Traffic Control Engineering has a substantial track record in preparing traffic control plans and detour plans, conducting traffic impact studies, and alternative underground utility alignment evaluations for construction work for public works projects. Their familiarity with local government requirements will be the greatest asset in assuring a timely and cost effective product.

Mr. David Kuan, P.E., principal of the firm, has had extensive working experience with both public and private sectors and also serves on the WATCH committee.

Calvada Surveying | Surveying Services

Calvada Surveying (Calvada) is a Disabled Veteran and Minority Owned land surveying firm founded in 1989 by Armando DuPont, PLS, and Edward Schenet, PLS. Headquartered in the City of Corona, Calvada provides professional land surveying services throughout the Western United States and offer the latest in land surveying technology including LIDAR and High-Definition Surveying (HDS), also known as 3D laser scanning. Hazen is excited to add Calvada to the team for projects that may require boundary and topographic surveys, mapping, aerial photogrammetry control, right-of-way and easement documentation, and other related land surveying services.

AirX | Utility Locating/Potholing

AirX Utility Surveyor's, Inc (AirX) is a WBE/SBE certified full-service Subsurface Utility Engineering (SUE) service provider since 2000. Hazen will utilize AirX to provide utility mapping services, vacuum excavation utility potholing services, and other utility locating services that may become necessary for project task orders issued under this contract. AirX expects to serve OMUC projects from their Ontario, CA office.

Richard C Slade & Associates | Well Drilling and Groundwater

Richard C. Slade and Associates, LLC (RCS) is comprised of a group of groundwater geologists focused on the development, protection, and management of groundwater resources throughout California. RCS is highly experienced in hydrogeology including groundwater resource development, well construction and rehabilitation, aquifer storage and recovery wells for groundwater injection, and related testing.

Section 5

Fiscal Stability

Section 5

Fiscal Stability

Hazen has provided a letter from our financial instituion stating our current line of credit and audited fanicial statements certified by a CPA in Appendix B.

Section 6

Experience and Technical Competence

Section 6

Experience and Technical Competence

Hazen provides an extensive list of representative projects. These projects provide the depth of relevant experience of the Hazen team and our premiere subconsultants. The representative projects have been selected to address the following categories, each category containing four to five projects.

Treatment Facilities

- Groundwater Treatment
- Recycled/Non-Potable treatment
- Miscellaneous Treatment

Conveyance Facilities

- Pipeline Improvements – Potable, Recycled, and Irrigation
- Pipeline Condition Assessment
- Meters, Valves and Appurtenances
- Cathodic Protection

Project Planning

- Hydraulic modeling
- Water Resources Planning
- Environmental

Pumping Facilities

- Pump/Booster Stations and Lift Stations

Storage Facilities

- Potable Water Tanks/Reservoirs & Recycled Water Reservoirs/Ponds

Hydrogeology

- Well Drilling and Rehab
- Groundwater Recharge / ASR
- Well Equipping

Treatment Facilities Design E

Hazen has planned, designed, and constructed many or providing groundwater treatment solutions throughout Southern California. Hazen is a recognized national ex cts successfully delivered throughout Southern California. Our clients in this area include: LADWP, Santa Clarita sin. Recent City of Chino plants include the Eastside Treatment Plant, State Street Treatment Plant and wells 4 & f Chino Hills, and Jurupa Community Service District, who can attest to our capabilities and quality work. We hav ane, hexavalent chromium, and PFAS), 97-005 permitting, and effective treatment strategies in the Basin.

Conveyance Facilities Design

Hazen has experience with designing water, wastewater, and recycled water mains. This experience in pressure pipes includes steel, cement mortar lined and coated (A experience in gravity pipe for wastewater application such as VCP (ASTM 700), RCP sewer pipe (ASTM C361), PVC 06) for trenchless applications. Hazen's team has extensive experience in both open-cut and trench pipeline instaberience using the trenchless installation methodology for crossing railroads, large and busy intersections, Caltraive areas, as well as deep cover (30 feet and deeper).

Project Planning and Pumpin

Hazen has designed and constructed both water and wet pit lift stations. Our pump station designs have included various types of pumping equipment, such as vertical li equency drive (with or without by-pass starter). Our design professionals specialize in the details of good hydraulil connection piping. Surge analysis is critical to good pump station design, and in most of our designs, surge analyn are all considered during design, along with the same for structural and architectural features of the physical st

References

The Hazen team has the experience and expertise to deliver as-needed engineering services. The following selection of the Hazen team's reference projects demonstrates a proven track record with project experience relevant to a range of project types applicable to OMUC.

In fact, our key team members proposed for this work had significant roles in these project tasks. The client references listed in this section can attest to the quality of our services, delivery capabilities, and the level of ownership. Others can attest to our local commitment to the communities we serve.

Eastside Groundwater Water Treatment Facility Expansion Design

City of Chino, CA

Hazen assisted the City of Chino in development of a system-wide Water Quality Feasibility Study which identified a matrix of alternative actions that the City could implement to address potential emerging water quality issues. In the study Hazen characterized water quality considering current and potential future regulated contaminants, identified various compliance approaches, evaluated best value treatment technologies and site layouts, and developed an implementation plan to guide the City.

Hazen provided engineering design for the City of Chino Eastside Water Treatment Facility Expansion project. The project involves increasing the treatment capacity from 3,500 gpm to 7,000 gpm for removing nitrate, perchlorate, 1,2,3-TCP and DBCP from four well sources. The design includes pressurized GAC vessels, regenerable ion exchange system, cartridge filter pre-treatment and a dual brine line to eliminate the current hauling of waste brine. Hazen examined the water quality from water sources and prepared a PDR investigating potential options and recommending the preferred treatment to progress through detailed design. Hazen worked with DDW from early in the design process and throughout the design to coordinate testing and start-up requirements and determination of 97-005 permitting requirements. This project required multi-agency coordination for incorporating design requirements and permitting the brine line.

Coachella Valley Water District

Palm Desert, CA

Risk and Resilience Assessment

Hazen conducted the Risk and Resilience Assessment (RRA) for the domestic water system, including treatment facilities, storage tanks, pump stations and pipelines. The RRA was conducted in compliance with the ANSI/AWWA J100 standard. Hazen visited critical assets to determine potential vulnerabilities, security issues, and mitigation measures. Workshops were held with CVWD staff to discuss findings and develop strategies.

Critical assets were paired with applicable threats using the J100-10 spreadsheet tool developed by Hazen. Based on the prioritized threat/asset pairs, risk management alternatives were developed and cost estimates provided. Following completion of the RRA, Hazen revised CVWD's Emergency Response Plan to include results of the RRA.

Enhanced Brine Management Evaluation

In this project, Hazen provided an assessment of brine treatment and disposal options for the ion exchange treatment plants (IXTP 6806 and 7802). Options for enhanced brine treatment were compared, including chemical coagulation, electrocoagulation, nanofiltration, and media treatment. Six brine minimization options, including plain, augmented, and partially augmented evaporation ponds were evaluated, and conceptual layouts were created for each facility. Finally, a brine recycle approach was identified to provide significant cost savings, and recommended testing to confirm effectiveness was developed. Conceptual cost estimates of capital, O&M, and lifecycle costs were developed to compare cost-effectiveness of options.

In addition to the initial project, an evaluation of the concrete slab at IXTP 6806 was performed. The evaluation included collection of bulk soil samples and coring to measure concrete slab thickness. Recommendations were provided for replacing or increasing the top layer of concrete (depending on the facility), sealing the concrete slab, and reducing ponding of water.

Sewage Lift Station Condition and Risk Assessment

Eastern Municipal Water District, Perris, CA

As EMWD begins to face the challenges of aging infrastructure, they recognized the need to develop proactive maintenance, rehabilitation, and replacement programs, and have the data and tools that would enable EMWD to have a greater level of confidence in prioritizing and projecting short and long-term funding needs. To increase that level of confidence, EMWD identified 38 of the 47 lift stations owned by EMWD for complete at grade visual condition assessment.

Hazen's approach included a field condition assessment and risk assessment (i.e., Probability of Failure and Consequence of Failure) rating for each lift station asset and each lift station district-wide, to determine appropriate maintenance activities and rehabilitation or repair alternatives and cost estimates. A Level 1 visual assessment was conducted by multi-disciplinary teams that were escorted by EMWD staff. Non-evasive testing was employed for the assessment and the assessment did not involve confined space entry. Along with the visual assessment, ultrasonic thickness and pit measurements were taken for easily accessible metallic piping and visible concrete was assessed using sounding to listen for discontinuities, penetration measurements with a chipping hammer, surface pH measurements and crack width measurements. Surface penetrating radar was used to assess reinforcement corrosion in reinforced concrete structures. All of the data collected for each asset, including photographs of the assets, the inspectors' notes, condition scores for specific attributes, inspection checklists, etc., was stored digitally. The condition scores were used to estimate remaining useful life and Probability of Failure.

The structural assessment also included a Tier 1 seismic assessment in accordance with ASCE 41-13 and identified deficiencies in existing structures that would prevent them from achieving a specified Level of Performance for an event at a specified Level of Seismicity. The outcome of this Project was EMWD was provided with the data and tools, including an interactive Dashboard to confidently make decisions that will ensure the long-term functionality and reliability of each lift station for EMWD's future needs.

Palmdale Water District Well 36

Palmdale, CA

Hazen, with Kyle Groundwater as a subconsultant, are finalizing the design and construction of a new well (Well No. 36) for the Palmdale Water District that is designed for a pumping rate of 1,000 gallons per minute (gpm). The project includes drilling a new well and construction of the wellhouse and supporting facilities. The proposed project components are described in further detail below:

- **Well** – The well would be drilled to a depth of approximately 1,030 feet below ground surface (bgs). The conductor borehole would be up to 48 inches in diameter for a depth up to 50 feet below grade surface (0 to 50 feet bgs); the borehole for the remainder of the depth of the well (50 to 1,030 feet bgs) would be up to 18 inches. The well would include stainless steel well casing, screen, ancillary tubing, and seal.
- **Wellhouse** – This single-story structure would house the well, pump, motor, and electrical equipment. The well house would be constructed of metal siding with a standing seam metal roof, similar to other well house facilities operated by PWD.
- **Percolation Basin** – A 40' x 60' percolation basin will be located in the western portion of the proposed well site to allow for percolation of low-flow wastewater discharges during well development and testing and also for pump-to-waste water.
- **Discharge and conveyance piping** – Up to 400 feet of 10" to 12" Ductile Iron Pipe (DIP) will be installed from the well to the property line. Piping would be installed to connect the well to the property line and from the well site to the percolation basin.
- **Ancillary structures** – Additional above-ground structures to support well operation include a 40-feet antenna, transformer (approximately 8' by 10') and surge tank (10 feet to 12 feet).

Ridgeline Pump Station

Trabuco Canyon Water District, Trabuco Canyon, CA

The Ridgeline Booster Pump Station (RBPS) is a critical facility within Trabuco Canyon Water District's system. The RBPS is the primary means of delivering water from Dimension Water Treatment Plant to the Harris Grade tanks. Design services included preliminary design, final design, surge analysis, and construction support. RBPS is an 8-cfs pump station consisting of four (4) vertical turbine pumps that operate in series with the Dimension Water Treatment Plant Pump Station. The project includes complete replacement of the pumps, piping, valving, civil site improvements, instrumentation and control, and electrical improvements with a standby generator. Additionally, structural and architectural upgrades were designed to accommodate the mechanical and electrical improvements at the site. Construction was completed in 2020 with minimal change orders. The facility is in operation today.

Rendering of finished site developed during preliminary design stage.

Local Experience

The Hazen team has extensive experience locally in Southern California,San Bernardino, and the City of Ontario, which is addressed in our project experience. In addition, our team members are providing services to the City and surrounding agencies. Our involvement with the City is detailed further in Section 11 of our proposal.

Disclosure Statement

Hazen has not incurred any of the following actions:

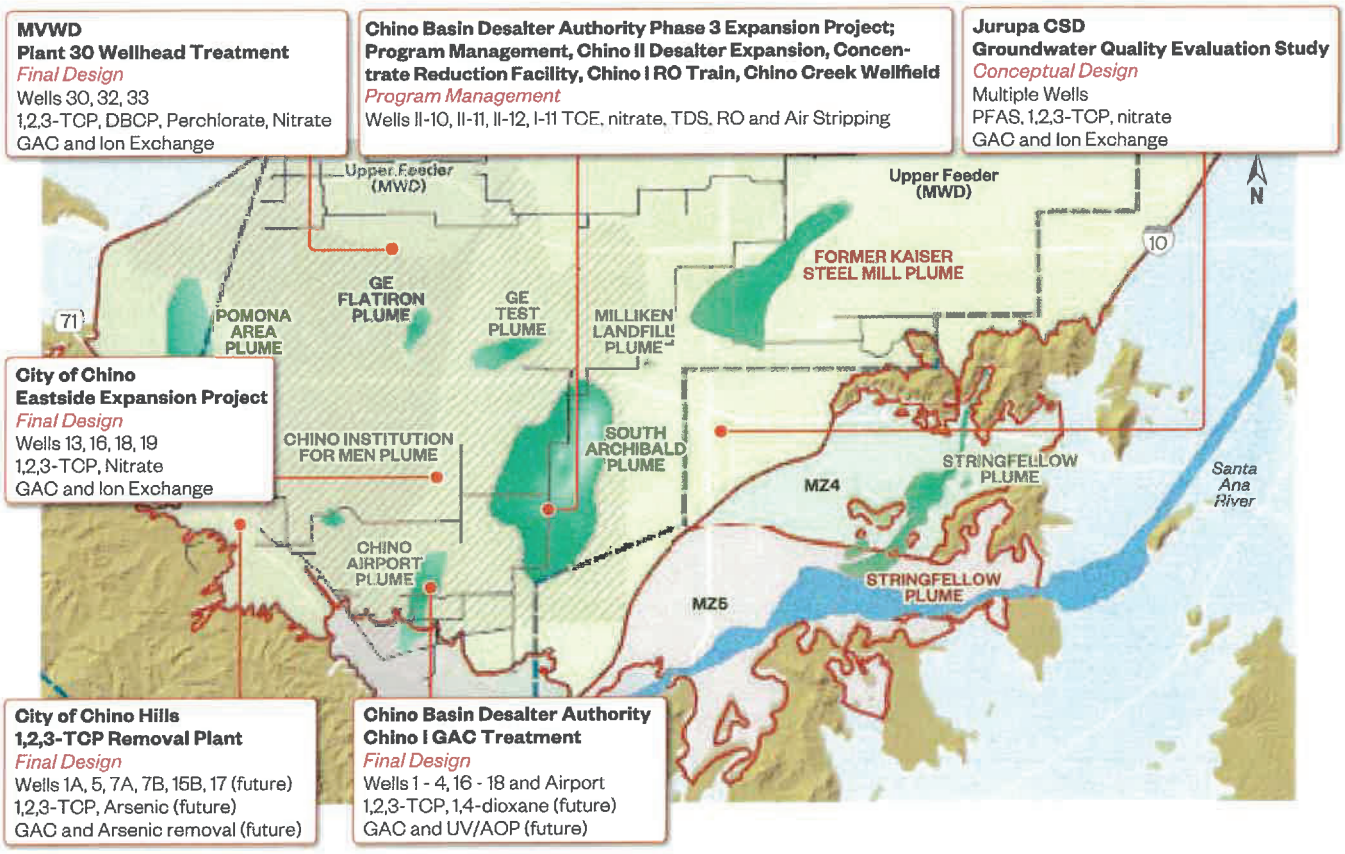
- Failure to enter into a contract or professional services agreement once selected.
- Withdrawal of a proposal as a result of an error.
- Termination or failure to complete a contract.
- Debarment by any municipal, county, state, federal or local agency.
- Involvement in litigation, arbitration or mediation other than provided in Section 10. Conviction of the firm or its principals for violating a state or federal antitrust law by bid or proposal rigging, collusion, or restrictive competition between bidders or proposers, or conviction of violating any other federal or state law related to bidding or professional services performance. Knowing concealment of any deficiency in the performance of a prior contract.
- Falsification of information or submission of deceptive or fraudulent statements in connection with a contract.
- Willful disregard for applicable rules, laws or regulations.

Technical Competence

In-House Technical Resources

Hazen is utilizing the latest hardware and software to meet the needs of our clients. Our platforms include the following capabilities: ACAD, RIVET, Microsoft Office 365, Excel, Word, PowerPoint, Project, SharePoint, Power BI, and various water, wastewater, and stormwater modeling programs.

In-House Staffing Resources

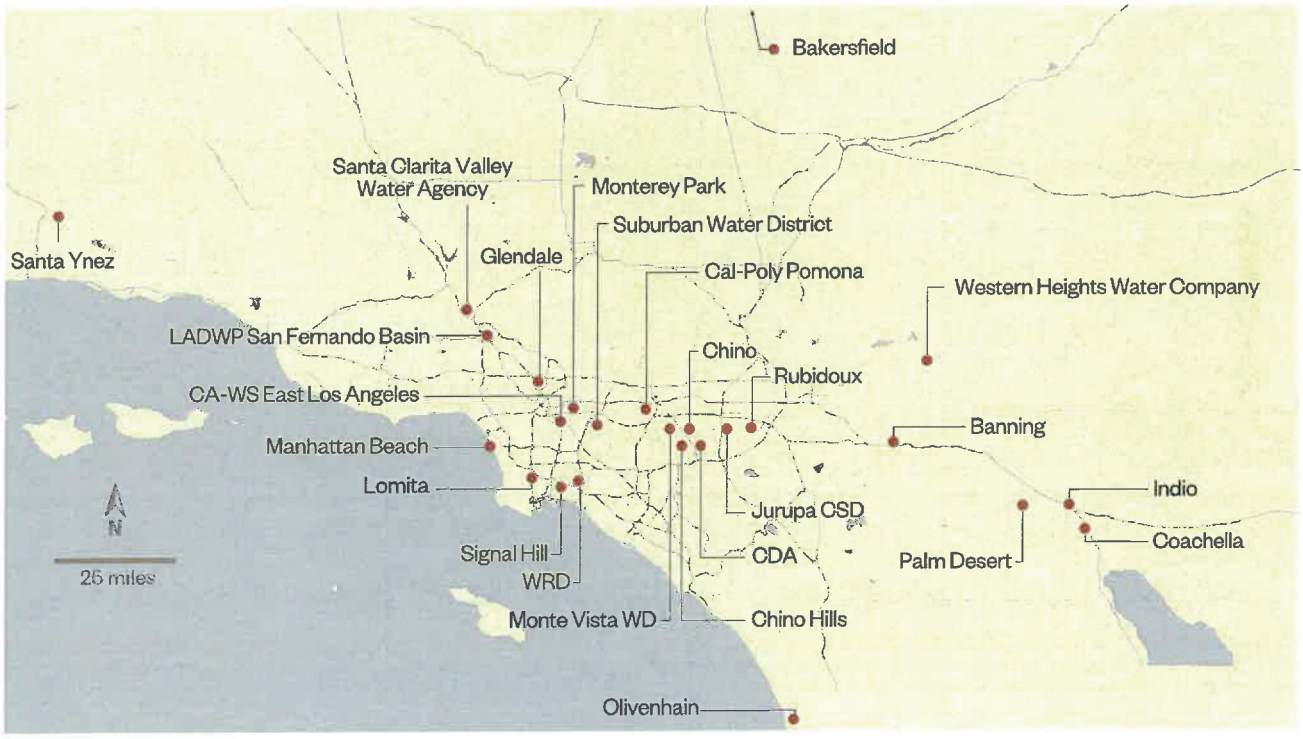


Hazen is a national firm with the multiple disciplines necessary to provide the services described in the City's RFQ as detailed in this and other sections of the proposal.

1014-741

Hazen Chino Basin Experience

The vast water supply potential of the Chino Basin has been limited over the years due to multiple contamination threats from historical agricultural and industrial operations, leading to basin-wide concerns with TDS and nitrate.



However, the regulatory climate has changed and new constituents have been emerging throughout the basin and particularly within several localized plumes of multiple constituents of concern. These new constituents have presented challenges to operation of CDA's desalters as well as the groundwater supply of other basin water pumpers. Hazen's Team is intimately familiar with the Chino Basin, having designed multiple groundwater treatment facilities in the Chino Basin, including new treatment improvements at both the Chino I and Chino II Desalter. Other key recent Hazen projects in the immediate area are illustrated below.

Water Quality and Regulatory Compliance Support

A particular challenge faced by many agencies in the Chino Basin is the number of constituents of concern and elevated concentrations. Hazen in an industry leader in helping water agencies respond to changing water quality regulations and emerging constituents, including PFAS, 1,4-dioxane, TCE, 1,2,3-TCP, and many others. Our team is on top of the best available technologies and cutting-edge research, providing a comprehensive evaluation of available treatment methods and alternatives to ensure solutions are constructable, cost-effective, and permittable. We have worked closely with DDW and the SARWQCB on multiple projects in the Basin, securing regulatory support and a cooperative working relationship with the agencies that directly benefits our clients.

Hazen has been providing the full range of professional engineering services to implement effective treatment and operational solutions to emerging contaminants in groundwater for many other agencies in the region and across the nation. As illustrated in the following graphic, Hazen is a proven leader in groundwater treatment, demonstrated by our robust portfolio of successful projects throughout Southern California.

Hazen has provided a full range of services, including evaluation and treatment of emerging contaminants, coordination with DDW and the RWQCB, membrane system design and operations, preliminary and final design of wells, pumping systems, pipelines, and other ancillary facilities, and full client support from planning and design through construction and operation.

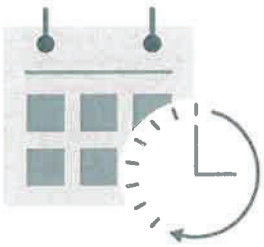
1014-741

Section 7

Proposed Method to Accomplish Work

Section 7

Proposed Method to Accomplish the Work



Hazen has over 1,700 specialists nationwide to draw from to address any CIP Projects. Our highly skilled project managers and engineers are accustomed to managing project scopes, schedules, and budgets to deliver projects as promised. The Hazen team knows OMUC and Southern California water utilities. We understand the importance you place on your on-call civil engineering contracts as they relate to implementing capital improvement projects. We bring familiarity with your internal processes, staff, and stakeholders. We stand ready and committed to making each of your assignments a success.

We know what is important to the City

OMUC has a CIP that it must deliver on schedule in the coming years. Hazen understands the need to drive the schedule for your projects under this on-call engineering services contract. Expediting the schedule will help keep the project on budget. However, Hazen will not rush any project at the expense of quality. Delivering top quality work products to OMUC is our top priority.

Hazen also focuses on providing value-added service to our clients. Each project has its unique challenges, and we collaborate with our in-house experts to analyze projects in advance and develop smart solutions that benefit our clients. We will also look for ways to reduce construction costs through in-house value engineering and constructability reviews. Another important area is planning for and minimizing permitting requirements which can derail projects if not managed. Hazen is committed to finding ways to save OMUC time and money through well thought-out project planning and execution.

Hazen's approach for delivering the on-call civil engineering design and support services to OMUC is clear and concise. Our proposed **Project Delivery Managers Cindy Miller, Jack Adam and Hampik Dekermenjian**, will first collaborate directly with you and your staff to fully understand the project scope of work, project goals, schedule, and estimated budget and then identify the most qualified Hazen staff available to complete the project. Once the appropriate staff are identified, we will prepare a detailed scope of work, schedule and budget for your review and approval. Upon receiving notice to proceed, we will develop a project specific work plan that includes a project quality control plan to ensure the project and tasks are completed to OMUC's expectations. Built into all our work plans and project schedules is the necessary time for our senior staff, who are not involved in the day-to-day preparation of deliverables, to provide thorough and independent quality control review.

Our priority will be to drive the project schedule while maintaining quality and providing value-added services.

1014-741

On-Call Approach

Our approach to OMUC'S on-call contract streamlines each project to provide superior service. The main steps taken to successfully execute each task are as follows:

1. **Project Initiation** – Once the City has a project assignment for which Hazen has been identified, OMUC staff can reach out to any of the three Project Delivery Managers to begin coordinating preparation of a scope, fee and schedule. The Project Delivery Manager will assemble the project team with the requisite expertise appropriate for the given assignment.
2. **Scope Meetings** – The Project Delivery Manager and selected staff that will be key to executing the requested project task will meet with OMUC to understand the scope of work, schedule, and estimated budget. For simpler tasks, the formal scope meetings may not be necessary, and in this instance, Hazen will prepare the scope of work, schedule, and budget for the OMUC's review.
3. **Prepare Scope of Work** – Following the Scoping Meetings, Hazen will prepare a detailed scope of work, schedule, and budget for OMUC's review. Because of its nature, the On-Call Contract can include a wide range of tasks. Depending on the task our approach may vary slightly to ensure the overall objective(s) and desired deliverable(s) are achieved. The Scope of Services section which follows outlines how our Hazen addresses the required project management efforts, tools utilized on projects, and expands on the District's technical provisions to complete assigned on-call projects.
4. **Kick-off Meetings** – Upon notice to proceed, Hazen will prepare a work plan, project quality control plan, and schedule a kick-off meeting as necessary.
5. **Communication** – Communication is key to the success of all projects. Hazen will provide regular communication as follows:
   - Project Managers will prepare bi-weekly status updates for OMUC and submit them via e-mail. The updates will include the project data needs, issues that need resolution, work completed in the previous weeks, and work to be completed in the upcoming weeks.
   - Monthly progress reports will be prepared and submitted to OMUC via e-mail from assigned Project Managers that includes work completed, work to be done, schedule status and budget status. Project Managers will also follow up with a phone call.
   - In the case of more complex projects or as necessary, Hazen will hold milestone meetings with the OMUC. Milestone meetings may be held to obtain additional information from OMUC'S staff necessary to complete a task, discuss comments on a submittal or discuss alternatives.

On-Call Services Approach

Commitment to Quality

A core element of Hazen's culture is to provide quality engineering services and products. Quality is fundamental to everything we do, from daily emails to complex studies and design projects. Hazen's commitment to quality is defined by our people and fostered through our formalized QA/QC process. This process is reinforced through training programs for technical competency. QA/QC compliance is ingrained in our culture.

Quality Assurance and Quality Control Approach

Hazen adheres to corporate project quality assurance guidelines that outline policies and procedures required for execution of all projects. Hazen and our teaming partners are required to adhere to our corporate Project Quality Control Program (PQCP) during project execution. The intent of the PQCP is to ensure that the services, products, and related deliverable items required by the project are of the highest quality. We then account for QC in the development of every deliverable schedule and make sure the QC review is assigned to a person with the appropriate technical expertise for the subject matter. We will incorporate OMUC into the process to benefit project development and document quality.

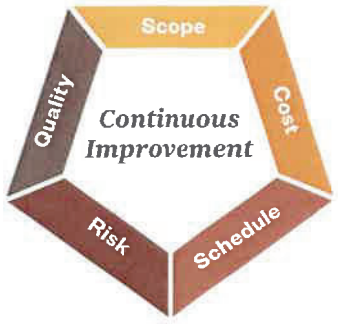
Hazen has established a QC Deputy (QCD) in each of its offices. Joel Bowdan, Nathan Boyle, and Tori Yokoyama serve as the QCD for Hazen's San Diego, Los Angeles, and Irvine offices, respectively. The role of the QCD is to confirm compliance among all active office projects with Hazen's QA/QC policy every quarter. As part of the QA/QC compliance check, each QCD reviews each active project to confirm that QC reviews and related QC formwork are completed in accordance with the deliverable schedule established by each project's PQCP. Additionally, projects are selected at random as part of a quarterly quality assurance (QA) audit process performed by out-of-region QCDs. The quarterly audit provides an in-depth review of the audited project to confirm adherence to Hazen's QA/QC procedures for QC reviews, filing of the QC review documents, and accurate reporting by project managers of QC completions. **We are serious about the quality of our work product, and we want OMUC to see the proof of our efforts to maintain quality in everything we do.**

Each CIP Project and assignment will be managed as an Individual Task Order under the Agreement and the specific scope of services will be determined on a project-by-project basis. Any or a combination of the Technical Provisions provided by the OMUC in the RFP may be required for each individual project and the Hazen team will utilize the list as a guideline and checklist when formulating a scope for an individual project.

Scope of Service

Hazen's team will deliver this project in accordance with the detailed scope of work negotiated with the OMUC on the project by drawing upon our knowledge of similar projects to formulate how the Hazen team can best tackle each of the tasks and expand, improve, and clarify options to the scope to formulate the best way to effectively accomplish the task. In the interest of space, the RFP Technical Provisions are not repeated in our proposal but will be adhered to. Instead, the paragraphs below present our understanding and additional assumptions and suggestions pertaining to each provision. All work will be performed in a timely and professional manner, consistent with the standards of the profession.

The core of our project management scope is a streamlined technical and administrative project management process that keeps the project on time and budget. This begins with a well written project execution plan that clearly delineates responsibilities of the key team members, project objectives and deliverables; yet provides flexibility to allow for incorporation of new tasks and analysis as more data become available and unforeseen findings come to light. The work plan includes checks and balances for budget and schedule monitoring, and a project Quality Assurance plan that outlines policies and procedures required for execution of the project. Quality assurance is not relegated to reviews before deliverables or milestones but is an ongoing activity. This differentiator has earned Hazen the reputation for delivering exceptional technical work products coupled with outstanding quality service.



Project Management

Our Project Delivery Managers will be responsible for ensuring that all projects and assignments meet OMUC's requirements while maintaining the schedule and budget and delivering a quality deliverable reviewed by the assigned Hazen Technical Advisors on the project.

Schedule and Budget Control

Hazen is committed to proactive cost and schedule control. Our experience has shown us how addressing potential issues early can minimize their overall disruption to the project. The project schedule will be finalized at the Kick-Off Meeting with checkpoints and key milestones identified. Our project management software program, Deltek Vision, is used to establish and closely track all of our project budgets and schedules. Our project managers will maintain an updated schedule as the project progresses. Actual progress will be checked against the baseline schedule weekly to identify any variances in tasks as well as coordinate resources for upcoming deliverables. When variances are identified, the Hazen project manager will work with OMUC's project manager, to develop mitigation strategies.

The five key elements of our schedule controls process include:

Project Communications

The Hazen team will ensure we are meeting and exceeding your expectations by providing continuous and frequent communication with the OMUC's Project Manager and team. At the onset of the contract, we will establish clearly defined roles, responsibilities, and reporting requirements that are consistent with the contract and scope of the project. Our team is committed to staying in constant contact with OMUC staff through email, phone, text, meetings, and technical correspondence. The ultimate goal of maintaining open lines of communication is to keep the project on schedule and within established budgets.

We recognize that project success will hinge on close collaboration with OMUC and their engineering and operations team, and input from other project stakeholders and regulatory agencies and will require effective communication and documentation to keep everyone involved in the decision-making process. To accomplish this, we will develop decision making registers, action item registers, progress reports and other tracking documents.

In addition to the project management scope defined above, Hazen has identified additional items that will be included in our scope:

Decision and action item logs – Communication and understanding is vital to ensure project success. The Task Lead will communicate with OMUC through project decision and action item logs. These logs are important to ensure both parties have a record of important project decisions including action items and information requests to insure OMUC and the Hazen Team are in sync to achieve the project goals. Not only are these logs important for communication, but they are key aspects to schedule and budget management.

Teams Platform – The Hazen team can utilize the Teams platform for submittals, correspondence and on projects. This is an efficient tool, and we will work with the OMUC's Teams integrator to establish this platform for on-call projects.

Workshops – We have found that workshops provide an invaluable platform for both Hazen and the client to discuss the overall project and better understand the project drivers and goals at the project outset. Also, at certain milestones project workshops can help achieve buy-in from the client on our approaches and/or findings before preparing a deliverable. Where it makes sense, Hazen prefers to include client operations and maintenance staff and other departments as warranted to get their perspective as well.

OMUC and Stakeholder Collaboration – In many cases projects involve multiple stakeholders, whether they are internal to the OMUC, or external stakeholders such as Caltrans, or Division of Drinking Water. Hazen understands that stakeholder input into a process or project is important to that stakeholder. We facilitate stakeholder involvement through the process of hearing everyone's perspectives in a workshop or other setting; then using tools such as Hazen Converge to objectively evaluate preferences and incorporate stakeholder input into the process.

Project Design and Technical Services

Hazen has identified additional items that we believe will add value to individual tasks where appropriate:

CAD Standards and BIM Delivery Guidelines - Hazen will comply with OMUC's latest version of its Computer Aided Design Standards and Building Information Modeling Delivery Guidelines. All product designs will be prepared in AutoCAD compatible with the City's current version. Hazen anticipates these standards and guidelines will also apply to the design work associated with these on-call services.

I&C, Security, and Communications Standards – Hazen will coordinate with the OMUC on developed standards for instrumentation and control through your SCADA Integration Plan, Programmable Logic Controller Software Configuration Standards, HMI Software Configuration Standards, Security configuration requirements, and fiber optic communication hardware standards. Hazen will ensure these are integrated as required into each project.

1014-741

Operations and Maintenance Coordination - Hazen will continue the OMUC's procedures of coordinating with O&M staff for regular input on projects to ensure designs are optimized for long-term operations and maintenance, the OMUC's preferences, permit compliance, and OMUC's preferred equipment and monitoring devices.

Condition Assessment – OMUC infrastructure facilities may require a detailed condition and risk assessment for rehabilitation, replacement, and prioritization. Hazen has an experienced Asset Management Team that offer a wide range of assistance should it be needed.

Equipment pre-purchase support - In some cases an assignment may be for an urgent project and immediate and rapid design development and construction is needed. Hazen has several examples where we have assisted with or coordinated the pre-purchase of certain long-lead equipment to help expedite construction and will do the same for the OMUC if needed.

Funding Assistance - Hazen can provide comprehensive funding consulting services aimed at maximizing grant and loan opportunities to minimize the financial burden of the program on rate payers. Hazen has experience with key funding sources, including SRF, WRFP, Title XIV, and WIFIA. Additionally, the passage of the Bipartisan Infrastructure Law, also known as the IJA, will direct $609,441,000 in new funding into California in just the first year of distribution.

Constructability, Operations, and Safety

Hazen conducts constructability and operations reviews along with safety reviews, and designs will be performed in accordance with the current version of OMUC's Improvement Standards. Built into each budget and schedule is time to complete a quality assurance and quality control review for each project deliverable.

Planning/Preliminary Engineering

Hazen will perform planning and preliminary engineering services to better define the project elements such as preparing a preliminary design report or Basis of Design Report (BODR) to summarize design criteria, review of pertinent documents, evaluate alternatives, summarize utility information gathered, required permits, conceptual exhibits and preliminary design drawings, calculations, and present probable costs both capital and O&M, etc. Hazen will perform hydraulic modeling analyses to evaluate system impacts, consider flow re-routing, and for facility sizing. The planning/preliminary engineering services provide opportunity for the OMUC to validate project technical feasibility, budgets, and anticipated expenditures.

Technical Reports

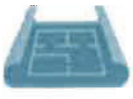
Hazen has the staff and expertise to provide technical reports and hydraulic calculations as required by the project. Hazen has technical expertise in treatment water quality, current regulations, and conveyance, and a significant hydraulic modeling team fluent in multiple modeling software for water, wastewater, and stormwater to provide the necessary recommendations for each project.

Environmental Documentation Support

Hazen can provide environmental documentation support. Hazen is committed to supporting the environmental consultant on the CEQA/NEPA process to ensure permit approval. Hazen can provide or assist the OMUC with consultations, environmental permits, and mitigation monitoring services during construction.

Final Engineering

Hazen will work closely with OMUC staff to ensure that the design meets the requirements of the project and standards of OMUC. We are prepared to provide design submittals at the 50%, 70%, 90%, and final (100%) milestones or as desired. For less complex projects, Hazen recommends that the submittal process be streamlined to save time and money. For instance, on smaller projects, 30%, 75%, and 100% submittal may suffice. Whatever the project needs are, we will ensure that the project delivery approach allows for OMUC operations and engineering to review and comment in a way that avoids rework and unnecessary cost to OMUC. Our in-house electrical engineers will prepare Theory of Operations with OMUC's operation team to verify the design meets the objectives and needs of OMUC.



Opinions of Probable Costs

Hazen promotes the creation and review of cost estimates at all phases of our projects beginning with the conceptual design and ending with a market analysis at bid time. All projects are different. We assess each facility individually keeping in mind that every project has its own challenges, be it site constrictions or access restraints. During the development of these estimates, our design teams work closely with our estimating team to ensure that design contingencies are appropriate with the level of details at the time of the estimate. Our method of estimating involves the creation of crew and productivity-based line items for all scope items for a project. It is important to understand the true nature of an installation rather than basing our numbers on parametric data or those of unrelated facilities in other parts of the country. Our estimators bring a wealth of knowledge from working for contractors, owners, and construction managers. That knowledge base is supplemented by RS Means data, MCAA, NECA and vendor pricing for specialty material and equipment. We incorporate a checklist for the review of our estimates and no estimate leaves our office without an official review by our engineers and other estimators. It is our goal to provide a budget with a range of accuracy, so budgets can be set, and our clients can see, with transparency, any changes as designs are developed. Hazen will provide an opinion of probable construction cost which will form the basis upon which the bid schedule items and quantities will be developed.

Bidding and Construction Support

Hazen staff will aid the OMUC in the bidding and construction phases of projects. Bidding support services include conducting pre-bid meetings and site walks, responding to questions during bidding, issuance of addenda, and bid review. Engineering construction support services include attending pre-job conference, shop drawing review, change order review, RFI/RFC response, revisions to contract documents, participation in construction progress meetings, final job walks and record drawings.

Other Information

Record of Project Success

Hazen is a nationally recognized firm specializing in everything water, including the engineering and management of water supply, conveyance, treatment, and reuse. Hazen is a leader in groundwater, treatment, and conveyance of potable water supply in California. We focus on planning, design, startup, operation, and maintenance of water infrastructure and treatment facilities.

For nearly 70 years, Hazen has advanced the boundaries of planning, design, and management of water and wastewater infrastructure. As a leader in the water industry, Hazen has aided cities, counties, municipalities, districts, and departments that serve more than 20% of the U.S. population. We have done this by building a team of technical experts who bring innovative thinking to all projects. The City of Ontario will receive unparalleled access to expertise in all facets of water projects.

Hazen has proven client service and our clients reap the benefits of our team's approach to client service. We encourage calling upon our references in Section 6 to truly understand the commitment we all make to each of our clients and their projects. Hazen's reputation for superior quality work, integrity, and long-standing client relationships is a direct result of our industry proven capabilities and experience. We are proud of the name Hazen as it has become synonymous with experience and customer service.

Community Involvement

Hazen is involved on multiple levels supporting our professional and local communities. Hazen is significantly involved in numerous professional associations within the water field as members, committee members, and officers leading our profession, attending conferences, and presenting papers and projects to spread our knowledge. Organizations include AWWA, ASCE, APWA, AMTA, AACEi, CWEA, SWMOA, and WEF. Hazen attended the recent ACE 2023 conference in Toronto delivering 25 presentations covering a wide range of drinking water issues impacting the industry such as PFAS, potable reuse, and Lead and Copper Rule revisions.

Hazen is also reaching out to assist in the development of future water professionals, from hosting annual in-house college interns, inviting college students for an externship to discuss career paths with Hazen professionals, providing university senior design classes real world project challenges, demonstrating filtration to a K-4 STEM school, judging science fairs, and educating elementary STEM schools on water-related environmental concepts. Hazen staff are assisting their communities in various ways from participating in wetlands cleanup, planting trees, stream clean-up, bay clean-up, earth day, and various charity events.

Previous Involvement with the City

Hazen is currently assisting the City with the Advanced Meter Infrastructure (AMI) project, led by **Steve Malloy**, who is a member of our Team. The Hazen team members have been involved in multiple projects, directly and indirectly, with and within the City, over the past 30 years. Hazen's Lead Delivery Manager, **Cindy Miller**, has led multiple projects for the City, including the Milliken Avenue Pipeline and Flow Control, 1212 Pump Station at the Dupont site, Euclid Recycled Water Project, to address median landscape concerns from the State, and multiple CDA improvements, including the Chino 1 Desalter Expansion, Chino 2 Desalter and Phase 3 expansion, including the Archibald Pump Station.

Conflict Statement

Hazen does not have any conflicts of interest as a result of performing this work.

Section 12

Certification of Proposal

The undersigned hereby submits its proposal and, by doing so, agrees to furnish services to the City in accordance with the Request for Qualifications (RFQ), and to be bound by the terms and conditions of the RFQ.

Cindy Miller, PE
Vice President
Irvine Operations Manager

1014-741

Appendix A

Resumes

Hampik Dekermenjian, PE, BCEE

Principal in Charge

Mr. Dekermenjian serves as Hazen's West Region Client Service Leader and Operations Manager for the Los Angeles office. He has 32 years of experience in water resources, drinking water, recycled water, wastewater and conveyance projects. He has spent the last 16 years specializing in water resources, specifically stormwater management and integrated resource planning throughout the state of California.

Education

M.B.A., University of Southern California, Los Angeles, CA

M.S., Environmental Engineering, University of Southern California, Los Angeles, CA

B.S., Engineering, California State University Northridge, Los Angeles, CA

Certification/License

Professional Engineer: #54064

Areas of Expertise

- Water Resources: Stormwater, Integrated Planning
- Stakeholder strategy and facilitation

Professional Activities

AWWA, WEF, NACWA, AMWA, ACWA, CA Reuse

Enhanced Watershed Management Plans for the City of Los Angeles, Bureau of Sanitation. Los Angeles, CA

For the City of Los Angeles, Bureau of Sanitation, Mr. Dekermenjian served as the principal in charge and technical reviewer for multiple Enhanced Watershed Management Plans. In his role, Mr. Dekermenjian interacted regularly with the City of Los Angeles staff and multiple stakeholders including, the Regional Water Quality Control Board and other City Departments. The Enhanced Watershed management Plans, included detailed projects and activites to improve water quality and increase stormwater capture.

Proposition O Conceptual Plan Development. For the City of Los Angeles Bureau of Sanitation, Los Angeles, CA

The residents of the City of Los Angeles overwhelmingly passed Proposition O, a $500 million stormwater bond. Mr. Dekermenjian oversaw the development of more than a dozen conceptual plans for water quality improvement projects within the four watersheds in Los Angeles. The Prop O program was a stakeholder driven process that solicited input from the communities in Los Angeles to identify the best projects that improved water quality while providing additional benefits to the community.

Regional Watershed Implementation Plan and Malibu Creek Bacteria TMDL Implementation Plan. Los Angeles Country Department of Public Works, Alhambra, CA

Project Facilitator. For the County of Los Angeles, Mr. Dekermenjian facilitates the stakeholder driven process to develop a Regional Watershed Implementation Plan and the Malibu Creek Bacterial TMDL Implementation Plan. This technically based effort will result in the regional plan that will address the regulatory requirements of current and future TMDLs for the North Santa Monica Bay Watersheds.

TMDL Implementation Plans, City of Los Angeles Bureau of Sanitation. Los Angeles, CA
Mr. Dekermenjian served as the project manager in the development of five TMDL Implementation Plans for the Los Angeles River Metals TMDL, Ballona Creek Metals, Bacteria and Toxic TMDL, the Santa Monica Bay Beaches Bacteria TMDL, and the Marina del Rey Bacteria TMDL. In his role, Mr. Dekermenjian interacted regularly with the city of Los Angeles staff and multiple stakeholders including, the Regional Water Quality Control Board, other City Departments, the County of Los Angeles, several enviornmental organziations, and the public at large. He also facilitated over twenty stakeholder workshops that presented the Implementation Plans, solicited input and reached an concensus. These Implementation Plans included over one hunder centralized and decentralized BMP projects that would improve water quality, provide water supply through infiltration and reuse, and offer other benefits to the communities.

Wilmington Drain Multi-use Projects, City of Los Angeles, Bureau of Engineering, Los Angeles, CA
Mr. Dekermenjian served as the Principal in Charge and technical reviewer of the Wilmington Drain Multi-use Project. The project improved water quality, increased flood management, enhanced habitat, stabilized creek banks, removed trash, and created new passive park areas. Project elements included the removal of 30,000 cubic yards of sediment material, installation of trash nets, grading and planting of native vegitation, and construction of a natural park. This project supported the City's plan of meeting TMDL requirements.

One Water LA 2040 Plan for the City of Los Angeles, Bureau of Sanitation. Los Angeles, CA
Principal in Charge and Stakeholder Facilitator. For the City of Los Angeles, Bureau of Sanitation, Mr. Dekermenjian served as the principal in charge and stakeholder facilitator for the One Water LA 2040 Plan. In his role, Mr. Dekermenjian interacted regularly with the City of Los Angeles staff and all the stakeholders repersenting a diverse group of community, environmental, and business leaders and other regional government entities. The One Water LA 2040 Plan brought together all the water needs of Los Angeles under one overarching plan to address water, wastewater and stormwater needs.

Machado Lake Restoration Projects, City of Los Angeles, Bureau of Engineering, Los Angeles, CA
Mr. Dekermenjian served as the Principal in Charge and technical reviewer of the restoration of the 45 acre Machado Lake, the largest urban lake in southern California. The project included the removal of invasive species, dredging of 239,000 cubic yards of sediment material and construction of wetlands, treatment systems, an AquaBlok lake bottom seal, and the restoration of 290 acres of park area. The project supported the City's plan of meeting TMDL requirements.

Owens Lake Dust Mitigation Project Phase 7, 7a, 9, and 10, City of Los Angeles Department of Water and Power, Keeler, CA
For the Los Angeles Department of Water and Power, Mr. Dekermenjian served as the Principal in Charge and on the Technical Review Committee that provided oversight and review of the preperation of plans and specifications for the Owens Lake Dust Mitigation Project Phase 7, 7a, 9 and 10. This program, over multiple phases, incldued the implementation of multiple dust mitigation methods on about 18 square miles of a 105 square mile laketo help meet PM10 air quality requirements. In his role, Mr. Dekermenjian met regularly with the project management team to discuss and advise on project issues and served in multi-day review sessions for the 30, 60, and 90% completion phases of the project.

Cindy Miller, PE

Project Delivery Manager

Ms. Miller is an experienced Principal in Charge with a long resume of leading the most challenging projects to successful completion. Her experience extends from planning, design, construction, and owner's agent services.

Education

B.S., Civil Engineering, University of California, Irvine

Certification/License

Professional Engineer

Areas of Expertise

- Pipeline Planning and Design
- Project Management
- Program Management
- Project Delivery
- Groundwater Supply
- Well Equipping Planning and Design
- Pump Station Planning and Design
- Reservoir Storage Planning and Design
- Drinking Water

Professional Activities

AWWA, ASCE, AMTA

CA-NV AWWA

CA Water Reuse Association

Her assignments have included providing Program Management services for a $150 million groundwater supply project, which includes wells, pipelines, pump stations, and an advanced treatment system for R.O. concentrate reduction; Project Manager for preliminary and final design of a 28 MGD microfiltration treatment facility, and Project Manager for a 10 MGD R.O./Ion Exchange groundwater treatment plant. Ms. Miller has also led numerous water storage and conveyance infrastructure projects, including design of over 100 miles of pipeline Ductile Iron, CML&C steel, PVC, and HDPE pipeline), design of steel, pre-stressed concrete, and cast-in-place concrete storage reservoirs, up to 10 million gallons, and numerous pump station facilities. She has led feasibility/planning studies, developed treatment process evaluations and life-cycle cost evaluations, participated in value engineering studies and operations evaluations. She has developed detailed designs of many systems and provided construction and startup services. She has experience with different project delivery methods including: design-bid-build, design-build and design-build-operate-finance.

Chino I Desalter VOC Treatment, Chino Basin Desalter Authority, CA
Project Manager. The project includes preliminary and final design of two (2) GAC treatment facilities (1.7 mgd and 3.4 mgd) at the Chino I Desalter Plant for the removal of TCE and 1,2,3-TCP, and evaluation of treatment requirements for 1,4-dioxanr, cis-1,2-DCE, 1,2-CDA, PFOA, and PFOS. The goal of this project is to provide groundwater treatment for all CDA bypass wells (CDA Wells I-1 through I-4), and several treated wells (CDA I-16 through 18), plus 10 new wells that will be installed by the County of San Bernardino as part of a Cleanup and Abatement Order issued by the Santa Ana Regional Water Quality Control Board (SARWQCB).

Chino Feasibility Study and Eastside Expansion for 1,2,3-TCP, Nitrate, and Perchlorate
Principal in charge for the City of Chino to identify a permanent solution to fully utilize all City groundwater wells by addressing water quality issues. Treatment and non-treatment options were evaluated for the City's twelve wells.

Monte Vista Water District Plant 30 Treatment for 1,2,3-TCP, Nitrate, and Perchlorate, Montclair, CA
Principal In Charge for engineering services to Monte Vista Water District (MVWD) for the design and construction of a 5.8 MGD water treatment facility (expandable to 8.7 MGD) for the removal of 1,2,3-TCP, nitrate, and perchlorate from the District's groundwater supply. The project includes raw water pipelines to convey multiple wells to the site, GAC+IX treatment facilities, and a waste brine pipeline all within a small site footprint. Hazen's engineering services include preparation of Basis of Design Report (BODR), field investigations, detailed design, CEQA, permitting, bidding services, and engineering services during construction.

Chino I Desalter Expansion and Chino II Desalter Projects, Inland Empire, CA
Provided engineering services to the Chino Basin Desalter Authority (CDA) for the multimillion-dollar Chino I De-salter Expansion and Chino II Desalter projects. The assignment involved design of a new desalter facility; expansion and upgrade of an existing desalter facility; design of water distribution facilities, including pump stations, pipelines, and well equipping. The project included expansion of an existing 9 MGD reverse-osmosis treatment plant to a 14 MGD plant by adding ion exchange treatment for nitrate removal and VOC treatment for removal of TCE. Other plant improvements included the upgrading of the existing disinfection system to 0.8 -percent solution sodium hy-pochlorite generated on site, expansion of the on-site product water pump station, and other miscellaneous up-grades to improve plant performance. In conjunction with increasing the Chino I Desalter's capacity, three new wells were added to increase the system's raw water supply. Delivery facilities from the Chino I Desalter were add-ed to enhance movement of treated water to the end-users. Delivery facilities included two new booster pump stations with capacities of 2,600 gpm and 1,400 gpm and approximately 14,000 linear feet of product water pipe-line, 12 inches to 24 inches in diameter. The project also included design of a new 10 MGD Chino II Desalter. This treatment plant was designed to target TDS and nitrate removal and using reverse-osmosis and ion exchange in parallel. The project included eight new groundwater wells; approximately 30,000 linear feet of raw water pipeline, 16 inches to 36 inches in diameter; approximately 24,000 linear feet of product water pipeline, 12 inches to 42 inches in diame-ter; and a new booster pump station with 3,000 gpm capacity. The new and expanded desalters, which include the Chino I Desalter and the Chino II Desalter, provide potable water to and strengthen the water supply reliability of cities and agencies in the southwesterly region of the Inland Empire, including Jurupa Community Services District, City of Chino, City of Chino Hills, City of Ontario, Santa Ana River Water Company, and the City of Norco.

La Brea Subarea Groundwater Supply Project – Wells, Transmission Main, and Treatment Facilities, City of Beverly Hills, CA
Ms. Miller is the Principal In Charge for the City of Beverly Hills La Brea Subarea Groundwater Supply Project. This is a $50 M project the City is implementing to expand their local water supply by developing groundwater in the La Brea Subarea of the Central Groundwater Basin. The project includes three (3) groundwater wells to be drilled and equipped, 4-miles of raw water transmission main through the City of Los Angeles and Beverly Hills, and upgrade of the City's existing reverse osmosis treatment plant. The first phase of the project which Hazen is leading is the drilling and equipping of the first groundwater well, and construction of the 4-mile transmission main.

Chino Basin Desalter Authority (CDA) Phase 3 Expansion, Chino, CA
Ms. Miller is providing Program Management services to the Chino Basin Desalter Authority (CDA) for their Phase 3 Expansion Project. Once completed, the Phase 3 Expansion will increase production capacity of the CDA's ground-water desalter Facilities to over 35,000 acre-ft per year of potable water capacity. The project includes construc-tion of new groundwater wells, pipelines, treatment facility to recover desalter concentrate (i.e. concentrate reduc-tion facility), product water pump station expansion and new product water pump stations. The construction cost of the Phase 3 expansion is estimated at $150 million and construction is expected to be completed early 2018.

Miller, Cindy

Jack Adam, PE

Project Delivery Manager

Jack is a Project Manager with extensive civil engineering experience in the water, wastewater, and recycled-water distribution, conveyance, storage, and treatment fields.

Education

BS, Civil Engineering, University of Massachusetts

Certification/License

Areas of Expertise

- Large Diameter Pipeline Design
- Project Management

Professional Affiliations

American Water Works Association (AWWA)

American Society of Civil Engineers (ASCE)

Water Pipeline Condition Assessment

Pipeline Risk Committee Blue Ribbon Task Force

Golden Key International Honor Society

Chi Epsilon Honor Society

Served as principal-in-charge, project manager, and design engineer on a multitude of major water resources projects throughout the United States. Career accomplishments total more than 100 miles of pipeline ranging in diameters from 8 to 102 inches with pressures up to 500 pounds per square inch (psi) and pump stations up to 10,000 hp. As the former Director of Engineering for the Sweetwater Authority, brings public sector experience involving management and oversight of infrastructure projects including 380 miles of pipelines, 40 Mgal of storage, a 5 mgd groundwater demineralization facility, a 30 mgd surface water treatment plant (WTP), a 2 mgd potable groundwater supply, and imported water supplies.

Design-Build of the Carlsbad Conveyance System, San Diego County Water Authority, Carlsbad, CA

Project Manager helming this work that included 52,000 feet of 54-inch welded steel pipe with pressure up to 600 psi for compliance with industry and client standards. The scope of work involved development and review of pipeline structural design, compliance with California Department of Public Health (CDPH) guidelines, evaluation of surge analysis, geotechnical studies, and operations and maintenance issues. Managed the overall design review effort including review of design drawings, specifications, and calculations to make certain the work conformed with agency and industry standards.

Palos Verdes Recycled-Water Pipeline Preliminary Design, West Basin Municipal Water District, Carson, CA

Project Manager for the design services for the Palos Verdes recycled water pipeline and Lago Seco Pump Station. The project includes the design of approximately 20,000 feet of 10, 8- and 4-inch PVC RW laterals, a pressure reducing and metering station, and a 500 gpm booster pump station design to provide with primary pumps to serve the Pals Verdes Golf Course and smaller jockey pumps to meet overnight irrigation demands. The project scope includes preparation of design plans and bid documents including project cost estimates preparing traffic control plans, obtaining project permits and approvals including Caltrans Permit, Los Angeles County Flood Control Permit, Department of Drinking Water Approvals, City of Torrance and Palos Verdes Estates Encroachment Permits, communication evaluation to enable the pump station to be

Hazen

integrated into West Basin's RW system, and land acquisition services including land appraisals and assisting with preparation of acquisition offers. The project pipelines are currently at the 90% design level and the pump station is at the 60% design level. We have provided technical support to West Basin to process pump station site approvals from the City of Torrance. Currently, the City is proposing the pump station be relocated to a site approximately 500 feet from it's current location.

Hueneme Road Pipeline, City of Oxnard, Oxnard, CA
Pipeline Design Engineer for work that included developing design criteria of a steel shell for internal pressure, external loading, and restrained-joint design for 5 miles of 36-inch and 42-inch welded steel pipe. Performed the pipeline structural design calculations.

Otay 2nd Pipeline Phase 3, City of San Diego, San Diego, CA
Project Manager for the City of San Diego's Otay 2nd Pipeline Phase 3 replacement including preliminary design, final design and construction administration services for replacing approximately 3,400 feet of 36-inch pipe with 5,400 feet 48-inch steel pipe. Completed in December 2019, the Basis of Design Report (BODR) identified the preferred pipeline alignment meeting the City's goal of relocating the pipeline from cross-country private properties into the Public right-of-way (ROW). Phase 3 is located in the unincorporated area of San Diego County (Bonita) and involves in-depth coordination with multiple private property owners and agencies including San Diego County, Sweetwater Authority, and the City of Chula Vista. The Project is currently in the 100% design phase. The scope of services includes survey, easement acquisition, permitting, environmental support, geotechnical investigations, utility potholing, and pipeline design including basis of design studies, preliminary and final design services.

As-Needed Water Pipeline Replacement Design, Vista Irrigation District, Vista, CA
As Project Manager, provides as-needed preliminary design and design services for the District's Group Job Pipeline Replacement Projects to reverse catastrophic failures experienced on its Nipponite asbestos cement (AC) pipe installed in the 1960s. Group Job 1 includes the replacement of approximately 10,000 feet of 10-inch, 8-inch, 6-inch, and 4-inch AC pipe with polyvinyl chloride (PVC) pipe. Group Job 2 included replacing 13,000 feet of 6-inch, 8-inch, and 14-inch AC and steel pipe with PVC pipe. Services have included preliminary design evaluation involving the assessment of high-lining versus replacing in-place; conducting utility research; coordinating survey, geotechnical, and environmental services; and preparing contract documents including plan and profiles, connection detail, and project specification.

Otay 2nd Pipeline Phase 1, City of San Diego, San Diego, CA
Project Manager for the design, assistance during the bid, and construction support for the replacement of the existing 30-inch Otay Phase I water pipeline with 48-inch steel pipe. The scope of work includes pipeline design calculations; conceptual design of the pressure relief valve (PRV)/Pump Station Connection Plan for the 30 percent, 60 percent, 90 percent, and final design; coordination of San Diego's Metropolitan Transit System (MTS) permit; engineers Off Property Contact (OPC); and a 60 percent constructability review.

Morena Water Pipeline Replacement Under the Morena Pump Station and Conveyance System Project, City of San Diego, San Diego, CA
Project Manager for work that has been included as part of the City of San Diego Pure Water Program and involves the replacement of the Morena Pipeline from Friars Road to Balboa Avenue. The Morena Pipeline consists of 3.75 miles of 16-inch cast-iron and 20-inch asbestos cement (AC) pipe currently serving both transmission and distribution functions. The project involves replacement of the existing pipeline with a 16-inch polyvinyl chloride (PVC) distribution pipeline and construction of a new 36-inch welded-steel transmission pipeline.

Nicole Blute, PhD, PE

Water Treatment Facilities

Dr. Blute develops and leads a wide variety of drinking water system projects, notably including water system planning, groundwater contamination treatment projects including PFAS, technology testing for emerging inorganic and organic contaminants, distribution system water quality projects, and disinfection strategy evaluations.

Education

PhD, Environmental Engineering, Massachusetts Institute of Technology

BS, Environmental Science, University of Rochester, NY

BA, Chemistry, University of Rochester, NY

Certification/License

Professional Engineer

Areas of Expertise

- Project management
- Groundwater treatment
- Decision analysis
- Advanced treatment
- Source water integration
- Distribution system water quality
- Corrosion control and stabilization
- Bench, pilot, and demonstration testing

Professional Activities

American Water Works Association

- Research Division Trustee
- Inorganic Contaminants Committee Chair

Society of Women Engineers

California Nevada AWWA

Recycled Water Committee Secretary

Regional Brackish Water Reclamation Program Phase I, Water Replenishment District of Southern California, Carson, CA

Dr. Blute is providing technical water quality and permitting support for Phase 1 of the RBWRP. The RBWRP will treat brackish water trapped behind the seawater intrusion barrier, with the goal of providing future room in the aquifer for recharge of indirect potable reuse from regional advanced water treatment plants. Phase 1 includes well siting, pilot borehole drilling, well water quality sampling, well design and drilling, pretreatment and reverse osmosis pilot testing, and water quality characterization.

AWIA Risk and Resiliency Assessment, Coachella Valley Water District, CA

Dr. Blute was the Project Manager for CVWD's AWIA Risk and Resiliency Assessment (RRA), providing project management of the team and QA/QC review of meeting materials and work products.

Brine Residuals Optimization Evaluation, Coachella Valley Water District, Palm Desert, CA

Dr. Blute was the Project Director for a study of CVWD's ion exchange treatment plants (IXTPs) focused on minimizing brine waste generation. IXTP programming was evaluated to identify opportunities for integration of additional recycling. Options for brine waste reduction were evaluated to assess payback periods for operational and infrastructure investments.

Ion Exchange Resin and Regeneration Pilot Testing, Coachella Valley Water District, Palm Desert, CA

Dr. Blute was the Project Director for pilot testing of new high capacity Cr(VI) removal strong base anion exchange resin. Testing included brine regeneration and an innovative approach for minimizing brine waste production. Two wells with different water quality were tested with successive regenerations and with recycled brine.

Owner's Agent for the San Fernando Basin Groundwater Remediation, Los Angeles Department of Water and Power, Los Angeles, CA

Project Manager and Technical Leader for the Los Angeles Department of Water and Power (LADWP) San Fernando Basin Groundwater Remediation. As the Owner's Agent, the team led by Dr. Blute is conducting a $30M, 10-year project to select and implement remediation, may cost between $300M and $600M for planning, design, and construction. Components include the following: Technical evaluation; Regulatory permitting, including 97-005 reports; Design services ranging from 30% to 100% design depending on the project; Procurement assistance; Proposition 1 grant writing; Construction scheduling; and Evaluation of alternate delivery options.

Strategy Development for Water Quality Changes, Metropolitan Water District of Southern California, Los Angeles, CA

Dr. Blute is the Project Manager developing a strategy for optimizing treatment and corrosion control for Metropolitan Water District of Southern California (Metropolitan). Periods of low alkalinity water have stressed the limits of the current corrosion control approach, and Metropolitan is preparing for additional episodes of snowmelt-induced low alkalinity water from SPW as well as new potential sources of low alkalinity water from desalination and direct potable reuse. Hazen planned and convened an Expert Workshop consisting of presentations by four drinking water treatment and corrosion experts and developed recommendations including design criteria for treatment chemicals to control corrosion.

Demonstration and Pilot Studies of Hexavalent Chromium Treatment Technologies, Glendale, CA

Dr. Blute was the Technical Lead and Project Manager for $10M of demonstration and pilot studies of hexavalent chromium removal technologies in the City of Glendale, CA. As Owner's Agent, led technology testing of seven potential approaches, recommended selection of two (weak base anion exchange and reduction coagulation filtration) and facilitated Project Advisory Committee final selection, managed 30% design, assisted the city in procurement services (Design Build), prepared the project report submitted to DDW, and provided optimization service for the past 3 years to reduce costs. She facilitated communications between the many involved parties, including regulatory agencies (CDPH, CDWR, and USEPA), additional funding agencies (USBR, Water Research Foundation), other utilities (MWDSC, LADWP, Burbank, and San Fernando), and engineering firms representing potentially responsible parties of the Superfund site and regulatory interests). The results of the over twelve years of study comprised the state-of-the-art knowledge about hexavalent chromium removal technologies and were used by the state in setting the new regulatory limit.

Joel Bowdan, PE

Water Treatment Lead and Pump/Booster Stations

Mr. Bowdan is a Senior Associate in Hazen's San Diego office. He is an experienced registered professional civil engineer with 30 years of experience in the planning and design of water and wastewater infrastructure including pipelines, lift stations, booster stations, production wells, storage tanks, treatment facilities, and combined sewage overflow elimination facilities.

Education

B.S., Civil Engineering, Lawrence Technological University, Southfield, MI

Certification/License

Professional Engineer

Areas of Expertise

- Process Engineering (water, wastewater, industrial)
- Pumping facilities (water, wastewater, recycled water, stormwater)
- Groundwater Treatment (Filtration, IX, BW NF/RO, Adsorptive Media, Biological Media)
- Wastewater Treatment
- Industrial Cooling Tower Treatment
- Industrial Pretreatment for Automotive Manufacturing Waste
- Combined Sewage Overflow and Retention Treatment Facilities
- Ground and Elevated Storage Tanks

Professional Activities

American Membrane Technology Association, American Water Works Association (AWWA), Chi Epsilon, The National Civil Engineering Honor Society, Southwest Membrane Operators Association, Tau Beta Pi - The Engineering Honor Society, WateReuse Association

Mr. Bowdan is responsible for project management, design supervision, contract administration, client interaction and development, and personnel management. His expertise includes complex pumping, control valve, and piping system layout, hydraulic design, groundwater supply and treatment facility design, brackish water reverse osmosis membrane desalinization, electrodialysis reversal (EDR) treatment for recycled water, alternative treatment for cooling tower systems, and other process related design. Mr. Bowdan's experience includes construction management and construction services support including start-up and operation of pumping and treatment facilities. He is highly experienced in the preparation of P&IDs, development of control narratives, and management of multi-disciplined teams (civil, architectural, structural, process, mechanical, electrical, and I&C) during project design and construction.

CVWD IXTP 7991 Replacement Construction Phase, Coachella Valley Water District, Mecca, CA

Project Manager. Project Manager. Responsible for professional engineering support services during construction for the replacement of the existing packaged ion-exchange treatment system with a new single-pass, adsorption media based, arsenic removal system including pre-filtration, backwash water recover and recycle, chemical feed storage and injection, new deep well turbine well pump, electrical distribution system, PLC-based control system, and related piping, valves, and appurtenances.

Twin Dolphin Development, Montage Hotel and Resorts, Cabo, Mexico

Technical Lead for wet infrastructure and facilities redesign. Joel worked on the Original SWRO plant, supporting conveyance facilities, and other onsite infrastructure facilities with his previous firm. Review of TSG BiTurbo technology and coordination with client for SWRO expansion. Members of the Hazen team were involved in the original planning, siting, preliminary design, start-up, and operational assistance for the original 1.0 MGD facility. Hazen has been selected by Twin Dolphin to

Hazen

provide ongoing engineering services for master plan preparation, SWRO expansion planning, TSG BiTurbo high efficiency RO unit evaluation, and design assistance for expansion of the SWRO plant to 2.05 MGD. The expanded SWRO plant will provide drinking water for new residential and commercial development and irrigation water for golf course expansion. Project is currently pursuing new subsurface intakes to supplement existing seawater supply but will also consider open ocean intake system. The SWRO system includes three (3) existing vertical beach production wells and will include one (1) or more new subsurface intakes, cartridge filtration system, Reverse Osmosis (RO) system, brine disposal system, and chemical injection facilities. Hazen staff have assisted with prior construction and commissioning of the existing desalination plant.

Upper Valle De Los Caballos (UVDC) Regional Pump Station, Rancho California Water District, CA
Project Manager. Preliminary and final design for new regional water booster station comprising four 1305 PZ Pumps (19,000 gpm capacity) and three 1380 PZ Pumps (6,850 gpm capacity) vertical turbine can pumps, new 2,000 lb/day onsite sodium hypochlorite generation system, new LAS storage and injection facilities, new chlorine contact tank, including new 10,000 SF CMU building with TPO membrane roofing system, upgraded electrical utility service and new switchgear, MCC, and VFDs. New redundant PLC based control and SCADA system.

69th and Mohawk Pump Station and Pipeline Replacement, City of San Diego, San Diego County, CA
Project Engineer. Oversaw detailed hydraulic modelling, surge analysis, pump selection, and control criteria for new 18 MGD pump station and associated transmission mains. Provided technical advisory during design and construction phases.

Eastern Service Area Secondary Connection Project (ESA SCP), Padre Dam Municipal Water District, San Diego County, CA
Technical Manager. Oversaw detailed hydraulic modelling, surge analysis, and surge tank design for new 12 MGD pump station, 9 MGD flow control facility (FCF), 1.75 MG reservoir and related transmission main.

Coronado Recycled Water Feasibility Study, City of Coronado, CA
Project Manager. Responsible for the development of a comprehensive feasibility study to identify and analyze alternatives for the supply of non-potable water to the City of Coronado. Study alternatives included: (1) reclamation of sanitary waste generated on the island; (2) single-stage, single-pass seawater desalination with open-ocean or subsurface intake; and (3) pipeline alternatives to import recycled water from other nearby water agencies. The sanitary waste reclamation alternative included conceptual design of two (2) wastewater reclamation facility alternatives: (1) extended aeration activated sludge followed by microfiltration tertiary treatment and UV; and (2) membrane bioreactor (MBR) followed by UV. Performed an alternatives analysis using criteria developed jointly with City staff and prepared a project implementation plan based on the recommended alternative.

San Pasqual Brackish Desalination Demonstration, City of San Diego, CA
Project Manager. Responsible for project management for preliminary design, detailed design, construction, facility start-up, and operation and maintenance of a 0.22 MGD brackish groundwater reverse-osmosis (RO) desalination facility demonstration project. Located on the City of San Diego's decommissioned San Pasqual Water Reclamation Plant site, the project utilized portions of the existing facility, including the Advanced Water Treatment Building, Administration/Lab Build-ing, Recycled Water Pump Station, and Hyacinth Ponds to facilitate construction and operation of the demonstration facility. This project garnered the ASCE San Diego Section Outstanding Civil Engineering Project - Water Treatment – 2010.

Chino Hills 123-TCP Removal Project, City Chino Hills, CA
Project Manager. Responsible for the feasibility and preliminary design study for a proposed centralized granular activated carbon (GAC) system for the removal of 1,2,3-TCP. The selected project will be a centralized facility having a treatment capacity of 6.8 MGD.

Silvana Ghiu, PhD, PE

Water Treatment Facilities

Dr. Ghiu has extensive experience in water treatment systems covering many aspects of project development, from feasibility studies, pilot testing, detailed design (for both traditional design-bid-build and design-build projects), and design review, manufacturing, cost estimation, comprehensive energy consumptions estimation and optimization, and O&M integration with design.

Education

Ph.D., Environmental Engineering, University of South Florida

M.S., Environmental Science and Policy, Central European University, Hungary

M.S., Atmospheric Physics, University of Bucharest, Romania

B.S., Engineering Physics, University of Bucharest, Romania

Certification/License

Professional Engineer

Areas of Expertise

- Groundwater treatment
- Raw water characterization
- Membrane system design and operation

Groundwater Treatment for San Fernando Basin, Los Angeles Department of Water and Power, CA
Task Leader. The project may require but not be limited to services to provide advice and recommendations regarding optimal project scheduling options, budgeting and cost estimating, design drawings, facility layouts, specifications, and project meetings. Services may include Civil, Traffic, Structural, Mechanical, Electrical, Water Quality and Treatment Engineering.

Water Replenishment District of Southern California, Leo J. Vander Lans Plant Chemical System Evaluation, Long Beach, CA
Project Manager. Leading a team of engineers in assessing the existing condition for ten chemicals system. Recommendations for improvements are proposed and implementation to 100% design is presented in plans and specifications. Services include construction support for the implementation phase.

Reservoirs 1 & 2, Pumps, Controls and Chemical System Improvements, Costa Mesa, CA
QA/QC for the reservoir and booster pump station project which included assessment of the booster pumps and their associated controls, evaluation of the chemical feed system, and an evaluation of the tank mixing system at two reservoirs. The project included a preliminary design report and 30-percent design drawings and specifications to replace the existing chemical feed system and install new reservoir mixing systems.

Broad Run Water Reclamation Facility, Loudoun Water, VA
Technical Advisor. Perform process and mechanical design review for expansion and rehabilitation of the ultrafiltration system.

Regional Water Recycling Facility Tertiary MBR Design and Microfiltration Upgrade Design, West Basin Municipal Water District, Carson, CA
Technical Advisor. Performed process and mechanical design review for microfiltration system and chemical consumption calculations for MBR O&M evaluation.

Chromium VI Ion Exchange Water Treatment Project, Coachella Valley Water District, CA
Process and Mechanical Lead. Performed process flow diagrams and P&ID for well water treatment systems using SBS, WBA and a central regeneration facility. Responsibilities includes 30%, 60% and 100% design drawings and specifications.

Mission Viejo Lake, Santa Margarita Water District
Technical Advisor. Performed design review for a 0.8 MGD advanced water treatment plant for replenishment of Mission Viejo Lake, CA. Evaluated proposals from system suppliers and provided recommendations on the procurement approach to the treatment system. (2016)

Broad Run Water Reclamation Facility, Loudoun Water, VA
Project Engineer. Developed an Operation and Maintenance cost estimate model which included energy, chemicals consumption, maintenance etc. Analyzed MBR membrane performance (historical and current) in terms of water quality and fouling potential (TMP and permeability time series) for twelve operating trains. (2014)

Design Build of the Well No. 9 NF Treatment Plant, City of Signal Hill, CA
Technical Advisor. Review of NF design, specifications preparation as well as membrane procurement interface with OEM for a 2.6 MGD groundwater NF treatment facility. Developed membrane acceptance and wet testing protocol and provided technical expertise on startup and commissioning.

Coachella Valley Water District Feasibility Study of Enhanced Brine Management, Coachella Valley Water District, Palm Desert, CA
Project Manager. Feasibility study to asses cost effectiveness of IX brine treatment and brine disposal options. The study will provide the utility sufficient information to make a decision whether different brine minimization strategies can be viable options to the current alternative for brine disposal.

Feasibility Study to Develop the Simi Valley Basin as Potable Water Resource, Simi Valley Waterworks District, CA
Task Leader. Responsible for water quality analysis for wells in different regions, identification and placement of the required treatment system as well as blending with local supplies to achieve the water quality goals. Responsible for developing capital and O&M cost estimates and cost - benefit analysis of alternatives for treatment.

Evaluation Study for the Operation of the 200 MG Maerkle Reservoir System, Carlsbad Municipal Water District, CA
Task Leader. Analysis of current operation practices and disinfection strategies in relation to the water quality in the reservoir and identification of potential factors contributing to nitrification. The reservoir is disinfected with chloramines and chlorine dioxide. Recommendations were provided for operational changes as well as capital improvements to improve the water quality and the residual in the reservoir.

Fredrick Gerringer, PE, BCEE, D.ENV

Wastewater & Recycled Water Treatment Facilities

Dr. Gerringer serves as Hazen's West Region Water Reuse Practice Leader. He has over 20 years of experience working in the public and private sectors on water reuse, drinking water, and wastewater projects throughout California.

Education

D.Env, University of California at Los Angeles, CA

MS, Civil/Environmental Engineering, University of California at Los Angeles, CA

BS, Civil/Environmental Engineering, University of California at Berkeley, CA

Certification/License

Professional Engineer

Board Certified Environmental Engineer, Specialty: Water Supply and Wastewater

Areas of Expertise

- Water recycling and reuse
- Drinking water treatment
- Wastewater treatment
- Process design
- Regulatory compliance
- Ozone disinfection and oxidation
- Membranes
- UV disinfection and advanced oxidation

Lower Santa Margarita Supply Reliability Pilot Project, Fallbrook Public Utility District, Fallbrook, CA

Technical Leader. Fallbrook Public Utility District (FPUD) and Marine Corps Base Camp Pendleton's (CPEN) are investigating indirect potable reuse (IPR) as an approach to complete the water cycles of their respective agencies, augment local water supplies, replenish the groundwater basin, and reduce dependence on imported water. FPUD selected Hazen to establish the IPR regulatory approach, conduct pilot testing at the Fallbrook Water Reclamation Plant and CPEN's Southern Regional Tertiary Treatment Plant, and develop a full-scale feasibility report. Dr. Gerringer is leading the technical approach and pilot testing and will support the process design in the full-scale feasibility report.

Design Build of the Central Groundwater Treatment Facility, City of Monterey Park, Monterey Park, CA

Project Engineer. Hazen as part of a Design-Build Team was responsible for the complete design of a 10 MGD UV Advanced Oxidation system and catalytic GAC system for treatment of a highly impaired groundwater in the City. Responsible for the complete process mechanical design as well as coordination of civil, electrical and structural designs including design of 0.5 miles of slip-lined piping for raw well water. Responsible for leading the process design, process mechanical design and for leading the process for obtaining the permit from the California DDW.

Ozone Pretreatment of Non-Nitrified Secondary Effluent, WateReuse Research Foundation, Alexandria, VA

Co-Principal Investigator on this tailored collaboration between the WateReuse Research Foundation and West Basin Municipal Water District to investigate the effect of the ozonation of a non-nitrified secondary effluent on the performance of microfiltration (MF) and reverse osmosis (RO) membranes. Project goals included optimizing ozone dose for MF performance, investigating the effect of MF pretreatment with ozone on downstream RO performance, testing automatic ozone dose control based on ultraviolet transmittance, and quantifying the effect of ozonation on N-nitrosodimethylamine and contaminants of emerging concern. Results from this project, which demonstrated improved MF performance after ozonation, were applied to the design of the Phase V Expansion of the Districts' Edward C. Little Water Recycling Facility.

Hazen

Implementation Plan for a Small-Scale Indirect Potable Reuse Project, Rancho California Water District, Temecula, CA

Project Manager. In Rancho California Water District's (RCWD) service area, water recycling has been confined to non-potable uses such as irrigation. Over the past decade, RCWD has conducted several studies to evaluate a range of non-potable and potable reuse options for expanding the use of recycled water. A recent analysis of project alternatives recommended a hybrid approach of expanding the non-potable reuse system and adding a Small-Scale (550 AFY) Indirect Potable Reuse (IPR) system to their water supply portfolio. The Small-Scale IPR system will purify tertiary water from the Santa Rosa Water Reclamation Facility to high-quality drinking water standards and return it to the local water supply via groundwater injection. A local and national Hazen team will use their expertise to identify potential technical, regulatory, financial and public acceptance risks and develop mitigation strategies to ensure the future success of RCWD's project. The Hazen Team will develop concepts, such as brine management options that could increase the size of the potable reuse facility, to produce a project that fits RCWD's vision and needs. These concepts will feed into an implementation pathway that will leverage the external funding that RCWD has secured for later stages of the project. Regardless of the direction RCWD takes the project, the Hazen Team will define a practical, implementable pathway that will provide the technical, regulatory and cost certainty RCWD needs to move forward to successful implementation.

Per and Polyfluoroalkyl Substances Pilot Testing, Water Replenishment District, Lakewood, CA

GSI Environmental and Hazen and Sawyer conducted pilot testing of per and polyfluoroalkyl substances (PFAS) removal technologies to address groundwater quality challenges in the Montebello Forebay area. The study included parallel testing of 4 types of granular activated carbon and 4 types of ion exchange resin. The team developed the pilot test work plan, reviewed the pilot plant design developed by the equipment supplier, conducted the pilot testing, and produced a technical memorandum that discussed the results and presented a cost analysis for the different treatment technologies. Dr. Gerringer provided technical expertise throughout the project, with a focus on analyzing the test results. Start Date: January 2020: Completion Date January 2021 (est.); Fee: $5,000.

Biological and Advanced Treatment at JWPCP, Los Angeles County Sanitation Districts, CA

AWT Integration. Technical analysis and preliminary design of wastewater treatment upgrades for the 150 mgd Regional Recycled Water Program, a partnership between LACSD and the Metropolitan Water District to increase local water supplies. One of the largest pure oxygen plants in the world, JWPCP will require nutrient removal and advanced water pretreatment prior to ground-water recharge or direct potable reuse.

Peck Reservoir Replacement Project, Manhattan Beach, CA

This project included the replacement of the existing 7.5 MG Peck Reservoir and Pumping Station with a new 8.0 MG Cast-in-Place buried reservoir with a separate pump station that has 3 duty and 1 standby pumps that produce 2,200 gpm at 250 hp with VFDs to match system demands. The project also adds a 4.75 mgd groundwater treatment facility to remove ammonia and manganese using breakpoint chlorination and greensand filtration followed by disinfection with chloramination. Dr. Gerringer supported the design, construction, and startup of the chemical storage and feed systems.

Operations Support Services, West Basin Municipal Water District, Carson, CA

Evaluation of West Basin Facility Readiness for Direct Potable Reuse. This two year on call project incorporates support to all West Basin operations including the 55 MGD Edward C Little Water Recycling Facility, neighboring satellite recycling facilities and distribution pipe network. Responsible for coordination of operations support team, scheduling, budgeting, treatment, water quality and operations advice, preparation of standard operating procedures and dashboards for measurement of facility key performance indicators (KPI).

Steve Malloy, PE

Wastewater & Recycled Water Treatment Facilities

Mr. Malloy is an experienced professional in treatment system planning and design. He brings a client's perspective to projects and applies his construction management experience in his QA/QC reviews.

Chino I Desalter VOC Treatment, Chino Basin Desalter Authority, CA
The project includes preliminary and final design of two (2) GAC treatment facilities (1.7 mgd and 3.4 mgd) at the Chino I Desalter Plant for the removal of TCE and 1,2,3-TCP, and evaluation of treatment requirements for 1,4-dioxanr, cis-1,2-DCE, 1,2-CDA, PFOA, and PFOS. The goal of this project is to provide groundwater treatment for all CDA bypass wells (CDA Wells I-1 through I-4), and several treated wells (CDA I-16 through 18), plus 10 new wells that will be installed by the County of San Bernardino as part of a Cleanup and Abatement Order issued by the Santa Ana Regional Water Quality Control Board (SARWQCB).

Michelson Water Recycling Plant Phase 2 Expansion Project, Irvine Ranch Water District, Irvine, CA
Project Manager on project to increase recycled water production capacity of existing plant from 18 mgd to 28 mgd. The project included new 48" to 60" influent sewers, headworks, primary sedimentation tanks, a 11 mgd membrane bioreactor, 22 mgd high rate clarifier, 15 mgd ultraviolet disinfection system, chemical systems, odor control, associated electrical and instrumentation systems, and a floodwall to provide 100-year flood protection. Duties included overseeing planning, design, construction management, permit compliance, and startup activities.

Irvine Desaler Project, Irvine Ranch Water District, Irvine, CA
Project Manager responsible for this potable and non-potable water project. The potable water portion included drilling 5 new brackish water wells, design and construction of pipelines, a 5 mgd drinking water low pressure reverse osmosis membrane treatment plant, and connection to an outfall for brine disposal. The non-potable portion of the project included implementing the Superfund Record of Decision for remediating the TCE plume emanating from the former El Toro Marine Corps Air Station, including rehabilitation of 3 wells, new pipelines, and 2 new air stripping/granular activated carbon treatment plants. Conducted extensive public outreach with the local community to acquire the well sites and treatment plant sites. Project included close coordination with the Regional Water Quality Control Boards for NPDES permits, Dept. of the Navy, California Dept. of Toxic Substances Control, and Orange County Water District.

Hazen

Deep Aquifer Treatment System, Irvine Ranch Water District, Irvine, CA
Project Manager for project to remove naturally occurring color from groundwater to produce a new drinking water supply. The project included drilling 2 new very deep wells, pipelines, an 8 mgd nanofitration treatment plant working at 92% recovery, and connection to Orange County Sanitation District sewers for concentrate disposal. The project was completed on time and within budget to meet an aggressive schedule to provide significant owner savings for a new water supply. Duties included overseeing the design, construction management of the design-build process, and coordination with Orange County Water District to ensure that the concentrate would not impact their Groundwater Replenishment System project.

Harvard Avenue Trunk Sewer, Irvine Ranch Water District, Irvine and Tustin, CA
Project Manager. 36" to 54" trunk sewer provided gravity connection to area formerly served by OCSD's Dow Street Lift Station. Includes two siphons under County flood control channel with air jumpers and a large diameter bore under railroad ROW.

Main Street Trunk Sewer and Sewer Diversion Structure, Irvine Ranch Water District, Irvine, CA
Project Manager. 60" sewer connects IRWD raw sewage flows to OCSD's collection system at Main Street and San Diego Creek. Project included a diversion structure, sewer siphon, air jumper, and flow meter.

Jeffrey Road Trunk Sewer, Irvine Ranch Water District, Irvine, CA
Project Manager. Design of new gravity sewer and triple-barrel siphon with air jumper pipe at San Diego Creek.

Michelson Pump Station No. 3 and Force Main, Irvine Ranch Water District, Irvine, CA
Project Manager. Pumps solids flows from MWRP to OCSD's collection system. Includes force main under I-405, a pig launching station, and chemical addition to reduce odors in the OCSD collection system.

University Drive Sewage Lift Station, Irvine Ranch Water District, Irvine, CA
Project Manager. Planning and design of lift station along University Drive that pumps to MWRP.

Bonita Canyon Road Sewage Lift Station, Irvine Ranch Water District, Irvine, CA
Project Manager. Design of lift station along Bonita Canyon Road that pumps to MWRP.

Sewage Lift Stations, Irvine Ranch Water District, Newport Beach, CA
Project Manager. Planning and design of lift station and force main along Newport Coast Drive that pump to OCSD's collection system.

Westpark Development, Irvine Ranch Water District, Irvine, CA
Project Manager. Planning and design of potable water, sewer, and recycled water pipelines in a new residential development area.

Newport Coast Development, Irvine Ranch Water District, Newport Beach, CA
Project Manager. Planning, design, and program management of potable water, sewer, and recycled water infrastructure including pump stations and reservoirs in a new luxury residential development area.

Foothill Ranch Development, Irvine Ranch Water District, County of Orange, CA
Project Manager. Planning, design, and program management of potable water, sewer, and recycled water infrastructure including pump stations and reservoirs in a new residential development area.

Shady Canyon Development, Irvine Ranch Water District, Irvine, CA
Project Manager. Planning, design, and program management of potable water, sewer, and recycled water infrastructure including a pump station and reservoir in a new luxury residential development area.

Jerimy Borchardt, PE

Pipelines

Mr. Borchardt is an accomplished project manager with 14 years of diverse planning, design and construction experience which allows him to effectively lead teams in a wide range of water and wastewater projects throughout California

Vacuum System Reduces Pump Station Power Consumption – ASCE Pipelines 2014 Conference

Water Infrastructure Improvement Project, City of Manhattan Beach, Manhattan Beach, CA

Project Manager for the design of replacement distribution pipelines as part of the City's three-year replacement CIP for critical sections within their water distribution network. The design required the re-alignment in congested corridors of most of the nine different pipeline segments that comprised the 8,700 LF of 6- to 8-inch distribution pipe to allow continued residential water service. The project required 20 different connection details to existing distribution pipe, design for 39 ADA compliant sidewalk access ramps, and complete grind and overlay of the 13 streets affected by the pipeline replacements. Close coordination with Department of Drinking Water (DDW) was required to obtain separation waivers required because of the pipeline re-alignments and congested pipeline corridors. The 90% design was completed in 5 months and is awaiting DDW waiver review and approval.

Whitewater Erosion Protection Structure Rehabilitation, Metropolitan Water District of Southern California, Los Angeles, CA

Project and design manager for the rehabilitation design of the erosion control structure that protects the dual Colorado River Aqueduct siphon crossing of the Whitewater River. The design included analysis of modeled river flows and the sizing of replacement rip-rap and other reinforcement design elements using U.S. Bureau of Reclamation and Army Corps of Engineer design methods that will mitigate further damage of the remaining structure into the near future and be constructible in an expedited manner. Because of the importance associated with protecting the Aqueduct siphons and facilitation advertisement, bidding, and construction of the rehabilitation in later the same year, the $125,000 design duration was only one and a half months long and required weekly design reviews by the multiple departments within Metropolitan.

Pump Station 4 Replacement Project, Byron-Bethany Irrigation District, Byron, CA
Construction Manager for the replacement of Pump Station 4, a vital BBID facility which provides irrigation water to over 1,000 acres. Construction of the project required close coordination with BBID to maintain operations of the existing pump station while the replacement pump station was constructed through irrigation season and expedited construction during the winter because it is located along a seasonal creek. The new pump station has a capacity of 32 cubic feet per second (cfs) and includes a cast-in-place reinforced concrete wet well, over 150 feet of reinforced shotcrete canal lining, traveling debris screen and conveyor, four vertical turbine pumps with two constant speed drives and two variable speed drives, two magnetic flow meters, and a new precast concrete control building. The replacement project also included over 1,600 feet of 24-inch diameter reinforced concrete pipe at two 50-foot welded steel pipe bridges.

San Diego County Water Authority Planning Services for Task 3 - San Diego 5ABC Flow Control Facility Replacement, San Diego County Water Authority, San Diego, CA
Project Engineer for the preliminary alternatives analysis, planning level conceptual design and cost estimates for new facilities and transmission pipelines including stakeholder coordination, environmental review and permitting evaluation of several viable alternatives for replacing the SD 5ABC Flow Control Facility (FCF). The Hazen team identified and recommended the preferred alternative for further evaluation during next phase of preliminary design. In addition, team members completed a hydraulic analyses based on the various flow demand deliveries through the Second Aqueduct system from the Miramar Vent to the Red Cedar Crossover to determine if the higher hydraulic gradients required to operate the 5ABC FCF and/or a hydraulic constraint at Red Cedar is causing the back-up in Miramar vent. Team members collaborated closely with the Water Authority throughout this project using in-person workshops and virtual meetings to review the results and discuss the recommendations during each of the project milestones.

Mountain House Raw Water Pipeline – Hydraulic Evaluation and Condition Assessment Project, Byron-Bethany Irrigation District, Bryon, CA
Project Engineer. The project involved a field investigation, hydraulic evaluation and condition assessment for 3.75 miles of a 30-inch diameter bar-wrapped welded-steel pipeline that delivered raw water to a local community WTP. Hazen team members completed the hydraulic investigation and evaluation of the existing pipeline to document the real-time system pressures, establish the baseline HGL condition and estimate the design HGL for comparison with the real-time data to confirm whether the pipeline pressure were within normal operating parameters for the flow deliveries to the WTP. After a market analysis of viable non-destructive condition assessment technologies, Hazen developed a comprehensive Request for Proposal for solicitation of bids and selection of a vendor to complete a visual (CCTV) and structural inspection of the pipeline to confirm and baseline the pipeline's current condition and identify any repairs that may be necessary including sediment removal. The next phase includes overseeing the field condition assessment and providing rehabilitation and/or replacement recommendations.

Upper Main Canal Enclosure Project, The West Side Irrigation District, Tracy, CA
Project Manager and Construction Manager for the construction of three double 42-inch culvert pipe crossings totaling 1,200 LF and included demolition of existing culverts and construction of new inlet and outlet cast-in-place concrete structures. As the Owner's representative provided construction oversight and construction management including coordination between Design Engineer, Contractor, Owner, and materials testing representatives. Construction was completed on a fast track schedule over one month to allow for the beginning of irrigation season.

Steven Conner, PE

Technical Advisor: Pump/Booster, Wells Lead

Mr. Conner is a professional civil engineer with 28 years of experience in the planning and design of water infrastructure including pump stations and booster stations.

Education

BS, Civil Engineering/Water Resources, University of California, Irvine

Certification/License

Professional Civil Engineer

Transportation Worker Identification Credential (TWIC), California

Areas of Expertise

- Condition Assessment
- Pump Stations
- Well Equipping
- Pipeline Design
- Trenchless Pipeline Rehabilitation and Installation
- Steel Tanks
- Concrete Tanks

Professional Activities

American Society of Civil Engineers, Member

Mr. Conner has particular expertise in pump station design and has managed or served in a key technical role on projects ranging in size up to 600 mgd capacity. This includes in-depth evaluation of system requirements for proposed new facilities as well as rehabilitation, upgrade, or replacement of existing pumping systems. Steve serves as the pump station expert for the West Region.

Mr. Conner is highly skilled in project coordination and communication with public agencies at all levels of government, including federal state, county and municipalities, non-governmental organizations, and special interest groups. He has managed multi-disciplined project teams for large and complex projects throughout his career and has proven results through the collaborative relationships he has built with his clients and team.

Barrier Pump Station and Basin Rehabilitation and Replacement (R&R) Project, West Basin Municipal Water District, CA

Pump and Mechanical Task Lead. Hazen conducted detailed condition assessment of six pumps (two 150hp and four 300hp) including variable frequency drives (VFDs) and all associated mechanical, electrical and control systems. In addition, a detailed mechanical, structural and electrical condition assessment was conducted of the facilities. Hazen prepared a technical memorandum documenting the condition assessment work and subsequently, worked with West Basin staff to prepare a project construction phasing plan to align the estimated $8 million construction project with the District's Capital Improvement Plan (CIP) budget. Hazen has been retained to conduct the design of the R&R improvements and prepare bid documents.

Union Sanitation District (USD), Pump Station Asset Condition Assessment Study, Union City, CA

Pump Expert. Performed condition assessment for 2 pump stations and 4 lift stations. Evaluated business risk exposure of all the assets within these stations. Identified major CIPs for the stations and developed an implementation schedule for the CIPs. Developed an Asset Management Decision Support Dashboard using Power BI to visualize the risk and condition assessment results along with long range funding needs to better support the decision-making process for future capital investment.

Well No. 36 Design and Environmental Permitting - Palmdale Water District, Palmdale, CA
Project Engineer for the permitting and design of a new water supply well. Project is being delivered in an expedited manner to provide a new source of water for the District as soon as possible. Project will also involve engineering services during construction including inspection.

Seismic Assessment of Steel Reservoirs, Orange County, CA Moulton Niguel Water District.
Project Engineer. Conducted a seismic, structural, mechanical, and safety assessment of 42 steel reservoirs. Evaluations and analysis were conducted for each tank by structural, civil/mechanical, and electrical engineering experts. The analyses included review and evaluation in the following categories: ring footing deficiency, freeboard deficiency, inlet/outlet piping, sample ports, safety, coating, cathodic protection, tank appurtenances, internal dive inspections, and geotechnical investigations. The final report included details of the findings and recommendations for improvements which was incorporated into a 20-year capital improvement program.

Van Vliet Pump Station, City of Chino, CA
Design of an 18 cfs (8,100 gpm) stormwater pumping station for the City of Chino. The pump station is designed to pump peak stormwater flows during rain events, and low flows from the detention pond water quality filter system. The pump station utilizes VFD driven duplex submersible non-clog pumps designed to maintain a constant liquid level in the wet well. VFD pumps were selected for this application to reduce the size of the wet well and number of pumps needed based on pump cycle time calculations.

Plant 30 Wellhead Treatment Design, Montclair, CA
Well pump analysis, QA/QC, and construction support for the planning, design, and construction of a 4,000 gpm wellhead treatment system for Monte Vista Water District. Treatment includes GAC for 1,2,3-TCP and regenerable ion exchange for nitrate and perchlorate. The design includes site civil design and treatment of three wells and off-site pipelines from two wells to the third well site.

Reservoirs 1 & 2, Pumps, Controls and Chemical System Assessment, Mesa Water District, Costa Mesa, CA
Completed an assessment of the condition and operation of the pumps and controls system at two domestic water reservoirs, developed a plan for removal and testing of pumps as well as completed an evaluation of the existing chemical dosing system. Prepared a preliminary design report and 30-percent design plans and specifications to replace the existing chemical feed systems and install new reservoir mixers.

Sterling Pump Station, Riverside, CA
Project Manager. Mr. Conner was responsible for developing preliminary design alternatives, plans, specifications, and cost estimates for the construction of a new water pump station to deliver flow from the Arlington Desalter to two separate pressure zones in Western Municipal Water District's distribution system. Preliminary engineering studies included: comprehensive hydraulic analyses of the supply and distribution systems, evaluation of pump station operations, life-cycle cost analyses for alternative configurations of pumps, primary power (natural gas engines verses electric motors), and backup power. The final design included a 1.1 MG partially buried prestressed concrete forebay; a pump station building housing six 700 hp electric motor driven pumps, two 700 hp natural gas engine driven pumps, and motor control center; a surge tank; a chemical building for storage and feeding of sodium hypochlorite and ammonium sulfate; and a diesel driven backup generator to power one electric motor. The pump station is designed for an ultimate capacity of 30 cfs at 450 psi discharge pressure.

Steve Diamond, PE, BCEE

Groundwater Treatment Facilities & Pump/ Booster Stations

Mr. Diamond has 29 years of experience with planning, pilot testing, detailed design, and operations assessments, including start-up and training, for various potable water treatment, potable reuse and wastewater treatment applications.

Education

B.S., Civil Engineering, Lehigh University, Bethlehem, PA

Certification/License

Professional Engineer

Areas of Expertise

- Drinking Water Treatment – Planning, Design, PM, Operations Assessment
- Potable Reuse – Planning, Design, PM
- Wastewater Treatment – PM

Professional Activities

AWWA

He has been responsible delivering work as the Project Manager, Design Manager and Technical Expert, and he is experienced in all three rolls. Mr. Diamond has managed and coordinated multi-disciplinary design teams to deliver planning documents, and construct documents for hard bid construction projects as well as design build projects. He is a registered Civil Engineer (PE) in California and Florida and a Board Certified Environmental Engineer with AAEE. Mr. Diamond specializes in the planning, design and implementation of advanced treatment technologies for potable water treatment and water reuse.

Sunset Reservoir and Treatment Final Design, Pasadena Water and Power, Pasadena, CA

Treatment Lead for the Sunset Complex Project, which includes construction of two new circular prestressed concrete reservoirs to provide 11 million gallons of storage and a 3,000-gpm capacity groundwater treatment facility, consisting of granular activated carbon and ion exchange treatment processes for removal of PCE and Perchlorate, respectively. The new facilities will be built on the existing reservoir site that was originally constructed over 120 years ago. The project also includes re-equipment and rehabilitation of the onsite Bangham Well, new landscaping, stormwater capture and treatment, and architectural improvements to the existing Glorieta Pump Station Building.

SCVWA Valley Center Well PFAS Groundwater Treatment, Santa Clarita Valley Water Agency, Santa Clarita, CA

Project Manager for preliminary, final design and ESDC services for a PFAS Treatment Facility at the SCVWA's Valley Center Well with a treatment capacity of 1,200-GPM. Planning included an evaluation of treatment alternatives (including GAC, IX and a hybrid GAC/IX), development of conceptual design, and the development of a preliminary design based on IX treatment for PFAS removal. Final design included the IX treatment system, pre-purchasing long-lead items such as the IX Vessels and pre-filters, and the design of a new chloramination facility and site improvements. The project also included well rehabilitation prior to startup.

Hazen

SCVWA Well 201 VOC Treatment Preliminary and Final Design, Santa Clarita Valley Water Agency, Santa Clarita, CA
Project Manager for preliminary and final design, and services during construction of VOC Treatment Improvements at the existing Well 201 site. Design included adding a GAC system for treating 2,000 gpm of groundwater upstream and in series with existing IX perchlorate treatment. The GAC system included two 12-ft diameter, 40,000 lb. capacity vessels in parallel, treating 1,000 gpm per vessel. The design included a belowgrade concrete backwash waste tank and submersible BWW pumps, a new chemical storage and handling building for bulk sodium hypochlorite and liquid ammonium sulfate.

SCVWA Well 205 Preliminary and Final Design, Santa Clarita Valley Water Agency, Santa Clarita, CA
Project Manager for preliminary and final design of a new Groundwater Treatment Facility for SCVWA's Well 205, with a capacity of 2,700 GPM. Assessed perchlorate and TCE treatment alternatives for 2,700 GPM well. Developed preliminary design for a hybrid GAC and IX system, including pre-filters and chemical area, for the removal of perchlorate and TCE from the groundwater.

SCVWA Groundwater Implementation Plan, Santa Clarita Valley Water Agency, Santa Clarita, CA
Technical Advisor and QA/QC for a feasibility evaluation for compliance of perchlorate, and PFAS impacted SCV Water wells, developed planning level treatment costs, and updated data from the 2015 Urban Water Master Plan (UWMP) and supported development of the 2020 UWMP.

CLWTP Phase 1 Improvements Design, Elsinore Valley Municipal Water District, Lake Elsinore, CA
Project Manager for the pilot testing, preliminary design and final design of the Phase 1 Improvements at an existing surface water treatment facility, the Canyon Lake Water Treatment Plant. The plant draws water from Canyon Lake, which receives surface water tributary to the San Jacinto watershed and has a capacity of 12,000 acre-feet. This project included an evaluation of PFAS treatment alternatives to be further studied and tested, including post filtration GAC, IX and RO/NF, and recommended a dual barrier GAC/IX system. The team conducted pilot testing for 10 months on two alternative PFAS treatment trains, including (1) post filtration dual barrier PFAS treatment with GAC/IX and GAC/Fluorosorb alternatives, and (2) a GAC/Pyrolusite in filter with IX post filter contactor treatment train. In addition to new PFAS treatment system and appurtenant systems, the Phase 1 Improvements design includes new static and rapid mixer, flocculation/sedimentation basins, centralized chemical storage and handling facility, booster pump station, intake pump station and site improvements.

Carlsbad Ocean Water Desalination Plant, Poseidon Water, Carlsbad, CA
As part of design/build delivery of a 25 MGD ocean water desalination plant located at the Encina power generating station, provided engineering support for the intake/feed water and product water pump station system design, and led the design of the Reverse Osmosis Building.

Perris North Basin Groundwater Program – Preliminary Design, Eastern Municipal Water District, Perris, CA
Project Manager for the preliminary design for three separate groundwater treatment sites in the Perris North Basin. Designed a centralized treatment facility to treat 1,240 gpm of groundwater from two (2) wells for the Moreno Valley Area that included GAC for PCE removal, single-use IX for perchlorate removal and staggered bed IX for nitrate removal. Designed chemical feed systems to provide a chloramine residual disinfectant, and well equipping/wellheads, and a product water pump station/clearwell. Designed a 2,300 gpm centralized treatment facility for the Cactus Corridor, including GAC for PCE removal, and a 650 gpm GAC treatment facility for PCE and PFAS treatment at the South Area Well 204.

Bill Malone, PE, PMP

Water Reservoirs Lead & Pipelines

Mr. Malone serves as a Senior Associate in Hazen and Sawyer's Conveyance Group. He has over 34 years of experience delivering large-scale conveyance and drinking water projects.

Education

B.S., Civil Engineering, California State Polytechnic University, Pomona

Certification/License

Professional Engineer

PMI Project Management Certification

Areas of Expertise

- Program Management
- Project Management
- Construction Management
- Project Delivery
- Water and Sewer System Planning
- Hydraulic Analysis
- CIP Budgeting
- Well Equipping Planning, Design and Construction
- Water Pipelines Planning, Design and Construction
- Reservoir Storage Planning, Design and Construction
- Sewer Pipelines Planning, Design and Construction
- Sewage Lift Stations and Force Mains Planning, Design and Construction
- Plan Checking, Quality Control Reviews and Constructability Reviews

Professional Activities

Project Management Institute (PMI)

AWWA

He has spent the last 30 years specializing in conveyance infrastructure facilities; collection and transmission pipelines, pumping stations, lift stations, water wells, reservoirs, and wellhead treatment facilities. An accomplished program, project, and construction manager, he provides technical and management capabilities to work in collaborative settings involving complex projects and community interests. He has an extensive experience in project management and has managed a wide variety of projects from initial planning, including master facility plans and engineering feasibility studies through design, including plans, specifications, and engineering cost estimates, to construction, including construction manager, contract administrator, project coordination with stakeholders and constructability reviews.

Mittry 3.13 MG Reservoir, Lake Arrowhead Community Services District, San Bernardino County, CA

Mr. Malone was the Technical Advisor on the project leveraging the experience and lessons learned on the Sunnyslope Reservoir project. The District conducted a storage tank assessment program to evaluate tanks within their water distribution system and covered future maintenance liabilities, structural integrity, demand requirements, and seismic capability. Each tank was given a level of priority and recommendations for retrofitting or replacing the existing tank structures were provided. One of the high priority tank sites was the Mittry site which included two existing welded steel tanks, 0.5 MG tanks and 1.0 MG capacities, and were in very poor condition and their seismic survivability was deemed to be very low. The cost to retrofit the tanks was extremely high so the District elected to replace the existing steel tanks completely. The evaluation of alternative tanks products concluded that an AWWA D110 Type I prestressed concrete tank would best serve the District. The decision was based on the opportunity to maximize storage volume, elimination of an expensive retaining wall, reduced freeboard requirements, proven seismic performance, and lowest total cost of ownership. The project consisted of the design of a 3.13 MG Prestressed-Concrete Tank near Lake Arrowhead in the San Bernardino Mountains. DN Tanks served as a specialty subcontractor to Schuler Engineering Corporation. The 3.130 MG tank stands 67 feet tall and is the tallest prestressed concrete tank

Hazen

in the State of California. Mr. Malone was responsible for the oversight of the project team's design implementation and provided input with lessons learned during the design and construction of the Sunnyslope 11.8 MG prestressed concrete reservoir to be addressed in the projects plans and specifications and constructability of the project.

Eastside Water Treatment Plant, City of Chino, San Bernardino County, CA –
Mr. Malone was the Technical Adviser for the Brine Line. The project consisted of the expansion of the City's existing plant treating 1,2,3-TCP and Nitrate from 3,500 gpm to 7,000 gpm with additional GAC and IX facilities. Brine was previously stored and trucked for disposal. The project included the design of 18,640 LF of offsite dual 6-inch diameter gravity PVC brine lines to discharge brine and softener waste separately to the Inland Empire Brine Line for direct disposal. Mr. Malone was responsible for the preliminary design and alignment analysis, hydraulic analysis of the discharge lines from the Plant to the IEUA brine line, and coordination of the alignments with the City of Ontario planning and engineering departments that included review of the City of Ontario's future Master Planned Water, Sewer, Storm Drain, Recycled Water and Fiber Optic facilities, required to serve the City's Ontario Ranch developments within minimal existing right-of-way corridors.

Wells 4 & 6 Water Treatment Plant, City of Chino, San Bernardino County, CA –
Mr. Malone is the Project Engineer for the Raw Water and Brine Lines. The project consists of a new Treatment Plant for wells 4 and 6 to treat 1,700 gpm of water supply for 1,2,3-TCP, Perchlorate, Hexavalent Chromium and Nitrate with GAC and IX facilities. Raw water will be brought to the plant by 3,400 LF of 8 and 12-inch diameter mains. Brine disposal will be to the IEUA brine line through 4,200 LF of offsite dual 6-inch diameter gravity PVC brine lines to discharge brine and softener waste separately. Mr. Malone's responsibilities include preliminary design and alignment analysis, preparation of plans, specifications and engineers estimate, coordination on CEQA documentation and permit approvals including for brine disposal with IEUA.

Sunnyslope 11.8 MG Reservoir, Jurupa Community Services District, Riverside County, California –
Mr. Malone was the Project Manager, Project Engineer and Construction Manager. The project consisted of the design of an 11.8 MG Reservoir at the base of the Jurupa Mountains. The project provided water storage in the District's 1100 PZ. The Reservoir is an 11.8 MG pre-stressed, reinforced concrete structure 230 FT in diameter and 42 FT high. The reservoir was partially buried between 16 feet and 27 feet. Earthwork consisted of 130,000 cy of excavation, embankment, and export. Improvements included 1,500 LF of 24-inch diameter drain and overflow line, onsite piping, electrical service to the site, electrical controls, SCADA, site security, lighting, paving and drainage, and perimeter fencing. Mr. Malone oversaw the Preliminary Design Report consisting of the evaluation of the 65 acre property for proposed reservoir siting, sizing to meet required water system HGL, minimum storage requirements, protecting and maintaining existing 3.2 MG Reservoir in service, review of alternative steel versus pre-stressed concrete material design and life cycle analysis, and options of partial burying of reservoir to minimize export. The PDR resulted in 6 alternative configurations ranging from 10 MG to 20 MG with project costs ranging from $12,600,000 to $17,700,000. Mr. Malone coordinated closely with the preparation of the required CEQA ISMND document with exhibits, construction phasing and staging requirements, equipment to be used, and project schedule. Mr. Malone concurrently prepared the final design of the recommended and selected alternative that included preparation of plans, specifications, and engineers' estimate. The design was closely coordinated with the geotechnical engineer on seismic and excavation requirements. The geotechnical evaluation included seismic refraction surveys to define the rip ability of the soil's material and rock underlaying the reservoir site. Mr. Malone continued the project as the Construction Manager and provided construction management services including bid document review, contract administration, submittals, RFI's, change orders, partial pay estimates, oversight and coordination of project inspectors, resolution of field issues and closeout services.

Wyatt Dressler, PE

Water Reservoirs & Tanks

Mr. Dressler specializes in structural and seismic design of water and wastewater treatment facilities, water storage facilities and support systems for conveyance pipelines..

Education

BS, Civil Engineering, California State University Northridge

Certification/License

Professional Engineer

Areas of Expertise

- Concrete Hydraulic Structures for Water & Wastewater Treatment
- Masonry Building Structures
- Bridge Pipeline Crossings
- Structural and Seismic Evaluation
- Structural Modeling

Owners Agent San Fernando Basin Groundwater Remediation, City of Los Angeles Department of Water and Power, Los Angeles, CA
As owner's agent, Hazen is providing a full range of expert professional engineering and consulting services to assist in the initiation, planning, design, permitting, procurement planning, alternative delivery, construction, commission, close out and operations of the San Fernando Groundwater Remediation Facilities in accordance with LADWP design requirements. Mr. Dressler led the structural design of the water treatment facilities that included cast-in-place concrete building structures using conventionally reinforced mat foundations with special reinforced concrete shear walls and flexible roof diaphragm; mat slab foundations to support process treatment equipment; and a chemical storage/dosing facility with steel framed canopy. Building designs included provisions for supporting mechanical, electrical and HVAC equipment, including wall openings for exhaust fans and vents. During construction phase Mr. Dressler performed on-site structural observations of reinforcing steel for the concrete foundations and walls of the buildings, as well as coordinating with Construction Manager on shop drawing reviews and RFIs.

Park Manor Reservoir Column Condition Assessment and Recommendations, Glendale Water & Power, Glendale, CA
As Structural Design Engineer, Mr. Dressler performed a structural condition assessment of the existing wood columns and wood roof framing of the Park Manor Reservoir, after the reservoir suffered a column failure for which the column was subsequently replaced in-kind. The client desired a structural assessment of the existing reservoir columns and roof framing in order to determine if they were adequate to support existing roof dead and design live loads for the short term future. Mr. Dressler performed field examinations of the existing columns and roof framing with the reservoir empty and full, with the use of an inflatable kayak. Tasks also included preparation a Structural Condition Assessment Report of the findings and recommendations, along with a construction cost estimate for repair.

Glenoaks Pump No. 1 Replacement Project, City of Glendale, CA
Structural Lead for preparing the plans, specifications and estimates the replacement of Pump No. 1, a 125 hp, 4160 volt 875 gpm centrifugal pump that has outlived it useful life. The pump was replaced in kind in the Glenoaks Pump Station (2018). The pump serves the 1290 pressure zone in the Glenoaks Canyon area. Pump No. 1 serves the daily flow condition for the 1290 pressure zone. Pump No. 2, a 250 hp, 4160 volt, 2,000 gpm centrifugal pump, which was recently replaced, will serve as the high demand pump. The work included a hydraulic analysis Technical Memorandum used for pump selection and a review of the hydraulic performance of the pumping station. The work also included the engineering services during construction by doing the RFI and Submittal reviews for the City.

Glorietta Park Pump Station Pumping Unit No. 2 Replacement, City of Glendale, CA
Structural Lead for preparing plans, specifications, and estimates for the replacement of Pump No. 2 at the Glorietta Park Pump Station. The new pump will be a 450 hp, 4160 volt, and 1,800 gpm vertical turbine can pump. The pump will boost water from the Glorietta Park Reservoir West Cell to the New York Reservoir in the 1666 Zone. The work includes a hydraulic analysis technical memorandum used for pump selection and a review of the hydraulic performance of the pumping station. The work will also include engineering services during construction, covering RFI reviews, submittal reviews, and inspection.

Reservoir 1 & 2 Chemical Management System, Mesa Water District, Costa Mesa, CA
Structural Lead for the final design of chemical dosing and water quality monitoring systems at Mesa Water District's Reservoir 1 and 2 sites. Responsibilities include preparation of drawings for construction, specifications and estimate. Structural tasks include design of chemical dosing facility at each reservoir site consisting of a conventionally reinforced concrete mat slab with spill containment to support chemical storage tanks, pumps, piping and ancillary equipment. The slab foundation was also designed to support a pre-engineering metal canopy overhead to protect the chemical dosing equipment from sun exposure and weather.

Elizabeth Reservoir, Booster Pump Station and Well No. 29, City of South Gate, South Gate, CA
Mr. Dressler served as Structural Design Engineer on the design team for the Elizabeth Reservoir and Well No. 29 project for the City of South Gate. The structural scope of work included the design of a booster pump station building and concrete mat foundation for a new 2.3 MG welded steel tank reservoir (designed by others), as well as the design of four concrete block building structures at the Well No. 29 site. The structural scope of work at the well site also included the retrofit of the foundations for an existing elevated steel tank reservoir. Mr. Dressler's responsibilities included design, plans, and specifications for the concrete block buildings and equipment supports at each site, which includes the pump station building, well head building, sodium hypochlorite building, and a generator building. Each building was designed using special reinforced masonry shear walls supporting a flexible roof diaphragm. The building roof system consists of fabricated steel trusses supporting metal decking with plywood sheathing and metal tile roofing. The well head building was designed with a section of removable roof and removable walls to facilitate removal of the well pump and piping for maintenance or replacement.

Plant 224 Reservoir and Pump Station, Suburban Water Systems, Whittier, CA
Mr. Dressler served as lead Structural Design Engineer responsible for the structural design, plans, specifications, and cost estimate for a 2,800-square foot single story concrete block pump station building on continuous spread footings. The pump station is connected to two new cast-in-place, conventionally reinforced, rectangular concrete reservoirs with a capacity of 2.4 MG and 4.7 MG. The masonry building was designed with tall parapet walls to satisfy several design criteria which include the City's building architectural guidelines, shielding the roof mounted HVAC equipment from view and reducing the noise produced from the roof mounted equipment.

Kirsten Plonka, PE

Water Resources PlanningKirsten brings over 20 years of experience in the planning, design, and management of water, wastewater, and recycled water systems.

She specializes in project management, hydraulic modeling, feasibility studies, infrastructure and water resource planning studies, and master planning, including Capital Improvement Plans and budgeting. She is well versed in funding alternatives, regulatory compliance, and public policy development. Kirsten's experience includes database development and integration of geographic information systems (GIS) with hydraulic models, recycled water customer databases, and asset databases. She also has experience managing public engineering departments, as well as headed up wastewater collections. Her extensive experience in the public sector allows her to approach projects from an owner's perspective and plan and design projects that are implementable and user-friendly.

Engineers Without Borders (former Southern California State Representative)

Potable Reuse Advisory Committee, San Diego County Water Authority

2020 UMWPs, Various Clients, CA
Project Manager and QA/QC. Management of the preparation of 2020 UWMPs for San Antonio Water Company, City of Escondido, Valley and Center Municipal Water District. Quality control for 2020 UWMPs for Big Bear Community Services District and Scotts Valley Water District & San Lorenzo (a combined plan). Oversight of plan deliver and quality to meet California DWR's requirement and demonstrate supplies and demands through 2045 for each agency.

2020 Urban Water Management Plan, Big Bear City Community Services District (BBCCSD), CA
Principal in Charge and QA/QC. Preparing 2020 UWMP for BBCCSD, a retail agency for a predominantly residential customer base that experiences an influx of part-time population and vacationers enjoying the summer and winter recreational facilities. BBCCSD's water supply is exclusively groundwater, developed through springs and wells. This plan will address new requirements for 2020 UWMPs, including WSCPs with prescriptive elements, 5-Year DRAs, and regional groundwater efforts and plans related to the Sustainable Groundwater Management Act.

2020 Urban Water Management Plan, Soquel Water District, CA
Supporting Author. Preparing 2020 UWMP for the District, a public agency that provides water service within unincorporated Santa Cruz County and portions of the City of Capitola. The District is solely dependent on local groundwater from the Soquel Aptos Groundwater Basin.

Hazen

Since the mid-1990s, the District has been evaluating multiple alternative water sources to supplement its groundwater supply. The District is pursuing supplemental supply options, namely Pure Water Soquel, a groundwater replenishment and seawater intrusion prevention Project. These emerging programs and other changing water conditions will be integrated into the new plan.

2015 Urban Water Management Plan, City of Carlsbad, Carlsbad, CA
District Engineer. Developed 20-year per capita water use projections by census block within the Division's boundary in accordance with California Senate Bill x 7-7. Evaluated supply, supply reliability, demand, supply and demand comparison, and developed a water shortage contingency plan.

2010 Urban Water Management Plan, City of Port Hueneme, Port Hueneme, CA
District Engineer. Developed 20-year per capita water use projections by census block within the Division's boundary in accordance with California Senate Bill x 7-7. Evaluated supply, supply reliability, demand, supply and demand comparison, and developed a water shortage contingency plan.

2010 Urban Water Management Plan, Rainbow Municipal Water District, Fallbrook, CA
District Engineer. Prepared the 2010 UWMP to fulfill the requirements of the Urban Water Management Planning Act.\ Developed 20-year per capita water use projections by census block within the Division's boundary in accordance with California Senate Bill x 7-7. Evaluated supply, supply reliability, demand, supply and demand comparison, and developed a water shortage contingency plan.

2005 Urban Water Management Plan, Rancho California Water District, Temecula, CA
District Engineer. Developed 20-year per capita water use projections by census block within the Division's boundary in accordance with California Senate Bill x 7-7. Evaluated supply, supply reliability, demand, supply and demand comparison, and developed a water shortage contingency plan.

As-Needed Hydraulic Modeling Services, Otay Water District, Spring Valley, CA
Project Engineer. Provides as-needed services for computerized hydraulic models to manage the District's potable water distribution, recycled water distribution, and wastewater collection pipe networks. She provides modeling services to optimize current operations, evaluate potential improvement projects, and allow for planning of future developments.

Water Master Plan and Condition Assessment, Big Bear City Community Services District, Big Bear City, CA
Project Manager. Conducted site visits and leveraged operator knowledge to document and address the maintenance and replacement needs of the current water system. Prepared detailed analysis of the District's infrastructure and conveyance system, as well as considered age and useful life. By the completion of the master plan, a comprehensive CIP will be developed that will be used to set annual budgets, establish rates and fees, prioritize improvements, and proactively prepare for future needs.

Comprehensive Planning Study, California American Water, Monterey District, CA
Project Engineer. Developed a Comprehensive Planning Study (CPS) for California American Water's Monterey District which included developing recommendations for a CIP, and included customer and demand projections, an assessment of adequacy of supplies, treatment, and distribution system facilities, and an evaluation of alternatives for developing additional supplies. Updated and calibrated the WaterGEMS hydraulic model. Performed an assessment of the distribution system piping, pumping, and storage capacity to meet current and projected demands, and to ensure it is providing adequate levels of service and reliability. The CIP is based on providing adequate capacity, meeting projected demands and growth, and meeting planning criteria and regulatory requirements.

Luke C. Wang, PE

Water Resources Lead

Mr. Wang specializes in water supply planning, operations, and demand forecasting. He is Hazen's Water Resource Management Leader for the West Region.

Santa Clara Valley Water District (Valley Water) Water Demand Model, San Jose, CA

Project Manager for developing Valley Water's new water demand model. Valley Water is in the process of developing a new water demand model for the purpose of developing long-term water demand projections. The model will be used to support several water supply planning and analysis efforts. As Project Manager, Mr. Wang is responsible for guiding the overall technical direction of the project, as well as maintaining the project budget and schedule.

East Bay Municipal Utility District (EBMUD) 2050 Demand Study, EBMUD, Oakland, CA

Deputy Project Manager for EBMUD's 2050 Demand Study. EBMUD is in the process of developing an econometric model for forecasting water demands in their service area out to the year 2050. The econometric model will explicitly account weather/climate conditions, anticipated land use changes, development trends, and socioeconomic factors (e.g. water rates, jobs, population growth, income) which have been shown to impact water use. The forecasted demands will be a critical component of EBMUD's 2020 Urban Water Management Plan.

Bay Area Water Supply & Conservation Agency Regional Water Supply Reliability Model Development and Analysis Services, San Mateo, CA

Project Manager and lead systems modeler for BAWSCA's Regional Water Supply Reliability Model project. Designed a water supply system model for the Bay Area incorporating regional supply sources (e.g. San Francisco Regional Water System) with locally utilized supplies and detailed estimations of municipal demands. BAWSCA is using the model for long-term water reliability planning and alternatives analysis.

Beverly Hills Integrated Water Resources Master Plan (Water, Sewer, Storm, Recycled, and SCADA), City of Beverly Hills, CA

Provided technical guidance and supported development of the long-range demand forecast for Beverly Hills' Integrated Water Resources Master Plan (IWRMP). The forecasts supported hydraulic modeling of the City's potable water system and will be used to support the City's other long-range planing efforts. The forecasts incorporated both per-capita and land use elements.

Hazen

Sweetwater Authority, Water Resources Master Plan, Chula Vista, CA
Project Manager. Currently working closely with Sweetwater Authority (Authority) an update to its Water Resources Master Plan. The intent of the Water Resources Master Plan is to examine the reliability of the Authority's water supplies to meet demands over a twenty-five-year planning period, to evaluate development of new local water supplies and/or expansion of existing local water supplies, and provide recommendations for reliable and cost-effective project alternatives to reduce dependence on more costly imported water supplies.

W2022 Water Facilities Master Plan Updates, Otay Water District, CA
Water Demand Lead. Developing updated WFMP for Otay, including updated water demands for potable and recycled water systems, hydraulic modeling, new source water needs assessment, CIP development, and programmatic EIR.

Design Services for the Development of New York City's Operation Support Tool, NYCDEP, New York, NY
The Operations Support Tool (OST) is a state-of-the-art decision support system to provide computational and predictive operations and planning support for New York City's 1+ BGD water supply system. OST is an integrated model consisting of a water supply operations model, mechanistic reservoir water quality models, hydrologic forecasts, and a database containing near-real-time system data. Mr. Wang developed hydrologic forecasts, demand forecasts, dynamic reservoir operating rules, and customized dashboards for visualizing model output.

Tampa Bay Water Seasonal Source Water Allocation Decision Support Tool, Tampa Bay Water, Clearwater, FL
Developed a forecast-based decision support tool to set monthly source allocations, minimize anticipated costs, and avert financial and regulatory risks during TBW's annual budgeting process. The tool is a two-stage algorithm consisting of an inner system model and an outer optimization module. Mr. Wang designed and coded the inner system model which simulates TBW's monthly surface water and groundwater supply operations. He also designed and tested the outer optimization module (Genetic Algorithm) which seeks source allocations that minimize expected O&M costs and minimize probability of requiring groundwater permit violations. The tool is used to minimize probability of budget shortfall, budget surpluses, and need for utilizing rate stabilization funds or levying within-year rate increases.

Finished Water Quality (Nitrification and LCR) Engineering Services California Water Service Company, San Jose, CA
Project manager. Provided a variety of finished water operations and management consulting services for the California Water Service Company (Cal Water). In Cal Water's Los Altos District, Hazen developed a nitrification action plan, which includes the following services:•Historical analysis of nitrification in the Los Altos distribution system, including identification of likely drivers.•Development of a tailored nitrification action plan, specific monitoring triggers for instituting operational modifications and potential infrastructural modifications for future control.

Lead and Copper Rule (LCR) assessment, California Water Service Company, San Jose, CA
Project manager assisting Cal Water in 7 districts in Northern and Southern California, including Stockton, Bakersfield, San Carlos, and Westlake. Services in support of the LCR assessments include:•Identification of a Tier 1 customer (single family structures containing copper pipe with lead solder) pool in the district service areas using a GIS data-driven approach.•Outreach to likely Tier 1 customers to gauge interest in participation in the LCR sampling program. •Development of an implementation plan for scaling the data-driven Tier 1 identification program to all Cal Water districts.

Sarah Dominick, PE, ENV SP

Water Resource Planning

Ms. Dominick specializes in water resources and integrated planning. Prior to Hazen, she led Denver Water's state of the art master planning effort as the client PM. She has planned for utilities from coast to coast and brings a unique perspective on best practices and innovative planning techniques.

Kyrene Water Reclamation Facility – Upgrades and Improvements, City of Tempe, AZ

Water Resources Expert. Facilitated a workshop based decision-making process to examine the long-term water resources needs for the City of Tempe. As part of the process, the highest and best use of Tempe's water reclamation facilities and reusable water were identified based on input from City stakeholders and considering both near term and anticipated future conditions.

WATER2025 Process Selection and Pilot Plant Project, City of Westminster, CO

Project Manager. As part of a consulting team, facilitated the decision-making process for establishing criteria, assessing alternatives, and providing recommendations for WATER2025 (a greenfield 30 mgd water purification facility) and the associated project pilot study. The study includes an assessment of the technical, environmental, regulatory, and economic parameters of the pilot test and the purification facility. The project was developed to include a number of workshops as key decision points to collaboratively review and discuss alternatives and to evaluate recommendations with the City.

Integrated Resource Plan (IRP 2065), Denver Water, CO

Project Manager responsible for overall project delivery of Denver Water's best in class long range scenario planning process. Managed a project team of nearly 100 individuals both internal and external to Denver Water and managed consulting contracts totaling over $2,500,000. Duties included regularly briefing the Denver Water Board, managing budgets and schedule, contracting with consultants, guiding technical teams, managing contract employee, and ensuring that IRP 2065 meets the needs of Denver Water and its customers.

Source Water Protection and Watershed Program, Denver Water, CO

Program Director responsible for the coordination of internal Denver Water efforts for watershed protection and analysis and procuring a $50,000 grant from Colorado Department of Public Health and Environ-

ment. The grant made possible an extensive collaborative stakeholder process which included environmental groups as well as local, state, and federal governments, with the goal to identify and recommend best management practices for source water protection in the Upper South Platte River Watershed.

Demand Management Study, Upper Colorado River Basin Commission (UCRC), Salt Lake City, UT

Client Services Manager. As part of the Colorado River Basin Drought Contingency Planning, Hazen is supporting the UCRC in providing overall project management for economic, legal, and technical analysis as well as modeling services to support evaluation of demand management alternatives.

Potable Reuse Feasibility Study, Denver Water, CO

Project Manager. Managed an in-depth investigation into the feasibility of employing potable reuse for Denver Water. This was a comprehensive study that examined water quality goals, treatment techniques, integration with existing facilities, and potential cost associated with the implementation of potable reuse. The study focused on determining how potable reuse would integrate with Denver Water's existing potable and recycled water infrastructure, water quality goals, water rights portfolio, and future water supply needs.

Operations Complex Redevelopment Lean Core Team, Denver Water, CO

Sustainability Representative. Member of a team of recognized industry professionals that was assembled by Denver Water to recommend sustainability goals that would be utilized by a project management team working on the total redesign of Denver Water's 35-acre campus. Served as a Technical Subject Matter Expert in the development of One Water concepts that would help Denver Water develop a robust strategy for water management on its new campus. One Water efforts typically include numerous and varied stakeholders, in this project efforts included the Planning Department, Public Affairs, Legal, and Engineering Divisions.

Colorado Water Plan Comments, Denver Water, CO

Policy Advisor and Author. Gained unique and comprehensive insight of Colorado water politics, water law, and stakeholder motivation. Also developed intuitive comments that ultimately improved the Colorado Water Plan.

New Supply Program, Denver Water, CO

Capital Budget Manager. Coordinated all expenditures related to supply planning. This included expenditures related to the Colorado River Cooperative Agreement and the WISE project. Responsible for program budgets that averaged approximately $10,000,000 per year.

Tori Yokoyama, PE

Pipelines and Water Resource Planning

Mr. Yokoyama is experienced in pump station, reservoir, and civil site design for both small and large projects. His background includes both the design of new facilities, as well as rehabilitation of aging existing facilities.

OCWA

ASCE

Los Angeles Department of Water and Power, Treatment for San Fernando Groundwater Basin, Los Angeles, CA

Civil Design Lead. The project is a large-scale groundwater remediation which may require advanced treatment. Role includes leading civil design for multiple water treatment plants. Civil design included trunkline piping, yard piping, off-site piping, grading, paving, drainage, and miscellaneous site improvements. Coordination with other disciplines including mechanical, electrical, instrumentation, architectural, and structural.

La Brea Subarea Groundwater Supply Project – Wells, Transmission Main, and Treatment Facilities, City of Beverly Hills, CA

Mr. Yokoyama is the Project Manager for the City of Beverly Hills La Brea Subarea Groundwater Supply Project. This is a $50 M project the City is implementing to expand their local water supply by developing groundwater in the La Brea Subarea of the Central Groundwater Basin. The project includes three (3) groundwater wells to be drilled and equipped, 4-miles of raw water transmission main through the City of Los Angeles and Beverly Hills, and upgrade of the City's existing reverse osmosis treatment plant. The first phase of the project which Hazen is leading is the drilling and equipping of the first groundwater well, and construction of the 4-mile transmission main.

Rubidoux Community Services District PFAS Alternatives Study, Riverside, CA

Project Manager and Civil Design Lead. Due to the proximity to a landfill, the California WaterBoards Division of Drinking Water (DDW) ordered Rubidoux Community Service District (RCSD) to conduct PFAS sampling of groundwater wells. Results from sampling found concentrations above the Notification Level (NL) but below the (former) Response Level in all of the wells. As a result of this finding, RCSD will have one year to install treatment or notify customers of the presence of PFAS in their water. A Basis of Design Report was developed including the evaluation of PFAS treatment alternatives, site layouts, and cost estimates for 4 wells. Project includes assistance during procurement, construction, and permitting.

Chino I Desalter VOC Treatment, Chino Basin Desalter Authority, CA
Civil Design Lead. The project includes preliminary and final design of two (2) GAC treatment facilities (1.7 mgd and 3.4 mgd) at the Chino I Desalter Plant for the removal of TCE and 1,2,3-TCP, and evaluation of treatment requirements for 1,4-dioxanr, cis-1,2-DCE, 1,2-CDA, PFOA, and PFOS. The goal of this project is to provide groundwater treatment for all CDA bypass wells (CDA Wells I-1 through I-4), and several treated wells (CDA I-16 through 18), plus 10 new wells that will be installed by the County of San Bernardino as part of a Cleanup and Abatement Order issued by the Santa Ana Regional Water Quality Control Board (SARWQCB).

Whittier PFAS Treatment Support, Suburban Water System, Covina, CA
Civil QA/QC. Suburban Water System's Whittier and La Mirada Systems required engineering design services to remove PFAS compounds from 5 drinking water wells, comprising 10,600 gpm. Hazen is leading the preliminary design and treatment approach evaluation, sharing process mechanical design with the prime consultant, and leading electrical and I&C. Hazen is also providing support on the design of RSSCT bench-scale testing, and is leading the facility permitting.

Hydraulic Modeling On-Call Services, Otay Water District, Spring Valley, CA
Lead Modeler. Utilizing Otay Water District's (OWD) existing hydraulic model and data from OWD's GIS and SCADA systems, Hazen was responsible for conducting steady state and extended period dynamic modeling analyses of the existing and future potable water and recycled water systems, performing pressure surge analyses for pressure zones or pipelines, identifying improvements and recommendations to remedy identified system deficiencies to meet future conditions and conducting fire flow analyses.

City of Santa Ana Well 29 Improvements Alternatives Analysis, Santa Ana, CA
Project Engineer. The City of Santa Ana owns and operates Well 29, located at the southeast corner of Flower Street and First Street, adjacent to City owned tennis courts. Well 29 pumps directly to an existing 8 MG reservoir. The existing well site includes the well head and discharge piping assembly, control equipment, a chlorination system in a building, and an SCE transformer. An alternatives analysis was conducted to recommend upgrades at the site including site improvements, structural, mechanical, and electrical upgrades. Highlights of the study include developing three (3) alternatives for the improved site, providing 3D renderings for each site alternative, and developing a preliminary opinion of probable cost for the design and construction of each alternative discussed. The City is moving forward with implementing the recommended alternative from this analysis.

West Grove Valley Pipelines, Riverview Pipelines, Santa Ana, CA
Project Manager. Two projects with the City of Santa Ana included a total of over 17,000 LF of water pipeline design ranging in size from 8-inch to 12-inch diameter. The City is actively replacing aging and undersized water mains throughout their distribution system. The West Grove Valley project include 9,500 LF of pipeline replacement design. The Riverview project included 7,700 LF of pipeline replacement design.

Waterline Replacement Project, Yorba Linda Water District, Yorba Linda, Anaheim, and Placentia, CA
Project Manager. Provided preliminary and final design and construction support services for the replacement of seven pipeline segments, the replacement of one pressure-reducing station, and the installation of one new pressure-reducing station. The pipeline replacements required many connections to existing pipelines, laterals, services, fire hydrants, and other appurtenances.

PROFESSIONAL AFFILIATIONS

American Water Works Association – Past Chair of CA/NV Water Well Technology Committee

Voting Member of the American Water Works Association National Well Standards Committee

The Thirst Project – Member of Technical Board supporting global projects to develop potable water sources within developing nations and impoverished communities

Mr. Kyle has 24 years of experience with a wide variety of groundwater resource related projects for public and private clients within the western United States, Mexico, and Africa, with a focus on groundwater resources development in Southern California. The scope of his technical experience includes groundwater basin evaluations, water supply studies, well siting investigations, artificial recharge feasibility evaluations, well field condition assessments, well rehabilitation, desalination feedwater supply studies, and geophysical surveys. Over the course of his career he has been responsible for installation of more than 150 water supply wells and 70 monitoring wells and exploratory borings, including management of a team of field inspectors, coordination with drilling contractors and regulatory agencies, well design, and construction management. Recent notable projects include installation of potable water supply wells for California Water Service Company, South Montebello Irrigation District, and Long Beach Water Department, and development of well rehabilitation, replacement, prioritization plans for the Long Beach Water Department, California Water Service Company, City of Riverside, and Palmdale Water District. He is also active within the water resources community and is currently a member and past Chair to the AWWA CA-NV Water Well Technology Committee, and as a voting member of the AWWA National Well Standards Committee. Mr. Kyle is also serving on multiple Technical Action Committees working to develop the new California Department of Water Resources water well standards.

SELECTED EXPERIENCE

New Well Siting Study – Indio Water Authority – Indio, California. Mr. Kyle is currently serving as Principal-in-Charge for a well siting study to evaluate sites deemed most favorable for installation of new production wells. Of particular concern is groundwater quality, specifically hexavalent chromium, and the potential need to build on-site treatment systems.

Redevelopment of Well Nos. 44 amd 45 - Desert Water Agency – Palm Springs, California. Mr. Kyle is currently serving as Principal-in-Charge for a project evaluating the feasibility of bringin two pre-existing wells to service. The wells were drilled in 2005 and were never equipped due to funding issues. The well assessment included and evaluation of the structural integrity of the wells through video and electro-magnetic defectoscope surveys, construction feasibility and logistics, and regulatory requirements. Both wells have been deemed viable and next steps are being considered.

Dominguez District Well 300-01 – California Water Service Company - Compton, California. Mr. Kyle provided an assessment of the proposed well site, including anticipated well capacity and groundwater quality, environmental risks, preliminary design, construction logistics, and identification of construction constraints and required permits. Specific project tasks include preparation of a risk assessment and preliminary design report, preparation of permit documents, and construction management and inspection.

Rehabilitation of Citizens Well 9 and Wilson Well 1A – Long Beach Water Department – Long Beach, California. Mr. Kyle is serving as project manager to provide construction management, inspection, and engineering services during rehabilitation of two municipal water supply wells. The project includes physical and chemical cleaning of each well, redevelopment and testing, and retrofitting of the well pump, motor, and electrical.

Wells 3B and U – Indio Water Authority – Indio, California. Wells U and 3B had been out of service and idle for several years due to elevated hexavalent chromium. IWA decided to put the wells back in service when the 10 ug/L MCL was rescinded and Mr. Kyle was tasked with evaluating the wells and preparing a recommended course of action and associated work plan to rehabilitate and redevelop the wells. A plan for evaluating depth-specific water quality was also developed as it is the desire of IWA to evaluate the wells as to feasibility of improving water quality by well modification should the hexavalent chromium MCL be reinstated. Both wells have been successfully rehabilitated.

Wells W and Z – Indio Water Authority – Indio, California. Mr. Kyle an evaluation of Wells W and Z with the goal of assessing the feasibility of reducing hexavalent chromium concentrations below the California MCL through well modification rather than application of expensive water quality treatment. The work involved time-series, variable-flow, and depth-specific water quality and flow profile testing. Results suggested that well modification may result in a positive outcome which led to follow-on verification testing through use of inflatable pneumatic packers. Testing indicated that favorable results could be achieved but further work was held due to revocation of the MCL.

Well No. 8 – South Montebello Irrigation District – Montebello, California. Mr. Kyle was the technical lead for a new well installation to be located adjacent to the Rio Hondo Spreading Basins within the Montebello Forebay area of the Central Basin. Mr. Kyle provided an assessment of the proposed well site, including anticipated well capacity and groundwater quality, preliminary design, construction logistics, and identification of construction constraints and required permits. Specific project support tasks include preparation of technical plans and specifications, CEQA, NPDES permitting, application for the Domestic Water Supply Permit Amendment, and preparation of DWSAP documents. Bid support, construction management and inspection services were also provided and the well installation was successfully completed in May 2020.

Rehabilitation of Citizens Well 9 and Wilson Well 1A – Long Beach Water Department – Long Beach, California. Mr. Kyle is serving as project manager to provide construction management, inspection, and engineering services during rehabilitation of two municipal water supply wells. The project includes physical and chemical cleaning of each well, redevelopment and testing, and retrofitting of the well pump, motor, and electrical.

Collection Main and New Well Site Study – Long Beach Water Department – Long Beach, California. Mr. Kyle served as Principal-in-Charge for a well siting study to evaluate areas favorable for installation of new production wells within the Central and West Coast Basins, and within relative proximity to the existing collection main pipeline. Buffers around sites of environmental concern, existing wells, and active hazardous liquid pipelines were used to eliminate possible areas for a new potable well. Potential sites were identified within areas that did not fall within those buffers and were within a one-mile radius of the collection main pipeline. The sites were ranked based upon a scientific approach and weighted decision matrix and an evaluation of how each potential well site will impact the collection main system.

Martin Hendrie

Wells Hydrogeology

Mr. Hendrie has over 13 years of experience in data analysis, modeling, and interpretation to support groundwater system characterization, permitting, and restoration projects in the U.S., U.K., and Australia.

Education

M.Sc., Hydrogeology (with Distinction), University of Birmingham, U.K.

B.Sc. (with Honors), Earth Science, University of Glasgow, U.K.

Areas of Expertise

- Hydrogeological conceptualization
- Basin-scale characterization
- Groundwater data analysis
- Groundwater flow and solute transport modeling
- Quantitative groundwater risk assessment

He specializes in providing technical expertise in quantitative analysis and modeling to support the development of solutions to complex groundwater challenges. He provides technical and task management capabilities, working collaboratively during planning and execution of groundwater project workstreams, to help clients translate priorities into strategic direction, tactical plans, and implementation activities for a variety of groundwater related projects. Over the last five years Mr. Hendrie has supported remedial investigations and feasibility studies for basin restoration, been responsible for groundwater characterization for permitting and regulatory compliance for groundwater production and replenishment operations, and supported stakeholder and regulator liaison relating to groundwater matters.

San Fernando Basin (SFB) Groundwater Remediation Project, Los Angeles Department of Water & Power (LADWP), Los Angeles, CA
Technical Consultant, Task Manager & Modeling Lead as part of the Owner's Agent team led by Hazen & Sawyer. Providing groundwater modeling and data analysis expertise across LADWP's SFB Well Fields, supporting tasks associated with remediation facility design, construction and operation, groundwater management and planning, remedial investigation and feasibility studies (RIFS), permitting activities associated with the DDW 97-005 Process Memo for Extremely Impaired Sources, execution of State Water Resources Control Board (SWRCB) Proposition 1 Planning and Implementation Grant Agreements, and, knowledge transfer to LADWP.

Los Angeles Groundwater Replenishment Project, Los Angeles Department of Water and Power (LADWP), Los Angeles, CA
Mr. Hendrie is providing groundwater analysis and modeling support for the draft Title 22 Engineering Report and permitting activities for the project, which aims to use an Advanced Water Purification Facility constructed at the Donald C. Tillman Water Reclamation Plant to generate purified water for groundwater replenishment in the San Fernando Basin (SFB).

LADWP Hyperion Owner's Agent
Groundwater Modeler. LADWP and LASAN have partnered to develop advanced water purification and potable reuse of the the City's wastewater plants, Hyperion and DC Tillman wastewater. Hazen is the technical support to LADWP in treatment planning, design, and groundwater recharge for recycled water. Services include permitting and regulatory strategy, alternatives evaluation, groundwater modeling, risk management, knowledge transfer and coordination with staff and consulting engineers.

Experience Prior to Hazen

Planning and Regulatory Framework for Groundwater Replenishment with Recycled Water in the San Fernando Basin, Water Research Foundation (WRF) & Los Angeles Department of Water and Power (LADWP), Los Angeles, CA
Co-Principal Investigator for the development of a tracer test planning study for the Tujunga Spreading Grounds. Activities included review of potential tracer test options, groundwater modeling to estimate retention time, assessment of field-testing conditions, and preparation of a draft tracer test execution plan. A tracer test is a necessary regulatory step to determine the underground retention time of water during transit from spreading to capture by adjacent Tujunga production wells as part of an evaluation of the potential for use of advanced treated water for indirect potable reuse (IPR) through infiltration.

San Fernando Basin (SFB) Groundwater Remediation Project, Los Angeles Department of Water & Power (LADWP), Los Angeles, CA
Technical Consultant, Task Manager & Modeling Lead as part of the Owner's Agent team led by Hazen & Sawyer. Provided groundwater modeling and analysis expertise across LADWP's SFB Well Fields, in support of tasks associated with well field optimization, capture zone delineation, groundwater management planning, remedial alternatives analysis, and solute transport modeling to support RIFS at various well fields in accordance with the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), and National Oil and Hazardous Substances Pollution Contingency Plan (NCP). Also provided water quality data analysis expertise in support of permitting activities associated with the DDW 97-005 Process Memo for Extremely Impaired Sources and for Human Health Risk Assessments, and technical support to LADWP for application for and execution of SWRCB Proposition 1 Planning and Implementation Grant Agreements.

Stephanie Botha

Wells Hydrogeology

Ms. Botha has 16 years professional experience working in planning, approvals, permitting, regulatory compliance, and project management on behalf of private and public clients across a broad range of industry including infrastructure, environment, water, contaminated land, decommissioning and restoration, transportation, oil and gas, waste management, marine geoscience, and mining.

Education

M.Sc., Hydrogeology, University of Birmingham, U.K.

B.Sc., Geology, University College London, U.K.

Areas of Expertise

- Hydrogeological investigation and water quality characterization
- Permitting of extremely impaired sources for direct potable use (DDW 97-005 Policy)
- Development and management of groundwater monitoring programs
- Environmental approvals
- Remedial investigation

Technical Publications:

Water Master Planning, Santa Clarita Valley Water Agency (SCV Water), Santa Clarita, CA

Ms. Botha is the water quality evaluation lead in support of water master planning for SCV Water, and her responsibilities include overseeing the review of extensive water quality datasets for SCV Water's portfolio of production wells and evaluating against current and anticipated future regulations for potable use.

Experience Prior to Hazen

San Fernando Basin (SFB) Groundwater Remediation Project - DDW and NCP Compliant Groundwater Monitoring, Los Angeles Department of Water & Power (LADWP), Los Angeles, CA

Ms. Botha was Technical Lead responsible for developing Sampling and Analysis Plans (SAP) and Quality Assurance Project Plans (QAPP), and successfully executing groundwater monitoring programs in compliance with NCP Guidance and DDW 97-005 requirements. To be deemed "compliant" it was crucial that the team, led by Ms. Botha, adhered to a rigorous and robust set of procedures, which were documented accordingly. Ms. Botha incorporated advice from industry-renowned NCP attorneys to ensure all components of the monitoring programs were NCP compliant.

San Fernando Basin (SFB) Groundwater Remediation Project - Remedial Investigation (RI) / Feasibility Studies (FS), Los Angeles Department of Water & Power (LADWP), Los Angeles, CA

LADWP, in accordance with CERCLA and the NCP conducted interim RI/FS to address hazardous substances dissolved in groundwater entering several major well fields owned and operated by LADWP in the SFB. Ms. Botha was responsible for co-authoring RI reports for the well fields. The RI reports documented background information pertaining to the beneficial uses of the SFB, well field operations, physical characteristics of the study area, water budgets, the nature and extent and fate and transport of contaminants in groundwater, the conceptual site model, and a baseline human health risk.

Olympic Well Field Monitoring Program, City of Santa Monica, Santa Monica, CA

Ms. Botha was the Project Lead and Project Manager for quarterly groundwater monitoring and reporting being undertaken on behalf of the City as part of the Olympic Well Field Monitoring Program. The purpose of the work is to demonstrate that pumping of the City's groundwater production wells provides adequate hydraulic control to prevent further migration of dissolved-phase volatile organic compounds (VOCs) in the deeper water-bearing zones.

RICHARD C. SLADE, PRESIDENT & PRINCIPAL GROUNDWATER GEOLOGIST

Professional Experience

Major fields of hydrogeologic emphasis for Mr. Slade include groundwater resource development (basin-wide studies, and water well design and construction), and aquifer analysis. Principal projects have involved, evaluations of entire groundwater basins, aquifer test analyses, assessment of water quality problems and groundwater degradation, design of water wells for municipal supply, well rehabilitation assessments, monitoring of all phases of water well construction, locating and designing groundwater monitoring networks, and providing expert witness testimony for groundwater litigation. Considerable work has also been performed for numerous vineyards and wineries in both the Central Coast and Northern California regions; types of work have included feasibility studies for determining final locations for new wells, designing new wells, monitoring of the construction of new wells, working with drilling contractors, evaluating down-hole problems (such as sanding) in existing wells, and developing protocol for water well rehabilitation.

Hydrogeologic studies have also involved evaluation of hazardous wastes such as acid mine drainage, leachate from sanitary landfills, and groundwater degradation resulting from leaking underground storage tanks containing various chemicals and organic compounds. Numerous groundwater studies and monitoring projects have involved volatile organics (TCE, PCE, etc.) and subsurface gasoline spills. Hydrogeologic assessments and definition of appropriate mitigation measures for environmental impact analyses have been provided also. Important to Mr. Slade's broad background is the experience gained while being a participant with other geologists on international geologic study tours to Europe, Iceland and Scandinavia, the former Soviet Union, South America, the People's Republic of China, Africa, New Zealand and Australia. Local groundwater and surface water features, large faults and landslides, mines, and oilfields were visited in these countries.

In December 2008, based on the recommendation of the Administrative Committee (the water managers for the cities of Burbank, Glendale, Los Angeles and San Fernando, and the Crescenta Valley Water District), the Superior Court of Los Angeles County selected Mr. Slade as the new Watermaster for the entire Upper Los Angeles River Area (ULARA). Mr. Slade represents only the third Watermaster of ULARA since the date of the original adjudication of the region in January 1979.

Highlights

Education

- University of California, Los Angeles, B.A., Geology, January 1966

Representative Project Experience

Various Hydrogeological services Including Well Feasibility, Siting, and Design, Santa Clarita Valley Water Agency (SCVWA) and Predecessor Agencies, Los Angeles County, CA, 1986 to 2022 (ongoing)

Starting in 1986, RCS commenced hydrogeological services, including a complete evaluation of the hydrogeology and groundwater resources of the entire Santa Clara River Valley Groundwater Basin; an initial perennial yield study was also performed. This work culminated in an extensive document describing in detail the hydrogeologic conditions of the basin. This original work involved providing a detailed conceptual model of subsurface hydrogeologic conditions in the groundwater basin, and extensively documented the: locations of known water wells; definition of groundwater flow directions and current water quality; identifying the base of fresh water; calculating groundwater in storage; defining aquifer parameters; evaluating water levels vs trends in historic rainfall; and preparing several cross sections using detailed correlations of E-logs from several water wells and numerous oil wells. A perennial yield study (now termed sustainable yield) was also performed to determine the future availability of groundwater supplies for the local water agencies. Following the initial hydrogeologic characterization of the groundwater basins, RCS has performed numerous well siting, construction, destruction, and rehabilitation project within the Santa Clarita Valley.

RCS is in the initial design stages (feasibility assessment) of two deep (~3,000-foot) water-supply wells, in which our services will consist of a preliminary design report, preparation of technical specifications, monitoring the drilling activities, providing the final designs, and conduction construction monitoring and aquifer testing of these two deep wells. The anticipated start date for of completion for the project is in 2021. Mr. Slade is the Technical Advisor for the Santa Clarita Valley effort.

Municipal Supply well and Injection Well Construction and Testing Project, City of Santa Monica, Los Angeles County, 2016 through 2023 (ongoing)

In the past few years, the City of Santa Monica developed a stated goal of achieving self-sufficiency from imported water supplies by 2020. To help achieve this goal, the City retained RCS with an on-call services contract to begin the process of developing an aggressive well site evaluation and well construction program. Exploratory boreholes and five water-supply wells have been constructed to date. This multi-well construction project was completed to strategically augment groundwater resources in the City of Santa Monica. The project well site locations and sizes posed several logistical and hydrogeologic challenges to well design and construction. Specifically, the SM-8 well site was located in a road median. A well-choreographed

mobilization and demobilization recommended by RCS was successful. Moreover, Well SM-8 was constructed in the Olympic Well Field, an area hosting shallow groundwater impacted by chlorinated solvents. RCS successfully designed and hydraulically tested Well SM-8 to limit capture of impacted groundwater. RCS prepared technical specifications for the drilling construction and testing of one municipal-supply water production well (Well SM-9) and one injection well (Well SM-10i); both locations were evaluated as part of the initial work. RCS has provided field geologic services, well design services, and extraction and injection testing services for the two wells. Currently, RCS is supporting the City in regard to drilling an exploratory borehole at an available City property to determine the feasibility of construction an injection well at the location. Mr. Slade is the Technical Advisor for all Santa Monica related projects.

Well No. 10 Construction, City of Signal Hill, Los Angeles County, 2022

Well No. 10 is a city funded municipal well construction project to secure and augment groundwater sources in the City of Signal Hill. The project well site location posed several well design and construction challenges. RCS proposed and executed a specific construction plan to mitigate equipment clearance and space issues. Through detailed hydrologic analysis and customized well development, a pumping capacity of approximately 2,500 to 3,000 gpm was achieved, exceeding the desired pumping capacity of 1,100 gpm. Mr. Slade was the Technical Advisor for this project.

Well No. 22, City of Vernon, Los Angeles County, 2022

Well No. 22 was a city and grant funded municipal well construction project to secure and augment groundwater sources in the City of Vernon. The project well site location posed several well design and construction challenges. RCS proposed and executed a specific construction plan to mitigate equipment clearance and space issues. Due to the well site location being within an industrial area, a 500-foot conductor casing was required to provide sufficient wellhead protection. Through detailed hydrologic analysis and customized well development, a resulting pumping capacity of 2,500 gpm was achieved, exceeding the desired pumping capacity of 1,500 gpm. Mr. Slade was the Technical Advisor for this project.

Design and Construction of Well Nos. 32, 33 and 34, City Of Oxnard, Ventura County, CA 2004-2005

RCS prepared a preliminary design report (PDR), technical specifications, and final well design, and observed the construction, development and testing of three proposed City of Oxnard (City) municipal water-supply wells, Nos. 32, 33 and 34. Based on a moratorium promulgated by the Fox Canyon Groundwater Management Agency (FCGWMA), the three new wells were permitted to extract groundwater only from the upper aquifer systems in the Oxnard Subbasin of the Santa Clara River Valley Groundwater Basin groundwater basin. Hence, the purposes of the PDR project were to provide the City with a hydrogeologic assessment of subsurface site conditions, and to formulate the preliminary design of the three proposed new wells to meet the conditions set forth by the management agency. All three wells were successfully constructed and tested, meeting the design requirements of the project. Mr. Slade was a Technical Advisor for this project.

Experience History

RICHARD C. SLADE & ASSOCIATES LLC, CONSULTING GROUNDWATER GEOLOGISTS. Independent consulting practice established in 1983 to provide technical, professional, and direct personal services to the groundwater industry. Hydrogeologic projects have included groundwater resource development; locating and designing water wells; assessing potential degradation resulting from hazardous waste sites and sanitary landfills; conducting water level and water quality monitoring from monitoring networks; defining aquifer characteristics from long-term aquifer tests in active wells; observation and monitoring of water well construction; providing expert witness testimony for a variety of groundwater cases; and providing hydrogeologic elements and mitigation measures for environmental assessments.

GEOTECHNICAL CONSULTANTS, INC., 1970-1983. Joined the firm in 1970 as an engineering geologist and hydrogeologist. Advanced to Associate in 1975. Participated in and supervised geotechnical and hydrogeologic projects of various complexities, from the feasibility level through final design. His investigation and reports have analyzed faults and seismicity, earth materials, and groundwater problems for such facilities as dams, reservoirs, treatment plants, tunnels, industrial and residential buildings, sanitary landfills and groundwater basins. Major experience has involved field mapping, logging of bore holes, monitoring of groundwater observation holes, data analyses, and report writing.

Since 1972, Mr. Slade was the responsible hydrogeologist for several major groundwater basin projects including locating and designing of new wells and well redevelopments, calculations of groundwater in storage, determination of aquifer parameters, and evaluation of dewatering criteria. Several studies utilized emplacement of deep exploratory drill holes, analyses of geologic and geophysical data, and monitoring and analyses of groundwater levels, quality and pollution, and assessment of leachate and gases at existing landfills.

In addition, he conducted and supervised groundwater pollution studies and evaluation of several active and proposed sanitary landfill sites; he has supervised geologic and hydrogeologic studies for the evaluation and abatement of acid mine drainage from a large, inactive sulfur mine; and he has participated in assessing groundwater, geologic, and geotechnical parameters which affect sewer infiltration and inflow.

METROPOLITAN WATER DISTRICT OF SOUTHERN CALIFORNIA, Los Angeles, 1967-1970. Performed hydrologic and hydrogeologic studies along pipeline and tunnel routes for State Water Project, conducted field mapping and exploration along tunnel routes, conducted and supervised aquifer tests for calculations of dewatering parameters for tunnel routes and dam sites. Served as Resident Geologist in charge of tunnel mapping and tunnel conditions for the Newhall and Castaic tunnels, excavated by tunnel boring machines.

Natasha Raykhman, PG

Well Drilling and Groundwater Recharge

Ms. Raykhman is a Senior Associate at Hazen. She has over 30 years of experience with conjunctive use, water recycling, groundwater remediation, and groundwater storage and recovery projects in California, Europe, Asia and Africa.

Education

MS, Hydrogeology, Moscow University

BS, Geologic Science, Moscow University

Certification/License

Professional Geologist: CA

Areas of Expertise

- Water Supply
- Hydrogeology
- Groundwater Modeling
- Groundwater Recharge
- Title 22 Analysis and Preparation of Engineering Reports
- Groundwater Contamination
- Groundwater Monitoring
- SGMA and GSP Development

An expert in developing complex groundwater models and using these models for water budget/safe yield analyses; evaluating recycled water injection and spreading; assessing the effectiveness of the sea water intrusion barriers, siting spreading basins and wells; and designing and optimizing wellfields. Ms. Raykhman managed groundwater modeling, conjunctive use and water recycling projects in many basins in Southern California, including West Coast Basin, Central Basin, San Fernando Valley Basin, San Gabriel Basin, Irvine Subbasin and many other areas.

Development of the Groundwater Sustainability Plan for the Alpaugh Groundwater Sustainability Agencies (GSA) in the Tule Subbasin, CA

Technical Director. The Department of Water Resources has designated the Tule Subbasin located in the San Joaquin Valley, CA as a critically overdrafted basin with an estimated subbasin average overdraft of 160,000 acre-feet per year that resulted in significant subsidence, degraded water quality, lowering of groundwater levels and reduction in storage. The California Sustainable Groundwater Management Act requires this basin to be managed under the groundwater sustainability management plan on or before January 31, 2020. The groundwater sustainability plan preparation included development of the sustainability goal for the basin, identification of the undesirable results of the groundwater overdraft and specific minimum thresholds and measurable objectives to evaluate progress toward the sustainability goal, establishing a monitoring network that collects enough data to measure the progress toward achieving this goal; and evaluation of projects and management actions proposed to achieve the sustainability goal. The plan was developed as a guiding document for the long-term management of groundwater resources so that all stakeholders have a reliable and safe water supply now and in the future. This project also included the development of a basin-wide hydrogeological conceptual model and water budget that accounted for the future climate change, numerical groundwater flow modeling to refine water budget estimates and simulate potential sustainability management actions and projects; and development of the basin-wide groundwater and subsidence monitoring networks.

Hazen

South Perris Desalination Program Support, Eastern Municipal Water District (EMWD)/ USACE, Perris, CA
Ms. Raykhman served as a Technical Director on EMWD's Perris II Desalter expansion program plans to add an additional 5.4 million gallons of potable water capacity per day. The project included updates and recalibration of the regional groundwater model for the San Jacinto Basin, independent evaluation of the safe yield focused on the Perris South Sub-Basin and adjacent areas, extraction well and pipeline field siting studies; monitoring plan development; and preliminary design of the extraction wells, pipelines and wellhead facilities.

Development of Strategic Groundwater Management Plans (SGWMPs) for four Governorates in Tunisia, Millennium Challenge Corporation (MCC)
Ms. Raykhman served as a technical director for the technical and policy/legal support to MCC for the development of the Strategic Groundwater Management Plans for four Governorates in Tunisia, where groundwater overdraft impacted agricultural activities and water supply availability. Ms. Raykhman worked closely with MCC staff, Government of Tunisia and local stakeholders on the development of sustainable groundwater management strategies to help define and achieve near-term targets and long-term goals based on the national water strategy 2050, regional economic development plans, local baseline groundwater conditions, and future climate change. She also worked with the water law experts on the evaluation of various decentralized groundwater management policies and strategies in order to propose the best options in each targeted Governorate to achieve a balance between economic growth, agricultural development, and sustainable use of groundwater in Tunisia. Strategic Groundwater Management Plans (SGWMPs) developed for this project are based on quantitative and qualitative approaches for sustainable groundwater management that promote stakeholder participation including women and youth, provide better employment and training opportunities, establish trust between water users and the administration, and increase community awareness of the consequences of groundwater overdraft.

North Basin Groundwater Protection Project, Orange County Water District, CA.
Ms. Raykhman served as a senior hydrogeologist/technical reviewer for the development and implementation of a cost-effective strategy to protect water resources in the North Basin by addressing regional groundwater VOC contamination. She performed senior review of the technical deliverables, including characterization work plans and reports and provided technical oversight of the conceptual model development and groundwater modeling analysis of various production well extraction scenarios.

Jennifer Coryell, PE

Stormwater Facilities Lead

Ms. Coryell is a senior associate with Hazen and a licensed professional engineer with over 17 years of experience in water resources planning and design.

Her areas of expertise include watershed planning, multi-benefit project conceptualization, green infrastructure planning and design, integrated water resources planning, Total Maximum Daily Load (TMDL) and MS4 Permit compliance planning, and policy planning.

Education

M.A., Public Policy and Public Administration, Eastern Illinois University, Charleston, IL

B.S., Civil Engineering, Marquette University, Milwaukee, WI

Certification/License

Professional Engineer

Areas of Expertise

Technical Presentations

Coryell, J.L. Reicks, A.C. Use of Automation to Identify and Site Stormawater BMPs in Urban Environments. American Water Works Association Illinois Section Watercon Total Water Conference. March 2022.

Coryell, J.L. Partisanship and Special Interest Influence on Environmental Policy as Illustrated through Statewide Plastic Bag Policies. Midwest Political Science Association. March 2021.

Development of a Project Implementation Inventory and Safe Clean Water CIP; Los Angeles Bureau of Sanitation and Environment; Los Angeles, CA

Project Manager. Ms. Coryell led the development of the methodology employed to prioritize and sequence projects for a 10-year stormwater capital improvement plan based on the master list of projects developed as part of a separate project also led by Ms. Coryell. Ms. Coryell facilitated the initial conceptualization of a dashboard for City staff to track and present information on projects being implemented citywide.

Project Site Selection and Analysis (SiteSAN) Tool Development and Master Project List Identification; Los Angeles Bureau of Sanitation and Environment; Los Angeles, CA

Project Manager. Ms. Coryell led a team in the development of a GIS based tool for the City to identify optimal locations for stormwater capture, infiltration and reuse across the City of Los Angeles. Based on the output of the tool, Ms. Coryell screened projects to develop a preliminary list of sites that would capture the volume of flow required to meet TMDL compliance targets while targeting other benefits such as diversion to sewer for recycled water use to reduce the City's dependance on imported water. The project helped the City identify enough sites to potentially avoid needing to site projects on private property, potentially saving the City hundreds of millions of dollars in costs. Ms. Coryell led the team in expanding this effort across the remainder of the City.

Feasibility Study for the Downtown Lomita Multi-Benefit Stormwater Project for the Safe, Clean Water Program Infrastructure Grant Funding Application; City of Lomita; Lomita, CA

Project Manager. Ms. Coryell led the development of a comprehensive feasibility study for a newly conceived project that involved stormwater capture through diversion of 5.4 ac-ft of stormwater in this urban area to

infiltration BMPs, including drywells, subsurface infiltration gallery, and bioretention. The project was envisioned to include community benefits such as a new bike lane and trees to reduce the heat island effect and improve quality of life. The feasibility study required a quick turnaround to meet submission deadlines for grant funding through the County of Los Angeles' Safe, Clean Water Program. Ms. Coryell presented the project to the South Santa Monica Bay Watershed Area Steering Committee (WASC) in conjunction with the City. The project received a high score during the first phase of screening, was ranked as the number one project by the WASC and was selected as a recommended project for funding.

Green Streets Mater Plan, 54th Street Green Alley Drywell Design; Los Angeles County; Los Angeles, CA
Project Engineer. Ms. Coryell is the lead designer of a green alley project in an urban section of Los Angeles County that involves capturing stormwater in a series of drywells. The alley presented a unique challenge in that there is no existing storm drain in the ally or adjacent streets. Ms. Coryell developed multiple alternatives which included both the installation of a new storm drain, and alternatives that avoided a new storm drain through strategic siting of drywells to utilize the existing curb to convey stormwater to key points along the alignment. The project involved the design of easy to clean out pretreatment devices to reduce pollutant loading to the drywells to increase their useful life. Additional considerations involved avoiding overhead powerlines, driveway entrances, and existing utilities. The alternatives were presented to the County and a preferred alternative was selected.

Dominguez Channel Watershed Management Group Technical Support, EWMP Update, and Annual Report Development; South Bay Cities Council of Governments (COG), Los Angeles, CA
Project Engineer. Ms. Coryell worked with eight member agencies in the COG to identify a regional stormwater capture project in each jurisdiction, developed the conceptual design, and assisted the agencies in applying for feasibility study funding from the County of Los Angeles' Safe Clean Water (SCW) Program. Tasks include studying the region to identify potential project locations, workshopping with each jurisdiction, and conceptualizing multi-benefit, multi-jurisdictional projects with a high likelihood of receiving funding. Two of the projects were submitted to the SCW Program thus far, and both were recommended to receive Technical Resources Program funding by the Watershed Area Steering Committee. Ms. Coryell also facilitated the completion of the Annual Report which is required for compliance with the Los Angeles MS4 Stormwater Permit and participated in the 2021 Enhance Watershed Management Program (EWMP) update.

Proposition O Concept Reports; City of Los Angeles Bureau of Sanitation and Environment, Los Angeles, CA
Project Engineer. Proposition O was a City of Los Angeles voter approved proposition for $500 million which was to be used on stormwater quality improvement projects. Ms. Coryell prepared multiple concept reports that were submitted and approved for Proposition O funding. Concept reports included conceptual design of multiple BMPs such as wetlands, vegetated swales, and trash capture devices, and required quantification of expected pollutant removal effectiveness and cost estimates.

Gabrielle Skipper, PE

Stormwater Facilities

Ms. Skipper brings 18 years of experience in watershed monitoring and assessment; watershed master planning; water quality data analysis; stormwater mapping, inventory and condition assessment; hydraulic/hydrologic studies; municipal separate storm sewer system (MS4) program implementation; stormwater compliance, regulatory research and policy support; and stakeholder outreach and engagement.

Education

MS, Biological and Agricultural Engineering, North Carolina State University

BSCE, University of Virginia

Certification/License

Professional Engineer

Areas of Expertise

- Watershed assessment and monitoring
- Watershed master planning
- Surface water quality and stormwater
- Management of Clean Water Act programs (construction, industrial and municipal stormwater, TMDL, nonpoint source management)
- Green infrastructure
- Stormwater system mapping, inventory and condition assessment

Professional Activities

California Water Quality Association (CASQA) (2009-2015)

South Carolina Association of Stormwater Managers (SCASM)

Southeast Stormwater Association (SESWA)

American Water Resources Association (AWRA)

American Society of Civil Engineers (ASCE)

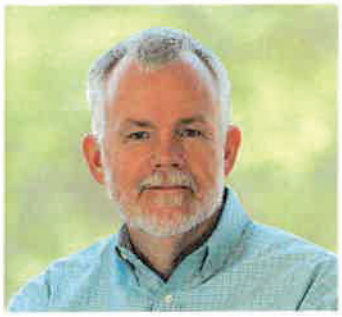
Hollenbeck Park Lake (LASAN), Los Angeles, CA
Technical Lead and Quality Reviewer. Worked with Hazen team and subconsultants to develop Water Quality Improvement Report (WQIR) and Hydrology and Hydraulics Technical Memorandum. Reviewed modeling results, compared to regional literature values, recommended improvements to data analysis and presentation of results. Prepared site plan and drainage diagrams to better convey proposed project components. Supported the team with technical writing. Responded to comments from LASAN and Caltrans.

Jeffries Creek-Middle Swamp TMDL Monitoring and Assessment Plan, City of Florence, SC
Project Engineer and Technical Quality Reviewer. Implementation phase for bacteria TMDL. Assisted with field assessment of monitoring stations, and development of monitoring plan. Provided guidance and completed technical quality review of plan and watershed maps.

Lake Swamp Watershed Assessment, City of Lake City, SC
Deputy Project Manager. Prepared field checklist using EPA methodology. Completed watershed research and field evaluation of land uses, pollutant sources and pathways. Compiled 15 years of water quality data from multiple stations and analyzed dissolved oxygen, bacteria and other parameters. Conducted limited literature review of similar watersheds. Initiated outreach to local community leaders, state and federal agencies, developed materials and led discussions for first watershed stakeholder meeting for Lake Swamp. Watershed Assessment report, including recommendations for BMPs and further monitoring, approved by SCDHEC and USEPA.

Spartanburg Water System Lake Management Support, Spartanburg, SC
Project Manager. Evaluated eutrophic conditions in two reservoirs. Provided technical quality review of algaecide prescription plans. Communicated results and trends of weekly sampling analysis, and coordinated activities related to algaecide treatment applications. Recommended monitoring and watershed management activities to better understand eutrophication processes.

Dupont-Wappoo Watershed Master Plan, City of Charleston, SC
Deputy Project Manager and Technical Lead. Prepared and implemented detailed SOP manual to govern field collection and analysis of stormwater inventory and condition assessment data for 500 ac watershed with 5,000 stormwater assets. Condition assessment methodology adapted from NASSCO. Managed multi-disciplinary teams of engineers, GIS analysts, programmers and field staf. Established and ensured QA/QC procedures. Developed system to generate maintenance requests during field work. Developed traffic control strategy for survey work of 1500 assets in high traffic corridors. Prepared encroachment permit and obtained approval from DOT. Conducted bi-weekly conference call updates with City and County.



Santa Margarita River Estuary Study, MCB Camp Pendleton, CA
Project Manager and Subject Matter Expert. Developed scope of work to study eutrophic conditions in coastal Southern California estuary. Coordinated field data collection, reviewed sampling results and required revisions to final report. Directed contractor for multi-agency estuary study in support of Santa Margarita River Total Maximum Daily Load (TMDL). Sampling included continuous dissolved oxygen monitoring, benthic algal sampling, and data collection of tides, groundwater up-welling and saltwater intrusion in the estuary. Coordinated review and acceptance of results by stakeholder agencies, including Caltrans and adjacent cities and counties. Submitted final reports to SDRWQCB and responded to follow-up requests.

Watershed Monitoring Program, MCB, Camp Pendleton, CA
Program Manager and Subject Matter Expert. Expanded and managed watershed monitoring program for 5 coastal watersheds covering 200 sq mi. Conducted annual wet weather and ambient sampling events (full suite water quality parameters, benthic macroinvertebrates, benthic algae) and hydrologic monitoring at multiple streams and coastal lagoons. Analyzed results, tracked water quality trends and prepared reports. Provided expert advice to installation managers and regulatory agencies regarding water quality trends.

Stormwater Master Plan, City of Stockton, CA
QA/QC. Hazen is working with the City of Stockton on the development of their first comprehensive stormwater master plan. Prior to master plan development, the City was unable to evaluate existing capacity of the stormwater system and plan for future development. A substantial focus has been development of model capabilities to understand the impacts of new upstream development with varying degrees of stormwater control and downstream areas.

Water Quality Technical Reviews, MCB Camp Pendleton, CA
Stormwater Program Manager and Subject Matter Expert. Completed expert technical reviews of dozens of water quality monitoring reports, studies, and all stormwater laboratory sampling data. Prepared comments and required revisions. Approved final results for submission to regulatory agencies.

Stormwater Design Standards Task Force, City of Charleston, SC
Deputy Project Manager and Technical Lead. Supported early stage of stakeholder group. Prepared and/or reviewed/consolidated briefing materials. Presented to group. Prepared meeting agendas, attended meetings and prepared meeting minutes. Interacted with stakeholders and answered questions as needed.

Jeff G. Powers, PE

Stormwater Facilities

Mr. Powers leads Hazen's Dam Engineering Team with over 300 dam design/rehabilitation projects to his credit along with over 80 dam breach analyses.

Education

BSCE, Southern College of Technology, (Civil Engineering Technology)

Certification/License

Professional Engineer

Georgia Safe Dams Program Engineer of Record - Civil Engineering, Hydrology, and Hydraulics

Areas of Expertise

- Dam Engineering
- Water Resources
- Stormwater Management
- Floodplain Mapping/FEMA Map Revisions
- Hydrologic & Hydraulic Modeling
- Site Development
- Transportation Engineering
- Water/Wastewater Design
- Construction Administration

Professional Activities

- Association State Dam Safety Officials (ASDSO) Affiliate Member
- ASDSO Technical Training Committe
- ASDSO Advisory Committee (AdCom)
- Georgia Association of Water Professionals (GAWP)
- American Society of Civil Engineers (ASCE)

Mr. Powers specializes in high hazard dam design and renovation, river and floodplain hydraulic analysis, storm drainage system design, culvert and bridge analysis, and levee rehabilitation. In conjunction with his dam design project experience, Mr. Powers has significant expertise modeling dam failures and floodplains utilizing both 1d and 2d models, analyzing existing and proposed culverts, and modeling bridges.

Copper Basin and Gene Wash Dams Ladderway Replacement, The Metropolitan Water District of Southern California, San Bernardino County, CA

Metropolitan owns and operates two dams located in remote locations near the Town of Parker Dam and the Colorado River. The dams are both thin concrete arch structures constructed in the late 1930s, with much of the original equipment still in use today. Both dams impound raw water for conveyance as part of the Colorado River Aqueduct water supply system. Copper Basin Dam is approximately 184 ft high while Gene Wash Dam is approximately 140 ft high. Metropolitan authorized Hazen to develop replacement options for the existing ladderway system at both dams to provide direct, safe, and secure access from the dam crest to the valve house at the base of each dam. Hazen provided conceptual ladderway replacement alternatives, material testing plans, and anticipated construction costs.

