guidelines Section 15064.7(c) state "[w]hen adopting thresholds of significance, a lead agency may consider thresholds of significance previously adopted or recommended by other public agencies, or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence."

Discussion on Establishment of Significance Thresholds

As previously stated, SEIR identifies that the measures included in the 2022 update to the CCAP are not substantially different than that of the 2014 CCAP and therefore there is no change in the environmental impacts associated with the CCAP. As such, and consistent with the 2014 CCAP, this analysis relies on the annual screening threshold of 3,000 $MTCO_2e$/yr to define small projects that are considered less than significant and do not require further GHG emissions calculations or analysis. Projects that do not exceed an annual 3,000 $MTCO_2e$/yr are therefore considered less than significant and would not require further analysis or mitigation.

GHG IMPACTS – CONSISTENCY WITH THRESHOLD NO. 1

Would the Project have the potential to generate direct or indirect GHG emissions that would result in a significant impact on the environment?

PROJECT GHG EMISSIONS

The estimated GHG emissions for the Project land use are summarized on Table 13. The estimated GHG emissions include emissions from Carbon Dioxide (CO_2), Methane (CH_4), Nitrous Oxide (N_2O), and Refrigerants (R). As shown on Table 13, the Project would generate a total of approximately 929.68 $MTCO_2e$/yr. Detailed operation model outputs for the proposed Project are presented in Attachment A.

TABLE 13: TOTAL PROJECT GHG EMISSIONS

Source	Emission (lbs/day)				
	CO_2	CH_4	N_2O	R	Total CO_2e
Annual construction-related emissions amortized over 30 years	16.23	7.19E-04	3.42E-04	3.84E-03	16.35
Mobile Source	522.99	0.03	0.04	0.80	537.00
Area Source	1.25	0.00	0.00	0.00	1.26
Energy Source	266.25	0.02	0.00	0.00	267.52
Water	20.26	0.47	0.01	0.00	35.28
Waste	6.85	0.68	0.00	0.00	23.95
Refrigerants	0.00	0.00	0.00	0.96	0.96
On-Site Equipment Source	0.00	0.00	0.00	0.00	47.37
Total CO_2e (All Sources)	**929.68**				

TOP 2050 GHG EMISSIONS

The estimated GHG emissions from the TOP 2050 adopted Industrial land use designation are summarized on Table 14. Detailed operation model outputs for the TOP 2050 adopted Industrial land use designation are presented in Attachment D.

TABLE 14: TOP 2050 GHG EMISSIONS

Source	Emission (lbs/day)				
	CO_2	CH_4	N_2O	R	Total CO_2e
Mobile Source	967.23	0.06	0.08	1.63	993.85
Area Source	2.23	0.00	0.00	0.00	2.24
Energy Source	462.97	0.04	0.00	0.00	465.16
Water	35.39	0.83	0.02	0.00	62.06
Waste	12.15	1.21	0.00	0.00	42.51
Refrigerants	0.00	0.00	0.00	1.70	1.70
On-Site Equipment Source	0.00	0.00	0.00	0.00	47.37
Total CO_2e (All Sources)	**1,614.88**				

PROJECT NET NEW GHG EMISSIONS – COMPARISON TO TOP 2050

Table 15 shows the Project is anticipated to generate less GHG emissions per day as compared to emissions generated by the TOP 2050 adopted Industrial land use designation.

TABLE 15: PROJECT NET NEW GHG EMISSIONS

Emission Source	Total CO_2e
Proposed Project	929.68
TOP 2050	1,614.88
Net Emissions (Proposed – TOP 2050)	**-685.20**

EXISTING BUILDING GHG EMISSIONS

The estimated GHG emissions from the existing buildings are summarized on Table 16. Detailed operation model outputs for the existing buildings are presented in Attachment E.

TABLE 16: EXISTING BUILDING GHG EMISSIONS

Source	Emission (lbs/day)				
	CO_2	CH_4	N_2O	R	Total CO_2e
Mobile Source	660.39	0.02	0.04	2.02	674.32
Area Source	0.51	0.00	0.00	0.00	0.51
Energy Source	43.48	0.00	0.00	0.00	43.65
Water	8.06	0.19	0.00	0.00	14.13
Waste	2.10	0.21	0.00	0.00	7.34
Refrigerants	660.39	0.02	0.04	2.02	674.32
Total CO_2e (All Sources)	**739.94**				

PROJECT NET NEW GHG EMISSIONS – COMPARISON TO EXISTING BUILDING

Table 17 shows the Project is anticipated to generate more GHG emissions per day as compared to emissions generated by the existing building, additionally; the proposed Projects emissions would still be less than the applicable thresholds.

TABLE 17: PROJECT NET NEW GHG EMISSIONS

Emission Source	Total CO_2e
Proposed Project	929.68
Existing Building	739.94
Net Emissions (Proposed – Existing)	**189.74**

As discussed within the CCAP, projects that generate less than 3,000 $MTCO_2e$/yr would have a less-than-significant GHG emissions impact. As shown on Table 17, the proposed Project would generate a total of 189.74 $MTCO_2e$/yr and would therefore not exceed the 3,000 $MTCO_2e$/yr significance threshold and a less than significant impact is expected.

GHG IMPACTS – CONSISTENCY WITH THRESHOLD NO. 2

Would the Project have the potential to conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs?

Pursuant to 15604.4 of the CEQA Guidelines, a lead agency may rely on qualitative analysis or performance-based standards to determine the significance of impacts from GHG emissions (35).

The 2022 Scoping Plan for Achieving Carbon Neutrality (2022 Scoping Plan) lays out a path to achieve targets for carbon neutrality and reduce anthropogenic greenhouse gas (GHG) emissions by 85 percent below 1990 levels no later than 2045, as directed by Assembly Bill 1279. The actions and outcomes in the plan will achieve significant reductions in fossil fuel combustion by deploying clean technologies and fuels, further reductions in short-lived climate pollutants, support for sustainable development, increased action on natural and working lands to reduce emissions and sequester carbon, and the capture and storage of carbon (36).

Finally, the Project is consistent with the general plan land use designation, density, building intensity, and applicable policies specified for the Project area in SCAG's Sustainable Community Strategy/Regional Transportation Plan, which pursuant to SB 375 calls for the integration of transportation, land-use and housing policies to plan for achievement of the GHG-emissions target for the region. Thus, a less than significant impact related to GHG emissions from Project construction and operation would occur and no mitigation is required.

CONCLUSION

Results of the assessment indicate that the Project is not anticipated to result in a significant impact during construction or operational activities associated with air quality and greenhouse gases.

CALEEMOD PROPOSED CONSTRUCTION EMISSIONS MODEL OUTPUTS

15067 - 2042 S Grove (Proposed Construction) Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

3. Construction Emissions Details

3.1. Demolition (2024) - Unmitigated

3.3. Site Preparation (2024) - Unmitigated

3.5. Grading (2024) - Unmitigated

3.7. Building Construction (2024) - Unmitigated

3.9. Building Construction (2025) - Unmitigated

3.11. Paving (2025) - Unmitigated

3.13. Architectural Coating (2025) - Unmitigated

4. Operations Emissions Details

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

1892

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	15067 - 2042 S Grove (Proposed Construction)
Construction Start Date	8/1/2024
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.80
Precipitation (days)	20.8
Location	2042 S Grove Ave, Ontario, CA 91761, USA
County	San Bernardino-South Coast
City	Ontario
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5296
EDFZ	10
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.13

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Industrial Park	61.9	1000sqft	1.42	61,867	23,452	—	—	—

1895

Parking Lot	100	Space	0.90	0.00	0.00	—	—	—
Other Asphalt Surfaces	1.88	Acre	1.88	0.00	0.00	—	—	—
User Defined Industrial	61.9	User Defined Unit	0.00	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	TOG	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—
Unmit.	4.44	13.5	36.0	34.4	0.06	1.60	5.89	7.49	1.47	2.74	4.21	—	6,917	6,917	0.28	0.15	3.11	6,946

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Industrial Park	0.00	0%
Parking Lot	0.90	100%
Other Asphalt Surfaces	1.88	100%
User Defined Industrial	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2024	0.00	532	0.03	< 0.005
2025	0.00	532	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	19.8	annual days of extreme heat
Extreme Precipitation	4.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

1917

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	84.6
AQ-PM	98.2
AQ-DPM	94.5

Drinking Water	93.3
Lead Risk Housing	22.4
Pesticides	34.9
Toxic Releases	83.5
Traffic	85.4
Effect Indicators	—
CleanUp Sites	88.1
Groundwater	60.6
Haz Waste Facilities/Generators	93.9
Impaired Water Bodies	43.8
Solid Waste	83.3
Sensitive Population	—
Asthma	61.6
Cardio-vascular	82.1
Low Birth Weights	56.1
Socioeconomic Factor Indicators	—
Education	71.6
Housing	51.4
Linguistic	58.2
Poverty	47.3
Unemployment	92.6

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	42.07622225

1919

Employed	49.30065443
Median HI	32.60618504
Education	—
Bachelor's or higher	10.88156037

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	96.0
Healthy Places Index Score for Project Location (b)	30.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Data provided by client Building, Paving, and Architectural Coating overlap to present a conservative analysis
Construction: Off-Road Equipment	T/L/B replaced with Crawler Tractor to accurately calculate disturbance for Site Preparation and Grading phases. Standard 8 hours work days
Construction: Trips and VMT	Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Demolition, Site Preparation, Grading, and Building Construction
Construction: Architectural Coatings	SCAQMD Rule 1113

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	19.8	annual days of extreme heat
Extreme Precipitation	4.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A

Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	84.6
AQ-PM	98.2
AQ-DPM	94.5
Drinking Water	93.3
Lead Risk Housing	22.4
Pesticides	34.9
Toxic Releases	83.5
Traffic	85.4
Effect Indicators	—
CleanUp Sites	88.1
Groundwater	60.6
Haz Waste Facilities/Generators	93.9
Impaired Water Bodies	43.8
Solid Waste	83.3
Sensitive Population	—
Asthma	61.6
Cardio-vascular	82.1
Low Birth Weights	56.1
Socioeconomic Factor Indicators	—
Education	71.6
Housing	51.4
Linguistic	58.2
Poverty	47.3

Unemployment	92.6

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	42.07622225
Employed	49.30065443
Median HI	32.60618504
Education	—
Bachelor's or higher	10.88156037

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	96.0
Healthy Places Index Score for Project Location (b)	30.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

1955

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Taken from site plan
Operations: Vehicle Data	Trip characteristics based on information provided in the Trip Generation
Operations: Fleet Mix	Passenger Car Mix estimated based on CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, MCY). Truck Fleet Mix based on 2, 3 and 4 axle trucks
Operations: Architectural Coatings	SCAQMD Rule 1113
Operations: Refrigerants	Beginning 1 January 2025, all new air conditioning equipment may not use refrigerants with a GWP of 750 or greater.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	19.8	annual days of extreme heat
Extreme Precipitation	4.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A

Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	84.6
AQ-PM	98.2
AQ-DPM	94.5
Drinking Water	93.3
Lead Risk Housing	22.4
Pesticides	34.9
Toxic Releases	83.5
Traffic	85.4
Effect Indicators	—
CleanUp Sites	88.1
Groundwater	60.6
Haz Waste Facilities/Generators	93.9
Impaired Water Bodies	43.8
Solid Waste	83.3
Sensitive Population	—
Asthma	61.6
Cardio-vascular	82.1
Low Birth Weights	56.1
Socioeconomic Factor Indicators	—
Education	71.6
Housing	51.4
Linguistic	58.2
Poverty	47.3

Unemployment	92.6

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	42.07622225
Employed	49.30065443
Median HI	32.60618504
Education	—
Bachelor's or higher	10.88156037

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	96.0
Healthy Places Index Score for Project Location (b)	30.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

1988

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Taken from site plan
Operations: Vehicle Data	Trip characteristics based on information provided in the Trip Generation
Operations: Fleet Mix	Passenger Car Mix estimated based on CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, MCY). Truck Fleet Mix based on 2, 3 and 4 axle trucks
Operations: Architectural Coatings	SCAQMD Rule 1113
Operations: Refrigerants	Beginning 1 January 2025, all new air conditioning equipment may not use refrigerants with a GWP of 750 or greater.

1995

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	15067 - 2042 S Grove Ave (TOP 2050)
Operational Year	2023
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.80
Precipitation (days)	20.8
Location	2042 S Grove Ave, Ontario, CA 91761, USA
County	San Bernardino-South Coast
City	Ontario
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5296
EDFZ	10
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.13

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Industrial Park	110	1000sqft	2.52	109,817	0.00	—	—	—

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	19.8	annual days of extreme heat
Extreme Precipitation	4.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
	2016

Exposure Indicators	—
AQ-Ozone	84.6
AQ-PM	98.2
AQ-DPM	94.5
Drinking Water	93.3
Lead Risk Housing	22.4
Pesticides	34.9
Toxic Releases	83.5
Traffic	85.4
Effect Indicators	—
CleanUp Sites	88.1
Groundwater	60.6
Haz Waste Facilities/Generators	93.9
Impaired Water Bodies	43.8

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	96.0
Healthy Places Index Score for Project Location (b)	30.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

2020

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Operations: Vehicle Data	Trip characteristics based on information provided by trip generation
Operations: Fleet Mix	Passenger Car Mix estimated based on CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, MCY). Truck Fleet Mix based on 2, 3 and 4 axle trucks
Operations: Architectural Coatings	SCAQMD Rule 1113
Operations: Refrigerants	Beginning 1 January 2025, all new air conditioning equipment may not use refrigerants with a GWP of 750 or greater.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	19.8	annual days of extreme heat
Extreme Precipitation	4.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

2047

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A

2048

Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	84.6
AQ-PM	98.2
AQ-DPM	94.5
Drinking Water	93.3
Lead Risk Housing	22.4
Pesticides	34.9
Toxic Releases	83.5

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	96.0
Healthy Places Index Score for Project Location (b)	30.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Taken from site plan
Operations: Vehicle Data	Trip characteristics provided by information based on trip generation

Operations: Fleet Mix	Passenger Car Mix estimated based on CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, MCY). Truck Fleet Mix based on 2, 3 and 4 axle trucks
Operations: Architectural Coatings	SCAQMD Rule 1113

2054

RESOLUTION NO. PC24-009

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING CITY COUNCIL APPROVAL OF FILE NO. PSPA22-007, AN AMENDMENT TO THE GROVE AVENUE SPECIFIC PLAN TO CHANGE THE LAND USE DESIGNATION OF 4.20 ACRES OF LAND FROM OFFICE/COMMERCIAL TO BUSINESS PARK FOR PROPERTY LOCATED AT 2042 S. GROVE AVENUE, AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 0105-049-111.

WHEREAS, First Industrial Realty Trust (hereinafter referred to as "Applicant") has filed an Application for the approval of a Specific Plan Amendment, File No. PSPA22-007, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 4.20 acres of land generally located north of Philadelphia Street and west of Grove Avenue, at 2042 S. Grove Avenue within the Office/Commercial land use designation of the Grove Avenue Specific Plan, and is presently improved with an existing office and warehouse/storage building with surface parking; and

WHEREAS, the properties to the north and east of the Project site are within the Business Park land use designation of the Grove Avenue Specific Plan and are developed with industrial business parks. The property to the south is within the Office/Commercial land use designation of the Grove Avenue Specific Plan and is developed with business park buildings. The properties to the west are within the General Industrial (IG) zoning designation, and are developed with industrial structures, outdoor storage yards and RV parking; and

WHEREAS, the Grove Avenue Specific Plan was adopted in 1993 to help facilitate development of the Grove Avenue corridor as a light industrial and limited commercial business park. The specific plan covers approximately 250 acres of land along the east and west side of Grove Avenue between Mission Boulevard to the north and State Route 60 (Pomona Freeway) to the south. At the time of the specific plan’s establishment, there were several driving factors that helped form the specific plan, such as the direct connection to the Ontario Airport and the increasing growth of industrial development; and

WHEREAS, the proposed Amendment to the Grove Avenue Specific Plan will change the land use designation on the subject site from Office/Commercial to Business Park. This Specific Plan Amendment will facilitate the future development of a new 61,867 square foot industrial building with associated site improvements on the 4.20-acre Project site. The requested land use change will coordinate well with the existing land uses to the

north and east, as they are currently designated for Business Park and are improved with business park industrial uses; and

WHEREAS, to analyze the traffic impacts of the requested land use change, a Trip Generation Assessment was prepared in accordance with the traffic study requirements of the City of Ontario and the San Bernardino County Transportation Authority (SBCTA) Congestion Management Program (CMP). As a result, the Project is anticipated to generate 204 fewer two-way trips per day as compared to the adopted TOP 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) certified by the Ontario City Council on August 16, 2022; and

WHEREAS, in conjunction with the proposed Specific Plan Amendment, the applicant has also submitted a Development Plan application (File No. PDEV22-040) to demolish an existing office and warehouse/storage building and construct a new 61,867 square-foot industrial building with associated site improvements within the 4.20-acre Project site located at 2042 S. Grove Avenue; and

WHEREAS, on February 21, 2024, the Development Advisory Board conducted a hearing regarding the related Development Plan (File No. PDEV22-040) and approved the Project, subject to City Council approval of this Specific Plan Amendment; and

WHEREAS, the Ontario Plan (TOP) 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) certified by the Ontario City Council on August 16, 2022 (hereinafter referred to as "Certified EIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as "EIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the environmental impacts of this project were thoroughly analyzed in the EIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an EIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make recommendation to the City Council on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, as the first action on the Project, on March 26, 2024, the Planning Commission issued a Resolution recommending the City Council adopt the EIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on March 26, 2024, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending body for the Project, the Planning Commission has reviewed and considered the information contained in the Addendum, the initial study, and the administrative record for the Project, including all written and oral evidence provided during the comment period. Based upon the facts and information contained in the Addendum, the initial study, and the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to The Ontario Plan (TOP) 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022 related to File No. PGA20-002; and

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the EIR Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR (The Ontario Plan (TOP) 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) certified by Ontario City Council on August 16, 2022) that will require major

revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR (The Ontario Plan (TOP) 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) certified by Ontario City Council on August 16, 2022) was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR (The Ontario Plan (TOP) 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) certified by Ontario City Council on August 16, 2022) was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified EIR (The Ontario Plan (TOP) 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) certified by Ontario City Council on August 16, 2022); or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR (The Ontario Plan (TOP) 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) certified by Ontario City Council on August 16, 2022); or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR (The Ontario Plan (TOP) 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) certified by Ontario City Council on August 16, 2022) would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending body for the Project, the Planning Commission finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not

one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 4: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in Sections 1 through 4, above, the Planning Commission hereby concludes as follows:

(1) ***The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The proposed Amendment to the Grove Avenue Specific Plan will change the land use designation on 4.20 acres of land from Office/Commercial to Business Park for property located at 2042 S. Grove Avenue. The proposed amendment is consistent with TOP's Vision, which states "in order to take advantage opportunities or remove impediments to achieving our Vision, we need the ability to quickly respond to changing market needs," and TOP's Policy Plan (General Plan) goals and policies, which states "LU3-3 *Land Use Flexibly*. We consider uses not typically permitted within a land use category if doing so improves livability, reduces vehicular trips, creates community gathering places and activity nodes, and helps create identity;" and

(2) ***The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** With the proposed amendments to the Grove Avenue Specific Plan, the proposed land use change will be in conformance with The Ontario Plan (TOP) Policy Plan Land Use Plan and will comply with the Policy Plan goals and policies applicable to the Specific Plan. The proposed amendment will not be detrimental to the public interest, health, safety, convenience, or general welfare of the City because it will provide a land use that is consistent with the surrounding area to the north and east, that is currently improved with business park and industrial developments; and

(3) ***In the case of an application affecting specific property(ies), the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The proposed amendment will modify the land use from Office/Commercial to Business Park, which aligns with surrounding land uses and allows for similar development intensities under the Business Park designation; and

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** The proposed amendment will allow for light industrial uses on the subject site under the Business Park land use designation of the Grove Avenue Specific Plan. The project site is suitable in size and shape, and contains adequate street frontage along Grove Avenue for sufficient access and availability of utilities to accommodate a light industrial development that is similar in scale and intensity to other existing developments within the Specific Plan area and under the Business Park designation; and

SECTION 6: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 through 5, above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVE the herein described Application, subject to each and every condition set forth in the Department reports attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located

at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 26th day of March 2024, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Nancy DeDiemar
Planning Commission Chairperson

ATTEST:

Henry K. Noh
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA)
COUNTY OF SAN BERNARDINO)
CITY OF ONTARIO)

I, Gwen Berendsen, Secretary Pro Tempore of the Planning Commission of the City of Ontario, DO HEREBY CERTIFY that foregoing Resolution No. PC24-009 was duly passed and adopted by the Planning Commission of the City of Ontario at their regular meeting held on March 26, 2024, by the following roll call vote, to wit:

AYES: Anderson, DeDiemar, Del Turco, Gage, Lampkin, Ricci

Project Description: A public hearing to consider an Amendment to the Grove Avenue Specific Plan (File No. PSPA22-007) to change the land use designation of 4.20 acres of land from Office/Commercial to Business Park for property located at 2042 S. Grove Avenue. **Submitted by First Industrial Realty Trust.**

Prepared By: Luis E. Batres, Senior Planner
Phone: 909.395.2431 (direct)
Email: Lbatres@ontarioca.gov

The Planning Department, Land Development Section, conditions of approval applicable to the above-described Project, are listed below. The Project shall comply with each condition of approval listed below:

1.0 Standard Conditions of Approval. The project shall comply with the *Standard Conditions for New Development*, adopted by City Council Resolution No. 2017-027 on April 18, 2017. A copy of the *Standard Conditions for New Development* may be obtained from the Planning Department or City Clerk/Records Management Department.

2.0 Special Conditions of Approval. In addition to the *Standard Conditions for New Development* identified in condition no. 1.0, above, the project shall comply with the following special conditions of approval:

2.1 Time Limits.

(a) Development Plan approval shall become null and void 2 years following the effective date of application approval, unless a building permit is issued and construction is commenced, and diligently pursued toward completion, or a time extension has been approved by the Planning Director. This condition does not supersede any individual time limits specified herein, or any other departmental conditions of approval applicable to the Project, for the performance of specific conditions or improvements.

2.2 General Requirements. The Project shall comply with the following general requirements:

(a) All construction documentation shall be coordinated for consistency, including, but not limited to, architectural, structural, mechanical, electrical, plumbing, landscape and irrigation, grading, utility and street improvement plans. All such plans shall be consistent with the approved entitlement plans on file with the Planning Department.

(b) The project site shall be developed in conformance with the approved plans on file with the City. Any variation from the approved plans must be reviewed and approved by the Planning Department prior to building permit issuance.

(c) The herein-listed conditions of approval from all City departments shall be included in the construction plan set for project, which shall be maintained on site during project construction.

2.3 Landscaping.

(a) The Project shall provide and continuously maintain landscaping and irrigation systems in compliance with the provisions of Ontario Development Code Division 6.05 (Landscaping).

(b) Comply with the conditions of approval of the Planning Department; Landscape Planning Division.

(c) Landscaping shall not be installed until the Landscape and Irrigation Construction Documentation Plans required by Ontario Development Code Division 6.05 (Landscaping) have been approved by the Landscape Planning Division.

(d) Changes to approved Landscape and Irrigation Construction Documentation Plans, which affect the character or quantity of the plant material or irrigation system design, shall be resubmitted for approval of the revision by the Landscape Planning Division, prior to the commencement of the changes.

2.4 Walls and Fences. All Project walls and fences shall comply with the requirements of Ontario Development Code Division 6.02 (Walls, Fences and Obstructions).

2.5 Wrought iron fencing proposed along the north and south property lines shall be reduced to 3-feet tall within the required 20-foot front landscape setback area.

2.6 Parking, Circulation and Access.

(a) The Project shall comply with the applicable off-street parking, loading and lighting requirements of City of Ontario Development Code Division 6.03 (Off-Street Parking and Loading). Project shall provide a minimum of 39 passenger parking spaces and 4 tractor-trailer parking spaces.

(b) All drive approaches shall be provided with an enhanced pavement treatment. The enhanced paving shall extend from the back of the approach apron, into the site, to the first intersecting drive aisle or parking space. A darker color shall be incorporated within all decorative paved areas (driveways, outdoor patio area and front office outdoor plaza area) so that the color stands out from the regular concrete.

(c) Areas provided to meet the City's parking requirements, including off-street parking and loading spaces, access drives, and maneuvering areas, shall not be used for the outdoor storage of materials and equipment, nor shall it be used for any other purpose than parking.

(d) The required number of off-street parking spaces and/or loading spaces shall be provided at the time of site and/or building occupancy. All parking and loading spaces shall be maintained in good condition for the duration of the building or use.

(e) Parking spaces specifically designated and conveniently located for use by the physically disabled shall be provided pursuant to current accessibility regulations contained in State law (CCR Title 24, Part 2, Chapters 2B71, and CVC Section 22507.8).

(f) Bicycle parking facilities, including bicycle racks, lockers, and other secure facilities, shall be provided in conjunction with development projects pursuant to current regulations contained in CALGreen (CAC Title 24, Part 11). Final design and placement of bicycle parking facilities shall be subject to Planning Department review and approval.

2.7 Outdoor Loading and Storage Areas.

(a) Loading facilities shall be designed and constructed pursuant to Development Code Division 6.03 (Off-Street Parking and Loading).

(b) Areas designated for off-street parking, loading, and vehicular circulation and maneuvering, shall not be used for the outdoor storage of materials or equipment.

(c) Outdoor loading and storage areas, and loading doors, shall be screened from public view pursuant to the requirements of Development Code Paragraph 6.02.025.A.2 (Screening of Outdoor Loading and Storage Areas, and Loading Doors) Et Seq.

(d) Outdoor loading and storage areas shall be provided with gates that are view-obstructing by one of the following methods:

(i) Construct gates with a perforated metal sheet affixed to the inside of the gate surface (50 percent screen); or
(ii) Construct gates with minimum one-inch square tube steel pickets spaced at maximum 2-inches apart.

(e) The minimum gate height for screen wall openings shall be established based upon the corresponding wall height, as follows:

Screen Wall Height	***Minimum Gate Height***
14 feet:	10 feet
12 feet:	9 feet
10 feet:	8 feet
8 feet:	8 feet
6 feet:	6 feet

2.8 Site Lighting.

(a) All off-street parking facilities shall be provided with nighttime security lighting pursuant to Ontario Municipal Code Section 4-11.08 (Special Residential Building Provisions) and Section 4-11.09 (Special Commercial/Industrial Building Provisions), designed to confine emitted light to the parking areas. Parking facilities shall be lighted from sunset until sunrise, daily, and shall be operated by a photocell switch.

(b) Unless intended as part of a master lighting program, no operation, activity, or lighting fixture shall create illumination on any adjacent property.

2.9 Mechanical and Rooftop Equipment.

(a) All exterior roof-mounted mechanical, heating and air conditioning equipment, and all appurtenances thereto, shall be completely screened from public view by parapet walls or roof screens that are architecturally treated so as to be consistent with the building architecture.

(b) All ground-mounted utility equipment and structures, such as tanks, transformers, HVAC equipment, and backflow prevention devices, shall be located out of view from a public street, or adequately screened through the use of landscaping and/or decorative low garden walls.

2.10 Security Standards. The Project shall comply with all applicable requirements of Ontario Municipal Code Title 4 (Public Safety), Chapter 11 (Security Standards for Buildings).

2.11 Signs.

(a) All Project signage shall comply with the requirements of Ontario Development Code Division 8.1 (Sign Regulations).

2.12 Sound Attenuation. The Project shall be constructed and operated in a manner so as not to exceed the maximum interior and exterior noise levels set forth in Ontario Municipal Code Title 5 (Public Welfare, Morals, and Conduct), Chapter 29 (Noise).

2.13 Environmental Requirements.

(a) If human remains are found during project grading/excavation/construction activities, the area shall not be disturbed until any required investigation is completed by the County Coroner and Native American consultation has been completed (if deemed applicable).

(b) If any archeological or paleontological resources are found during project grading/excavation/construction, the area shall not be disturbed until the significance of the resource is determined. If determined to be significant, the resource shall be recovered by a qualified archeologist or paleontologist consistent with current standards and guidelines, or other appropriate measures implemented.

(c) Project shall comply with the Mitigation Measures requested for the project by the Gabrieleno Band of Mission Indians-Kizh Nation. Prior to permits being issued, documentation shall be submitted to the Planning Department of the agreement(s) between the developer and the Gabrieleno Band of Mission Indians-Kizh Nation for this Project.

2.14 Indemnification. The applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void or annul any approval of the City of Ontario, whether by its City Council, Planning Commission or other authorized board or officer. The City of Ontario shall promptly notify the applicant of any such claim, action or proceeding, and the City of Ontario shall cooperate fully in the defense.

2.15 Additional Fees.

(a) Within 5 days following final application approval, the Notice of Determination ("NOD") filing fee shall be provided to the Planning Department. The fee shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act ("CEQA"). Failure to provide said fee within the time specified will result in the extension of the statute of limitations for the filing of a CEQA lawsuit from 30 days to 180 days.

(b) Within 5 days following final application approval, the Notice of Exemption ("NOE") filing fee shall be provided to the Planning Department. The fee shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act ("CEQA"). The filing of a NOE is voluntary; however, failure to provide said fee within the time specified will result in the extension of the statute of limitations for the filing of a CEQA lawsuit from 30 days to 180 days.

(c) After the Project's entitlement approval, and prior to issuance of final building permits, the Planning Department's Plan Check and Inspection fees shall be paid at the rate established by resolution of the City Council.

2.16 Related Applications. Development Plan (File No. PDEV22-040) approval shall not be final and complete until such time that related File No. PSPA22-007, Specific Plan Amendment has been approved by the City Council. Building permits will not be issued until the Specific Plan Amendment, File No. PSPA22-007, has been approved by City Council.

2.17 Public Art. The Project is subject to the requirements of the City's Public Art Ordinance (Ontario Municipal Code Section 5-33.05. Private Art for Public Enjoyment in Commercial and Industrial Development Projects).

2.18 Final Occupancy. The Project Architect of record will certify that construction of each building site and the exterior elevations of each structure shall be completed in compliance with the approved plans. Any deviation to approved plans shall require a resubmittal to the Planning Department for review and approval prior to construction. The Occupancy Release Request Form/Architect Certificate of Compliance shall be provided prior to final occupancy. After the receipt of this Certification, the Planning Department will conduct a final site and exterior elevations inspection. The Owner's Representative and Contractor shall be present.

2.19 Additional Requirements.

(a) If the loading dock/truck yard area will be visible from public views along the north, south and west of the Project site, solid block or tilt-up screen walls shall be constructed to City standards to screen the loading dock and doors area. During the plan check process, the Applicant shall conduct studies to make sure that truck yard and doors will not be visible.

(b) Applicant shall work with staff during the plan check process to incorporate decorative sconce lighting fixtures at key locations of the building to enhance it in the PM hours. No wall packs are allowed within public views.

APPROVED BY:	 **Khoi Do, P.E. City Engineer**	1-17-24 **Date**

Last Revised: 1/17/2024

THIS PROJECT SHALL COMPLY WITH THE REQUIREMENTS SET FORTH IN THE GENERAL STANDARD CONDITIONS OF APPROVAL ADOPTED BY THE CITY COUNCIL (RESOLUTION NO. 2017-027) AND THE PROJECT SPECIFIC CONDITIONS OF APPROVAL SPECIFIED HEREIN. ONLY APPLICABLE CONDITIONS OF APPROVAL ARE CHECKED. THE APPLICANT SHALL BE RESPONSIBLE FOR THE COMPLETION OF ALL APPLICABLE CONDITIONS OF APPROVAL PRIOR TO FINAL MAP OR PARCEL MAP APPROVAL, ISSUANCE OF PERMITS AND/OR OCCUPANCY CLEARANCE, AS SPECIFIED IN THIS REPORT.

1. PRIOR TO FINAL MAP OR PARCEL MAP APPROVAL, APPLICANT SHALL:

Check When Complete

☐ 1.01 Dedicate to the City of Ontario, the right-of-way, described below: ☐

_____ feet on _____

Property line corner 'cut-back' required at the intersection of _____ and _____.

☐ 1.02 Dedicate to the City of Ontario, the following easement(s): _____ ☐

_____

☐ 1.03 Restrict vehicular access to the site as follows: _____ ☐

☐ 1.04 Vacate the following street(s) and/or easement(s): ☐

A. All interfering on-site easements shall be quitclaimed, vacated, and/or submit non-interference letter from affected owner/utility company.