Inundation Maps and Supporting Technical Studies, Glendale Water and Power, CA

Technical Lead. Hazen was retained to develop inundation extents of non-weather-related dam failure and corresponding hydraulic models for dam breach wave routing. Services included two-dimensional breach modeling, database creation for each structure and appurtenances including spillway rating curves, elevation storage curves, and modeling methodology, and developing inundation mapping for five dams (Diederich, Brand Park, Glenoaks 968, Chevy Chase 1290, and East Glorietta) located in the foothills of the Verdugo Mountains and the San Rafael Mountains. Inundation associated with these dams will be used by emergency officials to create evacuation plans for the affected city neighborhoods.

Hazen

Heads Creek Reservoir Dam, City of Griffin, Spalding County, GA
Technical Lead/Project Manager. After a significant storm event in 2019 damaged the principal concrete chute spillway, the City requested Hazen develop a plan for bringing the dam into regulatory compliance with Georgia Safe Dams Program regulations. Tasks associated with the project include updating the hydrologic and hydraulic model in HEC-HMS, creating a tailwater model in HEC-RAS 2D, reviewing of computational fluid dynamics model results from Flow 3D, and designing improvements to the structure based on published design criteria. Major design elements include a 125-ft wide concrete chute spillway with a St. Anthony Falls stilling basin and riprap outlet channel, articulated concrete block embankment overtopping protection, grading plan, dual-chamber raw water intake and drawdown structure, drawdown pipe and energy dissipation structure, seepage collection system, and demolition of the existing spillway and raw water intake structures. Ongoing tasks include assisting the client throughout the permitting and bidding processes.

Hobby Hill, West Berry, and Cherokee Lake Dam Rehabilitation Project – Phase 1, City of Richmond, VA
Technical Lead. The City maintains responsibility for three earthen embankment dams which require rehabilitation to bring them into regulatory compliance. The City requested Hazen evaluate the condition of each of the three dams including coordination with the Virginia Department of Conservation and Recreation Dam Safety Program to define the permit status and regulatory requirements, perform a hydrologic and hydraulic analysis for each dam, develop inundation mapping and Emergency Action Plan for each dam, and take part in public outreach efforts. The focus of the project is developing a Basis of Design for each dam which documents the existing conditions and provides recommendations and associated costs for bring the dams into regulatory compliance.

Percy D. Miller Water Treatment Plant River Intake Sill Dam, City of Winchester, VA
Technical Lead. Renovation of a low-head sill dam across the north fork of the Shenandoah River in central Virginia. The dam's concrete ogee shaped weir spans the entire river channel creating sufficient withdrawal depth at the water treatment plant's pump intake. Originally constructed in the early 1950's, the intake is the water treatment plant sole source of raw water. Hazen's initial assessment of the dam indicated that the dam's weir is in excellent condition, but the two rubble stone end walls should be replaced with modern concrete structures. Hazen's scope of service includes an initial visual assessment, hydrological evaluation of the river flows and flood elevations, hydraulic modeling utilizing Flow 3D and HEC-RAS, and development of construction documents for the replacement of the end walls.

Dam Engineering Services, Gwinnett County, GA
Technical Reviewer. Dam engineering services associated with 25 dams for the Department of Water Resource. Services included quarterly inspections, rehabilitation design, Operation & Maintenance Plan development, inundation mapping, and Emergency Action Plan updates. Structures range in size from small residential subdivision dams to NRCS Flood Control Structures and one of the county's raw water reservoirs.

Reedy Mill BMP Dam Spillway Replacement, Chesterfield County, VA
Technical Lead. Renovation of a residential earthen dam. Originally constructed as part of a residential subdivision in late 1993, the dam's principal trapezoidal concrete chute spillway was constructed over the earthen embankment. Over time the spillway became undermined and collapsed in late 2016. Hazen was selected to develop options for replacing the spillway and renovating the entire dam. Construction documents were developed which included a permanent siphon to provide drawdown and a baffle chute spillway to pass the design storm. Hazen is currently providing construction services.

Jeff Wisniewski, PE

Stormwater Facilities - Dyke & Channels

Mr. Wisniewski is a successful Project Manager and Engineering Design Manager with extensive experience in the design and construction of large, complex civil works projects, with 20 years of experience managing and leading multi-disciplinary design teams to construction.

Education

M.S., Civil Engineering, Syracuse University, Syracuse, NY

M.S., Geotechnical Engineering, University of California, Berkeley, Berkeley, CA

Areas of Expertise

- Dams, Levees and Outlet Works
- Geotechnical Engineering
- Heavy Civil Construction
- Project/Program Management
- Multi-disciplinary Design Management
- Risk Management
- Workshop/Meeting Facilitation

Professional Activities

- United States Society on Dams (USSD)
- Association of State Dam Safety Officials (ASDSO)
- Society of American Military Engineers (SAME)
- Society for Mining, Metallurgy & Exploration (SME)
- ASCE San Francisco Geo-Institute (SFGI)

Pacheco Reservoir Expansion Project, Valley Water; Santa Clara County, CA

Design Manager responsible for feasibility-level design of the outlet works, pump station and conveyance for planned expansion of Pacheco Reservoir. Outlet works facilities consist of an intake shaft, multi-level 60-inch dia. adit intakes and 96-inch dia. standpipe, 96-inch low-level intake, 114-inch outlet conduit, outlet/bifurcation structure, low-flow bypass system, conveyance pipeline, bi-directional pumping plant with 490 cfs capacity, and tie-in structure to existing Pacheco Conduit operated by U.S. Bureau of Reclamation.

Sites Reservoir Project, Sites Project Authority; Glenn and Colusa Counties, CA

Project and Design Manager responsible for preparing 30% design for the planned new reservoir in Northern California, facilities including two large earth embankment dams and eight saddle dams/dikes, inlet/outlet works consisting of sloping intake and tunnel, diversion tunnel, spillway, roads and bridges.

South San Francisco Bay Shoreline Levee, USACE San Francisco District, Alviso, CA

Project and Design Manager responsible for the design of the Reach 1 flood risk management levee along the South San Francisco Bay as an integral part of an expansive salt pond restoration program.

Anderson Dam Tunnel Project, Valley Water; Morgan Hill, CA

Design Manager responsible for final design of 370-foot-long 13-foot-diameter tunnel and 925-foot-long 19-foot-diameter conventionally-excavated tunnels, 300-foot-long, 8-foot-diameter microtunnel, diversion outlet structure with 132-inch butterfly control valves and 132-inch fixed cone dissipating valves, grading and stream channel improvements, for an emergency action contract ahead of a planned larger seismic retrofit project. The design was required to be advanced from concept to 100% in less than 9 months to meet regulatory compliance for safe drawdown

Hazen

operations, with deliverables including plans, technical specifications, special provisions, basis of design and documentation reports, and a geotechnical baseline report.

Calero Dam Seismic Retrofit Project, Valley Water, San Jose, CA
Project and Design Manager responsible for management and technical delivery of design, plans and specifications, construction documents and cost estimates.

Los Vaqueros Reservoir Expansion Project, Contra Costa Water District; Contra Costa County, CA
Dam Engineer responsible for grading and erosion control for raising an existing 192-foot-high earth fill dam by 85 feet, including development of plans, specifications and cost estimates.

Newell Creek Dam Inlet/Outlet Replacement Project, City of Santa Cruz Water Department, Santa Cruz, CA
Program Manager, Risk Manager and Owner's Representative for design and construction of replacement of existing inlet/outlet works, including risk and value management, development of front-end specifications, real estate acquisition, technical review, and solicitation.

Sacramento Weir Widening, USACE Sacramento District, Sacramento, CA
Program Manager responsible for assisting internal design leads within the U.S. Army Corps of Engineers Sacramento District (CESPK) to deliver final design to widen the 1,950-foot weir an additional 1,500 feet.

Folsom Dam Auxiliary Spillway (Joint Federal Project) Phase III, USACE Sacramento District, Folsom, CA
Technical Lead Engineer during the final close-out phase of a $250M construction contract leading to dam commissioning, responsible for managing the schedule and budget and resolving outstanding technical concerns and challenges, including negotiating with the contractor on deficiencies and fiscal close-out as well as with USACE partners for facility transfer. Managed all engineering during construction (EDC) efforts, including review of contractor submittals and RFIs, and documentation of as-built conditions for design, foundation preparation and concrete placement, and lessons learned.

Hurricane Sandy Recovery Program (P.L. 113-2), USACE North Atlantic Division, Brooklyn, NY
Lead Program Manager, Lead Engineer and Deputy Chief responsible for technical delivery and execution of the $4.1 billion program in tri-hatted role, including cost and schedule metrics, design criteria and quality assurance, acquisition strategy and construction. Principally involved with all facets of the program's execution, which included 150+ projects ranging across USACE civil works business lines (FCCE, O&M, CAP, CG, GI).

Folsom Dam Auxiliary Spillway (Joint Federal Project) Phase IV, USACE Sacramento District, Folsom, CA
Technical Lead Engineer responsible for entire design effort of temporary cutoff wall embankment cofferdam, excavation of 1 million cubic yards of fill and decomposed and moderately-weathered granite, underwater blasting and dredging techniques, 100-foot-high post-tensioned concrete approach walls and 3,000-foot-long concrete-lined chute and stilling basin with armored baffle blocks. Served as the principal in a program schedule optimization that reduced completion schedule by four years. Responsible for all design disciplines including hydraulics, geology and geotechnical, structural engineering, civil, cost, construction, and environmental, impact assessment and regulatory compliance. Managed over 60 individuals across several districts and four architect-engineering firms, and oversaw an innovative and robust quality management plan.

Hurricane Sandy Recovery Program (P.L. 113-2), USACE North Atlantic Division, Brooklyn, NY
Lead Program Manager, Lead Engineer and Deputy Chief responsible for technical delivery and execution of the $4.1 billion program in tri-hatted role, including cost and schedule metrics, design criteria and quality assurance, acquisition strategy and construction. Principally involved with all facets of the program's execution, which included 150+ projects ranging across USACE civil works business lines (FCCE, O&M, CAP, CG, GI).

Matthew Jones, PhD, PE

Technical Advisor: Stormwater Facilities

Dr. Jones leads Hazen's stormwater practice group and offers national expertise in the full lifecycle of stormwater and flood management. He is engaged with many communities to understand their climate vulnerabilities and share best practices to support adaptation and resiliency for a broad array of stormwater and wastewater planning and design efforts.

Education

PhD, North Carolina State University

BS, North Carolina State University

Certification/License

Professional Engineer

Areas of Expertise

- Climate change
- Vulnerability assessments
- Stormwater planning and design
- Stormwater monitoring, modeling, and analysis
- Green infrastructure program development

Professional Activities

American Society of Civil Engineers

- LID/GI Committee Member

Water Environment Federation

- Stormwater Committee Member

Climate Change Vulnerability Assessment, San Diego County Water Authority, CA

QA/QC. High level assessment of the risks posed by climate change to water conveyance and storage infrastructure. Hazen identified river and coastal floodplains, wildfire risk areas, high temperature increases, wind and drought that directly and indirectly affect aqueduct pipelines, reservoirs, treatment plants and facilities. The purpose is to highlight vulnerabilities and possible adaptations for operations and future projects.

Climate Change Plan, City of Simi Valley, CA

QA/QC Reviewer for developing a Climate Change Effects Vulnerability Assessment and Management Plan for the City's Sanitation Facilities. The impact of flood, wildfire, and other climate phenomena are being investigated and assessed. The plan will include an include an assessment of short and long term vulnerabilities of the facilities and operations in order to ensure that compliance with National Pollution Discharge Elimination System permit conditions is achieved.

Climate Change Vulnerability Plans, Los Angeles County Sanitation Districts, Whittier, CA

Technical Advisor and QA/QC Reviewer of site assessments and local data to assess risks posed by climate change to operation of four reclamation plants in Santa Clarita Valley and Antelope Valley. Threats posed by flood, wildfire, extreme temperature, drought, and extreme wind were assessed to be developed into climate vulnerability plans. The plans will allow the Sanitation Districts to comply with regional water quality control board requirements necessary for obtaining National Pollution Discharge Elimination System permits.

Climate Resiliency Study SP-152, Orange County Sanitation District, Fountain Valley, CA

Technical Advisor and QA/QC Reviewer of the district's infrastructure of two treatment plants and multiple pump stations based on climate variability and change, and develop adaptation and mitigation recommendations to reduce vulnerabilities intensified by climate change. Sea level rise, flooding, wildfire and high heat were considered for impact to structures and systems. Adaptation strategies include emergency response procedures, setting new floor elevations for new CIP projects, retrofitting wall penetrations and pipe tunnel entrances.

Stormwater Master Plan Modeling and Design Implementation Services, City of Fort Lauderdale, FL

Task Lead and Technical Advisor. The City's Comprehensive Stormwater Management Program includes development of a new stormwater master plan model, a prioritized stormwater/resiliency capital improvements plan, and implementation of designs to address chronic flooding and other stormwater management challenges in the City, and improve resiliency. Served as a technical advisor for planning and modeling efforts and led the development of green infrastructure standard details and specifications. The green infrastructure details cover multiple bioretention and permeable pavement configurations adapted to suite site constraints throughout the City.

CSO-PlaNYC Green Infrastructure Initiative, New York City Department of Environmental Protection, NY

Lead Engineer supporting New York City's CSO-PlaNYC initiative to utilize green infrastructure to better manage stormwater runoff. A stormwater pilot program is an important part of the CSO-PlaNYC initiative, involving planning for green infrastructure implementation, developing green infrastructure designs, implementing the proposed source controls, and evaluating their performance to better inform future efforts. Designed a number of stormwater source control retrofits as part of this program, each utilizing green infrastructure and low impact development (LID) principles to reduce the rate and volume of stormwater runoff entering the combined sewer system. In addition to developing source control designs, Designed monitoring programs to examine the performance of these systems and better understand the implications of their broader application throughout New York City. Monitoring equipment designs and data collection and analysis protocols examined inflow and outflow, storage capacities, drawdown rates, water quality, and other aspects of source control functionality.

CITY OF ONTARIO
DESIGN SERVICES AGREEMENT

1. PARTIES AND DATE.

This Agreement is made and entered into as of _____ __, **2024** by and between the City of Ontario, a municipal corporation organized and operating under the laws of the State of California with its principal place of business at 303 East "B" Street, Ontario, California 91764-4196, County of San Bernardino, State of California ("City"), and **GHD Inc.**, a **CALIFORNIA CORPORATION** with its principal place of business at **320 Goddard way, Suite 200, Irvine CA 92618** (hereinafter referred to as "Consultant"). City and Consultant are sometimes individually referred to herein as "Party" and collectively as "Parties."

2. RECITALS.

2.1 City. City is a municipal corporation organized under the laws of the State of California, with power to contract for services necessary to achieve its purpose.

2.2 Consultant. Consultant desires to perform and assume responsibility for the provision of certain professional **engineering** design services required by the City on the terms and conditions set forth in this Agreement. Consultant warrants that it is fully licensed, qualified, and willing to perform the services required by this Agreement; provided, however, that if Consultant is a corporation or other organization, the Project Consultant designated pursuant to Section 3.2, and not the Consultant itself, shall be fully licensed to practice as an **engineer** in the State of California.

2.3 Project. City desires to engage Consultant to render such services for the **On-Call Design Services** ("Project") as set forth in this Agreement.

3. TERMS

3.1 Employment of Consultant.

3.1.1 Scope of Services. Consultant promises and agrees to furnish to City all labor, materials, tools, equipment, services, and incidental and customary work necessary to fully and adequately supply the professional **engineering** and related services necessary for the full and adequate completion of the Project consistent with the provisions of this Agreement

(hereinafter referred to as "Services"). The Services are more particularly described throughout this Agreement, including Exhibit "A" attached hereto and incorporated herein by reference. All Services shall be subject to, and performed in accordance with, this Agreement, any exhibits attached hereto and incorporated herein by reference, and all applicable local, state and federal laws, rules and regulations. All Services performed by Consultant shall be subject to the sole and discretionary approval of the City, which approval shall not be unreasonably withheld.

3.1.2 Term. The term of this Agreement shall be from **June 4, 2024** to **June 4, 2027**, unless earlier terminated as provided herein. The City shall have the unilateral option, at its sole discretion, to renew this Agreement automatically for no more than **two** additional one-year terms. Consultant shall complete the Services within the term of this Agreement, and shall meet any other established schedules and deadlines.

3.2 Project Consultant; Key Personnel.

3.2.1 **Engineer of Record.** Consultant shall name a specific individual to act as Project Consultant, subject to the approval of City. Consultant hereby designates **Chris Bartleman, PE** (License No. **C 81075**) to act as the **Engineer of Record** for the Project. The **Engineer of Record** shall: (1) maintain oversight of the Services; (2) have full authority to represent and act on behalf of the Consultant for all purposes under this Agreement; (3) supervise and direct the Services using his or her best skill and attention; (4) be responsible for the means, methods, techniques, sequences and procedures used for the Services; (5) adequately coordinate all portions of the Services; and (6) act as principal contact with City and all contractors, consultants, engineers and inspectors on the Project. Any change in the **Engineer of Record** shall be subject to the City's prior written approval, which approval shall not be unreasonably withheld. The new **Engineer of Record** shall be of at least equal competence as the prior **Engineer of Record**. In the event that City and Consultant cannot agree as to the substitution of a new **Engineer of Record**, City shall be entitled to terminate this Agreement for cause.

3.2.2 Key Personnel. In addition to the **Engineer of Record**, Consultant has represented to the City that certain additional key personnel, engineers and consultants will perform the Services under this Agreement. Should one or more of such personnel, engineers or consultants become unavailable, Consultant may substitute others of at least equal competence upon written approval of the City. In the event that City and Consultant cannot agree as to the substitution of key personnel, engineers or consultants, City shall be entitled to terminate this Agreement for cause. The key additional personnel, engineers and consultants for performance of this Agreement are as follows: **Chris Bartleman, PE, Abhay Hanamsagar, PMP, Azad Kavoosi, PE, Peng, PMP, Ulysses Fandino, PE, PACP, Timothy Joyce, PE, PACP, MACP, LACP, and Greg Watanabe, PE, PACP, MACP**.

3.3 Hiring of Consultants and Personnel.

3.3.1 Right to Hire or Employ. Consultant shall have the option, unless City objects in writing after notice, to employ at its expense architects, engineers, experts or other consultants qualified and licensed to render services in connection with the planning and/or administration of the Project, and to delegate to them such duties as Consultant may delegate without relieving Consultant from administrative or other responsibility under this Agreement. Consultant shall be responsible for the coordination and cooperation of Consultant's architects, engineers, experts or other consultants. All consultants, including changes in consultants, shall be subject to approval by City in its sole and reasonable discretion. Consultant shall notify City of the identity of all consultants at least fourteen (14) days prior to their commencement of work

to allow City to review their qualifications and approve to their participation on the Project in its sole and reasonable discretion.

3.3.2 Qualification and License. All architects, engineers, experts and other consultants retained by Consultant in performance of this Agreement shall be qualified to perform the Services assigned to them, and shall be licensed to practice in their respective professions, where required by law.

3.3.3 Standards and Insurance. All architects, engineers, experts and other consultants hired by Consultant shall be required to meet all of the same standards and insurance requirements set forth in this Agreement, unless other standards or requirements are approved by the City in writing. Unless changes are approved in writing by the City, Consultant's agreements with its consultants shall contain a provision making them subject to all provisions stipulated in this Agreement.

3.3.4 Assignments or Staff Changes. Consultant shall promptly obtain written City approval of any assignment, reassignment or replacement of such architects, engineers, experts and consultants, or of other staff changes of key personnel working on the Project. As provided in the Agreement, any changes in Consultant's consultants and key personnel shall be subject to approval by City.

3.3.5 Draftsman and Clerical Support. Draftsmen and clerical personnel shall be retained by Consultant at Consultant's sole expense.

3.4 Standard of Care.

3.4.1 Standard of Care. Consultant shall perform all Services under this Agreement in a skillful and competent manner, consistent with the standards generally recognized as being employed by professionals qualified to perform the Services in the same discipline in the State of California, and shall be responsible to City for damages sustained by the City and delays to the Project as specified in the indemnification provision of this Agreement. Without limiting the foregoing, Consultant shall be fully responsible to the City for any increased costs incurred by the City as a result of any such delays in the design or construction of the Project. Consultant represents and maintains that it is skilled in the professional calling necessary to perform the Services. Consultant warrants and represents that all of its employees, architects, engineers, experts and other consultants shall have sufficient skill and experience to perform the Services assigned to them. Finally, Consultant represents that it, its employees, architects, engineers, experts and other consultants have all licenses, permits, qualifications and approvals of whatever nature that are legally required to perform the Services assigned to or rendered by them and that such licenses and approvals shall be maintained throughout the term of this Agreement. As provided for in the indemnification provisions of this Agreement, Consultant shall perform, at its own cost and expense and without reimbursement from the City, any services necessary to correct errors or omissions which are caused by the Consultant's failure to comply with the standard of care provided for herein.

3.4.2 Performance of Employees. Any employee or consultant who is determined by the City to be uncooperative, incompetent, a threat to the adequate or timely completion of the Project, a threat to the safety of persons or property, or any employee or consultant who fails or refuses to perform the Services in a manner acceptable to the City, shall be promptly removed from the Project by the Consultant and shall not be re-employed to perform any of the Services or to work on the Project.

3.5 Laws and Regulations.

3.5.1 Knowledge and Compliance. Consultant shall keep itself fully informed of and in compliance with all applicable local, state and federal laws, rules and regulations in any manner affecting the performance of the Services or the Project, and shall give all notices required of the Consultant by law. Consultant shall be liable, pursuant to the standard of care and indemnification provisions of this Agreement, for all violations of such laws and regulations in connection with its Services. Consultant shall defend, indemnify and hold City, its officials, officers, employees and agents free and harmless, pursuant to the indemnification provisions of this Agreement, from any claim or liability arising out of any failure or alleged failure to comply with such laws, rules or regulations.

3.5.2 Drawings and Specifications. Consultant shall cause all drawings and specifications to conform to any applicable requirements of federal, state and local laws, rules and regulations, including the Uniform Building Code, in effect as of the time the drawings and specifications are prepared or revised during the latest phase of the Services described in Exhibit "A" attached hereto. Any significant revisions made necessary by changes in such laws, rules and regulations after this time may be compensated as Additional Services which were not known or reasonably should not have been known by Consultant. Consultant shall cause the necessary copies of such drawings and specifications to be filed with any governmental bodies with approval jurisdiction over the Project, in accordance with the Services described in Exhibit "A" attached hereto. For the preparation of all such drawings and specifications, the Consultant shall use Computer Aided Design Drafting ("CADD") (e.g., AutoCAD) or other technology acceptable to the Consultant and City.

3.5.3 Americans with Disabilities Act. Consultant will use its best professional efforts to interpret all applicable federal, state and local laws, rules and regulations with respect to access, including those of the Americans with Disabilities Act ("ADA"). Consultant shall inform City of the existence of inconsistencies of which it is aware or reasonably should be aware between federal and state accessibility laws, rules and regulations, as well as any other issues which are subject to conflicting interpretations of the law, and shall provide the City with its interpretation of such inconsistencies and conflicting interpretations. Unless Consultant brings such inconsistencies and conflicting interpretations to the attention of the City and requests City's direction on how to proceed, the Consultant's interpretation of such inconsistencies and conflicting interpretations shall be the sole responsibility and liability of Consultant, and the Consultant shall correct all plans, specifications and other documents prepared for the Project at no additional cost if its interpretations are shown to be incorrect. In the event that the Consultant request's City's direction on how to proceed with respect to any inconsistent and/or conflicting interpretation, the Consultant shall be responsible to the City only pursuant to the indemnification provisions of this Agreement.

3.5.4 Permits, Approvals and Authorizations. Consultant shall provide City with a list of all permits, approvals or other authorizations required for the Project from all federal, state or local governmental bodies with approval jurisdiction over the Project. Consultant shall then assist the City in obtaining all such permits, approvals and other authorizations. The costs of such permits, approvals and other authorizations shall be paid by the City.

3.5.5 Water Quality Management and Compliance. Consultant shall keep itself and all subcontractors, staff, and employees fully informed of and in compliance with all local, state and federal laws, rules and regulations that may impact, or be implicated by the performance of the Services including, without limitation, all applicable provisions of the City's ordinances

regulating water quality and storm water; the Federal Water Pollution Control Act (33 U.S.C. § 1251 *et seq.*); the California Porter-Cologne Water Quality Control Act (Cal Water Code §§ 13000-14950); and any and all regulations, policies, or permits issued pursuant to any such authority. Consultant shall additionally comply with the lawful requirements of the City, and any other municipality, drainage district, or other local agency with jurisdiction over the location where the Services are to be conducted, regulating water quality and storm water discharges. Failure to comply with laws, regulations, and ordinances listed in this Section is a violation of federal and state law.

3.6 Independent Contractor.

3.6.1 Control and Payment of Subordinates. City retains Consultant on an independent contractor basis and Consultant is not an employee of City. Consultant is not an employee for state tax, federal tax or any other purpose, and is not entitled to the rights or benefits afforded to City's employees. Any additional personnel performing the Services under this Agreement on behalf of Consultant shall also not be employees of City, and shall at all times be under Consultant's exclusive direction and control. Consultant shall pay all wages, salaries, and other amounts due such personnel in connection with their performance of Services under this Agreement and as required by law. Consultant shall be responsible for all reports and obligations respecting such additional personnel, including, but not limited to: social security taxes, income tax withholding, unemployment insurance, disability insurance, and workers' compensation insurance.

3.7 Schedule of Services.

3.7.1 Consultant Services. Consultant shall fully and adequately complete the Services described in this Agreement and in Exhibit "A" attached hereto and incorporated herein by reference.

3.7.2 Timely Performance Standard. Consultant shall perform all Services hereunder as expeditiously as is consistent with professional skill and care, as well as the orderly progress of the Project work so as not to be the cause, in whole or in part, of delays in the completion of the Project or in the achievement of any Project milestones, as provided herein. Specifically, Consultant shall perform its Services so as to allow for the full and adequate completion of the Project within the time required by the City and within any completion schedules adopted for the Project. Consultant agrees to coordinate with City's staff, contractors and consultants in the performance of the Services, and shall be available to City's staff, contractors and consultants at all reasonable times.

3.7.3 Performance Schedule. Consultant shall prepare an estimated time schedule for the performance of Consultant's Services, to be adjusted as the Project proceeds. Such schedule shall be subject to the City's review and approval, which approval shall not be unreasonably withheld, and shall include allowances for periods of time required for City's review and approval of submissions, and for approvals of authorities having jurisdiction over Project approval and funding. If City and Consultant cannot mutually agree on a performance schedule, City shall have the authority to immediately terminate this Agreement. The schedule shall not be exceeded by Consultant without the prior written approval of City. If the Consultant's Services are not completed within the time provided by the agreed upon performance schedule, or any milestones established therein, it is understood, acknowledged and agreed that the City will suffer damage for which the Consultant will be responsible.

3.7.4 Excusable Delays. Any delays in Consultant's work caused by the following may be added to the time for completion of any obligations of Consultant: (1) the actions of City or its employees; (2) the actions of those in direct contractual relationship with City; (3) the actions of any governmental agency having jurisdiction over the Project; (4) the actions of any parties not within the reasonable control of the Consultant; and (5) any Force Majeure Event (as defined herein) or other unforeseen occurrence not due to any fault or negligence on the part of Consultant. Neither the City nor the Consultant shall be liable for damages, liquidated or otherwise, to the other on account of such delays.

3.7.5 Force Majeure Events. Neither City nor Consultant shall be considered in default of this Agreement for delays in performance caused by circumstances beyond the reasonable control of the non-performing Party. For purposes of this Agreement, such circumstances include a Force Majeure Event. A Force Majeure Event shall mean an event that materially affects a Party's performance and is one or more of the following: (1) Acts of God or other natural disasters; (2) terrorism or other acts of a public enemy; (3) orders of governmental authorities (including, without limitation, unreasonable and unforeseeable delay in the issuance of permits or approvals by governmental authorities that are required for the services); (4) strikes and other organized labor action occurring at the site and the effects thereof on the services, only to the extent such strikes and other organized labor action are beyond the control of Consultant and its subcontractors, and to the extent the effects thereof cannot be avoided by use of replacement workers; and (5) pandemics, epidemics or quarantine restrictions. For purposes of this section, "orders of governmental authorities," includes ordinances, emergency proclamations and orders, rules to protect the public health, welfare and safety, and other actions of a public agency applicable to the Services and Agreement. Should a Force Majeure Event occur, the non-performing Party shall, within fifteen (15) calendar days of the beginning of an Force Majeure Event, give written notice to the other Party describing the circumstances preventing continued performance and the efforts being made to resume performance of this Agreement. Force Majeure Events shall not entitle Consultant to any additional compensation. Notwithstanding the foregoing in this section, the City may still terminate this Agreement in accordance with the termination provisions of this Agreement.

3.7.6 Request for Excusable Delay Credit. The Consultant shall, within fifteen (15) calendar days of the beginning of any excusable delay, notify the City in writing of the causes of delay (unless City grants in writing a further period of time to file such notice prior to the date of final payment under the Agreement). City will then ascertain the facts and the extent of the delay, and grant an extension of time for completing the Services when, in its sole judgment, the findings of fact justify such an extension. The City's findings of fact thereon shall be final and conclusive on the Parties. Extensions of time shall apply only to that portion of the Services affected by the delay and shall not apply to other portions of the Services not so affected. The sole remedy of Consultant for extensions of time shall be an extension of the performance time at no cost to the City. If Additional Services are required as a result of an excusable delay, the Parties shall mutually agree thereto pursuant to the Additional Services provision of this Agreement. Should Consultant make an application for an extension of time, Consultant shall submit evidence that the insurance policies required by this Agreement remain in effect during the requested additional period of time.

3.8 Additional Services.

3.8.1 Request for Services. At City's request, Consultant may be asked to perform services not otherwise included in this Agreement, not included within the basic services

listed in Exhibit "A" attached hereto, and/or not customarily furnished in accordance with generally accepted architectural practice.

3.8.2 Definition. As used herein, "Additional Services" mean: (1) any work which is determined by City to be necessary for the proper completion of the Project, but which the Parties did not reasonably anticipate would be necessary for the Consultant to perform at the execution of this Agreement; or (2) any work listed as Additional Services in Exhibit "A" attached hereto. Consultant shall not perform, nor be compensated for, Additional Services without prior written authorization from City and without an agreement between the City and Consultant as to the compensation to be paid for such services. City shall pay Consultant for any approved Additional Services, pursuant to the compensation provisions herein, so long as such services are not made necessary through the fault of Consultant pursuant to the indemnification provision of this Agreement.

3.8.3 Examples of Additional Services. Such Additional Services shall not include any redesign or revisions to drawings, specifications or other documents when such revisions are necessary in order to bring such documents into compliance with applicable laws, rules, regulations or codes of which Consultant was aware or should have been aware pursuant to the laws and regulations provision of this Agreement above. Such Additional Services may include, but shall not be limited to:

(a) Separately Bid Portions of Project. Plan preparation and/or administration of work on portions of the Project separately bid.

(b) Furniture and Interior Design. Assistance to City, if requested, for the selection of moveable furniture, equipment or articles which are not included in the Construction Documents.

(c) Fault of Contractor. Services caused by delinquency, default or insolvency of contractor, or by major defects in the work of the contractor, provided that any such services made necessary by the failure of Consultant to detect and report such matters when it reasonably should have done so shall not be compensated.

(d) Inconsistent Approvals or Instructions. Revisions in drawings, specifications or other documents when such revisions are inconsistent with written approvals or instructions previously given and are due to causes beyond the control of Consultant.

(e) Legal Proceedings. Serving as an expert witness on City's behalf or attending legal proceedings to which the Consultant is not a party.

(f) Damage Repair. Supervision of repair of damages to any structure.

(g) Extra Environmental Services. Additional work required for environmental conditions (e.g. asbestos or site conditions) not already contemplated within the Consultant's services for the Project.

3.9 City Responsibilities. City's responsibilities shall include the following:

3.9.1 Data and Information. City shall make available to Consultant all necessary data and information concerning the purpose and requirements of the Project, including scheduling and budget limitations, objectives, constraints and criteria. As part of the budget

limitation information, the City shall provide the Consultant with a preliminary construction budget ("City's Preliminary Construction Budget").

3.9.2 Project Survey. If required pursuant to the scope of the Project and if requested by Consultant, City shall furnish Consultant with, or direct Consultant to procure at City's expense, a survey of the Project site prepared by a registered surveyor or civil engineer, any other record documents which shall indicate existing structures, land features, improvements, sewer, water, gas, electrical and utility lines, topographical information and boundary dimensions of the site, and any other such pertinent information.

3.9.3 Bid Phase. Distribute Construction Documents to bidders and conduct the opening and review of bids for the Project.

3.9.4 Testing. Retain consultant(s) to conduct chemical, mechanical, soils, geological or other tests required for proper design of the Project, and furnish such surveys, borings, test pits, and other tests as may be necessary to reveal conditions of the site which must be known to determine soil condition or to ensure the proper development of the required drawings and specifications.

3.9.5 Required Inspections and Tests. Retain consultant(s) to conduct materials testing and inspection or environmental/hazardous materials testing and inspection pursuant to any applicable laws, rules or regulations.

3.9.6 Fees of Reviewing or Licensing Agencies. Directly pay or reimburse the payment of all fees required by any reviewing or licensing agency, or other agency having approval jurisdiction over the Project.

3.9.7 City's Representative. The City hereby designates the City Manager, or his or her designee, to act as its representative for the performance of this Agreement ("City's Representative"). City's Representative shall have the power to act on behalf of the City for all purposes under this Contract. The City Manager hereby designates **Dennis Mejia, PE, Utilities Engineering Division Manager**, or his or her designee, as the City's contact for the implementation of the Services hereunder. Contractor shall not accept direction or orders from any person other than the City's Representative or his or her designee.

3.9.8 Review and Approved Documents. Review all documents submitted by Consultant, including change orders and other matters requiring approval by the City Council or other officials. City shall advise Consultant of decisions pertaining to such documents within a reasonable time after submission, so as not to cause unreasonable delay as provided in the excusable delay provisions of this Agreement above.

3.10 Compensation.

3.10.1 Consultant's Compensation for Basic Services. City shall pay to Consultant, for the performance of all Services rendered under this Agreement, the total not to exceed amount of **Six Hundred Thousand Dollars ($600,000)** ("Total Compensation"). This Total Compensation amount shall be based upon, and may be adjusted according to, the fee schedule and related terms and conditions attached hereto as Exhibit "B" and incorporated herein by reference. The Total Compensation, as may be adjusted upon mutual agreement, shall constitute complete and adequate payment for Services under this Agreement.

3.10.2 Payment for Additional Services. At any time during the term of this Agreement, City may request that Consultant perform Additional Services. As used herein, Additional Services means any work which is determined by City to be necessary for the proper completion of the Project, but which the Parties did not reasonably anticipate would be necessary at the execution of this Agreement. Any additional work in excess of this amount must be approved by the City. If authorized, such Additional Services will be compensated at the rates and in the manner set forth in Exhibit "C" attached hereto and incorporated herein by reference, unless a flat rate or some other form of compensation is mutually agreed upon by the Parties. If City requires Consultant to hire consultants to perform any Additional Services, Consultant shall be compensated therefore at the rates and in the manner set forth in Exhibit "C" attached hereto and incorporated herein by reference, unless a flat rate or some other form of compensation is mutually agreed upon by the Parties. City shall have the authority to review and approve the rates of any such consultants. In addition, Consultant shall be reimbursed for any expenses incurred by such consultants pursuant to the terms and conditions of Section 3.10.3.

3.10.3 Reimbursable Expenses. Reimbursable expenses are in addition to compensation for the Services and Additional Services. Consultant shall not be reimbursed for any expenses unless authorized in writing by City, which approval may be evidenced by inclusion in Exhibit "C" attached hereto. Such reimbursable expenses shall include only those expenses which are reasonably and necessarily incurred by Consultant in the interest of the Project. Consultant shall be required to acquire prior written consent in order to obtain reimbursement for the following: (1) extraordinary transportation expenses incurred in connection with the Project; (2) out-of-town travel expenses incurred in connection with the Project; (3) fees paid for securing approval of authorities having jurisdiction over the Project; (4) bid document duplication costs in excess of $1,000; and (5) other costs, fees and expenses in excess of $1,000.

3.10.4 Payment to Consultant. Consultant's compensation and reimbursable expenses shall be paid by City to Consultant no more often than monthly. Such periodic payments shall be made based upon the percentage of work completed, and in accordance with the phasing and funding schedule provided in Exhibit "B" and the compensation rates indicated in Exhibit "C" attached hereto and incorporated herein by reference. In order to receive payment, Consultant shall present to City an itemized statement which indicates Services performed, percentage of Services completed, method for computing the amount payable, and the amount to be paid. The statement shall describe the amount of Services provided since the initial commencement date, or since the start of the subsequent billing periods, as appropriate, through the date of the statement, as well as those expenses for which reimbursement is requested for that statement period. The amount paid to Consultant shall never exceed the percentage amounts authorized by the phasing and funding schedule located in Exhibit "B" attached hereto. City shall, within thirty (30) days of receiving such statement, review the statement and pay all approved charges thereon pursuant to the provisions of Civil Code Section 3320. Disputed amounts shall be resolved by the Parties in a mutually agreeable manner.

Payments made for Additional Services shall be made in installments, not more often than monthly, proportionate to the degree of completion of such services or in such other manner as the Parties shall specify when such services are agreed upon, and in accordance with any authorized fee or rate schedule. In order to receive payment, Consultant shall present to City an itemized statement which indicates the Additional Services performed, percentage of Additional Services completed, method for computing the amount payable, and the amount to be paid. The statement shall describe the amount of Additional Services provided since the initial commencement date, or since the start of the subsequent billing periods, as appropriate, through the date of the statement. City shall, within thirty (30) days of receiving such statement, review

the statement and pay all approved charges thereon pursuant to the provisions of Civil Code Section 3320. Disputed amounts shall be resolved by the Parties in a mutually agreeable manner.

Upon cancellation or termination of this Agreement, Consultant shall be compensated as set forth in the termination provision herein.

3.10.5 Withholding Payment to Consultant. The City may withhold payment, in whole or in part, to the extent reasonably necessary to protect the City from claims, demands, causes of action, costs, expenses, liabilities, losses, damages, or injuries of any kind to the extent arising out of or caused by the negligence, recklessness, or willful misconduct protected under the indemnification provisions of this Agreement. Failure by City to deduct any sums from a progress payment shall not constitute a waiver of the City's right to such sums. The City may keep any moneys which would otherwise be payable at any time hereunder and apply the same, or so much as may be necessary therefor, to the payment of any expenses, losses, or damages as determined by the City, incurred by the City for which Consultant is liable under the Agreement or state law. Payments to the Consultant for compensation and reimbursable expenses due shall not be contingent on the construction, completion or ultimate success of the Project. Payment to the Consultant shall not be withheld, postponed, or made contingent upon receipt by the City of offsetting reimbursement or credit from Parties not within the Consultant's reasonable control.

3.10.6 Prevailing Wages. Consultant is aware of the requirements of California Labor Code Sections 1720, et seq., and 1770, et seq., as well as California Code of Regulations, Title 8, Section 16000, et seq., ("Prevailing Wage Laws"), which require the payment of prevailing wage rates and the performance of other requirements on certain "public works" and "maintenance" projects. Since the Services are being performed as part of an applicable "public works" or "maintenance" project, as defined by the Prevailing Wage Laws, and since the total compensation is $1,000 or more, Consultant agrees to fully comply with and to require its consultants to fully comply with such Prevailing Wage Laws. City shall provide Consultant with a copy of the prevailing rates of per diem wages in effect at the commencement of this Agreement. Consultant shall make copies of the prevailing rates of per diem wages for each craft, classification or type of worker needed to execute the Services available to interested parties upon request, and shall post copies at the Consultant's principal place of business and at the Project site. It shall be mandatory upon the Consultant and all subconsultants to comply with all California Labor Code provisions, which include but are not limited to prevailing wages (Labor Code Sections 1771, 1774 and 1775), employment of apprentices (Labor Code Section 1777.5), certified payroll records (Labor Code Sections 1771.4 and 1776), hours of labor (Labor Code Sections 1813 and 1815) and debarment of contractors and subcontractors (Labor Code Section 1777.1). The requirement to submit certified payroll records directly to the Labor Commissioner under Labor Code section 1771.4 shall not apply to work performed on a public works project that is exempt pursuant to the small project exemption specified in Labor Code Section 1771.4. Consultant shall defend, indemnify and hold the City, its elected officials, officers, employees and agents free and harmless from any claims, liabilities, costs, penalties or interest arising out of any failure or alleged failure of the Consultant or its consultants to comply with the Prevailing Wage Laws.

(a) Registration/DIR Compliance. If the Services are being performed as part of an applicable "public works project" of over $25,000 when the project is for construction, alteration, demolition, installation, or repair work, or a public works project of over $15,000 when the project is for maintenance work, in addition to the foregoing, then pursuant to Labor Code sections 1725.5 and 1771.1, the Consultant and all subconsultants performing such Services must be registered with the Department of Industrial Relations ("DIR"). Consultant shall maintain

registration for the duration of the Project and require the same of any subconsultants. This project may also be subject to compliance monitoring and enforcement by the DIR. It shall be Consultant's sole responsibility to comply with all applicable registration and labor compliance requirements, including the submission of payroll records directly to the DIR. Any stop orders issued by the Department of Industrial Relations against Consultant or any subconsultant that affect Consultant's performance of services, including any delay, shall be Consultant's sole responsibility. Any delay arising out of or resulting from such stop orders shall be considered Consultant caused delay and shall not be compensable by the City. Consultant shall defend, indemnify and hold the City, its officials, officers, employees and agents free and harmless from any claim or liability arising out of stop orders issued by the Department of Industrial Relations against Consultant or any subconsultant.

3.11 Notice to Proceed.

Consultant shall not proceed with performance of any Services under this Agreement unless and until the City provides a written notice to proceed.

3.12 Termination, Suspension and Abandonment.

3.12.1 Grounds for Termination; Consultant's Termination for Cause. City hereby reserves the right to suspend or abandon, at any time and for any reason, all or any portion of the Project and the construction work thereon, or to terminate this Agreement at any time with or without cause. Consultant shall be provided with at least seven (7) days advanced written notice of such suspension, abandonment or termination. In the event of such suspension, abandonment or termination, Consultant shall be paid for Services and reimbursable expenses rendered up to the date of such suspension, abandonment or termination, pursuant to the schedule of payments provided for in this Agreement, less any claims against or damages suffered by City as a result of the default, if any, by Consultant. Consultant hereby expressly waives any and all claims for damages or compensation arising under this Agreement, except as set forth herein, in the event of such suspension, abandonment or termination. Consultant may terminate this Agreement for substantial breach of performance by the City such as failure to make payment to Consultant as provided in this Agreement.

3.12.2 City's Suspension of Work. If Consultant's Services are suspended by City, City may require Consultant to resume such Services within ninety (90) days after written notice from City. When the Project is resumed, the Total Compensation and schedule of Services shall be equitably adjusted upon mutual agreement of the City and Consultant.

3.12.3 Documents and Other Data. Upon suspension, abandonment or termination, Consultant shall provide to City all preliminary studies, sketches, working drawings, specifications, computations, and all other Project Documents, as defined below, to which City would have been entitled at the completion of Consultant's Services under this Agreement. Upon payment of the amount required to be paid to Consultant pursuant to the termination provisions of this Agreement, City shall have the rights, as provided in this Agreement hereinafter, to use such Project Documents prepared by or on behalf of Consultant under this Agreement. Consultant shall make such documents available to City upon request and without additional compensation other than as may be approved as a reimbursable expense.

3.12.4 Employment of other Consultants. In the event this Agreement is terminated in whole or in part as provided herein, City may procure, upon such terms and in such manner as it may determine appropriate, services similar to those terminated.

3.13 Ownership and Use of Documents; Confidentiality.

3.13.1 Ownership. All plans, specifications, original or reproducible transparencies of working drawings and master plans, preliminary sketches, architectural presentation drawings, structural computations, estimates and any other documents prepared pursuant to this Agreement, including, but not limited to, any other works of authorship fixed in any tangible medium of expression such as writings, physical drawings and data magnetically or otherwise recorded on computer diskettes (hereinafter referred to as the "Project Documents") shall be and remain the property of City. Although the official copyright in all Project Documents shall remain with the Consultant or other applicable subcontractors or consultants, the Project Documents shall be the property of City whether or not the work for which they were made is executed or completed. Within thirty (30) calendar days following completion of the Project, Consultant shall provide to City copies of all Project Documents required by City. In addition, Consultant shall retain copies of all Project Documents on file for a minimum of fifteen (15) years following completion of the Project, and shall make copies available to City upon the payment of reasonable duplication costs. Before destroying the Project Documents following this retention period, Consultant shall make a reasonable effort to notify City and provide City with the opportunity to obtain the documents.

3.13.2 Right to Use. Consultant grants to City the right to use and reuse all or part of the Project Documents, at City's sole discretion and with no additional compensation to Consultant, for the following purposes:

(a) The construction of all or part of this Project.

(b) The repair, renovation, modernization, replacement, reconstruction or expansion of this Project at any time;

(c) The construction of another project by or on behalf of the City for its ownership and use;

City is not bound by this Agreement to employ the services of Consultant in the event such documents are used or reused for these purposes. City shall be able to use or reuse the Project Documents for these purposes without risk of liability to the Consultant or third parties with respect to the condition of the Project Documents, and the use or reuse of the Project Documents for these purposes shall not be construed or interpreted to waive or limit City's right to recover for latent defects or for errors or omissions of the Consultant.

Any use or reuse by City of the Project Documents on any project other than this Project without employing the services of Consultant shall be at City's own risk with respect to third parties. If City uses or reuses the Project Documents on any project other than this Project, it shall remove the Consultant's seal from the Project Documents and hold harmless Consultant and its officers, directors, agents and employees from claims arising out of the negligent use or re-use of the Project Documents on such other project.

3.13.3 License. This Agreement creates a non-exclusive and perpetual license for City to copy, use, modify or reuse any and all Project Documents and any intellectual property rights therein. Consultant shall require any and all subcontractors and consultants to agree in writing that City is granted a non-exclusive and perpetual license for the work of such subcontractors or consultants performed pursuant to this Agreement.

3.13.4 Right to License. Consultant represents and warrants that Consultant has the legal right to license any and all copyrights, designs and other intellectual property embodied in the Project Documents that Consultant prepares or causes to be prepared pursuant to this Agreement. Consultant shall indemnify and hold City harmless pursuant to the indemnification provisions of this Agreement for any breach of this Section. Consultant makes no such representation and warranty in regard to previously prepared designs, plans, specifications, studies, drawings, estimates or other documents that were prepared by design professionals other than Consultant and provided to Consultant by City.

3.13.5 Confidentiality. All Project Documents, either created by or provided to Consultant in connection with the performance of this Agreement, shall be held confidential by Consultant to the extent they are not subject to disclosure pursuant to the Public Records Act. All Project Documents shall not, without the written consent of City, be used or reproduced by Consultant for any purposes other than the performance of the Services. Consultant shall not disclose, cause or facilitate the disclosure of the Project Documents to any person or entity not connected with the performance of the Services or the Project. Nothing furnished to Consultant which is otherwise known to Consultant or is generally known, or has become known, to the related industry shall be deemed confidential. Consultant shall not use City's name or insignia, photographs of the Project, or any publicity pertaining to the Services or the Project in any magazine, trade paper, newspaper, television or radio production or other similar medium without the written consent of City.

3.14 Indemnification.

3.14.1 To the fullest extent permitted by law, Consultant shall defend (with counsel of City's choosing), indemnify and hold the City, its officials, officers, employees, volunteers, and agents free and harmless from any and all claims, demands, causes of action, costs, expenses, liability, loss, damage or injury of any kind, in law or equity, to property or persons, including wrongful death, in any manner arising out of, pertaining to, or incident to any acts, errors or omissions, or willful misconduct of Consultant, its officials, officers, employees, subcontractors, consultants or agents in connection with the performance of the Consultant's Services, the Project or this Agreement, including without limitation the payment of all damages, expert witness fees and attorney's fees and other related costs and expenses except such loss or damage caused by the sole negligence or willful misconduct of the City. Consultant's obligation to indemnify shall survive expiration or termination of this Agreement and shall not be restricted to insurance proceeds, if any, received by Consultant, the City, its officials, officers, employees, agents, or volunteers.

3.14.2 If Consultant's obligation to defend, indemnify, and/or hold harmless arises out of Consultant's performance as a "design professional" (as that term is defined under Civil Code section 2782.8), then, and only to the extent required by Civil Code section 2782.8, which is fully incorporated herein, Consultant's indemnification obligation shall be limited to claims that arise out of, pertain to, or relate to the negligence, recklessness, or willful misconduct of the Consultant, and, upon Consultant obtaining a final adjudication by a court of competent jurisdiction, Consultant's liability for such claim, including the cost to defend, shall not exceed the Consultant's proportionate percentage of fault.

3.15 Insurance. Consultant shall not commence work under this Agreement until it has provided evidence satisfactory to the City that it has secured all insurance required under this Section. In addition, Consultant shall not allow any subconsultant to commence work on any

subcontract until it has provided evidence satisfactory to the City that the subconsultant has secured all insurance required under this section.

3.15.1 Types of Insurance Required. As a condition precedent to the effectiveness of this Agreement for work to be performed hereunder, and without limiting the indemnity provisions of the Agreement, Consultant shall, at its expense, procure and maintain in full force and effect for the duration of the Agreement the following policies of insurance. If the existing policies do not meet the insurance requirements set forth herein, Consultant agrees to amend, supplement or endorse the policies to do so.

3.15.2 Additional Insured. The City of Ontario, its officials, officers, employees, agents, and volunteers shall be named as additional insureds on Consultant's and its subconsultants' policies of commercial general liability and automobile liability insurance using the endorsements and forms specified herein or exact equivalents.

3.15.3 Commercial General Liability

(a) The Consultant shall take out and maintain, during the performance of all work under this Agreement, in amounts not less than specified herein, Commercial General Liability Insurance, in a form and with insurance companies acceptable to the City.

(b) Coverage for Commercial General Liability insurance shall be at least as broad as the following: Insurance Services Office Commercial General Liability coverage (Occurrence Form CG 00 01) or exact equivalent. Commercial General Liability Insurance must include coverage for the following:

(i) Bodily Injury and Property Damage

(ii) Personal Injury/Advertising Injury

(iii) Premises/Operations Liability

(iv) Products/Completed Operations Liability

(v) Aggregate Limits that Apply per Project

(vi) Explosion, Collapse and Underground (UCX) exclusion deleted

(vii) Contractual Liability with respect to this Contract

(viii) Broad Form Property Damage

(ix) Independent Consultants Coverage

(c) The policy shall contain no endorsements or provisions limiting coverage for (1) contractual liability; (2) cross liability exclusion for claims or suits by one insured against another; (3) products/completed operations liability; or (4) contain any other exclusion contrary to the Agreement.

(d) The policy shall give City, the City Council and each member of the City Council, its officers, employees, agents and City designated volunteers additional insured status using ISO endorsement forms CG 20 10 10 01 and 20 37 10 01, or endorsements providing the exact same coverage.

(e) The general liability program may utilize either deductibles or provide coverage excess of a self-insured retention, subject to written approval by the City, and provided that such deductibles shall not apply to the City as an additional insured.

3.15.4 Automobile Liability

(a) At all times during the performance of the work under this Agreement, the Consultant shall maintain Automobile Liability Insurance for bodily injury and property damage including coverage for owned, non-owned and hired vehicles, in a form and with insurance companies acceptable to the City.

(b) Coverage for automobile liability insurance shall be at least as broad as Insurance Services Office Form Number CA 00 01 covering automobile liability (Coverage Symbol 1, any auto).

(c) The policy shall give City, the City Council and each member of the City Council, its officers, employees, agents and City designated volunteers additional insured status.

(d) Subject to written approval by the City, the automobile liability program may utilize deductibles, provided that such deductibles shall not apply to the City as an additional insured, but not a self-insured retention.

3.15.5 Workers' Compensation/Employer's Liability

(a) Consultant certifies that he/she is aware of the provisions of Section 3700 of the California Labor Code which requires every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that code, and he/she will comply with such provisions before commencing work under this Agreement.

(b) To the extent Consultant has employees at any time during the term of this Agreement, at all times during the performance of the work under this Agreement, the Consultant shall maintain full compensation insurance for all persons employed directly by him/her to carry out the work contemplated under this Agreement, all in accordance with the "Workers' Compensation and Insurance Act," Division IV of the Labor Code of the State of California and any acts amendatory thereof, and Employer's Liability Coverage in amounts indicated herein. Consultant shall require all subconsultants to obtain and maintain, for the period required by this Agreement, workers' compensation coverage of the same type and limits as specified in this Section.

3.15.6 Professional Liability (Errors and Omissions)

(a) At all times during the performance of the work under this Agreement the Consultant shall maintain professional liability or Errors and Omissions insurance appropriate to its profession, in a form and with insurance companies acceptable to the City and

in an amount indicated herein. This insurance shall be written on a policy form coverage specifically designed to protect against acts, errors or omissions of the Consultant. "Covered Professional Services" as designated in the policy must specifically include work performed under this Agreement. The policy must "pay on behalf of" the insured and must include a provision establishing the insurer's duty to defend.

3.15.7 Minimum Policy Limits Required

(a) The following insurance limits are required for the Agreement:

Coverage	Combined Single Limit
Commercial General Liability	$2,000,000 per occurrence/ $4,000,000 aggregate for bodily injury, personal injury, and property damage
Automobile Liability	$2,000,000 per occurrence for bodily injury and property damage
Employer's Liability	$1,000,000 per occurrence
Professional Liability	$2,000,000 per claim and aggregate (errors and omissions)

(b) Defense costs shall be payable in addition to the limits.

(c) Requirements of specific coverage or limits contained in this Section are not intended as a limitation on coverage, limits, or other requirement, or a waiver of any coverage normally provided by any insurance. Any available coverage shall be provided to the parties required to be named as Additional Insured pursuant to this Agreement.

3.15.8 Evidence Required

(a) Prior to execution of the Agreement, the Consultant shall file with the City evidence of insurance from an insurer or insurers certifying to the coverage of all insurance required herein. Such evidence shall include original copies of the ISO CG 00 01 (or insurer's equivalent) signed by the insurer's representative and Certificate of Insurance (Acord Form 25-S or equivalent), together with required endorsements. All evidence of insurance shall be signed by a properly authorized officer, agent, or qualified representative of the insurer and shall certify the names of the insured, any additional insureds, where appropriate, the type and amount of the insurance, the location and operations to which the insurance applies, and the expiration date of such insurance.

3.15.9 Policy Provisions Required

(a) Consultant shall provide the City at least thirty (30) days prior written notice of cancellation of any policy required by this Agreement, except that the Consultant shall provide at least ten (10) days prior written notice of cancellation of any such policy due to non-payment of premium. If any of the required coverage is cancelled or expires during the term of this Agreement, the Consultant shall deliver renewal certificate(s) including the General Liability Additional Insured Endorsement to the City at least ten (10) days prior to the effective date of cancellation or expiration.

(b) The Commercial General Liability Policy and Automobile Policy shall each contain a provision stating that Consultant's policy is primary insurance and that any insurance, deductible, or self-insurance maintained by the City, its officials, officers, employees, agents, or volunteers shall not contribute with this primary insurance. Policies shall contain or be endorsed to contain such provisions.

(c) The retroactive date (if any) of each policy is to be no later than the effective date of this Agreement. Consultant shall maintain such coverage continuously for a period of at least three years after the completion of the work under this Agreement. Consultant shall purchase a one (1) year extended reporting period A) if the retroactive date is advanced past the effective date of this Agreement; B) if the policy is cancelled or not renewed; or C) if the policy is replaced by another claims-made policy with a retroactive date subsequent to the effective date of this Agreement.

(d) All required insurance coverages, except for the professional liability coverage, shall contain or be endorsed to waiver of subrogation in favor of the City, its officials, officers, employees, agents, and volunteers or shall specifically allow Consultant or others providing insurance evidence in compliance with these specifications to waive their right of recovery prior to a loss. Consultant hereby waives its own right of recovery against City, and shall require similar written express waivers and insurance clauses from each of its subconsultants.

(e) The limits set forth herein shall apply separately to each insured against whom claims are made or suits are brought, except with respect to the limits of liability. Further the limits set forth herein shall not be construed to relieve the Consultant from liability in excess of such coverage, nor shall it limit the Consultant's indemnification obligations to the City and shall not preclude the City from taking such other actions available to the City under other provisions of the Agreement or law.

3.15.10 Qualifying Insurers

(a) All policies required shall be issued by acceptable insurance companies, as determined by the City, which satisfy the following minimum requirements: Each such policy shall be from a company or companies with a current A.M. Best's rating of no less than A:VII and admitted to transact in the business of insurance in the State of California, or otherwise allowed to place insurance through surplus line brokers under applicable provisions of the California Insurance Code or any federal law.

3.15.11 Additional Insurance Provisions

(a) The foregoing requirements as to the types and limits of insurance coverage to be maintained by Consultant, and any approval of said insurance by the City, is not intended to and shall not in any manner limit or qualify the liabilities and obligations otherwise assumed by the Consultant pursuant to this Agreement, including but not limited to, the provisions concerning indemnification.

(b) If at any time during the life of the Agreement, any policy of insurance required under this Agreement does not comply with these specifications or is canceled and not replaced, City has the right but not the duty to obtain the insurance it deems necessary and any premium paid by City will be promptly reimbursed by Consultant or City will withhold

amounts sufficient to pay premium from Consultant payments. In the alternative, City may cancel this Agreement.

(c) The City may require the Consultant to provide complete copies of all insurance policies in effect for the duration of the Project.

(d) Neither the City nor the City Council, nor any member of the City Council, nor any of the officials, officers, employees, agents or volunteers shall be personally responsible for any liability arising under or by virtue of this Agreement.

3.15.12 Subconsultant Insurance Requirements

(a) Consultant shall not allow any subcontractors or subconsultants to commence work on any subcontract until they have provided evidence satisfactory to the City that they have secured all insurance required under this Section. Policies of commercial general liability insurance provided by such subcontractors or subconsultants shall be endorsed to name the City as an additional insured using ISO form CG 20 38 04 13 or an endorsement providing the exact same coverage. If requested by Consultant, City may approve different scopes or minimum limits of insurance for particular subcontractors or subconsultants.

3.16 Records.

Consultant shall maintain complete and accurate records with respect to all costs and expenses incurred under this Agreement. All such records shall be clearly identifiable. Consultant shall allow a representative of City during normal business hours to examine, audit, and make transcripts or copies of such records and any other documents created pursuant to this Agreement. Consultant shall allow inspection of all work, data, documents, proceedings, and activities related to the Agreement for a period of five (5) years from the date of final payment under this Agreement.

3.17 Standardized Manufactured Items.

Consultant shall cooperate and consult with City in the use and selection of manufactured items on the Project, including but not limited to, paint, hardware, plumbing, mechanical and electrical equipment, fixtures, roofing materials and floor coverings. All such manufactured items shall be standardized to City's criteria to the extent such criteria do not interfere with building design.

3.18 Limitation of Agreement.

This Agreement is limited to and includes only the work included in the Project described herein. Any additional or subsequent construction at the site of the Project, or at any other City site, will be covered by, and be the subject of, a separate Agreement for **engineering** services between City and the Consultant chosen therefor by City.

3.19 Mediation.

Disputes arising from this Agreement may be submitted to mediation if mutually agreeable to the Parties hereto. The type and process of mediation to be utilized shall be subject to the mutual agreement of the Parties.

3.20 Successors and Assigns.

This Agreement shall be binding upon and shall inure to the benefit of the successors in interest, executors, administrators and assigns of each Party to this Agreement. However, Consultant shall not assign or transfer by operation of law or otherwise any or all of its rights, burdens, duties or obligations without the prior written consent of City. Any attempted assignment without such consent shall be invalid and void.

3.21 Asbestos Certification.

Consultant shall certify to City, in writing and under penalty of perjury, that to the best of its knowledge, information and belief no asbestos-containing material or other material deemed to be hazardous by the state or federal government was specified as a building material in any construction document that the Consultant prepares for the Project. Consultant shall require all consultants who prepare any other documents for the Project to submit the same written certification. Consultant shall also assist the City in ensuring that contractors provide City with certification, in writing and under penalty of perjury, that to the best of their knowledge, information and belief no material furnished, installed or incorporated into the Project contains asbestos or any other material deemed to be hazardous by the state or federal government. These certifications shall be part of the final Project submittal. Consultant shall include statements in its specifications that materials containing asbestos or any other material deemed to be hazardous by the state or federal government are not to be included.

3.22 No Third Party Rights.

This Agreement shall not create any rights in, or inure to the benefits of, any third party except as expressly provided herein.

3.23 Governing Law.

This Agreement shall be construed in accordance with, and governed by, the laws of the State of California. Venue shall be in San Bernardino County.

3.24 Exhibits and Recitals.

All exhibits and recitals contained herein and attached hereto are material parts of this Agreement and are incorporated as if fully set forth.

3.25 Severability.

Should any provision in the Agreement be held by a court of competent jurisdiction to be invalid, void, or unenforceable, the remaining provisions shall continue in full force and effect.

3.26 Non-Waiver.

None of the provisions of this Agreement shall be considered waived by either Party, unless such waiver is specifically specified in writing.

3.27 Safety.

Consultant shall execute and maintain its work so as to avoid injury or damage to any person or property. In carrying out its Services, the Consultant shall at all times be in compliance with all applicable local, state and federal laws, rules and regulations, and shall exercise all necessary precautions for the safety of its employees, consultant and subcontractors appropriate to the nature of the work and the conditions under which the work is to be performed.

3.28 Harassment Policy.

Consultant shall provide a copy of the City's Harassment Policy to each of its employees assigned to perform the tasks under this Agreement. Consultant shall submit to the City's Personnel Manager a statement signed by each of its employees who are assigned to perform the Services under this Agreement certifying receipt of City's Harassment Policy and certifying that they have read the Harassment Policy. A finding by the City that any of Consultant's employees has harassed a City employee shall be grounds for appropriate discipline, up to and including such employee's removal from performance of this Agreement at City's request.

3.29 Delivery of Notices.

All notices permitted or required under this Agreement shall be given to the respective Parties at the following address, or at such other address as the respective Parties may provide in writing for this purpose:

CITY:	CONSULTANT:
City of Ontario	**GHD Inc.**
303 East "B" Street	**320 Goddard Way, Suite 200**
Ontario, CA 91764	**Irvine, CA 92618**
Attn: **Dennis Mejia, PE, Utilities Engineering Division Manager**,	Attn: **Chris Bartleman**

Such notice shall be deemed made when personally delivered or when mailed, forty-eight (48) hours after deposit in the U.S. Mail, first class postage prepaid and addressed to the Party at its applicable address. Actual notice shall be deemed adequate notice on the date actual notice occurred, regardless of the method of service.

3.30 Time of Essence.

Time is of the essence for each and every provision of this Agreement.

3.31 City's Right to Employ Other Consultants.

City reserves right to employ other consultants, including designers, in connection with this Project or other projects.

3.32 Prohibited Interests.

3.32.1 Solicitation. Consultant maintains and warrants that it has not employed nor retained any company or person, other than a bona fide employee working solely for Consultant, to solicit or secure this Agreement. Further, Consultant warrants that it has not paid nor has it agreed to pay any company or person, other than a bona fide employee working solely for Consultant, any fee, commission, percentage, brokerage fee, gift or other consideration contingent upon or resulting from the award or making of this Agreement. For breach or violation of this warranty, City shall have the right to rescind this Agreement without liability.

3.32.2 Conflict of Interest. For the term of this Agreement, no director, official, officer or employee of City, during the term of his or her service with City, shall have any direct interest in this Agreement, or obtain any present or anticipated material benefit arising therefrom.

3.33 Equal Opportunity Employment.

Consultant represents that it is an equal opportunity employer and that it shall not discriminate against any employee or applicant for employment because of race, religion, color, national origin, ancestry, sex, age or any other classification protected by federal or state law. Such non-discrimination shall include, but not be limited to, all activities related to initial employment, upgrading, demotion, transfer, recruitment or recruitment advertising, layoff or termination. Consultant shall also comply with all relevant provisions of City's minority business enterprise program, affirmative action plan or other related programs or guidelines currently in effect or hereinafter enacted.

3.34 Labor Certification.

By its signature hereunder, Consultant certifies that it is aware of the provisions of Section 3700 of the California Labor Code which require every employer to be insured against liability for Worker's Compensation or to undertake self-insurance in accordance with the provisions of that Code, and agrees to comply with such provisions before commencing the performance of the Services.

3.35 Subcontracting.

As specified in this Agreement, Consultant shall not subcontract any portion of the Services required by this Agreement, except as expressly stated herein, without prior written approval of City. Subcontracts, if any, shall contain a provision making them subject to each and every provision of this Agreement.

3.36 Supplemental Conditions.

Any supplemental conditions shall be attached as an exhibit to this Agreement, and that exhibit shall be incorporated herein by reference.

3.37 Entire Agreement.

This Agreement, with its exhibits, contains the entire agreement of the Parties hereto, and supersedes any and all other prior or contemporaneous negotiations, understandings and oral or written agreements between the Parties hereto. Each Party acknowledges that no representations, inducements, promises or agreements have been made by any person which

are not incorporated herein, and that any other agreements shall be void. Furthermore, any modification of this Agreement shall only be effective if in writing signed by all Parties hereto.

EXHIBIT "A"
SCOPE OF SERVICES

EXHIBIT "A"

RFQ PROPOSED SCOPE OF SERVICES

The City of Ontario is seeking Statement of Qualifications from qualified consulting engineers to provide On-Call Services for three (3) years, with an option of renewing for two (2) consecutive one (1) year terms. The City desires to obtain the services of a maximum of six (6) qualified firms to assist with On-Call Design Services. At least ten (10) years of experience providing similar services is required to oversee the work, stamp, and sign all project related documents as required.

Request for Qualifications (RFQ) for various services in various disciplines (e.g. Engineering, Architecture, Construction, Hydraulic Modeling, Fire Flow Modeling, Feasibility Studies, etc.) with the intention of maintaining a list of multiple qualified prime engineering firms, with subconsultant support services as needed. Task orders will be issued to firms on a competitive basis based on the qualifications and expertise of the firm and their subconsultants. There is no designated minimum nor maximum value of services to be awarded to any one consultant.

Each Prospective Consultant needs to be able to provide all the services (or provide sub-consultants that must also be listed as part of their statement of qualifications) listed in this RFQ.

The following scope of services provides general categories of services that may be required for each task order requested. The categories are not an exhaustive list of services but rather a sampling of the services that are typically included, but not limited to, within that area of the scope in order to demonstrate the qualifications needed for that scope of services.

Specific services requested under these agreements shall be identified by the City at the time of the request for a specific task order. For each task order requested by the City, the Consultant shall provide a task order proposal that identifies the specific scope of services to be performed, the necessary project management activities, task budget, and task schedule. Upon City's approval of the proposed task's scope of services, the City will issue a notice to proceed with purchase order requisition for the work. The Consultant is encouraged to provide recommendations with respect to scope and order of completion.

No task order or scope of services shall be performed without first receiving authorization from the City and notice to proceed with the task order.

GENERAL REQUIREMENTS.

Consultant will be expected to work closely with staff for the duration of the assigned projects (i.e. task orders), and attend all meetings and workshops, as necessary. Any adjustments can be verified based on the need of City Project Managers. All field services must include appropriate traffic control.

Some or all of the following General Requirements and Services may be incorporated into specific tasks orders generated from the On-Call contract. The applicable General Requirements shall be based on needs of specific tasks and the City Project Managers:

Refer to Design Services Agreement in Exhibit "B" to review the General Requirements and other conditions.

ON-CALL DESIGN SERVICES

The City of Ontario is seeking Statement of Qualifications from firms for On-Call Design Services:

Consultant shall be aware that certain labor categories above may be subject to prevailing wage rates as identified in the California Labor Code commencing Section 1770 et Seq. Determination of whether or not Prevailing Wages shall apply will be determined when the City's Project Manager identifies the scope of specific task orders. Please refer to Paragraph XI.11 "Prevailing Wage and Contractor Registration" of this RFQ, and Paragraph 3.10.6 "Prevailing Wages" of the Design Services Agreement for further requirements.

Expected services to be provided under this on-call contract will be performed under a task order system, need to be designed following City Guidelines or associated governing agency guidelines, and may include:

Capital Improvement Project Division

- Feasibility Studies
    - Preparing and/or updating Guidance Documents for Utility Feasibility Studies and Technical Reports
- Environmental services for CEQA/NEPA
- Geotechnical Investigations
- Erosion Control and Storm Water Pollution Prevention Plans
- Permitting and Grant writing support
- Surveying and Mapping
    - ALTA Surveys
    - Easements, Right of Way Preparation, and Mapping
    - Topographic Mapping
    - Field Design Surveys
    - Boundary Surveying and Monumentation
    - Benchmarks and centerline tie information
    - Legal Descriptions and Exhibits
    - Construction Staking
    - Conduct Potholing Services
- Construction Documents Development
- Street Improvements and Highway Design Engineering
- Civil, mechanical, electrical, structural, instrumentation design using AutoCAD 2023 or later
    - Transmission, Collection & Distribution Pipelines (water, sewer, recycled water, storm drain, etc.) facilities including water pipelines (transmission and distribution)
    - Groundwater Wells
    - Pump Stations
    - Pressure Reducing Stations
    - Reservoirs
    - Sewer Lift Stations
- Construction Engineering Support Services
    - Provide RFI review and response services
    - Submittal review and response services

- Project coordination services with City hired Construction Manager
- Final inspection and punch list services
- Convert Contractor's redlines to record drawings

Planning and Land Development Division

- Master planning to include infrastructure master plans
  - Hydraulic Modeling
  - Flow Monitoring
  - Demand factor assessment
- Asset management program support
- Risk and Resilience Assessment
- Site Security Assessment
- Emergency Response Plan
- Facilities Condition Assessment
- Updating City Water and Sewer GIS
- Hydrology and Drainage Engineering
  - Hydraulic modeling and GIS support services conforming with San Bernardino County Hydrology Manual
  - Hydrology Studies and hydrologic calculations
  - Hydrogeologic engineering services related to groundwater well rehabilitation and installation
- Hydraulic Modeling and Model Maintenance
  - The potable and recycled water model is in Innovyze InfoWater, the sewer model is in Innovyze InfoSewer, and both are running in the ArcMap 10.7.1 environment.
  - Updating Model Geometries using City Water and Sewer Atlas GIS shapefiles and Water and Sewer Improvement Construction/Record Drawings.
  - Updating Model Demands, Patterns, and Peaking Factors based on development and meter data.
  - Creating and Running New Scenarios.
  - Model Verification and Calibration to assure that the model can run properly.
  - Preparing Utility Hydraulic Analysis Studies and Reviews.
  - Reviewing OMUC Staff or Developer/Engineer modeling work and providing summary validation reports.
  - Peer Review of Utility Hydraulic Analysis Studies and Reviews, and Utility Feasibility and Technical Studies.
  - Fire Flow Analysis

Water Resources and Water Quality Division

- Water Resources Planning and Management Support Services
  - Urban Water Management Plans - Preparation, Updates, and Amendments
  - Water Supply Assessments and Written Verifications
  - Hydrogeological Studies and Geotechnical Engineering
  - Water Use Surveys
  - Wastewater Flow and Strength Studies
  - Water Conservation and Audits
  - Recycled Water Use Studies and compliance with State Water Board and Regional Water Quality Control Board requirements

- Laboratory Testing
- Water and Wastewater Low/High Flow Monitoring (On-site Private & Public)
- Water and Wastewater Quality Sampling (On-site Private & Public)
- Sewer System Management Plan Update
- Sewer System Management Plan Audit

Subject: Qualifications for On-Call Design Services - RFQ No. 1740

Dear Members of the Selection Committee:

As a client-focused organization, we aim to not only meet but exceed Ontario Municipal Utilities Company's (City/OMUC) expectations. We are committed to providing high-quality service, adhering to schedules, and effectively managing costs. Our dedication to maintaining clear communication, quality assurance, and quality control further reflects our emphasis on delivering exceptional results. Furthermore, our ability to collaborate seamlessly with both the City's team and subconsultants ensures a holistic and efficient project approach.

Our commitment to delivering reliable, economical, and high-quality water and wastewater solutions aligns perfectly with the City's goals. With decades of experience in engineering consulting services, we have successfully partnered with numerous water and wastewater agencies to drive impactful projects and operational support. We proudly serve over 35 other agencies in southern California at this time. GHD's experience serving our clients in this on-call capacity has afforded us the ability to focus our services based upon the specific needs of our business partners and our niche services provided by our people.

We will tailor our services to meet the specific needs of the City. We understand the importance of expeditious implementation and a wide array of capital-related improvements, assessments, and investigations. Our team is well-prepared to provide technical engineering and feasibility studies, hydraulic modeling, asset management, regulatory compliance support, and more, as indicated in your outlined scope of work.

The Right Team and Experience. Our team is led by our Contract Manager, Chris Bartleman, PE with full support by a talented team of licensed, accredited, and experienced engineers, planners, and specialists who have directly applicable project experience on hundreds of infrastructure projects throughout California. Our team have worked closely together on numerous projects including pipeline designs, pump station rehabilitations and new construction, condition assessments, master planning efforts, hydraulic modeling, permitting, environmental compliance, design guidelines, construction cost estimates, and constructibility reviews. Our qualified subconsultants, Calvada Surveying, C-Below, Converse Consultants, Harper & Associates, Helix Environmental Planning, and N2W Engineering will provide further depth and experience to our team by supplying additional resources and knowledge to the City.

Contents. We have included all information required in response to this solicitation including executive summary, table of contents, identification of proposer, staffing resources, financial stability, experience and technical competence, method to accomplish the work, hourly rate schedules, insurance, litigation, other information, certification of proposal and appendix of resumes for key staff.

GHD is a global firm with global resources and expertise that will feature a local team committed to successfully achieving the City's goals. We welcome the opportunity to continue supporting the City's utility and infrastructure projects and look forward to hearing from you soon.

Sincerely,
GHD Inc.

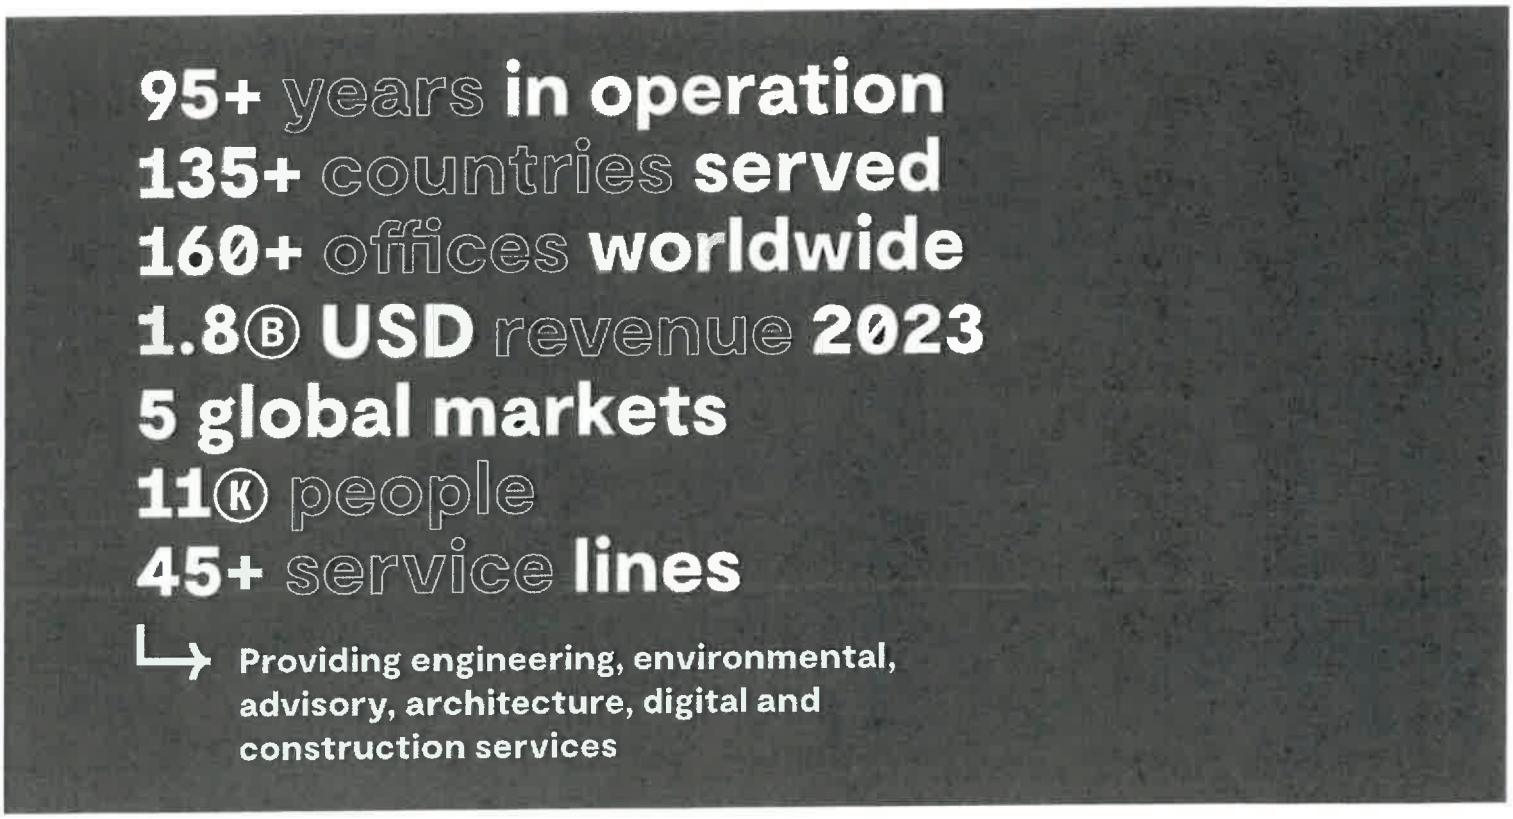
3. Identification of Proposer

→ 3. Identification of Proposer



GHD is a leader in infrastructure engineering with more than 11,000+ talented professionals and 160 offices worldwide. We have been a provider of multi-disciplined engineering services for over 90 years, through an internationally recognized network of water and wastewater, conveyance, pump station, process, mechanical, electrical, and structural engineers and other professionals including asset managers, cost estimators, and plant operators who together provide high quality environmental and infrastructure engineering. Backed by over 4,000 staff in North America, we deliver complex infrastructure projects of all types, excelling in all forms of water and wastewater civil infrastructure, including pipelines and treatment facilities.

GHD has had a local presence in Southern California since 1951 and has a long history of success working collaboratively with municipalities and agencies. GHD's Southern California offices currently include Irvine, Long Beach, San Diego, and Los Angeles. We offer a local presence and a long history of success in the region.

Committed to sustainable development, GHD improves the physical, natural and social environments of the many communities in which we operate. We are guided by our workplace health, safety, quality and environmental management systems, which are certified by Lloyds Register Quality Assurance to the relevant international standards (ISO and OHSAS).

The cornerstone of GHD's business is our client-service culture. Ninety percent (90%) of our clients are municipal agencies or government entities, and approximately 75% percent of our work comes from repeat clients. This track record illustrates our in-depth knowledge of specialized engineering services and speaks to our clients' confidence in our ability to deliver a project from planning and implementation, through to completion. GHD believes in working with our clients to create lasting community benefit.

4. Staffing Resources

→ 4.a Firm Staffing and Key Personnel

Based on our understanding of your project needs, we propose a team structure that spans the anticipated needed services. The organizational chart on the following page details our proposed team, including disciplinary-based roles tailored to your project.

GHD will bring our experience with the City and our broad technical capabilities to this contract, helping us foresee and adapt to challenges to expedite successful projects. The City will benefit from our local knowledge and experience, as well as those lessons learned from past projects. Our water engineering team brings you the depth of resources required for your project's success. GHD's team provides the benefit of quick response time, knowledge of local issues and conditions, and a cohesive design team. The GHD team is highly qualified to respond to the needs of the City quickly and readily for this contract.

GHD is prepared to engage in community meetings, to respond to time-sensitive design changes, and to meet with the City for progress or needed impromptu meetings.

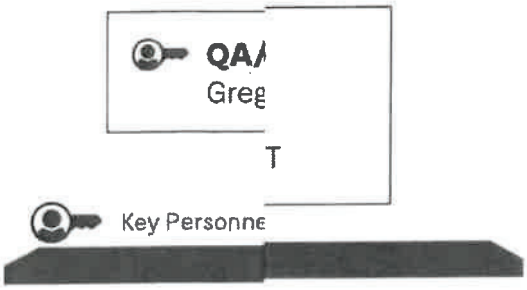
We have worked on many similar on-call services for a number of local agencies, including the City of Ontario, and understand the variety of task order requests. Through our experience, we have gained the knowledge and skills to successfully act on a moment's notice to address agency concerns, provide guidance and expertise in various public works projects, and facilities engineering design services to meet agency's schedule and deadlines. The GHD team has the qualifications, experience, depth and capacity to meet the City's needs.

i. Number of staff to be assigned

GHD is proposing **nine (9) key staff members** to be assigned to the project. In addition, we have included a support team of subject matter experts, both in-house staff and subcontractors, to assist in specific roles identified in Exhibit A of the RFQ. ***Resumes*** *for key project team members are included in* ***Appendix A***.

GHD is also able to draw on additional in-house resources, including 400+ staff in California and 4,000+ staff across North America, to provide specialty needs if required.

ii. Principally Responsible Persons



The City will be working with the following 3 principally responsible persons:

Chris Bartleman, PE, will be the **Contract Manager** and main point of contact. **Abhay Hanamsagar, PMP and Azad Kavoosi, PE, PEng, PMP** will both be **Project Managers** on the contract.

iv. Brief Biographies of Individual Staff working directly with the City

Chris Bartleman, PE | Contract Manager
BS, Civil Engineering • Civil Engineer, CA #81075

Chris Bartleman, PE, will perform contract management services and serve as the primary point of contact. In addition to being local to the Inland Empire, Chris knows the City of Ontario's requirements, standards, and construction procedures from his previous experience working on the Capital Improvement Program (CIP). Further, he is knowledgeable on the City's design guidelines, engineering, and construction personnel, which means there is no learning curve and an intrinsic understanding of the OMUC's operational preferences. His most recent work with the City includes the Well 50 Ion Exchange Treatment Facility and Wells 37 and 39 Engineering Services During Construction. In addition, Chris' experience includes inspection, construction administration, shop drawing review, and change order negotiations. His experience will be especially beneficial for this contract as he can readily anticipate potential risks during the proposal phase and provide the City options to address them. Chris has excellent communication skills and will communicate proactively with the City.

Greg Watanabe, PE, PACP, MACP | QA/QC Manager
BS, Civil Engineering (Emphasis: Environmental Engineering) • Civil Engineer, CA #67618, HI #11801, OR #97301, ID #20082, GU #1861 • Pipeline Assessment and Certification Program (PACP), NASSCO • Manhole Assessment and Certification Program (MACP)

As Quality Manager, Greg Watanabe will lead the technical review team and oversee the QA/QC of the detailed design deliverables. Greg has over 25 years of experience in design, project management and CIP management. His emphasis has been in the oversight, QA/QC, planning, development and design of domestic water, recycled water and wastewater facilities including pumping stations; master plans; hydraulic system modeling; and over 100 miles of pipelines up to 96 inches in diameter for public utility systems. He also has relevant municipal experience in CIP planning, development and management and working with private land developers while serving as District Engineer for a Southern California municipality. Greg has also managed the design and construction of award-winning projects recognized by the American Society of Civil Engineer (ASCE) and the American Public Works Association. He has also been published by ASCE, American Water Works Association (AWWA), and the North American Society for Trenchless Technology (NASTT). Noteworthy projects include the design of a gravity sewer beneath the 100-year-old Santa Monica Pier where the pipeline was suspended over the Pacific Ocean, a booster station within the coastal zone in the City of Malibu with a 450 psi working discharge pressure, and a 96-inch water transmission main for the San Bernardino Valley Municipal Water District. He currently serves as a Director for the Western Chapter of NASTT.

Abhay Hanamsagar, PMP | Project Manager
MS, Business Administration • BS, Chemical Engineering • Project Management Professional, Project Management Institute

Abhay Hanamsagar, BS (Chem Eng.), PMP: has over 31 years of experience in developing and executing projects in the Water industry, both in the manufacturing sector and as a consultant. He has a strong background in membrane filtration, Ion Exchange and includes process design, project engineering and project management, supply chain, and Program Management. He is knowledgeable about various water technology platforms, such as on-site hypo generation, arsenic contaminant removal by adsorption, and demineralization plants. He has also performed on-site system start-up and troubleshooting services in a variety of applications. Some of the projects he has worked on include OMUC Well 37/39, Santa Monica RO Upgrade and Yuma Marine base WT Plant Upgrades.

Azad Kavoosi, PE, PEng, PMP | Project Manager
MS, Chemical Engineering + Civil Engineering/Environmental • BS, Civil Engineering • Civil Engineer, NV #031903 • Professional Engineer, ON #100198409, MB #46817 • Project Management Professional, Project Management Institute

Azad has 16+ years of experience in multidisciplinary consulting and Original Equipment Manufacturer (OEM) companies as a project manager and process designer in the design, modeling, planning, and construction of wastewater/water treatment plants for municipal and industrial clients. He has solid experience in biological modeling of various industrial and municipal wastewater treatment and bio-solid facility process.

Ulysses Fandino, PE, PACP | Project Manager
MS, Civil Engineering • BS, Civil Engineering • Civil Engineer, CA #64558; • Pipeline Assessment and Certification Program (PACP), NASSCO

Ulysses has over 20 years of total experience as project manager and project engineer in planning, design, and construction of transmission, distribution and collection system pipeline projects. His expertise also includes master planning and condition assessment of pipelines, trenchless pipeline design via bore-and-jack and pilot-tube microtunneling, pump station rehabilitation, potholing utilities, and permitting. He is well-versed in preparing hydraulic analyses ranging from small feasibility studies to large utility master plan documents complete with capital improvement and financial implementation plans.

Timothy Joyce, PE, PACP, MACP, LACP | Project Manager
BS, Civil Engineering • Civil Engineer, CA #51596 • Pipeline, Manhole, and Lateral Assessment and Certifications (PACP, MACP, LACP), # U-1219-70307666, NASSCO

Tim has more than 30 years of experience in the planning, conceptual design, detailed design, and construction management of pipelines, pump stations, diversions, and other miscellaneous civil infrastructure projects throughout Southern California. He has a proven ability to communicate well with clients, ensuring project goals are met. He is then able to act on client information and lead design teams to prepare cost effective solutions that provide both maintainability and a long service life.

Coenraad Pretorius, PE | Technical Advisor
BS, Chemical Engineering • BS, Microbiology • BS, Genetics and Biochemistry • Civil Engineer, CA #63203

Coenraad is GHD's service line leader for wastewater treatment and recycling in North America. He has 29 years of experience in process design for water and wastewater treatment. His experience includes biological nutrient removal, secondary treatment design, capacity rating, process modeling and oxygen transfer, as well as grit removal. Recently he has focused on process control and energy saving strategies, including optimization of mixing and aeration in aeration basins, as well as mixing in anaerobic digesters. In South Africa, Coenraad also worked on low maintenance systems (including pond systems), industrial effluent treatment, acid mine drainage, and treatment of potable water.

Hector Ruiz, PE | Technical Advisor
MS, Civil and Environmental Engineering • BS, Civil Engineering • Civil Engineer, CA #55245

Hector has 34+ years of experience in utility management and engineering, including planning, design, construction, and operation of improvements and upgrades to water/wastewater/stormwater systems. His experience with utility management includes working side-by-side with engineering, planning, legal counsel, finance, maintenance, and operations personnel on business workflows, processes, implementing Computerized Maintenance Management Systems (CMMS), developing condition assessment protocols and asset management plans, conducting business case evaluations, and developing short-term and long-term investment profiles.

Bill Roberts, PE, BCEE, LSIT | Technical Advisor
BS, Civil Engineering + Civil Engineering/Environmental • Graduate, Leadership in Engineering Administration Program (LEAP), American Council of Engineering Companies • Civil Engineer, AZ #35921, CA #77103, TX #105527, NM #19801, CO #00486 • Board Certified Environmental Engineer, American Academy of Environmental Engineers & Scientists • Land Surveyor-in-Training, AZ #08653

Bill offers 26+ years of planning, designing, and constructing water and wastewater improvements for municipalities and utilities. He has served as a project manager on more than 80 water and wastewater projects for Arizona municipalities since 2001. Bill's project experience includes water models, sewer models, waterlines, sewer lines, water facility upgrades and modifications, pressure reducing valves , lift station design and upgrades, and large diameter meter replacements.

→ 4.b Subcontractors

GHD has invited the following subcontractors to work with us on this contract. We have worked with these consultants successfully in the past. GHD actively engages small consulting firms to enhance our projects and achieve specific goals. By collaborating with these firms, we gain access to a diverse range of skills and perspectives that complement our internal capabilities. These firms offer tailored solutions and a high level of engagement. They bring a fresh set of eyes, industry insights, and a wealth of experience, enabling us to address complex challenges. This partnership allows us to tap into the innovation and specialized expertise of these firms to optimize your projects and drive meaningful results.

Surveying

Calvada Surveying is a local land surveying business, providing professional land surveying services, aerial photogrammetry, all mapping projects, high definition laser scanning, 3D REVIT/CAD modeling, and CAD drafting. They have performed numerous land surveys within the Southern California region for the past 32 years.

Potholing

C Below provides professional locating and mapping services throughout southern California. They locate horizontal and vertical areas of underground utilities including water, gas power, waste, communications, and cable/TV. C Below has extensive experience with the City of Ontario over the past 13 years.

Geotechnical Engineering

Converse Consultants provides geotechnical engineering and geological services. Representative experience includes OMUC's Wells 37 & 39 Treatment Facility, and various well, water pipeline, sewer pipeline, street improvement, parks/sport complex, essential building and other project types for the City of Ontario over the past two decades.

Process Mechanical

N2W Engineering (N2W) is a full-service environmental engineering consultant and contractor. Services include preliminary design and cost estimating; detailed design, specification and engineer's estimate; startup and O&M manual; procurement support; and performance evaluation & optimization.

Environmental Planning

Helix is a full-service environmental planning firm with 28 years of experience providing high-quality environmental compliance services throughout California. Helix has provided environmental services on over 200 water and sewer infrastructure and management projects (e.g., treatment plants, water storage/reservoirs, pump stations, pipelines, groundwater extraction/replenishment, etc).

Tank/Reservoir Rehabilitation

Harper & Associates Engineering (HAE) is a corrosion and reservoir structural consulting engineering firm, operating since 1979. HAE specializes in reservoir corrosion, structural, seismic and cathodic protection engineering services specifically for reservoir rehabilitation projects.

5. Fiscal Stability

→ 5. Fiscal Stability

GHD has provided evidence of the following in ***Appendix B***. We respectfully request that this information remain confidential.

(i) A current report from any commercial credit rating service such as Dunn and Bradstreet or Experian; or

(ii) A letter from a financial institution stating a current line of credit; and

(iii) Latest audited financial statement and/or annual report that has been certified by a CPA.

6. Experience and Technical Competence

→ 6.a Experience and Technical Competence

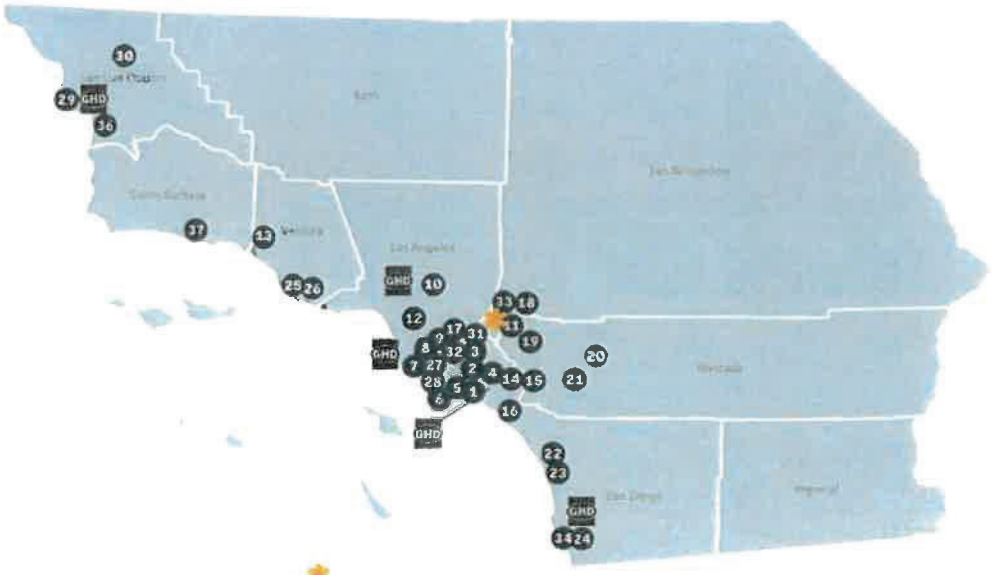
i. Meeting the Goals of the RFQ

GHD has established a knowledge base from previous projects that have been delivered throughout our years of service. Our experience with local projects of similar size and complexity has led us to develop strategies for cost effective designs. We will keep you apprised of the project status during all phases. We are familiar with the project's goals, challenges, and opportunities, and can efficiently start project work on day one.

We understand that many clients require professional consulting assistance to complement their internal staff's work. We currently hold over 85 as-needed/on-call consultant contracts with a variety of public entities throughout California, in capacities ranging from planning studies to engineering design and construction support. We pride ourselves on our ability to help carry out the range of services needed on assignments efficiently and effectively. In this capacity, GHD will assist the City in the timely and efficient delivery of services while ensuring quality, experience, and professional competence.

ii. Past Experience of Staff

Over the years, GHD has provided services similar to those provided in the RFQ. The table below is a snapshot relevant to our past and current projects within the last five years. The following pages provide more in-depth detail to specific highlighted projects.



iii. Number of Years GHD has conducted business

Established in 1928, we remain wholly owned by our people. GHD has been incorporated in California since 2006 (as Winzler & Kelly prior to merging with GHD in 2010), and we have been providing professional engineering and consulting services throughout California since 1951.

GHD's On-Call Contracts in Southern California

GHD has worked on many similar on-call services for a number of local agencies, including the City of Ontario. We understand the variety of the task order requests. Through our experience, we have gained the knowledge and skills to successfully act on a moment's notice to address agency concerns, provide guidance and expertise in various public works projects, and facilities engineering design services to meet agency's schedule and deadlines.

1. Orange County Sanitation District Annual Professional Design Services
2. Orange County Public Works On-Call A/E Services
3. City of Anaheim On-Call Water/Civil Engineering Services
4. City of Anaheim As Needed NPDES Services
5. City of Huntington Beach On-Call Water Engineering Services
6. City of Huntington Beach On-Call Civil Engineering Services
7. Long Beach Utilities Department As-Needed Engineering Services
8. City of Long Beach As-Needed Civil Engineering Services
9. Los Angeles County Public Works (LACPW) On-Call Environmental Testing, Inspection & Monitoring Services
10. As a subconsultant: LACPW On-Call Engineering Design and Support Services; LACPW On-Call Engineering Services; LACPW On-Call Services for Water Quality Monitoring and Related Services
11. Jurupa Community Services District On-Call Professional General Engineering Services
12. Central Basin Municipal Water District
13. Casitas Municipal Water District Electrical On Call
14. City of Irvine As-Needed Engineering Services
15. UC Irvine Medical Center As-Needed Engineering Services
16. City of San Juan Capistrano Professional Consulting Services
17. City of Seal Beach - On-Call Professional Engineering Services
18. Inland Empire Utilities Agency On-Call Engineering Services
19. City of Corona Water/Wastewater Support Services As-Needed
20. City of Moreno Valley As-Needed Civil Engineering Services
21. Eastern Municipal Water District As-Needed Engineering Services
22. City of Oceanside Water Utilities Department On-Call Civil Engineering
23. City of Carlsbad As-Needed Water and Recycled Water Services
24. City of San Diego As-Needed Engineering Services
25. City of Oxnard Consulting Services for Wastewater On-Call
26. City of Oxnard Consulting Services for Recycled Water Treatment Process Support

27. City of Culver City On-Call Engineering Services
28. City of Grover Beach On-Call Engineering Services
29. County of San Luis Obispo Water & Wastewater Engineering On-Call
30. County of San Luis Obispo Flood Control District On-Call
31. City of Pasadena Engineering On-Call
32. City of Los Angeles Department of Public Works, Bureau of Engineering On-Call Engineering Services
33. Inland Empire Utilities Agency Planning & Compliance Master Services
34. Port of San Diego As-Needed Asset Management Services
35. Los Angeles County Sanitation Districts On-Call Engineering Services
36. City of Arroyo Grande Water and Wastewater Engineering On-Call
37. As a subconsultant: County of Santa Barbara Wastewater Treatment On-Call

iv. References

Project	Description	Client Reference
Wells 37 & 39 Perchlorate Removal Design, Ontario Municipal Utilities Company	GHD has completed engineering services for the Ion Exchange (IX) Treatment Facilities for Wells 37 and 39, including equipment preselection, preliminary and final design, and permitting of the 8.6-mgd IX facilities for perchlorate groundwater treatment. The one-pass IX system consists of 4 skid-mounted pairs of vessels (8 vessels in total), with flow and control measurement on each skid. The design includes a small building to house the onsite hypochlorite generators (1+1), salt storage, brine and hypochlorite storage tanks, chemical metering pump skids, and a backup electrical generator with embedded fuel tank. The project also includes the development of Engineering Design Guidelines. GHD provided bidding services and is currently providing engineering services during construction and resident engineering services for the wellhead treatment facilities.	Thom Lambertson Principal Engineer 909.395.2774 lambertson@ontarioca.gov
Front Street Lift Station Wet well Rehabilitation Project, Eastern Municipal Water District	GHD is currently delivering the Front Street Lift Station Rehabilitation for the District with very similar scope as the proposed projects. The Lift Station is located adjacent to existing businesses within a small easement at the intersection of Old Town Front Street and Temecula Parkway (Highway 79). Challenges include permitting with the City of Temecula and Caltrans for the proposed sewer bypass pumping. SCADA data was used to determine the necessary bypass flow rates for peak wet weather, average, and minimum flows. The existing sewer will be surcharged to bypass from an upstream manhole to avoid disruption at the busy on-ramp to Highway 15. A new flow meter vault and replacement piping inside the valve vault was added to the scope during final design maintenance requests.	Edward Serna Principal Engineer 951.928.3777 sernae@emwd.org
On-Call Engineering Services, Inland Empire Utilities Agency	GHD is providing engineering services in support of IEUA's water and wastewater programs on an on-call basis for a three-year period. GHD is performing the task orders in accordance with IEUA's Engineering Design Guidelines, which were also created by GHD. The scope of the task orders encompasses the preparation of design, plans, specifications, cost estimates, and contract documents for capital projects including electrical/instrumentation, process controls, structural design, sewer improvements, water and recycled water improvements and wastewater improvements, constructibility reviews, as well as asset management.	Jerry Burke Manager of Engineering 909.993.1548 jburke@ieua.org
On-Call Engineering Services, Long Beach Water	GHD is providing engineering design and construction support services for potable, recycled, and sewer projects on an as-needed basis. The types of projects under this on-call pertain to potable water, recycled water and sewer system facilities such as pipeline assessment and design, pump analysis, sewer system capacity studies, and other miscellaneous services. Example task orders performed or being performed under this contract include Anaheim Street Sewer Improvement Preliminary Design Report and Queensway Bridge Pipeline Condition Assessment.	Robert Verceles Director of Engineering 562.570.2337 Robert.Verceles@lbwater.org
On-Call Professional Consulting and Engineering Services, City of Anaheim	GHD is providing engineering services to the City of Anaheim Public Works Department to assist in achieving the goals of the Capital Improvement Program for the Engineering Division for sanitary sewer projects, storm drain projects, and street rehabilitation/reconstruction. Example task orders performed or being performed under this contract include Alley Sanitary Sewer Improvement 2018, Knollwood Sewer Study, Beach Boulevard Specific Plan Sewer Analysis, 1000 North Kraemer Sewer Analysis, and Walnut Street and Cerritos Avenue Sewer Improvement.	William Grigsby Principal Engineer 714.765.5259 wgrigsby@anaheim.net

v. GHD's Local Experience and Knowledge of the City

GHD's success at exceeding our clients' needs is evidenced by the high percentage of repeat business that GHD has experienced and the results of client feedback. Our many client accolades demonstrate our record of successfully completing projects through efficient solutions.

Our local Contract Manager's experience in the Inland Empire for OMUC and other local agencies will ensure that project requirements are understood and implemented through on-call task orders. The majority of Contract Manager, Chris Bartleman's projects have been local to the Inland Empire as demonstrated on his resume in Appendix A. The project specific experience included provides additional evidence of direct experience with the City.

→ 6.b Project Specific Experience

The following 3 projects demonstrate our most relevant service contracts held within the last five years.

① Well 50 Ion Exchange Treatment Facilities Ontario, CA

Role of the Firm: Prime (GHD)

Value of Services: $7M (est.) **Value of Fee:** $420K

Staffing: Chris Bartleman, Abhay Hanamsagar, Shamia Salih, Mehdi Mardi, James Wang (N2W)

Duration: May 2022 - Ongoing

Relationship to Client: Designer

Contact: Luke Qu, PE, Project Manager, Ontario Municipal Utilities Company, LZQu@ontarioca.gov, 909.395.2676

Description of Services: The GHD team, led by Chris Bartleman, is providing Ion Exchange (IX) Treatment Facilities for Wells 50, including equipment pre-selection, preliminary and final design, and permitting of the 4.3-mgd IX facilities for perchlorate groundwater treatment. To establish the Basis of Design, the project commenced with the development of Engineering Design Guidelines for IX treatment facilities. The Engineering Design Guidelines outlines water quality performance requirements, material, and equipment preferences for standardization, and serves as the City's mechanism for O&M knowledge capture. The Guidelines establish the basis of design for the current project, and future IX treatment systems. The one-pass IX system consists of two-skid-mounted pairs of vessels (four vessels in total), with flow and control measurement on each skid. The design includes onsite hypochlorite generators (1+1), salt storage, brine and hypochlorite storage tanks, chemical metering pump skids, and a backup electrical generator manual transfer switch addition. The treatment facilities have significant instrumentation and control, connected to the City SCADA system. The engineering services cover site design, off-site pipeline, driveway access expansion, and water quality permitting support for the treatment facilities.

② Wells 37 & 39 Perchlorate Removal Design Ontario, CA

Role of the Firm: Prime (GHD)

Value of Services: $9M **Value of Fee:** $1.9M

Staffing: Chris Bartleman, Abhay Hanamsagar, Shamia Salih, Mehdi Mardi, James Wang (N2W)

Duration: March 2020 - September 2021 (Design); January 2021 - Ongoing (Construction)

Relationship to Client: Designer, CM, ESDC

Contact: Thom Lambertson, Principal Engineer, Ontario Municipal Utilities Company, lambertson@ontarioca.gov, 909.395.2774

Description of Services: GHD, in collaboration with N2W, has completed engineering services for the Ion Exchange (IX) Treatment Facilities for Wells 37 and 39 including equipment preselection, preliminary and final design, and permitting of the 8.6-mgd IX facilities for perchlorate groundwater treatment. The one-pass IX system consists of four skid-mounted pairs of vessels (eight vessels in total), with flow and control measurement on each skid.

The design includes a small building to house the onsite hypochlorite generators (1+1), salt storage, brine and hypochlorite storage tanks, chemical metering pump skids, and a backup electrical generator with embedded fuel tank.

The treatment facilities has significant instrumentation and control, connected to the City SCADA system. The engineering services cover environmental, planning, and water quality permitting for the treatment facilities, including CEQA documentation, City Planning Department, and DDW. The project also includes the development of Engineering Design Guidelines for IX treatment facilities to establish water quality performance requirements, material and equipment standardization, and City's O&M knowledge capture. The Guidelines establish the basis of design for future IX treatment systems.

GHD provided bidding and engineering services during construction/resident engineering service for the wellhead treatment facilities.

GHD is involved with all aspects of the design and providing support in the following additional areas: drainage and low impact development options, aesthetic screening and rendering of treatment vessels, preselection of vessel vendors for enhanced scheduling of purchase process, electrical upgrades and application, asset register, CEQA permitting support, and construction bid support.

③ On-Call Master Engineering Services Contract Chino, CA

Role of the Firm: Prime (GHD)

Value of Services: $2M **Value of Fee:** $2M

Staffing: Greg Watanabe, Coenraad Pretorius, Hector Ruiz, Chris Bartleman, Casey Raines, Mehdi Mardi, Andy Leung, Rick Guggiana, Pedro Alvarez

Duration: September 2018 - Ongoing

Relationship to Client: Designer, ESDC

Contact: Jerry Burke, Manager of Engineering, Inland Empire Utilities Agency (IEUA), jburke@ieua.org, 909.993.1548

Description of Services: GHD is providing engineering services in support of IEUA's water and wastewater programs on an on-call basis for a three year period. GHD is performing the task orders in accordance with IEUA's Engineering Design Guidelines, which were also created by GHD. The scope of the task orders encompasses the preparation of design, plans, specifications, cost estimates, and contract documents for capital projects including electrical/ instrumentation, process controls, structural design, sewer improvements, water and recycled water improvements and wastewater improvements, constructability reviews, as well as asset management.

Example task orders performed or being performed under this contract include:

- Technical review of valve submittal for specification compliance (Completed)
- Asset Management Gap Analysis for IEUA (Ongoing)
- Training of IEUA Project Managers on Engineering Design Guidelines and updated Front End Documents (Ongoing)
- Specialty inspections of sewer constructions and CCTV reviews (Ongoing)
- Collection System Asset Management program management support (Ongoing)
- IEUA Engineering Standard Details development (Ongoing)
- Development of asset management specification and spare parts strategy for RP-5 Liquid Treatment System Expansion and RP-5 Solids Treatment Facility Design Services (Ongoing)
- Preliminary and Final Design of the San Bernardino Lift Station Relaibility Improvements (Ongoing)

→ 6.c Technical Competence

ii. Description of In-House Resources

Issue Resolution and Technical Innovations

Successful issue resolution starts with acknowledging concerns and truly listening to understand the root cause. Challenges in the delivery of on-call projects tend to arise from the meshing of the City's, Contractor's and Engineer's priorities. We understand that each group has inherent responsibilities that can have competing interests at times, although everyone's goal is a successful project. What success means varies within each of those groups. An example is depicted to the right in Figure 1.

Our role, as your consultant, is to be your advocate and unite stakeholders with a common vision. Most issues are due to a trade-off. An increase O&M efficiency or a decrease in long-term O&M costs, may result in higher initial capital costs. We understand how to quantify and convey the effects of such trade-offs and will consider a deeper list of criteria, including safety, ease of operation, and resiliency. Often, the loudest voice or personality in the room may win the day or decision. It is our responsibility to ensure each voice, no matter how quiet, is heard and counted.

GHD will begin with setting adequate key performance indicators, scope and goal of each project, followed with substantial documentation. When proper development of alternatives, risks, and outcomes are presented, we will use a variety of objective tools and techniques to ensure the emotional response is reduced and promote effective decision making. Figure 2 shows some typical competing priorities.

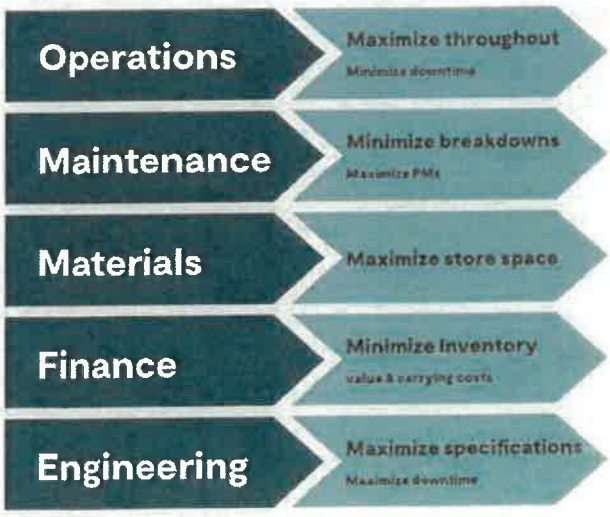

Figure 2. Typical Competing Priorities

Figure 1. Project Delivery Path

Continuous communication between the City, GHD, and any contractor or other consultant is necessary to properly identify conflicts before they arise when possible. Should an issue arise, immediate communication is critical for problem identification and resolution.

We understand the importance of communicating problems as soon as they are identified and involving the owner in their resolution. This minimizes the potential for issues to grow from a problem into a crisis. We will establish an escalation plan for dispute resolution on this project, but our goal will be to resolve conflicts at the lowest level of that ladder.

Incorporation of Technical Innovations

Our mission is to help you lead through innovation and collaboration with competency. We view innovation as a "Positive Change," which does not always mean a new way of doing something, or radical changes in thinking, products, processes, services, or organizational structure. The ability to identify or incorporate innovation into projects can occur during planning, design, construction or during operations. However, the most effective approach is to spend time during scoping and planning to develop potential innovations. Innovation also includes changes to O&M strategies, administration or management processes, project delivery, roles or responsibilities.

GHD remains focused on the project schedule. Every day equates to more cost and needs to be part of the discussion of innovation. GHD will remain open-minded to ideas that arise during design or construction and work to quickly project the value, impact, and risk of the proposed innovation. Our evaluations will provide validated information for the City to make informed, data-based decisions.

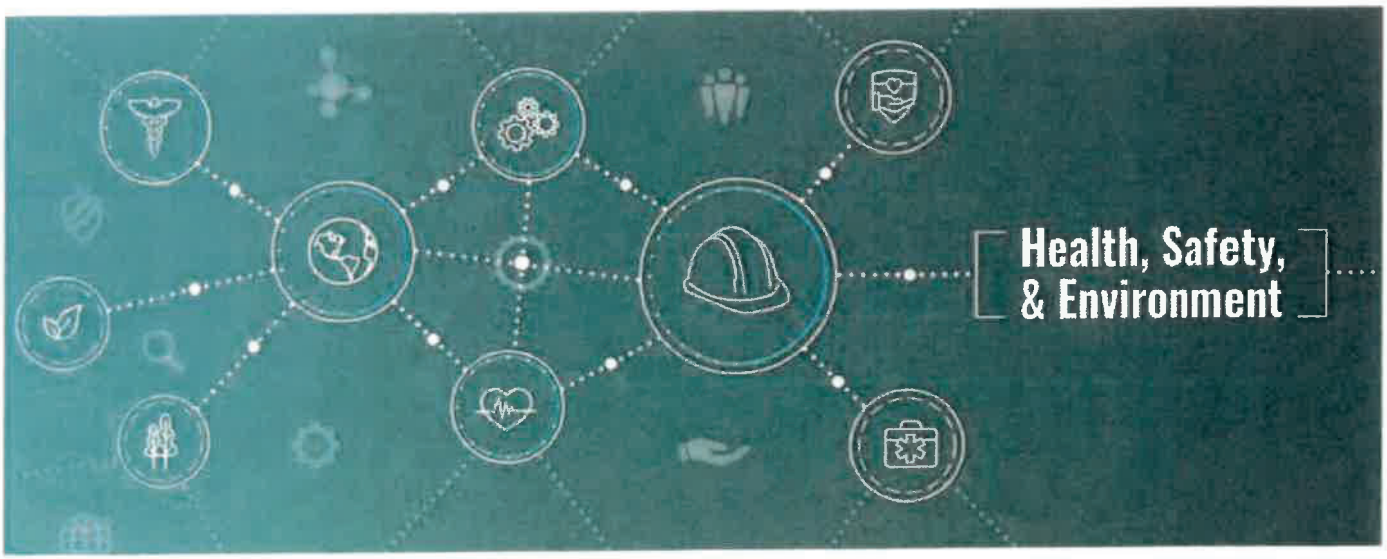
Technical Challenges and Conflict Resolution

Effective communication is a key to preventing potential performance issues. For individual projects, a specific information and data management plan is often necessary for reviewing project status and identifying potential technical issues before they become risks to the project. Our On-Call Project Manager will work with the QA/QC Manager and Technical Advisors to proactively conduct project reviews at critical points of work and identify technical challenges to be addressed. Additional technical resources will be identified and included in the project review to ensure conflicts are resolved and challenges are efficiently managed. The City's Project Manager will be consulted and updated regularly by the GHD On-Call Project Manager so that decisions made are consistent with the City's expectations.

GHD's Approach to Safety

GHD's safety program is dynamic and aligns with the City's safety program in that we seek relationships based on mutual trust, cooperation, and communication to achieve zero incidents, injuries, fatalities, and occupational illness. GHD encompasses both risk management and behavior-based safety as a proactive approach to HSE. Our behavior-based safety program is called Safety Means Awareness Responsibility Teamwork (SMART).

The SMART program was developed to provide the foundation for continuous improvement in our safety performance and serve as a vehicle by which we sustain the importance of health and safety management in our daily activities. It provides the management framework to bring about a positive culture, focusing on the identification of expected behaviors and proactive management of the desired and undesired behaviors that affect our Safety Culture. Our behavior-based safety programs allow all employees to get involved by making safety second nature and a way of life.



Adapting to a Changing Environment

In response to the COVID-19 outbreak, GHD has implemented well-defined crisis management and business continuity processes. GHD assures the City that it is 'business as usual' for GHD in terms of client service. GHD is confident in its ability to provide continued access to our staff via email, telephone, virtually (using MS Teams, WebEx, and Zoom) and in person as needed.

ii. Ability to draw upon Multi-Disciplinary Staff

The OMUC's On-Call Professional Engineering Consulting Services projects may include, but not limited to, feasibility studies and assessments, designs, rehabilitation, modification, hydraulic modeling, and post design support of both rehabilitation and new construction. GHD's deep bench of team members have the demonstrated ability to assimilate to the OMUC's design preferences, and to be flexible in approach to handle projects of all sizes, big or small. We hold ourselves to a high standard of quality and efficiency.

Responding to requests for services on an on-call basis requires a consultant to mobilize quickly and devote time to understanding the goals and expectations for the project. As an on-call service provider, we are not project advocates, but client advocates. The difference in approach may be subtle, but it is profound. When approaching an Owner and competitively pursuing individual capital projects, we take the time to investigate the project, the particular set of circumstances that lead up to implementation, and the issues and specific criteria by which that project will be implemented. We have developed approaches to identify key project features, make design choices, and implement costs savings throughout the life of the project as discussed below.

Task Order Delivery

The OMUC's point of contact will be GHD's Contract Manager, Chris Bartleman, who will lead overall project management and maintain effective communications throughout the duration of the contract. Upon notification of a possible project, Casey will engage a GHD Project Manager most qualified for the specific project, and will work with the OMUC's project manager to understand the project objectives, identify key issues, and develop a schedule to ensure the timely success of the project. Chris and the GHD team have a demonstrated ability to listen and deliver based on the OMUC's preferences. Project initiation is one of the most critical phases of a project and it is absolutely essential that the effort be orchestrated from the outset. Time spent in the very beginning of a project to plan is a valuable investment in the successful outcome.

The following expands on our approach for project initiation and delivery:

Site Reconnaissance and Data Collection

Site reconnaissance and data collection is one of the most important steps and is used to outline the characteristics of the project. In addition to any required site visits, GHD will also request as-built plans, modeling files, flow monitoring studies, inspection reports, and any other relevant data for the project. We will consult with operations staff whenever possible. Their experience can provide a wealth of information and they will be the ones to ultimately operate and maintain the facilities.

Team Development

GHD will assemble and mobilize that best team that meets the technical needs of each task order as well as the timing of the completion. This will start with the identification of the best suited Task Leader based on the specific project type. GHD understands the importance of staff continuity and will place emphasis on assembling teams comprised of employees that will be committed throughout the duration of the project.

Risk Register and Mitigation Measures

GHD understands the importance of identifying and mitigating potential risks (e.g., schedule, budget, public perception, etc.) in order to successfully deliver projects. For the rehabilitation of existing facilities, establishing and maintaining a risk register is critical for project success. Prior to project kick-off meetings, and where appropriate GHD will develop a Risk Register that identifies risks, evaluates potential impacts, and outlines mitigation measures.

Establish a Communication Pathway

Maintaining regular and open communication between our key team members and OMUC staff will be a critical part of the success of each task order.

OMUC staff will be kept informed of project progress to eliminate surprises and meet the task order schedule. While our Contract Manager will be the main point of contact with OMUC's project manager, our individual Project Managers will take over as the point of contact for individual projects. This approach ensures responsiveness and accessibility for each individual assignment. At the kick-off meeting project specific communication plan and protocols will be established.

Identifying Project-Specific Key Features for Each Project

Project planning and scoping is critical and requires the proper identification of the root goals of the project, development of alternatives, quantification of the capital and O&M costs, schedule, risks, and stakeholder impacts. GHD brings value through our hands-on treatment experience and comprehensive knowledge of the fields of trenchless technology, cathodic protection, chemistry, biology, hydraulics, mechanical processes/equipment, instrumentation and controls, materials handling, and O&M.

The second step is to identify impacted staff members and departments and to acknowledge what is important to them. As your consultant, GHD is here to facilitate the discussion, confirm our understanding of the project, and work with the entire team to develop and agree on a common approach. We also identify performance, schedule, cost, and installation challenges that we have seen on past similar projects and work with the team on ways to mitigate those risks.

As we proceed with designs, we may encounter new information that could affect the project. When that occurs, we share this information and coordinate with the entire OMUC team to maintain its common understanding. Most important to those processes is proper documentation, so that at any point during the delivery of the project GHD can quickly demonstrate why and when decisions were made.

7. Proposed Method to Accomplish the Work

→ 7. Proposed Method to Accomplish the Work

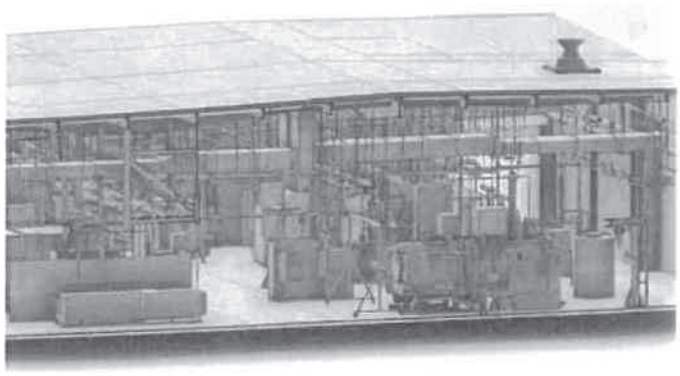
The GHD approach to work outlined below is based on our familiarity with the OMUC coupled with our vast experience delivering on-call contracts in Southern California.

Project Delivery Approach

GHD will provide the OMUC with efficient, successful project delivery as we have for many other municipal clients on similar potable water, sanitary sewer, and recycled water projects in the past. GHD uses tools such as MS Teams and Office 365 to continue to engage and collaborate internally and externally seamlessly. The frequency of communications between GHD and the OMUC will be project specific and based upon initial ground rules established upon the kick-off of each task order. Our project delivery approach can be summarized in the following major elements:

Data Collection. Meet with OMUC staff, obtain all relevant OMUC data, perform field survey, gather utility information, perform geotechnical investigations, and execute potholing plan.

Project Base Map. A detailed base map that accurately depicts all existing information including a verification of existing right of way and utility locations is an important element in proceeding with the design.



Agency Coordination. Provide close coordination with other public agencies or utility owners. Associated permit applications will be prepared and submitted on behalf of the OMUC.

Planning and Condition Assessment. This includes hydraulic modeling, GIS mapping, land-use analyses, feasibility studies, master planning, financial planning, physical condition assessments, alternatives evaluations, and recommendations.

Preliminary Design. This includes the development of alternative concepts where appropriate. Concepts and decision items will be presented to OMUC Staff prior to preparation of final PS&E.

Plans, Specifications and Cost Estimate. Bid documents will be prepared and processed with OMUC Staff at appropriate milestones. GHD is familiar with the OMUC's standards and requirements and will utilize this knowledge to develop submittals that will exceed the OMUC's expectations. Each subsequent submittal will address OMUC's comments and approvals from all relevant stakeholders will be obtained.

Bid Process and Construction Support. Provide technical support throughout the Bid Process. Respond to appropriate RFIs submitted by the Contractor and review construction submittals/shop drawings. Prepare records drawings based on the revisions documented by the Contractor at the conclusion of construction.

Development and Evaluation of Alternatives and Justification of Design Choices

Our success is founded on proper scoping and development of feasible alternatives that promote long-term quality and ease of operations. Our alignment with project goals, and assimilation of stakeholder needs, results in elevated confidence in compliance and reduction in long-term O&M costs. This means that alternatives are verified, validated and justified. The GHD difference is evidenced by proper validation. All engineers understand verification, the process of demonstrating that the problem or question was solved correctly. Conversely, validation is verifying that the right question was asked, or problem was solved. GHD's deep team of water infrastructure and treatment professionals, with the breadth and depth in the areas of engineering, operations, and asset management brings diversity and provides greater perspective.

We anticipate our alternatives and designs may require a wide range of tools and techniques to validate the effectiveness during and after construction. Such field techniques may include GPS and ground-based survey, 3D laser scanning, sampling, material testing, equipment/system testing, data collection, and condition assessments. Results of those activities will be combined with desktop analysis that may include biological and chemical modeling, hydraulic, transient and computational fluid dynamic modeling, process and equipment configuration, and layout analysis. This evaluation will focus on redundancy, reliability, O&M requirements, cost-effectiveness and optimization, safety, compliance and aesthetics.

The alternatives or design options presented to the OMUC by GHD will be based on the OMUC's criteria and staff preferences and will be fully supported by budgetary estimates, O&M considerations, schedules, risk analysis, potential delivery methods, and common sense.

CAPITAL IMPROVEMENT PROJECT DIVISION

Potable and Recycled Water Pipelines

GHD's team members have recently prepared plans that illustrate more than 250 miles of 6-inch to 96-inch water and recycled water pipelines. Our engineers have a wealth of linear improvement experience such as the design of new distribution systems to support expanding communities and the replacement or rehabilitation of existing systems in dense urban areas.

Our team has successfully delivered the Potable and Recycled Pipelines Replacements at I-5 and Oso Creek project. Our team has also worked with various public agencies to provide plans, technical specifications, and engineering cost estimates on projects in the past, such as the Jurupa Community Services District Recycled Water Pipeline Segment 1, West Orange County Water Board, West Orange County Water Board Feeder No. 2 Water Transmission Main Relocation Project with the City of Huntington Beach, the City of San Diego Otay 1st and 2nd Transmission Pipelines, the City of Anaheim Rural Ridge and Wilshire Water Main Replacements, Central Basin Municipal Water District's Six inch Recycled Water Pipelines in Norwalk Boulevard for UTC Aerospace, and the Irvine Ranch Water District's Seawatch Recycled Water Main Rehabilitation. These projects required coordination and permitting with Caltrans and the governing City departments; development of traffic control plans; surveying; geotechnical investigations; and potholing. GHD's team is fully capable of providing the tasks necessary for a detailed design of new or capital improvements to the City's water system.

Water Production Facilities

Our design engineers have designed more than 25 pump stations and storage facilities. These designs include large pump stations capable of moving 60 MGD and elegant infill stations that blend into their community and merge engineering and art. The GHD team provides tank design and rehabilitation experience with tanks ranging in size from 200,000 gallons to 40 million gallons, including both welded steel and AWWA D100 pre-stressed concrete. For the Orange County Parks, a potable water storage tank and production well was designed by the GHD team at the Caspers Wilderness Park.

Internationally, the GHD southern California offices provided the designs for two replacement reservoirs, one new booster pump station and four pressure regulating facilities for the Guam Waterworks Authority. The existing steel reservoirs required significant repairs and were replaced with a 1.0 MG pre-stressed concrete design. Due to the topography, the zone served by one of the reservoirs had customers with high and low pressures. To mitigate the inability to relocate the reservoir, a new booster pump station and pressure regulating station was designed to maintain pressures within the desired range. Hydraulic analyses completed in InfoWater verified the storage volumes and requirements for the new pump station.

GHD's engineers have designed and modified the equipment and site improvements for more than 40 well sites over the last decade in the Southwest United States, including the City of Ontario, Eastern Municipal Water District, Inland Empire Utilities Agency, Long Beach Water, City of Anaheim, Orange County, Camp Pendleton, City of Huntington Beach, South Coast Water District, Bullhead City, Sun City, Scottsdale, Paradise Valley, Surprise, Buckeye, Maricopa, and the Gila River Indian Community. These well sites vary in design and their different features consist of above ground or submersible motors, discharges that run to centralized supply facilities or directly into distribution systems and treatment such as arsenic removal, pH adjustment, de-sanding and disinfection.

These potable water production projects mentioned above required numerous disciplines working together as a team to accomplish the project's goals including civil, mechanical, structural, architectural, electrical and instrumentation.

Wastewater (Sanitary Sewer)

GHD's local experience in sewer improvement projects and studies exceed more than 250 miles of collection system pipelines, sewer master plans, and developer-based capacity studies throughout southern California. This experience also includes trenchless construction and rehabilitation methods, and special system facilities including inverted siphons, air-jumpers, force mains, diversion structures, metering stations, and outfall structures. We will bring thorough understanding on evaluating alternative alignments relative to the following items: limiting sewer improvements, maximizing existing capacity of nearby sewers, utilities, constructability, cost, maintainability, value, traffic impacts, community impacts, other construction activities in the project area, agency

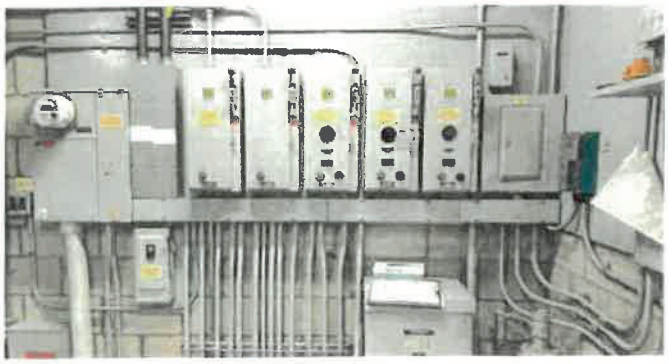
pavement replacement requirements, utilizing existing atlas maps and as-built drawings for sewer, water, storm drain, and electrical, and the latest utility record maps received from utility agencies. This provides our engineers a wealth of linear improvement experience in the planning of new collection systems to support expanding communities and the replacement or rehabilitation of existing systems in dense urban areas. We develop innovative solutions for our clients to address internal structural failures, as in the case for the Orange County Sanitation District Project No. 7-66 Sunflower and Red Hill Interceptor Repairs, and capacity deficiencies on the City of Anaheim's Harbor Boulevard, West Street, Wakefield Avenue, and Eleanor Drive Sewer Improvement Project.

Some of our Project Managers, QA/QC Manager, and members of our Support Team are all NASSCO PACP and MACP certified to evaluate CCTV inspections and assess the condition of sewer pipelines and manholes. Using our vast evaluation experience on past projects, including the Inland Empire Utilities Agency Haven Avenue Regional Sewer System Repair and Long Beach Water Department S-25 Lift Station Condition Assessment, our team will provide the City with the methods to correct any deficiencies (i.e., point repairs, lining and/or complete removal and replacement depending on condition). We are also capable of determining repair costs and prioritizing work.

Tunneling and Trenchless Construction

Where traditional open-cut pipeline construction is not feasible, the adoption of tunneling and trenchless construction methods may be advantageous for the project. During the establishment of the preliminary design concepts, GHD's in-house tunneling experts can assess the proposed construction method against a number of identified constraints including safety, constructability, traffic management, existing utilities, right of way, easements, launching and receiving pit locations, permitting requirements, environmental considerations, and areas associated with negative geological or geotechnical implications. These project requirements are then blended, conflicts resolved, and using a risk-based design, used to create a constructible project that meets the City's requirements. GHD is not married to one trenchless technology, we are able to draw upon our experience with all of the trenchless technologies. New installation methods include guided boring methods, horizontal auger boring, horizontal directional drilling, microtunneling, pilot tube method, pipe ramming, and tunneling.

Rehabilitation methods include; cured-in-place pipe, fold and form, spiral wound pipe, segmental liners, joint and spot repairs, pipe bursting, pipe reaming, slip lining, and spray on linings. Our latest successful trenchless project includes the Moulton Niguel Water District Potable and Recycled Water Pipeline Replacements Project using microtunneling under the I-5 Freeway and Oso Creek, and the Long Beach Water Department (LBWD) Water Main Lining Pilot Project that implemented fully structural NSF 61 approved Pressure Cured-in-Place Pipe (PCIPP) lining technology.



Wastewater Lift Stations

We have provided engineering services on more than 25 lift stations and is bolstered by experienced structural, electrical, mechanical, fire/life safety, and Operations and Maintenance (O&M) engineers capable of providing hands-on pump stations assessments, rehabilitation and design. Our team's mechanical, electrical, structural, and HVAC engineers have all worked closely together for pump station condition assessments and designs, including the Irvine Ranch Water District's Newport Coast Lift Station Rehabilitation Project. We also provided a number of potential solutions for confined space access enhancements to the pump station's underground dry well with the construction of a new stairway for safe ingress/egress. Other design elements that our team considers with pump station improvements are fall preventive measures, lighting, and security. Our Buena Creek Pump Station Project with the City of Vista included numerous site safety additions.

Electrical Systems and Instrumentation & Controls

GHD offers a comprehensive range of professional electrical engineering and instrumentation and control services to meet the City's needs including:

- Scoping, planning and concept development
- Power system analysis and design, high voltage and low voltage, including over-current protection design and Arc Flash Hazard mitigation
- Equipment specification and selection, including Electrical Engineering for Hazardous Areas
- Control system design including switchgear control, plant and process control
- Plant and machinery control, including machinery safeguarding

- Instrumentation and monitoring design, including Distributed Control Systems (DCS) and Supervisory Control and Data Acquisition (SCADA) system design
- Electrical installation condition assessments
- Electrical Safety advice, including Arc Flash Hazard and machinery safeguarding assessments
- Hazardous Area Classification and compliance audits

Cathodic Protection

GHD provides comprehensive in-house Cathodic Protection and Corrosion Engineering Services; and has a successful track record of providing these services, including design, field testing, inspection, and project management services, on a number of potable water and recycled water system projects. GHD's team includes accredited NACE Cathodic Protection Specialists (CP-4) and California licensed Professional Engineers. Successful past projects, such as the LBWD Golden Avenue Stray Current Investigation, contained many facets of the requested services, including extensive field services. Additionally, GHD is exceptionally familiar with numerous agency standard cathodic protection and corrosion control details, cathodic protection specifications, and corrosion control standard practices.

GHD's Cathodic Protection and Corrosion Engineering team is locally-based, which enables superior responsiveness and rapid mobilization when needed. GHD understands that work under this contract may include but not be limited to: data gathering and review; field inspection; surveys; engineering studies; preparation of traffic control plans; utility research and potholing services; soil sampling and laboratory testing; coordinating with utility owners, private property owners, City departments, and other stakeholders; permit acquisition; and preparation of design PS&E. Work will be performed in accordance with both NACE Recommended Practices, Test Methods, and Standard Practices, and City Standards. Cathodic protection/ corrosion engineering calculations will be based on design standards adopted by the City.

Utility Research

One of the most critical aspects of project progress is accurate and comprehensive identification and locating of existing utilities. A thorough, comprehensive and accurate program to locate existing utilities will significantly minimize costly construction change orders or potential catastrophic damages during construction. In the contract documents, we require the contractor to pothole all utilities in the vicinity of the project prior to ordering materials to re-confirm the presence and location of utilities.

Permitting

The GHD project team has excellent and collaborative relationships with many of the permitting agencies including Caltrans, State Division of Drinking Water, Regional Water Quality Control Board, US Army Corps of Engineers, California Department of Fish and Wildlife, California Coastal Commission, California Department of Parks and Recreation, South Coast Air Quality Management

District, Orange County Transportation Authority, and Orange County Sanitation District, from projects that we have completed throughout southern California. These established relationships will be valuable in advancing and resolving permit needs and issues related to the City's projects. GHD's environmental compliance team is embedded within our technical design team during the design phase to identify and streamline permits, as well as identify opportunities to limit and tweak the design to minimize permitting and follow on monitoring that could occur throughout the lifecycle of the infrastructure.

Treatment Processes

Our local GHD team has prepared studies, designed or improved treatment plants for a number of clients in California that have evaluated conventional and alternative treatment technologies to meet a particular system's needs, including pretreatment, clarification, filtration, disinfection, oxidation, aeration, corrosion and taste and odor control, softening, and process residuals dewatering and disposal. Our projects vary in size, with improvements to single treatment processes, such as the LBWD JWJ Reservoir Chemical Dosing Improvements, to entire water treatment facilities, such as the City of Anaheim Lenin Water Treatment Plant Rehabilitation and Expansion.

Services provided also include analysis, design, and construction engineering for collection, transmission and distribution facilities, including storage and high-lift pumping, transmission distribution pipelines, booster pump stations, pressure control valves, elevated and ground level storage, and telemetry.

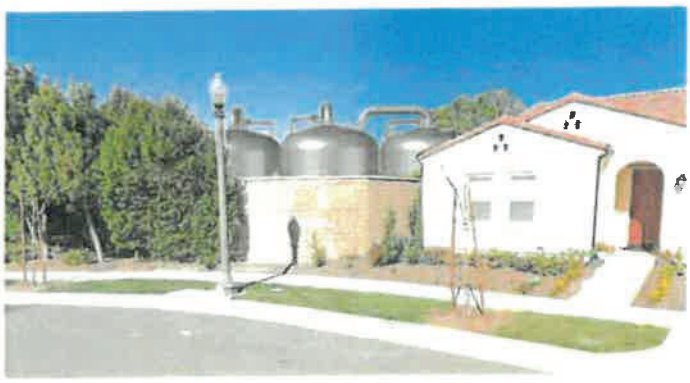
Process Optimization and Energy Efficiency

In response to rising energy costs and climate change regulation, GHD has examined the energy implications of alternative water and wastewater treatment plant configurations and developed an energy model to illustrate effective use of these alternative processes and/or configurations.

As energy costs rise and more regulations are employed, more and more clients have already begun to hire consultants with experience and knowledge of energy efficiency, treatment and distribution systems and energy sector programs such as grants and incentive programs, that will help fund their energy efficiency projects. GHD has developed tools, such as the Benchmarking Tool

and spreadsheets and uses Department of Energy (DOE) software such as eQuest, Motor Master+, BioWin and other programs to conduct audits for our clients. GHD is well suited to assist clients identify and implement strategic plans for providing energy saving opportunities due to our broad sector knowledge and depth of expertise.

Estimates of Probable Construction Costs



Knowing the importance of estimating construction budgets, We can prepare a cost estimate using the guidelines established by the American Association for the Advancement of Cost Engineering (AACE) for the development of Opinion of Probable Construction Costs (OPCC). Based upon the phase of the design project, GHD will utilize the AACE classification accordingly. The table on the following page summarizes GHD anticipated level of accuracy and associated contingencies.

Our team will utilize our connections with local trades in the development of unit costs to accurately reflect today's bidding market. This estimating approach is based on a multi-step methodology as summarized below:

- A job site walk, complete quantity survey using a multidisciplinary team approach, with expertise in the following disciplines: civil, environmental, mechanical, and sustainable design.
- Verify material pricing, labor availability and bidding interest by drawing upon the expertise of key contacts in the local general contractor and sub-contractor community. Estimates are based on the most up-to-the minute market outlook possible.
- The cost estimating team and design team maintain continuous communication during the entire design process and works closely together to identify issues early.
- This proven methodology will provide the City with the most current, up-to-date, and accurate cost information at all times as the project progresses. Surprises are minimized, and changes are easy to handle.

Constructability

The GHD team has successfully worked closely together to identify constructability challenges that may occur during construction and resolve constructability issues while meeting the requirements of permitting, the environmental documents and City operations.

GHD's construction group can provide constructability review and have extensive design and construction experience to evaluate the availability of equipment and materials to meet the needs of the contract, the level of impact necessary to complete the work, and whether that impact is consistent with the contract requirements. Soil conditions, depth of excavation, proximity to critical structures, proximity to utilities, proximity to improvements, size of potential trenchless operations and pit areas, available construction staging areas, depth and inclination of any changes in formational soil or rock, traffic conditions, and the distance between construction access points will be evaluated during design. The constructability review will also include an evaluation of the risks during construction and will identify ways these risks can be managed during construction.

PLANNING AND LAND DEVELOPMENT DIVISION

Condition Assessments

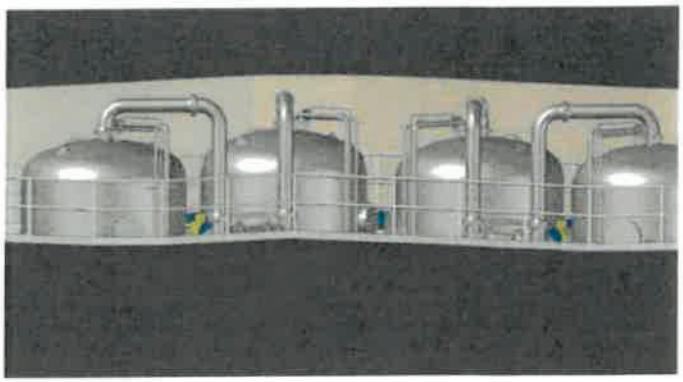
GHD has performed numerous condition assessments of facilities and has qualified inspection staff to assess facilities. The failure of these facilities can carry significant consequences in terms of costs to make repairs, environmental damage, fines and erosion of the public's confidence in the City. Recognizing the importance of these drivers, GHD's team is fully capable in the assessment of facilities and has the technical knowledge to develop rehabilitation recommendations and capital improvement programs that prioritize near-term risks. Our in-house Corrosion Engineer, Jeff Knauer, has extensive experience with corrosion risk assessment, condition assessment, and testing and mitigation design. He will support the team in assessing equipment for the risk of corrosion related failures and recommending corrosion mitigation alternatives.

Master Planning and Hydraulic Modeling

The GHD team also has in-depth planning and modeling experience for water distribution systems, sewer collection systems, and storm drain design. Our past master planning efforts have considered all aspects of community water/sewer systems, including supply, treatment, distribution, storage, metering, rate analysis, hydraulic modeling, watershed protection, security, staffing, and customer service. Our experience in the planning, hydraulic modeling, and development of potable water and sewer collection studies for public utility systems ranges from small capacity studies and fire flow analyses to comprehensive utility master plans complete with capital improvement and financial implementation plans. We will bring the City knowledge and experience on all aspects of hydraulic modeling with the understanding of the importance of flow monitoring and an accurately calibrated model. GHD's team of experienced hydraulic modelers are well-versed in numerous stand-alone, CAD based, and GIS based software programs such as those offered by the EPA, Haestad Methods/Bentley, MWHSoft/INNOVYZE, XP-Software, and Pizer. Our team will precisely perform hydraulic analyses and develop flow diversions and alternative alignments to address deficiencies and maximize the existing capacity in the City's distribution and collection systems.

Another element is the critical review and evaluation are the hydraulic capacity and demands of pump stations which are often associated with the significant impacts associated with aging infrastructure, population growth, and regulations, such as our work with the LBWD on the Downtown Area Sewer Focus Study Project and Sewer Master Plan Updates. Our staff knows it is imperative that pump stations also be reviewed for hydraulic capacity issues associated with pumps, valves, storage, fire protection, water surge, and system pressures to optimize and maintain the system.

Water Quality and Low Impact Development Design



GHD's water quality professionals comprised of Qualified Stormwater Developers (QSDs), Qualified Stormwater Practitioners (QSPs), and Qualified Industrial Stormwater Practitioners (QISPs) have in depth experience designing, drafting, implementing, and reviewing Storm Water Quality Management Plans (SWQMP), Stormwater Pollution Prevention Plans (SWPPP), and NPDES permit compliance for public and private clients. GHD is currently operating as the On-Call Reviewer of Storm Water Management Plans for the City of Oceanside and has drafted numerous SWPPPs for local public and private clients (including Orange County Public Works). GHD's experience with surface water quality extends beyond the development and review of SWPPP and SWQMP plans, as GHD has created City Best Management Practices (BMP) manuals and is reserved as an Expert Reviewer of all stormwater plans for large public groups in Southern California.

Groundwater Wells

GHD has qualified professional geologists to prepare detailed groundwater well designs and specification packages and will take those plans through to managing the construction, inspecting materials and equipment for different drilling methods, leading the development of the newly constructed municipal wells and then leading the aquifer pump tests and step drawdown tests for detailed pump hydraulics. GHD can also prepare the supporting engineering elements of design including well head pump sizing and selection, valves, piping and appurtenances, pump to waste and hydropneumatic tank, yard piping valves and appurtenances, well and pump/treatment building, chlorination system, topographic survey, site clearing, excavation, grading, underground utilities (water, sewer, storm drain, gas), paving, fencing, connection to the distribution mains. Work includes permitting and detailed civil, structural, mechanical, and electrical engineering to get a newly designed and constructed municipal well online into a system and also includes rehabilitation and redevelopment of aging wells.

GHD's water resource engineering personal and supporting staff and engineers with expertise in drinking water well detailed design and construction methods and management have provided these services with recent projects, such as:

- City of Ukiah Well #4 and #9
- City of Santa Rosa Supply Wells

- City of Eureka Martin Slough Supply Well
- Humboldt Bay Municipal Water District – including detailed design of assets associated with the Ranney Collector groundwater well network (up to 15 MGD)
- Inland Empire Utilities Agency Ely Monitoring Well Replacement

GHD's team has the experience to provide design, management, supervision, and the oversight of pump and well contractors with regard to labor, equipment, tools, materials, supplies, and services, as well as contractual procurements and other costs incidental to installation of water supply wells, performing pump tests, step drawdown tests, and aquifer testing. To determine anticipated groundwater supply well specific capacities and long-term performance; our geologists and hydrogeologists investigate open boreholes using geophysical methods, monitor existing wells, and evaluate the groundwater levels and conditions in multiple locations simultaneously in realtime by installing transducer networks. GHD has bolstered communities with custom-fit solutions for water well installation, such as Huntington Beach Well #1, where our unique engineering design provided a higher flow and easier maintenance while matching the exterior to the architecture of adjacent homes. Groundwater well equipment projects can vary in size from small monitoring wells with purging pumping needs of 10 gallons per minute (gpm) to large scale 10,000-gpm Ranney Collector caisson production wells.

We also provide safe and environmentally conscious demolition of existing wells, as well as installation of equipment, including chemical injection equipment storage containers for liquid chlorine and fluoride, electrical/instrumentation equipment, water sampling analyzers, emergency generators, security equipment, and deep well vertical turbine pumps. GHD has equipped groundwater wells in environmentally sensitive areas, like Caspers Wilderness Park—a sprawling 8,000-acre protected area of the Santa Ana Mountains— where we designed a new 25,000-gallon AWWA D-100 Welded Steel Potable Water Storage Tank and new groundwater well. We included a wireless SCADA system to monitor tank levels and notify the well pump to deliver water to the tanks and distribution piping. Due to the surrounding wilderness, GHD also included an erosion control plan and stormwater prevention plans in our design.

WATER RESOURCES AND WATER QUALITY DIVISION

Environmental Compliance

GHD's team of local environmental professionals, supported by an international organization of expertise sets GHD apart in the services we can provide to the City. GHD's engineers, geologists, chemists, toxicologists, industrial hygienists, biologists, environmental planners, hazardous material specialists, and regulatory specialists can support the City on environmental compliance tasks. GHD's experts in this field will help the City stay up to date on new and upcoming regulations and the impacts caused by those regulations. GHD's team can provide training to the City staff to aid the City in being compliant.

Our team's environmental staff have provided California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA) support for public infrastructure projects for over 25 years, and our expertise and abilities to execute complex projects are well established. With many years of experience preparing environmental documentation, our team members have a complete understanding of current CEQA and NEPA regulations and guidelines, and the components of the preparation and approval process that are critical to keeping projects on track. Beyond CEQA and NEPA documentation, our team has significant experience with the broad range of natural resources and regulatory permitting needs anticipated under this contract. We have ample experience working in the field and on job sites, conducting biological and preconstruction surveys for vegetation, wildlife, nesting birds, and endangered species, as well as wetlands delineations.

Specific capabilities include:

- Pre-Construction Surveys
- Biological Resource Assessments
- Biological Technical Reports
- NEPA Natural Environment Studies
- Stream and Habitat Restoration and Establishment
- Sensitive and Endangered Species Surveys and Mapping
- Biological Inventories and Monitoring
- Section 7 and 10 ESA Consultation
- Vegetation Mapping/Sensitive Plant Surveys
- Nesting Bird Surveys and Plans

We are adept at conducting and documenting construction monitoring and worker training in accordance with construction specifications, as well as preparing permits required in annual, periodic, and special reports. Related services include worker education and awareness training, oversight of environmentally sensitive areas, contractor coordination, and required reporting. Education and awareness training, oversight of environmentally sensitive areas, contractor coordination, and required reporting.

Charles Smith, our Environmental Documentation and Permitting Lead, understands that environmental documentation and permitting are often critical factors

in moving projects toward successful implementation, and we understand that obtaining permits is more than just submitting an application. It takes tenacity, balanced with solid science and professionalism, to obtain timely permit acquisitions and verify that permit conditions are acceptable and implementable. Our team's permitting staff offers local resource knowledge, along with the ability to work constructively with regulatory staff to facilitate the timely approval of permits. These relationships help us facilitate the early involvement of agency staff in the planning process. From our experience, this is crucial to gaining agency cooperation and input, ensuring that the project is more likely to be approved, and avoiding costly delays. Agencies with whom we routinely work (and associated regulatory permits) include:

- US Army Corps of Engineers (Section 404, 408)
- US Fish and Wildlife Service (Section 7 consultation)
- California Department of Transportation (encroachment permits)
- California Department of Fish and Wildlife (Section 1602)
- California Coastal Commission
- California Department of Water Resources
- California Division of Drinking Water
- State Historic Preservation Office (Section 106 consultation)
- State Water Resources Control Board (construction/ industrial stormwater)
- Safe and Affordable Funding for Equity and Resilience (SAFER) Program
- Regional Water Quality Control Board
- (National Pollutant Discharge Elimination System (NPDES))
- Air Quality Management District (permits to construct/ operate)
- Others, as needed

Effective environmental impact assessment and permitting require a solid basis in science. The GHD team's staff of scientists is recognized for experience and expertise in wetland ecology, wetland delineations, invasive species management, habitat restoration for special status species, and ecology of amphibians, reptiles, and selected invertebrates.

Our team uses special studies during the design process to help first avoid potential impact areas and then minimize unavoidable impacts, conducted in consultation with permitting and/or funding agencies to ultimately meet agency requirements and support defensible permit documents. In addition, we prepare mitigation and monitoring plans for re-vegetation, enhancement, and restoration for a variety of habitats.

Recycled Water Compliance

GHD's recycled water compliance services are incorporated within our Integrated Water Resources Management (IWRM) programs. IWRM represents a shift in how freshwater, wastewater, and urban stormwater is managed. It takes into account sustainable strategies for climate change adaptation, water conservation, use of reclaimed water, and improved management of water quantity and quality in the urban water cycle. It promotes discussion and consensus building across various stakeholder groups, agencies, and disciplines. GHD's team of IWRM professionals can help the City develop and implement a compliance program to assist the City in meeting the waste discharge permitting requirements and monitoring and reporting requirements based upon the standards set by the California Department of Public Health. GHD's experts will help the City stay up to date on upcoming regulations including the draft Water Reclamation Requirements for Recycled Water Use and preparing for adapting to the new regulations. Our IWRM professionals have the experience and expertise in various areas of integrated water resources management, including watershed and subwatershed planning and management, stormwater design and management, specialized numerical water resources modeling, climate change impact and risk assessment, and regulatory compliance and litigation support.

Water Rights, Transfer, and Exchange Agreements

GHD's team, with a specialization in inter-agency cooperation, has robust experience navigating both the intricacies of California water law and local water rights. Our team understands the California Water Code, the different water right types, as well as how to work with legal advisors providing the information required for robust agreements.

Understanding the ramifications from hydrologic, water availability, environmental, and impacts of changes on upstream and downstream users is the basis of sound agreements. We have worked across the state on these impacts from working with State Agencies to remove lands from Williamson Act to providing water availability analysis for transfer and exchange agreements. We also have experience working with local agencies on consolidation agreements as part of our Proposition 1 and SAFER projects, which include alternatives analysis requiring the examination of intertie, mutual aid, or transfer of water rights between local agencies to verify system reliability within limited local resources.

Our team has experience working on more than a dozen recent projects requiring water rights investigation, transfer, and inter-agency cooperation. This work begins with understanding the amount of water that is being considered for transfer, exchange, or surrender, the type of water right that exists, term/conditions of the agreement, constraints related to overarching CEQA/NEPA requirements associated with SWP, and the owner/partners involved in the agreement. To establish some of this information may take negotiations with the partners to reach agreement on specifics of the agreement.

Once this has been established, our engineers begin work on understanding the issues/challenges/impacts associated with the agreement including hydrologic, environmental, and impacts on other users. Depending on the type of water right and agreement, different state and Federal agencies will need to review/ approve the process including CEQA/NEPA. For State Water Project (SWP) related water, we follow the protocols outlined by DWR on their Water Transfer Information Management System. These rights require approval from Department of Water Resources (DWR) and from the State Water Resources Control Board (SWRCB) for the transfer or exchange, as well as potentially for use of the SWP conveyance. It is important to understand and consult with the agencies that have approval, regulatory, and/or operational compliance authority early in the process to avoid delays or rejection of the agreements.

Groundwater Data and Trends

Groundwater is a limited resource, where historically more groundwater has been pulled out of the system than is put back. This overdrafting has led to the depletion of water resources that affect everything from drinking water supply to ecosystem health. Being able to observe and understand the trends in groundwater allows for a better understanding and management of this water resource. We have provided groundwater monitoring, modeling, aquifer testing and characterizing, and data analysis for projects across the state. Projects like the Napa Syar Groundwater Surface Water Monitoring, where we provided water balance calculations for a mining site to evaluate the impact of mining on the state of the groundwater.

Other projects like Santa Monica Groundwater Wellfield Analysis and Capital Improvement Program (CIP) Projects Planning, Eel River Valley Groundwater Sustainability Plan included a water budget groundwater model, aquifer wide sustainable yield estimates, detailed hydrogeological conceptual model, climate change, and aquifer analysis for long-term water supply planning.

Groundwater, Imported Water, and Other Available and Planned Supplies

Our team members have been involved in a number of the most significant integrated resource planning efforts in Los Angeles County from large scale studies seeking to optimize reuse throughout southern California, to groundwater management studies, maximizing water resources through conservation and demand management, and desalination.

The GHD team has worked on dozens of source water supply planning projects from Drinking Water State Revolving Fund (DWSRF) projects related to water supply master planning, source capacity improvements, and design for treatment, conveyance, and storage elements of small and community scale water systems, as well as City municipal and County level groundwater resource planning and water master plans with prioritization. GHD is the program manager for the high-profile Monterey Pure Water project which focuses on advanced water recycling technology of storm water, wastewater, and industrial water for aquifer replenishment for sustainably planned aquifer resource uses.

We have also worked with the California Department of Water Resources to develop outcome monitoring protocols for grant funded sustainable groundwater management projects. As part of this work, we collected data on groundwater management projects identified across California and developed an online dashboard that summarizes the benefits that can be gained from these projects: California Groundwater Projects Tool. https://experience.arcgis.com/experience/00197adac22f4b06a3f410068d43a641/

Summary

The internal and external communication structure controls the task orders overall and day to day team interactions. This communication plan will be fully vetted with the OMUC before its implementation as part of each task order. Because of our experience delivering similar projects and on-call task orders, our team is accustomed to supporting your project needs on a range of assignments on a fast-track basis. GHD brings a committed and effective On-Call Project Manager, sound tools and methods on complex infrastructure programs, and a full-service team of experts who understand the project development processes and requirements.

GHD's experienced engineering team for the OMUC's on-call contract has a thorough understanding of the project development process, allowing us to:

- Quickly mobilize teams of professionals to respond to various Task Order assignments
- Develop scope, schedule, and budget for Task Orders, meeting the OMUC's objectives and expectations
- Develop design alternatives and complete construction documents that enhance the proposed project with an emphasis on cost savings
- Recognize the OMUC's focus on project delivery to provide value to ratepayers

10. Litigation
11. Other Information
12. Certification of Proposer

→ 9. Insurance

GHD has reviewed the Agreement, attached as Exhibit "B," and agree to the terms.

GHD Inc. carries $1M each of Commercial General Liability and Automobile Liability so we supplement with Umbrella Liability. Our generic certificate includes $1M Umbrella which can be applied separately to both General and Auto giving them each $2M. A custom certificate with specific language (such as additional insured, etc.) can be provided by an issued contract upon award of the project.

Please see our sample Certificate of Insurance in ***Appendix D.***

→ 10. Litigation

Due to the commercial sensitivity and confidentiality of any litigation in which GHD may have been involved, GHD is not at liberty to disclose the information sought. However, we point out that as a component of its prudent risk management practices, GHD obtains high quality professional liability insurance in the world market, and domestically in the United States, to provide cover in the industries in which it operates. As a consequence of engaging in business, there are sometimes claims asserted which may or may not give rise to litigation.

The details and progress of any such claims are by necessity commercially sensitive and remain in confidence. We are able to inform you that there have been claims notified in the normal course of business, none of which we believe are material to the services which are the subject of your RFP. There are however presently no significant ongoing contract failures, no criminal matters, and there have been no judgments against GHD Inc. within the last 10 years.

For further information regarding GHD's claims history, kindly contact GHD's Chief Counsel, Duncan Findlay, at 602.216.7225 or duncan.findlay@ghd.com to arrange for a confidential disclosure.

→ 11. Other Information

a. Demonstration of record of staffing tasks efficiently and completing projects on time and within the allocated budget.

GHD's approach to staffing tasks efficiently and completing projects on time and within the allocated budget is based upon developing a tailored solution given the conditions, opportunities, and constraints of the project. GHD offers outstanding resources to support the needs of our clients. We have assembled a comprehensive and talented group of specialists specifically chosen to meet the project goal. The GHD Project Manager will proactively manage the engineering and design tasks to stay on time and budget.

Project Management

Project Control

Many projects are influenced by a complex system of variables and as a result, aspects of the best-planned project approach will require some type of adjustments before the project is delivered. It is very important the system of project controls works together with the understanding by the On-Call Project Manager of how all of the aspects of a project interact. We manage this by maintaining constant communication and coordination with the City, as well as with all of the technical leads.

Project Management Plan (PMP)

The execution and management of the Project are tied together by the Project Management Plan. As mentioned above in the Technical Approach section, the first step in Project Control is to develop a sound, efficient achievable and effective Project Management Plan (PMP). At the start of the project, the GHD Project Manager develops this PMP with input from the City's Project Manager, project task leads and others.

Scope Verification and Control

The GHD team understands that scope verification is very important to ensure that project deliverables are formally accepted. We assure this by providing a well-defined scope of work for each project, developed in close coordination with our delivery team. This scope will include clearly defined deliverables for each task in the scope. Conclusions and recommendations will be well-supported by support analysis. Any issues potentially requiring adjustments to scope will be proactively communicated to the City's Project Manager, along with proposed solutions and/or a plan for recovery, if required.

Schedule Control

The schedule prepared as part of the Project Management Plan will integrate the work of all sub consultants and will include milestones and sub tasks, preparation and processing, in-house Quality Control, and the City's reviews. The project schedules will be created, updated, and maintained monthly to ensure that it remains current and accurate and monthly updates will be furnished to the City's Project Manager.

Cost Control

GHD's Project Manager will track the cost and expenditure for each Task Order, using our in-house cost control tools. Prior to each invoice, GHD's Project Manager will review the progress for consistency with the Project Management Plan and ensure that the billing does not exceed the estimated fee for services rendered to date. This cost control plan ensures that our fee will always be properly tracked with the progress of work.

Risk Management

Risk Management begins with identifying risks, which generally occurs during development of the project approach and is re-visited throughout project development as part of the project control. Identified risks must be listed, addressed and tracked to ensure that they do not impact the project schedule and budget in any way that could have been avoided. When a risk cannot be avoided, it is specified as a risk to budget and/or schedule.

Once identified, a brainstorming session involving technical, budgetary, and management professionals is held to determine if a solution could be found to either eliminate or significantly reduce the risk.

Document Control

GHD has its own document control system that makes all project documents, including QC checks and comment responses, available for delivery to the City. GHD therefore has a system in place to collect and categorize all project documentation and will adapt this system to meet the City's requirements.

Every project requires oversight and management to stay on task, on budget, and on schedule. GHD will work closely with MNWD staff in the most complete, cost-effective, and efficient manner to keep project tasks focused. Having worked on many similar projects, our understanding of the City's procedures, staff, and public concerns will provide results that stay within budget and meet schedules.

QA/QC

GHD uses a quality assurance program that is certified as ISO 9001 compliant. Based on a set of standards to help organizations develop and implement quality management systems, these principals are designed to help GHD meet the needs of clients and project stakeholders while meeting statutory and regulatory requirements related to our services. In addition to external audits, GHD completes internal project and system audits using trained auditors. Compliance with existing systems is evaluated along with the effectiveness of the systems and opportunities for continual improvement. All deliverables will be subject to QC checks, as well as other project milestones identified through the collaborative effort between the City and GHD.

GHD's QA methods involve actions at the management level that directly improve the chances that QC processes and procedures will result in a product or service that meets or exceeds your expectations and contract requirements. QA ensures that these project requirements are being met by planning the processes needed to ensure quality of the work, ensuring that equipment and staffing can perform tasks related to project quality, and documenting the quality efforts which will lead to continuous improvement and the successful delivery of each work product.

Design Quality Management Plan (DQMP) – A customized DQMP will be developed for each project that will utilize a series of discipline checklists to perform specific QC checks at each stage of the design. The DQMP will serve as the guide for how all future quality reviews will be performed and overseen for the project.

Intra-discipline Reviews – Each discipline will perform a QC review of all deliverables by a senior level Subject Matter Expert (SME) prior to submittal using the DQMP's formal checking and back-checking procedure and a pre-developed set of design review checklists.

Inter-discipline Reviews – Each discipline will perform a QC review of the plans, specifications, and other relevant project documents prepared by other disciplines to confirm that interfaces are compatible using the DQMP's formal checking procedure.

Constructability Reviews – A Senior Engineer experienced in all aspects of design and construction will perform constructability reviews to confirm that the project is constructable, and that all information required to construct the project is included.

QA Certifications – Prior to each submittal the QA Manager reviews the documentation prepared for each of the QC reviews to ensure that the review followed our DQMP process, our Scope of Work, and our contract terms and conditions. The QA Manager will then certify that each document is ready for submittal.

Management Reviews – The final step that all deliverables will receive will be to have our Project Manager and/or Task Order Lead perform a final review of each work product to be submitted. These final checks will be to ensure that each submittal package is 100% complete, directions communicated by the City and stakeholders via meetings and correspondence have been followed, and all prior comments have been dispositioned and incorporated.

b. Description of community involvement.

GHD is well connected with the local community and many of our staff are active members of local organization and charities which provide GHD with a different prospective to the local environment. We have had a local presence in the Inland Empire through our work and relationships with local agencies. Our local project office in Irvine is within close proximity of the City and serves as a base where staff can work out of and quickly respond to requests for site visits and/or impromptu meetings.

GHD's involvement and investment in the communities in which we live and work strengthens our relationships with those communities, builds our understanding of their needs, and demonstrates our shared commitment to improve the quality of life for all of us.

The community outreach efforts of GHD team members encompass a vast array of local projects, as well as participation in local professional organizations and community actives.

These include:

- Inland Counties Water Association
- American Society of Civil Engineers - Inland Empire
- Various Charities (Anthesis, Caritas San Vicente, Chino Neighborhood House, HomeStrong USA, Movember, Bike MS, and many more)

c. Description of any previous involvement with the City.

GHD has previously been involved with the City of Ontario through our work with Well 50 Ion Exchange Treatment Facilities and Wells 37 and 39 Treatment Facilities. Local experience working for Inland Empire Utilities Agency has also provided insights to City requirements for encroachment permit requirements for linear construction trenching and pavement.

d. A statement that the Proposer has no conflicts of interest in connection with providing the Services.

GHD has no conflicts of interest in connection with providing Services to the City of Ontario.

→ 12. Certification of Proposal

GHD hereby submits this proposal, and by doing so, we agree to furnish services to the City in accordance with the Request for Qualifications (RFQ), and agree to be bound by the terms and conditions of the RFQ.

Appendix A

Resumes

Chris Bartleman PE

Contract Manager

Qualifications/Registrations

- BS, Civil Engineering, California State Polytechnic University, Pomona, CA, 2004
- Civil Engineer, CA #81075, 2012

Experience

20 years | 1.5 w/GHD

Brief Biography

Chris Bartleman, PE, will perform contract management services and serve as the primary point of contact. In addition to being local to the Inland Empire, Chris knows the City's requirements, standards, and construction procedures from his previous experience working on the Capital Improvement Program (CIP). Further, he is knowledgeable on the City's design guidelines, engineering, and construction personnel, which means there is no learning curve and an intrinsic understanding of the OMUC's operational preferences. His most recent work with the City includes the Well 50 Ion Exchange Treatment Facility and Wells 37 and 39 Engineering Services During Construction. In addition, Chris' experience includes inspection, construction administration, shop drawing review, and change order negotiations. His experience will be especially beneficial for this contract as he can readily anticipate potential risks during the proposal phase and provide the City options to address them. Chris has excellent communication skills and will communicate proactively with OMUC.

Project Experience

Well 50 Ion Exchange Treatment Facilities

Project Manager | Ontario Municipal Utility Corporation | Ontario, CA | The GHD team is providing Ion Exchange (IX) Treatment Facilities for Wells 50, including equipment pre-selection, preliminary and final design, and permitting of the 4.3-mgd IX facilities for perchlorate groundwater treatment. To establish the Basis of Design, the project commenced with the development of Engineering Design Guidelines for IX treatment facilities.

Wells 37 & 39 Perchlorate Removal Design

Project Manager | Ontario Municipal Utility Corporation | Ontario, CA | GHD is providing construction management services and engineering services during construction for the IX project. Serves as the Contracts and Project Manager providing project coordination with City, contractor, and sub-vendors. Review and comment on applicable submittals for process equipment. Monitors and documents Requests for Information (RFI), submittals and change orders. Provide resources for and document resident engineering. Field Inspections and monitor online portal for project information for updates and compliance. Develop and maintain risk register and conflict resolution.

IEUA On-Call Master Engineering Services Contract

Project Manager | Inland Empire Utilities Agency | Chino, CA | GHD is providing engineering services in support of IEUA's water and wastewater programs on an on-call basis for a three year period. GHD is performing the task orders in accordance with IEUA's Engineering Design Guidelines, which were also created by GHD. The scope of the task orders encompasses the preparation of design, plans, specifications, cost estimates, and contract documents for capital projects including electrical/ instrumentation, process controls, structural design, sewer improvements, water and recycled water improvements and wastewater improvements, constructability reviews, as well as asset management.

Regional 24-Inch Forcemain

Project Engineer | Jurupa Community Service District | Jurupa Valley, CA | Served as Project Engineer for the pre-design, design, and construction management for the Districts 24-inch diameter Polyvinyl Chloride (PVC) regional forcemain. The pipeline is approximately 20,000 linear feet from Jurupa Community Service District's Plant 1 to the Riverside Regional Water Quality Control Plant, with three lift stations contributing flows to the regional forcemain creating variable hydraulic conditions. During the pre-design phase, analyzed 14 hydraulic scenarios. Also prepared the design criteria portion of the report. The final reach consisted of a double barrel siphon within the Riverside Water Quality Control plant that could not be avoided due to the topography and existing utilities. The project construction cost exceeded $12 million.

Hamner Pipeline, Chino Desalter Phase 3 Expansion - Product Water Pipeline

Project Engineer | Chino Basin Desalter Authority | Riverside County, CA; Ontario, CA; Eastvale, CA | Served as Project Engineer on the District's 30-inch diameter finished water pipeline. The pipeline is approximately 23,000 linear feet of class 250 welded steel from south of the Santa Anna River to just south of Riverside Drive along Hamner Avenue in the City of Eastvale. Major project components included a 750 linear feet microtunneling portion

under the Santa Anna River, 250 linear feet jack and bore portion in the intersection of Hamner and Limonite Avenue, and pressure reduction/meter turnout facilities to three agencies. Prepared the bid specification and the south portion of the alignment contact drawings. Project construction cost exceeded $20 million.

Clay Van Buren Lift Station

Project Engineer | Jurupa Community Service District | Jurupa Valley, CA | Served as Project Engineer for the replacement lift station project, which included addition of a flow metering facility, replacing the existing mechanical equipment, adding a standby diesel generator, sewage bypassing, relocating the Southern California Edison (SCE) service meter, and lining the existing wetwell. Prepared the plans, specifications, and cost estimate for the project. Performed construction management for the project including submittal and requests for information review, progress meetings, and coordination with the field inspector.

Benedict Reservoir Interior Recoating

Project Engineer | Jurupa Community Services District | Jurupa Valley, CA | Served as Engineer for preparation of plans and specifications for the design of an interior recoating operation of the 1.1 MG welded steel reservoir. In addition to the interior recoating, the project scope included various interior and exterior improvements including new tank ladder, roof ventilation sizing per AWWA, girder/column repair, tank overflow, and relocation of inlet pipe.

Sky Country Trunk Sewer

Project Engineer | Jurupa Community Services District | Jurupa Valley, CA | Served as Project Engineer for approximately 8000 linear feet of 8"-18" diameter gravity sewer to redirect flow being sent to Riverside Water Quality Control Plant to Western Riverside Regional Treatment Plant. Trenchless technologies such as no-dig Vitrified Clay Pipe (VCP) and conventional auger style jack and bore were used in areas to avoid street closures. Two lift stations were demolished as part of the project. Project challenges included areas with difficult soil conditions and sewers with minimum slopes up to 34 feet deep. The construction cost was approximately $6 million.

Proposed Residential and Commercial Developments

Project Manager | Western Municipal Water District | Riverside County, CA | Served as Project Manager for the development services department responsible to review plans of service for proposed residential and commercial developments within Western Municipal Water District service area. Responsible for review of the District's Master Plan, development standards for water and sewer generation, and the developer's plans of service.

Brine Disposal Pipeline Design

Project Engineer | City of Beaumont | Beaumont, CA | Served as Project Engineer and managed a team of five staff members in the design of an approximately 23-mile-long 12-inch diameter High Density Polyethylene (HDPE) pipeline from the City of Beaumont Wastewater Treatment Plant (WWTP) to the discharge into the Inland Empire Brine Line in the City of San Bernardino north of the Santa Ana River. The pressurized gravity flow pipeline crosses multiple jurisdictions with varying requirements for the proposed improvements, which were clearly identified in the plans and specifications. Portions of the line are proposed parallel to Union Pacific Railroad (UPRR) right of way and installed in multiple City-owned bridges over US Army Corp of Engineers' jurisdiction. The schedule for the project completion is March of 2020 as dictated by the State Regional Water Control Board. The plans and specs were completed in less than 1-year period from the planning level completion. The utility research, field verification, potholing, and locating were a critical part of the project to prevent construction change orders. Multiple trenchless installation crossings are proposed at environmentally sensitive areas, rivers, highways, railroads, and high traffic intersections. The pipeline project's cost was estimated at approximately $30 million.

Vista and Ellis Zones Water System Improvements

Project Engineer | Eastern Municipal Water District | Riverside County, CA | Served as Project Engineer for the replacement Watson Road booster pump station, 5.63 mg welded steel reservoir, and 24- and18-inch diameter pipelines. Followed District standards for booster station guidelines to develop the plans and specifications. Project challenges included chloramine trim boosting from ammonia and on-site chlorine generation facilities, sound attenuation of standby diesel generator, and coordination with various District Staff for design input.

Chino Airport Plume Remedial Action Project

Project Manager | County of San Bernardino | Chino, CA | Served as Project Manager for the design of ten potable water well sites in and around the Chino Airport to convey water to the Chino Basin Desalter Authority's Treatment Plant. Project includes the design of approximately 20,000 linear feet of raw water pipeline, compact well footprints located in fully developed commercial areas, coordination with regulatory agencies, property acquisition support, and peer review for Volatile Organic Compounds (VOC) treatment facilities.

Greg Watanabe PE, PACP, MACP

QA/QC Manager

Qualifications/Registrations

- BS, Civil Engineering (Emphasis: Environmental Engineering, California State Polytechnic University, Pomona, CA, 2001
- Post-Graduate Coursework, Public Administration, Notre Dame de Namur University, Belmont, CA
- Civil Engineer, CA #67618, HI #11801, OR #97301, ID #20082, GU #1861
- Pipeline Assessment and Certification Program, National Association of Sewer Service Companies (NASSCO), 2010
- Manhole Assessment and Certification Program, NASSCO, 2010

Experience

20 years | 11 w/GHD

Brief Biography

Greg has over 25 years of experience in design, project management and CIP management. His emphasis has been in the oversight, QA/QC, planning, development and design of domestic water, recycled water and wastewater facilities including pumping stations; master plans; hydraulic system modeling; and over 100 miles of pipelines up to 96 inches in diameter for public utility systems. He also has relevant municipal experience in CIP planning, development and management and working with private land developers while serving as District Engineer for a Southern California municipality. Greg has also managed the design and construction of award-winning projects recognized by the American Society of Civil Engineer (ASCE) and the American Public Works Association. He has also been published by ASCE, American Water Works Association (AWWA), and the North American Society for Trenchless Technology (NASTT). Noteworthy projects include the design of a gravity sewer beneath the 100-year-old Santa Monica Pier where the pipeline was suspended over the Pacific Ocean, a booster station within the coastal zone in the City of Malibu with a 450 psi working discharge pressure, and a 96-inch water transmission main for the San Bernardino Valley Municipal Water District. He currently serves as a Director for the Western Chapter of NASTT.

Project Experience

IEUA On-Call Master Engineering Services Contract

Project Director | Inland Empire Utilities Agency | Chino, CA | GHD is providing engineering services in support of IEUA's water and wastewater programs on an on-call basis for a three year period. GHD is performing the task orders in accordance with IEUA's Engineering Design Guidelines, which were also created by GHD. The scope of the task orders encompasses the preparation of design, plans, specifications, cost estimates, and contract documents for capital projects including electrical/instrumentation, process controls, structural design, sewer improvements, water and recycled water improvements and wastewater improvements, constructability reviews, as well as asset management.

East County Advanced Water Purification (PURE) Program - Package 2

Project Manager | East County Joint Powers Authority | Santee, CA | Managed a $40M CapEx progressive design-build for 10-miles of 24-inch welded-steel transmission main, a dechlorination facility, and a 30-inch HDPE subaqueous outfall pipeline. Besides the standard open-cut pipe segments there are six trenchless pipe segments installed via auger bore (jack and bore) methods and an 800 lineal foot segment installed above ground on concrete piers to cross a steep rock slope.

P-1044 Advanced Wastewater Treatment Plant (WWTP) Conveyance Facilities

Quality Control Manager | Orion Construction, NAVFAC SW | MCB Camp Pendleton, CA | Served as Quality Control Manager for the design-build of conveyance facilities including over 70,000 lineal feet of 16-inch diameter piping, treated water piping connections, emergency interconnection and pressure reducing station, well pump and motor replacements, assessment, and replacement of distribution lines, 9,000 lineal feet of brine disposal piping, 5,000 lineal feet of force main, horizontal directional drill crossings, and appurtenances.

Wineville Extension Recycled Water Pipeline

Project Manager | IEUA | Chino Hills, CA | Oversaw the design of five-miles of 36-inch and one-mile of 24-inch welded steel pipelines to extend the Agencies recycled water system from the City of Ontario to the City of Fontana. This project included hydraulic modeling of the recycled water system to determine appropriate pipe diameters by running average daily demand, maximum daily demand, and ultimate deposition into the Agency's groundwater recharge basins. It also included the preliminary and final design of the pipeline and two turnouts discharging recycled water to groundwater recharge basins and a San Bernardino County Flood Control District channel. This included the specification of a 24-inch and 12-inch plunger-type valves enabling the pressure system to discharge to open atmosphere. Other design elements included mitigating several storm drains, flood control channel crossings, railroad crossings through pipe bridges and bore and jack construction methods.

Dry Dock No. 1 Modifications

Design Manager | NAVFAC SW | Naval Base San Diego, CA | Manage the design of the replacement of the mechanical pumping systems associated with dewatering the 19-million-gallon Dry Dock facility. The associated mechanical facilities included the internal piping, valves, and eight pumping units. The larger saltwater dewatering pumps consisted of 800 hp axial-flow 54-inch units configured to better accommodate operator safety and facilitate access. The rated flow of the saltwater dewatering pump station was approximately 120,000 gpm.

Central Guam Reservoirs Design - Hyundai Water Booster Station

Design Manager | Guam Water Authority | Guam | Managed the design of a new potable water booster station for a small community that historically observed low operating pressures and substandard pressure during fire events. This project isolated the local distribution system and converted it to a closed loop supplied by the new booster station. The new booster station consisted of a triplex pump system fitted with VFD's to supply normal flows and included a single 150 hp high flow pump. Additionally, a 2,100-gallon bladder surge tank was specified to mitigate peaks during periods of low-demands and attenuate pressure transients due to a sudden loss of power. Other features included in the booster station design included a three-room CMU block building structure that housed the pumps and manifold piping, a diesel-powered back-up generator, and electrical controls. HVAC and a ceiling-mounted trolley crane hoist system rounded out the overall design.

Caspers Wilderness Park New Tank and Well

Project Director | Orange County Parks Department | San Juan Capistrano, CA | Managed the design of a new 25,000-gallon AWWA D100 welded steel tank and groundwater production well to provide potable water service to an 8,000-acre regional park that included hiking, biking, and equestrian trails; an interpretive center; and multiple campgrounds with 75 campsites. Specific project challenges included the construction of a new tank on a remote hilltop with access restrictions, drilling of a new groundwater production well in an area without access to potable water during construction, and designing a new SCADA system for remote operation in a canyon area.

Project No. 7-66, Sunflower and Red Hill Interceptor Repairs

Project Director | Orange County Sanitation District | Costa Mesa, CA | Direct the condition assessment and recommendation of the associated repairs of approximately 6,000 linear feet of 54-inches to 78-inches sewers and three inverted siphons. The existing RCP pipe contained a 270-degree PVC lining system to mitigate corrosion. The rehabilitation design included localized repairs of the PVC lining system throughout. It also included filling the invert of the pipe with a mortar mix to both repair the damaged section of pipe and raise the overall water surface level inside the pipe to fully submerge the sections of bare concrete to mitigate future corrosion. Other critical elements included the coordination with three different cities, which had jurisdiction along the pipe alignments, temporary bypassing of the existing sewer, and the associated traffic control for both bypassing and construction operations.

Haven Avenue Regional Sewer System Repair (EN20056)

Project Director | IEUA | Chino, CA | Directed the trenchless rehabilitation of the over 50-year-old Cucamonga Trunk Sewer that is located in Haven Avenue between East Airport Drive and Mission Boulevard in the City of Ontario. The project consists of lining approximately 7,420 linear feet of 18-inch and 20- inch epoxy lined transite/Asbestos Cement Piping (ACP) and its related 19 sewer manholes. CCTV inspections revealed that the epoxy liner has failed, subjecting the pipeline to sulfuric acid corrosion which led to the deterioration of the internal pipe wall. Other tasks included traffic control, bypass design, and permitting with City of Ontario and the FAA.

Abhay Hanamsagar PMP

Project Manager

Qualifications/Registrations

- MS, Business Administration, Savitribai Phule Pune University, Pune, India, 1989
- BS, Chemical Engineering, Manipal Institute of Technology, Manipal, India, 1986
- Project Management Professional, Project Management Institute

Experience

31 years | 2 w/GHD

Brief Biography

Abhay Hanamsagar, BS (Chem Eng.), PMP: has over 31 years of experience in developing and executing projects in the Water industry, both in the manufacturing sector and as a consultant. He has a strong background in membrane filtration, Ion Exchange and includes process design, project engineering and project management, supply chain, and Program Management. He is knowledgeable about various water technology platforms, such as on-site hypo generation, arsenic contaminant removal by adsorption, and demineralization plants. He has also performed on-site system start-up and troubleshooting services in a variety of applications. Some of the projects he has worked on include OMUC Well 37/39, Santa Monica RO Upgrade and Yuma Marine base WT Plant Upgrades.

Project Experience

Wells 37 & 39 Perchlorate Removal Design

Contracts Manager/Project Manager | Ontario Municipal Utility Corporation | Ontario, CA | GHD is providing construction management services and engineering services during construction for the IX project. Serves as the Contracts and Project Manager providing project coordination with City, contractor, and sub-vendors. Review and comment on applicable submittals for process equipment. Monitors and documents Requests for Information (RFI), submittals and change orders. Provide resources for and document resident engineering, Field Inspections and monitor online portal for project information for updates and compliance. Develop and maintain risk register and conflict resolution.

Arcadia Reverse Osmosis (RO) Water Treatment Plant (WTP) Expansion Project

Senior Project Manager | City of Santa Monica | Santa Monica, CA | GHD is the owners engineer for this progressive design- build desalination, Advanced Oxidation Processes (AOP) and capacity expansion project. AOP (Ultraviolet (UV) + H2O2) is provided to address organic contamination and the RO skids are retrofitted with flow reversal technology to increase the capacity of the WTP. Serves as Project Manager for the project including coordination with the design-build team, City, and deliverables management. Also undertook reviews of process equipment submittals, Reverse Osmosis projections at varying temperature and Total Dissolved Solids (TDS) conditions, compliance with project general and special provisions. Review and comment on Piping and Instrumentation Diagrams (P&ID), Controls philosophy and instrumentation interlocks.

Carlsbad Desalination Plant – Conceptual Dissolved Air Flotation (DAFF) Retrofit Project

Senior Process Engineer | Poseidon Resources LP | Carlsbad, CA GHD was engaged by Poseidon Resources (Channelside) LP to conceptually evaluate retrofitting the existing sea water reverse osmosis pre-treatment filter cells with a new in-filter dissolved air flotation arrangement and to provide a cost estimate for the same at the Carlsbad Desalination Plant. Developed a preliminary list of the main process equipment and its sizing along with suggested technical specifications. A preliminary site layout was also developed taking in to account the existing constraints as the plant is operational.

Valley Water - Santa Teresa Water Treatment Plant

Senior Project Manager | Santa Clara Valley Water District | Santa Clara, CA | Project consisted of refurbishment/replacement of filter media, nozzles, and associated valves for the gravity filters. Reviewed contractor submittals for equipment(s) and schedule.

Water Treatment Facility Membrane Treatment Plant

Project Manager | City of Geneva | Geneva, IL | The brackish water desalination plant consisted of 4 x 1.5 mgd reverse osmosis trains along with high pressure pumping system, Clean-in-Place (CIP), and fresh flush.

Ephrata Area Joint Authority Groundwater Softening Plant

Project Manager | City of Ephrata | Ephrata, PA | Served as Project Manager for 500,000 gpd nano filtration WTP for softening of potable water.

Chevron Offshore Floating Production, Storage, and Offloading Vessel - Double-Pass Seawater RO

Project Director | Chevron | Offshore Brazil | The project consisted of furnishing pre-treatment filtration, cartridge filtration, seawater RO equipment (2x, 800 M3/D potable water, 1 x 75 M3/day process water generation), CIP, and post treatment. All to American Petroleum Institute (API) and explosion proof Class 1 Division 2 specifications.

Youth Palace Desalination Plant

Proposal/Project Manager | Intech Corporation | Egypt | Served as Proposal/Project Manager for this seawater desalination project with pre-media filtration, cartridge filtration, high pressure pumps, duplex 2205 piping and CIP/flushing system(s), three trains of 3,300 M3/D permeate capacity.

Suez Cement Company Process Water Production - High Brackish Desalination Plant (11,356 M3/D)

Project Director | Suez Cement Co. | Egypt | Scope consisted of wells, interconnecting piping, civil, RO building, RO skids, pre-treatment filtration, CIP, and fresh flush systems with all controls for automatic operation.

Azad Kavoosi PE, PEng, PMP

Project Manager

Qualifications/Registrations

- MS, Chemical Engineering, University of Toronto, Toronto, ON, 2014
- MS, Civil Engineering/Environmental, Sharif University of Technology, Iran, 2005
- BS, Civil Engineering, Sharif University of Technology, Iran, 2002
- Biological Process Design and Modelling, IHE DELFT University, Netherland, 2020
- Desalination, and Membrane Technology, IHE DELFT University, Netherland, 2021

Experience

16 years | 1 w/GHD

Qualifications/Registrations

- Civil Engineer, NV #031903
- Professional Engineer, ON #100198409, MB #46817
- Project Management Professional, Project Management Institute

Brief Biography

Azad Kavoosi has over 16 years of experience in multidisciplinary consulting and Original Equipment Manufacturer (OEM) companies as a project manager and process designer in the design, modelling, planning, and construction of wastewater/water treatment plants for municipal and industrial clients. He has solid experience in biological modelling of various industrial and municipal wastewater treatment and biosolid facility process. He led the process mechanical team for a design-build project for the City of the Winnipeg headwork facility with the peak capacity of 330 MG/d. Azad is experienced in open channel hydraulic. Within his last four years of experience, Azad managed multiple municipal WWTP upgrade projects with the capital cost of more than $150 million for various clients, including Region of Niagara, City of Toronto, Town of Bradford, and Town of Innisfil. He is well familiar with project delivery, contracts preparation, procurement, and Tender Service Requirement.

Project Experience

American Canyon Water Reclamation Facility (WRF) Comprehensive Energy Upgrades

Senior Project Engineer | City of American Canyon | The City of American Canyon owns and operates the American Canyon WRF. GHD undertook an alternatives analysis and preliminary design of solids train treatment plant upgrades to accept and co-digest organic waste from various industrial contributors including food manufacturing waste, chocolate waste, winery waste and brewery waste at an average daily flow of 2.5 MGD municipal WTTP and process flow diagrams of 5.0 MGD. This upgrade reduces greenhouse gas emissions by generation of bioenergy via anaerobic digester biogas waste. Upgrades include an industrial waste tanker receival facility, anaerobic digestion, thickening, cogeneration, dewatering and side stream treatment. Assisting on developing the Basis of Design Report and Preliminary Design. Led the development of the P&ID drawings and providing guidance to instrumentation & control and electrical team. Led the development of the plant hydraulic profile calculations and drawings.

City of Oceanside San Luis Rey WRF Comprehensive Energy Upgrades

Senior Project Engineer | City of Oceanside | The City anticipates expanding its organics collection program to meet its landfill diversion goals and is investigating looking to utilize excess digestion capacity at the San Luis Rey WRF to treat diverted organics. GHD assessed a number of co-digestion and mono-digestion scenarios to treat these waste streams. This scope of this project includes construction of a new Imported waste receiving and storage, primary sludge thickening, sidestream treatment and upgrade the Digester No. 5, biosolids handling, and combined heat & power system. Assisting on developing the Basis of Design Report and Preliminary Design. Led the development of the PID drawings and providing guidance to instrumentation & control and Electrical team. Led the development of the plant hydraulic profile calculations and drawings.

Bradford Water Pollution Control Plant Submerged Membrane Tertiary Filtration, Ultraviolet (UV) Facilities, Fine Aeration, and Generator Upgrades

Project Manager | Town of Bradford | Bradford West Gwillimbur, ON | This project was defined with the purpose of the evaluation of the various tertiary filtration process technologies such as membrane filtration, enhanced settling process and media filtration. Based on the result of the preliminary evaluation, a complete submerged membrane system was selected and designed and commissioned for the Bradford Water Pollution Control Plant with the purpose of meeting the effluent Total Phosphorus (TP) of less than 0.08 mg/L with the peak capacity of 16.9 MG/d.

This process involves planning and oversizing a six-month submerged membrane pilot study with Suez (now Veolia). Pre-selection of the supplier of the technologies, and preliminary and detailed design, contractor pre-qualification, as well as Tender support and construction management were all part of the scope of this project. T

- Led the technology evaluation and discussion with the client to select the final alternative.
- Managed cost and schedule of various disciplines through the design process.
- Resourced planning and budget allocation to multidiscipline team through the project.
- Led the pre-selection, design, contractor pre- qualification, and procurement of a submerged ultrafiltration tertiary membrane filtration and generator upgrade.

Humber Treatment Plant Preliminary Treatment Improvement

Project Manager | City of Toronto | Toronto, ON | This project included modifications to the preliminary treatment of 125 MG/d capacity plant, specifically grit removal system, which will improve the operations of the systems and reduce the operations intervention to the current installation. The project included development of solutions and design to a number of upgrades, such as vortex grit recirculation system and analysis of grit removal system, as well as Supervisory Control and Data Acquisition (SCADA) programming upgrades. Scope of services included design and construction management.

- Managed cost and schedule of various disciplines through the design process.
- Monitored overall progress and use of resources and corrective action based on requirement.
- Managed project risks, including the development of contingency plans as required.
- Led the design team for various delivery of the project during the design and construction.

Lakeshore WWTP Upgrade

Project Manager| Senior Process Engineer | InnServices Utilities Inc.| Innisfil, ON | Lakeshore WWTP upgrade includes two-phased upgrade for an extended aeration and Biological Nutrient Removal (BNR) system with tertiary membrane for TP removal in the town of Innisfil and to meet the very stringent effluent TP of 0.035 mg/L.

Work includes a flow and peak study/estimation based on historical data and population growth, wastewater quality projection for phase III and IV of the expansion, biological process design and modeling of the 6.6 MG/d WWTP (peak capacity of 13.7 MG/d) extended aeration system in Phase III and BNR system with

the capacity of 10.6 MG/d in Phase IV of expansion including upgrade to the outfall pipe.

- Led the biological modeling (GPS-X), hydraulic design, and design of a biological nutrients removal treatment plant.
- Managed cost and schedule of various disciplines through the design process. Resource planning.

Ulysses Fandino PE, PACP

Project Manager

Qualifications/Registrations

- MS, Civil Engineering, California State University, Long Beach, CA, 2001
- BS, Civil Engineering, California State Polytechnic University, Pomona, CA, 1998
- Civil Engineer, CA #64558

Experience

23 years | 8 w/GHD

Brief Biography

Ulysses is a registered civil engineer with more than 23 years of total experience as project manager and project engineer in planning, design, and construction of sanitary sewer, water pipeline, and tunneling projects. His work has entailed master planning and condition assessment of gravity sewers, pressure sewers, and storm drains; design of sewer, potable water, and recycled water pipelines; trenchless design of water and sewer pipelines via horizontal auger boring, microtunneling, and horizontal directional drilling; sanitary sewer rehabilitation; flow bypassing; pump station rehabilitation; wet and dry utility relocation; potholing utilities; and permitting. He is well-versed in preparing studies with capital improvements and financial implementation plans. He has served numerous municipal and federal clients throughout the State of California and the State of Arizona.

Project Experience

Otay 1st and 2nd Pipelines West of Highland Avenue

Project Manager | City of San Diego Public Works Department | San Diego, CA | This water transmission pipeline replacement project for the City of San Diego replaces five miles of 16- inch through 42-inch water transmission pipelines and approximately 2.3 miles of 8-12-inch water distribution mains. The project includes a new Pressure Reducing Valves (PRV) station and a new control valve station at the University Heights Reservoir. The project also includes Caltrans permitting for three trenchless 60-inch tunnel crossings of the I-805 freeway. The project will overlay streets with new Asphalt Concrete (AC) pavement, replace approximately 140 new Americans with Disabilities Act (ADA) curb ramps and upgrade accessible parking along several neighborhood streets.

Potable and Recycled Pipeline Replacements at I-5 and Oso Creek

Project Manager | Moulton Niguel Water District | South Orange County, CA | Designed a new 21-inch Potable Water (PW) main and a new 30 inch Recycle Water (RW) main bundled together inside a 72-inch steel casing under the Caltrans I 5 freeway bridge over Oso Creek utilizing trenchless microtunneling installation methods. As part of the replacement of the PW main pipeline, an additional microtunnel bore was designed for a 12-inch PW pipeline inside a 30-inch steel casing under Oso Creek within the Mission Viejo Country Club golf course to connect to the existing PW pipelines at the golf course. Additionally, a new 15-inch Sanitary Sewer pipeline was evaluated for crossing under the I 5 Freeway and the adjacent La Paz Creek using microtunneling. Biological, archaeological, and tribal surveys and field investigations were completed for California Water Act (CWA) 401 and CWA 404 permitting and to develop California Environmental Quality Act (CEQA) environmental documentation including the Initial Study/Mitigated Negative Declaration (IS/MND). Engineering support was provided during bidding and construction, and included addressing bidders' questions, preparing one bid addendum, reviewing contractor's bids, attending construction progress meetings, performing site inspections, revising bid drawings, and reviewing and responding to construction change orders, RFI's, and submittals.

Newport Coast Sewer Lift Station Rehabilitation

Project Manager | Irvine Ranch Water District | Newport Beach, CA | Served as Project Manager for the complete rehabilitation design of a 500-gpm regional sewer lift station that includes the recoating of the wet well, new CIPP lining for the 12-inch Ductile Iron Pipe (DIP) sewer force, new wet well washer system, and sewer bypass pumping during the wet well and dry well rehabilitation. The dry well rehabilitation involves a new innovative discharge header that doubles back on itself, a new 30-foot-deep underground stairwell for improved ingress/egress to the dry well, and improved ventilation. The project also includes constructing a new Concrete Masonry Unit (CMU) block electrical building with new Programmable Logic Controller (PLC) and Motor Control Center (MCC) equipment, and a new chemical odor control system.

Project No. FE20-07, Santa Ana Trunk Rehabilitation at Plant No. 1

Project Manager | Orange County Sanitation District | Santa Ana, CA | Designing a Class IV structural rehabilitation liner for approximately 300 linear feet of the existing 48-inch Reinforced Concrete Pipe (RCP) gravity trunk sewer in Plant No.1 to address severe corrosion and exposed rebar inside the 48-inch RCP. Additionally, this project will repair the Polyvinyl Chloride (PVC) liner, manhole bench, and manhole channel for the associated upstream and downstream manholes. The project also includes a comprehensive preliminary design report with the recommended rehabilitation method based on a full evaluation of overall pros and cons of each method and other factors such as life expectancy, construction costs, construction impacts to the public, hydraulics, and constructability.

La Palma Avenue (west of East Street) Sanitary Sewer Improvements Project

Project Manager | City of Anaheim Public Works Department | Anaheim, CA | Served as Project Manager for the design of replacement sewers that addresses existing and build-out deficiencies for 1,600 linear feet of 12-inch and 15-inch sewer pipes along La Palma Avenue. The project consists of coordination and permitting with Southern California Regional Rail Authority for the installation of a 30-inch steel casing with an 18-inch carrier pipe by auger boring methods crossing under the existing railroad tracks. The preliminary design determined an alternative to divert flow and eliminate a majority of the deficiencies within the existing sewer. Specific tasks required for the sewer alignment analysis included construction cost opinion, field survey, potholing, geotechnical borings, temporary flow monitoring, and Closed-Circuit Television (CCTV) inspection.

Haven Avenue Regional Sewer System Repair

Quality Reviewer | Inland Empire Utilities Agency (IEUA) | Ontario, CA | Served as Quality Reviewer for trenchless rehabilitation of the over 50-year-old Cucamonga Trunk Sewer that is located in Haven Avenue between East Airport Drive and Mission Boulevard in the City of Ontario. The project consists of lining approximately 7,420 linear feet of 18- inch and 20-inch epoxy lined transite / Asbestos Cement (AC) piping and its related 19 sewer manholes. CCTV inspections performed by IEUA revealed that the epoxy liner has failed, subjecting the pipeline to sulfuric acid corrosion, which is leading to the deterioration of the internal pipe wall. Various sewer rehabilitation methods were evaluated, including Cured-in-Place Pipe (CIPP) and spiral wound lining to recommend a suitable structural rehabilitation method for the trunk sewer.

West Anaheim Master Plan of Sanitary Sewers and East Anaheim Master Plan of Sanitary Sewers

Project Manager | City of Anaheim Public Works Department | Anaheim, CA | Prepared two separate master plan updates for the West Anaheim Area and East Anaheim Area sewer systems. The project involves wet weather flow monitoring, using Innovyze H2O Map hydraulic modeling and Esri ArcGIS software to identify sewer lines requiring rehabilitation and/or replacement, determining sewer capacity impacts due to permitted affordable dwelling units, preparing cost estimates for sewer lines needing improvements for the existing and build out land use conditions, and determining the financial plan for obtaining the funding sources on building the proposed sewer improvements.

Timothy Joyce PE, PACP, MACP, LACP

Project Manager

Qualifications/Registrations

- BS, Civil Engineering, University of Connecticut, Mansfield, CT, 1990
- Civil Engineer, CA #51596
- Pipeline Assessment and Certification Program (PACP), National Association of Sewer Service Companies (NASSCO), 2019
- Manhole Assessment and Certification Program (MACP), NASSCO, 2019
- Lateral Assessment and Certification Program (LACP), NASSCO, 2019

Experience

30 years | 2 w/GHD

Brief Biography

Timothy Joyce has more than 30 years of experience in the planning, conceptual design, detailed design, and construction management of pipelines, pump stations, diversions, and other miscellaneous civil infrastructure projects throughout Southern California. These projects consist of both new construction and rehabilitation projects with engineering fees ranging from $10,000 to $4 million. He has a proven ability to communicate well with clients, ensuring project goals are met. He is then able to act on client information and lead design teams to prepare cost effective solutions that provide both maintainability and a long service life. In addition to leading design teams, Tim also provides QA/QC reviews and input on constructability for other projects. Along with large projects, he has supported numerous smaller design projects and engineering studies under on-call contracts for Los Angeles County Sanitation Districts, Moulton Niguel Water District, South Orange County Wastewater Authority, the City of Santa Ana, the City of Huntington Beach, and the City of Los Angeles' Bureaus of Engineering and Sanitation, and Caltrans.

Project Experience

Los Angeles Bureau of Sanitation Task Order Solicitation (TOS) SN 89 Sewer Advanced Planning Services

Project Manager | Los Angeles Bureau of Sanitation | Los Angeles, CA | Served as Project Manager supporting the City of Los Angeles, Bureau of Sanitation Wastewater Engineering Services Division, on technical matters and projects including field investigations, sewer capacity studies, Closed-Circuit Television (CCTV) inspections, sewer master plans, planning studies, concept reports, graphics preparation, and staffing/administrative tasks.

Balboa Trunk Sewer Rehabilitation

Project Manager Orange County Sanitation District | Newport Beach, CA | Served as Project Manager for a project that rehabilitated approximately 12,500 linear feet of 15-inch to 30-inch sewer located along the congested Newport Boulevard. The project entailed NASSCO pipeline and manhole inspections and condition assessments; CIPP rehabilitation design; manhole rehabilitation design; hydraulic analyses; sewer bypass design; traffic control design; community outreach; and design support during construction.

Regional Lift Station Force Main Replacement

Senior Engineer | Moulton Niguel Water District (MNWD) | Moulton Niguel, CA | Senior Engineer providing engineering services for the replacement of approximately 15,000 linear feet of 20- inch and 24-inch Techite sewer force main with Laguna Niguel Regional Park. The replacement force main consists of dual 24-inch pipeline approximately 8,000 feet length and will be constructed with Laguna Niguel Regional Park. Scope of services include preliminary design, final design, and construction phase services. Consulted on overall design for the project.

Regional Lift Station Enhancements

Senior Engineer | Moulton Niguel Water District | Moulton Niguel, CA | Served as Senior Engineer providing engineering services for a new back-up pumping system to the existing lift station with a wide-ranging flow rate from a typical daily peak of 7,200 gpm and a maximum wet weather peak of 15,500 gpm. The design included evaluating various pump capacities and performance curves with the system head curve with the intent to have an independently powered backup pumping system that will engage during scheduled maintenance or emergency conditions. Also, the

design provided additional emergency wet well storage in the form of a pre-cast concrete structure adjacent to the existing sewer manhole. Tim consulted on overall design for the project

JB Latham Treatment Plant Digester 4 Rehabilitation

Project Manager | South Orange County Wastewater Authority | Dana Point, CA | Served as Project Manager for the preliminary design; final design plans and specifications; and construction support services for this project. Digester 4 is an anaerobic digester consisting of cast-in-place concrete walls with a diameter of 45 feet and a steel truss roof. Key attributes of this project include:

- Condition assessment, including structural inspections and evaluations
- Rehabilitation methods selected included concrete and structural steel repairs, interior and exterior coatings, gas piping and valve replacement, sludge line, and miscellaneous valve replacements
- Enhancement to operations and maintenance included new level sensors and improved maintenance access points; due to the corrosive environment, special consideration was given to protective coatings and material selection

Warner Industrial Park Water

Senior Engineer | City of Santa Ana | Santa Ana, CA | Served as Senior Engineer for preliminary design, final design plans and specifications, and construction support services for the Warner Industrial Community Water Improvement project. The final project consisted of replacing approximately 5,000 feet of cast iron water mains with PVC and ductile iron pipelines. The project also entailed replacement of services (to meet current standards), air/vac release valve, blowoffs, and valves.

Yorktown Pipeline Rehabilitation

Project Manager | City of Huntington Beach | Huntington Beach, CA | Served as Project Manager for the design and construction support for a project to rehabilitate approximately 3.0 miles of 30-inch diameter steel water transmission pipeline including valve replacements, blowoff replacements, air/vac release valve replacements, the addition of cathodic protection system, traffic control, and appurtenant civil work.

Albion Riverside Park Project

Senior Project QA/QC Reviewer | City of Los Angeles Bureau of Engineering | Los Angeles, CA | Served as Senior Project QA/QC Reviewer for a project, located adjacent to the Los Angeles River, involves transforming a six-acre site, previously used for dairy warehousing and distribution, into a riverfront park and recreational facility that will benefit nearby disadvantaged low-income neighborhoods. In addition, the City is using the redeveloped property to increase the current capacity for managing storm water runoff. This important water quality project is part of the City's overall efforts through the Proposition O Bond Program to improve water quality and reduce pollutant loads that are currently being conveyed to the rivers, lakes, and oceans within the greater Los Angeles area.

Huntington Beach Downtown Cast Iron Pipeline Replacement

Project Manager | City of Huntington Beach | Huntington Beach, CA | Served as Project Manager for the design of the replacement of approximately 2,400 linear feet of cast iron water mains with new PVC pipelines. The project entailed valve replacements, meter replacements, alley reconstruction, and appurtenant civil work.

City of Huntington Beach Asbestos Cement Pipeline Replacement

Project Manager | City of Huntington Beach | Huntington Beach, CA | Served as Project Manager for the design of the replacement of approximately 1,200 LF of AC pipe water mains with new PVC pipelines. The project entailed valve replacements, meter replacements, alley reconstruction, and appurtenant civil work.

Coenraad Pretorius PE

Technical Advisor

Qualifications/Registrations

- BS, Chemical Engineering, University of Stellenbosch, South Africa, 1993
- BS (Honors), Microbiology, University of Cape Town, South Africa, 1990
- BS, Genetics and Biochemistry, University of Stellenbosch, South Africa, 1989
- Civil Engineer, CA #63203

Experience

29 years | 6 w/GHD

Brief Biography

Coenraad is GHD's service line leader for wastewater treatment and recycling in North America. He has 29 years of experience in process design for water and wastewater treatment. His experience includes biological nutrient removal, secondary treatment design, capacity rating, process modeling and oxygen transfer, as well as grit removal. Recently he has focused on process control and energy saving strategies, including optimization of mixing and aeration in aeration basins, as well as mixing in anaerobic digesters. In South Africa, Coenraad also worked on low maintenance systems (including pond systems), industrial effluent treatment, acid mine drainage, and treatment of potable water. Coenraad is also a chapter co-author for the Guidelines for Grit Sampling and Characterization (2016) and Design of Water Resource Recovery Facilities, MOP 8, 6th Edition (2017).

Project Experience

IEUA On-Call Master Engineering Services Contract

Process Specialist | Inland Empire Utilities Agency | Chino, CA | GHD is providing engineering services in support of IEUA's water and wastewater programs on an on-call basis for a three year period. GHD is performing the task orders in accordance with IEUA's Engineering Design Guidelines, which were also created by GHD. The scope of the task orders encompasses the preparation of design, plans, specifications, cost estimates, and contract documents for capital projects including electrical/instrumentation, process controls, structural design, sewer improvements, water and recycled water improvements and wastewater improvements, constructability reviews, as well as asset management.

Moulton Niguel Water District Plant 3A

Process Specialist | Moulton Niguel Water District | Aliso Viejo, CA | Oversaw process modeling to determine: 1) the capacity of the existing facilities, 2) additional process units required to treat a flow of 6 mgd to meet existing effluent standards, 3) additional process units required to treat a flow of 6 mgd to meet an effluent Total Nitrogen (TN) concentration of 10 mg/L, and 4) process units required to treat a flow of 6 mgd to meet an effluent TN limit of 10 mg/L using a MBR process. As part of the project additional sampling was performed and it was determined that the influent has a very low soluble substrate concentration, so that an abnormally large anoxic fraction would be required to reliably meet the effluent TN limits. It was also shown that the primary clarifiers occasionally achieved abnormally high removal efficiencies, which further added to the challenge of meeting effluent TN limits.

Investigator Plant 1 Sludge Process

Process Specialist | Orange County Sanitation District (OC San) | Orange County, CA | Investigated the potential benefits and savings that could be achieved by producing thicker primary sludge at Plant No. 1 for the OC San. To maintain OC San's target hydraulic retention time of 15 days in the digesters it was necessary to either construct more digester volume or produce thicker primary sludge. As a result, OC San decided to pursue a centrifuge thickener project that had the ability to co-thicken primary sludge with waste activated sludge. This led OC San to review the primary sludge concentration data at Plant #1. It was discovered that the rectangular primary clarifiers could not match the older circular primaries as far as primary sludge concentration was concerned. OC San commissioned a project to investigate the cause for the lower primary sludge concentrations from the rectangular primaries, as well as the overall impact on the facility if the primary sludge concentration achieved in the circular primaries could be matched in the rectangular units. A process model was created, and process outputs were used as inputs to an operations cost model. It was shown that significant savings are possible if the circular unit concentration could be matched and external primary sludge thickening in centrifuges could be avoided.

It was concluded that part of the reason for the lower sludge concentrations from the rectangular units were due to the design of the sludge hoppers. Due to the complexity of implementing changes to these hoppers, the project did not proceed, and centrifuge co-thickening of primary sludge was implemented.

Aerated Grit Basin Performance Study - Plant 1

Process Engineer | Orange County Sanitation District | Orange County, CA | Participated in a study to evaluate aerated grit basin performance. Advised the project team on grit terminal settling velocity and how it would be affected by coating with organic matter.

Orange County Sanitation District Rate Study

Process Engineer | Orange County Sanitation District | Orange County, CA | Provided a rate study to determine the proper charge the Orange County Sanitation District should use for the biosolids that Irvine Ranch Water District, California sends to its facilities. A simplified plant mass balance was developed for the Irvine Ranch facility to allow the client to estimate solids quantities based on the available plant data and projected future flows and loads.

Carbon Canyon Water Recycling Facility Asset Management and Improvements

Process Engineer | Inland Empire Utilities Agency (IEUA) | Chino, CA | Developed a calibrated process model of the facility and served as a process specialist for the evaluation of different alternatives for modifying the aeration basins and upgrading the aeration system. For each alternative, the impact on effluent quality was evaluated, as well as the life cycle cost. The selected alternative is under design and will create a consistent configuration in all aeration basins, replace the existing blowers with turbo blowers, upgrade the existing tube diffusers, expand the aeration control system to include ammonia- based aeration control and improve sludge settling characteristics, while maintaining low effluent total inorganic nitrogen levels.

City of Los Angeles Hyperion Treatment Plant

Process Specialist | City of Los Angeles Department of Public Works | Los Angeles, CA | Served as Process Specialist for an evaluation of options to reduce ammonia-nitrogen concentrations in the secondary effluent of the Hyperion Treatment Plant for the City of Los Angeles. The project included consideration of the routing of recycle streams, recycle treatment, conversion of oxygen reactors to nitrifying air activated sludge, and partial nitrification in the existing oxygen reactors. For all options, the expected impact on effluent quality was determined for ocean discharge and West Basin Municipal Water District reuse.

Model of Unit 1 Primary Clarifier and Surrounding Circular Aeration Basin

Process Specialist | City of San Bernardino | San Bernardino, CA | Created a model of the Unit 1 primary clarifier and surrounding circular aeration basin for the City of San Bernardino. Identified the required feed points, treatment capacity, and optimal operation with any two adjacent zones (out of a total of 10) out of service. The secondary treatment system is also being converted to nitrogen removal.

Eastern Municipal Water District Expansion Projects

Process Engineer | Eastern Municipal Water District | California | Served as Process Engineer on these projects which included expansion of the San Jacinto Regional Water Reclamation Facility to 14 mgd, expansion of the Moreno Valley Regional Water Reclamation Facility to 18 mgd, and expansion of the Perris Valley Regional Water Reclamation Facility to 22 mgd. These projects typically include modifications of existing aeration basins to achieve nitrogen removal, optimization of the use of existing process units in future treatment configurations, integration between new and existing process units, evaluation of new solids handling technologies and their effect on secondary treatment, and comparison of new technologies with existing equipment. The Perris Valley project included providing temporary fine-bubble aeration to an operating oxidation ditch without taking the ditch out of service in order to ensure that interim flow increases could be treated until the new plant is put in service.

Hector Ruiz PE

Technical Advisor

Qualifications/Registrations

- MS, Civil and Environmental Engineering and Science, Stanford University, Stanford, CA, 1992
- BS, Civil Engineering, California State Polytechnic University, Pomona, CA, 1990
- Civil Engineer, CA #55245

Experience

34 years | 5 w/GHD

Brief Biography

Hector has more than 34 years of experience in utility management and engineering, including planning, design, construction, and operation of improvements and upgrades to water/wastewater/stormwater systems. Hector's experience with utility management includes working side-by-side with engineering, planning, legal counsel, finance, maintenance, and operations personnel on business workflows, processes, implementing Computerized Maintenance Management Systems (CMMS), developing condition assessment protocols, developing Asset Management (AM) Plans, conducting business case evaluations, and developing short-term and long-term investment profiles. Hector's experience in the public sector includes the oversight and management of water and wastewater treatment personnel and facilities for a public agency in Orange County, California where he served as District Engineer and General Manager (2005-2018). Hector brings his experience from the public sector of having worked for many years with regulators, engineers, operators, and maintenance technicians in effectively managing an agency's operation, finances, security, and infrastructure and as such, understands the value of utility management from an owner's perspective.

Project Experience

IEUA On-Call Master Engineering Services Contract

Technical Advisor | Inland Empire Utilities Agency | Chino, CA | GHD is providing engineering services in support of IEUA's water and wastewater programs on an on-call basis for a three year period. GHD is performing the task orders in accordance with IEUA's Engineering Design Guidelines, which were also created by GHD. The scope of the task orders encompasses the preparation of design, plans, specifications, cost estimates, and contract documents for capital projects including electrical/instrumentation, process controls, structural design, sewer improvements, water and recycled water improvements and wastewater improvements, constructability reviews, as well as asset management.

Specifically, Hector has worked on the following asset management tasks:

- Regional Plant 4 Asset Register Accuracy and Hierarchy
- Condition Assessment Master Plan
- Business Case Evaluations (Above Grade Storage and Solids Handling Facility)
- Regional Plant 4 Risk Framework Development and Asset Criticality

Enterprise AM Strategy Initiatives, and Program Development

AM Advisor | Inland Empire Utilities Agency (IEUA) | Chino, CA | Served as AM Advisor for the development of the IEUA Enterprise AM Strategy. A Gap Assessment was conducted by GHD in following with ISO 55001 guidelines that included facilitating workshops and working closely with IEUA's engineering, O&M, business services, and CMMS staff in development of an overall AM strategy. In conducting the Gap Assessment, GHD facilitated several workshops on various topics and areas of practice in AM including data management, information technology, maintenance management, condition assessments, AM policy, and AM governance. IEUA has begun implementing various initiatives identified in the AM strategy, including an AM policy, AM governance, spare parts strategy, AM ready specifications, and the maintenance optimization of its collection system.

Metropolitan Water District of Southern California On-Call AM Services

Project Manager | Metropolitan Water District of Southern California | Southern California | Served as Project Manager for providing as-needed AM planning services to the Metropolitan Water District of Southern California. GHD has been working

with Metropolitan as an advisor with a focus on facilitating workshops and performing reviews for the continued development of Metropolitan's AM program. GHD worked closely with Metropolitan's engineering, operations, maintenance, and AM staff in development of a Strategic AM Plan and in identifying leading best practices in AM. GHD facilitated several workshops (on-site and online) on various topics and areas of practice in AM including data management, information technology, maintenance management, assessing Gaps, condition assessments, and review of asset hierarchy and register development.

Specific Tasks for Development of a Comprehensive AM Plan

Project Manager | Elsinore Valley Municipal Water District (EVMWD) | Elsinore, CA | Served as Project Manager for the EVMWD Development of a Comprehensive AM Plan. GHD worked closely with the EVMWD to implement leading best practices in AM, specifically preparing risk prioritization plans and asset categorization registers for linear and representative vertical assets. Utilizing data from Geographic Information System (GIS), CMMS software, and the collection system program, Granite, GHD worked with EVMWD to develop risk-based investment profiles for its water distribution system, gravity sewer system, and a representative lift station and water booster pump station. GHD worked with EVMWD to develop risk profiles that applied a rating system using CoF and PoF for use in preparation of capital replacement budgets (short-term and long-term investment profiles). GHD performed an assessment of EVMWD's CMMS system and developed a set of functional requirements for use in procurement of an upgraded or new CMMS system. Over the course of the project, GHD facilitated approximately twenty technical sessions or workshops with staff from planning, engineering, and O&M. From these sessions, valuable insight and direction from EVMWD staff was obtained and used to prepare a Roadmap that identified key AM initiatives and leading best practices for further development of EVMWD's AM Program.

AM, Risk & Resiliency Assessment (RRA) and CMMS

Project Manager | Water Facilities Authority | Upland, CA | GHD developed an asset register and condition assessment protocol for Operations and Maintenance (O&M) staff's assessment of assets for the 80mgd capacity Agua de Lejos Treatment Plant and transmission main system. The asset register is based on a hierarchy and will be used with the "To-Be" workflows developed in a new CMMS. GHD has been working closely with the Authority to develop condition assessment protocols and maintenance management strategy groups for use in the development of a Tactical AM Plan. The Tactical AM Plan will provide the Authority with long-term investment profiles for asset renewal and replacement and establishing reserves and a Capital Improvement Program (CIP) that relies less on age and more on true asset condition and risk. In addition, the Asset Register is serving a dual purpose for use in procuring a new CMMS. GHD identified improvements and recommendations to upgrade and replace a legacy CMMS. GHD conducted several on-site and online AM training sessions and workshops, including developing an asset register, condition assessment protocol, and Consequence of Failure (CoF) and Probability of Failure (PoF) criteria for preparation of representative capital replacement budgets. GHD also updated the Authority's RRA Plan in compliance with America's Water Infrastructure Act of 2018. Currently the Water Facilities Authority is in the process of implementing the various AM initiatives and best practices.

Desalination Facilities Evaluation and Exit Test

Project Manager | City of Santa Barbara | Santa Barbara, CA Project Manager for the asset evaluation and exit test of the City's 3 MGD Charles D. Meyer Seawater Desalination Plant In accordance with their agreement with the Design/Build/Operate (DBO) Contract with IDE. Hector has been working collaboratively with the City's staff and consultant and has a comprehensive understanding of the City's seawater desalination facility's assets, has developed an implementation plan for assessing their condition and the methodology for evaluating their performance and value to the City.

Collection System Condition Assessment and

Maintenance Optimization | Inland Empire Utilities Agency | Chino, CA | Served as Owner's Engineer and advisor for the development of the Inland Empire Utilities Agency's (IEUA) Collection System Condition Assessment and Maintenance Optimization Project. As the Owner's Engineer GHD worked with Engineering and Operations in reviewing its existing sewer condition assessment program and led the development of a scope of services, specifications, and preparation of the technical content of an RFP for conducting a condition assessment of IEUA's sewer system, optimizing its sewer cleaning and inspection program, and evaluating software needs for asset management. Work included scoping of sewer lift station and force mains for condition assessment, siphon condition assessments, and condition assessment of gravity mains ranging from 6" to 54".

- Board Certified Environmental Engineer, American Academy of Environmental Engineers & Scientists
- Land Surveyor-in-Training, AZ #08653

Experience

27 years | 14 w/GHD

Brief Biography

Bill joined GHD in 2010 and offers more than 26 years of planning, designing, and constructing water and wastewater improvements for municipalities and utilities. He has served as a project manager on more than 80 water and wastewater projects for Arizona municipalities since 2001, including Phoenix, Scottsdale, Peoria, Glendale, Mesa, Tolleson, and Surprise. Bill's project experience includes water models, sewer models, waterlines, sewer lines, water facility upgrades and modifications, Pressure Reducing Valves (PRV), lift station design and upgrades, and large diameter meter replacements.

Project Experience

City of Scottsdale Water/Wastewater On-Call Tasks Project Manager

City of Scottsdale | Scottsdale, AZ | Manages all of GHD's Scottsdale on call work. GHD has been providing on-call water and wastewater engineering design and post design services to the City of Scottsdale since 2006. Designs have included water meter replacements ranging from 3-30 inches in diameter; water storage tank assessment and rehabilitation for concrete and steel reservoirs ranging from 500,000 gallons to 5,000,000 gallons; BPS (BPS) replacements; waterline replacements; and sewer main replacements. Tasks under this on call contract include Water Storage Tank Assessment & Rehabilitation (Sites 7, 32, 42, 80, and 124); BPS Replacements (Sites 56, 57, 98C, and 116); Large Meter Replacements; Desert Mountain Water Main Replacement; and Drinkwater Sewer Replacement.

Water & Wastewater On-Call Engineering Services, Chaparral Water Treatment Plant (Combined Projects)

Project Manager | City of Scottsdale | Scottsdale, AZ | Served as Project Manager on more than a dozen on call task orders at the Chaparral WTP since 2011 and oversaw piping, pump, screen, blower, and process upgrades. Projects included a force main from the wash water recovery pump station to a sewer in Hayden Road; new rotating screens at the Arizona Canal; a 12-inch flush connection from the Motorola PCX 1 line; new membrane drain piping; backpulse piping; chemical pumps; and the review of existing yard piping and valves to determine the cause of damage to existing valves and piping.

New River Waterline Interconnections

Project Manager | City of Peoria | Peoria, AZ | Oversees all aspects of the project, including leading the design team and maintaining the project scope, schedule, and budget, and ensuring implementation of the GHD Quality Control System. GHD provided design services for two waterline interconnections to connect existing City and existing New River waterlines. The existing lines were connected approximately 300 feet from the intersections of Lake Pleasant Parkway and Beardsley Road (16-inch city waterline and 12-inch New River waterline), and 83rd Avenue and Deer Valley Road (16- inch city waterline and 12-inch New River waterline).

Water Main Replacement Program, Maricopa Freeway to Buckeye Road and 7th Avenue to Central Avenue (WS85509001)

Quality Control Manager City of Phoenix | Phoenix, AZ | Provided quality control review of all reports and construction documents to ensure that all Quality Assurance/Quality Control (QA/QC) procedures were followed. GHD provided design services for 27,781 linear feet of water main and 246 service replacements for aging small diameter galvanized iron, cast iron, and Class 100 AC

piping. A replacement water main was designed for Central Avenue, which is heavily congested with utilities. GHD worked with the City and utility reviewers to ensure adequate separation and that Phoenix design requirements were met while limiting the number of deflections required for installation. GHD also assisted the City in identifying additional aging infrastructure in the project area for future replacement.

Tartesso Water and Wastewater Improvements

Project Engineer | Private Developer | Buckeye, AZ | Served as the lead water engineer on the design of the Tartesso community, which included six well sites. The 5,000-acre project was planned and designed in five phases. Potable and raw water systems included multiple pressure zones. In support of the first phase, designed its Unit 1 water supply facility. The facility including two well sites, 9,000 gallons per minute (gpm) booster pumps, 2 mg storage reservoir, hydropneumatic tank, and onsite disinfection. In addition to the Unit 1 facility, designed a smaller water facility and well site at the Tartesso Water Reclamation Facility (WRF). Following these initial designs, designed an additional four well sites. Five of the wells were linked with a common raw water transmission system that could discharge to multiple water supply facilities. Each of these wells was designed with a discharge capacity of approximately 1,500 gpm.

Site 71 Odor Control System Design

Project Manager | City of Scottsdale | Scottsdale, AZ | 2016 | Managed the design team for this project in which GHD provided the design to add chemical injection to Site 71 to provide odor control for the nearby sewer system. The injection system was designed based on using Ferric Chloride as the odor control chemical. The new feed system included reuse of an existing 5,500-gallon tank, new concrete containment basin and eye wash, metering pump system, and piping and valves for discharge into the existing sewer system.

111th Avenue and Olive Avenue Lift Station

Project Manager | EPCOR Water (USA) Inc. | Sun City, AZ | Managed the design and construction team for this project in which GHD provided design and construction administration and inspection services to replace an existing lift station with a new lift station immediately adjacent to the existing site. GHD prepared a design report evaluating the existing system including wet well size, pump capacity, and force main velocities. The project included rerouting the sewer line; a new wet well; two submersible pumps; odor control unit; shade structure; piping relocation to eliminate confined space entry; grading and ground treatment; upgrades to perimeter walls and gates; and electrical and control systems upgrades.

Lift Station 56 Rehabilitation and Upgrades

Project Manager | City of Phoenix | Phoenix, AZ | 2017 (11125182) | Led the GHD team in providing design, permitting, and construction administration and inspection services to refurbish Lift Station 56 located at 11 W. Liberty Lane. The on-site piping improvements included removal of valves and flowmeter in confined spaces, a new above grade discharge assembly, dual flowmeter assemblies, and connection for future installation of a redundant force main. GHD also coordinated with the JOC contractor, local utilities, Phoenix Water and Building Depts., and Maricopa County Environmental Services Department.

City of Scottsdale Wastewater Modeling & Analysis

Project Manager | City of Scottsdale | Scottsdale, AZ | Served as part of a team that updated the Scottsdale wastewater model to reflect recent billing data and flow metering results, as well as updated development plans and projections. The model utilizes dry and wet weather steady state and extended period scenarios and will be used to identify current and future capacity challenges within the system. Deliverables included recommending system improvements, a report documenting the project's efforts, and a user's guide for the model.

Coverage Extension Endorsement

ZURICH

Policy No.	Eff. Date of Pol.	Exp. Date of Pol.	Eff. Date of End.	Producer No.	Add'l. Prem	Return Prem.
BAP 3757423-08	07/01/2023	07/01/2024	07/01/2023		---	---

THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.

This endorsement modifies insurance provided under the:

Business Auto Coverage Form
Motor Carrier Coverage Form

A. Amended Who Is An Insured

1. The following is added to the **Who Is An Insured** Provision in **Section II – Covered Autos Liability Coverage**:

   The following are also "insureds":

   a. Any "employee" of yours is an "insured" while using a covered "auto" you don't own, hire or borrow for acts performed within the scope of employment by you. Any "employee" of yours is also an "insured" while operating an "auto" hired or rented under a contract or agreement in an "employee's" name, with your permission, while performing duties related to the conduct of your business.

   b. Anyone volunteering services to you is an "insured" while using a covered "auto" you don't own, hire or borrow to transport your clients or other persons in activities necessary to your business.

   c. Anyone else who furnishes an "auto" referenced in Paragraphs **A.1.a.** and **A.1.b.** in this endorsement.

   d. Where and to the extent permitted by law, any person(s) or organization(s) where required by written contract or written agreement with you executed prior to any "accident", including those person(s) or organization(s) directing your work pursuant to such written contract or written agreement with you, provided the "accident" arises out of operations governed by such contract or agreement and only up to the limits required in the written contract or written agreement, or the Limits of Insurance shown in the Declarations, whichever is less.

2. The following is added to the **Other Insurance** Condition in the Business Auto Coverage Form and the **Other Insurance – Primary and Excess Insurance Provisions Condition** in the Motor Carrier Coverage Form:

   Coverage for any person(s) or organization(s), where required by written contract or written agreement with you executed prior to any "accident", will apply on a primary and non-contributory basis and any insurance maintained by the additional "insured" will apply on an excess basis. However, in no event will this coverage extend beyond the terms and conditions of the Coverage Form.

All other terms, conditions, provisions and exclusions of this policy remain the same.

Includes copyrighted material of Insurance Services Office, Inc., with its permission.

M. Temporary Substitute Autos – Physical Damage

1. The following is added to **Section I – Covered Autos:**

   Temporary Substitute Autos – Physical Damage

   If Physical Damage Coverage is provided by this Coverage Form on your owned covered "autos", the following types of vehicles are also covered "autos" for Physical Damage Coverage:

   Any "auto" you do not own when used with the permission of its owner as a temporary substitute for a covered "auto" you do own but is out of service because of its:

   1. Breakdown;
   2. Repair;
   3. Servicing;
   4. "Loss"; or
   5. Destruction.

2. The following is added to the Paragraph **A. Coverage** Provision of the **Physical Damage Coverage** Section:

   Temporary Substitute Autos – Physical Damage

   We will pay the owner for "loss" to the temporary substitute "auto" unless the "loss" results from fraudulent acts or omissions on your part. If we make any payment to the owner, we will obtain the owner's rights against any other party.

   The deductible for the temporary substitute "auto" will be the same as the deductible for the covered "auto" it replaces.

N. Amended Duties In The Event Of Accident, Claim, Suit Or Loss

Paragraph **a.** of the **Duties In The Event Of Accident, Claim, Suit Or Loss** Condition is replaced by the following:

a. In the event of "accident", claim, "suit" or "loss", you must give us or our authorized representative prompt notice of the "accident", claim, "suit" or "loss". However, these duties only apply when the "accident", claim, "suit" or "loss" is known to you (if you are an individual), a partner (if you are a partnership), a member (if you are a limited liability company) or an executive officer or insurance manager (if you are a corporation). The failure of any agent, servant or employee of the "insured" to notify us of any "accident", claim, "suit" or "loss" shall not invalidate the insurance afforded by this policy.

   Include, as soon as practicable:

   (1) How, when and where the "accident" or "loss" occurred, and if a claim is made or "suit" is brought, written notice of the claim or "suit" including, but not limited to, the date and details of such claim or "suit";

   (2) The "insured's" name and address; and

   (3) To the extent possible, the names and addresses of any injured persons and witnesses.

   If you report an "accident", claim, "suit" or "loss" to another insurer when you should have reported to us, your failure to report to us will not be seen as a violation of these amended duties provided you give us notice as soon as practicable after the fact of the delay becomes known to you.

O. Waiver of Transfer Of Rights Of Recovery Against Others To Us

The following is added to the **Transfer Of Rights Of Recovery Against Others To Us** Condition:

This Condition does not apply to the extent required of you by a written contract, executed prior to any "accident" or "loss", provided that the "accident" or "loss" arises out of operations contemplated by such contract. This waiver only applies to the person or organization designated in the contract.

Includes copyrighted material of Insurance Services Office, Inc., with its permission.

WORKERS COMPENSATION AND EMPLOYERS LIABILITY INSURANCE POLICY **WC 00 03 13**

(Ed. 4-84)

WAIVER OF OUR RIGHT TO RECOVER FROM OTHERS ENDORSEMENT

We have the right to recover our payments from anyone liable for an injury covered by this policy. We will not enforce our right against the person or organization named in the Schedule. (This agreement applies only to the extent that you perform work under a written contract that requires you to obtain this agreement from us.)

This agreement shall not operate directly or indirectly to benefit anyone not named in the Schedule.

Schedule

ALL PERSONS AND/OR ORGANIZATIONS THAT ARE REQUIRED BY WRITTEN CONTRACT OR AGREEMENT WITH THE INSURED, EXECUTED PRIOR TO THE ACCIDENT OR LOSS, THAT WAIVER OF SUBROGATION BE PROVIDED UNDER THIS POLICY FOR WORK PERFORMED BY YOU FOR THAT PERSON AND/OR ORGANIZATION.

WAIVER OF TRANSFER OF RIGHTS OF RECOVERY AGAINST OTHERS TO US

This endorsement modifies insurance provided under the following:

COMMERCIAL GENERAL LIABILITY COVERAGE PART
PRODUCTS/COMPLETED OPERATIONS LIABILITY COVERAGE PART

SCHEDULE

Name Of Person Or Organization: **Where required by written contract**
Information required to complete this Schedule, if not shown above, will be shown in the Declarations.

The following is added to Paragraph **8. Transfer Of Rights Of Recovery Against Others To Us** of **Section IV – Conditions:**

We waive any right of recovery we may have against the person or organization shown in the Schedule above because of payments we make for injury or damage arising out of your ongoing operations or "your work" done under a contract with that person or organization and included in the "products-completed operations hazard". This waiver applies only to the person or organization shown in the Schedule above.

SCHEDULE

Name of Person or Organization:
Where required by written contract

(If no entry appears above, information required to complete this endorsement will be shown in the Declarations as applicable to this endorsement.)

A. Section II – Who Is An Insured is amended to include as an insured the person or organization shown in the Schedule, but only with respect to liability arising out of your ongoing operations performed for that insured.

B. With respect to the insurance afforded to these additional insureds, the following exclusion is added:

2. Exclusions

This insurance does not apply to "bodily injury" or "property damage" occurring after:

(1) All work, including materials, parts or equipment furnished in connection with such work, on the project (other than service, maintenance or repairs) to be performed by or on behalf of the additional insured(s) at the site of the covered operations has been completed; or

(2) That portion of "your work" out of which the injury or damage arises has been put to its intended use by any person or organization other than another contractor or subcontractor engaged in performing operations for a principal as a part of the same project.

Traffic Control | Extensive	$ 1,750.00	$1,750.00
Traffic Control | Half day..|..25-55 MPH	$ 750.00	$675.00
Traffic Control Plans | Standard Plans	$ 1,250.00	$1,250.00
Traffic Control Plans | Engineered Stamped Plans	$ 1,500.00	$1,500.00
Flagman	$ 180.00	$155.00
Potholing Hourly Crew | Includes surface breaking, sand backfill, and permanent cold patch repair	$ 595.00	$560.00
Potholing Hourly Single Tech | Includes vac-truck, no surface breaking, backfill, or patching	$ 385.00	$370.00
Keyhole Coring | Includes utilibond	$ 250.00	$250.00
Dump Fee | Removal of excavated spoils and dumping of mat (Daily or every 5 PHs)	$ 950.00	$950.00
Hot Patching | Standard 2' x 2' area	$ 300.00	$ 300.00
Aquaphalt	Request Quote	Request Quote
Slurry Backfill | Every 5ft	$ 150.00	$150.00
Pothole Report | Drafting time to generate PDF	$ 550.00	$550.00
Travel Time | Mobilization technician plus equipment	$ 275.00	$250.00
Travel Time | Mobilization crew plus equipment	$ 295.00	$275.00
Additional Fees		
Administration (6 hour minimum with a 4 hour increase every additional week)	$95.00	$95.00
Project Management/ Coordinaton (6 hour minimum with an hour increase every additional week)	$95.00	$95.00
Per Diem | Per technician	$295.00	$295.00
Permit Costs | 3rd party	Request Quote	Request Quote

* 15% Overtime charges applies to all services for Holiday, Saturday work and off hours 6:00 pm - 6:00 am
* 20% Overtime charges applies to all services for Sunday work
* All services will be billed within the 4 & 8 hour minimum

CONVERSE CONSULTANTS
Non-Prevailing Wage Schedule of Fees
Geotechnical Personnel

Introduction
It is the objective of Converse Consultants to provide its clients with quality professional and technical services and a continuing source of professional advice and opinions. Services will be performed in a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions. This fee schedule is valid through December 31, 2026.

Hourly Charges for Personnel
Staff assignments will depend on personnel availability, job complexity, project site location, and experience level required to satisfy the technical requirements of the project and to meet the prevailing standard of professional care.

Field Technical Services (all including vehicle and equipment)

Construction Inspector – ACI/ICC and/or AWS/CWI certified (concrete, post-tension, masonry, structural steel, fireproofing; includes concrete batch plant and local steel fabrication inspections)	$85
Non-Destructive Testing Inspector (ultrasonic, magnetic particle, dye penetrant)	90
Construction Inspector/Technician (skidmore, pull testing, torque testing, Schmidt hammer, and pachometer)	90
Coring Technician	90
Soils Technician (soil, base, asphalt concrete, and moisture emission testing)	85
Senior Soils Technician	95
Sample Pick-Up	60

Professional Services (field and office)

Staff Professional	$145
Senior Staff Professional	155
Project Professional	165
Project Manager	175
Senior Professional	175
Principal Professional	225
Principal/Consultant	235

Laboratory Testing

Laboratory Technician (See Geotechnical Laboratory Testing and Materials Testing Services fee schedules.)	Per Test
Laboratory Supervisor	$100

Office Support

Clerical/Word Processing	$90
Drafting	90
CAD Operator/Drafting Manager	95

An overtime charge of 50 percent of the above hourly rates (excluding Professional Services) will be added for time in excess of eight hours per day and for all time on Saturdays, Sundays and holidays. An overtime charge of 100 percent of the above hourly rates (excluding Professional Services) will be charged on Sunday if hours worked were seven continuous eight hours per day in one work week, not counting paid time off within the week. Travel time to and from the job site will be charged at the hourly rates for the appropriate personnel.

Expenses
1. Exploration expenses (drilling, trenching, etc.) are charged at cost plus fifteen percent.
2. Travel and subsistence expenses (transportation, room and board, etc.) for individuals on projects requiring travel and/or living 50 miles away from the project site are charged at cost plus fifteen percent.
3. Automobile and truck expenses are charged at cost plus fifteen percent (rentals) or at the current IRS mileage rate for company-owned vehicles traveling between principal office and project.
4. Other out-of-pocket direct project expenses (aerial photos, long-distance telephone calls, permits, outside printing services, tests, etc.) are charged at cost plus fifteen percent.

Invoices
1. Invoices will be submitted to the Client on a monthly basis, and a final bill will be submitted upon completion of services.
2. Payment is due upon presentation of invoice and is past-due thirty days from invoice date. In the event Client fails to make any payment to Converse when due, Converse may immediately cease work hereunder until said payment, together with a service charge at the rate of eighteen percent per annum (but not exceeding the maximum allowed by law) from the due date, has been received. Furthermore, Converse may at its sole option and discretion refuse to perform any further work irrespective of payment from Client in the event Client fails to pay Converse for services when said payments are due.
3. Client shall pay attorneys' fees or other costs incurred in collecting any delinquent amount.

General Conditions
The terms and provisions of the Converse General Conditions are incorporated into this fee schedule as though set forth in full. If a copy of the General Conditions does not accompany this fee schedule, Client should request a copy from this office.

TERMS AND SCHEDULE OF FEES AND CHARGES

HARPER & ASSOCIATES ENGINEERING, INC. services are furnished on the basis of the below listed schedule of fees and charges. Rates will be increased at a maximum of 3% per year for continuation of contract for subsequent years.

FEES:

• Principal Engineer	$235.00 per hour
• Expert Witness/Deposition	$270.00 per hour
• Registered Corrosion Engineer	$210.00 per hour
• Registered Structural Engineer	$210.00 per hour
• Project Manager	$205.00 per hour
• Engineer	$190.00 per hour
• Engineering Technician	$125.00 per hour
• Engineering Aide	$100.00 per hour
• Structural Inspector	$130.00 per hour
• Coating/Paint Inspector	$98.00 per hour
• Draftsperson (CADD)	$125.00 per hour
• Dive Team	$365.00 per hour
• Clerical	$70.00 per hour

Travel time is chargeable at the above rates. Overtime for non-professionals, when authorized, shall be charged at 1-1/2X and 2X, based on specific time schedule under which work is performed. If project is located out of area, food and lodging will be charged as noted below.

EQUIPMENT AND MISCELLANEOUS CHARGES

The above charges include instruments commonly used in corrosion and related testing. However, specialized instrumentation and test equipment and facilities may require an additional charge.

These and miscellaneous charges are computed at cost plus fifteen percent. Examples of such charges include, but are not limited to, food, lodging, outside consultants, public transportation, rental equipment, special permits and fees, reproduction, special insurance, etc.

Passenger cars and pickup trucks are chargeable at $.65 per mile when authorized.

SCHEDULE OF FEES

HELIX Environmental Planning

CONSULTING SERVICES

Consulting services performed by HELIX typically include, but are not necessarily limited to, office, field, meetings, hearings, and travel time. Consulting services for expert witness review, deposition, and/or testimony will be provided at one and one-half times our standard rates. Overtime also may be charged at one and one-half times our standard rates.

DIRECT COSTS

Certain identifiable direct costs will be charged to the project at cost plus ten percent. Examples of direct costs include subconsultants, vehicle or equipment rentals, airplane and train fares, parking, per diem and lodging, mileage (at IRS rates), communications, reproduction, and supplies. A 4-wheel drive premium will be charged at $25 per project day. There will be additional charges for use of noise monitors, GPS, and other field equipment, as well as for plotting, color printing, and aerial photographs.

Payment

Invoices will be submitted monthly. Payment on invoices is due within thirty days of receipt.

PROFESSIONAL RATES

Current hourly rates for consulting services:

Principal	$290-310
Principal Planner	$240-300
Principal Regulatory Specialist	$240-300
Principal Biologist	$235-300
Principal Acoustician	$215-225
Principal Landscape Architect	$190-210
Principal Cultural Resources Specialist	$200-220
Safety Manager	$215-225
Senior Noise/Air Quality Specialist	$195-230

CITY OF ONTARIO
DESIGN SERVICES AGREEMENT

1. PARTIES AND DATE.

This Agreement is made and entered into as of _____ __, **2024** by and between the City of Ontario, a municipal corporation organized and operating under the laws of the State of California with its principal place of business at 303 East "B" Street, Ontario, California 91764-4196, County of San Bernardino, State of California ("City"), and **Stantec Consulting Services Inc.**, a **CORPORATION** with its principal place of business at **38 Technology Drive, Irvine CA 92618** (hereinafter referred to as "Consultant"). City and Consultant are sometimes individually referred to herein as "Party" and collectively as "Parties."

2. RECITALS.

2.1 City. City is a municipal corporation organized under the laws of the State of California, with power to contract for services necessary to achieve its purpose.

2.2 Consultant. Consultant desires to perform and assume responsibility for the provision of certain professional **engineering** design services required by the City on the terms and conditions set forth in this Agreement. Consultant warrants that it is fully licensed, qualified, and willing to perform the services required by this Agreement; provided, however, that if Consultant is a corporation or other organization, the Project Consultant designated pursuant to Section 3.2, and not the Consultant itself, shall be fully licensed to practice as an **engineer** in the State of California.

2.3 Project. City desires to engage Consultant to render such services for the **On-Call Design Services** ("Project") as set forth in this Agreement.

3. TERMS

3.1 Employment of Consultant.

3.1.1 Scope of Services. Consultant promises and agrees to furnish to City all labor, materials, tools, equipment, services, and incidental and customary work necessary to fully and adequately supply the professional **engineering** and related services necessary for the full and adequate completion of the Project consistent with the provisions of this Agreement

(hereinafter referred to as "Services"). The Services are more particularly described throughout this Agreement, including Exhibit "A" attached hereto and incorporated herein by reference. All Services shall be subject to, and performed in accordance with, this Agreement, any exhibits attached hereto and incorporated herein by reference, and all applicable local, state and federal laws, rules and regulations. All Services performed by Consultant shall be subject to the sole and discretionary approval of the City, which approval shall not be unreasonably withheld.

3.1.2 Term. The term of this Agreement shall be from **June 4, 2024** to **June 4, 2027**, unless earlier terminated as provided herein. The City shall have the unilateral option, at its sole discretion, to renew this Agreement automatically for no more than **two** additional one-year terms. Consultant shall complete the Services within the term of this Agreement, and shall meet any other established schedules and deadlines.

3.2 Project Consultant; Key Personnel.

3.2.1 **Engineer of Record.** Consultant shall name a specific individual to act as Project Consultant, subject to the approval of City. Consultant hereby designates **Jeff Dunn, PE** (License No. **C 58455**) to act as the **Engineer of Record** for the Project. The **Engineer of Record** shall: (1) maintain oversight of the Services; (2) have full authority to represent and act on behalf of the Consultant for all purposes under this Agreement; (3) supervise and direct the Services using his or her best skill and attention; (4) be responsible for the means, methods, techniques, sequences and procedures used for the Services; (5) adequately coordinate all portions of the Services; and (6) act as principal contact with City and all contractors, consultants, engineers and inspectors on the Project. Any change in the **Engineer of Record** shall be subject to the City's prior written approval, which approval shall not be unreasonably withheld. The new **Engineer of Record** shall be of at least equal competence as the prior **Engineer of Record**. In the event that City and Consultant cannot agree as to the substitution of a new **Engineer of Record**, City shall be entitled to terminate this Agreement for cause.

3.2.2 Key Personnel. In addition to the **Engineer of Record**, Consultant has represented to the City that certain additional key personnel, engineers and consultants will perform the Services under this Agreement. Should one or more of such personnel, engineers or consultants become unavailable, Consultant may substitute others of at least equal competence upon written approval of the City. In the event that City and Consultant cannot agree as to the substitution of key personnel, engineers or consultants, City shall be entitled to terminate this Agreement for cause. The key additional personnel, engineers and consultants for performance of this Agreement are as follows: **Venu Kolli, PE, PMP, ENV SP, Jeff Dunn, PE, Nita Kazi, PE, and Jim Cathcart, PE**.

3.3 Hiring of Consultants and Personnel.

3.3.1 Right to Hire or Employ. Consultant shall have the option, unless City objects in writing after notice, to employ at its expense architects, engineers, experts or other consultants qualified and licensed to render services in connection with the planning and/or administration of the Project, and to delegate to them such duties as Consultant may delegate without relieving Consultant from administrative or other responsibility under this Agreement. Consultant shall be responsible for the coordination and cooperation of Consultant's architects, engineers, experts or other consultants. All consultants, including changes in consultants, shall be subject to approval by City in its sole and reasonable discretion. Consultant shall notify City of the identity of all consultants at least fourteen (14) days prior to their commencement of work

to allow City to review their qualifications and approve to their participation on the Project in its sole and reasonable discretion.

3.3.2 Qualification and License. All architects, engineers, experts and other consultants retained by Consultant in performance of this Agreement shall be qualified to perform the Services assigned to them, and shall be licensed to practice in their respective professions, where required by law.

3.3.3 Standards and Insurance. All architects, engineers, experts and other consultants hired by Consultant shall be required to meet all of the same standards and insurance requirements set forth in this Agreement, unless other standards or requirements are approved by the City in writing. Unless changes are approved in writing by the City, Consultant's agreements with its consultants shall contain a provision making them subject to all provisions stipulated in this Agreement.

3.3.4 Assignments or Staff Changes. Consultant shall promptly obtain written City approval of any assignment, reassignment or replacement of such architects, engineers, experts and consultants, or of other staff changes of key personnel working on the Project. As provided in the Agreement, any changes in Consultant's consultants and key personnel shall be subject to approval by City.

3.3.5 Draftsman and Clerical Support. Draftsmen and clerical personnel shall be retained by Consultant at Consultant's sole expense.

3.4 Standard of Care.

3.4.1 Standard of Care. Consultant shall perform all Services under this Agreement in a skillful and competent manner, consistent with the standards generally recognized as being employed by professionals qualified to perform the Services in the same discipline in the State of California, and shall be responsible to City for damages sustained by the City and delays to the Project as specified in the indemnification provision of this Agreement. Without limiting the foregoing, Consultant shall be fully responsible to the City for any increased costs incurred by the City as a result of any such delays in the design or construction of the Project. Consultant represents and maintains that it is skilled in the professional calling necessary to perform the Services. Consultant warrants and represents that all of its employees, architects, engineers, experts and other consultants shall have sufficient skill and experience to perform the Services assigned to them. Finally, Consultant represents that it, its employees, architects, engineers, experts and other consultants have all licenses, permits, qualifications and approvals of whatever nature that are legally required to perform the Services assigned to or rendered by them and that such licenses and approvals shall be maintained throughout the term of this Agreement. As provided for in the indemnification provisions of this Agreement, Consultant shall perform, at its own cost and expense and without reimbursement from the City, any services necessary to correct errors or omissions which are caused by the Consultant's failure to comply with the standard of care provided for herein.

3.4.2 Performance of Employees. Any employee or consultant who is determined by the City to be uncooperative, incompetent, a threat to the adequate or timely completion of the Project, a threat to the safety of persons or property, or any employee or consultant who fails or refuses to perform the Services in a manner acceptable to the City, shall be promptly removed from the Project by the Consultant and shall not be re-employed to perform any of the Services or to work on the Project.

3.5 Laws and Regulations.

3.5.1 Knowledge and Compliance. Consultant shall keep itself fully informed of and in compliance with all applicable local, state and federal laws, rules and regulations in any manner affecting the performance of the Services or the Project, and shall give all notices required of the Consultant by law. Consultant shall be liable, pursuant to the standard of care and indemnification provisions of this Agreement, for all violations of such laws and regulations in connection with its Services. Consultant shall defend, indemnify and hold City, its officials, officers, employees and agents free and harmless, pursuant to the indemnification provisions of this Agreement, from any claim or liability arising out of any failure or alleged failure to comply with such laws, rules or regulations.

3.5.2 Drawings and Specifications. Consultant shall cause all drawings and specifications to conform to any applicable requirements of federal, state and local laws, rules and regulations, including the Uniform Building Code, in effect as of the time the drawings and specifications are prepared or revised during the latest phase of the Services described in Exhibit "A" attached hereto. Any significant revisions made necessary by changes in such laws, rules and regulations after this time may be compensated as Additional Services which were not known or reasonably should not have been known by Consultant. Consultant shall cause the necessary copies of such drawings and specifications to be filed with any governmental bodies with approval jurisdiction over the Project, in accordance with the Services described in Exhibit "A" attached hereto. For the preparation of all such drawings and specifications, the Consultant shall use Computer Aided Design Drafting ("CADD") (e.g., AutoCAD) or other technology acceptable to the Consultant and City.

3.5.3 Americans with Disabilities Act. Consultant will use its best professional efforts to interpret all applicable federal, state and local laws, rules and regulations with respect to access, including those of the Americans with Disabilities Act ("ADA"). Consultant shall inform City of the existence of inconsistencies of which it is aware or reasonably should be aware between federal and state accessibility laws, rules and regulations, as well as any other issues which are subject to conflicting interpretations of the law, and shall provide the City with its interpretation of such inconsistencies and conflicting interpretations. Unless Consultant brings such inconsistencies and conflicting interpretations to the attention of the City and requests City's direction on how to proceed, the Consultant's interpretation of such inconsistencies and conflicting interpretations shall be the sole responsibility and liability of Consultant, and the Consultant shall correct all plans, specifications and other documents prepared for the Project at no additional cost if its interpretations are shown to be incorrect. In the event that the Consultant request's City's direction on how to proceed with respect to any inconsistent and/or conflicting interpretation, the Consultant shall be responsible to the City only pursuant to the indemnification provisions of this Agreement.

3.5.4 Permits, Approvals and Authorizations. Consultant shall provide City with a list of all permits, approvals or other authorizations required for the Project from all federal, state or local governmental bodies with approval jurisdiction over the Project. Consultant shall then assist the City in obtaining all such permits, approvals and other authorizations. The costs of such permits, approvals and other authorizations shall be paid by the City.

3.5.5 Water Quality Management and Compliance. Consultant shall keep itself and all subcontractors, staff, and employees fully informed of and in compliance with all local, state and federal laws, rules and regulations that may impact, or be implicated by the performance of the Services including, without limitation, all applicable provisions of the City's ordinances

regulating water quality and storm water; the Federal Water Pollution Control Act (33 U.S.C. § 1251 *et seq.*); the California Porter-Cologne Water Quality Control Act (Cal Water Code §§ 13000-14950); and any and all regulations, policies, or permits issued pursuant to any such authority. Consultant shall additionally comply with the lawful requirements of the City, and any other municipality, drainage district, or other local agency with jurisdiction over the location where the Services are to be conducted, regulating water quality and storm water discharges. Failure to comply with laws, regulations, and ordinances listed in this Section is a violation of federal and state law.

3.6 Independent Contractor.

3.6.1 Control and Payment of Subordinates. City retains Consultant on an independent contractor basis and Consultant is not an employee of City. Consultant is not an employee for state tax, federal tax or any other purpose, and is not entitled to the rights or benefits afforded to City's employees. Any additional personnel performing the Services under this Agreement on behalf of Consultant shall also not be employees of City, and shall at all times be under Consultant's exclusive direction and control. Consultant shall pay all wages, salaries, and other amounts due such personnel in connection with their performance of Services under this Agreement and as required by law. Consultant shall be responsible for all reports and obligations respecting such additional personnel, including, but not limited to: social security taxes, income tax withholding, unemployment insurance, disability insurance, and workers' compensation insurance.

3.7 Schedule of Services.

3.7.1 Consultant Services. Consultant shall fully and adequately complete the Services described in this Agreement and in Exhibit "A" attached hereto and incorporated herein by reference.

3.7.2 Timely Performance Standard. Consultant shall perform all Services hereunder as expeditiously as is consistent with professional skill and care, as well as the orderly progress of the Project work so as not to be the cause, in whole or in part, of delays in the completion of the Project or in the achievement of any Project milestones, as provided herein. Specifically, Consultant shall perform its Services so as to allow for the full and adequate completion of the Project within the time required by the City and within any completion schedules adopted for the Project. Consultant agrees to coordinate with City's staff, contractors and consultants in the performance of the Services, and shall be available to City's staff, contractors and consultants at all reasonable times.

3.7.3 Performance Schedule. Consultant shall prepare an estimated time schedule for the performance of Consultant's Services, to be adjusted as the Project proceeds. Such schedule shall be subject to the City's review and approval, which approval shall not be unreasonably withheld, and shall include allowances for periods of time required for City's review and approval of submissions, and for approvals of authorities having jurisdiction over Project approval and funding. If City and Consultant cannot mutually agree on a performance schedule, City shall have the authority to immediately terminate this Agreement. The schedule shall not be exceeded by Consultant without the prior written approval of City. If the Consultant's Services are not completed within the time provided by the agreed upon performance schedule, or any milestones established therein, it is understood, acknowledged and agreed that the City will suffer damage for which the Consultant will be responsible.

3.7.4 Excusable Delays. Any delays in Consultant's work caused by the following may be added to the time for completion of any obligations of Consultant: (1) the actions of City or its employees; (2) the actions of those in direct contractual relationship with City; (3) the actions of any governmental agency having jurisdiction over the Project; (4) the actions of any parties not within the reasonable control of the Consultant; and (5) any Force Majeure Event (as defined herein) or other unforeseen occurrence not due to any fault or negligence on the part of Consultant. Neither the City nor the Consultant shall be liable for damages, liquidated or otherwise, to the other on account of such delays.

3.7.5 Force Majeure Events. Neither City nor Consultant shall be considered in default of this Agreement for delays in performance caused by circumstances beyond the reasonable control of the non-performing Party. For purposes of this Agreement, such circumstances include a Force Majeure Event. A Force Majeure Event shall mean an event that materially affects a Party's performance and is one or more of the following: (1) Acts of God or other natural disasters; (2) terrorism or other acts of a public enemy; (3) orders of governmental authorities (including, without limitation, unreasonable and unforeseeable delay in the issuance of permits or approvals by governmental authorities that are required for the services); (4) strikes and other organized labor action occurring at the site and the effects thereof on the services, only to the extent such strikes and other organized labor action are beyond the control of Consultant and its subcontractors, and to the extent the effects thereof cannot be avoided by use of replacement workers; and (5) pandemics, epidemics or quarantine restrictions. For purposes of this section, "orders of governmental authorities," includes ordinances, emergency proclamations and orders, rules to protect the public health, welfare and safety, and other actions of a public agency applicable to the Services and Agreement. Should a Force Majeure Event occur, the non-performing Party shall, within fifteen (15) calendar days of the beginning of an Force Majeure Event, give written notice to the other Party describing the circumstances preventing continued performance and the efforts being made to resume performance of this Agreement. Force Majeure Events shall not entitle Consultant to any additional compensation. Notwithstanding the foregoing in this section, the City may still terminate this Agreement in accordance with the termination provisions of this Agreement.

3.7.6 Request for Excusable Delay Credit. The Consultant shall, within fifteen (15) calendar days of the beginning of any excusable delay, notify the City in writing of the causes of delay (unless City grants in writing a further period of time to file such notice prior to the date of final payment under the Agreement). City will then ascertain the facts and the extent of the delay, and grant an extension of time for completing the Services when, in its sole judgment, the findings of fact justify such an extension. The City's findings of fact thereon shall be final and conclusive on the Parties. Extensions of time shall apply only to that portion of the Services affected by the delay and shall not apply to other portions of the Services not so affected. The sole remedy of Consultant for extensions of time shall be an extension of the performance time at no cost to the City. If Additional Services are required as a result of an excusable delay, the Parties shall mutually agree thereto pursuant to the Additional Services provision of this Agreement. Should Consultant make an application for an extension of time, Consultant shall submit evidence that the insurance policies required by this Agreement remain in effect during the requested additional period of time.

3.8 Additional Services.

3.8.1 Request for Services. At City's request, Consultant may be asked to perform services not otherwise included in this Agreement, not included within the basic services

listed in Exhibit "A" attached hereto, and/or not customarily furnished in accordance with generally accepted architectural practice.

3.8.2 Definition. As used herein, "Additional Services" mean: (1) any work which is determined by City to be necessary for the proper completion of the Project, but which the Parties did not reasonably anticipate would be necessary for the Consultant to perform at the execution of this Agreement; or (2) any work listed as Additional Services in Exhibit "A" attached hereto. Consultant shall not perform, nor be compensated for, Additional Services without prior written authorization from City and without an agreement between the City and Consultant as to the compensation to be paid for such services. City shall pay Consultant for any approved Additional Services, pursuant to the compensation provisions herein, so long as such services are not made necessary through the fault of Consultant pursuant to the indemnification provision of this Agreement.

3.8.3 Examples of Additional Services. Such Additional Services shall not include any redesign or revisions to drawings, specifications or other documents when such revisions are necessary in order to bring such documents into compliance with applicable laws, rules, regulations or codes of which Consultant was aware or should have been aware pursuant to the laws and regulations provision of this Agreement above. Such Additional Services may include, but shall not be limited to:

(a) Separately Bid Portions of Project. Plan preparation and/or administration of work on portions of the Project separately bid.

(b) Furniture and Interior Design. Assistance to City, if requested, for the selection of moveable furniture, equipment or articles which are not included in the Construction Documents.

(c) Fault of Contractor. Services caused by delinquency, default or insolvency of contractor, or by major defects in the work of the contractor, provided that any such services made necessary by the failure of Consultant to detect and report such matters when it reasonably should have done so shall not be compensated.

(d) Inconsistent Approvals or Instructions. Revisions in drawings, specifications or other documents when such revisions are inconsistent with written approvals or instructions previously given and are due to causes beyond the control of Consultant.

(e) Legal Proceedings. Serving as an expert witness on City's behalf or attending legal proceedings to which the Consultant is not a party.

(f) Damage Repair. Supervision of repair of damages to any structure.

(g) Extra Environmental Services. Additional work required for environmental conditions (e.g. asbestos or site conditions) not already contemplated within the Consultant's services for the Project.

3.9 City Responsibilities. City's responsibilities shall include the following:

3.9.1 Data and Information. City shall make available to Consultant all necessary data and information concerning the purpose and requirements of the Project, including scheduling and budget limitations, objectives, constraints and criteria. As part of the budget

limitation information, the City shall provide the Consultant with a preliminary construction budget ("City's Preliminary Construction Budget").

3.9.2 Project Survey. If required pursuant to the scope of the Project and if requested by Consultant, City shall furnish Consultant with, or direct Consultant to procure at City's expense, a survey of the Project site prepared by a registered surveyor or civil engineer, any other record documents which shall indicate existing structures, land features, improvements, sewer, water, gas, electrical and utility lines, topographical information and boundary dimensions of the site, and any other such pertinent information.

3.9.3 Bid Phase. Distribute Construction Documents to bidders and conduct the opening and review of bids for the Project.

3.9.4 Testing. Retain consultant(s) to conduct chemical, mechanical, soils, geological or other tests required for proper design of the Project, and furnish such surveys, borings, test pits, and other tests as may be necessary to reveal conditions of the site which must be known to determine soil condition or to ensure the proper development of the required drawings and specifications.

3.9.5 Required Inspections and Tests. Retain consultant(s) to conduct materials testing and inspection or environmental/hazardous materials testing and inspection pursuant to any applicable laws, rules or regulations.

3.9.6 Fees of Reviewing or Licensing Agencies. Directly pay or reimburse the payment of all fees required by any reviewing or licensing agency, or other agency having approval jurisdiction over the Project.

3.9.7 City's Representative. The City hereby designates the City Manager, or his or her designee, to act as its representative for the performance of this Agreement ("City's Representative"). City's Representative shall have the power to act on behalf of the City for all purposes under this Contract. The City Manager hereby designates **Dennis Mejia, PE, Utilities Engineering Division Manager**, or his or her designee, as the City's contact for the implementation of the Services hereunder. Contractor shall not accept direction or orders from any person other than the City's Representative or his or her designee.

3.9.8 Review and Approved Documents. Review all documents submitted by Consultant, including change orders and other matters requiring approval by the City Council or other officials. City shall advise Consultant of decisions pertaining to such documents within a reasonable time after submission, so as not to cause unreasonable delay as provided in the excusable delay provisions of this Agreement above.

3.10 Compensation.

3.10.1 Consultant's Compensation for Basic Services. City shall pay to Consultant, for the performance of all Services rendered under this Agreement, the total not to exceed amount of **Six Hundred Thousand Dollars ($600,000)** ("Total Compensation"). This Total Compensation amount shall be based upon, and may be adjusted according to, the fee schedule and related terms and conditions attached hereto as Exhibit "B" and incorporated herein by reference. The Total Compensation, as may be adjusted upon mutual agreement, shall constitute complete and adequate payment for Services under this Agreement.

3.10.2 Payment for Additional Services. At any time during the term of this Agreement, City may request that Consultant perform Additional Services. As used herein, Additional Services means any work which is determined by City to be necessary for the proper completion of the Project, but which the Parties did not reasonably anticipate would be necessary at the execution of this Agreement. Any additional work in excess of this amount must be approved by the City. If authorized, such Additional Services will be compensated at the rates and in the manner set forth in Exhibit "C" attached hereto and incorporated herein by reference, unless a flat rate or some other form of compensation is mutually agreed upon by the Parties. If City requires Consultant to hire consultants to perform any Additional Services, Consultant shall be compensated therefore at the rates and in the manner set forth in Exhibit "C" attached hereto and incorporated herein by reference, unless a flat rate or some other form of compensation is mutually agreed upon by the Parties. City shall have the authority to review and approve the rates of any such consultants. In addition, Consultant shall be reimbursed for any expenses incurred by such consultants pursuant to the terms and conditions of Section 3.10.3.

3.10.3 Reimbursable Expenses. Reimbursable expenses are in addition to compensation for the Services and Additional Services. Consultant shall not be reimbursed for any expenses unless authorized in writing by City, which approval may be evidenced by inclusion in Exhibit "C" attached hereto. Such reimbursable expenses shall include only those expenses which are reasonably and necessarily incurred by Consultant in the interest of the Project. Consultant shall be required to acquire prior written consent in order to obtain reimbursement for the following: (1) extraordinary transportation expenses incurred in connection with the Project; (2) out-of-town travel expenses incurred in connection with the Project; (3) fees paid for securing approval of authorities having jurisdiction over the Project; (4) bid document duplication costs in excess of $1,000; and (5) other costs, fees and expenses in excess of $1,000.

3.10.4 Payment to Consultant. Consultant's compensation and reimbursable expenses shall be paid by City to Consultant no more often than monthly. Such periodic payments shall be made based upon the percentage of work completed, and in accordance with the phasing and funding schedule provided in Exhibit "B" and the compensation rates indicated in Exhibit "C" attached hereto and incorporated herein by reference. In order to receive payment, Consultant shall present to City an itemized statement which indicates Services performed, percentage of Services completed, method for computing the amount payable, and the amount to be paid. The statement shall describe the amount of Services provided since the initial commencement date, or since the start of the subsequent billing periods, as appropriate, through the date of the statement, as well as those expenses for which reimbursement is requested for that statement period. The amount paid to Consultant shall never exceed the percentage amounts authorized by the phasing and funding schedule located in Exhibit "B" attached hereto. City shall, within thirty (30) days of receiving such statement, review the statement and pay all approved charges thereon pursuant to the provisions of Civil Code Section 3320. Disputed amounts shall be resolved by the Parties in a mutually agreeable manner.

Payments made for Additional Services shall be made in installments, not more often than monthly, proportionate to the degree of completion of such services or in such other manner as the Parties shall specify when such services are agreed upon, and in accordance with any authorized fee or rate schedule. In order to receive payment, Consultant shall present to City an itemized statement which indicates the Additional Services performed, percentage of Additional Services completed, method for computing the amount payable, and the amount to be paid. The statement shall describe the amount of Additional Services provided since the initial commencement date, or since the start of the subsequent billing periods, as appropriate, through the date of the statement. City shall, within thirty (30) days of receiving such statement, review

the statement and pay all approved charges thereon pursuant to the provisions of Civil Code Section 3320. Disputed amounts shall be resolved by the Parties in a mutually agreeable manner.

Upon cancellation or termination of this Agreement, Consultant shall be compensated as set forth in the termination provision herein.

3.10.5 Withholding Payment to Consultant. The City may withhold payment, in whole or in part, to the extent reasonably necessary to protect the City from claims, demands, causes of action, costs, expenses, liabilities, losses, damages, or injuries of any kind to the extent arising out of or caused by the negligence, recklessness, or willful misconduct protected under the indemnification provisions of this Agreement. Failure by City to deduct any sums from a progress payment shall not constitute a waiver of the City's right to such sums. The City may keep any moneys which would otherwise be payable at any time hereunder and apply the same, or so much as may be necessary therefor, to the payment of any expenses, losses, or damages as determined by the City, incurred by the City for which Consultant is liable under the Agreement or state law. Payments to the Consultant for compensation and reimbursable expenses due shall not be contingent on the construction, completion or ultimate success of the Project. Payment to the Consultant shall not be withheld, postponed, or made contingent upon receipt by the City of offsetting reimbursement or credit from Parties not within the Consultant's reasonable control.

3.10.6 Prevailing Wages. Consultant is aware of the requirements of California Labor Code Sections 1720, et seq., and 1770, et seq., as well as California Code of Regulations, Title 8, Section 16000, et seq., ("Prevailing Wage Laws"), which require the payment of prevailing wage rates and the performance of other requirements on certain "public works" and "maintenance" projects. Since the Services are being performed as part of an applicable "public works" or "maintenance" project, as defined by the Prevailing Wage Laws, and since the total compensation is $1,000 or more, Consultant agrees to fully comply with and to require its consultants to fully comply with such Prevailing Wage Laws. City shall provide Consultant with a copy of the prevailing rates of per diem wages in effect at the commencement of this Agreement. Consultant shall make copies of the prevailing rates of per diem wages for each craft, classification or type of worker needed to execute the Services available to interested parties upon request, and shall post copies at the Consultant's principal place of business and at the Project site. It shall be mandatory upon the Consultant and all subconsultants to comply with all California Labor Code provisions, which include but are not limited to prevailing wages (Labor Code Sections 1771, 1774 and 1775), employment of apprentices (Labor Code Section 1777.5), certified payroll records (Labor Code Sections 1771.4 and 1776), hours of labor (Labor Code Sections 1813 and 1815) and debarment of contractors and subcontractors (Labor Code Section 1777.1). The requirement to submit certified payroll records directly to the Labor Commissioner under Labor Code section 1771.4 shall not apply to work performed on a public works project that is exempt pursuant to the small project exemption specified in Labor Code Section 1771.4. Consultant shall defend, indemnify and hold the City, its elected officials, officers, employees and agents free and harmless from any claims, liabilities, costs, penalties or interest arising out of any failure or alleged failure of the Consultant or its consultants to comply with the Prevailing Wage Laws.

(a) Registration/DIR Compliance. If the Services are being performed as part of an applicable "public works project" of over $25,000 when the project is for construction, alteration, demolition, installation, or repair work, or a public works project of over $15,000 when the project is for maintenance work, in addition to the foregoing, then pursuant to Labor Code sections 1725.5 and 1771.1, the Consultant and all subconsultants performing such Services must be registered with the Department of Industrial Relations ("DIR"). Consultant shall maintain

registration for the duration of the Project and require the same of any subconsultants. This project may also be subject to compliance monitoring and enforcement by the DIR. It shall be Consultant's sole responsibility to comply with all applicable registration and labor compliance requirements, including the submission of payroll records directly to the DIR. Any stop orders issued by the Department of Industrial Relations against Consultant or any subconsultant that affect Consultant's performance of services, including any delay, shall be Consultant's sole responsibility. Any delay arising out of or resulting from such stop orders shall be considered Consultant caused delay and shall not be compensable by the City. Consultant shall defend, indemnify and hold the City, its officials, officers, employees and agents free and harmless from any claim or liability arising out of stop orders issued by the Department of Industrial Relations against Consultant or any subconsultant.

3.11 Notice to Proceed.

Consultant shall not proceed with performance of any Services under this Agreement unless and until the City provides a written notice to proceed.

3.12 Termination, Suspension and Abandonment.

3.12.1 Grounds for Termination; Consultant's Termination for Cause. City hereby reserves the right to suspend or abandon, at any time and for any reason, all or any portion of the Project and the construction work thereon, or to terminate this Agreement at any time with or without cause. Consultant shall be provided with at least seven (7) days advanced written notice of such suspension, abandonment or termination. In the event of such suspension, abandonment or termination, Consultant shall be paid for Services and reimbursable expenses rendered up to the date of such suspension, abandonment or termination, pursuant to the schedule of payments provided for in this Agreement, less any claims against or damages suffered by City as a result of the default, if any, by Consultant. Consultant hereby expressly waives any and all claims for damages or compensation arising under this Agreement, except as set forth herein, in the event of such suspension, abandonment or termination. Consultant may terminate this Agreement for substantial breach of performance by the City such as failure to make payment to Consultant as provided in this Agreement.

3.12.2 City's Suspension of Work. If Consultant's Services are suspended by City, City may require Consultant to resume such Services within ninety (90) days after written notice from City. When the Project is resumed, the Total Compensation and schedule of Services shall be equitably adjusted upon mutual agreement of the City and Consultant.

3.12.3 Documents and Other Data. Upon suspension, abandonment or termination, Consultant shall provide to City all preliminary studies, sketches, working drawings, specifications, computations, and all other Project Documents, as defined below, to which City would have been entitled at the completion of Consultant's Services under this Agreement. Upon payment of the amount required to be paid to Consultant pursuant to the termination provisions of this Agreement, City shall have the rights, as provided in this Agreement hereinafter, to use such Project Documents prepared by or on behalf of Consultant under this Agreement. Consultant shall make such documents available to City upon request and without additional compensation other than as may be approved as a reimbursable expense.

3.12.4 Employment of other Consultants. In the event this Agreement is terminated in whole or in part as provided herein, City may procure, upon such terms and in such manner as it may determine appropriate, services similar to those terminated.

3.13 Ownership and Use of Documents; Confidentiality.

3.13.1 Ownership. All plans, specifications, original or reproducible transparencies of working drawings and master plans, preliminary sketches, architectural presentation drawings, structural computations, estimates and any other documents prepared pursuant to this Agreement, including, but not limited to, any other works of authorship fixed in any tangible medium of expression such as writings, physical drawings and data magnetically or otherwise recorded on computer diskettes (hereinafter referred to as the "Project Documents") shall be and remain the property of City. Although the official copyright in all Project Documents shall remain with the Consultant or other applicable subcontractors or consultants, the Project Documents shall be the property of City whether or not the work for which they were made is executed or completed. Within thirty (30) calendar days following completion of the Project, Consultant shall provide to City copies of all Project Documents required by City. In addition, Consultant shall retain copies of all Project Documents on file for a minimum of fifteen (15) years following completion of the Project, and shall make copies available to City upon the payment of reasonable duplication costs. Before destroying the Project Documents following this retention period, Consultant shall make a reasonable effort to notify City and provide City with the opportunity to obtain the documents.

3.13.2 Right to Use. Consultant grants to City the right to use and reuse all or part of the Project Documents, at City's sole discretion and with no additional compensation to Consultant, for the following purposes:

(a) The construction of all or part of this Project.

(b) The repair, renovation, modernization, replacement, reconstruction or expansion of this Project at any time;

(c) The construction of another project by or on behalf of the City for its ownership and use;

City is not bound by this Agreement to employ the services of Consultant in the event such documents are used or reused for these purposes. City shall be able to use or reuse the Project Documents for these purposes without risk of liability to the Consultant or third parties with respect to the condition of the Project Documents, and the use or reuse of the Project Documents for these purposes shall not be construed or interpreted to waive or limit City's right to recover for latent defects or for errors or omissions of the Consultant.

Any use or reuse by City of the Project Documents on any project other than this Project without employing the services of Consultant shall be at City's own risk with respect to third parties. If City uses or reuses the Project Documents on any project other than this Project, it shall remove the Consultant's seal from the Project Documents and hold harmless Consultant and its officers, directors, agents and employees from claims arising out of the negligent use or re-use of the Project Documents on such other project.

3.13.3 License. This Agreement creates a non-exclusive and perpetual license for City to copy, use, modify or reuse any and all Project Documents and any intellectual property rights therein. Consultant shall require any and all subcontractors and consultants to agree in writing that City is granted a non-exclusive and perpetual license for the work of such subcontractors or consultants performed pursuant to this Agreement.

3.13.4 Right to License. Consultant represents and warrants that Consultant has the legal right to license any and all copyrights, designs and other intellectual property embodied in the Project Documents that Consultant prepares or causes to be prepared pursuant to this Agreement. Consultant shall indemnify and hold City harmless pursuant to the indemnification provisions of this Agreement for any breach of this Section. Consultant makes no such representation and warranty in regard to previously prepared designs, plans, specifications, studies, drawings, estimates or other documents that were prepared by design professionals other than Consultant and provided to Consultant by City.

3.13.5 Confidentiality. All Project Documents, either created by or provided to Consultant in connection with the performance of this Agreement, shall be held confidential by Consultant to the extent they are not subject to disclosure pursuant to the Public Records Act. All Project Documents shall not, without the written consent of City, be used or reproduced by Consultant for any purposes other than the performance of the Services. Consultant shall not disclose, cause or facilitate the disclosure of the Project Documents to any person or entity not connected with the performance of the Services or the Project. Nothing furnished to Consultant which is otherwise known to Consultant or is generally known, or has become known, to the related industry shall be deemed confidential. Consultant shall not use City's name or insignia, photographs of the Project, or any publicity pertaining to the Services or the Project in any magazine, trade paper, newspaper, television or radio production or other similar medium without the written consent of City.

3.14 Indemnification.

3.14.1 To the fullest extent permitted by law, Consultant shall defend (with counsel of City's choosing), indemnify and hold the City, its officials, officers, employees, volunteers, and agents free and harmless from any and all claims, demands, causes of action, costs, expenses, liability, loss, damage or injury of any kind, in law or equity, to property or persons, including wrongful death, in any manner arising out of, pertaining to, or incident to any acts, errors or omissions, or willful misconduct of Consultant, its officials, officers, employees, subcontractors, consultants or agents in connection with the performance of the Consultant's Services, the Project or this Agreement, including without limitation the payment of all damages, expert witness fees and attorney's fees and other related costs and expenses except such loss or damage caused by the sole negligence or willful misconduct of the City. Consultant's obligation to indemnify shall survive expiration or termination of this Agreement and shall not be restricted to insurance proceeds, if any, received by Consultant, the City, its officials, officers, employees, agents, or volunteers.

3.14.2 If Consultant's obligation to defend, indemnify, and/or hold harmless arises out of Consultant's performance as a "design professional" (as that term is defined under Civil Code section 2782.8), then, and only to the extent required by Civil Code section 2782.8, which is fully incorporated herein, Consultant's indemnification obligation shall be limited to claims that arise out of, pertain to, or relate to the negligence, recklessness, or willful misconduct of the Consultant, and, upon Consultant obtaining a final adjudication by a court of competent jurisdiction, Consultant's liability for such claim, including the cost to defend, shall not exceed the Consultant's proportionate percentage of fault.

3.15 Insurance. Consultant shall not commence work under this Agreement until it has provided evidence satisfactory to the City that it has secured all insurance required under this Section. In addition, Consultant shall not allow any subconsultant to commence work on any

subcontract until it has provided evidence satisfactory to the City that the subconsultant has secured all insurance required under this section.

3.15.1 Types of Insurance Required. As a condition precedent to the effectiveness of this Agreement for work to be performed hereunder, and without limiting the indemnity provisions of the Agreement, Consultant shall, at its expense, procure and maintain in full force and effect for the duration of the Agreement the following policies of insurance. If the existing policies do not meet the insurance requirements set forth herein, Consultant agrees to amend, supplement or endorse the policies to do so.

3.15.2 Additional Insured. The City of Ontario, its officials, officers, employees, agents, and volunteers shall be named as additional insureds on Consultant's and its subconsultants' policies of commercial general liability and automobile liability insurance using the endorsements and forms specified herein or exact equivalents.

3.15.3 Commercial General Liability

(a) The Consultant shall take out and maintain, during the performance of all work under this Agreement, in amounts not less than specified herein, Commercial General Liability Insurance, in a form and with insurance companies acceptable to the City.

(b) Coverage for Commercial General Liability insurance shall be at least as broad as the following: Insurance Services Office Commercial General Liability coverage (Occurrence Form CG 00 01) or exact equivalent. Commercial General Liability Insurance must include coverage for the following:

(i) Bodily Injury and Property Damage

(ii) Personal Injury/Advertising Injury

(iii) Premises/Operations Liability

(iv) Products/Completed Operations Liability

(v) Aggregate Limits that Apply per Project

(vi) Explosion, Collapse and Underground (UCX) exclusion deleted

(vii) Contractual Liability with respect to this Contract

(viii) Broad Form Property Damage

(ix) Independent Consultants Coverage

(c) The policy shall contain no endorsements or provisions limiting coverage for (1) contractual liability; (2) cross liability exclusion for claims or suits by one insured against another; (3) products/completed operations liability; or (4) contain any other exclusion contrary to the Agreement.

(d) The policy shall give City, the City Council and each member of the City Council, its officers, employees, agents and City designated volunteers additional insured status using ISO endorsement forms CG 20 10 10 01 and 20 37 10 01, or endorsements providing the exact same coverage.

(e) The general liability program may utilize either deductibles or provide coverage excess of a self-insured retention, subject to written approval by the City, and provided that such deductibles shall not apply to the City as an additional insured.

3.15.4 Automobile Liability

(a) At all times during the performance of the work under this Agreement, the Consultant shall maintain Automobile Liability Insurance for bodily injury and property damage including coverage for owned, non-owned and hired vehicles, in a form and with insurance companies acceptable to the City.

(b) Coverage for automobile liability insurance shall be at least as broad as Insurance Services Office Form Number CA 00 01 covering automobile liability (Coverage Symbol 1, any auto).

(c) The policy shall give City, the City Council and each member of the City Council, its officers, employees, agents and City designated volunteers additional insured status.

(d) Subject to written approval by the City, the automobile liability program may utilize deductibles, provided that such deductibles shall not apply to the City as an additional insured, but not a self-insured retention.

3.15.5 Workers' Compensation/Employer's Liability

(a) Consultant certifies that he/she is aware of the provisions of Section 3700 of the California Labor Code which requires every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that code, and he/she will comply with such provisions before commencing work under this Agreement.

(b) To the extent Consultant has employees at any time during the term of this Agreement, at all times during the performance of the work under this Agreement, the Consultant shall maintain full compensation insurance for all persons employed directly by him/her to carry out the work contemplated under this Agreement, all in accordance with the "Workers' Compensation and Insurance Act," Division IV of the Labor Code of the State of California and any acts amendatory thereof, and Employer's Liability Coverage in amounts indicated herein. Consultant shall require all subconsultants to obtain and maintain, for the period required by this Agreement, workers' compensation coverage of the same type and limits as specified in this Section.

3.15.6 Professional Liability (Errors and Omissions)

(a) At all times during the performance of the work under this Agreement the Consultant shall maintain professional liability or Errors and Omissions insurance appropriate to its profession, in a form and with insurance companies acceptable to the City and

in an amount indicated herein. This insurance shall be written on a policy form coverage specifically designed to protect against acts, errors or omissions of the Consultant. "Covered Professional Services" as designated in the policy must specifically include work performed under this Agreement. The policy must "pay on behalf of" the insured and must include a provision establishing the insurer's duty to defend.

3.15.7 Minimum Policy Limits Required

(a) The following insurance limits are required for the Agreement:

Coverage	Combined Single Limit
Commercial General Liability	$2,000,000 per occurrence/ $4,000,000 aggregate for bodily injury, personal injury, and property damage
Automobile Liability	$2,000,000 per occurrence for bodily injury and property damage
Employer's Liability	$1,000,000 per occurrence
Professional Liability	$2,000,000 per claim and aggregate (errors and omissions)

(b) Defense costs shall be payable in addition to the limits.

(c) Requirements of specific coverage or limits contained in this Section are not intended as a limitation on coverage, limits, or other requirement, or a waiver of any coverage normally provided by any insurance. Any available coverage shall be provided to the parties required to be named as Additional Insured pursuant to this Agreement.

3.15.8 Evidence Required

(a) Prior to execution of the Agreement, the Consultant shall file with the City evidence of insurance from an insurer or insurers certifying to the coverage of all insurance required herein. Such evidence shall include original copies of the ISO CG 00 01 (or insurer's equivalent) signed by the insurer's representative and Certificate of Insurance (Acord Form 25-S or equivalent), together with required endorsements. All evidence of insurance shall be signed by a properly authorized officer, agent, or qualified representative of the insurer and shall certify the names of the insured, any additional insureds, where appropriate, the type and amount of the insurance, the location and operations to which the insurance applies, and the expiration date of such insurance.

3.15.9 Policy Provisions Required

(a) Consultant shall provide the City at least thirty (30) days prior written notice of cancellation of any policy required by this Agreement, except that the Consultant shall provide at least ten (10) days prior written notice of cancellation of any such policy due to non-payment of premium. If any of the required coverage is cancelled or expires during the term of this Agreement, the Consultant shall deliver renewal certificate(s) including the General Liability Additional Insured Endorsement to the City at least ten (10) days prior to the effective date of cancellation or expiration.

(b) The Commercial General Liability Policy and Automobile Policy shall each contain a provision stating that Consultant's policy is primary insurance and that any insurance, deductible, or self-insurance maintained by the City, its officials, officers, employees, agents, or volunteers shall not contribute with this primary insurance. Policies shall contain or be endorsed to contain such provisions.

(c) The retroactive date (if any) of each policy is to be no later than the effective date of this Agreement. Consultant shall maintain such coverage continuously for a period of at least three years after the completion of the work under this Agreement. Consultant shall purchase a one (1) year extended reporting period A) if the retroactive date is advanced past the effective date of this Agreement; B) if the policy is cancelled or not renewed; or C) if the policy is replaced by another claims-made policy with a retroactive date subsequent to the effective date of this Agreement.

(d) All required insurance coverages, except for the professional liability coverage, shall contain or be endorsed to waiver of subrogation in favor of the City, its officials, officers, employees, agents, and volunteers or shall specifically allow Consultant or others providing insurance evidence in compliance with these specifications to waive their right of recovery prior to a loss. Consultant hereby waives its own right of recovery against City, and shall require similar written express waivers and insurance clauses from each of its subconsultants.

(e) The limits set forth herein shall apply separately to each insured against whom claims are made or suits are brought, except with respect to the limits of liability. Further the limits set forth herein shall not be construed to relieve the Consultant from liability in excess of such coverage, nor shall it limit the Consultant's indemnification obligations to the City and shall not preclude the City from taking such other actions available to the City under other provisions of the Agreement or law.

3.15.10 Qualifying Insurers

(a) All policies required shall be issued by acceptable insurance companies, as determined by the City, which satisfy the following minimum requirements: Each such policy shall be from a company or companies with a current A.M. Best's rating of no less than A:VII and admitted to transact in the business of insurance in the State of California, or otherwise allowed to place insurance through surplus line brokers under applicable provisions of the California Insurance Code or any federal law.

3.15.11 Additional Insurance Provisions

(a) The foregoing requirements as to the types and limits of insurance coverage to be maintained by Consultant, and any approval of said insurance by the City, is not intended to and shall not in any manner limit or qualify the liabilities and obligations otherwise assumed by the Consultant pursuant to this Agreement, including but not limited to, the provisions concerning indemnification.

(b) If at any time during the life of the Agreement, any policy of insurance required under this Agreement does not comply with these specifications or is canceled and not replaced, City has the right but not the duty to obtain the insurance it deems necessary and any premium paid by City will be promptly reimbursed by Consultant or City will withhold

amounts sufficient to pay premium from Consultant payments. In the alternative, City may cancel this Agreement.

(c) The City may require the Consultant to provide complete copies of all insurance policies in effect for the duration of the Project.

(d) Neither the City nor the City Council, nor any member of the City Council, nor any of the officials, officers, employees, agents or volunteers shall be personally responsible for any liability arising under or by virtue of this Agreement.

3.15.12 Subconsultant Insurance Requirements

(a) Consultant shall not allow any subcontractors or subconsultants to commence work on any subcontract until they have provided evidence satisfactory to the City that they have secured all insurance required under this Section. Policies of commercial general liability insurance provided by such subcontractors or subconsultants shall be endorsed to name the City as an additional insured using ISO form CG 20 38 04 13 or an endorsement providing the exact same coverage. If requested by Consultant, City may approve different scopes or minimum limits of insurance for particular subcontractors or subconsultants.

3.16 Records.

Consultant shall maintain complete and accurate records with respect to all costs and expenses incurred under this Agreement. All such records shall be clearly identifiable. Consultant shall allow a representative of City during normal business hours to examine, audit, and make transcripts or copies of such records and any other documents created pursuant to this Agreement. Consultant shall allow inspection of all work, data, documents, proceedings, and activities related to the Agreement for a period of five (5) years from the date of final payment under this Agreement.

3.17 Standardized Manufactured Items.

Consultant shall cooperate and consult with City in the use and selection of manufactured items on the Project, including but not limited to, paint, hardware, plumbing, mechanical and electrical equipment, fixtures, roofing materials and floor coverings. All such manufactured items shall be standardized to City's criteria to the extent such criteria do not interfere with building design.

3.18 Limitation of Agreement.

This Agreement is limited to and includes only the work included in the Project described herein. Any additional or subsequent construction at the site of the Project, or at any other City site, will be covered by, and be the subject of, a separate Agreement for **engineering** services between City and the Consultant chosen therefor by City.

3.19 Mediation.

Disputes arising from this Agreement may be submitted to mediation if mutually agreeable to the Parties hereto. The type and process of mediation to be utilized shall be subject to the mutual agreement of the Parties.

3.20 Successors and Assigns.

This Agreement shall be binding upon and shall inure to the benefit of the successors in interest, executors, administrators and assigns of each Party to this Agreement. However, Consultant shall not assign or transfer by operation of law or otherwise any or all of its rights, burdens, duties or obligations without the prior written consent of City. Any attempted assignment without such consent shall be invalid and void.

3.21 Asbestos Certification.

Consultant shall certify to City, in writing and under penalty of perjury, that to the best of its knowledge, information and belief no asbestos-containing material or other material deemed to be hazardous by the state or federal government was specified as a building material in any construction document that the Consultant prepares for the Project. Consultant shall require all consultants who prepare any other documents for the Project to submit the same written certification. Consultant shall also assist the City in ensuring that contractors provide City with certification, in writing and under penalty of perjury, that to the best of their knowledge, information and belief no material furnished, installed or incorporated into the Project contains asbestos or any other material deemed to be hazardous by the state or federal government. These certifications shall be part of the final Project submittal. Consultant shall include statements in its specifications that materials containing asbestos or any other material deemed to be hazardous by the state or federal government are not to be included.

3.22 No Third Party Rights.

This Agreement shall not create any rights in, or inure to the benefits of, any third party except as expressly provided herein.

3.23 Governing Law.

This Agreement shall be construed in accordance with, and governed by, the laws of the State of California. Venue shall be in San Bernardino County.

3.24 Exhibits and Recitals.

All exhibits and recitals contained herein and attached hereto are material parts of this Agreement and are incorporated as if fully set forth.

3.25 Severability.

Should any provision in the Agreement be held by a court of competent jurisdiction to be invalid, void, or unenforceable, the remaining provisions shall continue in full force and effect.

3.26 Non-Waiver.

None of the provisions of this Agreement shall be considered waived by either Party, unless such waiver is specifically specified in writing.

3.27 Safety.

Consultant shall execute and maintain its work so as to avoid injury or damage to any person or property. In carrying out its Services, the Consultant shall at all times be in compliance with all applicable local, state and federal laws, rules and regulations, and shall exercise all necessary precautions for the safety of its employees, consultant and subcontractors appropriate to the nature of the work and the conditions under which the work is to be performed.

3.28 Harassment Policy.

Consultant shall provide a copy of the City's Harassment Policy to each of its employees assigned to perform the tasks under this Agreement. Consultant shall submit to the City's Personnel Manager a statement signed by each of its employees who are assigned to perform the Services under this Agreement certifying receipt of City's Harassment Policy and certifying that they have read the Harassment Policy. A finding by the City that any of Consultant's employees has harassed a City employee shall be grounds for appropriate discipline, up to and including such employee's removal from performance of this Agreement at City's request.

3.29 Delivery of Notices.

All notices permitted or required under this Agreement shall be given to the respective Parties at the following address, or at such other address as the respective Parties may provide in writing for this purpose:

CITY:	CONSULTANT:
City of Ontario	**Stantec Consulting Services Inc.**
303 East "B" Street	**38 Technology Drive**
Ontario, CA 91764	**Irvine, CA 92618**
Attn: **Dennis Mejia, PE, Utilities Engineering Division Manager,**	Attn: **Jeff Dunn**

Such notice shall be deemed made when personally delivered or when mailed, forty-eight (48) hours after deposit in the U.S. Mail, first class postage prepaid and addressed to the Party at its applicable address. Actual notice shall be deemed adequate notice on the date actual notice occurred, regardless of the method of service.

3.30 Time of Essence.

Time is of the essence for each and every provision of this Agreement.

3.31 City's Right to Employ Other Consultants.

City reserves right to employ other consultants, including designers, in connection with this Project or other projects.

3.32 Prohibited Interests.

3.32.1 Solicitation. Consultant maintains and warrants that it has not employed nor retained any company or person, other than a bona fide employee working solely for Consultant, to solicit or secure this Agreement. Further, Consultant warrants that it has not paid nor has it agreed to pay any company or person, other than a bona fide employee working solely for Consultant, any fee, commission, percentage, brokerage fee, gift or other consideration contingent upon or resulting from the award or making of this Agreement. For breach or violation of this warranty, City shall have the right to rescind this Agreement without liability.

3.32.2 Conflict of Interest. For the term of this Agreement, no director, official, officer or employee of City, during the term of his or her service with City, shall have any direct interest in this Agreement, or obtain any present or anticipated material benefit arising therefrom.

3.33 Equal Opportunity Employment.

Consultant represents that it is an equal opportunity employer and that it shall not discriminate against any employee or applicant for employment because of race, religion, color, national origin, ancestry, sex, age or any other classification protected by federal or state law. Such non-discrimination shall include, but not be limited to, all activities related to initial employment, upgrading, demotion, transfer, recruitment or recruitment advertising, layoff or termination. Consultant shall also comply with all relevant provisions of City's minority business enterprise program, affirmative action plan or other related programs or guidelines currently in effect or hereinafter enacted.

3.34 Labor Certification.

By its signature hereunder, Consultant certifies that it is aware of the provisions of Section 3700 of the California Labor Code which require every employer to be insured against liability for Worker's Compensation or to undertake self-insurance in accordance with the provisions of that Code, and agrees to comply with such provisions before commencing the performance of the Services.

3.35 Subcontracting.

As specified in this Agreement, Consultant shall not subcontract any portion of the Services required by this Agreement, except as expressly stated herein, without prior written approval of City. Subcontracts, if any, shall contain a provision making them subject to each and every provision of this Agreement.

3.36 Supplemental Conditions.

Any supplemental conditions shall be attached as an exhibit to this Agreement, and that exhibit shall be incorporated herein by reference.

3.37 Entire Agreement.

This Agreement, with its exhibits, contains the entire agreement of the Parties hereto, and supersedes any and all other prior or contemporaneous negotiations, understandings and oral or written agreements between the Parties hereto. Each Party acknowledges that no representations, inducements, promises or agreements have been made by any person which

are not incorporated herein, and that any other agreements shall be void. Furthermore, any modification of this Agreement shall only be effective if in writing signed by all Parties hereto.

EXHIBIT "A"
SCOPE OF SERVICES

EXHIBIT "A"

RFQ PROPOSED SCOPE OF SERVICES

The City of Ontario is seeking Statement of Qualifications from qualified consulting engineers to provide On-Call Services for three (3) years, with an option of renewing for two (2) consecutive one (1) year terms. The City desires to obtain the services of a maximum of six (6) qualified firms to assist with On-Call Design Services. At least ten (10) years of experience providing similar services is required to oversee the work, stamp, and sign all project related documents as required.

Request for Qualifications (RFQ) for various services in various disciplines (e.g. Engineering, Architecture, Construction, Hydraulic Modeling, Fire Flow Modeling, Feasibility Studies, etc.) with the intention of maintaining a list of multiple qualified prime engineering firms, with subconsultant support services as needed. Task orders will be issued to firms on a competitive basis based on the qualifications and expertise of the firm and their subconsultants. There is no designated minimum nor maximum value of services to be awarded to any one consultant.

Each Prospective Consultant needs to be able to provide all the services (or provide sub-consultants that must also be listed as part of their statement of qualifications) listed in this RFQ.

The following scope of services provides general categories of services that may be required for each task order requested. The categories are not an exhaustive list of services but rather a sampling of the services that are typically included, but not limited to, within that area of the scope in order to demonstrate the qualifications needed for that scope of services.

Specific services requested under these agreements shall be identified by the City at the time of the request for a specific task order. For each task order requested by the City, the Consultant shall provide a task order proposal that identifies the specific scope of services to be performed, the necessary project management activities, task budget, and task schedule. Upon City's approval of the proposed task's scope of services, the City will issue a notice to proceed with purchase order requisition for the work. The Consultant is encouraged to provide recommendations with respect to scope and order of completion.

No task order or scope of services shall be performed without first receiving authorization from the City and notice to proceed with the task order.

GENERAL REQUIREMENTS.

Consultant will be expected to work closely with staff for the duration of the assigned projects (i.e. task orders), and attend all meetings and workshops, as necessary. Any adjustments can be verified based on the need of City Project Managers. All field services must include appropriate traffic control.

Some or all of the following General Requirements and Services may be incorporated into specific tasks orders generated from the On-Call contract. The applicable General Requirements shall be based on needs of specific tasks and the City Project Managers:

Refer to Design Services Agreement in Exhibit "B" to review the General Requirements and other conditions.

ON-CALL DESIGN SERVICES

The City of Ontario is seeking Statement of Qualifications from firms for On-Call Design Services:

Consultant shall be aware that certain labor categories above may be subject to prevailing wage rates as identified in the California Labor Code commencing Section 1770 et Seq. Determination of whether or not Prevailing Wages shall apply will be determined when the City's Project Manager identifies the scope of specific task orders. Please refer to Paragraph XI.11 "Prevailing Wage and Contractor Registration" of this RFQ, and Paragraph 3.10.6 "Prevailing Wages" of the Design Services Agreement for further requirements.

Expected services to be provided under this on-call contract will be performed under a task order system, need to be designed following City Guidelines or associated governing agency guidelines, and may include:

Capital Improvement Project Division

- Feasibility Studies
  - Preparing and/or updating Guidance Documents for Utility Feasibility Studies and Technical Reports
- Environmental services for CEQA/NEPA
- Geotechnical Investigations
- Erosion Control and Storm Water Pollution Prevention Plans
- Permitting and Grant writing support
- Surveying and Mapping
  - ALTA Surveys
  - Easements, Right of Way Preparation, and Mapping
  - Topographic Mapping
  - Field Design Surveys
  - Boundary Surveying and Monumentation
  - Benchmarks and centerline tie information
  - Legal Descriptions and Exhibits
  - Construction Staking
  - Conduct Potholing Services
- Construction Documents Development
- Street Improvements and Highway Design Engineering
- Civil, mechanical, electrical, structural, instrumentation design using AutoCAD 2023 or later
  - Transmission, Collection & Distribution Pipelines (water, sewer, recycled water, storm drain, etc.) facilities including water pipelines (transmission and distribution)
  - Groundwater Wells
  - Pump Stations
  - Pressure Reducing Stations
  - Reservoirs
  - Sewer Lift Stations
- Construction Engineering Support Services
  - Provide RFI review and response services
  - Submittal review and response services

- Project coordination services with City hired Construction Manager
- Final inspection and punch list services
- Convert Contractor's redlines to record drawings

Planning and Land Development Division

- Master planning to include infrastructure master plans
  - Hydraulic Modeling
  - Flow Monitoring
  - Demand factor assessment
- Asset management program support
- Risk and Resilience Assessment
- Site Security Assessment
- Emergency Response Plan
- Facilities Condition Assessment
- Updating City Water and Sewer GIS
- Hydrology and Drainage Engineering
  - Hydraulic modeling and GIS support services conforming with San Bernardino County Hydrology Manual
  - Hydrology Studies and hydrologic calculations
  - Hydrogeologic engineering services related to groundwater well rehabilitation and installation
- Hydraulic Modeling and Model Maintenance
  - The potable and recycled water model is in Innovyze InfoWater, the sewer model is in Innovyze InfoSewer, and both are running in the ArcMap 10.7.1 environment.
  - Updating Model Geometries using City Water and Sewer Atlas GIS shapefiles and Water and Sewer Improvement Construction/Record Drawings.
  - Updating Model Demands, Patterns, and Peaking Factors based on development and meter data.
  - Creating and Running New Scenarios.
  - Model Verification and Calibration to assure that the model can run properly.
  - Preparing Utility Hydraulic Analysis Studies and Reviews.
  - Reviewing OMUC Staff or Developer/Engineer modeling work and providing summary validation reports.
  - Peer Review of Utility Hydraulic Analysis Studies and Reviews, and Utility Feasibility and Technical Studies.
  - Fire Flow Analysis

Water Resources and Water Quality Division

- Water Resources Planning and Management Support Services
  - Urban Water Management Plans - Preparation, Updates, and Amendments
  - Water Supply Assessments and Written Verifications
  - Hydrogeological Studies and Geotechnical Engineering
  - Water Use Surveys
  - Wastewater Flow and Strength Studies
  - Water Conservation and Audits
  - Recycled Water Use Studies and compliance with State Water Board and Regional Water Quality Control Board requirements

- Laboratory Testing
- Water and Wastewater Low/High Flow Monitoring (On-site Private & Public)
- Water and Wastewater Quality Sampling (On-site Private & Public)
- Sewer System Management Plan Update
- Sewer System Management Plan Audit

Stantec

Stantec Consulting Services Inc.
38 Technology Drive Suite 200, Irvine CA 92618-5310

February 2, 2024

Attention: City of Ontario Purchasing Department
City of Ontario, Ontario Municipal Utilities Company
1425 S. Bon View Avenue
Ontario, CA 91761

Reference: Proposal for On-Call Design Services – RFQ No. 1740

We commend the Ontario Municipal Utilities Company's (City) efforts to effectively consider the continuing growth and management of your water and sewer infrastructure. As part of these efforts, the City desires to work with experienced professional engineering firms to provide on-call design services. We understand the importance of selecting a qualified team that is responsive, maintains positive working relationships, offers flexibility to perform both small and large tasks in a well-organized manner, understands proper design impacts and alternatives, and identifies efficient solutions. Stantec Consultant Services Inc. (Stantec) is confident that we are that team.

Similar Experience - Our team of qualified engineers and water specialists have the experience necessary to meet your high standards. What sets our team apart is our unique skillset, having delivered similar services to public agency clients throughout southern California, including with the City. Also, having performed several task orders for you on our current on-call services agreement, we understand the process and requirements enabling us to better understand your project goals.

Responsiveness – We have a strong in-house flexible team with local expertise who are familiar with your City's service area. Because of our familiarity, local presence, and related experience, we have the ability and the professional resources to meet tight schedules and mobilize appropriate staff at short notice.

Value-Added – For the many potential services, we have a deep bench to pull specific expertise that may be needed under unforeseen circumstances. We can provide planning experts throughout the state and nationally, if needed, to help assist the City in continually looking for innovative solutions to improve the planning process and tools for all your water and sewer systems' needs.

We have reviewed your proposed contract terms and should we be selected we will be able to conclude a mutually satisfactory contract with you. We sincerely thank you for this opportunity and look forward to continuing our working relationship.

The undersigned hereby submits this proposal and, by doing so, agrees to furnish services to the City in accordance with the Request for Qualifications (RFQ), and to be bound by the terms and conditions of the RFQ.

Regards,

Stantec Consulting Services Inc.

Design with community in mind

Stantec

On-Call Design Services
RFQ No. 1740

Proposal prepared for City of Ontario

February 2, 2024

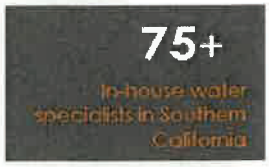
1.0 EXECUTIVE SUMMARY

Our Company

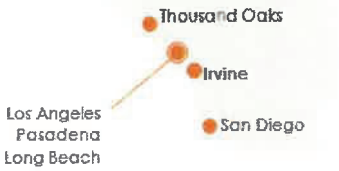
For more than 70 years, Stantec has provided water resource and all type of engineering services to improve the quality of life in communities where we live and work. During this time, we have added a full complement of engineering and planning disciplines to our portfolio to better serve our clients' needs. We take pride in a long history of being part of the communities we serve.

Stantec Consulting Services (Stantec) is a large, diverse, and continuously growing company offering extensive services to clients around the globe. With 25,000 employees in over 400 locations worldwide and 22 in California, we have the ability to provide solutions to whatever issues our clients may have.

We collaborate across disciplines and industries to bring water, buildings, energy and resources, environmental, and infrastructure projects to life. Our work—engineering, architecture, interior design, landscape architecture, surveying, environmental sciences, construction management services, project management, and project economics, from initial project concept and planning to design, construction, and commissioning—our work begins at the intersection of community, creativity, and client relationship.



Stantec is a worldwide leader in providing water resources engineering services and we consistently rank in the Top 5 Design Firms for Water/Wastewater. In partnership with our clients, we provide practical solutions by leveraging strong local teams with solid understanding of issues and global expertise. We have planned, designed, built, and managed many of the largest and most technologically advanced water resources projects in the world. Stantec has earned a reputation of being a go-to-partner for various agencies.



In Sections 3 through 11, we provide an overview of our firm and information as requested in the RFQ.

Our People and Staffing Resources

Our people are our greatest asset. It's the individuals that you know and trust to keep you informed and guide you down the right path to best accomplish your goals. Led by Venu Kolli, the three individuals proposed to be your partners on your various projects—**Jeff Dunn,** our Program Manager**, Nita Kazi, our** Capital Improvements Manager**, and Jim Cathcart,** our Water Resources and Water Quality Manager —have the local knowledge and relationships, and overall necessary experience and expertise to successfully accomplish your goals for this project. These individuals have also worked together over the past several years on many of the projects highlighted in experience. Their experience is outlined in Section 4 through brief biographies, extended resumes in Appendix, and further highlighted in our project experience in Section 6.

With 22 offices in California, we have the depth of resources and availability to immediately support your project.

Stantec's experienced team will maintain positive working relationships with all City staff as well as other consultants and community stakeholders (residents, business, and property owners). Having worked on a number of similar as-needed contracts, our team routinely thinks through project issues and recommends possible solutions on regulatory, technical, administrative, and managerial issues. We communicate effectively in both written and oral public sector settings and work closely with our client.

Our LOCAL team offers responsive partners who are ready to work with you to provide the right solutions for your needs. Our GLOBAL firm offers connection to incredible additional resources and depth of knowledge.

Our Fiscal Stability

Stantec's diverse business model allows us to adapt to changes in market conditions by offsetting decreased demand for services in one business operating unit or geographic location with increased demand in another. We believe this strategy helps us mitigate risk and balance workloads between staff. Stantec is a publicly traded corporation, with adequate credit quality, and capacity for the payment of financial obligations. As required by the RFP,

documentation of our credit rating is provided in the Appendix.

Our Experience with You

Our team has been working within the City for nearly two decades. Through our work on the New Model Colony projects, we studied and design much of the infrastructure in the southern part of the City. In addition, the references and projects in Section 6 illustrate the background of our team and their experience with nearly identical scopes. As an already cohesive and familiar team, we are eager to apply our lessons learned to help you move forward with solutions you can implement with confidence. We pride ourselves on delivering the right solution—the first time, every time.

Methods to Accomplish the Work

Our program approach has been time-tested and implemented on nearly 100 programs worldwide over the last 39 years. The foundation of our approach is based on three main elements:

- Communication
- Quality Assurance/Quality Control
- Minimizing Your Risks

Stantecs approach and method for on-call engineering services contract is simple:

1. We listen and ask questions to understand your goals, the project/task order, your schedule, and your budget.
2. Our Program Manager, Jeff Dunn, then selects the appropriate task leader with the necessary skill sets.
3. We define or refine the scope of work and conduct a resource check to select the right project team with availability to meet your schedule and budget.
4. We select subconsultants, if needed, to support Stantec personnel in completing the project/task order.
5. Jeff works with the senior task leader to develop a final scope of work, schedule, and budget for review and acceptance.

Proven Project Management Processes, Systems, and Tools

Our project management methods exceed industry standards for schedule and budget management tools. We leverage global best practices, processes, systems, and tools like our Project Delivery Model for risk, value, and quality management to provide consistently high-quality deliverables on time and on budget. Our accessible dashboard reporting tools provide high-level status reports for clear, promoting timely and transparent progress toward delivery goals. Our team has a simple and effective approach to complex projects: maintain consistency in delivery and coordination with all key stakeholders throughout the duration of the program.

Achieving Early Results Using Variety of Delivery Methods

Furthermore, **we have completed more than 300 task orders for large municipalities and utilities** over the past eight years spanning a full range of high-value "start-to-finish" preconstruction, planning, CEQA, design, engineering support during construction, and construction management services. Consequently, we have the capabilities and professional talent needed to support you in evaluating and selecting the optimal delivery method for each project.

Using a standardized decision-making framework, we have developed guidelines for evaluating the appropriateness of each project's delivery method. In addition, we have assembled a team with experience in the full spectrum of delivery approaches, ranging from traditional design-bid-build through design-build-operate- finance.

Our Commitment and Other Information

We strive to remain a trusted local partner with innovative, fit-for-purpose solutions and unwavering excellence in delivery. Some of the many ways we do this are through our commitment to the communities in which we live and work. Section 11 outlines some of our corporate-sponsored programs and local events with real world, recent implementation.

For us, excellence in delivery begins with the first conversation, and it extends through all project phases from design to construction to maintain and upkeep. We look forward to applying our peoples, our experience, and our commitment to your various Project.

3.0 IDENTIFICATION OF PROPOSER

Communities are fundamental. Whether around the corner or across the globe, they provide a foundation, a sense of place and of belonging. That is why at Stantec, we always "design with community in mind".

We care about the communities we serve — because they are our communities, too. This allows us to assess what is needed and connect our expertise, to appreciate nuances and envision what is never been considered, to bring together diverse perspectives so we can collaborate toward a shared success.

We are designers, engineers, scientists, and project managers, innovating together at the intersection of community, creativity, and client relationships.

Stantec employs approximately 25,000 employees working in over 400 locations across six continents. Our team delivers high quality engineering services to our clients and communities and has enabled us to become a top 10 international design firm, ranked No. 1 in Sewer/Wastewater and No. 2 in Water by Engineering News Record (2020).

Stantec is a leading provider of water resources engineering services throughout the world, and we consistently rank in the Top 5 Design Firms for Water/Wastewater. In partnership with our clients, we provide best-in-class solutions by leveraging strong local teams with a solid understanding of issues along with global expertise. We have planned, designed, built, and managed many of the largest and most technologically advanced projects in the world.

4.0 STAFFING RESOURCES

Stantec Resources

Offices
7 in southern California
22 total in California
400+ companywide

Water Resource Team Members
87 local
240+ in California
1,900+ companywide

Our water professionals provide a wide variety of services throughout California capable of delivering your multi-disciplinary projects for the development of Plans, Specifications, and Estimates (PS&E) to support your Capital Improvement Programs described in the City's Sewer, Water, and Recycled Water Master Plans including hydraulic modeling, integrated water resources master planning, water master planning, recycled water and sewer collection system analyses and master planning, well treatment, water and wastewater treatment, civil design, asset management, risk assessments and priority based planning tools, hydrology and drainage engineering, facility condition assessment, environmental and CEQA support services, permitting and grant writing support services, and water and recycled water use studies.

Our planning approaches and analyses, including innovative alternative solutions, have been a key factor in our successful planning studies. One of our strengths is the added value that our in-house resources bring to each planning project. This enables us to offer value-added services such as survey/geomatics, GIS expertise, funding and financial plan analyses, asset management, and condition assessment.

Stantec offers a thorough understanding of the requirements, procedures, and protocols from our experience in working with the OMUC specifically. We have worked closely with the City over the past decade on several planning projects and design projects including pressure regulating stations and sewer collection system designs.

Our people are our greatest asset. It's the individuals that you know and trust to keep you informed and guide you down the right path to best accomplish your goals. We have chosen our project team members based on their experience working with you and together on similar projects throughout Southern California. **Venu Kolli** is our Principal-in-Charge and **Jeff Dunn** is our proposed Program Manager and **Nita Kazi** as our Capital Improvements Program Manager have the local knowledge and relationships, and overall necessary experience and expertise to successfully accomplish your goals for this on-call design services.

Stantec Presence in California

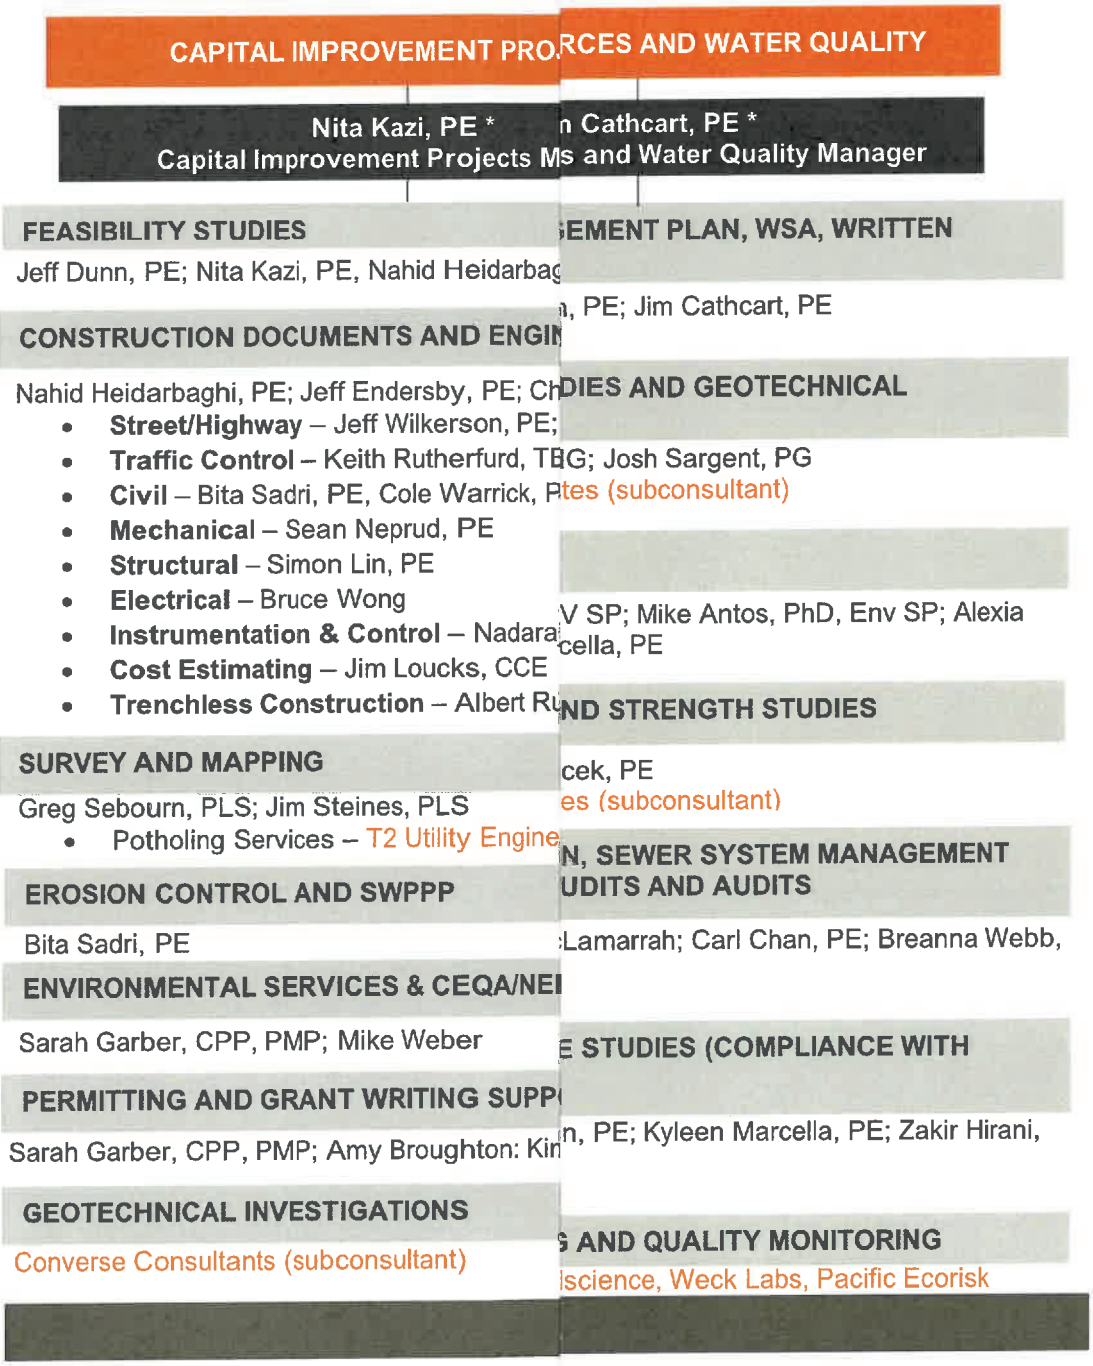
4.1 FIRM STAFFING

By defining the roles and responsibilities of everyone involved in project delivery, Stantec can set clear expectations for performance. Team leaders can hold – both individually and collectively – people accountable for achieving performance, which ultimately improves our success in project delivery. We have chosen our project team members based on their experience working together on similar projects with OMUC and as well as our clients throughout southern California. Our **three key personnel** include our Principal-in-Charge **Venu Kolli**, Program Manager **Jeff Dunn**, and **Nita Kazi** who is our Capital Improvements Project Manager.

As required by the RFQ, these three key personnel will be available for the duration of the contract term and will principally be responsible for coordination and working with the City. We acknowledge that these three individuals are "key" to the contract and will not be removed or replaced without the prior written concurrence of the City.

Our team has been assembled assuming task orders will be completed according to the Division as outlined in the scope of services within Exhibit A of the RFQ. Jeff Dunn will act as our Program Manager responsible for the overall on-call design services contract. Nita Kazi will serve as our Capital Improvement Project Division Manager. Jeff Dunn will be our Planning and Land Development Division Manager, and Jim Cathcart will be our Water Resources and Water Quality Manager.

Our proposed team as illustrated by our Organization Chart on the following page consists primarily of our in-house Stantec staffing resources in southern California. We have identified 42 team members within Stantec to support our Division managers and lead specific discipline activities for various task orders that may arise for Stantec to perform. In addition to these team members, we can pull from our over 240 water staff resources within California.



Full resumes of our team members are provided in the Appendix.

Subconsultants

Although we have a large staffing resource within Stantec, there are some specialty services that we will require to subcontract for services as task orders require. We have identified the following areas of service that will be subcontracted:

- Geotechnical Investigations and Reports – Converse Consulting
- Utility Verficiations and Potholing - T2 Utility Engineers
- Aerial Mapping – GPSI
- Groundwater Well Studies and Design Support – Thomas Harder & Associates
- Condition Assessment – V&A Consulting Engineers
- Wastewater Flow Monitoring and I&I Analysis – ADS Environmental Services
- Laboratory Testing and Water Quality Samping/Monitoring – Test America, Eurofins CalScience, Weck Labs, and Pacific Ecorisk

Organization Chart

* Indicates "key" staff principally responsible for the City.

4.2 KEY PERSONNEL

The following are brief summaries of our firm's staffing and key personnel project roles and responsibilities, followed by their one-page resumes (not included in sheet count, per RFQ). Should additional support be required in any area, we are able to pull from our 240+ water resource professionals in California. Our highly qualified team members were chosen based on their familiarity with similar task order work, experience working with the City, and their ability to commit to this project. Efficient coordination within our proposed team is facilitated by long-standing relationships between the team members.

VENU KOLLI, PE, PMP, ENV SP | Principle-in-Charge

Our principal-in-charge, Venu has 32 years of experience in all phases of civil and environmental engineering. He has extensive civil engineering experience on a wide variety of water, sewer, pump station design, master planning, and sewer modeling projects. His background includes design and project management responsibilities for large water and wastewater infrastructure projects and pump station projects. He worked on more than 20 pump station and 47 pipeline design or rehabilitation project.

PRIMARY ROLE: He will be our Principle-in-Charge he will overview the project and work closely with program manager Jeff Dunn and other leaders in charge of this program to ensure the outstanding services to be provided to the City. He will ensure the proper resources are allocated for project success.

JEFF DUNN, PE | Program Manager and Planning and Development Division Manager

Our program manager, **Jeff Dunn, PE**, has almost 30 years of experience and worked with public water agencies throughout the southern California area. His experience includes planning and design of infrastructure for potable water, recycled water, and sewer collection facilities. Jeff is uniquely familiar with the City's design requirements and procedures from task orders completed by Stantec's on-call engineering services.

PRIMARY ROLE: He will be our Program Manager he will manage the contract and be the point of contact with City. He will communicate with you on a regular basis and make sure the necessary project management activities are completed within budgets and schedules. He will manage tasks related from the Planning and Development Division.

Nita Kazi, PE | Capital Improvements Project Manager

Nita has nearly 30 years of experience with a portfolio including planning, design, and construction support for water, wastewater, and recycled-water distribution, pump stations, conveyance, and storage projects for both public and private sectors. She has collaborated with diverse technical teams, managed contracts, delivered on client commitments, and facilitated owner and stakeholder communication to achieve project success. Her abilities include leading and developing high performing delivery teams by using adaptive and innovative problem-solving techniques to meet operational objectives and manage risk. Her people-

centered approach to communication and project management empowers the team to serve in the best interest of our communities.

PRIMARY ROLE: Nita will manage the Capital Improvement Project Division tasks and resources required to complete the designs and deliverables necessary to meet the goals of OMUC.

Jim Cathcart | Water Resources & Water Quality Manager and Technical Advisor, QA/QC

Jim has 45 years of experience in water supply and development in California. He specializes in the planning, design, and construction management of water, wastewater, and reclamation infrastructure; master planning; ground- and surface water treatment; pumping and storage; and pipeline design. Jim has provided expert witness services for water system modeling and design, and groundwater contamination issues.

PRIMARY ROLE: Jim will manage the Water Resources and Water Quality Division projects and also will provide technical advisory assistance to Stantec team and oversee the quality assurance/quality control (QA/QC) reviews and procedures to provide high quality deliverables.

Nahid Heidarbaghi, PE | Project Engineer

Nahid is a detail-oriented engineer with over 20 years of professional experience in water and wastewater, transportation, land development projects. She has extensive experience in water and sewer systems, utility research and coordination, roadway improvements, and land development infrastructure design projects. Her eye for detail and quality control has been instrumental in design and review of water and sewer plans for Irvine Ranch Water District and other public agency design projects throughout southern California.

PRIMARY ROLE: Nahid will be a lead project engineer of record leading the design of water, recycled water and sewer capital improvement projects and packaging of the construction documents.

Jeff Endersby, PE | Project Engineer

Jeff has 37 years of experience specializing in the planning, design, and construction of water, wastewater, and recycled water facilities. His professional experience includes water and wastewater infrastructure project planning, preliminary design, final design and construction management, with expertise in water pump station, pipeline, and treatment plant design and construction administration, wastewater collection, conveyance and treatment planning and design, as well as project management for water distribution and wastewater systems planning and design.

PRIMARY ROLE: Jeff will be a lead project engineer of record leading the design of water, recycled water and sewer capital improvement projects and packaging of the construction documents.

6.0 EXPERIENCE AND TECHNICAL COMPETENCE

6.1 EXPERIENCE AND REFERENCES

On-Call and As-Needed Experience

Our proposed team has worked together on many task orders generated from similar on-call contracts. We are familiar with each other's work habits and skills, making our team efficient in getting the scope of work completed with the budget and schedule established. The value we bring is illustrated in our team, our success, and our clients who repeatedly engage our services. In addition to their individual qualifications highlighted in our organization and qualifications charts, this group has years of experience working together on several projects throughout Southern California, giving you a cohesive, collaborative team.

CITY OF ANAHEIM

RELEVANT TASK ORDERS

- Engineering Services for Water Master Plan Update
- Lincoln Avenue 16-inch Water Main Replacement
- Downtown Recycled Water System Expansion to Pearson Park
- Loara Street 8-inch Water Main Replacement
- Miscellaneous Water Vault Rehabilitations

CITY OF ONTARIO

RELEVANT TASK ORDERS

- Non-Potable Well Supply Study
- Piemonte Sewer Feasibility Study and Final Engineering Design Services
- Vineyard Sewer Feasibility Study and Final Engineering Design Services
- Archibald PDR and Final Engineering Design Services

ORANGE COUNTY WATER DISTRICT (OCWD)

RELEVANT TASK ORDERS

- Santa Ana Wells PFAS Treatment Systems Designs
- As-Needed Hydraulic Modeling Services

INLAND EMPIRE UTILITIES AGENCY (IEUA)

RELEVANT TASK ORDERS

- 1630 RW Pump Station Surge Protection
- Prado Utilities Study
- RP-1 East Influent Gate
- Inundation Study for the Preserve
- Philadelphia LS Pump Upgrades

EASTERN MUNICIPAL WATER DISTRICT (EMWD)

RELEVANT TASK ORDERS

- 1650 Zone Realignment Study
- As-Needed Design Conditions Reports
- Fire Flow and Hydraulic Modeling Services

SOUTH COAST WATER DISTRICT

RELEVANT TASK ORDERS

- Upgrades to CM-10 Junction Valve Replacement
- Lift Station 6 Force Main Replacement
- Water Supply Assessment

AZUSA LIGHT & WATER

RELEVANT TASK ORDERS

- Cypress Water Transmission Main Replacement Project
- Amforge Line Extension Project
- Triangle Flow Control Valve Structure

CAPITAL IMPROVEMENT PROJECTS

Potable and Recycled Water

We work closely with our clients to provide innovative and affordable solutions to manage, protect, store, and distribute water. Stantec has conducted thousands of investigations, hydraulic models, water quality evaluations, and water management studies. Our proposed team has provided planning, design, funding, and construction management services for water storage and conveyance projects across California. We offer integrated planning and design services to help our clients manage water resources from localized needs to regional plans.

We have broad-based expertise in hydraulic computer modeling, statistical analysis, data management, data visualization, asset management, and related evaluations that support water resources planning. Our expertise includes:

- Civil, structural, mechanical, and electrical design
- Water demand analysis
  - Hydraulic modeling
  - Transient Analysis and control
  - Water quality modeling and analysis
  - Computational fluid dynamics
  - Mixing and dispersion
  - Engineering economics
  - Geographic Information Systems (GIS)
  - Condition assessment
  - Decision support systems

Our staff possess specific expertise and understanding of the underlying water supply, quality, and hydraulic theories used to develop complex planning documents. Storage facilities are costly elements of an overall water distribution system and considerable planning, and design is essential to ensure these components benefit the water operations, are cost effective, and enhance the level of service to the customer. Our experience and expertise include all types of storage systems, such as steel tanks, cast-in-place concrete tanks, pre-stressed concrete and lined earthen reservoirs.

We provide facility planning to determine the ideal tank size and location based on optimizing the storage-pumping relationship and water quality.

Design and Rehabilitation of Reservoirs

Stantec is a recognized leader in the design and rehabilitation of reservoirs, and we also have experience in seismic evaluations and retrofit of existing water reservoirs. We are very familiar with local issues associated with reservoir design and construction, such as seismic design and detailing, local environmental and permitting requirements, and local building materials and their availability. We also conduct detailed hydraulic modeling to develop operating guidelines to maximize storage use and minimize potential water quality issues.

Pump Stations

Pumping systems are the heart of any water system and usually represent the largest single energy demand for the overall supply. Stantec has extensive experience designing water pumping stations with capacities as large as 525 MGD using horizontal split case and vertical turbine configurations. Stantec also offers specialty services in transient assessment and mitigation. It is critical to consider the water system as a whole to select the optimum combination of pumping versus storage. We have used variable speed drives to enable optimized pumping, and we have also developed pump demand scheduling control systems to minimize pumping costs and match pumping to demands. In some instances, this also provides opportunities for energy management and savings through off peak usage.

Distribution Systems

Aging distribution networks can result in high capital expenditures to maintain the existing pipes. Our commitment to enhancing our services by implementing contemporary, innovative technologies for both new construction and existing system rehabilitation often realizes significant cost benefits for our clients while ensuring long-term system integrity.

Pipelines

As a recognized expert in the industry,

Stantec has provided leadership in the planning, design, and construction management of more than 300,000 miles of pipelines throughout the US and around the world, including more than 5,000 miles of large diameter pipeline. We have worked with steel, ductile iron, cast iron, PVC, HDPE, reinforced concrete cylinder pipe (RCCP), prestressed concrete, fiberglass, concrete, and mortar lined steel pipelines for both high pressure and gravity applications ranging from 4 to 144 inches in diameter.

Stantec has designed pipelines for some of the most adverse conditions—surface congestion, underground utility conflicts, rugged terrain, and unstable or corrosive soils. Designs have included open trench, tunneling, jacking, submarine, and other types of installations. Often, these projects include all appurtenant facilities for flow control and access points for routine maintenance. We have led all phases of pipeline projects from planning, preliminary design, design, and construction to startup and commissioning.

Specific services we provide include hydraulic analysis, route selection, surveying and mapping, utility investigation, geotechnical services, pipeline material selection, corrosion control strategies, right of way and land acquisition, detailed civil and mechanical design, analysis of soil-structure interaction during seismic events, constructability reviews, value engineering, and construction management. When designing pipeline projects, measures we typically take include potholing of major utilities to further reduce changes in the field during construction.

In addition to designing new pipelines, our work has included both water transmission main extensions and replacement. We offer great depth and breadth of experience in this area, having assisted clients in extending or replacing water and transmission mains ranging in size from 6 to greater than 60 inches in diameter. Our team members have delivered several projects requiring a diverse mix of capabilities to provide a thorough evaluation of our clients' water distribution systems.

Wastewater

Stantec has been successfully designing economical wastewater and stormwater pumping stations and gravity sewer for more than 50 years. We draw on our extensive experience and apply our expertise to projects tailored specifically to meet or exceed the demands of our clients. Our team offers diversified qualifications and experience in all phases of wastewater pumping station project and gravity sewer project development.

Stantec provides planning, design, and construction management services for wastewater pumping stations up to 350 MGD and small to large diameter gravity sewer. Our designs reflect the close attention we pay to site considerations, aesthetic and environmental concerns, and our client's individual and/ or unique needs. From a thorough understanding of the complexities facing today's utilities and municipalities, we consistently develop creative solutions that successfully balance efficiency and effectiveness.

PLANNING AND LAND DEVELOPMENT

Modeling/ Planning

We bring decades of experience delivering water, recycled water, and sewer master plans and models for southern California agencies and municipalities. Stantec recently provided master planning services for East Valley and San Bernardino Municipal Water Districts, and the Cities of Anaheim, Orange, and Fullerton. We use all software platforms, including Innovyze (InfoWater, InfoSWMM, InfoSewer, InfoMaster), Bentley (WaterGEMS, SewerGEMS), Mike Urban, and EPA SWMM.

As part of our water master planning work, we deliver fire flow testing for model development, calibration, and verification of system pressures, including:

- Identifying hydrants for testing
- Developing standardized forms to collect data
- Assisting with field work for data collection
- Integrating data into relevant planning documents and models

we use existing hydraulic models and other planning tools to develop analyses for development, recommendations for new infrastructure, and verify recommendations as needed.

The tables on the following pages are a selection of some of our most relevant projects; aligned with your criteria and potential tasks. The projects are limited to those completed by proposed team members. While their names are included in the table to give a visual of the shared and varied experience of our diverse team, full resumes included in the appendix include more detailed descriptions of projects and the individuals' role on each one.

- We understand agencies experiencing growth as we have supported IRWD with similar growth and expansion of the service area, and as residential and commercial developments are planned, we have prepared Sub Area Master Plans (SAMPs) for each development or planning area. As a result, we have prepared more than 30 SAMPs, SAMP addenda, and facility planning studies that have evaluated existing and future water, sewer, and recycled water infrastructure amounting to nearly two-thirds of their service area and to serve proposed development areas accounting for 10,000 acres and 60,000 residential dwelling units.
- Our on-call expertise and responsive to agencies such as IRWD, EMWD, and IEUA needs allowed us to work on several facility planning studies and model analyses, including:
  - Analyzing existing and future demands
  - Model calibrations against SCADA information
  - Impacts to existing infrastructure
  - Pumping and pump station upgrades feasibilities
  - Sizing new infrastructure for sewer and recycled water facilities
  - We have performed sewer feasibility studies and water system pressure zone analyses.
  - We have provided coordination and meetings with all relevant stakeholders, including private developers. This was necessary to prepare and provide information for required CEQA and EIR requirements, phasing and sensitivity studies with considerations to existing neighborhoods, funding allocations and CIPs.

WATER RESOURCES AND WATER QUALITY

he Stantec team assists clients with quality and quantity management. We have provided services to all the WASCs in Southern California, more than 50 individual cities, Caltrans, and numerous private industrial and construction sites. Our services include permit compliance and reporting activities; stakeholder engagement; program development, planning, and Best Management Practices design; and stormwater treatment systems. Stantec has also developed successful automated stormwater monitoring programs and led complex compliance reporting efforts, which would benefit future compliance monitoring and enforcement activities.

Our team offers the County a distinct advantage through our extensive working knowledge of the various water resources issues throughout the County, its communities, and water management agencies. We have supported virtually every water management entity in Los Angeles County and lead surface water compliance and stormwater treatment solutions for one of the highest profile industrial sites in the Los Angeles River Watershed. We have prepared numerous planning documents for watersheds ranging in size from 3 to over 700 square miles. Our programs involve hydrologic and hydraulic engineering, environmental assessments, economic analysis, interested party engagement, and master planning services. Stantec has performed hydrologic analyses for more than 40 watersheds in the western United States with a variety of state-of-the-art hydrologic simulation programs.

We have completed water plans that integrate surface water, groundwater, transfers, conjunctive management, recycling, and reuse. Our team has proven leadership in the policy and legal decisions framing water resources planning and management in California. The Stantec team has completed multiple Regional Water Management Plans; Urban Water Management Plans; Water Supply Assessments and planning; Hydrogeologic studies, and other reports for the use of recycled water and wastewater flow and quality for compliance with the State Water Quality Control Board.

Our experience with many southern California agencies in sewer collection system modeling and master planning services that have included wastewater flow and strength studies. These evaluations are coordinated with, and field monitoring is performed by our subconsultant, ADS. Our studies begin with a well-thought-out flow monitoring plans for collection metering data in the field to measure dry weather flow patterns, wet weather flow patterns, land use flow factors, and tributary area impacts.

6.2 CITY OF ONTARIO LOCAL EXPERIENCE AND KNOWLEDGE

Our proposed team's involvement with the City dates back nearly two decades. Beginning with our experience with the New Model Colony project, we have performed planning studies and facility designs for much of the infrastructure construction in the southern portion of the City now known as Ontario Ranch. For that effort, we used the City's hydraulic models, and became very familiar with the criteria for design and construction. At that time, we were also very involved in updating and developing design standards the City now uses. Resulting from this, we performed other projects such as planning studies and design of gravity sewer facilities and lift station for the Edenglen development, which required detailed residential water use and sewer flow generation analysis.

This experience also has included work with IEUA, with whom the City is a member agency. With IEUA, our team has conducted on-call engineering services of their regional recycled water system. This allowed us to become very familiar with the region's water use and sewer collection systems. Design projects located in the City such as pipelines and regional plant pumping infrastructure designs have also been performed. These projects have provided our team the local experience and knowledge necessary for successfully completing the tasks for your as-needed tasks.

Our services with contracts directly with the City began with an as-needed hydraulic modeling agreement to study various alternatives and impacts to the existing recycled water system. Stantec currently holds an on-call services agreement where several tasks have been performed. Tasks from this agreement and other projects contracted directly with the City include:

- **Various hydraulic modeling scenarios of the recycled water system**
- **Non-potable Well Supply Study**
- **Recycled Water Master Plan Update**

More recently, our team's experience includes relevant sewer pipeline design projects either in progress or recently completed with OMUC:

- **North Vineyard Sewer Diversion Project** - Final Design and Feasibility Study/Preliminary Design Report (FS/PDR)
- **Archibald Sewer Diversion Project** - Final Design Feasibility Study/Preliminary Design Report
- **Piemonte Sewer Diversion Project** - Piemonte Sewer Feasibility Study for the Adept Development and Final Design of the sewer improvements in Mercedes Lane and Ferrari Lane, including engineering support services during construction.

For each of these projects use the City's design criteria and guidelines and master planning documents. Future systems conditions were developed, alternatives analysed, and future improvements recommended.

On-Call Planning and Modeling Support Services

Stantec performed on-call planning and modeling services, as part of the IRWD staff, located at IRWD headquarters. He prepared model analysis, technical memorandums evaluating facility planning studies, document reviews, and plan check support services. Jeff also supported IRWD staff in preparation of the potable and non-potable water master plans, including recycled water system expansion studies.

On-Call Plan Checking Services

Stantec performed on-call plan checking services as part of the IRWD staff, located at IRWD headquarters. Nahid provided plan checking services, which involved reviewing construction plans that were submitted to the District from consultants in various phases of design and all the revisions during the constructions. Projects involve water, recycled water, sewer or storm drain runoff facility improvements. She has supported IRWD staff and completed hundreds of plan checks over 10 years within the time frames requested by the District.

Michelson Sewer Lift Station Relocation

Provided design for lift station equipped with two duty pumps to provide a flow rate of 1,500 GPM and a "Cutter" pump with a flow capacity of 1,500 GPM.

Michelson Treatment Plant

All three pump motors were equipped with VFD, and housed in an air conditioned electrical room. A diesel power emergency generator is housed in a sound attenuated building. The wet well and force main was equipped with odor control equipment and the ventilation system was constructed in conformance with NFPA-820.

Lake Forest Zone B to C Pump Station

To progress the Lake Forest Recycled Water System improvements forward, IRWD retained Stantec for the Lake Forest Zone B to C Pump Station. The pump station will be primarily supplied directly from the Los Alisos Water Reclamation Plant. The new pump station will operate in a closed loop configuration and therefore be hydraulically isolated from Upper Oso Reservoir. The new recycled water pump station will be constructed on IRWD's existing Lake Forest Well No. 5 site located on the Northeast side of Lake Forest Drive, between Regency Lane and Vista Terrace. With implementing the planning and design efforts associated with the Lake Forest Zone B-C Pump Station, IRWD is intending to decommission and destroy the existing well and pump station located at the Zone B East Reservoir Site, and develop an intertie valve and metering station between IRWD's Zone C to Upper Oso Reservoir.

Irvine Boulevard-Portola Parkway Capital Facilities

We prepared the preliminary design report and final design for the domestic water, reclaimed

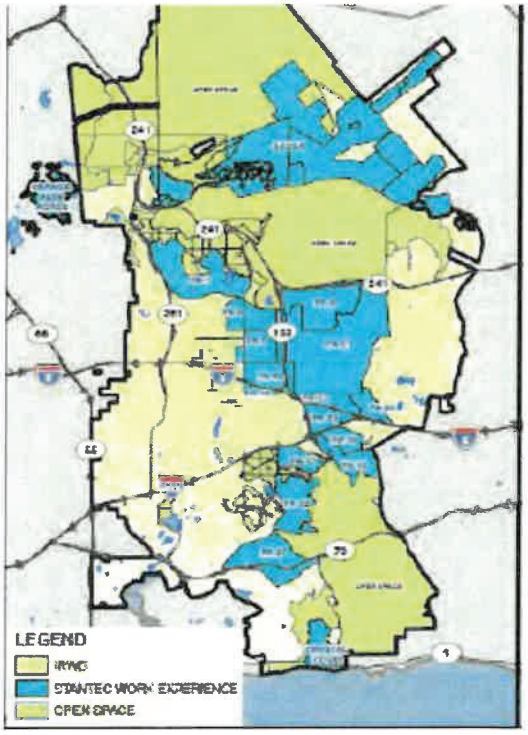
water, and sewer pipelines in Irvine Boulevard and Portola Parkway within the city of Irvine. The project involved the design of nearly 20,000 LF of 36-inch domestic pipeline; 6,802 LF of 12-inch domestic water pipeline; 12,700 LF of 16-inch reclaimed water pipeline; 7,073 LF of 20-inch reclaimed water pipeline; and approximately 2,800 LF of 12-inch sewer pipe. The plans were prepared with multiple pipe material alternates including PVC, ductile iron, and steel pipe.

Eastwood Multi-Zone Pump Station

The project involved a terminal pump station pumping to three differing pressure zones, surge mitigation measures, mechanical, electrical, structural, architectural, and I&C. The project included nine individual pumps with VFD control systems. Significant architectural enhancements were required due to the proximity of residential development, including noise mitigation measures.

Orchard Hills Zone A-C Recycled Water Pump Station and Zone C Pipelines

Stantec performed the planning and system layout analyses for the design of the



pump station and 16-inch pipelines to serve the future developments. The pump station has a capacity of 6,000 GPM located on a site near the IRWD Rattlesnake Complex.

Water Resource Master Plan Update Chapters 3, 4, and 5

This project involved updating the water supply, water demands, and storage chapters of IRWD'sWater Resource Master Plan (WRMP). The objective for this WRMP Update is to make this document an improved planning tool by updating it to match IRWD's system as a nearly built-out district with only infill and redevelopment areas primarily left for future demands. The WRMP Update revised water demand projections to be consistent with the recent water conservation measures with updated demand factors for each land use. The water supply chapter was revised with discussions related to their latest water supply sources added to the system since the previous planning document. Descriptions of their groundwater wells including as related to BPP, native surface water, and treated and untreated imported water were updated.
Each supply source was updated with a description of the contractual language and capacities. Supply reliability was addressed with mass balances analyses provided for certain outage scenarios of imported and groundwater supplies. The chapter was also updated to include their recent recycled water expansion projects. The storage chapter required investigation of storage criteria and assumptions, close coordination with IRWD planning staff to update their demand forecast tool, and cleanup of the GIS database. The GIS was utilized to update future demands for each land use polygon and create new storage areas to query and analyze storage area demands and requirements.

Potable Water, Sewer, and Recycled Water Sub-Area Master Plans (SAMP)

Since the mid-1990s Stantec has prepared over 20 Sub-Area Master Plans (SAMPs) and subsequent updates for potable water, sewer, non-potable water, and telemetry systems. Together they include 9,300 acres of development, with more than 53,000 dwelling units and 20 million square feet of commercial and industrial buildings. The ultimate population served within the eight study areas will comprise approximately 25 percent of the District's ultimate population and nearly two-thirds of the service area. To complete the SAMPs, we performed local and regional hydraulic modeling with extended period simulations, phasing studies, and regional storage analyses.

Stantec's IRWD Service Area Experience

RP-1 Mechanical Upgrades

Feasibility Study for the 1158 Zone Pump Station Upgrades

Stantec performed feasibility and surge protection analyses for upgrades to the RP-1 1158 Pressure Zone effluent pump station. It also evaluated an existing 8-mile long steel pipeline to solve its leaking issues.

Recycled Water Program Strategy

Stantec prepared a regional recycled water program strategy for IEUA which included an evaluation of the supplies and demands for identification of capital improvement needs for their 10 year CIP to follow the region's changes in water resource priorities.

As-Needed Hydraulic Modeling Services

Stantec hydraulic modeling and analysis services for IEUA's recycled water distribution system. The initial tasks required updating their existing model to Infowater software. The updating process included updating the existing model elements with current GIS and design information as well as adding in new facility model elements from their GIS database. The model was then calibrated with the latest demands information from their billing data, including creating diurnal patterns for the demands and supply facilities for EPS simulations. Pump stations and source water facilities were updated with SCADA flow data and pressure information. Workshops were conducted with IEUA staff to run the model in their presence to confirm calibrated results and controls set points. The model was analyzed for several projects such as expansions of three of the recycling plant effluent pump stations, pipeline improvements, and a recycled water program strategy to evaluate system needs for the ten-year CIP.

Regional Plant 5 (RP-5) Recycled Water Pump Station Expansion Bottleneck Pipeline

Stantec upgraded IEUA's existing recycled water pump station at RP-5.

1299 Zone/1630 West Pump Station and 1299 Zone Surge Analysis

Stantec performed hydraulic evaluation of the 1299/1630 Zones and final design for replacement of existing check valves and construction of new 750 gal surge tank protection system. For 1630 Stantec performed a pump station improvement including surge tank, valves addition, SCADA, and electrical services.

930 Zone Chino Hills Recycled Water Reservoir and Pipeline

Stantec prepared the pipeline layouts and design for approximately 12,500 LF of 30-inch diameter pipeline. The pipeline connects a new recycled water reservoir to the existing recycled water system. The alignment of the pipeline required several Caltrans and flood control channels, including several thousand feet within the access road of the channel. Coordination and permitting was required from the Army Corps.

IEUA RP-1 1158 Zone Recycled Water Pump Station Upgrades

The ongoing project upgrades the flow capacity of the existing 1158 pressure zone RWPS at RP-1 facility from 10,000 GPM to 17,400 GPM with redundancy. It also improves the hydraulic surge protection system for the upgraded pump station.

IEUA RMPU Yield Enhancement Improvements

Stantec provided preliminary designs to implement a 20 cfs pump station and a 10,000-ft force main pipeline, as part of the Recharge Master Plan Update (RMPU) Yield Enhancements Improvements in Inland Empire. The Preliminary Design Report included evaluation of the force main size and alignment, hydraulic calculations, pump sizing, pump station layout, and the cost estimate. The project will store and recharge additional storm water runoff and increase groundwater recharge of recycled water.

Eastern Municipal Water District

el-hagem@emwd.org

Team Members | Jeff Dunn[1], Adelina Pirijanyan[1], Roxana Carrillo[1], Jim Cathcart[2], Jeff Endersby[2], Nita Kazi[2]

On-Call Services Task Order – 1650 Zone Realignment Study

Stantec performed a planning study evaluating the existing 1650 Zone existing and future system conditions. The evaluation consisted of field hydrant flow testing to validate and update the hydraulic model. Alternative analyses were performed and evaluated recommendations for realignment of the 1650 Zone based on collaborative effort with the District. Final recommendations included some areas being serviced by a lower pressure zone and some areas serviced by a higher pressure zone.

On-Call Services for Hydraulic Modeling and Fire Flow Testing

Stantec has performed on-call tasks for updates and evaluation of the hydraulic model to run fire flow analyses as development requests are submitted. Analyses involve a demand evaluation, fire flow requirements for the development, updates to the model, pressure zone performance reporting, and evaluation of system capacity including recommendations as necessary.

As-Needed Services for Design Condition Reports

Stantec has performed as-needed planning support services to the District in reviewing and approving of hydraulic system planning reports, called Design Condition Reports, that evaluate existing and proposed water, sewer, and recycled water infrastructure proposed by the development. Reviews of these reports include significant coordination between the District and development engineers.

Rice Road Pipeline Improvements Project

When EMWD identified an urgent and high priority project to design the Salt Creek crossing at Rice Road, they turned to Stantec for an accelerated trenchless pipeline design. The new project was needed to provide adequate fire supply for the proposed neighboring developments. Water pipelines were already in place along the north and south side of Salt Creek, but a new 18-inch interconnection pipeline was needed across Salt Creek to meet the fire flow required to continue construction of the neighboring development. The need for a trenchless creek crossing design, permits, and coordination with the County of Riverside for a future bridge at this location was identified. The Rice Road Pipeline project includes various studies, preliminary design, and final design for approximately 800-feet length of new 18-inch pipe constructed by trenchless methods within Rice Road at the Salt Creek crossing. The new 18-inch pipe will connect to the existing 18-inch PVC pipe constructed at the north and south side of Salt Creek with valves and appurtenances. Preliminary design will evaluate the alignment and trenchless methods and provide a proposed trenchless crossing recommendation for EMWD approval. The project includes survey, geotechnical study, traffic control concept, potholing, agency coordination, and trenchless final design. Final design will use a progressive design method, including submittals and assistance to EMWD for obtaining permits with appropriate agencies.

Valley Boulevard Potable Water Transmission Pipelines Phase 1 Project

Stantec is preparing a preliminary design report for the Valley Boulevard Potable Water Transmission Pipelines Project will improve operational reliability through conveyance redundancy to the existing pipeline in Murrieta Road (Phase 1) and will ultimately connect to Eastern Municipal Water District's (the District) Desalination Complex, once Phase 2 is completed, to deliver water to existing and new developments in the area. The Project is a critical part of the District's largest pressure zone known as the Perris Valley 1627. It involves approximately 4 miles of 30- and 36-inch pipeline (21,600 feet) from the Perris Valley Desalination Complex to McLaughlin Road.

6.5 TECHNICAL COMPETENCE

6.5.1 Software

Stantec has extensive experience using all commercial CADD, GIS and water related modeling platforms including AutoCAD, Revit, ArcGIS, ArcGIS Pro, InfoWater, InfoSewer, InfoSWWM, InfoWater Pro, WaterGEMS, WaterCAD, and EPANet. Stantec's team is extremely proficient in each of these platforms. We can provide turnkey solutions from existing databases, drawings, and analytic software for successful planning and design of the City's water and sewer infrastructure systems.

We also use Power BI as a planning tool and for asset management tasks. Power BI is a data analytics collection of software services, apps, and connectors that work together to turn your sources of data into coherent, visually immersive, and interactive insights. Your data may be an Excel spreadsheet, GIS, or a collection of cloud-based and on-premises hybrid data warehouses. It unifies data from these sources to create interactive, immersive dashboards and reports that provide powerful analyses to support decision making goals with actionable insights that drive business results.

Our in-house staff have wide array of software technologies to improve our quality of deliverables and efficiency in completing our projects. For virtual meetings, we utilize Microsoft Teams. Other technical applications we use on a routine basis are AutoCAD and Revit for many of our design projects, and InfoMaster and other related software for the majority of our asset management services.

6.5.2 Multi-Discipline Staffing Resources

For more than seven decades, Stantec has provided water resource engineering services to improve the quality of life in communities where we work. Over that time, we have added a full complement of engineering and planning disciplines to our portfolio to better serve our clients' needs. We take pride in a long history of being part of the communities we serve.

Dating back to the 1950s, we have successfully collaborated with municipal, state, and federal water resource agencies nationally and throughout southern California. We are a local southern California team, backed by national expertise. Today, Stantec is a community of approximately 25,000 people working in over 400 offices worldwide. With more than 240 water specialists in California, we provide a full range of water services to meet our client's requirements.

7.0 PROPOSED METHOD TO ACCOMPLISH THE WORK

Stantec's overall approach to on-call services is to provide functional, high quality studies and designs that minimizes impacts to the public during construction, keep construction costs in check, are easy to operate, exhibit low operation and maintenance costs, and low energy consumption. To achieve this, Stantec has created a multi-disciplinary engineering and design delivery team focused on managing, developing, and reviewing top-quality, innovative, client tailored projects. We understand that the disciplines that may be required for on-call contract can vary.

Our general approach to each project consists of the following basic principals that will be our focus to maintain throughout the project:

- Communication
- Quality Assurance/Quality Control
- Minimizing Your Risks

The Stantec team is nimble and can flexibly provide the full suite of services include in your anticipated scope of work including, and not limited to, planning and feasibility studies, environmental services (CEQA /NEPA document preparation and compliance), geotechnical investigations, asset management , hydraulic modeling and model maintenance utilizing Innovyze InfoWater software for potable and recycled water, and Innovyze InfoSewer, software for sewer, water resources planning and management support, surveying and mapping (including easement assessments, right of way preparation, and mapping, and conduct potholing services), erosion control and storm water pollution prevention, hydrology and drainage engineering, plan checking, permitting support, grant writing services, street improvement and highway design engineering, civil, structural, mechanical, instrumentation, and electrical engineering and design services, traffic control, landscape architecture, and property acquisition. Our staff also routinely provides engineering services during construction, as well as construction management. Stantec has the full capability from initial concept to final construction services.