☐ 1.05 Submit a copy of a recorded private reciprocal use agreement or easement. The agreement or easement shall ensure, at a minimum, common ingress and egress and joint maintenance of all common access areas and drive aisles. ☐

☐ 1.06 Provide (original document) Covenants, Conditions and Restrictions (CC&Rs) as applicable to the project and as approved by the City Attorney and the Engineering and Planning Departments, ready for recordation with the County of San Bernardino. The CC&Rs shall provide for, but not be limited to, common ingress and egress, joint maintenance responsibility for all common access improvements, common facilities, parking areas, utilities, median and landscaping improvements and drive approaches, in addition to maintenance requirements established in the Water Quality Management Plan (WQMP), as applicable to the project. The CC&Rs shall also address the maintenance and repair responsibility for public improvements/utilities (sewer, water, storm drain, recycled water, etc.) located within open space/easements. In the event of any maintenance or repair of these facilities, the City shall only restore disturbed areas to current City Standards. ☐

☐ 1.07 For all development occurring south of the Pomona Freeway (60-Freeway) and within the specified boundary limits (per Boundary Map found at http://tceplumecleanup.com/), the property developer/owner is made aware of the South Archibald Trichloroethylene (TCE) Plume "Disclosure Letter". Property owner may wish to provide this Letter as part of the Real Estate Transfer Disclosure requirements under California Civil Code Section 1102 et seq. This may include notifications in the Covenants, Conditions and Restrictions (CC&Rs) or other documents related to property transfer and disclosures. Additional information on the plume is available from the Santa Ana Regional Water Quality Control Board at http://geotracker.waterboards.ca.gov/profile_report?global_id=T10000004658. ☐

☐ 1.08 File an application for Reapportionment of Assessment, together with payment of a reapportionment processing fee, for each existing assessment district listed below. Contact the Financial Services Department at (909) 395-2124 regarding this requirement. ☐

(1) _____

(2) _____

☐ 1.09 Prepare a fully executed Subdivision Agreement (on City approved format and forms) with accompanying security as required, or complete all public improvements. ☐

☐ 1.10 Provide a monument bond (i.e. cash deposit) in an amount calculated by the City's approved cost estimate spreadsheet (available for download on the City's website: www.ontarioca.gov) or as specified in writing by the applicant's Registered Engineer or Licensed Land Surveyor of Record and approved by the City Engineer, whichever is greater. ☐

☐ 1.11 Provide a preliminary title report current to within 30 days. ☐

☐ 1.12 File an application, together with an initial deposit (if required), to establish a Community Facilities District (CFD) pursuant to the Mello-Roos Community Facilities District Act of 1982. The application and fee shall be submitted a minimum of four (4) months prior to final subdivision map approval, and the CFD shall be established prior to final subdivision map approval or issuance of building permits, whichever occurs first. The CFD shall be established upon the subject property to provide funding for various City services. An annual special tax shall be levied upon each parcel or lot in an amount to be determined. The special tax will be collected along with annual property taxes. The City shall be the sole lead agency in the formation of any CFD. Contact Investment and Revenue Resources at (909) 395-2341 to initiate the CFD application process. ☐

☐ 1.13 Ontario Ranch Developments: ☐

☐ 1) Provide evidence of final cancellation of Williamson Act contracts associated with this tract, prior to approval of any final subdivision map. Cancellation of contracts shall have been approved by the City Council.

☐ 2) Provide evidence of sufficient storm water capacity availability equivalents (Certificate of Storm Water Treatment Equivalents).

☐ 3) Provide evidence of sufficient water availability equivalents (Certificate of Net MDD Availability).

☐ 1.14 Other conditions: _____ ☐

2. PRIOR TO ISSUANCE OF ANY PERMITS, APPLICANT SHALL:

A. GENERAL
(Permits includes Grading, Building, Demolition and Encroachment)

☐ 2.01 Record Parcel Map/Tract Map No. _____ pursuant to the Subdivision Map Act and in accordance with the City of Ontario Municipal Code. ☐

☐ 2.02 Submit a PDF of the recorded map to the City Engineer's office. ☐

☒ **2.03 Note that the subject parcel is a recognized parcel in the City of Ontario per Lot 2 of Parcel Map No. 4676, Book 45, Page 48 of the County of San Bernardino Recorder's office.** ☐

☐ 2.04 Note that the subject parcel is an 'unrecognized' parcel in the City of Ontario and shall require a Certificate of Compliance to be processed unless a deed is provided confirming the existence of the parcel prior to the date of March 4, 1972. ☐

☐ 2.05 Apply for a: ☐

☐ Certificate of Compliance with a Record of Survey;

☐ Lot Line Adjustment (Record a Conforming Deed with the County of San Bernardino within six months of the recordation of the Lot Line Adjustment to conform the new LLA legal description. Submit a copy of the recorded Conforming Deed to the Engineering Department.);

☐ Make a Dedication of Easement.

☐ 2.06 Provide (original document) Covenants, Conditions and Restrictions (CC&R's), as applicable to the project, and as approved by the City Attorney and the Engineering and Planning Departments, ready for recordation with the County of San Bernardino. The CC&R's shall provide for, but not be limited to, common ingress and egress, joint maintenance of all common access improvements, common facilities, parking areas, utilities and drive approaches in addition to maintenance requirements established in the Water Quality Management Plan (WQMP), as applicable to the project. ☐

☐ 2.07 For all development occurring south of the Pomona Freeway (60-Freeway) and within the specified boundary limits (per Boundary Map found at http://tceplumecleanup.com/), the property developer/owner is made aware of the South Archibald Trichloroethylene (TCE) Plume "Disclosure Letter". Property owner may wish to provide this Letter as part of the Real Estate Transfer Disclosure requirements under California Civil Code Section 1102 et seq. This may include notifications in the Covenants, Conditions and Restrictions (CC&Rs) or other documents related to property transfer and disclosures. Additional information on the plume is available from the Santa Ana Regional Water Quality Control Board at http://geotracker.waterboards.ca.gov/profile_report?global_id=T10000004658. ☐

☒ **2.08 Submit a soils/geology report.** ☐

☐ 2.09 Other Agency Permit/Approval: Submit a copy of the approved permit and/or other form of approval of the project from the following agency or agencies: ☐

- ☐ State of California Department of Transportation (Caltrans)
- ☐ San Bernardino County Road Department (SBCRD)
- ☐ San Bernardino County Flood Control District (SBCFCD)
- ☐ Federal Emergency Management Agency (FEMA)
- ☐ Cucamonga Valley Water District (CVWD) for sewer/water service
- ☐ United States Army Corps of Engineers (USACE)
- ☐ California Department of Fish & Game
- ☐ Inland Empire Utilities Agency (IEUA)
- ☐ Other: _____

☐ 2.10 Dedicate to the City of Ontario the right-of-way described below: ☐
_____ feet on _____

Property line corner 'cut-back' required at the intersection of _____ and _____.

☐ 2.11 Dedicate to the City of Ontario the following easement(s): _____ ☐

_____

☒ **2.12 Vacate the following street(s) and/or easement(s):** ☐

A. 6-feet of right-of-way on Grove Avenue along project frontage.
B. 15-feet City of Ontario railroad easement along western project boundary.
C. All interfering on-site easements shall be quitclaimed, vacated, and/or submit non-interference letter from affected owner/utility company.

☐ 2.13 Ontario Ranch Developments: ☐

☐ 1) Submit a copy of the permit from the San Bernardino County Health Department to the Engineering Department and the Ontario Municipal Utilities Company (OMUC) for the destruction/abandonment of the on-site water well. The well shall be destroyed/abandoned in accordance with the San Bernardino County Health Department guidelines.

☐ 2) Make a formal request to the City of Ontario Engineering Department for the proposed temporary use of an existing agricultural water well for purposes other than agriculture, such as grading, dust control, etc. Upon approval, the Applicant shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by said agreement.

☐ 3) Design proposed retaining walls to retain up to a maximum of three (3) feet of earth. In no case shall a wall exceed an overall height of nine (9) feet (i.e. maximum 6-foot high wall on top of a maximum 3-foot high retaining wall.

☒ **2.14** **Submit a security deposit to the Engineering Department to guarantee construction of the public improvements required herein valued at 100% of the approved construction cost estimate. Security deposit shall be in accordance with the City of Ontario Municipal Code. Security deposit will be eligible for release, in accordance with City procedure, upon completion and acceptance of said public improvements.** ☐

☒ **2.15** **The applicant/developer shall submit all necessary survey documents prepared by a Licensed Surveyor registered in the State of California detailing all existing survey monuments in and around the project site. These documents are to be reviewed and approved by the City Survey Office.** ☐

☒ **2.16** **Pay all Development Impact Fees (DIF) to the Building Department. Storm Drain Development Impact Fee, approximately $94,038.00, shall be paid to the Building Department. Final fee shall be determined based on the approved site plan and the DIF rate at the time of payment.** ☐

☒ **2.17** **Other conditions:** ☐

a. Provide a preliminary title report current to within 30 days.

B. PUBLIC IMPROVEMENTS
(See attached Exhibit 'A' for plan check submittal requirements.)

☒ **2.18** **Design and construct full public improvements in accordance with the City of Ontario Municipal Code, current City standards and specifications, master plans and the adopted specific plan for the area, if any. These public improvements shall include, but not be limited to, the following (checked boxes):**

Improvement	S. Grove Ave.			
Curb and Gutter	☐ New; ___ ft. from C/L ☒ **Replace damaged** ☐ Remove and replace	☐ New; ___ ft. from C/L ☐ Replace damaged ☐ Remove and replace	☐ New; ___ ft. from C/L ☐ Replace damaged ☐ Remove and replace	☐ New; ___ ft. from C/L ☐ Replace damaged ☐ Remove and replace

Removal of Improvements				
Other Improvements	**Relocate existing electrical underground structure located at proposed driveway**			

Specific notes for improvements listed in item no. 2.18, above:

1. **Along the entire property frontage.**
2. **Protect in place existing tress along property frontage.**

☒ **2.19** **Construct a 2" asphalt concrete (AC) grind and overlay on the following street(s):** ☐

a. **From edge of gutter to edge of gutter on South Grove Avenue from northerly project boundary to 2' south of sewer lateral connection**
b. **From centerline to edge of gutter on South Grove Avenue from 2' south of sewer lateral connection to southerly project boundary**

☐ 2.20 Reconstruction of the full pavement structural section, per City of Ontario Standard Drawing number 1011, may be required based on the existing pavement condition and final street design. Minimum limits of reconstruction shall be along property frontage, from street centerline to curb/gutter. ☐

☐ 2.21 Make arrangements with the Cucamonga Valley Water District (CVWD) to provide ☐ water service ☐ sewer service to the site. This property is within the area served by the CVWD and Applicant shall provide documentation to the City verifying that all required CVWD fees have been paid. ☐

☐ 2.22 Overhead utilities shall be under-grounded, in accordance with Title 7 of the City's Municipal Code (Ordinance No. 2804 and 2892). Developer may pay in-lieu fee, approximately _____, for undergrounding of utilities in accordance with Section 7-7.302.e of the City's Municipal Code. ☐

☐ 2.23 Other conditions: _____ ☐

C. SEWER

☒ **2.24 A 10-inch sewer main is available for connection by this project in South Grove Avenue (Ref: Sewer Drawing Number: S11693 and S11694).** ☐

☐ 2.25 Design and construct a sewer main extension. A sewer main is not available for direct connection. The closest main is approximately _____ feet away. ☐

☐ 2.26 Submit documentation that shows expected peak loading values for modeling the impact of the subject project to the existing sewer system. The project site is within a deficient public sewer system area. Applicant shall be responsible for all costs associated with the preparation of the model. Based on the results of the analysis, Applicant may be required to mitigate the project impact to the deficient public sewer system, including, but not limited to, upgrading of existing sewer main(s), construction of new sewer main(s) or diversion of sewer discharge to another sewer. ☐

☒ **2.27 Other conditions:** ☐
1. **See Exhibit B for additional Sewer Conditions of Approval from OMUC.**

D. WATER

☒ **2.28 A 6-inch and 12-inch water main are available for connection by this project in South Grove Avenue (Ref: Water Drawing Number: W12362).** ☐

☐ 2.29 Design and construct a water main extension. A water main is not available for direct connection. The closest main is approximately _____ feet away. ☐

☒ **2.30 Other conditions:** ☐
1. **See Exhibit B for additional Water Conditions of Approval from OMUC.**

E. RECYCLED WATER

☐ 2.31 A _____inch recycled water main is available for connection by this project in _____. (Ref: Recycled Water Drawing Number:_____) ☐

☐ 2.32 Design and construct an on-site recycled water system for this project. A recycled water main does exist in the vicinity of this project. ☐

☐ 2.33 Design and construct an on-site recycled water ready system for this project. A recycled water main does not currently exist in the vicinity of this project but is planned for the near future. If Applicant would like to connect to this recycled water main when it becomes available, the cost for the connection shall be borne solely by the Applicant. ☐

☐ 2.34 Submit one (1) electronic copy, in PDF format, of the Engineering Report (ER), for the use of recycled water to OMUC's Water Quality Programs at OMUCWQPlanCheck@ontarioca.gov for review and subsequent submittal to the California State Water Board (Division of Drinking Water) for final approval. ☐

Note: Review and approval process may take up to three (3) months. Contact the OMUC's Water Quality Programs at (909) 395-2678 or email OMUCWQPlanCheck@ontarioca.gov regarding this requirement.

☐ 2.35 Submit one (1) electronic copy, in PDF format, of the Landscape Plans (on-site & off-site) to OMUC's Water Quality Programs at OMUCWQPlanCheck@ontarioca.gov for review and approval.

☐ 2.36 Other conditions: _____ ☐

F. TRAFFIC / TRANSPORTATION

☐ 2.37 Submit a focused traffic impact study, prepared and signed by a Traffic/Civil Engineer registered in the State of California. The study shall address, but not be limited to, the following issues as required by the City Engineer: ☐
1. On-site and off-site circulation
2. Traffic level of service (LOS) at 'build-out' and future years
3. Impact at specific intersections as selected by the City Engineer

☐ 2.38 New traffic signal installations shall be added to Southern California Edison (SCE) customer account number # 2-20-044-3877. ☐

☒ **2.39 Other conditions:** ☐

1. **The Applicant/Developer shall be responsible to design and construct street improvements along property frontage in accordance with conditions issued by City's Land Development Division. These, and all other street improvements required herein, shall include, but not be limited to, sidewalk, LED street lights, signing and striping, and parkway landscaping.**
2. **The Applicant/Developer shall be responsible to relocate any existing public street lights along its project frontage on Grove Avenue conflicting with proposed project driveways. Street light relocations shall be done per City of Ontario Standard Drawing No. 5104**
3. **Design and construct proposed driveways in accordance with City of Ontario Standard Drawing No. 1204 for Commercial Driveway.**
4. **Parking restrictions shall remain in place along the property frontage of Grove Avenue.**
5. **All landscaping, block walls, and other obstructions shall be compatible with the stopping sight distance requirements per City of Ontario Standard Drawing No. 1309.**

G. DRAINAGE / HYDROLOGY

☐ 2.40 A _____inch storm drain main is available to accept flows from this project in _____. ☐
(Ref: Storm Drain Drawing Number: _____)

☒ **2.41 Submit a hydrology study and drainage analysis, prepared and signed by a Civil Engineer registered in the State of California. The study shall be prepared in accordance with the San Bernardino County Hydrology Manual and City of Ontario standards and guidelines. Additional drainage facilities, including, but not limited to, improvements beyond the project frontage, may be required to be designed and constructed, by Applicant, as a result of the findings of this study.** ☐

☒ **2.42 An adequate drainage facility to accept additional runoff from the site does not currently exist downstream of the project. Design and construct a storm water detention facility on the project site. 100-year post-development peak flow shall be attenuated such that it does not exceed 80% of pre-development peak flows, in accordance with the approved hydrology study and improvement plans.** ☐

☐ 2.43 Submit a copy of a recorded private drainage easement or drainage acceptance agreement to the Engineering Department for the acceptance of any increase to volume and/or concentration of historical drainage flows onto adjacent property, prior to approval of the grading plan for the project. ☐

☐ 2.44 Comply with the City of Ontario Flood Damage Prevention Ordinance (Ordinance No. 2409). The project site or a portion of the project site is within the Special Flood Hazard Area (SFHA) as indicated on the Flood Insurance Rate Map (FIRM) and is subject to flooding during a 100-year frequency storm. The site plan shall be subject to the provisions of the National Flood Insurance Program. ☐

☒ **2.45 Other conditions:** ☐

1. **Pay a Storm Drain In-Lieu Fee, $70,115.35, for the future installation of a 42" public storm drain main (GROV-VIII-1b) in South Grove Avenue along the project frontage.**

H. STORM WATER QUALITY / NATIONAL POLLUTANT DISCHARGE AND ELIMINATION SYSTEM (NPDES)

☐ 2.46 401 Water Quality Certification/404 Permit – Submit a copy of any applicable 401 Certification or 404 Permit for the subject project to the City project engineer. Development that will affect any body of surface water (i.e. lake, creek, open drainage channel, etc.) may require a 401 Water Quality Certification from the California Regional Water Quality Control Board, Santa Ana Region (RWQCB) and a 404 Permit from the United States Army Corps of Engineers (USACE). The groups of water bodies classified in these requirements are perennial (flow year round) and ephemeral (flow during rain conditions, only) and include, but are not limited to, direct connections into San Bernardino County Flood Control District (SBCFCD) channels. If a 401 Certification and/or a 404 Permit are not required, a letter confirming this from Applicant's engineer shall be submitted. Contact information: USACE (Los Angeles District) (213) 452-3414; RWQCB (951) 782-4130. ☐

☒ **2.47 Submit a Water Quality Management Plan (WQMP). This plan shall be approved by the Engineering Department prior to approval of any grading plan. The WQMP shall be submitted, utilizing the current San Bernardino County Stormwater Program template, available at: http://www.sbcounty.gov/dpw/land/npdes.asp.** ☐

☐ 2.48 Design and construct a Connector Pipe Trash Screen or equivalent Trash Treatment Control Device, per catch basin located within or accepting flows tributary of a Priority Land Use (PLU) area that meets the Full Capture System definition and specifications, and is on the Certified List of the State Water Resources Control Board. The device shall be adequately sized per catch basin and include a deflector screen with vector control access for abatement application, vertical support bars, and removable component to facilitate maintenance and cleaning. ☐

☐ 2.49 Other conditions: _____ ☐

J. SPECIAL DISTRICTS

☐ 2.50 File an application, together with an initial deposit (if required), to establish a Community Facilities District (CFD) pursuant to the Mello-Roos Community Facilities District Act of 1982. The application and fee shall be submitted a minimum of four (4) months prior to final subdivision map approval, and the CFD shall be established prior to final subdivision map approval or issuance of building permits, whichever occurs first. The CFD shall be established upon the subject property to provide funding for various City services. An annual special tax shall be levied upon each parcel or lot in an amount to be determined. The special tax will be collected along with annual property taxes. The City shall be the sole lead agency in the formation of any CFD. Contact Investment and Revenue Resources at (909) 395-2341 to initiate the CFD application process. ☐

☐ 2.51 Other conditions: _____ ☐

K. FIBER OPTIC

☐ 2.52 A _____ fiber optic line is available for connection by this project in _____. (Ref: Fiber Optic Drawing Number: _____) ☐

☒ **2.53 Design and construct fiber optic system to provide access to the City's conduit and fiber optic system per the City's Fiber Optic Master Plan. Building entrance conduits shall start from the closest OntarioNet hand hole constructed along the project frontage in the ROW and shall terminate in the main telecommunications room for each building. Conduit infrastructure shall interconnect with the primary and/or secondary backbone fiber optic conduit system at the nearest OntarioNet hand hole. Generally located in the northeast corner of the project on the east side of South Grove Avenue, see Fiber Optic Exhibit herein** ☐

☒ **2.54 Refer to the City's Fiber Optic Master Plan for design and layout guidelines. Contact the Broadband Operations Department at (909) 395-2000, regarding this requirement.** ☐

3. PRIOR TO ISSUANCE OF A CERTIFICATE OF OCCUPANCY, APPLICANT SHALL:

☒ 3.01 **Set new monuments in place of any monuments that have been damaged or destroyed as a result of construction of the subject project. Monuments shall be set in accordance with City of Ontario standards and to the satisfaction of the City Engineer.** ☐

☐ 3.02 Complete all requirements for recycled water usage. ☐

☐ 1) Procure from the OMUC a copy of the letter of confirmation from the California Department of Public Health (CDPH) that the Engineering Report (ER) has been reviewed and the subject site is approved for the use of recycled water.

☐ 2) Obtain clearance from the OMUC confirming completion of recycled water improvements and passing of shutdown tests and cross connection inspection, upon availability/usage of recycled water.

☐ 3) Complete education training of on-site personnel in the use of recycled water, in accordance with the ER, upon availability/usage of recycled water.

☒ 3.03 **The applicant/developer shall submit all final survey documents prepared by a Licensed Surveyor registered in the State of California detailing all survey monuments that have been preserved, revised, adjusted or set along with any maps, corner records or Records of Survey needed to comply with these Conditions of Approvals and the latest edition of the California Professional Land Survey Act. These documents are to be reviewed and approved by the City Survey Office.** ☐

☐ 3.04 Ontario Ranch Projects: For developments located at an intersection of any two collector or arterial streets, the applicant/developer shall set a monument if one does not already exist at that intersection. Contact the City Survey office for information on reference benchmarks, acceptable methodology and required submittals. ☐

☒ 3.05 **Confirm payment of all Development Impact Fees (DIF) to the Building Department.** ☐

☒ 3.06 **Submit electronic copies (PDF and Auto CAD format) of all approved improvement plans, studies and reports (i.e. hydrology, traffic, WQMP, etc.).** ☐

4. PRIOR TO FINAL ACCEPTANCE, APPLICANT SHALL:

☒ 4.01 **Complete all Conditions of Approval listed under Sections 1-3 above.** ☐

☒ 4.02 **Pay all outstanding fees pursuant to the City of Ontario Municipal Code, including but not limited to, plan check fees, inspection fees and Development Impact Fees.** ☐

☒ 4.03 **The applicant/developer shall submit a written request for the City's final acceptance of the project addressed to the City Project Engineer. The request shall include a completed Acceptance and Bond Release Checklist, state that all Conditions of Approval have been completed and shall be signed by the applicant/developer. Upon receipt of the request, review of the request shall be a minimum of 10 business days. Conditions of Approval that are deemed incomplete by the City will cause delays in the acceptance process.** ☐

☒ 4.04 **Submit record drawings (PDF) for all public improvements identified within Section 2 of these Conditions of Approval.** ☐

EXHIBIT 'A'

ENGINEERING DEPARTMENT
First Plan Check Submittal Checklist

Project Number: PDEV22-040

All plan check submittals are to be done digitally through the City Of Ontario Citizen Portal Access. The following items are to be included with the first plan check submittal:

1. ☒ **A copy of this check list**
2. ☒ **Payment of fee for Plan Checking**
3. ☒ **Engineering Cost Estimate (on City form) with engineer's wet signature and stamp.**
4. ☒ **Project Conditions of Approval**
5. ☐ Potable and Recycled Water demand calculations (include water demand calculations showing low, average and peak water demand in GPM for the proposed development and proposed water meter size).
6. ☐ Public Street improvement plan with street cross-sections
7. ☐ Public Water improvement plan (include water demand calculations showing low, average and peak water demand in GPM for the proposed development and proposed water meter size)
8. ☐ Recycled Water improvement plan (include recycled water demand calculations showing low, average and peak water demand in GPM for the proposed development and proposed water meter size and an exhibit showing the limits of areas being irrigated by each recycled water meter)
9. ☐ Public Sewer improvement plan
10. ☐ Public Storm Drain improvement plan
11. ☐ Public Street Light improvement plan
12. ☐ Signing and Striping improvement plan
13. ☒ **Fiber Optic plan (include Auto CAD electronic submittal)**
14. ☐ HOA Landscape improvement plans. Show corner sight line distance per engineering standard drawing 1309.
15. ☐ CFD Landscape improvement plans. Show corner sight line distance per engineering standard drawing 1309.
16. ☒ **Dry Utility plans within public right-of-way (at a minimum the plans must show existing and ultimate right-of-way, curb and gutter, proposed utility location including centerline dimensions, wall to wall clearances between proposed utility and adjacent public line, street work repaired per Standard Drawing No. 1306. Include Auto CAD electronic submittal)**
17. ☐ Traffic Signal improvement plan and One (1) copy of Traffic Signal Specifications with modified Special Provisions. Please contact the Traffic Division at (909) 395-2154 to obtain Traffic Signal Specifications.
18. ☒ **Water Quality Management Plan (WQMP), including one (1) copy of the approved Preliminary WQMP (PWQMP).**
19. ☒ **Hydrology/Drainage study**
20. ☒ **Soils/Geology report**

21. ☐ Payment for Final Map/Parcel Map processing fee

22. ☐ Final Map/Parcel Map

23. ☐ Approved Tentative Map

24. ☒ **Preliminary Title Report (current within 30 days)**

25. ☐ Traverse Closure Calculations

26. ☒ **Set of supporting documents and maps (legible copies): referenced improvement plans (full size), referenced record final maps/parcel maps (full size, 18"x26"), Assessor's Parcel map (full size, 11"x17"), recorded documents such as deeds, lot line adjustments, easements, etc.**

27. ☐ Engineering Report and an electronic file (include PDF format electronic submittal) for recycled water use.

28. ☒ **Other:**

    A. **Precise grading plan, including street and utility improvements, submitted to the building department.**

    B. **Submit vacation document for 6-feet of right-of-way on Grove Avenue along project frontage.**

    C. **Submit vacation document for 15-feet City of Ontario railroad easement along western project boundary.**

EXHIBIT 'B'

CITY OF ONTARIO
MEMORANDUM

ONTARIO MUNICIPAL UTILITIES COMPANY

DATE:	September 8, 2023
TO:	Angela Truong, Engineering
CC:	Luis Batres, Planning
FROM:	Peter Tran, Utilities Engineering
SUBJECT:	DPR #5 – Conditions of Approval (COA) - Utilities Comments (**#9521**) PSPA22-007, PDEV22-040 (A Specific Plan Ammendment to change land use and Development
PROJECT NO.:	Plan to construct one 62,136 sqft industrial building in the Grove Avenue Specific Plan)

BRIEF DESCRIPTION

A Development Plan to construct one 62,136-square-foot industrial building on 4.12 acres of land located at 2042 South Grove Avenue, within the Office/Commercial land use district of the Grove Avenue Specific Plan (APN: 105-049-111). Related File: PSPA22-007

OMUC UTILITIES ENGINEERING DIVISION
CONDITIONS OF APPROVAL

CONDITIONS OF APPROVAL: *The **Ontario Municipal Utilities Company (OMUC) Utilities Engineering Division** recommends this application for approval subject to the Conditions of Approval outlined below and compliance with the City's Design Development Guidelines, Specifications Design Criteria, and City Standards. The Applicant shall be responsible for the compliance with and the completion of all the following applicable Conditions of Approval prior to the following milestones and subject to compliance with City's Design Development Guidelines, Specifications Design Criteria, and City Standards:*

1. Standard Conditions of Approval: Project shall comply with the requirements as set forth in the Amendment to the Standard Conditions of Approval for New Development Projects adopted by the City Council (Resolution No. 2017-027) on April 18, 2017, or as amended or superseded by Council Resolution; as well as the project-specific conditions/requirements as outlined below.

Prior to Issuance of Any Permits (Grading, Building, Demolition and Encroachment), unless other timeline milestones are specified by individual conditions below, the Applicant Shall:

General Conditions (Section 2.A, Other conditions): The Applicant shall comply with the following:

2. Final Utilities Systems Map (USM): Submit a Final Utilities Systems Map (FUSM) as part of the precise grading plan submittal that meets all the City's USM requirements. These requirements include to show and label all existing and proposed utilities (including all appurtenances such as backflow devices, DCDAs, etc.), sizes, points of connection, and any easements. The final utility design shall comply with all Division of Drinking Water (CCR §64572) Separation Requirements. See Utility Systems Map (USM) Requirements document for details.
    a. The proposed utilities, utility alignments, and Public Rights-of-Way/Public Utility Easements shown on the Conceptual Utilities Systems Map (CUSM) and other Entitlement documents are not considered final and shall be revised during Final Design to meet all City Design Guidelines, Standards, City Requirements, and all of the Conditions of Approval contained in this document.
3. Design Utilities to comply Department of Drinking Water (DDW) Separation Requirements and California Code of Regulations (CCR) § 64572 Compliance: All DDW Separation Requirements under CCR § 64572 must be met. In order to assure compliance with CCR § 64572, on all design documents and plans: label the separation dimensions, measure from outside wall of the conveyances, between public potable water to any other public or private non-potable conveyance (sewer, storm drain, storm water, storm water infiltration, recycled water, recycled water irrigation, high pressure gas/petroleum, etc) whether publicly or privately maintained; provide one label per sheet per conveyance and additional

labels where separation dimensions and alignments change; and, for any facilities not currently meeting the separation requirements, revise plans/documents so that the facilities meet the separations requirements.

4. Unused Service Abandonment: All adjacent water services (along with connected appurtenances) and sewer laterals and main stubs along the frontages of the project site not used to provide service to this Development Project shall be abandoned back to the main in accordance with City Standards and Practices.

Sanitary Sewer Conditions (Section 2.C): The Applicant shall comply with the following:

5. Sanitary Sewer Mains Improvements:
    a. N/A.
6. Sanitary Sewer Service:
    a. Each building and its onsite private sewer system shall discharge wastewater to the Public Sanitary Sewer System through a Public Sewer Lateral per Standard #2003. The quantity of Public Sewer Laterals for each building shall be limited to the minimum necessary to meet all of the conditions of approval and as limited by the City.
    b. For each Public Sewer Lateral Service to an existing sewer main: the existing sewer main being connected to shall be CCTV Inspected between the upstream and downstream manholes of the connection once before and once after the Sewer Lateral connections is made and any damage to the sewer main resulting from the installation of the Sewer Lateral shall be repaired to meet City Standards and Requirements prior to placing the Sewer Lateral in service.
    c. Public Sewer Laterals and Storm Water Quality Improvements: No storm water quality improvements (infiltration, detention, retention, bioswale, etc) shall be installed above or with 5 feet of any Public Sewer Lateral.
7. Private Onsite Sewer System and Plumbing: The Onsite Sewer System shall be privately maintained by the property owner and shall meet the following requirements:
    a. For wastewater flows for non-residential uses:
        i. Note the following:
        The Occupant/Applicant shall apply for a Wastewater Discharge Permit for their establishment and shall comply will all the requirements of the Wastewater Discharge Permit. The application can be downloaded from the City's Utilities website in the drop-down of the "Pretreatment" section (www.ontarioca.gov/OMUC/Utilities). Please select the appropriate application that applies to your type of business. Requirements of the Wastewater Discharge Permit may include, but not limited to: Installation of wastewater pretreatment equipment, such as grease interceptors or clarifiers. For wastewater permit application questions, please contact:

        Michael Birmelin, Environmental Programs Manager
        omucenvironmental@ontarioca.gov

        Phone: (909) 395-2661.

        ii. Sewer Cleanout and Monitoring Manhole: Provide sewer cleanout behind the property line and sewer monitoring manhole per city's standards numbers 2201 and 2203, on private property for the sewer lateral.
    b. Private Onsite Sewer and Storm Water Quality Improvements: No storm water quality improvements (infiltration, detention, retention, bioswale, etc) shall be installed above or with 5 feet of any Private Onsite Sewer pipes.

Potable Water Conditions (Section 2.D): The Applicant shall comply with the following:

8. Potable Water Main Improvements:
    a. Fire Hydrants: Abandon the existing and conflicting fire hydrant in the middle of the proposed driveway approach back to the water main and construct a new fire hydrant minimum five feet away from the BCR/ECR or any other obstructions.
9. Potable Water Service:
    a. Backflow Prevention:

i. A Backflow Prevention Device is required for each Meter connected to the Public Potable Water System that: serves any residential use that is more than one (1) single family residential unit; or, any non-residential use; or, only irrigation use.

ii. Backflow Prevention Device Location: A Backflow Prevention Device location shall comply with the following requirements and City Standards:

1. In order to reduce the risk of backflow contamination to the Public Potable Water System, the length of pipe between the Public Potable Water Main and the Backflow Device shall be as minimally short as possible.

1. Along Public Streets within Publicly Dedicated Right-of Way: as measured along the pipe connecting to the Backflow Prevention Device, the Backflow shall be located a minimum of 3 feet and a maximum of 5 feet from the backflow concrete pad to the property line or back of sidewalk, whichever is closer.

2. Along Private Streets: as measured along the pipe connecting to the Backflow Prevention Device, the Backflow shall be located a minimum of 3 feet and a maximum of 5 feet from the backflow concrete pad to the meter box or back of sidewalk (or back of curb where there is no sidewalk), whichever is closer.

3. Only one single bend of up to 90 degrees maximum is allowed along the pipe to the Backflow and the single bend must be located at one of the following places: either the along the 90-degree riser connecting at the backflow assembly; or, at the end of the 12-inch stub at the back of the meter box.

4. All the minimum DDW Separations also apply to the pipeline connecting between the Main/Meter-Box to a Backflow Device (or DCDA) and any Backflow Device (or DCDA). This also includes storm water quality improvements (infiltration, detention, retention, bioswale, etc). Also, no public or private non-potable water conveyances (private utilities, plumbing lines, sewer, private fire system, storm drain) shall cross the pipeline connecting between the Main/Meter-Box to a Backflow Device (or DCDA) or under any Backflow Device (or DCDA).

b. Domestic Service: For domestic water uses:

i. The building shall have a domestic water service and meter connected to the Public Potable Water System and abandon any unused to city's current standards and guidelines.

c. Irrigation Service: For landscape irrigation uses that are not served by Recycled Water, the landscape irrigation uses shall have a separate irrigation water service and meter with backflow prevention device connected to the Public Potable Water System separate from the domestic water uses and the onsite plumbing systems and irrigation systems shall be also separate from each other.

d. Fire Water Service: For onsite private Fire System uses:

i. Where the domestic water service and meters connected to the Public Potable Water System that serves any use that is more than one (1) single family detached residential unit or any non-residential use: if an onsite private fire system is required, then a separate Fire Service with Double Check Detector Assembly (DCDA) per City Standard #4208 connected to the Public Potable Water System is required to serve the onsite private fire system; and, the onsite fire system and onsite domestic water plumbing system shall be separate. DCDAs are a type of Backflow prevention device.

e. Relocated Services: For any existing service with appurtenances to be relocated, the service shall be abandoned back to the main connection and the service and appurtenances shall be installed new per related City Standards.

☒	**Preliminary Plans (dated 3/1/2023; tree report sent on 4/4/2023) meet the Standard Conditions for New Development and have been approved considering that the following conditions below are met upon the landscape construction documents submittal.**
☐	**Preliminary Plans (dated) have not been approved. Corrections noted below are required before Preliminary Landscape Plan approval.**

A RESPONSE SHEET IS REQUIRED WITH RESUBMITTAL OR PLANS WILL BE RETURNED AS INCOMPLETE.
Landscape construction plans with plan check number may be emailed to:
landscapeplancheck@ontarioca.gov

Civil/ Site Plans

1. Replacement and mitigation for removed trees shall equal the trunk diameter of heritage trees removed per the Development Code Tree Preservation Policy and Protection Measures, section 6.05.020. The arborist identified a Phoenix canariensis (tree #15) which is a heritage tree; please coordinate with Philip Marino, Parks and Maintenance Manager to relocate the tree to a city location (909) 395-2610. Tree #13 is a 19" heritage tree; the recent plans show an increase of tree sizes that meet the mitigation for the 19" replacement value.
2. Show transformers set back 5' from paving all sides. Dimension 5' from paving to avoid bollards and allow for appropriate screening. Coordinate with landscape plans.
3. Show and dimension backflow devices set back 4' from paving on all sides. Locate on level grade.
4. Locate utilities, including light standards, fire hydrants, water, drain, and sewer lines to not conflict with required tree locations—coordinate civil plans with landscape plans.
5. Note for compaction to be no greater than 85% in landscape areas. All finished grades at 1 ½" below finished surfaces. Slopes to be maximum 3:1.
6. Dimension, show and call out for step-outs at parking spaces adjacent to planters; a 12" wide monolithic concrete curb, DG paving or pavers with edging.
7. Add Note to Grading and Landscape Plans: Landscape areas where compaction has occurred due to grading activities and where trees or stormwater infiltration areas are located shall be loosened by soil fracturing. For trees, a 12'x12'x18" deep area; for stormwater infiltration, the entire area shall be loosened. Add the following information on the plans: The backhoe method of soil fracturing shall be used to break up compaction. A 4" layer of Compost is spread over the soil surface before fracturing is begun. The backhoe shall dig into the soil lifting and then drop the soil immediately back into the hole. The bucket then

moves to the adjacent soil and repeats. The Compost falls into the spaces between the soil chunks created. Fracturing shall leave the soil surface quite rough with large soil clods. These must be broken by additional tilling. Tilling in more Compost to the surface after fracturing per the soil report will help create an A horizon soil. Imported or reused Topsoil can be added on top of the fractured soil as needed for grading. The Landscape Architect shall be present during this process and provide certification of the soil fracturing. For additional reference, see Urban Tree Foundation – Planting Soil Specifications.

Landscape Plans

8. Add note for Canary Island Palm; see #1.
9. Show all utilities on the landscape plans. Coordinate so utilities are clear of tree locations.
10. Dimension all planters to have a minimum 5' wide inside dimension with 6" curbs and 12" wide curbs where parking spaces are adjacent to planters.
11. Show trees and plant material at 2/3 their mature diameter. Symbols in planting legend should correspond to the plant material.
12. Root barriers are not required but shall be 12" deep maximum and linear application if identified.
13. Call out all fences, walls, proposed materials, and heights. Provide information for outdoor break area and paving.
14. Show concrete mowstrips to identify property lines along open areas or to separate ownership or between maintenance areas.
15. After a project's entitlement approval, the applicant shall pay all applicable fees for landscape plan check and inspections at a rate established by resolution of the City Council. Landscape construction plans with building permit number for plan check may be emailed to: landscapeplancheck@ontarioca.gov

CITY OF ONTARIO
MEMORANDUM

TO: **Luis Batres, Senior Planner**
Planning Department

FROM: **Paul Ehrman, Sr. Deputy Fire Chief/Fire Marshal**
Fire Department

DATE: **September 22, 2022**

SUBJECT: **PDEV22-040 - A Development Plan to construct one 62,136-square-foot industrial building on 4.12 acres of land located at 2042 South Grove Avenue, within the Office/Commercial land use district of the Grove Avenue Specific Plan (APN: 105-049-111). Related File: PSPA22-007.**

☒ The plan **does** adequately address Fire Department requirements at this time.

☒ Standard Conditions of Approval apply, as stated below.

SITE AND BUILDING FEATURES:

A. 2019 CBC Type of Construction: Type III-B

B. Type of Roof Materials: Panelized

C. Ground Floor Area(s): 62,136 Sq. Ft.

D. Number of Stories: 1 with Mezzanine

E. Total Square Footage: 62,136 Sq. Ft.

F. 2019 CBC Occupancy Classification(s): S

CONDITIONS OF APPROVAL:

1.0 GENERAL

☒ 1.1 The following are the Ontario Fire Department ("Fire Department") requirements for this development project, based on the current edition of the California Fire Code (CFC), and the current versions of the Fire Prevention Standards ("Standards.") It is recommended that the applicant or developer transmit a copy of these requirements to the on-site contractor(s) and that all questions or concerns be directed to the Bureau of Fire Prevention, at (909) 395-2029. For copies of Ontario Fire Department Standards please access the City of Ontario web site at www.ontarioca.gov/Fire/Prevention.

☒ 1.2 These Fire Department conditions of approval are to be included on any and all construction drawings.

2.0 FIRE DEPARTMENT ACCESS

☒ 2.1 Fire Department vehicle access roadways shall be provided to within 150 ft. of all portions of the exterior walls of the first story of any building, unless specifically approved. Roadways shall be paved with an all-weather surface and shall be a minimum of twenty-four (24) ft. wide. See Standard #B-004.

☒ 2.2 In order to allow for adequate turning radius for emergency fire apparatus, all turns shall be designed to meet the minimum twenty five feet (25') inside and forty-five feet (45') outside turning radius per Standard #B-005.

☒ 2.3 Fire Department access roadways that exceed one hundred and fifty feet (150') in length shall have an approved turn-around per Standard #B-002.

☒ 2.4 Access drive aisles which cross property lines shall be provided with CC&Rs, access easements, or reciprocating agreements, and shall be recorded on the titles of affected properties, and copies of same shall be provided at the time of building plan check.

☒ 2.5 "No Parking-Fire Lane" signs and /or red painted curbs with lettering are required to be installed in interior access roadways, in locations where vehicle parking would obstruct the minimum clear width requirement. Installation shall be per Standard #B-001.

☒ 2.6 Security gates or other barriers on fire access roadways shall be provided with a Knox brand key switch or padlock to allow Fire Department access. See Standards #B-003, B-004 and H-001.

☒ 2.7 Any time PRIOR to on-site combustible construction and/or storage, a minimum twenty-four (24) ft. wide circulating all weather access roads shall be provided to within 150 ft. of all portions of the exterior walls of the first story of any building, unless specifically approved by fire department and other emergency services.

3.0 WATER SUPPLY

☒ 3.1 The required fire flow per Fire Department standards, based on the 2019 California Fire Code, Appendix B, is 3500 gallons per minute (g.p.m.) for 4 hours at a minimum of 20 pounds per square inch (p.s.i.) residual operating pressure.

☒ 3.2 Off-site (public) fire hydrants are required to be installed on all frontage streets, at a minimum spacing of three hundred foot (300') apart, per Engineering Department specifications.

☒ 3.4 The water supply, including water mains and fire hydrants, shall be tested and approved by the Engineering Department and Fire Department prior to combustible construction to assure availability and reliability for firefighting purposes.

4.0 FIRE PROTECTION SYSTEMS

☒ 4.1 On-site private fire hydrants are required per Standard #D-005, and identified in accordance with Standard #D-002. Installation and locations(s) are subject to the approval of the Fire Department. An application with detailed plans shall be submitted, and a construction permit shall be issued by the Fire Department, prior to any work being done.

☒ 4.2 Underground fire mains which cross property lines shall be provided with CC & R, easements, or reciprocating agreements, and shall be recorded on the titles of affected properties, and copies of same shall be provided at the time of fire department plan check. The shared use of private fire mains or fire pumps is allowable only between immediately adjacent properties and shall not cross any public street.

☒ 4.3 An automatic fire sprinkler system is required. The system design shall be in accordance with National Fire Protection Association (NFPA) Standard 13. All new fire sprinkler systems, except those in single family dwellings, which contain twenty (20) sprinkler heads or more shall be monitored by an approved listed supervising station. An application along with detailed plans shall be submitted, and a construction permit shall be issued by the Fire Department, prior to any work being done.

☒ 4.5 Fire Department Connections (FDC) shall be located on the address side of the building within one hundred fifty feet (150') of a public fire hydrant on the same side of the street. Provide identification for all fire sprinkler control valves and fire department connections per Standard #D-007. Raised curbs adjacent to Fire Department connection(s) shall be painted red, five feet either side, per City standards.

☒ 4.6 A fire alarm system is required. The system design shall be in accordance with National Fire Protection Association (NFPA) Standard 72. An application along with detailed plans shall be submitted, and a construction permit shall be issued by the Fire Department, prior to any work being done.

☒ 4.7 Portable fire extinguishers are required to be installed prior to occupancy per Standard #C-001. Please contact the Fire Prevention Bureau to determine the exact number, type and placement required.

5.0 BUILDING CONSTRUCTION FEATURES

☒ 5.1 The developer/general contractor is to be responsible for reasonable periodic cleanup of the development during construction to avoid hazardous accumulations of combustible trash and debris both on and off the site.

☒ 5.2 Approved numbers or addresses shall be placed on all new and existing buildings in such a position as to be plainly visible and legible from the street or road fronting the property. Multi-tenant or building projects shall have addresses and/or suite numbers provided on the rear of the building. Address numbers shall contrast with their background. See Section 9-1 6.06 of the Ontario Municipal Code and Standards #H-003 and #H-002.

☒ 5.6 Knox ® brand key-box(es) shall be installed in location(s) acceptable to the Fire Department. All Knox boxes shall be monitored for tamper by the building fire alarm system. See Standard #H-001 for specific requirements.

☒ 5.7 Placards shall be installed in acceptable locations on buildings that store, use or handle hazardous materials in excess of the quantities specified in the CFC. Placards shall meet the requirements of National Fire Protection Association (NFPA) Standard 704.

6.0 OTHER SPECIAL USES

☒ 6.1 The storage, use, dispensing, or handling of any hazardous materials shall be approved by the Fire Department, and adequate fire protection features shall be required. If hazardous materials are proposed, a Fire Department Hazardous Materials Information Packet, including Disclosure Form and Information Worksheet, shall be completed and submitted with Material Safety Data Sheets to the Fire Department along with building construction plans.

☒ 6.2 Any High Piled Storage, or storage of combustible materials greater than twelve (12') feet in height for ordinary (Class I-IV) commodities or storage greater than six feet (6') in height of high hazard (Group A plastics, rubber tires, flammable liquids, etc.) shall be approved by the Fire Department, and adequate fire protection features shall be required. If High Piled Storage is proposed, a Fire Department High Piled Storage Worksheet shall be completed and detailed racking plans or floor plans submitted prior to occupancy of the building.

☒ 6.3 Underground fuel tanks, their associated piping and dispensers shall be reviewed, approved, and permitted by Ontario Building Department, Ontario Fire Department, and San Bernardino County Fire Department Hazardous Materials Division. In fueling facilities, an exterior emergency pump shut-off switch shall be provided.

RESOLUTION NO._____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING AN ADDENDUM TO THE ONTARIO PLAN (TOP) 2050 SUPPLEMENTAL ENVIRONMENTAL IMPACT REPORT (STATE CLEARINGHOUSE NO. 2021070364), CERTIFIED BY THE ONTARIO CITY COUNCIL ON AUGUST 16, 2022 PURSUANT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NO PSPA22-007

WHEREAS, First Industrial Realty Trust (hereinafter referred to as "Applicant") has filed an Application for the approval of a Specific Plan Amendment, File No. PSPA22-007, which consists of changing the land use designation of 4.20 acres of land from Office/Commercial to Business Park for property located at 2042 S. Grove Avenue, in the City of Ontario, California (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Ontario Plan (TOP) 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) was certified by City Council on August 16, 2022 (hereinafter referred to as "Certified EIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as "EIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the EIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified EIR was appropriate; and

WHEREAS, on March 26, 2024, the Planning Commission of the City of Ontario conducted a hearing to consider the Addendum and concluded said hearing on that date, voting to issue Resolution No. PC24-008 recommending that the City Council concluded that none of the conditions requiring preparation of a subsequent or supplemental EIR

have occurred, and further recommending that the City Council take action on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the City Council is the decision-making authority for the requested approval to construct and otherwise undertake the Project; and

WHEREAS, the City Council has reviewed and considered the EIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent or supplemental EIR have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the EIR Addendum for the Project are on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, are available for inspection by any interested person at that location and are, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, California, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to the Ontario Plan (TOP) 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022 in conjunction with File No. PGA20-002; and

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the City Council; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 and 2, above, the City Council hereby finds that based upon the

entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified EIR, and does hereby approve the EIR Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 4: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 5: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 16th day of April, 2024.

Addendum to the Ontario Plan (TOP) 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364)

(Addendum to follow this page)

Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

1. Project Title/File Nos.: File Nos.: PDEV22-040 & PSPA22-007 First Grove

2. Lead Agency: City of Ontario-Planning Department, 303 East B Street, Ontario, California 91764

3. Contact Person : Luis E. Batres, Phone : (909) 395-2431, Email : Lbatres@ontarioca.gov

4. Project Sponsor: First Industrial Realty Trust, Inc; 898 N. Pacific Coast Highway Ste. 175, El Segundo, CA 90245

5. Project Location: The Project site is located in southwestern San Bernardino County, within the City of Ontario. The City of Ontario is located approximately 40 miles from downtown Los Angeles, 20 miles from downtown San Bernardino, and 30 miles from Orange County. As illustrated on Figures 1, *Regional Location Map*, and 2, *Aerial Site Photograph*, below, the Project site is located at 2042 South Grove Avenue (APN: 1050-491-11). The Project site is bordered by South Grove Avenue to the east, industrial uses to the west, and commercial/office uses to the north and south. Regional access is provided via State Route 83 (SR-83) and State Route 60 (SR-60).

6. Policy Plan (General Plan) Designation: Business Park

7. Zoning Designation: Existing – Specific Plan (Office/Commercial under the Grove Avenue Specific Plan); Proposed – Business Park

8. Description of Project: The Project proposed the following entitlements:

    1. A Specific Plan Amendment (File No. PSPA22-007) to the Grove Avenue Specific Plan to change the land use designation of 4.2 acres of land from Office/Commercial to Business Park; and

    2. A Development Plan (File No. PDEV22-040) to construct a 61,867 square foot industrial building on 4.2 acres within the Business Park land use designation of the Grove Avenue Specific Plan. The Project is located at 2042 South Grove Avenue (APN: 1050-491-11).

    Specific Plan Amendment (File No. PSPA22-007)
    The Grove Avenue Specific Plan was adopted in May 1993. The Specific Plan is located on 250.15 acres of land generally located north of the SR-60 and south of Mission Boulevard. The Specific Plan Amendment will include the following revisions to the Specific Plan:

    - Exhibit 7, Land Use Plan, that currently identifies the 4.2 acres site, as of Office/Commercial and will be change to Business Park; and

    - Changes to Table 2, Grove Avenue Specific Plan Statistical Summary, to reflect land use change.

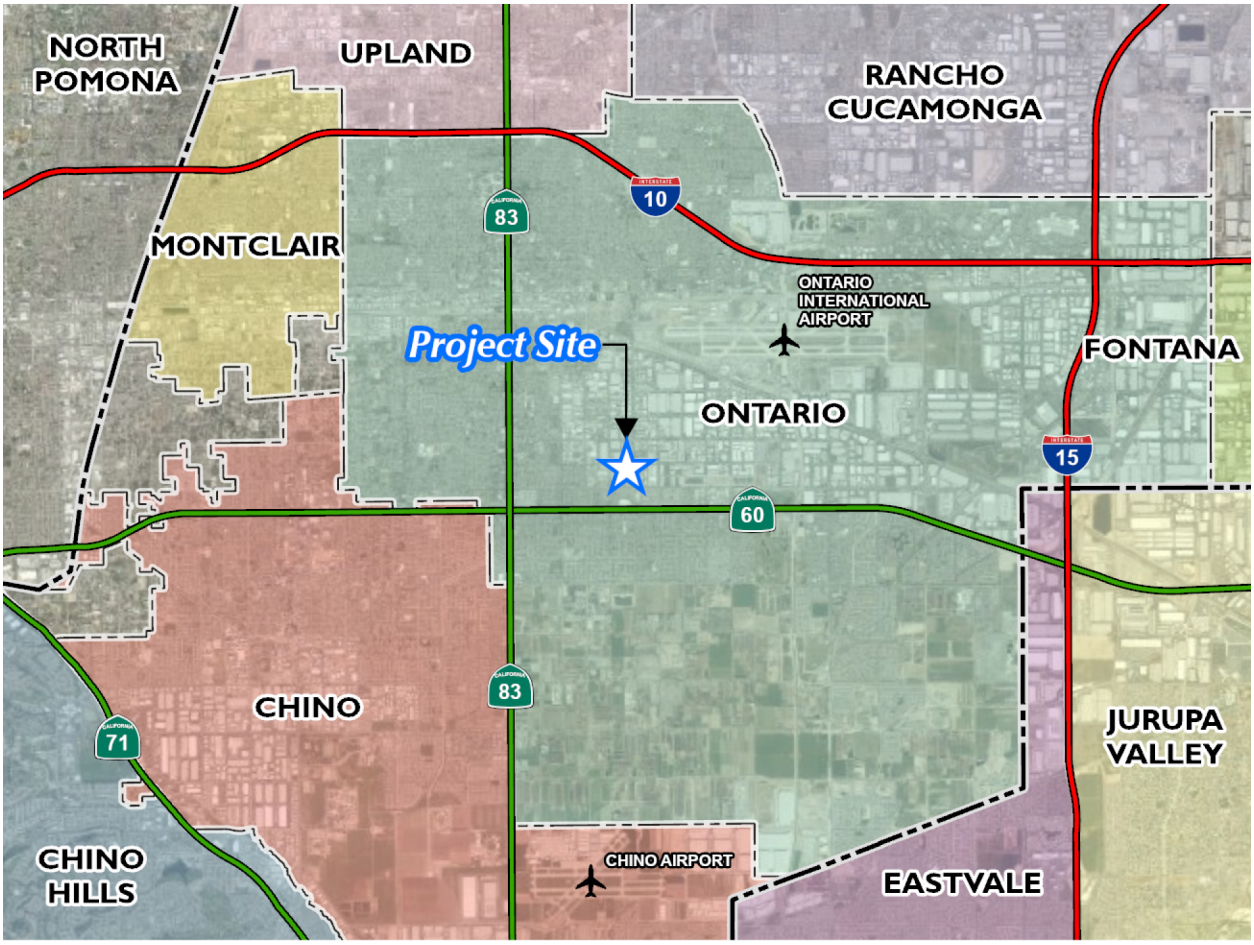

Figure 1: Regional Location Map

Figure 2: Aerial Site Photograph

Development Plan (File No. PDEV22-040)
The Project Applicant seeks to demolish the existing structures and re-develop the 4.2-acre site as a warehouse facility with approximately 61,867 square feet (s.f.) of building area as shown on Figure 3, *Site Plan*. Of the total building square footage, the Project would allocate 56,867 s.f. for warehousing/distribution and 7,500 s.f. for office uses. The Project would require demolition of the existing buildings and structures, associated on-site landscaping, and associated on-site parking.

Building Characteristics and Operations
As depicted in Figure 4, *Building Elevations (North and West) and Figure 5, Building Elevations (South and East)*, the proposed building will be a one-story, 36-foot tall speculative warehouse/distribution and office facility, designed to be visually compatible with adjacent buildings and uses. The primary color scheme of the proposed building would include varying shades of white, grays, and dark grays and would be further accented with blue reflective glazing. The building is designed with 13 dock doors on the west-facing side of the building.

Although the ultimate end-user is unknown at this time, for purposes of conservative analysis, the Project is assumed to operate up to 24-hours daily, 7 days a week. Loading and unloading activities would occur at the back of the building at the west elevation.

Circulation and Parking
Vehicular access will be provided via 2 driveways on South Grove Avenue. The southern driveway would be restricted to passenger vehicles only. The Project includes surface parking with ±94 parking spaces. Of the ±94 spaces, there are ±90 standard automobile parking stalls, 3 standard accessible parking stalls, and 1 van accessible parking stall. Passenger vehicle parking stalls would be located in parking areas positioned at the eastern side of the proposed building, at the northwestern corner of the proposed building and along the western boundary of the Project site. Additionally, a bicycle rack would be provided at the northeastern corner of the building near the office space. The Project would further include 6 truck trailer parking spaces located along the western boundary of the Project site, closest to the 13 proposed dock doors.

Landscaping, Walls, and Lighting
As depicted in Figure 6, *Landscape Plan*, a variety of trees, shrubs, accent plants, and ground cover are proposed along the perimeter of the Project site and parking area. Landscaping will feature drought-tolerant plant materials for a total of 90 trees, including 53 15 gallon, 4 48" box, 8 36" box, and 25 24" box trees.

A proposed retaining wall would border portions of the northern, southern, and the entire western boundary of the site. Additionally, an 8-foot tall wrought iron tubular fence would border the Project's northern, western, and eastern boundary.

Exterior lighting would be installed on-site, as necessary, for safety, security, and wayfinding. Decorative architectural lighting as well as landscape lighting would also be installed to accent building entries as focal points throughout the site. Ornamental landscaping, lighting, walls and utility infrastructure improvements/connections would be installed per compliance with the City's Municipal Code.

LANDSCAPE DATA

NET LOT AREA = 179,396 S.F. | 4.12 ACRES
LANDSCAPE PROVIDED = 23,452 S.F.
LANDSCAPE RATIO = 13%

PARKING AREA TREE REQUIREMENTS

TOTAL NUMBER OF PARKING SPACES = 98

TOTAL NUMBER OF TREES REQUIRED (1 TREE/4 SPACES) = 25 TREES

TOTAL NUMBER OF TREES PROVIDED = 29 TREES

PRELIMINARY MAWA CALCULATIONS

TOTAL LANDSCAPE SQUARE FOOTAGE : APPROX. 23,452 SQ.FT.

AVERAGE PLANT FACTOR = .2

ETO FOR THE ONTARIO AREA: 54.6 INCHES/YEAR

MAXIMUM APPLIED WATER ALLOWANCE (MAWA) = 357,254 GAL/YEAR

(54.6) X (.45) X (23,452) X (.62) = 357,254

Figure 6: Landscape Plan

Infrastructure Improvements

Water service to the Project site will be provided by the Ontario Municipal Utilities Company (OMUC). As shown in Figure 7, *Conceptual Utilities Plan*, water would be accommodated via proposed water lines that would extend from the eastern portion of the building and proposed fire hydrants to an existing 6-inch water main on South Grove Avenue.

Sanitary sewer service to the Project site would be provided by Inland Empire Utilities Agency (IEUA). Sewer would be accommodated via proposed sewer lines that would extend from the northwestern and northeastern corners of the building to an existing 10-inch sewer main on South Grove Avenue.

Stormwater will be directed to the on-site underground infiltration/detention system between the parking stalls along the western boundary and the paved loading dock section. The overflow from the underground system will discharge through a proposed parkway drain onto South Grove Avenue. A system of catch basins laid around the site will collect and pre-treat stormwater before it enters the underground system via a network of PVC pipes. The existing drainage pattern of the rear bio-swale will be kept by including a pipe that runs along the west boundary of the site from north to south in order to collect stormwater from the northern property and convey it to the southern property.

Electricity will be provided by Southern California Edison. All new dry utility infrastructure would be installed underground and within the Project site.

Project Construction Characteristics:

Project construction would occur in one phase over approximately one year with an opening year of 2025. Construction activities and durations are as follows:

- Demolition
- Site Preparation & Grading
- Building Construction
- Paving
- Architectural Coating & Landscaping

The Project will require demolition of the existing buildings and asphalt paving on site. As depicted in Figure 8, *Conceptual Grading Plan*, the Project would balance and no export/import of soils would be required.

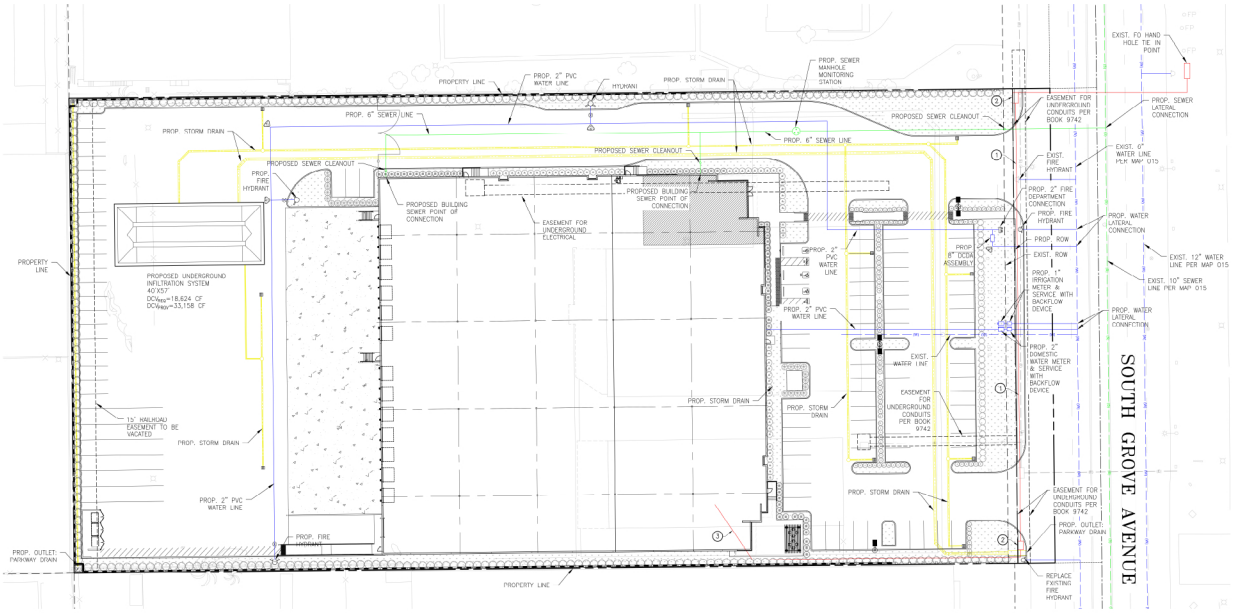

Figure 7: Conceptual Utilities Plan

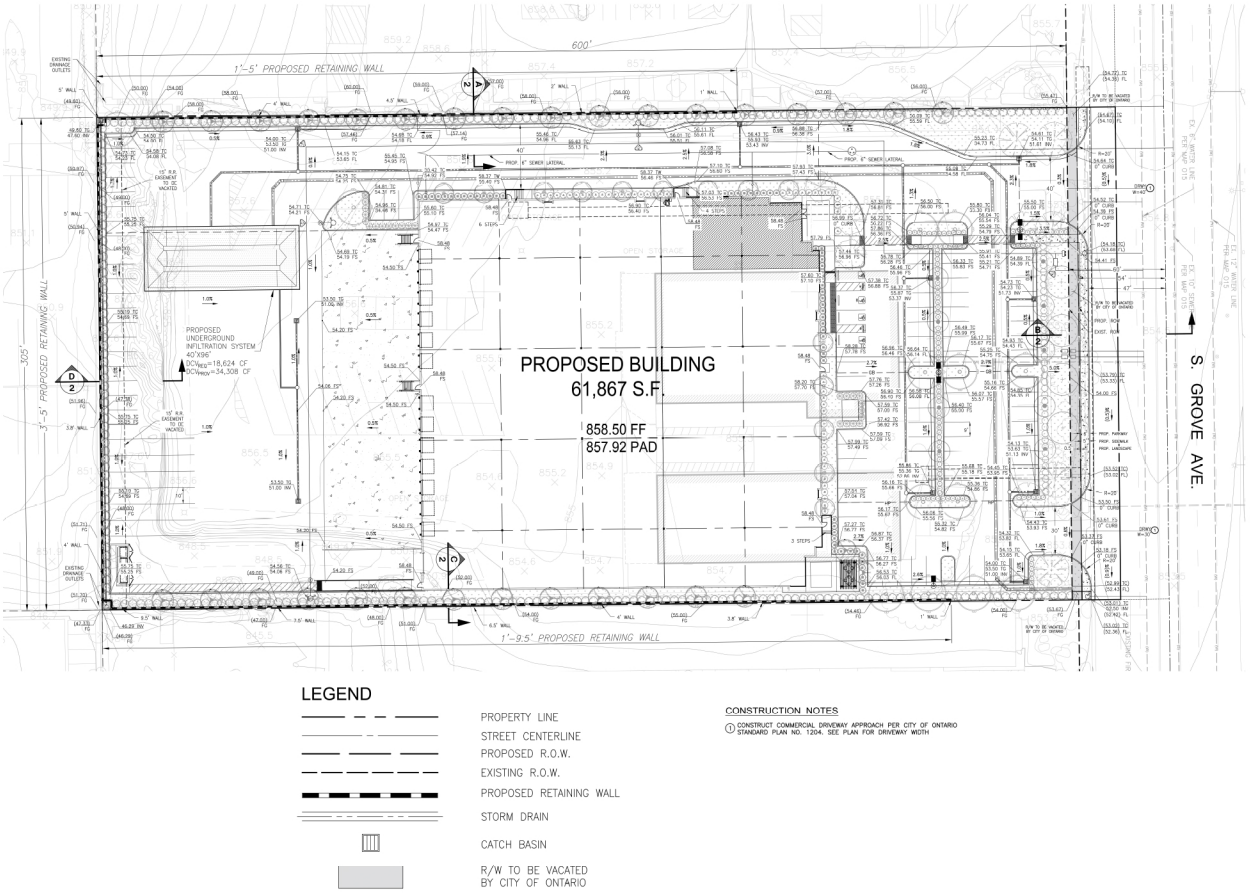

Figure 8: Conceptual Grading Plan

9. Project Setting: As shown in Figure 2, the Project site is currently developed with two buildings (an office and a warehouse/maintenance building) including associated parking lots, stockpile areas and ornamental landscaping and occupied by a telecommunication company with vehicle maintenance operations on-site (southern building). Excavated material generated off-site is temporarily staged along the western and southern boundary of the Project site. Vehicular access to the Project site is from two driveways along South Grove Avenue. Sidewalks are currently not present along South Grove Avenue.