Stantecs approach and method for on-call engineering services contract is simple:

6. We listen and ask questions to understand your goals, the project/task order, your schedule, and your budget.
7. Our Program Manager, Jeff Dunn, then selects the appropriate task leader with the necessary skill sets.
8. We define or refine the scope of work and conduct a resource check to select the right project team with availability to meet your schedule and budget.
9. We select subconsultants, if needed, to support Stantec personnel in completing the project/task order.
10. Jeff works with the senior task leader to develop a final scope of work, schedule, and budget for review and acceptance.
11. Upon notice to proceed, we prepare a detailed project execution plan that outlines the final scope of work, staffing, budget, background information/required data, and quality control plan. If needed, we will also include a risk assessment, health and safety plan, and communication plan. We then prepare a detailed schedule that includes our quality control review time and your review time. The project execution plan documents the project goals and allows the team to deliver solutions to meet your exact needs and helps to avoid misunderstandings.

When the City provides written notice to proceed, detailed schedule is bult from the bottom up, from the time you want the project/task order completed or operational. We then analyze each project component for risk and critical path, such as permitting from various agencies, environmental reviews, land acquisition, or lead times on equipment and material promoting pre-procurement. Once we identify the risks and critical path items, we can build a schedule for everyone to agree upon. This process proactively helps identify major issues up front so they can be addressed prior to project execution.

All Stantec's projects/tasks are managed by experienced staff and all quality control is performed by experts in their fields of study. These requirements are in place to prevent major issues from being overlooked. In the event a major issue is identified, Jeff will immediately address with the City's project manager. In addition, frequent communication with the internal team, as well as with the City, assists in identifying issues so they can be resolved quickly and efficiently.

Scope of Work Development

Upon receiving an opportunity to respond to a project/ task order under your on-call contract, Jeff will work with the Stantec team to prepare a detailed scope of services, schedule and budget for the work to be completed. Our emphasis will be on delivering the staff with the necessary experience and skill sets for assigned tasks.

Technical Task Leader Selection

Jeff will identify the appropriate task leader to execute the project/task order. He and the task leader work together to select the staff and subconsultants that will bring the best value to the City. For some task orders, multiple disciplines will be necessary, requiring specific task leaders. In this instance, the scope of work will be reviewed by the selected task leaders to define the work boundaries. The task leaders will report directly to Jeff, who will be the primary point of contact for the City throughout the execution of all projects/task orders.

Resource Staffing

Each project/task order will have different requirements and different goals that need to be considered for assigning staff and resources. Some task orders may require high levels of experienced personnel with a specific expertise while some projects/task orders may be routine deliverables driven by schedule. Stantec will staff each project/ task order with a focus on meeting the needs of the project/task order, team availability to meet your schedule and your budget. In developing our resource staffing plan, we always work to minimize the long- term cost of the project using experienced task leaders partnered with senior and mid-level staff as appropriate. Stantec strives for the most cost-effective mix of expertise and labor classifications to deliver value. One of the most important services Stantec offers is access to our company's resources and those of our subconsultants. This begins with local, experienced project management and technical staff who are readily available and responsive to your needs. Requirements for additional experts, senior, or junior-level staff can then be determined, as warranted by the scope of work.

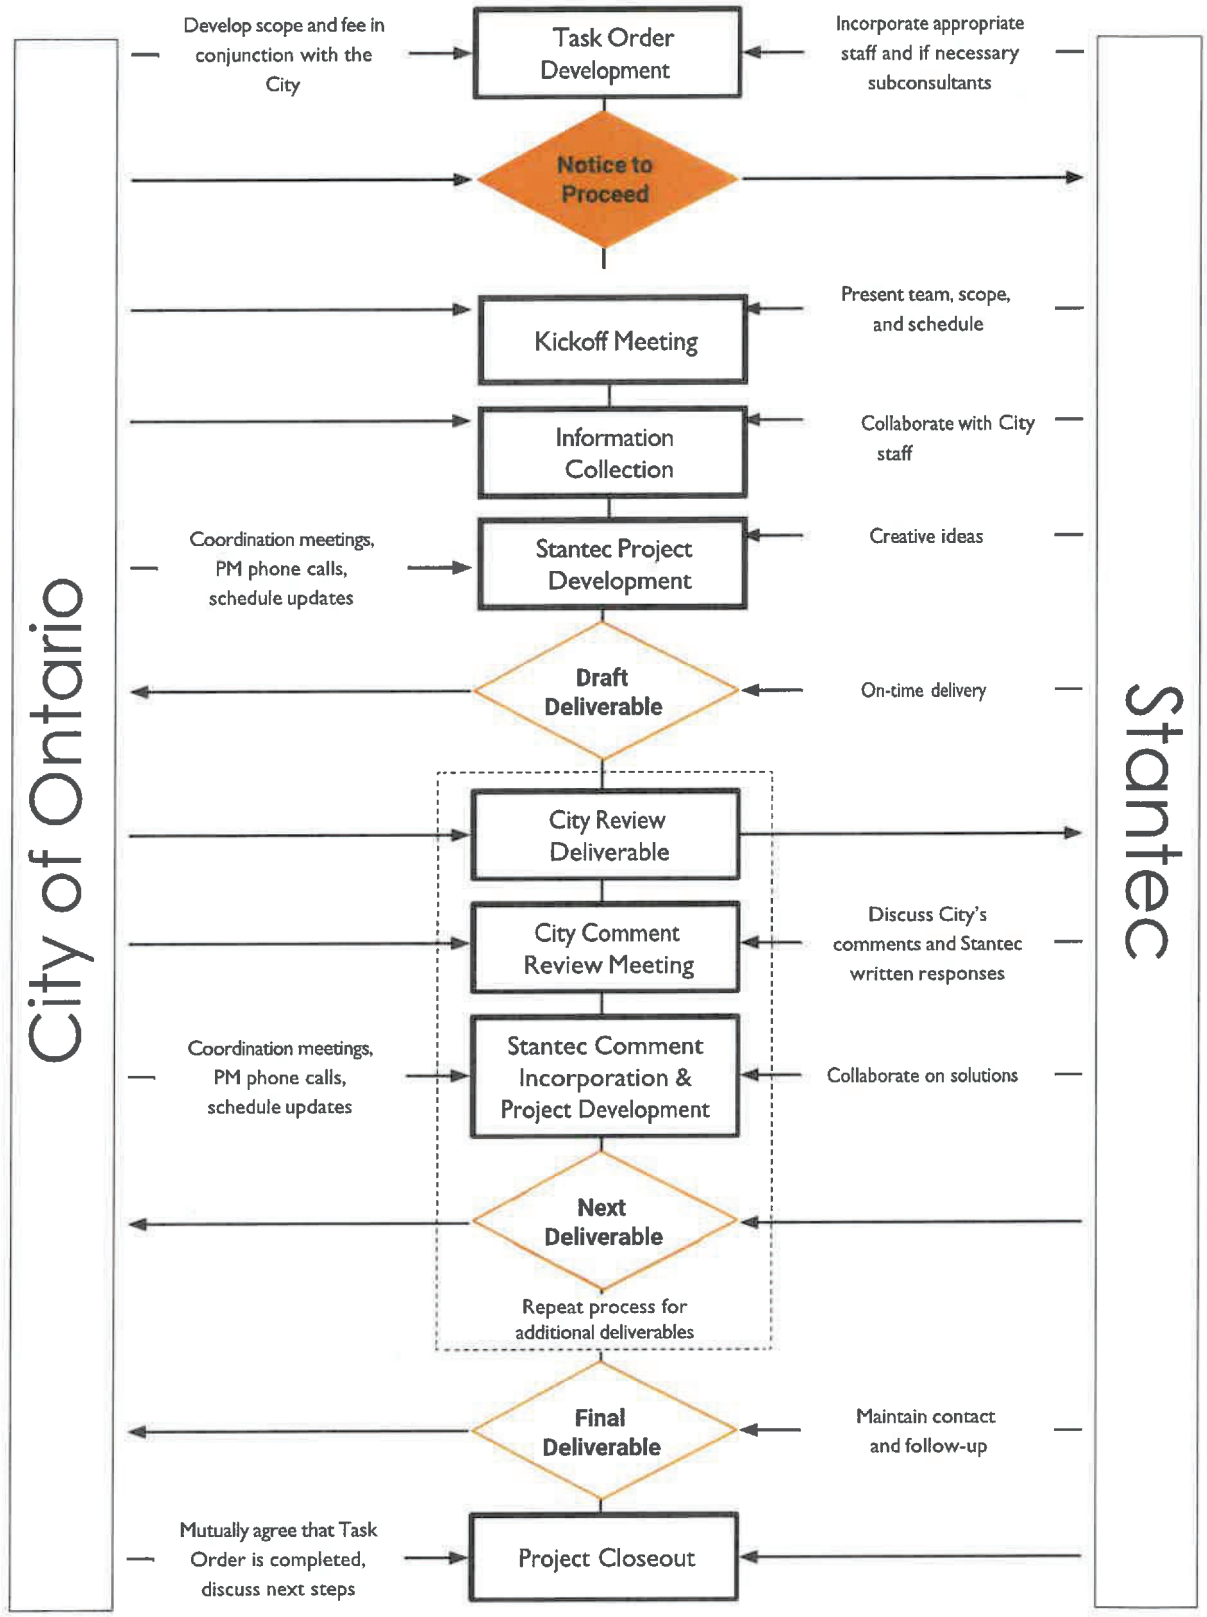
Quality Assurance/Quality Control

We have a proven procedure for establishing and maintaining the quality of our professional work products. Our QA/QC process includes proactive planning and implementation of appropriate procedural controls to provide and promote consistent delivery of high-quality services and work products. This process allows us to review all content with an experienced engineer with knowledge of the project as well as an independent

senior engineer who can look for issues that may not be apparent to those who have been involved in the day-to-day preparation of the deliverable. In addition all project activities and deliverables are overseen and checked by the task leads for the project. This strategy not only provides thorough quality assurance for our deliverables but also provides consistency amongst analyses and deliverables.

We focus on enhancing the sustainability and wellbeing of each community we serve. As we build on what's already in place, we make sure to maximize your existing investments, helping you realize the best value for money spent.

Figure 1 on the following page shows the anticipated key steps for a typical project/task order and identifies how Stantec will bring collaboration to the City on all aspects of a typical project/task order.



Preliminary Design

Depending on the nature and complexity of the project, a PDR is recommended that includes a 30% design level addressing the initial design aspects of the project and establishing design requirements and criteria. The preliminary design will include field investigations, including utility search, potholing activities, and geotechnical investigations as necessary. Specific elements of a PDR include:

- Project Design Criteria
- 30% Design plans
- Utility Research
- CEQA and Permitting requirements
- Preliminary drawing list
- Construction recommendations
- Construction scheduling requirements to be included in the construction documents
- Project schedule including design, bidding, and construction activities
- Specifications Table of Contents
- Opinion of probable construction costs

Final Design

During the final design phase of the project, we progress the preliminary design into a bid package with construction drawings, project specifications, and an opinion of construction costs. As the design packages are being completed, we work with the stakeholders and permitting agencies to incorporate the necessary requirements, including any traffic control drawings that may be required. The final design package can be submitted for the City's review at various completion levels such as 60%, 90%, and 100% design completions.

Stantec and City Collaboration during Project Delivery

10.0 LITIGATION

The projects with our proposed team have not had any of the listed occurrences described in the RFQ. There are no unsatisfied judgments or arbitration awards outstanding against Stantec. Stantec has hundreds of offices throughout the world and does have some legal proceedings, lawsuits, and/or claims pending. These are a normal part of professional services industries. All have been reported to Stantec's insurers who, with Stantec's active involvement, are in the process of adjusting/managing them. None will have a material effect on the financial position of the company or its ability to undertake this assignment.

11.0 OTHER INFORMATION

Descriptions of our work on past City projects in are provided as proof positive of our experience in addition to our involvement in the community. We are thorough, accurate, and staff our projects to deliver successful implementation within budget. We have worked within the City for more than fifteen years and are very knowledgeable with your service area and planning requirements.

11a. ABILITY TO MEET SCHEDULES AND BUDGETS

We understand the importance of timelines and quality; therefore, we will work closely with you to determine key project milestones and then adjust our schedule to meet those milestones. Sections 4 and 6 provide a detailed description of our staffing capabilities and past project experience where we demonstrate our past successes. Should additional support be required in any area, we are able to pull from our 240+ water resource professionals in California alone.

11b. GIVING WITH OUR COMMUNITY IN MIND

As a company, we have a passion for creating strong and vibrant communities. We aim to make a difference in the places where we live and work. Through donations, sponsorships, and volunteering, we connect with our communities and help strengthen them in meaningful ways.

Dollars for Doers

We care about the people that work for us. We want them to thrive not only at work but also in their communities — that is why we started our Dollars for Doers program. We encourage every employee that works with us to take part in initiatives that improve the world around them, so much so that we have committed to donating $500 to any charity for 25 hours of volunteering.

Stantec in the Community Week

Stantec in the Community Week is about bringing our hearts and hands together to make a difference by collectively volunteering in the communities we serve. It is why we design with Community in Mind. A worldwide week of community service across the Company, Stantec in the Community events highlight the local initiatives we are passionate about and the causes we support. Sharing our Stantec spirit does not just happen one week a year,

it continues all year long. Our Company and our people invest in communities by donating time, expertise, and funds to many charities.

US Inclusion & Diversity (I&D) Council

Stantec established a sub-committee of our US Inclusion & Diversity (I&D) Council. The I&D subcommittee prepared a plan to drive five key action areas: Committing time and funds to STEM education within Black and other underserved communities to help foster the growth of our future industry leaders and help break the cycle that generates social inequity; making additional resources to groups we already support, such as the Architecture Construction Engineering (ACE) Mentor program, the National Organization of Minority Architects (NOMA), and others; enhancing and implementing internal programs, including our unconscious bias training and our hiring and career advancement practices; leveraging our digital platforms and community relationships to advocate for I&D issues in our industry and our communities; and leveraging resources for our employees' mental health and wellness.

Annual Water For People Stantec Employee Giving Campaign

Every year, Stantec hosts a company-wide employee giving campaign in support of Water For People. Water For People is a non-profit working across 9 countries to bring safe and reliable water and sanitation to 4 million people. Water for People works with communities to build water and sanitation infrastructure and ensure the communities understand how to keep the systems serving the people long into the future. The Irvine office has hosted various fundraisers including ping-pong tournament, cycling race, virtual trivia competition, and virtual game night. Roxana Carrillo has organized the office fundraisers since joining Stantec and is now leading company-wide efforts to continue bringing clean water and safe sanitation to Everyone Forever.

11c. PREVIOUS INVOLVEMENT WITH THE CITY

As described in detail in Section 6.2, our experience directly with the City dates back more than a decade working within the City beginning on projects such as the New Model Colony (now Ontario Ranch) and Edenglen developments. Our services with contracts directly with the City began with an as-needed hydraulic modeling agreement to study various alternatives and impacts to the existing recycled water system. Currently, Stantec holds an on-call services agreement where several tasks have been performed.

11d. NO CONFLICTS OF INTEREST

Stantec has no conflicts of interest in connection with providing the services outlined within this proposal.

APPENDIX

Appendix A: Resumes

Venu Kolli PE, PMP, ENV SP

Principal-in-Charge
34 years of experience · Pasadena, California

Venu is an Area Manager and Sector Leader in Southern California. He brings a wide range of capabilities in large civil works and water resources projects. He has served as principal-in-charge for several projects with the City of Los Angeles, Coachella Valley Water District, and Los Angeles County Department of Public Works. He has also supported Program Management contracts for Naval Facilities Command–Pacific, City of Los Angeles–Industrial Pretreatment and City of Los Angeles, Clean Water Program. Previously for OC San, Venu worked as project engineer and project manager for P1-37 Primary Clarifiers 16-31and related facilities; Preparation of Corrosion Control Standards; P1-100 Sludge Digester Rehabilitation; and P1-101 Sludge Thickening, Dewatering and Odor Control and P2-105: Digester Ferric Chloride Rehabilitation.

Venu is adept at leading multi-disciplinary teams to deliver complex engineering projects and has managed more than $2 billion in capital improvement projects over the course of his career. He has led project teams in all phases of engineering, including field investigations, inspections, feasibility analysis, and facility assessments; plan and specification preparation; scheduling; cost estimating; commissioning, and operations planning and start-up.

PROJECT EXPERIENCE

TOS 14 Los Angeles River and Arroyo Seco Low-Flow Diversion Project | Los Angeles Bureau of Engineering | Los Angeles, California, United States | 2017-Present | Project Manager

Venu is managing the design and construction of two LFD systems to divert dry weather flow from the Arroyo Seco and three LFD systems to divert dry weather flow from the LA River that are negatively impacted by multiple pollutants contained in urban runoff into local sanitary sewers for treatment at the City's Hyperion Water Reclamation Plant.

OCC-48 Eastside Water Recycling Project* | Los Angeles Department of Water and Power | Los Angeles, California, United States | Principal-In-Charge

The project scope includes a new pressure regulator station and approximately 82,500 feet of 16-inch diameter pipeline.

Hyperion Water Reclamation Plant (HWRP) Aqueous Ammonia Storage & Containment Enhancements | Los Angeles Bureau of Engineering | Los Angeles, California, United States | 2018-2020 | Project Manager

Venu managed the development of plans and specifications to provide a containment area, deluge system, and facility canopy.

OCC-55 Eastside Water Recycling Project* | Los Angeles Department of Water and Power | Los Angeles, California, United States | Principal-In-Charge

Venu oversaw the development of a feasibility report to construct a new recycled water pipeline. The project will expand the Metro Recycled Water System in an effort to meet City of Los Angeles recycled water goals. Recycled water will be supplied from the LAGWRP.

** denotes projects completed with other firms*

Coachella Valley Water District, Water Reclamation Plant (WRP) # 10 Solar Design | Coachella Valley, California, United States | Principal-In-Charge

Venu was PIC for development of preliminary design and final design documents for new solar power facilities at WRP 10. The objective of the project is to evaluate if installing a solar power facility is financially viable and the Return on investment (ROI) is reasonable. This project will maintain an affordable power source to CVWD over the next 30 years, reducing energy costs in the future while providing environmental benefits through lower greenhouse gases emissions.

WRP 10 Water Replenishment Project Phase 2 | Coachella Valley Water District | Palm Desert, California, United States | Principal-in-Charge

Venu was principal-in-charge for the design of the new 14-MGD Secondary Effluent Pump Station to completion and expand the storage capacity of secondary effluent from 35 MG to 85 MG. This project will significantly increase the flexibility of the plant during peak flow conditions. In addition, this project included 10,000 linear feet of pipe, new connections to existing percolation ponds, new turnouts to the headworks and process basins, and a new control building for the secondary effluent pump station. Complicating this work was the requirement to maintain operations of existing facilities while the new facilities are being constructed.

San Bernardino Municipal Water District, 2019 Sewer Master Plan Update | San Bernardino, California, United States | Project Principal

Venu is project principal for preparing a master plan based on CCTV evaluation and condition assessment of 45,000 sewer connections; 510 miles of gravity sewers and forcemains; 9,000 manholes; 14 active lift stations; and 20 diversion structures. The plan includes data from flow monitoring, and hydraulic modeling of the sewer system and lift stations

Venice Auxiliary Pumping Plant* | City of Los Angeles | Los Angeles, California | 2015-2016 | Project Manager

Venu oversaw pre-design, design, and design support services during construction of this newly plant. The design included installation of three dry pit submersible pumps with variable frequency drives, an underground wet well, an above ground electrical building, an interconnecting sewer and force main pipe network, as well as all ancillary mechanical, electrical and control systems. Venu helped coordinate with stakeholders and permitting agencies (United Coastal Commission, USACE, and Los Angeles' Traffic and Planning Dept.) for project approvals.

Wastewater Treatment Plant Capital Rehabilitation and Repair Plan | City of Palm Springs | Palm Springs, California | Project Manager

Venu evaluated the feasibility and cost to rehabilitate or replace all treatment facilities, developed a 10-year CIP to bring the wastewater treatment plant into compliance with the TDS and nutrient effluent requirements, estimated the plan's implementation cost, developed a CIP funding strategy, and proposed a rate schedule.

Seal Beach Pump Station Rehabilitation | Orange County Sanitation District | Seal Beach, CA | 2017-2018 | QA/QC

Venu reviewed final deliverables for the Station's rehabilitation. Our engineers also analyzed the Station's upstream trunk system to determine the best area to begin construction of four new facilities for odor control systems throughout the region. Stantec updated the OCSD collection system model to complete a capacity analysis of the pump station, developed a forcemain, rehabilitation plan, analyzed the upstream trunk system for odor control, and designed a facility with an aesthetically pleasing building with Green Building Code design approaches.

Peck Reservoir and Pump Station | City of Manhattan Beach | Manhattan Beach, CA | USD 35M | 2016-present | Principal-in-Charge

Venu is providing project oversight and client engagement in the preliminary design and design phase services for a new 8-MG cast-in-place concrete reservoir, an 8.6-MGD pumping station, a green sand treatment system, replacement of distribution system piping, new MSE retaining walls, and new site amenities. Stantec has developed a preliminary design report, 60% design documents, a draft initial study, and currently is in the process of completing design. The station will pump from the new reservoir into the distribution system and will be operated based on maintaining a set pressure in the distribution system. In replacing the existing reservoir, the new design meets current seismic requirements and will be hidden from the view of nearby residents. Functionally, the new facilities will provide increased system storage, maximize the use of local groundwater resources, and offer reliable storage for the foreseeable future.

Marina Del Rey Pump Station Odor Control Pilot Study for Wastewater Pump Station | Los Angeles Department of Public Works | Alhambra, California, United States | Project Principal

Venu is the principal-in-charge for the design support for the odor control pilot testing of a Calix ACTI-Mag™ magnesium hydroxide chemical dosing system at a wastewater pump station. The scope of services included assessing the operation and performance of the chemical dosing system supplied by a third-party vendor, Calix NA LLC (Calix). The team conducted site visits and documented observations, evaluated results, and prepared a technical report summarizing findings and recommendations.

Los Angeles Sewer Planning Support* | Los Angeles Bureau of Sanitation, Wastewater Engineering Services Division | Los Angeles, California | Project Manager

Venu managed this project to provide sewer planning support services and conducting special studies on sewer systems, as needed. Work is directed by the city staff to assist in daily duties and operations to complete projects and assignments related to the Sewer Condition Assessment Program, using the CCTV inspection technology.

** denotes projects completed with other firms*

Marina Del Rey Sewer Pump Station and Force Main Replacement | Alhambra, California, United States | Project Manager

Venu is leading the technical team to prepare a preliminary design report to rehabilitate the force main and existing pump station components, including pumping equipment, odor control, and the existing wet well and dry pit structures. The Preliminary Design Report (PDR) will be developed sequentially through design memos that establish design criteria, document constraints and stakeholder requirements, develop and analyze alternatives, and eventually make recommendations on alternatives' selection.

WATER PUMP & LIFT STATIONS

Tank Farm Lift Station* | City of San Luis Obispo | San Luis Obispo, California | Project Manager

Venu managed the design of a new 5 MGD Tank Farm Lift Station, rehabilitation of 10,000 feet of sewer line, and replacement of 5,000 feet of force main. He coordinated all permitting approvals for the design of the pump station with all involved stakeholders.

MASTER PLANNING

Corrosion Control Design Standards* | Orange County Sanitation District | Fountain Valley, California | Project Manager

Venu worked to develop corrosion control engineering standards during the preliminary and final design phases of OC San's projects. The project included preparation of corrosion control guide lines, standard drawings and master specifications for incorporation into the OCSD Engineering Standards.

WASTEWATER

Collection System Model and Sewer Master Plan* | City of Victorville | Victorville, California | Technical Advisor/QC Manager

Venu provided technical advisor services and managed QC for the update of the sewer system master plan. Work included flow monitoring, comprehensive hydraulic modeling of the sewer collection system, capacity analysis, and preparation of the capital improvement program.

CAPITAL PROGRAM DEVELOPMENT

Capital Improvement Planning and Prioritization Process Review and Enhancement* | Los Angeles Bureau of Sanitation | Los Angeles, California, United States | 2014-2015 | Project Manager

Venu managed a team that developed tools and templates for business case development. He also oversaw triple-bottom-line (social, financial, and environmental) prioritization and scoring criteria that can be consistently used for all Los Angeles Bureau of Sanitation Capital Improvement Plan projects across treatment, collection, pumping, and other Bureau assets. The methodologies and tools developed through this effort align with the Bureau of Sanitation's existing asset management and capital planning programs.

DCTWRP Berm Design Project* | City of Los Angeles Bureau of Engineering | Los Angeles, California | Principal-in-Charge and Project Manager

Venu oversaw pre-design, design, and design support services during construction of the berm improvements to meet USACE SPF requirements.

On-Call Agreements | Los Angeles Bureau of Engineering | Los Angeles, California, United States | Contract Manager

Venu has managed on-call contracts for more than 10 years for LABOE, including the scoping, staffing, and completion of more than 80 individual tasks. These tasks covered a wide range of engineering, including planning studies; preliminary design reports; design and construction of pipelines, pump stations, stormwater capture, and treatment facilities; and stormwater multi-benefit projects.

On-Call Agreements | Los Angeles Bureau of Sanitation | Los Angeles, California, United States | Contract Manager

Venu has managed on-call contracts for the past 12 years for LASAN, including the scoping, staffing, and completion of more than 100 individual tasks. These tasks covered a wide range of engineering skills, from planning studies, regulatory approval and permitting, through preliminary design, and covered many types of facilities.

WATER REUSE & RECLAMATION

City of Los Angeles, Clean Water Campus* | Los Angeles, California | 2015-2016 | Project Manager

Venu oversaw the development of Clean Water Campus, which would provide a home for the five divisions located on a vacant lot owned by LASAN at the corner of San Fernando Road and Humboldt Avenue (Humboldt Site). The proposed building will include a community learning center. The center will teach children and adults about the LASAN One Water Program, the Industrial Pretreatment Program, and solid resources management in Los Angeles. Venu coordinated with several stakeholders in getting consensus on the program.

STORMWATER

TOS No. 25 – Stormwater Capture Parks Program Pre-Design and Design Services | Los Angeles Department of Water and Power / Los Angeles Bureau of Engineering | Los Angeles, California, USA | Principal-in-Charge

Stantec is preparing 50%-, 90%-, and 100%-level contract documents for the design of the flow diversion structure, valve vault, hydrodynamic separator unit, infiltration galleries, Supervisory Control and Data Acquisition (SCADA), educational signage, and park restoration and improvements. Stantec is also preparing the SWPPP and erosion control plans for Valley Village and Whitsett Park North. Stantec is also developing the Envision Roadmap and Baseline and Strategy memorandum, and is coordinating the Envision certification process.

** denotes projects completed with other firms*

Jeffrey Dunn PE

Program Manager, Planning and Land Development Division Manager
29 years of experience

Jeff has experience in water resource planning and engineering design services for a variety of public agencies throughout southern California involving domestic water, recycled water, and sewer facilities. His planning experience includes more than 25 facility master-planning projects, as well as several hydraulic studies feasibility studies and preliminary planning reports for municipal domestic drinking water systems, recycled water delivery systems, and sewer collection systems. He is an expert modeler, having calibrated and analyzed water distribution systems supplied from multiple regional and local supply sources delivered to its customers via several pressure zones. His design experience of pipeline, pump station, and storage infrastructure are extensive and includes evaluations of operation and maintenance programs, condition assessments, and asset management analyses.

EDUCATION

Bachelor of Science in Civil Engineering

REGISTRATIONS

Professional Engineer #58455, State of California

PROJECT EXPERIENCE

Plan Check Services | Irvine Ranch Water District | Irvine, California | Project Engineer

Jeff provided plan check services which involved reviewing construction plans that were submitted to the District, as well as the review of sub-area master plans, grading plans, tract maps, and easement documents. He completed more than 20 plan checks over two years. All plan checks were completed within the time frames requested by the District, which is normally two weeks for the first check and one week for the second check.

Potable Water, Sewer, and Recycled Water Sub-Area Master Plans | Irvine Ranch Water District | Various Cities, California | Project Manager

Since the mid-1990s, Jeff has prepared SAMPs for IRWD's potable water, sewer, non-potable water, and telemetry systems. To complete the SAMPs, Jeff performed local and regional hydraulic modeling with extended period simulations, phasing studies, and regional storage analyses. Recently, a SAMP update was performed for the Portola Springs service area for flow monitoring and calibration of the sewer model.

Water Master Plan | City of Manhattan Beach | Manhattan Beach, California | Project Manager

Jeff managed the water master plan update, which included near- and long-term water supply demands, delivery of adequate flows and pressures for peak demands and fire protection, redundancy for service reliability with diversified water supply sources, and highest efficiency and lowest cost of operation. The master plan included hydrant flow testing and calibration of the City of Manhattan Beach's hydraulic model in InfoWater.

Water System Master Plan | City of Orange | Orange, California | Project Manager

Jeff is managing the water master plan to update the current hydraulic model which included calibrating the model with hydrant flow testing program, analyzing water demand and supply projections, evaluating optimization of supply facility operation, and providing a phased priority-based CIP with cost estimates. Water quality issues were addressed including water age analyses, identifying any deficiencies, and improving water circulation and redundancy within the system.

Water Resources Master Plan Update (WRMP) | Irvine Ranch Water District | Irvine, California | Project Manager

Jeff prepared an update of the water supply, demands, and storage chapters of IRWD's 2017 WRMP. The WRMP Update revised water demand projections to be consistent with the recent water conservation measures with updated demand factors for each land use. The water supply chapter was revised to include their recent recycled water expansion projects.

City of Anaheim Water Master Plan Update | Anaheim, California, United States | Water System Planning Lead

Jeff led the water system planning efforts for the City's water master plan update. The WMP focused on updating water demands and use factors, calibrating the existing distribution model, and preparing an asset management program. Jeff analyzed scenarios addressing supply variability between groundwater and imported between the east and west service areas, including impacts to PFAS issues. The goal was to develop an updated plan for capital planning through 2040 planning horizon.

** denotes projects completed with other firms*

On-Call Planning Support and Hydraulic Modeling Services | Irvine Ranch Water District | Irvine, California | Project Manager

Jeff performed on-call planning and modeling services, as part of the IRWD staff, located at IRWD headquarters. He prepared model analysis, technical memorandums evaluating facility planning studies, document reviews, and plan check support services. Jeff also supported IRWD staff in preparation of the potable and nonpotable water master plans, including recycled water system expansion studies.

Urban Water Management Plan - Tejon-Castac Water District | Lebec, California | Project Engineer

Jeff provided preparation and coordination for an Urban Water Management Plan. The plan required research and review of the water supplies entitled to the District, including entitlement from the California Aqueduct, local groundwater supplies, and water-bank accounts. The supplies were analyzed with projected water uses. A water shortage contingency plan was investigated along with the other required items to be addressed in accordance with the Urban Water Management Act.

Desert Springs Resort Water Supply Assessment | Imperial County, California | Project Engineer

An SB 610 Water Supply Assessment was prepared by Stantec for the Desert Springs Resort project. The project is a motor sports resort community covering 1,105 acres on property which has historically been used solely for agriculture purposes. The resort includes 1,475 residential units of various types, raceway facilities, commercial elements, and recreational facilities such as road raceway and four lakes for water sports. No domestic water provider serves the area so the project will be served by a private water utility company who will operate private water and wastewater facilities. Non-potable, or raw, water supply will be provided by Imperial Irrigation District.

Randall Street Domestic Water Improvements | Irvine Ranch Water District | Orange, California | Project Engineer

Jeff prepared plans and specifications, including cost estimates, for the Lolita and Randall Street Domestic Water Improvements projects. The project included approximately 1,300 LF of 8-inch PVC pipeline in existing streets, including traffic control for the congested Santiago Canyon Avenue. Improvements were required due to an old 8-inch steel pipeline that was leaking and needed to be abandoned. Pipeline improvements and services were reconnected the existing system to the new pipeline, including connections and valves to IRWD's intertie with City of Orange, along with service meter reconnections.

UCI Medical Center (UCIMC) Water Improvements | City of Orange | Orange, California, United States | Project Manager

Jeff is currently managing civil engineering designs to address UCIMC's desire to control the water system within its medical campus separate from the City of Orange's water system. The project involves design of a new master water meter and approximately 900 feet of pipeline design near the intersection of The City Drive and Medical Center Drive and the removal/replacement of two master meters along The City Drive with fire hydrants.

Regional Plant 1 (RP-1) South Zone Pump Station | Inland Empire Utilities Agency | Inland Empire, California | Project Engineer

Jeff provided civil design services to upgrade the existing RP-1 South Zone Pump Station, which consisted of three 2,790-gpm vertical turbine pumps and one 9,330-gpm vertical turbine pump, each with variable frequency drives. The project involved adding a fifth pump with associated variable frequency drive and controls. The new pump was a 9,330-gpm vertical turbine pump with 500-hp motor and variable frequency drive. The project also included modifications to the existing control programming to incorporate the fifth pump as a standby pump to alternate duty with the existing 9,300-gpm pump. This expansion was required to be operational by the end of May 2011 to meet IEUA's summer demands.

Hart Park and Stacey Lee Lane Lift Stations Rehabilitations | City of Orange | Orange, California | Project Manager

Jeff managed the preparation of construction plans and specifications for the rehabilitation of two lift stations in the City of Orange. The stations were constructed in the 1970s and require rehabilitation. The project required an initial field assessment to determine the extent of rehabilitations and scope. The design included replacement of the submersible pumps, panels, telemetry, valve vaults, force main, and miscellaneous site work at each station.

Recycled Water Program Strategy | Inland Empire Utilities Agency | Various, Califlornia | Ongoing | Project Engineer

Jeff has prepared a program strategy for IEUA's future recycled water system to incorporate their member Agency's demands plus maximizing recycled water recharge to their spreading basins. A basin implementation strategy was developed along with system model analyses out to year 2035. A 20-year CIP was developed in 5-year increments.

Inland Empire Utilities Agency (IEUA) - 1630 West Recycled Water Pump Station Surge Protection | Inland Empire Utilities Agency | Ontario, California | Project Manager

To resolve surging and pump failure problems in the 1299 Zone and the 1630 West Pump Station, Jeff performed hydraulic model services to evaluate the system operation, system, surge and risk of pipeline failures. He prepared a technical memorandum that recommended a new surge tank, including BCE evaluation of alternatives and risk management analysis.

Downtown Recycled Water System Expansion to Pearson Park | City of Anaheim | Anaheim, California | Project Engineer

Jeff created and performed hydraulic modeling services, utilizing InfoWater software, for the proposed recycled water expansion project to serve future conversion of parks and other irrigation customers to be supplied from the treatment facility. The analysis required an alignment study, determine pipe sizing, and analysis using supply SCADA information from the treatment facility and pressure criteria. Existing demands were calibrated based on billing and supply SCADA information.

On-Call Hydraulic Modeling | Inland Empire Utilities Agency | California | Project Manager

Jeff managed and performed hydraulic modeling services for the Agency's recycled water model using the InfoWater software. Hydraulic modeling was performed to support the Recycled Water Program Strategy and preparation of technical memorandums such as for the WRCWRA supply options, and City of Ontario's Euclid Ave expansion project.

Groundwater Replenishment System (GWRS) Hydraulic Modeling Services and La Palma Basin Analysis, Orange County Water District | Anaheim, California | Project Manager

Jeff performed the services to create a complete calibrated model InfoWater of the GWRS pump station, pipeline, and pipeline facilities. The model was combined with their barrier well pump and system for source water considerations. The modeling was calibrated and analyzed to ensure minimum pressures are maintained at Anaheim's power plant under several operating and future flow conditions to their basins.

Newport Center Areas and Fashion Island Recycled Water Conversion Project | Newport Beach, California | Project Manager

Jeff prepared a technical memorandum, feasibility study and hydraulic analysis for the conversion of existing potable water customer meters serving landscape demands to a new recycled water system. The recycled water supply is from the OCWD GAP pipeline, which required model analysis and coordination with OCWD to determine supply and hydraulic constraints from their pump station. Meter billing data was analyzed and potential customer recycled water demands were calculated for various demand scenarios and phasing.

1630 East and West Pump Station Improvements | Inland Empire Utilities Agency | Ontario, California | 2017 | Project Manager

Jeff led the team for preliminary and final engineering services to replace existing check valves and add a new surge tank to the suction side of the existing pump station. The pump station experienced significant surging and pump failures, and to resolve, Stantec performed an analysis and provided design solutions. A new 1,000 cf surge tank, along with air compressor, and new electrical controls were designed for the facility.

RP-1 1158 Zone Recycled Water Effluent Pump Station Upgrades Feasibility Study and Final Design | Inland Empire, California | 2017 | Hydraulic Analysis

The study evaluated the RP-1 pump station operation to determine the proposed pump capacities and horsepower requirements. It was recommended to replace the four existing 400-hp pumps, with four new identical capacity 700-hp pumps, each with a design capacity of 5,700 gpm. This capacity nearly doubles the existing capacity of each pump, which are currently at 2,780 gpm. Additionally, the project evaluated the system transients with surge protection recommendations for a new surge tank. The existing transformers, VFDs, and MCC are also replaced with the electrical upgrades.

Edenglen Sewer Lift Station Upgrades | City of Ontario | Ontario, California | 2010

Jeff performed an evaluation of the performance of an existing lift station that was originally design to serve 225 homes, but subsequently was required to serve 480 homes. Evaluations consisted of field flow monitoring; hydraulic model analysis; inspections of existing facility; and alternatives evaluations for costs and horsepower requirements, pump sizing, force main, and phasing options. A preliminary design report was prepared to identify the details for the upgrades, bypass pumping, and phasing considerations. The station was replaced with two 75-hp Essco submersible pumps and control panels, with VFDs that provided for phased flow operation; new electrical and controls; a portable stationary generator; engine driven bypass pump; and parallel force main.

Loara Street 8-inch Water Main Replacement from Orangewood Avenue to the City Limit | Anaheim Public Utilities | Anaheim, California | USD 471.4k | Project Manager

Jeff is managing the design of approximately 1,325 feet of 8-inch ductile iron pipe to replace the existing 6-inch asbestos concrete pipe water main. The project involves vertical and horizontal pipeline design, utility research, and coordination with the City to obtain field survey information. The proposed pipeline will help improve system reliability and hydraulic capacity, which will, in turn, provide better water pressures and fire flow capacities to the customers in the project area.

Lincoln Avenue Water Main Replacement | Anaheim, California | Project Manager

Jeff was responsible for the design and preparation of construction plans, specifications, and cost estimates for the water main replacement project which included 1,300 linear feet of new 12-inch DIP water main in Lincoln Avenue, from East Street to La Plaza. The new pipeline was installed to parallel the existing 8-inch line, requiring connection details and fire hydrant connection details. Each hydrant required about 100 linear feet of new pipeline and the plans were to show sequencing details.

Nita Kazi PE

Capital Improvements Projects Division Manager
29 years of experience

Nita's experience portfolio includes planning, design, and construction support for water, wastewater, and recycled-water distribution, pump stations, conveyance, and storage projects for both public and private sectors. She has collaborated with diverse technical teams, managed contracts, delivered on client commitments, and facilitated owner and stakeholder communication to achieve project success. Her abilities include leading and developing high performing delivery teams by using adaptive and innovative problem-solving techniques to meet operational objectives and manage risk. Her people-centered approach to communication and project management empowers the team to serve in the best interest of our communities.

Professional Engineer #57669, State of California

PROJECT EXPERIENCE

CONVEYANCE - WATER DISTRIBUTION

Murrieta Road Transmission Pipeline Design and Construction* | Eastern Municipal Water District (EMWD) | Perris, California, United States | 2021 | Project Manager

Nita was project manager for alternatives evaluation, preliminary design, and final design services for the Murrieta Road Transmission Pipeline Improvements. This project is being implemented as part of District's overall groundwater basin management and desalination efforts to drought proof the region and provide a reliable alternate water source to reduce reliance on imported water. This project will provide the additional capacity required to convey the Perris II Desalter product water to the District's existing water transmission system located south along Murrieta Road to La Piedra Road. The project was initiated at an expedited schedule to coordinate with the Desalter completion schedule and includes approximately 6,800 LF of 36-inch and 42-inch steel pipeline, trenchless design at Salt Creek, narrow streets with congested utilities, coordination with City of Menifee, Riverside County Flood Control District, Riverside County Transit District, and District's team for coordination of hydraulic modeling, public outreach, environmental, real estate, safety pre-use, and field operations. Project was bid in 2021, Contractor (JW Fowler) began construction in May 2021.

Valley Boulevard Potable Water Transmission Pipeline | Eastern Municipal Water District | USD 20M | 2022-Present | Project Manager

Design of approximately 22,000 feet of new 30/36-inch pipeline in Valley Blvd from the District's desalination complex to the intersection of Rouse Road and Murrieta Road. The project requires extensive and close coordination with several proposed projects by developers, City, USACOE, and the District along the project corridor. Schedule and work sequencing with the adjacent projects is critical to manage conflicts and for the success of this project. Stantec completed the alignment alternatives evaluation and identified a potential cost savings of approximately $1.5M with alternative corridors that will reduce community impacts. The project is in preliminary design phase and is expected to complete design phase by May 2024.

Otay 2nd Pipeline Phase 3 Improvements* | City of San Diego | San Diego, California, United States | Technical Advisor

Nita's role as technical advisor for this project was to perform quality reviews for upsizing 3,403 LF (0.64 miles) of the Otay 2nd Pipeline to 48-inch diameter CML&TC and CMC welded steel pipeline from the 54-inch reducer south of State Route 54 (SR-54) to the new 48-inch flange at Sweetwater Road east of Willow Street. The project included alternative alignment evaluation, preliminary design report, final design of approximately 5,400 LF of 48-in CMLC tape coated steel pipeline, approximately 1,120 LF of 8-inch distribution pipeline for Sweetwater Authority customers, community outreach, liaison support with other agencies, and traffic control. Project final design is expected to be completed by end of 2021.

** denotes projects completed with other firms*

Ridgemoor Pipeline Improvements* | Eastern Municipal Water District (EMWD) | Perris, California, United States | Technical Advisor/QC Manager

As technical advisor and QC manager, Nita's role involved alternatives evaluation and preliminary design as part of District's efforts to upgrade aging infrastructure and serving the developing communities. The project includes approximately 5,000 LF of a new 24-inch steel pipeline and replacement of the existing 12-inch pipeline, in narrow streets with congested utilities, coordination with City of Menifee, and the District's team to coordinate hydraulic modeling, safety pre-use, and field operations. Alternatives evaluation identified and recommended a preferred alternative for final design. The Preliminary design report was completed in May 2021.

Morena Water Pipeline Replacement (part of Morena Pump Station and Conveyance System Project)* | City of San Diego | San Diego, California, United States | Design Manager

Nita was the design manager for work that has been included as part of the City of San Diego Pure Water Program and involves the replacement of the Morena Pipeline from Friars Road to Balboa Avenue. The Morena Pipeline consists of 3.75 miles of 16-inch cast-iron and 20-inch asbestos cement (AC) pipe currently serving both transmission and distribution functions. The project involves replacement of the existing pipeline with a 16-inch polyvinyl chloride (PVC) distribution pipeline and a new 36-inch welded-steel transmission pipeline.

Otay 2nd Pipeline Phase 1* | City of San Diego | San Diego, California, United States | Design Manager

As design manager, Nita was responsible for the design, assistance during the bid, and construction support for the replacement of the existing 30-inch Otay Phase I water pipeline with 48-inch steel pipe. The scope of work includes pipeline design calculations; conceptual design of the pressure relief valve (PRV)/Pump Station Connection Plan for the 30 percent, 60 percent, 90 percent, and final design; cost estimate, coordination of San Diego's Metropolitan Transit System (MTS) permit; engineers Off Property Contact (OPC); and a 60 percent constructability review.

As-Needed Water Pipeline Replacement Design* | Vista Irrigation District | Vista, California, United States | Technical Advisor/QC Manager

Nita was the technical advisor and QC manager for the expedited design of the District's Group Job Pipeline Replacement Projects to reverse catastrophic failures experienced on its Nipponite asbestos cement (AC) pipe installed in the 1960s. Group Job 1 includes the replacement of approximately 10,000 feet of 10-inch, 8-inch, 6-inch, and 4-inch AC pipe with polyvinyl chloride (PVC) pipe. Group Job 2 included replacing 13,000 feet of 6-inch, 8-inch, and 14-inch AC and steel pipe with PVC pipe.

Cielo Woodman Water Pump Station Replacement* | City of San Diego | San Diego, California, United States | Project Engineer

Nita was the project engineer on a proposed project that involves replacing the aging, below-grade, and undersized existing pump station with a new, larger-capacity, modern station. The project will increase the pump station capacity from 2,000 gpm to 11,000 gpm using five 250 hp pumps. Nita performed concept site evaluation for the facility including pump house, yard piping, emergency generator, surge-control facilities, vehicular access, and stormwater control. The civil design was conducted in accordance with City stormwater regulations and Development Services requirements. Nita also prepared final design drawings and specifications for all demolition work of the existing pump station, all civil site and yard piping plans, grading, and drainage plans.

Desalination Conveyance Feasibility Study* | San Diego County Water Authority | San Diego, California, United States | Project Manager

As project pngineer, Nita evaluated the Authority's pipeline and easement for construction of a parallel desalinization pipeline, including hydraulic analysis and cost estimate.

Potable-Water Distribution Main* | Otay Water District | Spring Valley, California, United States | Project Manager

As project manager, Nita prepared design document for polyvinyl chloride (PVC) 711 Zone water mains. Nita's scope of services included developing preliminary cost opinions and providing bid-phase support for 16-inch, 20-inch, and 24-inch-diameter potable-water distribution mains. The first set of pipelines is sequential located in H Street beginning at Eastlake Drive and continuing for approximately 4,800 feet. The second main is in Rancho Janal Drive from Otay Lakes Road north approximately 2,400 feet. The pipelines connect existing portions of the distribution system and provide additional support to the pressure zone. Construction was successfully completed in 2002.

Torrey Pines/La Jolla Boulevard Water Main Relocation* | City of San Diego | San Diego, California, United States | Project Manager

In her role as project manager, Nita prepared design documents and provided construction support of approximately 4 miles of 16-inch and 12-inch polyvinyl chloride (PVC) water main relocation, including traffic control, noise study, and water pollution control plan.

Unit X-2B Pipeline* | Olivenhain Municipal Water District | San Diego, California, United States | Project Engineer

As project engineer, Nita was tasked with design and specifications for 3,400 linear feet of 10-inch and 12-inch ductile iron pipeline (DIP). Nita provided bid-phase and construction-phase support services, including field inspections and shop drawing reviews. The waterline runs below one of the access roads for the District's Water Storage Project. The project was successfully completed in 2000.

** denotes projects completed with other firms*

Water Treatment Plant* | Olivenhain Municipal Water District | San Diego, California, United States | Project Engineer

In her role as project engineer, Nita provided design and specifications for 42-inch raw water and 48-inch treated water steel pipelines. This project involves one part of the District's Water Storage Project.

Via Ambiente Pipeline* | Olivenhain Municipal Water District | San Diego, California, United States | Project Engineer

In her role as project engineer, Nita was tasked with design and specifications for 3,400 linear feet of 10-inch and 12-inch ductile iron pipeline (DIP). Nita also provided bid-phase and construction-phase support services, including field inspections and shop drawing reviews. The waterline runs below one of the access roads for the District's Water Storage Project. The project was successfully completed in 2000.

Avenida Pico Transmission Main* | Tri-Cities Municipal and Laguna Beach County Water Districts | San Diego, California, United States | Project Engineer

Nita was the project engineer in charge of designing 9,800 linear feet of 20-inch to 36-inch high-pressure steel transmission main and developing specifications. Construction support included shop pipe fabrication observation, American Water Works Association (AWWA) compliance verification, shop drawings review, and construction observation. Construction was successfully completed in 1992.

Water Main Replacement for Newport Avenue and Warren Avenue* | City of Tustin | Tustin, California, United States | Project Engineer

As project engineer, Nita designed a pipeline on the AutoCAD version 12/DCA, including plan check and specifications for 10,400 linear feet of 8-inch, 12-inch, and 20-inch polyvinyl chloride (PVC) and ductile iron pipe (DIP) water mains. Construction was successfully completed in 1994.

Reservoir No. 2 and Pump Stations* | Mesa Consolidated Water District | Mesa, California, United States | Project Engineer

Nita was the project engineer for design, specification, and system analysis of an electrical and gas engine-driven pump station on school property. The project included 2,100 lineal feet of 30-inch steel transmission main, specifications, Occupational Safety and Health Administration (OSHA) permits, and coordination with an adjacent proposed 18 Mgal buried prestressed-concrete reservoir. Nita's responsibilities included shop drawings submittal review, construction support services, and field visits. An archaeologist was required during construction due to the discovery of fossils in the reservoir excavation. Construction was successfully completed in 1994.

Relocation of Water Main, Dale Street and Katella Avenue* | West Orange County Water Board | Garden Grove, California, United States | Project Engineer

Nita was the project engineer for design, specifications, and construction inspection of a 36-inch steel water main relocation. Nita designed water meter replacement and specifications for Feeder Nos. 1 and 2. Nita also prepared design plans for repair and replacement of various valves, meters, and pressure-reducing and regulating valves in 1996.

World Logistics Center | Highland Fairview | Perris, California | QA/QC

In addition to all infrastructure and civil design, Stantec is designing the public water and sewer facilities for the World Logistics Center complex. This includes approximately 16 miles of 12-inch to 24-inch water transmission lines, one 2.5-MGD booster pump station, and a 3-MG reservoir. Major sewer facilities include 5 miles of 8-inch to 15-inch diameter gravity mains, two 500-gpm lift stations and one mile of force mains. Stantec's work also includes hydraulic modeling of all facilities, and preliminary and final design incorporating multiple design packages over a two-year period.

Alvarado Trunk Sewer Phase IV Replacement Project* | City of San Diego | San Diego, California, United States | Project Manager

Nita's task as project manager for design was to replace approximately 3.5 miles of gravity sewer ranging in diameter from 30 inches to 42 inches, with deep gravity sewers up to 30-feet depths. The project included expedited alternatives alignment evaluation to relocate the trunk sewer away from private and commercial properties into the street right-of-way to facilitate improved maintenance access. Design included nine microtunneling and jack and bore drives which required permitting coordination with the California Department of Transportation (Caltrans), San Diego Metropolitan Transit System (MTS) and tunnel classification. Approximately 1.5 miles of existing trunk sewer needed to be converted to a collector sewer to continue servicing existing properties. Over 20 easement acquisitions were prepared, including extensive community outreach efforts, presentations to boards and site visits with stakeholders for a successful acceptance of the project. Nita provided support for environmental documentation and mitigated negative declaration (MND), traffic control, coordination with City Public Utilities Department (PUD), odor control evaluation, hydraulics evaluation, coordination with member agencies (City of La Mesa), coordination with Department of Drinking Water (DDW), and coordination with several utility agencies including utility relocations required by SDG&E, AT&T, and Cox. The estimated design fee is $4 M, with an estimated construction cost of $42 M. Project was bid in 2020, however due to non-responsive bid, City plans to rebid in 2021 and construction in Fall

James Cathcart PE, F.ASCE

Water Resources and Water Quality Division Manager
46 years of experience · Irvine, California

Jim has 46 years of experience in water supply and development in California. He has been responsible for 14 well equipping and/or wellhead treatment design projects, as well as numerous pipeline and pump station designs. Jim has also conducted several groundwater treatment studies for wellhead water quality compliance. He specializes in the planning, design, and construction management of water, wastewater, and reclamation infrastructure; master planning; ground- and surface-water treatment; pumping and storage; and pipeline design. Jim has provided expert witness services for water system design and groundwater contamination issues.

PROJECT EXPERIENCE

2019 Sewer Master Plan Update | San Bernardino Municipal Water District | San Bernardino | Project Manager

Jim provided overall project review for this $1.5 million effort to guide modernization of the department's sewer collection system. This project includes the closed-circuit television camera (CCTV) and cleaning of 40% of the Department's pipes that are 12 inches or greater in diameter; a flow monitoring effort at 20 sites for multiple months; an equipment review; and a condition assessment of SBMWD's siphons, manholes, lift stations, and catch basins. Information from the CCTV and cleaning effort will be incorporated into the final master plan and recommendations will be made for condition-based CIP.

2018 Sewer and Water Master Plan | East Valley Water District | Highlands, California | 2018-2019 | Project Manager

As part of the master plan updates, Stantec evaluated potential changes in EVWD's potable supply from mainly groundwater to mainly surface water over the future planning horizons. The two updated master plans address condition assessment of EVWD facilities, model update and calibration, system evaluations, and development of a comprehensive CIP.

Water System Study* | City of Victorville | Victorville, California | Principal-in-Charge

Jim provided water system consulting services to the City to determine the feasibility of providing water service to a proposed Federal Bureau of Prison facility. Water system modeling was used to assess water supply options and impacts on the City's water system operations.

Wildomar Recycled Water System Phase I Design* | Elsinore Valley Municipal Water District | Lake Elsinore, California | Project Manager

Jim oversaw a master plan update and design of the Phase 1 Wildomar recycled water system, which included approximately 32,500 linear feet of 6- to 24-inch-diameter pipelines serving 20 sites in Lake Elsinore. Design included the necessary on-site system conversions associated with each recycled water use site.

** denotes projects completed with other firms*

Palos Verdes Recycled Water System Expansion* | West Basin Municipal Water District | Palos Verdes, California | Principal-in-Charge/Project Manager

Jim oversaw the development of an H2ONET hydraulic model to determine the feasibility of expanding the District's recycled water system into Palos Verdes. Potential customers included parks and two golf courses. Work included overview of preliminary pipe alignment selection along with pump station and reservoir facility siting for this very hilly area. The recommended system expansion included two new pump stations, a reservoir and over 60,000 feet of pipe along highways and residential roads.

Regional System As-needed Services* | Walnut Valley Water District | Walnut, California | Principal-in-Charge/Project Manager

Jim provided consulting assistance for the District's participation in combining its system with a proposed region-wide recycled water system. The regional system ultimately would include four local distribution systems, regional pumping and transmission facilities and a regional lake to store recycled water. Subsequent work involved reviewing the feasibility of constructing a membrane bioreactor (MBR) wastewater treatment plant to provide an alternate recycled water supply source for the District's system. The MBR plant cost estimate was $12.5 million, for a unit projection cost of $392/AF.

Sub-Area Master Plan* | Irvine Ranch Water District | Irvine, California | Principal-in-Charge

Jim oversaw the preparation of a SAMP report involving planning for the Shady Canyon residential and golf course development, including new water, sewer and reclaimed water distribution, collection, pumping and storage facilities. The facility plan included a hydraulic model using H2ONET for analyzing recycled and domestic water systems. Work also involved a spreadsheet model to determine land use-based sewer flows and sewer pipeline sizes.

Condition Assessment of Water Distribution System at Southern California Logistic Airport* | City of Victorville | Victorville, California | QA/QC

Jim provided QA/QC for a condition assessment report prepared for the Southern California Logistics Airport. An estimated 8 to 10 miles of pipe were surveyed, as well as mainline valves, hydrants, and associated lateral services. The project also involved design and oversight during construction of approximately two miles of replacement pipelines.

Industrial Way Water Transmission Main Replacement* | City of Newport Beach | Newport Beach, California | Quality Control

Jim provided project oversight and quality control design reviews for replacement of a 14- and a 30-inch-diameter water main with a single 36-inch-diameter water main within the Industrial Way public street right-of-way.

Miramar Pipeline Rehabilitation Project Phase III and IV* | City of San Diego | Miramar, California | Technical Advisor

Jim was the technical advisor during condition assessment, alternatives analysis and predesign of rehabilitation improvements for a 40-year-old prestressed concrete cylinder pipe (PCCP) ranging from 51 to 66 inches in diameter. The preliminary design report identified a reliable and cost-effective rehabilitation program that provided clear recommendations for rehabilitation or replacement and avoided unnecessary capital expenditures.

Facilities Management and Master Planning* | City of South Gate | South Gate, California | Project Manager

As part of a facilities management and master planning effort Jim was responsible for inventorying and conversion to a computer database and graphical display for all water, wastewater, storm drain, street lighting, pavement, and urban forestry facilities. The project also included sewer flow monitoring and water system pressure and flow analysis; sewer, water and storm drain system computer modeling; and planning and analysis of existing and future sewer, water and stormwater systems. Results were incorporated into a comprehensive water, sewer and storm drain master plan and capital improvement program.

3-62 Westminster Force Main Relocation | Orange County Sanitation District | California, United States | Technical Advisor

During preliminary design, Jim provided technical review and editing of an initial pump station rehabilitation PDR, and later worked with the management team to rescope the project to include final force main design. The 2.7 mile long dual force main required coordination with the US Navy along the Seal Beach Naval Weapons Station, and Cities of Seal Beach and Westminster. He provided technical review during design that included 9,800 feet of dual 36" HDPE force mains in a common trench, 4,600 feet of 36" HDPE in a single trench, and 4,600 feet of 36" HDPE sliplined in an existing 42" pipe. Design also included one flood control channel overcrossing and rehabilitating a dual barrel inverted siphon under another channel. Construction sequencing was critical to maintain one force main in service throughout construction. He also participated in all design submittal reviews, and provided technical oversight of engineering services during construction.

Groundwater Treatment Plant* | Nuevo Water Company | San Bernardino County, California | Principal-in-Charge

Jim was responsible for designing a groundwater production well treatment system for H2S contamination. The treatment system consisted of an air stripping tower and chemical feed systems for raising and lowering pH.

As-Needed Services* | City of Ontario | Ontario, California | Project Manager

Jim provided as-needed consulting services to the City, including water quality data review, DHS correspondence, surface water treatment plant upgrade evaluation, and reviewing nitrate blending plans for City wells.

** denotes projects completed with other firms*

Value Engineering Studies* | Metropolitan Water District of Southern California | Los Angeles, California | Principal-in-Charge/Client Manager

Jim managed three VE studies including the Diemer Water Treatment Plant Orange County conveyance and distribution system maintenance facility, Orange County feeder lining repairs, and Weymouth sodium hypochlorite and sulfuric acid feed facilities.

On-Call Consulting Services for PFAS Treatment Systems Design | Orange County Water District | Santa Ana, California | Project Manager

Jim is leading a similar staff and subconsultant team for four wellhead treatment sites for the City of Santa Ana. Work includes preliminary design, final design, bid phase support, engineering services during construction, and part time inspection services. Sites include Well 40 currently in construction, Well 38 finishing final design, Well 31 in predesign, and Wells 27 and 28 in preliminary design.

San Fernando Basin Groundwater Remediation | Los Angeles Department of Water & Power (LADWP) | Los Angeles, California | QA/QC Review

Jim conducted the independent QA/QC review for this progressive design-build project of two new groundwater treatment facilities of 38 MGD and 25 MGD. The project is part of a comprehensive, long-term plan being pursued by the LADWP to replenish and store contaminated groundwater at sites across the 175-square-mile San Fernando Basin.

Seal Beach Pump Station Rehabilitation | Orange County Sanitation District | Seal Beach, CA | 2017-2018 | QA/QC Review and Technical Advisor

Jim reviewed final deliverables for the Station's rehabilitation. Work consisted of analyzing the Station's upstream trunk system to determine the best area to begin construction of four new facilities for odor control systems throughout the region. The OCSD collection system model was updated to complete a capacity analysis of the pump station, develop a replacement forcemain, building rehabilitation plan, and design a facility with an aesthetically pleasing building with Green Building Code design approaches.

Ortega Highway Pipeline* | City of San Juan Capistrano | San Juan Capistrano, California | Project Reviewer

Jim reviewed design of 5,500 feet of 12-inch-diameter steel pipeline and one pressure-reducing structure along Ortega Highway in conjunction with an ongoing road project.

3-62 Westminster Force Main Relocation | Orange County Sanitation District | Orange County, California | 2018-Present | Technical Advisor

During preliminary design, Jim provided technical review and editing of an initial pump station rehabilitation PDR, and later worked with the management team to rescope the project to include final force main design. The 2.7 mile long dual force main required coordination with the US Navy along the Seal Beach Naval Weapons Station, and Cities of Seal Beach and Westminster. He provided technical review during design that included 9,800 feet of dual 36" HDPE force mains in a common trench, 4,600 feet of 36" HDPE in a single trench, and 4,600 feet of 36" HDPE sliplined in an existing 42" pipe. Design also included one flood control channel overcrossing and rehabilitating a dual barrel inverted siphon under another channel. Construction sequencing was critical to maintain one force main in service throughout construction. He also participated in all design submittal reviews, and is providing technical oversight of engineering services during construction.

090G Groundwater Development (GWD) Project* | Southern Nevada Water Authority | Barclay, California | QA/QC Manager

Jim managed all QA/QC activities and conducted quality assurance reviews on all technical memoranda and a preliminary hydraulics report for this preliminary design. The project preliminary design consisted of approximately 202 miles of welded steel raw water pipeline, between 72 and 90 inches in diameter; one pumping station: six regulating tanks ranging between 7 and 10 MG in capacity; a 40-MG buried water storage reservoir; and two hydroturbine energy recovery facilities.

P-1045 New Potable Water Conveyance* | Naval Facilities Engineering Command | Oceanside, California | Project Manager/Design QC Manager

Jim oversaw the final design of 28 miles of 12 and 20-inch HDPE water transmission mains, three pump stations (up to 5 MGD capacity) and a 3-MG prestressed concrete reservoir. The project was for NAVFAC at MCB Camp Pendleton as part of a $54 million design/build contract with a Filanc/Orion JV. The project included horizontal directional drilling under four creeks plus one horizontal directional drill under the I-5 Freeway and NCTD railway.

Nahid Heidarbaghi PE, LEED AP

Senior Project Engineer
22 years of experience · Irvine, California

Nahid is a detail-oriented engineer with 22 years of professional experience in water and wastewater, and land development projects. She has extensive experience in water and sewer systems, and land development infrastructure design projects. In addition to engineering design, she has worked on numerous hydraulic modeling projects for water and recycled water distribution system, as well as sewer collection systems. Her eye for detail and quality control has been instrumental in review of water and sewer plans for Irvine Ranch Water District and other public agencies.

EDUCATION

Bachelor of Science in Civil Engineering

Professional Engineer #C67658, State of California

LEED Accredited Professional, U.S. Green Building Council

PROJECT EXPERIENCE

WATER

East Irvine Zone 1 to 3 Flow Meter Replacement* | Irvine Ranch Water District | Irvine, California, United States | Project Engineer

Nahid was project engineer for the replacement of the flow meter that records flows pumped from East Irvine Zone 1 to 3 at the Zone 1 reservoir site. The existing 36-inch meter installation was below grade and creating maintenance problems, so a new above ground electromagnetic meter was designed with associated retaining wall and ancillary systems.

Sunset Beach Alley Water Main Replacement* | City of Huntington Beach | Huntington Beach, California | Project Engineer

Nahid prepared construction plans and specifications for the replacement of 4,400 LF of substandard waterlines in constrained alleys that included water meters and temporary water mains. She also provided design for pavement improvements in the alleys which required pavement grind and overlay, or profile reconstruction to provide positive drainage. The project also included assisting the City in coordination with Caltrans for work encroaching near the Pacific Coast Highway.

Domestic Water Pipeline Capital Replacement Projects (CRPs 09-18, 09-04, 09-01)* | Hi-Desert Water District | Yucca Valley, California | Project Engineer

Nahid was involved with three domestic water pipeline replacement projects for the District's CIP, totaling approximately 11,230 linear feet. The improvement plans included new 8-inch PVC water main, replacement of hydrants, laterals and meters, and other appurtenances.

Well No. 27 Treatment System* | City of South Gate | South Gate, California, United States | Project Engineer

Nahid provided engineering design services for the Well No. 27 Treatment System Project in accordance with California Department of Public Health requirements. The Well is a critical supply source in the City's water system. The project provided adequate removal of Iron (Fe), Manganese (Mn), and Dioxane constituents occurring in the groundwater aquifer. The well produces 1,500 GPM and it is anticipated that all of the flow will need to be treated. The firm evaluated the treatment process and DPH requirements for discharge of the Well's water into the distribution system and identified opportunities for blending with untreated water to reduce the size of the required facilities. The concept plan for the treatment facilities, and the final process design, included Fe/Mn removal; distribution pump; yard piping; and electrical instrumentation and SCADA.

Westside Water and Sewer Main Replacement Projects* | City of South Gate | South Gate, California | Project Engineer

Nahid performed as project engineer for preliminary and final engineering design and construction management services that involved the abandonment of several City water mains and replacing them with new mains (approximately 17,700 LF). The project also entailed replacing existing sewer mains with higher capacity mains (approximately 1,220 LF), as specified in the City's Sewer Management Plan.

Water and Wastewater Systems Plan Checking (2012-present) | Irvine Ranch Water District | Irvine, California | Project Engineer

Nahid provided on-call plan checking services for submittals received from consultants in various phases of design. The projects included water, recycled water, sewer, and storm runoff facility improvements. She has completed hundreds of plan checks over 10 years within the time frames requested by the District

** denotes projects completed with other firms*

Well 1A Equipping, Helendale Community Services District* | Helendale Community Services District | Helendale, California, United States | Design Engineer

Nahid was design engineer for Well No. 1A, a new 1,300-GPM groundwater supply well with a total depth of 630 feet. The well was equipped with a 150-HP submersible pump including pedestal, piping, and appurtenance design.

PA5B 36-inch Recycled Water Pipeline* | Irvine Community Development Company | Irvine, California | Project Engineer

Nahid supplied engineering design and construction management services for a new 36-inch CML&C recycled water main. The pipeline is a critical interconnect in the IRWD system and replaced a 27-inch ACP main that was abandoned. She coordinated the pipe design and construction phasing issues with IRWD engineering and construction staff.

Regional Recycled Water Pipeline, Forest Lawn Memorial Parks* | City of Cerritos | Cerritos, California | Project Engineer

Nahid offered engineering design and construction support services for a regional 16-inch recycled water main to serve the cities of Cerritos, Lakewood, Cypress, and the Cypress Forest Lawn cemetery. The pipeline conveys recycled water produced at the Los Angeles County Sanitation Districts' Los Coyotes water reclamation plant to the new potential use areas and is funded by the State DWR Drought relief Program. She assisted with the pipe design and construction phase issues with all cities and stakeholders.

Downtown Anaheim Water Recycling Expansion Project, City of Anaheim, Anaheim, California

Nahid assisted with the design of approximately 2,400 feet of 4-inch and 6-inch PVC recycled water main to expand City's recycled water system and to bring recycled water to Pearson Park. Due to the vast number of existing underground utilities in the project area, the project involved conducting extensive utility research and choosing the best alignment for the proposed pipeline

Kraemer Boulevard Grade Separation; Wet Utilities Design Services*, Placentia and Anaheim, California | Project Engineer

Nahid prepared the improvement plans to relocate 500 linear feet of 12" gravity sewer line, and 900 linear feet of sewer force main; and prepared cost estimates and specifications for the sewer relocation.

WASTEWATER

Wine Country Trunk Sewer* | Eastern Municipal Water District | Redlands, California | Project Engineer

Design of 5,800 LF 21-inch trunk sewer extension to connect the Roripaugh Development to the regional Wine Country collection system. Challenging project components included design along steep slopes, reaches with deep cover, and along a County floodway (Long Valley Wash).

Lakeside Water Reclamation Facility* | Summit Land Partners | Corona, California | Project Engineer

Project Engineer for conceptual design plans for 100,000 gpd water reclamation facility to serve a remotely located 400 unit land development project. RWQCB and EVMWD permit submittals were also completed. Tertiary effluent with nutrient removal was required for discharge waters.

Non-Potable Water System, SCE El Casco Substation* | El Casco, California | Design Engineer

Design Engineer for engineering design plans of a storage tank with water treatment and booster pump systems to provide non-potable water for restroom and landscape irrigation at the El Casco Substation. The system provides pH adjustment and pressure boosting for the extensive irrigation system demands and elevation requirements at the newly constructed site. Coordinated with the well drilling and landscape contractors to provide a suitable system.

Helendale CSD WWTP Upgrades* | Helendale, California | Project Engineer

Project Engineer responsible for the design of upgrades to the 1.2 MGD WWTP, including headworks rehabilitation and fine screening, primary clarifier rehabilitation, and new sludge drying beds.

2012-2013 Gravity Sewer Mains Rehabilitation Program* | City of Manhattan Beach | Manhattan Beach, California | Project Engineer

Project Engineer for the preparation of construction plans and specifications for the rehabilitation of 33 sewer repair and pipeline replacements city-wide. Services included extensive field review of existing conditions, review of CCTV records, and assessment of sewer conditions to be repaired and rehabilitated; and preparation of cost estimates and specifications.

Sewer Collection System Evaluation and Capacity Assurance Plan, Home Gardens Sanitary District* | Home Gardens Sanitary District | Corona, California | Project Engineer

Project Engineer for conducting a system-wide evaluation and analysis of the District's sewer collection system. The entire system was inspected by CCTV, and a pipeline condition assessment was developed to prioritize the infrastructure replacement and maintenance needs. The service area characteristics were summarized, and flow conditions defined in order to assess system capacity. All of the data was compiled and formulated into a CIP program to address high priority issues.

** denotes projects completed with other firms*

MASTER PLANNING

IBC Sub-Area Master Plan Addendum for Element Hotel Project, Irvine, California (Project Engineer)

Project Engineer for conducting hydraulic analyses of Irvine Ranch Water District (IRWD) existing potable water and sewer system using Innovyze InfoWater and H2OMap sewer software. The project involved evaluating the impact of the Element Hotel Project to IRWD's existing water and sewer system and providing the report.

Lake Forest Sub-Area Master Plan Addendum for the Springhill Suites Project, Lake Forest, California (Project Engineer)
Project Engineer for conducting hydraulic analyses of Irvine Ranch Water District (IRWD) existing potable water system using Innovyze InfoWater software. The project involved evaluating the impact of constructing Springhill Suites in the Lake Forest Gateway Center to IRWD's existing water and sewer system and providing the report.

Utility Master Plan Update, Covina Hills, Forest Lawn Memorial Parks (FLMP), California (Project Engineer)
Nahid provided hydraulic modeling and analysis for the Potable and Irrigation Water Master Plan. The hydraulic analysis was performed using H2ONET modeling software. The entire existing and proposed distribution system was modeled to evaluate the existing system deficiencies and determine the pipe sizes for the proposed system per FLMP's needs and requirements. The project also includes designing a booster pump station for the potable water and irrigation system.

Utility Master Plan Update, Hollywood Hills, Forest Lawn Memorial Parks (FLMP), California (Project Engineer)

Hydraulic analyses and report preparation of the Potable and Irrigation Water and Sewer System Master Plan. The hydraulic analysis was performed using H2ONET modeling software. The entire existing and proposed distribution system was modeled to evaluate the existing system deficiencies and determine the pipe sizes for the proposed system per FLMP's needs and requirements.

Engineering Planning Services for Water and Sewer Hydraulic Analysis of the Sacramento Railyards Central Shops, Sacramento, California

Nahid provided modeling services for the Sacramento Railyards Central Shops, which is part of Sacramento Railyards project. The modeling analysis was used to determine pipe diameters and verify fire flow performance criteria.

Planning Area 12, Sub-Area Master Plan Addendum, Irvine, Irvine Ranch Water District, California

Nahid assisted with hydraulic analyses and report preparation for the Domestic Water, Sewer collection system, and Recycled Water System for the PA 12 SAMP Addendum using Innovyze InfoWater and InfoSWMM.

Planning Area 39, Sub-Area Master Plan Addendum, Irvine, Irvine Ranch Water District, California

Nahid performed hydraulic analyses and report preparation for the Domestic Water, Sewer collection system, and Recycled Water System for the PA 39 SAMP Addendum using Innovyze InfoWaterPro and InfoSWMM.

Planning Area 40, Sub-Area Master Plan Addendum, Irvine, Irvine Ranch Water District, California

Nahid performed hydraulic analyses and report preparation for the Domestic Water, Sewer collection system, and Recycled Water System for the PA 40 SAMP Addendum using Innovyze InfoWaterPro and InfoSWMM.

DRAINAGE AND STORMWATER PLANNING & DESIGN

Fullerton Road Grade Separation Stormwater & Groundwater Pump Stations* | City of Industry | Industry, California | Project Engineer

Project Engineer for design of a 20,500 gpm stormwater pump station, and a 200 gpm groundwater pump station facility, to allow for the depression of Fullerton Road under UPRR railroad tracks. Project included hydraulic analyses of storm and groundwater inflow conditions to match with outflow hydrographs, and mechanical, electrical, and structural design. The main pump station was permitted by the LACDPW.

Roripaugh Ranch*, Temecula, California (Project Engineer)

Project Engineer for civil engineering design services for the Roripaugh Ranch Development Project, approximately 805-acres, located in the City of Temecula, California. The project site is being developed to include approximately 2,000 single- and multi-family homes in gated neighborhoods, elementary and middle schools, a 20 acre sports park, 15 acres of commercial facilities, pedestrian trail networks, blic and private recreation centers, water and sewer systems facilities, flood control facilities and more than 200 acres of preserved public open space and habitat areas. Services have included water and sewer systems planning and design, preparation of grading and infrastructure improvement plans, and construction document preparation for the development of the Ranch.

** denotes projects completed with other firms*

Adelina Pirijanyan PE

Urban Water Resources Planning Leader
20 years of experience · Pasadena, California

Adelina has 20 years of experience in water resources planning, with majority experience in water/wastewater master planning. Adelina has led various master planning efforts, completing tasks on time and budget. She has taken the lead in the coordination of multiple tasks with colleagues, subconsultants. and clients nationwide, preparation and presentation of project results to clients on project management level as well as executives, and the responsibility of tracking the schedule and budget for the project. In addition, Adelina is skilled in hydraulic modeling and environmental data management, including data collection, input, quality assurance/quality control, verification, validation, and analysis. Her expertise includes applying geographic information systems (GIS) technologies and hydraulic modeling for potable/non-potable systems.

EDUCATION

Bachelor of Science, University of California, Irvine, Irvine, California

REGISTRATIONS

Professional Engineer #73785, California Board for Professional Engineers, Land Surveyors, and Geologists

PROJECT EXPERIENCE

Recycled Water to Port of Long Beach via Harbor Area Infrastructure Feasibility Study | Long Beach Water Department (LBWD) | Long Beach, CA | Project Engineer

Adelina led the effort in projecting potential recycled water demands for existing LBWD customer who were receiving domestic water but were interested in converting to recycled water. She helped prepare a tech memo which included the methodology used to project recycled waters demands. The LBWD has a successful history of supplying recycled water to the east side of the service area from the Long Beach Water Reclamation Plant (LBWRP). Due to limited water availability from the LBWRP as well as physical and economic constraints, the current recycled water system has not been able to expand to customers in Long Beach's western service area. LBWD has identified opportunities to maximize recycled water use in the west area along with customers in the adjacent Port of Long Beach (POLB) by partnering with agencies such as the Los Angeles Department of Water and Power (LADWP) to connect potential customers to an advanced treated recycled water supply.

Analysis and Recalibration of Sewer Flow Tenant Type Factors* | Eastern Municipal Water District | Perris, California | 2018 | Project Engineer

Adelina assisted EMWD to update their sewer flow tenant factors through a combination of data analysis, industry review, and flow monitoring. This study involved the analysis of the District's existing sewer flow tenant factors for its commercial and industrial use types by comparing existing indoor water usage with projected wastewater flows and conducting an industry review assessment. Flow monitoring is planned for some user types where existing data is not conclusive. Final recommendations are expected to include revision of some tenant types, as well as changes to some sewer flow factors.

2020 Water System Master Plan | City of Orange | Orange, CA | Project Engineer

Adelina led the hydraulic modeling effort for the water master plan update which included update of the City's current hydraulic model in InfoWater. The model updated included hydrant flow testing and calibration of the model. In addition, Adelina supported the master planning effort which included analyzing water demand and supply projections, evaluating optimization of supply facility operation, evaluated distribution system maintenance program, and providing a phased CIP with cost estimates. The team also investigated water quality issues and identifying any deficiencies and "bottle necks" in water system.

SARP 10 Program, Wastewater Collection System Master Plan* | City of Memphis | Memphis, Tennessee | Project Engineer/Modeler

Adelina developed the wastewater hydraulic model and master plan report as part of the SARP 10 program. The model development utilizing InfoSWMM included data import from GIS databases, dry weather calibration, and wet weather calibration. The master plan utilized future flow projections under a variety of design storm conditions to determine the appropriate conveyance improvements capacities for resolve hydraulic bottlenecks. The objective of this program is to improve the sanitary sewer infrastructure system and help reduce the number of sanitary sewer overflows (SSOs). The City owns, operates, and maintains approximately 2,400 miles of sanitary sewers, 100 lift stations, and 80,000 manholes.

** denotes projects completed with other firms*

Sustainable Water Master Plan* | City of Santa Monica | Santa Monica, California | Project Engineer

Adelina managed and updated Santa Monica's (City) 2014 Sustainable Water Master Plan. The City is updating sections of their SWMP due to recent changes to the City's supplies, demands, and policies considerations with the goal to eliminate City's dependence on imported water from Metropolitan Water District. The update includes analysis of City's historical water demands, projection of future demands and a comprehensive plan addressing future water supply needs. Currently the City supplies imported and local water to approximately 93,000 residents covering approximately 8 square miles.

Sewer Master Plan* | DeKalb County Department of Watershed Management | DeKalb County, Georgia | Project Engineer

Adelina led the model evaluation and master plan report development for the Dekalb County Department of Watershed Management (DWM). She is also responsible for estimating future sewer flow projections. DWM has three sewer service areas: Snapfinger, Pole Bridge and Inter-Governmental basins. The major facilities operated and maintained by the department include the Pole Bridge Advanced Wastewater Treatment Plant and Snapfinger Advanced Wastewater Treatment Plant. DWM provides wastewater collection and treatment services to approximately 750,000 residents.

2015 Wastewater Collection System Master Plan* | Eastern Municipal Water District | Perris, California | Project Engineer/Modeler

Adelina led the model evaluation and master plan report development for the master plan update. She is also working with the GIS team in the development and integration of tools for EMWD (District). The District has five sewer service areas: Moreno Valley, Perris Valley, Sun City, San Jacinto Valley and Temecula Valley. They provide wastewater collection and treatment services to approximately 555 square miles, owning and operating over 1,700 miles of sewer pipe, 51 active lift stations, and five regional water reclamation facilities.

Vallecitos Water District Recycled Water Business Plan* | Vallecitos Water District | San Marcos, California | 2017 | Project Engineer

Adelina prepared a business plan for Vallecitos recycled water use by identifying potential recycled water opportunities for the District), including both non-potable and potable reuse opportunities and at wholesale retail levels. VWD provides water, wastewater, and recycled water within northern San Diego County and is currently considering expanding their recycled water services.

City of Banning Water and Sewer System Master Plan | City of Banning | Banning, CA | Design Engineer

Adelina performed the hydraulic and sewer analyses and model calibration, as well as planned and prepared the report for the Water and Sewer System Master Plan. The development included commercial and residential acreage encompassing approximately 1,500 acres in project development. The City did not have domestic water zoning for this area, therefore water pressure zones were defined, were sized, the domestic and sewer water network was routed for the development, water and sewer pipes were sized, pressure reducers and valves were required, a pump station and a force main line was necessary for the southwest portion of the project in order to deliver the sewage to the plant due to elevation restrictions.

Manhattan Beach 2020 Water Master Plan | City of Manhattan Beach | Manhattan Beach, California, United States | Planning Lead

Adelina led the master planning update to plan focuses on: near- and long- term water supply demands, delivery of adequate flows and pressures for peak demands and fire protection, redundancy for service reliability with diversified water supply sources, and highest efficiency and lowest cost of operation. The master plan included hydrant flow testing and calibration of the City's hydraulic model in InfoWater.

Conceptual Planning for Groundwater Treatment Facilities, Task Order 5.3 | City of Los Angeles, Department of Water and Power | Los Angeles, CA | Project Engineer

Adelina helped develop conceptual layouts for six groundwater purification facilities, similar included constituents of concern and treatment objectives, advanced existing layouts, and evaluated land options further.

Groundwater System Improvement Study | Los Angeles Department of Water and Power | Los Angeles, CA | Project Engineer

This $11.5M project involves installing and sampling new monitoring wells, determining constituents of concern, evaluating the City's groundwater delivery system, and implementing projects that will restore the contaminated groundwater in the San Fernando Basin (SFB). The final study will provide realistic and economically viable recommendations on groundwater system improvement projects that will maximize the pumping capacity of the groundwater supply in the SFB.

** denotes projects completed with other firms*

New Model Colonies | City of Ontario | Ontario, CA | Design Engineer

Adelina manages the City of Ontario's domestic, recycled and sewer models, including development flows from the proposed New Model Colony development which consists of 3,800 acres of residential and commercial development. The responsibility included sizing the new development pipelines, creating queries, analyzing various scenarios within the model, analyzing the system using 24-hour period analysis to ensure City requirements and standards are met. Data management included analyzing land use data using Microsoft database and linking data to H2O Map Water. A Sewer and Water Master Plan for New Model Colony were prepared for the City of Ontario.

Construction of Hydraulic Model* | City of Anaheim | Anaheim, CA | Project Modeler

Adelina is converting the City's GIS network of water lines into a working hydraulic model using MWHSoft H20Net and InfoWATER Software. The hydraulic model contained over 30,000 pipes and approximately 17 different pressure zones. The system is fed mostly through wells on the western portion of the district. The eastern portion contains the Anaheim Hills therefore there are various pump stations and tanks that feed the system.

Recycled Water System, Construction of Model and Analysis | Camrosa Water District | Camarillo, CA | Project Engineer

Adelina is performing the construction, analyses, and model calibration for the Camrosa Water District's recycled water system. The District's existing non-potable system includes distribution of non-potable water to various agriculture and traditional irrigation users. Camrosa maintains several surface storage ponds, closed reservoirs, pump stations, and distribution piping to serve approximately 350 customers throughout seven separate pressure zones. To support these efforts, a hydraulic model was constructed and used to analyze the existing capacity and operations and determine the feasibility and impacts from the proposed future expansions. Recycled Water System, Design and Analysis, Elsinore Valley Municipal Water District, Lake Elsinore, CA |2009-2010 Project Engineer. Responsible for the hydraulic analyses, model calibration, design, planning, and report preparation for a recycled water system consisting of approximately 33,000 feet of proposed pipeline, a new pump station, and a new reservoir for the District. The Tuscany Hills development is converting to recycled water system, prior they were receiving water from a domestic water source. She also performed quantity and cost estimates for the project as well as attended meetings with the client.

Richland Creek Sewer Basin Dry and Wet Weather Calibration TM | Gwinnett County Department of Water Resources | Atlanta, GA | Modeling Engineer

Adelina is updating the wet weather calibration for County's Richland Creek sewer basin using Sewer GEMS and preparing a technical memorandum describing the calibration process and modeling results. Black & Veatch is providing assistance to Gwinnett County DWR in the development, maintenance and/or application of their Water GEMS, Sewer GEMS, and HAMMER models. The County uses Sewer GEMS to simulate sanitary loads within the system, and the models were last updated in the summer of 2012. The county has a total of 22 sewer basin models, Richland Creek basin being one. Richland Creek basin's sanitary sewer collection system consists of 4 sub-basins, approximately 8 sewer pump stations, 67 miles of gravity sewer, 6 miles of force main, and approximately 2,000 manholes.

US Navy Geographic Information System Development | U.S. Naval Facilities Engineering Command, Southwest Division | Coronado, CA | Project Engineer

Adelina is leading the compilation and conversion of multiple sources of data into a new GIS model, and verifying/updating location and attribute information through field surveys. Working shoulder-to-shoulder with the US Navy GIS Group to develop a GIS system that improves inventory tracking and optimizes asset usage and maintenance efforts. Utility systems being addressed include potable water, wastewater, gas, steam, compressed air, and electrical. The Navy's existing GIS data is being migrated to the new Utilities GIS Data Model v3.04 using the ESRI Data Interoperability Extension and custom Spatial ETL tools. Data Interoperability Extension is also being used to update the existing attribute data from external data sources, including the MAXIMO asset management system and the Navy's meter databases. The new GIS will contain some 70 layers, each containing 40 mandatory attributes, with more than 15,000 features.

Bachelor of Science, Civil Engineering,

Master of Science, Civil and Environmental Engineering,

CERTIFICATIONS & TRAINING

PSMJ, Project Management Boot Camp, Grand Rapids, Michigan, 2012

REGISTRATIONS

Professional Engineer #C87384, State of California,

PROJECT EXPERIENCE

CONVEYANCE - WATER STORAGE RESERVOIRS & TANKS

Hydropneumatic Tank 26 | Hi-Desert Water District | Yucca Valley, California | Project Manager

Chris is providing project management and design phase services for a new booster pump station and hydropneumatic tank. He is serving as project manager and is in charge of monitoring and controlling scope, schedule, and budget. Chris is also coordinating between discipline engineers and directing design document development.

Windy Ridge Reservoir | City of Anaheim | Anaheim, California | Project Engineer

Chris provides engineering services for the design of a 1.6 MG potable water reservoir. The new reservoir will provide potable water storage to the 1320 pressure zone reservoir on the eastern end of the City of Anaheim's water distribution system. A new pressure regulation station will allow the reservoir to supplement lower pressure zones as well.

Graves Reservoir Replacement Project | City of South Pasedena, Public Works Department | Pasadena, California | Project Engineer

Chris provided preliminary design and design phase services for a new 1-MG cast-in-place concrete reservoir, new pump station, on-site chlorination equipment, a new GAC system, new ion exchange system, and 2,000 linear feet of 8-, 12-, and 16-inch-diameter PVC and steel transmission pipeline. The existing facilities will be demolished while keeping the existing well operable. The new reservoir and pump station design must be carefully considered in order to fit the facilities into the existing site.

WATER AND SEWER

Norwood Regional Water and Sewer District Rehabilitation Projects* | Norwood Regional Water and Sewer District | Huntington County, Indiana | Project Engineer

Chris provided design and construction phase services for rehabilitation of the existing sanitary sewer collection system, installation of new small diameter water mains, installation of a new low-pressure sanitary sewer system, construction of two new lift station, rehabilitation of an existing lift station, rehabilitation of the existing water treatment plant, demolition of the existing wastewater treatment plant, and construction of a new 75,000 gallon water tower.

PUMP STATION

Peck Reservoir and Pump Station | City of Manhattan Beach, CA | Manhattan Beach, CA | USD 35M | 2016-present | Project Engineer

Chris is providing preliminary design and design phase services for a new 8-MG cast-in-place concrete reservoir, an 8.6-MGD pumping station, a green sand treatment system, replacement of distribution system piping, new MSE retaining walls, and new site amenities. Stantec has developed a preliminary design report, 60% design documents, a draft Initial Study, and are in the process of design completion. The new facility will receive water from City owned potable water wells and MWD. The pump station will pump from the new reservoir into the distribution system and will be operated based on maintaining a set pressure in the distribution system. In replacing the existing reservoir, the new design will meet current seismic requirements, as well as be hidden from view of nearby residents. The new facilities will provide increased system storage, maximize the use of local groundwater resources, and provide reliable storage for the foreseeable future.

** denotes projects completed with other firms*

TOS-14 | Los Angeles Bureau of Engineering | California | Project Engineer

Chris is providing engineering services for the design of five low flow diversion structures. The structures are intended to take nuisance flows out of existing storm drains and put them into local sanitary sewers for treatment at Hyperion Water Reclamation Plant. The small pump stations are designed to operate in a fill-and-draw scenario. Trash will be collected on bar racks within a trash collection manhole. The facilities will be constructed within the right of way. The project requires a very complicated permitting process involving coordination with LACFCD, LARAP, LASAN, LAMetro, Caltrans, LADWP, two council districts, and several private parties.

Secondary Effluent Pump Station and Replenishment Pond Upgrades | Palm Desert, California | Present | Project Engineer

Chris is currently managing the design for a new secondary effluent pump station with associated electrical facilities at the WRP 10 facility. The pump station will include vertical turbine pumps installed at grade with a traveling screen to protect the pumps. The electrical facilities will consist of a new electrical building, generator, and electrical service. The existing secondary effluent ponds will be upgraded to increase slope stability and prevent the grown of weeds. Three new replenishment ponds will be designed to allow for the recharge of up to 15,000 acre-feet per year of Colorado River Water.

WATER SYSTEM DESIGN

NAVFAC P-1046 RFP Development | Naval Facilities Engineering Command (NAVFAC) | San Diego, California | Project Manager

Chris managed the development of a design-build RFP package for Camp Pendleton. The project consists of a preliminary design report and 60% drawings for 6 miles of sanitary sewers, 8 miles of recycled water pipe, two steel reservoirs, and an advanced treatment system. This work was conducted on an extremely tight schedule, and was completed in 190 calendar days—meeting every deadline requested by the client. The proposed HDPE and ductile iron water pipelines are 8-, 12-, 16-, and 24-inches-in-diameter.

WATER STORAGE RESERVOIRS & TANKS

Lindley Reservoir Project | City of Escondido | Escondido, California, United States

Chris provided design services for two new 1.5 MG prestressed concrete reservoirs. The project involved the replacement of a single smaller steel tank that had exceeded its useful life. The facilities were constructed in a hard rock area and significant effort was made to accurately determine the amount of rock that needed to be removed. The reservoirs were designed to be hidden within a hillside so that local residents' views were not obstructed. Additional features included an inlet-outlet vault structure, new piping, storm water mitigation, and landscaping.

P-1045 North/South Potable Water Conveyance Project - RFP Development | Naval Facilities Engineering Command (NAVFAC) | Camp Pendleton, California | Hydraulic Engineer

Chris provided design phase services, design management, and project management for the development of a design-build RFP package for Camp Pendleton. The project consists of providing a preliminary design report, 60% design drawings for approximately 24 miles of domestic water pipeline, two pump stations, and a 3-MG reservoir. The drawings and specifications were developed to a 60% level to provide a more accurate bid for the design-build contractor. This work was conducted on an extremely tight schedule, and was completed in 210 calendar days—meeting every deadline requested by the client. The proposed HDPE and ductile iron water pipelines are 8-, 12-, and 16-inches-in-diameter.

On-Call Engineering Services | Metropolitan Water District of Southern California | Los Angeles, California, United States | Project Manager/Project Engineer

Chris provided project management and project engineering services for many Metropolitan Water District task orders under our on-call services agreement. These task orders consist of staff augmentation, feasibility reports for pump stations, hydraulic analysis of the Rialto Pipeline, pipeline design, upgrading of existing hydropower facilities, cost estimating services, design of solar power facilities, and others. The Rialto Pipeline Analysis and Design Task Order involved a 2,400 linear foot steel pipeline ranging in size from 12- to 24-inches-in-diameter.

SANITARY SEWERS AND FORCEMAINS

Wildomar Sanitary Sewer Upgrades | Elsinore Valley Municipal Water District | Wildomar, California | Project Engineer

Chris is providing engineering services to upgrade two pump stations and replace two pipeline segments. The scope of work consists of providing a preliminary design report, design phase services, bidding assistance, and a construction management services. The work will be designed to minimize down-time of associated facilities and maintain sanitary services in the project area during construction.

Taylor RSD Sanitary Sewer Improvements | Taylor Township Regional Sewer District | Taylor Township, Indiana | Project Engineer

Chris provided design and construction phase services for approximately 15,000 linear feet of a small diameter grinder pump network, 35,000 linear feet of sanitary force main, and two pump stations.

** denotes projects completed with other firms*

California Bowl Sewer Rehabilitation Project | Long Beach Water Department | California | Project Engineer

Chris is the project engineer for the rehabilitation of approximately 8,000 linear feet of sanitary sewers and 23 manholes for the Long Beach Water Department. The scope of work includes cured-in-place pipe (CIPP) lining, manhole replacement, and manhole rehabilitation. The project consists of installation of approximately 3,000 linear feet of cured in place pipe lining, replacement of a manhole, and heavy duty mechanical cleaning.

RECYCLED WATER

Northwest Area Recycled Water Facilities | Inland Empire Utilities Agency | Ontario, Rancho Cucamonga, and Upland, California | 2008-2012 | Project Engineer

Chris was the project engineer responsible for the design of approximately 23,000 linear feet of 24-inch-diameter steel pipe in the Cities of Ontario, Rancho Cucamonga, and Upland. The project involved crossing two railroad right-of-ways, crossing a Metropolitan Water District feeder line, coordination with multiple municipalities, and integration of multiple design criteria into a single project. Chris also provided engineering services during construction in support of the Inland Empire Utilities Authority.

SEWER SYSTEM DESIGN

Post-Rawles Sanitary Sewer Improvements* | Indianapolis Department Of Public Works | Indianapolis, Indiana | Project Manager

Chris provided design phase services for approximately 18,000 feet of 8-inch and 10-inch diameter gravity sanitary sewers, jack-and-bore under under two roadways which needed to remain in operation, and a new pump station. His duties included client communication, design decisions, permitting, and management of CAD personnel.

WASTEWATER TREATMENT

Galvestion Wastewater Treatment Plant Improvements* | Town of Galveston | Galveston, Indiana | Project Engineer

Chris was responsible for the design of retrofitting an existing oxidation ditch into an extended aeration tank. The project involved removal of existing rotary disk aerators, demolition of a micro-strainer system, installation of fine pore diffusers, installation of two new blowers, and air piping. His duties included client communication, design decisions, permitting, management of CAD personnel, shop drawing review, response to RFI's, processing of periodic contractor invoices, and development of change orders. This project allowed the Town to meet NPDES nitrate requirements and increased treatment capacity by 30%.

GROUNDWATER SUPPLY / WELLS

Terra Cotta Well Drilling Project | Elsinore Valley Municipal Water District | Lake Elsinore, California | Resident Engineer

Chris provided construction phase services for the drilling, development and construction of a new 1,200-foot deep well production water well. His duties included processing pay requests, change orders, requests for information, shop drawing review, tracking progress of construction, and field engineering decisions.

CONVEYANCE - PIPELINES & DISTRIBUTION

Northwest Area Recycled Water Facilities | Inland Empire Utilities Agency | Ontario, Rancho Cucamonga, and Upland, CA | 2008 - 2012 | Project Engineer

Christopher was responsible for the design of approximately 23,000 linear feet of 24-inch-diameter steel pipe in the Cities of Ontario, Rancho Cucamonga, and Upland. The project involved crossing two railroad right-of-ways, crossing a Metropolitan Water District feeder line, coordination with multiple municipalities, and integration of multiple design criteria into a single project. Chris also provided engineering services during construction in support of the Inland Empire Utilities Authority.

Downtown Water Recycling | Los Angeles Department of Water and Power (LADWP) | Los Angeles, CA | Project Engineer

Christopher is providing design services to bring recycled water for both irrigation and industrial services—a critical part of LADWP's plans to serve customers in the downtown area. Design work consists of 50,000 linear feet of 16-inch ductile iron pipe (DIP), a pressure reducing station, and a flow metering station. This project will cross Interstate 10, US 101, Interstate 110, and Metro Gold and Red lines are being created. and some of the busiest intersections in the City. Along with a limited urban work area, project challenges include a tight schedule, budget constraints, and a high level of public visibility. In addition, Stantec is providing design services for 10,000 linear feet of 18-inch DIP, two flow metering structures, a pressure reducing station, LADWP vault, control panels, and communication equipment connected to the LADWP Supervisory Control and Data Acquisition system. The project will expand recycled water deliveries to some of Los Angeles County's most heavily industrialized areas.

Professional and Technical Engineering and Architectural Design Services – On-Call Agreement #47336D-6 | Los Angeles Department of Water and Power | Los Angeles, CA | 2016-2021 | Project Engineer

Chris has worked several task orders as a part of this on-call contract including OCC-68: Unit 8 Second Gap Connection Pipeline, OCC-55: Feasibility Study of Water Recycling Facilities for Eastside Water Recycling Program, and OCC-48: Downtown Water Recycling Project. Each of these projects included civil, structural, mechanical, and instrumentation elements.

PROJECT EXPERIENCE

ROADWAYS

West Coast Highway Landscape Improvements | City of Newport Beach | Newport Beach, California | Project Manager

Jeff managed the firm's component of this current project which includes the preparation of plans, specifications, and cost estimates (PS&E) for the roadway beatification project along West Coast Highway from the Santa Ana River Bridge to the Newport Boulevard Overcrossing (approximately 9,250-feet). The project includes the demolition of existing landscaping and hardscaping from existing medians, new median islands and pavement repairs; restoration of signing and striping, a new irrigation water service, and irrigation sleeves between the medians. Since the improvements are within Caltrans right-of-way, the project also includes the processing of a Caltrans Encroachment Permit and the preparation of a Design Exception Report (Fact Sheet) and Storm Water Data Report (SWDR).

Bellflower Boulevard Pavement Rehabilitation Project (CIP 15-12), Woodruff Avenue Pavement Rehabilitation Project (CIP-14-14), and Various Street Pavement Rehabilitation Project (CIP 14-13) | City of Downey | Downey, California | Civil Task Manager

Jeff assisted with the preparation of plans, specifications and cost estimates (PS&E) for the pavement rehabilitation improvements for three separate CIP projects: Bellflower Boulevard, from Foster Road to Stewart and Gray Road (approximately 6,500-feet); Woodruff Avenue from Imperial Highway to Stewart and Gray Road (approximately 3,900-feet); 3) Various Streets throughout the City. The three projects include asphalt pavement reconstruction and overlays, repair of damaged curb and gutter, cross gutters, sidewalks, non-compliant ADA accessible ramps, and driveways, the construction of a retaining wall at the Rivergrove Drive and Glencliff Drive intersection, new signing and striping, the restoration of traffic signal loops, potable water improvements, and other utility adjustments and relocations.

Paramount Boulevard Median Island Improvements | City of Downey | Downey, California | Civil Task Manager

Jeff is assisting with the preparation of plans, specifications, and cost estimates (PS&E) for the new median island improvements along Paramount Boulevard between Imperial Highway and Florence Avenue (approximately 12,600-feet). The project includes new landscaped raised medians, new asphalt and concrete pavement, repair of damaged curb and gutter, cross gutters, sidewalk, and non-compliant ADA accessible ramps, restoration of traffic signal loops, signing and striping improvements, new potable water improvements, and other utilities adjustments and relocation.

Victoria Street Rehabilitation* | City of Costa Mesa | Costa Mesa, California | Project Manager

Jeff managed the civil engineering and topographic surveying services for the rehabilitation of roadway pavement for Victoria Street from Harbor Boulevard to the Santa Ana River (westerly City boundary - approximately 9,800 LF). The scope of improvements included pavement rehabilitation, reconstruction/ rehabilitation of damaged curb and gutter, cross gutters, sidewalks, driveways and driveway approaches, detailed design modifications to improve nuisance flow drainage problems and providing wheel chair ramps (WCR) to meet ADA requirements.

** denotes projects completed with other firms*

Cactus Avenue Widening* | City of Rialto | Rialto, California | Senior Project Engineer

Jeff assisted with the preparation of plans, specifications, and estimate (PS&E) for the widening of Cactus Avenue between Foothill Boulevard and Etiwanda Avenue in the City of Rialto. The project involved widening the roadway approximately 26 feet on the west side of Cactus Avenue to ultimate width of 72 feet and the installation of curb and gutter along the west side. The project included construction of the curb ramps at Rosewood Street and Ramona Drive (southeast corner only) to meet current ADA standards, utility relocations, signing and striping, and construction traffic control.

Fairview Road and Wilson Street Intersection Improvements | City of Costa Mesa | Costa Mesa, California | Project Manager

Jeff managed the engineering design for the roadway improvements along Wilson Street from Columbia Drive to Newport Boulevard. The project involved widening both sides of Wilson Street in order to provide additional through lanes in both directions throughout the project limits. Services included conceptual planning, final PS&E and right-of-way mapping. The scope of the improvements included new asphalt pavement, curb and gutter, sidewalk, driveways, a bus turnout, ADA compliant curb ramps, drainage improvements, utility relocations, private property improvements, signing and striping, and a traffic signal modification. Construction bid documents and an engineer's estimate were also prepared. Finally, legal descriptions, plats, and a programming cost estimate were prepared for the parcels where right-of-way acquisition that was required for the project improvements.

Harbor Boulevard and Victoria Street Intersection Improvements | City of Costa Mesa | Costa Mesa, California | Project Manager

Jeff managed the engineering design services to prepare a PS&E to improve the intersection of Harbor Boulevard and Victoria Street. The project was divided into two separate phases. The scope of first phase included extending the southbound right-turn lane along Harbor Blvd. and restriping the intersection to provide an exclusive eastbound right-turn lane along Victoria Street. The scope of the second phase included widening the road along westbound Victoria Street, west of Harbor Blvd., to lengthen the No.3 through lane departing the intersection. This widening/lengthening allowed the conversion of the existing exclusive westbound right-turn lane into an optional through-right lane along Victoria Street. The roadway improvements included new asphalt pavement, curb and gutter, sidewalk, bus pads, ADA compliant curb ramps, and striping. Also, additional right-of-way (R/W), street light, utility and catch basin relocations, private property access improvements, and minor landscaping and irrigation modifications were required for implementation of the project improvements.

Magnolia Avenue Widening, Rehabilitation and Beautification* | City of Riverside | Riverside, California | Project Manager

Jeff managed the engineering design services for the Magnolia Avenue Widening, Rehabilitation and Beautification Project for the City of Riverside Public Works Department. The project measures 2.5 miles in length and is the westerly entrance to the City. We reduced the width of the existing median for a portion of the project to provide three through lanes in each direction and median beautification for the entire project limits. Services included preparing conceptual landscape and engineering plans, environmental documentation, right-of-way mapping, and final PS&E.

17th Street/Tustin Avenue and Harbor Blvd./Wilson Street Intersections Improvements* | City of Costa Mesa | Costa Mesa, California | Project Engineer

Jeff assisted with the preparation of PS&E for intersection capacity and aesthetic improvements at the 17th Street/Tustin Avenue and Harbor Blvd./Wilson Street intersections. Project capacity improvements at 17th Street/Tustin Avenue included exclusive right-turn lanes on the eastbound and northbound approaches and a far-side bus turn-out on eastbound 17th Street. The improvements at this location also included decorative crosswalks across all approaches of the intersection, new curb returns and ADA-compliant access ramps, new sidewalk and tree wells, raised medians with landscaping and irrigation systems, and new street lighting. Improvements at Harbor Boulevard and Wilson Street included an exclusive westbound right-turn lane including retaining wall design. The firm prepared all street improvement plans for these projects including roadway plan and profiles, detail sheets, traffic signal modification, signing and striping, and street lighting.

Howard Way, Century Place and 16th Street Roadway Rehabilitation* | City of Costa Mesa | Costa Mesa, California | Project Manager

Jeff managed the engineering design services to rehabilitate and re-construct Howard Way, Century Place, and 16th Street. Project improvements included pavement reconstruction, reconstruction of damaged curb and gutter, cross gutters, sidewalks, driveways and driveway approaches, and providing wheel chair ramps (WCR) to meet ADA requirements.

Road Consultant Program* | County of Los Angeles | Los Angeles County, California | Project Engineer

Jeff provided engineering design services for the preparation of construction plans, specifications, and engineer's estimates for resurfacing/reconstruction projects for Los Angeles County Department of Public Works Road Consultant Program. The projects included street resurfacing design, traffic signal upgrades, traffic loop restoration, striping plan preparation, and utilities coordination for Avalon Boulevard, Marengo Avenue, Foothill Boulevard, South Side Drive, Mulholland Highway, 135th Street, Mulberry Drive, and 170th Street.

** denotes projects completed with other firms*

Newport Boulevard Widening | City of Newport Beach | Newport Beach, California | Project Manager

Jeff managed this project which provided comprehensive professional services associated with the conceptual planning, final design and construction of street improvements and landscaping enhancements along Newport Boulevard from 30th Street to Via Lido. The project included roadway widening and median improvements along Newport Boulevard to add an additional northbound through lane between 30th Street to 32nd Street and an additional southbound through lane between Via Lido to 32nd Street. Concrete bike lanes were constructed along both sides of Newport Boulevard to provide a connection to the existing bike lanes along 32nd Street, west of Newport Boulevard. The project also included the construction of a new public parking lot on the northwest corner of the Newport Boulevard and 32nd Street intersection which required the demolition of an existing building. This new public parking lot replaced the curbside public parking spaces lost due to the new roadway improvements. The project enhanced the visual quality of the project area with new landscaping and other decorative features and improved safety by introducing raised landscape medians on Newport Boulevard. Other tasks included the preparation of an IS/MND, coordination with public utility companies for utility relocations and the processing a Coastal Development Permit.

Brookshire Avenue Pavement Rehabilitation* | City of Downey | Downey, California | Senior Project Engineer

Jeff assisted with the preparation of plans, specifications, and cost estimates (PS&E) associated with the design and construction of pavement rehabilitation improvements on Brookshire Avenue from Imperial Highway to Davis Street (approx. 6,700'). The project involved pavement rehabilitation/resurfacing, reconstruction/rehabilitation of damaged curb and gutter, cross gutters, sidewalks, ADA accessible ramps with detectable warning surface, utilities, and potable water meter adjustments.

San Juan Creek Road Widening Project | City of San Juan Capistrano | San Juan Capistrano, California | Civil Design Task Manager

Jeff is providing civil design for the street widening improvements along San Juan Creek Road between Camino Capistrano and Valle Road as well as local widening improvements on Camino Capistrano and Valle Road to relieve congestion and provide for pedestrian and bicycle traffic. Services for this project include surveying, preparation of geotechnical report, design of street improvements including asphalt concrete pavement, curb and gutter and sidewalk, drainage modifications, utility relocation/removal, retaining wall, traffic signals, signing and striping improvements, preparation of specifications and an Engineer's estimate of probable construction costs, Caltrans encroachment permit application submittal, and processing including preparation of Design Exception Reports (Fact Sheets) and PEERS.

Santa Margarita Parkway, La Promesa And Coto De Caza Dr. Rehabilitation Projects* | City of Rancho Santa Margarita | Rancho Santa Margarita, California | Project Engineer

Jeff provided engineering services for the street rehabilitation of 1.3-miles of Santa Margarita Parkway and 0.4-miles of La Promesa/Coto De Caza Drive in the City of Rancho Santa Margarita. Project improvements included AC pavement removal and ARHM overlay, and reconstruction of access ramps and traffic signal push button upgrades to meet current ADA requirements. The work along Santa Margarita Parkway from Avenida de Las Flores to Plano Trabuco Road was implemented in three project phases and the firm prepared separate PS&E for each segment. Utility investigation and coordination was conducted for each project segment and pavement rehabilitation striping, pavement markings, and traffic signal loop detectors was restored. The project also included pavement and soil sampling to identify pavement rehabilitation recommendations. The design plans complied with the latest edition of Caltrans, Green Book, SPPWC and City Standards.

PARKS & RECREATION

Sand Canyon Avenue and I-405 Class I Bike Trail | Irvine Community Development Company | Irvine, California | Project Engineer

Jeff helped provide concept design and construction PS&Es for the Sand Canyon Avenue and I-405 Class I bike trail, a key 1-mile off-street trail connection that provides users with a safe and scenic route to local destinations. Services included horizontal layout, vertical profiling of the bike trail, grading and drainage design, and trail lighting design. The alignment of this bike trail passes through Southern California Edison (SCE) owned property for multiple circuits of overhead transmission lines and tower support structures. The City of Irvine negotiated a license agreement with SCE to allow the Class I bike trail use within their property. The design required a keen understanding of strict criteria established by SCE's transmission engineering department for the proposed grading, drainage, and surface improvements near the transmission tower foundations and future underground transmission facilities within the SCE property. The main challenge was designing a bike trail that met all project stakeholder's requirements and design code criteria. Our engineering team collaborated closely with SCE's transmission engineers and maintenance managers to coordinate horizontal alignment and vertical design of the bike trail and horizontal placement of the surface trail lighting and conduit system to meet design and maintenance requirements. Designs were also in conformance with Caltrans Highway Design Manual requirements for Class I Bike Trail design and met minimum photometrics required by the City of Irvine's security code.

Underground District Projects - Real Property/Easement & Civil Base Map Services* | City of Anaheim, Public Utilities Department | Anaheim, California

Jeff was responsible for preparation of civil base maps of all underground utilities including profiles for APUD transformers and other electrical facilities associated with the undergrounding of overhead power lines.

** denotes projects completed with other firms*

Susan Reid PE

Project Engineer
30 years of experience · Irvine, California

Susan has more than 28 years experience providing engineering and design services for public and private infrastructure projects. With expertise in precise geometrics and computer aided design (CAD), she has worked on numerous roadway, hydrology/hydraulic, and land development projects throughout Southern California. Susan utilizes numerous CAD programs, including AutoCAD Civil 3D InRoads/MicroStation, WSPGW, and various Orange and Los Angeles County hydrology and hydraulics programs.

PROJECT EXPERIENCE

COMMUNITY INSTITUTIONAL

Laguna Beach Maintenance Facility and Act 5 Parking | City of Laguna Beach | Laguna Beach, California, United States | USD 8.5M | 2002 | Project Engineer

Susan provided assistance for the design of storm drainage, precise grading, and coordination with Caltrans of an eight-acre maintenance facility and parking area to be used by the public and city staff. The Scope of work also included the design of special storm water management systems, such as CDS units. Continuous coordination with the City, County of Orange, and Caltrans was needed to achieve the goals of the project.

ENVIRONMENTAL ASSESSMENTS

Chino Sphere of Influence | City of Chino | Chino, California | 1999 | Designer

Stantec provided an environmental inventory, mapping, and baseline opportunities and constraints phase for the initial subarea of a recent 7,200-acre dairyland addition to the City sphere. Stantec provided comprehensive area-wide mapping utilizing GIS (ARC CAD), and will be assisting the City of Chino with setting up a sub-regional GIS database. Stantec also prepared the master EIR addressing the City's general plan for areas to be annexed.

PARKING

Heritage Park Parking Lot Improvements | City of Irvine | Irvine, California | USD 0 | Design Engineer

Suan led the design and interdisciplinary coordination of a fast-track design improvement to a four-acre parking lot originally constructed in 1976. The design improved circulation, capacity, safety, water quality, and aesthetics. Consideration of concept elements included better circulation and ADA facilities, increased capacity, visually pleasing design, sustainable features, and safety.

Orange County Great Park Wild Rivers Parking Lot | City of Irvine | Irvine, CA, USA | USD 4M | Engineering Design Lead

Susan designed the 60% design plans, estimates, and details. The plans included demolition, grading, and drainage for the site and offsite grading and edge treatments to accommodate water quality treatment areas along the parkway. The parking lot was designed for heavy pedestrian routes, bus movements and parking, and future EV parking spaces in accordance with Title 24.

Redondo Beach Parking Lot and Welcome Park | City of Redondo Beach | Redondo Beach, California | Project Engineer

Susan designed precise grading, storm drain, lighting/electrical, and landscaping services for parking lot design. Parking and park improvements were designed to minimize the impact to existing large underground utilities, as well as carefully consider the interactions between pedestrian, bicycle and vehicular movements

Saddleback Church Parking Lot | Saddleback Church | San Juan Capistrano, California | Project Engineer

Susan led the civil design services, coordinated with other disciplines, including landscape and survey, and processed the plans directly with the city from the preliminary layout stage through construction. A key element of the design was the site circulation and ADA accessibility with an understanding of extreme peak periods of pedestrian and vehicular movements.

Act V Parking Lot and City Maintenance Yard | City of Laguna Beach | Laguna Beach, California | Project Engineer

Susan led civil engineering services for this 4.5-acre city lot, which included site parking layout studies, site grading with large retaining walls, various drainage studies with storm drain and impact basin design, various wet and dry utility design, site lighting, driveway access studies and design, shuttle passenger pick up area design, and encroachment permit processing.

Pacific Coast Highway (PCH) Junior Lifeguard and RV Parking Lot Rehabilitation | City of Huntington Beach | Huntington Beach, CA | Project Engineer

Susan led the civil design services, coordinated with other disciplines, and coordinated directly with the city for the PS&E documents through construction. The project schedule included scheduling aerial and field survey prior to the annual air show that restricts flight access for one month, and hitting a specific month for construction to minimizing parking lot shut during RV season.

MIXED-USE

Vellano Golf Course Community | Oaktree Capital Management, LLC | Orange County, California | Drainage Designer

Ms. Reid developed the drainage plans for this project in which Stantec provided engineering, surveying, mapping, and construction management services for the project, architecture services for the entire community and the golf course, and the wetland mitigation design.

ROADWAYS

Campus Drive/Bristol Street Intersection Improvement Project | John Wayne Airport | Orange County, California | Project Engineer

We are providing full A-E services for the City at this major arterial intersection to improve the level of service (LOS) and mitigate the future projected substandard LOS at the intersection of Culver Drive and University Drive. The site is surrounded by William R. Mason Regional Park, a Methodist Church, and a residential community. The local community is served by UC Irvine, University High School, Concordia University, and the City's University Park. Our services consist of civil engineering, right of way services, landscape design, flood control, utility relocations, and environmental permitting through final plans, specifications, and estimates

On-Call Street Improvements in Lake Forest's Light Industrial Area | City of Lake Forest | Lake Forest, California, US | USD 200k | ongoing | Project Engineer

Ms. Reid provided engineering for Front Street, Orange Avenue, and Whisler Drive—all located in a light industrial area—to improve roadway surface, drainage, and pedestrian access. The scope of work included preparation of numerous alternatives to design improvements with the least of right-of-way impact. She provided a design solution to an existing drainage sump with no storm drain outlet by modifying the street cross section to provide positive surface drainage towards an existing storm drain system.

Summit Valley Road Improvements | County of San Bernardino | County of San Bernardino and City of Hesperia, California, US | USD 50M | 2012 | Project Engineer

Susan is responsible for providing civil engineering services for the Summit Valley Road improvements, approximately 7.5 miles in length. Her services include preparation of feasibility studies and final PS&E.

Kline Drive Roadway and Storm Drain Improvements | OC Public Works | County of Orange and City of Newport Beach, California, US | USD 825k | 2010 | Project Engineer

Susan was responsible for developing various alternatives to alleviate storm drain issues, preparing detailed hydrology and hydraulics computations, and preparing the County of Orange Environmental Analysis Checklist.

Sand Canyon Avenue Widening and Realignment | The Irvine Company | Irvine, California, United States | USD 28M | Senior Design Engineer

Responsible for the storm drain, hydrology, and hydraulics design, Stantec provided design surveys, plans, specifications, project schedules, cost estimates, and CEQA/environmental documentation for the widening of Sand Canyon Avenue. The existing four-lane roadway will be widened to its full right-of-way. The widening will provide six lanes of travel, intersection turning movements, traffic signals, curb, gutter, sidewalk, storm drain facilities, dry utilities, and IRWD sewer and water facilities. Additional services include right-of-way engineering; potholing; hydrology and hydraulic studies and reports; utility composite plan; traffic control plan; and improvement plans for domestic and reclaimed water, street improvements, IRWD improvements, traffic signals, signing and striping, sewer, and storm drainage. Additional services include research and base data review; permitting and application; bidding assistance; preparation of project manuals; and organization of project team and review meetings.

WAREHOUSE / LIGHT INDUSTRIAL

Irvine Spectrum 8 - Engineering | Irvine Industrial Company | Irvine, California

Stantec was responsible for providing engineering and design services for the Spectrum 8 project, which is located in Irvine, California. The site contains 640 acres, of which 612 of agricultural land will be converted to a research and development office park and open space. Stantec's scope of services included preparing the lotting study in conjunction with the client and the site planner; completing the preparation and securing the approval of the vesting tentative parcel map; preparing the preliminary utility layout plans; completing the design and securing the approval of the mass grading plan; preparing the record data base mapping and record of survey; preparing the major storm drain infrastructure; preparing the erosion control, SWPPP, and NOI reports; and preparing the highway widening and roadway infrastructure plans.

BICYCLE / PEDESTRIAN STUDIES

Burbank Channel Bikeway Project | Burbank, California | Project Engineer

We are providing full A-E and environmental services to the City of Burbank which completes an important bikeway link through design of a Class I bikeway and multi-use trail along the Burbank Channel. This bikeway will extend from the City's Metrolink station south toward the Los Angeles River Trail located just beyond the City limits. We have provided presentations at council meetings, met with the community in open gatherings and one-on-one with the City, and also helped develop a community survey to gather input from all interested members. Our concept designs looked closely at each of their concerns and provided detailed cost estimates of the proposed project alternatives. One of the interesting project challenges is the conversion of an abandoned rail road spur line bridge to be used for the bikeway with added protective railing. We are also providing at-grade crossings at four locations and linkages to dead-end streets at four locations.

TRAFFIC CALMING

Saddleback Ranch Road Engineering Design | City of Lake Forest | Lake Forest, California | Project Engineer

We are providing full A-E services for traffic calming, improvements to improve traffic operations in a residential and educational facility area. Conceptual studies were prepared and presented to the stakeholders in a number of workshops. The scope of work included preparation and of preliminary engineering studies, PS&E documents.

Saddleback Ranch Road Engineering Design | Lake Forest, California | Project Engineer

We are providing full A-E services for traffic calming, improvements to improve traffic operations in a residential and educational facility area. Conceptual studies were prepared and presented to the stakeholders in a number of workshops. Susan led the preparation and of preliminary engineering studies, PS&E documents.

Berkeley Street Traffic Calming | City of Santa Monica | Santa Monica, California, United States | USD 400k | Project Engineer

Susan provided civil engineering design services for medians and curb extensions, realignment of a large intersection, and implementation of appropriate traffic controls. The project addressed neighborhood traffic concerns on Berkeley Street, a short cut that draws traffic from outside of the neighborhood and is inundated with speeding. Stantec's neighborhood workshops helped the residents develop a plan. Subsequently, Stantec designed the neighborhood-endorsed improvements and also assisted the City prepare and design roadway improvements to increase safety around the Santa Monica High School (Samohi). Improvements offered various safety improvements, including a road diet on some of the roadways and various multi-modal alternatives to improve access, pedestrian and bicyclist safety, and travel time.

Keith Rutherfurd TE

Traffic Engineering
38 years of experience · Irvine, California

Keith offers more than 36 years of experience in transportation and traffic engineering with a broad background in transportation analysis and preparing design plans. He performs technical analyses and studies, prepares various reports, and designs improvement plans for numerous private and public works projects. Keith has also served as an on-call consultant to public agencies. His specific transportation engineering experience includes road alignment studies; highway and street improvements design, comprising geometric studies, interchanges, and ramps; traffic engineering, as well as site impact studies, parking and bikeway studies, bus operations, signing, striping, traffic signal, and traffic control plan design.

PROJECT EXPERIENCE

ROADWAYS

Irvine Avenue Pavement Rehabilitation | Cities of Newport Beach and Costa Mesa | Traffic Lead

Keith led the traffic engineering design including preparation of signing and striping plans for pavement rehabilitation and pedestrian and cyclist safety improvements along Irvine Avenue from 16th Street to Santiago Drive. Mariners Elementary School is located within the project limits, and Newport Harbor High School is adjacent to the project limits. Sidewalk repairs and ADA-compliant curb ramps were constructed to provide improved safety to school children and pedestrians. An accelerated schedule was required to help ensure the improvements are completed before the next school year. As part of this project, a buffer between the bike lane and the travel lane will be added from 17th Street to Dover Drive/19th Street to increase the road's safety.

Pennsylvania One-Way to Two-Way Street Conversion | Santa Monica, California | QA/QC

Keith oversaw engineering plans and assisted with bidding documents to convert Pennsylvania Avenue from an existing one-way street to a two-way street between 26th and Stewart Streets. The project involved traffic signal modifications at Pennsylvania Avenue and 26th Street; preparation of signage and striping plans, including relocation and installation of new parking meters; and addition of a bicycle lane to connect an existing bike route on Stewart Street. Efforts helped improve traffic circulation, mobility, connectivity, vehicle access, reduced congestion, and increased pedestrian and cyclist comfort and safety.

Newport Boulevard Widening Project | City of Newport Beach | Newport Beach, California, United States | USD 4M | Traffic Design Task Manager

Keith was traffic design lead for preparation of PS&E for widening improvements along Newport Boulevard between Via Lido and 30th Street (approximately 1,600 feet). Project features included pavement wideining and median improvements, pavement rehabilitaton, new ADA-compliant curb ramps and driveways, four (4) traffic signal modifications, drainage improvements, signing and striping, landscaping and irrigation, new street lighting, and new parking lot construction. Staged traffic control plans were prepared for project implementation. Role: Traffic Design Task Manager | Cost: 4.02 million | Dates involved: 07/2012-11/2016

North San Fernando Boulevard Safety Improvements | Burbank, California | Traffic Manager

Keith managed traffic signal modifications, as part of safety improvement designs to reduce vehicle travel speeds, enhance traffic operations and improve visibility and separation of vehicles, bicycles, and pedestrians for North San Fernando Boulevard between Grismer Avenue and Walnut Avenue. The project included the design of curb extensions to improve the alignment at intersections, traffic signal modifications, adding bike lanes, left turn lanes, and ADA ramps and crossings. Funding of this project used a Federal Highway Safety Improvement Program (HSIP) grant and the project had to comply to Caltrans and federal guidelines for design and construction procurement. Stantec prepared the PS&E package as well as all associated documents and exhibits in Caltrans LAPM for authorization to proceed with right-of-way acquisition and construction.

replacing the existing V ditch along the roadway.

n.

** denotes projects completed with other firms*

Fundadores Crosswalk Bulb-Out Upgrades* | City of Rancho Santa Margarita | Rancho Santa Margarita, California | Project Manager

Keith managed the final civil and traffic engineering design services improving school crosswalk bulb-out upgrades on Avenida de los Fundadores at Pasada Valiente and Ama Daisy adjacent to Cielo Vista Elementary School. The project scope included curb bulb-outs with ADA access ramps, ADA ramp up-grades, enhanced sidewalks and crosswalks, traffic calming features, and modified landscaping and irrigation systems.

State Route 55 Widening* | Orange County Transportation Authority | Orange County, California

Keith was responsible for the PS&E striping, signing, traffic control, traffic signal modification, and ramp metering design for widening a 1.2-mile segment of this freeway from Walnut Avenue to Taft Avenue in the City of Orange. These traffic improvements required preparing more than 100 plan sheets and have an estimated construction cost of more than $1.2 million dollars. Project responsibilities also included preparing an operational traffic analysis of proposed improvements at the Route 55/Katella interchange and a Traffic Management Plan (TMP) for mitigation of project construction impacts.

Cactus Avenue Widening* | City of Rialto | Rialto, California | Traffic Task Manager

Keith assisted with widening Cactus Avenue between Foothill Boulevard and Etiwanda Avenue in the City of Rialto. The project involved widening the roadway approximately 26 feet on the west side of Cactus Avenue to a width of 72 feet and installed curb and gutter along the west side. Keith was responsible for preparing signing and striping, and construction traffic control plans.

Free Right Turn Lane at Fred Waring Drive and Highway 111* | City of Palm Desert | Palm Desert, California | Traffic Design Task Manager

Keith assisted with designing a free right turn lane from westbound Fred Waring Drive to northbound Highway 111 on behalf of the City of Palm Desert, Department of Public Works. The proposed free right turn lane will replace the existing dual right turn lanes and will reduce congestion at the intersection by eliminating signalized control for the right turn movement. The specific elements of work include traffic signal modifications and signing and striping design plans.

On-Call Traffic Engineering Consulting Services* | City of Irvine | Irvine, California | 1997-Present

Keith is providing on-call traffic engineering services to the City of Irvine (City). Services include traffic plan check and report review. Traffic plan review includes signing and striping, traffic signal, and traffic control plans.

Dune Palms Road and "A" Street Roadway and Traffic Signal Improvements* | City of La Quinta | La Quinta, California | Project Manager

Keith managed the PS&E for roadway improvements and traffic signal installation at the intersection of Dune Palm's Road and "A" Street in the City of La Quinta. The project provided a new roadway alignment that provides access to an existing Desert Sands Unified School District facility and a new Redevelopment Agency residential and commercial development. The project included traffic data collection and signal warrant analysis, utility coordination, design survey, concept plan development, legal and plat preparation for right of way and temporary construction easements, and preparation of final PS&E. The improvements at the intersection provided a new 8-phase traffic signal, bus turn out, catch basin relocation and drainage improvements, and extended and modified raised medians. Our firm also provided support services to the City during the bid and construction phases of the project.

Gerald Ford and Frank Sinatra Drive Traffic Signal* | City of Palm Desert | Palm Desert, California | Project Manager

Keith managed the traffic signal design and related improvements at the Frank Sinatra Drive and Gerald Ford Drive intersection. He performed utility and electrical service point coordination, recommended traffic signal operation, signal interconnect improvements, median modification and access ramp improvements, evaluated the need for a construction/maintenance easement and prepared legal documents, for the southerly approach to the intersection, and prepared final PS&E. All plans are being prepared using AutoCAD in accordance with city standards and include a title sheet, street improvement plan, traffic signal modification plan, and a signal interconnect/signing and striping plan.

HSIP Cycle 5 and 6 – Traffic Signal Modification Design at 3 Locations* | City of Orange | Orange, California | Project Manager

Keith managed the PS&E for traffic signal modifications under Cycle-5 of the Federal Highway Safety Improvement Program (HSIP) to implement protected left-turn phasing at three signalized intersections in the City of Orange. The improvements were a top safety priority to reduce the number of pedestrian/vehicle right of way violations that occur at the intersections. Protected left-turn phasing helps reduce accidents by clearly assigning right of way to left-turning vehicles and allowing pedestrians to cross the street during a separate signal phase, free of conflict from left-turning vehicles. The project locations were at the intersections of Chapman Avenue and Hewes Street, Tustin Street and Mayfair Avenue, and Chapman Avenue and Esplanade Street. The project also included signal upgrades, including new controller cabinets, LED signal indications, luminaires, and illuminated street name signs, ADA ramps, new signal pole standards and mast arms, and new wiring with conductor cable. Base mapping from a field design survey at each location at utility coordination was prepared.

** denotes projects completed with other firms*

Santa Margarita Parkway, La Promesa And Coto De Caza Dr. Rehabilitation Projects* | City of Rancho Santa Margarita | Rancho Santa Margarita, California | Project Manager

Keith managed the street rehabilitation of 1.3-miles of Santa Margarita Parkway and .4-miles of La Promesa/Coto De Caza Drive in the City of Rancho Santa Margarita. Project improvements included AC pavement removal and ARHM overlay, reconstruction of access ramps and traffic signal push button upgrades meeting current ADA requirements. The work along Santa Margarita Parkway from Avenida de Las Flores to Plano Trabuco Road was implemented in three project phases and separate PS&Es were prepared for each segment. Utility investigation and coordination was conducted for each project segment, pavement rehabilitation striping, pavement markings, and traffic signal loop detectors were restored. The project also included pavement and soil sampling identifing pavement rehabilitation recommendations. The design plans complied with the latest edition of Caltrans, Green Book, APWA, and city standards.

223rd Street/Wardlow Road Traffic Signal Synchronization Project* | County of Los Angeles | County of Los Angeles, California | Project Manager

Keith managed to conduct field inventory and document intersection geometrics and traffic signal facilities at 13 intersections, including signal pole types and mast arm lengths, vehicle and pedestrian indication types and sizes, detection types, controller cabinets, and hardware types, safety lighting, crosswalks, medians, sidewalks, access ramps, lane widths, and striping. Following field inventory, improvement plans were prepared for implementation of the recommended signal improvements per Los Angeles County Department of Public Works standards. Signal plans for two locations were prepared in accordance with City of Los Angeles Department of Transportation (LADOT) standards.

I-5/Culver Drive/Trabuco Road Interchange Improvements* | City of Irvine | Irvine, California | Traffic Task Manager

Keith was responsible for preparing plans, specifications, and cost estimates for traffic signal modification and relocation of ramp meter and communication conduits as part of capacity improvements to the I-5/Culver Drive/Trabuco Road interchange for the City of Irvine (City). Traffic signal modification plan preparation included a removal and final plan for improvements at the Culver Drive and Trabuco Road intersection. A traffic signal interconnect and conduit relocation plan has been prepared for reinstallation of City and Caltrans interconnect conduits and ramp meter conduit.

OCTA Bus Rapid Transit Program - Bus Stop Enhancements* | Orange County Transportation Authority | Orange County, California

Keith prepared lighting design plans for enhancing 109 bus stop stations located strategically along three bus rapid transit routes in Orange County, California and within 12 different cities

17th Street/Tustin Avenue and Harbor Boulevard/Wilson Street Intersections Improvements* | City of Costa Mesa | Costa Mesa, California | Project Manager

Keith managed the PS&E for intersection capacity and aesthetic improvements at the 17th Street/Tustin Avenue and Harbor Boulevard/Wilson Street intersections. Project capacity improvements at 17th Street/Tustin Avenue included exclusive right-turn lanes on the eastbound and northbound approaches and a far-side bus turn-out on eastbound 17th Street. The improvements at this location also included decorative crosswalks, new curb returns, and ADA-compliant access ramps, new sidewalk and tree wells, raised medians with landscaping and irrigation systems, and new street lighting. Improvements at Harbor Boulevard and Wilson Street included an exclusive westbound right-turn lane including retaining wall design. The firm prepared all street improvement plans for these projects including roadway plans and profiles, detail sheets, traffic signal modification, signing and striping, and street lighting.

ASouth Coast Highway (Route 1) Street Lighting Master Plan | City of Laguna Beach | Laguna Beach, California | 2020-Present | Project Manager

Keith is managing preparation of a master plan for a proposed City-owned street light system along the entire six-mile alignment of South Coast Highway through the City Limits. This project includes data collection, utility research and coordination, field review, photometric analysis, and preliminary plan and cost estimate preparation. The plan will be implemented through a series of smaller final plans, specifications, and estimate (PS&E) design projects as utility undergrounding projects are undertaken and/or project funding is available. The preliminary design included in the master plan will serve as a reference for final design projects.

TRAFFIC SIGNALS DESIGN

Protected-Permissive Left-turn Phasing Traffic Signal Modification, CIP No. 331704 | City of Irvine | Irvine, California | USD 16M | ongoing | Project Manager

Keith managed implementation of a protected-permissive left-turn phasing with flashing yellow arrow at up to six intersections within the City of Irvine. Following data collection and field inventory, an existing conditions and design report was prepared which documented design recommendations for each location. PS&E was prepared for each project intersection including ADA access ramp upgrades, raised median nose removal, signing and striping, traffic signal improvements including video detection and CCTV systems, and phased traffic control for project implementation. The design phase was completed in early 2018 and Stantec will provide construction support services during construction which is scheduled to begin in late June 2018. Following construction, Stantec will prepare monitoring reports at 1-month, 6-month, and 12-month intervals. Role: Project Manager | Cost: 1.16 million | Dates involved: 04/2017-present

** denotes projects completed with other firms*

Bita Sadri PE

Senior Project Manager
19 years of experience · Irvine, California

Bita is a certified professional engineer with 19 years of experience in planning and engineering public infrastructure and civil projects, with a focus on local and regional infrastructure facilities. She has extensive experience in designing and improving public and private infrastructure, regional and sub-regional drainage systems, and other infrastructure facilities. Additionally, she has experience preparing project plans and construction documents for repair, rehabilitation, upgrades, and improvements.

Bachelor of Science in Civil Engineering

REGISTRATIONS

Professional Engineer #79576, State of California

PROJECT EXPERIENCE

CIVIL ENGINEERING

First Aqueduct Tunnel Rehabilitation Design Build | San Diego County Water Authority (SDCWA) | California, United States | Civil Project Manager

The first design build rehabilitation of three 72" water tunnels for SDCWA. Lilac (500 feet long) and Red Mountain (3,100 feet long) tunnels were rehabbed using geopolymer methods and Oat Hills tunnel (3,600 feet long) was slip lined with fiberglass reinforced plastic (FPR). Bita managed preparation of design build civil construction drawings. She also managed and coordinated site development, surveying, utility coordination, rights-of way and easement evaluation, erosion control plans, temporary excavation, permanent rock excavation, structural demolition, reconstruction, and preparation of As-built plans.

Lake Hodges Dam Near-term Improvement* | City of San Diego | California, United States | Civil Project Manager

Bita reviewed near-term improvement report and prepare scope and fee proposal for on-call improvement plans for City of San Diego for Near-term structural and civil improvement including dam survey scope. She prepared 50% access improvement plans and leak monitoring plan for the Hodges Dam near-term improvements.

Poseidon Desal Plant Phase 2 Intake Preliminary Design* | Carlsbad, California, United States | Civil Project Manager

Bita evaluated options for preliminary design of derbies collection and construction access for preliminary design plans for Poseidon desalination plant in Carlsbad. This included 30% civil and demolition plans.

FE20-02 Digester Rehabilitation, Orange County Sanitation District* | California, United States | Civil Project Manager

Bita was involved in managing the digester C, D, F, and G mechanical rehabilitation project at plant No. 2. The mechanical equipment including four high rate mixing pump, four heat exchangers, four recirculation pumps, two sludge transfer pumps and associated piping. She managed the project coast, schedule, team coordination and client coordination.

PA39 Los Olivos Phase 2 Tentative Tract Map* | Irvine, California, United States | Project Engineer

Bita prepared the preliminary storm drain, sewer, recycle water and water utility layout for the project. After approval of the Tentative Tract Map, she prepared the on-site storm drain improvement plans including natural treatment basin plans, on-site sewer plans, and on-site storm drain hydrology and hydraulic report for the Irvine Company project in City of Irvine.

Natural Treatment System Regional Facilities Project* | Irvine, California, United States | Design Engineer

This project involved development of the hydraulic modeling required to ensure the original hydraulic capacity of channel after implementation of the Natural treatment system (NTS). Bita prepared the hydraulic analysis for the Santa Ana/Santa Fe Channel, Peters Canyon Wash and San Diego Creek. The final improvement Plan was approved by Orange County Flood Control District.

Yorba Linda Bastanchury Road Widening Project* | Yorba Linda, California, United States | Design Engineer

The project involved review of existing off-site hydrology studies. Flooded with calculation and existing and proposed hydrology. The on-site storm drain construction plan was developed for widened street.

** denotes projects completed with other firms*

Michelson Water Reclamation Plant | Warehousing and Water Quality | Irvine Ranch Water District (IRWD) | Irvine, California | Civil Engineer

Bita was responsible for the civil engineering scope of work for a 1,500 square foot new Water Quality storage building and warehouse. She oversaw the site grading and yard piping for the Michelson Water Reclamation Plant. She coordinated the localized site surveying (above and below grade), assessments of soil conditions, and civil portion of the project. Bita performed the existing utility investigation and coordination and how to best limit the impact to existing operations during construction. Bita met with the District, coordinated construction document development (at 60%, 100% & Final documentation), and will be working on Bid Phase Preparation and Addenda, as needed.

CONVEYANCE

New Model Colony Backbone Infrastructure Facilities* | Ontario, California, United States | Design Engineer

This project involved the design and implementation of water quality Management Plans (WQMP). Efforts included development of the master plan of drainage for NMC East approximately 34 miles of arterial streets. Bita supported preparation of the 35%, 65% and 100% level storm drain improvement plans. Project efforts involved preparation of final hydrology analyses, utilizing AES hydrology software and San Bernardino Flood Control requirements. The final design hydraulics utilized WSPG for conveyance systems, and AES CH1 for street capacities and storm drain Inlet facilities.

Irvine Ranch Water District, Orange Park Acres Improvement Plans for Sewer System * | Irvine, CA | Design Engineer

This project involved analysis of existing water model for Irvine Ranch Water District using H2OMAP Water GIS. Bita provided analysis of existing septic tanks sewer, including some existing city sewer, using H2OMAP Sewer GIS.

Spring Mountain Ranch, Highgrove Project* | Riverside, California, United States | Design Engineer

This project involved the preparation of 100-year hydrology and hydraulic calculations, as well as preparation of storm drain and inlet capacity analysis and sizing.

Desert Lakes Planned Recreational Community Project* | California, United States | Design Engineer

This project involved on-site and off-site storm drain master planning and modeling. Bita provided guidance and input in an effort to integrate and minimize drainage infrastructure.

Desert Springs Resort Project* | Imperial, California, United States | Design Engineer

This project effort involved preparation of the Tentative/Preliminary Master Plan of Drainage. Responsibilities included addressing storm flows from approximately 2,400 acres of off-site tributary area and providing different alternatives, as well as utilizing the proposed lake facilities as conveyance throughout the site and reducing the con-site storm drain facilities. Tentative level of construction documentation identified all drainage and water quality infrastructure for off-site/on-site.

PA 5, Irvine Company Development Project* | Irvine, California, United States | Design Engineer

Bita was responsible for preparing tentative hydrology reports based on the Orange County Drainage Manual. Efforts involved desolating basin design and implementation for mass grading plans. Bita prepared the finalized drainage report, including hydrology, hydraulics, catch basin sizing, and detention basin sizing. She also developed the on-site and off-site drain improvement plans.

Sares-Regis Group Project* | Torrance, California, United States | Design Engineer

Los Angeles County allowable flow investigation for Commercial property Design. Project efforts included detention facility sizing and design, and preparation of hydrology and hydraulics calculation and report.

PA 40 East, Irvine Company Apartment Communities* | Irvine, California, United States | Design Engineer

Bita developed on-site storm drain improvement plans and prepared drainage reports, including hydrology and hydraulic calculations.

Forest Lawn Memorial Park Project* | Los Angeles, California, United States | Design Engineer

Bita performed pre- and post-project hydrology calculations based on the LA County Modified Rational Method. Efforts involved preparing the preliminary storm drain, sewer, irrigation, water and dry joint utility layout. Developed on-site storm drain improvement plans.

Temple Hills Storm Drain Improvement Project* | Laguna Beach, California, United States | Design Engineer

Bita supported the as-built plan, data collection, and field investigation. Improvement plan preparation project efforts involved preparing the alternative improvement and the proposed hydrology and hydraulics report for the City.

K. Hovnanian's Four Season Project* | Beaumont, California, United States | Design Engineer

Bita prepared the on-site storm drain hydrology and hydraulic report and the on-site storm drain improvement plans for this project.

Santa Ana Country Club Project* | California, United States | Design Engineer

This project involved a new sewer lateral connection plan and permit with Costa Mesa Sanitary District. Bita prepared the on-site grading and storm drain plans, On-site pre- and post-project hydrology study and report for the County of Orange.

** denotes projects completed with other firms*

ROADWAY

Cow Camp Road Extension Project* | Rancho Mission Viejo, California, United States | Project Engineer Manager

Bita reviewed and managed the design implementation of two runoff master plans and drainage facility design for PA-2 and PA-3 for unincorporated area of Orange County for Rancho Mission Viejo Community. The runoff master plans included traditional and innovative hydrology and hydraulics, advanced sediment transport, GIS, and stormwater quality. The design and construction included flood water quality, regional flood control basin and storm drain plans for Cow Camp Road extension including two creek bridge crossings. Interim facilities and design were considered for off-site areas of project based on phasing. Cow Camp Road on-site storm drain improvement plans were prepared for the County of Orange.

I-15 ELPSE Project* | Riverside, California, United States | Project Manager

Bita managed preparation of hydraulic study and summary floodplain evaluation report, as well as rapid assessment of stream crossing for Interstate 15 Express Lane southern extension for Riverside County Transportation Commission project.

TRANSIT

Caltrans District 12 Rout 73/133 Safety Project* | Laguna Beach, California, United States | Water Project Manager

Existing and proposed HEC-RAS study for hydrology was prepared, as well as hydraulic analysis for existing and proposed improvements. Bita supported with review and preparation of the report required for improvement and construction plan for Caltrans improvements.

Caltrans District 7, SR-71 Project* | Pomona, California, United States | Project Engineer

Project efforts included as-built plan data collection, and field investigation. Bita prepared the existing hydrology and hydraulics calculations and report based on existing and allowable flow provided by Los Angeles County requirement of allowable flows for the existing drainage facility crossing the SR-71.

** denotes projects completed with other firms*

Sean Neprud PE, LEED AP

Process Mechanical Engineer
21 years of experience · Pasadena, California

Sean is a mechanical engineer with 19 years of experience in water and wastewater treatment, mechanical electrical and plumbing (MEP), and decorative water features. He brings 13 years of experience servicing the water and utilities sector in the Western US, and several years of experience engineering and managing decorative water feature projects internationally. He also is knowledgeable on a variety of infrastructure elements, including pumping and piping systems, emergency power generators, compressed air, fire protection, electrical power distribution systems, chemical storage and delivery, control systems, and instrumentation. As a project manager, Sean is experienced in all stages of traditional and creative engineering projects, including engineering, construction management and coordination, production, startup and commissioning, and project closeout.

WATER TREATMENT

Chlorine Storage and Scrubbing Facility Retrofit* | Calleguas Municipal Water District | Thousand Oaks, California | USD 180k | 2011-2012 | Project Engineer and Mechanical Engineer

Sean was responsible for the retrofit of a chlorine storage and emergency scrubbing system at a water treatment facility. As project engineer, Sean provided project coordination, on-time delivery of project deliverables, and coordination of services through project completion. As mechanical engineer, he designed a dry-media chlorine scrubbing system to replace an existing wet chlorine scrubber that included forced air systems, ventilation, and emergency containment systems for a chlorine storage facility.

Jamieson Canyon Water Treatment Plant Improvements* | City of Napa | Napa, California | 2009 to 2012 | Mechanical Engineer and Construction Coordinator

This $38 million project expanded an existing water treatment plant. Sean engineered plant water and emergency fire pump stations, building mechanical and plumbing systems, laboratory facilities, and process facilities for ozone treatment. He was the lead coordinator of the engineering services provided during construction, including cross-discipline coordination, shop drawing, RFI review, and record drawing production.

Avenue Water Treatment Plant Membrane Upgrade* | City of Ventura | Ventura, California | 2006 to 2007 | Construction Coordinator

Sean performed mechanical engineering design and coordinated the engineering services during the construction of a 22-million-membrane treatment upgrade with 10 MGD capacity. He engineered chemical storage and delivery systems, pumping, and process mechanical piping systems. As construction coordinator, he managed shop drawing and RFI review and performed day-to-day coordination with the Contractor and the City's Construction Manager.

San Fernando Basin Groundwater Remediation, Design-Build | Los Angeles Department of Water & Power | Los Angeles, CA | 2020-Present | Process Mechanical Engineer

Sean was the mechanical lead for remediation and modifications of 17 groundwater pumping stations. He served as the mechanical process engineer for two treatment sites that use Granular Activated Carbon (GAC) filtration and UV/Advanced Oxidation Process treatment for groundwater. The project includes large GAC filtration pressure vessels, pre-treatment mechanical filters, and ultraviolet reactors. Sean was heavily involved in designing several pump stations at the two sites, including a waste pump system and a recirculation system for processing water. Sean also worked directly on chemical storage and delivery systems for peroxide, ammonia, and fluoride.

PFAS INVESTIGATION AND MITIGATION

City of Santa Ana PFAS Water Treatment Plant Well No. 40 | Orange County Water District | Santa Ana, CA | Process Mechanical Engineer

Sean was the process mechanical engineer for a PFAS treatment system that used ion exchange pressure vessels to remove contaminants. This project also included the design of a pre-treatment cartridge filtration, booster pump, and mechanical modifications to an existing groundwater well pump station.

** denotes projects completed with other firms*

City of Santa Ana PFAS Water Treatment Plant Well 38 | Orange County Water District | Santa Ana, California | Process Mechanical Engineer

Sean was the process mechanical engineer for a PFAS treatment system that used ion exchange pressure vessels to remove contaminants. This project also included the design of a pre-treatment cartridge filtration, booster pump, mechanical modifications to an existing groundwater well pump station, and a hypochlorite generation and feed chemical system.

WASTEWATER

Long Beach Municipal Urban Stormwater Treatment | City of Long Beach | Long Beach, California | 2020 | Process Mechanical Engineer

Sean was the lead process mechanical engineer for this treatment facility for urban runoff stormwater. This project includes the mechanical engineering for the installation of Continuous Ultra Filtration (CUF) and photo-catalytic treatment equipment. In addition to those treatment systems, the project includes media filters, pumps for both clean and wastewater, and chemical storage and dosing equipment.

Chambers Creek Regional Wastewater Treatment Plant Expansion* | Pierce County | Tacoma, Washington | 2011-2013 | Mechanical Engineer

With a forecasted population growth increase, the Chamber's Creek Regional Wastewater Treatment Plant (45-MGD) expansion added 50% more capacity. As lead mechanical engineer, Sean performed mechanical engineering for process and non-process areas, including ventilation and other utility services for process mechanical wastewater equipment.

Orange Cove Wastewater Treatment Plant* | City of Orange Cove | Orange Cove, California

Sean performed process and building mechanical engineering, including aeration systems, solids handling, chemical dosing, and building mechanical engineering for process and non-process facilities.

Philadelphia Pump Station Pump Improvements Project | Inland Empire Utility Agency | Ontario, CA | 2022-Present | Process Mechanical Engineer

Sean is the lead process mechanical engineer for the analysis of a replacement pumping system in an existing pump station facility. The project consists of analyzing and recommending replacement pumps, developing a control strategy to maximize utility of the pumps and efficiency of operation, replacing the ventilation and cooling equipment for electrical control equipment, and replacement of the existing chemical storage and dosing equipment. As lead Process Mechanical engineer Sean drafted the mechanical portions of five Technical Memorandums that analyze various pieces of the overall replacement project, and helped with the overall coordination and completion of the memorandums that will be the basis of the preliminary design for the replacement project.

MECHANICAL ENGINEERING

Commercial Vehicle Enforcement Facility* | Fairfield, California | 2009-2012 | Mechanical Engineer

This vehicle inspection facility consisted of a wastewater pump station, emergency power generation, building mechanical, and fire protection. This project was awarded LEED Silver status.

Commercial Vehicle Enforcement Facility* | California Highway Patrol | Fairfield, California | 2009-2012 | Mechanical Engineer

Mechanical engineer for a vehicle inspection facility including MEP, emergency power generation, fire protection, and wastewater pump stations.

1106th TASMG Hangar Roof and HVAC Replacement* | California National Guard | Fresno, California | 2010-2012 | Mechanical Engineer

Project Engineer and mechanical engineer for replacement of roof and all HVAC equipment for an aircraft repair facility.

PUMP STATION

Yosemite Valley Pump Station Upgrade* | National Park Service | Yosemite, California, United States | 2004 to 2007 | Mechanical Engineer

Sean performed mechanical engineering for sewer pump stations and a backup emergency power generator at Yosemite Village, Curry Village, and Housekeeping Camp. The pump stations consisted of submersible non-clog sewage pumps ranging in size from 40 horsepower to 5 horsepower, and also included sewage grinders and odor control. These lift stations pump through over a mile and a half of force main to convey over half of the sewage flow through Yosemite Valley. This project was completed while Sean was Mechanical Engineer at Kennedy/Jenks Consultants.

Friant-Kern Canal Middle Reach Capacity and Subsidence Correction Project | Friant Water Authority & U.S. Bureau of Reclamation | California, United States | 2021 | Process Mechanical Engineer

Sean was lead mechanical engineer for five irrigation pump stations with pumps varying in size from 250 horsepower vertical turbine pumps to 10 horsepower mixed-flow pumps. The pump stations also include a air over water surge tank for surge mitigation and mechanical travelling screens.

WATER FEATURE DESIGN

Allegro and Tide Water Feature at Dubai Opera House* | Emaar | Dubai, Dubai, United Arab Emirates | USD 6.5M | Project Lead and Primary Mechanical and Electrical Engineer

Sean lead a project and was the primary mechanical and electrical engineer for two decorative water features including water filtration and treatment, compressed air, and system design, and performance.at the Dubai Opera House.

** denotes projects completed with other firms*

Medusa and Gallant Water Features at Emaar Sqaure* | Emaar | Istanbul, Turkey | USD 5.5M | Project Manager, Mechanical Engineer, and Electrical Engineer

Sean managed the project and provided mechanical and electrical engineering services for two decorative water features including water filtration and treatment, water circulation pumping systems, natural gas distribution and safety systems, and overall system and performance.

The Vortex at Jewel Changi Airport* | Changi Airport | Singapore | USD 1.5M | Mechanical and Electrical Engineering

Sean engineered the mechanical, electrical, and instrumentation systems for a 10,000 gallon per minute indoor waterfall architectural feature. The design included five pump stations with mechanical piping systems coordinated provided mechanical and electrical engineering services for the central water feature consisting of 7,200-gallon-per-minute indoor waterfall, including pump stations, water treatment, and water storage.

Simon Lin Ph.D., PE, SE

Civil/Structural Engineering Team Lead
20 years of experience · Pasadena, California

With more than 18 years of national and international experience as a civil/structural engineer, Simon has a strong structural analysis background with hands-on structural design and project management experience. His professional expertise includes water delivery facilities, earthquake engineering, seismic retrofit and design, and applications of advanced technologies.

EDUCATION

Doctor of Philosophy, Civil/Structural Engineering,

Bachelor of Science, Engineering Mechanics (Aerospace)

Master of Science, Mechanical Engineering

REGISTRATIONS

Registered Civil Engineer #C73920, State of California

Licensed Structural Engineer #S5911, State of California

Disaster Service Worker (DSW) Volunteer #SAP 64451, State of California

MEMBERSHIPS

Member, American Concrete Institute (Atlantic)

Member, American Institute of Steel Construction

Member, Structural Engineers Association of Southern California

PROJECT EXPERIENCE

WATER AND WASTEWATER FACILITIES

San Fernando Groundwater Remediation Project Tujunga Central Treatment Facility and North Hollywood Central Treatment Facility | Los Angeles Department of Water & Power | North Hollywood & Tujunga | 2019 - 2022 | Structural Engineer Lead /SEOR

As a lead of structural engineering discipline (also structural engineer of record), Simon is involved in the progressive design build project for two treatment facilities within the San Fernando Basin, including Tujunga site and North Hollywood site. Both sites are similar and consist of a UV AOP building, Granular Activated Carbon (GAC) vessels, peroxide facility, pretreatment and back wash waste tank. Simon is leading design and constructability for all structural-related components and providing expert recommendations to the project team and the Department's considering a reasonable construction cost.

Los Angeles River and Arroyo Seco Low Flow Diversion Project (TOS-14) | Los Angeles Bureau of Engineering | Los Angeles | 2020 | Structural Engineer Lead/Structural Engineer of Record

As a structural lead, Simon is involved in the LABOE project of five low flow diversion system. The project will divert dry-weather flow from prioritized stormwater outfalls to sanitary sewers for treatment at Hyperion Water Reclamation Plant. Project construction consists of storm drain diversion structures with weirs and pipelines, trash collection maintenance holes, pump stations, discharge pipes, pressurized pipes, valve and meter vaults, and power supplies for pump stations. Simon oversees structural design and repair, as well as constructability for all structural components of system.

City of San Mateo Basins 2 and 3 Collection System Improvements | San Mateo, California | 2018-2019 | Structural Engineer

Simon has been working this project as one of key structural engineers. The improvements in Basins 2 & 3 of collection system include: Install a new minimum 4.2 MG in-system flow equalization storage facility, including associated pumping and odor control; Upgrade /expand 3 existing pump stations, including expansion of the firm pumping capacity to meet peak wet weather flows, rehabilitation of wet wells, and upgrading of piping and electrical systems; Install approximately 6 miles of new parallel and upsized gravity sewers and force mains, ranging in size from 8inches to 48 inches, and provide rehabilitation of some force mains.

Seal Beach Pumping Upgrade and Rehabilitation Project No.3-62 | Orange County Sanitation District (OCSD) | Seal Beach, CA, USA | 2019 | Lead Structural Engineer

Simon worked on this project as lead structural engineer. This project included the rehabilitation of the Seal Beach pump station and Westminster Boulevard force main replacement.

Ojai Wastewater Treatment Plant Nutrient TMDL – Dentification Filters | Ojai Valley Sanitary District | Ojai, CA, USA | Structural Engineering Lead/Structural Engineer of Record

Simon is leading structural engineering from the initial project stage through to the 100% design submittal. This project consists of adding one new denitrification filter structure and new chemical tank area, and the modifications of one existing flocculation basin, four existing denitrification filter structures, and two existing oxidation ditches. One new electrical room is being added to the chemical building to expand electrical equipment.

** denotes projects completed with other firms*

Santa Monica Sustainable Water Infrastructure Project (SWIP) | City of Santa Monica | Santa Monica, California, United States | USD 82M | 2019-2021 | Lead structural peer reviewer

As a lead structural peer reviewer, Simon is involved in the large progressive design build project of SWIP for the City of Santa Monica. The project includes four key components as follows: Santa Monica Urban Runoff Recycling Facility upgrades for reverse osmosis and ultra-violet treatment system; Memorial Park stormwater harvesting system; Civic Center stormwater harvesting system; and the advanced water treatment facility. Simon's role is to review the structural design and constructability for all structural related components, and also provide expert recommendations to the design team and the City considering a reasonable construction cost

Structural Assessment of Activated Sludge Selectors and Aeration Basins | Valley Sanitary District | Indio, CA | Lead Structural Engineer

Simon served as a lead structural engineer for this project that included structural assessments of the existing Activated Sludge Selectors and Aeration Basins. A condition assessment, using visual observations and non-destructive testing, was performed for the existing concrete basins (selectors, aeration basins), safety railing, and concrete bridge above aeration tanks. The final technical memorandum summarizes the findings and recommendations, as well as an AACE concept level cost estimate for the recommended repair approach.

Seismic Retrofit, Water Quality Control Plant* | City of Simi Valley | Principal Structural Engineer

Simon was responsible for this seismic retrofit design of six, 1970s-era buildings located at the Water Quality Control Plant. Each structure required seismic upgrades to provide adequate masonry wall anchorage to the flexible wood roof diaphragm and to provide a complete load path to distribute wall forces into the roof diaphragms. Coordination of demolition, architectural ceiling repairs, and other nonstructural components were provided to help the City prepare a general contractor RFP for the proposed upgrades.

Condition Assessment of Water Facilities | Casitas Municipal Water District | Oak View | 2020 | Structural Lead

Simon was involved in the as-built condition assessment of 16 reservoir tanks and pump station sites. He oversaw the structural assessment of existing tanks and structural elements, as well as providing the retrofit schemes for any deficient elements to maintain operation for another 10 years.

Structural Evaluation El Estero Wastewater Treatment Plant* | City of Santa Barbara | Santa Barbara, California | Principal Structural Engineer

Simon worked as the project manager to address structural and corrosion engineering assessment and evaluation of the existing 1970s-era concrete process structures, support, and maintenance buildings as part of an overall asset management plan (19 concrete structures in total). The assessment included concrete condition, seismic evaluation, corrosion considerations, expected serviceability and performance, and recommendations for repairs and upgrades. A detailed report prioritized repairs and made recommendations for future improvements as part of an overall capital improvement plan. The report aids the City to allocate funds for future improvements and maintenance.

Energy Services Treatment Plant, Design-Build | Valley Sanitary District | Indio, California, USA | Lead Structural Engineer/Structural Engineer of Record

Simon is the lead structural engineer for this progressive design-build project to design and build plant improvements to the District's Wastewater Treatment Plant. The project includes existing effluent channel extension and Grit chamber, Digester tank, DAFT tank, Electrical steel building, and equipment pads and canopies.

Replacement of Steel Water Tanks at Thousand Trails Idyllwild RV Preserve, CA.* | Idyllwild, California | Principal Structural Engineer

Simon worked as the principal structural engineer for this project. The structural scope of services is to design a new water tank to replace the existing 125,000-gallon water tank at Thousand Trails Idyllwild RV Preserve, including: 1) Develop water tank design loading criteria and coordinate with water tank manufacture; 2) Review the structural design of steel water tank per codes; 3) Check the existing concrete pad for new tank anchorage and develop new anchorage detail to the existing pad; 4) Provide the structural drawings/ calculations to Riverside County for permits; 5) Work with the contractor during construction to answer RFIs and verify the installation is in conformance with the plans.

Basins 2 and 3 Collection System Improvements Project | City of San Mateo, CA | San Mateo, California, United States | USD 160M | Structural Engineer

Simon has been working this project as one of the key structural engineers. The improvements in the Basins 2 & 3 collection system include: install a new minimum 4.2 MG in-system flow equalization storage facility, including associated pumping and odor control; upgrade/expand three existing pump stations, including expansion of the firm pumping capacity to meet peak wet weather flows, rehabilitation of wet wells, and upgrading of piping and electrical systems; install approximately six miles of new parallel and upsized gravity sewers and force mains, ranging in size from 8 inches to 48 inches, and provide rehabilitation of some force mains.

** denotes projects completed with other firms*

On-Call Consulting Services for PFAS Treatment Systems Design | Orange County Water District | Santa Ana, California | QA/QC Structural

Simon is conducting QA/QC for all structural design elements for four wellhead treatment sites for the City of Santa Ana. Work includes preliminary design, final design, bid phase support, engineering services during construction, and part time inspection services. Sites include Well 40 currently in construction, Well 38 finishing final design, Well 31 in predesign, and Wells 27 and 28 in preliminary design.

South Bay International Wastewater Treatment Plant New Administration Building* | San Diego, California

Simon provided civil, structural, mechanical, electrical, and fire protection engineering services for the design-build construction of a new administration building for the plant. The structural design included the Unified Facilities Criteria--Department of Defense Minimum Antiterrorism Standards for Buildings. The project was finished within budget and on schedule.

RP-1 Mech Restoration & Headworks Second Gate | Inland Empire Utilities Agency | Chino, California, USA | Structural Lead

Simon is involved the mechanical restoration at RP-1 with pipe support design, the secondary gate installation, channel isolation, and structure cover replacement.

Hyperion Treatment Plant Digester Gas Utilization Project | City of Los Angeles | Playa Del Rey, California | Structural Engineer

Simon is serving as structural engineer for this digester gas utilization project.

Seismic Retrofit, Water Quality Control Plant* | City of Simi Valley | Principal Structural Engineer

Simon was responsible for this seismic retrofit design of six, 1970s-era buildings located at the Water Quality Control Plant. Each structure required seismic upgrades to provide adequate masonry wall anchorage to the flexible wood roof diaphragm and to provide a complete load path to distribute wall forces into the roof diaphragms. Coordination of demolition, architectural ceiling repairs, and other nonstructural components were provided to help the City prepare a general contractor RFP for the proposed upgrades.

BUILDINGS GOVERNMENT

Shaffer Community Park Buildings* | Orange, California

Simon was involved in the Shaffer Community Park Buildings, which consisted of one story frames.

CALTRANS Inland Empire Traffic Management Center* | CA

Simon was one of structural engineers for this project. The building is a two-story base isolated structure with a total floor space of approximately 45,000 sf and was designed to achieve LEED Gold rating. A 120-foot communications tower is constructed on the site. The IETMC site occupies approximately 10 acres within an approximate 35-acre State-owned parcel located in the southeast quadrant of the interchange of Interstate 15 (I-15) and State Route 210 (SR-210) in the City of Fontana.

APHIS Bird Quarantine Building Renovation* | Otay Mesa, California

Simon was the project structural engineer for this project. The Bird Quarantine facility was built in 1983 and no major upgrades had been done since. USDA owns the facility but the land is owned by the U.S. Border Patrol. The total area of the existing Bird Quarantine Building is approximately 3,500 square feet. This renovation project included repair and addition (almost double floor area), and was executed by design/build. This scope of work involved the development of the guiding documents for the design/build team to complete the design and renovations. The project was intended to address the structural deficiencies either as part of the base bid, or as added alternates.

Bruce Wong PE, PMP, ENV SP

Electrical Engineer
19 years of experience · Pasadena, California

Bruce brings more than 17 years of experience in design of power and control systems for numerous process configurations, including water/wastewater treatment plants. His design expertise includes chemical delivery/containments systems, low-, medium-, and high-voltage power generation/distribution, hydropower generation, high-voltage sub station design, and indoor/outdoor lighting design. Recently, Bruce assisted in the detailed design of two processes for a 16-MGD water recycling plant in the pacific northwest. In Southern California, Bruce has most recently worked with the City of South Pasadena and the Metropolitan Water District of Southern California.

Professional Engineer #26166, State of New Mexico

PROJECT EXPERIENCE

WASTEWATER TREATMENT

16 MGD Industrial Water Recycling Facility | Client Confidential | Portland, Oregon | 2019 | Assistant Project Engineer

Bruce assisted the on-site lead electrical engineer with the electrical design of the two processes for an industrial water recycling facility. The project was delivered through a design-build procurement method and Bruce helped develop single line diagrams, confirm cable/conductor sizes, review shop drawings, and answer RFIs.

Eielson Air Force Base Water Treatment Plant | Air Force Civil Engineering Center | Eielson, Alaska | 2016 | Electrical Engineer

As electrical engineer, Bruce designed the electrical system for expansion of water treatment plant. The electrical site plan, single line diagram, control schematic, panelboard schedule, and equipment elevation were created using Micro station.

HYDROELECTRIC

Foothill Hydroelectric Plant Rehabilitation | Metropolitan Water District of Southern California | Great Los Angeles, California | 2015 - 2017 | Lead Electrical Engineer

As the lead electrical engineer for the rehabilitation of the Foothill Hydroelectric Plant, consisting of replacing electrical equipment (switchgear, protective relays, and control cabinets) and instrumentation equipment (PLC and annunciator panel), Bruce coordinated with a subconsultant to update as-builts of the existing relay based control panels. After the completion of as-builts to document the existing conditions of the site, Bruce designed new multi-functioning protective relays and the layout of a new PLC cabinet at the site.

WATER TREATMENT

Water Treatment Plant Mods ISC Kodiak | US Coast Guard | Kodiak, Alaska | CAD 3M | 2016 | Lead Electrcial Engineer

As the lead electrical engineer on this project, Bruce performed electrical design on the Soda Ash System. In addition, he re-designed the power distribution system for the 559 pump house and N23 treatment plant.

PFAS INVESTIGATION AND MITIGATION

City of Santa Ana Well 40 | Orange County Water District | Santa Ana, California | 2021-2023 | Electrical Engineer

Bruce worked as the electrical engineer adding the Automatic Transfer Switch (ATS), emergency standby generator, and soft starter for the booster pump. The project consists of adding electrical equipment (automatic transfer switch, sizing the emergency standby generator, and soft starter) and instrumentation equipment. He was responsible for coordinating with a subconsultant to update as-builts of the electrical drawings. Bruce assisted in reviewing shop drawings and answering RFIs. The project is currently in the construction phase.

City of Santa Ana Well 38 | Orange County Water District | Santa Ana, California | Electrical Engineer

Bruce worked as the electrical engineer for re-design of the electrical distribution system. It included replacing the switchboard, motor control center, VFDs, and adding onsite hypochlorite generation system and soft starter for booster pump. The project consisted of developing the electrical site plan, one line diagram, grounding plan, conduit & cable schedule, duct bank design, and control diagram. The project is currently in the design phase.

WATER STORAGE RESERVOIRS & TANKS

Graves Reservoir Replacement Project | City of South Pasadena | San Marino, California | USD 5.2M | 2016 | Lead Project Electrical Engineer

As lead project electrical engineer, Bruce designed electrical system for Graves reservoir replacement project. The projected was completed by using AutoCAD and the electrical site plan, single line diagram, and conduit schedule were generated for this project. Bruce also coordinated with Southern California Edison (SCE) for upgrading existing power service.

Nadarajan Sankaran PE

Instrumentation & Controls Designer
12 years of experience · Irvine, California

Nadarajan (Sanki) brings 11 years of experience for both design and construction of electrical, instrumentation and control (E, I&C) and supervisory control and data acquisition (SCADA) systems. He has provided effective engineering solutions for water and wastewater treatment plants, oil & gas, and mining sectors using both PLC and DCS platforms in the US and internationally. He has developed smart P&ID's, network architecture diagrams, loop diagrams and technical specifications including control philosophies, instrumentation data sheets and instrument schedules in addition to single line diagrams, control schematics, electrical plans and electrical specifications. Additionally, he has both Allen Bradley PLC and HMI programming, redundant SCADA server and historian data configuration experience.

PROJECT EXPERIENCE

INSTRUMENTATION AND CONTROLS (I&C)

Greeley Water Pollution Control Facility Blower Replacement | City of Greeley | Greeley, Colorado, United States | 2018-2019 | Lead I&C Engineer

Greeley, CO | Lead I&C Engineer Sanki led the I&C design and commissioning of the upgrade of an existing aeration system to include an optimized automated control approach. Design included the integration of three new High Speed Turbo (HST) blowers through the development of a consolidated control strategy for blower operation, while upgrading the end-of-life Allen Bradley PLC hardware. Sanki witnessed FAT of both hardware and software control system components and was solely responsible for on-site start-up and commissioning, performing installation verification walk-downs, loop checks, process start-up and PID tuning, and operator training. Controlled processes included three 300-HP HST blowers, three K-Turbo blowers, two multistage blower skids, and four aeration basins. Pressure-based blower control strategy with MOV control providing optimized pressure management.

Support Facilities Upgrade | City of Denver | Denver, Colorado | Lead I&C Engineer

Sanki was lead I&C engineer on the upgrade of the existing facility network infrastructure, including three facility buildings, and installing a new redundant data center. Design included upgrading the fiber network infrastructure to support a ring topology, coordinating the decommissioning of the existing data center and fiber network through detailed construction sequencing documents. Sanki developed the electrical cable tray layouts/isometrics, cable schedules, electrical plan drawings, and electrical specifications. He also designed a new CCTV intercom and access control system with integration into the plant-wide network.

Mesa Water Treatment Plant Upgrades Program Phase I | Colorado Springs Utilities | Colorado Springs, Colorado | 2018-present | Lead I&C Engineer

Sanki created P&IDs, specifications, instrument lists, network diagrams, datasheets, and technical memorandums, in addition managing and coordinating drawing production resources. Controlled processes included rapid mixing, flocculation, sedimentation, and chemical and polymer systems. The control system was exclusively based on the Rockwell product line, including Allen Bradley smart MCCs, Logix controllers, FactoryTalk HMI, and OSI PI historian with Ethernet/IP profibus field network.

Long Beach Municipal Urban Stormwater Treatment (LB MUST) | City of Long Beach | Long Beach, California | 2020-present | Lead I&C Engineer

Sanki recovered and reviewed vendor (Purifics) PLC and HMI programs for application according to the contract requirements. He incorporated network re-design changes to reflect the pre-procured vendor package and provided technical recommendations to the City to pursue actions for vendor contract non-conformance.

San Fernando Basin Groundwater Remediation Project | Los Angeles Department of Water & Power | Los Angeles, CA | 2020 | Lead I&C Engineer

Sanki is the lead I&C engineer on the Progressive Design Build (PDB) team for two treatment facilities within the San Fernando Basins (SFB). The facilities will treat contaminated groundwater from the Tujunga (TJ) and Rinaldi-Toluca (RT) Well Fields. The controlled processes include self-cleaning strainers, UV-AOP, Granular Activated Carbon (GAC), hydrogen peroxide, drain pumping station, liquid ammonium sulfate, and hydrofluorosilicic acid chemical systems.

Nuisance Struvite and Dewaterability Improvements PAR 1280 | Metro Wastewater Reclamation District | Denver, Colorado | 2018-present | Lead I&C Engineer

Sanki is leading the design of an AirPrex™ pre-dewatering phosphorus recovery system to sequester and recover phosphorus as struvite. The process reduces the phosphorus load recycled to the head of the plant, facilitating controlled precipitation of struvite to reduce the potential for nuisance accumulation within pipelines, and improve biosolids dewatering. Phase I included the pre-procurement of vendor blower and classifier packages and associated instrumentation. Phase II integrates the pre-procured packages to the existing DCS. Controlled processes include recovery reactor, aeration system, anti-foam, and magnesium chloride storage and dosing systems.

Sidestream Nutrient Removal Project PAR 1237 | Metro Wastewater Reclamation District | Denver, Colorado | Lead I&C Engineer

Sanki was lead I&C engineer on the upgrade of an existing facility involving enhanced biological phosphorus removal (EBPR) and de-ammonification (DMX) treatment. He created P&IDs and coordinated vendor designs, specifications, instrument lists, network diagrams, datasheets, and technical memoranda. Controlled processes included ANITAMox DMX reactors, EBPR, and chemical systems. Facility controls used an ABB DCS control system.

Cerro Verde Wastewater Treatment Plant | Freeport-McMoRan Inc. | Arequipa, Peru | I&C Envineer

Sanki was I&C engineer on the design and construction of a green-field treatment plant design consisting of two separate plant sites (Cerro Verde and Enlozada). The plant facilities were designed to treat predicted plant flow rates from 17 MGD to 108 MGD. Sanki coordinated and reviewed vendor packages, and created wiring diagrams, I/O lists, alarm lists, instrument index, and datasheets. He also provided on-site construction support, responding to RFIs and pre-commissioning activities, including loop testing and fieldbus communication check-outs. Sanki was part of the supervisory team during plant start-up and commissioning. Controlled processes included headworks facilities, lift stations, primary and secondary clarification, trickling filters, aeration basins, and solids handling facilities.

WTF Asia Pacific LNG | Origin Energy | Brisbane, Australia | Electrical and I&C Engineer

Sanki was involved in the detail design of the electrical and instrumentation aspects of two 40-MLd water treatment facilities for a Coal Seam Gas Extraction Plant. He assisted in the creation of P&IDs, instrument cable schedule, instrument index, cause and effect matrix, and datasheets. Sanki was responsible for the mass creation of wiring diagrams using AVEVA instrumentation software; attended FATs for switchrooms and Yokogawa DCS cabinets; and provided on-site construction support, performing construction verification walk downs and commissioning support. Sanki also designed electrical load schedules, cable schedules, and cable block diagrams. Controlled processes included microfiltration, ion exchange softening, reverse osmosis, brine reservoir management, and IX silica removal. Controls were based on the Yokogawa DCS offering.

Sustainable Water Infrastructure | City of Santa Monica, CA | Santa Monica, CA, | 2018—present | Owner's Representative I&C Engineer

Owner's I&C representative overseeing the design and construction of a design-build water treatment facility, treating a blend of raw wastewater and urban runoff/storm water to produce 1MGD of purified water. I reviewed design documents from engineering firms, ensuring adherence in accordance with Owner I&C standards as well as providing value engineering alternatives. Controlled processes: MBR-cartridge filtration, aeration blowers, RO, UV/Advanced Oxidation Process (AOP) and chlorine disinfection.

City of Santa Ana PFAS Water Treatment Plant Well 38 | Orange County Water District | Santa Ana, California | I&C Controls Engineer

Sanki was the I&C controls engineer for a PFAS treatment system that used ion exchange pressure vessels to remove contaminants. This project also included the design of a pre-treatment cartridge filtration, booster pump, mechanical modifications to an existing groundwater well pump station, and a hypochlorite generation and feed chemical system.

Friant-Kern Canal (FKC) Middle Rach Capacity Correction Project Phase 1 - Pump Station | Friant Water Authority | Lead I&C Engineer

Sanki is leading the I&C effort on the new pump station design across five remote sites that draw water from the FKC via turnout structures. Each site consists of licensed Ethernet-based 900MHz radios and Schneider SCADApack PLCs that communicate back to a central base station. Sanki developed RFP language for the Authority-required contractors/suppliers (including the radio supplier, integrator, PLC supplier) and final contract plans and specifications. Controlled processes include cast-in-place concrete wet well with integrated traveling water screen, and a combination of constant and variable speed pumps.

32nd Booster Pump Station | Long Beach Water Department | Long Beach, CA | Lead I&C Engineer

Sanki performed preliminary analysis of the existing legacy 9600 baud serial radio network with recommendations to upgrade to an Ethernet-based 900 MHz licensed radio system. Telemetry infrastructure included Microwave Data System (MDS) 900 MHz licensed radio network, Schneider Electric M340 processors, and an AVEVA (WonderWare) InTouch SCADA System. Sanki used peer-to-peer communications to network critical flow and pressure and pumping parameters to remotely monitor and control pump station operation.

CCWRF 12kV Backup Generator Control Circuit Improvements | Inland Empire Utilities Agency | Chino, CA | Lead I&C Engineer

Sanki is upgrading the existing, relay-based Automatic Transfer Control system to a new, redundant PLC-based control system according to IEUA's Engineering Design Guidelines, while addressing Agency stakeholder concerns.

19007 Aeration and Secondary Clarifiers (150-MGD Expansion) | Clark County Water Reclamation District | Las Vegas, Nevada, USA | Lead I&C Engineer

Sanki is the lead I&C engineer for the upgrade and capacity expansion (to 150 MGD) of the west secondary treatment facility, including three aeration basins, three secondary clarifiers, four dual core APG-Neuros HST blowers, MLR, WAS and RAS pumping systems to support BNR, including nitrification, partial denitrification, and biological phosphorus removal. The project is being executed under a CMAR alternative delivery approach. The control system includes Rockwell Automation ControlLogic PLC and Remote I/O with AVEVA (WonderWare) InTouch SCADA System. Pressure-based blower control strategy, with direct individual core control providing additional turndown. Combination of V-port ball valves and electro-hydraulic actuators for precise DO and Ammonia based-aeration with MOV control providing optimized pressure management.

Advanced Water Treatment Facility Design | Metropolitan Water District of Southern California | Los Angeles, CA | USD 21M | I&C Engineer

Sanki assisted in reviewing system integraot submittal during construction, and commissioning of the AWT Pilot Plant. The pilot facility, designed to receive primary or secondary clarifier wastewater from the neighboring wastewater treatment facility and treat to drinking water quality, introduced MWD to new treatment processes and process control/communication equipment. The control system, primarily based on the Rockwell Automation ControlLogix offering with Profibus-DP and Ethernet/IP field networks, also included an introduction to PlantPax high-performance graphics.

Boulder Water Resource Recovery Facility (WRRF) Sidestream Nutrient Removal Business Case Evaluation | City of Boulder, Colorado | Boulder, Colorado | I&C Engineer

Sanki serves as the I&C design engineer for the improvements at the WRRF to comply with anticipated future nitrogen and phosphorus effluent limitations. The project involves both nutrient removal improvements and asset replacement improvements: including sustainable phosphorus removal, nitrogen removal efficiency, effective solids processing, and sidestream phosphate mitigation. Aeration upgrades will include replacement blower, valves, actuators, piping, and diffusers. Including full design and implementation of feed-forward ABAC low DO for a four-stage process and SRT controls.

Advanced Water Treatment Facility Design | Metropolitan Water District of Southern California | Los Angeles, CA | USD 21M | I&C Engineer

Sanki assisted in reviwing system integraot submittal during construction, commissioning of the AWT Pilot Plant. The pilot facility, designed to receive primary or secondary clarifier wastewater from the neighboring wastewater treatment facility and treat to drinking water quality, introduced MWD to new treatment processes and process control/communication equipment. The control system, primarily based on the Rockwell Automation ControlLogix offering with Profibus-DP and Ethernet/IP field networks, also included an introduction to PlantPax high-performance graphics.

PFAS INVESTIGATION AND MITIGATION

City of Santa Ana PFAS Water Treatment Plant Well 40 | Orange County Water District | Santa Ana, California | I&C Controls Engineer

Sanki was the I&C controls engineer for a PFAS treatment system that used ion exchange pressure vessels to remove contaminants. This project also included the design of a pre-treatment cartridge filtration, booster pump, and mechanical modifications to an existing groundwater well pump station.

James Loucks PMP, CCP

Cost Estimating
45 years of experience · Walnut Creek, California

Jim has over four decades of constructability, cost estimating, and project management experience, with an emphasis in in large civil works, water treatment, conveyance, and industrial process facilities. He is experienced in diverse project delivery methods, including design-build, engineer-procure-construct, and traditional design-bid-build or hard-dollar contracting, from pre-construction planning to construction phase support. Throughout his cost estimating experience, Jim is familiar leading groups of 10+ full-time professional cost estimators supplemented by outside consultants at any given time for development of cost and schedule opinion deliverables. His aptitudes include but are not limited to systems integration, detailed and conceptual estimating, third party estimate reviews, client services, and quality control reviews, primarily for water and wastewater projects. He has served in a cost estimator capacity on projects exceeding $1 billion in construction costs and brings 15+ years of experience using cost estimating software such as RS Means, Timberline, CostLink™/MCACES on over 500 projects. In addition, Jim has gained significant domestic and international exposure, particularly in Asia, Latin America, and the United Kingdom.

PROJECT EXPERIENCE

WASTEWATER

Sunol Valley Water Treatment Plant | San Francisco Public Utilities Commission (SFPUC) | Sunol, California | 2014 | Estimating Manager

Jim was the estimating manager and a lead quality control resource for the plant upgrades. The purpose of this $100 million project was to increase the sustainable capacity of the plant from 120 to 160 MGD. This was accomplished by the addition of a new 40-MGD flocculation/sedimentation basin, upgrades to the plant's 12 existing filters with new filter media, new under drains and air/water backwash capability, a new washwater recovery basin, and modifications to the plant's existing flow distribution structure.

Lower Tualatin Pump Station | Clean Water Services of Washington County | Tigard, Oregon | 2016 | Lead Estimator

Jim was the lead estimator during the development of a new influent pump station (IPS) design at the Durham Wastewater Treatment Facility.

Little Bear Pump Station and Force Main | Fulton County Department of Public Works | Little Bear WRF is located at 705 Rippling Brook Drive, Palmetto, Georgia, and Ono Road Pump Station located at 755 Ono Road, Palmetto, Georgia | 2016 | Cost Estimator

Jim prepared a Class 4 OPCC in support of a 30 percent design submittal to construct a sewage lift station and approximately 20,100 linear feet (LF) of 12-inch forcemain from Little Bear Creek to the Ono Road Pump Station. The project is a component of a larger design-build project to pump wastewater from the Serenbe development and surrounding areas.

** denotes projects completed with other firms*

Sewer System Master Plan Cost Estimate Review | San Francisco Public Utilities Commission (SFPUC) | San Francisco, California | 2014-2016 | Principal Estimator

Jim led a cost review of a planned $4 billion program to upgrade a combined sewer system over the next 10 to 15 years. He and his team reviewed consultant cost opinions for all program features, which including several wastewater treatment plant expansion options, conveyance tunnel options, and a new biosolids facility. They also provided comment on forward cost escalation trends and the cost of construction in San Francisco compared to other locations. Jim additionally helped develop a new cost estimate for the greenfield digester facility to be located at the existing southeast plant site. The cost review highlighted the need to robustly analyze program costs and escalation allowances. In addition, cost estimating procedures were refined to ensure more accurate cost opinions from the various consultant teams.

CS-884, As-Needed Water Treatment Design Services | San Francisco Public Utilities Commission | San Francisco, California | 2010-2012 | Lead Estimator

Under Task Order #12, Jim led a team of estimators to independently develop cost opinions for the capital elements associated with the Crystal Springs pump station and San Andreas Transmission Main project. He developed the Association for the Advancement of Cost Engineering Class 4, 3, and 2 cost estimates to support the detailed design process. Jim led estimating efforts to support a multidisciplinary team that provided civil, structural, geotechnical, mechanical, electrical, and special engineering services for the upgrade, expansion, and seismic retrofit on a wide range of wastewater, water, and power facilities—including dams, reservoirs, tunnels, treatment plants, pipelines, pump stations, and power transmission facilities. Services included preparing design and specifications documents, technical reviews, cost estimating, and value engineering on the Water System Improvement Program (WSIP) and non-WSIP projects. Jim provided 10 to 15 cost estimates under this contract, including one for the Harry Tracy Water Treatment Plant Short- Term Improvements, Phase 3 project.

Indiana Harbor and Canal Dredge Spoil Wastewater Treatment | USACE Chicago District | Chicago, Illinois | 2013 | Lead Estimator

James is the lead estimator for the USACE for treatment of wastewater generated due to dredging of contaminated sediments from the Indiana Harbor and Canal near Chicago. This project includes bench testing and treatment predesign for chemical precipitation, biological nitrification, ion exchange, and carbon adsorption. Role: Lead Estimator | Cost: Unknown | Dates involved: 01/2010-12/2010

Green River Filtration Facility | Tacoma Water | Tacoma, Washington | 2009 | Lead Estimator

Jim is the lead estimator on the $180M plant expansion project. Jim and his team have successfully submitted cost estimates at the preliminary design report, 30%, and 60 % design stages that have correlated to within 2% of the GM/GC's GMP proposals. The project expanded an existing water treatment plant.

Roseville Water Treatment Plant (WTP) Expansion | City of Roseville | Roseville, California | 2006 | Lead Estimator

Jim was the lead estimator for the City of Roseville WTP Expansion Project.This $32M treatment plant expansion increased the rated capacity to 100 mgd, and, in addition to other work, included two additional horizontal flocculation and sedimentation basins. Jim prepared interim cost estimates at the 30, 60, and 95 percent design stages, as well as the final engineer's opinion of probable construction cost.

CS-825B, As-Needed Wastewater Design Services, San Francisco Public Utilities Commission | San Francisco Public Utilities Commission | San Francisco, California | 2016-2018 | Lead Estimator

Under Task Order #6, James led cost estimating on the third-party review of the Sewer System Master Plan (SSMP) feasibility level cost estimates. The SSMP program evaluates the existing wastewater treatment and collection system and determines present and future need to ensure reliable service consistent with the City's goals. As part of the review effort, James commented on the appropriate escalation factor and proper inclusion of owner soft costs. He also provided input on the cost of construction in San Francisco relative to the rest of the country. Finally, James undertook a detailed review of consultant cost estimates for the New Bayside Digester Facility and the Cayuga Diversion scheme.

CONVEYANCE

Sacramento River Water Reliability Study* | Sacramento County Regional Water District/Bureau of Reclamation | California | Principal Estimator

Jim served as principal estimator for this $775 million program that included river intake and water conveyance pipeline upgrades for four major water districts in northeast Sacramento, covering a multi-year build out program.

Villages of San Luis Water Infrastructure Program* | San Luis Water District | San Luis, California | Principal Estimator

James provided cost estimating for a $230 million program involving a raw water diversion off the CAP with common site development of wastewater and water treatment facilities. Conveyance piping was also included to cover recycled water delivery and storage.

Project 3-62, Westminster Blvd, Force Main Replacement | Orange County Sanitation District | Seal Beach, California, United States | Estimator

The project involved the construction of new single and dual 36" HDPE force mains along Westminster Blvd.

** denotes projects completed with other firms*

WATER RESOURCES ENGINEERING

CS-777.B – As-Needed Engineering Design Services | San Francisco Public Utilities Commission | San Francisco, California, United States | Lead Estimator

Jim led estimating efforts to support a multidisciplinary team that provided civil, structural, geotechnical, mechanical, electrical, and special engineering services for the upgrade, expansion, and seismic retrofit on a wide range of wastewater, water, and power facilities—including dams, reservoirs, tunnels, treatment plants, pipelines, pump stations, and power transmission facilities. Services included preparing design and specifications documents, technical reviews, cost estimating, and value engineering on the Water System Improvement Program (WSIP) and non-WSIP projects. Jim provided 10 to 15 cost estimates under this contract, including one for the Harry Tracy Water Treatment Plant Short-Term Improvements, Phase 3 project.

WATER TREATMENT

Lake Oswego-Tigard Water Treatment Plant (LO-T WTP) Expansion | Lake Oswego-Tigard Water Partnership | Lake Oswego, Oregon, United States | USD 68M | Estimating Manager/Lead QC

Jim was the estimating manager and lead QC resource for the 30 percent design stage cost estimate. The $68 million expansion project considers a conventional filtration process that will be constructed at a functional plant under a multi-phase construction sequence. The developed 30 percent cost estimate underwent an extensive peer review and value engineering effort to reduce costs in line with original program targets.

Willamette Water Treatment Plant Project | City of Wilsonville, OR | Wilsonville, Oregon | Project Support

For the 40-MGD plant expansion, Jim developed and negotiated the original design-build proposal and played a key role in resolving cost issues during the two-year project.

Vineyard Surface Water Treatment Plant | Sacramento County Water Agency | Sacramento County, California, United States | USD 207.8M | Cost Estimator

Jim developed the 30, 60, and 90 percent design stage cost estimates for the $75 million Greenfields plant.

PROGRAM MANAGEMENT

San José-Santa Clara Regional Wastewater Facility Capital Improvement Program (CIP) | City of San José Environmental Services Department | San José, California | USD 1.4B | Principal Estimator

Stantec is providing program and project management services for a 10-year Capital Improvement Program at the San José/Santa Clara Regional Wastewater Facility. The draft plant master plan envisions a $2.2 million capital investment over the 30-year planning period, with $1.4 billion occurring in the next 10 years. Jim has developed and reviewed cost estimates for 33 CIP projects—taking into consideration escalation spiking—and provided auxiliary support to the City's estimating team.

Bon Tempe and San Geronimo Water Treatment Plants Master Plan and Filter Rehabilitation | Marin Municipal Water District | Corte Madera, California, United States | 2017 | Cost Estimator

The first of these two projects that were completed for MMWD was a Master Plan to help ensure reliable, cost-effective operation of the two drinking water treatment plants for the next 50+ years. The Master Plan, completed by the end of 2014, found that major seismic rehabilitation of filters and other structures is required to achieve code compliance and meet the District's reliability goal of producing water within 24 hours of a major earthquake. To address these issues, Stantec began the Filter Rehabilitation Project in 2015. Jim is providing cost estimating services for the project, which includes performing seismic/structural analysis, evaluating upgrade options, preparing cost-effective designs, managing bid documents, and providing construction support for the necessary improvements at both plants. Role: Cost Estimator | Cost: Unknown | Dates involved: 01/2017-09/2017

PUMP STATION

Peck Reservoir and Pump Station | City of Manhattan Beach | Manhattan Beach, California, United States | Estimator

Jim was involved in the development of the Class 4-2 opinions of probable construction cost. We are leading the technical design for a new 8-MG cast-in-place concrete reservoir, new 10,000-GPM pump station, and new green-sand treatment system. The new reservoir will provide superior water storage capacity to meet peak demand conditions and fire flow requirements, and utilize better mixing characteristics to improve water quality and provide a long-last reservoir according to modern design standards.

RP-5 Recycled Water Pump Station Expansion | Inland Empire Utilities Agency (IEUA) | Ontario, California | Estimator

Jim was involved in the development of the Class 4-2 opinions of probable construction cost. Stantec helped upgrade IEUA's existing recycled water pump station at RP-5. The existing pump station included five pumps with a total capacity of 3,100 GPM with a total dynamic head (TDH) of 208 feet. To maximize the amount of recycled water produced by RP-5 to supply customers in their 800 pressure zones, IEUA needed to increase the capacity of the pump station to more closely match the peak effluent flows from the plant.

** denotes projects completed with other firms*

Albert Ruiz PE

Principal, Tunnel and Trenchless Practice
19 years of experience · Chandler, Arizona

Albert is an expert when it comes to the design of tunnel excavations and ground support systems, structural liners for shafts and tunnels, and trenchless construction. He has led design teams responsible for shaft, tunnel, and trenchless projects and coordinated with different engineering disciplines and project stakeholders. He has created finite element models for design of tunnels, cut and cover structures, and shafts. His expertise has extended to several published papers regarding tunneling and underground construction. He has general civil and structural design experience as well, including the structural design of bridge abutments, retaining walls, and concrete and steel frame structures. He has performed site investigations and structural inspections, has experience in infrastructure rehabilitation projects, and has experience in generating quantity take-offs, cost estimates, and construction schedules. His experience in general civil design includes design of water and sewer mains, site grading and drainage, and hydrological analysis. Albert also has construction management experience in both a resident engineer and contract administration role, with experience reviewing and approving contract change orders, reviewing and approving contractor progress payments, and reviewing and approving contractor submittals.

PROJECT EXPERIENCE

DAMS & LEVEES

Calaveras Dam Replacement Project* | San Francisco Public Utilities Commission | Sunol Valley, California | Engineer and Assistant Field Contract Administrator

Albert led the project controls and contract administration team. He was responsible for review and approval of contract change orders, reviewing and approving progress payments, and quantity and cost estimates. He coordinated with the owner, contractor, design engineer, construction manager, and all other project stakeholders on cost, schedule, and contract issues. This project was a $520M Dam Replacement Project involving the construction of a new 220-foot high zoned earth and rock fill dam, new intake shaft and tunnels, spillway structure and stilling basin, and surface works.

TUNNELS

SRP Navajo Generating Station Water Intake Shafts* | Salt River Project (SRP) | Page, Arizona | Project Engineer

Senior Engineer responsible for design of a new water intake system consisting of five new 60-inch diameter inclined shafts over 500 feet in length for cooling water intakes for the coal fired power plant. Performed design and prepared drawings and specs for new water intake system for the SRP Navajo Generating Station. During preliminary engineering, researched feasibility of conceptual designs and created preliminary cost estimates and construction schedules for each. Assisted with formulation of cost estimate for final design. During construction provided engineering support and directed construction inspection teams. Lead inspection team performing ROV inspection of existing and new inclined shafts.

Esterhazy K3 Potash Mine Shaft* | Mosaic Mining Company | San Diego, California | Project Engineer

Albert oversaw the design team as a project engineer for the structural design of 20-foot-diameter waterproof shaft liner for two 3,500-foot-deep potash mine shafts. Th project was a Design-Build and required coordination with multiple different design teams and contractors located all over the globe. Designed structural composite final liner and initial ground support through various soft ground and hard rock formations. Liner design utilized a composite welded steel and concrete liner using up to 10,000 psi concrete. Challenges included maintaining a watertight shaft with up to 1300 psi water pressure, ground freezing, installation sequencing, and fast track construction schedule.

** denotes projects completed with other firms*

Tunnel Stabilization and Sewer Pipeline Replacement* | South Coast Water District | Laguna Beach, California | Project Engineer

Project engineer overseeing and coordinating design efforts between different engineering teams. Completed design of two-mile-long sewer tunnel rehabilitation and new 20-foot diameter access shaft mined in alluvium and hard rock for $75M enlargement and rehabilitation project. Designed tunnel structural liner and shaft structural liner. Also assisted client with easement and permit acquisition and coordinated between all project stakeholders. Project challenges included the tunnel being located in an extremely environmentally sensitive area, difficult access to the tunnel, coordinating with the public, and keeping the 24-inch diameter, 1MGD sewer pipeline in service during construction.

New Irvington Tunnel Project* | San Francisco Public Utility Commission (SFPUC) | Fremont, California | Inspector and Field Contract Administrator

Reviewed and approved of contract change orders and performed site inspections. Lead inspection team in a study of potential construction defects. Coordinated with owner, design engineer, construction manager, and contractor. The estimated $250 million four-year project will involve excavating the tunnel from up to four headings using pre-excavation grouting, drainage/dewatering, and ground support techniques. It is anticipated that up to seven major fault/shear zones will be encountered as well as hydrostatic heads of 350 ft and depths up to 700 ft. The portals will require extensive piping and valves to connect to the numerous existing supply pipelines for the Bay Area.

San Diego Central Courthouse Inmate Tunnel* | San Diego, California | Project Engineer

Lead engineer responsible for the design of structural liner for pedestrian soft ground hand mined tunnel connecting new courthouse building to jail house. Led and coordinated design teams in different geographical locations. Tunnel was designed to be constructed using SEM methods underneath a roadway and foundations of a high rise building in a seismically active area. Challenges included extreme limitations on surface settlement, crossing an active fault using an articulated liner design, and size limitations for tunnel.

EJMT Tunnel Structural Inspection* | Colorado Department of Transportation | Denver, Colorado | Project Engineer

Performed structural inspection of the 1.7-mile long Eisenhower Johnson Memorial Highway Tunnels. Inspected and documented conditions of structural CIP liner, precast divider wall and suspended ceiling of air plenums using FHWA guidelines modified for project conditions. The project is located at high altitude (11,000 feet above sea level) with extreme weather conditions. Observation and assessment of structural elements was documented using standardized forms, photographs, and video recordings. Prepared written narrative of inspection activities and assessment of observed conditions.

SRP NGS Lake Intake Generating Station* | Salt River Project (SRP) | Page, Arizona | Project Engineer

Albert was the project engineer responsible for leading design team for a new cooling water intake system consisting of a 400-feet deep, 21-foot diameter mined shaft in sandstone, and two 200-foot long lateral five-foot diameter microtunnels for a cooling water intake pipes for a coal fired power plant. He coordinated efforts between different engineering discipline design teams and owner, as well as performed design calculations and analyzed reinforced concrete shaft and pipe jacking chamber. During preliminary engineering, Albert researched feasibility of conceptual designs and created preliminary cost estimates and construction schedules for each. Assisted with formulation of cost estimate for final design. During construction, analyzed construction records and created a report on results of the shaft pre-excavation grouting program.

Seymour Capilano Twin Tunnels* | Greater Vancouver Water District | Vancouver, BC | Project Engineer

Performed structural analysis of contractor submitted alternative tunneling lining design for tunnel mined in hard rock. Steel lining was for temporary support during excavation of a hard rock water tunnel at great depth. Steel design included composite members subjected to non-uniform 360 degree ring and rock wedge loading. Verified design adequacy and created memo advising recommendations for steel ring lining design.

EJMT South Bore Panel Replacement* | Colorado Department of Transportation | Denver, Colorado | Project Engineer

Created a Structural Selection Report for replacement of wall panels comparing alternatives. Researched and evaluated six different structural panel concepts including precast concrete, enameled steel, shotcrete, and ceramic tile wall panels. Developed evaluation criteria and rating system for constructability, life cycle costs, durability, fire resistance, and aesthetics.

Laguna Beach Sewer Interceptor Tunnel Rehabilitation* | South Coast Water District | Laguna Beach, California | Project Engineer

Albert performed tunnel inspection and stability assessment of two-mile long sewer tunnel. He also created the report of inspection findings and recommended repair and rehabilitation options, as well as performed duties as a Construction Inspector for rehabilitation and repairs of a 700-foot-long section of tunnel. Oversaw excavation, shotcrete and concrete installation. Created material movement studies and quantity take-offs for logistically and environmentally complex site involving construction beach landing crafts to resupply materials and remove spoil.

** denotes projects completed with other firms*

TRENCHLESS TECHNOLOGY

Toledo Waterways Initiative - Downtown Storage Basin | Toledo Waterways Initiative | Toledo, Ohio | Tunnel Engineer

Albert served as tunnel engineer for the 16MG combined sewer overflow (CSO) storage basin along Water Street, near the Maumee River, with 1,000 feet of 108-inch-diameter reinforced concrete pipe connection to the existing CSO pump station. The pipe was installed by pipe jacking approximately 40- to 50-feet below the existing grade in stiff to very stiff cohesive till materials below the groundwater table. Albert prepared plans and specifications and reviewed tunnel design calculations.

South Surrey Interceptor - Johnston Road Section | Surrey, British Columbia | Tunnel Engineer

This project consists of a 1,015-meter-long section of a new, 3.05-meter diameter concrete sewer pipe to be installed using microtunneling, including a double curved drive with 500m radii. The alignment passed in close proximity to existing office buildings and across 152nd Street, which has numerous buried utilities. As the owwner's engineer, he prepared plans, specifications, and Request for Proposals documents for Design-Build procurement. Reviewed and approved design-build submittals.

Fourth Street 84-Inch Sewer Interceptor | City of San Jose | San Jose, California | Lead Trenchless Engineer

Lead tunnel engineer responsible for leading trenchless design team and coordinating with other design disciplines and with contractor as part of design-build team. Prepared trenchless drawings, calculations, and specifications. Prepared documents for Caltrans Encroachment Permit Exception Request. The project consists of two miles of 84-inch diameter RCP sewer pipe, including a low cover crossing of US Highway 101 using microtunneling and a low overhead open cut installation underneath a Highway 880 overpass.

Miami Area North Transmission Main | Miami, Florida, United States | Lead Trenchless Engineer

Albert led a trenchless design team and coordinated with other design disciplines, project stakeholders, and permitting agencies. The project consisted of an approximately 750-foot crossing of a state highway and CSX railway tracks for a 48-inch-diameter water pressure main within a 72-inch steel casing constructed using microtunnelling. Albert prepared design plans, specifications, and calculations.

TransCanada Sanitary Trunk Sewer | City of Calgary | Calgary, Alberta | Lead Trenchless Engineer

Lead tunnel engineer responsible for leading trenchless design team and coordinating with other design disciplines and project stakeholders. Project consisted of 7 kilometers of 1.2-meter gravity sanitary trunk pipeline constructed using a combination of microtunneling, guided auger boring, and open cut construction. Analyzed alignment options and trenchless methodologies, and prepared Preliminary Design Report. Detailed Design to be completed Q4 2018.

Interchange 12 Railway Interceptor Project | City of Framingham | Framingham, Massachusetts | Trenchless Engineer

As a trenchless engineer worked on Geotechnical Baseline Report, design plans, calculations, and specifications. Project consisted of seven different trenchless crossings using a combination of microtunneling, auger boring, and open-faced pipe jacking to install new sewer pipes ranging in size from 16-inch to 60-inch diameter.

Southern Extra High Pipeline Section 111 | Massachusetts Water Resources Authority | Masachusetts | Lead Trenchless Engineer

Lead tunnel engineer responsible for leading trenchless design team and coordinating with other design disciplines and project stakeholders, including Massachusetts Bay Transportation Authority (MBTA). Project consisted of two trenchless crossings, one underneath Interstate I-95 and one underneath MBTA railroad tracks, using microtunneling and auger boring with ground improvement. Analyzed alignment options and trenchless methodologies, helped prepare design plans, specifications, and design reports.

Downtown Storage Basin - Toledo Waterways Initiative Phase II | City of Toledo | Toledo, Ohio, United States | AED 62.1M | Trenchless Engineer

Project consists of a 16-million-gallon combined sewer overflow storage basin along Water Street, near the Maumee River, with 1,000-feet of 108-inch diameter reinforced concrete pipe connection to the existing CSO pump station. Pipe installed by pipe jacking approximately 40- to 50-feet below the existing grade in stiff to very stiff cohesive till materials below the groundwater table. As a project engineer, Albert prepared plans and specifications and reviewed tunnel design calculations.

STRUCTURAL ANALYSIS AND DESIGN (HIGH-RISE, LOW-RISE, BRIDGES, PORTS, ETC.)

Sky Harbor Airport Automated Train Project* | City of Phoenix | Phoenix, Arizona | Project Engineer

Albert designed bridge abutments for elevated guideway structures as part of an $800M automated train project traveling through Sky Harbor airport. Designed retaining walls for aircraft taxiway under crossings. Completed preliminary structural design of existing taxiway deck extension for Category V aircraft. Involved development of phasing construction to maintain service of airplane taxiways during construction. Also performed quantity take-offs.

Greg Sebourn PLS, MASCE

Principal-In-Charge
24 years of experience · Irvine, California

Greg has 24 years of professional experience in numerous aspects of land surveying and mapping, including project and client management, as well as surveying, mapping, and map checking services. Greg works with public agencies throughout Southern California, including LACPW and LASAN. His municipal projects include monument preservation efforts; and design topographic, and construction surveys for pavement, sewer, and right-of-way improvement projects. Greg is significantly active in the land surveying professional community, having served as the California Land Surveyors Association's (CLSA) Director and CLSA's Orange County Chapter President. Greg serves as a Subject Matter Expert for the California Board for Professional Engineers, Land Surveyor, and Geologists.

PROJECT EXPERIENCE

SURVEYS / GEOMATICS

Interim City Surveyor of Huntington Beach | Stantec | Huntington Beach, California | USD 50k | 2019-Present | Principal In Charge

Greg serves the City of Huntington Beach as the acting interim City Surveyor while the City conducts an extensive recruitment effort. Greg is in responsible for map checking, quality control, construction staking, and all land surveying and mapping activities conducted by the City's surveying and mapping staff. Working closely with the City's senior staff, Greg provides consulting services as needed.

Zone A to B and Zone A to C BPS | IRWD | Irvine, California | Project Surveyor

Greg provided land surveying services required to design and build Zone A to B and Zone A to C BPS at PA 5B Eastwood Village. Land surveying and mapping services included aerial control, ROW base mapping, topographic design surveying, and 10-scale mapping.

Multiple On-Call Map Checking* | Public Municipalities | Southern California | Quality Assurance/Quality Control Supervisor

Greg has provided map checking services to numerous municipalities and other agencies for more than 10 years. Reviewing and verifying final maps, parcel maps, Records of Survey, Corner Records, certificates of compliance, lot line adjustments, legal descriptions, and plats for compliance and conformity with local and state regulations has allowed Greg to sharpen his QA/QC skills. Greg has provided map and survey document checking for the Cities of Irvine, Fullerton, Montebello, Covina, Baldwin Park, Bell, Bell Gardens, and Cudahy, as well as the County of Orange and others.

Pacific Coast Highway (PCH) Junior Lifeguard and RV Parking Lot Rehabilitation | City of Huntington Beach | Huntington Beach, CA | Project Surveyor

Greg led the Geospatial team that provided aerial control and photogrammetric mapping together with conventional topographic surveying and mapping. Survey data had an extremely brief window for data collection, which had to be concluded prior to the start of the City's annual Pacific Airshow with more than one million spectators. Horizontal and vertical control was based on the Orange County Surveyor's primary control network (NAVD88 & CCS83, Zone VI, 2017.50 Epoch).

** denotes projects completed with other firms*

Caltrans District 7 North On-Call Professional Land Surveying and Specialty Services | Caltrans | Northern Los Angeles and Ventura Counties, CA | Task Manager

Greg served as the survey task manager for contract Task Order 4 under 07A4016 On-Call Professional Land Surveying Services for Northern Los Angeles and Ventura Counties. Stantec performed over 20 task orders under that agreement, including design surveys, land net surveys, photo control, and records of surveys to support the development and construction of transportation projects within northern Los Angeles and Ventura Counties. The contract was our third consecutive on-call agreement with District 7. Role: Task Manager | Cost: $2.5M | Dates involved: 08/2016--06/2019

Los Angeles County On-Call, PW15224 | Los Angeles County | Los Angeles | Principal-in-Charge

Greg is the principal in-charge under this on-call surveying services contract with the County of Los Angeles in support of Department of Public Works projects. This three-year contract is serviced on an as-needed basis and is task based. Stantec was recently awarded our second on-call for the County's Department of Public Works to provide land surveying and mapping services. Recent tasks include the survey of Mira Loma Women's Detention Center, Ranchos Los Amigos National Rehabilitation Center, Compton ALTA Surveys, and the Leticia Drive Et Al Topographic Survey and Monument Preservation Project. All task orders included survey control, topographic surveying, boundary surveying, utility surveying, and all associated mapping. Greg's role included management and oversight of data processing, mapping, and high-definition 3D LiDAR scanning, as well as project controls. Role: Principal-in-Charge | Cost: $490,000 | Dates involved: 11/2019-present

Los Angeles County Sanitation Districts | Los Angeles County Sanitation | Southern CA | Principal-in-Charge

Greg led the effort to conduct boundary and topographic surveys over portions of LACSD pipeline easements and related properties. The project included several miles of pipeline, as well as properties and easements. The boundary covered several multiple cities. Deliverables included CADD files, point files, GIS .SHP files, Corner Records, and a Records of Survey maps filed with the County Surveyor. Role: Principal-in-Charge | Cost: $200,000 | Dates involved: 08/2015-present

TOPOGRAPHIC AND SITE SURVEYS

As-Needed Aerial Photography, Topography and/or Planimetric Mapping Services | LACPW | Los Angeles County, CA | Principal-in-Charge and Contract Manager

Since 2016, Stantec has supported eight task orders, providing surveying services, including professional consultation, design surveys/topographic surveys, monument preservation, ground control, aerial photography/mapping, boundary and encumbrance surveying and mapping.

Joint Outfall "J" Trunk Sewer Unit IE Section 3 Protection at La Rotonda Canyon | LASAN | Rancho Palos Verdes, CA | Principal-in-Charge/Senior Project Manager

Greg managed digital topographic mapping by field surveying and drafting services for La Rotonda Canyon and protective concrete and grouted riprap improvements approximately 700 feet southwest from the cul-de-sac at the end of La Rotonda Drive within the Trump National Golf Course. Stantec retraced a previous survey and tied new control and monitoring stations to the network. We also provided surface modeling of the Canyon and the Canyon outlet at the Pacific Ocean where a 150-200 foot vertical cliff existed. To collect the surface data, we used conventional and non-traditional methods. Photogrammetry provided for large-scale mapping while terrestrial methods (total stations) created a more detailed data set. Due to the vertical drop and the dangers of working near the slope, Stantec utilized an UAV to collect surface data without endangering staff safety. Together with the photogrammetric data, terrestrial data, and UAV data, we created a detailed model for monitoring and design purposes. This was the first time LASAN used UAV technology on a pipeline project. The project was delivered on time and on budget.

Surveying and Mapping of San Juan & Trabuco Creek Facilities Study | Orange County Public Works | Orange County, California | 2020 | Principal in Charge

Greg led Stantec's geospatial team to provided topographic and control surveying, as well as right-of-way base mapping for San Juan Creek so that the design team could evaluate, analyze and provide recommendations for the project elements that need to be implemented to bring the channel facility to its ultimate condition. The channel needs to have issues addressed including those related to scour, capacity, fish passage and levee protection. The Study area focuses on the reaches that are owned by the Orange County Flood Control District (OCFCD). OCFCD owns the reach of San Juan Creek between the ocean outlet and the I-5 freeway and owns the reach of the Trabuco Creek from the confluence with San Juan Creek and 2,800' upstream of Del Obispo Street.

On-Call Surveying and Mapping, | MWD of Southern California | County of Riverside, California | Survey and Mapping Task Leader

Greg led boundary and topographic surveys over portions of Metropolitan pipeline easements and related properties. The project included several miles of pipeline, as well as dozens of properties and easements. The boundary covered several Public Land Survey System Sections, as well as rancho boundaries. Deliverables included CAD files, point files, GIS .SHP files, and a Record of Survey map filed with the Riverside County Surveyor.

** denotes projects completed with other firms*

ROADWAYS

Irvine Avenue Pavement Rehabilitation | Cities of Newport Beach and Costa Mesa | Newport Beach and Costa Mesa, California, United States | 2017-2018 | Senior Survey Manager

The project involved sidewalk repairs and constructing ADA-compliant curb ramps to improve safety for students and pedestrians. Greg led topographic surveys and preparation of base mapping for pavement rehabilitation and pedestrian and cyclist safety improvements along Irvine Avenue from 16th Street to Santiago Drive. Mariners Elementary School is located within the project limits, and Newport Harbor High School is adjacent to the project limits. An accelerated schedule was required to help ensure the improvements are completed before the next school year. 10/2017-3/2018

WATER

On-Call Surveying and Mapping, Metropolitan Water District (MWD) of Southern California* | Metropolitan Water District (MWD) | County of Riverside, California | 2012 | Survey and Mapping Task Leader

Greg led the effort to conduct boundary and topographic surveys over portions of MWD pipeline easements and related properties. The project included several miles of pipeline, as well as dozens of properties and easements. The boundary covered several Public Land Survey System Sections, as well as rancho boundaries. His deliverables included CADD files, point files, GIS .SHP files, and a Record of Survey map filed with the Riverside County Surveyor. Project was completed in January 2012.

ANNEXATIONS

Saugus Union School District Mapping Services* | City of Saugas | Saugas, California | 2015 | Quality Assurance/Quality Control Supervisor

Greg was the quality assurance/quality control supervisor for the legal description and plat for approximately 890 acres of a School Facilities Improvement District Boundary which met the California Education Code and California Government Code requirements. Mapping tasks were completed in June 2015.

HIGHER EDUCATION

LACCD - City College - Survey | Los Angeles Community College District | Los Angeles, CA | 2018-2019 | Principal-in-Charge

Greg oversaw surveying services for the modernization and renovation of nine campuses as part of the Los Angeles Communication College District. The 882 square-mile area includes new and renovated academic buildings and laboratories, libraries, sports facilities, art complexes, administrative buildings, child development centers, parking structures, central energy plants, and renewable energy projects. Services included campus-wide base mapping for all of the nine campuses, including photogrammetric topographical mapping, georeferenced digital color ortho-photography, conventional ground topographic surveys, and boundary and encumbrance mapping. The contract value was $2.3M.

RIGHT-OF-WAY SURVEYS

IDIQ Contract for Surveying and Mapping Boundary and ROW Acquisition, PF225 Border Fence, Los Angeles District, U.S. Army Corps of Engineers* | U.S. Army Corps of Engineers | San Diego County and Imperial County, California | 2012 | Survey Manager

This project consisted of boundary and cadastral surveying for right of way acquisitions along the US/Mexico International Border. Specifically, the acquisitions involved existing roads currently used by Customs and Border Protection (CBP), as well as roads and staging areas that were utilized in the construction of the new border fence. Many of these roads have been utilized by CBP for years; however, no legal right existed to allow such use. As such, numerous properties had to be surveyed, along with said roads and staging areas, to compile legal descriptions to facilitate acquisitions and/or condemnations. This project involved a total of 29 separate owners and 31 individual parcels from west of Tecate in San Diego County to west of Calexico in Imperial County. The projects cover approximately 13 fractional townships along the border, requiring extensive cadastral retracement throughout the area. Survey and mapping tasks were completed in October 2012.

SANITARY SEWERS AND FORCEMAINS

Joint Outfall "J" Trunk Sewer Unit IE Section 3 Protection at La Rotonda Canyon | Sanitation Districts of Los Angeles County | Rancho Palos Verdes, California | USD 44.6k | 2017-2018 | Principal In-Charge / Senior Project Manager

The County Sanitation Districts of Los Angeles County (Districts) selected Stantec to to provide digital topographic mapping by field surveying and drafting services for the subject project. The project area surveyed and mapped was La Rotonda Canyon and protective concrete and grouted riprap improvements approximately 700 feet southwest from the cul-de-sac at the end of La Rotonda Drive within the Trump National Golf Course in the City of Rancho Palos Verdes. The project required Stantec to retrace a previous survey and tie new control and monitoring stations to the network. Additionally, the Districts requested surface modeling of the canyon and the outlet of the canyon at the Pacific Ocean where a 150- to 200-foot vertical cliff existed. To collect the surface data Stantec used conventional and non-traditional methods. Photogrammetry provided for large-scale mapping while terrestrial methods (total stations) created a more detailed data set. Due to the vertical drop and the dangers of working near the slope, Stantec utilized an Unmanned Aerial Vehicle (UAV) to collect surface data without endangering staff safety. Together with the photogrammetric data, terrestrial data, and UAV data, Stantec was able to create a detailed model for monitoring and design purposes. This was the first time that the Districts had used UAV technology on a pipeline project. The project was delivered on time and on budget.

** denotes projects completed with other firms*

Sarah Garber PMP, CPP

Environmental Scientist
36 years of experience · Pasadena, California

Sarah is a senior principal environmental scientist with 36 years of experience in environmental impact assessments for infrastructure projects. In addition to NEPA and CEQA documentation, she also specializes in permit acquisition from a wide range of regulatory agencies. Sarah routinely conducts public scoping meetings for environmental documents, participates in stakeholder coordination meetings, and presents the environmental issues of projects at public hearings. She manages surface water investigations and permitting for stream discharges. Sarah has also worked as a field biologist, concentrating in water quality analysis, fisheries investigations and natural resource surveys.

EDUCATION

Master of Science, Biology,

Bachelor of Science, Natural Resources,

REGISTRATIONS

Project Management Professional (PMP)® #1561265, Project Management Institute

Certified Air Permitting Professional #C7603, South Coast Air Quality Management District

PROJECT EXPERIENCE

ENVIRONMENTAL ASSESSMENT

Environmental Assessment and Air Quality Services, City of Los Angeles Department of Water and Power | City of Los Angeles Department of Water and Power | Los Angeles, Owens Valley, and Mono Basin, California | 2008-Present | Contract Manager

Sarah is the overall contract manager for a task order-based master services agreement (MSA) to provide environmental assessment and air quality services for a wide range of City projects—both water and power related. Since 2016, she has also served as project manager for task orders under another MSA with LADWP—the Eastern Sierra Water Management Program Agreement. Sarah has directly managed more than 140 task orders ranging from preparation of a fast-tracked initial study for a storm water pilot project (Woodman Avenue), to supervising cultural resources investigations over thousands of acres of Owens Lake (Dust Mitigation Project). Recent projects include CEQA documents for the Mono Basin Water Rights Licenses Amendments—stream ecosystem flows and modification of the Grant Lake Reservoir spillway in compliance with the requirements of the SWRCB, and for construction of 2 miles of new 84-inch penstock at South Haiwee Reservoir. Role: Contract Manager and Lead Project Manager | Cost: $6 Million (current MSA 2017 to 2020) | Dates involved: 10/2008-Ongoing

Sun Valley Watershed Management Plan Program EIR | Los Angeles County Department of Public Works | Los Angeles, California | USD 2M | 2001-2004 | CEQA Project Manager

On behalf of the Watershed Management Division, Sarah managed the preparation of a Program EIR for the Sun Valley Watershed Management Plan. The plan provides a blueprint for a multi-purpose flood control program to solve the local flooding problem in the Sun Valley Watershed area while increasing water conservation, recreational opportunities, and wildlife habitat, and reducing stormwater pollution. Implementation of the Watershed Management Plan will comprise construction of various stormwater facilities within the watershed (both small and large-scale), including those for retention and/or infiltration, conveyance, and distribution for reuse. Role: CEQA Project Manager | Cost: ~$2M | Dates involved: 12/2001-06/2004

Clark County Wetlands Park | Clark County Departments of Comprehensive Planning and Parks and Recreation | Clark County, Nevada | NEPA Project Scientist

As part of a multi-disciplinary team, Sarah was involved in the preparation of two NEPA documents for the Clark County (Nevada) Departments of Comprehensive Planning and Parks and Recreation. The Environmental Assessment (EA) focused on construction of an erosion control structure in Las Vegas Wash. The EIS is a programmatic document that describes the environmental effects of the Las Vegas Wash Wetlands Park. Erosion control, surface and groundwater hydrology, water quality, biological resources, and consumptive use were key environmental issues. Four alternative park plans, plus "no project", were analyzed.

Red Hill Bay Project | Imperial Irrigation District | Salton Sea, California | Project Manager

Sarah is managing the preparation of a Biological Resources Technical Report, Aquatics Report and CEQA IS for a dust control project on land adjacent to the Salton Sea in Imperial County. Key issues for the project are maintenance of existing wetlands and protection of endangered species.

Environmental Regulatory Assessment | California American Water | Rosemead, California | Project Scientist

Sarah conducted an environmental regulatory assessment and prepared an environmental compliance program for the water company. She performed site visits at various facilities in all six districts of the company. Existing operations were compared for applicability to federal, state, and local environmental regulations. The compliance program includes written procedures for 18 major environmental laws and regulations covering the areas of air, water, biologic resources, noise, hazardous materials, and waste. A preconstruction checklist was prepared to assist the company with environmental compliance for future projects and recommendations were made for additional staff and training.

Los Angeles County Waterworks District 29 Water System Master Plan Program EIR | County of Los Angeles Department of Public Works | Alhambra, California | USD 1.5M | 2014-2016 | Environmental Project Manager

Sarah recently managed the preparation of a Program EIR for a Water System Master Plan in the City of Malibu and unincorporated area of Tujunga. The Master Plan identifies Phase I Improvements, to be addressed within the first 5 years: 5 above ground tank reservoirs, 29 pipeline segments and an emergency connection pipeline (pipelines totaling approximately 17 miles), and water quality improvements in multiple zones. Key issues for the EIR were compliance with the Coastal Plan, including protection of trees along proposed pipeline alignments during construction. Role: CEQA Project Manager | Cost: $1.54M | Dates involved: 07/2014-06/2016

Summer Flow Augmentation | Las Virgenes -Triunfo Joint Powers Authority (JPA) | Calabasas, California | Environmental Lead

The Summer Augmentation project is composed of two primary components: conveyance of potable water to Tapia Water Reclamation Facility (WRF) and facilities for ammonia removal at Tapia WRF prior to discharge to Malibu Creek. Sarah prepared a CEQA IS for the project. Permitting focused on compliance with the Santa Monica Mountains Local Coastal Program through the Los Angeles County Department of Regional Planning.

ENVIRONMENTAL SITE ASSESSMENTS

Taylor Yard Phase II Environmental Site Assessment, Los Angeles Department of Water & Power | Los Angeles Department of Water & Power | Los Angeles, California | Project Manager

On behalf of LADWP, Sarah managed the preparation of a work plan for a Phase II environmental site assessment for baseline environmental conditions at Taylor Yard. The investigation was to support planning for a recycled water pipeline at the project site.

ENVIRONMENTAL MONITORING

San Gabriel River Sediment Management Plan | Los Angeles County Department of Public Works | Los Angeles County, California | Project Manager

Sarah managed a multi-year water quality and stream sampling program on the San Gabriel River conducted in accordance with the Sediment Management Plan that guides the removal of sediments from the San Gabriel and Morris Reservoirs. The monitoring plan was specifically intended to meet the requirements of the Los Angeles Regional Board Monitoring and Reporting Program, the Final EIS/EIR for the project, the CDFW Streambed Alteration Agreement and the USACE 404 Permit.

PERMITTING, COMPLIANCE, AUDITING

Regulatory Compliance Projects | Elsinore Valley Municipal Water District | Lake Elsinore, California | 2006-2017 | Project Manager

The Regional Wastewater Treatment Plant discharges to both Temescal Wash (assumed habitat for the endangered least Bell's vireo and southwestern willow flycatcher) and to Lake Elsinore, an impaired water body included on the Clean Water Act Section 303(d) list. Sarah managed permit acquisition for expansion of the Regional Plant from 4.0 to 8.0 MGD, installation of new discharge points in the Wash, and construction of an effluent pipeline to the lake. Coordination was required with the Santa Ana Regional Board, USACE, CDFW, SCAQMD, Caltrans, and Riverside County Flood Control and Water Conservation District. Additionally, in coordination with California State University San Bernardino, the team conducted six years of water quality monitoring on Lake Elsinore and Canyon Lake in compliance with the Regional Board's Total Maximum Daily Load (TMDL) Program. Sarah managed sample collection, data analysis, report preparation, and coordination with Regional Board staff and the TMDL stakeholders.

Lower Owens River Project Permitting and CEQA Compliance | Los Angeles Department of Water & Power | Owens Valley, California | 2001-2006 | Project Manager

Sarah oversaw final CEQA compliance and permitting for the LORP—the largest river restoration of its kind ever undertaken in the United States. Under this dynamic adaptive management project, more than 60 miles of the Owens River was re-watered as mitigation for past water exportation in the Owens Valley. Permits were obtained from the State Lands Commission, CDFW, Regional Board, and USACE. After filing of a lawsuit by the Sierra Club, a Supplemental EIR (SEIR) was prepared for the project focused on project impacts to the brine pool transition area of Owens Lake. The findings of the SEIR were upheld by the court and flows to the river were released. Sarah facilitated the public meeting for the SEIR.

APPROVALS AND PERMITTING

Peck Park Canyon Enhancement Project | City of Los Angeles Bureau of Engineering | Los Angeles, California | 2008-2009 | Permitting Lead

The Peck Park Canyon Enhancement Project is a Proposition O-funded recreation and habitat enhancement effort within an urban park in Los Angeles, California. Sarah assisted the City with permit acquisition for modifications to the streambed, installation of erosion control features, and vegetation alterations. Permits were obtained from the CDFW, USACE, and the Los Angeles RWQCB.

WATER RESOURCES / PLANNING / OTHER STUDIES

Graves Reservoir Project | City of South Pasadena | South Pasadena, California | 2015-2016 | Environmental Lead

For a proposed reservoir in a residential area, Sarah prepared a CEQA Initial Study in accordance with the State Water Resources Control Board CEQA-Plus Guidelines for State Revolving Fund (SRF) projects. Mitigation measures were identified to reduce impacts from project construction to less than significant levels and the environmental requirements for the SRF loan were met.

ENVIRONMENTAL PERMITTING SUPPORT

Carson Regional Water Recycling Facility Expansion Project (2015) - Mitigated Negative Declaration | West Basin Municipal Water District/Carson Regional Water | Carson, California | Permitting

West Basin proposed to expand the Carson Regional Water Recycling Facility to meet additional recycled water demand from the Tesoro Carson Refinery in Carson. Sarah provided permitting support for the initial study of the project, which included the construction of additional microfiltration (MF) treatment capacity and nitrification systems. Funding for the project was sought from the State Revolving Fund (SRF) Loan Program administered by the State Water Resources Control Board (SWRCB), Division of Financial Assistance, therefore the Initial Study was prepared to meet CEQA-Plus requirements.

Hidden Valley Wetlands Restoration | San Bernardino Valley Municipal Water District (SBVMWD) | Riverside, California | Project Manager

Sarah is supporting SBVMWD in the preparation of a CEQA IS for the restoration of the Hidden Valley Wetlands, adjacent to the Santa Ana River, which would serve as mitigation for SBVMWD projects. The wetland restoration project would develop semi-permanent and seasonal wetland habitats on 64 acres of property owned by CDFW in Riverside County.

WATER RESOURCES

Peck Reservoir and Pump Station | City of Manhattan Beach | Manhattan Beach, California | Environmental Lead

Sarah is currently working on the CEQA documentation for the Peck Reservoir and Pump Station CEQA compliance. The project is to provide preliminary design and design phase services for a new 8 MG cast-in-place concrete reservoir, an 8.6 MGD pumping station, and new site amenities for the City of Manhattan Beach. This new facility will receive water from both City owned potable water wells and Metropolitan Water District of Southern California. The pump station will pump from the new reservoir into the distribution system. The pump station will be operated based on maintaining a set pressure in the distribution system. The new reservoir will replace an existing reservoir, the new reservoir will be designed to meet current seismic design requirements and be hidden from view of the nearby residents.

GROUNDWATER MONITORING AND REPORTING

Lake Elsinore and Canyon Lake TMDL Monitoring | and Lake Elsinore and San Jacinto Watershed Authority | Riverside, California | Project Manager

In coordination with California State University San Bernardino, we conducted more than six years of water quality monitoring on both Lake Elsinore and Canyon Lake as required by the Regional Board's total maximum daily load (TMDL) program. Recent efforts included water quality and sediment sampling and analysis for Canyon Lake related to the Lake Elsinore and San Jacinto Watersheds Authority (LESJWA) alum application program. Sarah managed sample collection, data analysis, report preparation, and coordination with Regional Board staff and the TMDL stakeholders. Since 2006, Sarah has presented data results and water quality trends to the TMDL Technical Advisory Committee and TMDL Task Force.

STRATEGIC PLANNING

The Boeing Company, Santa Susanna Field Laboratory Remediation Project | The Boeing Company | Ventura County, California | CEQA Advisor

Boeing is closing its 2,850-acre Santa Susana Field Laboratory site and is working to achieve a reasonable and responsible cleanup of impacted media, including: soil vapor, soil, surface water, groundwater, biota, and bedrock. The remediated project area will be preserved in a conservation easement as open space habitat. Sarah has provided strategic planning and support for site closure alternatives, CEQA/NEPA reviews, and assistance with preparation of the CEQA document Project Description.

Laith Alfaqih PhD, PE, CRL, MIAM, SDRM

Principal Consultant
21 years of experience · Blue Ash, Ohio

Laith is a results-oriented professional engineer with more than 20 years of experience. He leads Stantec's Asset Integration and Management group and champions working collaboratively on inter-professional teams to achieve common goals and develop strategic, holistic asset management programs. Laith works with organizations—at any stage of their asset management journey—to implement asset management principles and practices that fit their culture and align with their maturity and growth strategies to achieve sustainability, reliability, and resiliency. He is comfortable handling gap analysis, documentation, and statistical and lifecycle analysis to not only develop asset management plans but also identify key areas of operational efficiencies and cost savings.

PROJECT EXPERIENCE

WATER ASSET MANAGEMENT SYSTEMS

Water Asset Management Program* | Oakland County Water Resources Commissioner | Oakland County, Michigan | Senior Asset Management Consultant

Laith was the Senior Asset Management Consultant brought in to conduct interviews and workshops with staff and stakeholders as part of the utility's gap analysis documentation. Laith led a team that statistically analyzed workshop data and feedback from participants about their concerns, priority areas, and areas of needed improvement on short and long-term basis. He documented the asset management gap analysis report that identified and prioritized gaps in the asset management practices based on industry standards, and developed list of next steps for the utility to consider as part of developing their asset management program.

Stormwater Managment Program* | City of Suffolk | Suffolk, Virginia | Program Analyst

Studied and analyzed the areas that exhibited excessive rainfall derived infiltration and inflow (RDII) in the system. Modeled and calculated stormwater parameters for the unmonitored basins statistically using Multi-parameter Regression Analysis. Modeled rainfall runoff projection into the system using PCSWMM and calibrated the RTK values for the model, and documented the analyses, assumptions, and processes that were conducted in this study.

** denotes projects completed with other firms*

Remote Monitoring Program* | Metropolitan Sewer District of Greater Cincinnati (MSDGC) | Cincinnati, Ohio | Management Consultant

Laith managed development and integration of the watershed operations division's remote monitoring program, which is based on the GE Integrated Platform (IP) system. He worked with the project manager and vendors to build and communicate the architecture, develop system requirements, and test and integrate equipment within the platform while also improving on collection, management, sharing and usage of data to effectively manage the system. Laith also identified savings through life cycle analysis; identified improvements on existing systems within the division (radar and rain gages); and worked with USGS to develop and implement sampling and monitoring programs.

MSD Reliability Program* | Metropolitan Sewer District of Greater Cincinnati | Cincinnati, Ohio | Strategic Management Consultant

Laith assisted in MSDGC's Reliability Program's back-to-back wins of international awards from Uptime Magazine. In 2014, this program won "Best Asset Condition Management Program" and in 2013, the "Best Emerging Maintenance Reliability Program." The reliability program had a 55% reduction in unexpected failures, 40% reduction in downtime and a 37% reduction in safety incidents. This translated into $0.5 million annually in maintenance costs only. He supported the program in producing cost savings and operational benefits across the enterprise by shifting maintenance from a reactive mode of maintenance to a proactive mode using a blend of Maintenance Strategy Improvements (through RCM and other tools), advanced condition monitoring (through Predictive Maintenance technologies) and increased productivity (through advanced planning and scheduling). He chartered the program teams, assisted them in identifying any challenges, developed business case evaluations to justify capital and operational projects, and made sure teams were on schedule and had the resources available, internally and externally, to be successful. Laith also coordinated and assisted in the supply-chain (inventory) and team building workshops.

Water Resources Smart Systems Planning, Development, Implementation and Analytics* | Department of Watershed Management | Atlanta, Georgia

Developed water resources (water, wastewater, and stormwater systems) smart systems prototypes architecture that includes both general (general asset info) and specific types of data (water quality). Identified data needs, formatting, and quality to be included in data reporting, visualization and analytics. Identified and connected various data sources to be included as part of the smart system platform.

Data Management, City of Atlanta* | City of Atlanta | Atlanta, Georgia | Senior Strategic Consultant

Developed and managed the Department of Watershed Management linear asset inventory data clean-up, organization, and QA/QC, including guidance on asset hierarchies and criticality; assignment of linear assets to historical work orders; development of linear asset management workflow processes, and CMMS support.

City of Odessa Asset Management Program | Odessa, Texas, United States | Project Engineer

Assessed the condition of water and wastewater infrastructure assets in the City. Conducted risk assessment of evaluated assets. Prioritized assets' maintenance renewal schedule.

City of Forth Worth Asset Management | City of Fort Worth | Fort Worth, Texas, United States | Project Manager

As legacy project from an acquired firm, it was behind schedule and over budget. The project's scope was to conduct a sanitary sewer evaluation system (SSES) for more than 800,000 feet of conveyance system infrastructure. Reviewed available material and developed an execution plan to complete the project with a minimal financial impact while meeting client's expectations. Led the team to set up assessment methodologies, databases, reporting techniques, cost estimates, and quality assurances/quality control (QA/QC) for the assessment. Compiled and presented the information and results to the client with success.

Drinking Water Protection Guidance | Metropolitan Council Environmental Services (MCES) | Minneapolis, Minnesota, United States | Lead Management Consultant

Developed a platform / toolbox to assist local communities in managing land uses to protect water sources. This platform will assist communities and property owners to get informed on how to protect their local water supply as well as reduce contaminants to source water. Developed the communication plan, data, and platform requirements collection from stakeholders.

Asset Management and Reliability Centered Design Implementation, Capital Regional District (CRD) | Capital Regional District (CRD) | Victoria, British Columbia | Asset Management Lead

Laith developed an Asset Componentization Guide and implemented the processes on the new facilities that CRD has acquired. This guide will be utilized on future assets across CRD. He also developed and implemented an asset cost replacement methodology for new and existing assets to help with long-term capital reserve planning. Laith assisted CRD in discussions and implementation of Reliability Centered Design/Maintenance principles at the new wastewater treatment plants and pump stations and conducted criticality analysis workshops on the new facilities.

** denotes projects completed with other firms*

Water Master Plan Update | Anaheim, California, United States | Asset Management Lead

Expanded on the City's asset management program as part of the master plan update. This update was to reflect the improvements and changes made to Anaheim's water infrastructure and to serve as a roadmap for Anaheim's long-term capital improvement program and water resource planning by addressing its' future demands, long term reliability goals, and aging infrastructure. InfoMaster software is utilized to complete a risk-based prioritization for pipeline-improvements.

Capital Program Management and Program Controls Management and Implementation | Metropolitan Sewer District of Greater Cincinnati (MSDGC) | Cincinnati, Ohio | Capital Improvement Planning and Asset Management Lead

Laith is tasked with developing, communicating, and implementing an integrated approach to define and allocate $130M Annual CIP for Asset Management (AM) and Consent Decree projects. He collaborates with the AM and Watershed Planning supervising engineer on improving processes, and developing and implementing the Asset Management Strategy as part of the Asset Management Plan for watershed and facilities planning. He assists MSD employees from various divisions on documenting, reviewing, and updating the workflow processes. Develops and documents the decision-making process to identify and prioritize capital and operational projects at service, watershed, and basin levels to establish the Program Annual CIP. This is a $6.5M annually for 6-year program, with the CIP and asset management task at $1M/ year.

MSDGC and Greater Cincinnati Water Works Technology Plan | Cincinnati, Ohio, United States | Management Consultant

Interviewed and worked directly with staff to evaluate the existing use of technology (strengths and weaknesses), Identified opportunities to streamline and consolidate systems, developed a technology plan that focuses on current and future use of emerging Smart Cities Technologies. This conceptual design provided documentation for smart wastewater/water network technology requirements, considered regulatory mandates, technology innovations within and outside the water/wastewater industry, while looking specifically at the use of machine to machine (M2M) technology / Internet of Things (IoT).

Collection System Management Program | Pinellas County Utilities | Pinellas County, Florida | Asset Management Technical Lead

Laith is supporting Pinellas County in identifying and updating the County's assets. He is aligning data collection tools and processes to meet service level goals, developing criticality standards and implementing them on the collection system, ensuring the asset management (AM) activities meet the County's AM strategies and objectives, and integrating the asset data across the organization for informed decision-making.

Greater Cincinnati Water Works Technology Plan | Metropolitan Sewer District of Greater Cincinnati | Cincinnati, Ohio, United States

Laith interviewed and worked directly with staff to evaluate the existing use of technology (strengths and weaknesses), identified opportunities to streamline and consolidate systems, developed a technology plan that focuses on current and future use of emerging Smart Cities Technologies. This conceptual design provided documentation for smart wastewater/water network technology requirements, considered regulatory mandates, technology innovations within and outside the water/ wastewater industry, while looking specifically at the use of machine to machine (M2M) technology / Internet of Things (IoT).

RECREATION MASTER PLANNING AND DEVELOPMENT

Communication Planning* | Louisville Metropolitan Sewer District | Louisville, Kentucky | Communication Planning

Based on the success of the recreation management communication platform for Cincinnati MSD, Louisville MSD approached the team to develop a similar one for them. Led the team in developing the plan and approach for the communication platform. Conducted the analysis and development of the predictive model and identified next steps for the utility to establish a robust recreation management program and a successful communication platform. Analysis indicated that further work needs to be done within the utility's conveyance system (I/I, CSO) to reduce the pollution levels in the urban streams. Additionally, more data needed to be collected to develop a robust model.

ASSET MANAGEMENT CONSULTING

Organization Succession Plan Development, Department of Public Utilities | Toledo, Ohio, United States | Lead Management Consultant

Benchmarked, documented, and developed a succession plan / resource review plan for the utility. As part of Ohio Senate Bill #2 and as a result of performance audit and strategic plan the utility is updating its roles and responsibilities and succession plan.

Reliability Centered Design | Clark County Water Reclamation District | Las Vegas, Nevada, United States | Asset Management Lead

Conducted RCD workshops and documentation on the West Secondary Aeration Basin and clarifiers. This is in partnership with Aladon Network.

GREEN INFRASTRUCTURE DESIGN

Green Infrastructure Asset Management* | Metropolitan Sewer District of Greater Cincinnati | Cincinnati, Ohio | Management Consultant

Laith assisted MSDGC in developing a green infrastructure asset management program for operation and maintenance. He documented the assets, their classes, required maintenance for each type of green infrastructure, assisted in developing the standard operating procedures, and assisted in developing a GI O&M manual to maintain the required level of service.

CITY OF ONTARIO
DESIGN SERVICES AGREEMENT

1. PARTIES AND DATE.

This Agreement is made and entered into as of _____ __, **2024** by and between the City of Ontario, a municipal corporation organized and operating under the laws of the State of California with its principal place of business at 303 East "B" Street, Ontario, California 91764-4196, County of San Bernardino, State of California ("City"), and **Albert A. Webb Associates**, a **CALIFORNIA CORPORATION** with its principal place of business at **3788 McCray St, Riverside CA 92506** (hereinafter referred to as "Consultant"). City and Consultant are sometimes individually referred to herein as "Party" and collectively as "Parties."

2. RECITALS.

2.1 City. City is a municipal corporation organized under the laws of the State of California, with power to contract for services necessary to achieve its purpose.

2.2 Consultant. Consultant desires to perform and assume responsibility for the provision of certain professional **engineering** design services required by the City on the terms and conditions set forth in this Agreement. Consultant warrants that it is fully licensed, qualified, and willing to perform the services required by this Agreement; provided, however, that if Consultant is a corporation or other organization, the Project Consultant designated pursuant to Section 3.2, and not the Consultant itself, shall be fully licensed to practice as an **engineer** in the State of California.

2.3 Project. City desires to engage Consultant to render such services for the **On-Call Design Services** ("Project") as set forth in this Agreement.

3. TERMS

3.1 Employment of Consultant.

3.1.1 Scope of Services. Consultant promises and agrees to furnish to City all labor, materials, tools, equipment, services, and incidental and customary work necessary to fully and adequately supply the professional **engineering** and related services necessary for the full and adequate completion of the Project consistent with the provisions of this Agreement

(hereinafter referred to as "Services"). The Services are more particularly described throughout this Agreement, including Exhibit "A" attached hereto and incorporated herein by reference. All Services shall be subject to, and performed in accordance with, this Agreement, any exhibits attached hereto and incorporated herein by reference, and all applicable local, state and federal laws, rules and regulations. All Services performed by Consultant shall be subject to the sole and discretionary approval of the City, which approval shall not be unreasonably withheld.

3.1.2 Term. The term of this Agreement shall be from **June 4, 2024** to **June 4, 2027**, unless earlier terminated as provided herein. The City shall have the unilateral option, at its sole discretion, to renew this Agreement automatically for no more than **two** additional one-year terms. Consultant shall complete the Services within the term of this Agreement, and shall meet any other established schedules and deadlines.

3.2 Project Consultant; Key Personnel.

3.2.1 **Engineer of Record.** Consultant shall name a specific individual to act as Project Consultant, subject to the approval of City. Consultant hereby designates **Bruce Davis, PE** (License No. **C 47200**) to act as the **Engineer of Record** for the Project. The **Engineer of Record** shall: (1) maintain oversight of the Services; (2) have full authority to represent and act on behalf of the Consultant for all purposes under this Agreement; (3) supervise and direct the Services using his or her best skill and attention; (4) be responsible for the means, methods, techniques, sequences and procedures used for the Services; (5) adequately coordinate all portions of the Services; and (6) act as principal contact with City and all contractors, consultants, engineers and inspectors on the Project. Any change in the **Engineer of Record** shall be subject to the City's prior written approval, which approval shall not be unreasonably withheld. The new **Engineer of Record** shall be of at least equal competence as the prior **Engineer of Record**. In the event that City and Consultant cannot agree as to the substitution of a new **Engineer of Record**, City shall be entitled to terminate this Agreement for cause.

3.2.2 Key Personnel. In addition to the **Engineer of Record**, Consultant has represented to the City that certain additional key personnel, engineers and consultants will perform the Services under this Agreement. Should one or more of such personnel, engineers or consultants become unavailable, Consultant may substitute others of at least equal competence upon written approval of the City. In the event that City and Consultant cannot agree as to the substitution of key personnel, engineers or consultants, City shall be entitled to terminate this Agreement for cause. The key additional personnel, engineers and consultants for performance of this Agreement are as follows: **Bruce Davis, PE, Jeff Hart, PE, and Bradley Sackett, PE.**

3.3 Hiring of Consultants and Personnel.

3.3.1 Right to Hire or Employ. Consultant shall have the option, unless City objects in writing after notice, to employ at its expense architects, engineers, experts or other consultants qualified and licensed to render services in connection with the planning and/or administration of the Project, and to delegate to them such duties as Consultant may delegate without relieving Consultant from administrative or other responsibility under this Agreement. Consultant shall be responsible for the coordination and cooperation of Consultant's architects, engineers, experts or other consultants. All consultants, including changes in consultants, shall be subject to approval by City in its sole and reasonable discretion. Consultant shall notify City of the identity of all consultants at least fourteen (14) days prior to their commencement of work

to allow City to review their qualifications and approve to their participation on the Project in its sole and reasonable discretion.

3.3.2 Qualification and License. All architects, engineers, experts and other consultants retained by Consultant in performance of this Agreement shall be qualified to perform the Services assigned to them, and shall be licensed to practice in their respective professions, where required by law.

3.3.3 Standards and Insurance. All architects, engineers, experts and other consultants hired by Consultant shall be required to meet all of the same standards and insurance requirements set forth in this Agreement, unless other standards or requirements are approved by the City in writing. Unless changes are approved in writing by the City, Consultant's agreements with its consultants shall contain a provision making them subject to all provisions stipulated in this Agreement.

3.3.4 Assignments or Staff Changes. Consultant shall promptly obtain written City approval of any assignment, reassignment or replacement of such architects, engineers, experts and consultants, or of other staff changes of key personnel working on the Project. As provided in the Agreement, any changes in Consultant's consultants and key personnel shall be subject to approval by City.

3.3.5 Draftsman and Clerical Support. Draftsmen and clerical personnel shall be retained by Consultant at Consultant's sole expense.

3.4 Standard of Care.

3.4.1 Standard of Care. Consultant shall perform all Services under this Agreement in a skillful and competent manner, consistent with the standards generally recognized as being employed by professionals qualified to perform the Services in the same discipline in the State of California, and shall be responsible to City for damages sustained by the City and delays to the Project as specified in the indemnification provision of this Agreement. Without limiting the foregoing, Consultant shall be fully responsible to the City for any increased costs incurred by the City as a result of any such delays in the design or construction of the Project. Consultant represents and maintains that it is skilled in the professional calling necessary to perform the Services. Consultant warrants and represents that all of its employees, architects, engineers, experts and other consultants shall have sufficient skill and experience to perform the Services assigned to them. Finally, Consultant represents that it, its employees, architects, engineers, experts and other consultants have all licenses, permits, qualifications and approvals of whatever nature that are legally required to perform the Services assigned to or rendered by them and that such licenses and approvals shall be maintained throughout the term of this Agreement. As provided for in the indemnification provisions of this Agreement, Consultant shall perform, at its own cost and expense and without reimbursement from the City, any services necessary to correct errors or omissions which are caused by the Consultant's failure to comply with the standard of care provided for herein.

3.4.2 Performance of Employees. Any employee or consultant who is determined by the City to be uncooperative, incompetent, a threat to the adequate or timely completion of the Project, a threat to the safety of persons or property, or any employee or consultant who fails or refuses to perform the Services in a manner acceptable to the City, shall be promptly removed from the Project by the Consultant and shall not be re-employed to perform any of the Services or to work on the Project.

3.5 Laws and Regulations.

3.5.1 Knowledge and Compliance. Consultant shall keep itself fully informed of and in compliance with all applicable local, state and federal laws, rules and regulations in any manner affecting the performance of the Services or the Project, and shall give all notices required of the Consultant by law. Consultant shall be liable, pursuant to the standard of care and indemnification provisions of this Agreement, for all violations of such laws and regulations in connection with its Services. Consultant shall defend, indemnify and hold City, its officials, officers, employees and agents free and harmless, pursuant to the indemnification provisions of this Agreement, from any claim or liability arising out of any failure or alleged failure to comply with such laws, rules or regulations.

3.5.2 Drawings and Specifications. Consultant shall cause all drawings and specifications to conform to any applicable requirements of federal, state and local laws, rules and regulations, including the Uniform Building Code, in effect as of the time the drawings and specifications are prepared or revised during the latest phase of the Services described in Exhibit "A" attached hereto. Any significant revisions made necessary by changes in such laws, rules and regulations after this time may be compensated as Additional Services which were not known or reasonably should not have been known by Consultant. Consultant shall cause the necessary copies of such drawings and specifications to be filed with any governmental bodies with approval jurisdiction over the Project, in accordance with the Services described in Exhibit "A" attached hereto. For the preparation of all such drawings and specifications, the Consultant shall use Computer Aided Design Drafting ("CADD") (e.g., AutoCAD) or other technology acceptable to the Consultant and City.

3.5.3 Americans with Disabilities Act. Consultant will use its best professional efforts to interpret all applicable federal, state and local laws, rules and regulations with respect to access, including those of the Americans with Disabilities Act ("ADA"). Consultant shall inform City of the existence of inconsistencies of which it is aware or reasonably should be aware between federal and state accessibility laws, rules and regulations, as well as any other issues which are subject to conflicting interpretations of the law, and shall provide the City with its interpretation of such inconsistencies and conflicting interpretations. Unless Consultant brings such inconsistencies and conflicting interpretations to the attention of the City and requests City's direction on how to proceed, the Consultant's interpretation of such inconsistencies and conflicting interpretations shall be the sole responsibility and liability of Consultant, and the Consultant shall correct all plans, specifications and other documents prepared for the Project at no additional cost if its interpretations are shown to be incorrect. In the event that the Consultant request's City's direction on how to proceed with respect to any inconsistent and/or conflicting interpretation, the Consultant shall be responsible to the City only pursuant to the indemnification provisions of this Agreement.

3.5.4 Permits, Approvals and Authorizations. Consultant shall provide City with a list of all permits, approvals or other authorizations required for the Project from all federal, state or local governmental bodies with approval jurisdiction over the Project. Consultant shall then assist the City in obtaining all such permits, approvals and other authorizations. The costs of such permits, approvals and other authorizations shall be paid by the City.

3.5.5 Water Quality Management and Compliance. Consultant shall keep itself and all subcontractors, staff, and employees fully informed of and in compliance with all local, state and federal laws, rules and regulations that may impact, or be implicated by the performance of the Services including, without limitation, all applicable provisions of the City's ordinances

regulating water quality and storm water; the Federal Water Pollution Control Act (33 U.S.C. § 1251 *et seq.*); the California Porter-Cologne Water Quality Control Act (Cal Water Code §§ 13000-14950); and any and all regulations, policies, or permits issued pursuant to any such authority. Consultant shall additionally comply with the lawful requirements of the City, and any other municipality, drainage district, or other local agency with jurisdiction over the location where the Services are to be conducted, regulating water quality and storm water discharges. Failure to comply with laws, regulations, and ordinances listed in this Section is a violation of federal and state law.

3.6 Independent Contractor.

3.6.1 Control and Payment of Subordinates. City retains Consultant on an independent contractor basis and Consultant is not an employee of City. Consultant is not an employee for state tax, federal tax or any other purpose, and is not entitled to the rights or benefits afforded to City's employees. Any additional personnel performing the Services under this Agreement on behalf of Consultant shall also not be employees of City, and shall at all times be under Consultant's exclusive direction and control. Consultant shall pay all wages, salaries, and other amounts due such personnel in connection with their performance of Services under this Agreement and as required by law. Consultant shall be responsible for all reports and obligations respecting such additional personnel, including, but not limited to: social security taxes, income tax withholding, unemployment insurance, disability insurance, and workers' compensation insurance.

3.7 Schedule of Services.

3.7.1 Consultant Services. Consultant shall fully and adequately complete the Services described in this Agreement and in Exhibit "A" attached hereto and incorporated herein by reference.

3.7.2 Timely Performance Standard. Consultant shall perform all Services hereunder as expeditiously as is consistent with professional skill and care, as well as the orderly progress of the Project work so as not to be the cause, in whole or in part, of delays in the completion of the Project or in the achievement of any Project milestones, as provided herein. Specifically, Consultant shall perform its Services so as to allow for the full and adequate completion of the Project within the time required by the City and within any completion schedules adopted for the Project. Consultant agrees to coordinate with City's staff, contractors and consultants in the performance of the Services, and shall be available to City's staff, contractors and consultants at all reasonable times.

3.7.3 Performance Schedule. Consultant shall prepare an estimated time schedule for the performance of Consultant's Services, to be adjusted as the Project proceeds. Such schedule shall be subject to the City's review and approval, which approval shall not be unreasonably withheld, and shall include allowances for periods of time required for City's review and approval of submissions, and for approvals of authorities having jurisdiction over Project approval and funding. If City and Consultant cannot mutually agree on a performance schedule, City shall have the authority to immediately terminate this Agreement. The schedule shall not be exceeded by Consultant without the prior written approval of City. If the Consultant's Services are not completed within the time provided by the agreed upon performance schedule, or any milestones established therein, it is understood, acknowledged and agreed that the City will suffer damage for which the Consultant will be responsible.

3.7.4 Excusable Delays. Any delays in Consultant's work caused by the following may be added to the time for completion of any obligations of Consultant: (1) the actions of City or its employees; (2) the actions of those in direct contractual relationship with City; (3) the actions of any governmental agency having jurisdiction over the Project; (4) the actions of any parties not within the reasonable control of the Consultant; and (5) any Force Majeure Event (as defined herein) or other unforeseen occurrence not due to any fault or negligence on the part of Consultant. Neither the City nor the Consultant shall be liable for damages, liquidated or otherwise, to the other on account of such delays.

3.7.5 Force Majeure Events. Neither City nor Consultant shall be considered in default of this Agreement for delays in performance caused by circumstances beyond the reasonable control of the non-performing Party. For purposes of this Agreement, such circumstances include a Force Majeure Event. A Force Majeure Event shall mean an event that materially affects a Party's performance and is one or more of the following: (1) Acts of God or other natural disasters; (2) terrorism or other acts of a public enemy; (3) orders of governmental authorities (including, without limitation, unreasonable and unforeseeable delay in the issuance of permits or approvals by governmental authorities that are required for the services); (4) strikes and other organized labor action occurring at the site and the effects thereof on the services, only to the extent such strikes and other organized labor action are beyond the control of Consultant and its subcontractors, and to the extent the effects thereof cannot be avoided by use of replacement workers; and (5) pandemics, epidemics or quarantine restrictions. For purposes of this section, "orders of governmental authorities," includes ordinances, emergency proclamations and orders, rules to protect the public health, welfare and safety, and other actions of a public agency applicable to the Services and Agreement. Should a Force Majeure Event occur, the non-performing Party shall, within fifteen (15) calendar days of the beginning of an Force Majeure Event, give written notice to the other Party describing the circumstances preventing continued performance and the efforts being made to resume performance of this Agreement. Force Majeure Events shall not entitle Consultant to any additional compensation. Notwithstanding the foregoing in this section, the City may still terminate this Agreement in accordance with the termination provisions of this Agreement.

3.7.6 Request for Excusable Delay Credit. The Consultant shall, within fifteen (15) calendar days of the beginning of any excusable delay, notify the City in writing of the causes of delay (unless City grants in writing a further period of time to file such notice prior to the date of final payment under the Agreement). City will then ascertain the facts and the extent of the delay, and grant an extension of time for completing the Services when, in its sole judgment, the findings of fact justify such an extension. The City's findings of fact thereon shall be final and conclusive on the Parties. Extensions of time shall apply only to that portion of the Services affected by the delay and shall not apply to other portions of the Services not so affected. The sole remedy of Consultant for extensions of time shall be an extension of the performance time at no cost to the City. If Additional Services are required as a result of an excusable delay, the Parties shall mutually agree thereto pursuant to the Additional Services provision of this Agreement. Should Consultant make an application for an extension of time, Consultant shall submit evidence that the insurance policies required by this Agreement remain in effect during the requested additional period of time.

3.8 Additional Services.

3.8.1 Request for Services. At City's request, Consultant may be asked to perform services not otherwise included in this Agreement, not included within the basic services

listed in Exhibit "A" attached hereto, and/or not customarily furnished in accordance with generally accepted architectural practice.

3.8.2 Definition. As used herein, "Additional Services" mean: (1) any work which is determined by City to be necessary for the proper completion of the Project, but which the Parties did not reasonably anticipate would be necessary for the Consultant to perform at the execution of this Agreement; or (2) any work listed as Additional Services in Exhibit "A" attached hereto. Consultant shall not perform, nor be compensated for, Additional Services without prior written authorization from City and without an agreement between the City and Consultant as to the compensation to be paid for such services. City shall pay Consultant for any approved Additional Services, pursuant to the compensation provisions herein, so long as such services are not made necessary through the fault of Consultant pursuant to the indemnification provision of this Agreement.

3.8.3 Examples of Additional Services. Such Additional Services shall not include any redesign or revisions to drawings, specifications or other documents when such revisions are necessary in order to bring such documents into compliance with applicable laws, rules, regulations or codes of which Consultant was aware or should have been aware pursuant to the laws and regulations provision of this Agreement above. Such Additional Services may include, but shall not be limited to:

(a) Separately Bid Portions of Project. Plan preparation and/or administration of work on portions of the Project separately bid.

(b) Furniture and Interior Design. Assistance to City, if requested, for the selection of moveable furniture, equipment or articles which are not included in the Construction Documents.

(c) Fault of Contractor. Services caused by delinquency, default or insolvency of contractor, or by major defects in the work of the contractor, provided that any such services made necessary by the failure of Consultant to detect and report such matters when it reasonably should have done so shall not be compensated.

(d) Inconsistent Approvals or Instructions. Revisions in drawings, specifications or other documents when such revisions are inconsistent with written approvals or instructions previously given and are due to causes beyond the control of Consultant.

(e) Legal Proceedings. Serving as an expert witness on City's behalf or attending legal proceedings to which the Consultant is not a party.

(f) Damage Repair. Supervision of repair of damages to any structure.

(g) Extra Environmental Services. Additional work required for environmental conditions (e.g. asbestos or site conditions) not already contemplated within the Consultant's services for the Project.

3.9 City Responsibilities. City's responsibilities shall include the following:

3.9.1 Data and Information. City shall make available to Consultant all necessary data and information concerning the purpose and requirements of the Project, including scheduling and budget limitations, objectives, constraints and criteria. As part of the budget

limitation information, the City shall provide the Consultant with a preliminary construction budget ("City's Preliminary Construction Budget").

3.9.2 Project Survey. If required pursuant to the scope of the Project and if requested by Consultant, City shall furnish Consultant with, or direct Consultant to procure at City's expense, a survey of the Project site prepared by a registered surveyor or civil engineer, any other record documents which shall indicate existing structures, land features, improvements, sewer, water, gas, electrical and utility lines, topographical information and boundary dimensions of the site, and any other such pertinent information.

3.9.3 Bid Phase. Distribute Construction Documents to bidders and conduct the opening and review of bids for the Project.

3.9.4 Testing. Retain consultant(s) to conduct chemical, mechanical, soils, geological or other tests required for proper design of the Project, and furnish such surveys, borings, test pits, and other tests as may be necessary to reveal conditions of the site which must be known to determine soil condition or to ensure the proper development of the required drawings and specifications.

3.9.5 Required Inspections and Tests. Retain consultant(s) to conduct materials testing and inspection or environmental/hazardous materials testing and inspection pursuant to any applicable laws, rules or regulations.

3.9.6 Fees of Reviewing or Licensing Agencies. Directly pay or reimburse the payment of all fees required by any reviewing or licensing agency, or other agency having approval jurisdiction over the Project.

3.9.7 City's Representative. The City hereby designates the City Manager, or his or her designee, to act as its representative for the performance of this Agreement ("City's Representative"). City's Representative shall have the power to act on behalf of the City for all purposes under this Contract. The City Manager hereby designates **Dennis Mejia, PE, Utilities Engineering Division Manager**, or his or her designee, as the City's contact for the implementation of the Services hereunder. Contractor shall not accept direction or orders from any person other than the City's Representative or his or her designee.

3.9.8 Review and Approved Documents. Review all documents submitted by Consultant, including change orders and other matters requiring approval by the City Council or other officials. City shall advise Consultant of decisions pertaining to such documents within a reasonable time after submission, so as not to cause unreasonable delay as provided in the excusable delay provisions of this Agreement above.

3.10 Compensation.

3.10.1 Consultant's Compensation for Basic Services. City shall pay to Consultant, for the performance of all Services rendered under this Agreement, the total not to exceed amount of **Six Hundred Thousand Dollars ($600,000)** ("Total Compensation"). This Total Compensation amount shall be based upon, and may be adjusted according to, the fee schedule and related terms and conditions attached hereto as Exhibit "B" and incorporated herein by reference. The Total Compensation, as may be adjusted upon mutual agreement, shall constitute complete and adequate payment for Services under this Agreement.

3.10.2 Payment for Additional Services. At any time during the term of this Agreement, City may request that Consultant perform Additional Services. As used herein, Additional Services means any work which is determined by City to be necessary for the proper completion of the Project, but which the Parties did not reasonably anticipate would be necessary at the execution of this Agreement. Any additional work in excess of this amount must be approved by the City. If authorized, such Additional Services will be compensated at the rates and in the manner set forth in Exhibit "C" attached hereto and incorporated herein by reference, unless a flat rate or some other form of compensation is mutually agreed upon by the Parties. If City requires Consultant to hire consultants to perform any Additional Services, Consultant shall be compensated therefore at the rates and in the manner set forth in Exhibit "C" attached hereto and incorporated herein by reference, unless a flat rate or some other form of compensation is mutually agreed upon by the Parties. City shall have the authority to review and approve the rates of any such consultants. In addition, Consultant shall be reimbursed for any expenses incurred by such consultants pursuant to the terms and conditions of Section 3.10.3.

3.10.3 Reimbursable Expenses. Reimbursable expenses are in addition to compensation for the Services and Additional Services. Consultant shall not be reimbursed for any expenses unless authorized in writing by City, which approval may be evidenced by inclusion in Exhibit "C" attached hereto. Such reimbursable expenses shall include only those expenses which are reasonably and necessarily incurred by Consultant in the interest of the Project. Consultant shall be required to acquire prior written consent in order to obtain reimbursement for the following: (1) extraordinary transportation expenses incurred in connection with the Project; (2) out-of-town travel expenses incurred in connection with the Project; (3) fees paid for securing approval of authorities having jurisdiction over the Project; (4) bid document duplication costs in excess of $1,000; and (5) other costs, fees and expenses in excess of $1,000.

3.10.4 Payment to Consultant. Consultant's compensation and reimbursable expenses shall be paid by City to Consultant no more often than monthly. Such periodic payments shall be made based upon the percentage of work completed, and in accordance with the phasing and funding schedule provided in Exhibit "B" and the compensation rates indicated in Exhibit "C" attached hereto and incorporated herein by reference. In order to receive payment, Consultant shall present to City an itemized statement which indicates Services performed, percentage of Services completed, method for computing the amount payable, and the amount to be paid. The statement shall describe the amount of Services provided since the initial commencement date, or since the start of the subsequent billing periods, as appropriate, through the date of the statement, as well as those expenses for which reimbursement is requested for that statement period. The amount paid to Consultant shall never exceed the percentage amounts authorized by the phasing and funding schedule located in Exhibit "B" attached hereto. City shall, within thirty (30) days of receiving such statement, review the statement and pay all approved charges thereon pursuant to the provisions of Civil Code Section 3320. Disputed amounts shall be resolved by the Parties in a mutually agreeable manner.

Payments made for Additional Services shall be made in installments, not more often than monthly, proportionate to the degree of completion of such services or in such other manner as the Parties shall specify when such services are agreed upon, and in accordance with any authorized fee or rate schedule. In order to receive payment, Consultant shall present to City an itemized statement which indicates the Additional Services performed, percentage of Additional Services completed, method for computing the amount payable, and the amount to be paid. The statement shall describe the amount of Additional Services provided since the initial commencement date, or since the start of the subsequent billing periods, as appropriate, through the date of the statement. City shall, within thirty (30) days of receiving such statement, review

the statement and pay all approved charges thereon pursuant to the provisions of Civil Code Section 3320. Disputed amounts shall be resolved by the Parties in a mutually agreeable manner.

Upon cancellation or termination of this Agreement, Consultant shall be compensated as set forth in the termination provision herein.

3.10.5 Withholding Payment to Consultant. The City may withhold payment, in whole or in part, to the extent reasonably necessary to protect the City from claims, demands, causes of action, costs, expenses, liabilities, losses, damages, or injuries of any kind to the extent arising out of or caused by the negligence, recklessness, or willful misconduct protected under the indemnification provisions of this Agreement. Failure by City to deduct any sums from a progress payment shall not constitute a waiver of the City's right to such sums. The City may keep any moneys which would otherwise be payable at any time hereunder and apply the same, or so much as may be necessary therefor, to the payment of any expenses, losses, or damages as determined by the City, incurred by the City for which Consultant is liable under the Agreement or state law. Payments to the Consultant for compensation and reimbursable expenses due shall not be contingent on the construction, completion or ultimate success of the Project. Payment to the Consultant shall not be withheld, postponed, or made contingent upon receipt by the City of offsetting reimbursement or credit from Parties not within the Consultant's reasonable control.

3.10.6 Prevailing Wages. Consultant is aware of the requirements of California Labor Code Sections 1720, et seq., and 1770, et seq., as well as California Code of Regulations, Title 8, Section 16000, et seq., ("Prevailing Wage Laws"), which require the payment of prevailing wage rates and the performance of other requirements on certain "public works" and "maintenance" projects. Since the Services are being performed as part of an applicable "public works" or "maintenance" project, as defined by the Prevailing Wage Laws, and since the total compensation is $1,000 or more, Consultant agrees to fully comply with and to require its consultants to fully comply with such Prevailing Wage Laws. City shall provide Consultant with a copy of the prevailing rates of per diem wages in effect at the commencement of this Agreement. Consultant shall make copies of the prevailing rates of per diem wages for each craft, classification or type of worker needed to execute the Services available to interested parties upon request, and shall post copies at the Consultant's principal place of business and at the Project site. It shall be mandatory upon the Consultant and all subconsultants to comply with all California Labor Code provisions, which include but are not limited to prevailing wages (Labor Code Sections 1771, 1774 and 1775), employment of apprentices (Labor Code Section 1777.5), certified payroll records (Labor Code Sections 1771.4 and 1776), hours of labor (Labor Code Sections 1813 and 1815) and debarment of contractors and subcontractors (Labor Code Section 1777.1). The requirement to submit certified payroll records directly to the Labor Commissioner under Labor Code section 1771.4 shall not apply to work performed on a public works project that is exempt pursuant to the small project exemption specified in Labor Code Section 1771.4. Consultant shall defend, indemnify and hold the City, its elected officials, officers, employees and agents free and harmless from any claims, liabilities, costs, penalties or interest arising out of any failure or alleged failure of the Consultant or its consultants to comply with the Prevailing Wage Laws.

(a) Registration/DIR Compliance. If the Services are being performed as part of an applicable "public works project" of over $25,000 when the project is for construction, alteration, demolition, installation, or repair work, or a public works project of over $15,000 when the project is for maintenance work, in addition to the foregoing, then pursuant to Labor Code sections 1725.5 and 1771.1, the Consultant and all subconsultants performing such Services must be registered with the Department of Industrial Relations ("DIR"). Consultant shall maintain

registration for the duration of the Project and require the same of any subconsultants. This project may also be subject to compliance monitoring and enforcement by the DIR. It shall be Consultant's sole responsibility to comply with all applicable registration and labor compliance requirements, including the submission of payroll records directly to the DIR. Any stop orders issued by the Department of Industrial Relations against Consultant or any subconsultant that affect Consultant's performance of services, including any delay, shall be Consultant's sole responsibility. Any delay arising out of or resulting from such stop orders shall be considered Consultant caused delay and shall not be compensable by the City. Consultant shall defend, indemnify and hold the City, its officials, officers, employees and agents free and harmless from any claim or liability arising out of stop orders issued by the Department of Industrial Relations against Consultant or any subconsultant.

3.11 Notice to Proceed.

Consultant shall not proceed with performance of any Services under this Agreement unless and until the City provides a written notice to proceed.

3.12 Termination, Suspension and Abandonment.

3.12.1 Grounds for Termination; Consultant's Termination for Cause. City hereby reserves the right to suspend or abandon, at any time and for any reason, all or any portion of the Project and the construction work thereon, or to terminate this Agreement at any time with or without cause. Consultant shall be provided with at least seven (7) days advanced written notice of such suspension, abandonment or termination. In the event of such suspension, abandonment or termination, Consultant shall be paid for Services and reimbursable expenses rendered up to the date of such suspension, abandonment or termination, pursuant to the schedule of payments provided for in this Agreement, less any claims against or damages suffered by City as a result of the default, if any, by Consultant. Consultant hereby expressly waives any and all claims for damages or compensation arising under this Agreement, except as set forth herein, in the event of such suspension, abandonment or termination. Consultant may terminate this Agreement for substantial breach of performance by the City such as failure to make payment to Consultant as provided in this Agreement.

3.12.2 City's Suspension of Work. If Consultant's Services are suspended by City, City may require Consultant to resume such Services within ninety (90) days after written notice from City. When the Project is resumed, the Total Compensation and schedule of Services shall be equitably adjusted upon mutual agreement of the City and Consultant.

3.12.3 Documents and Other Data. Upon suspension, abandonment or termination, Consultant shall provide to City all preliminary studies, sketches, working drawings, specifications, computations, and all other Project Documents, as defined below, to which City would have been entitled at the completion of Consultant's Services under this Agreement. Upon payment of the amount required to be paid to Consultant pursuant to the termination provisions of this Agreement, City shall have the rights, as provided in this Agreement hereinafter, to use such Project Documents prepared by or on behalf of Consultant under this Agreement. Consultant shall make such documents available to City upon request and without additional compensation other than as may be approved as a reimbursable expense.

3.12.4 Employment of other Consultants. In the event this Agreement is terminated in whole or in part as provided herein, City may procure, upon such terms and in such manner as it may determine appropriate, services similar to those terminated.

3.13 Ownership and Use of Documents; Confidentiality.

3.13.1 Ownership. All plans, specifications, original or reproducible transparencies of working drawings and master plans, preliminary sketches, architectural presentation drawings, structural computations, estimates and any other documents prepared pursuant to this Agreement, including, but not limited to, any other works of authorship fixed in any tangible medium of expression such as writings, physical drawings and data magnetically or otherwise recorded on computer diskettes (hereinafter referred to as the "Project Documents") shall be and remain the property of City. Although the official copyright in all Project Documents shall remain with the Consultant or other applicable subcontractors or consultants, the Project Documents shall be the property of City whether or not the work for which they were made is executed or completed. Within thirty (30) calendar days following completion of the Project, Consultant shall provide to City copies of all Project Documents required by City. In addition, Consultant shall retain copies of all Project Documents on file for a minimum of fifteen (15) years following completion of the Project, and shall make copies available to City upon the payment of reasonable duplication costs. Before destroying the Project Documents following this retention period, Consultant shall make a reasonable effort to notify City and provide City with the opportunity to obtain the documents.

3.13.2 Right to Use. Consultant grants to City the right to use and reuse all or part of the Project Documents, at City's sole discretion and with no additional compensation to Consultant, for the following purposes:

(a) The construction of all or part of this Project.

(b) The repair, renovation, modernization, replacement, reconstruction or expansion of this Project at any time;

(c) The construction of another project by or on behalf of the City for its ownership and use;

City is not bound by this Agreement to employ the services of Consultant in the event such documents are used or reused for these purposes. City shall be able to use or reuse the Project Documents for these purposes without risk of liability to the Consultant or third parties with respect to the condition of the Project Documents, and the use or reuse of the Project Documents for these purposes shall not be construed or interpreted to waive or limit City's right to recover for latent defects or for errors or omissions of the Consultant.

Any use or reuse by City of the Project Documents on any project other than this Project without employing the services of Consultant shall be at City's own risk with respect to third parties. If City uses or reuses the Project Documents on any project other than this Project, it shall remove the Consultant's seal from the Project Documents and hold harmless Consultant and its officers, directors, agents and employees from claims arising out of the negligent use or re-use of the Project Documents on such other project.

3.13.3 License. This Agreement creates a non-exclusive and perpetual license for City to copy, use, modify or reuse any and all Project Documents and any intellectual property rights therein. Consultant shall require any and all subcontractors and consultants to agree in writing that City is granted a non-exclusive and perpetual license for the work of such subcontractors or consultants performed pursuant to this Agreement.

3.13.4 Right to License. Consultant represents and warrants that Consultant has the legal right to license any and all copyrights, designs and other intellectual property embodied in the Project Documents that Consultant prepares or causes to be prepared pursuant to this Agreement. Consultant shall indemnify and hold City harmless pursuant to the indemnification provisions of this Agreement for any breach of this Section. Consultant makes no such representation and warranty in regard to previously prepared designs, plans, specifications, studies, drawings, estimates or other documents that were prepared by design professionals other than Consultant and provided to Consultant by City.

3.13.5 Confidentiality. All Project Documents, either created by or provided to Consultant in connection with the performance of this Agreement, shall be held confidential by Consultant to the extent they are not subject to disclosure pursuant to the Public Records Act. All Project Documents shall not, without the written consent of City, be used or reproduced by Consultant for any purposes other than the performance of the Services. Consultant shall not disclose, cause or facilitate the disclosure of the Project Documents to any person or entity not connected with the performance of the Services or the Project. Nothing furnished to Consultant which is otherwise known to Consultant or is generally known, or has become known, to the related industry shall be deemed confidential. Consultant shall not use City's name or insignia, photographs of the Project, or any publicity pertaining to the Services or the Project in any magazine, trade paper, newspaper, television or radio production or other similar medium without the written consent of City.

3.14 Indemnification.

3.14.1 To the fullest extent permitted by law, Consultant shall defend (with counsel of City's choosing), indemnify and hold the City, its officials, officers, employees, volunteers, and agents free and harmless from any and all claims, demands, causes of action, costs, expenses, liability, loss, damage or injury of any kind, in law or equity, to property or persons, including wrongful death, in any manner arising out of, pertaining to, or incident to any acts, errors or omissions, or willful misconduct of Consultant, its officials, officers, employees, subcontractors, consultants or agents in connection with the performance of the Consultant's Services, the Project or this Agreement, including without limitation the payment of all damages, expert witness fees and attorney's fees and other related costs and expenses except such loss or damage caused by the sole negligence or willful misconduct of the City. Consultant's obligation to indemnify shall survive expiration or termination of this Agreement and shall not be restricted to insurance proceeds, if any, received by Consultant, the City, its officials, officers, employees, agents, or volunteers.

3.14.2 If Consultant's obligation to defend, indemnify, and/or hold harmless arises out of Consultant's performance as a "design professional" (as that term is defined under Civil Code section 2782.8), then, and only to the extent required by Civil Code section 2782.8, which is fully incorporated herein, Consultant's indemnification obligation shall be limited to claims that arise out of, pertain to, or relate to the negligence, recklessness, or willful misconduct of the Consultant, and, upon Consultant obtaining a final adjudication by a court of competent jurisdiction, Consultant's liability for such claim, including the cost to defend, shall not exceed the Consultant's proportionate percentage of fault.

3.15 Insurance. Consultant shall not commence work under this Agreement until it has provided evidence satisfactory to the City that it has secured all insurance required under this Section. In addition, Consultant shall not allow any subconsultant to commence work on any

subcontract until it has provided evidence satisfactory to the City that the subconsultant has secured all insurance required under this section.

3.15.1 Types of Insurance Required. As a condition precedent to the effectiveness of this Agreement for work to be performed hereunder, and without limiting the indemnity provisions of the Agreement, Consultant shall, at its expense, procure and maintain in full force and effect for the duration of the Agreement the following policies of insurance. If the existing policies do not meet the insurance requirements set forth herein, Consultant agrees to amend, supplement or endorse the policies to do so.

3.15.2 Additional Insured. The City of Ontario, its officials, officers, employees, agents, and volunteers shall be named as additional insureds on Consultant's and its subconsultants' policies of commercial general liability and automobile liability insurance using the endorsements and forms specified herein or exact equivalents.

3.15.3 Commercial General Liability

(a) The Consultant shall take out and maintain, during the performance of all work under this Agreement, in amounts not less than specified herein, Commercial General Liability Insurance, in a form and with insurance companies acceptable to the City.

(b) Coverage for Commercial General Liability insurance shall be at least as broad as the following: Insurance Services Office Commercial General Liability coverage (Occurrence Form CG 00 01) or exact equivalent. Commercial General Liability Insurance must include coverage for the following:

(i) Bodily Injury and Property Damage

(ii) Personal Injury/Advertising Injury

(iii) Premises/Operations Liability

(iv) Products/Completed Operations Liability

(v) Aggregate Limits that Apply per Project

(vi) Explosion, Collapse and Underground (UCX) exclusion deleted

(vii) Contractual Liability with respect to this Contract

(viii) Broad Form Property Damage

(ix) Independent Consultants Coverage

(c) The policy shall contain no endorsements or provisions limiting coverage for (1) contractual liability; (2) cross liability exclusion for claims or suits by one insured against another; (3) products/completed operations liability; or (4) contain any other exclusion contrary to the Agreement.

(d) The policy shall give City, the City Council and each member of the City Council, its officers, employees, agents and City designated volunteers additional insured status using ISO endorsement forms CG 20 10 10 01 and 20 37 10 01, or endorsements providing the exact same coverage.

(e) The general liability program may utilize either deductibles or provide coverage excess of a self-insured retention, subject to written approval by the City, and provided that such deductibles shall not apply to the City as an additional insured.

3.15.4 Automobile Liability

(a) At all times during the performance of the work under this Agreement, the Consultant shall maintain Automobile Liability Insurance for bodily injury and property damage including coverage for owned, non-owned and hired vehicles, in a form and with insurance companies acceptable to the City.

(b) Coverage for automobile liability insurance shall be at least as broad as Insurance Services Office Form Number CA 00 01 covering automobile liability (Coverage Symbol 1, any auto).

(c) The policy shall give City, the City Council and each member of the City Council, its officers, employees, agents and City designated volunteers additional insured status.

(d) Subject to written approval by the City, the automobile liability program may utilize deductibles, provided that such deductibles shall not apply to the City as an additional insured, but not a self-insured retention.

3.15.5 Workers' Compensation/Employer's Liability

(a) Consultant certifies that he/she is aware of the provisions of Section 3700 of the California Labor Code which requires every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that code, and he/she will comply with such provisions before commencing work under this Agreement.

(b) To the extent Consultant has employees at any time during the term of this Agreement, at all times during the performance of the work under this Agreement, the Consultant shall maintain full compensation insurance for all persons employed directly by him/her to carry out the work contemplated under this Agreement, all in accordance with the "Workers' Compensation and Insurance Act," Division IV of the Labor Code of the State of California and any acts amendatory thereof, and Employer's Liability Coverage in amounts indicated herein. Consultant shall require all subconsultants to obtain and maintain, for the period required by this Agreement, workers' compensation coverage of the same type and limits as specified in this Section.

3.15.6 Professional Liability (Errors and Omissions)

(a) At all times during the performance of the work under this Agreement the Consultant shall maintain professional liability or Errors and Omissions insurance appropriate to its profession, in a form and with insurance companies acceptable to the City and

in an amount indicated herein. This insurance shall be written on a policy form coverage specifically designed to protect against acts, errors or omissions of the Consultant. "Covered Professional Services" as designated in the policy must specifically include work performed under this Agreement. The policy must "pay on behalf of" the insured and must include a provision establishing the insurer's duty to defend.

3.15.7 Minimum Policy Limits Required

(a) The following insurance limits are required for the Agreement:

Coverage	Combined Single Limit
Commercial General Liability	$2,000,000 per occurrence/ $4,000,000 aggregate for bodily injury, personal injury, and property damage
Automobile Liability	$2,000,000 per occurrence for bodily injury and property damage
Employer's Liability	$1,000,000 per occurrence
Professional Liability	$2,000,000 per claim and aggregate (errors and omissions)

(b) Defense costs shall be payable in addition to the limits.

(c) Requirements of specific coverage or limits contained in this Section are not intended as a limitation on coverage, limits, or other requirement, or a waiver of any coverage normally provided by any insurance. Any available coverage shall be provided to the parties required to be named as Additional Insured pursuant to this Agreement.

3.15.8 Evidence Required

(a) Prior to execution of the Agreement, the Consultant shall file with the City evidence of insurance from an insurer or insurers certifying to the coverage of all insurance required herein. Such evidence shall include original copies of the ISO CG 00 01 (or insurer's equivalent) signed by the insurer's representative and Certificate of Insurance (Acord Form 25-S or equivalent), together with required endorsements. All evidence of insurance shall be signed by a properly authorized officer, agent, or qualified representative of the insurer and shall certify the names of the insured, any additional insureds, where appropriate, the type and amount of the insurance, the location and operations to which the insurance applies, and the expiration date of such insurance.

3.15.9 Policy Provisions Required

(a) Consultant shall provide the City at least thirty (30) days prior written notice of cancellation of any policy required by this Agreement, except that the Consultant shall provide at least ten (10) days prior written notice of cancellation of any such policy due to non-payment of premium. If any of the required coverage is cancelled or expires during the term of this Agreement, the Consultant shall deliver renewal certificate(s) including the General Liability Additional Insured Endorsement to the City at least ten (10) days prior to the effective date of cancellation or expiration.

(b) The Commercial General Liability Policy and Automobile Policy shall each contain a provision stating that Consultant's policy is primary insurance and that any insurance, deductible, or self-insurance maintained by the City, its officials, officers, employees, agents, or volunteers shall not contribute with this primary insurance. Policies shall contain or be endorsed to contain such provisions.

(c) The retroactive date (if any) of each policy is to be no later than the effective date of this Agreement. Consultant shall maintain such coverage continuously for a period of at least three years after the completion of the work under this Agreement. Consultant shall purchase a one (1) year extended reporting period A) if the retroactive date is advanced past the effective date of this Agreement; B) if the policy is cancelled or not renewed; or C) if the policy is replaced by another claims-made policy with a retroactive date subsequent to the effective date of this Agreement.

(d) All required insurance coverages, except for the professional liability coverage, shall contain or be endorsed to waiver of subrogation in favor of the City, its officials, officers, employees, agents, and volunteers or shall specifically allow Consultant or others providing insurance evidence in compliance with these specifications to waive their right of recovery prior to a loss. Consultant hereby waives its own right of recovery against City, and shall require similar written express waivers and insurance clauses from each of its subconsultants.

(e) The limits set forth herein shall apply separately to each insured against whom claims are made or suits are brought, except with respect to the limits of liability. Further the limits set forth herein shall not be construed to relieve the Consultant from liability in excess of such coverage, nor shall it limit the Consultant's indemnification obligations to the City and shall not preclude the City from taking such other actions available to the City under other provisions of the Agreement or law.

3.15.10 Qualifying Insurers

(a) All policies required shall be issued by acceptable insurance companies, as determined by the City, which satisfy the following minimum requirements: Each such policy shall be from a company or companies with a current A.M. Best's rating of no less than A:VII and admitted to transact in the business of insurance in the State of California, or otherwise allowed to place insurance through surplus line brokers under applicable provisions of the California Insurance Code or any federal law.

3.15.11 Additional Insurance Provisions

(a) The foregoing requirements as to the types and limits of insurance coverage to be maintained by Consultant, and any approval of said insurance by the City, is not intended to and shall not in any manner limit or qualify the liabilities and obligations otherwise assumed by the Consultant pursuant to this Agreement, including but not limited to, the provisions concerning indemnification.

(b) If at any time during the life of the Agreement, any policy of insurance required under this Agreement does not comply with these specifications or is canceled and not replaced, City has the right but not the duty to obtain the insurance it deems necessary and any premium paid by City will be promptly reimbursed by Consultant or City will withhold

amounts sufficient to pay premium from Consultant payments. In the alternative, City may cancel this Agreement.

(c) The City may require the Consultant to provide complete copies of all insurance policies in effect for the duration of the Project.

(d) Neither the City nor the City Council, nor any member of the City Council, nor any of the officials, officers, employees, agents or volunteers shall be personally responsible for any liability arising under or by virtue of this Agreement.

3.15.12 Subconsultant Insurance Requirements

(a) Consultant shall not allow any subcontractors or subconsultants to commence work on any subcontract until they have provided evidence satisfactory to the City that they have secured all insurance required under this Section. Policies of commercial general liability insurance provided by such subcontractors or subconsultants shall be endorsed to name the City as an additional insured using ISO form CG 20 38 04 13 or an endorsement providing the exact same coverage. If requested by Consultant, City may approve different scopes or minimum limits of insurance for particular subcontractors or subconsultants.

3.16 Records.

Consultant shall maintain complete and accurate records with respect to all costs and expenses incurred under this Agreement. All such records shall be clearly identifiable. Consultant shall allow a representative of City during normal business hours to examine, audit, and make transcripts or copies of such records and any other documents created pursuant to this Agreement. Consultant shall allow inspection of all work, data, documents, proceedings, and activities related to the Agreement for a period of five (5) years from the date of final payment under this Agreement.

3.17 Standardized Manufactured Items.

Consultant shall cooperate and consult with City in the use and selection of manufactured items on the Project, including but not limited to, paint, hardware, plumbing, mechanical and electrical equipment, fixtures, roofing materials and floor coverings. All such manufactured items shall be standardized to City's criteria to the extent such criteria do not interfere with building design.

3.18 Limitation of Agreement.

This Agreement is limited to and includes only the work included in the Project described herein. Any additional or subsequent construction at the site of the Project, or at any other City site, will be covered by, and be the subject of, a separate Agreement for **engineering** services between City and the Consultant chosen therefor by City.

3.19 Mediation.

Disputes arising from this Agreement may be submitted to mediation if mutually agreeable to the Parties hereto. The type and process of mediation to be utilized shall be subject to the mutual agreement of the Parties.

3.20 Successors and Assigns.

This Agreement shall be binding upon and shall inure to the benefit of the successors in interest, executors, administrators and assigns of each Party to this Agreement. However, Consultant shall not assign or transfer by operation of law or otherwise any or all of its rights, burdens, duties or obligations without the prior written consent of City. Any attempted assignment without such consent shall be invalid and void.

3.21 Asbestos Certification.

Consultant shall certify to City, in writing and under penalty of perjury, that to the best of its knowledge, information and belief no asbestos-containing material or other material deemed to be hazardous by the state or federal government was specified as a building material in any construction document that the Consultant prepares for the Project. Consultant shall require all consultants who prepare any other documents for the Project to submit the same written certification. Consultant shall also assist the City in ensuring that contractors provide City with certification, in writing and under penalty of perjury, that to the best of their knowledge, information and belief no material furnished, installed or incorporated into the Project contains asbestos or any other material deemed to be hazardous by the state or federal government. These certifications shall be part of the final Project submittal. Consultant shall include statements in its specifications that materials containing asbestos or any other material deemed to be hazardous by the state or federal government are not to be included.

3.22 No Third Party Rights.

This Agreement shall not create any rights in, or inure to the benefits of, any third party except as expressly provided herein.

3.23 Governing Law.

This Agreement shall be construed in accordance with, and governed by, the laws of the State of California. Venue shall be in San Bernardino County.

3.24 Exhibits and Recitals.

All exhibits and recitals contained herein and attached hereto are material parts of this Agreement and are incorporated as if fully set forth.

3.25 Severability.

Should any provision in the Agreement be held by a court of competent jurisdiction to be invalid, void, or unenforceable, the remaining provisions shall continue in full force and effect.

3.26 Non-Waiver.

None of the provisions of this Agreement shall be considered waived by either Party, unless such waiver is specifically specified in writing.

3.27 Safety.

Consultant shall execute and maintain its work so as to avoid injury or damage to any person or property. In carrying out its Services, the Consultant shall at all times be in compliance with all applicable local, state and federal laws, rules and regulations, and shall exercise all necessary precautions for the safety of its employees, consultant and subcontractors appropriate to the nature of the work and the conditions under which the work is to be performed.

3.28 Harassment Policy.

Consultant shall provide a copy of the City's Harassment Policy to each of its employees assigned to perform the tasks under this Agreement. Consultant shall submit to the City's Personnel Manager a statement signed by each of its employees who are assigned to perform the Services under this Agreement certifying receipt of City's Harassment Policy and certifying that they have read the Harassment Policy. A finding by the City that any of Consultant's employees has harassed a City employee shall be grounds for appropriate discipline, up to and including such employee's removal from performance of this Agreement at City's request.

3.29 Delivery of Notices.

All notices permitted or required under this Agreement shall be given to the respective Parties at the following address, or at such other address as the respective Parties may provide in writing for this purpose:

CITY:	CONSULTANT:
City of Ontario	**Albert A. Webb Associates**
303 East "B" Street	**3788 McCray Street**
Ontario, CA 91764	**Riverside, CA 92506**
Attn: **Dennis Mejia, PE, Utilities Engineering Division Manager,**	Attn: **Bruce Davis**

Such notice shall be deemed made when personally delivered or when mailed, forty-eight (48) hours after deposit in the U.S. Mail, first class postage prepaid and addressed to the Party at its applicable address. Actual notice shall be deemed adequate notice on the date actual notice occurred, regardless of the method of service.

3.30 Time of Essence.

Time is of the essence for each and every provision of this Agreement.

3.31 City's Right to Employ Other Consultants.

City reserves right to employ other consultants, including designers, in connection with this Project or other projects.

3.32 Prohibited Interests.

3.32.1 Solicitation. Consultant maintains and warrants that it has not employed nor retained any company or person, other than a bona fide employee working solely for Consultant, to solicit or secure this Agreement. Further, Consultant warrants that it has not paid nor has it agreed to pay any company or person, other than a bona fide employee working solely for Consultant, any fee, commission, percentage, brokerage fee, gift or other consideration contingent upon or resulting from the award or making of this Agreement. For breach or violation of this warranty, City shall have the right to rescind this Agreement without liability.

3.32.2 Conflict of Interest. For the term of this Agreement, no director, official, officer or employee of City, during the term of his or her service with City, shall have any direct interest in this Agreement, or obtain any present or anticipated material benefit arising therefrom.

3.33 Equal Opportunity Employment.

Consultant represents that it is an equal opportunity employer and that it shall not discriminate against any employee or applicant for employment because of race, religion, color, national origin, ancestry, sex, age or any other classification protected by federal or state law. Such non-discrimination shall include, but not be limited to, all activities related to initial employment, upgrading, demotion, transfer, recruitment or recruitment advertising, layoff or termination. Consultant shall also comply with all relevant provisions of City's minority business enterprise program, affirmative action plan or other related programs or guidelines currently in effect or hereinafter enacted.

3.34 Labor Certification.

By its signature hereunder, Consultant certifies that it is aware of the provisions of Section 3700 of the California Labor Code which require every employer to be insured against liability for Worker's Compensation or to undertake self-insurance in accordance with the provisions of that Code, and agrees to comply with such provisions before commencing the performance of the Services.

3.35 Subcontracting.

As specified in this Agreement, Consultant shall not subcontract any portion of the Services required by this Agreement, except as expressly stated herein, without prior written approval of City. Subcontracts, if any, shall contain a provision making them subject to each and every provision of this Agreement.

3.36 Supplemental Conditions.

Any supplemental conditions shall be attached as an exhibit to this Agreement, and that exhibit shall be incorporated herein by reference.

3.37 Entire Agreement.

This Agreement, with its exhibits, contains the entire agreement of the Parties hereto, and supersedes any and all other prior or contemporaneous negotiations, understandings and oral or written agreements between the Parties hereto. Each Party acknowledges that no representations, inducements, promises or agreements have been made by any person which

are not incorporated herein, and that any other agreements shall be void. Furthermore, any modification of this Agreement shall only be effective if in writing signed by all Parties hereto.

EXHIBIT "A"
SCOPE OF SERVICES

EXHIBIT "A"

RFQ PROPOSED SCOPE OF SERVICES

The City of Ontario is seeking Statement of Qualifications from qualified consulting engineers to provide On-Call Services for three (3) years, with an option of renewing for two (2) consecutive one (1) year terms. The City desires to obtain the services of a maximum of six (6) qualified firms to assist with On-Call Design Services. At least ten (10) years of experience providing similar services is required to oversee the work, stamp, and sign all project related documents as required.

Request for Qualifications (RFQ) for various services in various disciplines (e.g. Engineering, Architecture, Construction, Hydraulic Modeling, Fire Flow Modeling, Feasibility Studies, etc.) with the intention of maintaining a list of multiple qualified prime engineering firms, with subconsultant support services as needed. Task orders will be issued to firms on a competitive basis based on the qualifications and expertise of the firm and their subconsultants. There is no designated minimum nor maximum value of services to be awarded to any one consultant.

Each Prospective Consultant needs to be able to provide all the services (or provide sub-consultants that must also be listed as part of their statement of qualifications) listed in this RFQ.

The following scope of services provides general categories of services that may be required for each task order requested. The categories are not an exhaustive list of services but rather a sampling of the services that are typically included, but not limited to, within that area of the scope in order to demonstrate the qualifications needed for that scope of services.

Specific services requested under these agreements shall be identified by the City at the time of the request for a specific task order. For each task order requested by the City, the Consultant shall provide a task order proposal that identifies the specific scope of services to be performed, the necessary project management activities, task budget, and task schedule. Upon City's approval of the proposed task's scope of services, the City will issue a notice to proceed with purchase order requisition for the work. The Consultant is encouraged to provide recommendations with respect to scope and order of completion.

No task order or scope of services shall be performed without first receiving authorization from the City and notice to proceed with the task order.

GENERAL REQUIREMENTS.

Consultant will be expected to work closely with staff for the duration of the assigned projects (i.e. task orders), and attend all meetings and workshops, as necessary. Any adjustments can be verified based on the need of City Project Managers. All field services must include appropriate traffic control.

Some or all of the following General Requirements and Services may be incorporated into specific tasks orders generated from the On-Call contract. The applicable General Requirements shall be based on needs of specific tasks and the City Project Managers:

Refer to Design Services Agreement in Exhibit "B" to review the General Requirements and other conditions.

ON-CALL DESIGN SERVICES

The City of Ontario is seeking Statement of Qualifications from firms for On-Call Design Services:

Consultant shall be aware that certain labor categories above may be subject to prevailing wage rates as identified in the California Labor Code commencing Section 1770 et Seq. Determination of whether or not Prevailing Wages shall apply will be determined when the City's Project Manager identifies the scope of specific task orders. Please refer to Paragraph XI.11 "Prevailing Wage and Contractor Registration" of this RFQ, and Paragraph 3.10.6 "Prevailing Wages" of the Design Services Agreement for further requirements.

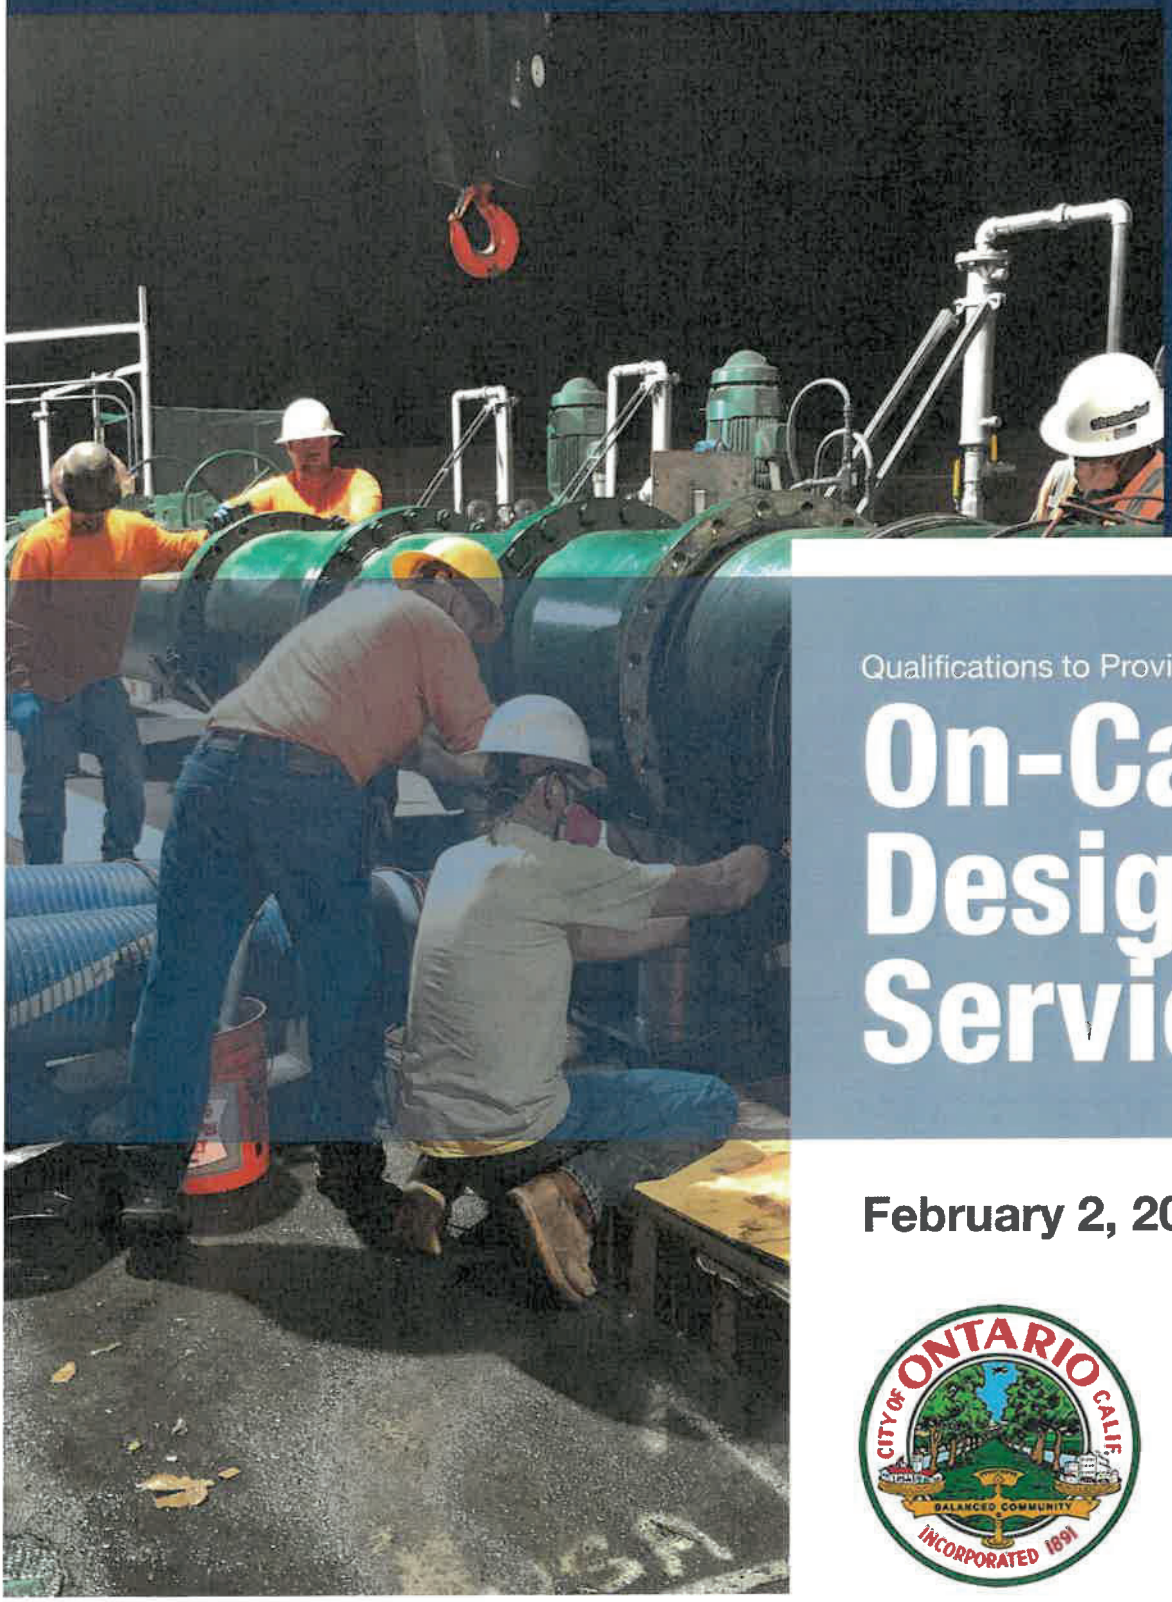
Expected services to be provided under this on-call contract will be performed under a task order system, need to be designed following City Guidelines or associated governing agency guidelines, and may include:

Capital Improvement Project Division

- Feasibility Studies
  - Preparing and/or updating Guidance Documents for Utility Feasibility Studies and Technical Reports
- Environmental services for CEQA/NEPA
- Geotechnical Investigations
- Erosion Control and Storm Water Pollution Prevention Plans
- Permitting and Grant writing support
- Surveying and Mapping
  - ALTA Surveys
  - Easements, Right of Way Preparation, and Mapping
  - Topographic Mapping
  - Field Design Surveys
  - Boundary Surveying and Monumentation
  - Benchmarks and centerline tie information
  - Legal Descriptions and Exhibits
  - Construction Staking
  - Conduct Potholing Services
- Construction Documents Development
- Street Improvements and Highway Design Engineering
- Civil, mechanical, electrical, structural, instrumentation design using AutoCAD 2023 or later
  - Transmission, Collection & Distribution Pipelines (water, sewer, recycled water, storm drain, etc.) facilities including water pipelines (transmission and distribution)
  - Groundwater Wells
  - Pump Stations
  - Pressure Reducing Stations
  - Reservoirs
  - Sewer Lift Stations
- Construction Engineering Support Services
  - Provide RFI review and response services
  - Submittal review and response services

- Project coordination services with City hired Construction Manager
- Final inspection and punch list services
- Convert Contractor's redlines to record drawings

Planning and Land Development Division



- Master planning to include infrastructure master plans
  - Hydraulic Modeling
  - Flow Monitoring

Ontario, CA 91764-4196

RE: Request for Qualifications for On-Call Design Services

Dear Purchasing Department:

Enclosed is Albert A. Webb Associates' (WEBB) response to the City of Ontario (City) toward providing On-Call Design Services to meet the City's project needs. We are confident we can tailor solutions to meet your needs and develop a strong relationship moving forward.

The City requires a responsive professional consulting firm who possesses the experience and resources needed to achieve the goals and objectives of the City. WEBB has provided engineering services for public clients for more than 75 years and recognizes the importance of being close to our clients. WEBB would like to illustrate to the City what makes us the absolute correct choice for your projects.

- We have resources available that can be dedicated to meeting all the City's needs. We are local and can react to the needs of the City in a very short time frame. We can and will to handle both large and small projects and tasks with the resources available to us.
- We have extensive experience with providing numerous on-call services to multiple public agencies including providing in-house staff.
- All of our project managers are invested in providing the City with the highest quality work products to achieve your goals. Our project managers pride themselves on customer service through effective coordination and communication on all projects.
- We have long working relationships with many sub-consultants to augment our services on a project specific basis, providing all the services needed for a particular project and reducing the City's coordination effort.

WEBB is committed to contributing the highest quality assistance possible to achieve the City of Ontario's goals. We look forward to the opportunity to discuss our qualifications and answer any questions you may have. I can be reached at (951) 686-1070.

Sincerely,

Bruce A. Davis, PE
Senior Vice President
bruce.davis@webbassociates.com

Section 1. Executive Summary

WEBB's proposal details the firm's qualifications, the experience of the firm and project team, and our plan to complete successful projects for the City with highlights noted as follows:

Firm Profile

- Long-standing financially stable civil engineering firm since 1945 primarily serving the Inland Southern California
- Extensive experience in civil engineering, planning, design, and construction
- Multiple disciplinary firm capable of providing all primary services "in house"
- Professionally licensed in the State of California
- Local Inland Southern California references on recent and current projects of similar scope

Staffing Resources

- Assigned Principal-in-Charge, **Bruce Davis, PE,** specializes in managing multiple disciplines
- WEBB's Water Resource Team has extensive experience providing similar services to public agencies and are ready to assist the City
- Full-time project managers with project teams available
- Multiple disciplinary firm of over 180 associates capable of providing all primary services
- Support services from highly qualified firms to provide required specialized services

Experience and Technical Competence

- Recent and current projects of similar scope
- Superior quality work, integrity, and long-standing client relationships
- Understanding of projects, deliverables, and required scope of services
- Tested approach to project management and processing
- WEBB has extensive experience working with cities and agencies and utilizes best practices
- Strive to reach client goals for each project and responsive to client requests and needs
- Project teams are currently providing on-call services for multiple city's

Quality Assurance

- Tested standardized approach to project management
- Quality control embedded in every stage of project development
- Assignment of highly qualified project managers and resources to individual projects
- Identification of critical issues on each project and how to mitigate based on experience
- Boots on the ground approach to reviewing each individual project for design considerations

Differentiators

In selecting the right consultant, the City should know what makes our WEBB Team the absolute right choice for this project. With the collaboration of our team and the City, the City's projects will benefit from:

- A highly experienced team in public works projects
- Firm resources with the capacity to meet project schedules
- Consistent presence and involvement of principals through all stages of the project
- Implementing lessons learned on public agency services to improve design
- Identifying and addressing critical issues

Since 1945, Albert A. Webb Associates (WEBB), a [redacted], has provided consistent civil engineering services to public sector clients in California, demonstrating remarkable financial stability. With offices in Riverside and Murrieta, we strategically cater to diverse client needs. WEBB is a comprehensive in-house professional services firm specializing in public and private sector clients throughout Inland Southern California, offering a wide range of services spanning project development, planning, design, entitlement, funding, permitting, construction management, and inspection. Our enduring legacy, strategic locations, and broad expertise position WEBB as the top choice for comprehensive civil engineering services, ensuring project success and nurturing lasting professional partnerships.

Section 4. Staffing Resources

Principal-In-Charge and Team Overview

Knowledge, experience, and responsiveness are the key elements of a strong team needed to exceed the City's goals and expectations for all your projects. WEBB has put together a team of professionals that will deliver these key elements to all future projects. You will not find a team that has more knowledge, background, technical expertise, and the experience of working collaboratively on recent successful projects than you find with this project team. The assembled team has a long history of working together, which increases communication and efficiency when managing projects for the City.

Bruce A. Davis, PE
Senior Vice President

Principal-In-Charge Highlights

- Over 30 years of pertinent experience with WEBB
- Has successfully worked with all team members
- Extensive background leading multiple disciplines

"I'll lead the City's projects hands-on, ensuring timely delivery and top-notch quality. With our team's relevant technical expertise from successful projects, WEBB is the ideal partner for the City."

- Bruce A. Davis, PE

Bruce Davis, PE, is a Senior Vice President at WEBB. Bruce's breadth of experience and in-depth technical and professional background with both public and private projects make him a well versed consultant with the ability to serve the best interests of both public agencies and private clients. Bruce's past experience has allowed him to be successful in a number of large and complex projects over the last 38 years. His unique ability to understand the planning and civil engineering needs of a project, coupled with his uncanny ability to mediate problems and find creative solutions with all constituents involved, makes him a highly sought after consultant.

Our assigned project team consists of senior level professionals who will perform the required tasks for the City. By taking this hands-on approach, an experienced professional always has in-depth and intimate knowledge of each project task. This improves overall project management, reduces the opportunity for costly mistakes and delays, and allows our staff to provide very effective and efficient service to you. Coordination is critical for your civil engineering projects. Every project assigned to WEBB will include principal involvement.

When an RFP is received, our Principal-in-Charge will work with one of our project managers to develop the best team for each project. WEBB's project managers will maintain direct and continued responsibility for services provided under the duration of the contract. The chosen project manager will serve as the primary contact on matters dealing with specific projects, managing the day-to-day activities throughout project completion. Our team members are readily available to you and remain accessible throughout the project to the extent required to successfully complete it. Our key personnel will be available to the extent proposed for the duration of the project acknowledging that no person designated as "key" to the project shall be removed or replaced without the prior written concurrence of the City.

WEBB has a variety of subconsultants to fortify our project team pending project requirements. WEBB will supplement when necessary to create a strong team approach for the City's projects. WEBB ensures all subconsultants are DIR registered and will provide the documentation prior to contract execution.

Task Leader Overview

Brad Sackett, PE, has over 20 years' experience designing projects for various public agencies. Brad has unparalleled experience with public agencies water/sewer systems which will dramatically reduce the ramp-up time and effort on these focused engineering projects. His work ethic toward all clients ensures we are committed to follow through on all project details during project implementation.

David Algranti, PE, is a Chief Design Engineer with WEBB's Water Resources Department. Dave has years of experience in the planning, design, and construction of water resources projects. With such deep knowledge of water-related systems, he assists as technical advisor for all WEBB teams handling such projects for clients.

Kris Danielson, PE, will provide planning, hydraulic modeling, and engineering evaluations for water and sewer facility improvements for the City's projects. Kris specializes in hydraulic analysis, sewer system master planning, field inspection, and construction management. His responsibilities include the planning and design of public works facilities, fluid system modeling, and report preparation. Kris has over 20 years of experience at WEBB.

Siming Zhang, PE, has managed and designed public works projects consisting of water storage reservoirs, water transmission pipelines, major trunk sewer mains, sewer collection pipelines, sewer lift stations, and water booster stations in his 34 years of experience.

Sinnaro Yos, PE, has over 20 years' experience managing the design and construction of a wide range of public works projects that enhance water quality and supply including water and wastewater systems, water reclamation, and water and wastewater treatment. Sinnaro focuses on master plan reports for water and wastewater systems, water and sewer pipeline sizing and hydraulic analysis, alignment analysis, and pipe thickness design.

Shane Bloomfield, PE, has over 20 years' experience in many diverse water and wastewater projects. Shane specializes in the design of projects consisting of major pumping plants, groundwater pumping wells, sewer collection system design, water distribution system design, wastewater treatment plant design, disinfection systems, and hydraulic system modeling.

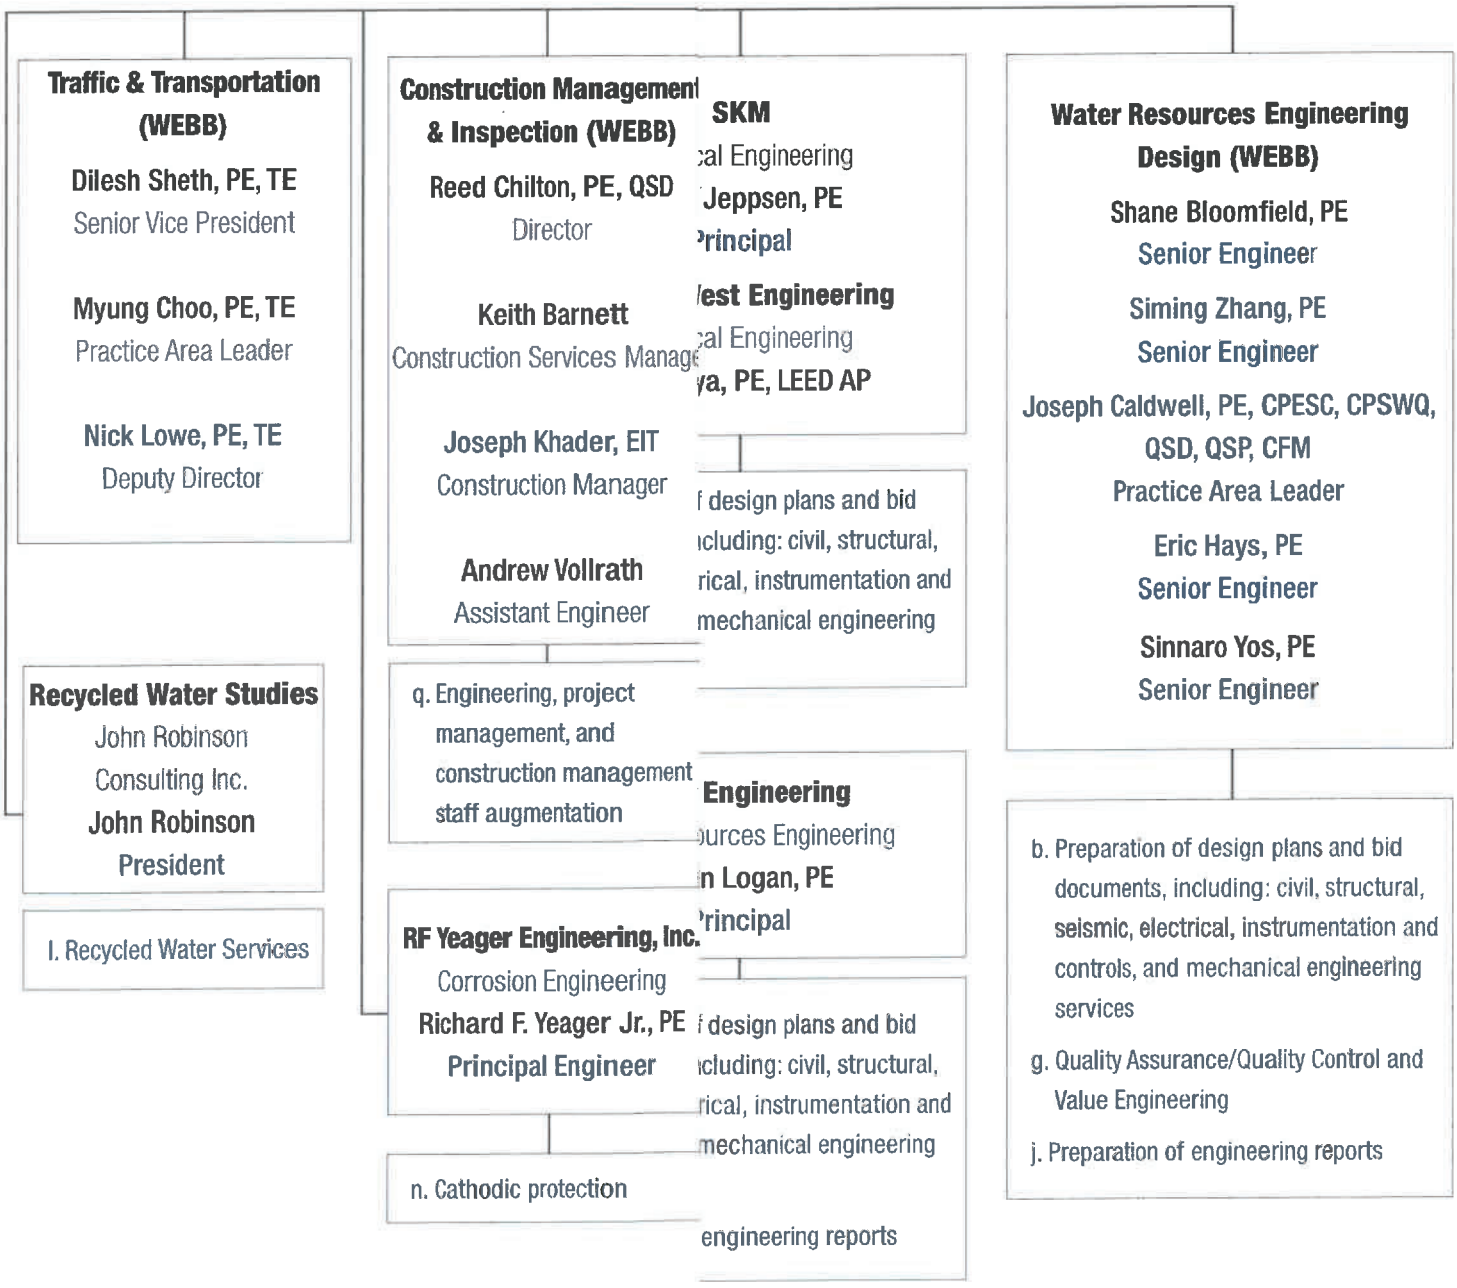
Joseph Caldwell, PE, CPESC, CPSWQ, QSD, QSP, CFM, is the Practice Leader of WEBB's Water Resources Department. Joseph focuses on the development of master drainage plans, the design of backbone drainage infrastructure, and the design of water quality systems for flood control projects throughout the region. A Certified Professional in Erosion and Sediment Control and Storm Water Quality, Joseph is a specialist in water quality and environmental compliance and an expert in hydrology and hydraulics. Joseph has over 20 years of experience at WEBB.

Reed Chilton, PE, QSD, will provide construction management and inspection services for the City's projects. As Director of WEBB's Construction Management and Inspection Department, Reed has a bench of qualified in-house inspectors that will be available for the City's projects. Reed specializes in sewer lines, drainage facilities, water lines, recycled water lines, wastewater treatment facilities, dry utilities, street improvements, street lighting, traffic signals, and landscaping.

Stephanie Standerfer is the Vice President over the Environmental Services Department for WEBB. Stephanie has over 20 years' professional experience as an environmental planner, specializing in managing large California Environmental Quality Act (CEQA) projects for both public and private projects. Stephanie has managed large project and program Environmental Impact Reports (EIRs) for water districts, cities, and private developers.

Michael Johnson, LLS, is WEBB's Land Survey Practice Leader and has over 30 years of experience in all aspects of surveying from initial project coordination and research, to performing survey data adjustments, and analysis.

Chandler Drachslin is an Assistant Engineer and is WEBB's GIS expert providing support to all in-house services in addition to working on public works projects as part of the Water Resources Department.



Key Personnel Organization

The following chart provides an overview of key personnel the project manager, will be available for the duration of the City's projects.

Principally Responsible Individuals:

1. Bruce Davis, PE - Principal-In-Charge
2. Jeff Hart, PE - Deputy Director
3. Bradley Sackett, PE - Technical Advisor

WEBB has the capacity to provide additional personnel as needed to complete the City's Projects.

Bruce Davis, PE

Senior Vice President

Bruce Davis is a Senior Vice President WEBB. Bruce has been a full-time employee of WEBB since 1986. Bruce currently serves as Director of Water Resources. As Director, he oversees all water and wastewater projects performed by the firm. Since 2018, Bruce has taken the lead representing WEBB in matters involving engineering standard of care and risk management. Bruce is a registered civil engineer in the State of California.

Bruce has served as Principle-in-charge for well over one hundred regional infrastructure projects. His experience includes planning, design and support during construction of water, wastewater, drainage and transportation projects on behalf of clients including Jurupa Community Services District, Eastern Municipal Water District, Coachella Valley Water District, and cities of Corona, Murrieta, Rancho Mirage, Ontario, Grand Terrace, Rialto and Cathedral City. Project types include pipelines from 8-inch diameter up to 60-inch diameter, pumping ranging in size from one hundred gallons per minute to over 5,000 gallons per minute and storage facilities ranging in capacity from five hundred thousand gallons to over twenty million gallons, roadways, signals, storm drains and basins. Recent water industry projects include O'Ferrelll Street Booster Pump Station, Redlands/Hemlock Booster Pump Station, Longview and Watson Roads pipelines, Perris II Desalter pipeline and Markham 7.0-million-gallon storage tank.

Along with experience with regional infrastructure projects, Bruce has extensive knowledge and experience with survey, planning, entitlement, development (residential and commercial) and environmental services. His extensive experience translates to an understanding of all steps required to successfully complete a project efficiently and on schedule. Bruce has served as an expert witness in matters involving land use, entitlements and drainage.

Bruce is a member of and/or involved with American Public Works Association, American Water Works Association, Association of California Water Agencies and League of California Cities. He served several years as a Board member of CalWater PAC which is a political action committee advocating for issues important to California's water supply. Bruce serves as an excellent resource for his clients on current issues and trends in our region.

Jeff Hart, PE

Deputy Director, Water Resources

As Deputy Director of the Water Resources Department at WEBB, Jeff Hart uses his 25 years of experience in public works to support the execution of all water resources projects. He is also responsible for assigning project managers to each project and ensuring all project obligations are met with the highest standard. Jeff has previously managed and implemented over $800M of Capital Improvement Projects. He has split his years of experience working with both public and private sector clients; serving as City Engineer, Public Works Director, and Floodplain Manager for the public sector, and Director of Engineering and Deputy Director of Water Resources for the private sector. Jeff is well versed having acted as a representative across various committees, councils, and commissions.

Bradley A. Sackett, PE

Senior Engineer

Brad Sackett, PE, is a Senior Engineer and Project Manager with WEBB's Water Resources Department. Brad specializes in assisting major public agencies with a wide variety of water resource projects. Clients seek his expertise with pumping facilities, water pipeline design, gravity sewer main design, water and sewer system master plans, hydraulic modeling analysis, and sewer resource plans for Specific Plan Environmental Impact Reports (EIRs), among other projects.

Brad has been instrumental in assisting clients with in-house projects, while representing these agencies with their constituents as an on-site consultant. Throughout Brad's career he has been intricately involved in the design, management, and construction support of projects for such clients as Eastern Municipal Water District (EMWD), Western Municipal Water District (WMWD), and the cities of Riverside and St. Helena, to name a few.His detailed approach ensures each project integrates flawlessly into master plan requirements from concept through construction. He specializes in operations take-over and integration of systems with a focus on cost effective and efficient transitions.

Siming Zhang, PE - C 60158
Senior Engineer

Siming Zhang, PE, is a Senior Engineer with WEBB's Water Resources Department. Siming assists clients in managing and designing a wide array of public works projects including water storage reservoirs, water transmission pipelines and booster stations, major trunk sewer mains, sewer collection pipelines and sewer lift stations, and water booster stations.

Shane Bloomfield, PE - C77435
Senior Engineer

Shane Bloomfield, PE, is a Senior Engineer with WEBB's Water Resources Department. Shane specializes in the design of public works projects consisting of major pumping plants, groundwater pumping wells, sewer collection system design, wet well rehabilitation, water distribution system design, wastewater treatment plant design, and hydraulic system modeling using various computer models. He has engineering design responsibilities for several projects for public works agency clients including the City of Ontario, City of Riverside, Jurupa Community Services District, Eastern Municipal Water District, and Crestline-Lake Arrowhead Water Agency.

Joseph Caldwell, PE, CPESC, CPSWQ, QSD, QSP, CFM - C 67239
Practice Leader - Water Resources

Joseph Caldwell, PE, is the Practice Leader of WEBB's Water Resources Department. Joseph focuses on the development of master drainage plans, the design of backbone drainage infrastructure, and the design of water quality systems for flood control projects throughout the region. A Certified Professional in Erosion and Sediment Control and Storm Water Quality, Joseph is a specialist in water quality and environmental compliance and an expert in hydrology and hydraulics.

Eric Hays, PE - C 73614
Senior Engineer

Eric Hays, PE, is a Senior Engineer with WEBB's Water Resources Department. Eric has years of diverse engineering experience with deep knowledge in the fields of hydrology, hydraulics, and drainage design. His experience includes the preparation of preliminary design reports, alternative analysis studies, canal design plans for flood control infrastructure projects, and storm drain system designs for residential, commercial, industrial, and public agency projects.

Sinnaro Yos, PE - C 68607
Senior Engineer

Sinnaro Yos, PE, is a Senior Engineer with WEBB's Water Resources Department. Sinnaro offers clients extensive experience managing the design and construction of a wide range of public works projects that enhance water quality and supply including water and wastewater systems, water reclamation, and water and wastewater treatment.

Kristopher A. Danielson, PE - C 79743
Senior Engineer

Kristopher (Kris) Danielson, PE, is a Senior Engineer with WEBB's Water Resources Department. Kris specializes in hydraulic analysis, sewer system master planning, field inspection, and construction management. His responsibilities include the planning and design of public works facilities, fluid system modeling, and report preparation.

Dilesh Sheth, PE, TE - C 65078 and TE 2112
Senior Vice President

Dilesh Sheth, PE, TE, is a Senior Vice President with WEBB and is Director of the Traffic & Transportation Department. Dilesh assists public and private clients with sophisticated civil works projects. Clients benefit from his expertise in presenting project findings and recommendations to elected officials, municipal commissions, community groups, and the general public. Dilesh has coordinated projects with Caltrans and numerous counties, cities, flood control districts, utility companies, residential, and business owners throughout Inland Southern California. This experience enables him to help clients realize a wide range of project goals and comply with varied requirements.

Myung Choo, PE, TE - CA 79651 and TE 2451
Practice Area Leader - Traffic & Transportation

Myung Choo, PE, TE, is a Traffic & Transportation Practice Area Leader in WEBB's Traffic and Transportation Department. In his role he develops the technical abilities of WEBB Team to better assist clients in achieving their transportation goals through preparing traffic studies, designing new traffic signals and upgrading existing traffic signals. Clients benefit from his extensive knowledge of governmental agency procedures, design, geometrics, signs, traffic controls, parking and maintenance. Among his duties, he presents findings and recommendations on traffic matters to elected officials, municipal commissions, community groups and the general public.

Nick Lowe, PE,TE - C 87666 and TE 3056
Deputy Director - Traffic & Transportation

Nick Lowe, PE, is a Deputy Director with WEBB's Traffic and Transportation Department. Nick assists clients with traffic signal upgrades, signing and striping modifications, and pavement improvements. He also develops temporary traffic control plans for construction while working closely with public agencies, contractors, and construction managers to safely expedite projects, thus minimizing impacts to traffic and businesses.

Stephanie Standerfer
Vice President

Stephanie Standerfer is a Vice President and Director of WEBB's Environmental Services Department. Stephanie has worked as an environmental planning project manager, focusing on California Environmental Quality Act (CEQA) matters for small, medium, and large public and private projects. Stephanie has managed all levels of CEQA documents for healthcare clients, community college districts, water districts, cities, counties, and private developers. Her varied project experience allows her to foresee and navigate challenges that arise during CEQA compliance. As an expert in CEQA implementation throughout Inland Southern California, she also provides local agencies training in CEQA processing. She regularly oversees and coordinates with large teams of environmental planners, engineers, and architects and actively assists her clients through the environmental compliance gauntlet.

Cheryl DeGano
Practice Area Leader

Cheryl DeGano serves as a Practice Area Leader with WEBB's Environmental Services Department. Cheryl manages the preparation and approval of environmental and planning documents for public and private sector clients. During her consulting career, Cheryl has been responsible for the preparation and processing of environmental and planning documents including environmental impact reports, environmental assessments, initial studies and mitigated negative declarations, mitigation monitoring and reporting programs (MMRPs), specific plans, development impact fee ("Nexus") studies per California Government Code 66000 et seq., and development and entitlement applications.

Autumn DeWoody
Senior Environmental Analyst

Autumn DeWoody is a Senior Environmental Analyst with WEBB's Environmental Services Department. Autumn offers clients a bridge between our technical municipal and stormwater engineering services and environmental documentation. She regularly partners with WEBB's project managers to prepare various planning documents on behalf of our water, wastewater, and flood control district clients. In addition, Autumn offers private and public clients jurisdictional delineations and regulatory permitting services as well as environmental monitoring at construction sites to ensure compliance with Mitigation, Monitoring, and Reporting Plans (MMRPs). She has been repeatedly commended by clients on the frequency and helpfulness of timely updates during permit processing.

Eliza Laws
Air Quality Practice Leader

Eliza Laws is an Air Quality Practice Leader with WEBB's Environmental Services Department. Eliza assists public and private clients in the preparation and approval of environmental and planning documents. During her consulting career, Eliza successfully prepared or directed the preparation and processing of environmental documents under both the California Environmental Quality Act (CEQA) and National Environmental Quality Act (NEPA) for public and private clients. She has been responsible for all aspects of these projects including research, data collection and analysis, report writing, quality assurance/quality control review, preparation of distribution lists, direction of public noticing, project management, preparation of technical studies related to air quality, greenhouse gas (GHG), and health risk assessments, direction of technical studies, representation at public meetings and hearings, and agency and client coordination.

Reed Chilton, PE, QSD - C 83827
Director - Construction Management and Inspection

Reed Chilton, PE, QSD, is Director of WEBB's Construction Management and Inspection Department. Reed has worked on a variety of private and public projects and has established a strong foundation in the engineering and construction management profession. His project experience includes sewer lines, drainage facilities, water lines, recycled water lines, wastewater treatment facilities, dry utilities, street improvements, street lighting, traffic signals, and landscaping. Specifically, his involvement with these projects includes preparation of specifications and bid documents, contract management and administration, permitting, submittal and RFI review and coordination, leading meetings, field investigations, project documentation, review and approval of change orders and pay estimates, project close-out, and managing day-to-day needs for owners and contractors. Reed manages and schedules WEBB's Inspection Team.

Keith Barnett
Construction Services Manager

Keith Barnett is a Construction Services Manager and Inspector with WEBB's Construction Management and Inspection Department. Keith has more than 25 years of experience with various types of projects. His experience as a construction manager for various large scale projects, coupled with his decisive nature and excellent project management skills, has made him capable of overseeing teams, budgets, and schedules. Keith is adept at client relationship management, scope development, and field monitoring.

Joseph Khader, EIT
Construction Manager

Joseph Khader, EIT is a Construction Manager with WEBB's Construction Management and Inspection Department. Joseph has more than 20 years of experience with various types of projects. His experience as a construction manager for various large scale projects, coupled with his decisive nature and excellent project management skills, has made him capable of overseeing teams, budgets, and schedules. Keith is adept at client relationship management, scope development, and field monitoring.

Andrew Vollrath
Assistant Engineer

Andrew is currently an assistant engineer working on receiving his Professional Engineering License. Andrew manages the progress of numerous projects, with the goal of a high-quality product within budget and schedule. His role includes preparing and negotiating the financial aspects of the job, ensuring materials are up to standard, maintaining communication between owners, contractors, and engineers, and collaborating with designers and public agencies to ensure a successful construction process.

Subcontractors

AQUA ENGINEERING

Water Resources Engineering

Justin Logan, PE

533 W 2600 S Suite 25
Bountiful, UT 84010
T: 801.299.1327

AQUA Engineering (AQUA) is a civil engineering firm specializing in municipal engineering, water and wastewater treatment design, water resources, and environmental services. AQUA is headquartered in Bountiful, Utah with a new location in Denver, Colorado, and has provided quality services to clients throughout the west. As one of the region's leading civil engineering firms, they are qualified, responsive, and highly experienced in the design, operation, and maintenance of water and wastewater treatment facilities. WEBB has worked with AQUA for over 10 years.

skm

Electrical Engineering

Mark Jeppsen, PE

533 W 2600 S Suite 25
Bountiful, UT 84010
T: 801.677.0011

SKM Engineering (SKM) will provide electrical engineering services for the City's project. SKM is a premier electrical engineering firm specializing in SCADA (supervisory control and data acquisition), telemetry, and electrical and control design. They employ a staff of highly trained electrical engineers with extensive experience in electrical design, instrumentation and controls, and PLC and HMI programming and design services. Their focus on wastewater and water systems provide clients with extensive process knowledge and understanding of water well and treatment projects.

DESIGN WEST ENGINEERING

Electrical Engineering

Leo Maya, PE, LEED AP

412 E Vanderbilt Way
San Bernardino, CA 92408
T: 909.890.3700

Design West Engineering (DWE) will provide electrical engineering services for the WEBB Team. They were founded on the philosophies of second-to-none service, environmental sensibility, and commitment to forward-thinking innovation. Established in 2000 and centered on these ideas, DWE quickly grew to become one of Southern California's most prominent and the Inland Empire's largest MEP firms. DWE currently maintains approximately 35 employees and offers a diversified range of practical experience in municipal, educational, green-building, transportation, medical, commercial, and residential building sectors. Their highly qualified and innovative engineers work in a multi-disciplined environment, each familiar with overall project requirements in addition to their specific area of expertise, and offer the most up-to-date expertise in the latest technologies to maximize your project's potential.

KLEINFELDER

Structural/Architectural Engineering

Christina Nishimoto, PE, SE

770 First Avenue, Suite 400
San Diego, CA 92101
619.831.4600

Kleinfelder will provide structural engineering services for the WEBB Team. Kleinfelder's structural engineering services are delivered by a multi-disciplinary team of experts to various public agencies and private companies. During the past 25 years, their experienced structural engineers have gradually adapted to changing technology, codes, and standards. Kleinfelder's structural design is fully integrated with technology using the most recent software developments such as BIM (Building Information Modeling), SAP 2000, Larsa 4D Bridge Plus, and others.

Kleinfelder's structural engineers have extensive experience in the design and construction management support for a variety of projects utilizing current guidelines, codes, and standards. They have an outstanding reputation of accomplishing projects on time and within the original negotiated budget.

R.F. Yeager ENGINEERING

Corrosion Engineering

Richard F. Yeager Jr., PE

1016 Broadway Ste. A
El Cajon, CA 92021
T: 619.312.0195

RF Yeager Engineering is a DVBE/SBE, SLBE, and SCOOP certified corrosion engineering firm providing corrosion control inspections and design services for the oil, fuel, water, and wastewater industries. Established in 2004, they have built strong relationships with many of the local public agencies and municipalities and truly believe that Client and Owner satisfaction is the method in which to measure a project's success. They pride themselves in being responsive to the Client's needs and to offer a quality product, personalized service, and at a competitive rate.

Converse Consultants
Geotechnical Engineering & Consulting
Environmental & Groundwater Science
Materials Testing & Inspection Services

Geotechnical Engineering

Hashmi Quazi, PhD, PE, GE

717 S. Myrtle Ave.
Monrovia, CA 91016
T: 909.796.0544

Converse Consultants provides professional services in the fields of geotechnical engineering, engineering geology, groundwater sciences, environmental sciences, and soils and materials testing and inspection. Their mission is to work together with clients to provide them with responsive and quality services, resulting in the development of long-term relationships. Clients include public agencies and private sector clients in the transportation, water/wastewater, educational, residential, commercial, and other market segments.

SMITH - EMERY SE 1904

Geotechnical Engineering

Josh Greeley

1197 Tustin Avenue
Anaheim, CA 92807
T: 714.238.6133

Since 1904, Smith-Emery has delivered exceptional service to the construction industry. They are a singular source for highly-experienced professionals successfully servicing today's complex building projects. Smith-Emery's trusted advisors stay ahead of trends and provide a rare depth of service, continuously demonstrating their ability to change with and stand the test of time. They've been a pillar in this industry for more than 100 years, and that's why their private and public clients keep coming back. Worldwide, their 400+ employees work every day to help make building environments safer and more secure. From their internal processes to the projects they deliver, to the skills they offer their clients, they strive to do things better, and let their track record speak for itself.

Ninyo & Moore Geotechnical and Environmental Sciences Consultants

Geotechnical Engineering

Michael Putt, PG, CEG

1197 Tustin Avenue
Anaheim, CA 92807
T: 949.753.7070 x 12321

Ninyo & Moore Geotechnical and Environmental Sciences Consultants was established to provide geotechnical and environmental engineering, soil and materials testing, and inspection services to clients in the governmental (federal, state, and local), commercial, and private sectors. Ninyo & Moore has helped clients develop and implement innovative solutions to geotechnical and environmental challenges since 1986. Services provided by Ninyo & Moore encompass all phases of a project, from the planning stage through design and construction.

PUZZULLO CONSULTING
CONSTRUCTION PROJECT MANAGEMENT

Cost Estimating and Value Engineering

Jeff Puzzullo

504 Machado Way
Vista, CA 92308
T: 760.533.3500

With a career based upon construction of public works improvement projects, Jeff Puzzullo has been involved in many of the municipal infrastructure projects in California, Nevada, and Arizona since 1980. Puzzullo Consulting strives to provides its clients with excellent cost estimating and project planning budgeting based upon preliminary and advanced levels of design detail. Each cost estimate is prepared in fine detail similar to what a bidding general contractor would take to develop a total project construction cost. With Mr. Puzzullo's direct hands-on construction business management experience, extreme care is taken to include all costs that may be anticipated by a contractor during the performance of a construction contract. It is this experience and capability that our clients can rely on for a accurate, realistic, and complete cost estimates, constructability reviews, value engineering, and/or CPM project schedules.

JOHN ROBINSON Consulting, Inc.

Recycled Water Studies

John Robinson

1055 E Colorado Boulevard, Suite 500
Pasadena, CA 91106
T: 626.796.9141

John has approximately 30 years of experience in engineering consulting, construction management, project leadership/project management, operational/ fiscal management and market sector strategy development focused most recently on obtaining local, State and Federal grants and/or loans for public agencies and special districts.

Section 5. Fiscal Stability

Albert A. Webb Associates does not hold any controlling or financial interest in any other organization, nor is owned or controlled by any other person or organization. WEBB is a financially secure California corporation. We assure our clients we have the financial resources and organizational capabilities to conduct and complete the required services in a proficient and professional manner. As a privately held company, WEBB does not typically provide financial information; however, we have provided our audited financial as a general attachment in PlanetBids.

Section 6. Experience and Technical Competence

Our local knowledge and experience gives us the ability to efficiently assist the City throughout the analysis, planning, design, and construction process with a minimum of "ramp up" time. Also, our proximity in relation to the City makes for easy coordination and a minimum of travel time. *WEBB has worked with the City on numerous water, wastewater, recycled water, and water supply assessment projects for over 27 years and has built a complete understanding of not only the City's infrastructure, but the City's needs.* In addition, WEBB has provided similar services throughout the Inland Southern California since 1945, during which WEBB has built an enormous understanding of the region as well as a reputation for being the go-to firm for various water infrastructure engineering needs, both small and large. *WEBB has chosen three leaders to oversee our project team and are currently responsible for managing similar projects throughout the region*. Our management approach will readily accommodate this project. We understand the needs of projects that provide services to the public.

Ability to Maintain Budgetary Control

Accurate estimates begin with a well-defined scope of work and deliverables. WEBB will work closely with the City to determine the parameters of the project and then, using our extensive database of cost information from similar projects, we will prepare a detailed estimate to complete project construction. Typically, project estimates are prepared during planning, preliminary design, and updated upon completion of design. This process assists with identifying potential budgetary problems early so corrective action can be taken.

Quick Response to the City's Project Needs

The size and experience of our staff in the Riverside office gives us the flexibility to draw upon design teams with strong technical skills regardless of the type of project proposed, and all are led by talented managers with extensive experience. These teams will enable us to accommodate scheduling needs the City may have during the life of the contract.

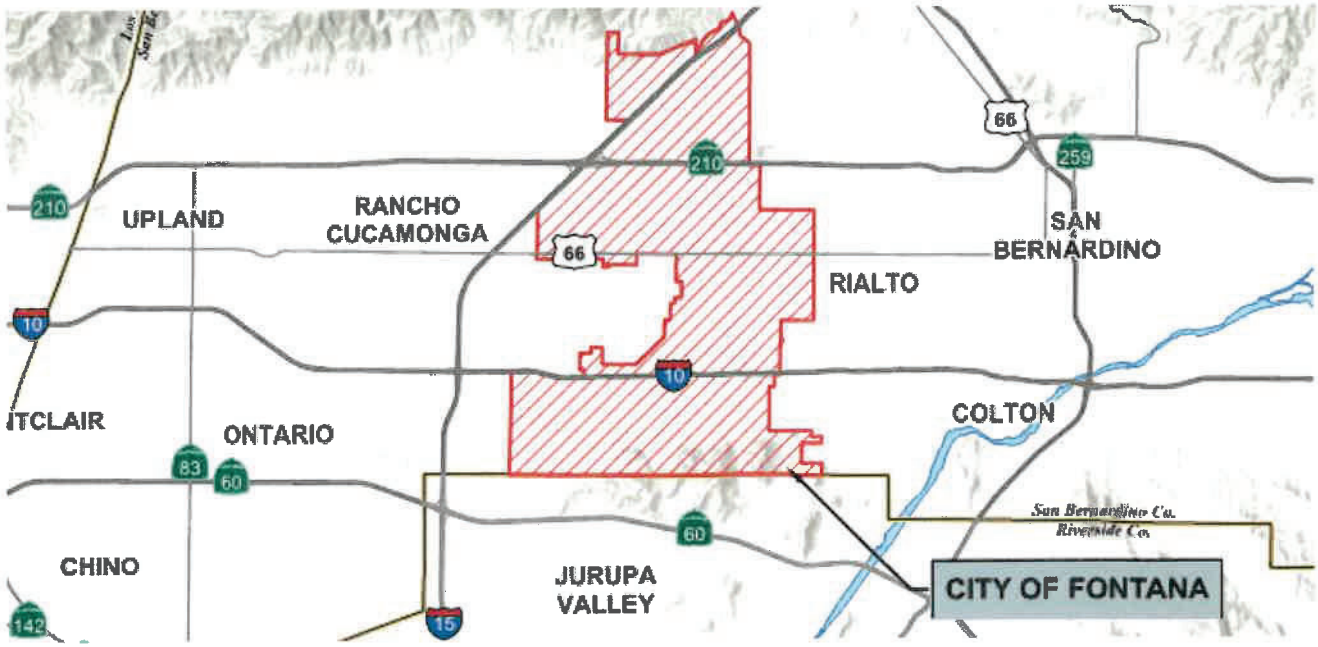
Available Resources

- WEBB's Water Resources Department is comprised of 23 full-time associates with registered engineers specializing in water, non-potable water, wastewater, and stormwater that are ready to assist the City
- Seven full-time project managers with project teams available
- Multiple disciplinary firm of over 180 associates capable of providing most services in-house and utilizing our bench of trusted subconsultants to supplement additional project needs
- Support services in-house to provide project managers support include survey and mapping, traffic and transportation, environmental services, land survey, landscape architecture, and construction management and inspection (See Technical Competence portion at the end of this section)

Capable of Managing Itself

- Project management approach designed to establish clear lines of communication for expectations from start to finish
- A project manager with experience managing all subconsultants
- Extensive experience in water, wastewater, and drainage infrastructure projects for public agencies by assigned team
- Strive to reach client's goals and responsive to client's requests and needs for each project
- Recent and current projects of similar scope
- Superior quality work, integrity, and long-standing client relationships

Key Personnel



- Assigned Principal-In-Charge, **Bruce Davis, PE,** specializes in CIP water, wastewater, and drainage improvements
- Highly qualified Technical Advisors, **Brad Sackett, PE** and **Jeff Hart, PE,** who have worked together on similar projects.
- Key personnel will be available as proposed for the duration of the project

References

The City will benefit from WEBB's team approach to client service. Our reputation for superior quality work, integrity, and long-standing client relationships is a direct result of our industry proven capabilities and experience. We encourage the City to speak with your staff who have worked with our firm and call our references to truly understand the commitment we make to each of our clients and their projects.

Client Contact	Description of Services
Eastern Municipal Water District Greg Kowalski, PE, Engineering Manager T: 951.928.3777 E: kowalskig@emwd.org	Various pipeline replacements, upgrades, new tank/reservoir construction
Coachella Valley Water District Sabrina Nies, PE, Engineering Manager T: 760.404.5627 x 2288 E: snies@cvwd.org	Various engineering services including water and sewer, traffic and transportation, construction management and inspection, environmental services, land surveying
San Bernardino Special Districts Byanka Velasco, PE, Division Manager T: 909.386.8834 E: byanka.velasco@dpw.sbcounty.gov	Various including water and sewer projects, plan checking, environmental services,
Jurupa Community Services District Eddie Rhee, PE, Engineering Manager T: 951.685.7434 x 118 E: erhee@jcsd.us	WEBB has provided engineering services to JCSD for over 60 years including general engineering services, plan checks, project management, construction management and inspection, land survey, hydraulic modeling, and environmental services.
City of Ontario Municipal Utilities Company Thomas Palmieri, PE T: 909.395.2688 E: tpalmieri@ontarioca.gov	Various engineering services including water and sewer projects, stormwater, well equipping, construction management and inspection, and environmental services.

Project Specific Experience

Sewer Master Plan Update

City of Fontana

Client Contact:
David Hammer, PE
Engineering Manager
City of Fontana
909.350.7627
dhammer@fontanaca.gov

Dollar Value of Fee (Design):
$478,502

Duration of Services:
September 2022 - September 2023

Relationship to Client:
Prime Consultant

Project Team:
Bruce Davis, PE
Kris Danielson, PE
Brad Sackett, PE
Joseph Caldwell, PE
Sinnaro Yos, PE

The WEBB Team prepared an updated Sewer Master Plan for the City of Fontana (City). The project included the update of the 2023 Sanitary Sewer System Master Plan to evaluate the existing system for capacity, along with identifying existing and future deficiencies in the collection system as a result of future development through build-out of the community.

This project required data collection and field investigations, GIS gap analysis, temporary flow monitoring plan, update of current flow generation data, hydraulic sewer model calibration and update as well as analysis. WEBB provided guidance on selecting new hydraulic modeling software for the City's entire wastewater system.

WEBB provided the City with an updated Sewer System Master Plan and worked with City Staff to review existing sewer projects and development activity in progress to set the foundation for a new Capital Improvement Plan (CIP) and sewer line replacement program.

WEBB also conducted a connection fee study and sewer lift station analysis as part of this project.

Various Capital Improvement Projects *(Partial List)*

Jurupa Community Services District (JCSD)

Client Contact:
Eddie Rhee, PE
Engineering Manager
Jurupa Community Services District
951.685.7434 x118
erhee@jcsd.us

Dollar Value of Fee (Design):
Various

Duration of Services: Ongoing

Relationship to Client:
Prime Consultant

Project Team:
Bruce Davis, PE
Brad Sackett, PE
Siming Zhang, PE
Shane Bloomfield, PE
Kris Danielson, PE
Sinnaro Yos, PE

Regional Lift Station Upgrades *(Partial List)*

- Multiple Sewer Bypass including a large multi-week bypass
- Concrete repair lining in wet well and dry well
- Pump room upper deck steel modifications
- Concrete encasement of existing wet well columns
- Manhole improvements such as replacement, rehab
- Stainless steel sluice gate in manhole
- Add motorized actuator to influent slide gate
- Replacement monorail and crane hoist
- Steel & DIP piping below and above grade

Waterline Replacement Program - *(Potable Water)*

- 45 years of service to the JCSD
- Aggressive waterline replacement program to upgrade existing service since 1986
- 10,000-LF of 8-inch to 12-inch dia. CML/CMC water distribution mains annually
- Preparation of plans and specifications, utility research, coordination with fire and transportation departments
- Waterlines installed in minimal ROW streets congested with exiting utilities

Sewer Bond Projects

- Van Buren Bridge Force Main Crossing, 2,400-LF 24-inch diameter Sewer
- Florine Sewer Lift Station, 3,500-LF 10-inch dia. Gravity & Force Main
- Upgrades and Enhancements to Electrical/SCADA at Plant 1
- Regional Force Main to City of Riverside WWTP – 17,600-LF of 24-inch diameter Force Main and 2,200-LF of 27-inch diameter Gravity Sewer
- Pyrite Creek Trunk Sewer, 10,300-LF of 30-inch and 36-inch diameter
- 7,200-LF of 8-inch to 21-inch diameter Sewer Main, 3,000-LF of Slip Lining and Small Sewer Lift Station
- Jurupa Road Trunk Sewer, 14,600-LF 10-inch, 18-inch, and 21-inch diameter Sewer Main
- Sky Country Trunk Sewer, 8,100-LF 12-inch and 18-inch diameter Sewer Main
- Regional Sewer Lift Station, 7,500 GPM, 750 HP capacity

Goetz Road Tank and Transmission Pipeline

Eastern Municipal Water District

Client Contact:
Greg Kowalski, PE
Engineering Manager
Eastern Municipal Water District
951.928.3777
kowalskig@emwd.org

Dollar Value of Fee (Design):
$350,000

Duration of Services:
June 2022 - Present

Relationship to Client:
Prime Consultant

Project Team:
Bruce Davis, PE
Siming Zhang, PE
Bradley Sackett, PE
Michael Johnson, LLS

The WEBB Team is currently providing civil design for the tank project and design engineer for the transmission pipeline project. The project consists of the construction of a 8MG concrete reservoir and a 5,400-LF 30-inch diameter transmission pipeline to connect an existing 24-inch diameter transmission pipeline to the future Goetz Road Tank site, located in the City of Menifee. The pipeline will be constructed along Thornton Avenue, half of which is improved and the remaining alignment is reserved within a tract development.

Careful planning and special details are required for the successful implementation of the pipeline with minimal service interruptions, including additional coordination with the City of Menifee and the City of Perris.

Challenges for this project include keeping the elevation of the pipeline below the future Goetz Road Tank inlet/outlet due to the higher elevations at the intersection of Goetz Road and Thornton Avenue than the tank pad.

The WEBB Team is coordinating with the District and other consultants on potholing, CEQA compliance, geotechnical investigation and corrosion report/design services.

Highway 86 Water Transmission Main, Phase 3 and 4

Coachella Valley Water District

Client Contact:
Mario Zamora, PE
Senior Engineer
Coachella Valley Water District
760.398.2661 Ext. 2273
mzamora@cvwd.org

Dollar Value of Fee (Design):
$2,275,299

Duration of Services:
November 2021 - November 2023

Relationship to Client:
Prime Consultant

Project Team:
Bruce Davis, PE
Siming Zhang, PE
Brad Sackett, PE
Michael Johnson, LLS

The WEBB Team provided Planning and Preliminary Design which focused on the alignment analysis and selection, survey and mapping of the final alignment, and the required environmental analysis and documents necessary for State and Federal Grant funding, and environmental clearances and 30% construction documents. The Final Design Phase included final construction documents, right-of-way acquisition, cost estimates, and bid support. CVWD sought state and federal funding for the project and required assistance from the selected design consultant to support the loan and grant applications in both phases.