   Background: On January 27, 2010, the Ontario City Council adopted The Ontario Plan ("TOP"). An Environmental Impact Report ("EIR") was prepared for TOP (State Clearinghouse No. 2008101140) and certified by the City Council on January 27, 2010 (hereinafter referred to as "Certified EIR"), which included Mitigation, Findings and a Statement of Overriding Considerations pursuant to the requirements of the California Environmental Quality Act, commencing with Public Resources Code Section 21000 ("CEQA"). Subsequently, on August 16, 2022, the Ontario City Council adopted The Ontario Plan 2050 ("TOP 2050"), an update to TOP. TOP 2050 serves as the framework for the City's business plan and provides a foundation for the City to operate as a municipal corporation that consists of six (6) distinct components: 1) Vision; 2) Governance Manual; 3) Policy Plan; 4) Council Priorities; 5) Implementation; and 6) Tracking and Feedback. The Policy Plan component of TOP 2050 meets the functional and legal mandate of a General Plan and contains nine elements: Land Use, Housing, Parks and Recreation, Environmental Resources, Community Economics, Safety, Mobility, Community Design and Social Resources.

   A Supplemental Environmental Impact Report ("SEIR") was prepared for TOP 2050 (State Clearinghouse No. 2021070364) and was certified by the City Council on August 16, 2022 (hereinafter referred to as "Certified SEIR"). The Certified SEIR analyzed the direct and physical changes in the environment that would be caused by TOP 2050; focusing on changes to land use associated with the buildout of the proposed land use plan compared to the TOP, and in the Policy Plan and impacts resultant of population and employment growth in the City.

   The Project site was analyzed in the Certified SEIR as Business Park to be consistent with the business park uses to the north and east of the Project site. The significant unavoidable adverse impacts that were identified in Certified SEIR included air quality, cultural resources, noise, and transportation.

10. CEQA Requirements for an Addendum: If changes to a project or its circumstances occur or new information becomes available after adoption of a negative declaration, the lead agency may: (1) prepare a subsequent EIR if the criteria of State CEQA Guidelines Section 15162(a) are met, (2) prepare a subsequent negative declaration, (3) prepare an addendum, or (4) prepare no further documentation. (State CEQA Guidelines Section 15162(b)). When only minor technical changes or additions to the negative declaration are necessary and none of the conditions described in section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred, CEQA allows the lead agency to prepare and adopt an addendum. (State CEQA Guidelines Section 15164(b).)

    Under Section 15162, a subsequent EIR or negative declaration is required only when:

    1) Substantial changes are proposed in the project which will require major revisions of the previous negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the negative declaration due to the involvement of any new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the negative declaration was adopted, shows any of the following:

   a) The project will have one or more significant effects not discussed in the previous negative declaration;

   b) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

   c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

   d) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

Thus, if the Project does not result in any of the circumstances listed in Section 15162 (i.e., no new or substantially greater significant impacts), the City may properly adopt an addendum to the Certified SEIR.

11. Analysis: According to the California Environmental Quality Act Guidelines Section 15164, an Addendum to a previously certified EIR may be used if some changes or additions are necessary, but none of the conditions described in Section 15162 requiring the preparation of a subsequent Negative Declaration or EIR have occurred. The CEQA Guidelines require that a brief explanation be provided to support the findings that no subsequent EIR or Negative Declaration are needed for further discretionary approval. These findings are described below:

    1) Required Finding: Substantial changes are not proposed for the project that will require major revisions of the previous EIR due to the involvement of new, significant environmental effects or a substantial increase in the severity of previously identified effects.

    Substantial changes are not proposed by the Project and Project implementation will not require revisions to the Certified SEIR. The Certified SEIR analyzed the direct and physical changes in the environment that would be caused by TOP 2050; focusing on changes to land use associated with the buildout of the proposed land use plan. The Project site is located within the Business Park land use designation of the TOP 2050. As discussed in the Certified SEIR, maximum development of the Project site (4.2 acres) would not exceed 109,817 s.f. of industrial uses based on a maximum FAR of 0.60 under the TOP 2050 land use plan. As discussed above, the Project proposes the development of an approximately 61,867 s.f. warehouse building. The proposed building would be approximately 47,950 s.f. less than the

maximum allowed under TOP 2050. Therefore, the proposed Project will result in less development of the site than the Certified SEIR analyzed at buildout (i.e., 61,867 s.f. vs. 109,817 s.f.). Since the anticipated buildout resulting from the proposed project changes will be less than that originally analyzed in the Certified SEIR, no revisions to Certified SEIR are required. In addition, all previously adopted mitigation measures are a condition of project approval and are incorporated herein by reference. This Addendum provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in State CEQA Guidelines Section 15162 are present.

2) *Required Finding: Substantial changes have not occurred with respect to the circumstances under which the project is undertaken, that would require major revisions of the previous Environmental Impact Report due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.*

   Substantial changes have not occurred with respect to the circumstances under which the project was undertaken, that would require major revisions to the Certified SEIR. The Project would be developed consistent with the Industrial land use designation of the site as the site was analyzed in the Certified SEIR. Therefore, no proposed changes or revisions to the Certified SEIR are required. In addition, all previously adopted mitigation measures are a condition of project approval and are incorporated herein by reference. This Addendum provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in State CEQA Guidelines Section 15162 are present.

3) *Required Finding. No new information has been provided that would indicate that the proposed project would result in one or more significant effects not discussed in the previous EIR.*

   No new information has been provided that would indicate the proposed Project would result in any new significant effects not previously discussed in the Certified SEIR. The Certified SEIR analyzed the Project site as Industrial consistent with surrounding industrial properties to the north, east, and west. Therefore, no proposed changes or revisions to the Certified SEIR are required. In addition, all previously adopted mitigation measures are a condition of project approval and are incorporated herein by reference. This Addendum provides an analysis of the Project and verification that the Project will not cause environmental impacts such that any of the circumstances identified in State CEQA Guidelines Section 15162 are present.

12. Conclusion: The Certified SEIR, as certified by City Council on August 16, 2022, was prepared as a Program EIR in accordance with CEQA, the State CEQA Guidelines, and the City's Rules for the Implementation of CEQA and in accordance with Section 15121(a) of the State CEQA Guidelines (California Code of Regulations, Title 14, Division 6, Chapter 3). The Certified SEIR considered the direct physical changes and reasonably foreseeable indirect physical changes in the environment that would be caused by TOP 2050. Consequently, the Certified SEIR focused on impacts from changes to land use associated with buildout of the City's land use plan and impacts from the resulting population and employment growth in the City. The proposed Project is consistent with the existing land use designations and with development in the surrounding areas. As described on page 12, the amount of development under the

proposed Project will be less than the development analyzed in the Certified SEIR.

Accordingly, and based on the findings and information contained in the Certified SEIR, the analysis in this document, and CEQA statute and State CEQA Guidelines, including Sections 15164 and 15162, the Project will not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary, nor is there a need for any additional mitigation measures.

13. Surrounding Land Uses:

	Existing Land Use	General Plan Designation	Zoning Designation	Specific Plan Land Use
Site:	Office and Warehouse	Business Park (BP)	Grove Avenue Specific Plan	Office/Commercial
North:	Commercial/Office uses	BP	Grove Avenue Specific Plan	Business Park
South:	Commercial/Office uses	BP; General Commercial (GC)	Grove Avenue Specific Plan; Community Commercial (CC)	Commercial
East:	Commercial/Office uses	BP	Grove Avenue Specific Plan	Business Park
West:	Industrial uses	Industrial	Light Industrial (IL); General Industrial (IG)	N/A

14. Other public agencies whose approval is anticipated include (e.g., permits, financing approval or participation agreement):

    - Santa Ana Regional Water Quality Control Board (Issuance of a National Pollutant Discharge Elimination System Permit; Issuance of a Construction General Permit);
    - State Water Resources Control Board (Stormwater Pollution Prevention Plan);
    - South Coast Air Quality Management District (Issuance of Air Quality permits to construct and operation, if necessary)

15. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1?

☒Yes ☐ No

If "yes", has consultation begun? ☐ Yes ☐ No ☒ Completed

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture/Forestry Resources	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Geology / Soils
☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials	☐ Hydrology/Water Quality
☐ Land Use / Planning	☐ Mineral Resources	☐ Noise
☐ Population / Housing	☐ Public Services	☐ Recreation
☐ Transportation	☐ Utilities / Service Systems	☐ Mandatory Findings of Significance
☐ Tribal Cultural Resources	☐ Wildfire	☐ Energy

DETERMINATION (To be completed by the Lead Agency)

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☒ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

EVALUATION OF ENVIRONMENTAL IMPACTS

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4. "Negative Declaration: Less Than Significant with Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from the "Earlier Analyses" Section may be cross-referenced).

5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or Negative Declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
   a. Earlier Analyses Used. Identify and state where they are available for review.

   b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

   c. Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7. Supporting Information Sources. A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.

8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9. The explanation of each issue should identify:

   a. The significance criteria or threshold, if any, used to evaluate each question; and

   b. The mitigation measure identified, if any, to reduce the impact to less than significance.

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP 2050 SEIR*
1. AESTHETICS. Except as provided in Public Resources Code section 21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?)	☐	☐	☐	☒
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☐	☒
2. AGRICULTURE AND FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP 2050 SEIR*
Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?				
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒
3. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☐	☒
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☐	☒
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☐	☒
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☐	☒
4. BIOLOGICAL RESOURCES. Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP 2050 SEIR*
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒
5. CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	☐	☐	☐	☒
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	☐	☐	☐	☒
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	☐	☐	☐	☒
6. ENERGY. Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☐	☒
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☐	☒
7. GEOLOGY AND SOILS. Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☐	☒
ii) Strong seismic ground shaking?	☐	☐	☐	☒
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☐	☒
iv) Landslides?	☐	☐	☐	☒
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☐	☒
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☐	☒
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code, creating substantial direct or indirect risks to life or property?	☐	☐	☐	☒
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP 2050 SEIR*
systems where sewers are not available for the disposal of wastewater?				
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☐	☒
8. GREENHOUSE GAS EMISSIONS. Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☐	☒
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?	☐	☐	☐	☒
9. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☐	☒
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☐	☒
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☒
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☐	☒
10. HYDROLOGY AND WATER QUALITY. Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☐	☒
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP 2050 SEIR*
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) Result in substantial erosion or siltation on- or off-site;	☐	☐	☐	☒
ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☐	☐	☐	☒
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☐	☒
d) Impede or redirect flood flows?	☐	☐	☐	☒
e) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	☒
f) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☐	☒
11. LAND USE AND PLANNING. Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒
12. MINERAL RESOURCES. Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒
13. NOISE. Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☐	☒
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☐	☒
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP 2050 SEIR*
14. POPULATION AND HOUSING. Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?	☐	☐	☐	☒
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
15. PUBLIC SERVICES. Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i) Fire protection?	☐	☐	☐	☒
ii) Police protection?	☐	☐	☐	☒
iii) Schools?	☐	☐	☐	☒
iv) Parks?	☐	☐	☐	☒
v) Other public facilities?	☐	☐	☐	☒
16. RECREATION.				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment?	☐	☐	☐	☒
17. TRANSPORTATION. Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☐	☒
b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☐	☒
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☐	☒
d) Result in inadequate emergency access?	☐	☐	☐	☒
18. TRIBAL CULTURAL RESOURCES. Would the project cause a				

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP 2050 SEIR*
substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☐	☐	☐	☒
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☐	☒
19. UTILITIES AND SERVICE SYSTEMS. Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☐	☒
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☐	☒
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☐	☒
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☐	☒
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☐	☒
20. WILDFIRE. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a	☐	☐	☐	☒

Issues	*Potentially Significant Impact*	*Less Than Significant with Mitigation*	*Less Than Significant Impact*	*Impacts Previously Analyzed in TOP 2050 SEIR*
wildfire or the uncontrolled spread of a wildfire?				
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☒
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒
21. MANDATORY FINDINGS OF SIGNIFICANCE. (State CEQA Guidelines section 15065(a).)				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☐	☒
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)	☐	☐	☐	☒
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☐	☒
Note: Authority cited: Public Resources Code sections 21083, 21083.05, 21083.09. Reference: Gov. Code section 65088.4; Public Resources Code sections 21073, 21074, 21080(c), 21080.1, 21080.3, 21080.3.1, 21080.3.2, 21082.3, 21083, 21083.3, 21083.5, 21084.2, 21084.3, 21093, 21094, 21095 and 21151; *Sundstrom v. EXPLANATION OF ISSUES

1. AESTHETICS. Would the project:

a. Have a substantial adverse effect on a scenic vista?

Summary of Certified SEIR Finding: The Certified SEIR concluded that increased development under TOP 2050 would occur within the city limits and already urbanized areas of the City. The scale and design of the City under TOP 2050 would not deter views of the San Gabriel Mountains. Therefore, impacts to scenic vistas would be less than significant and would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: TOP 2050 does not identify scenic vistas within the City. However, the Policy Plan (Policy CD-1.5) requires all major north-south streets be designed and developed to feature views of the San Gabriel Mountains. The Project site is located along South Grove Avenue and is identified as a principal arterial in the Roadway Classification (Figure M-01) of the Mobility Element within the Policy Plan (City of Ontario, 2022a). Currently, views of the San Gabriel Mountains can visible to travelers along Grove Avenue. The Project would be confined to the Project site and existing views to the San Gabriel Mountains would not be obstructed due to the implementation of the Project. The Project site is surrounded by industrial uses and the Certified SEIR assumed buildout of the Project site as an industrial development. The type and character of development that would occur on the Project site is similar to what was anticipated by the Certified SEIR. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings and historic buildings within a state scenic highway?

Summary of Certified SEIR Finding: The Certified SEIR concluded that there are no State Scenic highways through or in the vicinity of the City. The closest designated State scenic highway is a portion of State Route 142 in Chino Hills, approximately five miles west of the Ontario city limit. Therefore, no impacts to scenic highways would occur and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The City of Ontario is served by three freeways: I-10, I-15, and SR-60. I-10 and SR-60 traverse the northern and central portion of the City, respectively, in an east–west direction. I-15 traverses the northeastern portion of the City in a north–south direction. These segments of I-10, I-15, and SR-60 are not designated as scenic highways by the California Department of Transportation. The nearest eligible State scenic highway is SR-142, approximately 6.92 miles to the southwest of the Project site (Caltrans, 2022). In addition, there are no historically significant buildings or any scenic resources identified on or in the vicinity of the Project site. Therefore, the Project would not substantially damage scenic resources, including, but not limited to, trees, rock outcroppings and historic buildings within a state scenic highway. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?)

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 includes goals and policies to ensure that new development would be compatible with the existing community and would be of quality design. Additionally, future development would still be required to adhere to the City's Development Code, which is intended to improve consistency with existing regulations and conditions. Therefore, TOP 2050 would not have a significant impact with respect to being inconsistent with policies or regulations governing scenic quality and would

not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project is in an urbanized area, therefore, this analysis is focused on whether the Project would conflict with applicable zoning and other regulations governing scenic quality. Project-related changes to local visual character would be less than significant during near-term construction activities because construction activity is common in the City, would be temporary in nature, and would not substantially degrade the visual character of the area.

The Project site is zoned Grove Avenue Specific Plan and The Project would require a Specific Plan Amendment to the Grove Avenue Specific Plan to change the land use designation of 4.2 acres of land from Office/Commercial to Business Park. Design standards applicable to the Business Park zone under the Grove Avenue Specific Plan would remain the same under the Project and the Project is required to comply with the development standards established in the Grove Avenue Specific Plan. As part of the development review process, City staff conducted a thorough review of the Project's design and determined that the Project would be consistent with the Business Park development standards and design guidelines from the Grove Avenue Specific Plan. Accordingly, there are no components of the Project that would degrade the existing visual character or quality of the site and surroundings beyond what was evaluated and disclosed in the Certified SEIR. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 would result in additional sources of light and glare; however, adherence to the design standards of the City of Ontario Development Code would ensure that light and glare from new developments would be minimized and that significant impacts would not occur. Therefore, impacts to light and glare would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Under existing conditions, the Project site is developed and primarily surrounded by industrial and commercial uses. Existing lighting includes security lighting on the two buildings and parking lot. Street lights are located along South Grove Avenue. New lighting will be introduced to the site with the redevelopment of the Project on the proposed building and surface parking lot, similar to lighting for the existing development. Pursuant to the requirements of the City's Development Code, project on-site lighting will be shielded, diffused or indirect, to avoid glare to pedestrians or motorists. In addition, lighting fixtures will be selected and located to confine the area of illumination to within the Project site and minimize light spillage.

Furthermore, consistent with the findings of the Certified SEIR, site lighting plans will be subject to review by the Planning Department and Police Department prior to issuance of building permits (pursuant to the City's Building Security Ordinance). Therefore, implementation of the Project would not result in a significant source of light or glare that would adversely affect daytime or nighttime views. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

2. AGRICULTURE AND FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the City of Ontario's land use plan no longer designates agricultural land uses in the City. Therefore, no impact on land zoned for the purpose of agricultural uses would occur and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is presently occupied by two buildings (an office and a warehouse/maintenance building) and does not contain any agricultural uses. Further, the site is identified as Urban and Built-up Land on the map prepared by the California Resources Agency, pursuant to the Farmland Mapping and Monitoring Program (DOC, 2018). The Project does not have the potential to convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) to non-agricultural use. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the City of Ontario's land use plan no longer designates agricultural land uses in the City. Buildout of TOP would have resulted in the cancellation or nonrenewal of Williamson Act contracts and TOP 2050 would not result in further impacts to Williamson Act lands. Therefore, impacts to Williamson Land Acts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is not zoned for agricultural use. The Project site is zoned Grove Avenue Specific Plan and would involve a Specific Plan Amendment to change the land use designation of 4.2 acres of land from Office/Commercial to Business Park. The Project's proposed Specific Plan Amendment would not result in a loss of land zoned for agriculture. Furthermore, as concluded in the Certified SEIR, there is no Williamson Act contract in effect on the subject site. Therefore, no impacts to agricultural uses are anticipated, nor will there be any conflict with existing or Williamson Act contracts. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)?

Summary of Certified SEIR Finding: The Certified SEIR concluded that there are no land use designations or zoning for forest land, timberland, or timberland zoned Timberland Production in the City of Ontario. Therefore, no impacts to forest land would occur and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is not zoned for forest land or timberland. As concluded in the Certified SEIR, the City's Zoning Map does not designate any parcels of land in the Project area for forest land, timberland, or timberland zoned Timberland Production. Therefore, implementation of the Project would not conflict with, or cause the rezoning of, forest land or timberland. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. Result in the loss of forest land or conversion of forest land to non-forest use?

Summary of Certified SEIR Finding: The Certified SEIR concluded that there is no land in Ontario that would be considered forest land. Therefore, no impacts to the loss of forest land or conversion of forest land to non-forest use would occur and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: There is currently no land in the City of Ontario that qualifies as forest land as defined in Public Resources Code section 12220(g). Neither the Policy Plan nor the City's Zoning Code provide designations for forest land. Additionally, the Project site is zoned Grove Avenue Specific Plan and is presently occupied by a telecommunication company with vehicle maintenance operations on-site and does not contain forest land. Consequently, the Project would not result in the loss or conversion of forest land. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

e. Involve other changes in the existing environment, which, due to their location or nature, could individually or cumulatively result in loss of Farmland to non-agricultural use or conversion of forest land to non-forest use?

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 would not involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland to nonagricultural use or conversion of forest land to non-forest use, and impacts would be less than significant. Therefore, TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: As previously discussed above, the Project site does not include

Farmland (defined as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance) or forest land and, therefore, the Project would not result in the conversion of Farmland to non-agricultural use of forest land to non-forest use. The Project would not result in any impacts to agricultural and/or forestry resources. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation Required: No additional mitigation required.

3. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations.

The analysis in this section is based on the First Grove Air Quality & Greenhouse Gas Assessment prepared by Urban Crossroads, Inc. (Urban Crossroads) dated June 8, 2023. This report is provided in its entirety as Appendix A, of this Addendum.

South Coast AQMD Regional and Local Significance Thresholds

The City of Ontario utilizes the South Coast AQMD CEQA Air Quality Handbook and thresholds of significance to determine the potential significance of Project emissions. A Project may have a significant impact if Project emissions would exceed these air pollution thresholds. Table 3-1, *South Coast AQMD Regional Threshold of Significance*, below identifies South Coast AQMD's regional construction and operational emissions within its jurisdiction.

Table 3-1 South Coast AQMD Regional Threshold of Significance

Pollutant	Construction Regional Thresholds	Operational Regional Thresholds
NO_X	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM_{10}	150 lbs/day	150 lbs/day
$PM_{2.5}$	55 lbs/day	55 lbs/day
SO_X	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day

Notes: lbs/day – Pounds Per Day, NO_X – Nitrogen Oxides, VOC – Volatile Organic Compounds, PM_{10} – Particulate Matter 10 microns in diameter or less, $PM_{2.5}$ – Particulate Matter 2.5 microns in diameter or less, SO_X – Sulfur Oxides, CO – Carbon Monoxide.
Source: (Urban Crossroads, 2023a, Table 1)

The South Coast AQMD also established localized significance thresholds (LSTs) that a project can emit without contributing to an existing or new air quality standard exceedance. LSTs are defined separately for construction and operational activities and are dependent on location, project size, and distance to sensitive receptors. The South Coast AQMD Localized Thresholds are provided in the analysis below.

a. Conflict with or obstruct implementation of the applicable air quality plan?

Summary of Certified SEIR Finding: The Certified SEIR concluded that buildout of TOP 2050 would be consistent with the AQMP under the first criteria. However, air pollutant emissions associated with buildout of TOP 2050 would cumulatively contribute to the nonattainment designations in the South Coast Air Basin (SCAB). Incorporation of Mitigation Measures 3-2 and

AQ-1 into future development projects for the operation phase would reduce criteria air pollutant emissions associated with buildout of TOP 2050. Additionally, goals and policies in TOP 2050 would promote increased capacity for alternative transportation modes. However, due to the magnitude of residential units that would be developed under TOP 2050 to accommodate the RHNA, no additional mitigation measures are available that would reduce impacts below South Coast AQMD thresholds. Therefore, impacts would remain significant and unavoidable.

Discussion of Effects: The Project site is located within the South Coast Air Basin (SCAB). Currently, State and federal air quality standards are exceeded in most parts of the SCAB. In response, the South Coast AQMD has adopted a series of Air Quality Management Plans (AQMPs) to meet the State and federal ambient air quality standards. AQMPs are regularly updated to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy. In December 2022, the SCAQMD released the Final 2022 AQMP (2022 AQMP). The 2022 AQMP continues to evaluate current integrated strategies and control measures to meet the California Ambient Air Quality Standards (CAAQS), as well as explore new and innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, state, and local levels. Similar to the 2016 AQMP, the 2022 AQMP incorporates scientific and technological information and planning assumptions, including the 2020-2045 RTP/SCS, a planning document that supports the integration of land use and transportation to help the region meet the federal CAA requirements. The Project's consistency with the AQMP will be determined using the 2022 AQMP as discussed below. Criteria for determining consistency with the 2016 AQMP are defined in Chapter 12, Section 12.2, and Section 12.3 of the South Coast AQMD's CEQA Air Quality Handbook (1993). The Project's consistency with these criteria is discussed below.

Consistency Criterion No. 1: The Project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

The violations that Consistency Criterion No. 1 refer to are the CAAQS and National Ambient Air Quality Standards (NAAQS). CAAQS and NAAQS violations could occur if regional or localized significance thresholds are exceeded. As evaluated under Air Quality Threshold b, below, the Project's regional and localized construction and operational-source emissions would not exceed applicable regional or LST significance threshold. As such, impacts would be less than significant.

Consistency Criterion No. 2: The Project will not exceed the assumptions in the AQMP based on the years of Project build-out phase.

The 2022 AQMP demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to the SCAG, which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in TOP 2050 is considered to be consistent with the AQMP.

Peak day emissions generated by construction activities are largely independent of land use assignments, but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities. As such, when considering that no emissions thresholds will be exceeded, a less than significant impact would result.

The TOP 2050 adopted by the City in August 2022, designates the Project site as "Business Park" land uses. The "Business Park" designation allows for a maximum FAR of 0.60 for employee-intensive office uses including corporate offices, technology centers, research and development, "clean" industry, light manufacturing, and supporting retail within a business park setting. As discussed in the Certified SEIR, maximum development of the Project site (4.2 acres) would not exceed 109,817 s.f. of industrial uses based on a maximum FAR of 0.60 under the TOP 2050 land use plan.

The Project includes the development of 61,687 square foot industrial warehouse building, which is 47,950 square feet less than the TOP assumed development potential. Therefore the Project consistent with the current TOP land uses and growth projections. As such, the proposed Project would not conflict with the goals and objectives of the AQMP.

AQMP Consistency Conclusion

The Project would not have the potential to result in or cause NAAQS or CAAQS violations. Additionally, Project construction and operational-source emissions would not exceed the regional or localized significance thresholds. The Project is therefore considered to be consistent with the AQMP. (Urban Crossroads, 2023a) Additionally, consistent with the findings of the Certified SEIR, the Project would be required to comply with Mitigation Measures 3-1, 3-2 and AQ-1 to reduce cumulative air pollutant emissions. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required. The following mitigation measure from the Certified SEIR is applicable to the Project:

MM 3-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, City of Ontario Building Department shall require feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:

- Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:
    - Requiring use of nontoxic soil stabilizers to reduce wind erosion.
    - Applying water every four hours to active soil disturbing activities.
    - Tarping and/or maintaining a minimum of 24 inches of

freeboard on trucks hauling dirt, sand, soil, or other loose materials.

- Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits.
- Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.
- Limiting nonessential idling of construction equipment to no more than five consecutive minutes.
- Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: http://www.aqmd.gov/prdas/brochures/Super-Compliant_AIM.pdf.

These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.

MM 3-2 The City of Ontario shall evaluate new development proposals within the City and require all developments to include access or linkages to alternative modes of transportation, such as transit stops, bike paths, and/or pedestrian paths (e.g. sidewalks).

AQ-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following:

- For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.
- Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate

applications to optimize renewable energy generation systems and avoid peak energy use.

- Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485).

- Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures).

- Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).

- Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures).

- Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).

- Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star–certified or equivalent appliances shall be verified by the City during plan check.

MM 3-1 and AQ-1 have been met through preparation of First Grove Air Quality & Greenhouse Gas Assessment prepared by Urban Crossroads, Inc. provided in Appendix A. No construction or operational-related impacts have been identified in the technical report.

b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Summary of Certified SEIR Finding: The Certified SEIR concluded that buildout in accordance with TOP 2050 would generate short-term emissions that would exceed South Coast AQMD's regional significance thresholds and cumulatively contribute to the nonattainment designations of the SCAB. Mitigation Measure 3-1 and the goals and policies of TOP 2050 would reduce construction-related air pollutant emissions to the extent feasible. Therefore, construction related regional air quality impacts of developments that would be accommodated by TOP 2050 would remain significant and unavoidable.

Buildout in accordance with TOP 2050 would generate long-term emissions that would exceed South Coast AQMD's regional significance thresholds and cumulatively contribute to the nonattainment designations of the SCAB. Mitigation Measure 3-2 and AQ-1, in addition to the goals and policies of TOP 2050, would reduce air pollutant emissions to the extent feasible. The measures and policies covering topics such as expansion of the pedestrian and bicycle networks, promotion of public and active transit, and support to increase building energy efficiency and energy conservation would also reduce criteria air pollutants within the City. However, impacts would remain significant and unavoidable due to the increase in VOCs from residential

development associated with TOP 2050 compared to that of the TOP.

Discussion of Effects: As discussed above, the Project proposes a development of an approximately 61,867 s.f. warehouse building. The proposed building would be approximately 47,950 s.f. less than the maximum allowed under TOP 2050. Therefore, the Project will result in less development of the site than the Certified SEIR analyzed at buildout (i.e., 61,867 s.f. vs. 109,817 s.f.). The Project Applicant would redevelop the Project site with a land use that was planned by the TOP 2050 and evaluated in the Certified SEIR; therefore, the Project would not generate air pollutant emissions that were not already anticipated by the Certified SEIR. Notwithstanding, an Air Quality Assessment (Appendix A) was prepared to quantify air pollutant emission associated with the implementation of the Project. Accordingly, the Project's daily regional emissions from construction have been estimated using South Coast AQMD's CalEEMod 2022.1 model, as shown in Table 3-2, *Regional Threshold Summary of Construction*. As shown in Table 3-2, Project construction-source emissions would not exceed the regional numerical thresholds of significance established by the South Coast AQMD for any criteria pollutant and impacts would be less than significant. Therefore, the Project's construction emission impacts would be less than significant.

Table 3-2 Regional Threshold Summary of Construction

Year	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
2024	3.74	36.04	34.41	0.06	7.49	4.21
2025	13.45	20.42	29.39	0.04	1.53	0.95
Winter						
2024	3.62	34.44	31.47	0.06	4.39	2.38

Maximum Daily Emissions	**13.45**	**36.04**	**34.41**	**0.06**	**7.49**	**4.21**
South Coast AQMD Regional Threshold	75	100	550	150	150	55
Threshold Exceeded?	NO	NO	NO	NO	NO	NO

Source: (Urban Crossroads, 2023a, Table 3)

Emissions associated with the Project's operation were calculated using CalEEMod 2022.1. The Project's daily regional emissions from operation are shown in Table 3-3, *Summary of Peak Operational Emissions*. As shown in Table 3-5, the Project is anticipated to generate less emissions per day for pollutants of VOC, NO_X, CO, SO_X, and $PM_{2.5}$ as compared to emissions generated by the TOP 2050 adopted Business Park land use designation, and operational-source emissions would not exceed the applicable South Coast AQMD regional thresholds.

As shown in Table 3-2 and 3-3, Project-related construction and operational activities would not exceed the South Coast AQMD significance threshold for any criterial pollutant. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Table 3-3 Summary of Peak Operational Emissions

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
Proposed Project	3.09	2.88	30.55	0.04	1.08	0.28
TOP 2050	5.57	5.33	44.33	0.07	1.89	0.47

Mitigation: No additional mitigation required. Mitigation Measures 3-1, 3-2, and AQ-1 would be applicable to the Project.

c. Expose sensitive receptors to substantial pollutant concentrations?

Summary of Certified SEIR Finding: Buildout of TOP 2050 could expose sensitive receptors to substantial concentrations of TACs. Buildout could result in new sources of criteria air pollutant emissions and/or TACs near existing or planned sensitive receptors. Review of development projects by South Coast AQMD for permitted sources of air toxics (e.g., industrial facilities, dry cleaners, and gasoline dispensing facilities) would ensure that health risks are minimized. Policy ER-4.9 would ensure mobile sources of TACs not covered under South Coast AQMD permits are considered during subsequent project-level environmental review by the City of Ontario. Individual development projects would be required to achieve the incremental risk thresholds established by South Coast AQMD, and TACs would be less than significant. However, implementation of TOP 2050 would generate TACs that could contribute to elevated levels in the air basin due to the increase in industrial land use allowed under TOP 2050. While individual projects would achieve the project-level risk threshold of 10 per million, they would nonetheless contribute to the higher levels of cancer risk in the SCAB; and therefore, result in a cumulatively considerable impact. Therefore, impacts would remain significant and unavoidable.

Discussion of Effects: Some people are especially sensitive to air pollution. These groups of people include children, the elderly, individuals with pre-existing respiratory or cardiovascular illness, and athletes who engage in frequent exercise. Structures that house these persons or place where they gather to exercise are defined as sensitive receptors. All distances are measured from the Project site boundary to the outdoor living areas (e.g., backyards) or at the building façade, whichever is closer to the Project site in order to provide a conservative analysis. The receptor locations are shown in Figure 9, *Sensitive Receptors Locations*.

Figure 9: Sensitive Receptors Locations

The South Coast AQMD recommends that the nearest sensitive receptor be considered when determining the Project's potential to cause an individual or cumulatively significant impact. The nearest land use where an individual could remain for 24 hours to the Project site has been used to determine localized construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$ (since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time). The nearest receptor used for evaluation of localized impacts of PM_{10} and $PM_{2.5}$ is location R1, represented by the existing residence at 2125 South Cucamonga Ave, approximately 596 feet (182 meters) southwest of the Project site.

Consistent with LST Methodology, the nearest industrial/commercial use to the Project site is used to determine construction and operational LST air impacts for emissions of NO_X and CO as the averaging periods for these pollutants are shorter (8 hours or less) and it is reasonable to assume that an individual could be present at these sites for periods of one to 8 hours. The nearest receptor used for evaluation of localized impacts of NO_X and CO is location R6, represented by Tech Industrial Machine Corp at 2124 S Grove Ave Unit J, adjacent south of the Project site.

Construction Emissions

Project-related construction localized emissions are presented in Table 3-4, *LST Summary of Construction*. As shown, the Project's construction emissions would not exceed South Coast AQMD's significance thresholds for localized air pollutant emissions during construction. Therefore, the nearby sensitive receptors would not be exposed to substantial pollutant concentrations that would present a public health concern and impacts would be less than significant.

Table 3-4 LST Summary of Construction

On-Site Emissions	Emissions (lbs/day)			
	NO_X	**CO**	**PM_{10}**	**$PM_{2.5}$**
Demolition				
Maximum Daily Emissions	24.89	21.74	1.90	1.10
South Coast AQMD Localized Threshold	118	863	92	28
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**
Site Preparation				
Maximum Daily Emissions	35.95	32.93	7.26	4.16
SCAQMD Localized Threshold	220	1,713	95	36
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**
Grading				
Maximum Daily Emissions	34.29	30.17	4.12	2.31
South Coast AQMD Localized Threshold	237	1,873	106	38
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**

Source: (Urban Crossroads, 2023a, Table 9)

Operational Emissions

Project-related operational localized emissions are presented in Table 3-5, *Summary of Operations*. As shown, Project would not exceed the South Coast AQMD significance thresholds

for localized air pollutant emissions during operation. Therefore, Project operation would expose sensitive receptors near the Project site to less-than-significant localized criteria pollutant concentrations.

Table 3-5 LST Summary of Operations

On-Site Emissions	Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Maximum Daily Emissions	1.19	21.47	0.08	0.07
SCAQMD Localized Threshold	270	2,193	31	10
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**

Source: (Urban Crossroads, 2023a, Table 10)

CO Hotspots

An adverse CO concentration, known as a "hotspot," would occur if an exceedance of the State one-hour standard of 20 parts per million (ppm) or the 8-hour standard of 9 ppm were to occur. It has long been recognized that CO hotspots are caused by vehicular emissions, primarily when idling at congested intersections. In response, vehicle emissions standards have become increasingly stringent in the last 20 years. Currently, the allowable CO emissions standard in California is a maximum of 3.4 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of increasingly sophisticated and efficient emissions control technologies, CO concentration in the SCAB is now designated as attainment.

Due to the relatively small size of the Project, the Project does not have the potential to generate the volume of traffic required to generate a CO "hotspot. Therefore, CO "hotspots" are not an environmental concern for the Project and no impacts would occur. (Urban Crossroads, 2023a)

Based on the foregoing analysis, the Project would not expose sensitive receptors near the Project site to significant pollutant concentrations during construction and operation. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. Result in other emissions (such as those leading to odors adversely affecting a substantial number of people)?

Summary of Certified SEIR Finding: The Certified SEIR concluded that industrial uses would be generally limited to the areas designated Industrial and future environmental review would be required for these types of industrial projects, which would ensure that sensitive land uses are not exposed to objectionable odors. Both residential and nonresidential land uses would be required to comply with South Coast AQMD Rule 402. Therefore, impacts from potential odors generated from residential and other nonresidential land uses associated with TOP 2050 are considered less than significant. Moreover, any construction-related odor emissions would be temporary and intermittent. By the time such emissions reached any sensitive receptor sites, they would be diluted to well below any level of air quality concern. Therefore, impacts associated with construction-

generated odors are considered less than significant.

Discussion of Effects: Land uses generally associated with odor complains include: agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting operations, refineries, landfills, dairies, and fiberglass molding facilities. The Project does not contain land uses typically associated with emitting objectionable odors. Potential odor sources associated with the Project may result from construction equipment exhaust and the application of concrete and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the Project's (long-term operational) uses. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the City's solid waste regulations. The Project would also be required to comply with South Coast AQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the Project construction and operations would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

4. BIOLOGICAL RESOURCES. Would the project:

The analysis in this section is based on the Biological Resource Assessment prepared by LSA Associates, Inc (LSA) dated November 2022 and is provided in their entirety as Appendix B of this Addendum.

a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Summary of Certified SEIR Finding: The Certified SEIR concluded that no sensitive plant species have been observed in Ontario, and the only such species that are considered potentially present in the City have a low potential due to lack of suitable habitat. Therefore, implementation of TOP 2050 would not have substantial adverse impacts on sensitive plant species. TOP 2050 includes policies to ensure that special-status species and habitat are protected through compliance with state and federal regulations (e.g., Policies ER-5.1 and ER-5.2). Projects under TOP 2050 that undergo independent CEQA review would be required to determine whether there is potential habitat on-site for sensitive species. Compliance with the requirements of the California and federal Endangered Species Acts, including requirements of the USFWS regarding critical habitat; mitigation fees paid by projects in Ontario Ranch; and acquisition and management of habitat using those fees would reduce impacts on sensitive animal species from implementation of TOP 2050. Therefore, TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is currently developed with two buildings (an office and a warehouse/maintenance building), including associated parking lots, stockpile areas and ornamental landscaping. The landscaping consists of ornamental trees and shrubs that primarily border the easterly edge of the Project site along Grove Avenue. Ruderal vegetation was also

noted along the stockpile areas on the southwesterly portion of the Project site. As concluded in the Project's Biological Resource Assessment, two listed species, Delhi Sands flower-loving fly and California black rail have the potential to occur on the Project site; however, the Project site lacks suitable habitat for these two species because the Project site is entirely developed. Therefore, the Project would have no effects to threatened and endangered species. Moreover, no U.S. Fish and Wildlife Service (USFWS) designated critical habitat is present on the Project site. Therefore, the Project would have no effects to designated critical habitat (LSA, 2023). The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Summary of Certified SEIR Finding: The Certified SEIR concluded that implementation of TOP 2050 would not result in direct vegetation removal in surface water areas in the City; however, projects approved pursuant to TOP 2050 could indirectly result in such removal. Projects that would result in impacts to surface water areas determined to be jurisdictional to the state would require CDFW approval pursuant to the Fish and Game Code (Section 1600 et. seq.) in the form of Streambed Alteration Agreements. Compared to TOP, TOP 2050 would have similar impacts to sensitive habitat because it would not result in the development of new, previously undeveloped areas of the City even though it would result in an increase in land use intensity. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is completely developed/disturbed, as it was in 2022 when the Certified SEIR was certified. The Project site is currently developed with industrial uses and is in a highly urbanized and industrialized area in the City. The Project site does not contain any riparian habitat or other sensitive natural community identified by the Department of Fish & Game or Fish & Wildlife Service (USFWS, 2020). Therefore, the Project would not result in significant impacts to riparian habitat or other sensitive natural communities. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the Cucamonga Creek and Deer Creek channels and portions of the Lower Deer Creek, Day Creek, Etiwanda Creek, and West Cucamonga Creek channels, are owned and maintained by San Bernardino County; they are not subject to land use controls by the City of Ontario and would not be affected by TOP 2050. Remaining segments of the Lower Deer Creek, Day Creek, Etiwanda Creek, and West Cucamonga Creek channels in the City that are owned by the City of Ontario, would be designated Open Space–Non-recreation by TOP 2050 and would not be developed with other land uses. Implementation of TOP 2050 would not result in direct impacts to waters of the State

because TOP 2050 does not grant specific entitlements for development. Individual projects undergoing environmental review under CEQA would be required to determine whether there is potential habitat on-site for sensitive species. Compared to TOP, TOP 2050 would have similar impacts to jurisdictional waters since TOP 2050 would result in an increase in land use intensity but would not result in development of new, previously undeveloped areas of the City. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: No wetland habitat is present on site (LSA, 2023). Therefore, Project implementation would have no impact on these resources. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Summary of Certified SEIR Finding: The Certified SEIR concluded that no regional wildlife movement corridors have been identified in the City, most of which is ill suited for the purposes of wildlife movement. There are trees and shrubs scattered throughout the City that may be used for nesting or roosting by migrating birds. Individual projects would require to comply with the federal Migratory Bird Treaty Act of 1918 (MBTA). Therefore, TOP 2050 is not anticipated to have substantial adverse impacts to migratory birds. Furthermore, Policy ER-5.1 would encourage efforts to conserve flood control channels and transmission line corridors as wildlife movement corridors. Consequently, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: No surface water bodies; streams or waterways occur on the Project site. The Project site and adjacent areas are entirely developed with industrial and commercial uses. As a result, the Project site does not support regional wildlife movement or serve as a nursery site (LSA, 2023). There are a limited number of ornamental trees on site that would be removed and replaced with new trees and landscaping. The MBTA implements the United States' commitment to four treaties with Canada, Japan, Mexico, and Russia for the protection of shared migratory bird resources. Nesting migratory birds are protected under the MBTA (United States Code, Title 16, Sections 703–712) and California Fish and Game Code Sections 3503 et seq. Consistent with the findings of the Certified SEIR, compliance with federal MBTA and California Fish and Game Code would eliminate any potential impacts. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Summary of Certified SEIR Finding: The Certified SEIR discussed this impact along with Threshold f below with emphasis on the impacts to the Delhi Sands Flower-Loving Fly (DSFLF) Ontario Recovery Unit. Projects proposed within the Ontario Recovery Unit would be required to

conduct focused surveys for DSFLF on the project site and consult with the USFWS regarding mitigation of impacts on any DSFLF found. TOP 2050 would not grant specific entitlements for development and would not conflict with FESA requirements and USFWS regulations regarding critical habitat. Furthermore, Policy ER-5.1 of TOP 2050 would support efforts to conserve high-quality habitat for the DSFLF. Individual projects undergoing environmental review under CEQA would be required to determine whether there is a potential for habitat onsite for sensitive species. TOP 2050 would have similar impacts regarding consistency with a habitat conservation plan. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is not located within the Ontario Recovery Unit; Project site is located approximately 4 miles northwest from the DSFLF Ontario Recovery Unit habitat conservation plan area. Section 10-2 of the Ontario Municipal Code addresses tree protection, maintenance, and replacement policies for trees within the City's parkways and rights-of-way. Additionally, the City has published landscape guidelines that must be followed when developing new or existing sites. All existing trees within the site will be removed as part of the Project. There is an existing 60" heritage tree (*Eucalyptus Viminalis*) onsite that will be removed as part of the Project. As shown in Figure 6, *Landscape Plan*, a total of 90 trees would be planted. As part of the City's mitigation requirement for removal of the heritage tree, the proposed 15 gallon and 24" box size trees would be upsized. Therefore, the Project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance, and impacts would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

f. Conflict with the provisions of an adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other approved local, regional, or state habitat conservation plan?

Summary of Certified SEIR Finding: As discussed above. TOP 2050 would have similar impacts regarding consistency with a habitat conservation plan. There is one habitat conservation plan in the City, a 19-acre area near the intersection of Greystone Drive and the eastern city boundary established to protect the DSFLF. The HCP area would remain designated Industrial under the Proposed Project. Any project proposed for development within this HCP pursuant to TOP 2050 would be required to consult with the USFWS regarding project impacts on DSFLF and mitigation of any such impacts. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is not part of an adopted HCP, NCCP or other approved habitat conservation plan (LSA, 2023). The Project site is located approximately 4 miles northwest from the HCP area. As a result, no adverse environmental impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

5. CULTURAL RESOURCES. Would the project:

   a. Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?

Summary of Certified SEIR Finding: The Certified SEIR concluded that Ontario has eight historic districts, and four proposed and five potential historic districts are deemed eligible for listing. The City's Register of Historic Resources shows 1,957 historic resources, 99 of which are designated Historic Landmark properties. The Development Code establishes criteria for Tier I, Tier II or Tier III properties, with Tier I and II being of the highest value. Given this strong policy of the City and the programmatic nature of TOP 2050, implementation of TOP 2050 would not result in significant impacts to Tier I and II resources. Tier III consists of all properties that are Designated Historic Landmarks, are contributing structures in Designated Historic Districts, or are Eligible Historical Resources, as defined by the Development Code. Demolition of these properties should be avoided where possible, but may be appropriate under certain circumstances. If demolition occurs, the City requires historic resources to be documented and historic features to be salvaged, and requires a demolition mitigation fee. The Development Code does not provide a high level of protection for Tier III resources. As a result, historical resources categorized under the ordinance as Tier III could potentially be impacted with implementation of TOP 2050. Mitigation Measure 5-1 would require historic or potentially historic resources to be evaluated for historic significance through the City's Development Code tier system. Impacts to historical resources would remain significant and unavoidable.

Discussion of Effects: A project-related significant adverse effect would occur if a project were to adversely affect a historical resource meeting one of the definitions listed below. CEQA Guidelines Section 15064.5 defines historic resources as resources listed or determined to be eligible for listing by the Historic Resources Commission, a local register of historic resources, or the lead agency. Generally, a resource is considered "historically significant" if it meets one of the following criteria:

- Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
- Is associated with the lives of persons important to our past;
- Embodies the distinctive characteristics of a type, period, region, or method of construction or represents the work of an important creative individual, or possesses high artistic values;
- Has yielded, or may be likely to yield, information important in prehistory or history.

The Project site is not listed as a Tier 1, II, or III historical resources under the TOP 2050. Additionally, the existing buildings at the Project site were constructed in 1979 and 2022, respectively, and are not of historic-age. (PaleoWest, 2022a). Therefore, the Project would not cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5, and no impacts would occur. The Project would not result in any impacts to historical resources. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation Required: No additional mitigation required.

b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Summary of Certified SEIR Finding: The Certified SEIR concluded the records review at the South-Central Coastal Information Center (SSCIC) identified 17 archeological resources in the City. Based on the results of the research, there is potential archaeological sensitivity throughout the City. Adoption of TOP 2050 would not directly affect archaeological resources. However, long-term implementation of TOP 2050 land use plan could allow development (e.g., new development, infill development, redevelopment, and revitalization/restoration), including grading, of known and unknown sensitive areas. Grading and construction activities of undeveloped areas or redevelopment that requires more intensive soil excavation than in the past could potentially cause the disturbance of archeological resources. Therefore, future development that would be accommodated by TOP 2050 could potentially unearth previously unrecorded resources. Mitigation Measure 5-2 would require preservation and curation of archeological resources if uncovered during development. Mitigation Measure 5-2 would reduce potential impacts to archeological resources to a level that is less than significant. Therefore, impacts to archaeological resources would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: A Cultural Resource Constraints Analysis, included as Technical Appendix C, was conducted for the Project by PaleoWest, LLC. (PaleoWest). A record search from the South-Central Coastal Information Center at California State University, Fullerton was conducted for the Project which encompassed an area of one mile surrounding the Project site. Based on the results of the records search, no resources were recorded in the Project site or within one mile of the Project site. (PaleoWest, 2022a)

While no adverse impacts to archeological resources are anticipated at this site due to its urbanized nature and extent of prior ground disturbance, the presence of previously undiscovered subsurface archaeological resources on the Project site remains possible, and these resources could be affected by ground-disturbing activities associated with grading and construction at the site. As a result, consistent with the findings of the Certified SEIR, Mitigation Measure 5-2 would be implemented to ensure the proper treatment of significant archaeological resources should they be encountered during ground-disturbing construction activities in native soil. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation Required: No additional mitigation required. The following mitigation measure from the Certified SEIR is applicable to the Project:

MM 5-2 In areas of documented or inferred from evident archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:

a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.

b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.

c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including a catalog with museum numbers.

c. Disturb any human remains, including those interred outside of dedicated cemeteries?

Summary of Certified SEIR Finding: The Certified SEIR concluded there are known Native American gravesites and cemeteries in the City, including Bellevue Memorial Park on the north side of G Street, between Benson Avenue and Mountain Avenue. TOP 2050 in itself does not involve grading activities and would not directly disturb any human remains. However, long-term implementation of TOP 2050 would allow development and redevelopment, including grading, of sensitive areas, possibly disturbing human remains, including those outside of formal cemeteries. Although soil-disturbing activities associated with development in accordance with TOP 2050 could result in the discovery of human remains, compliance with existing law including California Health and Safety Code, Section 7050.5; CEQA Section 15064.5; and PRC Section 5097.98 would ensure that significant impacts to human remains would not occur. Therefore, impacts to human remains would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project is in an area that has been previously disturbed by development. The possibility of uncovering human remains during Project-related grading activities is remote due to fact that the previous development of the site has substantially disturbed the subsurface of the site. Thus, human remains are not expected to be encountered during any construction activities. However, as concluded in the Certified SEIR, in the unlikely event that human remains are discovered, existing regulations, including the California Public Resources Code Section 5097.98 and California Health and Safety Code Section 7050.5, would afford protection for human remains discovered during redevelopment activities including but not limited to demolition, site preparation and grading, infrastructure installation, and other ground-disturbing activities. Furthermore, standard conditions have been imposed on the Project that in the event of unanticipated discoveries of human remains are identified during excavation and construction activities, the area shall not be disturbed until any required investigation is completed by the County Coroner and/or Native American consultation has been completed, if deemed applicable. Mandatory compliance with these requirements would ensure that no impacts associated with the discovery of human remains would occur. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

6. ENERGY. Would the project:

a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the types of land uses accommodated under TOP 2050 would also be similar to the land uses accommodated under TOP. Thus, the construction processes for future development projects accommodated under TOP 2050 would be similar to the construction processes of current development projects and projects accommodated under TOP. Therefore, TOP 2050 would not result in wasteful, inefficient, or unnecessary consumption of fuel use during construction.

Operation of new development projects accommodated under TOP 2050 would create additional demands for electricity and natural gas compared to existing conditions. Overall, regulatory compliance will increase building energy efficiency and vehicle fuel efficiency and reduce building energy demand and transportation-related fuel usage. Additionally, TOP 2050 includes policies related to land use and transportation planning and design, energy efficiency, public and active transit, and renewable energy generation that will contribute to minimizing building and transportation-related energy demands overall and demands on nonrenewable sources of energy. Implementation of proposed policies under TOP 2050 and Community Climate Action Plan (CCAP) in conjunction with regulatory requirements would ensure that energy demand associated with growth under TOP 2050 would not be inefficient, wasteful, or unnecessary. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project would implement the TOP 2050 land use plan and the Project's proposed land use and development intensity is consistent with the development regulations contained within the TOP 2050. The proposed building would be approximately 47,950 s.f. less than the maximum allowed under TOP 2050. Therefore, the development proposed by the Project – and its energy use – is within the scope of the project that was evaluated in the Certified SEIR. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Summary of Certified SEIR Finding: The Certified SEIR concluded that land uses accommodated under TOP 2050 would comply with the current and future iterations of the Building Energy Efficiency Standards and CALGreen. Additionally, TOP 2050 includes Environmental Resources Element policies and Safety Element policies that would support the statewide goal of transitioning the electricity grid to renewable sources and employ best practices regarding energy-saving standards. Therefore, implementation of TOP 2050 would not conflict with or obstruct implementation of California's Renewables Portfolio Standard (RPS) program. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project would not conflict with or obstruct a state or local plan adopted for the purposes of increasing the amount of renewable energy or energy efficiency. The California Title 24 energy efficiency standards for non-residential buildings address electricity and natural gas efficiency in lighting, water, heating, and air conditioning, as well as the effects of the building envelope (e.g., windows, doors, walls and rooves, etc.) on energy consumption. Consistent with the findings of the Certified SEIR, the Project would be required to comply with the

Title 24 CALGreen standards current at that time and the City's CCAP. Since each new building will comply with applicable State standards and adhere to the City's CCAP, which includes energy reductions measures, the Project would not conflict with nor obstruct a state or local plan for renewable energy or energy efficiency. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

7. GEOLOGY & SOILS. Would the project:

a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:

i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Summary of Certified SEIR Finding: The Certified SEIR concluded that the City of Ontario is not within any Alquist-Priolo Earthquake Fault Zone. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Ground rupture is the visible offset of the ground surface when an earthquake rupture along a fault affects the Earth's surface. Southern California, including the City of Ontario, is subject to the effects of seismic activity due to the active faults that traverse the area. Active faults are defined as those that have experienced surface displacement within Holocene time (approximately the last 11,000 years) and/or are in a State-designated Alquist-Priolo Earthquake Fault Zone. According to the Project-specific Geotechnical Investigation, included as Appendix D, the Project site is not located with an Alquist-Priolo Earthquake Fault Zone. (SoCal Geo, 2022) Fault rupture would not occur on the Project site since no active faults cross the Project site. Therefore, no adverse impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

ii. Strong seismic ground shaking?

Summary of Certified SEIR Finding: The Certified SEIR concluded that projects considered for approval under TOP 2050 would be required to comply with seismic safety provisions of the CBC (Title 24, Part 2 of the California Code of Regulations). Such compliance would reduce hazards arising from ground shaking to less than significant. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Southern California is a seismically active area and properties in the City of Ontario, including the Project site, are subject to periodic ground shaking and other effects from earthquake activity along nearby regional faults. The Project site is not at an increased risk relative to the surrounding areas. Consistent with the findings in the Certified SEIR,

Project-related structures and buildings would be required to be designed and built-in compliance with the California Building Code (CBC [California Code of Regulations, Title 24, Part 2]), which contains provisions for earthquake safety based on factors including occupancy type, the types of soil and rock onsite, and the probable strength of ground motion, the Ontario Municipal Code, TOP 2050, and all other ordinances adopted by the City related to construction and safety. Therefore, as structures would be designed to meet or exceed CBC standards for earthquake resistance, redevelopment of the Project would not create significant impacts related to seismic ground shaking. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

iii. Seismic-related ground failure, including liquefaction?

Summary of Certified SEIR Finding: The Certified SEIR concluded that there is currently no potential for liquefaction based on groundwater levels throughout the City being greater than 50 feet below ground surface. Therefore, no impact would occur.

Discussion of Effects: Seismic-related ground failure includes, but is not limited to, liquefaction. Liquefaction is a seismic phenomenon in which loose, saturated, granular soils behave similarly to fluids when subject to high intensity seismic events. Liquefaction occurs when three general conditions coexist: 1) shallow groundwater, 2) low-density non-cohesive (granular) soils and 3) high-intensity ground motion. According to the Geotechnical Investigation, the Project site is not located within an area of liquefaction susceptibility and groundwater is considered to have existed at depth in excess of 25 feet due to the lack of water encountered at all boring locations (SoCal Geo, 2022). Therefore, consistent with the findings in the Certified SEIR, the Project does not have the potential to expose people or structures to seismic-related liquefaction. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

iv. Landslides?

Summary of Certified SEIR Finding: The Certified SEIR did not identify any specific constraints regarding landslides.

Discussion of Effects: Slope failures in the form of landslides are common during strong seismic shaking in areas of steep hills. The Project site and surrounding area are generally flat with no significant slopes. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Result in substantial soil erosion or the loss of topsoil?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the young alluvial sediment and wind-blown sand underlying the City are generally granular, poorly consolidated, and very susceptible to erosion. However, compliance with the CBC and review of grading plans

for individual projects by the City Engineer would ensure no significant impacts would occur. In addition, construction activities on project sites larger than one acre are required to prepare a Stormwater Pollution Prevention Plan (SWPPP) that details best management practices (BMPs) to reduce the potential for erosion during construction activities. Furthermore, TOP 2050 includes the following policies regarding erosion and loss of topsoil: ER-1.6, ER 4.7, S-5.1, and S-5.2. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Erosion is the movement of rock and soil from place to place. Erosion occurs naturally by agents such as wind and flowing water; however, grading and construction activities can greatly increase erosion if effective erosion control measures are not used. Common means of soil erosion from construction sites include water, wind, and being tracked offsite by vehicles. The Project site is in a highly urbanized, built-out portion of the City and is largely flat; soils have already been disturbed by existing development. Because the Project site is fully developed and contains very little exposed soils, existing erosion occurring on the site is minimal.

The State Water Resources Control Board (SWRCB) Order No. 2009-0009-DWQ (General Construction Permit) contains water quality standards and stormwater discharge requirements that apply to construction projects of one acre or more. The General Construction Permit was issued pursuant to the National Pollutant Discharge Elimination System (NPDES) regulations for implementing part of the federal Clean Water Act. The General Construction Permit requires preparation of a SWPPP that identifies the sources of pollution that may affect the quality of stormwater discharges and describes and ensures the implementation of BMPs to reduce the pollutants, including silt and soil, in construction stormwater discharges. Examples of BMPs that are commonly included in SWPPPs are shown in Table 7-1, below.

Table 7-1 Examples of Construction-Phase Stormwater Pollution Prevention BMPs

Category	Goal	Sample Measures
Erosion Controls	Prevent soil particles from being detached from the ground surface and transported in runoff	Preserving existing vegetation; soil binders; geotextiles and mats
Sediment controls	Filter out soil particles that have entered runoff	Barriers such as slit fences and gravel bag berms; and street sweeping
Tracking Controls	Prevent soil from being tracked offsite by vehicles	Stabilized construction roadways and entrances/exits
Wind Erosion Control	Prevent soil from being transported offsite by wind	Similar to erosion controls above
Non-stormwater Management	Prevent discharges of soil from site by means other than runoff and wind	BMPs regulating various construction practices; water conservation
Waste and Materials Management	Prevent release of waste materials into storm discharges	BMPs regulating storage and handling of materials and wastes

Future development within the Project site will be required to comply with the NPDES permit by preparing and implementing a SWPPP specifying BMPs for minimizing pollution of stormwater with soil and sediment during Project construction. Consistent with the findings in the Certified SEIR, adherence to the BMPs in the SWPPP would reduce, prevent, or minimize soil erosion from Project-related demolition, site preparation and grading, and construction activities. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the thick alluvial deposits comprising the Chino Subbasin may be susceptible to compaction, with resulting subsidence at the surface, in the event of rapid groundwater withdrawal. Projects considered for approval under TOP 2050 could expose structures or persons to potentially significant hazards from ground subsidence. However, compliance with the CBC and review of grading plans for individual projects by the City Engineer would ensure no significant impacts would occur.

Additionally, the young sediments underlying the City are generally dry and loose in the upper few feet, and therefore are susceptible to compression. Much of the Ontario Ranch has been intensively farmed and is especially susceptible to compression. Developments approved pursuant to TOP 2050 could expose persons or structures to potentially significant hazards from compressible soils. However, compliance with the CBC and review of grading plans for individual projects by the City Engineer would ensure no significant impacts would occur.

Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: As stated previously, the Project site is not susceptible to landslides or liquefaction. The potential for other geologic hazards on the Project site, including lateral spreading, subsidence or collapse is considered low (SoCal Geo, 2022). Furthermore, Project-related structures and buildings would be required to be designed and built-in compliance with the CBC and the Ontario Municipal code, which requires the Project to implement the recommendations of the site-specific geotechnical investigation. The recommendations require foundations to be constructed based on the expansion index and shear strength of onsite soils. Consistent with the findings in the Certified SEIR, compliance with the CBC and Ontario Municipal code would ensure that impacts would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

Summary of Certified SEIR Finding: The Certified SEIR concluded that expansive soils are likely in the southern parts of the City, where there are silts, sandy silts, and silty clays. Projects in the southern part of the City under TOP 2050 could expose persons or structures to potentially significant hazards from expansive soils. However, compliance with the CBC and review of grading plans for individual projects by the City Engineer would ensure no significant impacts would occur. Therefore, impacts related to expansive soils would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Expansive soils are defined as soils possessing clay particles that react to moisture changes by shrinking or swelling. According to the Project's Geotechnical Investigation, the near-surface soils consist of silty sands, sandy silts, and fine to coarse sands with

no appreciable clay content. These materials have been visually classified as non-expansive (SoCal Geo, 2022). Therefore, no adverse impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Summary of Certified SEIR Finding: The Certified SEIR concluded that wastewater from the City is treated at wastewater treatment facilities owned and operated by the IEUA. Use of septic tanks would be limited to existing septic tanks, and new septic tanks would be constricted to areas not in practical proximity to existing sewer mains, dependent on approval by the Santa Ana Regional Water Quality Control Board on a case-by-case basis. Therefore, impacts related to septic tanks would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: No septic tanks will be used as part of the proposed Project. The Project would connect to the existing waste water disposal system. Accordingly, no impact would occur. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the City is underlain by deposits of Quaternary and upper-Pleistocene sediments deposited during Pliocene and early Pleistocene time. Quaternary Older Alluvial sediments may contain significant, nonrenewable, paleontological resources and are therefore considered to have high sensitivity. Older Pleistocene alluvial sediments can yield fossil remains, often found at depths of 10 feet or more below existing ground surface. As a result, the possibility of finding additional paleontological resources within City boundaries is moderate to high at depths of 10 feet or more below ground surface. Therefore, future development that would be accommodated by TOP 2050 could potentially unearth previously unrecorded resources. Mitigation Measure 5-2 requires that in the event of an unanticipated discovery of paleontological resources during grading and excavation of the site, a qualified paleontologist would assess the find and develop a course of action to preserve the find. Therefore, with the implementation of Mitigation Measure 5-2, potential impacts to paleontological resources would be reduced to a level that is less than significant.

Discussion of Effects: According to the Project's Paleontological Resource Assessment, included as Appendix E, ground disturbances less than 5 ft below ground surface are unlikely to result in impacts to significant paleontological resources; however, ground disturbances greater than or equal to 5 ft below ground surface may impact geologic units of high paleontological sensitivity, and therefore, may result in impacts to significant paleontological resources. (PaleoWest, 2022b) However, the Project would be required to implement Mitigation Measure 5-2 to ensure construction activities will not continue or will be moved to other parts of the Project site if paleontological resources are discovered during grading activities and a qualified

paleontologist shall be contacted to determine the significance of these resources in the event unanticipated paleontological resources are identified during excavation. Consistent with the findings of the Certified SEIR, With the implementation of Mitigation Measure 5-2, impacts to paleontological resources would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required. The following mitigation measure from the Certified SEIR is applicable to the Project:

MM CUL 5-2 In areas of documented or inferred from evident archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:

a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.

b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.

c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including a catalog with museum numbers.

8. GREENHOUSE GAS EMISSIONS. Would the project:

a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Summary of Certified SEIR Finding: The Certified SEIR concluded that GHG emissions associated with TOP 2050 would be slightly higher compared to those of TOP in the absence of local measures identified in the Community Climate Action Plan (CCAP) and would not meet the 2050 GHG target of 2.0 $MTCO_2e$ per capita. With implementation of the CCAP, TOP 2050 would result in a decrease in emissions. The City would achieve the EO S-03-05 GHG emissions reduction targets, resulting in an 80 percent decrease in GHG emissions in the City by 2050 from existing conditions, and would make substantial progress toward the State's carbon neutrality goals under EO B-55-18. Therefore, TOP 2050, which includes the CCAP, would reduce GHG emissions impacts compared to TOP. Impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The analysis in this section is based on the First Grove Air Quality & Greenhouse Gas Assessment prepared by Urban Crossroads, Inc. (Urban Crossroads) dated June 20, 2023. This report is provided in its entirety as Appendix A, of this Addendum.

The CCAP establishes an annual screening threshold of 3,000 $MTCO_2e$/yr to define small projects that are considered less than significant and do not require further GHG emissions calculations or analysis. Projects that do not exceed an annual 3,000 $MTCO_2e$/yr are therefore considered less than significant and would not require further analysis or mitigation.

The Project's annual GHG emissions are summarized in Table 8-1, *Project GHG Emissions*. As shown in Table 8-1, the Project will result in total GHG emissions of approximately 929.68 $MTCO_2e$/yr and would not exceed the annual 3,000 $MTCO_2e$/yr threshold. Additionally, when compared to emissions generated by the TOP 2050 adopted Industrial land use designation, the Project would result in a net decrease of 685.20 $MTCO_2e$/yr. As such, Project-related emissions would not have a potential significant direct or indirect impact on GHG emissions and impacts would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Table 8-1 Project GHG Emissions

Source	Emission (lbs/day)				
	CO_2	**CH_4**	**N_2O**	**R**	**Total CO_2e**
Annual construction-related emissions amortized over 30 years	16.23	7.19E-04	3.42E-04	3.84E-03	16.35
Mobile Source	522.99	0.03	0.04	0.80	537.00
Area Source	1.25	0.00	0.00	0.00	1.26
Energy Source	266.25	0.02	0.00	0.00	267.52
Water Source	20.26	0.47	0.01	0.00	35.28
Waste Source	6.85	0.68	0.00	0.00	23.95
Refrigerants Source	0.00	0.00	0.00	0.96	0.96
On-Site Equipment Source	0.00	0.00	0.00	0.00	47.37
Total CO_2e (All Sources)	**929.68**				
TOP 2050	1,614.88				
Net Emissions (Proposed – TOP 2050)	**-685.20**				

Source: (Urban Crossroads, 2023a, Tables 13 and 15)

Mitigation Required: No additional mitigation required.

b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Summary of Certified SEIR Finding: The Certified SEIR concluded that development projects accommodated under TOP 2050 are required to adhere to the programs and regulations identified by the 2017 Scoping Plan and implemented by state, regional, and local agencies to achieve the statewide GHG reduction goals of AB 32 and SB 32. Implementation of TOP 2050 would not obstruct implementation of the CARB Scoping Plan. Additionally, TOP 2050 would

provide for residents to both live and work in the City instead of commuting to other areas, which would contribute to minimizing VMT and reducing VMT per service population. Therefore, TOP 2050 would not interfere with SCAG's ability to implement the regional strategies in Connect SoCal. Impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Since certification of the Certified SEIR, CARB has adopted the 2022 Scoping Plan. Pursuant to Section 15604.4 of the State CEQA Guidelines, a lead agency may rely on qualitative analysis or performance-based standards to determine the significance of impacts from GHG emissions. As such, the Project's consistency with SB 32 (2022 Scoping Plan) is discussed below.