Key Aspects:

- 13.4 mile long project alignment
- Multiple channel/ditch crossings with required environmental review
- Acquisition of necessary easements and permits
- Construction Document Preparation
- Final Design Services

Beaumont Treatment Plant Expansion and Salt Mitigation

City of Beaumont

Client Contact:
Elizabeth Gibbs-Urtiaga
City Manager
City of Beaumont
951.337.6501
egibbs@beaumontca.gov

Dollar Value of Fee (Design) $3.1M

Duration of Services:
November 2016 - Ongoing

Relationship to Client:
Prime Consultant

Project Team:
Brad Sackett, PE
Siming Zhang, PE
Shane Bloomfield, PE
Kris Danielson, PE
Sinnaro Yos, PE

This project was divided into two parts, 1) WWTP Upgrade/Expansion and, 2) the Brineline. WEBB performed overall Program Management Support for the entire project.

WWTP Expansion and Upgrade

The existing WWTP needs to be expanded and upgraded. The WWTP is currently treating over 75% of its permitted capacity and therefore must begin the expansion process. Per the new Regional Water Quality Control Board's updated Basin Plan, the City must begin reducing TDS being discharged from the plant. The City completed a feasibility study to identify the best way to expand and upgrade the plant. The WWTP upgrades include additional headworks screening, flow equalization, grit removal, fine screens, MBR, reverse osmosis, biosolids dewatering, and drying.

Brine Line - Final Design

Brine disposal is an integral part of this project and was a key driver in the selection of this project. Without a safe, reliable, and cost effective way to dispose of the brine, this project cannot move forward and compliance with the Basin Plan would be impossible. The brine pipeline connecting to the Inland Empire Brine Line (IEBL) was determined to be the best option during the feasibility study, due to cost and certainty of operation. The brine line has been sized at 12-inches and will be approximately 23-miles long. The pipeline begins at the City's WWTP and ends near the City of San Bernardino's WWTP on Waterman Avenue. WEBB is also leading the permitting of this facility with Riverside County, San Bernardino County, City of Redlands, City of Loma Linda, and City of San Bernardino.

Technical Competence

Our local knowledge and experience gives us the ability to efficiently assist the City throughout the analysis, planning, design, and construction process with a minimum of "ramp up" time. Also, our proximity in relation to the City makes for easy coordination and a minimum of travel time. *WEBB has worked with the City on numerous water, wastewater, recycled water, and water supply assessment projects for over 27 years and has built a complete understanding of not only the City's infrastructure, but the City's needs.* In addition, WEBB has provided similar services throughout the Inland Empire since 1945, during which WEBB has built an enormous understanding of the region as well as a reputation for being the go-to firm for various water infrastructure engineering needs, both small and large. *WEBB has chosen three leaders to oversee our project team and are currently responsible for managing similar projects throughout the region as seen in the regional map below*. Our management approach will readily accommodate projects of the scope outlined in the RFQ. We understand the needs of projects that provide services to the public.

In-House Resources

With a firm of 180 associates, our multidisciplinary firm is well-equipped to offer a variety of services in-house. We utilize our expertise of our diverse team and leverage a network of reliable subconsultants to meet any additional project requirements. Our in-house support services, ranging from survey and mapping to traffic and transportation, environmental services, land survey, landscape architecture, and construction management and inspection, ensure that our project managers receive comprehensive support for successful project execution.

Ability to Maintain Budgetary Control

Accurate estimates begin with a well-defined scope of work and deliverables. WEBB will work closely work with the City to determine the parameters of the project and then, using our extensive database of cost information from similar projects, we will prepare a detailed estimate to complete project construction. Typically, project estimates are prepared during planning, preliminary design, and updated upon completion of design. This process assists with identifying potential budgetary problems early so corrective action can be taken.

Quick Response to the City's Project Needs

The size and experience of our staff in the Riverside office gives us the flexibility to draw upon design teams with strong technical skills regardless of the type of project proposed, and all are led by talented managers with extensive experience.

Technological Experience

WEBB ensures staff has the latest technology to meet all client demands. Some of the software that our multi-disciplinary staff use include, but are not limited to the following:

- AutoCAD, Civil 3D, Civil Design
- AutoTurn, InfoWater, InfraWorks
- SYNCHRO, TRAFFIX, WEBSTER
- Riverside and San Bernardino Rational Method
- Arc Geographical Information Systems (GIS)
- HEC RAS, GEO HEC RAS 2D, SRH 2D
- HELE-1 and HELE-2
- Hydraulic Toolbox
- Synthetic Unit Hydrograph
- Terramodel, Vistro, TransCAD
- Google Earth Pro and Sketchup
- BlueBeam, Adobe Suite
- Microsoft Office and Office 365
- Smartfile (FTP)

Section 7. Proposed Method to Accomplish the Work

Management Philosophy

WEBB understands the absolute need for strong project management. We recognize the critical issues associated with schedule, budget management, and communication. Communication and coordination between the engineering consultant and the City is paramount to each project. To guarantee continuous and effective communication, a project manager will be assigned to each project to serve as the primary point-of-contact to the City and a principal-in-charge will be monitoring the entire process. Our project manager makes it a priority to attend all meetings between the City and the project proponents during the project. This will ensure a constant and effective way of communication resulting in strong budget and schedule control.

Responsiveness and Proximity

Our project management and delivery approach has two major elements: (1) use an experienced project management team with detailed experience of the project area, clear understanding of the City's facilities and preferences, and clearly defined responsibilities and proven management tools to deliver this complex project that meets City's needs on budget and on schedule, and (2) have a detailed delivery plan that is understood and accepted by the City and the consultant team, with deliverables completed on schedule for timely decision making.

Management Responsibilities and Procedures

Bruce Davis, PE, will be the direct point-of-contact as the Principal-In-Charge for the City's contractual matters focusing on resolving any critical contract issues as soon as they are identified. Bruce will have the authority to commit firm resources and will support the project manager in managing the overall scope, schedule, and budget. Bruce's experience on large multi-disciplinary projects has trained them to look forward to identify and prevent potential delay-causing issues.

The project manager will be responsible for the day-to-day project and technical management which includes:

- Facilitating frequent and consistent communications with the City
- Implementing the overall delivery plan
- Managing the overall scope, schedule, and budget
- Implementing the QA/QC Program
- Overseeing the project controls staff for timely project management reports

Bruce will be responsible for facilitating final decisions by the City, coordination, management, communicating to the project team and the City project manager, preparing and reviewing design deliverables, and directing design support service disciplines and specialty subcontractors. WEBB's project manager will assist in presenting the technical work at meetings and documenting action items and decisions.

The Team QA/QC and Project Management Plan will facilitate successful project execution. Management tools, procedures, and a delivery plan are all contained in a comprehensive Project Methodology Plan that is prepared at the beginning of the project and is updated throughout the project. Having a comprehensive and detailed Project Management Plan is essential for delivering a major design project with an integrated team consisting of the City, multiple stakeholders, multiple disciplines, and many deliverables. City input into the plan will be essential to make certain it is an effective tool, adequately used, and meets your needs. An outline of the Project Management Plan and some initial comments and items to be included, in addition to our detailed Communication Plan, are as follows:

Kick-off Meeting - Initial Design Workshop

After project award and notice-to-proceed, our project team will conduct a Kick-off Meeting and Initial Design Workshop with all members of the project team and key City Staff. The workshop is structured to establish communication protocols for the project, as well as to identify critical success factors and processes, activities, and tasks that must be carried out

to achieve project goals. The workshop is an important step to ensure all parties are focused on the same project goals and help clarify the critical path issues, key outside stakeholders, milestones, and third-party approvals.

Scope Management

A detailed Work Breakdown Structure (WBS) is typically included in our fee budget proposal and will be utilized for the project duration with detailed tasks. With input from the City, the scope will be finalized and adopted for the overall project. During the execution of the project, the scope will be utilized as a baseline by our project manager, who will manage the scope and work product. If potential changes are identified as the project develops, our project manager will work with the City to clarify and approve any additional tasks necessary to complete the project.

Schedule Management

A preliminary schedule will be prepared, provided, and discussed. In collaboration with the City, the project schedule and milestones will be evaluated and then modifications will be made to set the final baseline schedule during the initial project kick-off process. The baseline schedule will be monitored and tracked by our project manager to maintain the project milestones and manage critical path items. A tracking schedule will be provided with monthly updates and all schedule variances identified. Actions required to correct schedule deviations will be developed and implemented by the team. The project schedule is an effective management tool when developed and maintained to guide the design team through the tasks required to successfully complete a project. WEBB uses Microsoft Project software to schedule and track project tasks.

Cost/Budget Management Plan

The proposed project budget will be prepared based on tasks required to successfully complete the project. Our project manager will track the final budget compared to the actual earned value, task completion, and cost-to-date and will identify any project cost variance monthly. Corrective actions will be taken to maintain the project budget. If changes to the scope and budget are deemed necessary, our project manager will work with the City to justify the need and clearly define the impacts.

Communication Plan and Management

Communication between all team members and the City is critical to its success. A key differentiator between our project team and our competitors is our physical location and our ability to meet with the clients and stakeholders quickly. We are committed to providing consistent communication by having required members of the project team available for all City meetings.

Issue Management/Risk Management

The tracking of project issues and management of risks is facilitated through a tracking log and available to the City and the project team. With issues being raised through email, phone calls, and meetings throughout the duration of the project, having a centralized document ensures project impacts are identified, logged, assigned, analyzed, acted upon, and addressed as part of the design process.

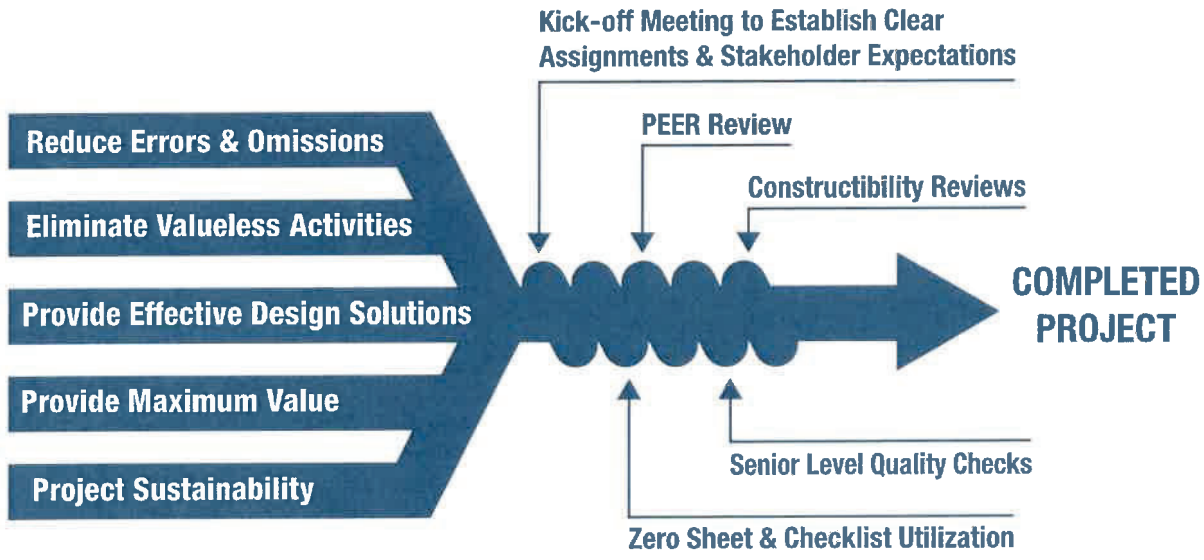
Quality Management Plan (QMP)

The quality control for this project will be embedded in every stage of the project development. Our QA/QC Program is designed to enhance the cooperation and synergy between the disciplines in-house, our design teams, sub-consultants, and the City. Our entire staff is part of the QA/QC Program and each plays a significant role in its implementation. As an underlying principle of our QA/QC Program, WEBB will utilize senior level staff to review work the product to utilize the experience and knowledge to each aspect of the project.

Our quality assurance begins with developing a close and continuous line of communication between the design team and the City. Our experience indicates good communication is a critical element to project success. Under our project protocol, we keep an organized directory of all project-related communication, meeting minutes and action items,

documents, images, data, and plan sets, which allows us to respond quickly to requests. We will seek the input of operations and engineering staff throughout the project development to ensure the project meets the needs of the City.

The proposed project schedule and work plan, developed by the project manager, will be evaluated by our internal peer review team. We recognize a comprehensive, realistic project schedule is critical to the decision-making process for the City. This schedule will include all interim milestones, reviews, third party reviews, and deliverables for the project.



As part of the preliminary design and evaluation of project alternatives, the key project team members will meet and discuss the challenges of each of the proposed alternatives. By bringing these disciplines together early in the project, we can recommend the best project alternative and develop a list of critical design issues that need to be addressed as detailed design is implemented.

A key aspect of our Quality Control Program is the location of existing utilities. These must be confirmed in order to select the most cost-effective alignment. Our in-house utility coordination will acquire the alignments of the existing utilities from the utility companies and combine them for the initial conflict control maps. Our engineers will then walk each of the proposed alternatives and compare the mapped utilities to the site conditions to confirm the correlation between the mapping and the actual locations of bus stops, vaults, valves, catch basins, manholes, and overhead utilities. Potholing of utility crossings will be done to confirm x and y coordinates at each utility crossing so an accurate plan and profile can be designed.

After the preliminary design has been developed, the project will receive a comprehensive internal peer review prior to submittal and coordination with the City. This peer review will be utilized to ensure the preliminary design is clear, concise, comprehensive, and most importantly, meets the objectives of the City.

Brad Sackett, PE, will use his years of project management experience and will serve on the QA/QC Team. Brad has been responsible for the successful delivery of large-scale, multi million dollar water supply, and delivery projects for water agencies throughout the region. Brad will be the lead in performing quality control reviews for the projects. Brad has over 25 years of experience in the planning, design, and construction of various pipeline projects. **Davis Algranti, PE**, will also serve on the QA/QC Team as a technical advisor.

QA / QC PROCESS

Section 9. Insurance

WEBB can meet and provide the insurance requirements as outlined in the City's RFP. Below is a sample Certificate of Insurance (COI). Upon execution of contract, WEBB will provide a COI specific to the project.

ALBEAWE-01 RDEANDA

ACORD

CERTIFICATE OF LIABILITY INSURANCE

DATE (MM/DD/YYYY) 1/16/2024

Section 10. Litigation

WEBB has identified herein all litigation and mediation regarding professional consulting services WEBB offers:

- Western Municipal Water District of Riverside County v. Albert A. Webb Associates, et al., San Bernardino Sup. Ct. Case No. CIVDS1718398 (Resolved)
- Canyon Lake Property Owners Association v. Hardy & Harper, Inc., et al., Riverside Sup. Ct. Case No. RIC1506750 (Resolved)

Section 11. Other Information

Previous Involvement with the City

WEBB has worked with the City on numerous water, wastewater, recycled water, and water supply assessment projects for over 27 years and has built a complete understanding of not only the City's infrastructure, but the City's needs. In addition, WEBB has provided similar services throughout Inland Southern California since 1945, during which WEBB has built an enormous understanding of the region as well as a reputation for being the go-to firm for various water infrastructure engineering needs, both small and large.

Conflicts of Interest

WEBB has no conflicts of interest in providing the services outlined in the RFP.

Section 12. Certification of Proposal

The undersigned hereby submits its proposal and, by doing so, agrees to furnish services to the City in accordance with the Request for Proposal (RFP), and to be bound by the terms and conditions of the RFP.

Appendix 1. Key Personnel Resumes

Bruce Davis, PE

Senior Vice President

Bruce Davis is a Senior Vice President WEBB. Bruce has been a full-time employee of WEBB since 1986. Bruce currently serves as Director of Water Resources. As Director, he oversees all water and wastewater projects performed by the firm. Since 2018, Bruce has taken the lead representing WEBB in matters involving engineering standard of care and risk management. Bruce is a registered civil engineer in the State of California.

Bruce has served as Principle-in-charge for well over one hundred regional infrastructure projects. His experience includes planning, design and support during construction of water, wastewater, drainage and transportation projects on behalf of clients including Jurupa Community Services District, Eastern Municipal Water District, Coachella Valley Water District, and cities of Corona, Murrieta, Rancho Mirage, Ontario, Grand Terrace, Rialto and Cathedral City. Project types include pipelines from 8-inch diameter up to 60-inch diameter, pumping ranging in size from one hundred gallons per minute to over 5,000 gallons per minute and storage facilities ranging in capacity from five hundred thousand gallons to over twenty million gallons, roadways, signals, storm drains and basins. Recent water industry projects include O'Ferrelll Street Booster Pump Station, Redlands/Hemlock Booster Pump Station, Longview and Watson Roads pipelines, Perris II Desalter pipeline and Markham 7.0-million-gallon storage tank.

Along with experience with regional infrastructure projects, Bruce has extensive knowledge and experience with survey, planning, entitlement, development (residential and commercial) and environmental services. His extensive experience translates to an understanding of all steps required to successfully complete a project efficiently and on schedule. Bruce has served as an expert witness in matters involving land use, entitlements and drainage.

Bruce is a member of and/or involved with American Public Works Association, American Water Works Association, Association of California Water Agencies and League of California Cities. He served several years as a Board member of CalWater PAC which is a political action committee advocating for issues important to California's water supply. Bruce serves as an excellent resource for his clients on current issues and trends in our region.

Jeff Hart, PE

Deputy Director, Water Resources

As Deputy Director of the Water Resources Department at WEBB, Jeff Hart uses his 25 years of experience in public works to support the execution of all water resources projects. He is also responsible for assigning project managers to each project and ensuring all project obligations are met with the highest standard. Jeff has previously managed and implemented over $800M of Capital Improvement Projects. He has split his years of experience working with both public and private sector clients; serving as City Engineer, Public Works Director, and Floodplain Manager for the public sector, and Director of Engineering and Deputy Director of Water Resources for the private sector. Jeff is well versed having acted as a representative across various committees, councils, and commissions.

Jeff has served as project manager, oversight, and implementation of several infrastructure projects including domestic water, wastewater, recycled water, drainage, transportation, and land development throughout Southern California and Nevada.

As a Principal Engineer for the Coachella Valley Water District he oversaw the initial Chromium-6 compliance study, ultimately heading to the largest public works construction project ever in the Coachella Valley ($400M). Recent water resource projects include the implementation of a $100M waste water treatment plant upgrade for the City of Beaumont, including the ability to produce recycled water via RO and the construction of a 22 mile brine line.

Along with experience in regional infrastructure projects, Jeff has extensive knowledge and experience with planning, entitlement, development (residential, commercial, and industrial), and capital improvement development and budgeting. His extensive experience translates to an understanding of all steps required to successfully complete a project efficiently and on schedule.

Brad Sackett, PE, is a Senior Engineer and Project Manager with WEBB's Water Resources Department. Brad specializes in assisting major public agencies with a wide variety of water resource projects. Clients seek his expertise with pumping facilities, water pipeline design, gravity sewer main design, water and sewer system master plans, hydraulic modeling analysis, and sewer resource plans for Specific Plan Environmental Impact Reports (EIRs), among other projects.

Brad has been instrumental in assisting clients with in-house projects, while representing these agencies with their constituents as an on-site consultant. Throughout Brad's career he has been intricately involved in the design, management, and construction support of projects for such clients as Eastern Municipal Water District (EMWD), Western Municipal Water District (WMWD), and the cities of Riverside and St. Helena, to name a few.

His detailed approach ensures each project integrates flawlessly into master plan requirements from concept through construction. He specializes in operations take-over and integration of systems with a focus on cost effective and efficient transitions.

Recycled Water System Preliminary Design Report, Jurupa Community Services District (District) - Brad served as Assistant Project Manager for the WEBB Team that completed the Preliminary Design Report for the District's proposed recycled water system to convey recycled water from the WRCRWA's treatment plant to existing parks, schools, street landscaping throughout the City of Eastvale and connect to an existing system that serves some existing irrigation customers within Area B located in the City of Jurupa Valley.

The proposed system will serve recycled water for irrigation to various parks, schools and landscaped medians within the City of Eastvale. The pipelines will vary in size from 24-inch diameter for the largest transmission pipeline down to 8-inch diameter pipelines for the distribution pipelines, totaling approximately 54,900-LF This system will have the potential to serve nine parks, seven schools and approximately 19 median landscape meters. The proposed pump station will be located at the WRCRWA's wastewater treatment plant in Eastvale. As part of the recent upgrade at the plant, initial planning and preliminary design were completed for the future recycled water pump station for the District..

Redlands and Hemlock Booster Station, Eastern Municipal Water District (District) - WEBB provided preliminary and final design engineering services for the replacement of the District's 1,827 GPM Redlands and Hemlock (previously Ironwood) Booster Pumping Stations (BPS) with a new 3,000 GPM Redlands and Hemlock BPS located in the City of Moreno Valley. The existing, partially below-grade facility reached its useful life and was creating a variety of operational and maintenance challenges. The project consisted of preliminary design, facilities site analysis, property acquisition support, project management, survey, geotechnical study, electrical study and coordination, Southern California Edison (SCE) plan

of service, system hydraulic evaluation, CEQA support, operational control strategy, preparation of design contract documents (plans and specifications), cost estimates, and bidding assistance. The project also included the preparation of bid documents for the abandonment and demolition of the existing facility.

O'Ferrell Street Booster Station, Eastern Municipal Water District - Brad served as the Project Manager for the planning and design of this 1,000 gallon-per-minute potable water pump station which ultimately included two 500 gallons-per-minute vertical turbine pumps with a 500 gallons-per-minute standby pump. WEBB's services included site acquisition, metering, and design of reverse flow control valves, a masonry block building, and an emergency generator. Brad and the WEBB Team also assisted with site improvements including paving, a block wall and gates suction and discharge pipelines, an access road, and demolition of the existing booster station. WEBB also provided all environmental services for a complete Initial Study/Mitigated Negative Declaration.

Vista Ellis Improvement Project – Eastern Municipal Water District (District) - Brad served as Project Manager for the Vista Ellis Improvement Project which includes a 5,600 GPM booster pump station, a 5.63 MG steel tank, and over 23,000-LF of 18-inch and 24-inch diameter transmission pipeline connecting the facilities. WEBB was responsible for hydraulic modeling, site selection of the booster station and storage tank, preliminary design, CEQA analysis, and the final design of all phases. The proposed pipeline is located within the City of Menifee and the County of Riverside public right-of-way and an easement at RCFC&WCD Channel. The project allows the District to add storage to the 1,698-FT Pressure Zone and convey adequate water supplies to the 1,815-FT Pressure Zone to balance filling the Craig and Vista tanks to address water quality and hydraulic issues within the current system.

Hamner Trunk Sewer Project, Jurupa Community Services District (JCSD) - Brad served as the Project Manager for the Hamner Avenue Trunk Sewer Project. WEBB worked on the final design for a deep (24+ FT) 12-inch diameter gravity sewer main within the Hamner Avenue right-of-way from Celebration Drive to 1,400-FT south of 58th Street. The alignment of the proposed sewer main will parallel the proposed CDA product water pipeline in Hamner Avenue. The proposed sewer main is located within the City of Eastvale public right-of-way and a private easement. The project allows JCSD to convey existing domestic sewage to their regional trunk sewer facilities for treatment at the WRCRWA wastewater treatment facility, eliminating a connection to the SARI pipeline. The existing right-of-way is crowded with numerous existing utilities including the 42-inch diameter SARI pipeline, 60-inch storm drain, 30-inch JCSD potable water pipeline, 24-inch diameter Norco water pipeline, 16-inch diameter gas line, an abandoned sewer force main, two fiber optic cables, an Edison electric line, several other smaller dry utilities, and two traffic signals.

Hamner/Detroit Product Water Piepline, Chino Basin Desalter Authority - Brad served as the Project Manager for the Hamner Avenue Trunk Sewer Project. WEBB worked on the final design for a deep (24+ FT) 12-inch diameter gravity sewer main within the Hamner Avenue right-of-way from Celebration Drive to 1,400-FT south of 58th Street. The alignment of the proposed sewer main will parallel the proposed CDA product water pipeline in Hamner Avenue. The proposed sewer main is located within the City of Eastvale public right-of-way and a private easement. The project allows Jurupa Community Sewer District to convey existing domestic sewage to their regional trunk sewer facilities for treatment at the WRCRWA Wastewater Treatment Facility, eliminating a connection to the SARI pipeline. The existing right-of-way is crowded with numerous existing utilities including the 42-inch diameter SARI pipeline, 60-inch storm drain, 30-inch JCSD potable water pipeline, 24-inch diameter Norco water pipeline, 16-inch diameter gas line, an abandoned sewer force main, two fiber optic cables, an Edison electric line, several other smaller dry utilities, and two traffic signals.

Joseph Caldwell, PE, CPESC, CPSWQ, QSD, QSP, CFM

Water Resources Practice Leader

Joseph Caldwell, PE, is the Practice Leader of WEBB's Water Resources Department. Joseph focuses on the development of master drainage plans, the design of backbone drainage infrastructure, and the design of water quality systems for flood control projects throughout the region. A Certified Professional in Erosion and Sediment Control and Storm Water Quality, Joseph is a specialist in water quality and environmental compliance and an expert in hydrology and hydraulics.

Joseph's experience includes the design of regional flood control basins, a flood control levee, master drainage plans, and the design and construction of several miles of backbone drainage infrastructure. He has also hydrologically and hydraulically modeled the San Jacinto River from Railroad Canyon to the existing Army Corps levee in the City of San Jacinto. Joseph's extensive knowledge of local agencies' design standards and procedures, and effective working relationships with agency staff, enable him to expedite projects through completion.

Heacock Channel Design Project, March Joint Powers Authority - Joseph served as the Project Manager for Phase 3 of the Heacock Channel Design Project for the March Joint Powers Authority. The project included the preparation of final improvement plans, traffic control plans, and a hydrology and hydraulic report for approximately 3,600-LF of the channel. The project extends from Lateral A of the Perris Valley Storm Drain north along Heacock Avenue to the southern end of an existing land fill. WEBB's services also included project management and coordination throughout the duration of the project including attendance at project design team meetings, quality control services, and all other processing of improvement for necessary project approvals.

Hemet MDP Line C, Stage 4, County of Riverside Flood Control and Water Conservation District - Joseph was the Project Manager for the Hemet MDP Line C, Stage 4 Project. The extension of the Hemet MDP Line C was an important component to provide surface flooding relief and flood protection of a predominately developed portion of the City of Hemet. The extension of the Hemet MDP Line C was an important component to provide surface flooding relief and flood protection of a predominately developed portion of the City of Hemet. This segment of the Master Plan Facility represents the middle one third of the entire Line C System. The critical component of this project was implementing a master planned facility in a highly urbanized area of the City extremely constrained by multiple utilities. WEBB completed a Preliminary Design Report that outlined the most feasible alignment for this facility. WEBB is currently preparing final design plans and specifications for this backbone drainage facility.

Wildwood Creek Basin, City of Yucaipa (City) - Joseph served as the Project Manager for design of a multi-purpose watershed basin in Wildwood Creek in the City of Yucaipa. WEBB provided engineering services that accommodated the critical needs of the City. This project is located in the middle of a major watercourse. The watershed tributary

to the project is over 4,000 acres and the creek is designated on the Flood Insurance Rate Map by FEMA. The City's goal was to reduce the peak flow utilizing a series of detention basins that in turn will reduce peak flow rates downstream and reduce the burden on those downstream facilities. This reduction in peak flow rates was accomplished through the removal of sediment/debris load and the attenuation of peak flooding through the use of the proposed basins. In addition to providing flood control benefits, this project also provided certain environmental and water quality benefits. To do this, the flood control facilities were developed in such a manner so the construction preserves riparian vegetation, where possible, and implements other measures for environmental and water quality impacts. In order to accomplish this, WEBB reviewed the conceptual design and provided a more precise analysis of the level of flood control protection the basins will provide. WEBB also prepared detailed hydrologic, hydraulic, and sediment transport models to determine the peak runoff rates, flood volume, and debris load.

North Indio Regional Flood Control Channel Project, Coachella Valley Water District (CVWD) - Joseph is the Technical Lead for the North Indio Regional Flood Control Channel Project which is a key component of the CVWD flood protection mission in the Coachella Valley. The project will complete the link between existing flood control facilities in the north Indio area, providing increased flood protection for the region. The project consists of over three miles of concrete lined trapezoidal and rectangular channels, including numerous culvert crossings of existing and future streets. To date, WEBB has prepared the hydraulic analysis, preliminary design, and environmental documentation for the project. WEBB is currently in the process of preparing the final design plans, specifications, and estimates. WEBB is also responsible for preparing the CLOMR and providing public outreach and right-of-way acquisition services.

University Wash Channel, Riverside County Flood Control & Water Conservation District - Joseph was Technical Lead for the University Wash Storm Drain Project including the planning, analysis, and design of a large diameter master plan storm drain that connects existing upstream and downstream facilities together. This project was unique in that the 2,450 LF - 90-inch RCP required for this project had to be designed to maneuver its way through a developed industrial corridor of the City. Key to this project was the coordination with local businesses to ensure construction of the storm drain minimized impacts to business operations.

San Jacinto River Stage 3 Master Drainage Plan, Riverside County Flood Control & Water Conservation District (District) - Joseph served as Project Manager for the WEBB Team responsible for reviewing the current hydrological model, analyzing potential alternative models, and working with the District to decide the best option based for the current Master Drainage Plan. This project consisted of preparation of conceptual drawings for the Master Plan addressing all key elements such as floodplain management, flood control features, environmental preservation, development opportunities, effects on regional infrastructure, right-of-way requirements, and order of magnitude cost. WEBB worked directly with the District to prepare the planning study, coordinated with all stakeholders, and presented all findings to the Advisory Board with recommendations for the next steps (i.e., MSHCP compliance, CEQA strategy, land development constraints, and floodplain management). WEBB is currently working on the final MDP and EIR for the District.

Bedford Wash Channel, Riverside County Flood Control and Water Conservation District - Joseph is the Project Manager for the Bedford Wash Channel upstream on the McMillan Property. Services provided included finalizing the 30% design, preparation of all necessary studies, and designs for the final construction drawings, preparation and processing of the Cooperative Agreement and Agency approvals as well as providing on-going coordination with the overall project team during the design of the overall project and with the environmental consultant to assist with obtaining any regulatory permits associated with the channel construction. WEBB provided three iterations of channel design from the point the project was secured, when it was a completely lined concrete channel. Through WEBB's recommendation, the project stakeholders strategically selected to move toward transitioning the channel to a soft bottom.

Shane Bloomfield, PE

Senior Engineer

Shane Bloomfield, PE, is a Senior Engineer with WEBB's Water Resources Department. Shane specializes in the design of public works projects consisting of major pumping plants, groundwater pumping wells, sewer collection system design, wet well rehabilitation, water distribution system design, wastewater treatment plant design, and hydraulic system modeling using various computer models. He has engineering design responsibilities for several projects for public works agency clients including the City of Ontario, City of Riverside, Jurupa Community Services District, Eastern Municipal Water District, and Crestline-Lake Arrowhead Water Agency.

Recycled Water System Preliminary Design Report, Jurupa Community Services District (District) - Shane served as Project Manager for the WEBB Team that completed the Preliminary Design Report for the District's proposed recycled water system to convey recycled water from the WRCRWA's treatment plant to existing parks, schools, street landscaping throughout the City of Eastvale and connect to an existing system that serves some existing irrigation customers within Area B located in the City of Jurupa Valley.

The proposed system will serve recycled water for irrigation to various parks, schools, and landscaped medians within the City of Eastvale. The pipelines will vary in size from 24-inch diameter for the largest transmission pipeline down to 8-inch diameter pipelines for the distribution pipelines, totaling approximately 54,900-LF. This system will have the potential to serve nine parks, seven schools, and approximately 19 median landscape meters. The proposed pump station will be located at the WRCRWA's wastewater treatment plant in Eastvale. As part of the recent upgrade at the plant, initial planning and preliminary design were completed for the future recycled water pump station for the District.

WRCWRA Wastewater Treatment Plant, Western Riverside County Regional Wastewater Authority - Shane served as Project Engineer for the WEBB Team that designed the 14 MGD plant expansion. The expansion project included evaluating alternatives to provide additional flow and biological capacity while reducing the overall cost of treatment. WEBB's design includes primary, secondary, and tertiary treatment along with disinfection and solids handling. Working with the member agencies, cost effective alternatives are being selected and refined to make this project affordable to build while reducing the cost of treatment. The project also includes chemical storage and pumping.

WWTP Expansion and Salt Mitigation Project, City of Beaumont (City) - Shane serves as the Civil Designer for the City's WWTP Expansion. The existing WWTP needs to be expanded and upgraded. The WWTP is currently treating over 75% of its permitted capacity and therefore must begin the expansion process. Per the new Regional Water Quality Control Board's updated Basin Plan, the City must begin reducing TDS being discharged from the plant. The City completed a feasibility study to identify the best way to expand and upgrade the plant.

Shane Bloomfield, PE

Senior Engineer

Beaumont WWTP Expansion/Upgrade Preliminary Design, City of Beaumont (City) - Shane served as WWTP Expansion/Upgrade Civil Engineer on the WEBB Team that prepared the project feasibility study, which analyzed two different options. The first was the Beaumont option which expands and upgrades treatment at the City's WWTP. For this option three different WWTP configurations were evaluated. In addition, options were explored to dispose of waste brine from the advanced treatment system. The second option was to consolidate treatment with YVWD and deliver all wastewater flow there. For each option, detailed cost estimates were developed taking into account capital cost and O&M costs. In the end the City Council selected the Beaumont option. The preliminary design includes the preparation of 20%-30% plans for both the WWTP expansion as well as a 23-mile brine disposal pipeline connecting to the IEBL in San Bernardino.

City of Riverside WQCP Expansion, Camp Dresser & McKee (CDM) – Shane was the Project Engineer for the civil design of this $220 million wastewater plant expansion project. WEBB's scope of work included survey, mapping, existing utility identification, utility master plan, site grading, yard piping, demolition, drainage improvements, and landscaping.

The Riverside Regional Water Quality Control Plant (RWQCP) currently serves nearly 300,000 residents in the City of Riverside and several neighboring communities. As part of its Riverside Renaissance Program, the City of Riverside embarked on the Riverside RWQCP Expansion, Upgrade, and Replacement Project in order to meet the projected 2025 flows to accommodate capacity requirements, fulfill regulatory discharge requirements to protect the Santa Ana River, and increase production of reclaimed water to augment Riverside's non-potable demand with recycled water. The expansion project includes replacing 20 million gallons per day (MGD) of existing capacity with 26 MGD of new capacity. The improvements also include new solids processing facilities.

Well Design & Equipping Well Nos. 27 & 28, Jurupa Community Services District - Shane served as Project Manager on the well design & equipping of these wells. His responsibilities included pump (4,500 GPM to 4,000 GPM) and motor sizing (800 hp), emergency generator sizing, on-site chlorine generation system sizing, preparation of all civil, mechanical, and coordination of the electrical and architectural drawings, preparation of bid documents, and technical specifications. Shane will be in charge of construction management during the equipping phase of the project and his responsibilities will include reviewing contractor's submittals, coordinating the project with the contractor on behalf of the client, review and preparation of partial payments and change orders, and responses to the contractor's questions regarding the project.

On-Site Chlorine Generation System Conversion, City of Ontario Municipal Utilities Company - This project included the conversion of 13 existing water well sites from chlorine gas to on-site chlorine generation (OSCG). Shane performed the design of each OSCG system, chemical metering pump sizing, preparation of all civil and mechanical drawings, and preparation of technical specifications and bid documents. Shane was in charge of construction management for the project, providing general project management activities, start-up, and testing services.

H-Street Booster Station, Golden State Water Company - Shane served as Project Manager overseeing the design of the H-Street Booster Station in Barstow. The station design included two 400 GPM vertical turbine pumping units with room for two future pumping units, suction/discharge piping, block booster station building design, and SCADA/electrical design. WEBB was in charge of the preparation of all civil and mechanical drawings, structural drawings, coordination of the electrical drawings, and preparation of bid documents and technical specifications. Design of the booster station was completed in February 2018.

Eric Hays, PE

Senior Engineer

Eric Hays, PE, is a Senior Engineer with WEBB's Water Resources Department. Eric has years of diverse engineering experience with deep knowledge in the fields of hydrology, hydraulics, and drainage design. His experience includes the preparation of preliminary design reports, alternative analysis studies, canal design plans for flood control infrastructure projects, and storm drain system designs for residential, commercial, industrial, and public agency projects.

In addition to Eric's extensive experience with drainage project design, he offers clients strong civil site development and public project background. His experience includes development of site grading plans, street improvements plans, sewer plans, bike trail plans, Water Quality Management Plans, Stormwater Pollution Prevention Plans, and railroad grade crossing improvement plans. His expertise also includes survey, construction staking, construction observation, and support.

REGISTRATIONS

University Wash Final Design, Riverside Flood Control & Water Conservation District - Eric served as project engineer for the project. The University Wash Storm Drain Project included the planning, analysis, and design of a large diameter master plan storm drain that connects existing upstream and downstream facilities together. This project was unique in that the 2,450 LF, 90-inch RCP required for this project had to be designed to maneuver its way through a developed industrial corridor of the City. Key to this project was the coordination with local businesses to ensure construction of the storm drain minimized impacts to business operations.

Cole Avenue Storm Drain Improvements, City of Riverside - Public Works Department - The Cole Avenue Storm Drain Improvements between Lurin Avenue and Krameria Avenue conveyed runoff from the surrounding residential developments and discharged to a new outlet structure eliminating continual nuisance drainage problems as well as eliminating flooding problems associated with the intersection flooding that occurs during most storm events. The project watershed is developed residential home sites. There were no storm drain systems except along Lurin Avenue. The watershed area was subject to surface runoff within street right-of-way. The area was also subject to nuisance runoff associated with landscape irrigation on a frequent basis. WEBB designed 2,500-FT of storm drain improvements that reduced nuisance flows in the tract and in the roadside channel on the south side of Lurin Avenue to meet the future needs of the area. The alignment WEBB selected discharges runoff into the existing drainage feature 350-FT west of the intersection of Cole Avenue and Lurin Avenue via an impact energy dissipater structure to reduce the construction footprint within the existing right-of-way. This minimized the need for additional right-of-way and reduced the impact to existing vegetation. The system was designed so to easily connect to the future drainage system in Cole Avenue.

Siming Zhang, PE

Senior Engineer

Siming Zhang, PE, is a Senior Engineer with WEBB's Water Resources Department. Siming assists clients in managing and designing a wide array of public works projects including water storage reservoirs, water transmission pipelines and booster stations, major trunk sewer mains, sewer collection pipelines and sewer lift stations, and water booster stations.

As a Project Manager who leads a team of engineers and designers, Siming has been a key advisor on many important matters that help determine the success of land developments including master drainage plans, hydrology/hydraulic studies, storm drain designs, Conditional Letters of Map Revision (CLOMR), and Letters of Map Revision (LOMR). Clients depend on Siming's ability to fulfill a broad range of project goals including assistance with engineering design, bidding, construction administration, coordination with local agencies, sewer and water master facility plans, feasibility studies, construction drawings and specifications, construction and project cost estimates, and coordination with government agencies to secure approvals and permits.

Siming's responsibilities entail engineering design, assistance during bidding, construction administration, coordination with local agencies, sewer and water master facility plans, feasibility studies, construction drawings and specifications, construction and project cost estimates, and coordination with various government agencies to obtain the applicable approvals and permits. His contract administration responsibilities included review of bid proposals, contractor submittal drawings, inspection reports, and process requests for information, requests for change order, and periodic site visits to monitor construction.

Among his contract administration responsibilities, Siming has reviewed bid proposals, contractor submittal drawings, and inspection reports. He also processes requests for information, coordinates change order requests, partial pay estimates, weekly working statements and notices of completion, and makes periodic site visits to monitor construction.

Capital Improvement Waterline Replacement Program, City of Ontario (City)
Siming served as the Project Manager in the design and construction of the City's capital improvement programs. As the Project Manager, Siming was fully involved in updating Ontario's local waterline distribution systems throughout the City. The project included 4,300-LF of 12-inch diameter pipelines and 5,000-LF of 16-inch diameter pipelines. Siming managed utility research, local and state agency coordination, and coordination with utility agencies within the project limits. After successful completion of the FY 2013-14, FY 2014-15, 8,460-LF of 8-inch pipeline, Siming served as the Project Manager with similar tasks to the City's infrastructure updates for the 2015-16.

Siming Zhang, PE

Senior Engineer

Waterline Replacement, Jurupa Community Services District (District) - Siming served as the Project Manager for the replacement of several water mains to better serve customers of the District. He handled a wide range of work on the projects including alignment and topographical land surveys, base mapping, utility research coordination, field verification, engineer's estimates and bidding documentations, and coordination with local agencies. He also helped the WEBB Team provide a construction survey.

Area B Non-Potable Waterline, Jurupa Community Services District (District) - Siming served as Project Manager for this project that expands the District's use of non-potable water for irrigation purposes to offset the District's need for potable water. The District considered several possible non-potable water sources. This project consisted of the construction of approximately 12,000-LF of 10-inch diameter and 16-inch diameter transmission pipeline in Bellegrave Avenue between Hamner Avenue and Etiwanda Avenue. This pipe is part of the backbone transmission pipeline system in addition to other components.

870 PZ Water Transmission Pipeline, Jurupa Community Services District (District) - Siming serves as the Project Manager for a series of pipeline improvements to increase efficiency for customers of the District. The project, in the City of Jurupa Valley in northwestern Riverside County, includes the construction of two groundwater wells, ancillary equipment, and approximately 12,800-LF of potable water transmission pipelines which will connect to the District's 870-FT Pressure Zone and 2,100-LF storm drain pipeline. WEBB's services include determining horizontal control for the proposed alignment, preparing a survey control map, locating and detailing existing storm drain structures, determining the location of field potholes, and preparing design plans and profile drawings.

Grace Street (D to H Avenue) Pipeline Project, Golden State Water Company - Siming serves as the Project Manager for this project, consisting of replacing approximately 2,700-LF of 12-inch diameter steel pipeline. This project consists of coordination with the Barstow Unified School District on possible future development and approval of the proposed pipeline, obtaining preliminary title reports of the parcel, field survey and establishing parcel boundary line, CEQA documentation and compliance, and legal description/plat and land acquisition for easement.

Royal Avenue Pipeline Replacement, Golden State Water Company - Siming served as the Project Manager for this project, consisting of replacing approximately 200-LF of 8-inch diameter steel pipeline. The replaced pipeline runs across the Royal Avenue Bridge with hangers, steel saddles, plates and rods.

IVDA 24-inch Diameter Transmission Main, City of San Bernardino Municipal Water Department (SBMWD) - Siming served as the Project Manager for the WEBB Team that provided preliminary design engineering, alignment option evaluation, final design plans, and specifications for SBMWD's project consisting of approximately 14,000-LF of 24-inch diameter Ductile Iron Pipe (DIP) to connect Point "A" and Point "B" of the Intermediate Zone Inland Valley Development Agency (IVDA) and includes an 18-inch diameter pipeline crossing the Twin Creek freeway bridge at 9th Avenue.

30-inch & 18-inch Water Main Improvements, Ontario Municipal Utilities Company - Siming is serving as a Project Engineer and Construction Manager for this project which includes designing two water capital improvement projects for the Ontario Municipal Utilities Company. The first involves the design of 6,800-LF of 30-inch diameter transmission main from the 20 MG Reservoir (1212 Pressure Zone) on Eighth Street in the City of Upland and south on San Antonio Avenue to Fourth Street. The second project involves the design of 7,500-LF of 18-inch diameter distribution main in Fourth Street from Elderberry Avenue to Euclid Avenue. The key challenge for both of these projects is to select an alignment that avoids both existing utilities, maintains access to the residents in the area and includes an 18-inch diameter pipeline crossing the I-10 freeway bridge.

Sinnaro Yos, PE

Senior Engineer

Sinnaro Yos, PE, is a Senior Engineer with WEBB's Water Resources Department. Sinnaro offers clients extensive experience managing the design and construction of a wide range of public works projects that enhance water quality and supply including water and wastewater systems, water reclamation, and water and wastewater treatment.

Sinnaro's responsibilities include master plan reports for water and wastewater systems, water and sewer pipeline sizing and hydraulic analysis, alignment analysis, and pipe thickness design. He also focuses on water booster stations, sewer lift stations and deep well drilling and equipping design, utilities coordination and permitting through agencies, preparation of bid documents, and engineering cost estimates.

Clients also depend on Sinnaro's wide-ranging construction management experience during construction of projects. He provides construction schedule analysis and control, schedules survey activities and specialized inspection efforts, and resolves field conflicts and issues. He also assists with processing submittals, RFIs, progress payments and change requests, conducts progress meetings, disseminates meeting minutes, communicates with the project inspector, contractor and owner, and provides for closeout of contracts. This includes conducting the final walk-through and generating a punch list, performing a final review of retention payments, and processing as-builts and O&M manuals. In addition, Sinnaro has provided technical memorandums as well as water and sewer master plan reports for projects which have been built and are operating successfully.

Annual Sewer Improvement Project, Edgemont Community Services District (District) - Sinnaro served as Project Engineer for a study designed to improve water quality in the City of Moreno Valley's Edgemont neighborhood. He performed water quality analysis and coordinated water quality sampling for the area's water system. He also developed the water quality section of the Edgemont Water Master Plan Update. The project included the preparation of master wastewater plans for the District, as well as creation of a hydraulic computer model, development of projected wastewater generation of various regions of the District, and determination sewer main sizing and alignment.

Well Drilling, Design, and Equipping of Wells 27 & 28, Jurupa Community Services District (JCSD) - Sinnaro served as a project engineer for this project. The WEBB Team provided the engineering and hydrogeology services to provide JCSD with two new groundwater wells to serve the District's water system and aquifer storage and recovery (ASR) capabilities. WEBB performed the site selection evaluation for these well sites based on both hydrogeologic and engineering parameters. The WEBB team prepared the drilling specifications and Geoscience provided inspection services during the well drilling of these wells.

Sinnaro Yos, PE

Senior Engineer

Wells 22, 23, and 25, Jurupa Community Services District (JCSD) - Sinnaro served as a Project Engineer for the JCSD Well Nos. 22, 23 and 25 Project. The WEBB Team provided the engineering and hydrogeology services to provide JCSD with three new groundwater wells to serve the District's water system. WEBB performed the site selection evaluation for these well sites based on both hydrogeologic and engineering parameters. For Well No. 25, we provided legal and plats for the District to purchase land and obtain easements. The WEBB Team prepared the drilling specifications and Geoscience provided inspection services during the well drilling of these wells. WEBB provided input on Geoscience's recommendations for casing and screen design, filter pack design, and pump setting. Geoscience's recommendations were incorporated into our well equipping design plans and specifications.

WEBB and our subconsultants provided JCSD with complete civil, mechanical, and electrical design plans and specifications for the public bid process. Well No. 22 (3,000 gpm), Well No. 23 (3,000 gpm) and Well No. 25 (4,000 gpm) are being equipped with 500 hp, 500 hp, and 600 hp electric motors, respectively. For Wells 22 and 23, the long lead time items such as the deep well pump and motor and the motor control center was pre-purchased. We prepared specifications for the District to pre-purchase the equipment. These wells will also be equipped with standby diesel generators. WEBB is currently providing construction management and inspection services, maintaining constant communication with the District to resolve issues that developed during the equipping phase of the project.

Site Improvements for Wells 6, 14, and 15, Jurupa Community Sevices District - Sinnaro served as the Project Engineer and was in charge of design, analysis, and construction coordination of the 1,800 GPM, one vertical turbine deep well pump and motor, genset, site work, and grading. This project was retro-fit and re-equipping of an existing well facility including the removal and demolition of metal building, natural gas engine, and other existing on-site facilities. The WEBB Team provided the engineering design services to provide CDA for the retro-fit, and re-equipping of this well to serve and enhance CDA's water system. WEBB performed the site survey and evaluation of the existing equipment for this well facility for use of existing items to salvage, reuse, and per engineering parameters. WEBB performed design plans and specifications for the demo, retro-fit, and re-equipping of the Well 6 facility. WEBB provided construction phase services including construction management, surveying, and inspection, and assisted in the start-up and testing.

Chino I Desalter and Chino II Desalter Projects, Chino Basin Desalter Authority - Sinnaro served as the Project Engineer on these projects. The expansion of the Chino I Desalter included the addition of three raw water production wells and 6,000 LF of 16-inch diameter raw water feed pipeline, addition of 4.9 MGD ion exchange capacity, product water pump station expansion and other ancillary improvements, 15,000 LF of 16-inch to 24-inch diameters of product water pipeline, and pump stations to the Cities of Chino Hills and Ontario. The Chino II Desalter included the treatment plant facility, product water pump station, nine raw water wells, 15,000 LF of brine discharge pipeline, 27,250 LF of 12-inch to 30-inch of raw water feed pipeline, 9,000 LF of 12-inch diameter of product water pipeline to the City of Ontario and Santa Ana River Water Company, pump station, and turnout connections to the City of Ontario.

Chino Creek Well Fields I and II - Raw Water Intertie Pipeline, Chino Basin Desalter Authority - Sinnaro served as a Project Engineer for the design of pipeline to connect several Chino Basin Desalter Authority (CDA) wells to the Chino II raw water pipeline and help transfer water in both directions between the Chino I and Chino II systems via a new raw water intertie pump station. WEBB provided design engineering, surveying, bidding, and construction support services for the project, which included about 14,800-LF of 24-inch CML&C steel pipeline.

Kristopher A. Danielson, PE

Senior Engineer

Kristopher (Kris) Danielson, PE, is a Senior Engineer with WEBB's Water Resources Department. Kris specializes in hydraulic analysis, sewer system master planning, field inspection, and construction management. His responsibilities include the planning and design of public works facilities, fluid system modeling, and report preparation.

Master Sewer Plan, Jurupa Community Services District (District) - Kris assisted in the final preparations of the Master Sewer Plan for the District. This report encompassed approximately 16,000 acres. The scope of the report included among other things, population projections, establishing analysis criteria, projection of wastewater flows, modeling and analyzing existing and ultimate facilities, capital improvement projects summary, cost estimates, and recommendations.

Consultant Engineer, Golden State Water Company (GSWC) - Kris worked under contract for 18 months in 2013/2014 and six months in 2008 as a full time Project Engineering Consultant as part of the Capital Program Management team in the Ontario office of GSWC. His responsibilities included working for the Capital Program Manager overseeing the construction of multiple projects in the Mountain Desert, Orange County, and Foothill Districts, preparing contract documents for bidding, managing budgets and schedules, construction inspection, pipeline/water facility design, permit acquisition, and conducting meetings with staff members and contractors.

Fire Flow Test and Hydraulic Modeling Consultant Engineer, Eastern Municipal Water District (District) - Kris served as Project Manager leading the WEBB Team, who worked closely with the Development Service Department, to prepare over 140 fire flow tests which included two-hour, four-hour, and hydraulic boundary condition tests. Kris worked with developers providing hydraulic analysis at the District's office where he worked with the District's water model on behalf of the developers to expedite the analysis and review process. The District provided him access to a computer, a portion of their server, and their as-built plans. This allowed him access to multiple departments to get quick answers.

Master Sewer Plan, Mission Springs Water District - Kris assisted in the preparation of the Master Sewer Plan of over 32,000 acres (including the City of Desert Hot Springs and North Palm Springs). He conducted the hydraulic analyses by modeling both the existing and ultimate system. The report analyzed population, environmental and engineering constraints, land utilization, exiting and protected water and wastewater characteristic, waste discharge and treatment requirements, projected wastewater flow criteria, facility design criteria, alternatives, existing facilities, and the proposed system.

Dilesh Sheth, PE, TE

Senior Vice President

REGISTRATIONS

Registered Civil Engineer C 14934 (NM)
Registered Traffic Engineer TE 2112 (CA)

EDUCATION

BS, Civil Engineering
University of Saurastra Rajkot, India

AFFILIATIONS

American Public Works Association (APWA), Coachella Valley

Institute of Transportation Engineering (ITE) Riverside and San Bernardino Counties

Dilesh Sheth, PE, TE, is a Senior Vice President with WEBB and is Director of the Traffic & Transportation Department. Dilesh assists public and private clients with sophisticated civil works projects. Clients benefit from his expertise in presenting project findings and recommendations to elected officials, municipal commissions, community groups, and the general public.

Dilesh has coordinated projects with Caltrans and numerous counties, cities, flood control districts, utility companies, residential, and business owners throughout Inland Southern California. This experience enables him to help clients realize a wide range of project goals and comply with varied requirements. He balances the needs of the community with the needs of local jurisdictions to bring positive solutions to difficult situations and projects. Dilesh's technical experience includes highway design, intersection and interchange improvements, street widening, alignment studies, and geometrics' drawings. His recent projects include a diverse range of roadway design, freeway ramp improvements, residential development street design, traffic signal design, traffic control plans, signing & striping plans, and pedestrian and bike facilities. He has also handled site access evaluation, intersection capacity analysis, traffic forecasting, circulation planning, traffic impact studies, parking studies, parking demand analysis, transportation demand management plans, focused site specific traffic studies, and area-wide circulation studies.

Dilesh is currently serving as the Program Manager for the on-call traffic engineering services for the cities of Palm Springs, Cathedral City, Lake Elsinore, and Grand Terrace, and the County of Riverside. Through his efforts, Dilesh has been able to raise over $24.3 million in funds from HISP and CVAG for these cities and their numerous projects. A large majority of these projects were completed without any matching funds needed from the City.

The Civic Center Storm Drain (SD2201) and Oasis Street Beautification (ST2303), City of Indio - Dilesh Sheth served as the Program Manager for the City of Indio's Master Drainage Plan project undertaken by Albert A. Webb Associates (WEBB). In this capacity, he played a crucial role in overseeing the planning and execution of the project aimed at addressing consistent flooding problems in identified areas.

WEBB successfully assisted the City in securing a $4.1 million Urban Flood Protection Grant from the State of California. The project involved the preparation of detailed Plans, Specifications, and estimates, with a focus on constructing essential infrastructure such as storm drains, curb extensions, curb ramps, and rain gardens along key streets, including Oasis Street, Requa Avenue, Smurr Street, and Jackson Street.

As the project progressed, additional elements were incorporated into the scope of services, resulting in more than doubling the construction cost. Despite these challenges, Dilesh Sheth, along with the WEBB team, demonstrated exceptional dedication and efficiency. The late design phase witnessed a significant expansion of the project's scope, yet WEBB managed to complete the Plans, Specifications, and Estimates (PS&E) with additional in-house resources. The original project schedule aimed for the bidding process to commence by the end of August 2023. Even with the increased scope of work, WEBB achieved the milestone of going out to bid in November 2023, showcasing effective project management in meeting deadlines.

PLC North – Offsite Infrastructure Project – City of Perris IDI Logistics - Dilesh served as the Program Manager for this project. WEBB was tasked to improve approximately four (4) miles of roadway and drainage improvements, including a bridge, three railroad crossings, interchange improvements, traffic signal, bicycle lanes, and trail improvements with construction cost of over $50 million. The PLC North project was conditioned to construct part of the infrastructure prior to the occupancy permit in November 2023. WEBB was able to prepare plans, provide bidding support and construction management to complete improvements before the occupancy permit.

Arts and Music Line, Coachella Valley Association of Governments – Dilesh is serving as Project Manager for this project. WEBB is currently working with CVAG on the Arts and Music Line Project. The Project will provide about 15 miles of new and improved bikeways through La Quinta, Indio, and Coachella, a portion of unincorporated Riverside County and tribal lands. The project includes nine miles of protected Class I and Class IV bicycle facilities, which separate bicycles and golf carts from motor vehicle traffic, and more than six miles of Class II traditional bike lanes and Class III shared. The project's design will incorporate light and sound, providing pedestrians and cyclists safe access to the music and art festivals at the Empire Polo Grounds. The project also includes partnerships with two school districts and Golden Voice, as the route provides an opportunity to feature students' art and music. WEBB helped the CVAG secure ATP Grant funds of $36 Million. WEBB prepared the preliminary design, environmental documents for CEQA, and 65% of construction drawings and worked on NEPA, utility coordination, drainage studies, right-of-way, and final design.

WEBB has proposed several state-of-the-art elements, including bicycle signals with fully protected bicycle movements, raised and/or recessed bike/pedestrian crossings, bicycle signal indicators to alert bicyclists that the traffic signal, lighting and colored concrete, bridge bike path under crossings, and connections to CV Link and the Coachella Festival grounds have detected them. The project will be a unique project not only in the area but also in the state and the country.

The CVAG challenged the design team to make the project attractive, creative, and innovative to entice riders. The project design took the challenge by incorporating color pattern concrete, beautiful and programmable lights, and sound. WEBB is staying on top of the schedule and accommodate additional project needs.

In addition, WEBB developed the Active Transportation Design Guidelines for the Coachella Valley Cities to ensure design and facility consistency across multiple jurisdictions.

Myung Choo, PE, TE

Practice Area Leader

Myung Choo, PE, TE, is a Traffic & Transportation Practice Area Leader in WEBB's Traffic and Transportation Department. In his role he develops the technical abilities of WEBB Team to better assist clients in achieving their transportation goals through preparing traffic studies, designing new traffic signals and upgrading existing traffic signals. Clients benefit from his extensive knowledge of governmental agency procedures, design, geometrics, signs, traffic controls, parking and maintenance. Among his duties, he presents findings and recommendations on traffic matters to elected officials, municipal commissions, community groups and the general public.

Myung has extensive background in coordinating and processing permits through Caltrans for encroachment projects. He also offers experience with traffic-related technology, including TRAFFIX and WEBSTER programs for intersection analyses, SYNCHRO, ROADPLAN software for ICU and delay evaluations, and ULI spreadsheets in shared parking analyses. In addition, he has expertise in designing and analyzing micro-simulation computer traffic models.

Madison Street Improvements, City of Indio - Madison Street from Avenue 50 to Avenue 52 is an approximately one mile long arterial roadway located within the City of Indio and the City of La Quinta. Myung was the Project Engineer for the Madison Street Improvement Project. He assisted the Webb environmental team with alignment study and additional elements of the Project Design Report. During the design phase he was responsible for the utility relocation coordination and extents of right-of-way acquisitions. Myung was responsible for preparation of Plans, Specifications, and Cost Estimates (PS&E) on the project. To obtain PS&E approval, concurrence from both City of Indio and City of La Quinta was required. His role also included preparation of the traffic signal warrant at the intersections of both Madison Street and Avenue 50 and Avenue 52.

Jackson Street and Avenue 50, City of Indio - Myung is currently the Project Engineer for the Jackson Street is project. The City of Indio proposes to improve Jackson Street from Avenue 52 to Avenue 49. Similar to the Madison Street project, the Jackson Street project requires multi-agency approval as the project limits are within both City of Indio and County of Riverside jurisdictions. Key design features of the project include adequate driveway tie-ins and necessary utility relocations where conflicts have been identified. This project also requires coordination and parking lot design of a well-known local market at the northeast corner of Jackson St. and Avenue 50.

Nick Lowe, PE,TE

Deputy Director

Nick Lowe, PE, is a Deputy Director with WEBB's Traffic and Transportation Department. Nick assists clients with traffic signal upgrades, signing and striping modifications, and pavement improvements. He also develops temporary traffic control plans for construction while working closely with public agencies, contractors, and construction managers to safely expedite projects, thus minimizing impacts to traffic and businesses.

In addition, Nick assists other engineers on street improvements, street light installations, sewer and water plans, and expert witness testimony. He is also well-versed in the AutoTURN vehicle simulation program which assists in transportation improvements for constrained travel areas and parking lots. With increasing traffic pressure amid booming growth throughout Inland Southern California cities, Nick's work on regional transportation solutions provides a tangible benefit to the public through improvements in safety, mobility, and quality of life. Nick is currently pursuing his Professional Traffic Engineer's License and is active in several industry associations.

Nick provides grant funding assistance to the cities of Lake Elsinore, Palm Springs, and Cathedral City and has helped these cities secure over $20.9 million in funding, with little matched funds needed from the City, to install advanced dilemma zone detection, flashing beacons, and left turn phasing at over 50 signalized intersections.

Madison Street Improvements from Avenue 50 to 52 - As Project Engineer for Madison Street Improvements from Avenue 50 to 52, Nick worked with the WEBB Team on this multifaceted project within the City of Indio and La Quinta. His responsibilities included leading the alignment study, Project Design Report, environmental assessments, utility relocation, right-of-way acquisition, and roundabout feasibility. This project encountered unique challenges due to the need for additional right-of-way, involving communication with property owners and the resolution of shared rights-of-way conflicts among multiple agencies. To avoid project delays, determining senior rights was essential, and after thorough research, it was established that the City of La Quinta held senior rights, leading to significant cost savings as the Imperial Irrigation District accepted shared responsibility for 37 transmission lines, avoiding over $2 million in expenses.

Art and Music Line, Coachella Valley Association of Governments – Nick served as Project Engineer for this project. WEBB is actively collaborating with CVAG on the innovative Art and Music Line Project, delivering 15 miles of enhanced bikeways across various locations. This comprehensive initiative includes 9 miles of protected bicycle facilities, promoting separation from vehicle traffic, and over 6 miles of traditional bike lanes. The project focuses on safety and accessibility, with unique elements like lighting and sound for access to festivals at the Empire Polo Grounds. WEBB played a key role in securing $36 million in ATP Grant funds and introduced innovative features like bicycle signals, raised crossings, and more.

Stephanie Standerfer

Vice President

Stephanie Standerfer is a Vice President and Director of WEBB's Environmental Services Department. Stephanie has worked as an environmental planning project manager, focusing on California Environmental Quality Act (CEQA) matters for small, medium, and large public and private projects. Stephanie has managed all levels of CEQA documents for water and wastewater districts, healthcare clients, community college districts, water districts, cities, counties, and private developers. Her varied project experience allows her to foresee and navigate challenges that arise during CEQA compliance. As an expert in CEQA implementation throughout Inland Southern California, she also provides local agencies training in CEQA processing. She regularly oversees and coordinates with large teams of environmental planners, engineers, and architects and actively assists her clients through the environmental compliance gauntlet.

Clients benefit from Stephanie's interdisciplinary environmental planning background which includes experience on general plan updates, specific plans, planning studies, environmental constraints analyses, air quality impact studies, health risk assessments, noise studies, biological resource surveys, and cultural resource studies. She has managed small and large teams of subconsultants, engineers, and architects on a variety of controversial public works and private development projects over the years and often spearheads making public presentations on her projects.

Because of her reputation as a CEQA authority, clients seek out Stephanie's assistance in peer reviewing CEQA documents and guidance on CEQA processing strategies. She enjoys working closely with her clients and establishing long-standing professional relationships with her clients.

Cheryl DeGano serves as a Practice Area Leader with WEBB's Environmental Services Department. Cheryl manages the preparation and approval of environmental and planning documents for public and private sector clients. During her consulting career, Cheryl has been responsible for the preparation and processing of environmental and planning documents including environmental impact reports, environmental assessments, initial studies and mitigated negative declarations, mitigation monitoring and reporting programs (MMRPs), specific plans, development impact fee ("Nexus") studies per California Government Code 66000 et seq., and development and entitlement applications. Cheryl has been responsible for all aspects of these projects including research, data collection and analysis, report writing, quality assurance/quality control review, preparation of distribution lists, direction of public noticing, project management, representation at public meetings and hearings, and agency and client coordination. Cheryl is also experienced in the analysis of construction noise using the Federal Highway Administration's Roadway Construction Noise Model (RCNM). In addition to her environmental and planning background, Cheryl has assisted public agencies and private sector clients finance public facilities/services through the formation and administration of special finance districts and is well versed in socio-economic issues.

Cheryl possesses strong communication and analytical skills and establishes and maintains excellent client relationships. Cheryl has a proven ability to take over large projects with minimal disruption to the client, experience with high profile and controversial studies, and the ability to work effectively and collaboratively within the increasingly complex regulatory and environmental context of development in southern California to develop solutions, strategies, and feasible alternatives for complex projects.

Cheryl is experienced in the preparation of environmental and planning documents and assisting public agencies and private sector clients finance public facilities/services through the formation and administration of special finance districts and the preparation of development impact fee studies. Strengths include communication and analytical skills, establishment and maintenance of excellent client relationships, proven ability to take over large projects with minimal disruption to client, experience with high profile and controversial studies, and a desire to work collaboratively toward a common goal.

Eliza Laws

Air Quality Practice Leader

Eliza Laws is an Air Quality Practice Leader with WEBB's Environmental Services Department. Eliza assists public and private clients in the preparation and approval of environmental and planning documents. During her consulting career, Eliza successfully prepared or directed the preparation and processing of environmental documents under both the California Environmental Quality Act (CEQA) and National Environmental Quality Act (NEPA) for public and private clients. She has been responsible for all aspects of these projects including research, data collection and analysis, report writing, quality assurance/quality control review, preparation of distribution lists, direction of public noticing, project management, preparation of technical studies related to air quality, greenhouse gas (GHG), and health risk assessments, direction of technical studies, representation at public meetings and hearings, and agency and client coordination.

Eliza also specializes in processing environmental documents through Caltrans District 8 in accordance with the Caltrans Local Assistance Procedures Manual and is knowledgeable of the policies and procedures required to obtain CEQA/NEPA approval.

With strong communication and analytical skills, as well as a proven ability to take over large projects with minimal disruption to clients, Eliza maintains excellent client relationships. She offers experience with high profile and controversial studies, as well as the ability to work effectively and collaboratively within the increasingly complex regulatory and environmental context of development in southern California - helping to provide clients with solutions, strategies, and feasible alternatives for complex projects.

Autumn DeWoody

Senior Environmental Analyst

Autumn DeWoody is a Senior Environmental Analyst with WEBB's Environmental Services Department. Autumn offers clients a bridge between our technical municipal and stormwater engineering services and environmental documentation. She regularly partners with WEBB's project managers to prepare various planning documents on behalf of our water, wastewater, and flood control district clients. In addition, Autumn offers private and public clients jurisdictional delineations and regulatory permitting services as well as environmental monitoring at construction sites to ensure compliance with Mitigation, Monitoring, and Reporting Plans (MMRPs). She has been repeatedly commended by clients on the frequency and helpfulness of timely updates during permit processing.

Autumn is a certified Level 1 Water Audit Validator and has also prepared Water Supply Assessments and Urban Water Management Plans for a variety of public and private clients. As a result, she appreciates the importance of timely client communication in order to collect pertinent data that is sufficiently detailed and accurate to provide a thorough reflection of the project. This data collection, communication, and collaboration early in the project has proven to keep projects on schedule and budget. She is familiar with the intricacies of complex water supply portfolios and the technical components of planning for future water demands.

Reed Chilton, PE, QSD

Director - Construction Management and Inspection

Reed Chilton, PE, QSD, is Director of WEBB's Construction Management and Inspection Department. Reed has worked on a variety of private and public projects and has established a strong foundation in the engineering and construction management profession. His project experience includes sewer lines, drainage facilities, water lines, recycled water lines, wastewater treatment facilities, dry utilities, street improvements, street lighting, traffic signals, and landscaping. Specifically, his involvement with these projects includes preparation of specifications and bid documents, contract management and administration, permitting, submittal and RFI review and coordination, leading meetings, field investigations, project documentation, review and approval of change orders and pay estimates, project close-out, and managing day-to-day needs for owners and contractors. Reed manages and schedules WEBB's Inspection Team.

Project Manager for the Benedict Reservoir 8, Jurupa Community Services District (District). WEBB provided construction management, inspection services, and engineering support for the Benedict Reservoir B project for the District. The existing project site includes two tanks. This project includes demolishing one existing tank and installing a new 1.1 MG welded steel reservoir (Benedict B) adjacent to the existing 1.0 MG reservoir (Benedict A). Exterior coating of both tanks will be performed. Benedict Reservoir B will have a nominal diameter of 91-FT and shell height of 26-FT, including a reinforced concrete ring-wall foundation. This project includes a temporary by-pass to provide service to the 1200 pressure zone during construction, grading on the hillside in rock, site improvements, and re-vegetation.

Construction Manager for the $5.2M Sky Country Trunk Sewer Project, Jurupa Community Services District. The project included over 8,000-LF of 8-inch to 18-inch PVC and (PS 115 and SDR 35) and no dig VCP pipe with a construction cost of $5.5 million as well as Jack and Bore installation of PVC and VCP sewer ranging in size from 8-inch to 18-inch. Performed air pressure testing and vacuum testing of sewer pipe and manholes. Observation of trench excavation, backfill, fill material moisture conditioning, densification, and asphalt paving. Coordinated road closures and traffic detours with city, local residents, and local businesses. Inspected installation of work area traffic control for compliance with approved plans.

Construction Manager for the $25M Wastewater Treatment Plant, City of Imperial (City). WEBB performed Construction Management, Inspection, and Engineering Support Services for the City's $25M WWTP Upgrade project. This project includes construction of a new MBR treatment system including MBR Basins, waste-activated sludge pumps, blowers, air compressors, permeate storage tank, and non-potable water pumps. A pre-engineered metal building was installed for the MBRS system which included a monorail bridge crane, office spaces, and lab room. A dewatering system with screw conveyors was also installed inside a pre-engineered metal building. Electrical improvements include a new transformer, main breaker, automatic transfer switch, and Emergency Power Generator. Site improvements include yard piping, paving, and rock installation. The project also includes modifications to existing facilities, shut-downs, and tie-ins to the active wastewater treatment plan.

Reed Chilton, PE, QSD

Director, Construction Management and Inspection

Construction Manager for the Sludge Storage Water Reclamation Facility #1, City of Corona (City). WEBB provided construction management and inspection services for the City's sludge storage project. This project repurposed two existing chlorine contact basins for sludge storage tanks. The project included new rotary drum screens and sludge transfer pumps to replace the existing system, a new compactor was added to the process for compaction of the screenings, and overhead piping was installed. Other components of the project included installation of new pump station, coarse bubble eductor tubes, new fine bubble diffusers, and all associated piping, valving, mechanical, electrical, structural, architectural, instrumentation, and controls.

Project Manager for the $3M College Tank Replacement, Golden State Water Company (GSWC). For the College Site in Placentia, an existing concrete tank was demolished and replaced with two 0.5 MG welded steel tanks along with a new site storm drain and site improvements. The existing concrete tank remained in service during construction of the new steel tanks and was then removed. A 1,000-LF, 12-inch diameter PVC overflow drain line was constructed in the College Plant access road from the new reservoir to an existing storm drain catch basin. This project also included landscaping to screen the tanks from nearby residents. This project included coordination with MWD for improvements near their existing facilities, CEQA compliance with environmental mitigation measures, asbestos survey of existing facilities, coordination with nearby residents, and working with GSWC Operations Staff. Critical issues included:

- Meeting an aggressive completion schedule
- Coordination with operations to ensure continuity of water service during tank construction
- Project phasing such that critical operations were maintained during demolition and tank construction
- CEQA compliance based on mitigation measure developed by GSWC
- Compatibility with the surrounding development and sensitivity to neighbors

Project Manager for the $3.6M Golden Tank Replacement, Golden State Water Company (GSWC). The Golden Tank Project in Yorba Linda included demolition of the existing tank, installation of a new 1.5 MG welded steel tank, and installation of a new pump station. The existing concrete tank was removed prior to construction of the new steel tank. The booster station includes two 30 Hp vertical turbine pumps designed to pump 500 gpm, and one 60 Hp vertical turbine pump designed to pump 1,000 gpm with associated piping, valves, and appurtenances. The project also includes revisions to the on-site storm drain system, tie-ins to the existing water system, coordination with GSWC operations, removal of existing asbestos pipe, and coordination with the nearby park facilities. Critical issues included:

- Meeting an aggressive completion schedule
- Coordination with operations to ensure continuity of water service during tank construction
- Project phasing such that critical operations were maintained during demolition and tank construction
- CEQA compliance based on mitigation measure developed by GSWC
- Compatibility with the surrounding development and sensitivity to neighbors

Construction Manager for the $5.7M Rider Distribution Center 3. This project consisted of offsite Improvements project for IDI Logistics in the City of Perris. The project was led by the developer of multiple nearby distribution warehouses. The improvements included in the contract were reimbursable by RBBD funds through the City of Perris. The purpose of the project was to widen Rider Street to ultimate width, construct Redlands Avenue including storm drain improvements, and curb and gutter, sidewalk, parkway landscaping, medians, median landscaping, street lighting, and traffic signals. Construction coordination included the on-site builder, off-site underground utilities including EMWD recycled and domestic water, dry utility installation, and SCE transmission pole relocation. Scheduling work between all trades and contractors was critical to meeting aggressive deadlines.

Keith Barnett

Construction Services Manager

Keith Barnett is a Construction Services Manager and Inspector with WEBB's Construction Management and Inspection Department. Keith has more than 25 years of experience with various types of projects. His experience as a construction manager for various large scale projects, coupled with his decisive nature and excellent project management skills, has made him capable of overseeing teams, budgets, and schedules. Keith is adept at client relationship management, scope development, and field monitoring.

NPDES Storm Water Training
NRMCA Pervious Concrete
Nuclear Gauge Operator

John J. Benoit Detention Center Phase II Offsite Storm Drain, Street, Landscape, and Traffic Signal Improvements, County of Riverside Facilities Management Keith provided construction management for this project located in the City of Indio. The project consisted of offsite improvements for the John J. Benoit Detention Center, including Hwy 111 and Oasis roadway, new sidewalk, access ramps and associated concrete improvements, landscape and irrigation, signing & Striping, and traffic signal modification improvements. Coordination with the following agencies was required: City of Indio Public Works, Valley Sanitary District, and Indio Water Authority.

21/22 Pavement Management and Slurry Seal, City of Indio – Keith provided construction management for this project consisting of repaving 19 separate street segments inside 10 neighborhoods and three parking lots. Work included grinding and removing existing asphalt and replacing the removed asphalt to prior grade, final utility adjustments, replacing existing striping, removal and replacement of over 50 ADA access ramps, NPDES and AWMD compliance, traffic control, and resident/business notifications. WEBB also worked under a joint agreement with the County of Riverside to complete the County of Riverside portion of Dillon Road

Stage Ranch Pipeline Replacement, Elsinore Valley Municipal Water District Keith provided construction management for this waterline replacement project, consisting of the replacement approximately 2,600-LF of an existing 10-inch CMLC water main with approximately 330-LF of 8-inch DIP, Class 53 pipe, and 2,270-LF of 8-Inch PVC C900, in the City of Wildomar. The project improved water quality and pressure of the existing water system which remained in service throughout the project to serve agricultural areas. There were multiple project challenges:

- A temporary highline was required to keep the waterline in service, however construction of proposed pipe was completed keeping the existing line active
- The terrain was mountainous with a 48% slope in some areas and granitic rock conditions were present
- Overhead powerlines were located along the alignment. The contractor had to use caution and coordinate with Edison
- The work area was extremely limited for the contractor
- A road detour was required and coordinated with the Forestry Service

Washington Avenue Lift Station, Elsinore Valley Municipal Water District – Keith provided construction management for this lift station decommissioning project. This project consisted of cleaning, flushing, and

Construction Manager

Joseph Khader, EIT is a Construction Manager with WEBB's Construction Management and Inspection Department. Joseph has more than 20 years of experience with various types of projects. His experience as a construction manager for various large scale projects, coupled with his decisive nature and excellent project management skills, has made him capable of overseeing teams, budgets, and schedules. Keith is adept at client relationship management, scope

Romoland MDP Line A: Stages 4, 5, and 6 - Joseph was the Senior Project Manager for this project. It features 1 Million CY; 15,000 of structural concrete, 11,000 CY of concrete channel paving, and 3,500-LF of RCP up to 102-inches.

West Garden Grove Transmission Main - Joseph was the Senior Project Manager for this project. It consisted of 24,000-LF of 16" PVC, 1,215-LF of 16" DIP, 2,500-LF of 10" PVC and 3,000-LF of 8" PVC potable water transmission mains. It also included the construction of an electric control valve, connections to reservoir and pump stations and the replacement of 4,000-LF of 15"-24" VCP sewer trunk line while bypassing flows of 4,000-GPM.

Olive Avenue Sewer Improvements - This project consisted of the installation of 10,500-LF of 36" SDR sewer trunk line, the connection to the active sewer main requiring 24/7 bypass of 4,500-GPM flows, extensive dewatering, and the treatment of 500-GPM that was discharged. This project was completed at an average depth of 22-FT. 325 dewatering wells and 85 monitoring wells were constructed.

Parking Lot Designs, Naval Air Station North Island Coronado - This project required complete design and construction. It included the removal of earthwork, paving, utilities, subsurface structures, above surface structures for the proposed utilities and infrastructure to be built adjacent to live aircraft runway. Joseph served as the Project Manager.

Andrew Vollrath

Assistant Engineer

Andrew is currently an assistant engineer working on receiving his Professional Engineering License. Andrew manages the progress of numerous projects, with the goal of a high-quality product within budget and schedule. His role includes preparing and negotiating the financial aspects of the job, ensuring materials are up to standard, maintaining communication between owners, contractors, and engineers, and collaborating with designers and public agencies to ensure a successful construction process.

Richard F. Yeager Jr., PE

Principal Corrosion Engineer

Richard (Rick) F. Yeager Jr. is a California Registered Civil Engineer and a NACE Int'l Certified Cathodic Protection Specialist with a broad background in corrosion engineering, inspections, and construction support services. Mr. Yeager has extensive experience in water and wastewater corrosion control and cathodic protection system designs, corrosivity assessments, pipe and coating materials of construction, and inspection and monitoring of installed piping systems. The NACE Certification meets the definition of "Corrosion Expert" as defined by the United States Environmental Protection Agency and under 40 CFR 280.12 of the Code of Federal Regulations. Additionally, Mr. Yeager has provided construction inspection services for projects that have included pipelines, water reservoirs, treatments plants, and roadways.

Project Experience:

As-Needed Corrosion Engineering Services & Annual Surveys

Provide Cathodic Protection Survey and Performance testing of installed pipelines and reservoirs. To include monitoring, testing and troubleshooting all existing corrosion control facilities for corrosion. Performing coating assessments on process facilities, water treatment plants, and buried piping systems. Then assessing system damage and evaluating cathodic protection system performance and identifying repair or refurbishment requirements. A summary report listing all observations, conclusions, and recommendations is submitted at the completion of each annual survey.

Mr. Logan is a Vice President and Principal at AQUA Engineering. Justin leads AQUA's efforts in water and wastewater treatment. He focuses on treatment facility planning, design and construction projects, with emphasis on providing clients effective and affordable solutions to their individual challenges. Justin has worked on more than 50 treatment facilities, developing his extensive experience with a variety of processes and equipment. His responsibilities include project master planning, facility evaluations, process development, design layout, plant configuration, design efficiency and construction drawing development of water and wastewater treatment facilities.

Project Experience

City of Imperial Wastewater Treatment Plant Upgrade - Imperial, CA
Conversion of existing plant form extended aeration to a 2.4 mgd membrane bioreactor (MBR) plant capable of producing recycled water.

City of Beaumont Water Reclamation Facility Upgrade - Beaumont, CA
Existing pland modification and expansion from extended aeration to a 6.0 mgd membrane bioreactor (MBR) plant followed by reverse osmosis to meet salt reduction requirements.

City of Corona Dewatering Upgrade - Corona, CA
Modification of existing dewatering belt press facility to include a single centrifuge capable of dewatering for the plant and also capable of adding another centrifuge in the future.

Puako Preliminary Engineering Report - Puako, HI
Preliminary feasibility of treatment & sewer collection options for the Community of Puako with the preparation of a Preliminary Engineering Report.

Las Gallinas Valley Sanitary District Secondary Treatment Upgrade - San Rafael, CA
Planning and Design work for the upgrade of the secondary treatment processes from trickling filter to activated sludge, including equalization basin addition and recycled water facility expansion.

City of Imperial Headworks Upgrade - Imperial, CA
Replacement of existing headworks facility along with various other plant improvements.

City of Rexburg Water Reclamation Facility Solids Handling Project - Rexburg, ID
Expansion of solids handling process by converting to anaerobic digestion and pasteurization to produce Class A biosolids and provide for solids storage.

Western Riverside County Regional Water Authority - Corona, CA
Plant evaluation, design, and construction services for a complete plant upgrade from 8 mgd to 14 mgd, including all aspects of the treatment plant.

Western Riverside County Regional Water Authority - Corona, CA
Aeration upgrade adding diffusers and blowers to existing process to improve efficiency and restore capacity of oxidation ditch.

Rexburg City Wastewater Treatment Plant - Rexburg, ID
Expansion and upgrade utilizing a fixed film process followed by existing oxidation ditches to bring the plant to capacity of 4.8 mgd, adding ultraviolet disinfection, and belt press facility.

Fort Shafter Flats Pump Station Conversion - Honolulu, HI
Planning and complete design for the conversion of the existing pump station to a 2 mgd membrane facility to produce recycled water.

Tooele City Water Reclamation Facility, Phase 1B Upgrade - Tooele, UT
Design and construction which added UV disinfection, digestion, and solar drying to the facility. Expansion and upgrade utilizing an MBR process to bring the plant to a capacity of 2 mgd.

Las Gallinas Valley Sanitary District Recycled Water Facility - San Rafael, CA
Design and construction services for the addition of the Recycled Water facility to the existing

treatment plant. This 1.4 mgd facility, capable to 5.4 mgd, utilizes pressure membranes and UV treatment.

Elko Secondary Treatment Upgrade - Elko, NV
Facility planning, design, and construction of a 4 mgd plant.

West Wendover Wastewater Treatment Plant - West Wendover, NV
Facility planning and design of upgrade to MBR system and improvements to the headworks facility, including new screening and washing equipment, HVAC, and utility water system.

Town Wastewater Treatment Plant Expansion and Upgrade - Town of Town, NM
Utilized an MBR process design to bring the plant to a capacity of 2 mgd and provide recycled water quality effluent.

Imperial County Wastewater Treatment Plant - Imperial, CA
5 mgd Zenon hollow fiber membrane system, expandable to 15 mgd. Fine screening, process tanks and biological treatment system, UV disinfection facility, RERS, and standby power.

Springville City Wastewater Treatment Plant - Springville, UT
Expansion and upgrade utilizing STM Aerator process to bring the plant to a capacity of 6 mgd.

Weber Wastewater Treatment Plant - Weber, CA
1.2 mgd activated sludge treatment plant facility expansion.

Immigration Canyon Rustic Wastewater Treatment Plant - Prescott, AZ
0.5 mgd Kubota flat plate MBR with fine screening, process tanks and biological treatment systems, UV disinfection facility, lab, operations building, and standby power.

Tooele City Wastewater Treatment Plant - Tooele, UT
Expansion to bring the plant from 2 mgd to 4mgd in two phases.

San Felipe Pueblo Wastewater Treatment Plant - San Felipe, NM
300,000 gpd Kubota flat plate MBR, expandable to 600,000 gpd, includes offices, a small lab, biosolids dewatering, and a pump station to deliver treated water.

Jerome City Wastewater Treatment Plant - Jerome, ID
Expansion utilizing an MBR process. Several phases to bring plant capacity to 4.5 mgd.

Tiw Cliffs Wastewater Treatment Plant - Boise, ID
Facility with 300,000 gpd Kubota MBR System expandable to 600,000 gpd including fine screening, process tanks, and biological treatment systems, UV disinfection facility, RERs, and standby power.

Edgewood Wastewater Treatment Plant - Edgewood, NM
Facility design & construction of a 150,000 gpd Kubota MBR System.

Hurricane City Wastewater Treatment Plant - Hurricane, UT
Kubota MBR process for a 1 mgd plant that is primarily turkey processing waste.

Pueblo Wastewater Treatment Plant - Albuquerque, NM
Facility design & construction of a 0.25 mgd Kubota Flat Plate MBR Facility, included design of an influent screening system, back-up power system, and the associated telemetry control system.

Town Wastewater Treatment Plant - Town, NM
Design and construction of new headworks facility and septage receiving station.

Cubby Water Reclamation Facility - Cubby, UT
Design and construction of a Zenon ZeeWeed 200,000 GPD facility.

Hyrum Water Reclamation Facility - Hyrum City, UT
Facility planning, design, and construction upgrading this existing oxidation ditch facility to a 2 mgd MBR facility using Kubota membranes.

Christina Nishimoto, PE, SE

Senior Engineer
Kleinfelder

Registered Civil Engineer C 73208
Registered Structural Engineer SE 6084

EDUCATION

BS, Electrical Engineering, University of Utah

Christina Nishimoto has nine years of professional experience including working with steel, concrete, masonry, and timber structures and is knowledgeable in the design considerations of all four materials and their respective governing codes. Her design phase work has included attending meetings, coordinating with other professional trades, structural analysis, and detailing.

Plant 150, East Valley Water District - Christina serves as Project Engineer providing foundation calculations, drawings, and specifications for Plant 150, a centralized water treatment plant. The scope of work includes a ring foundation for two 500,000 gallon steel tanks for surface water, concrete foundations for an operations building, chemical building, and multiple ion exchange tanks.

Miramar Clearwell Improvements, City of San Diego Public Utilities Department - Christina serves as Project Engineer providing the design of two new rectangular hopper bottom reservoirs, totaling 58.3 MG. The structural system is a two-way reinforced concrete roof with drop panels supported seismically by perimeter concrete shearwalls. Christina is also designing a 5 MG chlorine contact chamber of similar structural system and assisting in managing the work of a number of subconsultants, including the water disinfection process, architectural, civil, landscaping, and environmental permitting.

Point Loma Sedimentation Basin Rehabilitation, City of San Diego - Christina served as Project Engineer on the Point Loma Wastewater Treatment Plant project that consists of 12 existing sedimentation basins constructed as several different projects starting in 1962 through 1996. The result of the varying projects is non-uniformity within the 12 basins. Christina provided support on structural engineering services provided by KLF|SWE which included site evaluation, design and drafting, and construction administration during the construction process. Additionally, Christina provided the design of a pipe support rack.

Pump Stations 1 and 2, City of San Diego Metropolitan Wastewater Department - Christina provided structural calculations and construction support for this design-build project. KLF/SWE's scope of work included the design of a two-story concrete masonry building at Pump Station 2 as a sub-consultant to Carollo Engineers. The first floor of the building is an electrical room and the second floor is used for storage. The structural system of the building consists of long span trusses for the roof framing, composite floor, and a mat foundation.

Twin Oaks Central Basin, Central Basin Municipal Water District - Christina served as Project Engineer providing design calculations for the 50 MGD design/build water treatment plant. The design included pump stations, arc flow treatment barriers, two 14 MGD reservoirs, and an ozone treatment facility and filter basin.

Pala Casino Wastewater Treatment Plant, Pala Band of Mission Indians - Christina served as Project Engineer providing the design calculations for this project, which provided the Pala Band of Mission Indians a new wastewater treatment plant and upgrades to the existing lift station.

Phase I Expansion, Riverside Regional Water Quality Control Plant - Christina served as the Project Engineer and provided construction support services for the Phase I expansion. KLF/SWE's scope of work included design consulting services for this project. The expansion scope was to replace 20 MGD of existing conventional activated sludge capacity with 26 MGD of membrane bioreactor capacity.

Mark P. Jeppsen, P.E. - Principal

(801) 683-3760 - mark.jeppsen@skmeng.com

Mr. Jeppsen is an electrical, instrumentation and controls engineer with 21 years of experience in power design, controls engineering, process and instrumentation design, industrial network design, construction oversight, radio and telemetry systems, SCADA system design and integration and PLC and HMI design and integration. He has designed and integrated multiple potable water, secondary water, water treatment, wastewater collection and wastewater treatment systems. Design tasks include facility power, motor power and control, SCADA systems, instrumentation selection and control, process and instrumentation diagrams, communications networks and systems, control loop diagrams and descriptions. Integration tasks include control and PLC panel design and construction, PLC, OIT and HMI programming and commissioning, radio system integration and testing, instrument calibration, automated reporting systems and operator training and documentation.

Project Experience

2009 - 2021:
Jurupa Community Services District (JCSD), Jurupa, CA - Electrical and Controls Engineer
Mark has worked with JCSD on various projects over the years including the Regional Lift Station and various other lift stations. He has also was the lead electrical engineer on Wells 13, 27 & 28 as well as the JCSD-RCSD Booster Pump Station. Mark has worked closely with the District's controls engineer and O&M staff to develop designs drawings that are tailored to the District's standards.

2009 - Present:
Western Riverside County Regional Wastewater Authority (WRCRWA), Eastvale, CA - Electrical and Controls Engineer
In 2009 Mark led the electrical and control design for an aeration upgrade at the WRCRWA plant. This included a new blower building with associated controls for the existing oxidation ditches. In 2012 Mark was the lead electrical engineer for a complete plant expansion at WRCRWA which also included new network, PLC, and HMI systems. Since the completion of the expansion, Mark has provided services for several projects and has provided on-call support for the facility.

2006 – Present:
Salt Lake City, UT - Electrical and Controls Engineer
SKM has been providing services to Salt Lake City for their various water and wastewater facilities since 2006. Mark is currently overseeing the implementation of a complete control system upgrade at the 50 MGD Water Reclamation Facility which includes control panel upgrades, PLC replacements and new HMI screens. SKM has designed a new WAS thickening facility and is currently designing a new Headworks facility. Mark is the lead engineer and project manager for electrical and controls upgrades at the 20 MGD Big Cottonwood Water Treatment Plant that will be completed in 2018.

2004 – Present:
Central Weber Sewer Improvement District, UT - Electrical and Controls Engineer
SKM has been working for Central Weber Sewer Improvement District (CWSID) since 2004 by providing electrical designs, controls upgrades and system maintenance. Mark has managed upgrades at the plant as they have come, including upgrades for the influent pump building, utility water pump building and PLC & HMI upgrades. In 2006 design began for a complete 60 MGD plant expansion and SKM was an integral part of the design and integration team. Construction for this project began in 2008 and was completed in 2012.

2004 – Present:
Sandy City, UT - Electrical and Controls Engineer
SKM provided the complete and operational SCADA System for Sandy City's Water System that was completed in 2005. Since then, SKM has provided incremental additions, improvements and maintenance including a new storm water system. The system consists of nearly 40 remote sites that consist of tanks, boosters and wells. In 2016 SKM provided an HMI system upgrade for the water and storm water systems.

2003 – Present:
Park City, UT - Electrical and Controls Engineer
SKM began working for Park City by providing the system integration for an iron, arsenic and manganese removal process at the Spiro Water Treatment Plant in 2003. In 2012, SKM provided the complete and operational SCADA System for the Quinn's Junction Water Treatment Plant, a microfiltration membrane process. This included PLC & HMI programming, custom reports and historical data gathering and startup and commissioning. In 2016 SKM upgraded Park City's complete SCADA system which included their two water treatment plants and approximately 70 remote boosters, tanks, metering stations, PRV stations and well houses.

Hashmi Quazi, PhD, PE, GE

Principal in Charge/Project Manager

Dr. Quazi has over 29 years of experience providing geotechnical engineering services and has earned a reputation for providing quality work in an honest and ethical manner, on time and within budget.

In his capacity as Principal in Charge or Project Manager, Dr. Quazi provides quality control, budget oversight, and technical assistance on various types of projects, including pipelines, wastewater treatment plants, reservoirs, and other related studies. He has supervised site investigations and prepared technical reports for facilities located in areas of high liquefaction potential and difficult subsurface conditions.

Education

- Ph.D., Civil Engineering, University of Arizona, 1987
- M.S., Civil Engineering, Arizona State University, 1982
- B.S., Bangladesh Engineering University, 1978

Registrations/Certifications

- California, Civil Engineer, #46651
- California, Geotechnical Engineer, #2517

Professional Memberships

- American Society of Civil Engineers (ASCE)

Relevant Experience

Membrane Building, Pump Station, and Well, Azusa Light & Water Canyon Filtration Plant, *Azusa, CA*. QA/QC. Provided quality control oversight during the geotechnical investigation and grading and materials testing. The project included the construction of a new membrane building, a membrane feed pump station and a pretreatment basin, yard pipeline, a 4 MG water storage reservoir, and a new 18 inch 3500 feet long pipeline.

District I and II Sewer Main Replacement, *Pomona, CA*. Principal in Charge. Provided technical and budget oversight, resource allocation and contract management for the geotechnical investigation. The project consists of about 3,620 linear feet of 15-inch diameter vitrified clay sewer pipe in the city of Pomona, California.

RP-4 Out Fall Pipeline, Pump Station and Water Reservoir, *Chino Basin Municipal Water District, CA*. Principal in Charge. Provided technical and budget oversight, resource allocation and contract management for the geotechnical investigation. The project consisted of 44,000 linear feet of 42-inch diameter pipeline, a pump station, a 2.6 million gallon below grade water reservoir and a chlorination facility. The pipeline traversed underneath existing reinforced concrete box culverts and railroad tracks.

Rosemead Pipeline Extension – Phase I & II, *Rosemead, CA*. QA/QC. Provided quality control oversight for the geotechnical investigation. The project consisted of the design and construction of approximately 6,635 linear feet of 16-inch recycled water pipeline in the City of Rosemead, California. For Phase II, the project consisted of the design and construction of approximately 12,917 linear feet of water pipeline in the City of Rosemead, California.

Arroyo Seco Pipeline Installation, *Pasadena, CA.* Principal in Charge. Provided technical oversight and budget control for geotechnical observation, materials testing and inspection. The project consisted of the City of Pasadena installing new pipelines prior to the larger construction activities ranging from 4 inches to 16 inches. The total length of the pipelines required trenching to approximately 2,000 linear feet. Converse will supplied qualified technicians to provide inspection and materials testing services for soils during construction operations.

EVMWD 6 Capital Improvement Projects, *Riverside County, CA*. Principal in Charge. Provided technical oversight and budget allocation for the geotechnical and materials testing and inspection. The project consisted of the construction of six (6) capital improvement projects for EVMWD involving: **1) Wildomer Area Lift Station -** Approximately 1,300 linear feet of 8-inch parallel sewer line, 1,200 linear feet of 14-inch force main, pump and electrical upgrades to the B1 and B2 lift station facilities. **2) Trtan**

Jeff Puzzullo

Puzzullo Consulting

Role: Cost Estimating, CPM Scheduling and Project Support Services

Mr. Puzzullo has been providing professional construction services as a licensed general contractor and construction manager for over 44 years. During this time, Jeff has been responsible for the completion of over $500 million in construction projects in the public and private sectors of the construction industry with primary emphasis on public works projects. He has extensive experience in the execution of design/bid/build and design/build construction projects with an emphasis on the development, design, and construction of water and wastewater infrastructure projects. He has extensive experience in construction cost estimating, constructability reviews/input and CPM scheduling, and has served as an expert on numerous value-engineering teams for the assessment of water and wastewater treatment facilities under both traditional bid-build and design-build methods of project delivery.

Bachelor of Science in Electrical Engineering
Arizona State University

Leo Maya, P.E., LEED AP – Senior Electrical Engineer
With over 20 years of design and project management experience, Leo Maya has worked on a wide array of projects including large commercial and industrial buildings, health care and institutional facilities, data centers, sports field lighting, street and area lighting, golf course electrical systems, custom residences, and various dry utility designs. Mr. Maya joined the Design West team in 2005 and in 2009 took over the responsibility of running the electrical production. Apart from standard electrical and lighting design, he oversees the electrical BIM design team; solar photovoltaic design; specialized analyses including arc flash, coordination studies and load flow evaluation; all low voltage applications including fire alarm, security, data and signal, and A/V systems. His continuing education in the field of the electrical engineering and lighting design, along with his membership and board position for the IESNA (Illuminating Engineers Society of North America) keep him up to date with the latest lighting and energy efficient technologies. Beyond his technical prowess, it is Mr. Maya's dedication to maintaining long-term client relationships and his diverse background that have made him such a valuable asset to the Design West team. This dedication to customer service is evident in the work ethic and the character displayed by his whole team.

Featured Project Experience:

Circuit 31,41,44,69 Upgrade, South Gate
Conversation of 8.5 miles of existing high voltage series street lighting to new multi-circuit LED.

Kenneth Tang | City of South Gate | (323) 816-4011 | ktang@sogate.org

Ponderosa Park and Community Center, Anaheim
New 22,000 square feet Family Resource Center including classrooms, office, dance studio, and gymnasium, new splash pad, skate park with Musco lighting, and a new restroom building.

Pamela Galera | City of Anaheim | (714) 765-4463 | pgalera@anaheim.net

Whittier Blvd., Montebello
Electrical design for a 6 mile stretch of façade and streetscape revitalization to mixed use residential, store front, and commercial segments along the strip.

Sam Kouri | City of Montebello | (323) 887-1460 | skouri@cityofmontebello.com

SR55 Downtown Gateway
New LED landscape, median and roadway lighting and infrastructure

Bart Mejia | City of Costa Mesa | (714) 754-5291 | BMejia@ci.costa-mesa.ca.us

Redlands Wastewater Treatment Plant Generator
New Generator Set Design for a 1.25 MW generator system at the city's Central Wastewater Plant.

Greg Brooks | City of Redlands | 909-798-7584 | gbrooks@cityofredlands.org

SMITH-EMERY LABORATORIES
An Independent Commercial Testing Laboratory, Established 1904

Josh Greeley | *Field Technician*

Mr. Greeley is a valued member of our team and he excels at his duties as a Field Testing Technician. Josh is proficient with public works and private sector projects and their various requirements. His duties include, but are not limited to: soils testing, asphalt testing, concrete testing and pull/torque testing. Josh has worked with Smith-Emery since 2006, and is an asset to any project team.

Licenses and Certifications

Nuclear Gauge Certification – #46183
American Concrete Institute Field Testing Technician – Grade I Certification
Railroad Safety Certification
Caltrans 539 – Sampling Freshly Mixed Concrete
Caltrans 540 – PCC Cylinder Fabrication
Caltrans 523 – Flexural Strength Concrete
Caltrans 524 – Flexural Strength Rapid Set PCC
Caltrans 556 – Test of Slump of Fresh PCC
Caltrans 557 – Test for Temperature of Freshly Mixed PCC
Caltrans 231 – Test for Soil and aggregate density
Caltrans 375 – Test for Asphalt Density
Caltrans 125 – Sampling Materials

City of Irvine – Certification No.: 2655
Concrete Certification
Asphalt Certification

Michael Putt, PG, CEG
Principal Geologist

EDUCATION

B.S., Geology, 1997, California State University, Fullerton

Applied Rock Slope Engineering Short Course, 2006, Association of Engineering Geologists, California

REGISTRATIONS/ CERTIFICATIONS

PG 7581 (California)

CEG 2341 (California)

Radiological Safety and Gauge Use Certification, 1997

PROFESSIONAL AFFILIATIONS

South Coast Geological Society

Mr. Putt is a Principal Geologist with Ninyo & Moore and has extensive experience in providing engineering geology consultation in Southern California. Mr. Putt has extensive experience on a variety of project types, including highways, bridges, bore and jack tunneled undercrossings, hillside and flat-land mass grading projects for residential, commercial, and industrial developments, pipelines, and forensic investigations. Mr. Putt performs project administration and management, prepares and reviews geologic and geotechnical reports and provides third party review services for geotechnical reports. He conducts geologic and geotechnical field evaluations, including detailed logging of large- and small-diameter borings and trenches, and geologic evaluation/mapping. Projects have included fault hazard evaluations, landslide studies, slope stability analysis, seismic refraction studies, geologic reconnaissance studies, forensic evaluations, and construction and inspection services.

EXPERIENCE

South Coast Water District, Lift Station No. 2, Laguna Niguel, California: Served as Principal-in-Charge providing geotechnical consulting services for the rehabilitation of the South Coast Water District (SCWD) Lift Station No. 2 Force Main in Laguna Niguel and Laguna Beach, California. The project involved the rehabilitation of the existing SCWD force main between Lift Station No. 2 and the South Orange County Wastewater Authority Coastal Treatment Plant. The force main consists of approximately 5,970 feet of 20-inch wide polyurethane-lined, polyethylene wrapped, class 250 Ductile Iron pipe that was constructed in 1992.

South Coast Water District, Soil Disposal Site and Administration Building, Dana Point, California: Principal Geologist provided recommendations for remedial grading to be performed prior to placing new fill at Lot "B" located on South Coast SCWD's San Juan Creek Property in Dana Point, California. Lot B was used to dispose of soil that was being generated from an off-site tunneling project being performed by SCWD and that SCWD was planning to place the soil generated from the tunneling operation as an engineered fill. The site was to be used by SCWD for new improvements in the future. Services consisted of review of readily available background materials, geotechnical reconnaissance of the project area to evaluate the surface conditions, subsurface exploration, and preparation of a technical memorandum presenting general information regarding the geologic and seismic conditions of the subject site.

Irvine Ranch Water District, On-Call Geotechnical Engineering Services, Irvine, California: Principal Geologist retained for as-needed geotechnical engineering services that involved evaluations for design of new facilities or upgrades to existing facilities, including pipelines, pump stations, reservoirs and various related structures. Geotechnical design investigations have involved field exploration, laboratory testing, seismic and geologic hazard assessment, and geotechnical engineering.

City of Yorba Linda, On-Call Geotechnical and Materials Testing Services, Yorba Linda, California: Served as Principal Geologist retained for on-call engineering, geotechnical and materials testing and deputy inspection, as well as environmental consulting services during the various construction and reconstruction type pro-jects located throughout the City of Yorba Linda. Mr. Putt provided input and review during evaluation of soil and geologic conditions and preparation of geotechnical recommendations for proposed geotechnical findings, conclusions, and recommendations for the project

John Robinson, Principal

JOHN ROBINSON Consulting, Inc.

PROFESSIONAL REGISTRATION
Engineering-in-Training, CA
2016 Recycled Water Advocate of the Year - WateReuse
IEUA On-Site Supervisor Trained

AFFLIATIONS
Former CWEA Los Angeles Basin Section (LABS), President
Former WateReuse Association, Inland Empire Chapter, Trustee
Former WateReuse California Board Member

EDUCATION
Bachelor of Science, Civil Engineering
California State University, Long Beach

John has approximately 30 years of experience in engineering consulting, construction management, project leadership/project management, operational/fiscal management and market sector strategy development focused most recently on obtaining local, State and Federal grants and/or loans for public agencies and special districts.

John has worked on recycled water retrofits and has completed over 800 recycled water customer conversions (i.e., water through the meter), as well as completed and additional 2,000 recycled water customer conversion assessments. He specializes in assisting clients with identifying and assessing customers, evaluating potential non-potable reuse system components as well as managed the customer development for all customer conversions; developed recycled water conversion plans worked with customers and developed conversion construction costs. John has developed and conducted training seminars for both client staff as well as end use customers. He is particularly adept at working closely with DDW and local regulatory agencies such as County of Riverside for coordination of site issues and approvals and he understands how to make the regulatory approval process go smoothly.

Relevant Work Experience

Jurupa Community Services District (JCSD), CA - Recycled Water Program Development and Customer Development. (2021-Present)

Mr. Robinson was the Project Manager for the Recycled Water Program development. First phase performing recycled water customer assessments on 30 medians/parkways, 10 parks and 8 schools within the City of Eastvale and City of Jurupa Valley as well as the development of the Master Engineering Report. Additional scope of work including construction plan and specifications development, construction cost estimates, final cross-connection testing, DDW coordination, development of Rules and Regulations and Standard Details as well as the Recycled Water User Manual for JCSD. The project consisted of the design, permitting and construction of 48 recycled water customer retrofits (medians/parkways, parks and schools) which resulted in 600 acre-feet per year of recycled water use to JCSD's future recycled water distribution system. In addition, the project meet the requirements of its grant funding obligations under the MWD On-Site Retrofit funding program.

West Basin Municipal Water District (WBMWD), CA - Recycled Water Customer Development (2011 to On-Going).

Deputy Project Manager since 2011 as a subconsultant to Woodard & Curran developing onsite drawings & supplemental engineering reports, performing site inspections with LA County Department of Public Health and coordinating projects. John has been assisting worked as an extension of WBMWD staff to manage 100+ customer conversions of parks, schools, power-plants, dual-plumbed buildings, car washes, baseball fields, and a race-track. John has provided support directly to customers, including hydraulic modeling of onsite systems, site supervisor training, as well as engineering support for recycled water feasibility studies. John has provided assistance to West Basin on RFP development for Operations Staff. In addition, the project meet the

requirements of its grant funding obligations under the MWD Local Resource Program funding program for several of the projects that have been completed between 2011 to present.

Fontana Water Company (FWC), Recycled Water Program and Customer Development (2015-2020).

Mr. Robinson was the Project Manager for the Recycled Water Program development. First phase performing recycled water customer assessments on 17 medians/parkways and 8 parks within the City of Fontana as well as the development of the Master Engineering Report. Second phase including construction plan and specifications development, construction cost estimates, final cross-connection testing, DDW coordination, development of Rules and Regulations and Standard Details as well as the Recycled Water User Manual for the FWC. The project consisted of the design, permitting and construction of 32 recycled water customer retrofits (medians/parkways, parks and schools) which resulted in 400 acre-feet per year of recycled water use to FWC's recycled water distribution system. John developed a training seminar for FWC and customer staff on recycled water uses for irrigation applications. In addition, the project meet the requirements of its grant funding obligations under the MWD On-Site Retrofit funding program.

City of San Juan Capistrano (CoSJC), Utilities Department, Recycled Water Program ad Recycled Water Conversion Project (2016-On-Going).

Mr. Robinson was the customer retrofit and certified cross connection specialist responsible for performing development of the Master Engineering Report, site evaluations, construction plan and specifications development, construction cost estimates, preliminary and final cross-connection testing, DDW and OCHCA coordination, development of Rules and Regulations as was as the Recycled Water User Manual for the CoSJC. The project consisted of the design, permitting and construction of 36 recycled water customer retrofits (golf course, HOAs, parks, schools and commercial landscape) which resulted in 600 acre-feet per year of potential recycled water use to the CoSJC's Recycled water distribution system. In addition, the project meet the requirements of its grant funding obligations under the Orange County Integrated Regional Water Management Implementation Program.

Upper San Gabriel Valley Municipal Water District, Recycled Water Program and Recycled Water Conversion Project (Phase I, Phase IIA and Phase IIB) (2002-2020):

Phase I and Phase 1A - Recycled Water Project

Mr. Robinson as the Program Manager coordinated with the USGVMWD to develop and complete both Phase 1 and Phase 1A Projects. The two projects consisted of the design, permitting and construction of 4 recycled water customer retrofits (Rose Hills Memorial Park & Cemetery, Rio Hondo College, elementary school and industrial storage complex irrigation system) which resulted in 1,260 acre-feet per year of potential recycled water use. The facilities for the project include 12,000 linear feet of pipeline, on-site retrofit construction including potable water system for hose bibs at Gate 1 of Rose Hills. Worked closely with Central Basin MWD (point of connection to recycled water), San Gabriel Valley Water Company and Los Angeles County DPH to maximize reclaimed water use for commercial/industrial applications. In addition, the project meet the requirements of its grant funding obligations under the original MWD On-Site Retrofit funding program.

Phase IIA and Phase IIA Expansion - Whittier Narrows Water Recycling Project

Mr. Robinson as the Program Manager coordinated with the USGVMWD to develop and complete Phase IIA and Phase IIA Expansion Projects. The two projects consisted of the design, permitting and construction of 18 recycled water customer retrofits (parks, schools, corporate headquarters for SCE and Panda Inn, local college, medians/parkways) which resulted in 1,610 acre-feet per year of potential recycled water use. The facilities included a pump station at the County Sanitation Districts of Los Angeles County Whittier Narrows Water Reclamation Plant, approximately 18,000 linear feet of pipeline and on-site retrofit construction. In addition, the project meet the requirements of its grant funding obligations under the MWD Local Resource Program funding program.

Phase IIB - City of Industry Water Recycling Project

Mr. Robinson as the Program Manager coordinated with the USGVMWD to develop and complete Phase IIB Project. The project consisted of the design, permitting and construction of 22 recycled water customer retrofits (parks, schools, golf courses and medians/parkways) which resulted in ultimate demand of 1,600 acre-feet per year of potential recycled water use. The facilities included a pump station at the County Sanitation Districts of Los Angeles County San Jose Creek Water Reclamation Plant, approximately 24,000 linear feet of pipeline, two

reservoirs and on-site retrofit construction. In addition, the project meet the requirements of its grant funding obligations under the MWD Local Resource Program funding program.

Central Basin Municipal Water District (CBMWD) Recycled Water Program Development and Customer Development. (1993-1997)

Project Manager/Engineer for identification and conversion of 133 recycled water use customers for over 8,000 acre-feet per year demand. Program including the development of the Rules, Regulations and Standard details, design of on-site retrofits for recycled water irrigation systems and disconnection from potable water system. Worked closely with users, DDW and LA County DPH to maximize reclaimed water use for commercial/industrial applications for Central Basin MWD. Developed CBMWD's first Recycled Water User's Manual. In addition, the project meet the requirements of its grant funding obligations under the MWD Local Resource Program funding program.

Project Manager, Regional Recycled Water Distribution System Facilities, Inland Empire Utilities Agency, CA

Project Manager for identification of 95 customers and conversion of eight recycled water use customers, including design of on-site retrofits for recycled water irrigation systems and disconnection from potable water system. Worked closely with users and DDW to maximize recycled water use for commercial/industrial applications. Customers to date include Reliant Resources, Inland Paper & Packaging Inc. Kaiser Permanente, Ontario facility for cooling towers and Frito Lay in Rancho Cucamonga. The on-going IEUA recycled water use customer development program encompasses the Cities of Ontario, Chino, Chino Hills, Rancho Cucamonga, and portions of Fontana and Montclair.

San Gabriel Valley Water Company (SGVWC), Customer Development (2019-2020).

Mr. Robinson was the Project Manager for the conversion of 13 recycled water customers in the City of South El Monte. First phase performing recycled water customer assessments on multiple parks, two schools, City Hall, Aquatics Center, Community Center, Senior Center and local hospital. Second phase including construction plan and specifications development, construction cost estimates, final cross-connection testing, and Los Angeles County DPH coordination. The project consisted of the design, permitting and construction of 13 recycled water customer retrofits which resulted in 80 acre-feet per year of recycled water use to SGVWC's recycled water distribution system. In addition, the project meet the requirements of its grant funding obligations under the MWD On-Site Retrofit funding program.

City of Simi Valley (CoSV), Customer Development (2016-2018).

Mr. Robinson was the Project Manager for the site investigation for 8 conversion of recycled water customers in the City of Simi Valley. First phase performing recycled water customer assessments/site investigation on multiple parks, two golf courses, and multiple schools). The project consisted of the customer evaluation in order to support the recycled water master plan and recycled water pipeline design being designed by others. The recycled water customer retrofits ultimately will in approximately 400 acre-feet per year of recycled water use to the CoSV's recycled water distribution system. In addition, the project meet the requirements of its grant funding obligations under the MWD On-Site Retrofit funding program.

City of Oceanside (CoO), San Luis Rey Water Recycling Facility Conversion (2019)

Mr. Robinson was the Project Manager for the conversion of the 3W water and irrigation system at the San Luis Rey Water Recycling Facility. First phase performing recycled water customer assessments/site investigation on a facility with poor as-builts. The project consisted of the customer evaluation to develop on-site retrofit drawings of the entire facility. The recycled water customer retrofit allowed approximately 50 acre-feet per year of recycled water use to the CoO's recycled water distribution system. The project required the coordination with the CoO's staff and County of San Diego Department of Environmental Health.

Los Angeles Department of Water and Power (LADWP), Customer Development (1995-1997).

Project Engineer/Manager for recycled water customer site assessments/plans and development of conversion construction costs for all customers in the Westwood area. Customers included Department of Airport landscaping, Westchester golf course, parks, medians/parkways and Loyola Marymount University. The project consisted of the design, permitting and construction of 8 recycled water customer retrofits which resulted in approximately 200 acre-feet per year of recycled water use to LADWP's recycled water distribution system.

CITY OF ONTARIO
DESIGN SERVICES AGREEMENT

1. PARTIES AND DATE.

This Agreement is made and entered into as of _____ __, **2024** by and between the City of Ontario, a municipal corporation organized and operating under the laws of the State of California with its principal place of business at 303 East "B" Street, Ontario, California 91764-4196, County of San Bernardino, State of California ("City"), and **Ardurra Group, Inc.**, a **CORPORATION** with its principal place of business at **3737 Birch St, Suite 250, Newport Beach CA 92660** (hereinafter referred to as "Consultant"). City and Consultant are sometimes individually referred to herein as "Party" and collectively as "Parties."

2. RECITALS.

2.1 City. City is a municipal corporation organized under the laws of the State of California, with power to contract for services necessary to achieve its purpose.

2.2 Consultant. Consultant desires to perform and assume responsibility for the provision of certain professional **engineering** design services required by the City on the terms and conditions set forth in this Agreement. Consultant warrants that it is fully licensed, qualified, and willing to perform the services required by this Agreement; provided, however, that if Consultant is a corporation or other organization, the Project Consultant designated pursuant to Section 3.2, and not the Consultant itself, shall be fully licensed to practice as an **engineer** in the State of California.

2.3 Project. City desires to engage Consultant to render such services for the **On-Call Design Services** ("Project") as set forth in this Agreement.

3. TERMS

3.1 Employment of Consultant.

3.1.1 Scope of Services. Consultant promises and agrees to furnish to City all labor, materials, tools, equipment, services, and incidental and customary work necessary to fully and adequately supply the professional **engineering** and related services necessary for the full and adequate completion of the Project consistent with the provisions of this Agreement

(hereinafter referred to as "Services"). The Services are more particularly described throughout this Agreement, including Exhibit "A" attached hereto and incorporated herein by reference. All Services shall be subject to, and performed in accordance with, this Agreement, any exhibits attached hereto and incorporated herein by reference, and all applicable local, state and federal laws, rules and regulations. All Services performed by Consultant shall be subject to the sole and discretionary approval of the City, which approval shall not be unreasonably withheld.

3.1.2 Term. The term of this Agreement shall be from **June 4, 2024** to **June 4, 2027**, unless earlier terminated as provided herein. The City shall have the unilateral option, at its sole discretion, to renew this Agreement automatically for no more than **two** additional one-year terms. Consultant shall complete the Services within the term of this Agreement, and shall meet any other established schedules and deadlines.

3.2 Project Consultant; Key Personnel.

3.2.1 **Engineer of Record.** Consultant shall name a specific individual to act as Project Consultant, subject to the approval of City. Consultant hereby designates **Dolores Salgado, PE** (License No. **C 67536**) to act as the **Engineer of Record** for the Project. The **Engineer of Record** shall: (1) maintain oversight of the Services; (2) have full authority to represent and act on behalf of the Consultant for all purposes under this Agreement; (3) supervise and direct the Services using his or her best skill and attention; (4) be responsible for the means, methods, techniques, sequences and procedures used for the Services; (5) adequately coordinate all portions of the Services; and (6) act as principal contact with City and all contractors, consultants, engineers and inspectors on the Project. Any change in the **Engineer of Record** shall be subject to the City's prior written approval, which approval shall not be unreasonably withheld. The new **Engineer of Record** shall be of at least equal competence as the prior **Engineer of Record**. In the event that City and Consultant cannot agree as to the substitution of a new **Engineer of Record**, City shall be entitled to terminate this Agreement for cause.

3.2.2 Key Personnel. In addition to the **Engineer of Record**, Consultant has represented to the City that certain additional key personnel, engineers and consultants will perform the Services under this Agreement. Should one or more of such personnel, engineers or consultants become unavailable, Consultant may substitute others of at least equal competence upon written approval of the City. In the event that City and Consultant cannot agree as to the substitution of key personnel, engineers or consultants, City shall be entitled to terminate this Agreement for cause. The key additional personnel, engineers and consultants for performance of this Agreement are as follows: **Dolores Salgado, PE, Kaitlyn Leong, PE, Amy Czajkowski, PE, CCM, QSD/P, Scott Adamson, PE, QSD/P, Anders Egnese, PE, and Robert Weber, PE.**.

3.3 Hiring of Consultants and Personnel.

3.3.1 Right to Hire or Employ. Consultant shall have the option, unless City objects in writing after notice, to employ at its expense architects, engineers, experts or other consultants qualified and licensed to render services in connection with the planning and/or administration of the Project, and to delegate to them such duties as Consultant may delegate without relieving Consultant from administrative or other responsibility under this Agreement. Consultant shall be responsible for the coordination and cooperation of Consultant's architects, engineers, experts or other consultants. All consultants, including changes in consultants, shall be subject to approval by City in its sole and reasonable discretion. Consultant shall notify City of the identity of all consultants at least fourteen (14) days prior to their commencement of work

to allow City to review their qualifications and approve to their participation on the Project in its sole and reasonable discretion.

3.3.2 Qualification and License. All architects, engineers, experts and other consultants retained by Consultant in performance of this Agreement shall be qualified to perform the Services assigned to them, and shall be licensed to practice in their respective professions, where required by law.

3.3.3 Standards and Insurance. All architects, engineers, experts and other consultants hired by Consultant shall be required to meet all of the same standards and insurance requirements set forth in this Agreement, unless other standards or requirements are approved by the City in writing. Unless changes are approved in writing by the City, Consultant's agreements with its consultants shall contain a provision making them subject to all provisions stipulated in this Agreement.

3.3.4 Assignments or Staff Changes. Consultant shall promptly obtain written City approval of any assignment, reassignment or replacement of such architects, engineers, experts and consultants, or of other staff changes of key personnel working on the Project. As provided in the Agreement, any changes in Consultant's consultants and key personnel shall be subject to approval by City.

3.3.5 Draftsman and Clerical Support. Draftsmen and clerical personnel shall be retained by Consultant at Consultant's sole expense.

3.4 Standard of Care.

3.4.1 Standard of Care. Consultant shall perform all Services under this Agreement in a skillful and competent manner, consistent with the standards generally recognized as being employed by professionals qualified to perform the Services in the same discipline in the State of California, and shall be responsible to City for damages sustained by the City and delays to the Project as specified in the indemnification provision of this Agreement. Without limiting the foregoing, Consultant shall be fully responsible to the City for any increased costs incurred by the City as a result of any such delays in the design or construction of the Project. Consultant represents and maintains that it is skilled in the professional calling necessary to perform the Services. Consultant warrants and represents that all of its employees, architects, engineers, experts and other consultants shall have sufficient skill and experience to perform the Services assigned to them. Finally, Consultant represents that it, its employees, architects, engineers, experts and other consultants have all licenses, permits, qualifications and approvals of whatever nature that are legally required to perform the Services assigned to or rendered by them and that such licenses and approvals shall be maintained throughout the term of this Agreement. As provided for in the indemnification provisions of this Agreement, Consultant shall perform, at its own cost and expense and without reimbursement from the City, any services necessary to correct errors or omissions which are caused by the Consultant's failure to comply with the standard of care provided for herein.

3.4.2 Performance of Employees. Any employee or consultant who is determined by the City to be uncooperative, incompetent, a threat to the adequate or timely completion of the Project, a threat to the safety of persons or property, or any employee or consultant who fails or refuses to perform the Services in a manner acceptable to the City, shall be promptly removed from the Project by the Consultant and shall not be re-employed to perform any of the Services or to work on the Project.

3.5 Laws and Regulations.

3.5.1 Knowledge and Compliance. Consultant shall keep itself fully informed of and in compliance with all applicable local, state and federal laws, rules and regulations in any manner affecting the performance of the Services or the Project, and shall give all notices required of the Consultant by law. Consultant shall be liable, pursuant to the standard of care and indemnification provisions of this Agreement, for all violations of such laws and regulations in connection with its Services. Consultant shall defend, indemnify and hold City, its officials, officers, employees and agents free and harmless, pursuant to the indemnification provisions of this Agreement, from any claim or liability arising out of any failure or alleged failure to comply with such laws, rules or regulations.

3.5.2 Drawings and Specifications. Consultant shall cause all drawings and specifications to conform to any applicable requirements of federal, state and local laws, rules and regulations, including the Uniform Building Code, in effect as of the time the drawings and specifications are prepared or revised during the latest phase of the Services described in Exhibit "A" attached hereto. Any significant revisions made necessary by changes in such laws, rules and regulations after this time may be compensated as Additional Services which were not known or reasonably should not have been known by Consultant. Consultant shall cause the necessary copies of such drawings and specifications to be filed with any governmental bodies with approval jurisdiction over the Project, in accordance with the Services described in Exhibit "A" attached hereto. For the preparation of all such drawings and specifications, the Consultant shall use Computer Aided Design Drafting ("CADD") (e.g., AutoCAD) or other technology acceptable to the Consultant and City.

3.5.3 Americans with Disabilities Act. Consultant will use its best professional efforts to interpret all applicable federal, state and local laws, rules and regulations with respect to access, including those of the Americans with Disabilities Act ("ADA"). Consultant shall inform City of the existence of inconsistencies of which it is aware or reasonably should be aware between federal and state accessibility laws, rules and regulations, as well as any other issues which are subject to conflicting interpretations of the law, and shall provide the City with its interpretation of such inconsistencies and conflicting interpretations. Unless Consultant brings such inconsistencies and conflicting interpretations to the attention of the City and requests City's direction on how to proceed, the Consultant's interpretation of such inconsistencies and conflicting interpretations shall be the sole responsibility and liability of Consultant, and the Consultant shall correct all plans, specifications and other documents prepared for the Project at no additional cost if its interpretations are shown to be incorrect. In the event that the Consultant request's City's direction on how to proceed with respect to any inconsistent and/or conflicting interpretation, the Consultant shall be responsible to the City only pursuant to the indemnification provisions of this Agreement.

3.5.4 Permits, Approvals and Authorizations. Consultant shall provide City with a list of all permits, approvals or other authorizations required for the Project from all federal, state or local governmental bodies with approval jurisdiction over the Project. Consultant shall then assist the City in obtaining all such permits, approvals and other authorizations. The costs of such permits, approvals and other authorizations shall be paid by the City.

3.5.5 Water Quality Management and Compliance. Consultant shall keep itself and all subcontractors, staff, and employees fully informed of and in compliance with all local, state and federal laws, rules and regulations that may impact, or be implicated by the performance of the Services including, without limitation, all applicable provisions of the City's ordinances

regulating water quality and storm water; the Federal Water Pollution Control Act (33 U.S.C. § 1251 *et seq.*); the California Porter-Cologne Water Quality Control Act (Cal Water Code §§ 13000-14950); and any and all regulations, policies, or permits issued pursuant to any such authority. Consultant shall additionally comply with the lawful requirements of the City, and any other municipality, drainage district, or other local agency with jurisdiction over the location where the Services are to be conducted, regulating water quality and storm water discharges. Failure to comply with laws, regulations, and ordinances listed in this Section is a violation of federal and state law.

3.6 Independent Contractor.

3.6.1 Control and Payment of Subordinates. City retains Consultant on an independent contractor basis and Consultant is not an employee of City. Consultant is not an employee for state tax, federal tax or any other purpose, and is not entitled to the rights or benefits afforded to City's employees. Any additional personnel performing the Services under this Agreement on behalf of Consultant shall also not be employees of City, and shall at all times be under Consultant's exclusive direction and control. Consultant shall pay all wages, salaries, and other amounts due such personnel in connection with their performance of Services under this Agreement and as required by law. Consultant shall be responsible for all reports and obligations respecting such additional personnel, including, but not limited to: social security taxes, income tax withholding, unemployment insurance, disability insurance, and workers' compensation insurance.

3.7 Schedule of Services.

3.7.1 Consultant Services. Consultant shall fully and adequately complete the Services described in this Agreement and in Exhibit "A" attached hereto and incorporated herein by reference.

3.7.2 Timely Performance Standard. Consultant shall perform all Services hereunder as expeditiously as is consistent with professional skill and care, as well as the orderly progress of the Project work so as not to be the cause, in whole or in part, of delays in the completion of the Project or in the achievement of any Project milestones, as provided herein. Specifically, Consultant shall perform its Services so as to allow for the full and adequate completion of the Project within the time required by the City and within any completion schedules adopted for the Project. Consultant agrees to coordinate with City's staff, contractors and consultants in the performance of the Services, and shall be available to City's staff, contractors and consultants at all reasonable times.

3.7.3 Performance Schedule. Consultant shall prepare an estimated time schedule for the performance of Consultant's Services, to be adjusted as the Project proceeds. Such schedule shall be subject to the City's review and approval, which approval shall not be unreasonably withheld, and shall include allowances for periods of time required for City's review and approval of submissions, and for approvals of authorities having jurisdiction over Project approval and funding. If City and Consultant cannot mutually agree on a performance schedule, City shall have the authority to immediately terminate this Agreement. The schedule shall not be exceeded by Consultant without the prior written approval of City. If the Consultant's Services are not completed within the time provided by the agreed upon performance schedule, or any milestones established therein, it is understood, acknowledged and agreed that the City will suffer damage for which the Consultant will be responsible.

3.7.4 Excusable Delays. Any delays in Consultant's work caused by the following may be added to the time for completion of any obligations of Consultant: (1) the actions of City or its employees; (2) the actions of those in direct contractual relationship with City; (3) the actions of any governmental agency having jurisdiction over the Project; (4) the actions of any parties not within the reasonable control of the Consultant; and (5) any Force Majeure Event (as defined herein) or other unforeseen occurrence not due to any fault or negligence on the part of Consultant. Neither the City nor the Consultant shall be liable for damages, liquidated or otherwise, to the other on account of such delays.

3.7.5 Force Majeure Events. Neither City nor Consultant shall be considered in default of this Agreement for delays in performance caused by circumstances beyond the reasonable control of the non-performing Party. For purposes of this Agreement, such circumstances include a Force Majeure Event. A Force Majeure Event shall mean an event that materially affects a Party's performance and is one or more of the following: (1) Acts of God or other natural disasters; (2) terrorism or other acts of a public enemy; (3) orders of governmental authorities (including, without limitation, unreasonable and unforeseeable delay in the issuance of permits or approvals by governmental authorities that are required for the services); (4) strikes and other organized labor action occurring at the site and the effects thereof on the services, only to the extent such strikes and other organized labor action are beyond the control of Consultant and its subcontractors, and to the extent the effects thereof cannot be avoided by use of replacement workers; and (5) pandemics, epidemics or quarantine restrictions. For purposes of this section, "orders of governmental authorities," includes ordinances, emergency proclamations and orders, rules to protect the public health, welfare and safety, and other actions of a public agency applicable to the Services and Agreement. Should a Force Majeure Event occur, the non-performing Party shall, within fifteen (15) calendar days of the beginning of an Force Majeure Event, give written notice to the other Party describing the circumstances preventing continued performance and the efforts being made to resume performance of this Agreement. Force Majeure Events shall not entitle Consultant to any additional compensation. Notwithstanding the foregoing in this section, the City may still terminate this Agreement in accordance with the termination provisions of this Agreement.

3.7.6 Request for Excusable Delay Credit. The Consultant shall, within fifteen (15) calendar days of the beginning of any excusable delay, notify the City in writing of the causes of delay (unless City grants in writing a further period of time to file such notice prior to the date of final payment under the Agreement). City will then ascertain the facts and the extent of the delay, and grant an extension of time for completing the Services when, in its sole judgment, the findings of fact justify such an extension. The City's findings of fact thereon shall be final and conclusive on the Parties. Extensions of time shall apply only to that portion of the Services affected by the delay and shall not apply to other portions of the Services not so affected. The sole remedy of Consultant for extensions of time shall be an extension of the performance time at no cost to the City. If Additional Services are required as a result of an excusable delay, the Parties shall mutually agree thereto pursuant to the Additional Services provision of this Agreement. Should Consultant make an application for an extension of time, Consultant shall submit evidence that the insurance policies required by this Agreement remain in effect during the requested additional period of time.

3.8 Additional Services.

3.8.1 Request for Services. At City's request, Consultant may be asked to perform services not otherwise included in this Agreement, not included within the basic services

listed in Exhibit "A" attached hereto, and/or not customarily furnished in accordance with generally accepted architectural practice.

3.8.2 Definition. As used herein, "Additional Services" mean: (1) any work which is determined by City to be necessary for the proper completion of the Project, but which the Parties did not reasonably anticipate would be necessary for the Consultant to perform at the execution of this Agreement; or (2) any work listed as Additional Services in Exhibit "A" attached hereto. Consultant shall not perform, nor be compensated for, Additional Services without prior written authorization from City and without an agreement between the City and Consultant as to the compensation to be paid for such services. City shall pay Consultant for any approved Additional Services, pursuant to the compensation provisions herein, so long as such services are not made necessary through the fault of Consultant pursuant to the indemnification provision of this Agreement.

3.8.3 Examples of Additional Services. Such Additional Services shall not include any redesign or revisions to drawings, specifications or other documents when such revisions are necessary in order to bring such documents into compliance with applicable laws, rules, regulations or codes of which Consultant was aware or should have been aware pursuant to the laws and regulations provision of this Agreement above. Such Additional Services may include, but shall not be limited to:

(a) Separately Bid Portions of Project. Plan preparation and/or administration of work on portions of the Project separately bid.

(b) Furniture and Interior Design. Assistance to City, if requested, for the selection of moveable furniture, equipment or articles which are not included in the Construction Documents.

(c) Fault of Contractor. Services caused by delinquency, default or insolvency of contractor, or by major defects in the work of the contractor, provided that any such services made necessary by the failure of Consultant to detect and report such matters when it reasonably should have done so shall not be compensated.

(d) Inconsistent Approvals or Instructions. Revisions in drawings, specifications or other documents when such revisions are inconsistent with written approvals or instructions previously given and are due to causes beyond the control of Consultant.

(e) Legal Proceedings. Serving as an expert witness on City's behalf or attending legal proceedings to which the Consultant is not a party.

(f) Damage Repair. Supervision of repair of damages to any structure.

(g) Extra Environmental Services. Additional work required for environmental conditions (e.g. asbestos or site conditions) not already contemplated within the Consultant's services for the Project.

3.9 City Responsibilities. City's responsibilities shall include the following:

3.9.1 Data and Information. City shall make available to Consultant all necessary data and information concerning the purpose and requirements of the Project, including scheduling and budget limitations, objectives, constraints and criteria. As part of the budget

limitation information, the City shall provide the Consultant with a preliminary construction budget ("City's Preliminary Construction Budget").

3.9.2 Project Survey. If required pursuant to the scope of the Project and if requested by Consultant, City shall furnish Consultant with, or direct Consultant to procure at City's expense, a survey of the Project site prepared by a registered surveyor or civil engineer, any other record documents which shall indicate existing structures, land features, improvements, sewer, water, gas, electrical and utility lines, topographical information and boundary dimensions of the site, and any other such pertinent information.

3.9.3 Bid Phase. Distribute Construction Documents to bidders and conduct the opening and review of bids for the Project.

3.9.4 Testing. Retain consultant(s) to conduct chemical, mechanical, soils, geological or other tests required for proper design of the Project, and furnish such surveys, borings, test pits, and other tests as may be necessary to reveal conditions of the site which must be known to determine soil condition or to ensure the proper development of the required drawings and specifications.

3.9.5 Required Inspections and Tests. Retain consultant(s) to conduct materials testing and inspection or environmental/hazardous materials testing and inspection pursuant to any applicable laws, rules or regulations.

3.9.6 Fees of Reviewing or Licensing Agencies. Directly pay or reimburse the payment of all fees required by any reviewing or licensing agency, or other agency having approval jurisdiction over the Project.

3.9.7 City's Representative. The City hereby designates the City Manager, or his or her designee, to act as its representative for the performance of this Agreement ("City's Representative"). City's Representative shall have the power to act on behalf of the City for all purposes under this Contract. The City Manager hereby designates **Dennis Mejia, PE, Utilities Engineering Division Manager**, or his or her designee, as the City's contact for the implementation of the Services hereunder. Contractor shall not accept direction or orders from any person other than the City's Representative or his or her designee.

3.9.8 Review and Approved Documents. Review all documents submitted by Consultant, including change orders and other matters requiring approval by the City Council or other officials. City shall advise Consultant of decisions pertaining to such documents within a reasonable time after submission, so as not to cause unreasonable delay as provided in the excusable delay provisions of this Agreement above.

3.10 Compensation.

3.10.1 Consultant's Compensation for Basic Services. City shall pay to Consultant, for the performance of all Services rendered under this Agreement, the total not to exceed amount of **Six Hundred Thousand Dollars ($600,000)** ("Total Compensation"). This Total Compensation amount shall be based upon, and may be adjusted according to, the fee schedule and related terms and conditions attached hereto as Exhibit "B" and incorporated herein by reference. The Total Compensation, as may be adjusted upon mutual agreement, shall constitute complete and adequate payment for Services under this Agreement.

3.10.2 Payment for Additional Services. At any time during the term of this Agreement, City may request that Consultant perform Additional Services. As used herein, Additional Services means any work which is determined by City to be necessary for the proper completion of the Project, but which the Parties did not reasonably anticipate would be necessary at the execution of this Agreement. Any additional work in excess of this amount must be approved by the City. If authorized, such Additional Services will be compensated at the rates and in the manner set forth in Exhibit "C" attached hereto and incorporated herein by reference, unless a flat rate or some other form of compensation is mutually agreed upon by the Parties. If City requires Consultant to hire consultants to perform any Additional Services, Consultant shall be compensated therefore at the rates and in the manner set forth in Exhibit "C" attached hereto and incorporated herein by reference, unless a flat rate or some other form of compensation is mutually agreed upon by the Parties. City shall have the authority to review and approve the rates of any such consultants. In addition, Consultant shall be reimbursed for any expenses incurred by such consultants pursuant to the terms and conditions of Section 3.10.3.

3.10.3 Reimbursable Expenses. Reimbursable expenses are in addition to compensation for the Services and Additional Services. Consultant shall not be reimbursed for any expenses unless authorized in writing by City, which approval may be evidenced by inclusion in Exhibit "C" attached hereto. Such reimbursable expenses shall include only those expenses which are reasonably and necessarily incurred by Consultant in the interest of the Project. Consultant shall be required to acquire prior written consent in order to obtain reimbursement for the following: (1) extraordinary transportation expenses incurred in connection with the Project; (2) out-of-town travel expenses incurred in connection with the Project; (3) fees paid for securing approval of authorities having jurisdiction over the Project; (4) bid document duplication costs in excess of $1,000; and (5) other costs, fees and expenses in excess of $1,000.

3.10.4 Payment to Consultant. Consultant's compensation and reimbursable expenses shall be paid by City to Consultant no more often than monthly. Such periodic payments shall be made based upon the percentage of work completed, and in accordance with the phasing and funding schedule provided in Exhibit "B" and the compensation rates indicated in Exhibit "C" attached hereto and incorporated herein by reference. In order to receive payment, Consultant shall present to City an itemized statement which indicates Services performed, percentage of Services completed, method for computing the amount payable, and the amount to be paid. The statement shall describe the amount of Services provided since the initial commencement date, or since the start of the subsequent billing periods, as appropriate, through the date of the statement, as well as those expenses for which reimbursement is requested for that statement period. The amount paid to Consultant shall never exceed the percentage amounts authorized by the phasing and funding schedule located in Exhibit "B" attached hereto. City shall, within thirty (30) days of receiving such statement, review the statement and pay all approved charges thereon pursuant to the provisions of Civil Code Section 3320. Disputed amounts shall be resolved by the Parties in a mutually agreeable manner.

Payments made for Additional Services shall be made in installments, not more often than monthly, proportionate to the degree of completion of such services or in such other manner as the Parties shall specify when such services are agreed upon, and in accordance with any authorized fee or rate schedule. In order to receive payment, Consultant shall present to City an itemized statement which indicates the Additional Services performed, percentage of Additional Services completed, method for computing the amount payable, and the amount to be paid. The statement shall describe the amount of Additional Services provided since the initial commencement date, or since the start of the subsequent billing periods, as appropriate, through the date of the statement. City shall, within thirty (30) days of receiving such statement, review

the statement and pay all approved charges thereon pursuant to the provisions of Civil Code Section 3320. Disputed amounts shall be resolved by the Parties in a mutually agreeable manner.

Upon cancellation or termination of this Agreement, Consultant shall be compensated as set forth in the termination provision herein.

3.10.5 Withholding Payment to Consultant. The City may withhold payment, in whole or in part, to the extent reasonably necessary to protect the City from claims, demands, causes of action, costs, expenses, liabilities, losses, damages, or injuries of any kind to the extent arising out of or caused by the negligence, recklessness, or willful misconduct protected under the indemnification provisions of this Agreement. Failure by City to deduct any sums from a progress payment shall not constitute a waiver of the City's right to such sums. The City may keep any moneys which would otherwise be payable at any time hereunder and apply the same, or so much as may be necessary therefor, to the payment of any expenses, losses, or damages as determined by the City, incurred by the City for which Consultant is liable under the Agreement or state law. Payments to the Consultant for compensation and reimbursable expenses due shall not be contingent on the construction, completion or ultimate success of the Project. Payment to the Consultant shall not be withheld, postponed, or made contingent upon receipt by the City of offsetting reimbursement or credit from Parties not within the Consultant's reasonable control.

3.10.6 Prevailing Wages. Consultant is aware of the requirements of California Labor Code Sections 1720, et seq., and 1770, et seq., as well as California Code of Regulations, Title 8, Section 16000, et seq., ("Prevailing Wage Laws"), which require the payment of prevailing wage rates and the performance of other requirements on certain "public works" and "maintenance" projects. Since the Services are being performed as part of an applicable "public works" or "maintenance" project, as defined by the Prevailing Wage Laws, and since the total compensation is $1,000 or more, Consultant agrees to fully comply with and to require its consultants to fully comply with such Prevailing Wage Laws. City shall provide Consultant with a copy of the prevailing rates of per diem wages in effect at the commencement of this Agreement. Consultant shall make copies of the prevailing rates of per diem wages for each craft, classification or type of worker needed to execute the Services available to interested parties upon request, and shall post copies at the Consultant's principal place of business and at the Project site. It shall be mandatory upon the Consultant and all subconsultants to comply with all California Labor Code provisions, which include but are not limited to prevailing wages (Labor Code Sections 1771, 1774 and 1775), employment of apprentices (Labor Code Section 1777.5), certified payroll records (Labor Code Sections 1771.4 and 1776), hours of labor (Labor Code Sections 1813 and 1815) and debarment of contractors and subcontractors (Labor Code Section 1777.1). The requirement to submit certified payroll records directly to the Labor Commissioner under Labor Code section 1771.4 shall not apply to work performed on a public works project that is exempt pursuant to the small project exemption specified in Labor Code Section 1771.4. Consultant shall defend, indemnify and hold the City, its elected officials, officers, employees and agents free and harmless from any claims, liabilities, costs, penalties or interest arising out of any failure or alleged failure of the Consultant or its consultants to comply with the Prevailing Wage Laws.

(a) Registration/DIR Compliance. If the Services are being performed as part of an applicable "public works project" of over $25,000 when the project is for construction, alteration, demolition, installation, or repair work, or a public works project of over $15,000 when the project is for maintenance work, in addition to the foregoing, then pursuant to Labor Code sections 1725.5 and 1771.1, the Consultant and all subconsultants performing such Services must be registered with the Department of Industrial Relations ("DIR"). Consultant shall maintain

registration for the duration of the Project and require the same of any subconsultants. This project may also be subject to compliance monitoring and enforcement by the DIR. It shall be Consultant's sole responsibility to comply with all applicable registration and labor compliance requirements, including the submission of payroll records directly to the DIR. Any stop orders issued by the Department of Industrial Relations against Consultant or any subconsultant that affect Consultant's performance of services, including any delay, shall be Consultant's sole responsibility. Any delay arising out of or resulting from such stop orders shall be considered Consultant caused delay and shall not be compensable by the City. Consultant shall defend, indemnify and hold the City, its officials, officers, employees and agents free and harmless from any claim or liability arising out of stop orders issued by the Department of Industrial Relations against Consultant or any subconsultant.

3.11 Notice to Proceed.

Consultant shall not proceed with performance of any Services under this Agreement unless and until the City provides a written notice to proceed.

3.12 Termination, Suspension and Abandonment.

3.12.1 Grounds for Termination; Consultant's Termination for Cause. City hereby reserves the right to suspend or abandon, at any time and for any reason, all or any portion of the Project and the construction work thereon, or to terminate this Agreement at any time with or without cause. Consultant shall be provided with at least seven (7) days advanced written notice of such suspension, abandonment or termination. In the event of such suspension, abandonment or termination, Consultant shall be paid for Services and reimbursable expenses rendered up to the date of such suspension, abandonment or termination, pursuant to the schedule of payments provided for in this Agreement, less any claims against or damages suffered by City as a result of the default, if any, by Consultant. Consultant hereby expressly waives any and all claims for damages or compensation arising under this Agreement, except as set forth herein, in the event of such suspension, abandonment or termination. Consultant may terminate this Agreement for substantial breach of performance by the City such as failure to make payment to Consultant as provided in this Agreement.

3.12.2 City's Suspension of Work. If Consultant's Services are suspended by City, City may require Consultant to resume such Services within ninety (90) days after written notice from City. When the Project is resumed, the Total Compensation and schedule of Services shall be equitably adjusted upon mutual agreement of the City and Consultant.

3.12.3 Documents and Other Data. Upon suspension, abandonment or termination, Consultant shall provide to City all preliminary studies, sketches, working drawings, specifications, computations, and all other Project Documents, as defined below, to which City would have been entitled at the completion of Consultant's Services under this Agreement. Upon payment of the amount required to be paid to Consultant pursuant to the termination provisions of this Agreement, City shall have the rights, as provided in this Agreement hereinafter, to use such Project Documents prepared by or on behalf of Consultant under this Agreement. Consultant shall make such documents available to City upon request and without additional compensation other than as may be approved as a reimbursable expense.

3.12.4 Employment of other Consultants. In the event this Agreement is terminated in whole or in part as provided herein, City may procure, upon such terms and in such manner as it may determine appropriate, services similar to those terminated.

3.13 Ownership and Use of Documents; Confidentiality.

3.13.1 Ownership. All plans, specifications, original or reproducible transparencies of working drawings and master plans, preliminary sketches, architectural presentation drawings, structural computations, estimates and any other documents prepared pursuant to this Agreement, including, but not limited to, any other works of authorship fixed in any tangible medium of expression such as writings, physical drawings and data magnetically or otherwise recorded on computer diskettes (hereinafter referred to as the "Project Documents") shall be and remain the property of City. Although the official copyright in all Project Documents shall remain with the Consultant or other applicable subcontractors or consultants, the Project Documents shall be the property of City whether or not the work for which they were made is executed or completed. Within thirty (30) calendar days following completion of the Project, Consultant shall provide to City copies of all Project Documents required by City. In addition, Consultant shall retain copies of all Project Documents on file for a minimum of fifteen (15) years following completion of the Project, and shall make copies available to City upon the payment of reasonable duplication costs. Before destroying the Project Documents following this retention period, Consultant shall make a reasonable effort to notify City and provide City with the opportunity to obtain the documents.

3.13.2 Right to Use. Consultant grants to City the right to use and reuse all or part of the Project Documents, at City's sole discretion and with no additional compensation to Consultant, for the following purposes:

(a) The construction of all or part of this Project.

(b) The repair, renovation, modernization, replacement, reconstruction or expansion of this Project at any time;

(c) The construction of another project by or on behalf of the City for its ownership and use;

City is not bound by this Agreement to employ the services of Consultant in the event such documents are used or reused for these purposes. City shall be able to use or reuse the Project Documents for these purposes without risk of liability to the Consultant or third parties with respect to the condition of the Project Documents, and the use or reuse of the Project Documents for these purposes shall not be construed or interpreted to waive or limit City's right to recover for latent defects or for errors or omissions of the Consultant.

Any use or reuse by City of the Project Documents on any project other than this Project without employing the services of Consultant shall be at City's own risk with respect to third parties. If City uses or reuses the Project Documents on any project other than this Project, it shall remove the Consultant's seal from the Project Documents and hold harmless Consultant and its officers, directors, agents and employees from claims arising out of the negligent use or re-use of the Project Documents on such other project.

3.13.3 License. This Agreement creates a non-exclusive and perpetual license for City to copy, use, modify or reuse any and all Project Documents and any intellectual property rights therein. Consultant shall require any and all subcontractors and consultants to agree in writing that City is granted a non-exclusive and perpetual license for the work of such subcontractors or consultants performed pursuant to this Agreement.

3.13.4 Right to License. Consultant represents and warrants that Consultant has the legal right to license any and all copyrights, designs and other intellectual property embodied in the Project Documents that Consultant prepares or causes to be prepared pursuant to this Agreement. Consultant shall indemnify and hold City harmless pursuant to the indemnification provisions of this Agreement for any breach of this Section. Consultant makes no such representation and warranty in regard to previously prepared designs, plans, specifications, studies, drawings, estimates or other documents that were prepared by design professionals other than Consultant and provided to Consultant by City.

3.13.5 Confidentiality. All Project Documents, either created by or provided to Consultant in connection with the performance of this Agreement, shall be held confidential by Consultant to the extent they are not subject to disclosure pursuant to the Public Records Act. All Project Documents shall not, without the written consent of City, be used or reproduced by Consultant for any purposes other than the performance of the Services. Consultant shall not disclose, cause or facilitate the disclosure of the Project Documents to any person or entity not connected with the performance of the Services or the Project. Nothing furnished to Consultant which is otherwise known to Consultant or is generally known, or has become known, to the related industry shall be deemed confidential. Consultant shall not use City's name or insignia, photographs of the Project, or any publicity pertaining to the Services or the Project in any magazine, trade paper, newspaper, television or radio production or other similar medium without the written consent of City.

3.14 Indemnification.

3.14.1 To the fullest extent permitted by law, Consultant shall defend (with counsel of City's choosing), indemnify and hold the City, its officials, officers, employees, volunteers, and agents free and harmless from any and all claims, demands, causes of action, costs, expenses, liability, loss, damage or injury of any kind, in law or equity, to property or persons, including wrongful death, in any manner arising out of, pertaining to, or incident to any acts, errors or omissions, or willful misconduct of Consultant, its officials, officers, employees, subcontractors, consultants or agents in connection with the performance of the Consultant's Services, the Project or this Agreement, including without limitation the payment of all damages, expert witness fees and attorney's fees and other related costs and expenses except such loss or damage caused by the sole negligence or willful misconduct of the City. Consultant's obligation to indemnify shall survive expiration or termination of this Agreement and shall not be restricted to insurance proceeds, if any, received by Consultant, the City, its officials, officers, employees, agents, or volunteers.

3.14.2 If Consultant's obligation to defend, indemnify, and/or hold harmless arises out of Consultant's performance as a "design professional" (as that term is defined under Civil Code section 2782.8), then, and only to the extent required by Civil Code section 2782.8, which is fully incorporated herein, Consultant's indemnification obligation shall be limited to claims that arise out of, pertain to, or relate to the negligence, recklessness, or willful misconduct of the Consultant, and, upon Consultant obtaining a final adjudication by a court of competent jurisdiction, Consultant's liability for such claim, including the cost to defend, shall not exceed the Consultant's proportionate percentage of fault.

3.15 Insurance. Consultant shall not commence work under this Agreement until it has provided evidence satisfactory to the City that it has secured all insurance required under this Section. In addition, Consultant shall not allow any subconsultant to commence work on any

subcontract until it has provided evidence satisfactory to the City that the subconsultant has secured all insurance required under this section.

3.15.1 Types of Insurance Required. As a condition precedent to the effectiveness of this Agreement for work to be performed hereunder, and without limiting the indemnity provisions of the Agreement, Consultant shall, at its expense, procure and maintain in full force and effect for the duration of the Agreement the following policies of insurance. If the existing policies do not meet the insurance requirements set forth herein, Consultant agrees to amend, supplement or endorse the policies to do so.

3.15.2 Additional Insured. The City of Ontario, its officials, officers, employees, agents, and volunteers shall be named as additional insureds on Consultant's and its subconsultants' policies of commercial general liability and automobile liability insurance using the endorsements and forms specified herein or exact equivalents.

3.15.3 Commercial General Liability

(a) The Consultant shall take out and maintain, during the performance of all work under this Agreement, in amounts not less than specified herein, Commercial General Liability Insurance, in a form and with insurance companies acceptable to the City.

(b) Coverage for Commercial General Liability insurance shall be at least as broad as the following: Insurance Services Office Commercial General Liability coverage (Occurrence Form CG 00 01) or exact equivalent. Commercial General Liability Insurance must include coverage for the following:

(i) Bodily Injury and Property Damage

(ii) Personal Injury/Advertising Injury

(iii) Premises/Operations Liability

(iv) Products/Completed Operations Liability

(v) Aggregate Limits that Apply per Project

(vi) Explosion, Collapse and Underground (UCX) exclusion deleted

(vii) Contractual Liability with respect to this Contract

(viii) Broad Form Property Damage

(ix) Independent Consultants Coverage

(c) The policy shall contain no endorsements or provisions limiting coverage for (1) contractual liability; (2) cross liability exclusion for claims or suits by one insured against another; (3) products/completed operations liability; or (4) contain any other exclusion contrary to the Agreement.

(d) The policy shall give City, the City Council and each member of the City Council, its officers, employees, agents and City designated volunteers additional insured status using ISO endorsement forms CG 20 10 10 01 and 20 37 10 01, or endorsements providing the exact same coverage.

(e) The general liability program may utilize either deductibles or provide coverage excess of a self-insured retention, subject to written approval by the City, and provided that such deductibles shall not apply to the City as an additional insured.

3.15.4 Automobile Liability

(a) At all times during the performance of the work under this Agreement, the Consultant shall maintain Automobile Liability Insurance for bodily injury and property damage including coverage for owned, non-owned and hired vehicles, in a form and with insurance companies acceptable to the City.

(b) Coverage for automobile liability insurance shall be at least as broad as Insurance Services Office Form Number CA 00 01 covering automobile liability (Coverage Symbol 1, any auto).

(c) The policy shall give City, the City Council and each member of the City Council, its officers, employees, agents and City designated volunteers additional insured status.

(d) Subject to written approval by the City, the automobile liability program may utilize deductibles, provided that such deductibles shall not apply to the City as an additional insured, but not a self-insured retention.

3.15.5 Workers' Compensation/Employer's Liability

(a) Consultant certifies that he/she is aware of the provisions of Section 3700 of the California Labor Code which requires every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that code, and he/she will comply with such provisions before commencing work under this Agreement.

(b) To the extent Consultant has employees at any time during the term of this Agreement, at all times during the performance of the work under this Agreement, the Consultant shall maintain full compensation insurance for all persons employed directly by him/her to carry out the work contemplated under this Agreement, all in accordance with the "Workers' Compensation and Insurance Act," Division IV of the Labor Code of the State of California and any acts amendatory thereof, and Employer's Liability Coverage in amounts indicated herein. Consultant shall require all subconsultants to obtain and maintain, for the period required by this Agreement, workers' compensation coverage of the same type and limits as specified in this Section.

3.15.6 Professional Liability (Errors and Omissions)

(a) At all times during the performance of the work under this Agreement the Consultant shall maintain professional liability or Errors and Omissions insurance appropriate to its profession, in a form and with insurance companies acceptable to the City and

in an amount indicated herein. This insurance shall be written on a policy form coverage specifically designed to protect against acts, errors or omissions of the Consultant. "Covered Professional Services" as designated in the policy must specifically include work performed under this Agreement. The policy must "pay on behalf of" the insured and must include a provision establishing the insurer's duty to defend.

3.15.7 Minimum Policy Limits Required

(a) The following insurance limits are required for the Agreement:

Coverage	Combined Single Limit
Commercial General Liability	$2,000,000 per occurrence/ $4,000,000 aggregate for bodily injury, personal injury, and property damage
Automobile Liability	$2,000,000 per occurrence for bodily injury and property damage
Employer's Liability	$1,000,000 per occurrence
Professional Liability	$2,000,000 per claim and aggregate (errors and omissions)

(b) Defense costs shall be payable in addition to the limits.

(c) Requirements of specific coverage or limits contained in this Section are not intended as a limitation on coverage, limits, or other requirement, or a waiver of any coverage normally provided by any insurance. Any available coverage shall be provided to the parties required to be named as Additional Insured pursuant to this Agreement.

3.15.8 Evidence Required

(a) Prior to execution of the Agreement, the Consultant shall file with the City evidence of insurance from an insurer or insurers certifying to the coverage of all insurance required herein. Such evidence shall include original copies of the ISO CG 00 01 (or insurer's equivalent) signed by the insurer's representative and Certificate of Insurance (Acord Form 25-S or equivalent), together with required endorsements. All evidence of insurance shall be signed by a properly authorized officer, agent, or qualified representative of the insurer and shall certify the names of the insured, any additional insureds, where appropriate, the type and amount of the insurance, the location and operations to which the insurance applies, and the expiration date of such insurance.

3.15.9 Policy Provisions Required

(a) Consultant shall provide the City at least thirty (30) days prior written notice of cancellation of any policy required by this Agreement, except that the Consultant shall provide at least ten (10) days prior written notice of cancellation of any such policy due to non-payment of premium. If any of the required coverage is cancelled or expires during the term of this Agreement, the Consultant shall deliver renewal certificate(s) including the General Liability Additional Insured Endorsement to the City at least ten (10) days prior to the effective date of cancellation or expiration.

(b) The Commercial General Liability Policy and Automobile Policy shall each contain a provision stating that Consultant's policy is primary insurance and that any insurance, deductible, or self-insurance maintained by the City, its officials, officers, employees, agents, or volunteers shall not contribute with this primary insurance. Policies shall contain or be endorsed to contain such provisions.

(c) The retroactive date (if any) of each policy is to be no later than the effective date of this Agreement. Consultant shall maintain such coverage continuously for a period of at least three years after the completion of the work under this Agreement. Consultant shall purchase a one (1) year extended reporting period A) if the retroactive date is advanced past the effective date of this Agreement; B) if the policy is cancelled or not renewed; or C) if the policy is replaced by another claims-made policy with a retroactive date subsequent to the effective date of this Agreement.

(d) All required insurance coverages, except for the professional liability coverage, shall contain or be endorsed to waiver of subrogation in favor of the City, its officials, officers, employees, agents, and volunteers or shall specifically allow Consultant or others providing insurance evidence in compliance with these specifications to waive their right of recovery prior to a loss. Consultant hereby waives its own right of recovery against City, and shall require similar written express waivers and insurance clauses from each of its subconsultants.

(e) The limits set forth herein shall apply separately to each insured against whom claims are made or suits are brought, except with respect to the limits of liability. Further the limits set forth herein shall not be construed to relieve the Consultant from liability in excess of such coverage, nor shall it limit the Consultant's indemnification obligations to the City and shall not preclude the City from taking such other actions available to the City under other provisions of the Agreement or law.

3.15.10 Qualifying Insurers

(a) All policies required shall be issued by acceptable insurance companies, as determined by the City, which satisfy the following minimum requirements: Each such policy shall be from a company or companies with a current A.M. Best's rating of no less than A:VII and admitted to transact in the business of insurance in the State of California, or otherwise allowed to place insurance through surplus line brokers under applicable provisions of the California Insurance Code or any federal law.

3.15.11 Additional Insurance Provisions

(a) The foregoing requirements as to the types and limits of insurance coverage to be maintained by Consultant, and any approval of said insurance by the City, is not intended to and shall not in any manner limit or qualify the liabilities and obligations otherwise assumed by the Consultant pursuant to this Agreement, including but not limited to, the provisions concerning indemnification.

(b) If at any time during the life of the Agreement, any policy of insurance required under this Agreement does not comply with these specifications or is canceled and not replaced, City has the right but not the duty to obtain the insurance it deems necessary and any premium paid by City will be promptly reimbursed by Consultant or City will withhold

amounts sufficient to pay premium from Consultant payments. In the alternative, City may cancel this Agreement.

(c) The City may require the Consultant to provide complete copies of all insurance policies in effect for the duration of the Project.

(d) Neither the City nor the City Council, nor any member of the City Council, nor any of the officials, officers, employees, agents or volunteers shall be personally responsible for any liability arising under or by virtue of this Agreement.

3.15.12 Subconsultant Insurance Requirements

(a) Consultant shall not allow any subcontractors or subconsultants to commence work on any subcontract until they have provided evidence satisfactory to the City that they have secured all insurance required under this Section. Policies of commercial general liability insurance provided by such subcontractors or subconsultants shall be endorsed to name the City as an additional insured using ISO form CG 20 38 04 13 or an endorsement providing the exact same coverage. If requested by Consultant, City may approve different scopes or minimum limits of insurance for particular subcontractors or subconsultants.

3.16 Records.

Consultant shall maintain complete and accurate records with respect to all costs and expenses incurred under this Agreement. All such records shall be clearly identifiable. Consultant shall allow a representative of City during normal business hours to examine, audit, and make transcripts or copies of such records and any other documents created pursuant to this Agreement. Consultant shall allow inspection of all work, data, documents, proceedings, and activities related to the Agreement for a period of five (5) years from the date of final payment under this Agreement.

3.17 Standardized Manufactured Items.

Consultant shall cooperate and consult with City in the use and selection of manufactured items on the Project, including but not limited to, paint, hardware, plumbing, mechanical and electrical equipment, fixtures, roofing materials and floor coverings. All such manufactured items shall be standardized to City's criteria to the extent such criteria do not interfere with building design.

3.18 Limitation of Agreement.

This Agreement is limited to and includes only the work included in the Project described herein. Any additional or subsequent construction at the site of the Project, or at any other City site, will be covered by, and be the subject of, a separate Agreement for **engineering** services between City and the Consultant chosen therefor by City.

3.19 Mediation.

Disputes arising from this Agreement may be submitted to mediation if mutually agreeable to the Parties hereto. The type and process of mediation to be utilized shall be subject to the mutual agreement of the Parties.

3.20 Successors and Assigns.

This Agreement shall be binding upon and shall inure to the benefit of the successors in interest, executors, administrators and assigns of each Party to this Agreement. However, Consultant shall not assign or transfer by operation of law or otherwise any or all of its rights, burdens, duties or obligations without the prior written consent of City. Any attempted assignment without such consent shall be invalid and void.

3.21 Asbestos Certification.

Consultant shall certify to City, in writing and under penalty of perjury, that to the best of its knowledge, information and belief no asbestos-containing material or other material deemed to be hazardous by the state or federal government was specified as a building material in any construction document that the Consultant prepares for the Project. Consultant shall require all consultants who prepare any other documents for the Project to submit the same written certification. Consultant shall also assist the City in ensuring that contractors provide City with certification, in writing and under penalty of perjury, that to the best of their knowledge, information and belief no material furnished, installed or incorporated into the Project contains asbestos or any other material deemed to be hazardous by the state or federal government. These certifications shall be part of the final Project submittal. Consultant shall include statements in its specifications that materials containing asbestos or any other material deemed to be hazardous by the state or federal government are not to be included.

3.22 No Third Party Rights.

This Agreement shall not create any rights in, or inure to the benefits of, any third party except as expressly provided herein.

3.23 Governing Law.

This Agreement shall be construed in accordance with, and governed by, the laws of the State of California. Venue shall be in San Bernardino County.

3.24 Exhibits and Recitals.

All exhibits and recitals contained herein and attached hereto are material parts of this Agreement and are incorporated as if fully set forth.

3.25 Severability.

Should any provision in the Agreement be held by a court of competent jurisdiction to be invalid, void, or unenforceable, the remaining provisions shall continue in full force and effect.

3.26 Non-Waiver.

None of the provisions of this Agreement shall be considered waived by either Party, unless such waiver is specifically specified in writing.

3.27 Safety.

Consultant shall execute and maintain its work so as to avoid injury or damage to any person or property. In carrying out its Services, the Consultant shall at all times be in compliance with all applicable local, state and federal laws, rules and regulations, and shall exercise all necessary precautions for the safety of its employees, consultant and subcontractors appropriate to the nature of the work and the conditions under which the work is to be performed.

3.28 Harassment Policy.

Consultant shall provide a copy of the City's Harassment Policy to each of its employees assigned to perform the tasks under this Agreement. Consultant shall submit to the City's Personnel Manager a statement signed by each of its employees who are assigned to perform the Services under this Agreement certifying receipt of City's Harassment Policy and certifying that they have read the Harassment Policy. A finding by the City that any of Consultant's employees has harassed a City employee shall be grounds for appropriate discipline, up to and including such employee's removal from performance of this Agreement at City's request.

3.29 Delivery of Notices.

All notices permitted or required under this Agreement shall be given to the respective Parties at the following address, or at such other address as the respective Parties may provide in writing for this purpose:

CITY:	CONSULTANT:
City of Ontario	**Ardurra Group, Inc.**
303 East "B" Street	**3737 Birch Street, Suite 250**
Ontario, CA 91764	**Newport Beach, CA 92660**
Attn: **Dennis Mejia, PE, Utilities Engineering Division Manager**,	Attn: **Dolores Salgado**

Such notice shall be deemed made when personally delivered or when mailed, forty-eight (48) hours after deposit in the U.S. Mail, first class postage prepaid and addressed to the Party at its applicable address. Actual notice shall be deemed adequate notice on the date actual notice occurred, regardless of the method of service.

3.30 Time of Essence.

Time is of the essence for each and every provision of this Agreement.

3.31 City's Right to Employ Other Consultants.

City reserves right to employ other consultants, including designers, in connection with this Project or other projects.

3.32 Prohibited Interests.

3.32.1 Solicitation. Consultant maintains and warrants that it has not employed nor retained any company or person, other than a bona fide employee working solely for Consultant, to solicit or secure this Agreement. Further, Consultant warrants that it has not paid nor has it agreed to pay any company or person, other than a bona fide employee working solely for Consultant, any fee, commission, percentage, brokerage fee, gift or other consideration contingent upon or resulting from the award or making of this Agreement. For breach or violation of this warranty, City shall have the right to rescind this Agreement without liability.

3.32.2 Conflict of Interest. For the term of this Agreement, no director, official, officer or employee of City, during the term of his or her service with City, shall have any direct interest in this Agreement, or obtain any present or anticipated material benefit arising therefrom.

3.33 Equal Opportunity Employment.

Consultant represents that it is an equal opportunity employer and that it shall not discriminate against any employee or applicant for employment because of race, religion, color, national origin, ancestry, sex, age or any other classification protected by federal or state law. Such non-discrimination shall include, but not be limited to, all activities related to initial employment, upgrading, demotion, transfer, recruitment or recruitment advertising, layoff or termination. Consultant shall also comply with all relevant provisions of City's minority business enterprise program, affirmative action plan or other related programs or guidelines currently in effect or hereinafter enacted.

3.34 Labor Certification.

By its signature hereunder, Consultant certifies that it is aware of the provisions of Section 3700 of the California Labor Code which require every employer to be insured against liability for Worker's Compensation or to undertake self-insurance in accordance with the provisions of that Code, and agrees to comply with such provisions before commencing the performance of the Services.

3.35 Subcontracting.

As specified in this Agreement, Consultant shall not subcontract any portion of the Services required by this Agreement, except as expressly stated herein, without prior written approval of City. Subcontracts, if any, shall contain a provision making them subject to each and every provision of this Agreement.

3.36 Supplemental Conditions.

Any supplemental conditions shall be attached as an exhibit to this Agreement, and that exhibit shall be incorporated herein by reference.

3.37 Entire Agreement.

This Agreement, with its exhibits, contains the entire agreement of the Parties hereto, and supersedes any and all other prior or contemporaneous negotiations, understandings and oral or written agreements between the Parties hereto. Each Party acknowledges that no representations, inducements, promises or agreements have been made by any person which

are not incorporated herein, and that any other agreements shall be void. Furthermore, any modification of this Agreement shall only be effective if in writing signed by all Parties hereto.

SCOPE OF SERVICES

EXHIBIT "A"

RFQ PROPOSED SCOPE OF SERVICES

The City of Ontario is seeking Statement of Qualifications from qualified consulting engineers to provide On-Call Services for three (3) years, with an option of renewing for two (2) consecutive one (1) year terms. The City desires to obtain the services of a maximum of six (6) qualified firms to assist with On-Call Design Services. At least ten (10) years of experience providing similar services is required to oversee the work, stamp, and sign all project related documents as required.

Request for Qualifications (RFQ) for various services in various disciplines (e.g. Engineering, Architecture, Construction, Hydraulic Modeling, Fire Flow Modeling, Feasibility Studies, etc.) with the intention of maintaining a list of multiple qualified prime engineering firms, with subconsultant support services as needed. Task orders will be issued to firms on a competitive basis based on the qualifications and expertise of the firm and their subconsultants. There is no designated minimum nor maximum value of services to be awarded to any one consultant.

Each Prospective Consultant needs to be able to provide all the services (or provide sub-consultants that must also be listed as part of their statement of qualifications) listed in this RFQ.

The following scope of services provides general categories of services that may be required for each task order requested. The categories are not an exhaustive list of services but rather a sampling of the services that are typically included, but not limited to, within that area of the scope in order to demonstrate the qualifications needed for that scope of services.

Specific services requested under these agreements shall be identified by the City at the time of the request for a specific task order. For each task order requested by the City, the Consultant shall provide a task order proposal that identifies the specific scope of services to be performed, the necessary project management activities, task budget, and task schedule. Upon City's approval of the proposed task's scope of services, the City will issue a notice to proceed with purchase order requisition for the work. The Consultant is encouraged to provide recommendations with respect to scope and order of completion.

No task order or scope of services shall be performed without first receiving authorization from the City and notice to proceed with the task order.

GENERAL REQUIREMENTS.

Consultant will be expected to work closely with staff for the duration of the assigned projects (i.e. task orders), and attend all meetings and workshops, as necessary. Any adjustments can be verified based on the need of City Project Managers. All field services must include appropriate traffic control.

Some or all of the following General Requirements and Services may be incorporated into specific tasks orders generated from the On-Call contract. The applicable General Requirements shall be based on needs of specific tasks and the City Project Managers:

Refer to Design Services Agreement in Exhibit "B" to review the General Requirements and other conditions.

ON-CALL DESIGN SERVICES

The City of Ontario is seeking Statement of Qualifications from firms for On-Call Design Services:

Consultant shall be aware that certain labor categories above may be subject to prevailing wage rates as identified in the California Labor Code commencing Section 1770 et Seq. Determination of whether or not Prevailing Wages shall apply will be determined when the City's Project Manager identifies the scope of specific task orders. Please refer to Paragraph XI.11 "Prevailing Wage and Contractor Registration" of this RFQ, and Paragraph 3.10.6 "Prevailing Wages" of the Design Services Agreement for further requirements.

Expected services to be provided under this on-call contract will be performed under a task order system, need to be designed following City Guidelines or associated governing agency guidelines, and may include:

Capital Improvement Project Division

- Feasibility Studies
    - Preparing and/or updating Guidance Documents for Utility Feasibility Studies and Technical Reports
- Environmental services for CEQA/NEPA
- Geotechnical Investigations
- Erosion Control and Storm Water Pollution Prevention Plans
- Permitting and Grant writing support
- Surveying and Mapping
    - ALTA Surveys
    - Easements, Right of Way Preparation, and Mapping
    - Topographic Mapping
    - Field Design Surveys
    - Boundary Surveying and Monumentation
    - Benchmarks and centerline tie information
    - Legal Descriptions and Exhibits
    - Construction Staking
    - Conduct Potholing Services
- Construction Documents Development
- Street Improvements and Highway Design Engineering
- Civil, mechanical, electrical, structural, instrumentation design using AutoCAD 2023 or later
    - Transmission, Collection & Distribution Pipelines (water, sewer, recycled water, storm drain, etc.) facilities including water pipelines (transmission and distribution)
    - Groundwater Wells
    - Pump Stations
    - Pressure Reducing Stations
    - Reservoirs
    - Sewer Lift Stations
- Construction Engineering Support Services
    - Provide RFI review and response services
    - Submittal review and response services

- Project coordination services with City hired Construction Manager
- Final inspection and punch list services
- Convert Contractor's redlines to record drawings

Planning and Land Development Division

- Master planning to include infrastructure master plans
  - Hydraulic Modeling
  - Flow Monitoring
  - Demand factor assessment
- Asset management program support
- Risk and Resilience Assessment
- Site Security Assessment
- Emergency Response Plan
- Facilities Condition Assessment
- Updating City Water and Sewer GIS
- Hydrology and Drainage Engineering
  - Hydraulic modeling and GIS support services conforming with San Bernardino County Hydrology Manual
  - Hydrology Studies and hydrologic calculations
  - Hydrogeologic engineering services related to groundwater well rehabilitation and installation
- Hydraulic Modeling and Model Maintenance
  - The potable and recycled water model is in Innovyze InfoWater, the sewer model is in Innovyze InfoSewer, and both are running in the ArcMap 10.7.1 environment.
  - Updating Model Geometries using City Water and Sewer Atlas GIS shapefiles and Water and Sewer Improvement Construction/Record Drawings.
  - Updating Model Demands, Patterns, and Peaking Factors based on development and meter data.
  - Creating and Running New Scenarios.
  - Model Verification and Calibration to assure that the model can run properly.
  - Preparing Utility Hydraulic Analysis Studies and Reviews.
  - Reviewing OMUC Staff or Developer/Engineer modeling work and providing summary validation reports.
  - Peer Review of Utility Hydraulic Analysis Studies and Reviews, and Utility Feasibility and Technical Studies.
  - Fire Flow Analysis

Water Resources and Water Quality Division

- Water Resources Planning and Management Support Services
  - Urban Water Management Plans - Preparation, Updates, and Amendments
  - Water Supply Assessments and Written Verifications
  - Hydrogeological Studies and Geotechnical Engineering
  - Water Use Surveys
  - Wastewater Flow and Strength Studies
  - Water Conservation and Audits
  - Recycled Water Use Studies and compliance with State Water Board and Regional Water Quality Control Board requirements

- Laboratory Testing
- Water and Wastewater Low/High Flow Monitoring (On-site Private & Public)
- Water and Wastewater Quality Sampling (On-site Private & Public)
- Sewer System Management Plan Update
- Sewer System Management Plan Audit

ARDURRA

01 EXECUTIVE SUMMARY

ARDURRA

01 EXECUTIVE SUMMARY

February 2, 2024

Omar Gonzalez, PE,CIP Manager
Ontario Municipal Utilities Company
1425 South Bon View Ave
Ontario, California 91761

RE: RFQ NO. 1740 | ON-CALL DESIGN SERVICES

Dear Mr. Gonzalez and Selection Panel Members:

It is with great pleasure and gratitude that I submit our proposal to renew our On-Call Engineering Services contract. Over the last five years, our team has remained consistent because we understand the value our expertise, knowledge of your Standards, and personal relationships with OMUC staff, adds to the success of your projects. Our team will continue to go the extra mile, not taking for granted the trusted relationships and our reputation of delivering high quality projects on-time and within budget. Our team continues to offer you the following:

Multi-Discipline Team to Meet Task Order Needs. Our deep bench of professionals offers comprehensive resources to meet the needs and objectives of the City for all water, recycled water, sewer, water treatment, and general facility needs. We have the availability and experience to manage various project types and scale as required to support major or minor capital projects.

Capacity to Execute the Work. As shown in our Team Organizational Chart, we have experienced staff assigned to each key role of the project. Each staff member is an expert in their respective field and ready and available to work on your project without delay. The key team members are supported by Ardurra's California operational team, which includes over 200 professionals and our cadre of experienced subconsultants that will fulfill specialized roles on the project. We can scale as needed based on each task order.

Successful History of Implementing Capital Related Improvements and On-Call Projects including the past City of Ontario On-call. Our team of experts has worked together to provide full-service on-call engineering services for multiple public agencies and has serviced the City of Ontario since 2019. Our philosophy is to protect the City's interests, minimize risks, provide cost-effective solutions, and maintain compliance to provide the City with long-term value for their investments.

Innovation and Experience for Long-Term Water Management and Reliability. Understanding the interconnectedness of all water, including surface water, groundwater, stormwater, and wastewater, is critical to adapting to the City's need to deliver reliable, economical, high-quality water to its customers. Our Project Manager, Dolores Salgado, PE, is familiar with the City of Ontario, having successfully completed numerous projects for the City. Our Deputy Project Manager, Kaitlyn Leong, PE, has 10+ years of experience planning and designing water infrastructure projects. Our Water Resources team offers the City the technical expertise and hands-on experience in water/sewer projects and has completed award-winning projects.

Vested Interest and Dedication to See the Project Through to Successful Completion. Having performed prior design projects for the City, Ardurra has a vested interest in the success of all your projects. As a relationship-based organization, we will work tirelessly to ensure the goals of the project and City are met.

On behalf of our team, we look forward to the opportunity to work with you to execute this project. The proposed team members have all worked together on past projects of similar scope and size, and are enthusiastic about working with the City on this On-Call Design project. Please contact me at 661.748.3893 or email me at dsalgado@ardurra.com if you have any questions about our proposal.

Sincerely,

Dolores Salgado, PE
Project Director | Client Services Manager

ARDURRA

03 IDENTIFICATION OF PROPOSER

MEET ARDURRA

Ardurra Group, Inc. (Ardurra) is a relationship-based, professional services organization primarily serving public water and wastewater agency clients for the past 45 years. With 1450+ employees in 78 offices nationwide, Ardurra is a Top 500 ENR-ranked, rapidly growing company of experts, engineers, and design professionals committed to delivering quality services and practical solutions. Over the last three years, we have tripled in size through organic growth and strategic acquisitions that have expanded our resources, capabilities, and geographic reach. Our staff is our greatest resource, and we continue to grow to meet the needs of our clients.

The majority of our work is with public agencies. We not only have the specific related experience to provide On-Call services but have taken the time to understand the City's objectives.

Responsiveness - We are there when you need us!
As we intend to demonstrate, Ardurra is proud of the reputation we have established and the style in which we deliver our services based on the investment and ownership responsibility we place on every single project. We are motivated to exceed the City's expectations. With offices throughout California, the Ardurra team provides local subject matter experts with the availability and resources to be responsive to the City's needs. We can provide on-the-spot assistance with an emergency situation or a fast-track project while maintaining sufficient staff and resources to manage large multi-discipline projects. Our geographic proximity to the City makes it ideal for us to be available to attend in-person meetings and readily accessible to be in the field as needed.

Local In-House Capabilities to Meet Task Order Needs
Our in-house capabilities include project management, civil, mechanical, and electrical engineering and design, as-needed municipal "staff extension" services, water and wastewater master planning and hydraulic modeling, traffic and transportation engineering, plan checking, CEQA/NEPA compliance, regulatory permitting, GIS design and implementation, sewer flow monitoring, survey, and construction management and inspection services. We also have established relationships with several recognized specialty firms that support us with additional disciplines and services as needed.

Our Commitment
Ardurra provides full-spectrum services to assist our clients from planning through construction. From our substantial experience in planning, designing, and managing public infrastructure undertakings, we understand that projects today are driven by a balance of economic, environmental, social, and political factors. We believe in working in partnership with our clients to meet these challenges. We offer the City a commitment to responsiveness, quality, and forward-thinking solutions to deliver innovative projects that meet budget and schedule expectations.

04 STAFFING RESOURCES

ARDURRA

04 STAFFING RESOURCES

A. Firm Staffing and Key Personnel

Ardurra has assembled a team with the technical expertise, local knowledge, and dedicated resources to deliver a successful project. The Design Leads and support staff are led by Dolores Salgado and Kaitlyn Leong, Deputy Project Manager, who will act as the primary contact for City staff, providing consistency in the project deliverables that meet City needs and requirements. Depending on the scope of work, a specialty Design Lead will be assigned to coordinate activities within the team and will be responsible for developing progress and final submittals, coordination meetings, and status reports. Moreover, we offer a Quality Management Team to provide oversight and quality design reviews to minimize project delays.

Dolores, Kaitlyn, and the team provide proactive project solutions that help minimize disruptions, costs, and impacts to stakeholders. In addition to our technical leads, Dolores Salgado will serve as the Project Manager, whose familiar background with the City provides valuable insight to deploy the right resources efficiently.

Our team is familiar with the City's operations and expectations, having worked on previous projects. We offer the City a unique understanding of project requirements, no learning curve, and ease of third-party and stakeholder coordination to expedite permitting and the schedule. Our design team and specialty experts are available to help expedite environmental clearance, permitting, and utilities coordination.

The organization chart illustrates the roles and relationships between the City, our key personnel, and subconsultants. It identifies the principal personnel - Dolores, Kaitlyn, and Rob who will work directly with the City.

Staff Assigned to Perform Services & Firm Capacity

We bring the right expertise to execute this project's related scope of services. Most notably, our proposed key staff is currently available, and should the need arise, we are open to engaging firm-wide resources.

Our overall OMUC & City-focused client approach allows us to be responsive and adaptable. We have embodied this by showing flexibility to adapt to client initiated changes in scope, project timelines, and deliverables and deploying team members where needed at your request. We share the goal of minimizing project disruptions and risks.

Benefits of Our Team

History Working With OMUC
Since 2019, our team has been working actively with the City

Knowledge of City Operations & Staff
Our team prepared has great working relations with Ops Staff

Proven Ability to Deliver OMUC Projects
Our responsive team has successfully delivered several City projects on-time and within budget

PROVIDING THE RIGHT BLEND OF LOCAL KNOWLEDGE AND TECHNICAL EXPERTISE WITH THE AVAILABILITY TO DELIVER SUCCESSFUL PROJECTS

Principal Individuals — Past Experience Working with the City

DOLORES SALGADO, PE

PROJECT DIRECTOR/PROJECT MANAGER

YEARS OF EXPERIENCE:
25 years

Dolores has over 25 years of experience planning and designing water pipeline, sewer, and civil transportation projects. Her civil transportation experience includes light rail transit and bus rapid transit. Water and sewer experience includes water distribution and sewer collection facilities.

VALUE TO THE CITY
- ✓ Knowledge of OMUC procedures
- ✓ Proven leadership skills
- ✓ Track record of successful project delivery

RELEVANT PROJECTS
- On-Call Professional Engineering Services, Ontario Municipal Utilities Company
- Ontario Ranch Phase 2 Water Main Improvements, OMUC
- San Antonio Ave 30-inch Diameter Transmission Water Main, OMUC

KAITLYN LEONG, PE

DEPUTY PM/GRANT WRITING/PERMITTING

YEARS OF EXPERIENCE:
10 years

Kaitlyn brings ten years of experience in the design of water and sewer projects. Her water and sewer experience includes water storage, conveyance and distribution, and sewer collection facilities. She commits to understanding her clients' needs and preferences. She systematically maneuvers her clients' projects through varying project phases – permitting, community acceptance, gaining approval, and through project completion. She has completed numerous pipeline designs, including complicated horizontal and vertical alignments and through congested utility corridors.

VALUE TO THE CITY
- ✓ Proven Project Manager for OMUC/City of Ontario Projects
- ✓ Knowledge of City of Operations, Design Standards, and Technical Specifications
- ✓ Organized, focused, and committed to meeting project deadlines

RELEVANT PROJECTS
- UT 1050 42-inch Diameter TWM Alignment Study, OMUC
- UT1065 and UT1066 Water Main Improvements, OMUC
- UT1067, UT1069, and UT170 Sewer Main Improvements, OMUC
- UT1072 Euclid Avenue Downtown Recycled Water Improvements, OMUC
- On-Call Professional Engineering Services, Ontario Municipal Utilities Company

ROBERT WEBER, PE

QUALITY MANAGEMENT - DESIGN REVIEWS

YEARS OF EXPERIENCE:
33 years

As Quality Manager, Rob brings 33 years of civil engineering and project management experience on various water, wastewater, and recycled water projects. He has been involved in the design of several award-winning projects, and the thoroughness and thoughtfulness he brings to his projects result from his dedication and commitment to providing the client with the best possible project.

VALUE TO THE CITY
- ✓ Proven leader in a changing industry
- ✓ Commitment and dedication to client-service
- ✓ Excellent communication skills

RELEVANT PROJECTS
- As-Needed Professional Engineering Design Services, Leucadia Waste Water District
- As-Needed Engineering and Design, City of Anaheim
- On-Call Professional Engineering Services, Ontario Municipal Utilities Company

Design Leads/Key Personnel

ANDERS EGENSE, PE

QUALITY MANAGEMENT - DESIGN REVIEWS

YEARS OF EXPERIENCE:
40 years

Anders provides specialized experience in the planning and design of water supply projects. Ander's role at Ardurra is exclusively focused on quality assurance and quality control. He will be a dedicated quality reviewer for the project and verify that the design standards comply with regulatory and the City's standards.

VALUE TO THE CITY
- ✓ 40 years of water planning & design experience
- ✓ Extensive QA/QC experience with attention to detail
- ✓ Dedication to quality and effectively manages project risks, and controls, construction and operational costs

RELEVANT PROJECTS
- Santa Margarita Conjunctive Use Project Facilities, Fallbrook Public Utilities District, CA
- Lester J. Berglund Water Treatment Plant Clearwell Upgrades, City of Poway
- Recycled Water Plan Check Support Services and Standard Procedures Development, EMWD

AMY CZAJKOWSKI, PE, CCM, QSD/P

QUALITY MANAGEMENT - CONSTRUCTABILITY REVIEWS

YEARS OF EXPERIENCE:
30 years

Serving water districts, municipalities, and purveyors, Amy has gained recognition for system planning, design engineering, and construction management of public water and wastewater infrastructure projects. Her engineering design experience includes conveyance systems, pump and lift stations, reservoir storage, and treatment facilities. Her on-site construction experience and extensive research of material and equipment performance allow her to avoid constructability problems and reduce costs.

VALUE TO THE CITY
- ✓ Certified Construction Manager to verify compliance, maintain safety and quality
- ✓ Extensive experience with CM for grant funded projects and compliance requirements
- ✓ Instructor for CMAA Certified Construction Manager (CCM) course

RELEVANT PROJECTS
- As-Needed Engineering and Design, City of Anaheim
- Third-Party CM & Inspection Services at Margaret H. Chandler Water Reclamation Plant, San Bernardino Municipal Water Dept.
- San Antonio Ave 30-inch Diameter Transmission Water Main, OMUC

SCOTT ADAMSON, PE, QSD/P

QUALITY MANAGEMENT - CONSTRUCTABILITY REVIEWS

Scott is an expert in providing construction management, resident engineering, inspection, and design of small and large civil engineering public works projects, emphasizing street improvements, water and sewer repair and rehabilitation, and storm drain construction. He is familiar with challenging public works engineering issues such as franchise utilities, NPDES requirements, public relations, right-of-way, private property issues, council concerns, and various outside grant and funding requirements, including SRF and FHWA funding programs.

VALUE TO THE CITY
- ✓ Practical, real world construction experience that will prove invaluable to any task order
- ✓ Current on Caltrans Local Assistance Procedures and Water Pollution Control requirements
- ✓ 25 years of construction management, resident engineering, inspection, and design of small and large public works projects

RELEVANT PROJECTS
- San Antonio Ave 30-inch Diameter Transmission Water Main, OMUC
- UT1065 and UT1066 Water Main Improvements, OMUC
- UT1067, UT1069, and UT170 Sewer Main Improvements, OMUC

DALIA MULATO

WATER/RECYCLED PIPELINES

YEARS OF EXPERIENCE:
7 years

Dalia has seven years of experience preparing thorough PS&E documents on various projects, including water pipelines and sewer gravity mains. Dalia is knowledgeable in developing details and pipeline plans and profile drawings, development of detailed cost estimates, preparation of preliminary design reports, and permit coordination. Additionally, she has extensive knowledge of AutoCAD, Revit, Google SketchUp, and GIS.

VALUE TO THE CITY

- ✓ Proficient in pipeline design
- ✓ Extensive knowledge of Audocad, Revit, SketchUp, and GIS
- ✓ Proven track record of project delivery

RELEVANT PROJECTS

- San Antonio Ave 30-inch Diameter Transmission Water Main, OMUC
- Ontario Ranch Phase 2 Water Main Improvements, Ontario Municipal Utilities Company/City of Ontario
- UT1065 and UT1066 Water Main Improvements, OMUC

MARCO CRUZATT, EIT

SEWER GRAVITY PIPE AND FORCE MAINS

YEARS OF EXPERIENCE:
15 years

Marco has 15 years of experience in Land Development projects and Construction Administration. He has worked on and managed small-residential to large-scale projects. Marco can take a project from the planning phase to the construction phase. He's well versed with government agency requirements and highly proficient in Civil 3D and MicroStation software.

VALUE TO THE CITY

- ✓ Experienced with off-site improvements, grading and drainage, utilities, and roadway design
- ✓ Well versed in design and public agency standards
- ✓ Experience leading teams in a design role

RELEVANT PROJECTS

- Topanga Lagoon Restoration Project, Los Angeles County, CA
- Five Point Valencia Commerce Center, Newhall Ranch, CA
- Cage Avenue- New Bridge and Street Widening, City of Bell, CA

RICHARD KENNEDY, PE

PUMP STATIONS

YEARS OF EXPERIENCE:
47 years

Richard has managed the design of more than 15 new and retrofit pump station projects ranging in size from 400 gpm to over 400 MGD, with various types of pumps and drive configurations. He has managed the design of new and retrofit water treatment plant projects. He specializes in mechanical process equipment of all kinds. He prides himself in working closely with his clients and ensuring the design team understands the project's critical issues. He is dedicated to delivering detailed and quality bid packages.

VALUE TO THE CITY

- ✓ Has successfully obtained over $5M in grant funding
- ✓ Experience in design and quality assurance management for various municipal projects
- ✓ Mechanical expert

RELEVANT PROJECTS

- Lester J. Berglund Water Treatment Plant, Chemical Building, and Tank Farm Upgrades, City of Poway
- Santa Margarita Conjunctive Use Project Facilities, Fallbrook Public Utilities District, CA
- KSD Joint Venture: Carlsbad Desalination Project, Carlsbad, CA

YUE SUN, PE, BCEE

WATER TREATMENT

YEARS OF EXPERIENCE:
24 years

Yue is an expert in water and wastewater facility design, treatment process selection, hydraulic analysis, and water treatment bench scale and pilot studies. She has been involved in expanding and upgrading water and wastewater treatment plants nationwide, and her strengths include project planning, design management and coordination, and successful project delivery.

VALUE TO THE CITY

- ✓ Proven water and wastewater engineer
- ✓ Expert in bench and pilot testing, process selection, facility design, hydraulic analysis, and water quality management
- ✓ Expert in water quality control and regulatory compliance, and public water system monitoring program development

RELEVANT PROJECTS

- East Water Purification Plant Expansion to 350-MG, Houston TX
- Southeast Water Treatment Plant 80-MGD Expansion
- Wescalo Water Treatment Plant Expansion Evaluation

BO ZHANG, PE

WASTEWATER TREATMENT

YEARS OF EXPERIENCE:
22 years

Bo is a senior Water and Wastewater Process Engineer and Project Manager with 22 years of experience in condition assessment, capital improvement planning, evaluation, design, construction services, regulatory assistance, and governmental grants/loan application support for water and wastewater treatment and conveyance systems.

VALUE TO THE CITY

- ✓ Experienced wastewater treatment systems
- ✓ Over 20 years of experience in planning, evaluation, design, assessments of water treatment plants
- ✓ Technical expert in operational reliability, evaluation, design, and regulatory compliance

RELEVANT PROJECTS

- Design and Supply of Water Treatment Systems, La Crescenta, CA
- Development of New Growth Initiatives for GZE Assets, Irvine, CA
- Hopewell WWTP Upgrade, Hopewell, NJ

ARIC GNESA, PE, DBIA

GROUNDWATER WELLS

YEARS OF EXPERIENCE:
24 years

Aric has 24 years of professional experience in various engineering tasks and disciplines, including planning, design, and construction management of large and small-diameter (treated, raw water, and sewage) pipelines, pump stations, flow control facilities, and reservoirs. He is highly experienced in preparing DWSAP and drinking water permits, groundwater well testing, designing wellhead facilities, start-up testing, and commissioning drinking water wells.

VALUE TO THE CITY

- ✓ Hands-on experience in various water projects
- ✓ Thorough understanding of design standards, practices, and methods
- ✓ Specializes in preparation of plans, specifications and cost estimates for reservoirs, pump stations, pipelines, and flow control facilities

RELEVANT PROJECTS

- City of Oceanside Wells 9, 10, and 11
- City of Palo Alto Eleanor Pardee Park Well
- As-needed Engineering, South Coast Water District
- City of Menlo Park Supplemental Emergency Well Supply

RYAN HUSTON, PE

GROUNDWATER RECHARGE

YEARS OF EXPERIENCE:
26 years

Ryan has provided planning and design services for various water, wastewater, and recycled water projects, including water wells, reservoirs, pipelines, and pump stations. His 26 years of experience include working in the public and private sectors, which provides Ryan with a unique understanding of the intricacy of a public agency and the relationship between client and consultant.

VALUE TO THE CITY

- ✓ Design expert and proven project manager
- ✓ Provides a balance approach, availability, and responsiveness to execute any task order
- ✓ Experienced with planning and design for various water infrastructure projects

RELEVANT PROJECTS

- Ames-Reche, Oeste, Lucerne Recharge Basins & Oeste Turnout Projects, Mojave Water Agency
- Adelanto R^3 Extension, Mojave Water Agency
- Recycled Water Pond Pumping Stations, Eastern Municipal Water District

LORI TROTTIER, AICP, CEP

ENVIRONMENTAL

YEARS OF EXPERIENCE:
34 years

Lori has 34 years of environmental planning and project management experience on various infrastructure and development projects requiring General Plan Amendments, Specific Plans, and clearance under the California Environmental Quality Act and National Environmental Policy Act. She has managed numerous multi-disciplinary teams and has been the primary author on regionally significant and high-profile CEQA documents involving considerable public input. Her experience extends beyond environmental planning, including many entitlement permits for development, natural resources, and construction.

VALUE TO THE CITY

- ✓ Experienced in a variety of development and infrastructure projects
- ✓ Expert in CEQA compliance, environmental planning, and analysis
- ✓ Ability to obtain stakeholder consensus through a collaborative approach

RELEVANT PROJECTS

- UT1072 Euclid Ave Downtown Recycled Water Main Improvements, OMUC
- M-1394 Water Main Improvements, Tipping Development
- California Commerce Center Supplemental Specific Plan EIR, City of Ontario

B. Identification of Subcontractors

FIRM NAME	AirX Utility Surveyors
ROLE	Utility Location & Potholing
CONTACT INFO	Kyle Walton 909.906.2119 kwalton@airxus.com

AirX Utility Surveyors, Inc. has been a premier full-service Subsurface Utility Engineering (SUE) service provider since 2000. Backed by skilled engineers, contractors, managers, locators, and potholers, they have 150 years of trade experience locating and identifying underground utilities. Their services ensure work and cost efficiency and safety. Core competencies include:

- CCTV inspections
- Utility Locating
- Ground Penetrating Radar (GPR)
- Concrete Scanning
- Potholing with Hydro/Air Evacuation
- Street Surface Repairs
- Traffic Control
- Drawing & Installation
- Permit Processing
- Project Management
- Report Documentation

FIRM NAME	Converse Consultants
ROLE	Geotechnical
CONTACT INFO	Hashmi Quazi, PhD, PE, GE 909.474.2847 hquazi@converseconsultants.com

Established in 1964, Converse Consultants provides the construction industry with geotechnical engineering and geological services. Converse is an employee-owned corporation with nine offices and more than 170 employees throughout the United States. Their professional and technical staff includes in-house geotechnical engineers, engineering geologists, environmental scientists, deputy inspectors, laboratory and field technicians, drafting/CAD specialists, and other specialized support personnel. Their laboratories are certified by the Division of the State Architect (DSA), California Department of Transportation (Caltrans), US Army Corps of Engineers, American Association of State Highway and Transportation Officials (AASHTO), and the Cement and Concrete Reference Laboratory (CCRL). A registered civil engineer supervises each lab to ensure all of our equipment is calibrated regularly and quality control is available 24/7.

FIRM NAME	Kelsey Structural
ROLE	Structural
CONTACT INFO	Guy Kelsey, SE, Principal 619.920.1262 gkelsey@kelseystructural.com

Kelsey Structural is a Southern California small business structural engineering firm specializing in the design of water and wastewater treatment, storage, and conveyance facilities. Their services include structural design for new and existing structures, seismic analysis and retrofit design, technical reports, life cycle analysis, cost estimating, and construction support services. Their staff has a diverse background in designing pump stations, reservoirs, and civil and pipeline structures, emphasizing concrete-masonry unit buildings, below-grade rectangular concrete structures, concrete and steel reservoir design, and structural repair and rehabilitation. Kelsey Structural works closely with design teams, contractors, and clients to provide the most cost-effective solutions that help ensure a safe and reliable water supply.

FIRM NAME	Thomas Harder & Co.
ROLE	Hydrogeology & Groundwater
CONTACT INFO	Georgie Aronson, GIT 714.779.3875 garonson@thomasharddercompany.com

Thomas Harder & Co. (TH&Co) is a full-service hydrogeological consulting company with expertise in developing practical and sustainable groundwater resource solutions. Their Principal Hydrogeologist, Thomas Harder, has over 34 years of experience on various groundwater projects. Mr. Harder is supported by a staff of eleven professional hydrogeologists and geoscientists with extensive experience in field observation of municipal well drilling, construction, development, and testing. Services include:

- Design of High Capacity Groundwater Wells
- Well Performance, Rehabilitation and Troubleshooting
- Well Production Strategy
- Groundwater Resource Management
- Large-Scale Groundwater Basin Studies
- Groundwater Models

FIRM NAME	BCR Consulting
ROLE	Cultural & Historical Studies
CONTACT INFO	Joseph Orozco, M.A., RPA 909.455.8531 joseph@bcrllc.com

BCR Consulting LLC (BCR Consulting) is made up of a highly qualified team of professionals that provide cultural resource compliance services for publicly and privately funded projects pursuant to the California Environmental Quality Act (CEQA), Section 106 of the National Historic Preservation Act (NHPA), and the National Environmental Policy Act (NEPA). Fields of specialization include Archaeology (both prehistoric and historic), Historic Preservation (History and Architectural History), Paleontology, and Geographic Information Systems (GIS). During the past 25 years, BCR Consulting staff has participated in several successful cultural resource assessments and evaluations in the City of Ontario. In addition, Consulting Principal David Brunzell was born and raised in the City of Ontario and is intimately familiar with its history, layout, and potential cultural resource issues.

FIRM NAME	ELMT Consulting, Inc
ROLE	Environmental - Biological Studies
CONTACT INFO	Travis J. McGill 909.816.1646 travismcgill@elmtconsulting.com

ELMT has expert in-house biologists experienced in the Federal and State Endangered Species Acts, the Migratory Bird Treaty Act, the California Department of Fish and Game Code, the Clean Water Act, and biological analysis under the California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA). ELMT's relationships with wildlife agencies, regulatory agencies, federal land managers, and various conservation groups allow the firm to serve as a liaison between the applicant and these agencies/organizations. Moreover, ELMT has been working in the City for over 40 combined years and knows the biological resources in the City. Their offices are nearby and can provide same-day field services if needed.

FIRM NAME	O'Day Consultants, Inc
ROLE	Survey
CONTACT INFO	Patrick N. O'Day JD, PE 760.931.7700 pato@odayconsultants.com

O'Day Consultants is a full-service civil engineering and land surveying firm with 42 years of experience. They offer comprehensive, client-based, professional land surveying, mapping, civil engineering design, and consulting services. They successfully worked with various municipalities, state agencies, the federal government, private developers, general contractors, architects, and other consulting firms on numerous projects throughout California. Our licensed Professional Land Surveyors and Professional Engineers are skilled in all service areas required by the City of Ontario, such as:

- Aerial mapping & surface
- Topographic surveys
- Preliminary utility surveys
- Preparing legal descriptions & plats
- Potholing services
- Horizontal and vertical control
- Construction surveying
- Other surveying services

FIRM NAME	Bennett Trenchless
ROLE	Trenchless
CONTACT INFO	Matthew S. Wallin, PE 916.294.0095 matthew.wallin@bennetttrenchless.com

Bennett Trenchless Engineers, LLP is a certified California SBE specialty consulting engineering firm in Folsom, CA, focusing 100% on trenchless technology. The firm specializes in all design aspects, including feasibility studies, complete design services, and construction management services. Technologies mastered by the firm include microtunneling, open-shield pipejacking, earth pressure balance pipejacking and tunneling, horizontal directional drilling, pilot tube method, and pipe ramming. Design services have included the production of trenchless plans and specifications, geotechnical baseline reports, project schedules, and engineer's cost estimates. The firm has conducted design reviews and served on value engineering panels at various levels of design, suggesting modifications to add value and reduce the construction risk of the project. The firm has experience in other successful City of Ontario projects.

FIRM NAME	Ganddini Group
ROLE	Noise, Air Quality/GHG/Energy
CONTACT INFO	Giancarlo Ganddini 949.735.9314 giancarlo@ganddini.com

Ganddini Group, Inc. is a technical consulting services firm dedicated to helping our clients succeed through a context-sensitive and cost-effective approach to every project. Their team consists of licensed engineers and highly qualified environmental specialists offering expertise in traffic engineering/transportation planning, acoustical engineering and vibration, and air quality/greenhouse gas and energy sciences, with an emphasis on the preparation of technical studies for California Environmental Quality Act (CEQA) documentation and local development review.

FIRM NAME	RF Yeager Engineering Inc
ROLE	Corrosion/Cathodic Protection/ Condition Assessment
CONTACT INFO	Richard Yeager Jr, PE, President 619.312.0195 RFYeager@RFYeager.com

RF Yeager Engineering Inc. is a San Diego based Corrosion Engineering firm established in 2004. They are highly qualified in areas of corrosion control for water and wastewater systems, pipelines, reservoirs, treatment plants, pump stations, and pressure-reducing stations. Their goal is to preserve existing facilities and maximize the life of new facilities. The firm provides the District with the following benefits:

- A local Corrosion Engineering Firm with over 60 years of combined experience providing Corrosion Control/Cathodic Protection designs for pipelines, reservoirs, pump stations, and other water and wastewater industry facilities
- Experienced Corrosion Engineers, including CA Professional Engineer Corrosion and AMPP Cathodic Protection Specialist.

PROVEN EXPERIENCE TO HELP ACHIEVE LONG-TERM GOALS

OUR TEAM'S COMBINED EXPERIENCE, BRINGS THE RIGHT EXPERTISE TO MINIMIZE PROJECT RISKS & PROVIDES FOR A SHORT-LEARNING CURVE.

05 FISCAL RESPONSIBILITY

ARDURRA

05 FISCAL STABILITY

A. Evidence of Corporate Stability

Ardurra Group Inc. has strong financial health, including steady revenue, strong backlog, stabilized expenses, and positive cash flow. There are no impairments, litigation, or impending transactions that may impede Ardurra Group's ability to complete services within the scope of this proposal.

As requested the following supporting documentation are provided in the Appendix section.

- A letter from a financial institution stating a current line of credit; and
- Ardurra's latest audited financial statement that has been certified by a CPA

06 EXPERIENCE AND TECHNICAL COMPETENCE

ARDURRA

06 EXPERIENCE AND TECHNICAL COMPETENCE

A. Summary of Experience

This following section highlights Ardurra's proven capabilities in providing similar expertise working on On-call Design Services.

Experience, Technical and Professional Skills to Meet Goals and Fulfill General Functions in this RFP	✓ Ardurra has worked on multiple on-call design projects for municipalities across California including pump station, reservoir, wells, and pipeline projects ✓ Our demonstrated capabilities and proven success in managing similar work scopes can be seen in this section ✓ We take a proactive, collaborative, and integrative approach while developing, evaluating, and prioritizing near and long-term capital improvement projects
Past Staff Experience Performing Similar Services	✓ The Ardurra team is comprised of local experts with prior experience working for the City of Ontario and associated stakeholders ✓ Our team is robust, technically savvy, and dedicated to providing the City with the right resources and guidance to deliver successful projects ✓ We are familiar with City Design Standards and Operations
21+ Number of Years the Firm has Conducted Business in Southern California	✓ Over 21 years providing exceptional engineering and related services to Southern California. Our success is based on long-term working relationships with public agencies, developed through our design expertise and cemented with our commitment to deliver quality products and unmatched dedication to be responsive to our client services. Ardurra was started in 1977 as King Engineering Associates in the State of Florida. We have been providing services to the City since 2019.
Five References - Experience and Performance Providing Similar Services	✓ Please see reference table within this section for Ardurra's experience in performing similar services.
Local Experience and Knowledge of the City	✓ Our team has successfully performed in several projects for the City of Ontario/ Ontario Utilities company including the following: • UT1032 On-Call Professional Engineering Services • UT1013 San Antonio Transmission Watermain, Phase 1 • UT1046 San Antonio Transmission Watermain, Phase 2 - 8th Street • UT1038 Risk & Resilience • UT1050 Ontario Ranch Phase 2 Water Improvements • UT1065 FY2023-2024 Water Main Improvements • UT1066 Downtown Water Main Improvements • UT1067 Laurel Avenue Sewer Main Improvements • UT1069 Sultana Avenue Sewer Main Improvements • UT1070 Nocta Street Sewer Main Improvements • UT1077 Nocta Street Sewer Lateral • 935 E Hold Blvd Demolition • SM2302 Sultana Storm Drain • Ontario Regional Sports Complex • City's Annual Land Use Control Inspection - Bon View • SD063 Fourth Street Storm Drain • On-Call Construction Management and Inspection for Various Projects ✓ No learning curve as we will leverage our previous experience to streamline the process ✓ We are vested in providing the City with a high quality project while meeting budget and schedule goals as we look forward to continuing to contribute to the City's growth.

References. Ardurra is proud of the successful projects we have accomplished and the agencies and municipalities that have placed their confidence in our services. Contact our references to confirm the efficiency, attention to detail, communication skills, and commitment of our team in successfully completing every project.

B. Project Specific Experience.

The Ardurra team provides a full range of multi-disciplinary professional services from project conception and preliminary planning through final design and construction management. Our staff has substantial experience managing, planning, designing, and constructing utility projects, specializing in reservoirs/tanks, treatment plants, pump stations, and pipelines for public agencies. In addition to these core capabilities, Ardurra also brings expertise in the condition assessment and rehabilitation of pipelines, existing tanks, pump stations, and community relations. Below are more detailed descriptions of Ardurra's capabilities regarding the general areas of expertise sought by the City for On-Call Design Services.

On-Call & As-Needed Services

A testament to our responsiveness and quality of services are repeat Clients such as Southern California water and wastewater agencies to provide as-needed services. The list below highlights many of the agencies for whom we have provided such services over the years:

DEMONSTRATED EXPERIENCE

On-Call /As-Needed Services		
Project	**Years of Contract**	**Agency**
On-Call Engineering Services	2019 – Present	City of Ontario/Ontario Municipal Utilities Company
As-Needed Engineering Services	2006 – 2022	Leucadia Wastewater District
As-Needed Engineering Services	2021 – Present	South Coast Water District
As-Needed Engineering & Design Consulting Services	2019 – Present	City of Anaheim
As-Needed Water/Recycled Water Engineering Services	2009 – 2021	City of Carlsbad
As-Needed Project Management	2019 – 2020	City of Oceanside
As-Needed Engineering Services	2003 – Present	City of Oceanside
As-Needed Water & Wastewater Engineering Services	2022 – Present	County of San Diego

On-Call /As-Needed Services		
Project	**Years of Contract**	**Agency**
As-Needed Engineering Design Services	2006 – Present	Eastern Municipal Water District
On-Call Civil Engineering	2021 - Present	City of Huntington Beach
On-Call CM Services	2021 - Present	City of Huntington Beach
As-Needed Project Management Services	2023 - Present	City of Irvine
As-Needed Hydraulic Modeling Services	2019 – Present	Olivenhain Municipal Water District
As-Needed Construction Management and Inspection	2023 - Present	City of Brea
As-Needed Design and Civil	2023 - Present	City of Brea
As-Needed Engineering Support Services	2002 – Present	Vallecitos Water District

Master Planning & Hydraulic Modeling

Ardurra's standard hydraulic modeling platform is the Innovyze family of programs. We also have extensive experience with other software programs and have performed system-wide and sub-system master planning, facility planning, hydraulic modeling, GIS, and related studies for dozens of water and wastewater agencies throughout California. In addition to these core planning capabilities, Ardurra brings expertise in other services integral to the planning process, including asset management support and facility condition assessment.

Ardurra uses state-of-the-art software tools, including Innovyze's InfoWater© and InfoSWMM©, to execute hydraulic analysis and system planning. We utilize the GIS environment for model data creation and modification, although we also have the capability to digitize systems from scratch. This enables us to execute master planning projects efficiently and allows the data created or modified as part of a hydraulic model development to be readily compatible with the City's existing GIS data and future GIS goals. We have prepared major planning studies, including geodatabase design and development, on several recent master planning projects.

Master Planning/Hydraulic Modeling

Project	Scope of Work	Agency
On-Call Hydraulic Modeling Services	Performed, managed, or technically reviewed several model simulations for the District associated with recent developments. Typically involved analysis related to impacts of developments to fire flow and water age to the District distribution system.	San Dieguito Water District
Zone 1467 Analysis	Model update and subsequent hydraulic analysis to increase fire flows and system pressures in Zone 1467 operations. Data Quality Management approach used included comparing GIS and model piping and boundary conditions, documenting errors for GIS update. Resulting model matched field fire flows in zone.	Elsinore Valley Municipal Water District
Water Distribution Model Update/ Build	Creation and calibration of water distribution system model having 6,900 services, 16 pressure zones, 35 storage reservoirs, 32 pressure reducing stations, 63 booster pumps, and 11 wells. InfoWater was used to import information via "GIS Gateway" to create an all-pipes model.	Phelan Piñon Hills Community Service District

CORE PLANNING CAPABILITIES FOR NEXT LEVEL DETAIL

WE HAVE PERFORMED SYSTEM-WIDE AND SUB-SYSTEM MASTER PLANNING, FACILITY PLANNING, HYDRAULIC MODELING, GIS, AND RELATED STUDIES FOR DOZENS OF WATER AND WASTEWATER AGENCIES. WE BRING EXPERTISE IN SERVICES THAT ARE INTEGRAL TO THE PLANNING PROCESS.

In addition to developing and using hydraulic models for planning efforts, we assist and train our client's staff to use the models themselves.

To assist agencies with moving master planned projects to the next level of detail, Ardurra is often called upon to prepare studies focused on specific facilities. These have included pipeline alignment investigations, pump station layout and siting studies, and reservoir type and configuration studies. The deliverables prepared by Ardurra often encompass documents such as an Alternatives Analysis Report, Facility Planning Report, Preliminary Design Report, or Basis of Design Report.

Pipelines

The planning and design of pipelines and associated facilities is one of Ardurra's core disciplines. Our team's pipeline experience extends from alignment planning and hydraulic modeling to condition assessment and rehabilitation of existing pipelines and design of new pipelines.

Our pipeline experience encompasses water and recycled water pipes, gravity sewers and force mains, with sizes up to 96-inch diameter and all pipe types including commonly used welded steel, PVC, and ductile iron, as well as pipe materials selected for special applications such as FRP, and HDPE and fusible PVC for trenchless construction. Our services have spanned hydraulic analyses, alignment studies, preliminary and final design, and construction support. We

*Award Winning Projects

are experienced at designing and constructing pipelines under emergency conditions, through sensitive habitats and creeks, in highly developed residential areas, across open rural property, and within existing pavement traveled by daily commuters.

Pipelines - Water		
Project	**Scope of Work**	**Agency**
Loretta Street Waterline Replacement*	1,600 lf HDD 12" HDPE	City of Oceanside

Booster/Pump Stations

Our booster/pump station experience encompasses the design and condition assessment of pumping systems up to 11,000+ gpm capacities and includes constant- and variable-speed pumping conditions and custom and packaged pumping stations. Our experience includes siting studies, conceptual and final design of facilities located in areas constrained by existing improvements, high volume traffic, or environmentally sensitive habitat. We have completed numerous designs requiring the continued operation of existing pumping systems or joint-use facilities during construction with special requirements for temporary pumping and highlining of existing facilities, and commissioning of new facilities.

Booster/Pump Stations		
Project	**Scope of Work**	**Agency**
Graham Pump Station*	10,000 gpm	City of Mountain View
511 Pump Station	3,125 gpm	City of Oceanside
California Pump Station	1,600 gpm	City of Redwood City

San Elijo Hills Pump Station*	2,700 gpm	Vallecitos Water District

Water Storage

Ardurra has extensive experience on a variety of reservoir and storage facility planning and design projects, including several reservoir rehabilitation projects. Our experience encompasses both small and large facilities, from pre-stressed concrete to steel, ranging from 0.10 MG to 53.0 MG; including the world's largest pre-stressed concrete reservoir – Vallecitos Water District's 40.0 MG Twin Oaks Reservoir No. 2.

Water Storage		
Project	**Scope of Work**	**Agency**
Stations 119 & 120 Tanks	(2) 0.4 MG concrete tanks	California Water Service Company
Second Washwater Tank at the Escondido-Vista Water Treatment Plant*	0.70 MG steel tank	City of Escondido
Graham Reservoir*	8.0 MG buried, circular, pre-stressed concrete tank	City of Mountain View
Corte Madera Reservoir Replacement Project	1.5 MG circular/pre-stressed concrete tank	City of Palo Alto
Clearwell Replacement	(2) 4MG prestressed concrete tanks	City of Poway

*Award Winning Projects

Water Storage		
Project	**Scope of Work**	**Agency**
California Tank	0.75 MG partially buried/ circular/pre-stressed concrete tank	City of Redwood City
La Jolla View Reservoir	3.1 MG buried/circular/ pre-stressed concrete tank	City of San Diego
Miramar Clearwells*	(2) 29.5 MG partially buried/rectangular/cast-in-place clearwell basins with hopper bottoms	City of San Diego
Post Road (Ellis) Tank Replacement	3.5 MG welded steel tank	Eastern Municipal Water District
Fox Street Tank Replacement	1.0 MG welded steel tank	Eastern Municipal Water District
Gheen Reservoir	4.0 MG steel tank	Fallbrook Public Utility District
El Cajon Tank Modifications*	Replaced existing steel roof of 2.0 MG tank with new aluminum dome roof	Helix Water District
Tunnel Hill Reservoir Rehabilitation	1.0 MG pre-stressed concrete tank 2.0 MG steel tank	Helix Water District
Spyglass Reservoir Replacement	0.4 MG circular/pre-stressed concrete tank	Lake Arrowhead Community Services District
Gano Reservoir*	6.5 MG partially buried/ circular/pre-stressed concrete tank	Olivenhain Municipal Water District
640-1 (10 MG) and 640-2 (10 MG) Reservoirs*	(2) 10.0 MG partially buried/circular/pre-stressed concrete tanks	Otay Water District
Chromium-6 Mitigation Project	3.0 MG steel tank	Phelan Piñon Hills Community Service District
Pala Mesa Tank*	6.0 MG partially buried/ circular/pre-stressed concrete tank. Site grading for two tanks; one slated for future construction	Rainbow Municipal Water District
Darrell Water Tank	2.0 MG pre-stressed concrete tank	Town of Hillsborough
North Twin Oaks Reservoirs No. 2 and 3	(2) 3.5 MG steel tanks	Vallecitos Water District
Twin Oaks Reservoir No. 2*	40.0 MG buried/circular/ pre-stressed concrete tank	Vallecitos Water District
Wulff Tank Replacement	0.35 MG steel tank	Vallecitos Water District

Environmental Services

We are known for providing robust and reader-friendly documents that are defensible, and are based on current legal precedents that shape CEQA/NEPA implementation. We understand that the lead agency often has more than one option in terms of how to proceed through environmental reviews, and that CEQA/NEPA compliance may require choices based on a balance between schedule urgency, cost, community sentiment, and risk of legal challenge. Our central responsibility is providing our clients with the information needed to consider the pro's, con's and potential outcomes of all options, allowing the client to make the best and most informed choices for project and long-term success. Examples of our environmental services are presented below:

Environmental Compliance		
Project	**Scope of Work**	**Agency**
Olivenhain Trunk Sewer Improvements Project	CEQA Technical Studies and Community Outreach	City of Encinitas
Emergency Water Supply Program	CEQA Constraints Assessment, Community Outreach, & Water Well Siting Evaluations	City of Menlo Park
Graham Reservoir and Pump Station*	IS/MND Coordination	City of Mountain View
Oceanside Boulevard Lift Station	Alternatives Development, IS/ MND, and Community Outreach	City of Oceanside
La Jolla View Reservoir	CEQA Technical Studies and Community Outreach	City of San Diego
Upas Street Pipeline Replacement*	CEQA Technical Studies, IS/MND, and Community Outreach	City of San Diego
San Elijo Hills Pump Station*	Program EIR Addendum Agency Negotiations (Permit Triggers Avoided)	Vallecitos Water District

*Award Winning Projects

Water Treatment Plants

Ardurra has worked on several process modifications to water treatment plants of sizes ranging from small, medium, and large throughout California. These improvements have helped our clients mitigate flow violations, comply with regulatory requirements, and upgrade treatment plant processes to optimize plant operations.

Water Treatment Plants

Project	Scope of Work	Agency
Alvarado Algae Plugging of Ozone Sample Lines Process Assistance	120 MGD plant	City of San Diego
Lester J. Berglund Water Treatment Plant, Chemical Building, and Tank Farm Upgrades	Miscellaneous Upgrades (24 MGD)	City of Poway
Santa Margarita Conjunctive Use Project	New RO Plant (8 MGD plant)	Fallbrook Public Utility District
Bernina Water Treatment Plant Modifications	Process Upgrades (4 MGD)	Lake Arrowhead Community Services District
Gafner Advanced Water Treatment Plant Rehabilitation	1.0 MGD plant	Leucadia Wastewater District

Flow Monitoring

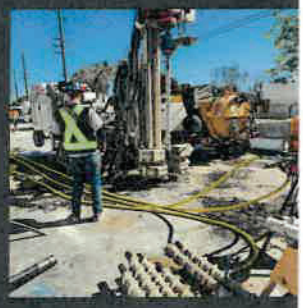
Ardurra's Flow Services Group has in-house staff that provide service and maintenance for short-term, long-term, and permanent flow monitoring solutions including real-time data reporting. As an engineering firm, we also understand the "end use" of how flow monitoring data will be used for things like hydraulic modeling, inflow/infiltration analysis, regulatory requirements, etc. Ardurra has been conducting flow monitoring studies since 2008 and has successfully completed wet weather flow studies, associated inflow/infiltration analyses, and capacity studies for several agencies throughout California, Nevada and Hawaii including:

- Byron-Bethany Irrigation District
- City of Belmont
- City of El Monte
- City of Los Angeles
- City of Richmond
- City of San Diego
- City of Sunnyvale
- Eastern Municipal Water District
- Los Angeles County Sanitation
- Olivenhain Municipal Water District
- Rainbow Municipal Water District
- Rancho California Water District
- Tejon-Castac Water District
- Western Municipal Water District

Pressure Reducing Stations

Ardurra's experience includes the full range of pressure reducing/sustaining stations with primary hydraulic control and remote control via SCADA using radio, fiber, or cellular communication. Designs include buried pre-packaged stations in steel capsules with corrosion control, buried concrete vault installations, and above-ground installations with flow metering and pressure relief capabilities and instrumentation for pressure and flow monitoring and/or control. Our expertise includes siting design in space-constrained locations, cavitation analyses, control valve sizing to meet the full range of minimum and maximum flows, and coordination for pressure and flow monitoring and/or control. Our expertise includes siting design in space-constrained locations, cavitation analyses, control valve sizing to meet the full range of minimum and maximum flows.

Pressure Reducing Stations



Project	Scope of Work	Agency
Group Job 1020 Pressure Reducing Station	Design of buried PSR with two 6" pressure reducing/sustaining valves; new electrical, radio telemetry and SCADA	City of San Diego
Upas Street Pipeline Replacement*	Design of four buried PRSs (with 8", 10", and 12" pressure reducing/sustaining valves with bypasses)	City of San Diego
Pala Mesa Tank*	Design the relocation of the Canonita/Beck Zone interconnection with 12" pressure reducing/sustaining and pressure relief valves; interconnection to SDCWA Rainbow 7 FCF; new flow metering station	Rainbow Municipal Water District

1 COMBINED PIPELINE PROJECTS

City of Ontario/Ontario Municipal Water Company (OMUC)|Ontario, CA

PROJECT SPECIFICATIONS

Role of Firm : Design Engineer

Dollar Value of Services: $21,000,000

Dollar Value of Fees: $1,400,000

Staffing: Dolores Salgado, Dalia Mulato, Kaitlyn Leong

Duration of Services: 2019 - Ongoing

Relationship to Client: Consultant

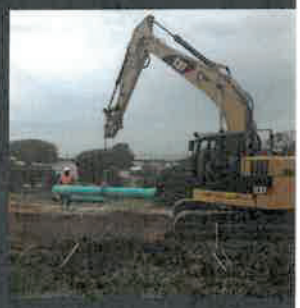
Omar Gonzalez
909.395.2578
oegonzalez@ontarioca.gov

Description of Services

Ardurra has designed several significant transmission water main projects for the City and OMUC. As an on-call consultant since 2019, over $21 million in water improvements has been designed.



One project includes a ~2,900 linear feet of new 30 & 36-inch cement mortar lined and coated welded steel pipe (CML&C WSP) and abandoning approximately 5,000 linear feet of existing 18-inch diameter transmission main. The objective was to upsize the 18-inch diameter transmission main to meet the demands of the system per the Water Master Plan. Located within the City of Upland, highly urbanized area and the subsurface conditions that presented difficult trenching conditions. The pipeline profile was ~20-feet deep near OMUC's 20-million-gallon reservoir to maximize the operational capacity of the reservoir. Ardurra offered creative solutions, which included consolidating two existing OMUC 18-inch diameter transmission mains into one single 36-inch diameter transmission main to physically accommodate the new water main. Ardurra's continuous coordination building consensus with permitting agencies created a successful path to gain approvals from the City of Upland and the San Bernardino County Flood Control District. To address potential impacts to existing utilities along the congested corridor, over 40 utility potholes were performed to obtain horizontal and vertical location of existing utilities and design around them.

Another project includes ~ 2 miles of 18-inch diameter transmission water main in Chino Avenue between Grove Avenue and the Chino Avenue Bridge (Cucamonga Creek channel) (1010 PZ), where it connects to an existing 18-inch diameter transmission water main west of the channel crossing and ~1.5 miles of 30-inch potable water main in Grove Avenue between Eucalyptus Avenue and Chino Avenue (925 PZ), where it will connect to an existing 24-inch diameter transmission water main. An interim pressure reducing station at the intersection of Grove Avenue and Chino Avenue will break pressure from the 1010 PZ to 925 PZ until the future 9 million gallon (925 PZ) reservoirs are constructed. Ardurra offered solutions to expedite the project by eliminating one milestone submittal and dual construction headings. Lack of public right of way through these old county roads presented challenges, which were addressed by securing Permit to Enter with private property owners for temporary construction impacts and obtaining an encroachment permit from the San Bernardino County Flood Control District (SBCFCD) to install a portion of the transmission main within their existing utility easement. Crossing of major facilities include SBCFCD 66-inch diameter storm drain, Southern California Gas 36-inch diameter high pressure transmission main, and Inland Empire Utilities Agency 30-inch diameter recycled water pipeline.

Another project includes planning for future developments within Ontario Ranch (925 PZ) that is expected within the next several years. To meet the future water demands of Ontario Ranch, OMUC contracted Ardurra to develop a comprehensive technical study to evaluate and select a preferred alignment for approximately 2.6 miles of a future 42-inch diameter transmission water main to convey water from a future 9 million-gallon (MG) reservoir (925 PZ) and two wells with total capacity of 2,500 gallons per minute (gpm) to Ontario Ranch (925 PZ). The future water supply site will be located on Bon View Avenue north of Francis Street. Five (5) total alignments were evaluated and ranked. Existing utilities along the highly urbanized and developed corridors required extensive utility research and investigations included over eight franchise utility owners and two regional public utility agencies. By utilizing a systematic scoring system the preferred alignment was selective objective.

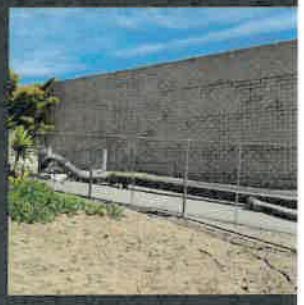
2 AS-NEEDED PROFESSIONAL ENGINEERING DESIGN SERVICES

Leucadia Wastewater District, CA

Description of Services

For 16 years, Ardurra provided as-needed engineering services on a task order basis to the Leucadia Wastewater District. Services encompassed a wide variety of tasks to support all aspects of the District's Capital and Operational needs including planning and hydraulic modeling, Geographical Information System (GIS) support services, flow monitoring, engineering design, cost estimating, plan preparation, office engineering during construction, and construction inspection. The following list highlights several task orders completed:



- Village Park 7 Pump Station Replacement
- FY 2022 Gravity Line Rehabilitation
- FY 2021 Gravity Line Rehabilitation
- FY 2020 Gravity Line Rehabilitation
- FY 2018 Gravity Line Rehabilitation
- Leucadia Pump Station Rehabilitation and LOX System
- Batiquitos Pump Station Emergency Overflow Lining & Pump
- Diana Pump Station Emergency Generator
- Scott's Valley Sewer Rehabilitation Saxony Pump Station Rehabilitation
- B1/B2 Sewer Formace Main Replacement
- B1 Force Main Repair
- Encinitas Estates Pump Station
- Orchard Wood Sewer
- 2019 Pump Station Assessment
- B3 Sewer Force Main Replacement
- La Costa Gravity Sewer Evaluation
- As-Needed GIS

PROJECT RELEVANCY

- Multi-discipline on-call
- Multiple stakeholder/agency coordination
- Planning, design, engineering, environmental, and construction services
- Repair, rehabilitation, upgrade, and improvements
- Various modeling and water quality assessment task orders

PROJECT SPECIFICATIONS

3 AS-NEEDED ENGINEERING SERVICES

SOUTH COAST WATER DISTRICT, LAGUNA BEACH, CA

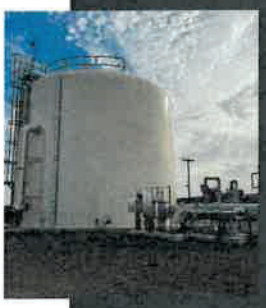
Description of Services

The South Coast Water District (SCWD) is an independent public agency providing water and wastewater service to residents and businesses within an 8.3 sq. mi area along a stretch of the Pacific Coast in south Orange County. SCWD established a three-year Capital Improvements Program (CIP) that identified priority improvements to SCWD's infrastructure. SCWD sought engineering consultants to assist its Engineering Department with expediting the CIP projects as well as other general engineering and operations support services.

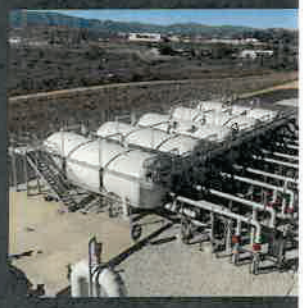
Ardurra provided as-needed engineering services on a task order basis to the South Coast Water District (SCWD). Services included planning, engineering design and support tasks including preliminary design, final design, planning studies, system optimization, hydraulic modeling, structural engineering services, corrosion engineering services, environmental compliance and permitting, land surveying and real property, water quality and treatment, subsurface utilities engineering, electrical, instrumentation, and control services, plan checking, standards, guidelines, emergency repair assessments, and construction management & inspection services.

Task Orders included:

- Via Sacramento Water Main Improvements
- Three Arch Bay Sewer Lateral Connection Feasibility Study
- Design of Adit 22 and Adit 23 Improvements
- Local Transmission Main (LTM) Replacement/Repair Options at Calle Vista Torito
- Bradt Reservoir Warehouse Project
- 30 Acres Trailer Utilities Design
- LTM Repair Design



PROJECT RELEVANCY



- On-call multi-discipline task orders
- Pipeline replacement design
- Transmission main replacement
- Working with multiple jurisdictions
- Congested utilities
- Design for new wastewater facilities to be located in easements on private lands
- Design for limited horizontal separation between potable and non potable pipelines

4 SANTA MARGARITA CONJUNCTIVE USE PROJECT

Fallbrook Public Utility District, CA

PROJECT SPECIFICATIONS

Role of Firm: Design Engineer

Dollar Value of Services: $5M (Design) / $65.6 (Total)

Dollar Value of Fees: $5M

Staffing: Rob Weber, Rick Kennedy

Duration of Services: November 2012 - Present

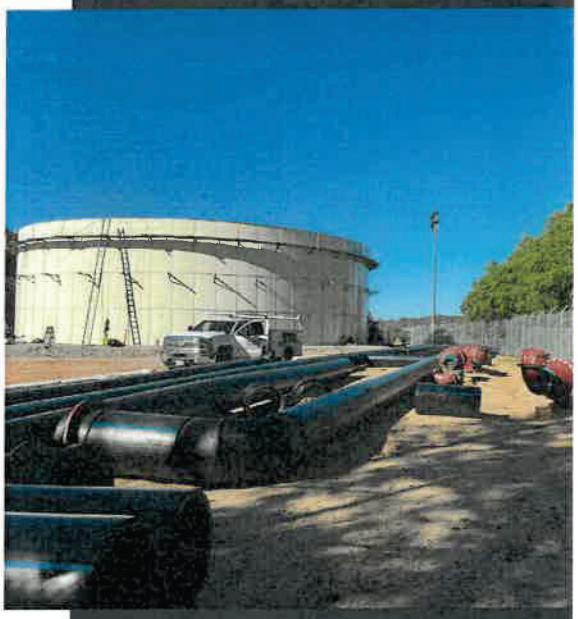
Relationship to Client: Consultant

Reference:

Jack Bebee, PE
Fallbrook Public Utility District
760.728.1125
jackb@fpud.com

Description of Services

The Santa Margarita Conjunctive Use Project (SMCUP) represents a strategic and innovative solution that elegantly addresses a complex web of legal, environmental, economic, and water resources challenges. Fundamentally, the 8 MGD treatment facility and bi-directional pipeline resolves seven decades of litigation between FPUD and the federal government for mutual benefit, allowing treated drinking water to flow to either the FPUD distribution system or the Marine Corps Base Camp Pendleton.



In addition to greensand filers for iron and manganese removal, the treatment system consists of reverse osmosis (RO) and granular activated carbon (GAC), operating in parallel for PFAS removal while also relying on RO for salinity reduction. Notably, the project facilitates the development of local groundwater, allowing FPUD to reduce its dependence on imported water from 99% to 40% of its resource portfolio. Not only is this local source essential for water supply diversification and resilience, hedging against disruption in purchased water deliveries, but it is also a long-term economic investment. Although persistent drought is decreasing imported water reliability and escalating prices, the cost of water produced by the SMCUP project is substantially more predictable and stable, resulting in enhanced financial security for FPUD and lower rates for the District's customers.

PROJECT RELEVANCY

- RO Process design
- GAC/PFAS removal design
- Transmission main design
- Site/infrastructure design
- CM and Inspection

5 LESTER J. BERGLUND WATER TREATMENT PLANT CLEARWELL WELL UPGRADES

City of Poway | Poway, CA

PROJECT SPECIFICATIONS

Role of Firm: Design Engineer

Dollar Value of Services: $37M

Dollar Value of Fees: $2.7M

Staffing: Rob Weber, Rick Kennedy, Aric Gnesa, Anders Egense,

Duration of Services: May 2019 - Present

Relationship to Client: Consultant

Reference:

Shadi Sami, PE – Principal Civil Engineer
City of Poway – Public Works Department
858.668.4717
ssami@poway.org

Description of Services

The City's 10 MG Clearwell is an integral part of the City's Water Treatment Plant (WTP). Originally constructed in 1964 as a hopper bottom basin with a floating geomembrane cover and liner, the Clearwell needed replacement. A significant complication was that there was no way to bypass the existing Clearwell to replace it. Ardurra developed options including phased cover/liner replacement, constructing a bypass pipeline around the Clearwell, and constructing facilities that would enable retirement of the existing Clearwell. The selected project option included constructing a bypass system with temporary storage followed by permanent Clearwell replacement facilities. The Bypass System included a permanent bypass pipeline (1,140 ft of 36" CML&C steel), a temporary bypass pump station (3,900 gpm) and temporary storage tanks (2.2 MG in twin bolted steel tanks with 1,100 ft of 24" HDPE pipe). Design of the permanent Clearwell Replacement Project comprised of 8 MG of storage (in twin 4 MG pre-stressed concrete tanks) with associated earthwork and grading, inlet/outlet/drain/overflow piping, chemical feed facilities, access improvements, and associated civil/site hardscape and drainage work.

Key project components include:

- **Condition Assessment of Clearwell:** Material testing of Hypalon floating cover and liner, evaluation of replacement installation options, and preliminary design for replacement
- **Evaluation of Clearwell Replacement Alternatives:** Reviewed future water system demands, Clearwell volume requirements, and compared rehabilitating the existing Clearwell
- **Preliminary Design for Clearwell Bypass Pipeline:** Hydraulic analysis of system operations to determine minimum storage requirements for Bypass System; evaluation of options for configuring and locating bypass storage; and preliminary alignment analysis for bypass pipeline.
- **Bypass Tank Configuration Evaluation:** Concept-level evaluation of three concrete tank shapes: circular and two rectangular footprints with comparison of general life cycle costs.
- **Preliminary Design for Bypass Tank:** Preliminary design for 2.5 MG prestressed concrete tank and 1,000 ft bypass line with valve vaults, site improvements, drainage facilities.
- **Final Design for Temporary Bypass System:** Technical memorandum to develop temporary bypass system comprised of permanent bypass. Prepared PS&E for system and assisted with support services during bidding and construction phases.
- **Design for Clearwell Replacement:** Design of twin 4 MG prestressed concrete tanks to replace existing floating cover Clearwell

PROJECT RELEVANCY

- Multi-faceted project
- Stakeholder coordination
- Rehabilitation and improvements
- Cost estimating

a) Failure to enter into a contract or professional services agreement once selected.	N/A
b) Withdrawal of a proposal as a result of an error.	N/A
c) Termination or failure to complete a contract.	Buena Sanitation District terminated IEC for convenience (2019 before Ardurra acquisition) Gila River Indian Community terminated Ardurra for convenience
d) Debarment by any municipal, county, state, federal or local agency.	N/A
e) Involvement in litigation, arbitration or mediation. Conviction of the firm or its principals for violating a state or federal antitrust law by bid or proposal rigging, collusion, or restrictive competition between bidders or proposers, or conviction of violating any other federal or state law related to bidding or professional services performance. Knowing concealment of any deficiency in the performance of a prior contract.	**Please see Section 10 Litigation History.**
f) Falsification of information or submission of deceptive or fraudulent statements in connection with a contract.	N/A
g) Willful disregard for applicable rules, laws or regulations.	N/A

Technical Competence

Technical Resources

Ardurra is a fully operating organization with the latest innovative technologies and licenses required to plan, prepare, design, model, and execute pipeline projects. Our staff is proficient in utilizing these software tools to analyze and create the most favorable solutions aligned with project goals. Programs include but are not limited to:

- Microstation and pipeline design programs
- AutoCAD, Civil3D, Geographic Information (GIS)
- Inroads, a program that prepares grading plans, plan and profile sheets, and roadway designs. InRoads also computes cut and fill quantities and automatically determines roadway (and pipeline) stations and creates sections.
- ArcMap (ArcInfo) to support water and wastewater system master planning efforts
- Water modeling software including: H20Net, H20Map Water, InfoWater, EPANet, WaterCAD, WaterGEMS
- Sewer modeling software including: H20Map Sewer, InfoSewer, InfoSWMM, XP-SWMM, SewerCAD, and SewerGEMS
- The latest hydraulic parameters for both open channel and pressure pipe
- Licenses for the full spectrum of Microsoft Office applications
- Adobe licenses for Acrobat and Creative Cloud (e.g. Photoshop, Illustrator, Indesign)
- Web-based capabilities such as Virtual Project Manager (VPM) for construction and project management that provides a single repository for all project related information, accessible anywhere with internet connection. Company-wide subscription with no additional cost to the Client.

Ability to Draw Upon Multi-Disciplinary Staff

Ardurra is a full service firm providing broad-based solutions tailored to the specific needs of each Client. As a responsive and nimble partner, we take ownership of every project to maintain project momentum and success. We leverage the depth of our professional and technical expertise, as well as our integrated structure, to deliver practical, innovative solutions for our clients. With more than 1,450 employees and 78 offices across the United States, Ardurra has the ability to provide local subject matter experts, with national backing.

07 PROPOSED METHOD TO ACCOMPLISH THE WORK

ARDURRA

07 PROPOSED METHOD TO ACCOMPLISH THE WORK

Measures to complete tasks on time and within budget will be intended to accomplish the following:

- ✓ Maintain vigilant and proactive management of budget, schedule, and work quality and allow real time management
- ✓ Communicate with the City
- ✓ Smooth management for the City
- ✓ Allow ease of coordination with other City staff and stakeholders such as the community or other jurisdictional agencies

Achieving these goals depends equally on having proven project management procedures in place and on our 100% commitment to listen actively and understand the City's goals and objectives for each project. The Ardurra team will work as an extension of the City staff to support the City's needs to provide flexible and responsive service. Once a project has been identified through the planning process and there is consensus on the project elements, design can commence and move forward in a focused and cost-effective manner. The specific technical approach we would employ will depend on the nature of the particular task. Ardurra's project management approach provides well-structured procedures to plan, execute, and track the work while communicating effectively within the team, with the City and with the project stakeholders.

CONTINUOUS COLLABORATION

WORKING CLOSELY WITH THE CITY, OUR GOAL IS TO PROVIDE PROACTIVE SERVICES TO MANAGE BUDGET, SCHEDULE, AND WORK QUALITY TO DELIVER A PROJECT WITH LASTING VALUE.

Lines of Communication

Ardurra will be responsible for the overall project management, communication, and coordination with the City. Ms. Salgado will serve as the primary contact and liaison with City for new task orders and other issues that may arise. The Design Lead assigned to each task will work closely with Ms. Leong and will serve as the day-to-day manager of the assigned project team. The Design Lead will be involved in daily coordination and communications with the City and other team members. The Design Lead will oversee the specialty subconsultants and will check in with them regularly regarding process on their assignments.

Ardurra will implement routine communication avenues to keep the City's Project Manager informed of project progress and status.

DELIVERING RELIABLE QUALITY PROJECTS

ARDURRA'S APPROACH PROVIDES THE CITY WITH THOROUGHNESS, CREATIVITY, AND DEDICATION DURING ALL PHASES OF PROJECT EXECUTION

ARDURRA'S MANAGEMENT APPROACH PROVIDES THE CITY SEAM COORDINATION AND OPEN COMMUNICATION

KICKOFF

Meet with the City and visit the Project site to gain a thorough understanding of the project parameters, goals, constraints, and measures of success. Assign the right team for the task.

SCOPING

Prepare a clear and concise scope of services that describes the Project. Keep the City Team and Project Manager apprised of any factors that may affect the project budget or schedule so that there is time to identify and implement agreed-upon adjustments. Ardurra will consider the following during development of each Project scope:

- Think creatively to generate a broad range of potential solutions. For example, look for opportunities to modify or combine the project with other proximate facilities to simplify/improve City operations or reduce costs.
- Identify project opportunities that may allow the City to delay capital costs or reduce operational costs. For example, on the discharge side of a pump station, selecting a slightly oversized pipe may yield significant long-term energy savings that outweigh the added cost of the pipe.
- Make early assessment of potential environmental triggers and seek to configure the project and/or incorporate features that will streamline regulatory compliance by avoiding or reducing trigger conditions.
- Reference the appropriate City guidelines. Think about possible guideline modifications that may benefit the City and forward these as suggestions for the City to consider.

WORKPLAN

Execute the work independently, but in close coordination with the City so staff knows the progress and decisions being made. Obtain City input and reviews at appropriate stages. Where appropriate, conduct workshops with presentations to review the project progress and achieve consensus on key project decisions. This will streamline the design review process and promote stakeholder "buy-in" to the final recommendations. Look out for potential challenges or time sensitive factors such as permitting and ROW acquisition, cultural resource, or biological issues.

REPORTS

Prepare technical memoranda or project reports that describe the background information, data, assumptions, and analysis approach utilized, use clearly labeled graphics and tables, and provide a thorough description of the basis for the recommendations made. Our written documents are well-organized, easy to read, and tailored to the audience, with a concise Executive Summary section for documents to be reviewed by senior management.

EOPCC

Develop Engineer's Opinion of Probable Construction Costs (EOPCC) that utilize locally representative unit cost factors and appropriate market condition factors, reflect the level of detail used to define the project, and include appropriate levels of inflation factors and contingency based on well-established methods by the American Association of Cost Engineers.

QA/QC

Perform on-going quality control during project execution. This entails QC at multiple levels: from the project engineer checking his/her work, to the "arms-length" review of project deliverables by a senior staff member prior to submittal to the City.

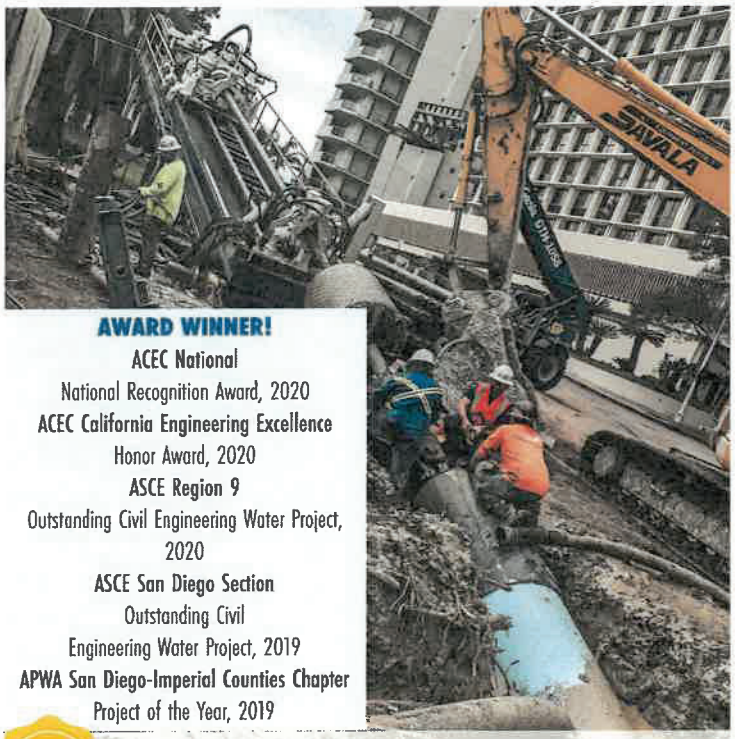
ATTITUDE

Provide our services in the spirit of a positive and collaborative team environment, resulting in cost-efficient and successful Projects.

PROPOSED METHOD TO ACCOMPLISH THE WORK

Pipeline Design Technical Approach

Critical technical elements that Ardurra considers for pipeline projects include:



- System and pump hydraulics/surge effects
- Alignment selection and easement acquisition
- Pipeline separation requirements
- Utility crossings, summarized on plan & profile sheets
- Corrosion issues, specialty coatings and materials
- Geotechnical/foundation conditions included the need for special ground improvement design
- Environmental constraints
- Operation & Maintenance Issues
- Contracting strategies, scheduling, and budget control
- Traffic control
- Construction impacts: noise, dust
- Compliance with regulatory requirements
- Where trenchless pipe construction is utilized, classification by OSHA Mining & Tunnel Unit (>30-inch diameter)
- Preparation of SWPPP's and other requirements for compliance with the State's General Construction Permit and San Bernardino County requirements
- For pipes in the public-right-of-way, compliance with local agency municipal codes and ordinances regarding utility installations, traffic control, street resurfacing, and potholing activities
- Potholing plan

Typically, the most challenging aspect of underground pipeline design and construction is definition of existing facilities or utilities, particularly when there is sparse or no information. Ardurra utilizes a methodical and detailed utility research and plotting procedure that provides for a high level of confidence with respect to the locations of subsurface utilities. Our procedure is generally outlined as follows:

- Upon authorization by the City, contact USA Dig-Alert to obtain a pre-planning request which provides a listing of existing utility agencies in the project areas.
- Establish one point of contact at Ardurra to serve as "Project Utility Coordinator" and be responsible for tracking and documenting all utility requests and responses.
- From the USA Dig-Alert pre-planning list, contact all utility agencies in or around the proposed work area to establish contact information and lines of communication.
- Send to each utility agency a "Utility Notice of Planned Improvements" to formally request their system maps and record drawings.
- The Project Utility Coordinator will review information received for responsiveness and completeness, and will follow up phone calls or in person visits to agencies as necessary.
- Plot the utilities, along with proposed horizontal and vertical alignments (depending on submittal milestone). Send to each agency a set of plans for conflict check at each submittal milestone. Incorporate comments as necessary.
- Once the utility base map is established, perform QA/QC including a field review to determine if the plotted information is accurate with field conditions.
- If necessary, perform potholing to obtain actual field data for key utility crossings or parallel utilities of interest.
- Document and track the process at each step. Agencies are sent plans at each milestone regardless of whether or not there are conflicts, or conflicts have been resolved, due to potential changes in alignment, existing utilities, or agency review personnel.
- Utility information is plotted in the plan & profile sheets and summarized in a crossing table.

A TAILORED APPROACH

BASED ON OUR UNDERSTANDING OF EACH TASK ORDER, ARDURRA WILL TAILOR AN APPROACH TO DELIVER THE PROJECTS IN AN ECONOMICAL, TIMELY, AND QUALITY MANNER.

AWARD WINNER!

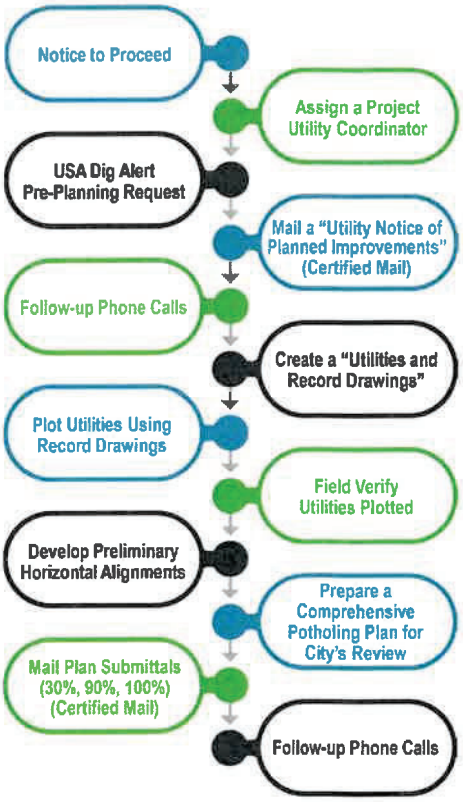
ACEC National
National Recognition Award, 2020
ACEC California Engineering Excellence
Honor Award, 2020
ASCE Region 9
Outstanding Civil Engineering Water Project, 2020
ASCE San Diego Section
Outstanding Civil Engineering Water Project, 2019
APWA San Diego-Imperial Counties Chapter
Project of the Year, 2019

AWARD WINNING

UPAS Street Waterline Replacement, City of San Diego (14,980 lf 8" - 12" PVC; 8, 160 lf 24" CML&C; 1,640 lf 30" HDPE HDD)

Ardurra has designed hundreds of miles of pipeline using the above utility research procedures and has an excellent track record of avoiding conflicts with existing utilities.

Condition Assessment for Pipelines



As time progresses and as many agencies transition from a growth-based capital improvement program to maintenance based programs, the condition of infrastructure deteriorates until such time as these facilities need to be repaired or replaced. An important facet of asset management and facility maintenance is the evaluation of the condition of existing facilities and the evaluation process leading to the development of mitigation options (e.g. no action, repair, replace, upsize, reline, etc.). Ardurra has performed evaluations for water and sewer pipelines and has included the services of subconsultant firms where special access or tools are required (e.g. specialized technology or CCTV inspections of pipes). We have also assisted agencies with the development of a risk-based Rehabilitation and Replacement Program that plans for replacement of facilities utilizing an advanced asset management methodology. Examples of projects where we have provided such system-wide services include:

- City of National City: 104 miles of sewer pipe. On this project, Ardurra utilized CCTV (performed by Affordable Pipeline) interior inspection to assist in the condition assessment process
- San Dieguito Water District: 178 miles of water pipe
- City of Mountain View: 184 miles of water pipe and 160 miles of sewer pipe

At a more facility specific level, Ardurra has also performed condition assessments of selected pipelines and pipe segments. The techniques used for these projects have included non-destructive and destructive testing (e.g. coupons, pipe segment extraction, and phenolphthalein) for ductile iron and asbestos cement pipes. We have also assisted agencies with the evaluation of various non-destructive testing procedures such as PICA See Snake, Pure Technologies Pipe Diver, and magnetic flux leakage testing. Specific project examples include:

- HighPoint Waterline, Vallecitos Water District: Condition assessment using PICA – 8-inch and 12-inch diameter DIP waterline
- Sewer Force Main Assessment, City of Oceanside: Condition assessment of 17,000 lf 24" sewer and 12,000 lf 42" force main using various technologies - PURE, UT testing, coupons for 24-inch and other size DIP sewer force mains

Utility Research Flow Chart

ANTICIPATING FUTURE & OPERATIONAL NEEDS

ARDURRA PLANS AHEAD. WE ASSIST AGENCIES WITH THE DEVELOPMENT OF A RISK-BASED REHABILITATION AND REPLACEMENT PROGRAM THAT PLANS FOR REPLACEMENT OF FACILITIES UTILIZING AN ADVANCED ASSET MANAGEMENT METHODOLOGY AND AN EVALUATION PROCESS TO DEVELOP MITIGATION OPTIONS.

Ardurra understands the City of Ontario's location presents unique water resource challenges and why long-term planning for local water reliability is a priority. The City of Ontario (City) is implementing the Pure Ontario Water (POW) project (Project) with the goals of developing a new, reliable water supply and reducing reliance on imported State Water Project (SWP) water. The City is working collaboratively with neighboring agencies. Ardurra is poised to provide planning level studies and assessments, local agency advisement, and other needed services to support the City of Ontario.

AWARD WINNING

AWARD WINNER!

Merit Award, 2016

San Elijo Hills Pump Station Interior, Vallecitos Water District
(2,700 gpm pump station)

AWARD WINNING

AWARD WINNER!
ACEC California Engineering Excellence
Merit Award, 2023

California Tank and Pump Station, City of Redwood City
(.75 MG potable water tank and 1,600 gpm pump station, 1,100 lf main pipeline, 640 lf 12-inch yard piping)

AWARD WINNING

AWARD WINNER!
ACEC California Engineering Excellence
Merit Award, 2018
APWA San Diego-Imperial Counties
Honor Award, 2017

Village Park Recycled Water Project,
Olivenhain Municipal Water District
(Conversion of existing potable Wiegand Tank to recycled water use)

Wells/Pump Station Approach

Critical technical elements that we consider for booster/pump stations include:

- Review of system hydraulics and pump selection/surge control
- Control strategies and integration into City SCADA system
- Energy management system time of use pumping
- Electrical/instrumentation requirements
- Power supply and standby power requirements
- Site selection and acquisition
- Seismic/structural issues
- Corrosion issues, specialty coatings and materials
- Operation & maintenance issues
- Contracting strategies, scheduling, and budget control
- Noise, aesthetics, and community concerns
- Safety pre-use analysis
- Disinfection requirements and associated chemical storage and dosing systems
- Consideration for use of packaged systems

Storage Facility Approach

Depending on the type, location, and size of the storage facility, there are a variety of technical considerations that Ardurra will address to accomplish the facility design:

- System hydraulics
- Tank type – steel or concrete
- Visual aesthetics/roof type
- Site configuration
- Geotechnical/foundation conditions
- Earthwork and grading; above-ground, partial, or full burial
- Water quality and circulation
- Operational and maintenance requirements
- Safety features for fall protection, roof access and confined space entry
- Integration into SCADA system
- Stormwater control facilities and bio basins
- Traffic and noise impacts during construction

Special Considerations for Non-Potable Facilities

Operations of storage and conveyance facilities for non-potable water present special challenges that require attention during design such as:

- Stored water quality can be more difficult to maintain and therefore requires special attention regarding the tank volume, residence time in the tank and circulation
- A higher degree of settlement in storage facilities can lead to the need for more frequent and special equipment for clean-out operations
- Configuring facilities to properly handle planned discharges such as wash down, as well as unplanned discharges like tank overflows, must respect regulatory constraints and may require special features to control flows (e.g. discharge to a sewer)
- Compliance with regulatory requirements, coupled with early coordination with regulators, is paramount to smooth project approval.

Wastewater/Water Treatment Approach

Ardurra's approach to designing treatment plants is to achieve the City's goals, meet regulatory standards, maintain operational efficiency, and manage initial capital costs and long-term operational and maintenance costs. Our thorough approach follows these steps:

- Preliminary site assessment and site planning
- Water quality analysis to identify contaminants and establish treatment goals.
- Perform Wastewater modeling.
- Treatment process selection that offer cost-effective design solutions and flexibility for future maintenance.
- Basis of design for expected performance levels, redundancy, functionality, and interoperability to establish expectations and selection of equipment for optimal performance.
- Early planning and discussions with regulators
- Assess risks and develop mitigation strategies
- Develop a robust operation and maintenance plan to ensure long-term efficiency, smooth start-up and operational transition plan.

Although the approach to designing treatment plants is similar, the technical expertise needed to design either type of complex plant comes from decades of specialized experience. Ardurra brings distinct technical experts who specialize in each area.

Groundwater Recharge Facility Approach

Depending on the desired City goals and basin-wide opportunities, the following approach is critical when designing groundwater recharge facilities:

- Conduct a comprehensive geological and hydrological study to understand the soil composition, aquifer characteristics
- Analyze the water basin to determine recharge capacities, existing water levels, seasonal variations, and limitations/ opportunities in adjudicated basins or SGMA regulations
- Develop a hydraulic model to simulate various scenarios to assess the impact of the basin
- Permeability tests
- Identify land use restrictions, environmental factors, infrastructure limitations.
- Site planning for well fields (injection/extraction) and spreading basins
- Monitoring system that allows for real-time adjustments and data-driven decision-making.
- Plan for long-term sustainability by accounting for ongoing maintenance, assessing potential impacts on ecosystems, and accounting for changes in climate patterns.

Environmental Services

Ardurra's approach to environmental document support combines experience and a pragmatic approach to environmental clearance, which we implement on each project. Our approach and methodology encompass a clear understanding of agency requirements and client objectives, focused scope of services, technical expertise, and frequent communication and collaboration. This results in daily progress toward achieving environmental compliance, avoids significant environmental constraints, and supports staff with expert representation in an efficient, practical, and timely manner. With this approach, Ardurra will achieve the following objectives:

- Assist the City in managing the environmental process
- Identify issues early and provide effective solutions for CEQA/NEPA compliance and environmental regulations
- Prepare technical studies and environmental reports in a clear and unbiased manner
- Provide stakeholder support
- Deliver expert environmental support to staff and at public meetings and hearings
- Facilitate regularly scheduled coordination meetings for updates and discussions
- Provide consistent interface and follow-up with staff to keep projects moving

FULL ENVIRONMENTAL SERVICES TO ACHIEVE COMPLIANCE

OUR PRAGMATIC APPROACH AVOIDS SIGNIFICANT CONSTRAINTS, RESULTING IN EFFECTIVE SOLUTIONS FOR CEQA/NEPA COMPLIANCE & ENVIRONMENTAL REGULATIONS

Knowledge of Regulatory Compliance and Other Agencies

The Ardurra Team has worked for many years with the regulatory and other agencies typically involved with City projects. We coordinate successfully with these agencies by communicating early on and addressing their requirements to achieve a smooth approval process. Examples of these agencies and their potential involvement in City projects include:

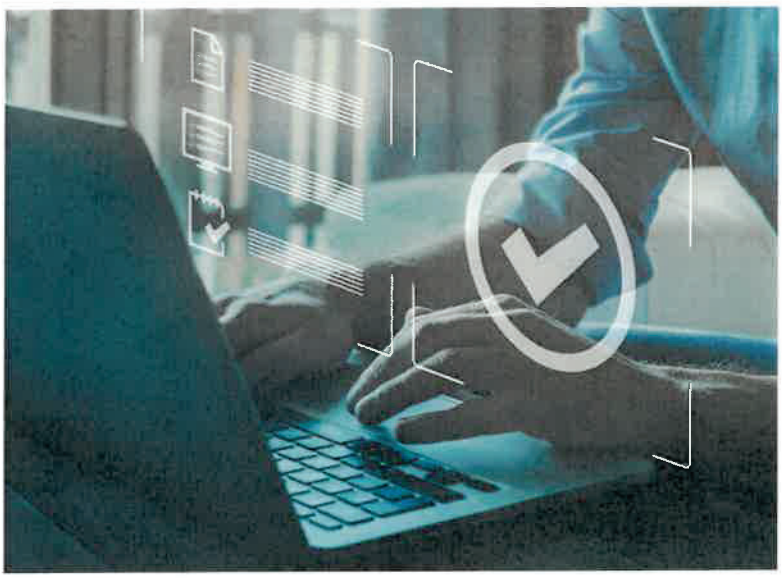
- **California State Water Board, Drinking Water Program:** DDW reviews projects involving water quality and disinfection issues associated with the design of a drinking water facility. They also regulate recycled water use (Title 22, cross-connection control/procedures, and standards for separation between potable water, recycled water and sewer pipes).
- **California Regional Water Quality Control Boards:** The RWQCB sets the City's waste discharge and producer/user requirements for recycled water as they relate to the groundwater management basins.
- **Native American Indian Tribes:** Sites where culturally significant features are present may require coordination with the tribal representatives and project modifications to preserve the features.
- **CalOSHA:** Any excavation over 5-ft deep requires OSHA compliance.
- **State of California Stormwater Regulations:** Preparation of SWPPP's and other requirements for compliance with the State's General Construction Permit.
- **Southern California Edison (SCE) and Southern California Gas (SCG):** Power supply to a facility and any construction activities near/across power or gas facilities will require SCE and SCG coordination and possibly permits or joint use agreements.
- **Caltrans and Railroads:** Where utility encroachments on their rights-of-way are unavoidable, comprehensive negotiations and design reviews can be expected.
- **San Bernardino County Flood Control District:** Projects impacting San Bernardino County Flood Channels require coordination with the County and an encroachment permit.
- **Local Cities:** Projects in the public-right-of-way must comply with City municipal codes and ordinances regarding utility installations, traffic control, street resurfacing, and potholing activities. We are familiar with the City's requirements.

LOCAL AGENCY & REGULATORY EXPERTISE FOR A SMOOTH APPROVAL PROCESS

OUR HISTORY OF SUCCESSFUL AGENCY COORDINATION PROVIDES CONTINUED DEVELOPMENT OF PROGRAMS AND PROJECTS THAT PROVIDE INCREASED WATER SUPPLY AND RELIABILITY FOR CONSTITUENTS.

Constructability Review

Ms. Amy Czajkowski and Scott Adamson will advise the team on constructability issues. They will review documents for change order exposure.



Stakeholder Approval

Project success must gain the support of the City, and the community. We understand the local challenges and know how to work with your internal and external stakeholders. Through effective communication and collaboration, and engaging O&M staff, we will garner project support to advance the project schedules. Ardurra also offers Community Relations/ Public Outreach services.

Communication & Collaboration:
We recognize the importance of effective communication with the City and your stakeholders throughout the course of the project. Therefore, Ardurra will leverage bi-weekly updates and design workshops to foster consensus-building and decision-making. Our On-Call Task Managers have the organizational and communication skills to lead the meetings, build consensus, and work through critical design approach concepts to reach alignment on the key issues.

O&M Engagement: We also recognize the end users of this project are the O&M staff and the success of this project will be judged to a great degree by the ease of operations and maintenance. Accordingly, Ardurra will ensure their needs and concerns are addressed and adequately incorporated into the design. We will actively seek their input during the workshops.

Community Relations/Public Outreach: Ardurra offers community relations services led by Rebecca Cole. Ms. Cole and her team provide services such as developing a Community Relations and Communication Strategy and Work Plan, Project Communication/Implementation for Community Meetings, and Material Development.

BIG PICTURE IN MIND

ARDURRA'S QA/QC PROCEDURES CONSISTS OF A SYSTEMATIC SEQUENCE OF TASKS APPLIED TO ALL PHASES OF THE PROJECT. WE PAY ATTENTION TO THE DETAILS TO VERIFY THE CITY'S OBJECTIVES ARE MET AND SUPPORTED BY THE STAKEHOLDERS. WE ARE DEDICATED TO ACHIEVING HIGH QUALITY STANDARDS.

Quality Management Approach

It is Ardurra's philosophy that all team members are responsible for the quality of the products being produced. As such, we foster an atmosphere of continual quality control. The Ardurra team conducts formal internal quality control review at each review submittal level, prior to submittal to City. Ardurra has established a standard Quality Assurance program for its engineering projects.

Our goal is to create a working environment where quality is a top priority through clear definition of, and conformance to, requirements and procedures, raising awareness, and doing things right the first time.

At the core of our QA/QC process is the principle of proper commitment of resources and allocating sufficient review time. Therefore, we have created an independent Project Oversight Committee which has a dedicated role to provide QA/QC reviews and input to the team. Anders Egense, who offers a unique perspective from both the planning and engineering viewpoints, will lead our Quality Management Team. Supporting Anders is Amy Czajkowski, who is a certified construction manager, and Scott Adamson. They will perform constructability reviews for each task order or design package as needed.

Ardurra utilizes a dual approach to quality reviews. First is the initiation of the overall operations conducted to provide adequate confidence that our products and services will satisfy given requirements for quality. This is more commonly known as "quality assurance" or QA. Quality assurance at Ardurra provides that adequate resources are dedicated to the project for not only production but quality reviews and that the overall product and services provided meets the project requirements. This is accomplished by careful attention to detail during scope development and project execution, along with application of sound project management principles. We then implement planned and specified review actions or operations necessary to develop a product that will meet given or defined requirements for quality. This is commonly referred to as "quality control" or QC. Quality control is accomplished through the methodical adherence to agency standards, engineering design standards, technical reports and CAD standards. A series of design checklists, interdisciplinary review procedures, industry standards (ASTM, AWWA, ANSI), and guidelines are utilized to provide the appropriate QC requirements.

The implementation of the QA/QC Program to any project is essential but is even more critical when projects are complex and involve multiple disciplines where work is performed by subconsultants. Ardurra understands that in addition to our team of specialty subconsultants, projects often entail coordination with other consultants engaged directly by the City (e.g. corrosion/cathodic protection, environmental, geotechnical, or survey consultants). The first step in the QC process with subconsultants is to include them in the early stages of the project scoping and kick-off and coordination efforts where the design criteria and project objectives are established.

This is critical for subconsultants where changes in process configurations will have a large impact on their individual designs. Ardurra also understands that as the design progresses, there will be changes and these changes need to be communicated to the subconsultants. Ardurra also sends all subconsultants updated base drawings when they are updated. Ardurra has found that by adhering to these simple procedures many of the common inconsistencies and errors are avoided and smooth coordination with the subconsultants is achieved. Two additional steps foster QA/QC of the work produced by our subconsultants. Through our subcontracting agreement, we require that they prepare and maintain their own QA/QC program internally and that they document their efforts. Secondly, we review their deliverables carefully for compliance with the goals of their scope of services and the needs of the project.

ARDURRA

11 OTHER INFORMATION

A. Ability to Staff Tasks Efficiently & Complete Projects On Time and Within Budget

Ardurra's wide range of in-house capabilities makes us capable of providing the right staff for each task. This allows us to tailor every project and work with clients to reasonably obtain budget and schedule objectives. Our flexibility is a reason clients continually return to Ardurra for their professional engineering needs.

B. Community Involvement

Ardurra employees actively participate and contribute to the communities where we live and work. By pursuing leadership opportunities within engineering organizations, our employees have influenced programs that reach out to a diverse population. Moreover, by volunteering as leaders, Ardurra employes directly contribute their time and energy to the benefit of the engineering community and communities in which we work.

Ardurra Employees Community Service Involvement

Diversity, Equity, and Inclusion

Dolores Salgado, PE has been serving as Chair for the DEI committee since 2020. The American Council of Engineering Companies in California (ACEC-CA) consists of more than 22 chapters in the state. As a statewide organization, they are dedicated to enhancing the consulting engineering and land surveying professions, protecting the public and promoting use of the private sector in the growth and development of our state. The mission of the DEI committee is to promote diversity, equity, and inclusion with ACEC-CA member firms and public agencies by increasing awareness, demonstrating value, and providing resources to support member firms seeking to implement diversity, equity, and inclusion strategies. The committee hosts webinars and serves as a resources to member firms seeking to diversify their workforce and retain their employees by creating a culture of inclusion within their organization.

Introduce a Girl to Engineering Day

Dolores Salgado, PE, spearheaded the second annual "Introduce a Girl 2 Engineering" (IGE) event held at Bakersfield College. The event concept was derived by the American Council of Engineering Companies California (ACEC-CA) in support of their Diversity, Equity, and Inclusion Committee's initiatives. ACEC-CA was interested in sponsoring an event to increase the number of women entering engineering careers to meet the demand of our industry. Dolores serves as the DEI Committee Chair for ACEC-CA. We partnered with the Bakersfield College Math Engineering and Science Achievement Program (BC-MESA) because the BC-MESA Program outperforms the College STEM Program in student retention, grade point average and transfer rates. The event targeted 9th and 10th grade girls from schools in Kern County that feed into this community college. More than 140 girls attended and met professional women engineers, learned about different engineering careers, toured the college campus, and participated in a hands-on competition. Ten scholarships were raffled off and competition winners received prizes!

C. Previous Involvement with the City

Our team has been involved in several projects for the City of Ontario/Ontario Utilities company including the following:

- UT1032 On-Call Professional Engineering Services
- UT1013 San Antonio Transmission Watermain, Phase 1
- UT1046 San Antonio Transmission Watermain, Phase 2 - 8th Street
- UT1038 Risk & Resilience
- UT1050 Ontario Ranch Phase 2 Water Improvements
- City's Annual Land Use Control Inspection - Bon View
- On-Call Construction Management and Inspection for Various Projects
- UT1065 FY2023/24 Water Main Improvements
- UT1066 Downtown Water Main Improvements
- UT1067 Laurel Avenue Sewer Main Improvements
- UT1069 Sultana Avenue Sewer Main Improvements
- UT1070 Nocta Street Sewer Main Improvements
- UT1077 Nocta Street Sewer Lateral
- 935 E Hold Blvd Demolition
- SM2302 Sultana Storm Drain
- Ontario Regional Sports Complex
- SD063 Fourth Street Storm Drain

D. Conflict of Interest

Ardurra Group, Inc has no conflict of interest in connection with providing the services listed in the RFQ for the City of Ontario's On-Call Design Services Project, RFQ No. 1740.

12 CERTIFICATION OF PROPOSAL

ARDURRA

12 CERTIFICATION OF PROPOSAL

"The undersigned hereby submits its proposal and, by doing so, agrees to furnish services to the City in accordance with the Request for Proposal (RFP), and to be bound by the terms and conditions of the RFP."

ARDURRA

RESUMES

ARDURRA

DOLORES SALGADO, PE

PROJECT DIRECTOR/PROJECT MANAGER

Ms. Salgado has 25 years of experience in the planning and design of civil transportation and water and sewer projects. She manages Ardurra's central valley office located in Bakersfield, CA. Her civil transportation experience includes light rail transit and bus rapid transit. Water and sewer experience includes water storage, conveyance and distribution facilities and sewer collection facilities. Ms. Salgado is bilingual in English and Spanish and provides technical translation services.

RELEVANT HIGHLIGHTS

- ✓ Knowledge of OMUC procedures
- ✓ Extensive experience managing multi-faceted projects
- ✓ Proven leadership skills
- ✓ Track record of successful project delivery

RELEVANT EXPERIENCE:

On-Call Professional Engineering Services, Ontario Municipal Utilities Company (OMUC). Ardurra has provided various services to the City of Ontario/Ontario Municipal Utilities Company since 2019 for various pipeline, water sewer main and transmission improvements, and various construction management and inspection projects.

Ontario Ranch Phase 2 Water Main Improvements, OMUC/ City of Ontario. Project Manager for approximately 1.5 miles of 30-in diameter cement mortar lined and coated, welded steel pipe (CML&C WSP), PZ 925, along Grove Avenue between Eucalyptus Avenue and Chino Avenue, design of an interim Pressure reducing valve (PRV) station at the intersection of Grove Avenue and Chino Avenue to break pressure from the PZ 1010 to PZ 925, situated on the north side of Chino Avenue approximately 500 feet east of Grove Avenue, 1.6 miles of 18-in diameter CML&C WSP, PZ 1010, along Chino Avenue between Grove Avenue and the Chino Avenue Bridge (Cucamonga Creek).

San Antonio Ave 30-inch Diameter Transmission Water Main, OMUC/ City of Ontario. Project Manager. Design for approximately 2,900 linear feet of new 30 & 36-inch cement mortar lined and coated welded steel pipe (CML&C WSP) and abandoning approximately 5,000 linear feet of existing 18-inch diameter transmission main. The project is located within the City of Upland, highly urbanized area and the subsurface conditions in Upland consist of lakebed sediment, cobbles, and boulders, therefore are prone to caving and present very difficult trenching conditions. The pipeline profile was approximately 20-feet deep near OMUC's 20-million-gallon reservoir to maximize the operational capacity of the reservoir. At the major intersection, IEC worked with Bennett Trenchless to design approximately 85 linear feet of tunneling to cross underneath the existing 108-inch diameter storm drain and avoid open trench construction in the intersection.

Euclid Ave Downtown Recycled Water Project, OMUC/City of Ontario. Principal-in-charge. The Euclid Avenue Downtown Recycled Water Pipeline Project (Project) consists of 24,630 linear feet of 8-inch, 12-inch, and 24-inch recycled water main that will be constructed to reduce use of potable water, specifically for landscape irrigation, within a portion of western Ontario. The Project will construct new recycled water mains for the conveyance of recycled water from the Inland Empire Utilities Agency (IEUA) existing recycled water distribution system located within City Limits from a 30-inch diameter IEUA recycled water main at the 4th Street/Euclid Avenue and from a 24-inch diameter IEUA recycled water main located at the Riverside Avenue/Cucamonga Channel. Once constructed the Project will convey recycled water to existing city-owned

DOLORES SALGADO, PE

PROJECT DIRECTOR/PROJECT MANAGER

and operated facilities for landscape maintenance. The Project will provide recycled water for landscape irrigation along the Euclid Avenue arterial median, within Ontario's downtown district, and via new mains constructed within collector and local streets off Euclid Avenue to nearby parks at Riverside Drive and Flora Street, and to the City's civic center. The Project will facilitate conservation of potable water and distribution recycled water that is treated for irrigation by IEUA. Over 50 million gallons per day of wastewater from its regional treatment plants is accepted and treated at IEUA facilities. This water is treated to Title 22 regulations set forth by the State Division of Drinking Water and delivered for agriculture, municipal irrigation, industrial uses, and for groundwater replenishment.

UT1065 and UT1066 Water Main Improvements, Ontario Municipal Utilities Company/ City of Ontario. Approximately 3.4 miles of 8-in and 12-in diameter cement mortar lined and coated, welded steel pipe (CML&C WSP), in the downtown area. The project includes the installation of new water service connections and appurtenances.

Water Main Improvements, Ontario Municipal Utilities Company/City of Ontario. Approximately 2,900 linear feet of 12-in diameter ductile iron pipe. The project includes the installation of new water service connections and appurtenances.

640 Potable Water Reservoirs, Otay Water District. Project Engineer for the final design of twin 10 million gallon (MG) partially buried prestressed concrete reservoirs at the District's Regulatory Site, which is the terminal storage for a major part of their service area within the 640 pressure zone. The project included a detailed alternative analysis to recommend the optimal reservoir configuration, type, and location. Major project elements included five vaults for flow control and chemical injection, chemical metering pumps and associated chemical room improvements, two pressure reducing stations, civil site improvements, access roadways, mass grading and storm drain improvements, landscaping, over 14,000 lf of new pipelines, and demolition of an existing conventionally reinforced concrete tank (1.6 MG) and abandonment of associated piping.

KAITLYN LEONG, PE

DEPUTY PROJECT MANAGER

Kaitlyn is a project manager that brings strong design experience in water and wastewater projects. Her attention to detail and work on a breadth of projects makes her an effective key project member. Kaitlyn is proficient in the development of pipeline design, detailed cost estimates, and preparation of preliminary design reports. Kaitlyn is also skilled in several modeling and design programs including AutoCAD, HEC-RAS, InfoWater, and GIS.

RELEVANT EXPERIENCE:

UT1065 and UT1066 Water Main Improvements, Ontario Municipal Utilities Company/ City of Ontario. Project Engineer for approximately 3.4 miles of 8-in and 12-in diameter cement mortar lined and coated, welded steel pipe (CML&C WSP), in the downtown area. The project includes the installation of new water service connections and appurtenances. to act as an extension of municipal staff.

UT1067, UT1069, and UT1070 Sewer Main Improvements, Ontario Municipal Utilities Company/City of Ontario. Project Manager for the design of approximately 1,400 linear feet of 8-inch diameter pipeline and 4,500 LF of 10-inch diameter vitrified clay pipe. The project includes the construction of a sewer diversion manhole and sewer service connections.

Ontario Ranch Phase 2 Water Main Improvements, Ontario Municipal Utilities Company/ City of Ontario. Project Engineer for approximately 1.5 miles of 30-in diameter cement mortar lined and coated, welded steel pipe (CML&C WSP), PZ 925, along Grove Avenue between Eucalyptus Avenue and Chino Avenue, design of an interim Pressure reducing valve (PRV) station at the intersection of Grove Avenue and Chino Avenue to break pressure from the PZ 1010 to PZ 925, situated on the north side of Chino Avenue approximately 500 feet east of Grove Avenue, 1.6 miles of 18-in diameter CML&C WSP, PZ 1010, along Chino Avenue between Grove Avenue and the Chino Avenue Bridge (Cucamonga Creek).

within collector and local streets off Euclid Avenue to nearby parks at Riverside Drive and Flora Street, and to the City's civic center. The Project will facilitate conservation of potable water and distribution recycled water that is treated for irrigation by IEUA. Over 50 million gallons per day of wastewater from its regional treatment plants is accepted and treated at IEUA facilities. This water is treated to Title 22 regulations set forth by the State Division of Drinking Water and delivered for agriculture, municipal irrigation, industrial uses, and for groundwater replenishment.

Disadvantaged Communities (Mead Valley Cajalco Corridor and Good Hope Olive Area) Water Main Improvements, Eastern Municipal Water District . Project Engineer. Project for EMWD included the design of approximately 1,650 linear feet of new 8-inch diameter water pipeline in the Mead Valley area and approximately 7,800 linear feet of new 8-inch diameter water pipeline in the Good Hope Olive area. The project includes the installation of 86 new water service connections and the reconnection of 182 existing service connections. The Project is located in unincorporated Riverside County. The new pipelines provide safe a reliable access to potable water.

Downtown Sewer Replacement, Elsinore Valley Municipal Water District. Project Engineer. Project includes evaluating the condition of approximately 7,700 lineal feet of 6 and 8-inch diameter sewer mains via CCTV, site inspections, input from operators and maintenance crews. The project is located in the downtown area of the City of Lake Elsinore. The project replaced and upsized approximately 4,000 lineal feet of sewer mains, reconnected approximately 60 sewer laterals, replaced approximately 14 manholes, and repaired the streets with grind and overlay.

Pershing Avenue Sewer Trunk Line Rehabilitation Project, City of Stockton . Staff engineer providing the City of Stockton with assistance in the implementation (final design) of the rehabilitation of approximately 2,300 LF of gravity sewer trunk lines with pipe diameters of 18-inch to 30-inch along Pershing Avenue from Venetian Drive to West Swain Avenue. Our tasks included CCTV review, condition assessment, alternative evaluation, preliminary design, and final design. The project will include pipe bursting an existing 30-inch segment to 33-inch and lining the remaining segments with cured-in place concrete rehabilitation methods.

2014-2016 Miscellaneous Water and Sewer Main Replacement Project, City of Mountain View. Staff Engineer for the design services for the City of Mountain View's sewer and water main replacements project. Design includes replacement of 5,280 lineal feet of 4-inch and 6-inch cast iron water mains with PVC pipe material with conventional open trench method. Design also included replacement of 4,840 lineal feet of 6-inch and 8-inch sewer mains with pipe bursting method. Reviewed CCTV records and videos of existing sewer condition and provided recommendations of best replacement method based on existing sewer condition. Pipe burst methods were employed where feasible based on review of sewer conditions from CCTV investigation. The project included evaluation of sewer repair methods for a sewer main near a Caltrain crossing.

Fairfield Sanitary Sewer Rehabilitation Project, City of Fairfield. Staff engineer providing the City of Fairfield a comprehensive sewer replacement plan for the Midtown area that includes approximately 90,000 LF of gravity mains ranging from 4-inch to 10-inch in diameter. Reviewed CCTV and performed a condition assessment of the existing pipeline. Identified critical defects using National Association of Sewer Service Companies (NASSCO) Pipeline Assessment and Certification Program (PACP®) methods.

Semitropic School Water Supply Project, Wasco, CA. Staff Engineer for the design of an approximately 5,000 foot water supply pipeline connecting the school to an existing 12-inch waterline. The Semitropic School's has a problem with water quality and reliability. The water supply has arsenic levels which are not in compliance with the new drinking water standards and also exceeds the MCL for iron and antimony. The school's well is also vulnerable to chemicals and byproducts from the surrounding agricultural activities. Prepared a preliminary engineering report to support a water supply funding application. The school is located within one mile of the wells and treatment plant for Lost Hills Utility District (LHUD). It was determined that consolidation with the LHUD would be the best alternative to provide reliable water service that meets the drinking water standards and the present and future needs of the school.

North Kaweah Mutual Company Water Supply and Consolidation Project, Three Rivers, CA. Staff Engineer for planning, design and construction management in a mountainous area to consolidate two water systems, install approximately 10,600 feet of 6- and 8-inch waterlines, fire hydrants, new 120,000 gallon storage tank, pressure reducing station, two new shallow wells, a 25 gpm water treatment plant, and new electrical services.

ROBERT WEBER, PE

QUALITY MANAGEMENT - DESIGN REVIEWS

Mr. Weber has 33 years of civil engineering and project management experience on a variety of municipal and public works water, wastewater, and recycled water projects. Specific project experience includes conveyance pipelines, reservoirs and tanks, water pump stations, and sewer lift stations. He has also successfully managed several as-needed services contracts for municipalities and water/wastewater utilities. Mr. Weber is thoroughly familiar with design standards, techniques, and analytical methods, bid specifications, and cost estimating. His experience extends beyond civil engineering to include securing required project permits, fostering cooperative inter-agency approvals, and gaining community project acceptance.

Mr. Weber's project success is based on his ability to understand the client's needs and objectives and translate them into actions during execution of the project. He prides himself in involving the client in the project, and ensuring the technical staff understands the critical issues of the project. His engineering decisions and designs are based on careful considerations of project needs and specific site characteristics. His dedication to quality effectively manages project risks and controls construction and operational costs.

RELEVANT EXPERIENCE:

AS-NEEDED SERVICES PROJECT EXPERIENCE

The broad and diverse experience offered by Robert has been called upon in "as-needed" situations for municipal engineering. Managing many task assignments concurrently and providing highly responsive service, Robert has designed pipeline replacements, sewer lateral relocations, culvert and storm drainage improvements, service access roads, pipeline bridge crossings, tank foundations, erosion control systems, and conducted planning studies for literally hundreds of residential homes. Robert is recognized among his peers for his earthwork and grading expertise. Through his experience he has proven to act as an extension of municipal staff.

As Needed Engineering Services, Leucadia Wastewater District.
Project Manager. Ardurra provided as-needed engineering services on a task order delivery basis to the Leucadia Wastewater District (District) from 2006 to 2022. Services encompassed a wide variety of tasks to support all aspects of the District's Capital and Operational needs including planning and hydraulic modeling, Geographical Information System (GIS) support services, flow monitoring, engineering design, cost estimating, plan preparation, office engineering during construction, and construction inspection. The following are a few of the projects Ardurra has successfully completed to date:

- Annual Sewer Rehabilitation (Fiscal Years 2013 – 2022)
- Batiquitos Gravity Sewer
- B2 and B3 Force Main Replacement
- Piraeus Street Gravity Sewer
- Satellite Force Main & Pump Station Replacement
- Scott's Valley Sewer Rehabilitation
- L1 Force Main West Section Replacement
- Leucadia Scenic Cured-in-Place Pipe Lining

ROBERT WEBER, PE

QUALITY MANAGEMENT - DESIGN REVIEWS

As-Needed Engineering and Design, City of Anaheim – Anaheim Public Utilities. QA/QC & Technical Review. Public Utilities Water capital improvement program. For the last five years Ardurra has served as the City's on-call consultant. Projects have included design of pipelines, wells, pump stations, pressure regulation stations, water mains, water quality and treatment, and reservoirs. Other work has included planning studies, hydraulic modeling, feasibility studies, and construction management and inspection.

Urban Water Management Plan, Phelan Piñon Hills Community Service District. Principal-in-charge. Delivery of the District's 2020 UWMP to meet state regulatory requirements. Significant updates to the 2015 plan were made including an update to the existing water shortage contingency plan. The team worked diligently with District staff and team to deliver the project successfully.

Water Master Plan, Phelan Piñon Hills Community Service District. Principal-in-charge. Delivery of the District's Water Distribution Master Plan to help the City develop its capital improvement budget. Tasks included data collection, data analysis, update of water distribution system design criteria, update and calibration of water hydraulic model with the most recent operational control information, demand information, and field tests, evaluation of the system under Average Day Demand (ADD), Maximum Day Demand (MDD), Peak Hour Demand (PHD), and MDD plus Fire Flow (FF) conditions, identification of system deficiencies based on model results, and recommendation of Capital Improvement Projects. An additional task included a study to help the District identify operational solutions to optimize the use of Reservoir 6A.

2020 Water Master Plan and Water Capacity Fee Study, San Dieguito Water District. Principal-in-charge. Project included: hydraulic model update and validation, demand forecasting, asset valuation and condition assessment, water capacity fee study, fire hazard analysis, and capital improvement project development and prioritization.

As-Needed Water Distribution Modeling Services, City of Oceanside. Principal-in-charge for various tasks related to system operations changes, design support, and new development related impact studies.

OTHER RELEVANT PROJECT EXPERIENCE

Lester J. Berglund Water Treatment Plant Clearwell Temporary Bypass, City of Poway. Principal-in-charge. Ardurra developed options, including phased cover/liner replacement, constructing a bypass pipeline around the Clearwell, and constructing facilities that would enable the retirement of the existing Clearwell. The selected project option included constructing a bypass system with temporary storage. The Bypass System included a permanent bypass pipeline (1,140 ft of 36" CML&C steel), a temporary bypass pump station (3,900 gpm), and temporary storage tanks (2.2 MG in twin bolted steel tanks with 1,100 ft of 24" HDPE pipe).

Clearwells Replacement, City of Poway. Project Manager for a replacement clearwell facility consisting of two 4 MG prestressed concrete reservoirs, providing reliable and redundant storage for the Lester J. Berglund Water Treatment Plant. The two replacement reservoirs will be constructed in the footprint of the existing lined earthen berm reservoir with floating cover. The project involves significant grading and construction of hundreds of linear feet of retaining wall to create the space for the unburied tanks.

Santa Margarita Conjunctive Use Project Facilities, Fallbrook Public Utilities District (FPUD), Fallbrook, CA. Principal-in-Charge for the design of treatment facilities associated with an agreement between FPUD and the federal government that settled a century long dispute over water rights of the Santa Margarita River. The treatment train included 8-mgd of iron and manganese utilizing greensand media within six 12-inch diameter and 30-inch long pressure vessels. A side stream treated with RO membranes was remixed to create a product water to match the water quality of FPUD's imported water. The product water was pumped directly in the distribution systems. Distribution system improvements included two miles of 24-inch CML&C steel pipe, a remote 8-mgd pump station and 6-MG steel water storage tank.

San Diego 28 Flow Control and Alvarado Hydroelectric Facilities Rehabilitation, San Diego County Water Authority. Principal-in-Charge. The San Diego 28 Flow Control Facility (SD12 FCF) is a 150 cubic feet/second turnout from SDCWA's Pipeline 4, providing water to the City of San Diego's Alvarado Treatment Plant (AWTP). The FCF site is adjacent to AWTP, and includes the 2.0 MW Alvarado Hydroelectric Facility (AHEF), which has been out of service since 2007. The project includes a new turnout structure and piping, new meter and valve vaults, abandonment of existing FCF structure, sizing of new turbine to maximize annual energy production for the least capital and maintenance costs (estimated at 1.9 MW), new electrical and controls components, new 48-inch yard piping, and rehabilitation of the existing AHEF.

Tunnel Hill Facilities Rehabilitation, Helix Water District. Served as Project Manager for the preliminary and final design services for rehabilitation of facilities on the District's Tunnel Hill site. The facilities consist of a 2 million gallon steel tank, a 1 million gallon prestressed concrete tank, and a water pump station. The focus of the project was seismic upgrade and re-roofing of the existing steel tank along with ancillary improvements for the other facilities.

ANDERS EGENSE, PE

QUALITY MANAGEMENT - DESIGN REVIEWS

Clearwells Replacement, City of Poway. Technical Advisor for a replacement clearwell facility consisting of two 4 MG prestressed concrete reservoirs, providing reliable and redundant storage for the Lester J. Berglund Water Treatment Plant. The two replacement reservoirs will be constructed in the footprint of the existing lined earthen berm reservoir with floating cover. The project involves significant grading and construction of hundreds of linear feet of retaining wall to create the space for the unburied tanks.

Santa Margarita Conjunctive Use Project Facilities, Fallbrook Public Utilities District (FPUD), Fallbrook. Technical Advisor for the design of treatment facilities associated with an agreement between FPUD and the federal government that settled a century long dispute over water rights of the Santa Margarita River. The treatment train included 8-mgd of iron and manganese utilizing greensand media within six 12-inch diameter and 30-inch long pressure vessels. A side stream treated with RO membranes was remixed to create a product water to match the water quality of FPUD's imported water. The product water was pumped directly in the distribution systems. Distribution system improvements included two miles of 24-inch CML&C steel pipe, a remote 8-mgd pump station and 6-MG steel water storage tank. Project Name, Client, City, State. Insert role and project details here.

Cactus II Feeder Transmission Main Evaluation, Eastern Municipal Water District (Perris, CA). Project Manager for planning study for 6.5 miles of 36"-48" pipeline including water demand assessment, pipe diameter versus pump energy evaluation, alignment alternatives evaluation, and preliminary project cost estimates.

Recycled Water Pipeline Extension Phase I Design, City of Solana Beach. Project Manager for design of 6,000 ft of 4"-8" PVC pipeline to serve irrigation customers. Project includes attachment of DIP pipe segment on bridge crossing railroad, irrigation system retrofit, traffic control plans, and coordination with multiple stakeholders: North County Transit District, Santa Fe Irrigation District (water purveyor), San Elijo JPA (water wholesaler), County of San Diego DEH. Also provided bid and construction phase support services.

Paseo Vivora Pipeline, Eastern Municipal Water District. Project Manager for the planning and design of pipeline replacement project comprised of 2,200 ft of fusible PVC pipe and appurtenances, and abandonment of old steel pipe. Also providing engineering support services during construction.

Five Reservoirs Rehabilitation Project, Padre Dam Municipal Water District. Project Manager for the planning and design of a multifaceted rehabilitation and replacement program involving the following potable water facilities: rehabilitation of four hopper-bottom reservoirs (3.5 MG Chocolate Summit, 2.4 MG Mountain Top, 2.6 MG West Victoria, and 7.9 MG Blossom Valley) to replace the 45-year old roofs with new aluminum dome roofs; construction of a new 2.3 MG prestressed concrete reservoir to replace the aging 1.3 MG

ANDERS EGENSE, PE

QUALITY MANAGEMENT - DESIGN REVIEWS

East Victoria Reservoir; and construction of new pump stations to replace the existing West Victoria Pump Station (1,500 gpm) and East Victoria Pump Station (1,000 gpm). Each pump station is housed in CMU building with new SCADA, power supply, surge control and security systems. The project includes comprehensive hydraulic analyses and four separate bid packages in order to phase the construction in such a manner that impacts to District operations and customers are minimized.

Rock Springs Sewer, Vallecitos Water District. Project Manager for the design of 2,700 ft of 12"-15" gravity sewer (with trenchless construction section) through environmentally sensitive corridor. Project included slip-lining to rehabilitate one segment of 8" pipe, environmental compliance (IS/MND preparation), and coordination with homeowners to select alignment that minimized impacts to HOA park.

La Jolla View Reservoir and Pipeline, City of San Diego. Project Manager responsible for PDR and PS&E for 3.1 MG reservoir, 3,000 ft of 30" welded steel pipe, and demolition of two outdated reservoirs. Reservoir is comprised of pre-stressed concrete tank that is fully buried with limited surface features. Project includes extensive habitat restoration and public outreach support due to the tank location in a scenic, hilltop park in coastal La Jolla area.

Village Park Recycled Water Facilities, Olivenhain Municipal Water District. Project Manager for alternatives evaluation, PDR, and PS&E for design of 35,500 feet of 4"-12" PVC and fusible PVC pipe, an 1,200 gpm pump station (using pre-fabricated station), flow metering facilities, and modifications for conversion of existing 1.0 MG water tank to recycled water operation including addition of potable make-up water system with flow control and air-gap. The pipelines are located in busy thoroughfares, residential streets and fronting schools and businesses. Services included extensive utility agency and City of Encinitas coordination and hydraulic analysis of operational interface between Olivenhain Municipal Water District and San Elijo Joint Powers Authority recycled water systems, support for Coastal Development Permit from City of Encinitas, and bid and construction phase support.

Tenaja Pump Station, Rancho California Water District. Project Manager for construction support services associated with 6,300 gpm pump station including standby power generator, surge control system, and on-site hypochlorite generator, all housed in a CMU block building. Services encompassed submittal reviews, responses to RFI's, structural and SCADA/controls specialty inspections, and start-up assistance.

Make-up Water Facility Evaluation for Northwest Quadrant Recycled Water System, Olivenhain Municipal Water District. Project Manager for evaluation of a facility to provide potable make-up water to existing recycled water distribution system. Study evaluated multiple storage structure types and sites, facility sizing, and operations.

Miramar Water Treatment Plant 58 MG Clearwell, City of San Diego. Task Manager for civil design of water storage facility comprised of two 29 MG partially-buried basins to replace existing outdated structures. The project includes 2,200 ft of 54" – 84" welded steel inlet and outlet pipes, inlet and outlet structures, flow meters in buried vaults, 200 ft of 42" RCP overflow piping, basin drain system with 16" piping, underdrain piping, and a barrier drain system to address local groundwater. Also providing bid & construction phase support services.

Water Master Plan, Olivenhain Municipal Water District. Project Manager for comprehensive master plan encompassing District's 50-square-mile service area. Study involved the development of a new geographic information system (GIS) based hydraulic model (using H2ONET©), planning of future potable water and recycled water capital facilities and the development of operational guidelines for District's potable water storage in concert with the new treatment plant and water storage project.

Recycled Water System Analysis for Santa Fe Valley, Olivenhain Municipal Water District. Project Manager for evaluation of recycled water distribution system including facility routing and sizing. The evaluation encompassed service to greenbelts in two development areas (totaling 820 residential units) and two golf courses. Hydraulic modeling was performed using H2ONET©.

Recycled Water Plan Check Support Services and Standard Procedures Development, Eastern Municipal Water District. Principal-in-Charge for staff support services to review and approve recycled water plans. Efforts included preparation and implementation of recycled water guidelines and the plan review procedure (creating standard plan format, updating the recycled water notes to meet the latest California Department of Public Health criteria, and implementation of an electronic submittal process).

AMY CZAJKOWSKI, PE, CCM,QSD/P

QUALITY MANAGEMENT - CONSTRUCTABILITY REVIEWS

In her 30 years of serving water districts, municipalities, and purveyors, Amy Czajkowski has gained recognition for system planning, design engineering, and construction management of public water and wastewater infrastructure projects. An additional specialty of Amy is Stormwater Management including both design services, assisting with permitting compliance, and performing inspection for effectiveness of BMP systems during construction. She has conducted master plans for water and sewer services, assessed impact fees, and developed capital improvement programs to ensure adequate service. Amy's engineering design experience includes conveyance systems, pump and lift stations, reservoir storage, and treatment facilities. Her on-site construction experience, combined with her extensive research of material and equipment performance allows her to avoid constructability problems and reduce costs. In addition to being a Certified Construction Manager, Amy is both a certified QSD and QSP giving her the experience and flexibility to make changes in the field and ensure the project specific or overall plans such as SUSUMPs, HMPs, etc. are effectively implemented.

Regardless of the size or complexity of the project, she focuses on complete and accurate engineering, and understands her clients' needs. Ms. Czajkowski's professional expertise, combined with her client focus, enables her to act as an extensive of the client's staff on as-needed contracts. Her experience in performing on "as-needed" agreements affords her the unique perspective of having acted as a municipal and district employee. She is recognized for her project management, thorough design review and plan checking, and ability to work with a variety of contractors and permit applicants. She also has extensive experience with design-nuild both as the Design Manager and the Quality Assurance Manager.

RELEVANT EXPERIENCE:

San Antonio Ave 30-inch Diameter Transmission Water Main, OMUC/ City of Ontario. Design for approximately 2,900 linear feet of new 30 & 36-inch cement mortar lined and coated welded steel pipe (CML&C WSP) and abandoning approximately 5,000 linear feet of existing 18-inch diameter transmission main. The project is located within the City of Upland, highly urbanized area and the subsurface conditions in Upland consist of lakebed sediment, cobbles, and boulders, therefore are prone to caving and present very difficult trenching conditions. The pipeline profile was approximately 20-feet deep near OMUC's 20-million-gallon reservoir to maximize the operational capacity of the reservoir. At the major intersection, IEC worked with Bennett Trenchless to design approximately 85 linear feet of tunneling to cross underneath the existing 108-inch diameter storm drain and avoid open trench construction in the intersection.

Various Well Rehabilitations, Elsinore Valley Municipal Water District. Construction Manager for the construction for $3.5M for (5) Groundwater Well Rehabilitation projects which were completely upgraded by replacing all the pumps, bowls, packers, and making other associated repairs. Since several of these wells have high levels of arsenic, they either had to be treated at the Back Basin Groundwater Treatment Facility or blended with other well flow. Therefore, bringing each well back on line required detailed coordination with Operations and Engineering to ensure the blending and/or treatment requirements were met.

AMY CZAJKOWSKI, PE, CCM,QSD/P

QUALITY MANAGEMENT - CONSTRUCTABILITY REVIEWS

16-Inch Emergency Bypass Sewer and 12-Inch Failsafe Outfall Rehabilitation, Vallecitos Water District. Project Manager. Design of 3,200 lf of pressured cured-in-place pipe lining (CIPPL) to be installed in 16-inch techite and ductile iron secondary effluent pipeline, 2,150 lf of pressurized CIPPL in 12-inch raw sewage ductile iron pipe, and related isolation valves. Project included coordinating with District's environmental consultant in support of an IS/MND and inclusion of City-specific requirements for both the City of Carlsbad and the City of San Marcos.

Advanced Metering Infrastructure Program(multiple Grant Funding Sources), Elsinore Valley Municipal Water District Project Manager for an ambitious Advanced Metering Program. Assisted the District with multiple grant funding sources to offset costs. Phase II included installation of residential 5,227 MTU's and Phase III included installation of residential and commercial 36,000 MTU's.

2021/2022 Construction Management & Inspection Services, San Bernardino Municipal Water Department. Construction Manager for the consolidation of three separate locations into one location to fulfill SBMWD goal to meet and exceed internal and external customer expectations including responsiveness and timeliness. This contract is a combination of projects which will allow the Department to consolidate their workforce into one location and construct more warehouse space for the Department's use.

Moreno Valley Regional Water Reclamation Facility (MVRWRF) Plant 2B Equipping Project, Eastern Municipal Water District. Serving as Construction Manager for Ardurra's Construction Management Team (Construction Manager, Resident Engineer, electrical inspection and SCADA Integration and Start-up and Testing Services) for the Plant 2B Equipping Project components and Centrate and RAS Reaeration Basin (CaRRB) project components. The CM and RE support the District's Senior CA, inspection team and CAR. The project includes complex electrical, mechanical, and process improvements. The project is 30 months in duration and involves close coordination with District Operations and supporting departments. At the 100% design phase, Ms. Czajkowski performed two constructability reviews of the bid documents for bid ability, constructability, and identified changes to the bid documents needed to mitigate potential conflicts of change orders during construction of the Plant 2B Equipping Project components and Centrate and RAS Reaeration Basin (CaRRB) project components.

New Mission Basin Groundwater Purification Facility (MBGPF) Operations Building, City of Oceanside Construction Manager and Inspection Coordinator for the new City of Oceanside Water Utilities Department Mission Basin Groundwater Purification Facility (MBGPF) Operations Building, which is a key asset to the City of Oceanside and to the operations of the Mission Basin Groundwater Purification Facility. As part of a long-term vision, the new building supported the continued efforts of the treatment facility to address the City's ongoing water supply needs. The new building is approximately 5,000 square feet and includes open "bullpen" offices, restrooms, locker rooms, private offices, a laboratory for basic water testing needs, staff kitchen, conference room, a SCADA equipment room, and a control room for monitoring plant operations. Additionally, Ms. Czajkowski aided in the coordination all of the elements to obtain a Gold LEED Certification for New Construction. This included close coordination with the Architects - HB&A Architects, LEED Consultant - Innovative Workshop Consulting, LLC, Utility for Electrical and Gas – SDG&E, and the Water Utilities Department Staff.

511 Pump Station, City of Oceanside. QA/QC Manager for the preliminary design of a 4.5 MGD pump station and discharge pipeline to pump from the Mission Basin Groundwater Purification Facility (RO Plant) directly to the 511 pressure zone. The preliminary design included development of the Design-Build Contract Documents, including technical specifications and 30% drawings. The pump station includes 3 vertical turbine pumps installed in an existing clearwell, control valves, flow meter, surge protection system, expansion of the existing site power capacity and a standby power system. The new pump station will allow the City to fully utilize the capacity of the RO Plant, increasing the volume of locally produced water, and further ensuring a safe and reliable source of water for the area.

Regional Water Reclamation Facility (RWRF) Operations Building & Existing Operations Building Modifications and HVAC Improvements, Elsinore Valley Municipal Water District. Construction Manager/ Constructability Review for the expansion of the on-site Operations Building. This is a 6,700-square foot building sited to the southeast of the existing Operations building. This amount of space maximizes the available site for a single-story detached building connected to the existing operations building by a covered corridor. The new Operations Building is a CMU commercial building with a steel framed and tile roof system. The expansion of the on-site Operations Building included landscaping, addition of covered parking areas and installation of fiber optic cable and a state-of-the-art security system. Additionally, provided oversight, reviewed all prevailing wage documents and certified payroll and maintained the prevailing wage document logs for EVMWD. Ardurra also coordinated all specialty inspections and coordinated with the Fire Marshall for the flow inspections and final fire alarm and full operation of the Fire Protection System.

SCOTT ADAMSON, PE, QSD/P

QUALITY MANAGEMENT - CONSTRUCTABILITY REVIEWS

Mr. Adamson has 25 years of construction management, resident engineering, inspection and design of small and large civil engineering public works projects. He began his career in the geotechnical field as a soils technician and progressed steadily through the ranks of inspection and construction quality control to the position of Sr. Construction Manager. During his career he has worked as an extension of staff for such agencies as the City of Del Mar, City of La Mesa, and City of San Diego as well as water districts such as Oceanside Water Utilities, Elsinore Valley Water District, and Vista Irrigation District. As a lead construction manager, he is responsible for the day-to-day management of the department as well as actively managing his own projects. He is in the field on a daily basis providing guidance to our staff of construction professionals.

RELEVANT EXPERIENCE:

San Antonio Ave 30-inch Diameter Transmission Water Main, OMUC/ City of Ontario. Design for approximately 2,900 linear feet of new 30 & 36-inch cement mortar lined and coated welded steel pipe (CML&C WSP) and abandoning approximately 5,000 linear feet of existing 18-inch diameter transmission main. The project is located within the City of Upland, highly urbanized area and the subsurface conditions in Upland consist of lakebed sediment, cobbles, and boulders, therefore are prone to caving and present very difficult trenching conditions. The pipeline profile was approximately 20-feet deep near OMUC's 20-million-gallon reservoir to maximize the operational capacity of the reservoir. At the major intersection, IEC worked with Bennett Trenchless to design approximately 85 linear feet of tunneling to cross underneath the existing 108-inch diameter storm drain and avoid open trench construction in the intersection.

W. Anaheim Water Valve Replacement, City of Anaheim. Senior Construction Manager for this valve replacement project which included 4 valve clusters located throughout the City of Anaheim. Valve sizes ranged from 6- to 12-inch gate valves. The biggest challenge was coordination with the different parties involved with, and affected by, the shut-downs. In particular, this included a kidney dialysis clinic that operated almost 24-hrs a day, seven days a week, and had a very short window in which to even install a high-line. The Ardurra construction team coordinated with the Contractor, City of Anaheim water operations department, and the surrounding residents and businesses throughout the project to deliver an efficient process.

FY21-22 Annual Pavement Rehabilitation, City of La Mesa. Sr. Construction Manager for the City of La Mesa FY21-22 Pavement Rehabilitation project which included the full width grind and overlay of four the City's busiest arterial streets.

FY21-22 Storm Drain Rehabilitation, City of La Mesa. Sr. Construction Manager. The goal of this project was to rehabilitate badly deteriorated CMP storm drain pipelines throughout the City of La Mesa through the installation of Cured In Place Pipe lining (CIPP). The lines included sizes ranging from 18-inch through 42-inch CMP and included approximately 1800 Linear Feet of CIPP lining, including construction of new catch basins and headwalls.

East Water Purification Plant Expansion to 350-MGD, Houston, Texas. Project Engineer. Involved with expanding the city's East Water Purification Plant to a firm 350-MGD capacity without the addition of process treatment units. The project consisted of process,

SCOTT ADAMSON, PE, QSD/P

QUALITY MANAGEMENT - CONSTRUCTABILITY REVIEWS

hydraulics, chemical feed, and electrical and instrumentation improvements to all three plants at the EWPP complex. She evaluated the hydraulic impacts of process improvements on plant operation, identified hydraulic bottlenecks, and recommended process design modifications.

Southeast Water Treatment Plant 80-MGD Expansion. Project Engineer. Worked on miscellaneous mechanical design components of the project. Her responsibility included designing rate-of-flow control valves with electro-hydraulic actuators, designing a flow meter vault to house a 72-inch transit-time flow meter on the finished water line, designing filter backwash flow control valve, designing plant sampling pumps and water quality on-line analyzers. She developed detailed design drawings for these components, and prepared system control strategy and specifications.

Lower 1 Recycled Water Conveyance System, City of Oceanside. Senior Construction Manager on this SRF funded, $16 million, large diameter water main installation project for the City of Oceanside. This project is part of the City's ongoing pure water program, and included two pipelines, one raw water supply line, and a second recycled water distribution main. The project also includes two Jack & Bore installations beneath the NCTD right of way, a horizontal directional drill component below the San Luis Rey River, and installation along the City's major arterial roadway, El Camino Real. Due to the environmentally sensitive nature of the surrounding habitat and the river crossing, the project also contained a robust environmental mitigation and monitoring component. Mr. Adamson's role was of senior advisor to Ardurra's (formerly IEC) on site field staff. He coordinated subcontracts with specialty consultants and also oversaw contract funding compliance issues, such as environmental reporting, American Iron and Steel documentation, and labor compliance monitoring.

Camino Del Sur Recycled Water Conversion Project, City of San Diego. Working as extension of staff for the City of San Diego Field Engineering Department, Mr. Adamson provided Resident Engineering services for this approximately $1.1 million water main installation. This water main included approximately 1,400 Linear Feet of 16-inch PVC water main installed along the major arterial of Camino Del Sur off of Hwy. 56 in San Diego. As part of this installation it was necessary to install approximately 1,100 linear feet of 26-inch welded joint HDPE pipe as an encasement through the Caltrans right-of-way extending under Hwy. 56. This project also included the restoration of environmentally sensitive habitat within the limits of McGonigle Canyon associated with a stormdrain repair. This restoration included restoration of the original slope face, planting of native species shrubs and grasses, and installation and upkeep of a temporary irrigation system.

Graeber Street Watermain Replacement, Western Municipal Water District – Senior Construction Manager for the installation of the 7,000 LF water main replacement project located on March Air Reserve Base in Riverside County. The project consisted primarily of installing new 12-inch water main along the main arterial through the base. Challenges encountered as part of this project included limited personnel access due to security, an unusually high number of unknown live and abandoned conflicting utilities, and unforeseen base activities which impacted construction.

Clay Canyon and City Reservoir Steel Tank Rehabilitation Projects, Elsinore Valley Municipal Water District. Mr. Adamson provided construction management and inspection on these two steel tank rehabilitation projects for Elsinore Valley Municipal Water District (EVMWD). Though the projects were bid separately, they were completed simultaneously. Ardurra provided construction management and site inspection on both. The projects included the cleaning and recoating of the interior and exterior of both tanks, repairs to badly corroded roof rafters, upgrades to the entrance hatches, upgrades to yard piping and valving, and upgrades to the foundations. Ardurra also teamed with Coating Specialists and Inspection Services, Inc. to provide NACE Level 3 coating inspection during sandblasting and recoating processes.

7th Avenue & Broadway Water Main Replacement, City of Escondido. Construction Manager for the of the installation of approximately 5,000 linear feet of 10-inch PVC water main in the older residential portions of the City as well as the historic downtown district. The historic nature of the streets affected meant that there were a large number of unknown, abandoned utilities.

West La Mesa Street Improvement Project, City of La Mesa. The City of La Mesa combined two major streetscape projects under this one contract. The first portion of the contract was the improvement of Jr. High Drive fronting La Mesa Elementary School. This included the replacement of existing sidewalks and flatwork in front of the school as well as the extension of the road through a dedicated easement. The result of this portion was the improved walkability at the school entrance as well as connecting sidewalks to a new Boys and Girls Club constructed on the property. The second portion of the project included the reconstruction of a number of curb ramps at four major intersections along University Avenue improving walkability at these locations for school pedestrians. Both projects included ADA improvements, new flatwork, new drainage, signal lighting modifications, landscaping, and paving. Mr. Adamson provided construction management services including oversight of Ardurra inspection staff on the project.

DALIA MULATO

WATER/RECYCLED PIPELINES

Dalia has 7 years of experience in preparing thorough PS&E documents on a wide variety of projects including water pipelines, and sewer gravity mains. Dalia is knowledgeable in the development of details and pipeline plans and profile drawings, development of detailed cost estimates, preparation of preliminary design reports, and permit coordination. Additionally, she has extensive knowledge with AutoCAD, Revit, Google SketchUp, and GIS.

RELEVANT HIGHLIGHTS

- ✓ Proficient in pipeline design
- ✓ Extensive knowledge of Audocad, Revit, SketchUp, and GIS
- ✓ Proven track record of project delivery

RELEVANT EXPERIENCE:

Ontario Ranch Phase 2 Water Main Improvements, Ontario Municipal Utilities Company/ City of Ontario. Design Engineer for approximately 1.5 miles of 30-in diameter cement mortar lined and coated, welded steel pipe (CML&C WSP), PZ 925, along Grove Avenue between Eucalyptus Avenue and Chino Avenue, design of an interim Pressure reducing valve (PRV) station at the intersection of Grove Avenue and Chino Avenue to break pressure from the PZ 1010 to PZ 925, situated on the north side of Chino Avenue approximately 500 feet east of Grove Avenue, 1.6 miles of 18-in diameter CML&C WSP, PZ 1010, along Chino Avenue between Grove Avenue and the Chino Avenue Bridge (Cucamonga Creek).

San Antonio Ave 30-inch Diameter Transmission Water Main, Ontario Municipal Utilities Company/City of Ontario. Design Engineer. Design for 2,900 linear feet of new 30-inch cement mortar lined and coated welded steel pipe (CML&C WSP); abandonment of approximately 3,700 linear feet of existing 18-inch steel pipe.

Asset Management Plan, Sheep Creek Water Company (SCWC). Design Engineer. The SCWC Asset Management Plan (AMP) included the preparation of an inventory of all water system assets, water system maps, prioritization of Capital Improvement Projects (CIP), and estimating capital expenditures for the CIP. The AMP established a framework to manage Capital Improvement Projects and provided recommendations for future AMP implementation and funding strategies for the SCWC. The SCWC is a community water system serving a Disadvantaged Community in an unincorporated area of San Bernardino County, near Phelan, CA.

Winterhaven County Water District (WCWD) Preliminary Engineering Report (PER), County of Imperial. Design Engineer The project for the WCWD consisted of the preparation of a Preliminary Engineering Report (PER). The PER evaluated alternatives to improve the WCWD aging water system. The PER was developed to aid the WCWD in applying for State and Federal grants and/or low interest loans. The PER was commissioned as part of the County of Imperial's technical assistance to the WCWD. The PER was funded by the State Department of Water.

Phelan Piñon Hills Community Services District (PPHCSD) Water Consolidation Project, University Enterprises Inc. Design Engineer. The project consisted of providing Engineering and Managerial support services to Phelan Pinon Hills Community Services District (PPHCSD) to consolidate and take ownership of the Sheep Creek Water Company (SCWC). The SCWC is a Community Water System that Serves a Disadvantaged Community in unincorporated San Bernardino County, near Phelan, CA. The consolidation included water system improvements and six (6) interconnections, including a new well and new water pipelines. Consolidation of the PPHCSD with the SCWC will ensure that the community has a safe and reliable source of water. The project is part of the University Enterprises Inc. technical assistance to

DALIA MULATO
WATER/RECYCLED PIPELINES

the PPHCSD and is funded by the Divisions of Financial Assistance (DFA) under the SAFER program.

Trunk Sewer Main Replacement, City of Escondido. Design Engineer. The City of Escondido's Trunk Sewer Main is a key piece of the City's sewer infrastructure system. The trunk sewer collects sewage from approximately 30% of the City and conveys it to the Hale Avenue Resource Recovery Facility (HARRF). The trunk sewer was constructed in 1959 and originally served as the outfall from the City's treatment facility to a lift station. However, when the HARRF was constructed, the pipeline was repurposed to serve as a trunk sewer in the City's collection system. In recent years, sections of the pipeline has been failing, requiring emergency repairs to keep this key piece of infrastructure in-service. The original pipeline was constructed of 24- and 27-inch diameter reinforced concrete pipe (RCP), however as emergency repairs were made, 30- and 36-inch diameter PVC were installed. This project replaces five (5) segments of trunk sewer remaining from the original construction, which totals 6,900 linear feet of trunk sewer.

Tomlin Pipeline Replacement, Elsinore Valley Municipal Water District. Design Engineer. Ardurra is designing the replacement/upsizing of 5,100 linear feet of an existing 6-inch diameter pipeline. The District's 2016 Water Master Plan (2016 WMP) identified the need to upsize the pipeline to an 8-inch diameter to provide adequate fire supply to the 3544 pressure zone. Starting at the discharge side of the District's Tomlin 1 Pump Station on Lancashire Drive, the existing 6- inch diameter discharge pipeline heads southwest for approximately 2,000 linear feet along El Cariso Trail to the Tomlin 1 Reservoir (1871 pressure zone). From here, the second segment heads southwest from the District's Tomlin 2 Pump Station discharge along El Cariso Trail for approximately 3,100 linear feet to the Tomlin 2 Reservoir (2313 pressure zone). The existing 6-inch diameter water main is located within a 20-ft wide utility easement owned by the District.

Stage Ranch Road Pipeline, Elsinore Valley Municipal Water District. Design Engineer for design of approximately 2,400 linear feet of 8-inch diameter potable water pipeline. The project required approximately 300 linear feet of special material (CML&C Welded Steel Pipe) due to the Elsinore Fault Zone, which has a high probability of fault rupture. A hydraulic analysis was performed to determine if the new 8-inch diameter pipeline can supply fire flows of 1,500 gallons per minute at 20 pounds per square inch residual pressure without exceeding the maximum flow velocities of 10 feet per second to minimize potential for system hydraulic surge and to limit pressure drops during fires.

Canyon Del Rey CMP Sewer Line Replacement, Seaside County Sanitation District. Design Engineer for the replacement and upsizing of three sewer segments of corroded sewer main totaling approximately 850 lf of 12" and 15" PVC. Project also consisted of four 48" diameter sewer manholes, and reconnection of three sewer laterals; two of which serve major users, the State Department of Motor Vehicles and the City of Seaside City Hall Complex.

CWC Final Water System Improvements – Club Ave Bridge Waterline Replacement, Elsinore Valley Municipal Water District. Design Engineer for the design to relocate an existing 8-inch diameter potable water main on Club Ave in the City of Wildomar, CA. The project upsized the existing 8-inch diameter water main to a 10-inch diameter main, the approximate length was 270 linear feet. The water main was originally installed attached to a bridge structure. The existing bridge structure was utilized by local residents to traverse a small stream. The bridge was failing structurally therefore compromising the water main. The designation of the watercourse under the bridge was Waters of the United States and regulated by the U.S. Fish and Wildlife Service. To avoid costly permitting and delays, Ardurra determined that instead of rehabilitating this small bridge structure and reattaching the waterline, it was more cost effective and expedient to relocate the waterline outside the jurisdictional limits. By utilizing horizontal directional drilling (HDD) construction methods, the team avoided the stream.

Downtown Sewer Replacement, Elsinore Valley Municipal Water District. Design Engineer. Project includes evaluating the condition of approximately 7,700 lineal feet of 6- and 8-inch diameter sewer mains via CCTV, site inspections, input from operators and maintenance crews. The project is located in the downtown area of the City of Lake Elsinore. The project replaced and upsized approximately 4,000 lineal feet of sewer mains, reconnected approximately 60 sewer laterals, replaced approximately 14 manholes, and repaired the streets with grind and overlay.

Sewer Replacement Nevada Avenue and Bodger Street Area (CIP No. 005), City of El Monte. Engineer. The City's existing sewer mains and manholes within the area of Nevada Avenue and Bodger Street were constructed in 1938 and are approaching the end of their useful life. In addition, many of the mains and manholes are in easements located in the back yards of private residential properties, making it difficult for the City to access and conduct maintenance. As a result, approximately 4,500 linear feet of existing small diameter (8- and 12-inch) sewer is being replaced and relocated into the public ROW. The project also includes construction of new sewer laterals for each of the affected properties, approximately 140 in total. This was particularly challenging because the existing sewer connections are in the back yard, requiring realignment of laterals from the rear of properties to the street.

MARCO CRUZATT, EIT

SEWER GRAVITY PIPE AND FORCEMAINS

Mr. Cruzatt has 15 years of experience in Land Development projects and Construction Administration. He has worked and managed projects ranging from small residential to large scale developments. Marco is able to take a project from planning phase all the way to construction phase. He's very well versed with government agency requirements and is highly proficient in Civil 3D and MicroStation software.

RELEVANT HIGHLIGHTS

- ✓ Experience in design and quality assurance management for various municipal projects
- ✓ Mechanical expert
- ✓ Expert in pump stations, water treatment, treatment facility and restoration projects

RELEVANT EXPERIENCE:

Santa Margarita Conjunctive Use Project Facilities, Fallbrook Public Utilities District. Project Manager. Design of treatment and storage facilities. Designed 8-mgd of ground water treatment to remove iron and manganese utilizing greensand media within six 12-inch diameter and 30-foot-long pressure vessels. A side stream treated with RO membranes was remixed to create a product water to match the water quality of FPUD's imported water. The product water was pumped directly in the distribution systems. Distribution system improvements included two miles of 24-inch CML&C steel pipe, a remote 8-mgd pump station and 6-MG steel water storage tank.

Lester J. Berglund Water Treatment Plant, Chemical Building, and Tank Farm Upgrades, City of Poway. Quality Assurance/Quality Control. Ardurra) prepared design documents, bid phase and construction support for a retrofit of the City of Poway Lester J. Berglund Water Treatment Plant (WTP). The WTP plant is a conventional rapid mix, coagulation, sedimentation and media filtration plants using chlorine and ammonia for disinfection. The retrofit and rehabilitation project involved key water treatment plant processes such as disinfection, coagulation, and filtration. Modifications to the gaseous chlorine system were designed as well as replacement of polymer, permanganate chemical storage and handling systems and filter valves and actuators. The project included a specific Maintenance of Plant Operations (MOPO) specification and close coordination with City staff.

Leucadia Pump Station, Leucadia Wastewater District. Quality Manager for the condition assessment, preliminary and final design for a 4.0 MGD wastewater lift station for the Leucadia Wastewater District. The Leucadia Pump Station is the District's largest pump station with four 200-horsepower (hp) variable speed driven (VFD) pumps currently in place. This rehabilitation project will include the replacement of the four large pumps with three slightly smaller 150-hp pumps and two 25-hp jockey pumps to accommodate the wide range of flows to the pump station. The project will include the reuse of two relatively new 200-hp VFDs for two of the new 150-hp pumps, all new ductile iron piping, valve, and appurtenances. The new pumps will be dry pit submersible type. The T-locked wet well will be repaired, and odor control equipment and other minor equipment replaced.

Post Road Hydropneumatic Booster Pump Station, Eastern Municipal Water District. Project Manager and Quality Manager for the pre-design and final design of a temporary booster pump station, hydropneumatic tank, and associated suction and distribution pipeline to alleviate low pressure conditions in the westerly higher elevation areas of the Eastern Municipal Water District's Good Hope II (1832) Pressure Zone. Gathered information on the District's

RICHARD KENNEDY, PE

PUMP STATIONS

existing water facilities in the local pressure zone (1832) and surrounding area with new survey to: 1.) provide hydraulic distribution system modeling to define three alternative proposed 1910 pressure zones and pumping criteria (selecting one), 2.) evaluate two alignment alternatives (selecting one) based on advantages and disadvantages considering existing in-place utilities, public right-of-way, planned utilities, crossings; traffic; permits; cost; access, and community and environmental impacts, 3.) prepare a preliminary design report using existing aerial mapping information County, USGS, to develop the booster pumping station site to be located along an existing 40-foot-wide District easement west of Post Road, and evaluate two pre-engineered 300-gpm pump and hydropneumatic tank layouts, and 4.) provide final design documents.

PFAS Treatment for Perris II Desalter and Well 57, Eastern Municipal Water District. Project Manager. Two projects associated with PFAS treatment. The Perris II and the Menefee/Perris I Desalters utilize RO treatment to reduce TDS in the combined flows from their large groundwater well system. While RO reduces PFAS contamination, the bypass water blended back to meet TDS targets has to be treated to meet the forthcoming PFAS regulations. Well 57 like other wells in EMWD's system is both high in TDS with some varieties of PFAS being present. Water quality data for the wells feeding the desalters and Well 57 were analyzed with initial recommendations being made which included granulated active carbon (GAC) followed by ion exchange (IX) for both facilities. The Well 57 evaluation included an alternative where Well 57 water would be conveyed by pipeline to the Perris II Desalter for treatment. This alternative was determined to be advantageous in several respects including cost as determined by a present worth analysis. Project descriptions to assist with potential grant and other funding mechanisms for these two projects were written.

Preparation of the Title XVI Application for the City of Escondido Membrane Filtration Reverse Osmosis (MFRO) Facility, City of Escondido. Project Manager. Richard was instrumental in only six weeks successfully developing the Bureau of Reclamation Title XVI Water Reclamation and Reuse Projects funding opportunity assistance for the City of Escondido's (City) Membrane Filtration Reverse Osmosis Facility (MFRO) Project. The City's project was one out of six projects selected out of the State of California to be awarded up to $5,000,000 in grant funding. Development of the application included reviewing and developing the application using City provided technical documents, environmental and cultural resources, developing 29 Letters of Support and receiving 22, and development of the financial budget for the project.

Lester J. Berglund Water Treatment Plant Clearwell Temporary Bypass, City of Poway. Mechanical and instrumentation and controls lead. The City's 10 MG Clearwell is an integral part of the City's Water Treatment Plant (WTP). Originally constructed in 1964 as a hopper bottom basin with a floating geomembrane cover and liner, the Clearwell needed replacement. A significant complication was that there was no bypass around the existing Clearwell. Ardurra developed a bypass pipeline around the Clearwell, and facilities that would enable the retirement of the existing Clearwell. The selected project option included constructing a bypass system with temporary storage. The Bypass System included a permanent bypass pipeline (1,140 ft of 36" CML&C steel), a temporary bypass pump station (3,900 gpm), and temporary storage tanks (2.2 MG in twin bolted steel tanks with 1,100 ft of 24" HDPE pipe).

Filter Washwater Header and Associated Piping Project, Santa Fe Irrigation District. Senior Project Manager for the filter surface washwater header and associated piping project performed at the RE Badger Filtration Plant located at 18535 Aliso Canyon Road in Rancho Santa Fe, CA. The mechanical work includes the replacement of the schedule 30, steel filter surface washwater piping: consisting of two 80 foot long, 16-inch diameter main headers; six 40-foot long, 16-inch branch distribution headers; and over 7,000 linear feet of perforated 3-inch schedule 80 PVC fixed-grid surface wash piping. To maximize corrosion resistance all 270 feet of 16-inch new steel pipe will be coated on the interior and exterior with fusion-bonded epoxy. To confirm the structural stability of the new piping system, all existing pipe hangers are being replaced, with all hanger anchors being inspected and replaced as needed. The six 16-inch wall thimbles will be inspected with the interiors recoated. The design included a wall thimble.

Water Treatment Plant Expansion, City of Folsom. Served as Project Manager to upgrade the City's water treatment plant. The project included decommissioning 25-mgd of existing automatic backwashing (ABW) filters and converting four existing floc/sed basins to filter backwash and ActiFlo blowdown treatment, modifying the existing conventional filters (20-mgd) and providing and additional 30-mgd of conventional filtration, adding a 1.2-MG circular pre-stressed concrete chlorine contact tank, and adding a new hypochlorite generator. Capacity of the plant increased from 40- to 50-mgd. Specific modifications to the existing filters included a new filter-to-waste (FTW) piping arrangement to correct a potential cross-connection problem.

YUE SUN, PE, BCEE

WATER TREATMENT

Ms. Sun has 24 years of experience with water and wastewater facility design, treatment process selection, hydraulic analysis and pump station design, water treatment bench scale and pilot studies, water quality control and regulatory compliance, public water system monitoring, and source water and distribution water quality control and management. She has been involved in the expansion and/or upgrades of water and wastewater treatment plants and her responsibilities include project planning, design management and coordination, construction services and project delivery.

RELEVANT HIGHLIGHTS

- ✓ Proven Process Engineer with over 24 years of experience in water and wastewater treatment
- ✓ System monitoring and reporting includes water quality control and regulatory compliance, public water system monitoring program development, and source water quality and distribution water quality control and management
- ✓ Expert in bench and pilot testing, process selection, facility design, hydraulic analysis, and water quality management

RELEVANT EXPERIENCE:

East Water Purification Plant Expansion to 350-MGD, Houston, Texas. Project Engineer. Involved with expanding the city's East Water Purification Plant to a firm 350-MGD capacity without the addition of process treatment units. The project consisted of process, hydraulics, chemical feed, and electrical and instrumentation improvements to all three plants at the EWPP complex. She evaluated the hydraulic impacts of process improvements on plant operation, identified hydraulic bottlenecks, and recommended process design modifications.

Southeast Water Treatment Plant 80-MGD Expansion. Project Engineer. Worked on miscellaneous mechanical design components of the project. Her responsibility included designing rate-of-flow control valves with electro-hydraulic actuators, designing a flow meter vault to house a 72-inch transit-time flow meter on the finished water line, designing filter backwash flow control valve, designing plant sampling pumps and water quality on-line analyzers. She developed detailed design drawings for these components, and prepared system control strategy and specifications.

Southeast Water Purification Plant 80-MGD Expansion 60-inch Overflow Line Hydraulics. Project Engineer. Performed a hydraulic analysis of the existing 60-inch overflow line to determine if there was potential overflow cross contamination when draining sedimentation basins. She developed hydraulic grade lines to indicate water level changes in the sedimentation basins and process overflow basin over the basin draining process. A gate valve was recommended to be installed to prevent cross contamination.

Southeast Water Purification Plant 80-MGD Expansion Raw Water Line Hydraulic Analysis. Project Engineer. Hydraulic analysis of the raw water pipeline to determine the required header pressure at the Coast Water Authority pressure regulating station. To ensure an equal flow split between existing and new treatment trains, rate-of-flow control valves were designed to make up pressure difference between the treatment trains. Modifications were made to the plant existing Raw Water Control Station to serve as blow-off line in the event of power failure.

Southeast Water Purification Southeast Water Purification Plant Expansion Master Plan Hydraulic Evaluation. Project Engineer. Hydraulic analysis for the plant expansion master plan. Various finished water pipeline routes and high service pump station design and operation scenarios were developed to accommodate future expansion phases to expand the facility capacity from 200-MGD to 240-, 360-, and 720-MGD.

YUE SUN, PE, BCEE

WATER TREATMENT

Southeast Water Treatment Plant 80-MGD Expansion UV Disinfection Facility Chemical Cleaning and Waste Neutralization System Design. Project Engineer. For Houston's Southeast Water Purification Plant 80-MGD expansion, a chemical clean-in-place (CIP) system was designed to provide off-line chemical cleaning for UV reactor lamps using 25 percent diluted phosphoric acid. Ms. Sun designed a CIP chemical cleaning system which consists of a chemical storage tank, one chemical feed pump, one chemical return pump, a stand-by pump, a chemical cleaning waste underground storage tank, and other miscellaneous components, prepared design drawings and specifications, and developed system control narrative and chemical cleaning operating procedures. In addition, Ms. Sun conducted a preliminary design of a two-stage continuous chemical neutralization system to neutralize the chemical waste from the UV reactor lamp cleaning service prior to discharging into the plant sanitary sewer.

Houston Water Distribution Corrosion Control. Lead Engineer. The project was to demonstrate water quality improvements in Houston's water distribution system by using polyphosphate as a corrosion inhibitor to control water quality issues such as odor and color. The project included design of a polyphosphate feed system at the city's Acres Homes and Spring Branch Re-Pump Stations. Ms. Sun led preliminary engineering design of the chemical storage and feed system and developed design drawings.

FBWCID No. 2 Surface Water Treatment Plant Feasibility Study. Project Engineer. To comply with the Fort Bend Subsidence District regulations, Fort Bend Water Control and Improvement District No. 2 planned to convert their drinking water source from groundwater to surface water. The objective of this project was to conduct a conceptual design of a 3-MGD surface water treatment and develop cost opinions to assist the District in determining the required funding for the new plant. Ms. Sun worked on the conceptual design of ancillary facilities for the new treatment plant, developed the conceptual construction and O&M costs for three process treatment alternatives, including conventional treatment, low pressure membrane filtration, and nanofiltration, prepared life cycle costs for the plant future expansion, and developed the evaluation report.

Water Pumping Station Upgrades Jersey Village Pump Station SCADA Controlled Bypass Line, City of Houston. Task Leader. Ms. Sun worked on this project to design a bypass line for the subjected pump station to provide more operational flexibility to the existing groundwater plant.

East Water Purification Plant 1 and Plant 3 Improvements, City of Houston. Assistant Project Manager. For the City of Houston, this project was to evaluate the existing clarifiers at Plant 1 of the EWPP complex to determine the level of rehabilitation required for the facility. Ms. Sun served as a task leader for this project, responsible for project coordination, field inspection, progress reports, and final engineering report preparation.

Weslaco Water Treatment Plant Expansion Evaluation. Project Manager. This project involves 1.5-MGD expansion of the city's water treatment plant, consisting of process and hydraulic evaluation to all three plants at the plant complex. As a result of the evaluation, process improvements and modifications are recommended to expand the plant treatment capacity and improve plant operation performance. Ms. Sun led the evaluation and preliminary engineering design for the project.

Sugar Land 9-MGD Surface Water Membrane Treatment Plant Conceptual Design and Evaluation Study. Assistant Project Manager. For this project, Ms. Sun led the conceptual design for Sugar Land's first surface water treatment plant, developing site plan and layout, design criteria, and conceptual construction and O&M costs for two water treatment process alternatives (MF/UF membrane filtration versus MF/UF followed by RO).

Northeast Water Purification Plant (NEWPP) Chemical System Improvement. Project Manager. Led preliminary engineering evaluation and final design and subdiscipline coordination to improve existing chemical storage and feed facilities at the City's 80-MGD NEWPP to address system reliability, operational safety, and code compliance requirements, including evaluation of two improvement alternatives: rehabilitation of existing chemical facilities and construction of new chemical facilities. The chemical feed system involved in the project includes coagulant, coagulant aid polymer, flocculant aid polymer, filter aid polymer, sodium hypochlorite, liquid ammonium sulfate, sodium permanganate, caustic soda, fluoride, and carbon dioxide.

BO ZHANG, PE

WASTEWATER TREATMENT

Ms. Zhang is a senior Water and Wastewater Process Engineer and Project Manager with 22 years of experience in condition assessment, capital improvement planning, evaluation, design, construction services, regulatory assistance and governmental grants/loans application support for water and wastewater treatment and conveyance systems.

RELEVANT HIGHLIGHTS

- ✓ Related experience in scope of services in water treatment systems
- ✓ Process Engineer with over 20 years of experience
- ✓ Expert in planning, evaluation, design, condition assessments, and operational reliability for water treatment plants

RELEVANT EXPERIENCE:

Design and Supply of Water Treatment System, La Crescenta, CA. Senior Process Engineer. Drafted portions of proposal and contract terms and conditions, reviewing design calculations, allocating staff, tracking design and construction budget and progress. Selected a hydrogen-fed membrane biofilm technology to remove nitrate without generating residual waste.

Development of New Growth Initiatives for GZE Assets, Irvine, CA. Technical Advisor . Analyzed commercial maturity, operational reliability, and 5-year P&L of emerging water/wastewater technologies including Membrane Biofilm Reactor, AOP, Forward Osmosis, Vibratory Reverse Osmosis, et al. Proposed US$1.5MM investment in FO that was funded in 2017.

Greenhouse Gas (GHG) Emissions Monitoring from WWTPs, Calgary, AB. Program Manager. Initiated and managed a collaborative applied research project, developing and applying machine learning algorithms, in conjunction with a BioWin-based process modeling, for charactering GHG emissions from wastewater treatment systems, with the ultimate objective of optimizing the operation of wastewater treatment facilities for reducing GHG emissions. GHG emission are quantified using the innovative optical remote sensing approach consisting of OP-TDL and OP-FTIR. Presented preliminary results of this project at the June 2022 New York Water Environment Association Spring Symposium in Syracuse, NY, and the May 2023 Water Environment Federation (WEF) Odors and Air Pollutants conference in Charlotte, NC.

50 MGD Chester Pump Station Wet Weather Treatment Facility Upgrade, Delcora, PA. Lead Process Engineer. Evaluated planning strategies, alternatives, and conceptual/preliminary level design and costs estimation for Combined Sewer Overflow (CSO) treatment at a satellite pump station. Evaluate was based on TSS/BOD5 removal based on using vortex chambers such as Storm King by Hydro International and sodium hypochlorite vs peracetic acid (PAA) disinfection. Modified process/mechanical design to improve the hydraulic grade line (HGL) for satisfying the 0.2-percent-annual-chance (or 500-year) floodplain design constraint. Prepared evaluation memos and basis of design reports.

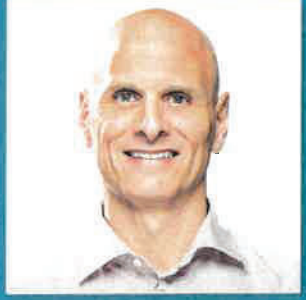
75 MGD Western Regional Treatment Plant (WRTP) Upgrade, Delcora, PA. Lead Process Engineer. Evaluated and designed mechanical sludge dewatering systems consisting of screw press, belt filter press, rotary press, and centrifuge, and fine bubble diffused aeration systems consisting of ceramic diffusers, membrane diffusers, and ultra-fine bubble panel diffusers. Performed BioWin process simulation to evaluate 1) treatment capacities, and process air requirements under different influent flows and loads conditions, and effluent requirements, and 2) plant performance under wet weather flow conditions during which the influent flow increased from 50 MGD to 120 MGD within 24 hours. Prepared evaluation memorandums.

BO ZHANG, PE

WASTEWATER TREATMENT

Skillman Village and Cherry Valley WWTPs Consolidation, NJ. Lead Process Engineer. BioWin simulated the Skillman Village treatment process to determine the maximum flow capacity under optimized operational conditions without violating the NPDES permit limitations. Prepared Basis of Design Report on consolidating the Cherry Valley WWTP and diverting the flows to the Skillman Village WWTP, including upgrade of 1) relevant treatment systems at the Skillman Village WWTP, 2) three (3) pump stations (6A PS, Bedens Brook County Club PS, and Save PS), and re-routing of pertinent force mains and gravity mains. Estimated construction costs. Reviewed design plans.

Hopewell WWTP Upgrade, Hopewell, NJ. Lead Process Engineer. As part of the overall plant upgrade to address the issues of plant capacity, permit compliance, aging infrastructure, and operational efficiency and reliability, an alternatives analysis of disinfection was preformed for increasing chlorine contact tank volume, replacing existing chlorination with open channel UV disinfection, replacing existing chlorination with inline/closed-vessel UV disinfection, and replacing existing chlorination with PAA disinfection. A conceptual level sizing, layout, and cost estimation was performed for all alternatives, and preliminary design was completed based upon Aquioics's inline UV system.



76 MGD Springfield Regional Wastewater Treatment Facility, Bondi's Island, MA. Lead Process Engineer. Evaluated upgrade options for biological nutrient removal, conduced preliminary evaluation of regional biosolids management center, odor control, and septage receiving station. Supported the development of a 20-year Design-Build-Operate contract including preparing performance standards and technical specifications for capital improvements projects, fees structure analysis, and review of proposals submitted by proposers.

4.03 MGD Water Treatment Plant Upgrade, Barnstable, MA. Lead Process Engineer. Prepared proposal and fees, evaluating planning strategies and alternatives for removal of PFAS, 1, 4-Dioxane, iron and manganese, nitrate, and perchlorate. Prepared conceptual design and facilities planning reports.

3.0 MGD Ammonia-based Aeration Control for Improved Total Nitrogen Removal and Energy Efficiency in Wastewater Treatment, Plymouth, MA. Lead Process Engineer. Evaluated control algorithms and instrumentation for a MassCEC funded pilot study to cut energy consumption and improve total nitrogen removal at a Sequencing Batch Reactor (SBR) plant by implementing an innovative instrumentation and control strategy based upon using nitrate/nitrite sensors, ammonia sensors, and ORP sensors.

Drinking Water Distribution System Non-Compliance, NC. Process Engineer. Diagnosis and correction of design or operational deficiencies causing non-compliance problems. Used multiple approaches, sampling, speciation and process modelling, and onsite inspection, to solve non-compliance problems including corrosion in a drinking water distribution system in NC; disinfection at Lake City WWTP (E. Coli) and Dorchester WWTP (Enterococci); elevated TSS at Long Cove WWTP; toxicity in pre-treated industrial wastewater, et al.

Treatment Facilities Upgrade for Removal of PFAS, Town of Barnstable, MA. Lead Process Engineer. Led the technical/engineering aspects of the project, setting treatment goals, evaluating alternatives (activated carbon, ion exchange, reverse osmosis), combined with greensand and UV-based advanced oxidation process for achieving the treatment goals. Completed conceptual level design and cost estimations for each alternative. Completed pilot scale study, evaluating design parameters for GAC and ion exchange. Considering the highly permeable properties of the soils at this coastal location, also included in the technical scope was a Watershed Threat Assessment, identifying contaminant sources at upgradient locations that likely influence the water supply wells, in both near-term (5-, 10-, year) and long-term (30- year).

ARIC GNESA, PE, DBIA

GROUNDWATER WELLS

Aric has 24 years professional experience in a wide range of engineering tasks and disciplines including planning, design, and construction management of large and small diameter (treated, raw water, and sewage) pipelines, pump stations, flow control facilities, and reservoirs. Temporary positions (3-12 months each) include internships in geotechnical, land surveying, and land development, and Contract Consultant (design engineer and construction management) at the San Diego County Water Authority (SDCWA) for 18 months. Prior to completing his formal education, Aric worked in the construction industry for 8 years as a craftsman, foreman, and project manager. This combination of practical experience and highly technical education make Aric well suited for a variety of projects and duties pertaining to Civil Engineering.

RELEVANT EXPERIENCE:

As-Needed Engineering Services, South Coast Water District. Task Lead. The South Coast Water District (SCWD) is an independent public agency providing water to residents and businesses within an 8.3 sq mi area along a stretch of the Pacific Coast in south Orange County. SCWD established a three-year Capital Improvements Program (CIP) that identified priority improvements to SCWD's infrastructure. SCWD sought engineering consultants to assist its Engineering Department with expediting the CIP projects as well as other general engineering and operations support services.

Groundwater Pilot Production Wells, City of San Diego. Project Engineer for as-needed services to design pumping and conveyance systems for groundwater production wells throughout San Diego County. The City has an aggressive program to enhance their water supply system by adding approximately 10,000 acre-feet/year of locally produced groundwater to supplement the City's water supply system. To date, the contract has included the following task orders: 1. - Pilot Production Wells Investigation Workshop to identify candidate projects and develop the initial scope for future investigation and design efforts. 2. - Pilot Production Well No. 1 Improvements to design upgrades to the City's San Vicente Production Well No. 1 including new flow meter, pump to waste piping, and SCADA and remote communications equipment. 3. - Overall Program Management - LISA (Local Investigations and Studies Assistance) Program and miscellaneous technical assistance. 4. - Design of Production Well Head and Conveyance Facilities for Diamond Business Improvement District (DBID) including a new 500 gpm production well head facilities, controls, and pipelines to enable the City to utilize groundwater for irrigation purposes.

Well No.'s 10 and 11 Raw Water Collection Pipeline, City of Oceanside. Project Engineer for the design of 5,000 lf of 20-inch PVC transmission pipeline, consisting of (2) jack-and-bore crossings, pipeline to be constructed in City streets, under Highway 76, within an engineered fill, in undeveloped areas adjacent to existing Army Corp of Engineers flood control levee, and finally connecting to the City's existing Mission Basin Desalting Facility. Project included coordinating with and obtaining permits from several agencies including Caltrans, SDG&E, FAA, and OSHA Mining and Tunneling Unit. An alignment study which examined several possible alternatives was performed as part of this project.

ARIC GNESA, PE, DBIA

GROUNDWATER WELLS

Design-Build of Water Production Wells for Emergency Water Supply at Eleanor Pardee Park and Library/Community Gardens, City of Palo Alto. Project Engineer for the design of two fully operational emergency supply water wells connected to the City of Palo Alto's water distribution system. The well sites are highly visible to the public; one is at the City's Main Library, adjacent to an important community garden facility, and the other is at Eleanor Pardee Park, a neighborhood park that provides children's playgrounds, picnic areas, and an additional community garden. At both sites, design challenges included the need to develop wellhead facilities that would blend into their surroundings and avoid introducing inappropriate "industrial" aesthetics into recreational greenspace. In addition, because of City regulations prohibiting loss of recreational lands, it was essential to minimize the above-ground footprint of the finished facilities. Effective public outreach and construction noticing were identified as particularly important for the success of this project, which kicked off immediately following the controversial removal of several mature trees on California Avenue in the City's central business district.

Emergency Water Supply Project, City of Menlo Park. Project Engineer for project to construct wells providing emergency backup potable and firefighting supply for eastern portion of City of Menlo Park. At present, 100% of potable water supply for eastern Menlo Park is provided to the Menlo Park Municipal Water District via the San Francisco Public Utilities Commission's Hetch Hetchy Aqueducts Nos. 1 and 2, which cross several active faults en route to the Bay Area. Co-developed and implemented innovative site and ranking process that combines engineering, hydrologic, and community "livability" criteria along with engineering and hydrologic factors. Principal author of several technical memoranda describing the site ranking process and presenting recommendations for emergency well siting.

As-Needed Engineering and Design, City of Anaheim – Anaheim Public Utilities. Project Manager. The Ardurra team is currently providing water engineering services in support of the City of Anaheim's Public Utilities Water capital improvement program. For the last five years Ardurra has served as the City's on-call consultant. Projects have included design of pipelines, wells, pump stations, pressure regulation stations, water mains, water quality and treatment, and reservoirs. Other work has included planning studies, hydraulic modeling, feasibility studies, and construction management and inspection.

Water Supply Backup Well Facility at City Corporation Yard, City of Menlo Park. Project Manager for 200 HP deep well submersible pump and piping connections, a 5,000 gallon hyrdopnuematic tank, on-site disinfection facilities, 350kW Emergency Generator, connection to City's potable water distribution system, connection to storm drain, landscaping improvements, and associated electrical and controls for the well head pump station and integration to the Corporation Yard's electrical power system.

Well No. 9 Wellhead Facilities, City of Oceanside. Project Engineer for the design of well head facilities, consisting of a 200 HP (2,000 gpm, VFD) submersible well pump, layout of concrete pad with surge tank, piping, electrical equipment, connection to the City's existing Mission Basin Desalting Facility (400 linear feet of 16-inch PVC pipeline), and 700 linear feet of 18" RCP drain pipe. Project also included preparation of a DHS Drinking Water Source Assessment.

First Aqueduct Treated Water Tunnels Rehabilitation Project, Design Build, Specification 670, San Diego County Water Authority (sub to Stantec/Michels). Project Manager. The San Diego First Aqueduct Treated Water Tunnels project includes rehabilitation of the concrete lined Oat Hills, Red Mountain, and Lilac tunnels. Project support included technical memoranda analyzing system hydraulic capacity before after lining of tunnels with fiberglass pipe liners and geopolymer rehabilitation methods, as well as design support for custom fiberglass pipe closure pieces and bifurcation structure temporary modifications to allow for phased tunnel rehabilitation.

San Diego 28 Flow Control and Alvarado Hydroelectric Facilities Rehabilitation, San Diego County Water Authority. Project Manager. The San Diego 28 Flow Control Facility (SD12 FCF) is a 150 cubic feet/second turnout from SDCWA's Pipeline 4, providing water to the City of San Diego's Alvarado Treatment Plant (AWTP). The FCF site is adjacent to AWTP, and includes the 2.0 MW Alvarado Hydroelectric Facility (AHEF), which has been out of service since 2007. The project includes a new turnout structure and piping, new meter and valve vaults, abandonment of existing FCF structure, sizing of new turbine to maximize annual energy production for the least capital and maintenance costs (estimated at 1.9 MW), new electrical and controls components, new 48-inch yard piping, and rehabilitation of the existing AHEF.

RYAN HUSTON, PE

GROUNDWATER RECHARGE

Ryan Huston has provided planning and design services for a variety of water, wastewater, and recycled water projects including water wells, reservoirs, pipelines, and pump stations. His resume includes 25 years of experience; twenty-two years of experience in the private industry and over two years with a municipal water and wastewater agency. This experience has allowed Mr. Huston to gain a unique understanding of the intricacy of a public agency and the relationship between client and consultant.

RELEVANT EXPERIENCE:

Ames-Reche, Oeste, Lucerne Recharge Basins & Oeste Turnout Projects, Mojave Water Agency. Project Director. The project consists of the Ames-Reche Recharge Basin Relocation, Oeste Demonstration Recharge Pilot Test, Lucerne Valley Pump Station Recharge Basin, and Oeste Permanent Aqueduct Turnout. For the Ames-Reche relocation, MWA-owned parcels of 10 acres will be utilized to increase the size and optimize the capacity of the existing facility. The Oeste Pilot Recharge Test consists of constructing basins and assessing recharge feasibility with design flows of 5-6 cfs, installation of a monitoring well, and DWR permits. The Lucerne Pump Station will be modified to convey water to the 3-acre basin, designed for an annual recharge of 7,300 AFY with a maximum flow rate of 10 cfs. Based on the results of the Pilot Recharge Test, a permanent improvement and facility, CA aqueduct turnout with DWR permitting, and traveling screen and other necessary appurtenances will be completed.

Adelanto R³ Extension, Mojave Water Agency. Project Manager. Preliminary, final design, and construction management for approximately 5,800 linear feet of a 30-inch diameter CML&C steel pipeline, modifications to Turnout 6 to include an in-line booster pump, and a new turnout for delivery to the City of Adelanto.

Bunker Hill Basin Conjunctive Use Project, San Bernardino Valley Municipal Water District . Project Manager for preliminary design of the Bunker Hill Basin Conjunctive Use Project (CUP) to determine the physical systems necessary to enhance water supply reliability for the region, and performing a cost allocation study to determine the equitable cost allocation of the CUP based on potential benefits received by the stakeholders. Provided coordination and support in the development of an operations and governance plan including stakeholder facilitation.

Upper VDC Conjunctive Use Optimization Project, Rancho California Water District. Project Manager for the development of an optimized recharge recovery strategy that allows for increased production and improved operations at the Los Caballos Upper Recharge/Recovery Facility. Project included the design of the Phase 1 improvements which included a new 5-foot high berm, re-grading of pond bottoms to direct recharge to the recovery wells, three new pond discharge outlets, 1,900 LF of 36-inch diameter raw water pipeline, and 1,000 LF of 24-inch diameter treated water pipeline. Developed an optimized recharge/ recovery strategy to maximize use of untreated water supply and developed centralized disinfection strategy. Also developed a four phased CIP implementation strategy to allow recharge up to 60 cfs.

Santa Margarita River Discharge project, Rancho California Water District, Temecula, CA. Project Engineer for the design of a 15 CFS interconnection with Metropolitan Water District of Southern California,

RYAN HUSTON, PE
GROUNDWATER RECHARGE

including a pressure reducing facility utilizing a sleeve valve, 3,000 linear feet of 20-inch PVC pipeline and 200 linear feet of 16-inch CML&C pipeline, and a discharge structure to the Santa Margarita River.

Recycled Water Pond Pumping Stations, Eastern Municipal Water District. Principal-In-Charge. Preliminary and final design of three recycled water pond pump stations to convey recycled water from the effluent storage ponds to the distribution storage tanks.

Perris North Basin Groundwater Contamination Prevention and Remediation Project, Eastern Municipal Water District. Project Director. Performed a feasibility study and preliminary design for two centralized treatment facilities for the removal of perchlorate, nitrate, and PCE, the equipping of 8 wells, and approximately 5 miles of pipeline. Developed an Implementation Plan for the Program to define the location of the proposed wells and treatment facilities to support future property acquisition and CEQA compliance efforts.

Well 59 Wellhead Treatment Facilities, Eastern Municipal Water District. Project Director for EMWD's Well 59, with a production capacity of 1,000 gpm, exceeded the health advisory levels for perflourinated compounds (PFAS) and was taken out of service. Project consisted of the preliminary and final design for wellhead treatment consisting of GAC treatment. The project was funded by the US Air Force and included bench scale column testing to evaluate coal-based GAC and coconut-based GAC.