The 2022 Scoping Plan for Achieving Carbon Neutrality (2022 Scoping Plan) lays out a path to achieve targets for carbon neutrality and reduce anthropogenic GHG emissions by 85 percent below 1990 levels no later than 2045, as directed by Assembly Bill 1279. The actions and outcomes in the plan will achieve significant reductions in fossil fuel combustion by deploying clean technologies and fuels, further reductions in short-lived climate pollutants, support for sustainable development, increased action on natural and working lands to reduce emissions and sequester carbon, and the capture and storage of carbon.

The Project would not impede the State's progress towards carbon neutrality by 2045 under the 2022 Scoping Plan. The Project would be required to comply with applicable current and future regulatory requirements promulgated through the 2022 Scoping Plan. Some of the current transportation sector policies the Project will comply with (through vehicle manufacturer compliance) include: Advanced Clean Cars II, Advanced Clean Trucks, Advanced Clean Fleets, Zero Emission Forklifts, the Off-Road Zero-Emission Targeted Manufacturer rule, Clean Off-Road Fleet Recognition Program, In-use Off-Road Diesel-Fueled Fleets Regulation, Off-Road Zero-Emission Targeted Manufacturer rule, Clean Off-Road Fleet Recognition Program, Amendments to the In-use Off-Road Diesel-Fueled Fleets Regulation, carbon pricing through the Cap-and-Trade Program, and the Low Carbon Fuel Standard. Finally, the Project is consistent with the general plan land use designation, density, building intensity, and applicable policies specified for the Project area in SCAG's Sustainable Community Strategy/ Regional Transportation Plan, which pursuant to SB 375 calls for the integration of transportation, land-use and housing policies to plan for achievement of the GHG-emissions target for the region. Thus, a less than significant impact related to GHG emissions from Project construction and operation would occur. (Urban Crossroads, 2023a) Therefore, the Project would not have the potential to conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation Required: No additional mitigation required.

9. HAZARDS & HAZARDOUS MATERIALS. Would the project:

The analysis in this section is based on the Phase I Environmental Site Assessment prepared by Roux Associates, Inc. (Roux) dated December 2022 and is provided in their entirety as Appendix F of this Addendum.

a. Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?

Summary of Certified SEIR Finding: The Certified SEIR discussed thresholds a, b, and c together and concluded that implementation of TOP 2050 would increase the number of businesses and residents in the City, thereby increasing the amount of hazardous materials being transported, stored, and manufactured, and the number of people exposed to these materials. The City of Ontario has around 127 facilities or sites that generate, transport, treat, store, and/or dispose of hazardous waste, as recorded by the national RCRA Envirofacts Database. An increase in the transport of hazardous waste from an increased demand for transport, use, and disposal within or outside the City could result in more accidents leading to the release of hazardous materials. Demolition activities that have the potential to expose construction workers and/or the public to asbestos-containing materials or lead-based paint will be conducted in accordance with applicable regulations. Current federal and state regulations, City ordinances, and TOP 2050 policies would regulate the handling of hazardous substances to reduce potential releases; exposure; and risks of transporting, storing, treating, and disposing of hazardous materials and wastes. Therefore, additional hazardous waste transport, use, and/or disposal that would occur upon the buildout of TOP 2050 would be less than significant with adherence to the existing regulations and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: A significant impact may occur if a project would involve the use or disposal of hazardous materials as part of its routine operations, or would have the potential to generate toxic or otherwise hazardous emissions that could adversely affect sensitive receptors. The Project Applicant proposes to redevelop the Project site with a building that has the potential to store hazardous materials during the future building user's daily operations. As demonstrated in the analysis below, the Project would not result in a hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials during construction or operation. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Project Construction

General Construction Hazardous Waste

Heavy equipment (e.g., dozers, excavators, tractors) would operate on the subject property during construction of the Project. Heavy equipment is typically fueled and maintained by petroleum-based substances such as diesel fuel, gasoline, oil, and hydraulic fluid, which is considered hazardous if improperly stored or handled. Also, materials such as paints, adhesives, solvents, and other substances typically used in building construction would be located on the Project site during construction. Improper use, storage, or transportation of hazardous materials can result in accidental releases or spills, potentially posing health risks to workers, the public, and the environment. This is a standard risk on all construction sites, and there would be no greater risk for improper handling, transportation, or spills associated with the proposed Project than would occur on any other similar construction site. Construction contractors would be required to comply with all applicable federal, State, and local laws and regulations regarding the transport, use, and storage of hazardous construction-related materials, including but not limited requirements imposed by the EPA, California Department of Toxic Substances Control (DTSC), South Coast AQMD, and Santa Ana Regional Water Quality Control Board (RWQCB). Consistent with the findings of the Certified EIR, with mandatory compliance with applicable hazardous materials regulations, the Project would not create a significant hazard to the public or the environment through routine transport, use, or disposal of hazardous materials during the construction phase.

Impacted Soils

Construction activities required to redevelop the Project site would involve the disturbance of on-site soils. There is the potential for the discovery of contamination during these activities due to staged material originating off-site, historical agricultural use, former gasoline and diesel Underground Storage Tanks (USTs), and vapor intrusion. Specifically,

- Staged Material Originating Off-Site. During the site reconnaissance, a construction materials staging area was observed in the exterior western lot. According to the yard manager, construction materials, including dirt, asphalt, and concrete, are generated from trenching and excavation activities during the installation of fiber optic cables off-site. Considering the trenching and excavation activities take place at various locations around the Los Angeles area, including commercial and industrial properties, the condition of off-site construction material and wastewater is unknown.

- Historical Agricultural Use. According to historical sources, the Project site was used for agricultural purposes as an orchard as early as 1946 through 1966. It is unknown if agricultural chemicals, such as pesticides, herbicides and fertilizers, have impacted soil on the Project site.

- Former Gasoline and Diesel USTs. According to records from the San Bernardino County Fire Department (SBCFD), a permit application was submitted for the installation of one 1,000-gallon gasoline UST and one 1,000-gallon diesel UST at the Project site. A permit application to remove the two USTs was submitted on July 30, 1990. Following UST removal in August 1990, one soil confirmation sample was collected approximately 2 feet beneath each UST. The sample collected beneath the gasoline UST was analyzed for gasoline, and the sample collected beneath the diesel UST was analyzed for diesel. Soil confirmation results reported concentrations below laboratory reporting limits.

- Potential for Vapor Intrusion. The northeastern General Electric Co – Jet Engine Test Cell Facility, located at 2264 East Avion Street (located approximately 1.82 miles northeast of the Project site) is an open – verification monitoring case as of February 5, 2010. According to the GeoTracker case (SL208133868), the facility has operated as an aircraft engine facility since 1965. Subsurface investigations have identified volatile organic compounds (VOCs), specifically trichloroethene (TCE) as the primary chemical of potential concern. Remedial efforts include a soil vapor extraction (SVE) system with a total of 23 SVE wells from 1996 through 2005 and groundwater monitoring since 1991. Based on the Fourth Quarter 2021 Groundwater Monitoring Report, dated January 24, 2022, the nearest groundwater monitoring well (OW-11) is located approximately 300 feet southeast of the eastern boundary of the Project site. It is unknown if the presence of VOCs in groundwater in close proximity to the Project site and possible lateral and vertical migration pose a potential vapor intrusion concern.

A Phase II subsurface investigation was conducted for the Project site, in which a total of 31 soil samples (including 3 duplicate samples) were collected and analyzed for total petroleum hydrocarbons (TPH), Title 22 metals, polychlorinated biphenyls (PCBs), organochlorine pesticides (OCPs), VOCs, and asbestos; and A total of 15 soil vapor samples (including 1 duplicate sample) were collected and analyzed for VOCs. Based on the results of the Phase II, VOCs, metals, PCBs, OCPs, and asbestos were not considered to be chemical of potential concern in soil. Limited detections of TPH in the diesel and motor oil ranges were found in shallow soil throughout the staging area on the western portion. These soils could be removed as non-hazardous waste and would be excavated and disposed of off-site in accordance with applicable regulations. Several

VOCs were detected in soil vapor above laboratory reporting limits but below applicable screening levels, with the exception of tetrachloroethylene (PCE) in two samples. It is noted that no potential source of PCE or other chlorinated solvents was identified in association with current or historical operations.

A subsequent Human Health Risk Assessment (HRA) was conducted due to the chemical detected in the soils vapor. Based on the results of the (HRA), cumulative carcinogenic risk and non-carcinogenic hazard to human receptors for commercial/industrial indoor air scenarios are within acceptable ranges and vapor intrusion mitigation is not warranted. (Roux, 2022) Therefore, the Project site does not contain any Recognized Environmental Conditions (RECs), Historical Recognized Environmental Conditions (HRECs), or Controlled Recognized Environmental Conditions (CRECs), nor is the Project site affected by any off-site hazards or hazardous materials.

Demolition

The use of asbestos-containing materials (ACM, a known carcinogen) and lead-based paint (LBP) (a known toxic), both of which are considered hazardous materials, was a common building construction prior to 1978. Since the existing buildings on the Project site were constructed in 1985 and 2002, neither ACMs nor lead paint are determined to be a significant hazard on the Project site.

Project Operation

Future users of the proposed on-site Project building are not yet known. Future uses on-site are assumed to be those permitted by the TOP 2050 and Grove Avenue Specific Plan zoning designations. Future users have the potential to use hazardous materials (i.e., gasoline, diesel, biodiesel fuels, and oil) during the course of daily operations at the Project site. In the event that hazardous materials, other than those common materials described above, are associated with future warehouse operations, the hazardous materials would only be stored and transported to and from the building site. Federal and State Community-Right-to-Know laws allow the public access to information about the amounts and types of chemicals that may be used by the businesses that would operate at the Project site. Laws also are in place that require businesses to plan and prepare for possible chemical emergencies. Pursuant to the City of Ontario Municipal Code, any business involved in the use, production, storage, or transfer of any material defined as hazardous and subject to regulation by San Bernadino County Department of Public Health and/or subject to regulation by the South Coast Air Quality Management District per Rules 1401, 1402, and 1403. Such businesses are also required to comply with California's Hazardous Materials Release Response Plans and Inventory Law, which require immediate reporting to San Bernadino County Fire Protection District and State Office of Emergency Services regarding any release or threatened release of a hazardous material, regardless of the amount handled by the business.

The operation of the Project would be required to comply with all applicable federal, State, and local regulations to ensure the proper transport, use, and disposal of hazardous substances. Consistent with the findings of the Certified SEIR, with mandatory regulatory compliance, potential hazardous materials impacts associated with long-term operation of the Project is not expected to pose a significant hazard to the public or environment through the routine transport, use, or disposal of hazardous materials, nor would the Project increase the potential for accident operations which could result in the release of hazardous materials into the environment. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Summary of Certified SEIR Finding: As discussed above, the Certified SEIR concluded that additional hazardous waste transport, use, and/or disposal that would occur upon the buildout of TOP 2050 would be less than significant with adherence to the existing regulations and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects:

Construction

During Project construction, there is a possibility of accidental release of hazardous substances such as petroleum-based fuels or hydraulic fluid used for construction equipment. The level of risk associated with the accidental release of hazardous substances is not considered significant due to the small volume and low concentration of hazardous materials utilized during construction. The construction contractor would be required to use standard construction controls and safety procedures that would avoid and minimize the potential for accidental release of such that any materials released are appropriately contained and remediated as required by local, State, and federal law.

The Project would comply with the requirements of applicable laws and regulations governing upsets and accidents including the requirements of the hazardous materials disclosure program, the California Accidental Release Prevention Program, the hazardous materials release response plans and inventory program, and California Health and Safety Code Section 25500.

These requirements would ensure that all potentially hazardous materials are handled in an appropriate manner and would minimize the potential for upset and accident conditions. For example, all spills or leakage of petroleum products during construction activities are required to be immediately contained, the hazardous material identified, and the material remediated in compliance with applicable state and local regulations for the cleanup and disposal of that contaminant. All contaminated waste would be required to be collected and disposed of at an appropriately licensed disposal or treatment facility. Therefore, consistent with the findings of the Certified SEIR, this impact is considered less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Operation

Regulatory requirements pertaining to upsets and accidents following during the construction phase would also be implemented during the operational phase. For the operational phase, both the federal government and the State of California (Health and Safety Code, Division 20, Chapter 6.95, §§ 25500–25520; 19 CCR, Chapter 2, Subchapter 3, Article 4, §§ 2729–2734) require all businesses that handle more than a specified amount of hazardous materials or extremely hazardous materials, termed a reporting quantity, to submit a hazardous materials emergency/contingency plan (also known as a hazardous materials business plan) to their local Certified Unified Program Agency (CUPA). These requirements would ensure that all potentially

hazardous materials are handled in an appropriate manner and would minimize the potential for safety impacts. Consistent with the findings of the Certified SEIR, with mandatory regulatory compliance, the Project would not increase the potential for accident conditions which could result in the release of hazardous materials into the environment. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances or waste within one-quarter mile of an existing or proposed school?

Summary of Certified SEIR Finding: The Certified SEIR did not identify any specific constraints regarding hazardous materials within one-quarter mile of an existing or proposed school and analysis were combined with threshold a and b which concluded less than significant impacts.

Discussion of Effects: The Project site is within 0.25 mile of an existing school. The closest school to the Project site is the Bon View Elementary School, located approximately 0.25 mile to the west of the Project site. As discussed above, with mandatory regulatory compliance, potential hazardous materials impacts associated with long-term operation of the Project is not expected to pose a significant hazard to the public or environment through the routine transport, use, or disposal of hazardous materials, nor would the Project increase the potential for accident operations which could result in the release of hazardous materials into the environment. Implementation of the Project would not have the potential to emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 miles of an existing or proposed school. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Summary of Certified SEIR Finding: The Certified SEIR concluded that development in accordance with TOP 2050 would involve redevelopment and reuse of some sites listed as hazardous materials sites on environmental databases. Redevelopment of these sites could potentially expose future residents and workers to hazards from known hazardous materials releases on and near the sites. Site assessments for hazardous materials and remediation of hazardous materials releases would be required for redevelopment projects developed in accordance with TOP 2050 and the regulations and policies of the agency assigned to the site. TOP 2050 include policies that address development on and around known hazardous waste sites. Compared to TOP, TOP 2050 would have similar impacts because TOP 2050 would result in an increase in land use intensity rather than development of new, previously undeveloped areas of the City that would require substantial landform modification. Therefore, buildout of TOP 2050 would not expose people to substantial hazards from hazardous materials sites listed on environmental databases and would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is listed in California Integrated Water Quality System

(CIWQS), HAULERS, Resource Conservation and Recovery Act Non-generators (RCRA NONGEN/NLR), Facility Index System (FINDS), Enforcement and Compliance History Online (ECHO), Hazardous Waste Tracking System (HWTS), California Environmental Reporting System (CERS), HAZ WASTE, HazNet, San Bernardino County Permit, National Pollutant Discharge Elimination System (NPDES), and California Hazardous Materials Incident Report System (CHIMRS) database. Due to the lack of additional information relevant to the environmental history of the facility and results of the subsurface investigation conducted on the Project site, these listing are not considered to represent a significant environmental concern. (Roux, 2022) As discussed in Response 9.a, the Project site does not contain any RECs, HRECs, or CRECs, nor is the Project site affected by any off-site hazards or hazardous materials. Therefore, the Project would not create a significant hazard to the public or the environment. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the consistency determination analysis for the Ontario International Airport (ONT), prepared by the City and submitted to ONT-IAC, found that TOP 2050 is consistent with ALUCP for ONT. Additionally, buildout of TOP 2050 would involve development within the Chino Airport influence area. Projects accommodating TOP 2050 in this area would be required to meet the conditions of the Chino Airport Authority and the 2011 Caltrans Airport Land Use Planning Handbook, including those determining appropriate land uses, maximum population density, maximum site coverage, height restrictions, and required notification/disclosure areas based on the noise contours and runway protection, approach, and Part 77 zones of the adopted Chino Airport Master Plan. The Airport Planning section of TOP 2050 Land Use Element includes policies that would ensure airport planning compatibility and consistency. Therefore, TOP 2050 ensures compatibility with both ONT and Chino Airport. Impacts related to airport safety hazards would be less than significant and would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: According to the Land Use Element (Exhibit LU-06 Airport Safety Zones and Influence Areas) of TOP 2050, the Project site is not located within the Chino Airport Influence Area (City of Ontario, 2022a).

According to the Ontario International Airport (ONT) Land Use Compatibility Plan (ALUCP), the Project site is located within the ONT Airport Influence Area (City of Ontario, 2011). Specifically, the Project site is located outside of the 65 CNEL noise impact zones and is subject to the Noise Criteria established on Table 2-3 in the ONT ALUCP. According to Table 2-3 of the ONT ALUCP, industrial land uses located outside the 65 dBA CNEL noise level contours of ONT, such as the Project, are considered normally compatible land use. For normally compatible land uses, either the activities associated with the land use are inherently noisy or standard construction methods will sufficiently attenuate exterior noise to an acceptable indoor community noise equivalent level (CNEL). Therefore, the Project would not result in excessive noise for people residing or working in the Project area.

Moreover, according to the Land Use Element (Exhibit LU-06 Airport Safety Zones and

Influence Areas) of TOP 2050, the Project site is not located within the ONT safety zones. Therefore, the Project would not result in a safety hazard for people residing or working in the Project area. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the threat of flood is Ontario's greatest hazard as large portions of the City are within the flood zone, according to the Vulnerability Analysis conducted as part of TOP 2050. There are also substantial improvements in transportation infrastructure planned to accommodate the increase in population in the City in the event of an emergency. Additionally, the Ontario Fire Department reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance. Therefore, Implementation of TOP 2050 would not Impair implementation of or physically interfere with an adopted emergency response plan. Impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The City's Safety Element includes policies and procedures to be administered in the event of a disaster. The City seeks interdepartmental and inter-jurisdictional coordination and collaboration to be prepared for, respond to, and recover from every day and disaster emergencies. The City manages disaster preparedness through the Technical Services Bureau of the Ontario Fire Department. This bureau is responsible for the preparation of the community for disasters and the organization of recovery efforts. The City updated a Local Hazard Mitigation Plan (LMHP) prepared by the Office of Emergency Services of the Ontario Fire Department in 2018. Because the Project site has been historically used for industrial/commercial uses, it is not identified in any of these plans as being an evacuation area.

According to the Federal Emergency Management Agency (FEMA) flood map No. 06071C8617J, the Project site is located within Zone X, an area of minimal flood hazard (FEMA, 2016). Furthermore, construction of the Project would be generally confined to the Project site and would not physically impair access to the site or the Project area. During both construction and long-term operation, the Project would be required to maintain adequate emergency access for emergency vehicles as required by the City and the Ontario Fire Department. In addition, the Project will comply with the requirements of the Ontario Fire Department and all City requirements for fire and other emergency access. As concluded in the Certified SEIR, the Ontario Fire Department reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance. Therefore, the Project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the there are many resources available to address wildland fires should they arise, including the CAL FIRE 2019 Strategic Fire Plan for California, the California Fire Code, County of San Bernardino Multi-jurisdiction Hazard Management Plan, the Ontario LHMP, and fire services from the Ontario Fire Department. With adherence to these building practices, development and infrastructure associated with TOP 2050 would not exacerbate risk or result in post-wildfire hazards (e.g., landslides, mudflows, and flooding). Impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is fully developed and is within a completely urbanized area that is void of any wildland areas. Additionally, according to the California Department of Forestry and Fire Protection (CalFire), the Project site is not within a very high fire hazard severity zone (CAL FIRE, 2008). Implementation of the Project would not expose people or structures to a significant risk involving wildland fires and would not exacerbate the risk or result in post-wildfire hazards (e.g., landslides, mudflows, and flooding). The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

10. HYDROLOGY & WATER QUALITY. Would the project:

The analysis in this section is based on the Preliminary Water Quality Management Plan and Preliminary Hydrology Study prepared by Huitt-Zollars, Inc. dated April 2023 and is provided in their entirety as Appendices G.1 and G.2 of this Addendum.

a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Summary of Certified SEIR Finding: The Certified SEIR concluded that clearing, grading, excavation, and construction activities associated with TOP 2050 have the potential to impact water quality through soil erosion and increasing the amount of silt and debris carried in runoff. To minimize these potential impacts, future development associated with TOP 2050 would require compliance with the State Water Resources Control Board (SWRCB) Construction General Permit (CGP) Water Quality Order 2009-0009-DWQ as amended by Order No. 2010-0014-DWQ and 2012-006-DWQ. The CGP also requires that prior to the start of construction activities, the project applicant must file permit registration documents (PRD) with the SWRCB prior to the start of construction. The PRDs include a Notice of Intent, risk assessment, site map, Stormwater Pollution Prevention Plan (SWPPP), annual fee, and a signed certification statement. In addition, the City of Ontario requires that an erosion and sediment control plan be submitted prior to grading plan approval and the issuance of a grading permit. Submittal of the PRDs and implementation of the SWPPP and the erosion control plan throughout the construction phase of the Proposed Project would address anticipated and expected pollutants of concern as a result of construction activities.

Pollutants from the post-construction phases of projects include sediment, metals, nutrients, pesticides, and hydrocarbons. TOP 2050 includes policies that direct the City to reduce pollutants in the City's stormwater system. Projects approved under TOP 2050 would be required to control pollutants in discharges of stormwater from postconstruction activities under National Pollution Discharge Elimination System (NPDES) Permit through preparation of a Water Quality Management Plan (WQMP) identifying BMPs for prevention of stormwater pollution during the

postconstruction phase, including site-design, source-control, and/or treatment BMPs. Therefore, water quality standards and waste discharge requirements would not be exceeded, and surface water and groundwater quality would not be degraded. Impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: As demonstrated in the analysis below, the Project would not violate any water quality standards or waste discharge requirements. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Temporary Construction-Related Activities

Construction of the Project would involve demolition, clearing, grading, paving, utility installation, construction, and landscaping activities. Construction activities would result in the generation of potential water quality pollutants such as silt, debris, chemicals, paints and solvents, and other chemicals with the potential to adversely affect water quality. As such, short-term water quality impacts have the potential to occur during construction of the Project in the absence of protective or avoidance measures.

Construction activities would disturb the 4.2-acre site; therefore, the Project is subject to the requirements of the SWRCB GCP, as previously analyzed in the Certified SEIR. Mandatory adherence to the CGP and implementation of measures outlined in the SWPPP would ensure that the Project does not violate any water quality standards or waste discharge requirements during construction activities. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Post-Development Water Quality Impacts

The site would be developed with a building up to 61,867 s.f. and associated parking and landscaping. To meet the requirements of the NPDES permit, the Project Applicant would be required to prepare and implement a WQMP. Implementation of the WQMP ensures on-going, long-term protection of the watershed basin.

According to the Project's Preliminary WQMP, included as Appendix G.1, the Project is designed to include on-site structural source control BMPs consisting of underground infiltration/detention system. In addition, operation source control BMPs would be implemented, including but not limited to, minimizing non-stormwater site runoff through efficient irrigation system design and controllers, vacuum sweeping of private streets and parking lots, landscape management BMPs, and providing education/training of site occupants and employees on stormwater BMPs. (Huitt-Zollars, 2023a) Compliance with the Preliminary WQMP and long-term maintenance of proposed on-site water quality control features would be required by the City to ensure the long-term effectiveness of all on-site water quality features.

In addition to the WQMP, the NPDES program also requires certain land uses, including the industrial land use proposed by the Project, to prepare a SWPPP for operational activities and to implement a long-term water quality sampling and monitoring program, unless an exemption is granted. Because the permit is dependent upon the operational activities of the building and the tenants are not known at this time, details of the SWPPP (including BMPs) or potential exemption to the SWPPP operational activities requirement cannot be determined at this time. However, based on the requirements of the NPDES Industrial General Permit, the Project's mandatory compliance with all applicable regulations would further reduce potential water quality impacts

during long-term operation.

Implementation of the Project would have a beneficial impact on water quality because it would capture on-site flows and treat flows prior to being discharged into the City's storm drainage system. Based on the foregoing analysis, the Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality or result in potential discharge of stormwater to affect beneficial uses of receiving waters. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin)?

Summary of Certified SEIR Finding: The Certified SEIR concluded that future development would increase the amount of impermeable surfaces in the City and reduce the amount of permeable surfaces available for groundwater recharge. Most of the increase in impermeable surfaces in the City would result from development of the Ontario Ranch in accordance with land use designations in TOP 2050. Future urban development in Ontario Ranch would be served by domestic water provided by the City. Approximately 46 percent of the City's water supply is groundwater pumped by the City from the Chino Groundwater Basin; groundwater pumping is managed by OMUC so that domestic demands do not exceed the safe yield for the basin. With the implementation of City policies that promote Low Impact Development (LID) and infiltration for new development projects and compliance with the Chino Basin Watermaster's safe yield restrictions, the potential for the project to substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin would be less than significant. Therefore, TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Water supply to the Project would be provided by OMUC and would not require the direct use of groundwater at the Project site. Therefore, the Project would not require direct additions or withdrawals of groundwater. Excavation that would result in the interception of existing aquifers or penetration of the existing water table is not proposed or anticipated. In addition, since the existing Project site is mostly impervious, the Project would not reduce any existing percolation of surface water into the groundwater table. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would?

i. Result in substantial erosion or siltation on- or off-site;

Summary of Certified SEIR Finding: The Certified SEIR concluded that future development associated with TOP 2050 would involve site improvements that require grading, excavation, and

soil exposure during construction, with the potential for erosion or siltation to occur. If not controlled, the transport of these materials to local waterways could temporarily increase suspended sediment concentrations and release pollutants attached to sediment particles. To minimize this impact, the project would be required to comply with the requirements in the State's CGP, including preparation of a notice of intent and SWPPP prior to the start of construction activities. In addition, the City of Ontario requires preparation of an erosion and sediment control plan and implementation of BMPs to control erosion, debris, and construction-related pollutants. For post-construction, projects approved under TOP 2050 would be required to control stormwater discharges under NPDES Permit through preparation of a WQMP identifying BMPs for reducing or eliminating runoff. Collectively, implementation of BMPs outlined in SWPPPs, erosion and sediment control plans, WQMPs, and TOP 2050 policies would address anticipated erosion and siltation impacts. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Under existing conditions, the Project site does not contain a stream or river; therefore, the Project does not have to potential to alter the course of a stream or river. No impacts would occur in this regard. Refer to Response 10a. Project construction would temporarily expose on-site soils to surface water runoff. However, consistent with the findings of the Certified SEIR, compliance with construction-related BMPs and/or the SWPPP would control and minimize erosion and siltation, resulting in a less than significant impact. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off-site;

Summary of Certified SEIR Finding: The Certified SEIR concluded that future development would increase the amount of impermeable surfaces in the City, which could result in future on- and off-site flooding. The City's standard conditions of approval for new development also require the preparation of hydrology studies and drainage analyses that document the peak runoff rates from the developed site and evaluate the capacity of the storm drain system to accept these flow rates. Additionally, TOP 2050 policies would direct the City to incorporate strategies to capture, slow, or treat run-off and to reduce the flooding potential down-gradient of new development. These policies would reduce the potential for on- and off-site flooding during the operational phase of future development projects. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is currently developed; redevelopment of the site would not increase impervious surfaces. According to the Preliminary Hydrology Study prepared by Huitt-Zollars, Inc., included as Appendix G.2, all runoff will be directed to the on-site underground infiltration/detention system between the parking stalls along the western boundary and the paved loading dock section. The overflow from the underground system will discharge through a proposed parkway drain onto South Grove Avenue. A system of catch basins laid around the site will collect and pre-treat stormwater before it enters the underground system via a network of PVC pipes. The existing drainage pattern of the rear bio-swale will be kept by including a pipe that runs along the west boundary of the site from north to south in order to collect stormwater from the northern property and convey it to the southern property. No runoff from the Project site will be allowed to drain onto adjacent properties.

Moreover, the total 100-year peak flow rate tributary to the Project site at proposed condition is approximately 7.95 cfs, which is well below the 80% of existing peak flow (12.86 cfs) requirement for the City. (Huitt-Zollars, 2023b). Therefore, runoff discharge from the Project site would not have an adverse effect to the existing storm drain system downstream. The Project would not substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off-site. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

iii. Create or contribute runoff water which would exceed the capacity or existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff;

Summary of Certified SEIR Finding: The Certified SEIR concluded that projects considered for approval under TOP 2050 would be required to prepare project-specific hydrology and hydraulic studies as required by the City. In compliance with the MS4 Permit and San Bernardino County Stormwater Program, new development projects would also be mandated to install stormwater treatment BMPs that retain the 2-year, 24-hour rainfall event. Because new development in the City would be required to prepare a hydrology study and drainage analysis in accordance with the San Bernardino County Hydrology Manual, no significant impacts would occur. Therefore, TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: As stated above, according to the Project's Preliminary Hydrology Study, included as Appendix G.2, runoff from the implementation of the Project would be below the 80% existing peak flow requirement for the City. Accordingly, the Project would not create or contribute runoff that would exceed the capacity of any existing stormwater drainage system. Consistent with the finding of the Certified SEIR, stormwater generated by the Project will be discharged in compliance with the statewide NPDES General Construction Activities Stormwater Permit and San Bernardino County MS4 permit requirements. With the full implementation of a SWPPP developed in compliance with the General Construction Activities Permit requirements, the BMPs included in the SWPPP, and a stormwater monitoring program would reduce any impacts to below a level of significance. Additionally, projects approved under TOP 2050 would be required to comply with the Santa Ana River Basin Plan and to control pollutants in discharges of stormwater from post-construction activities under NPDES Permit. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

iv. Impede or redirect flood flows?

Summary of Certified SEIR Finding: The Certified SEIR concluded that only small portions of the City adjacent to flood control channels, detention basins, and creeks are in the 100-year floodplain. The western portion of Ontario Ranch is labeled Zone D—undetermined flood hazard—and no hazard analysis has been completed for this area. TOP 2050 include policies to reduce impacts of potential development within 100-year flood zones. Additionally, Chapter 13 of the Ontario Municipal Code requires that a development permit be obtained prior to development in a special flood hazard area to ensure that the site is reasonably safe from flooding and flood

hazards. With implementation of existing policies, the potential for the project to impede or redirect flood flows is considered less than significant. Therefore, TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: According to the Federal Emergency Management Agency (FEMA) flood map No. 06071C8617J, the Project site is located within Zone X, an area of minimal flood hazard (FEMA, 2016). Therefore, the Project would not impede or redirect flood flows and no impact would occur. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the western and southern portions of the City are in the dam inundation zone of San Antonio Dam. The probability of dam failure is very low, and Ontario has never been impacted by a major dam failure. In addition, dam owners are required to maintain emergency action plans that include procedures for damage assessment and emergency warnings. Because the likelihood of catastrophic failure of the San Antonio Dam is very low and the City has emergency action plan (EAP) notification procedures, impacts of release of pollutants due to dam inundation are considered less than significant. The City is inland and approximately 30 miles from the ocean and is not at risk of flooding due to tsunamis. Therefore, impacts associated with the release of pollutants due to inundation would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: As discussed above, the Project site is not in a FEMA flood zone. Additionally, consistent with the findings of the Certified SEIR, there are no large water bodies in the area that could impact the Project site due to a seiche and the Project site is outside of any tsunami hazard zone. Therefore, the Project would not result in a risk of pollutant release due to inundation from a flooding event, tsunami, or seiche zones. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the City's groundwater supplies are from the Chino Groundwater Basin, which is adjudicated and managed by the Chino Basin Watermaster. The Chino Basin is exempt from legislative requirements under the Sustainable Groundwater Management Act (SGMA) because it is an adjudicated basin and is not required to prepare a groundwater sustainability plan. As discussed above, implementation of the SWPPP, and adherence to the City's Erosion and Sediment Control Plan requirements would ensure that surface and groundwater quality are not adversely impacted during construction. Additionally, projects approved under TOP 2050 would be required to comply with the Santa Ana River Basin Plan and to control pollutants in discharges of stormwater from post-construction activities under NPDES Permit. Therefore, implementation of TOP 2050 would not obstruct or

conflict with the RWQCB's Basin Plan or any groundwater management plan, and impacts would be less than significant. TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: As discussed under Response 10a, the Project site is within the Santa Ana River Basin; therefore, Project-related construction and operational activities would be required to comply with the Santa Ana RWQCB's Santa Ana River Basin Water Quality Control Plan by preparing and adhering to an SWPPP and WQMP. Additionally, as discussed previously, implementation of the Project would not conflict with or obstruct the Santa Ana River Basin Water Quality Control Plan.

The Project site is located within the Chino Groundwater Basin. Upon development, the Project site will be connected to the City's public water supply and there will be no onsite wells for use of groundwater. The City manages both the potable and non-potable supplies to ensure withdrawals from the Chino Groundwater Basin do not exceed the safe yield for the Basin, as per the Chino Basin Watermaster's Optimum Basin Management Program (OBMP). Therefore, the Project would not obstruct or conflict with the OBMP. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

11. LAND USE & PLANNING. Would the project:

a. Physically divide an established community?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the changes in land use that would occur upon the implementation of TOP 2050 Land Use Plan would not result in the physical division of an established community. The Land Use Element of TOP 2050 contains policies and programs that encourage the preservation or enhancement of the existing, primarily residential community through infill development, open space opportunities, and development of compatible uses that would reduce the amount of conflict between contradicting land uses and enhance the existing character of Ontario. TOP 2050 would avoid conflicting land uses and would not divide an established community. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is located in an area that is currently developed with urban land uses. Existing commercial/office development borders the site to the north, south, and east with industrial uses to the west. The Project Applicant would redevelop the site with an warehouse building with associated parking and landscaping improvements, consistent with the TOP 2050 land use plan. The Project will be of similar design and size to surrounding development. The Project would not have the potential to physically divide an established community. No adverse impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 is consistent with the majority of Connect SoCal's goals. Additionally, the Airport Planning section of the TOP 2050 Land Use and Mobility Elements includes policies that would ensure airport planning compatibility and consistency. Therefore, TOP 2050 ensures compatibility with ONT and Chino Airport. Impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is designated for Business Park by the TOP 2050 Land Use Plan. The Project Applicant would redevelop the Project site in accordance with the adopted land use designations. The Project would require a Specific Plan Amendment to the Grove Avenue Specific Plan to change the land use designation of 4.2 acres of land from Office/Commercial to Business Park. The Specific Plan Amendment would bring the land use under the Grove Avenue Specific Plan for the Project site into conformance with the TOP 2050 Land Use Plan, which lists the Project site as Business Park (0.6 FAR). Development standards and design guidelines applicable to the Business Park zone under the Grove Avenue Specific Plan would remain the same under the Project. The Project is consistent with the TOP and does not interfere with any policies for environmental protection. As such, no impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

12. MINERAL RESOURCES. Would the project:

a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

Summary of Certified SEIR Finding: The Certified SEIR concluded that there are two areas in Ontario that are designated MRZ-2, where significant mineral resources are known or are likely. The remainder of the City is designated MRZ-3, where the significance of mineral deposits is unknown. Development in an MRZ-3 area would not result in significant impacts because mineral resources of statewide or local importance are not identified on the California Geological Survey's P-C maps. Implementation of TOP 2050 would not result in changes to the existing land use designation or existing conditions of the MRZ-2 areas. Therefore, TOP 2050 would not result in the loss of availability of a known mineral resource in Ontario, and impacts to mineral resources would be less than significant.

Discussion of Effects: The Project site is located within an developed area surrounded by urban land uses. As shown in Figure 5.12-1 of the Ontario Plan 2050 Draft SEIR, the Project site is designated as MRZ-3 (City of Ontario, 2022b). As concluded in the TOP 2050 EIR, development in an MRZ-3 area would not result in significant impacts to mineral resources. Therefore, no impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

Summary of Certified SEIR Finding: As discussed above, the Certified SEIR concluded that implementation of TOP 2050 would not result in the loss of availability of a locally important mineral resource recovery site. Therefore, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: As discussed in Response 12a above, there are no known mineral resources in the area. The Project would not result in the loss of availability of locally-important mineral resources. No impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

13. NOISE. Would the project result in:

The analysis in this section is based on the Noise and Vibration Analysis prepared by Urban Crossroads, Inc. dated June 5, 2023 and is provided in their entirety as Appendix H of this Addendum.

a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Summary of Certified SEIR Finding: The Certified SEIR concluded that construction activities associated with buildout of TOP 2050 would result in temporary noise increases at sensitive receptors. Mitigation Measure 12-4 would reduce potential impacts associated with construction from individual development projects to the extent feasible. However, due to the potential for proximity of construction activities to sensitive uses, the number of construction projects occurring simultaneously, and the potential duration of construction activities, construction activities could still result in a temporary substantial increase in noise levels above ambient conditions and exceedance of the 80 dBA Leq threshold. Therefore, construction noise impacts would remain significant and unavoidable. It should be noted that the identification of this program level impact does not preclude the finding of less-than-significant impacts for subsequent projects analyzed at the project level.

Moreover, TOP 2050 would not result in new type of stationary noise sources than those under TOP; therefore, stationary noise impacts would be less than significant. Additionally, traffic noise level increase would be below the significant threshold and TOP 2050 include policies that would minimize traffic noise impacts. Therefore, operational noise impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: A Project-specific Noise and Vibration Analysis has been prepared by Urban Crossroads for the Project and is included as Appendix H. Redevelopment of the Project site with a new building and associated improvement has the potential to generate elevated noise levels during both near-term construction activities and under long-term operational conditions. Near-term (i.e., temporary) and long-term (i.e., permanent) noise level increases that would be associated with the Project are described below. To assess the potential short-term construction and long-term operational noise impacts, Urban Crossroads identified 5 representative noise-sensitive receiver locations at which the Project's anticipated noise generation was compared against as shown in Figure 10, *Receiver Locations*.

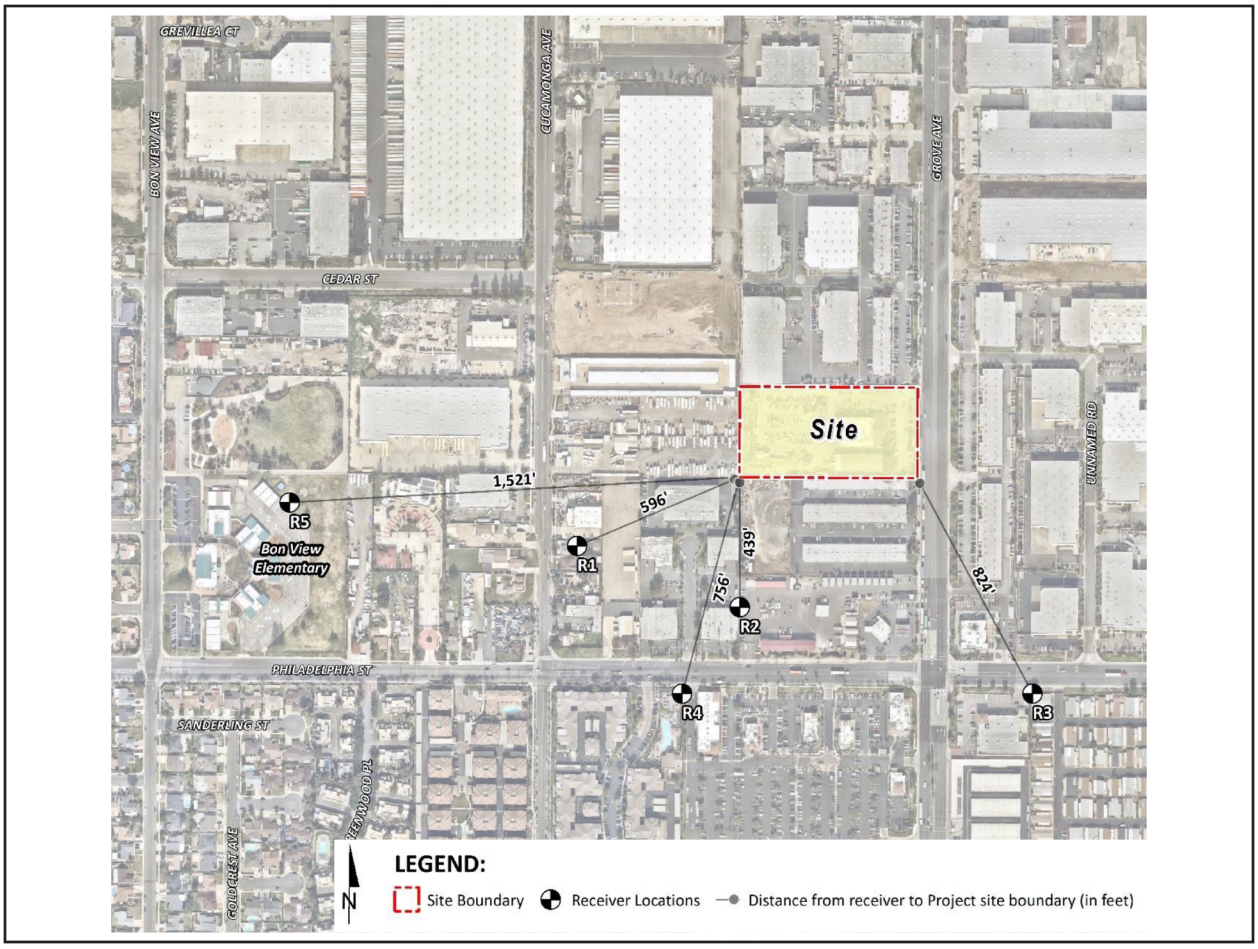

Figure 10: Receiver Locations

Construction Noise Impact

The Project's only potential to cause a substantial temporary or periodic increase in ambient noise levels would occur during the construction phase. Construction activities on the Project site, especially those involving the use of heavy equipment, would create intermittent, temporary increases in ambient noise However, although periodic and temporary construction noise has the potential to be substantial compared to existing ambient noise levels. The Project's construction-related activities are required to comply with the City's Noise Ordinance (Municipal Code Section 5-29.09).

The City of Ontario has set restrictions to control noise impacts associated with construction. Section 5-29.09 of the Municipal Code states: No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m. While the City establishes limits to the hours during which construction activity may take place, it does not identify specific noise level limits for construction noise levels at potentially affected receiver locations for CEQA analysis purposes. Therefore, a numerical construction threshold of 80 decibels (dBA) equivalent sound level (L_{eq}) based on Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment Manual is used for analysis of daytime construction impacts. As shown in Table 13-1, *Construction Noise Level Compliance*, the Project's construction-related noise at the off-site receiver locations will satisfy the 80 dBA L_{eq} significance threshold (Urban Crossroads, 2023b). Therefore, construction noise impacts would be less than significant.

Table 13-1 Construction Noise Level Compliance

Receiver Location[1]	Construction Noise Levels (dBA L_{eq})		
	Highest Construction Noise Levels[2]	Threshold[3]	Threshold Exceeded?[4]
R1	61.2	80	No
R2	63.9	80	No
R3	59.4	80	No
R4	60.2	80	No
R5	54.8	80	No

Operational Noise Impact

Future users of the proposed Project are currently unknown. Therefore, this analysis presents worst-case scenario noise conditions for typical warehouse activities, assuming that the Project would be operational 24-hours per day, 7 days per week. The Project's proposed business operations would primarily be conducted within the enclosed building, except for traffic movement, parking, and loading/unloading of trucks at designated loading bays. The on-site

Project-related noise-sources are anticipated to include: loading dock activity, roof-top air conditioning units, trash enclosure activity, parking lot vehicle movements, and truck movements.

To estimate the Project's operational noise impacts, reference noise level measurements were collected from similar types of activities to represent the noise levels anticipated with the development of the Project. To demonstrate compliance with local noise regulations, the Project-only operational noise levels are evaluated against exterior noise level thresholds based on the City of Ontario exterior noise level standards at nearby noise-sensitive receiver locations. Section 5-29.04(a) identifies the allowable daytime and nighttime ambient exterior noise standards for each land use type. For residential land uses (Noise Zone I), ambient exterior noise levels may not exceed 65 dBA Leq during the daytime hours (7:00 a.m. to 10:00 p.m.), and may not exceed 45 dBA Leq during the nighttime hours (10:00 p.m. to 7:00 a.m.). Table 13-2, *Operational Noise Level Compliance*, shows the operational noise levels associated with the Project will satisfy the City of Ontario exterior noise level standards adjusted to reflect the ambient noise conditions (Urban Crossroads, 2023b). Therefore, operational noise impacts would be less than significant.

Table 13-2 Operational Noise Level Compliance

Receiver Location[1]	Project Operational Noise Levels (dBA L_{eq})[2]		Noise Level Standards (dBA L_{eq})[3]		Noise Level Standards Exceeded?[4]	
	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime
R1	55.7	55.6	63.7	59.2	No	No
R2	58.0	57.9	61.8	60.0	No	No
R3	48.6	48.5	72.1	67.2	No	No

Source: (Urban Crossroads, 2023b , Table 7-4)

Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required. The following mitigation measure from the Certified SEIR is applicable to the Project:

MM 12-4 Construction activities associated with new development that occurs near sensitive receptors shall be evaluated for potential noise impacts. Construction contractors shall implement the following measures for construction activities in the City of Ontario. Construction plans submitted to the City shall identify these measures on demolition, grading, and construction plans. The City of Ontario Planning and Building Departments shall verify that grading, demolition, and/or construction plans submitted include these notations prior to issuance of demolition, grading, and/or building permits.

- Construction activity is limited to the hours between 7:00 am and

6:00 pm Monday through Friday and 9:00 am to 6:00 pm Saturdays and Sundays, as prescribed in Municipal Code Section 5-29.09.

- During the entire active construction period, equipment and trucks used for project construction shall use the best-available noise control techniques wherever feasible (e.g., improved mufflers, equipment re-design, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds).

- Impact tools (e.g., jack hammers and hoe rams) shall be hydraulically or electrically powered wherever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools.

- Stationary equipment such as generators and air compressors shall be located as far as feasible from nearby noise-sensitive uses.

- Stockpiling shall be located as far as feasible from nearby noise-sensitive receptors.

- Construction traffic shall be limited, to the extent feasible, to approved haul routes established by the City's Engineering Department.

- At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report the action to the City.

- Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes.

- During the entire active construction period and to the extent feasible, the use of noiseproducing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level or switch off back-up alarms and replace with human spotters in compliance with all safety requirements and laws.

- Erect temporary noise barriers (at least as high as the exhaust of equipment and breaking line-of-sight between noise sources and sensitive receptors), as necessary and feasible, to maintain construction noise levels at or below the performance standard of 80 dBA Leq. Barriers shall be constructed with a solid material that

has a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier and may be lined on the construction side with an acoustical blanket, curtain, or equivalent absorptive material.

MM 12-4 has been met through preparation of First Grove Noise and Vibration Analysis prepared by Urban Crossroads, Inc. provided in Appendix H. No construction-related noise impacts have been identified in the technical report.

b. Generation of excessive groundborne vibration or groundborne noise levels?

Summary of Certified SEIR Finding: The Certified SEIR concluded that construction activity at projects within TOP 2050 plan area would generate varying degrees of ground vibration, depending on the construction procedures and equipment. TOP 2050 would have similar impacts as the TOP because specific project-level data for individual developments for TOP 2050 (such as construction equipment) are not available, and construction could generate excessive vibration levels at sensitive receptor locations. Vibration-related noise impacts during construction that would accommodate buildout of TOP 2050 would be potentially significant. Mitigation Measure 12-2 would reduce potential impacts associated with construction vibration from individual development projects to the extent feasible. However, due to the potential for proximity of construction activities to sensitive uses, the number of construction projects occurring simultaneously, and the potential duration of construction activities, impacts would remain significant and unavoidable and would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR. It should be noted that the identification of this program-level impact does not preclude the finding of less-than-significant impacts for subsequent projects analyzed at the project level.

Commercial and industrial operations would generate varying degrees of ground vibration, depending on the operational procedures and equipment. The Certified EIR found that the majority of industrial uses would not be immediately adjacent to vibration-sensitive uses, the use of heavy equipment associated with industrial activities would occur indoors, and no significant vibration impacts would occur from vibration generated by industrial uses. TOP 20050 would not result in new or a substantial increase in magnitude of impacts compared to that of TOP. Therefore, vibration impacts during operation would be less than significant and would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: According to the Federal Transit Administration (FTA), vibration is the period oscillation of a medium or object. Sources of ground-borne vibrations include natural phenomena (e.g., earthquake, landslides, sea waves) or human-made causes (e.g., explosions, machinery, traffic, trains, construction equipment). To analyze vibration impacts originating from the operation and construction of the Project, vibration generating activities are evaluated based on Caltrans methodology. The Caltrans Transportation and Construction Vibration Guidance Manual provide guidelines for the maximum-acceptable vibration criteria. The nearest noise sensitive buildings adjacent to the Project site can best be described as "older residential structures" with a maximum acceptable continuous vibration threshold of 0.3 PPV (in/sec).

Construction-Related Vibration Impacts

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods employed. Operation of construction equipment causes ground vibrations that spread through the ground and diminish in strength with distance. Table 13-4, *Project Construction Vibration Levels*, presents the expected Project related vibration levels at the

nearby receiver locations. At distances ranging from 439 to 1,521 feet from Project construction activities, construction vibration velocity levels are estimated to range from 0.000 to 0.001 in/sec PPV. Based on maximum acceptable continuous vibration threshold of 0.3 PPV (in/sec) per the Caltrans Transportation and Construction Vibration Guidance Manual, the typical Project construction vibration levels will fall below the building damage thresholds at all the noise sensitive receiver locations. Therefore, the Project-related vibration impacts would be less than significant during typical construction activities at the Project site. Moreover, the vibration levels reported at the sensitive receiver locations are unlikely to be sustained during the entire construction period but will occur rather only during the times that heavy construction equipment is operating adjacent to the Project site perimeter (Urban Crossroads, 2023b).

Table 13-4 Project Construction Vibration Levels

Receiver[1]	Distance to Const. Activity (Feet)[2]	Typical Construction Vibration Levels PPV (in/sec)[3]					Thresholds PPV (in/sec)[4]	Thresholds Exceeded?[5]
		Small bulldozer	Jackhammer	Loaded Trucks	Large bulldozer	Highest Vibration Level		
R1	596'	0.000	0.000	0.001	0.001	0.001	0.3	No
R2	439'	0.000	0.000	0.001	0.001	0.001	0.3	No
R3	824'	0.000	0.000	0.000	0.000	0.000	0.3	No
R4	756'	0.000	0.000	0.000	0.001	0.001	0.3	No
R5	1,521'	0.000	0.000	0.000	0.000	0.000	0.3	No

[5] Does the peak vibration exceed the acceptable vibration thresholds?
"PPV" = Peak Particle Velocity
Source: (Urban Crossroads, 2023b , Table 8-6)

Operational-Related Vibration Impacts

Under long-term conditions, the Project would not include nor require equipment, facilities, or activities that would result in substantial or perceptible ground-borne vibration. Trucks would travel to-and-from the Project site during long-term operation; however, vibration levels for heavy trucks operating at low to-normal speeds on smooth, paved surfaces, as expected on the Project site and surrounding roadways typically do not exceed the Caltrans vibration thresholds. As concluded in the Certified SEIR, industrial uses do not normally induce significant groundborne vibrations because they do not typically involve equipment or activities which result in large vibrations. Accordingly, long-term operation of the Project would not expose persons or generate excessive groundborne vibration or groundborne noise levels, and a less than significant impact would occur.

Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Summary of Certified SEIR Finding: The Certified SEIR concluded that implementation of TOP 2050 could expose noise sensitive uses to excessive noise levels from the Ontario International Airport. With the implementation of Mitigation Measure 12-1, impacts to future sensitive receptors from excessive airport-related noise would be reduced to interior noise levels of 45 dBA CNEL or less. While interior noise levels are required to achieve the interior noise limits of Title 24 and Title 25, exterior noise levels may continue to exceed the noise compatibility criteria for the City. Consequently, airport noise compatibility impacts would remain significant and unavoidable, and would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: According to the Ontario International Airport (ONT) Land Use Compatibility Plan (ALUCP), the Project site is located within the ONT Airport Influence Area (City of Ontario, 2011). Moreover, the Project site is located outside of the 65 CNEL noise impact zone and is subject to the Noise Criteria established on Table 2-3 in the ONT ALUCP. According to Table 2-3 of the ONT ALUCP, industrial land uses located outside the 65 dBA CNEL noise level contours of ONT, such as the Project, are considered normally compatible land use. For normally compatible land uses, either the activities associated with the land use are inherently noisy or standard construction methods will sufficiently attenuate exterior noise to an acceptable indoor community noise equivalent level (CNEL). Moreover, as discussed under Response 13a, the Project would not result in a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established. Therefore, the Project would not expose people residing or working in the project area to excessive noise levels and impacts would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

14. POPULATION & HOUSING. Would the project:

a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?

Summary of Certified SEIR Finding: The Certified SEIR concluded that implementation of TOP 2050 accommodates population growth through land use designations, goals, and policies that provide a vision and guide growth in the City. TOP 2050 would increase population, dwelling units, and nonresidential buildings but would result in a small decrease in employment. Although the increase in population, housing, and employment under TOP 2050 would exceed SCAG's regional forecasts for the City of Ontario, TOP 2050 would improve the job-housing balance. Consequently, impacts would be less than significant and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project would result in the development of an approximately 61,867 s.f. warehouse facility and does not include a residential component that would increase population growth. Based on the Southern California Association of Governments' (SCAG) Employment Density Study of 1 employee per 1,195 square feet for warehouse use, the Project would generate approximately 61 direct jobs According to the California Employment

Development Department (EDD), as of December 2022, the City of Ontario has a labor force of 94,700 persons and of that labor force, 3,300 are unemployed (unemployment rate of 3.2 percent)(EDD, 2022). According to SCAG's 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy, the City of Ontario is anticipated to employ approximately 169,300 persons by 2045 (SCAG, 2020). Additionally, the TOP 2050 projected 296,002 employees in 2050. Therefore, the Project is consistent with both the SCAG's 2045 and TOP 2050 employment projections for the City. Project-generated jobs are well within the employment projections for the City of Ontario. Operation of the Project would not induce substantial unplanned population growth in the Project area, either directly or indirectly and would not exceed regional or local growth projections. Therefore, no impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Summary of Certified SEIR Finding: The Certified SEIR concluded that land use changes under TOP 2050 would increase opportunities for housing in the City—for example, by converting shopping centers to mixed-use and increasing residential density in existing residential areas and religious properties. The TOP 2050 Land Use Plan would provide land use designations for a variety of housing types and provide for additional residential opportunities throughout Ontario. TOP 2050 includes the following policies supporting an increase in the provision of housing and diversity of housing opportunities in the City. Therefore, impacts would be less than significant and would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site does not contain any housing and there are no people living at the Project site that would be displaced by the Project. Therefore, no impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

15. PUBLIC SERVICES. Would the project:

a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

i. Fire protection?

Summary of Certified SEIR Finding: Fire prevention services are provided by the Ontario Fire Department (OFD). The Certified SEIR concluded that based on correspondence with the OFD, existing conditions would not be adequate to meet such increased demands from the implementation of TOP 2050. The OFD's recommendation is that three additional fire stations would be needed in the Ontario Ranch to meet projected needs. While the construction of future facilities could result in potential environmental impacts, future environmental review would occur once specific locations have been determined. Without a definitive location for the development

of future facilities, the analysis of potential impacts is too speculative to conduct. Future projects would be reviewed by the City and the OFD on an individual basis and would be required to comply with requirements in effect at the time building permits are issued, including the payment of development impact fees (DIF) that contribute to funding for additional staffing, facilities, and equipment. Therefore, impacts to fire protection services would be less than significant and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project Applicant would develop the Project site in accordance with TOP 2050 land use plan. Accordingly, the development activities proposed by the Project were planned by TOP 2050 and, thus, the Project's demand for fire protection services was anticipated by the Certified SEIR. Additionally, the Project site is not located within the Ontario Ranch area. The proposed building would be in accordance with the applicable provisions of the adopted California Fire Code (CFC) and the City's Municipal Code Section 4-4.01, ordinances, and standard conditions regarding fire prevention and suppression measures related to water improvement plans, fire hydrants, fire access, and water availability. The Project will not require the construction of any new fire protection facilities or alteration of any existing fire protection facilities or cause a decline in the levels of service, which could cause the need to construct new fire protection facilities. Consistent with the findings of the Certified SEIR, DIF would also be collected in order to build and supply necessary infrastructure for fire protection services, as necessary. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

ii. Police protection?

Summary of Certified SEIR Finding: Police protection services are provided by the Ontario Police Department (OPD). The Certified SEIR concluded that according to correspondence with the OPD as part of this project, the OPD currently has enough staffing to meet current demands but would require additional staffing as population increases to accommodate buildout of TOP 2050. There are current plans for adding a substation in Downtown Ontario and Ontario Ranch. While the construction of future facilities could result in potential environmental impacts, future environmental review would occur once specific locations have been determined. Without a definitive location for the development of future facilities, the analysis of potential impacts is too speculative to conduct. Future development would also be subject to development impact fees which pay for police services. Therefore, impacts to police protection services would be less than significant and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project Applicant would develop the Project site in accordance with TOP 2050 land use plan. Accordingly, the development activities proposed by the Project were planned by TOP 2050 and, thus, the Project's demand for police protection services was anticipated by the Certified SEIR. Additionally, the Project is not located within the Downtown Ontario and Ontario Ranch areas. The Project plans would be reviewed and approved by the City's Building and Police Departments, which would ensure that adequate safety and crime prevention measures are provided within the Project's design. The Project will not require the construction of any new police protection facilities or alteration of any existing police protection facilities or cause a decline in the levels of service, which could cause the need to construct new police protection facilities. Consistent with the findings of the Certified SEIR, DIF would also be collected in order to build and supply necessary infrastructure for police protection

services, as necessary. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

iii. Schools?

Summary of Certified SEIR Finding: As part of the development of this SEIR, the City reached out to the five school districts that serve residents of Ontario to obtain existing conditions information and information on potential impacts. Current enrollment for all three of these school districts is below capacity and the capacity of the schools in addition to any already planned construction projects would be able to accommodate the increased population due to the implementation of TOP 2050. However, it is possible that Ontario-Montclair School District and Cucamonga School District would need additional facilities. Developers would be required to pay the impact fees levied by each school district, set within the limits of SB 50. The Certified SEIR concluded that although the increased demand on school facilities would have the potential to impact one or more of the school districts that serve Ontario, payment of impact fees in compliance with SB 50 would reduce the impacts to an acceptable level. Therefore, impacts to school services would be less than significant and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The City is served by the Ontario-Montclair School District. The Project Applicant proposes to demolish the existing industrial buildings and redevelop the site with a single industrial building. Implementation of the Project does not have the potential to result in substantial direct growth in the population, nor an increase in the student population. The Project Applicant would develop the Project site in accordance with TOP 2050 land use plan and, thus, the Project's indirect demand for public school services was anticipated by the Certified SEIR. The Project would be required to pay school fees as prescribed by state law prior to the issuance of building permits. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

iv. Parks?

Summary of Certified SEIR Finding: Park service were discussed under the Recreation section of the Certified SEIR. The Certified SEIR concluded that impacts to recreation would be less than significant and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR. Details on the summary findings are discussed below in Section 16.

Discussion of Effects: The Project would develop the Project site in accordance with TOP 2050 land use plan and would not introduce new residents to the City necessitating the need for additional parks. The Project will not require the construction of any new parks or alteration of any existing parks or cause a decline in the levels of service, which could cause the need to construct new park facilities. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

v. Other public facilities?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the Ontario library system is currently not meeting the goal of 0.6 square feet of library facilities per capita. Buildout of TOP 2050 would result in an increase in demand for library services in the City of Ontario based on an increase in population. Environmental impacts could result from the construction of future facilities; however, the location and size of potential future facilities is currently unknown, and each project would have to complete applicable environmental review under CEQA when it is determined. Future projects would be reviewed by the City of Ontario on an individual basis and would be required to comply with requirements in effect at the time building permits are issued (i.e., payment of development impact fees). Since adequate services would be provided and payment of development impact fees would offset the costs associated with library services, impacts on library services would be less than significant. Therefore, implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project would develop the Project site in accordance with TOP 2050 land use and would not introduce new residents to the City necessitating the need for additional public facilities. The Project will not require the construction of any new public facilities or alteration of any existing public facilities or cause a decline in the levels of service, which could cause the need to construct new public facilities. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

16. RECREATION. Would the project:

a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Summary of Certified SEIR Finding: The Certified SEIR concluded that future growth in the City in accordance with buildout of TOP 2050 would increase the demand for parks and increase existing park usage. TOP 2050 would designate approximately 900 acres for recreational uses under the Open Space – Recreation (OS-R) land use designation. Additionally, new development in Ontario Ranch provides an additional two acres per 1,000 residents for private parks in addition to the City's three acres per 1,000 residents for public parks. There are also at least 180 acres of regional recreational facilities, joint-use agreements with school districts, and private recreational opportunities providing services that cannot be accommodated by existing facilities. As a result, development of park facilities would keep pace with the anticipated increase in population from buildout of TOP 2050. Therefore, impacts would be less than significant, and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project would develop the Project site in accordance with the TOP 2050 land use plan. Accordingly, the development activities proposed by the Project were planned by TOP 2050 and, thus, the Project's indirect demand for parks was anticipated by the Certified SEIR. The Project is not proposing any significant new housing or large employment generator that would cause an increase in the use of neighborhood parks or other recreational facilities. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Does the project include recreational facilities or require the construction or expansion of recreational facilities that have an adverse physical effect on the environment?

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 includes planned park facilities; however, it is speculative to determine the location of proposed park facilities in the City and impacts arising from development of individual park projects. Existing federal, state, and local regulations as well as goals, policies, and actions in TOP 2050 would mitigate potential adverse impacts to the environment that may result from buildout of TOP 2050, including expansion of parks, recreational facilities, and multiuse trails. Furthermore, subsequent environmental review would be required for development of park projects under the TOP 2050 Land Use Plan. Therefore, impacts would be less than significant, and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project does not include recreational facilities or require the construction or expansion of recreational facilities. Implementation of the Project would not result in any adverse physical effects on the environment due to the construction of recreational facilities. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

17. TRANSPORTATION/TRAFFIC. Would the project:

a. Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 includes policies to encourage and provide access to the regional transit network, to enhance connectivity to the City's nonmotorized transportation network, and proposes the changes to the Mobility Element that have the potential to affect infrastructure projects identified in the Regional Transportation Plan. Therefore, TOP 2050 would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects:

Project Trip Generation

Trip generation represents the amount of traffic that is attracted to and produced by a development project. The Institute of Transportation Engineers (ITE) Trip Generation Manual (2021) includes a trip generation rate for general light industrial uses (ITE land use code 110). According to the Project's Trip Generation Assessment, included as Appendix I.1, the Project is anticipated to generate a total of 326 two-way trips per day with 46 Passenger Car Equivalent (PCE) AM peak hour trips and 41 PCE PM peak hour trips. However, when accounting for existing conditions, the Project is anticipated to generate 101 fewer two-way trips per day with 6 fewer AM peak hour trips and 10 fewer PM peak hour trips in comparison to the existing uses (in PCE). Per the City's Guidelines, the trip generation comparison is based on PCE as the existing and proposed uses are truck-intensive uses and any operations analysis performed (if necessary) would utilize PCE values. Additionally, when comparing to buildout of the site assumed under TOP 2050, the Project is

anticipated to generate 182 fewer two-way trips per day with 34 fewer AM peak hour trips and 29 fewer PM peak hour trips (in PCE).

The City of Ontario adheres to the County's Transportation Impact Study Guidelines which has been used to determine whether additional traffic analysis is necessary for the proposed Project. The County's Guidelines indicate that development projects that generate a net increase of 100 or more peak hour vehicle trips (without pass-by reductions) would require the preparation and submittal of a Transportation Impact Analysis. The Project is anticipated to generate fewer than 50 net new peak hour trips during the morning and evening peak hours. The Project on its own, without taking any credit for existing uses, also generates fewer than 100 new peak hour trips (both in actual vehicles and PCE). Lastly, the proposed Project uses are anticipated to generate fewer trips than the adopted TOP 2050 land use (Business Park). As such, additional peak hour traffic operations analysis is not necessary based on the thresholds and standards included in the County's Guidelines (Urban Crossroads, 2023c). Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Bicycle and Pedestrian Facilities

The Project site is not located along a bikeway. The closest designated bikeway to the Project site is a Class I trail located at West Cucamonga Channel, approximately 0.5 mile to the east. The Project would be confined to the Project site and would not affect or conflict with existing or planned bikeways. In addition, the Project would provide bike rack to accommodate bicycle access to the Project stie.

The Project site features (buildings, parking areas, etc.) would be connected by ADA compliant sidewalks and striped crosswalks within the parking areas to the existing ensure pedestrian access throughout Project site. Additionally, the Project would install sidewalk on South Grove Avenue. Implementation of the Project would not interfere with the City's Active Transportation Plan. No impacts would occur.

Transit

Transit service to the City is provided by OmniTrans. The closest bus route to the Project site is Route 87 with a bus stop located at the intersection of South Grove Avenue and East Francis Street, approximately 0.31 mile north of the Project site. The City of Ontario strives to provide a transit system that serves as a viable alternative to automobile travel. The Project would support transit use by improving existing pedestrian and bicycle facilities in the Project area. The Project would not introduce new features to any public road that would affect transit in the Project area. As such, a less than significant impact would occur.

As demonstrated, the Project would not conflict with the City's Mobility Element, and impacts associated with conflict of an applicable program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities would be less than significant. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

Summary of Certified SEIR Finding: The Certified SEIR concluded that there is a net increase in citywide Boundary VMT primarily due to the increase in population accommodated by TOP 2050. Mitigation Measure T-1 would reduce potential impacts for future development projects to the extent feasible. Future development projects consistent with TOP 2050 would need to consider transportation demand management (TDM) measures consistent with those identified in the Mobility Element. TDM techniques include incentives to use transit; incentives to form carpools rather than drive alone; and making home, work, and shopping closer together to shorten travel distances. Because the VMT impact is citywide, mitigation measures to reduce VMT would need to focus on changing or improving the citywide travel patterns, transportation network, or infrastructure. Given the uncertainty of the effectiveness of implementing these types of mitigation measures at a citywide level and of their effectiveness at reducing citywide VMT, VMT impacts would remain significant and unavoidable.

Discussion of Effects: The City Guidelines lists standardized screening methods for project level VMT analysis that can be used to identify when a proposed land use development project is anticipated to result in a less than significant impact, thereby eliminating the need to conduct a full VMT analysis. The City of Ontario VMT screening criteria, as described within the City Guidelines, are listed below:

- Transit Priority Area (TPA) Screening
- Low VMT Area Screening
- Project Type Screening

A land use project need only meet one of the above screening criteria to result in a less than significant impact.

TPA Screening

Consistent with guidance identified in the City Guidelines, projects located within a Transit Priority Area (TPA) (i.e., within ½ mile of an existing "major transit stop" or an existing stop along a "high-quality transit corridor"[1]) may be presumed to have a less than significant impact absent substantial evidence to the contrary. However, the presumption may not be appropriate if a project:

- Has a Floor Area Ratio (FAR) of less than 0.75;
- Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking);
- Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization); or
- Replaces affordable residential units with a smaller number of moderate or high-income residential units.

Based on the secondary criteria outlined in the City Guidelines, the Project does not meet the secondary criteria of having an FAR at or above 0.75, regardless of the Project being physically

[1] Pub. Resources Code, § 21155 ("For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.").

located in a TPA.

Low VMT Area Screening

City Guidelines state that projects may be presumed to have a less than significant VMT impact if located in an already low VMT generating traffic analysis zone (TAZ). City Guidelines recognize low VMT areas as those that generate a VMT per service population (i.e., population and employment) that is 15% below County of San Bernardino Baseline VMT per service population or 33.3 VMT per service population. The San Bernardino Transportation Analysis Model (SBTAM) is used to measure VMT performance in individual TAZs within the region. The Project's physical location was identified in the SBTAM model to determine the TAZ where the Project is located. The Project TAZ 53663401 is then calculated using Origin-Destination (OD) trip matrices to obtain total OD VMT. The resulting total OD VMT is divided by the Project TAZ's service population. The Project TAZ 53663401 has a VMT per service population of 54.8, which exceeds the threshold of 33.3 VMT per service population. As a result, the Project is not located within a low VMT generating zone. Therefore, the Project would not meet the Low VMT Area Screening threshold.

Project Type Screening

The City Guidelines identify that local serving retail less than 50,000 square feet or other local serving essential services (e.g., day care centers, public schools, medical/dental office buildings, etc.) are presumed to have a less than significant impact absent substantial evidence to the contrary. The Project as intended does not contain any local serving uses. Additionally, the City Guidelines state that small projects generating fewer than 110 daily vehicle trips or less may be presumed to have a less than significant impact. The Project is anticipated to generate 204 fewer two-way trips per day as compared to the adopted TOP 2050 in actual vehicles.[2] Therefore, the Project's estimated trips will not exceed the City's 110 net new daily vehicle trip threshold and the Project would meet the Project Type Screening threshold. (Urban Crossroads, 2023d) The Project VMT impact would be less than significant and would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. Substantially increase hazards due to a geometric design feature (e. g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Summary of Certified SEIR Finding: The Certified SEIR concluded that majority of the population growth associated with TOP 2050 would occur in Ontario Ranch and there are substantial improvements in transportation infrastructure planned to accommodate the increase in population in the City in the event of an emergency. Additionally, the City has adopted roadway classification standards in Policy M-1.1 that include roadway design standards as part of TOP 2050, precluding the construction of any unsafe features. Therefore, impacts would be less than significant, and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project's potential to increase hazards as a result of a geometric design feature has been assessed to provide adequate truck access/circulation. The Project's circulation plan has been designed to be compatible with all foreseeable vehicles. Vehicular

[2] For informational purposes, the Project would also generate 66 fewer two-way trips per day as compared to the existing use.

access will be provided via 2 driveways on South Grove Avenue. The southern driveway would be restricted to passenger vehicles only. The northern driveway is 40 feet wide and designed to accommodate the wide turning radius of the heavy trucks.

The Project area is generally characterized by industrial uses. Traffic generated by the Project would be typical of a warehouse and be compatible with the type of traffic generated by the existing and surrounding development. In addition, all proposed improvements within the public right-of-way would be installed in conformance with City design standards. The City of Ontario Engineering Department reviewed the Project's application materials and determined that no hazardous transportation design features would be introduced by the Project. At the time of final grading, landscape, and street improvement plans; the City will further review project access points to ensure adequate sight distance. Accordingly, the Project would not create or substantially increase safety hazards due to a design feature or incompatible use and impacts would be a less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. Result in inadequate emergency access?

Summary of Certified SEIR Finding: The Certified SEIR concluded that a review of emergency access is included as part of the City's Design Review process. According to the City's Local Hazard Mitigation Plan, interstate highways would serve as major emergency response and evacuation routes. Additionally, the Ontario Fire Department reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance. Therefore, impacts would be less than significant, and implementation of TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project will be designed to provide access for all emergency vehicles and meet all applicable City of Ontario Fire and Police Department access requirements to ensure that adequate access would be provided for emergency vehicles at Project build out. During construction activities that include road and sidewalk improvements, the Project would provide adequate emergency access along abutting roadways during temporary construction activities. As concluded in the Certified SEIR, the Ontario Fire Department reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance. As a result, the Project would not a less than significant impact to emergency access. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

18. TRIBAL CULTURAL RESOURCES. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

Summary of Certified SEIR Finding: The Certified SEIR concluded that result of the Sacred Lands File (SLF) check conducted through the Native American Heritage Commission (NAHC) was negative. In accordance with AB 52 and SB 18 requirements, the City sent invitation letters to the

Native American contacts provided by the NAHC. Grading and construction activities in undeveloped areas or redevelopment that requires deeper soil excavation than in the past have the potential to disturb tribal cultural resources. Mitigation Measures 5-3 and 5-4 and new Mitigation Measures TCR-1 and TCR-2 would reduce potential impacts associated with tribal cultural resources to a level that is less than significant. Therefore, no significant unavoidable adverse impacts relating to tribal cultural resources remain.

a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?

Discussion of Effects: As analyzed in Response 5.a, there are no resources on the Project site that are eligible for listing in the California Register of Historical Resources or in a local register of historical resources as defined by Public Resources Code Section 5020.1(k). Implementation of the Project would not result in a substantial adverse change in the significance of a listed historical resource. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Discussion of Effects: As discussed in Response 5.a, no resources were recorded in the Project site or within one mile of the Project site. However, since the Project would require excavation for construction into previously undisturbed soils, there is a potential to uncover undiscovered prehistoric artifacts or tribal cultural resources during excavation. Therefore, while unlikely, the presence of subsurface tribal cultural resources on the Project site remains possible, and these could be affected by ground-disturbing activities associated with grading and construction at the Project site. As a result, consistent with the findings of the Certified SEIR, implementation of Mitigation Measures 5-3, 5-4, TCR-1 and TCR-2 would preclude potential impacts to tribal cultural resources as defined in Public Resources Code 5024.1(c). Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required. The following mitigation measure from the Certified SEIR is applicable to the Project:

MM 5-3 Upon receipt of an application for a proposed project subject to CEQA and within the City's jurisdiction, the City's representative shall consult with the relevant tribe(s)' representative(s) to determine if the proposed project is within a culturally sensitive area to the tribe. If sufficient evidence is provided to reasonably ascertain that the site is within a tribal culturally sensitive area, an archaeologist shall prepare then a cultural resources assessment. The findings of the cultural resources assessment shall be incorporated into the CEQA documentation. A copy of the report shall be forwarded to the tribe(s). If mitigation is recommended in the CEQA document, the procedure described in Mitigation Measure 5-4 shall be

followed.

MM 5-4 Prior to the issuance of grading permits for a proposed project for which the CEQA document defines cultural resource mitigation for potential tribal resources, the project applicant shall contact the designated tribe(s) to notify them of the grading, excavation, and monitoring program. The applicant shall coordinate with the City of Ontario and the tribal representative(s) to develop mitigation measures that address the designation, responsibilities, and participation of tribal monitors during grading, excavation, and ground-disturbing activities; scheduling; terms of compensation; and treatment and final disposition of any cultural resources, sacred sites, and human remains discovered on the site. The City of Ontario shall be the final arbiter of the conditions for projects within the City's jurisdiction.

TCR-1 Tribal Cultural Resources Monitoring. The project archaeologist, in consultation with interested tribes, the developer, and the City of Ontario, shall develop an Archaeological Monitoring Plan (AMP) to address the details, timing, and responsibility of archaeological and cultural activities that will occur on the project site. Details in the AMP shall include:

1. Project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) and development scheduling;

2. The development of a rotating or simultaneous schedule in coordination with the developer and the project archeologist for designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all project archaeologists (if the tribes cannot come to an agreement on the rotating or simultaneous schedule of tribal monitoring, the Native American Heritage Commission shall designate the schedule for the onsite Native American Tribal Monitor for the proposed project);

3. The protocols and stipulations that the developer, City, Tribes, and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.

At least 30 days prior to application for a grading permit and before any brush clearance, grading, excavation, and/or ground disturbing activities on the site, the developer shall retain a tribal cultural monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources.

Pursuant to the AMP, a tribal monitor from the consulting tribe shall be present during the initial grading activities. If tribal resources are found during grubbing activities, the tribal monitoring shall be present during site grading activities.

TCR-2 Treatment and Disposition of Cultural Resources. In the event that Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., for the proposed project, the following procedures will be carried out for treatment and disposition of the discoveries:

1. Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process;

2. Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and nonhuman remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Ontario with evidence of same:

    a. Accommodate the process for on-site reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloging, basic analysis, other analyses as recommended by the project archaeologist and approved by consulting tribes, and basic recordation have been completed; all documentation should be at a level of standard professional practice to allow the writing of a report of professional quality;

    b. A curation agreement with an appropriate qualified repository in San Bernardino County that meets federal standards per 36 CFR Part 79, and therefore the resource would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility in San Bernardino County, to be accompanied by payment of the fees necessary for permanent curation;

    c. For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, materials shall be curated at the San Bernardino County Museum by default;

    d. At the completion of grading, excavation, and ground-disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources

recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pregrade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the City, County Museum, and consulting tribes.

19. UTILITIES AND SERVICE SYSTEMS. Would the project:

a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 would result in an overall increase in the number of residential dwellings and nonresidential square footage. The TOP 2050 has policies in place to require improvements to sewer infrastructure as part of new development and redevelopment projects and has processes in place to ensure that any sewer improvement projects are implemented prior to or during new development. With funding from sewer connection/usage fees and the Capital Improvements Program (CIP) budget, the City would continue to expand and improve the sewer infrastructure to accommodate new development and future growth. Therefore, there would be no significant impacts on wastewater infrastructure.

Due to the increase in demand for potable and recycled water, the City and the IEUA have made plans for infrastructure expansion and improvement. As part of the land development approval process, the City determines a project's fair-share costs and connection fees. Through the use of connection fees and agreements, the City maintains and expands its water distribution system as necessary and is able to ensure that new developments pay their fair-share costs. Therefore, impacts related to water infrastructure expansion and improvement caused by the implementation of TOP 2050 would be less than significant.

Potential future development and the change in land uses could result in an increase in impervious surfaces. Future developments would be required to comply with the City's storm drain policies and the MS4 permit, which would require the preparation of hydrology reports and drainage plans for review and approval by the City to ensure that there are no adverse impacts to the City's storm drain system. Also, the developers would need to prepare a WQMP that addresses stormwater runoff and requires the construction of stormwater treatment facilities for temporary on-site retention of stormwater runoff. These requirements would minimize the amount of stormwater runoff from potential future development. Compliance with the City's policies and programs that ensure adequate infrastructure and the regulatory provisions in the MS4 permit that limit runoff from new development would ensure that implementation of TOP 2050 would not result in significant increases in runoff that would contribute to the construction or expansion of new storm drains beyond what is already planned. Therefore, impacts with respect to stormwater infrastructure would be less than significant.

Discussion of Effects:

Water and Wastewater

The Project would include the installation of water and wastewater lines within the Project site. Water would be accommodated via proposed water lines that would extend from the eastern portion of the building and proposed fire hydrants to an existing 6-inch water main on

South Grove Avenue. Sewer would be accommodated via proposed sewer lines that would extend from the northwestern and northeastern corners of the building to an existing 10-inch sewer main on South Grove Avenue.

Although the Project would result in new water and wastewater line connections, these connections would occur on-site and would be part of the Project's construction phase, which is evaluated throughout this Addendum. The construction of the Project's water and wastewater lines necessary to serve the Project would not result in any significant physical effects on the environment that are not already identified and disclosed as part of this Addendum. Impacts would be less than significant.

Stormwater Drainage

Stormwater will be directed to the on-site underground infiltration/detention system between the parking stalls along the western boundary and the paved loading dock section. The overflow from the underground system will discharge through a proposed parkway drain onto South Grove Avenue. A system of catch basins laid around the site will collect and pre-treat stormwater before it enters the underground system via a network of PVC pipes. The existing drainage pattern of the rear bio-swale will be kept by including a pipe that runs along the west boundary of the site from north to south in order to collect stormwater from the northern property and convey it to the southern property.

Refer to the analysis under Section 10, Hydrology and Water Quality Threshold c.ii, above. As discussed, stormwater runoff would be treated on site and would not require relocation or construction of new or expanded storm water drainage infrastructure which could cause significant environmental effects. Impacts would be less than significant.

Dry Utilities

Electricity will be provided by Southern California Edison. Connections to the existing utility networks are available in the Project area and any offsite improvements would occur within improved rights-of-way, which are inherent to the Project's construction phase and have been evaluated throughout this Addendum. Because the Project site has been previously developed with industrial uses that requires electric power and telecommunication services, implementation of the Project is not anticipated to limit the ability of service providers to provide service to Project. Therefore, the Project would not require or result in the construction or expansion of new facilities, and impacts would be less than significant.

Based on the preceding, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Summary of Certified SEIR Finding: The Certified SEIR concluded that total water demand associated with TOP 2050 would result in a increase of approximately 6 percent compared to the 2020 Urban Water Management Plan (UWMP). The 2020 UWMP states that there are sufficient water supplies through 2045 to meet projected demands in normal years, single dry years, and multiple dry years through 2045. Although TOP 2050 at buildout is estimated to generate a 6

percent increase in water demand using conservative water demand factors, new State requirements and City policies and code requirements would result in enhanced water efficiency and conservation. Applying these measures would result in total water demand below the projections in the 2020 UWMP for year 2045. Therefore, there would be sufficient water supplies to meet the demand for TOP 2050 buildout. Impacts would be less than significant, and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: OMUC is responsible for supplying potable water to the Project site. The UWMP includes an analysis of water supply reliability projected through 2045 under normal years, single dry year, and multiple dry years. OMUC's total water demand for 2020 was approximately 32,109 AF (OMUC, 2021). As stated above, the City is anticipated to have adequate water supplies to meet all its demands from the implementation of TOP 2050 at buildout until the year 2045 under a normal year, single dry year, and multiple dry years. The Project Applicant would demolish the existing structures and redevelop the site with an approximately 61,867 s.f. s.f. building. The proposed building would be approximately 47,950 s.f. less than the maximum allowed under TOP 2050. Therefore, the Project will result in less development of the site than the Certified SEIR analyzed at buildout (i.e., 61,867 s.f. vs. 109,817 s.f.) and require less water demand. Because the Project Applicant would redevelop the site with a use permitted under the Business Park land use designation, the Project would be consistent with TOP 2050 and UWMP and, therefore, the water demand associated with the Project was considered in the demand anticipated by the Certified SEIR and impacts would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

c. Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Summary of Certified SEIR Finding: The Certified SEIR concluded that IEUA has two facilities that serve the City of Ontario: RP-1 and RP-5. The current combined capacity of these two facilities is 60.3 mgd and would increase to 66.5 mgd once the expansion project that is currently under construction at RP-5 is completed. The additional flow rate from implementation of TOP 2050 would not exceed the capacity of the wastewater treatment providers. Therefore, there would be no significant impacts on wastewater collection and treatment. Impacts would be less than significant, and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The Project site is developed with two buildings (an office and a warehouse/maintenance building) and occupied by a telecommunication company with vehicle maintenance operations on-site (southern building) that requires wastewater treatment services. The Project Applicant would demolish the existing structures and redevelop the site with an approximately 61,867 s.f. building. The proposed building would be approximately 47,950 s.f. less than the maximum allowed under TOP 2050. Therefore, the Project will result in less development of the site than the Certified SEIR analyzed at buildout (i.e., 61,867 s.f. vs. 109,817 s.f.). The Project Applicant would redevelop the Project site with a use that is consistent with the site's underlying land use designation; therefore, the wastewater generation associated with the Project was considered in the demand anticipated by the Certified SEIR and the City's Sewer Master Plan and analyzed therein. As such, the IEUA's existing wastewater treatment facilities are

anticipated to have adequate capacity to serve the Project's project demand in addition to its existing commitments. Impacts would be less than significant. Therefore, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Summary of Certified SEIR Finding: The Certified SEIR concluded that the increase in population under the TOP 2050 would result in more solid waste generation and could impact the capacity of the receiving landfills. TOP 2050 would result in a net increase in solid waste generation at buildout of 45,204 tons/year. This net increase is about 2 percent of the Badlands Sanitary Landfill and the El Sobrante Landfill's excess capacity. Therefore, there is sufficient landfill capacity to serve future development pursuant to the TOP 2050. Therefore, impacts would be less than significant, and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: Solid waste generated during the operation of the Project is anticipated to be collected by the City of Ontario and is anticipated to be hauled to Badlands Sanitary Landfill or El Sobrante Landfill. The Badlands Sanitary Landfill has a permitted disposal capacity of 5,000 tons per day with a remaining capacity of 7,800,000 cubic yards. The Badlands Sanitary Landfill is estimated to reach capacity, at the earliest time, in the year 2059. (CalRecycle, 2023a) The El Sobrante Landfill is permitted to receive 16,054 tons of solid waste per day with a remaining capacity of 143,977,170 ton. The El Sobrante Landfill is estimated to reach capacity, at the earliest time, in the year 2051 (CalRecycle, 2023b).

Based on the generation rate of 1.42 pounds per 100 s.f. per day, the proposed 61,867 s.f. building would result in approximately 879 pounds per day (0.44 tons per day). As previously stated, the Badlands Sanitary Landfill has a permitted disposal capacity of 5,000 tons per day and the El Sobrante Landfill has a permitted disposal capacity of 16,054 tons per day. The Project generated solid waste represents a nominal portion of the landfill's capacity and would not contribute significantly to the daily landfill capacity, and the landfill facilities are sufficient. Accordingly, impacts would be less than significant. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Summary of Certified SEIR Finding: The Certified SEIR concluded that future development pursuant to TOP 2050 would comply with Section 4.408 of the 2019 CALGreen building code, which requires that at least 65 percent of nonhazardous construction and demolition waste from nonresidential construction operations be recycled and/or salvaged for reuse. Development would also comply with AB 341, which mandates recycling for commercial and multifamily residential land uses. Additionally, future businesses that generate organic waste in amounts over a certain threshold would be mandated to recycle organic matter in accordance with AB 1826.

In addition, TOP 2050 policies ER-2.1, ER-2.2, and ER-2.3 describe waste diversion requirements, hazardous and electronic waste disposal, and purchasing of products made from recycled materials that would ensure that the City has a cost-effective integrated waste management system that meets or exceeds state and federal recycling and waste diversion mandates. Therefore, impacts would be less than significant, and TOP 2050 would not result in new or a substantial increase in magnitude of impacts compared to the Certified EIR.

Discussion of Effects: The following federal and state laws and regulations govern solid waste disposal:

- AB 939 (Chapter 1095, Statutes of 1989), the California Integrated Waste Management Act of 1989 required each city, county, and regional agency to develop a source reduction and recycling element of an integrated waste management plan that contained specified components, including a source reduction component, a recycling component, and a composting component. With certain exceptions, the source reduction and recycling components were required to divert 50 percent of all solid waste from landfill disposal or transformation by January 1, 2000, through source reduction, recycling, and composting activities.

- AB 32 (Chapter 488, Statutes of 2006), the California Global Warming Solutions Act, established mandatory recycling as one of the measures to reduce GHG emissions adopted in the Scoping Plan by the California Air Resources Board.

- AB 341 (Chapter 476, Statutes of 2011) requires that all "commercial" generators of solid waste (businesses, institutions, and multifamily dwellings) establish recycling and/or composting programs. AB 341 goes beyond AB 939 and establishes the new recycling goal of 75 percent by 2020.

The Project would implement the requirements of the City's Integrated Waste Department's Refuse & Recycling Planning Manual on refuse and recycling storage and access for service, as well as addressing the City's recycling goals. The requirements of Chapter 3, Integrated Waste Management, of the Municipal Code will also be implemented to ensure that the Project complies with all applicable state and federal laws. Therefore, no impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

20. WILDFIRE.

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

a. Substantially impair an adopted emergency response plan or emergency evacuation plan?

b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread

of a wildfire?

c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Summary of Certified SEIR Finding: The Certified SEIR concluded that substantial improvements in transportation infrastructure planned to accommodate the increase in population in the City in the event of an emergency. Additionally, a review of emergency access is included as part of the City's Design Review process. According to the City's LHMP, interstate highways would serve as major emergency response and evacuation routes. Additionally, the Ontario Fire Department reviews development applications to ensure that adequate emergency accessibility is provided based on local and state guidance. Therefore, impacts related to emergency access would be less than significant.

Moreover, the City is located outside of a State Responsibility Area (SRA) and California Department of Forestry and Fire Protection (CAL FIRE) has determined that the City contains no areas subject to very high wildfire risk. However, the City recognizes that even though fuel loading is light in Ontario and fire risk comes primarily from urban fires, not wildfires, there is some risk related to wildfires. With adherence to the building practices in the CAL FIRE's 2019 Strategic Fire Plan for California, the California Fire Code, County of San Bernardino Multi-Jurisdictional Hazard Mitigation Plan, and City's LHMP, development and infrastructure associated with TOP 2050 would not exacerbate risk or result in post-wildfire hazards.

Discussion of Effects: As concluded in the Certified SEIR, the City is not located with a SRA. According to the California Department of Forestry and Fire Protection's fire hazard map for the Local Responsibility Area (LRA), the Project site is not within a Very High Fire Hazard Severity Zone (CAL FIRE, 2008). Therefore, no impact would occur. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

21. MANDATORY FINDINGS OF SIGNIFICANCE.

a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat or a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Summary of Certified SEIR Finding: The Certified SEIR concluded that TOP 2050 would result in less-than-significant impacts to sensitive plant and animal species as well as habitats. Additionally, the Certified SEIR concluded that, with mitigation, TOP 2050 would result in significant and unavoidable impacts to Tier III historical resources.

Discussion of Effects: The Project site is in a highly urbanized area of the City that is already Developed with industrial uses. As discussed in the Biological Resources Section of this Addendum, potentially significant biological impacts are not anticipated because the Project site is developed and there are no rare or endangered plants or animal species within the Project site. Additionally, as indicated in the Cultural Resources section, the Project site is not included on the National Register of Historic Places, California Register of Historical Resources, or a local register of historical resources, nor is it eligible for listing. Therefore, no impacts are anticipated. The Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary.

Mitigation: No additional mitigation required.

f. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)

Summary of Certified SEIR Finding: The Certified SEIR addressed cumulative impacts for each of the environmental topics evaluated. The Certified SEIR concluded that TOP 2050 would result in significant and unavoidable cumulative impacts regarding air quality, cultural resources (Historic), noise, and transportation (VMT).

Discussion of Effects: As identified through the analysis presented in this Addendum, with the implementation of Project-specific mitigation measures identified herein, the Project would not result in any new, increased or substantially different impacts, other than those previously considered and addressed in the Certified SEIR. No changes or additions to the Certified SEIR analyses are necessary. Therefore, there is no potential for the Project to result in cumulatively considerable effects to the environment beyond those previously disclosed in the Certified SEIR (and already disclosed throughout this analysis), and instead, the Project's impacts are generally less than the impacts assumed and analyzed in the Certified SEIR.

Mitigation: No additional mitigation required.

g. Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?

Summary of Certified SEIR Finding: The Certified SEIR concluded that with the implementation of the recommended TOP Mitigation Measures, compliance with existing laws, plans and regulations, and the various TOP Implementation Actions outlined in the Project Description, TOP 2050 does not have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly.

Discussion of Effects: The Project's potential to result in environmental effects that could adversely affect human beings, either directly or indirectly, has been discussed throughout this Addendum. The Project would result in less than significant impacts related to air quality and associated effects on human health from air pollutants, GHG emissions, and noise. Additionally, with mandatory regulatory compliance, potential hazardous materials impacts associated with long-term operation of the Project is not expected to pose a significant hazard to the public or environment through the routine transport, use, or disposal of hazardous materials, nor would the Project increase the potential for accident operations which could result in the release of hazardous materials into the environment. Implementation of the Project would not result in

environmental effects that would cause substantial adverse effects on human beings, either directly or indirectly, beyond those disclosed in the Certified SEIR, and instead, the Project's impacts are generally less than the impacts assumed by the Certified SEIR.

Mitigation: No additional mitigation required.

EARLIER ANALYZES

(Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, one or more effects have been adequately analyzed in an earlier EIR or Negative Declaration. Section 15063(c)(3)(D)):

1) Earlier Analyzes Used. Identify earlier analyzes used and state where they are available for review.

a) The Ontario Plan Final Environmental Impact Report

b) The Ontario Plan/Policy Plan

c) City of Ontario Zoning

All documents listed above are on file with the City of Ontario Planning Department, 303 East "B" Street, Ontario, California 91764, (909) 395-2036.

2) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of, and adequately analyzed in, an earlier document pursuant to applicable legal standards.

RESOLUTION NO._____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PSPA22-007, AN AMENDMENT TO THE GROVE AVENUE SPECIFIC PLAN TO CHANGE THE LAND USE DESIGNATION OF 4.20 ACRES OF LAND FROM OFFICE/COMMERCIAL TO BUSINESS PARK FOR PROPERTY LOCATED AT 2042 S. GROVE AVENUE, AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 105-049-111

WHEREAS, First Industrial Realty Trust (hereinafter referred to as "Applicant") has filed an Application for the approval of a Specific Plan Amendment, File No. PSPA22-007, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 4.20 acres of land generally located north of State Route 60 (Pomona Freeway) and south of Mission Boulevard, at 2042 S. Grove Avenue within the Office/Commercial land use designation of the Grove Avenue Specific Plan, and is presently improved with existing office and warehouse/storage building with surface parking; and

WHEREAS, the properties to the north and east of the Project site are within the Business Park land use designation of the Grove Avenue Specific Plan and are developed with industrial and business park land uses. The property to the south is within the Office/Commercial land use designation of the Grove Avenue Specific Plan and is developed with industrial buildings. The properties to the west are within the General Industrial (IG) land use designation, and are developed with industrial structures, outdoor storage yards and RV parking; and

WHEREAS, the Grove Avenue Specific Plan was adopted in 1993 to help facilitate development of the Grove Avenue corridor as a light industrial, limited commercial and business park. The specific plan covers approximately 250 acres of land along the east and west side of Grove Avenue between Mission Boulevard to the north and State Route 60 (Pomona Freeway) to the south. At the time of the specific plan’s establishment, there were several driving factors that helped form the specific plan, such as the direct connection to the Ontario Airport and the increasing growth of industrial development; and

WHEREAS, the proposed Amendment to the Grove Avenue Specific Plan will change the land use designation on the subject site from Office/Commercial to Business Park. This Specific Plan Amendment will facilitate the future development of a new 61,867 square foot industrial building with associated site improvements on the 4.20-acre Project site. The requested land use change will coordinate well with the existing land uses to the north and east, as they are currently designated for Business Park; and are improved with business park industrial land uses; and

WHEREAS, to analyze the traffic impacts of the requested land use change, a Trip Generation Assessment was prepared in accordance with the traffic study requirements of the City of Ontario and the San Bernardino County Transportation Authority (SBCTA) Congestion Management Program (CMP). As a result, the Project is anticipated to generate 204 fewer two-way trips per day as compared to the adopted TOP 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) certified by the Ontario City Council on August 16, 2022; and

WHEREAS, in conjunction with the proposed Specific Plan Amendment, the applicant has also submitted a Development Plan application (File No. PDEV22-040) to demolish an existing office and warehouse/storage building and construct a new 61,867 square-foot industrial building with associated site improvements within the 4.20-acre Project site located at 2042 S. Grove Avenue; and

WHEREAS, on February 21, 2024, the Development Advisory Board conducted a hearing regarding the related Development Plan (File No. PDEV22-040) and approved the Project, subject to City Council approval of this Specific Plan Amendment; and

WHEREAS, on March 26, 2024, the Planning Commission conducted a public hearing and voted unanimously (6-0) to recommend that the City Council approve the proposed Specific Plan Amendment; and

WHEREAS, the Ontario Plan (TOP) 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) certified by City Council on August 16, 2022 (hereinafter referred to as "Certified EIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as "EIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the environmental impacts of this project were thoroughly analyzed in the EIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to

as "CEQA") and an EIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on March 26, 2024, the Planning Commission of the City of Ontario conducted a hearing to consider the EIR Addendum and the Project, and concluded said hearing on that date, voting to issue Resolution No. PC24-008, recommending the City Council adopt the EIR Addendum, and voting to issue Resolution No. PC24-009, recommending the City Council approve the Application; and

WHEREAS, as the first action on the Project, on March 26, 2024, the City Council issued a Resolution adopting the EIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on April 16, 2024, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, California, as follows:

SECTION 1: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the City Council finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 2: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 3: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Sections 1 and 2, above, the City Council hereby concludes as follows:

(1) ***The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The proposed amendment to the Grove Avenue Specific Plan will change the land use designation on 4.20 acres of land from Office/Commercial to Business Park for property located at 2042 S. Grove

Avenue. The proposed amendment is consistent with TOP's Vision, which states "in order to take advantage opportunities or remove impediments to achieving our Vision, we need the ability to quickly respond to changing market needs," and TOP's Policy Plan (General Plan) goals and policies, which states "LU3-3 *Land Use Flexibly*. We consider uses not typically permitted within a land use category if doing so improves livability, reduces vehicular trips, creates community gathering places and activity nodes, and helps create identity;" and

(2) ***The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** With the proposed amendment to the Grove Avenue Specific Plan, the proposed land use change will be in conformance with The Ontario Plan (TOP) Policy Plan Land Use Plan and will comply with the Policy Plan goals and policies applicable to the Specific Plan. The proposed amendment will not be detrimental to the public interest, health, safety, convenience, or general welfare of the City because it will provide a land use that is consistent with the surrounding area to the north and east, that is currently improved with business park and industrial developments; and

(3) ***In the case of an application affecting specific property(ies), the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The proposed amendment will modify the land use from Office/Commercial to Business Park, which aligns with surrounding land uses and allows for similar development intensities under the Business Park designation; and

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** The proposed amendment will allow for light industrial uses on the subject site under the Business Park land use designation of the Grove Avenue Specific Plan. The project site is suitable in size and shape and contains adequate street frontage along Grove Avenue for sufficient access and availability of utilities to accommodate a light industrial development that is similar in scale and intensity to other existing developments within the Specific Plan area and under the Business Park designation.

SECTION 4: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 3, above, the City Council hereby APPROVES the herein described Application.

SECTION 5: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 6: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 16th day of April, 2024.