San Jacinto Valley Groundwater Quality Evaluation, Eastern Municipal Water District. Project Director for evaluating iron, manganese and TDS compliance alternatives for the East Valley groundwater wells. These constituents were identified as chemicals of concern (COCs) based on the water quality data. The purpose of the project is to evaluate iron, manganese, nitrate and TDS compliance alternatives and provide a planning/guiding document with a matrix of various tables to be used by the District to identify groundwater management options with respect to water quality compliance for these COCs.

Near Term Water Supply Program As-Needed Civil Design Services, Elsinore Valley Municipal Water District. Principal-in-Charge. Design of the Palomar and Lee Lake Well Equipping Projects. The Palomar Well project includes the preliminary and final design for the equipping of a new 800 gpm well, chemical feed, and blending facility. The Lee Lake Wells project includes the final design of two, 300 gpm wells, and a centralized treatment and pump station facility.

Terra Cotta Well, Elsinore Valley Municipal Water District. Principal-in-Charge for the design and construction management of the 1,200 gpm aquifer and storage recovery well which included a passive park consisting of drought tolerant landscaping and benches for local residents.

Canyon Lake Water Treatment Plant Facilities Master Plan. Principal-in-Charge. Prepared a master plan for the water treatment plant to guide and direct future facility needs and upgrades, program budgeting, and phasing of the capital improvement program. A comprehensive condition assessment was performed to improve performance and reliability, and determine the remaining useful life of the facilities.

Winchester Pond Pump Station, Eastern Municipal Water District, Temecula, CA. Principal-in-Charge. Preliminary design includes evaluation of alternatives to optimize storage and pumping capacities at the District's Winchester Distribution Ponds (1700 AF). Evaluation includes floating membrane covers, hydraulic analysis, mixing and aeration to improve water quality, ground water study for recharge recovery, evaluation of existing pump station, deepen ponds to increase storage, new pump station for ultimate demands and geotechnical investigations to study the stability of the site for continued operations.

Audie Murphy Ranch Recycled Water Pipeline, Eastern Municipal Water District. Project Manager. Final design of approximately 4,000 linear feet of 18-inch and 12-inch diameter recycled water pipeline, and a pressure reducing station for discharge to the Sun City recycled water pond.

Energy Management Plan, Eastern Municipal Water District. Project Director. Performed an assessment of Eastern's current and future energy portfolio as well as develop a road map to meet its strategic objective of reducing costs while meeting regulatory requirements and maximizing available resources. Evaluations included fuel cells, microturbines, solar facilities, food-to-waste, biosolids dryer, biodiesel, internal combustion engines, and energy management software.

Temescal Agricultural Pipeline Condition Assessment, Elsinore Valley Municipal Water District. Principal-In-Charge. (Elsinore Line Condition Assessment) Condition assessment of approximately 11 miles of a 30-inch diameter agricultural pipeline including pipe cleaning and CCTV investigation, developing various rehabilitation alternatives, and developing a capital improvement program.

LORI TROTTIER, AICP CEP

ENVIRONMENTAL

Ms. Trottier has 34 years of experience as a city and regional environmental planner. During this time, she has worked as agency staff and as a consultant. She has been primary author and Environmental Project Manager for compliance with California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA). She has managed numerous multi-disciplinary teams and been the manager responsible for regionally significant and high-profile CEQA documents involving considerable public input. Ms. Trottier is an expert on CEQA compliance, environmental planning, and analysis. Her experience includes a variety of development and infrastructure projects including master plans for large-scale phased development. Ms. Trottier has provided CEQA and NEPA clearance on roadways and intersections, energy transmission, radio and communication sites, development of residential, commercial, mixed-use, and industrial land uses, regional recreation facilities, General Plans, General Plan Elements, and Specific Plans. Ms. Trottier can quickly focus on key project issues, understand client needs and develop cooperative agency and stakeholder relationships resulting in win-win outcomes. Her experience extends beyond environmental planning and includes many types of entitlement and regulatory permits for development, natural resource protection, and construction.

RELEVANT EXPERIENCE:

As-Needed Engineering Services, South Coast Water District. Task Lead- Environmental. The South Coast Water District (SCWD) is an independent public agency providing water to residents and businesses within an 8.3 sq mi area along a stretch of the Pacific Coast in south Orange County. SCWD established a three-year Capital Improvements Program (CIP) that identified priority improvements to SCWD's infrastructure. SCWD sought engineering consultants to assist its Engineering Department with expediting the CIP projects as well as other general engineering and operations support services.

Euclid Ave Downtown Recycled Water Project, OMUC/City of Ontario. Environmental. The Euclid Avenue Downtown Recycled Water Pipeline Project (Project) consists of 24,630 linear feet of 8-inch, 12-inch, and 24-inch recycled water main that will be constructed to reduce use of potable water, specifically for landscape irrigation, within a portion of western Ontario. The Project will construct new recycled water mains for the conveyance of recycled water from the Inland Empire Utilities Agency (IEUA) existing recycled water distribution system located within City Limits from a 30-inch diameter IEUA recycled water main at the 4th Street/Euclid Avenue and from a 24-inch diameter IEUA recycled water main located at the Riverside Avenue/Cucamonga Channel. Once constructed the Project will convey recycled water to existing city-owned and operated facilities for landscape maintenance. The Project will provide recycled water for landscape irrigation along the Euclid Avenue arterial median, within Ontario's downtown district, and via new mains constructed within collector and local streets off Euclid Avenue to nearby parks at Riverside Drive and Flora Street, and to the City's civic center. The Project will facilitate conservation of potable water and distribution recycled water that is treated for irrigation by IEUA. Over 50 million gallons per day of wastewater from its regional treatment plants is accepted and treated at IEUA facilities. This water is treated to Title 22 regulations set forth by the State Division of Drinking Water and delivered for agriculture, municipal irrigation, industrial uses, and for groundwater replenishment.

LORI TROTTIER, AICP CEP

ENVIRONMENTAL

California Commerce Center Supplemental Specific Plan EIR, City of Ontario. Primary author and CEQA project manager on the Supplemental Specific Plan EIR for the regionally significant build out of the California Commerce Center Specific Plan. The project proposed 2-million-square-feet of warehouse space near the Ontario International Airport. Project issues included compatibility with SCAG's regional growth plan; health risk assessment associated to diesel emissions along truck routes; long-term air quality and fugitive dust emissions control BMPs; access, circulation, traffic generation and compatibility with established at grade railroad operations; vapor intrusion of hazardous materials, and screening for endangered species impacts. This project required significant agency input and coordination with SCAG, PUC, Native American Heritage Commission, SCAQMD, and the Department of Fish and Game.

General Plan Update, City of Fountain Valley. Managed environmental analysis and authored the Programmatic EIR for a full-scope update of the City's General Plan.

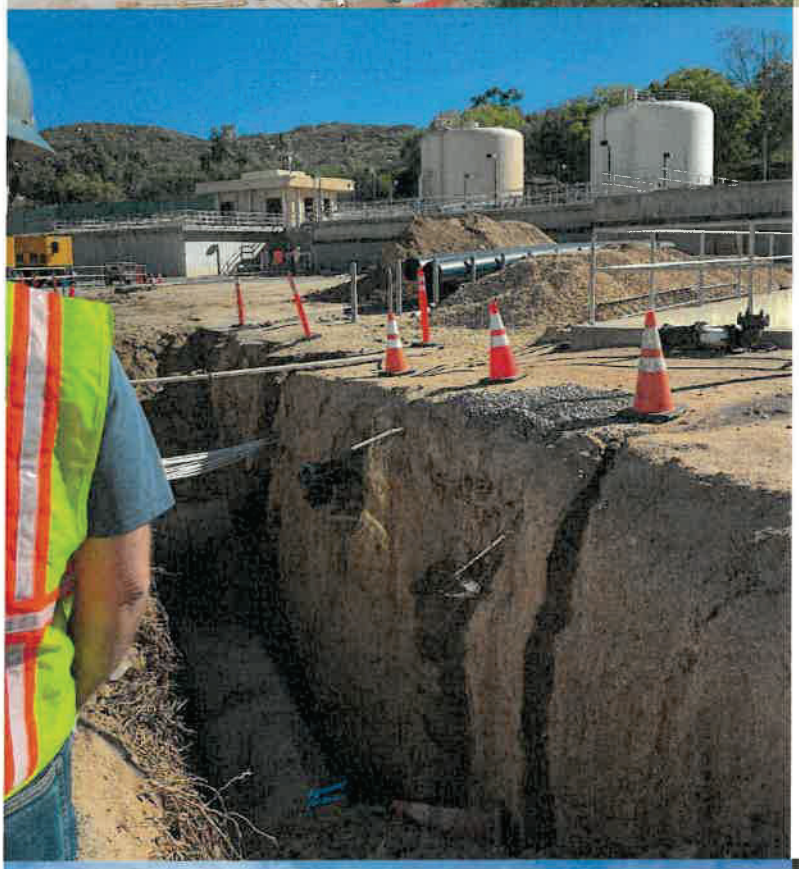
General Plan and General Plan EIR, City of Aliso Viejo. Provided input as a Planning Advisor on the City's first General Plan and PEIR after City incorporation. Project issues included housing, traffic, historic preservation, and tribal resources.

Darrell Tanks Replacement, Town of Hillsborough. Environmental Task Leader for the Darrell Tank Initial Study/ Mitigated Negative Declaration. Darrell Tank replacement involves demolition of two existing steel tanks with a 2-million-gallon prestressed concrete tank. Potentially significant impacts from the project involve geology, soils, and seismicity, tree removals, views, noise, air quality, traffic, biological resources, cultural and tribal resources.

Oceanside Boulevard Lift Station, City of Oceanside. The project involves demolition of an existing pump station, development of a new pump station, and associated pipeline upgrades in Oceanside Boulevard. Project issues include mitigation for sensitive habitat, cultural resources, AB 52 compliance, access, noise, and air quality.

La Jolla View Reservoir Replacement, City of San Diego. Coordinated CEQA-plus technical analysis of resources including biological, cultural, historic architectural, air quality, and greenhouse gas emissions, for demolition of Exchange Place Reservoir and demolition/replacement of the outdated and undersized La Jolla View Reservoir, in La Jolla Natural Park. Project issues include grading, traffic and circulation, noise, air quality, dust control, and significance of biological, aesthetics, and cultural and historic resources.

Anza Road Pipeline Extension, Rancho California Water District. Environmental Task Leader for the Initial Study/Mitigated Negative Declaration on a potable water pipeline within the 1550 pressure zone from Morgan Hill Drive to Anza Road, County of Riverside. The project will improve reliability of the water system and consists of of 1,050 linear feet of potable water pipeline beginning at the end of the existing easterly terminus of Morgan Hill Drive within an existing residential development. Avoidance measures were incorporated into project design. Environmental issues included cultural resources and biological resources related to open trench and bore and jack construction.



Phase 2 McHenry Sewer, City of Escalon. Environmental Task Leader for the Initial Study/Mitigated Negative Declaration on realignment of 4,500 linear feet of 24-inch sewer main according to the approved Sewer Master Plan and General Plan. Phase 2 McHenry Sewer involves construction of sewer main using bore and jack construction, under a South San Joaquin Irrigation District Main Irrigation Canal and open trench under the existing Meyer Avenue asphalt roadway and County easement. Potentially significant impacts from the project involve tree removals, noise, air quality, biological resources, cultural and tribal resources.

Olivenhain Trunk Sewer Improvements FEIR/EA, City of Encinitas. Environmental Task Leader for final environmental documents and permits. IEC is providing comprehensive design, environmental, and outreach support for relining 50 existing manholes, relocating approximately 2,800 linear feet of sewer line within existing roadway. The project includes wetland re-vegetation plans. Environmental services include EIR/EA, Clean Water Act Section 404 permit, California Streambed Alteration Agreement, federal and state Endangered Species Act take authorization, and Coastal Development Permit, City of Encinitas Major Use Permit (MUP), San Diego County permits, Wetland Restoration Plan, and a NEPA Environmental Assessment for easement modification under the Natural Resource Conservation Service Agriculture Conservation Easement Program.

Lake Skinner Boat Launching Facility #1141, Riverside County Regional Parks & Open Space District. Researched County needs and requirements for improvements. Managed preparation and filing of a Notice of Exemption for rehabilitation of Lake Skinner boat launch and recreation facilities.

NOTES AND ASSUMPTIONS

Engineering, Municipal, Environmental, Traffic, & Survey Notes:
* Positions noted with an asterisk are subject to overtime rates billed at 1.5 times regular rates for all time over eight (8) hours in a single day or work performed on Saturday; and double time rates for work performed on Sundays and holidays.
Other Direct Costs: Reimbursement of identifiable non-salary costs that are directly attributable to the project such as oversized and/or color reproduction costs, overnight postage, or couriers, etc., are billed at actual cost, plus fifteen percent (15%) to cover overhead and administration. Mileage required for travel are billed at the allowable IRS mileage reimbursement rate.
Fees for subconsultant services: Billed at actual cost, plus fifteen percent (15%) to cover overhead and administration.
Exclusions to Scope and Fee: The following items are specifically excluded:
– Legal advice
– Specialized software (other than MS Office Suite and MS Project)
– Expert witness services
Project, Construction Management & Inspection Notes:
[1] The above hourly rates include wages, fringe and general and administrative overhead and fee, as well as typical supplies, tools and equipment required to perform services. Construction management software is not included in the base rate.
[2] Rate applies to the first four hours of overtime during the week and /or first eight hours of overtime on Saturdays; all overtime in excess of four hours during the week or eight hours on Saturdays is paid at the Sunday/holiday rate.
[3] Prevailing Wage Rates are subject to increases pursuant to the State of California's Department of Industrial Relations Wage Rate Determinations. Ardurra's Billing Rates will increase in proportion to the DIR increase, plus overhead and profit. The current rates are based on Determination SD-23-63-3-2023-2D, issued 8/22/2023. The above billing rates increase by $5/hour on July 1, 2024 to adjust for a predetermined increase.
[4] A Special Shift is any shift that starts after 5:00PM and before 6:00 AM.
[5] The following minimum callout applies to Inspection staff, in accordance with Industrial Welfare Commission Order #16-2001: • Cancellation of 8 hours scheduled inspection after inspector's arrival on site: 4-hour minimum • Cancellation of 4 hours scheduled inspection after inspector's arrival on site: 2-hour minimum.
[6] For contracts involving public works inspection services, Ardurra requires the awarding public agency to complete DIR form PWC-100 solely for Ardurra as the prime contractor specific to the awarded contract name and amount. A half-hour per week, per inspector labor compliance charge will be billed for all Prevailing Wage inspection assignments.

Overall Notes:
Reimbursable Expenses (Other Direct Costs): Ordinary identifiable non-salary costs that are directly attributable to the project, such as regular commuter travel costs, standard equipment, tools and software, etc., are included in the fee estimated above. Extraordinary expenses, such as oversized and/or color reproduction costs, vehicle identification decals, site facility hard phone line and/or internet service charges, non-commuter project miles and/or other travel expenses to remote (over 50 miles one-way) fabrication yards / batch plants, overnight postage / couriers, etc., are billed at actual cost plus fifteen percent (15%) to cover overhead and administration. Travel charges to a casting / fabrication yard or batch plant will include the hourly billing rate plus travel expenses as listed in the Caltrans Travel Guide (State rates). Mileage is billed at the current IRS rate (currently $0.655/mile). An allowance for Extraordinary charges is included as Other Direct Costs (ODC) in the fee table above. Extraordinary charges above and beyond the estimated ODC allowance will not be billed to the Client unless specifically included in the contract or requested and approved by the Client in writing prior to incurring the additional expense.
Fees for Subconsultant Services: Billed at actual cost, plus fifteen percent (15%) to cover overhead and administration.
Web Based Contract Administration: Selected / specified cloud based service billed at cost plus fifteen percent (15%).
Escalation: Unless specified otherwise (such as for prevailing wage personnel), all billing rates are subject to annual review for Consumer Price Index escalation or 3%, whichever is greater.

Additional Notes, Fees & Exclusions:

(*) Includes portion for partial Mobilization

- ALL PERMIT FEES WILL BE CHARGED BACK TO THE CLIENT AT COST PLUS 10%. THIS INCLUDES ANY DEPOSITS, BONDS, OR OTHER ASSOCIATED FEES THAT MAY BE REQUIRED. AirX cannot guarantee turn-around times for permit process.
- This rate sheet INCLUDES the provision for prevailing wage, applicable to all field work. *Prevailing Wage rates are set by the California Department of Industrial Relations (DIR) and subject to change annually per DIR regulations. Federal prevailing wage rates will also apply, if applicable.*
- [illegible]
- This is a rate sheet only based on limited information provided. Adjustments, changes and response to actual field conditions may incur added costs. *Final invoicing will reflect actual work hours performed, materials utilized and services provided.*
- This is a rate sheet only based on limited information provided. Adjustments, changes and response to actual field conditions may incur added costs. *Final invoicing will reflect actual work hours performed, materials utilized and services provided.*
- AirX will make a good faith effort to locate and mark all utilities. However, due to utility depths, types of material, etc. some utilities may not be locatable or found. AirX requests that as-builts or maps be provided.
- Client to facilitate access to site. We also request that access be provided to any utility cabinets or facilities in the area.
- Potholing and Excavation rate applies to typical conditions of asphalt or concrete surface material 6" - 8" in depth and digable soil conditions. Excessive surface material, concrete beneath asphalt, cobble, dense clay, CTB base, slurry, caliche or other medium will be charged at the hourly rate listed on this estimate.
- **Utility Locating:** Minimum charge of 2 hours for Locating. Locator Truck includes electromagnetic, magnetic, sonic locating equipment. Also, GPR, duct rods, hand tools, gas testers, blowers & miscellaneous equipment pertinent to the trade.
- **Utility Re-Marking:** Utilities previously marked and subsequently lost due to conditions beyond our control shall not be the responsibility of AIRX. Re-marking will be charged at the utility locating rate indicated on this estimate.
- Traffic control and Right of Way plan drawings are on 11"x17" sheets. If D Sheets are required, additional fees will apply. If the TC plans are required to be prepared and approved by a Registered CA Civil Engineer, the cost is $250 per sheet, plus $120 per hour travel time.
- Standard traffic control includes all signs, cones, barricades, sign stands and caution tape and 1 arrow-board unless otherwise specified. Specialty equipment such as non-typical signage, crash barrels, message boards or K-Rail is available @ cost, plus 10%.
- AirX can provide certified flagman or additional laborers as needed at a rate of $200 per man/hour.
- **CCTV Inspection:** CCTV Rates are based on typical conditions. Conditions such as standard elbows, size of pipe and limited or no accessibility may prevent CCTV locating & inspection of utility. Locating via CCTV is limited if deeper than 5 feet and not guaranteed due to equipment limitations.
- CCTV pricing excludes jetting of pipe.
- **Materials:** Pricing allows for backfill of sand & Class II Base only. Also includes patching with AC Cold Patch or Quick Set Concrete only. AirX also offers a quality permanent patch with Aquaphalt. Use of Aquaphalt product is dependent upon Agency acceptance and guaranteed for 3 years. Please request a revised quote if other backfill material or surface repair is required.
- **Railroad Right of Way:** Railroad Protective Liability insurance will be required for all work within railroad right of way and may require Railroad-designated flagging and utility mark-out personnel. Coordination of personnel may affect schedule of work. Final fees will be paid for by AIRX and charged back to the Client at cost plus 10%.
- **Hazardous Spoils:** Testing, Storage, and Disposal of any material, hazardous or otherwise, will incur additional charge and based on project requirements. If required, fees will be paid for by AirX and charged back to the Client at cost plus 10%.
- Specialty training, due to project requirements, may incur added time and cost and affect schedule of work.
- Work within Caltrans, railroad, environmentally sensitive or contaminated areas may incur additional costs.
- Night work, if required, will incur additional cost for balloon lighting, generators and barricade lights.
- All rates are based on a standard 40-hour work week. Overtime, doubletime or holiday rates will apply, if applicable.
- Payment terms are 30 days from date of invoice, plus 1.5% per month thereafter.

Authorization: X

Invoice Contact: *please include all persons that will be receiving invoicing correspondence.*

Invoice Address: *please include all persons that will be receiving invoicing correspondence.*

Converse

CONVERSE CONSULTANTS
Non-Prevailing Wage Schedule of Fees
Geotechnical Personnel

Introduction
It is the objective of Converse Consultants to provide its clients with quality professional and technical services and a continuing source of professional advice and opinions. Services will be performed in a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions. This fee schedule is valid through December 31, 2026.

Hourly Charges for Personnel
Staff assignments will depend on personnel availability, job complexity, project site location, and experience level required to satisfy the technical requirements of the project and to meet the prevailing standard of professional care.

Field Technical Services (all including vehicle and equipment)

Construction Inspector – ACI/ICC and/or AWS/CWI certified (concrete, post-tension, masonry, structural steel, fireproofing; includes concrete batch plant and local steel fabrication inspections)	$85
Non-Destructive Testing Inspector (ultrasonic, magnetic particle, dye penetrant)	90
Construction Inspector/Technician (skidmore, pull testing, torque testing, Schmidt hammer, and pachometer)	90
Coring Technician	90
Soils Technician (soil, base, asphalt concrete, and moisture emission testing)	85
Senior Soils Technician	95
Sample Pick-Up	60

Professional Services (field and office)

Staff Professional	$145
Senior Staff Professional	155
Project Professional	165
Project Manager	175
Senior Professional	175
Principal Professional	225
Principal/Consultant	235

Laboratory Testing

Laboratory Technician (See Geotechnical Laboratory Testing and Materials Testing Services fee schedules.)	Per Test
Laboratory Supervisor	$100

Office Support

Clerical/Word Processing	$90
Drafting	90
CAD Operator/Drafting Manager	95

An overtime charge of 50 percent of the above hourly rates (excluding Professional Services) will be added for time in excess of eight hours per day and for all time on Saturdays, Sundays and holidays. An overtime charge of 100 percent of the above hourly rates (excluding Professional Services) will be charged on Sunday if hours worked were seven continuous eight hours per day in one work week, not counting paid time off within the week. Travel time to and from the job site will be charged at the hourly rates for the appropriate personnel.

Expenses
1. Exploration expenses (drilling, trenching, etc.) are charged at cost plus fifteen percent.
2. Travel and subsistence expenses (transportation, room and board, etc.) for individuals on projects requiring travel and/or living 50 miles away from the project site are charged at cost plus fifteen percent.
3. Automobile and truck expenses are charged at cost plus fifteen percent (rentals) or at the current IRS mileage rate for company-owned vehicles traveling between principal office and project.
4. Other out-of-pocket direct project expenses (aerial photos, long-distance telephone calls, permits, outside printing services, tests, etc.) are charged at cost plus fifteen percent.

Invoices
1. Invoices will be submitted to the Client on a monthly basis, and a final bill will be submitted upon completion of services.
2. Payment is due upon presentation of invoice and is past-due thirty days from invoice date. In the event Client fails to make any payment to Converse when due, Converse may immediately cease work hereunder until said payment, together with a service charge at the rate of eighteen percent per annum (but not exceeding the maximum allowed by law) from the due date, has been received. Furthermore, Converse may at its sole option and discretion refuse to perform any further work irrespective of payment from Client in the event Client fails to pay Converse for services when said payments are due.
3. Client shall pay attorneys' fees or other costs incurred in collecting any delinquent amount.

General Conditions
The terms and provisions of the Converse General Conditions are incorporated into this fee schedule as though set forth in full. If a copy of the General Conditions does not accompany this fee schedule, Client should request a copy from this office.

3 Man Survey Crew	586.00
2 Man Survey Crew	395.00
1 Man Survey Crew/Survey Chief	221.00
CONSULTATION	
Principal	$300.00

All out-of-pocket expenses, such as filing fees, printing, reproduction costs and deliveries, will be extra and invoiced at our direct cost plus 15%. Prevailing wage projects will be charged a higher rate for field engineering. Four (4) hour minimum charge for survey crew time. Any site visits less than 4 hours will be charged as extra work to fixed fee scopes of work.

Payment Terms: Accounts are due and payable within 10 days of the date of the invoice. If payment for invoice is not received within 30 days from the date of invoice, then a finance charge will be assessed at 1.5% per month for each month the invoice remains unpaid, starting at the 31st day. If payment for invoice is not received within 60 days from the date of invoice, then work will stop and will recommence once the account is paid in full.

Rates are subject to periodic increase. Prevailing Wage rates are subject to California Department of Industrial Relations mandated wage rate changes.

CITY OF ONTARIO
DESIGN SERVICES AGREEMENT

1. PARTIES AND DATE.

This Agreement is made and entered into as of _____ __, **2024** by and between the City of Ontario, a municipal corporation organized and operating under the laws of the State of California with its principal place of business at 303 East "B" Street, Ontario, California 91764-4196, County of San Bernardino, State of California ("City"), and **TKE Engineering Inc.,** a **CALIFORNIA C CORPORATION** with its principal place of business at **2305 Chicago Avenue, Riverside CA 92507** (hereinafter referred to as "Consultant"). City and Consultant are sometimes individually referred to herein as "Party" and collectively as "Parties."

2. RECITALS.

2.1 City. City is a municipal corporation organized under the laws of the State of California, with power to contract for services necessary to achieve its purpose.

2.2 Consultant. Consultant desires to perform and assume responsibility for the provision of certain professional **engineering** design services required by the City on the terms and conditions set forth in this Agreement. Consultant warrants that it is fully licensed, qualified, and willing to perform the services required by this Agreement; provided, however, that if Consultant is a corporation or other organization, the Project Consultant designated pursuant to Section 3.2, and not the Consultant itself, shall be fully licensed to practice as an **engineer** in the State of California.

2.3 Project. City desires to engage Consultant to render such services for the **On-Call Design Services** ("Project") as set forth in this Agreement.

3. TERMS

3.1 Employment of Consultant.

3.1.1 Scope of Services. Consultant promises and agrees to furnish to City all labor, materials, tools, equipment, services, and incidental and customary work necessary to fully and adequately supply the professional **engineering** and related services necessary for the full and adequate completion of the Project consistent with the provisions of this Agreement

(hereinafter referred to as "Services"). The Services are more particularly described throughout this Agreement, including Exhibit "A" attached hereto and incorporated herein by reference. All Services shall be subject to, and performed in accordance with, this Agreement, any exhibits attached hereto and incorporated herein by reference, and all applicable local, state and federal laws, rules and regulations. All Services performed by Consultant shall be subject to the sole and discretionary approval of the City, which approval shall not be unreasonably withheld.

3.1.2 Term. The term of this Agreement shall be from **June 4, 2024** to **June 4, 2027**, unless earlier terminated as provided herein. The City shall have the unilateral option, at its sole discretion, to renew this Agreement automatically for no more than **two** additional one-year terms. Consultant shall complete the Services within the term of this Agreement, and shall meet any other established schedules and deadlines.

3.2 Project Consultant; Key Personnel.

3.2.1 **Engineer of Record.** Consultant shall name a specific individual to act as Project Consultant, subject to the approval of City. Consultant hereby designates **Terry Renner, PE, PLS, QSD** (License No. **C 69984**) to act as the **Engineer of Record** for the Project. The **Engineer of Record** shall: (1) maintain oversight of the Services; (2) have full authority to represent and act on behalf of the Consultant for all purposes under this Agreement; (3) supervise and direct the Services using his or her best skill and attention; (4) be responsible for the means, methods, techniques, sequences and procedures used for the Services; (5) adequately coordinate all portions of the Services; and (6) act as principal contact with City and all contractors, consultants, engineers and inspectors on the Project. Any change in the **Engineer of Record** shall be subject to the City's prior written approval, which approval shall not be unreasonably withheld. The new **Engineer of Record** shall be of at least equal competence as the prior **Engineer of Record**. In the event that City and Consultant cannot agree as to the substitution of a new **Engineer of Record**, City shall be entitled to terminate this Agreement for cause.

3.2.2 Key Personnel. In addition to the **Engineer of Record**, Consultant has represented to the City that certain additional key personnel, engineers and consultants will perform the Services under this Agreement. Should one or more of such personnel, engineers or consultants become unavailable, Consultant may substitute others of at least equal competence upon written approval of the City. In the event that City and Consultant cannot agree as to the substitution of key personnel, engineers or consultants, City shall be entitled to terminate this Agreement for cause. The key additional personnel, engineers and consultants for performance of this Agreement are as follows: **Terry Renner, PE, PLS, QSD, Michael Thornton, PE, PLS, MS, Steven W Ledbetter, PE, Steve Nix, PE, PLS, Ron Musser, PE, PLS, Brian Wolfe, PE, and Octavio Parada.**.

3.3 Hiring of Consultants and Personnel.

3.3.1 Right to Hire or Employ. Consultant shall have the option, unless City objects in writing after notice, to employ at its expense architects, engineers, experts or other consultants qualified and licensed to render services in connection with the planning and/or administration of the Project, and to delegate to them such duties as Consultant may delegate without relieving Consultant from administrative or other responsibility under this Agreement. Consultant shall be responsible for the coordination and cooperation of Consultant's architects, engineers, experts or other consultants. All consultants, including changes in consultants, shall be subject to approval by City in its sole and reasonable discretion. Consultant shall notify City of the identity of all consultants at least fourteen (14) days prior to their commencement of work

to allow City to review their qualifications and approve to their participation on the Project in its sole and reasonable discretion.

3.3.2 Qualification and License. All architects, engineers, experts and other consultants retained by Consultant in performance of this Agreement shall be qualified to perform the Services assigned to them, and shall be licensed to practice in their respective professions, where required by law.

3.3.3 Standards and Insurance. All architects, engineers, experts and other consultants hired by Consultant shall be required to meet all of the same standards and insurance requirements set forth in this Agreement, unless other standards or requirements are approved by the City in writing. Unless changes are approved in writing by the City, Consultant's agreements with its consultants shall contain a provision making them subject to all provisions stipulated in this Agreement.

3.3.4 Assignments or Staff Changes. Consultant shall promptly obtain written City approval of any assignment, reassignment or replacement of such architects, engineers, experts and consultants, or of other staff changes of key personnel working on the Project. As provided in the Agreement, any changes in Consultant's consultants and key personnel shall be subject to approval by City.

3.3.5 Draftsman and Clerical Support. Draftsmen and clerical personnel shall be retained by Consultant at Consultant's sole expense.

3.4 Standard of Care.

3.4.1 Standard of Care. Consultant shall perform all Services under this Agreement in a skillful and competent manner, consistent with the standards generally recognized as being employed by professionals qualified to perform the Services in the same discipline in the State of California, and shall be responsible to City for damages sustained by the City and delays to the Project as specified in the indemnification provision of this Agreement. Without limiting the foregoing, Consultant shall be fully responsible to the City for any increased costs incurred by the City as a result of any such delays in the design or construction of the Project. Consultant represents and maintains that it is skilled in the professional calling necessary to perform the Services. Consultant warrants and represents that all of its employees, architects, engineers, experts and other consultants shall have sufficient skill and experience to perform the Services assigned to them. Finally, Consultant represents that it, its employees, architects, engineers, experts and other consultants have all licenses, permits, qualifications and approvals of whatever nature that are legally required to perform the Services assigned to or rendered by them and that such licenses and approvals shall be maintained throughout the term of this Agreement. As provided for in the indemnification provisions of this Agreement, Consultant shall perform, at its own cost and expense and without reimbursement from the City, any services necessary to correct errors or omissions which are caused by the Consultant's failure to comply with the standard of care provided for herein.

3.4.2 Performance of Employees. Any employee or consultant who is determined by the City to be uncooperative, incompetent, a threat to the adequate or timely completion of the Project, a threat to the safety of persons or property, or any employee or consultant who fails or refuses to perform the Services in a manner acceptable to the City, shall be promptly removed from the Project by the Consultant and shall not be re-employed to perform any of the Services or to work on the Project.

3.5 Laws and Regulations.

3.5.1 Knowledge and Compliance. Consultant shall keep itself fully informed of and in compliance with all applicable local, state and federal laws, rules and regulations in any manner affecting the performance of the Services or the Project, and shall give all notices required of the Consultant by law. Consultant shall be liable, pursuant to the standard of care and indemnification provisions of this Agreement, for all violations of such laws and regulations in connection with its Services. Consultant shall defend, indemnify and hold City, its officials, officers, employees and agents free and harmless, pursuant to the indemnification provisions of this Agreement, from any claim or liability arising out of any failure or alleged failure to comply with such laws, rules or regulations.

3.5.2 Drawings and Specifications. Consultant shall cause all drawings and specifications to conform to any applicable requirements of federal, state and local laws, rules and regulations, including the Uniform Building Code, in effect as of the time the drawings and specifications are prepared or revised during the latest phase of the Services described in Exhibit "A" attached hereto. Any significant revisions made necessary by changes in such laws, rules and regulations after this time may be compensated as Additional Services which were not known or reasonably should not have been known by Consultant. Consultant shall cause the necessary copies of such drawings and specifications to be filed with any governmental bodies with approval jurisdiction over the Project, in accordance with the Services described in Exhibit "A" attached hereto. For the preparation of all such drawings and specifications, the Consultant shall use Computer Aided Design Drafting ("CADD") (e.g., AutoCAD) or other technology acceptable to the Consultant and City.

3.5.3 Americans with Disabilities Act. Consultant will use its best professional efforts to interpret all applicable federal, state and local laws, rules and regulations with respect to access, including those of the Americans with Disabilities Act ("ADA"). Consultant shall inform City of the existence of inconsistencies of which it is aware or reasonably should be aware between federal and state accessibility laws, rules and regulations, as well as any other issues which are subject to conflicting interpretations of the law, and shall provide the City with its interpretation of such inconsistencies and conflicting interpretations. Unless Consultant brings such inconsistencies and conflicting interpretations to the attention of the City and requests City's direction on how to proceed, the Consultant's interpretation of such inconsistencies and conflicting interpretations shall be the sole responsibility and liability of Consultant, and the Consultant shall correct all plans, specifications and other documents prepared for the Project at no additional cost if its interpretations are shown to be incorrect. In the event that the Consultant request's City's direction on how to proceed with respect to any inconsistent and/or conflicting interpretation, the Consultant shall be responsible to the City only pursuant to the indemnification provisions of this Agreement.

3.5.4 Permits, Approvals and Authorizations. Consultant shall provide City with a list of all permits, approvals or other authorizations required for the Project from all federal, state or local governmental bodies with approval jurisdiction over the Project. Consultant shall then assist the City in obtaining all such permits, approvals and other authorizations. The costs of such permits, approvals and other authorizations shall be paid by the City.

3.5.5 Water Quality Management and Compliance. Consultant shall keep itself and all subcontractors, staff, and employees fully informed of and in compliance with all local, state and federal laws, rules and regulations that may impact, or be implicated by the performance of the Services including, without limitation, all applicable provisions of the City's ordinances

regulating water quality and storm water; the Federal Water Pollution Control Act (33 U.S.C. § 1251 *et seq.*); the California Porter-Cologne Water Quality Control Act (Cal Water Code §§ 13000-14950); and any and all regulations, policies, or permits issued pursuant to any such authority. Consultant shall additionally comply with the lawful requirements of the City, and any other municipality, drainage district, or other local agency with jurisdiction over the location where the Services are to be conducted, regulating water quality and storm water discharges. Failure to comply with laws, regulations, and ordinances listed in this Section is a violation of federal and state law.

3.6 Independent Contractor.

3.6.1 Control and Payment of Subordinates. City retains Consultant on an independent contractor basis and Consultant is not an employee of City. Consultant is not an employee for state tax, federal tax or any other purpose, and is not entitled to the rights or benefits afforded to City's employees. Any additional personnel performing the Services under this Agreement on behalf of Consultant shall also not be employees of City, and shall at all times be under Consultant's exclusive direction and control. Consultant shall pay all wages, salaries, and other amounts due such personnel in connection with their performance of Services under this Agreement and as required by law. Consultant shall be responsible for all reports and obligations respecting such additional personnel, including, but not limited to: social security taxes, income tax withholding, unemployment insurance, disability insurance, and workers' compensation insurance.

3.7 Schedule of Services.

3.7.1 Consultant Services. Consultant shall fully and adequately complete the Services described in this Agreement and in Exhibit "A" attached hereto and incorporated herein by reference.

3.7.2 Timely Performance Standard. Consultant shall perform all Services hereunder as expeditiously as is consistent with professional skill and care, as well as the orderly progress of the Project work so as not to be the cause, in whole or in part, of delays in the completion of the Project or in the achievement of any Project milestones, as provided herein. Specifically, Consultant shall perform its Services so as to allow for the full and adequate completion of the Project within the time required by the City and within any completion schedules adopted for the Project. Consultant agrees to coordinate with City's staff, contractors and consultants in the performance of the Services, and shall be available to City's staff, contractors and consultants at all reasonable times.

3.7.3 Performance Schedule. Consultant shall prepare an estimated time schedule for the performance of Consultant's Services, to be adjusted as the Project proceeds. Such schedule shall be subject to the City's review and approval, which approval shall not be unreasonably withheld, and shall include allowances for periods of time required for City's review and approval of submissions, and for approvals of authorities having jurisdiction over Project approval and funding. If City and Consultant cannot mutually agree on a performance schedule, City shall have the authority to immediately terminate this Agreement. The schedule shall not be exceeded by Consultant without the prior written approval of City. If the Consultant's Services are not completed within the time provided by the agreed upon performance schedule, or any milestones established therein, it is understood, acknowledged and agreed that the City will suffer damage for which the Consultant will be responsible.

3.7.4 Excusable Delays. Any delays in Consultant's work caused by the following may be added to the time for completion of any obligations of Consultant: (1) the actions of City or its employees; (2) the actions of those in direct contractual relationship with City; (3) the actions of any governmental agency having jurisdiction over the Project; (4) the actions of any parties not within the reasonable control of the Consultant; and (5) any Force Majeure Event (as defined herein) or other unforeseen occurrence not due to any fault or negligence on the part of Consultant. Neither the City nor the Consultant shall be liable for damages, liquidated or otherwise, to the other on account of such delays.

3.7.5 Force Majeure Events. Neither City nor Consultant shall be considered in default of this Agreement for delays in performance caused by circumstances beyond the reasonable control of the non-performing Party. For purposes of this Agreement, such circumstances include a Force Majeure Event. A Force Majeure Event shall mean an event that materially affects a Party's performance and is one or more of the following: (1) Acts of God or other natural disasters; (2) terrorism or other acts of a public enemy; (3) orders of governmental authorities (including, without limitation, unreasonable and unforeseeable delay in the issuance of permits or approvals by governmental authorities that are required for the services); (4) strikes and other organized labor action occurring at the site and the effects thereof on the services, only to the extent such strikes and other organized labor action are beyond the control of Consultant and its subcontractors, and to the extent the effects thereof cannot be avoided by use of replacement workers; and (5) pandemics, epidemics or quarantine restrictions. For purposes of this section, "orders of governmental authorities," includes ordinances, emergency proclamations and orders, rules to protect the public health, welfare and safety, and other actions of a public agency applicable to the Services and Agreement. Should a Force Majeure Event occur, the non-performing Party shall, within fifteen (15) calendar days of the beginning of an Force Majeure Event, give written notice to the other Party describing the circumstances preventing continued performance and the efforts being made to resume performance of this Agreement. Force Majeure Events shall not entitle Consultant to any additional compensation. Notwithstanding the foregoing in this section, the City may still terminate this Agreement in accordance with the termination provisions of this Agreement.

3.7.6 Request for Excusable Delay Credit. The Consultant shall, within fifteen (15) calendar days of the beginning of any excusable delay, notify the City in writing of the causes of delay (unless City grants in writing a further period of time to file such notice prior to the date of final payment under the Agreement). City will then ascertain the facts and the extent of the delay, and grant an extension of time for completing the Services when, in its sole judgment, the findings of fact justify such an extension. The City's findings of fact thereon shall be final and conclusive on the Parties. Extensions of time shall apply only to that portion of the Services affected by the delay and shall not apply to other portions of the Services not so affected. The sole remedy of Consultant for extensions of time shall be an extension of the performance time at no cost to the City. If Additional Services are required as a result of an excusable delay, the Parties shall mutually agree thereto pursuant to the Additional Services provision of this Agreement. Should Consultant make an application for an extension of time, Consultant shall submit evidence that the insurance policies required by this Agreement remain in effect during the requested additional period of time.

3.8 Additional Services.

3.8.1 Request for Services. At City's request, Consultant may be asked to perform services not otherwise included in this Agreement, not included within the basic services

listed in Exhibit "A" attached hereto, and/or not customarily furnished in accordance with generally accepted architectural practice.

3.8.2 Definition. As used herein, "Additional Services" mean: (1) any work which is determined by City to be necessary for the proper completion of the Project, but which the Parties did not reasonably anticipate would be necessary for the Consultant to perform at the execution of this Agreement; or (2) any work listed as Additional Services in Exhibit "A" attached hereto. Consultant shall not perform, nor be compensated for, Additional Services without prior written authorization from City and without an agreement between the City and Consultant as to the compensation to be paid for such services. City shall pay Consultant for any approved Additional Services, pursuant to the compensation provisions herein, so long as such services are not made necessary through the fault of Consultant pursuant to the indemnification provision of this Agreement.

3.8.3 Examples of Additional Services. Such Additional Services shall not include any redesign or revisions to drawings, specifications or other documents when such revisions are necessary in order to bring such documents into compliance with applicable laws, rules, regulations or codes of which Consultant was aware or should have been aware pursuant to the laws and regulations provision of this Agreement above. Such Additional Services may include, but shall not be limited to:

(a) Separately Bid Portions of Project. Plan preparation and/or administration of work on portions of the Project separately bid.

(b) Furniture and Interior Design. Assistance to City, if requested, for the selection of moveable furniture, equipment or articles which are not included in the Construction Documents.

(c) Fault of Contractor. Services caused by delinquency, default or insolvency of contractor, or by major defects in the work of the contractor, provided that any such services made necessary by the failure of Consultant to detect and report such matters when it reasonably should have done so shall not be compensated.

(d) Inconsistent Approvals or Instructions. Revisions in drawings, specifications or other documents when such revisions are inconsistent with written approvals or instructions previously given and are due to causes beyond the control of Consultant.

(e) Legal Proceedings. Serving as an expert witness on City's behalf or attending legal proceedings to which the Consultant is not a party.

(f) Damage Repair. Supervision of repair of damages to any structure.

(g) Extra Environmental Services. Additional work required for environmental conditions (e.g. asbestos or site conditions) not already contemplated within the Consultant's services for the Project.

3.9 City Responsibilities. City's responsibilities shall include the following:

3.9.1 Data and Information. City shall make available to Consultant all necessary data and information concerning the purpose and requirements of the Project, including scheduling and budget limitations, objectives, constraints and criteria. As part of the budget

limitation information, the City shall provide the Consultant with a preliminary construction budget ("City's Preliminary Construction Budget").

3.9.2 Project Survey. If required pursuant to the scope of the Project and if requested by Consultant, City shall furnish Consultant with, or direct Consultant to procure at City's expense, a survey of the Project site prepared by a registered surveyor or civil engineer, any other record documents which shall indicate existing structures, land features, improvements, sewer, water, gas, electrical and utility lines, topographical information and boundary dimensions of the site, and any other such pertinent information.

3.9.3 Bid Phase. Distribute Construction Documents to bidders and conduct the opening and review of bids for the Project.

3.9.4 Testing. Retain consultant(s) to conduct chemical, mechanical, soils, geological or other tests required for proper design of the Project, and furnish such surveys, borings, test pits, and other tests as may be necessary to reveal conditions of the site which must be known to determine soil condition or to ensure the proper development of the required drawings and specifications.

3.9.5 Required Inspections and Tests. Retain consultant(s) to conduct materials testing and inspection or environmental/hazardous materials testing and inspection pursuant to any applicable laws, rules or regulations.

3.9.6 Fees of Reviewing or Licensing Agencies. Directly pay or reimburse the payment of all fees required by any reviewing or licensing agency, or other agency having approval jurisdiction over the Project.

3.9.7 City's Representative. The City hereby designates the City Manager, or his or her designee, to act as its representative for the performance of this Agreement ("City's Representative"). City's Representative shall have the power to act on behalf of the City for all purposes under this Contract. The City Manager hereby designates **Dennis Mejia, PE, Utilities Engineering Division Manager**, or his or her designee, as the City's contact for the implementation of the Services hereunder. Contractor shall not accept direction or orders from any person other than the City's Representative or his or her designee.

3.9.8 Review and Approved Documents. Review all documents submitted by Consultant, including change orders and other matters requiring approval by the City Council or other officials. City shall advise Consultant of decisions pertaining to such documents within a reasonable time after submission, so as not to cause unreasonable delay as provided in the excusable delay provisions of this Agreement above.

3.10 Compensation.

3.10.1 Consultant's Compensation for Basic Services. City shall pay to Consultant, for the performance of all Services rendered under this Agreement, the total not to exceed amount of **Six Hundred Thousand Dollars ($600,000)** ("Total Compensation"). This Total Compensation amount shall be based upon, and may be adjusted according to, the fee schedule and related terms and conditions attached hereto as Exhibit "B" and incorporated herein by reference. The Total Compensation, as may be adjusted upon mutual agreement, shall constitute complete and adequate payment for Services under this Agreement.

3.10.2 Payment for Additional Services. At any time during the term of this Agreement, City may request that Consultant perform Additional Services. As used herein, Additional Services means any work which is determined by City to be necessary for the proper completion of the Project, but which the Parties did not reasonably anticipate would be necessary at the execution of this Agreement. Any additional work in excess of this amount must be approved by the City. If authorized, such Additional Services will be compensated at the rates and in the manner set forth in Exhibit "C" attached hereto and incorporated herein by reference, unless a flat rate or some other form of compensation is mutually agreed upon by the Parties. If City requires Consultant to hire consultants to perform any Additional Services, Consultant shall be compensated therefore at the rates and in the manner set forth in Exhibit "C" attached hereto and incorporated herein by reference, unless a flat rate or some other form of compensation is mutually agreed upon by the Parties. City shall have the authority to review and approve the rates of any such consultants. In addition, Consultant shall be reimbursed for any expenses incurred by such consultants pursuant to the terms and conditions of Section 3.10.3.

3.10.3 Reimbursable Expenses. Reimbursable expenses are in addition to compensation for the Services and Additional Services. Consultant shall not be reimbursed for any expenses unless authorized in writing by City, which approval may be evidenced by inclusion in Exhibit "C" attached hereto. Such reimbursable expenses shall include only those expenses which are reasonably and necessarily incurred by Consultant in the interest of the Project. Consultant shall be required to acquire prior written consent in order to obtain reimbursement for the following: (1) extraordinary transportation expenses incurred in connection with the Project; (2) out-of-town travel expenses incurred in connection with the Project; (3) fees paid for securing approval of authorities having jurisdiction over the Project; (4) bid document duplication costs in excess of $1,000; and (5) other costs, fees and expenses in excess of $1,000.

3.10.4 Payment to Consultant. Consultant's compensation and reimbursable expenses shall be paid by City to Consultant no more often than monthly. Such periodic payments shall be made based upon the percentage of work completed, and in accordance with the phasing and funding schedule provided in Exhibit "B" and the compensation rates indicated in Exhibit "C" attached hereto and incorporated herein by reference. In order to receive payment, Consultant shall present to City an itemized statement which indicates Services performed, percentage of Services completed, method for computing the amount payable, and the amount to be paid. The statement shall describe the amount of Services provided since the initial commencement date, or since the start of the subsequent billing periods, as appropriate, through the date of the statement, as well as those expenses for which reimbursement is requested for that statement period. The amount paid to Consultant shall never exceed the percentage amounts authorized by the phasing and funding schedule located in Exhibit "B" attached hereto. City shall, within thirty (30) days of receiving such statement, review the statement and pay all approved charges thereon pursuant to the provisions of Civil Code Section 3320. Disputed amounts shall be resolved by the Parties in a mutually agreeable manner.

Payments made for Additional Services shall be made in installments, not more often than monthly, proportionate to the degree of completion of such services or in such other manner as the Parties shall specify when such services are agreed upon, and in accordance with any authorized fee or rate schedule. In order to receive payment, Consultant shall present to City an itemized statement which indicates the Additional Services performed, percentage of Additional Services completed, method for computing the amount payable, and the amount to be paid. The statement shall describe the amount of Additional Services provided since the initial commencement date, or since the start of the subsequent billing periods, as appropriate, through the date of the statement. City shall, within thirty (30) days of receiving such statement, review

the statement and pay all approved charges thereon pursuant to the provisions of Civil Code Section 3320. Disputed amounts shall be resolved by the Parties in a mutually agreeable manner.

Upon cancellation or termination of this Agreement, Consultant shall be compensated as set forth in the termination provision herein.

3.10.5 Withholding Payment to Consultant. The City may withhold payment, in whole or in part, to the extent reasonably necessary to protect the City from claims, demands, causes of action, costs, expenses, liabilities, losses, damages, or injuries of any kind to the extent arising out of or caused by the negligence, recklessness, or willful misconduct protected under the indemnification provisions of this Agreement. Failure by City to deduct any sums from a progress payment shall not constitute a waiver of the City's right to such sums. The City may keep any moneys which would otherwise be payable at any time hereunder and apply the same, or so much as may be necessary therefor, to the payment of any expenses, losses, or damages as determined by the City, incurred by the City for which Consultant is liable under the Agreement or state law. Payments to the Consultant for compensation and reimbursable expenses due shall not be contingent on the construction, completion or ultimate success of the Project. Payment to the Consultant shall not be withheld, postponed, or made contingent upon receipt by the City of offsetting reimbursement or credit from Parties not within the Consultant's reasonable control.

3.10.6 Prevailing Wages. Consultant is aware of the requirements of California Labor Code Sections 1720, et seq., and 1770, et seq., as well as California Code of Regulations, Title 8, Section 16000, et seq., ("Prevailing Wage Laws"), which require the payment of prevailing wage rates and the performance of other requirements on certain "public works" and "maintenance" projects. Since the Services are being performed as part of an applicable "public works" or "maintenance" project, as defined by the Prevailing Wage Laws, and since the total compensation is $1,000 or more, Consultant agrees to fully comply with and to require its consultants to fully comply with such Prevailing Wage Laws. City shall provide Consultant with a copy of the prevailing rates of per diem wages in effect at the commencement of this Agreement. Consultant shall make copies of the prevailing rates of per diem wages for each craft, classification or type of worker needed to execute the Services available to interested parties upon request, and shall post copies at the Consultant's principal place of business and at the Project site. It shall be mandatory upon the Consultant and all subconsultants to comply with all California Labor Code provisions, which include but are not limited to prevailing wages (Labor Code Sections 1771, 1774 and 1775), employment of apprentices (Labor Code Section 1777.5), certified payroll records (Labor Code Sections 1771.4 and 1776), hours of labor (Labor Code Sections 1813 and 1815) and debarment of contractors and subcontractors (Labor Code Section 1777.1). The requirement to submit certified payroll records directly to the Labor Commissioner under Labor Code section 1771.4 shall not apply to work performed on a public works project that is exempt pursuant to the small project exemption specified in Labor Code Section 1771.4. Consultant shall defend, indemnify and hold the City, its elected officials, officers, employees and agents free and harmless from any claims, liabilities, costs, penalties or interest arising out of any failure or alleged failure of the Consultant or its consultants to comply with the Prevailing Wage Laws.

(a) Registration/DIR Compliance. If the Services are being performed as part of an applicable "public works project" of over $25,000 when the project is for construction, alteration, demolition, installation, or repair work, or a public works project of over $15,000 when the project is for maintenance work, in addition to the foregoing, then pursuant to Labor Code sections 1725.5 and 1771.1, the Consultant and all subconsultants performing such Services must be registered with the Department of Industrial Relations ("DIR"). Consultant shall maintain

registration for the duration of the Project and require the same of any subconsultants. This project may also be subject to compliance monitoring and enforcement by the DIR. It shall be Consultant's sole responsibility to comply with all applicable registration and labor compliance requirements, including the submission of payroll records directly to the DIR. Any stop orders issued by the Department of Industrial Relations against Consultant or any subconsultant that affect Consultant's performance of services, including any delay, shall be Consultant's sole responsibility. Any delay arising out of or resulting from such stop orders shall be considered Consultant caused delay and shall not be compensable by the City. Consultant shall defend, indemnify and hold the City, its officials, officers, employees and agents free and harmless from any claim or liability arising out of stop orders issued by the Department of Industrial Relations against Consultant or any subconsultant.

3.11 Notice to Proceed.

Consultant shall not proceed with performance of any Services under this Agreement unless and until the City provides a written notice to proceed.

3.12 Termination, Suspension and Abandonment.

3.12.1 Grounds for Termination; Consultant's Termination for Cause. City hereby reserves the right to suspend or abandon, at any time and for any reason, all or any portion of the Project and the construction work thereon, or to terminate this Agreement at any time with or without cause. Consultant shall be provided with at least seven (7) days advanced written notice of such suspension, abandonment or termination. In the event of such suspension, abandonment or termination, Consultant shall be paid for Services and reimbursable expenses rendered up to the date of such suspension, abandonment or termination, pursuant to the schedule of payments provided for in this Agreement, less any claims against or damages suffered by City as a result of the default, if any, by Consultant. Consultant hereby expressly waives any and all claims for damages or compensation arising under this Agreement, except as set forth herein, in the event of such suspension, abandonment or termination. Consultant may terminate this Agreement for substantial breach of performance by the City such as failure to make payment to Consultant as provided in this Agreement.

3.12.2 City's Suspension of Work. If Consultant's Services are suspended by City, City may require Consultant to resume such Services within ninety (90) days after written notice from City. When the Project is resumed, the Total Compensation and schedule of Services shall be equitably adjusted upon mutual agreement of the City and Consultant.

3.12.3 Documents and Other Data. Upon suspension, abandonment or termination, Consultant shall provide to City all preliminary studies, sketches, working drawings, specifications, computations, and all other Project Documents, as defined below, to which City would have been entitled at the completion of Consultant's Services under this Agreement. Upon payment of the amount required to be paid to Consultant pursuant to the termination provisions of this Agreement, City shall have the rights, as provided in this Agreement hereinafter, to use such Project Documents prepared by or on behalf of Consultant under this Agreement. Consultant shall make such documents available to City upon request and without additional compensation other than as may be approved as a reimbursable expense.

3.12.4 Employment of other Consultants. In the event this Agreement is terminated in whole or in part as provided herein, City may procure, upon such terms and in such manner as it may determine appropriate, services similar to those terminated.

3.13 Ownership and Use of Documents; Confidentiality.

3.13.1 Ownership. All plans, specifications, original or reproducible transparencies of working drawings and master plans, preliminary sketches, architectural presentation drawings, structural computations, estimates and any other documents prepared pursuant to this Agreement, including, but not limited to, any other works of authorship fixed in any tangible medium of expression such as writings, physical drawings and data magnetically or otherwise recorded on computer diskettes (hereinafter referred to as the "Project Documents") shall be and remain the property of City. Although the official copyright in all Project Documents shall remain with the Consultant or other applicable subcontractors or consultants, the Project Documents shall be the property of City whether or not the work for which they were made is executed or completed. Within thirty (30) calendar days following completion of the Project, Consultant shall provide to City copies of all Project Documents required by City. In addition, Consultant shall retain copies of all Project Documents on file for a minimum of fifteen (15) years following completion of the Project, and shall make copies available to City upon the payment of reasonable duplication costs. Before destroying the Project Documents following this retention period, Consultant shall make a reasonable effort to notify City and provide City with the opportunity to obtain the documents.

3.13.2 Right to Use. Consultant grants to City the right to use and reuse all or part of the Project Documents, at City's sole discretion and with no additional compensation to Consultant, for the following purposes:

(a) The construction of all or part of this Project.

(b) The repair, renovation, modernization, replacement, reconstruction or expansion of this Project at any time;

(c) The construction of another project by or on behalf of the City for its ownership and use;

City is not bound by this Agreement to employ the services of Consultant in the event such documents are used or reused for these purposes. City shall be able to use or reuse the Project Documents for these purposes without risk of liability to the Consultant or third parties with respect to the condition of the Project Documents, and the use or reuse of the Project Documents for these purposes shall not be construed or interpreted to waive or limit City's right to recover for latent defects or for errors or omissions of the Consultant.

Any use or reuse by City of the Project Documents on any project other than this Project without employing the services of Consultant shall be at City's own risk with respect to third parties. If City uses or reuses the Project Documents on any project other than this Project, it shall remove the Consultant's seal from the Project Documents and hold harmless Consultant and its officers, directors, agents and employees from claims arising out of the negligent use or re-use of the Project Documents on such other project.

3.13.3 License. This Agreement creates a non-exclusive and perpetual license for City to copy, use, modify or reuse any and all Project Documents and any intellectual property rights therein. Consultant shall require any and all subcontractors and consultants to agree in writing that City is granted a non-exclusive and perpetual license for the work of such subcontractors or consultants performed pursuant to this Agreement.

3.13.4 Right to License. Consultant represents and warrants that Consultant has the legal right to license any and all copyrights, designs and other intellectual property embodied in the Project Documents that Consultant prepares or causes to be prepared pursuant to this Agreement. Consultant shall indemnify and hold City harmless pursuant to the indemnification provisions of this Agreement for any breach of this Section. Consultant makes no such representation and warranty in regard to previously prepared designs, plans, specifications, studies, drawings, estimates or other documents that were prepared by design professionals other than Consultant and provided to Consultant by City.

3.13.5 Confidentiality. All Project Documents, either created by or provided to Consultant in connection with the performance of this Agreement, shall be held confidential by Consultant to the extent they are not subject to disclosure pursuant to the Public Records Act. All Project Documents shall not, without the written consent of City, be used or reproduced by Consultant for any purposes other than the performance of the Services. Consultant shall not disclose, cause or facilitate the disclosure of the Project Documents to any person or entity not connected with the performance of the Services or the Project. Nothing furnished to Consultant which is otherwise known to Consultant or is generally known, or has become known, to the related industry shall be deemed confidential. Consultant shall not use City's name or insignia, photographs of the Project, or any publicity pertaining to the Services or the Project in any magazine, trade paper, newspaper, television or radio production or other similar medium without the written consent of City.

3.14 Indemnification.

3.14.1 To the fullest extent permitted by law, Consultant shall defend (with counsel of City's choosing), indemnify and hold the City, its officials, officers, employees, volunteers, and agents free and harmless from any and all claims, demands, causes of action, costs, expenses, liability, loss, damage or injury of any kind, in law or equity, to property or persons, including wrongful death, in any manner arising out of, pertaining to, or incident to any acts, errors or omissions, or willful misconduct of Consultant, its officials, officers, employees, subcontractors, consultants or agents in connection with the performance of the Consultant's Services, the Project or this Agreement, including without limitation the payment of all damages, expert witness fees and attorney's fees and other related costs and expenses except such loss or damage caused by the sole negligence or willful misconduct of the City. Consultant's obligation to indemnify shall survive expiration or termination of this Agreement and shall not be restricted to insurance proceeds, if any, received by Consultant, the City, its officials, officers, employees, agents, or volunteers.

3.14.2 If Consultant's obligation to defend, indemnify, and/or hold harmless arises out of Consultant's performance as a "design professional" (as that term is defined under Civil Code section 2782.8), then, and only to the extent required by Civil Code section 2782.8, which is fully incorporated herein, Consultant's indemnification obligation shall be limited to claims that arise out of, pertain to, or relate to the negligence, recklessness, or willful misconduct of the Consultant, and, upon Consultant obtaining a final adjudication by a court of competent jurisdiction, Consultant's liability for such claim, including the cost to defend, shall not exceed the Consultant's proportionate percentage of fault.

3.15 Insurance. Consultant shall not commence work under this Agreement until it has provided evidence satisfactory to the City that it has secured all insurance required under this Section. In addition, Consultant shall not allow any subconsultant to commence work on any

subcontract until it has provided evidence satisfactory to the City that the subconsultant has secured all insurance required under this section.

3.15.1 Types of Insurance Required. As a condition precedent to the effectiveness of this Agreement for work to be performed hereunder, and without limiting the indemnity provisions of the Agreement, Consultant shall, at its expense, procure and maintain in full force and effect for the duration of the Agreement the following policies of insurance. If the existing policies do not meet the insurance requirements set forth herein, Consultant agrees to amend, supplement or endorse the policies to do so.

3.15.2 Additional Insured. The City of Ontario, its officials, officers, employees, agents, and volunteers shall be named as additional insureds on Consultant's and its subconsultants' policies of commercial general liability and automobile liability insurance using the endorsements and forms specified herein or exact equivalents.

3.15.3 Commercial General Liability

(a) The Consultant shall take out and maintain, during the performance of all work under this Agreement, in amounts not less than specified herein, Commercial General Liability Insurance, in a form and with insurance companies acceptable to the City.

(b) Coverage for Commercial General Liability insurance shall be at least as broad as the following: Insurance Services Office Commercial General Liability coverage (Occurrence Form CG 00 01) or exact equivalent. Commercial General Liability Insurance must include coverage for the following:

(i) Bodily Injury and Property Damage

(ii) Personal Injury/Advertising Injury

(iii) Premises/Operations Liability

(iv) Products/Completed Operations Liability

(v) Aggregate Limits that Apply per Project

(vi) Explosion, Collapse and Underground (UCX) exclusion deleted

(vii) Contractual Liability with respect to this Contract

(viii) Broad Form Property Damage

(ix) Independent Consultants Coverage

(c) The policy shall contain no endorsements or provisions limiting coverage for (1) contractual liability; (2) cross liability exclusion for claims or suits by one insured against another; (3) products/completed operations liability; or (4) contain any other exclusion contrary to the Agreement.

(d) The policy shall give City, the City Council and each member of the City Council, its officers, employees, agents and City designated volunteers additional insured status using ISO endorsement forms CG 20 10 10 01 and 20 37 10 01, or endorsements providing the exact same coverage.

(e) The general liability program may utilize either deductibles or provide coverage excess of a self-insured retention, subject to written approval by the City, and provided that such deductibles shall not apply to the City as an additional insured.

3.15.4 Automobile Liability

(a) At all times during the performance of the work under this Agreement, the Consultant shall maintain Automobile Liability Insurance for bodily injury and property damage including coverage for owned, non-owned and hired vehicles, in a form and with insurance companies acceptable to the City.

(b) Coverage for automobile liability insurance shall be at least as broad as Insurance Services Office Form Number CA 00 01 covering automobile liability (Coverage Symbol 1, any auto).

(c) The policy shall give City, the City Council and each member of the City Council, its officers, employees, agents and City designated volunteers additional insured status.

(d) Subject to written approval by the City, the automobile liability program may utilize deductibles, provided that such deductibles shall not apply to the City as an additional insured, but not a self-insured retention.

3.15.5 Workers' Compensation/Employer's Liability

(a) Consultant certifies that he/she is aware of the provisions of Section 3700 of the California Labor Code which requires every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that code, and he/she will comply with such provisions before commencing work under this Agreement.

(b) To the extent Consultant has employees at any time during the term of this Agreement, at all times during the performance of the work under this Agreement, the Consultant shall maintain full compensation insurance for all persons employed directly by him/her to carry out the work contemplated under this Agreement, all in accordance with the "Workers' Compensation and Insurance Act," Division IV of the Labor Code of the State of California and any acts amendatory thereof, and Employer's Liability Coverage in amounts indicated herein. Consultant shall require all subconsultants to obtain and maintain, for the period required by this Agreement, workers' compensation coverage of the same type and limits as specified in this Section.

3.15.6 Professional Liability (Errors and Omissions)

(a) At all times during the performance of the work under this Agreement the Consultant shall maintain professional liability or Errors and Omissions insurance appropriate to its profession, in a form and with insurance companies acceptable to the City and

in an amount indicated herein. This insurance shall be written on a policy form coverage specifically designed to protect against acts, errors or omissions of the Consultant. "Covered Professional Services" as designated in the policy must specifically include work performed under this Agreement. The policy must "pay on behalf of" the insured and must include a provision establishing the insurer's duty to defend.

3.15.7 Minimum Policy Limits Required

(a) The following insurance limits are required for the Agreement:

Coverage	Combined Single Limit
Commercial General Liability	$2,000,000 per occurrence/ $4,000,000 aggregate for bodily injury, personal injury, and property damage
Automobile Liability	$2,000,000 per occurrence for bodily injury and property damage
Employer's Liability	$1,000,000 per occurrence
Professional Liability	$2,000,000 per claim and aggregate (errors and omissions)

(b) Defense costs shall be payable in addition to the limits.

(c) Requirements of specific coverage or limits contained in this Section are not intended as a limitation on coverage, limits, or other requirement, or a waiver of any coverage normally provided by any insurance. Any available coverage shall be provided to the parties required to be named as Additional Insured pursuant to this Agreement.

3.15.8 Evidence Required

(a) Prior to execution of the Agreement, the Consultant shall file with the City evidence of insurance from an insurer or insurers certifying to the coverage of all insurance required herein. Such evidence shall include original copies of the ISO CG 00 01 (or insurer's equivalent) signed by the insurer's representative and Certificate of Insurance (Acord Form 25-S or equivalent), together with required endorsements. All evidence of insurance shall be signed by a properly authorized officer, agent, or qualified representative of the insurer and shall certify the names of the insured, any additional insureds, where appropriate, the type and amount of the insurance, the location and operations to which the insurance applies, and the expiration date of such insurance.

3.15.9 Policy Provisions Required

(a) Consultant shall provide the City at least thirty (30) days prior written notice of cancellation of any policy required by this Agreement, except that the Consultant shall provide at least ten (10) days prior written notice of cancellation of any such policy due to non-payment of premium. If any of the required coverage is cancelled or expires during the term of this Agreement, the Consultant shall deliver renewal certificate(s) including the General Liability Additional Insured Endorsement to the City at least ten (10) days prior to the effective date of cancellation or expiration.

(b) The Commercial General Liability Policy and Automobile Policy shall each contain a provision stating that Consultant's policy is primary insurance and that any insurance, deductible, or self-insurance maintained by the City, its officials, officers, employees, agents, or volunteers shall not contribute with this primary insurance. Policies shall contain or be endorsed to contain such provisions.

(c) The retroactive date (if any) of each policy is to be no later than the effective date of this Agreement. Consultant shall maintain such coverage continuously for a period of at least three years after the completion of the work under this Agreement. Consultant shall purchase a one (1) year extended reporting period A) if the retroactive date is advanced past the effective date of this Agreement; B) if the policy is cancelled or not renewed; or C) if the policy is replaced by another claims-made policy with a retroactive date subsequent to the effective date of this Agreement.

(d) All required insurance coverages, except for the professional liability coverage, shall contain or be endorsed to waiver of subrogation in favor of the City, its officials, officers, employees, agents, and volunteers or shall specifically allow Consultant or others providing insurance evidence in compliance with these specifications to waive their right of recovery prior to a loss. Consultant hereby waives its own right of recovery against City, and shall require similar written express waivers and insurance clauses from each of its subconsultants.

(e) The limits set forth herein shall apply separately to each insured against whom claims are made or suits are brought, except with respect to the limits of liability. Further the limits set forth herein shall not be construed to relieve the Consultant from liability in excess of such coverage, nor shall it limit the Consultant's indemnification obligations to the City and shall not preclude the City from taking such other actions available to the City under other provisions of the Agreement or law.

3.15.10 Qualifying Insurers

(a) All policies required shall be issued by acceptable insurance companies, as determined by the City, which satisfy the following minimum requirements: Each such policy shall be from a company or companies with a current A.M. Best's rating of no less than A:VII and admitted to transact in the business of insurance in the State of California, or otherwise allowed to place insurance through surplus line brokers under applicable provisions of the California Insurance Code or any federal law.

3.15.11 Additional Insurance Provisions

(a) The foregoing requirements as to the types and limits of insurance coverage to be maintained by Consultant, and any approval of said insurance by the City, is not intended to and shall not in any manner limit or qualify the liabilities and obligations otherwise assumed by the Consultant pursuant to this Agreement, including but not limited to, the provisions concerning indemnification.

(b) If at any time during the life of the Agreement, any policy of insurance required under this Agreement does not comply with these specifications or is canceled and not replaced, City has the right but not the duty to obtain the insurance it deems necessary and any premium paid by City will be promptly reimbursed by Consultant or City will withhold

amounts sufficient to pay premium from Consultant payments. In the alternative, City may cancel this Agreement.

(c) The City may require the Consultant to provide complete copies of all insurance policies in effect for the duration of the Project.

(d) Neither the City nor the City Council, nor any member of the City Council, nor any of the officials, officers, employees, agents or volunteers shall be personally responsible for any liability arising under or by virtue of this Agreement.

3.15.12 Subconsultant Insurance Requirements

(a) Consultant shall not allow any subcontractors or subconsultants to commence work on any subcontract until they have provided evidence satisfactory to the City that they have secured all insurance required under this Section. Policies of commercial general liability insurance provided by such subcontractors or subconsultants shall be endorsed to name the City as an additional insured using ISO form CG 20 38 04 13 or an endorsement providing the exact same coverage. If requested by Consultant, City may approve different scopes or minimum limits of insurance for particular subcontractors or subconsultants.

3.16 Records.

Consultant shall maintain complete and accurate records with respect to all costs and expenses incurred under this Agreement. All such records shall be clearly identifiable. Consultant shall allow a representative of City during normal business hours to examine, audit, and make transcripts or copies of such records and any other documents created pursuant to this Agreement. Consultant shall allow inspection of all work, data, documents, proceedings, and activities related to the Agreement for a period of five (5) years from the date of final payment under this Agreement.

3.17 Standardized Manufactured Items.

Consultant shall cooperate and consult with City in the use and selection of manufactured items on the Project, including but not limited to, paint, hardware, plumbing, mechanical and electrical equipment, fixtures, roofing materials and floor coverings. All such manufactured items shall be standardized to City's criteria to the extent such criteria do not interfere with building design.

3.18 Limitation of Agreement.

This Agreement is limited to and includes only the work included in the Project described herein. Any additional or subsequent construction at the site of the Project, or at any other City site, will be covered by, and be the subject of, a separate Agreement for **engineering** services between City and the Consultant chosen therefor by City.

3.19 Mediation.

Disputes arising from this Agreement may be submitted to mediation if mutually agreeable to the Parties hereto. The type and process of mediation to be utilized shall be subject to the mutual agreement of the Parties.

3.20 Successors and Assigns.

This Agreement shall be binding upon and shall inure to the benefit of the successors in interest, executors, administrators and assigns of each Party to this Agreement. However, Consultant shall not assign or transfer by operation of law or otherwise any or all of its rights, burdens, duties or obligations without the prior written consent of City. Any attempted assignment without such consent shall be invalid and void.

3.21 Asbestos Certification.

Consultant shall certify to City, in writing and under penalty of perjury, that to the best of its knowledge, information and belief no asbestos-containing material or other material deemed to be hazardous by the state or federal government was specified as a building material in any construction document that the Consultant prepares for the Project. Consultant shall require all consultants who prepare any other documents for the Project to submit the same written certification. Consultant shall also assist the City in ensuring that contractors provide City with certification, in writing and under penalty of perjury, that to the best of their knowledge, information and belief no material furnished, installed or incorporated into the Project contains asbestos or any other material deemed to be hazardous by the state or federal government. These certifications shall be part of the final Project submittal. Consultant shall include statements in its specifications that materials containing asbestos or any other material deemed to be hazardous by the state or federal government are not to be included.

3.22 No Third Party Rights.

This Agreement shall not create any rights in, or inure to the benefits of, any third party except as expressly provided herein.

3.23 Governing Law.

This Agreement shall be construed in accordance with, and governed by, the laws of the State of California. Venue shall be in San Bernardino County.

3.24 Exhibits and Recitals.

All exhibits and recitals contained herein and attached hereto are material parts of this Agreement and are incorporated as if fully set forth.

3.25 Severability.

Should any provision in the Agreement be held by a court of competent jurisdiction to be invalid, void, or unenforceable, the remaining provisions shall continue in full force and effect.

3.26 Non-Waiver.

None of the provisions of this Agreement shall be considered waived by either Party, unless such waiver is specifically specified in writing.

3.27 Safety.

Consultant shall execute and maintain its work so as to avoid injury or damage to any person or property. In carrying out its Services, the Consultant shall at all times be in compliance with all applicable local, state and federal laws, rules and regulations, and shall exercise all necessary precautions for the safety of its employees, consultant and subcontractors appropriate to the nature of the work and the conditions under which the work is to be performed.

3.28 Harassment Policy.

Consultant shall provide a copy of the City's Harassment Policy to each of its employees assigned to perform the tasks under this Agreement. Consultant shall submit to the City's Personnel Manager a statement signed by each of its employees who are assigned to perform the Services under this Agreement certifying receipt of City's Harassment Policy and certifying that they have read the Harassment Policy. A finding by the City that any of Consultant's employees has harassed a City employee shall be grounds for appropriate discipline, up to and including such employee's removal from performance of this Agreement at City's request.

3.29 Delivery of Notices.

All notices permitted or required under this Agreement shall be given to the respective Parties at the following address, or at such other address as the respective Parties may provide in writing for this purpose:

CITY:	CONSULTANT:
City of Ontario	**TKE Engineering, Inc.**
303 East "B" Street	**2305 Chicago Avenue**
Ontario, CA 91764	**Riverside, CA 92507**
Attn: **Dennis Mejia, PE, Utilities Engineering Division Manager,**	Attn: **Terry Renner**

Such notice shall be deemed made when personally delivered or when mailed, forty-eight (48) hours after deposit in the U.S. Mail, first class postage prepaid and addressed to the Party at its applicable address. Actual notice shall be deemed adequate notice on the date actual notice occurred, regardless of the method of service.

3.30 Time of Essence.

Time is of the essence for each and every provision of this Agreement.

3.31 City's Right to Employ Other Consultants.

City reserves right to employ other consultants, including designers, in connection with this Project or other projects.

3.32 Prohibited Interests.

3.32.1 Solicitation. Consultant maintains and warrants that it has not employed nor retained any company or person, other than a bona fide employee working solely for Consultant, to solicit or secure this Agreement. Further, Consultant warrants that it has not paid nor has it agreed to pay any company or person, other than a bona fide employee working solely for Consultant, any fee, commission, percentage, brokerage fee, gift or other consideration contingent upon or resulting from the award or making of this Agreement. For breach or violation of this warranty, City shall have the right to rescind this Agreement without liability.

3.32.2 Conflict of Interest. For the term of this Agreement, no director, official, officer or employee of City, during the term of his or her service with City, shall have any direct interest in this Agreement, or obtain any present or anticipated material benefit arising therefrom.

3.33 Equal Opportunity Employment.

Consultant represents that it is an equal opportunity employer and that it shall not discriminate against any employee or applicant for employment because of race, religion, color, national origin, ancestry, sex, age or any other classification protected by federal or state law. Such non-discrimination shall include, but not be limited to, all activities related to initial employment, upgrading, demotion, transfer, recruitment or recruitment advertising, layoff or termination. Consultant shall also comply with all relevant provisions of City's minority business enterprise program, affirmative action plan or other related programs or guidelines currently in effect or hereinafter enacted.

3.34 Labor Certification.

By its signature hereunder, Consultant certifies that it is aware of the provisions of Section 3700 of the California Labor Code which require every employer to be insured against liability for Worker's Compensation or to undertake self-insurance in accordance with the provisions of that Code, and agrees to comply with such provisions before commencing the performance of the Services.

3.35 Subcontracting.

As specified in this Agreement, Consultant shall not subcontract any portion of the Services required by this Agreement, except as expressly stated herein, without prior written approval of City. Subcontracts, if any, shall contain a provision making them subject to each and every provision of this Agreement.

3.36 Supplemental Conditions.

Any supplemental conditions shall be attached as an exhibit to this Agreement, and that exhibit shall be incorporated herein by reference.

3.37 Entire Agreement.

This Agreement, with its exhibits, contains the entire agreement of the Parties hereto, and supersedes any and all other prior or contemporaneous negotiations, understandings and oral or written agreements between the Parties hereto. Each Party acknowledges that no representations, inducements, promises or agreements have been made by any person which

are not incorporated herein, and that any other agreements shall be void. Furthermore, any modification of this Agreement shall only be effective if in writing signed by all Parties hereto.

SCOPE OF SERVICES

EXHIBIT "A"

RFQ PROPOSED SCOPE OF SERVICES

The City of Ontario is seeking Statement of Qualifications from qualified consulting engineers to provide On-Call Services for three (3) years, with an option of renewing for two (2) consecutive one (1) year terms. The City desires to obtain the services of a maximum of six (6) qualified firms to assist with On-Call Design Services. At least ten (10) years of experience providing similar services is required to oversee the work, stamp, and sign all project related documents as required.

Request for Qualifications (RFQ) for various services in various disciplines (e.g. Engineering, Architecture, Construction, Hydraulic Modeling, Fire Flow Modeling, Feasibility Studies, etc.) with the intention of maintaining a list of multiple qualified prime engineering firms, with subconsultant support services as needed. Task orders will be issued to firms on a competitive basis based on the qualifications and expertise of the firm and their subconsultants. There is no designated minimum nor maximum value of services to be awarded to any one consultant.

Each Prospective Consultant needs to be able to provide all the services (or provide sub-consultants that must also be listed as part of their statement of qualifications) listed in this RFQ.

The following scope of services provides general categories of services that may be required for each task order requested. The categories are not an exhaustive list of services but rather a sampling of the services that are typically included, but not limited to, within that area of the scope in order to demonstrate the qualifications needed for that scope of services.

Specific services requested under these agreements shall be identified by the City at the time of the request for a specific task order. For each task order requested by the City, the Consultant shall provide a task order proposal that identifies the specific scope of services to be performed, the necessary project management activities, task budget, and task schedule. Upon City's approval of the proposed task's scope of services, the City will issue a notice to proceed with purchase order requisition for the work. The Consultant is encouraged to provide recommendations with respect to scope and order of completion.

No task order or scope of services shall be performed without first receiving authorization from the City and notice to proceed with the task order.

GENERAL REQUIREMENTS.

Consultant will be expected to work closely with staff for the duration of the assigned projects (i.e. task orders), and attend all meetings and workshops, as necessary. Any adjustments can be verified based on the need of City Project Managers. All field services must include appropriate traffic control.

Some or all of the following General Requirements and Services may be incorporated into specific tasks orders generated from the On-Call contract. The applicable General Requirements shall be based on needs of specific tasks and the City Project Managers:

Refer to Design Services Agreement in Exhibit "B" to review the General Requirements and other conditions.

ON-CALL DESIGN SERVICES

The City of Ontario is seeking Statement of Qualifications from firms for On-Call Design Services:

Consultant shall be aware that certain labor categories above may be subject to prevailing wage rates as identified in the California Labor Code commencing Section 1770 et Seq. Determination of whether or not Prevailing Wages shall apply will be determined when the City's Project Manager identifies the scope of specific task orders. Please refer to Paragraph XI.11 "Prevailing Wage and Contractor Registration" of this RFQ, and Paragraph 3.10.6 "Prevailing Wages" of the Design Services Agreement for further requirements.

Expected services to be provided under this on-call contract will be performed under a task order system, need to be designed following City Guidelines or associated governing agency guidelines, and may include:

Capital Improvement Project Division

- Feasibility Studies
    - Preparing and/or updating Guidance Documents for Utility Feasibility Studies and Technical Reports
- Environmental services for CEQA/NEPA
- Geotechnical Investigations
- Erosion Control and Storm Water Pollution Prevention Plans
- Permitting and Grant writing support
- Surveying and Mapping
    - ALTA Surveys
    - Easements, Right of Way Preparation, and Mapping
    - Topographic Mapping
    - Field Design Surveys
    - Boundary Surveying and Monumentation
    - Benchmarks and centerline tie information
    - Legal Descriptions and Exhibits
    - Construction Staking
    - Conduct Potholing Services
- Construction Documents Development
- Street Improvements and Highway Design Engineering
- Civil, mechanical, electrical, structural, instrumentation design using AutoCAD 2023 or later
    - Transmission, Collection & Distribution Pipelines (water, sewer, recycled water, storm drain, etc.) facilities including water pipelines (transmission and distribution)
    - Groundwater Wells
    - Pump Stations
    - Pressure Reducing Stations
    - Reservoirs
    - Sewer Lift Stations
- Construction Engineering Support Services
    - Provide RFI review and response services
    - Submittal review and response services

- Project coordination services with City hired Construction Manager
- Final inspection and punch list services
- Convert Contractor's redlines to record drawings

Planning and Land Development Division

- Master planning to include infrastructure master plans
  - Hydraulic Modeling
  - Flow Monitoring
  - Demand factor assessment
- Asset management program support
- Risk and Resilience Assessment
- Site Security Assessment
- Emergency Response Plan
- Facilities Condition Assessment
- Updating City Water and Sewer GIS
- Hydrology and Drainage Engineering
  - Hydraulic modeling and GIS support services conforming with San Bernardino County Hydrology Manual
  - Hydrology Studies and hydrologic calculations
  - Hydrogeologic engineering services related to groundwater well rehabilitation and installation
- Hydraulic Modeling and Model Maintenance
  - The potable and recycled water model is in Innovyze InfoWater, the sewer model is in Innovyze InfoSewer, and both are running in the ArcMap 10.7.1 environment.
  - Updating Model Geometries using City Water and Sewer Atlas GIS shapefiles and Water and Sewer Improvement Construction/Record Drawings.
  - Updating Model Demands, Patterns, and Peaking Factors based on development and meter data.
  - Creating and Running New Scenarios.
  - Model Verification and Calibration to assure that the model can run properly.
  - Preparing Utility Hydraulic Analysis Studies and Reviews.
  - Reviewing OMUC Staff or Developer/Engineer modeling work and providing summary validation reports.
  - Peer Review of Utility Hydraulic Analysis Studies and Reviews, and Utility Feasibility and Technical Studies.
  - Fire Flow Analysis

Water Resources and Water Quality Division

- Water Resources Planning and Management Support Services
  - Urban Water Management Plans - Preparation, Updates, and Amendments
  - Water Supply Assessments and Written Verifications
  - Hydrogeological Studies and Geotechnical Engineering
  - Water Use Surveys
  - Wastewater Flow and Strength Studies
  - Water Conservation and Audits
  - Recycled Water Use Studies and compliance with State Water Board and Regional Water Quality Control Board requirements

- Laboratory Testing
- Water and Wastewater Low/High Flow Monitoring (On-site Private & Public)
- Water and Wastewater Quality Sampling (On-site Private & Public)
- Sewer System Management Plan Update
- Sewer System Management Plan Audit

Subject: Request for Qualification – On-Call Design Services

Review Panel:

Thank you for the opportunity to present our qualifications as a response to the Request for Proposals for On-Call Design Services. Our statement of qualifications enclosed herein, outlines TKE Engineering, Inc's (TKE) qualifications to provide the requested services to the City of Ontario (City). TKE is a full service, multi-disciplinary consulting firm highly qualified to perform On-Call Design and other support services required to successfully implement the City's adopted goals and objectives. TKE has reviewed the wide range of services that City has requested qualifications. TKE has assembled a project team that will meet and exceed all of those needs. We are enthusiastic about the opportunity to assist the City and aware of the City's needs for immediate assistance and will be ready to begin work for the City at a moment's notice. Founded in 2000, TKE is a California Corporation with a local headquarter office located in Riverside at 2305 Chicago Avenue, Riverside CA 92507 which is less than 20 minutes away from the City.

Why should the City choose TKE to provide On-Call Design Services? Please consider the following:

1. **Local Experience –** Throughout the past 24 years, TKE has developed an extensive understanding of engineering requirements. Our experience within San Bernardino County along with our current local experience working with the City of Ontario, OMUC and all neighboring cities, provides the City with a knowledgeable engineering team. Our local service approach ensures that the City's needs will be met and TKE will constantly strive to exceed the City's expectation which makes us the perfect fit for on-call.

2. **Team Qualifications and Experience –** TKE Team is capable of managing and delivering municipal consulting engineering services. We specialize in Capital Improvement Projects, Land Development Services, Design Services, Staff Augmentation, and water resources including project management, pre project planning, permitting, design and construction administration of public works and development projects. A brief list of on-call municipal clients, together with projects that TKE has successfully completed is presented in these qualifications. The City will benefit from our broad range of experience through our intimate understanding of the common pitfalls for each project variation, and development processing challenges, and our past history of successfully overcoming these challenges. TKE, having served as City Engineer for multiple cities, has developed a vast knowledge of different engineering challenges. TKE, in this role, has developed solutions to overcome these challenges.

In addition, TKE's experience includes a comprehensive understanding of the Standard Specifications for Public Works Construction (Green Book), project scheduling programs (including critical path methodology relating to interagency and interdepartmental coordination), and Caltrans Local Assistance project processing. Finally, TKE's extensive funding administration experience will also greatly benefit the City

3. **Validity –** This statement of qualifications is valid for at least hundred and twenty (120) Calendar days.

4. **Addendum Acknowledgement –** TKE Engineering, Inc. is in receipt of Addendum No. 1 on January 17, 2024.

TKE would very much appreciate the opportunity to introduce our team to City staff. Terry Renner is authorized to negotiate and execute an Agreement with the City on behalf of TKE. If you have any questions, please call Mr. Renner at our office at (951) 680-0440, by cell at (909) 240-6285 or email him at trenner@tkeengineering.com.

Sincerely,

Terry Renner, P.E., P.L.S., Q.S.D.

Senior Vice President

SECTION 4 | STAFFING RESOURCES

TKE will responsible to deliver all projects assigned. TKE will complete the following list of tasks with inhouse resources:

A. FIRM STAFFING AND KEY PERSONNEL

ASSIGNED DESIGN KEY STAFF

TKE will assign up to seven (7) staff members as required to complete all projects assigned to TKE. Key Staff include:

Terry Renner, P.E., P.L.S., Q.S.D. – Construction Manager, All Disciplines

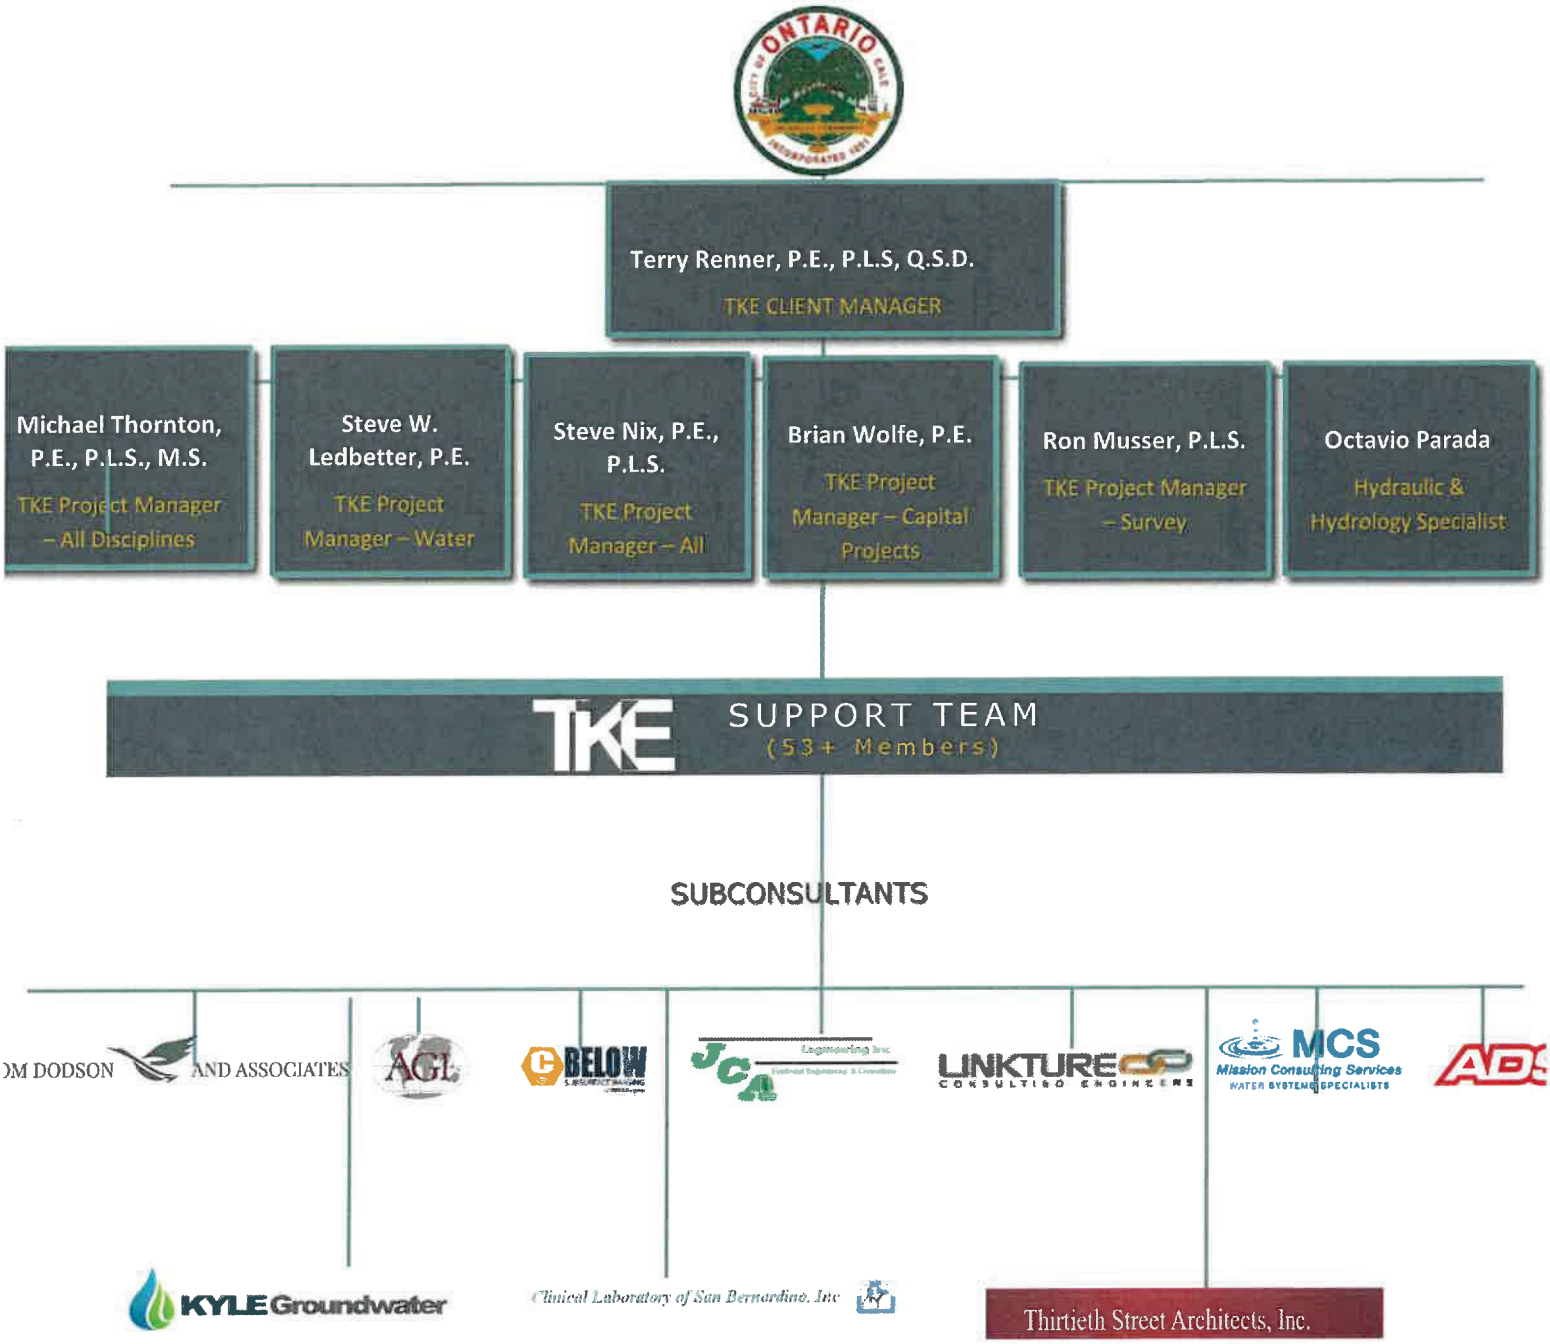
Michael Thornton, P.E., P.L.S., M.S. - Project Manager, All Disciplines

Steven W. Ledbetter, P.E. – Construction Manager, Water Resources

Steve Nix, P.E., P.L.S. – Senior Engineer, All Disciplines

Ron Musser, P.E., P.L.S. – Senior Surveyor, Surveying

Brian Wolfe, P.E. – Project Manager, Capital Improvements



Octavio Parada – Hydraulic/Hydrology Specialist

TKE's professional team is supported by 53 engineers, designers, surveyors, plan checkers, engineering assistants, construction managers, inspectors, and administrative staff which will be assigned on a weekly basis depending on the City needs. TKE's management staff meet each week to assign staff as needed to complete the upcoming needs of each clients to ensure the project remains on schedule. An organizational chart for the entire team is presented on the following page.

B. STAFF PRINCIPALLY RESPONSIBLE

TKE has assigned the following staff to be principally responsible for working with the City: Terry Renner, P.E., L.S., Q.S.D., Client Manager, Steven Ledbetter, P.E., Project Manager for Water Resources, and Michael Thornton, P.E., P.L.S., M.S. as Project Manager, all disciplines.

C. TEAM ORGANIZATION

D. BIOGRAPHIES

DESIGN/ PROJECT MANAGEMENT KEY PERSONNEL:

Terry Renner, P.E., P.L.S., Q.S.D.
Construction Manager

R.C.E. No. 69984

P.L.S. No. 9762

Q.S.D. Certification No. 24329

Mr. Renner has 24 years of engineering and surveying experience and also has experience as a Plan Checker and Project Manager. Mr. Renner is a Registered Civil Engineer in the State of California. He has extensive experience in the design and construction of public works improvement projects, including project management, design engineering, construction management and surveying services. In addition, as detailed on Mr. Renner's resume, he has experience with drainage studies preparation, design and construction engineering for street, sewer and drainage system improvement projects. Mr. Renner is well trained in the use of computerized drawing software. He will assist with various tasks throughout the course of providing engineering services.

Mr. Renner's role on the team will include management of TKE staff, compliance with standards and regulations and perform quality assurance and quality control on all documents.

Michael Thornton, P.E., L.S.
Project Manager

P.E. No. 44226

P.L.S. No. 6867

Mr. Thornton, TKE's President, is in charge of all TKE projects. He has over 35 years of experience in engineering planning, design, land surveying and construction management for public works projects. He has worked on a variety of public works engineering projects including sewer improvements, street improvements, park improvements, bike trail improvements, drainage improvements, and reclaimed water system improvements projects. Over the past 20 years, he has served a number of communities as it's Engineer and has encountered a diverse array of engineering challenges. He has delivered solutions to overcome these challenges. Mr. Thornton is responsible for managing projects assigned to TKE for all disciplines requested in the SOQ, including funding administration, planning, evaluating, and designing these projects and has provided construction engineering and surveying services for many of these same projects.

Steve Ledbetter, P.E.
Construction Manager

P.E. No. 84044

Mr. Ledbetter has over 23 years of professional experience in the civil engineering industry. He has provided design and management services on various critical and challenging projects from planning through design and implementation. He has a well-rounded background with experience in preparation of plans, specifications and estimates and analysis of street and utility improvements, pavement rehabilitation, street widening and median improvements, bicycle and pedestrian enhancements, roundabout improvements, ADA pathway improvements, and signing and striping improvements. Mr. Ledbetter also has extensive experience with computer modeling, analysis, and report preparation, storm water compliance reporting including water quality management plans and storm water pollution prevention plans and; and grant writing for various State and Federal agencies. Steve will serve the City as a Project Manager for Water Resources related projects.

Steve Nix, P.E., P.L.S.
Senior Land Development Engineer

P.E. No. 56810

L.S. No. 8146

Mr. Nix, has over 40 years of experience in engineering planning, design, and construction management for public works projects. Mr. Nix has served several cities as it's engineer and other capacities in both the public and private sectors. His experience includes design and construction management of all types of civil engineering projects ranging from single and multi-family residential, commercial and industrial development projects, public works projects including street, sewer, water, storm drain improvements, water wells construction including wellhead treatment, sewage and water pump stations, water reservoirs as well as sewage treatment and transmission. Steve will serve the City as a Project Manager for all disciplines presented in the SOQ.

Ron Musser, P.L.S.

Senior Surveyor

P.L.S. No. 4230

Mr. Musser has over 51 years of experience in performing field and office surveying services for public and private projects including design surveys and right-of-way acquisition projects. Prior to joining TKE Engineering, Inc., Mr. Musser worked at the County of Riverside as a County Surveyor for nearly 22 years providing mapping, easement document preparation, field surveying and calculations support for hundreds of projects. He has prepared records of survey, parcel maps, tract maps, right-of-way and easement documents in San Bernardino County. He has performed boundary, topographic, ALTA, and precise level surveys as well as Global Positioning Surveys.

Brian Wolfe, P.E.

Project Manager

P.E No. 69109

Mr. Wolfe has over 20 years of experience for various public works clients and specializes in the reviewing and approving, and signing of engineering plans. He is familiar with municipal codes associated with technical decision-making. For example, many of his projects have involved ADA accessible pathways and grant funding management such as Safe Routes to Schools and Community Development Block Grant (CDBG) improvements. Brian served as City Engineer in Adelanto for the four years, managing more than $20 million in public improvements. Mr. Wolfe is closely familiar with providing staff augmentation services as well as developing the processes and procedures associated with ensuring successful project delivery. He is accustomed to coordinating with outside City agencies including fire, sewer, and water as well as Caltrans and SBCTA, and looks forward to the opportunity to assist the City of Ontario. Brian will serve the City as Project Manager for Capital Projects.

Octavio Parada

Hydraulic/Hydrology Specialist

Mr. Parada has over 24 years of progressive experience in civil engineering in the public works sector as well as the private sector. He is result-driven, proactive and detail-oriented with a proven track record of successfully handling and delivering a wide variety of complex and challenging projects. He is dedicated to ensure that projects exceed industry standards and consistently finishing under budget and schedule. Through his career, Octavio has accumulated extensive experience in planning, designing and project completion for more than 30 miles of roadways, street widening, medians, traffic calming, roundabouts, signing and striping modifications, bicycle lanes, pedestrian facilities for major corridors, arterials, collectors and residential streets, including water improvements, sewer improvements, drainage improvements, grading plans and computerized system modeling for drainage master plans. Finally, Octavio has worked in the private sector for commercial and industrial development as technical director managing projects from the conceptual stage, through planning, designing, bidding, construction, and project completion under project specifications and exceeding client expectations. Mr. Parada will serve the City as Hydraulic/Hydrology Specialist.

E. SUBCONSULTANTS

TOM DODSON AND ASSOCIATES

Tom Dodson & Associates (TDA), incorporated in 1983, is a small environmental consulting and regulatory compliance firm located in San Bernardino.

- Environmental services for CEQA/ NEPA

KYLE Groundwater

KYLE Groundwater, Inc. (KGI) is a California Corporation located in Upland. Mr. Russell Kyle and Ms. Kimberly Makar, in response to demand for experienced and innovative hydrogeological solutions from our Southern California clients.

- Hydrogeological Studies and Geotechnical Engineering

AGI

Aragón Geotechnical Inc. (AGI) is a highly qualified geotechnical and construction materials testing firm with significant experience in providing services similar to those being requested. AGI is committed to providing geotechnical, materials testing, and construction field inspection services with a superior degree of professional excellence and proficiency.

- Geotechnical Investigations
- Hydrogeological Studies and Geotechnical Engineering

C BELOW SUBSURFACE IMAGING An RMA Company

C Below Subsurface Imaging (C-Below) are highly experienced technicians that utilize the most advanced equipment in the industry.

- Conduct Potholing Services

Clinical Laboratory of San Bernardino, Inc. Clinical Laboratory of San Bernardino, Inc., a California State Certified Small Business has been providing analytical services to Southern, Central and Coastal regions of California including the high and low desert regions of California for over 40 years.

- Laboratory Testing

JCA has been dedicated to providing efficiently innovative architectural lighting design services and state of the art electrical engineering.

- Civil, Mechanical, Electrical, Structural, instrumentation Design Using AutoCAD 2023 or Later
- Site Security Assessment

Linkture Consulting Engineers was formed in 1992 and offers a full range of electrical and control system engineering services to Engineers, Private Industries, Contractors, Federal and State Government and Municipalities.

- Civil, Mechanical, Electrical, Structural, instrumentation Design Using AutoCAD 2023 or Later

Thirtieth Street Architects, Inc. Thirtieth Street Architects, Inc as the subconsultant for all architectural matters for this on-call. (TSA) was founded in 1976 and has based its practice on a range of projects, including new construction, historic rehabilitation and downtown revitalization projects.

- Architectural Services

MCS is a specialty engineering firm with expertise in engineering and planning services and hydraulic modeling. We are dedicated to the development and evolution of our client's hydraulic modeling capabilities, and to the adequate planning and foresight for their water, sewer, and recycled water systems.

- Master Planning to include infrastructure master plans
- Hydraulic Modeling
- The potable and recycled water model is in Innovyze InfoWater
- Updating Model Geometries using City Water and Sewer Atlas GIS shapefiles
- Updating Model Demands, Patterns, and Peaking Factors based on development and meter data
- Creating and Running Scenarios
- Preparing Utility Hydraulic Analysis Studies and reviews

ADS provides products and services that have helped thousands of municipalities diagnose and correct wastewater infrastructure problems. For over 44 years, we've helped our clients increase efficiency and mitigate environmental compliance action.

- Flow Monitoring
- Wastewater Flow and Strength Studies
- Water and wastewater Low/High Flow Monitoring
- Water and Wastewater Quality Sampling

SECTION 5 | FISCAL STABILITY

A. FINANCIAL CONDITION

TKE's organizational structure has steadily grown since our inception 24 years ago, which provides us with a solid foundation and ensures successful completion of any City assignment.

In addition, over TKE's 24 years of business, not a single TKE project has gone through litigation. There are no financial conditions that may impede TKE's ability to provide services or complete the services as outlined in the RFP. No conditions or organizational conflicts of interest exists that will affect the ability of TKE to perform the assigned duties. A letter from TKE's CPA is included to document our financial stability. TKE has an annual gross income of more than 10 million dollars.

B. RECENT LETTER FROM FINANCIAL INSTITUTION

Schlotzhauer & West
Certified Public Accountants

February 1, 2024

City Of Ontario
303 East "B" Street
Ontario, California 91764

Regarding: TKE Engineering, Inc.

We have been the accountants for TKE Engineering, Inc. since the inception of the Company on July 13, 2000.

Please feel free to contact me with any further questions.

Sincerely,

Richard H. West, CPA

SECTION 6 | EXPERIENCE AND TECHNICAL COMPETENCE

A. TECHNICAL EXPERIENCE

TKE Engineering, Inc. (TKE), a California Corporation, was established in June 2000, and in the last 24 years has developed into one of Southern California's premier full-service consulting municipal engineering firms. TKE provides services to municipal clients only and therefore will never have any conflicts of interest related to private development projects. TKE was established with the goal of providing turnkey services for municipal agencies in order to benefit our community. As a result of the focus of a firm on this mission, TKE has earned a reputation for thoroughness, rapid turnaround, cost efficiency and, overall quality of work. We are a highly motivated, dynamic firm with the goal of being your preferred consultant for all City services.

TKE has 24 years of experience working in San Bernardino County specifically in the cities of Ontario, Hesperia, San Bernardino, Fontana, Rialto, Highland, Adelanto, Colton, Chino, Chino Hills, Yucaipa, Twentynine Palms, and other district/agencies in San Bernardino County such as Ontario Municipal Utilities Company, San Bernardino Valley Municipal Water, Inland Empire Utilities Agency, Mojave Water Agency, Twentynine Palms Water District.

TKE is currently providing design civil engineering services to OMUCD for their Recycled Water Pipeline for Riverside Drive, from Archibald Avenue to Mill Creek Avenue project. TKE Team desires to continue building upon our relationship with the City by demonstrating our capabilities and capacities to deliver your anticipated projects within budget and on schedule. Our history of providing services has prepared us to implement an enhanced approach to maintaining continuity and communication with heightened standards for this contract.

TKE provides turnkey municipal engineering. The municipal services provided by our firm include City Engineering Design, Plan and Map Checking, Traffic Engineering, Surveying, Project Management, Construction Management, and Construction Inspection services, as well as Quality Assurance/Quality Control. Our broad range of services provides our team with an intimate knowledge and experience of the common pitfalls for each project variation and our team will ensure CIP and developer projects do not fall into the same situations.

TKE's headquarters is located at 2305 Chicago Avenue in Riverside located approximately 20 minutes from the City of Ontario. TKE currently maintains a staff of 53 city engineers, , project managers, engineers, traffic engineers, surveyors, drafters, construction managers, inspectors, and clerical personnel. TKE's Senior Vice President, Terry Renner is our proposed Client Manager.

TKE routinely assists cities with planning, design and implementation of their capital improvement and development services programs. The City's CIP projects include street rehabilitation program for arterial highways, collectors, and residential streets; intersection and traffic signal improvements; miscellaneous sidewalk and concrete replacements for Americans with Disabilities Act (ADA) improvements; drainage projects installation of BMPs and NPDES improvements; construction of park improvements; water resources project delivery installation of landscaping and irrigation improvements; bridge maintenance and repairs, and rehabilitation of City-owned facilities.

COMMON GOALS:
The TKE Team will work collaboratively and strategically to support the City's mission toward ensuring project delivery.

TKE has provided numerous municipalities and agencies throughout Southern California with consulting engineering, development services review, design, surveying, plan checking, inspection, construction management and grant management services for every facet of Public Works projects. TKE proudly serves municipal agencies the following services on a routine basis:

CIVIL ENGINEERING

TKE's Consulting Civil Engineering services include, but are not limited to:

- Staff Engineering Assistance including Technical Assistance
- Regulatory (local, state, and federal) Compliance Verification
- City Interests Protection
- Maintain Accurate Engineering Records and Maps for Staff and Public Access
- Prepare Engineering Reports, Studies, and Evaluations as needed
- Perform Other Engineering Functions as Required
- Manage Project Financing
- Verify Compliance with City Engineering Ordinances, Specifications, and Requirements
- Provide Engineering Investigation Services
- Assist with Capital Improvement Program Development

- Coordinate Public Meetings related to Engineering Matters
- Verify National Pollution Discharge Elimination System (NPDES) and PM-10 Compliance
- Pavement Rehabilitation Design
- Local Streets and Road Design
- Street Widening
- Storm Drainage Infrastructure Planning and Design
- Retention / Detention Basins
- Parking Lots
- Storm Drain and Channels
- Floodplain Analysis and Mapping
- Traffic Signal Design
- Traffic Studies and Warrant Analysis
- Traffic Impact Studies
- Parks
- Public Facilities
- Grading Studies, Design and Earthwork Analysis
- Capital Improvement Programs (CIPs)
- Neighborhood Improvement Preservation
- Hydrologic Studies / Hydraulic Design
- Storm Water Pollution Prevention Plans (SWPPP)
- Sediment and Erosion Control Facilities
- Hydromodification Studies / Water Quality Management Plans (WQMPs)

SURVEYING AND RIGHT-OF-WAY ENGINEERING

Our Surveying and Mapping experts provide:

- ATLA Surveys
- Easements, Right of Way Preparation, and Mapping
- Topographic Survey
- Field Design Survey
- Boundary Surveying and Monumentation
- Benchmarks and Centerline Tie Information
- Legal Descriptions and Exhibits
- Construction Staking
- Potholing Services
- Design Survey
- Transportation Improvements
- Land and Real Estate Evaluations
- Grade Separations
- Street Widening
- Construction Layout/Staking
- Right-of-Way Engineering
- Construction Surveys
- Aerial Mapping
- Control Surveys

GRANT WRITING / FUNDS MANAGEMENT

TKE's Grant Writing/Funds Management team enables our municipal and agency partners of any size to find potential funding sources and to prepare competitive funding applications. Additionally, after funds are awarded to a partner, TKE ensures compliance with state and federal funding requirements. In the past few years, TKE has obtained millions of dollars in funding for our public works projects and transportation improvements.

Our grant writing services are enhanced by integration with engineering services to facilitate and integrate project design. This expedites project start up and completion and ensures compliance with funding requirements. TKE has assisted clients secure funding from the following programs:

- SRTS and SR2S (Safe Routes to Schools)
- Federal Transportation Funding thru Caltrans Local Assistance
- State Proposition 1E and 84 Flood Management Funding
- Community Development Block Grant (CDBG) Funding
- Active Transportation Program (ATP) Funding
- Highway Safety Improvements Program (HSIP) Funding
- State Water Resources Control Board – State Revolving Fund Program
- Department of Water Resources – Proposition 40 Grant Program
- Department of Water Resources – Infrastructure Rehabilitation Grant

TKE continues to track bond activity for the 2024 ballot as it relates to flood protection. It's anticipated that one or more bond measures will make the final November 2024 ballot. These measures include: Assembly Bill 1567 California Drinking Water, Natural Disaster Prevention, Energy, and Workforce Development Bond Measure which is slated to include over $6 billion for flood control projects; Senate Bill 638 Climate Resiliency and Flood Protection Bond Act of 2024, which would extend Proposition 68 grant programs, includes over $6 billion for flood protection and climate resiliency projects; and Assembly Bill 305 California Flood Protection Bond Act of 2024, also an extension of Proposition 68 grant programs, includes $4.5 billion for flood protection projects.

Finally, TKE is currently working with many funding agencies including DWR, SWRCB, FEMA, US EPA, and other State and federal agencies. These relationships will be invaluable to

match grant funding opportunities with the project. Again, the successful results of our past performance in securing and administering grant funding for public works projects, along with our firm's proven ability to utilize our experience for a complete and well-engineered project, will provide a valuable resource to the District.

PROJECT/PROGRAM MANAGEMENT

TKE has managed publicly funded design projects throughout our history. The breadth of experience and technical skill of our staff enable us to manage a wide variety of projects, ranging from major infrastructure to the restoration and rehabilitation of significant historical structures. We ensure that all work is completed in accordance with funding contract specifications, terms, conditions, state and federal laws and regulations, and client policy.

GOAL ACCOMPLISHMENT

The TKE Team is eager and prepared for an opportunity to support the City of Ontario in accomplishing its goals developed for their CIP and to establish the framework for making informed decisions regarding the community's future success. Our team specializes in developing processes and procedures based on professional expertise and lessons learned, which we implement on all of our projects to ensure successful delivery on schedule and within budget.

For all projects, the most important aspect of management will be to ensure that the City's interest is protected to the maximum extent possible. TKE will ensure that public funds and are used for the benefit of the community.

The following pages contain relevant project examples showing where TKE has provided On-Call and project specific services incorporating a combination of services available from the full spectrum scope of services we offer.

LOCAL EXPERIENCE

TKE has worked on several projects within the City, including the Ontario Christian High School Gym Expansion and Parcel Merger, Francis Street Drainage System and Jurupa Street Recycled Water Project. Furthermore, TKE has worked with the Cities of Fontana and Upland on projects bordering the City of Ontario. Our past experience in and around the City has allowed TKE to develop an understanding of the City's standards and requirements which will be utilized on any proposed project under this contract.

RESOURCES

TKE's project team is committed to providing services as presented herein. In addition, TKE maintains state of the art engineering resources that ensure complete compatibility with our client's resources including computer software compatibility, filing protocol, communications protocol, and survey data. Our office location in Riverside is less than 20 minutes from the City and will permit TKE staff to respond to requested for meetings within at a moment's notice.

TKE will respond to the City's needs as they arise. The City will be an important client since, as a smaller firm, all of our clients are given the utmost attention. TKE commitment will ensure that all of the City's needs are met. We strongly encourage the City to verify our performance history with our references. Because of TKE proactive management approach, TKE rarely experiences 'crisis' project delivery needs. When requested by our clients, TKE adds resources, commits extended work hours, develops an efficient implementation plan and other efforts as needed.

B. STAFF PAST EXPERIENCE

TKE has assembled an elite team of professionals to partner with the City to provide consulting design engineering services. TKE's management team came together out of the collective belief of long-time practitioners that there needed to be, in the civil engineering and land surveying consultant's marketplace, a company that brought modern management techniques and new ways of thinking to the business of consulting services for engineering projects. Our management team is 100% accountable and responsible for TKE's work product and actively seeks feedback and suggestions on our services.

TKE's project staff hold all necessary and required licenses and credentials to provide the proposed services. The primary staff assigned to this project have been working together for more than 15 years.

C. TKE'S HISTORY

TKE was established in June 2000 and has conducted business for the past 24 years under our current name. For all 24 years, TKE has been performing design services to municipal agencies for transportation, drainage, water resources, facilities improvements projects.

D. REFERENCES

Please see the Table below for a small, but representative list of agencies who have and continue to request TKE to assist them in delivering valuable projects to their communities. We respectfully request that you verify our qualifications with the listed references.

E. LOCAL EXPERIENCE & KNOWLEDGE OF THE CITY

TKE Engineering partnered with Richard Brady & Associates to provide engineer services on the ***City of Ontario's UT 1074 Reservoir 925-1A and Transmission Main Improvement*** project.

We also provided Engineering Construction Support Services for **OMUC Design Services for Recycled Water Pipeline for Riverside Drive, From Archibald Avenue to Mill Creek Avenue.**

F. PROJECT SPECIFIC EXPERIENCE

OMUC UT 1074-RESERVOIR 925-1A AND TRANSMISSION MAIN

City of Ontario, CA

Client Contact: Omar Gonzalez
Phone Number: (909) 395-2600
Email: oe.gonzalez@ontarioca.gov
Dollar Value of Service: $850K
Dollar Value of Project: $20M
Completion Date: On-Going

RELEVANCE TO ONTARIO

- Local Project Experience
- Potable Water Design Project
- Coordination with Caltrans
- Extensive Utility Coordination
- Restraint Calculations
- Permitting

DESCRIPTION

TKE partnered with Brady to provide design and construction services for one of the two 925 PZ reservoirs, Res925-1A, the approximate 17,200 linear feet 42-inch transmission for the reservoir site to the connected point at the intersection of Chino Avenue and Grove Avenue, a booster pump to pump supply from the 925' PZ to the 1074' PZ, facilities for emergency back-up power as well as to develop the reservoir site to be able to accommodate the future Res925-1B and a future regional water treatment facility.

SERVICES

Services include preliminary design report, agency coordination, surveying, design, utility coordination, Caltrans, permitting, and agency coordination.

CALIMESA CREEK BASIN AND STORM DRAIN

City of Calimesa, CA

Client Contact: Will Kolbow | City Manager
Phone Number: (909) 795-9801
Email: wkolbow@cityofcalimesa.com
Dollar Value of Service: $830K
Dollar Value of Project: $9.1M
Completion Date: On-Going

RELEVANCE TO ONTARIO

- *Major Drainage Infrastructure*
- *Regional Flood Control Basin*
- *Connection to County Flood Control Facility*
- *Extensive Utility Coordination and Permitting*
- *Hydraulics/Hydrology Modeling*

DESCRIPTION

The Calimesa Creek Storm Drain Improvements Project is located in the Cities of Calimesa and Yucaipa south of County Line Road between the Interstate 10 Freeway and 5th Street. The project includes the design of 2,000 linear feet of 96" storm drain pipe and open channel improvements and includes design of a 53 Acre-Foot detention basin for flood control and hydro-modification purposes, providing 100-Year flood conveyance storm drain protection and low flow diversion to the existing Calimesa Creek. Design will also include walking trails and maintenance roads alongside of the improved channel alignment.

SERVICES

Services include pre-project planning, development, preliminary engineering, hydrology and hydraulics, design, project grant writing, environmental compliance, state and federal funding coordination, utility relocation coordination, right-of-way acquisition and permitting.

CY SYNC – PHASE I & II

Coachella Valley Association of Governments (CVAG), Coachella Valley, CA

Client Contact: Eric Cowle | Program Manager
Phone Number: (760)346-1127
Email: ecowle@cvag.org
Dollar Value of Service: $11M
Dollar Value of Project: $130M
Completion Date: On-Going

RELEVANCE TO ONTARIO

- *Public Works Construction Management Inspection Project*
- *Traffic Signal, Synchronization and Special Inspections*
- *Electrical Inspections*
- *State and Federal Grant Management*

DESCRIPTION

This project located in the Coachella Valley consists of upgrading the local agencies existing legacy (outdated) traffic signal controllers, traffic management systems, and communication systems with the latest off-the-shelf technologies in order to provide inter-agency traffic signal synchronization along three regional roadways including Highway 111, Ramon Road and Washington Street. The project improvements include advanced traffic management systems (ATMS), advanced transportation controllers (ATC), selected Intelligent Transportation System (ITS) elements, ITS sub-systems, and Ethernet/IP-based communications that will be expandable and scalable for future integration of ITS technologies and strategies, such as Integrated Corridor Management (ICM), Smart Cities, and Connected and Autonomous Vehicles. This project includes a Regional Traffic Management Center (RTMC) and local Traffic Operation Centers (TOC) that will have the capability to monitor, control of connected traffic signals, and be used as a monitoring tool for research and analysis to help determine regional system enhancements, operations, and maintenance.

SERVICES

Services included bid administration and pre-construction assistance, grant funding administration, construction management, inspection, and project closeout services

A-04 DRAINAGE CORRIDOR PROJECT

City of Hesperia, CA

Client Contact: Nils Bentsen
Phone Number: (760) 947-1025
Email: nbentsen@cityofhesperia.us
Dollar Value of Service: $300K
Dollar Value of Project: $50M
Completion Date: 2020

RELEVANCE TO ONTARIO

- *Major Drainage Infrastructure*
- *Hydraulics/Hydrology Planning*
- *Basin Routing*
- *Permitting*

DESCRIPTION

TKE provided investigation and acquired grant funding, planning, design, topographic survey, hydrology, and hydraulic analysis, bidding services, construction administration, State and Federal funding coordination services for the City of Hesperia. The A-04 Drainage Corridor project is located in the southwesterly portions of the City of Hesperia. The A-04 drainage corridor is the City's largest drainage tributary containing more than 4,380 acres and conveys flows in excess 5,000cfs. The project includes construction of three proposed flood control basins totaling over 1,000 feet of storage and more than 17,000 linear feet of various size storm drain pipe and box culverts, together with inlet and outlet facilities. During moderate and larger storm events, flooding and sediment accumulation occurs along the entire drainage corridor downstream of the proposed project; in particular, on Main Street, one of the highest volume streets in the city. The project will enhance quality, reduce the region's dependence on imported water supplies, and simulate economic development.

SERVICES

Services include investigate and acquire grant funding, planning, design, topographic survey, hydrology and hydraulic analysis, permitting from San Bern, US Army Corps of Engineers' 404 permit, bidding services, construction administration, State and Federal funding coordination.

COUNTY LINE ROAD TRANSPORTATION CORRIDOR (LPP)

City of Calimesa, CA

Client Contact: Will Kolbow | City Manager
Phone Number: (909) 795-9801
Email: wkolbow@cityofcalimesa.com
Dollar Value of Service: $1.2M
Dollar Value of Project: $8.5M
Completion Date: On-Going

RELEVANCE TO ONTARIO

- *LPP State Grant Management*
- *Roundabouts Design*
- *Right-of-Way Acquisition*
- *Extensive Utility Relocations*
- *Major Arterial Reconstruction*
- *Various Pavement Strategies*
- *Extensive Utility Coordination and Permitting*
- *Community Outreach Efforts*

DESCRIPTION

TKE prepared and obtained a grant for the City of Calimesa through the Road Repair and Accountability Act of 2017 (SB1) Local Partnership Program (LPP). TKE is preparing street widening and roundabout improvements for the construction of the County Line Road Transportation Corridor. The Project includes four (4) single-lane and one (1) multi-lane roundabouts, together with street, pedestrian, and bicycle improvements, to improve safety and efficiency throughout the corridor. The innovative approach to implement roundabout intersection throughout the corridor provides adequate capacity and level of service to remain a two-lane street; thus, significantly reducing right-of-way and construction costs to construct a four-lane corridor.

SERVICES

Services include grant coordination and management, design, topographic survey, right-of-way engineering, environmental assistance, roadway safety analysis, preparation of exhibits, cost estimates, coordination with California Transportation Commission, construction management, inspection, and construction staking.

SIERRA AVENUE WIDENING PROJECT

City of Fontana, CA

Client Contact: Phillip Burum | Deputy City Manager
Phone Number: (909) 350-6727
Email: pburum@fontana.org
Dollar Value of Service: $650K
Dollar Value of Project:$11.3M
Completion Date: Current

RELEVANCE TO ONTARIO

- *Project/Construction Management*
- *Major Arterial Roadway Widening*
- *Traffic Signal Modification/Design*
- *Right-of-Way Acquisition*
- *Various Pavement Strategies*
- *Extensive Utility Coordination and Relocations*
- *Community Outreach Efforts*

DESCRIPTION

The Sierra Avenue widening improvements project is located in the City of Fontana north of Interstate 10 Freeway between Foothill Boulevard and Baseline Road. The project is approximately 1 mile of widening for the City's primary north-south arterial street widening the roadway from 4 lanes to 6 lanes. The project includes street widening, raised landscape median, new sewer main installation, traffic signal installation and modifications, traffic signal interconnect and fiber optic cable installation, and extensive utility coordination for water main replacement, Rule 20A and Rule 20B undergrounding work. The project also includes right-of-way acquisition for 76 parcels, traffic analysis, review of construction plans, coordination with project design consultants, construction management and construction staking services. TKE represents the City with other agencies, represented engineering with the City's management personnel and other meetings, managed engineering budgets and project schedules.

SERVICES

Services include design, topographic survey, right-of-way engineering and acquisition, roadway safety analysis, preparation of exhibits, cost estimates, utility coordination, construction management, and construction staking.

I-10 CHERRY VALLEY INTERCHANGE IMPROVEMENT PROJECT

City of Calimesa, CA

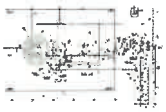
Client Contact: Will Kolbow | City Manager
Phone Number: (909) 795-9801
Email: wkolbow@cityofcalimesa.com
Dollar Value of Service: $300K
Dollar Value of Fee: $60M
Completion Date: On-Going

RELEVANCE TO ONTARIO
- *Project Management*
- *Caltrans Experience*
- *Project Planning*
- *Right-of-Way Engineering*

DESCRIPTION

TKE provides project management services for the City for the Cherry Valley Interchange including review and oversight of the Project Study Report (PSR or Project Initiation Document – PID) prepared by the County of Riverside and the consulting engineering firm, coordination with all stake holders including adjacent private developments, preparation/review of cooperation and funding agreements between stake holders. The PSR provides new interchange alternatives and preliminary geometric layouts that includes the City's preferred interchange alternative and other viable interchange alternatives along with initial traffic data, storm water data, and environmental data. Construction of a new interchange is vital to the City to increase capacity and functionality for the Cherry Valley Boulevard on/off-ramps to support the current/future traffic demand. The project is moving into the Project Approval and Environmental Document phase and is expected to begin construction in 2022.

SERVICES



Services included council report preparation, design review, project planning, review traffic impact studies, preparation of grant funding applications, report preparation, project scoping, right-of-way, and project management.

KEY STAFF

I-15 SEWER LIFT STATION AND WATER BOOSTER STATION

City of Hesperia, CA

Client Contact: Nils Bentsen
Phone Number: (760) 947-1901
Email: NBentsen@cityofhesperia.us
Dollar Value of Service: $350K
Dollar Value of Project:$3.0M
Completion Date: On-Going

RELEVANCE TO ONTARIO
- *Water and Sewer Booster/Lift Station*
- *Construction Sequencing with Associated Project Phases*
- *Coordination with City, Caltrans, and County*
- *Coordination with Developer, Businesses and Residents*

DESCRIPTION

TKE developed a sewer and water feasibility study to serve the area; followed by preparing the design and contract documents for sewer conveyance, and water distribution and transmission systems; and is now preparing the design and contract documents for the lift station and booster station. This project consists of the design and construction of a sewer lift station and water booster station to provide service to developments along the I-15 freeway corridor. The lift station includes two 25 HP VFD submersible impeller pumps, wet well, piping, valves, manholes, electrical, motor control center and electrical building, and associated site improvements. The separate booster station, located at an existing reservoir site, includes three 250 HP VFD pumps, two 50 HP VFD pumps, one 20 HP pump, hydro-pneumatic system, piping, valves, electrical, prefabricated building, emergency generator (600 kW), and associated site improvements.

SERVICES

Services include preliminary engineering, opinion of probable cost, feasibility study, with system alternatives, sewer and water hydraulic modeling analysis, design, topographic surveying, and preparation of construction contract documents.

REGIONAL WATER RECLAMATION PROGRAM MANAGEMENT

Mission Springs Water District, City of Desert Hot Springs, CA

RELEVANCE TO ONTARIO

- *Management of the Program from Inception to Date*
- *Program Sequencing*
- *Value Engineering*
- *Managing CEQA Compliance*
- *Managing Permitting*
- *Coordination with City, County, RWQCB, and State Water Board*
- *SRF and Grant Acquisition and Administration*

Client Contact: Brian Macy | General Manager
Phone Number: (760) 329-5169
Email: bmacy@Mswd.Org
Dollar Value of Service: $2.6M
Dollar Value of Project:$60M
Completion Date: On-Going

DESCRIPTION

Mission Springs Water District (MSWD) retained TKE to prepare a preliminary engineering analysis that evaluated expanding an existing WWTP or building a new regional WWTP. Ultimately, MSWD selected to proceed with a new regional WWTP, the Regional Water Reclamation Facility (RWRF). Thereafter, TKE was retained to be the program manager for the for the development of the RWRF and associated projects. As program manager, TKE is responsible for coordinating the design, hydrogeological analysis, environmental compliance processing, and construction of the RWRF, a new Regional Conveyance Trunk Sewer to deliver wastewater to the RWRF, and the M-2 Collection System to connect 695 parcels to the sewer system for treatment by the RWRF. In addition, TKE is in charge of grant funding and permit acquisition. In 2022, TKE secured $68 million in grant funding for the project. The project includes coordination with the State Water Resource Control Board, Regional Water Quality Control Board, Air Quality Management District, other agencies, and other consultants.

SERVICES

Services include preliminary engineering, benefit-cost analysis, project planning and scoping, Board report preparation and presentations, prepare grant funding applications and management, preparation of wastewater flow projection report, technical report and design review, prepare RFPs, environmental compliance services, prepare right-of-way acquisition documents, provided program/project management, regulatory and stakeholder meetings and presentations, perform construction management and inspection..

Client Contact: Brian Macy | General Manager
Phone Number: (760) 329-5169
Email: bmacy@Mswd.Org
Dollar Value of Service: $400K
Dollar Value of Project: $6.5M
Completion Date: On-Going

DESCRIPTION

Mission Springs Water District (MSWD) retained TKE to conduct a preliminary engineering an
sewer/force main alignments, wastewater flow rates, lift station capacity analysis, and other
preferred alignment of the Regional Conveyance Force Main and Trunk Sewer and potential flow diversions to the Regional Water Reclamation Facility (RWRF). TKE is also responsible for final design and contract documents for approximately 3 miles of the preferred Regional Conveyance Force Main and Trunk Sewer alignment from the intersection of Dillon Road and Avenida Manzana to the RWRF. The project includes environmental compliance and geotechnical investigation, along with coordination with developers, other agencies, Regional Water Quality Control Board, and other consultants.

SERVICES

Services include preliminary engineering, opinion of probable cost, planning system alternatives, sewer hydraulic modeling analysis, design, topographic surveying, and preparation of plans, specifications, and estimates, construction management, inspection and construction staking.

KEY STAFF

Dollar Value of Project: $11.2M
Completion Date: On-Going

RELEVANCE TO ONTARIO

- *Construction Management and Inspection Experience*
- *Project Sequencing*
- *Utility Coordination*
- *Federal and Local Grant Funding*

DESCRIPTION

TKE provides Construction Management and Inspection services for the Terrace No. 3 Reservoir, Sycamore No. 1 Reservoir, Del Rosa No. 3 Reservoir, and Devore Reservoir. The project consists of seismic upgrades, yard piping, demolition, structural work, welding work, foundation work, and coating of existing steel reservoirs. TKE is providing complete construction management services, including preconstruction services, construction management, coordination, scheduling, administration, inspection, materials testing, environmental impacts analysis, submittal review and approval coordination, and preparation of project records and close-out documents for the project, including preparation of an operations manual and coordination of required training.

SERVICES

Services include construction management, inspection, environmental compliance, geotechnical and material testing, multiple agency coordination, and special inspections.

Completion Date: On-Going

RELEVANCE TO ONTARIO

- *On-Call Survey*
- *ALTA Surveys*
- *Design Surveys*
- *Topographic Surveys*

DESCRIPTION

TKE provides on-call surveying services to the City, including City Surveyor. TKE managed more than $20 million in public improvements. While providing these services to the City, TKE represented the City with other agencies at numerous meetings, represented engineering with the City's council and other public meetings, reviewed maps and conditions of approval, performed boundary and topographic surveys, performed construction verification and staking surveys and performed map checking for commercial and residential development projects.

SERVICES

Services include ALTA surveys, design surveys, easements, right of way preparation, and mapping, topographic mapping, boundary surveying and monumentation, benchmarks and centerline tie information, legal description and exhibits, construction staking

TERMINATION, DEBARMENT, OR LITIGATION

TKE Engineering Inc. has no past history of failure to enter into a contract, withdrawal of a proposal as a result of error, termination or failure to complete, debarment by any municipal county, state, federal or local agency, litigation or any falsification of information submitted.

G. TECHNICAL COMPETENCE

TECHNOLOGY

TKE has state of the art conferencing and communications equipment. We are fully capable of hosting multi-participant meetings including video conferencing. TKE, with its current clients, already utilizes similar tools including clients' ability to view host computer screens for document development and review.

AVAILABILITY TO PERFORM WORK

TKE is committed to completing all of the services required for the duration of the contract. TKE will always find the City as a priority client and as such, resources needed to complete the required tasks will be provided.

TKE has extensive experience with an excellent reputation in the provision of project design services for municipal agencies. Throughout our history, we have successfully completed hundreds of locally and grant funded public works improvement projects for more than 80 different municipal agencies. We have successfully completed complex and challenging grant funded projects for a variety of municipal agencies who have continued to request that we partner with them in delivering value to their communities.

RESOURCES

TKE maintains state of the art engineering and surveying equipment and software Our survey equipment includes a mirrorless, fully robotic, 1-second total station and GPS equipment capable of tying all project into California State Plane Coordinate System, and digital leveling equipment to ensure accuracy of the project datum information. Our computer systems include AutoCAD Civil 3D (latest version) and MicroStation software for computer aided drafting and project design, Microsoft Office Suite for letters, spreadsheets and schedule preparation and Outlook for email communications. Our Hydrology and Hydraulic Analysis are conducted using Hydrosoft software package developed by Advance Engineering Software (AES) and Civilcadd/Civildesign software package developed by CIVILDESIGN, Corporation. Included within those software packages are: peak flow runoff estimation by Rational Method or Unit-Hydrograph, Flow Routing Analysis, Water Surface Pressure Gradient Modeling, as well as various storm drain structure hydraulic analysis modules. All documents provided by TKE will be completely compatible with City equipment and software.

RESPONSE TIME

TKE will respond to the City's needs as they arise and diligently stay on schedule. As discussed in previous sections of the proposal, TKE's management staff meet weekly to assign staff for the needs of each project to ensure the project receives the required attention to stay on schedule. Because of TKE's proactive management approach, TKE rarely experiences 'crisis' project delivery needs. When requested by our clients, TKE adds resources, commits extended work hours, develops an efficient implementation plan, and other efforts as needed.

SECTION 7 | PROPOSED METHOD TO ACCOMPLISH THE WORK

A. PROPOSED APPROACH

Whether the services required are Civil engineering, surveying, planning, design, construction related, successful project delivery is our goal. Our definition of successful project delivery is:

- Project Completion that Protects City Interests
- Project Completion that Meets All Project Requirements
- Project Completion on Schedule
- Project Completion within Budget

IMPLEMENTATION PLAN

TKE's implementation plan includes the following key elements which we routinely provide for each of our projects:

PROJECT MANAGEMENT

TKE provides effective engineering, design, and project management services to a variety of clients. We have successfully delivered extensive and highly visible development projects, street improvement, traffic improvement, drainage improvement, water, wastewater and facility improvement projects for the Coachella Valley Association of Governments, County of San Bernardino and Riverside, Cities of Coachella, Banning, Calimesa, Moreno Valley, Chino, Glendora, El Monte, South El Monte, Corona, Highland, Hesperia, Colton, Upland, Fontana, Yucaipa, Rialto, Redlands, Wildomar, Lake Elsinore, and Riverside and for the Municipal Agencies San Bernardino Municipal Water Department, Rubidoux Community Services District, Mission Springs Water District, East Valley Water District, Mission Springs Water District, Coachella Water Authority, San Bernardino Municipal Water Department, Rubidoux Community Services District, East Valley Water District, Three Valleys Municipal Water District, Monte Vista Water District, and Maywood Mutual Water Company. TKE's approach has consistently allowed our partner agencies to fulfill their missions of delivering the best value for the public's investment.

TKE's management approach includes:

MONTHLY PROGRESS REPORTS

TKE documents project progress for all projects assigned to TKE by a comprehensive project management summary. The summary includes project name and related number, description of progress, budget status, schedule compliance, completed deliverables, and anticipated upcoming accomplishments.

COMMUNICATION

Communications with City staff is another important component to effective project management. In addition to the monthly progress reports, TKE meets with clients as needed to ensure the projects are proceeding as anticipated. We document each discussion or meeting with notes and electronically mail them to the project team within three days of the meeting/conference indicating action items and a schedule for completion of these items. Finally, TKE welcomes direct lines of communication between the City and all Key Staff for any and all project needs.

RECORD KEEPING

TKE keeps records in an organized filing system in electronic forms. This organized filing system allows TKE to access records immediately should they be needed. Additionally, TKE can provide comprehensive project records to the City upon completion of each project.

MEETINGS

TKE meets with project stakeholders as needed including the public, permitting agencies, utilities, etc. We meet with them at the project's onset and throughout the course of project development to ensure all stakeholder project needs are considered in the project design. All meeting preparation (City Staff Reports, agendas, exhibits, slide shows, etc.) will be prepared by TKE for each meeting. Again, meetings will be documented.

TEAM MEETINGS

Team meetings include all parties that have any interest in the project development. In particular, the City's Engineering and Public Works Departments and TKE's subconsultants will be close working partners with TKE in project development of projects.

CIP PROJECT MANAGEMENT

Project management will be an essential element in all types of project delivery. Effective communications will lead to effective management. Management will include weekly reviews of project budget and schedules and regular meetings with all project stakeholders.

For all projects, the most important aspect of management will be to ensure that the City's interests are protected to the maximum extent possible and project schedules are met. TKE will ensure that public funds and are used for the benefit of the community. Any deviation from standards and requirements will be referred to the City and TKE will implement direction given by City staff. Maintaining excellent communications will prevent any project processing misunderstandings and will avoid project delays. TKE management techniques always result in efficient project delivery.

Managing our subconsultants is another area that TKE excels. Due to our extensive variety of project experience, TKE has a vast amount of knowledge with all public works improvement projects. With this understanding, TKE is able to manage others and avoid any costly project changed conditions and delays.

REGULATORY, SUBDIVISION MAP ACT AND CITY STANDARDS COMPLIANCE

Another primary function of TKE staff is to verify compliance with aspects of federal, state, and local laws as well as City standards. TKE will verify that all construction related to engineering components, are constructed in accordance with these requirements and standards.

ENVIRONMENTAL COMPLIANCE

Environmental permitting for projects within the CIP may be complex and involve coordination with multiple jurisdictional agencies, in addition to the normal CEQA analysis and determination. Projects may require environmental permit, including Clean Water Act (CWA) Section 404 permits from the United States Army Corps of Engineers, CWA Section 401 permits from the Regional Water Quality Control Board, Section 1602 Permits from the California Department of Fish and Game and potential US ESA Section 7 permitting from the United States Fish and Wildlife Service. TKE has experience in the acquisition of each of these different permit types and will provide excellent management and oversight to ensure environmental compliance permitting is implemented.

CRITICAL ISSUES

TKE has extensive experience in delivery municipal projects. With our in depth understanding projects and wide range of experience, TKE is able to hit the ground running. For all projects, Step 1 is identifying critical elements.

IDENTIFICATION OF CRITICAL DESIGN ELEMENTS

Our approach to identifying critical issues will be to develop a comprehensive understanding of project scope and prepare a list of critical elements. This will give us a head start on instructing our team about areas of focus.

UTILITY COORDINATION

Most projects include, some utilities which may require relocation and/or adjustment for the proposed improvements. Again, we will identify these facilities early in project design to begin coordination at the earliest opportunity. Agencies that maintain private utilities can be cumbersome in getting facilities relocated. Early coordination will prevent project delays.

ACCURATE COST ESTIMATING

Because of the limited budget for this project, it is important to keep costs controlled. Our approach to controlling costs is to provide frequent and accurate cost estimates by using TKE's detailed cost estimating database. In addition to using this database, TKE utilizes our considerable experience with Construction Management to assist in providing constructability reviews and cost estimating based on current information from our on-going projects. Finally, with the current economic climate, construction costs are widely varying. We will also discuss the project elements with local contractors to assure that we have the most current construction information available so that the City can ensure the most value for the public's dollar.

FAMILIARITY WITH FUNDING SOURCE

TKE is well versed with Caltrans Local Assistance and other grant funding agency requirements. Caltrans requirements includes:

- Requesting that Caltrans furnish an expenditure authorization number.
- Submitting allocation request and finance letters to Caltrans Local Assistance requesting reimbursable costs allocation
- Ensuring Caltrans prepares a Program Supplement Agreement for City execution. If the City does not have a "State Funds Master Agreement" on file with Caltrans, one will be required.
- Ensuring that the City acquires Local Assistance approval for all required environmental clearances (CEQA) and right-of-way needed for the project.
- Ensuring that the project complies with the requirements of the Americans with Disabilities Act.
- Processing invoices to Caltrans Local Assistance for reimbursement.

Other grant agency processing requirements are also unique- TKE grant funding experience will greatly benefit the City.

B. METHODOLOGY

Below is an example of the Scope of Work that will be required for a design project.

TASK NO. 1 PROJECT MANAGEMENT

TKE's Project Managers will be responsible for project requirement. They will attend all meetings, prepare agendas and corresponding meeting minutes together with collection of signatures for meeting attendees (sign-in sheets). They will meet with the City at appropriate times and will meet as needed with agencies, and utilities in addition to the meetings

presented below. We will also update TKE's project budget and schedule prior to each City meeting for discussion with staff.

Deliverables

Agendas, Meeting Minutes, Exhibits, and Project Progress, Schedule and TKE Budget Updates

TASK NO. 2 INITIAL 'KICK OFF' MEETING

Prior to commencement of services for any project, TKE will meet City staff to review project obligations and to discuss all project requirements in detail. TKE's Project Managers will attend the meeting to determine project protocol, design requirements, funding requirements and obtain City record drawings.

Deliverables

Agenda, Minutes, and Distribution to all Entities

TASK NO. 3 RECORDS RESEARCH

We will thoroughly research existing utility records and acquire copies of all available records. The purpose of the records research is to assemble survey records to establish locations of street centerlines, street rights-of-way, and easements and determine locations of all existing utilities and improvements. The research will consist of assembling copies of assessors' maps, tract maps, parcel maps, easement documents, monument ties, benchmark data, corner records, street and storm drain improvement plans, and utility drawings. We will request the City provide copies of available pertinent City records, such as survey ties, benchmarks, and street, water, recycled water, sewer and storm drain improvement plans.

We will notify Underground Service Alert to acquire a complete list of underground utility purveyors. The utility drawings will include existing drawings from the City, and drawings and/or atlas maps from all private utility companies, and/or agencies. We will confer and coordinate with the following agencies as well as any additional agencies listed in the Underground Service Alert:

- Ontario Municipal Utilities Company
- Verizon Telephone
- AT&T and PacBell
- Sprint
- Southern California Gas Co.
- Southern California Edison
- Time Warner Cable Television

We will send first utility notice letters to all listed utility companies and agencies requesting their data. We will maintain copies of the letters and correspondence for future reference. We shall also provide the City with a complete copy of all correspondence with all utility companies.

Deliverables

Record Data and Utility Information

TASK NO. 4 DESIGN SURVEY

TKE will conduct a survey of the project areas. Our field survey crews will collect appropriate detail as required to prepare a topographic map. Survey data will include visible grade breaks, trees, buildings, walkways, sidewalks, driveways, curbs, gutters, cross gutters, fire hydrants, water valves, manholes, water meters, signs, street lights, power poles, fences, structure, and all other visible features. In addition, we will survey the existing height of overhead wires as needed.

Our crews will collect existing topography as needed to provide sufficient level of detail for precise design. The crew will also measure invert, top of cone and rim elevations for all existing manholes in the project area and invert and rim elevations for all drainage and sewer facilities. The crew will set temporary benchmarks within the project limits and they will be shown on the drawings.

Deliverables

Ground Topography, Utilities and Data in ASCII Format with Description Codes

TASK NO. 5 TOPOGRAPHIC MAP/SURVEY CONTROL PLAN

We will prepare a topographic map as required. The topographic map shall be prepared in AutoCAD format appropriate drawing scales and shall include 1-foot contours.

A survey control plan shall be prepared and shall show all existing found monumentation, benchmarks, ties and temporary control points. All found monumentation will include descriptions and tie-out information.

The survey control plan will be provided to the City in hard copy (mylar) and digital (AutoCAD and PDF) formats.

Deliverables

Topographic Mapping and Control Plan

TASK NO. 6 BASE CONSTRUCTION DRAWINGS

We will prepare the base construction drawings on 24" by 36" sheets with the City's standard title block using AutoCAD 2023 software, at required drawing scales. The base construction drawings will include a plan view based on the accumulated conventional survey data. We will add the sheet north arrow, graphic scale, existing improvements and utilities (based on both assembled records and field data), property lines, public and private right-of-way, easement areas, assessor parcel numbers, street centerline, street names, building locations, water service location; sewer manhole lids and water valve lids;

cross gutters; driveways, pedestrian ramps; traffic stripes and legends; curb returns; details of private improvements, fences, gates, irrigation systems, mailboxes, trees and landscaping, and survey data to the drawings. Once the base drawings are complete, we will perform a careful field review to ensure all underground facilities are shown correctly.

Deliverables

Base Construction Drawings in Plan View

TASK NO. 7 GEOMETRIC ALIGNMENT DESIGN

For street projects, TKE will prepare a Geometric Alignment Plan. Geometric configuration will require extensive coordination between TKE and the City to determine the preferred alignment configuration that will provide safety and efficiency, while considering right-way impacts. Using the topographic and base mapping, TKE will prepare the geometric alignment to be used for analyzing site conditions, operational functionality for the design vehicle, stopping sight distance, intersection sight distance and non-motorized design users. Upon completion of the alignment design, TKE will present the information to the City for approval.

In addition, TKE will prepare preliminary construction drawings showing proposed street improvements. Proposed improvements will be designed in accordance with the City's current street design standards and specifications for ultimate street widening. We will include proposed curb, sidewalk, driveway and ramp locations to assess right-of-way requirements. We will show the typical street section incorporating existing utility and improvement locations, existing drainage improvements, existing right-of-way, proposed right-of-way requirements at each intersection, and right-of-way exhibit.

We will prepare quantity estimates for all proposed improvements. In addition, we will prepare a preliminary construction cost estimate using an Excel spreadsheet. Descriptions of work, unit prices, and quantities will be included in the spreadsheet.

Deliverables

Geometric Alignment Exhibit in Plan View and Preliminary Estimate

TASK NO. 8 COMPOSITE UTILITY PLAN

TKE will prepare a composite utility plan which identifies all existing utilities within the proposed right-of-way and all utilities affected by the proposed street and traffic signal improvements and requiring relocation. The plan shall show all above and below ground utilities including all laterals. The utility plan will be for City use in coordinating with utility companies.

Deliverables

Composite Utility Plan

TASK NO. 9 65% DESIGN

65% Design will include preparation geometric roadway improvement exhibits, preliminary construction drawings, preliminary technical specifications, and preliminary construction estimates.

Construction drawings will show proposed street and intersection geometrics including locations of proposed curb, drive approaches, sidewalk, center island, refuge islands, swales, ramps, spandrels and cross gutters. In addition, street grades will be prepared to establish project grading requirements. Proposed improvements will be designed in accordance with the City's current street and drainage design standards and specifications for ultimate street widening. The proposed improvements will be designed to minimize grading, earthwork and transitions onto private property.

Drawings will include a title sheet, construction note sheet, demolition sheets, plan/profile sheets, drainage sheets, cross-section sheets, landscape and irrigation sheets, street lighting sheets, signing and striping sheets, and necessary detail sheets.

The title sheet shall include the title of the job, a vicinity map showing the City in relationship to surrounding communities, a location map showing the project limits, construction notes, an index for the drawings, list of references on the City's standard title block.

The construction note sheets will show general construction notes, a list of abbreviations used, benchmark data, general notes, utilities with phone numbers, and project specific requirements.

The demolition sheets will show existing improvement demolition including limits of pavement removal, saw cutting locations and limits and concrete cross gutters and curbs, if required. In addition, the plan will specify relocation of private improvement such as mailboxes fences, etc. as required.

Plan/profile sheets will show proposed improvements including curb and gutter, median curbs, sidewalks, handicap ramps, driveways, pavement limits, storm drain pipe, manholes, catch basins, overlay limits, signs, traffic stripes, existing utility relocations (if any), water service relocations, and sewer manhole, valve, and vault cover grade adjustments. For the profile portion of the drawings, we will show existing and proposed pavement elevations at centerline and existing edge of pavement on both sides of the streets with appropriate design data together with proposed top of curb elevations.

The drainage sheets will be prepared in accordance with City standards and requirements. The sheet will show existing right-of-way, curb, gutter, sidewalk, existing utilities, existing right-of-way, existing drainage improvements and all proposed

improvements including catch basins, pipe and connections. Storm drain sheets will show top of pipe, flowline, structures utility crossings and ground surface.

The street cross-sections sheets will show street sections at appropriate drawing scales. The sections will be dimensioned and construction and demolition notes will be shown. In addition, rights-of-way and limits of work will be shown.

Street lighting sheets will be prepared in accordance with City standards and requirements. The sheets will show existing right-of-way, curb, gutter, sidewalk, existing utilities, existing and proposed street light improvements and all proposed modifications including conduit extension and head replacements.

The signing and striping sheets will include all required pavement markings, way finding signs, lane stripes and signage in accordance with the MUTCD, California supplement and all other applicable City requirements, for the project limits. The sheets will include full geometrical layouts at each intersection.

For the specifications, we will amend the City Standards Technical Provisions as required for the projects. The construction specifications will be prepared in Microsoft Word (2020 Version) format in accordance with City standards.

In addition, we will prepare quantity estimates for all proposed improvements prepared using an excel spreadsheet showing an itemized construction cost breakdown. Descriptions of work, unit prices, and quantities will be included in the spreadsheet.

65% Design (construction drawings, technical specifications, construction estimates, and right-of-way documents and approvals) will be submitted with a project summary memorandum together with an updated project schedule, utility contact matrix, stakeholder meeting summary, and internal plan review documentation.

Deliverables

65% Design Submittal

TASK NO. 10 COORDINATION WITH AGENCIES/ UTILITIES

After 65% design is complete, plans will be sent to agencies having facilities in the project areas requesting that they verify their facilities are shown correctly and that they furnish any construction requirements they desire. We will highlight each agency's facilities and advise each of potential conflicts and relocation requirements. We will request that they respond within two weeks and we will follow up with telephone calls to confirm all agency requirements have been incorporated. We will document all conferences with utilities and agencies and copy the City via e-mail.

Deliverables

Utility Coordination Matrix

TASK NO. 11 65% DESIGN REVIEW MEETINGS

After the City has completed its review, we will meet with City staff to acquire Staff's comments for preparation of revised plans, specifications and estimates. It is anticipated that the City will be involved in the 60% plan check process and subsequent 60% design review meeting.

Deliverables

Meeting Agenda, Minutes and Final Design Approval

TASK NO. 12 95% DESIGN

95% design will include incorporation of City comments, final street and roundabout, drainage, landscape, irrigation, lighting and signing and striping plans.

We will verify that the project will comply with ADA design requirements and that adequate drainage will be achieved.

95% Design will be submitted with a project summary memorandum together with updated project specifications and estimates.

Deliverables

95% Design Submittal

TASK NO. 13 FINAL COORDINATION WITH AGENCIES/ UTILITIES

After the final drawings are approved by the City, we will again submit them to all agencies/utilities having underground facilities in the project area requesting that they verify their facilities are shown correctly and we will advise them of the project construction schedule and relocation requirements. In addition, we will coordinate final relocation construction prior to project bidding. We will document all meetings and conferences with utilities and agencies.

Deliverables

Utility Coordination Matrix

TASK NO. 14 95% DESIGN REVIEW MEETINGS

After the City has completed its review, we will meet with City staff to acquire Staff's comments for preparation of revised plans, specifications and estimates.

Deliverables

Meeting Agenda, Minutes and Final Design Approval

TASK NO. 15 100% DESIGN

100% design will include incorporation of City comments, final plans, specifications, and estimates, ready for public bidding. Final documents will include mylars and hard copy

specifications with signatures and electronic copies of final documents.

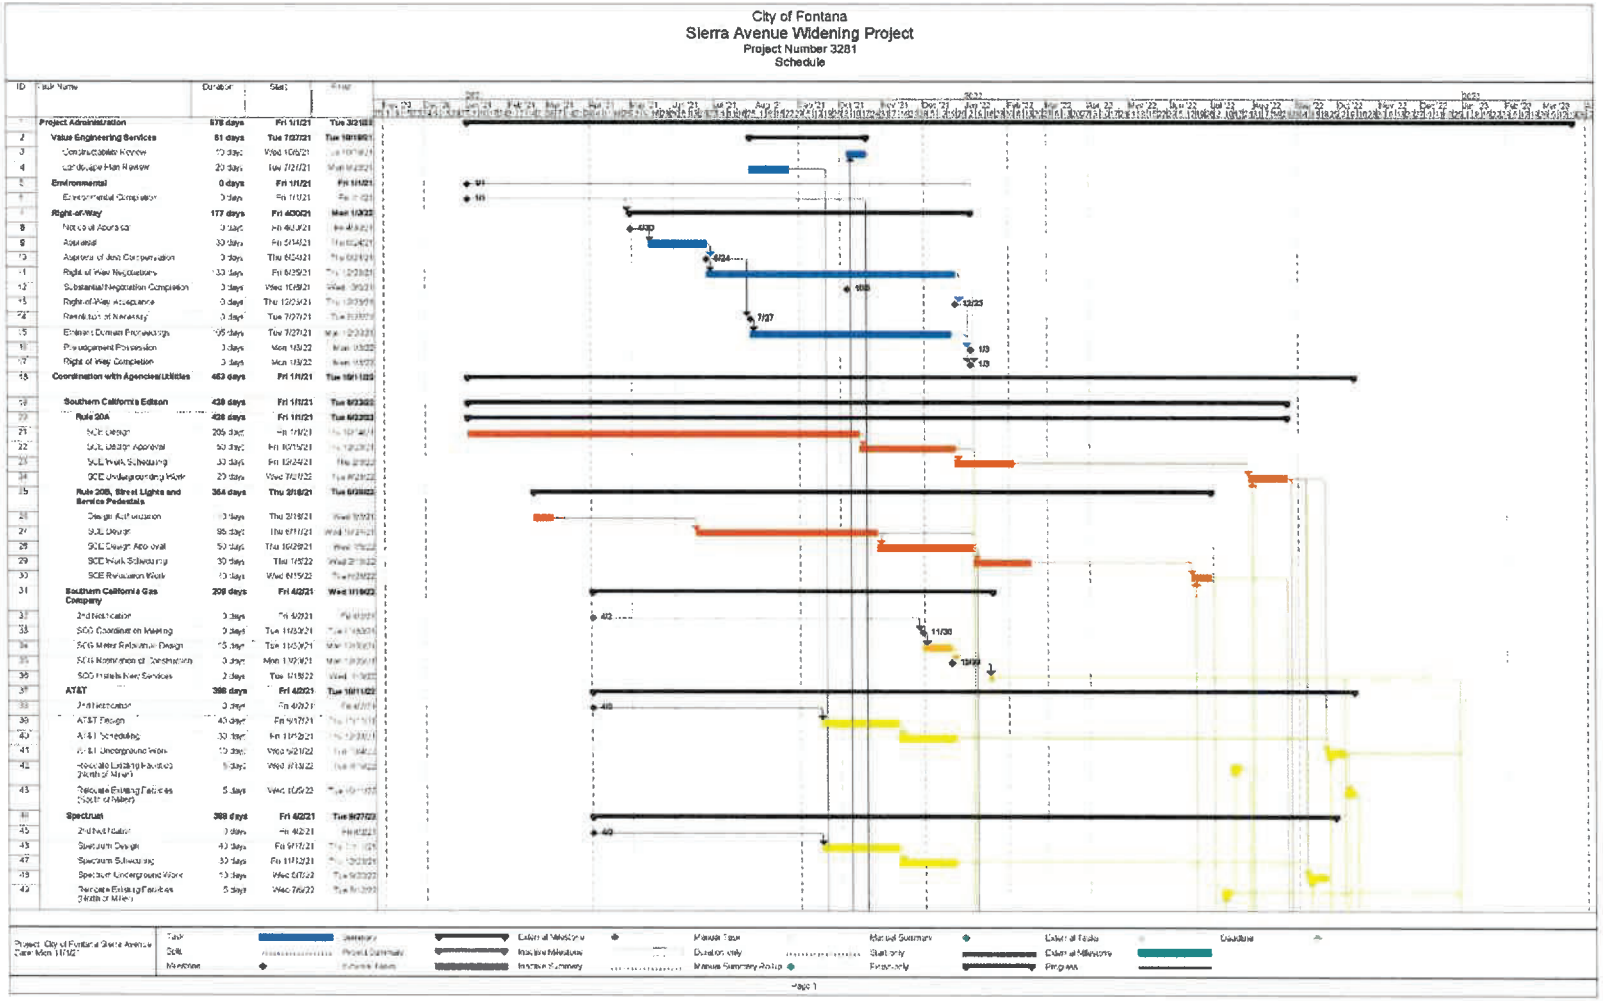
100% Design will be submitted with a project summary memorandum together with an updated project schedule, additional stakeholder meeting summary, and internal plan review documentation.

Deliverables
One (1) Full-Size Mylar of 100% Drawings; Hard Copy of Specifications and Estimate, Electronic Files of Final Plans, Specifications and Estimate

TASK NO. 16 BIDDING ASSISTANCE

TKE will assist the City during project bidding by attending pre-bid meeting, answering questions about or provide clarifications of the contract documents as requested by the City, and will prepare addenda if necessary.

Deliverables
Response to RFI's, Addenda Preparation and Bid Analysis Recommendations



TASK NO. 17 ASSISTANCE DURING CONSTRUCTION

TKE shall attend the preconstruction meeting and upon receipt of redlined drawings, TKE will prepare a complete set of signed and stamped record drawings, which will reflect the improvements as constructed; any changes made during project construction. Said record drawings will be based on data furnished by the public agencies, the contractor, and the City.

Deliverables
Response to RFI's, Shop Drawing Submittals, and As-Built Preparation

C. PROPOSED PROJECT SCHEDULE

A Microsoft project schedule will be prepared for each project assigned to TKE. TKE will submit the project schedule to the City for concurrence. The schedule will be reviewed by TKE's Project Managers weekly. Schedule update will be provided to the City at the monthly coordination meetings. In addition, a sample schedule for a one of TKE's current projects is shown below for your reference:

City of Fontana
Sierra Avenue Widening Project
Project Number 3281

SECTION 10 | LITIGATION

TKE does not have any claims filed by our firm or against our firm throughout our entire history.

SECTION 11 | OTHER INFORMATION

A. As previously discussed, TKE Engineering Inc. (TKE) encourages the City to verify with our qualifications with our references and verify TKE's ability to provide efficient and effective services on schedule and within budget.
B. TKE is extremely active in the engineering community. Key members of TKE's staff have been serving volunteer roles on the American Society of Civil Engineers San Bernardino and Riverside Counties and Los Angeles Section Boards, American Council of Engineering Companies Inland Empire Board, American Public Works Association Inland Empire Board and are members of the American Water Works Association and Society of American Military Engineers.
C. TKE Engineering is currently working on the OMUC Design Services for Recycled Water Pipeline for Riverside Drive, from Archibald Avenue to Mill Creek Avenue.
D. TKE Engineering has no conflict of interest in connection with providing the services.

SECTION 12 | CERTIFICATION OF PROPOSAL

The undersigned hereby submits its proposal and, by doing so, agrees to furnish services to the City in accordance with the Request for Qualifications (RFQ), and to be bound by the terms and conditions of the RFQ.

APPENDICES

APPENDIX A | NONCOLLUSION DECLARATION

City of Ontario

NONCOLLUSION DECLARATION TO BE EXECUTED BY BIDDER AND SUBMITTED WITH BID

The undersigned declares:

I am the Senior Vice President of TKE Engineering, Inc., the party making the foregoing bid.

The bid is not made in the interest of, or on behalf of, any undisclosed person, partnership, company, association, organization, or corporation. The bid is genuine and not collusive or sham. The bidder has not directly or indirectly induced or solicited any other bidder to put in a false or sham bid. The bidder has not directly or indirectly colluded, conspired, connived, or agreed with any bidder or anyone else to put in a sham bid, or to refrain from bidding. The bidder has not in any manner, directly or indirectly, sought by agreement, communication, or conference with anyone to fix the bid price of the bidder or any other bidder, or to fix any overhead, profit, or cost element of the bid price, or of that of any other bidder. All statements contained in the bid are true. The bidder has not, directly or indirectly, submitted his or her bid price or any breakdown thereof, or the contents thereof, or divulged information or data relative thereto, to any corporation, partnership, company association, organization, bid depository, or to any member or agent thereof to effectuate a collusive or sham bid, and has not paid, and will not pay, any person or entity for such purpose.

Any person executing this declaration on behalf of a bidder that is a corporation, partnership, joint venture, limited liability company, limited liability partnership, or any other entity, hereby represents that he or she has full power to execute, and does execute, this declaration on behalf of the bidder.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct and that this declaration is executed on January 10, 2024 [date], at Riverside [city], California [state].

Name of Bidder TKE Engineering, Inc.

Mr. Renner is the Senior Vice President of TKE and has over 23 years of experience in civil engineering design, plan checking, project management and construction management of both development and public works infrastructure projects, including grading improvements, street, traffic, and transportation improvements, pavement rehabilitation, drainage improvements, water and sewer improvements, public facilities, parks and recreation improvements. He currently provides project and construction management services for the Coachella Valley Association of Governments (CVAG), Mission Springs Water District and the cities of Coachella, Calimesa, Fontana, Wildomar, Highland, and Moreno Valley. He has managed design and construction on a variety of Capital Improvement Program and development projects of all sizes ranging from $100,000 to $80 Million. As a project manager, Mr. Renner has been responsible for field analysis of pavement deterioration, design production, supervising a staff of engineers and drafters, coordinating work between the production team and the client, and for submitting all deliverables in a timely manner. As a construction manager, Mr. Renner has been responsible for construction coordination and scheduling, utility relocation coordination, public relations, submittal review, supervising a staff of inspectors and subconsultants, weekly progress meetings, request for information responses, storm water management, progress payments, change order review and negotiations, labor compliance, and project closeout. He has successfully delivered a wide variety of complex and challenging projects and is dedicated to ensuring that the projects managed and delivered by TKE continue to exceed industry standards.

DETAILED PROJECT EXPERIENCE

- **CV Sync Traffic Signal Synchronization,** *City of Palm Desert, CA*- Terry serves as the project manager assisting in oversight of all construction management aspects for Phase 1 of the CV Sync project (Formerly CVAG TSSPP). This work involves plan review, management and approval of construction scheduling, budget, field work, local agency procedures and more. As the Local Agency Resident Engineer, Justin ensures adherence with applicable State and Federal requirements requiring familiarity with the CAMUTCD, Caltrans Standard Plans, Caltrans Construction Manual, Local Agency Procedures Manual and other applicable standards and documents. This project involves coordination and support across twelve agencies in the Coachella Valley.
- **Sierra Avenue Widening Project**, *City of Fontana, CA* - Mr. Renner provides project and construction management services to the City of Fontana for the Sierra Avenue Widening Project. The project is approximately 1 mile of widening for the City's primary north south arterial street widening the roadway from 4 lanes to 6 lanes. The project includes street widening, raised landscape median, new sewer main installation, traffic signal installation and modifications, traffic signal interconnect and fiber optic cable installation, and extensive utility coordination for water main replacement, Rule 20A and Rule 20B undergrounding work. He is currently responsible for management of utility coordination, right-of-way acquisition for 76 parcels, traffic analysis, review of construction plans, coordination with project design consultants, construction management and construction staking services. While providing these services to the City, Mr. Renner has represented the City with other agencies, represented engineering with the City's management personnel and other meetings, managed engineering budgets and project schedules.
- **Calimesa Citywide Pavement Rehabilitation Project,** *City of Calimesa, CA*- Terry served as the project manager. The citywide pavement rehabilitation project included various pavement rehabilitation strategies for 12 residential and arterial streets throughout the City of Calimesa. The project included more than 400,000 square feet of full depth removal and replacement, grind and overlay along with replacement of damaged cross gutters, spandrels, curb, driveways and curb access ramps. The project also included coordination with

Caltrans to obtain a permit for construction within the State right-of-way for repaving the Sandalwood overcrossing of the Interstate 10 Freeway

- **Moreno Valley Citywide Pavement Rehabilitation Project,** *City of Moreno Valley, CA* - Mr. Renner served as the project manager. The Citywide Pavement Rehabilitation Program for FY 2021/22 Project included rehabilitation for 20 miles along various streets throughout the City of Moreno Valley. TKE provided daily inspection and monitoring to ensure construction of the project was in accordance with the approved plans and specifications. The project included pavement crack sealing, grinding and isolated removal areas along with construction of street widening with asphalt rubberized hot mix overlay over conventional hot mix asphalt base paving, pavement replacement, rubberized asphalt concrete overlay, slurry seal and asphalt concrete curb installation. TKE provided preparation of daily field reports and photo logs and provided reports to the City Staff on weekly basis
- **LPP County Line Road Project**, *City of Yucaipa/Calimesa, CA* - Mr. Renner was the project manager for design of the SB1 Local Partnership Program project. This project consists of the preparation of full construction documents including environmental compliance documents, right-of-way acquisition, utility relocations, plans, technical specifications, construction cost estimates (PS&E) and construction support services for the design of four roundabouts, street widening, bicycle lanes, curb and gutter, sidewalk, crosswalks, ADA curb ramps, storm drain, and signing and striping along County Line Road from 4th Street to Bryant Street.
- **ATP Cycle 3 Street Safe Routes to School Pedestrian Improvement Project,** *City of Fontana, CA* – Mr. Renner served as the Principal-In-Charge for the ATP Cycle 3 Safe Routes to School Pedestrian Improvement Project. TKE provided design engineering services for the Safe Routes to Schools project funded through ATP Cycle 2 for the City of Fontana for Fontana Ave and Arrow Boulevard. This project consisted of the preparation of full Construction documents including plans, technical specifications, construction cost estimates (PS&E) and construction support services for the 5,900 linear foot ADA and pedestrian enhancement project. The project included the construction of curb, gutter, sidewalk, curb ramp, bike lane improvements, utility relocations, storm drain modifications, private improvement restoration and signing and striping. TKE successfully coordinated with Caltrans for completion of the PES, right-of-way certifications and obtaining the RFA for construction.
- **San Bernardino Avenue Street Improvements**, *City of Fontana, CA* - Mr. Renner provided Construction Administration services for the San Bernardino Avenue street and storm drain improvements project which is located in the City of Fontana north of Interstate 10 Freeway and East of the Interstate 15 Freeway from Commerce Drive to Cherry Avenue. The proposed median and sidewalk improvements minimize turning movements providing for increased vehicular capacity, corridor beautification, and improved traffic and pedestrian safety. Construction Management, Inspection and construction staking is being provided by TKE for approximately 8,800 linear feet of street median, sidewalk and storm drain improvements. TKE provided utility and railroad coordination for the relocation and adjustment of various utility improvements and the railroad crossing upgrade. TKE prepared all legal descriptions, right-of-way acquisition plats, temporary construction easement plats and negotiated with property owners for 5 separate parcels
- **Foothill Boulevard Median and Traffic Signal Improvements,** *City of Fontana, Phase II, CA* – Mr. Renner was the Project Manager for this project which included 1,900 linear feet of median, traffic signal installation, and street widening improvements. The project is between Oleander Avenue and Juniper

Avenue. Project components included construction of ultimate street widening, median, curb and gutter, sidewalk, traffic signal installation, median landscaping and lighting, striping, and onsite private improvements. The project was a federally funded project (HSIP) which was administered through Caltrans Local Assistance.

Mr. Thornton, TKE's President, is in charge of all TKE projects. He has over 34 years of experience in engineering planning, design, land surveying and construction management for public works projects. He has worked on a variety of public works engineering projects including sewer improvements, street improvements, park improvements, bike trail improvements, drainage improvements, and reclaimed water system improvements projects. Mr. Thornton is responsible for managing including funding administration, planning, evaluating, and designing these projects and has provided construction engineering and surveying services for many of these same projects.

DETAILED PROJECT EXPERIENCE

- **City Engineering Services**, *City of Calimesa, CA* -Mr. Thornton provides on-call civil engineering services to the City, including City Engineer. He managed more than $10 million in public improvements. While providing these services to the City, Mr. Thornton represented the City with other agencies at numerous meeting including RCTC and WRCOG, represents engineering with the City's council and other public meetings, manages engineering budgets and project schedules, retains other consultants to prepare improvement design projects, manages funding programs, and various related work. In addition, Mr. Thornton manages major development projects.
- **ATP Cycle 3 Street Safe Routes to School Pedestrian Improvement Project,** *City of Fontana, CA* – Mr. Thornton served as the project manager for the ATP Cycle 3 Safe Routes to School Pedestrian Improvement Project. TKE provided design engineering services for the Safe Routes to Schools project funded through ATP Cycle 2 for the City of Fontana for Fontana Ave and Arrow Boulevard. This project consisted of the preparation of full Construction documents including plans, technical specifications, construction cost estimates (PS&E) and construction support services for the 5,900 linear foot ADA and pedestrian enhancement project. The project included the construction of curb, gutter, sidewalk, curb ramp, bike lane improvements, utility relocations, storm drain modifications, private improvement restoration and signing and striping. TKE successfully coordinated with Caltrans for completion of the PES, right-of-way certifications and obtaining the RFA for construction.
- **Calimesa Creek Storm Drainage Improvements,** *City of Calimesa, CA* – Mr. Thornton is serving as the Principal in Charge for the Calimesa Creek Storm Drainage Improvements Project, located in the City of Calimesa along County Line Road between the Interstate 10 Freeway and 5th Street. The proposed project is planned to provide bank stabilization and storm water management improvements along a 0.6 mile portion of the Calimesa Creek to mitigate erosion and flooding of the earthen channel with undersized street culvert crossings and severely eroded side slopes with near vertical walls. The project will provide 100-year storm protection as well as other important benefits including groundwater recharge of storm water, environmental restoration and enhancement, recreational trails and increased protection to existing developments. The project will include environmental assessment and processing, preliminary engineering and project scoping, design, right-of-way acquisition, EPA funding coordination and management and additional drainage system improvements.
- **San Bernardino Avenue Street Improvements,** *City of Fontana, CA*- Mr. Thornton provided Construction Administration services for the San Bernardino Avenue street and storm drain improvements project which is located in the City of Fontana north of Interstate 10 Freeway and East of the Interstate 15 Freeway from Commerce Drive to Cherry Avenue. The proposed median and sidewalk improvements minimize turning movements providing for increased vehicular capacity, corridor beautification, and improved traffic

and pedestrian safety. Construction Management, Inspection and construction staking is being provided by TKE for approximately 8,800 linear feet of street median, sidewalk and storm drain improvements. TKE provided utility and railroad coordination for the relocation and adjustment of various utility improvements (i.e., power poles, meters, vaults, etc.) and the railroad crossing upgrade. TKE prepared all legal descriptions, right-of-way acquisition plats, temporary construction easement plats and negotiated with property owners for 5 separate parcels.

- **I-10 Cherry Valley Interchange Improvements,** *City of Calimesa, CA*– Mr. Thornton is serving as the Principal in Charge for the Cherry Valley Interchange Improvements Project, located in the City of Calimesa along Interstate 10. The proposed project is planned to include intersection roundabouts at the on/off ramps to achieve significant construction cost savings and to facilitate Caltrans streamline approvals. The project also includes the ultimate realignment of the Cherry Valley Bridge Overpass to improve line of sight limitations with the existing interchange. The project will include environmental assessment and processing, preliminary engineering and project scoping, design phasing to accommodate Caltrans streamline requirements, right-of-way acquisition, TEAMAC funding coordination and management and additional street and drainage system improvements.
- **A-04 Drainage Corridor Project,** *City of Hesperia, CA*- Michael served as the project manager. TKE provided investigation and acquired grant funding, planning, design, topographic survey, hydrology, and hydraulic analysis, bidding services, construction administration, State and Federal funding coordination services for the City of Hesperia. The A-04 Drainage Corridor project is located in the southwesterly portions of the City of Hesperia. The A-04 drainage corridor is the City's largest drainage tributary containing more than 4,380 acres and conveys flows in excess 5,000cfs. The project includes construction of three proposed flood control basins totaling over 1,000 feet of storage and more than 17,000 linear feet of various size storm drain pipe and box culverts, together with inlet and outlet facilities. During moderate and larger storm events, flooding and sediment accumulation occurs along the entire drainage corridor downstream of the proposed project; in particular, on Main Street, one of the highest volume streets in the city. The project will enhance quality, reduce the region's dependence on imported water supplies, and simulate economic development.

Mr. Ledbetter has over 22 years of professional experience in the civil engineering industry. He has provided design and management services on various critical and challenging projects from planning through design and implementation. He has a well-rounded background with experience in preparation of plans, specifications and estimates and analysis of street and utility improvements, pavement rehabilitation, street widening and median improvements, bicycle and pedestrian enhancements, roundabout improvements, ADA pathway improvements, and signing and striping improvements. Mr. Ledbetter also has extensive experience with computer modeling, analysis, and report preparation, storm water compliance reporting including water quality management plans and storm water pollution prevention plans and; and grant writing for various State and Federal agencies.

DETAILED PROJECT EXPERIENCE

- **2nd Street Safe Route to Schools (SR2S),** *City of Calimesa, CA*- Mr. Ledbetter is serving as the project engineer for this state funded project located in the City of Calimesa. The City of Calimesa was awarded funding for the pedestrian path of travel enhancements to provide safer walking paths along 2nd Street between Avenue "L" and Avenue "H" and along Avenue "L" between 2nd Street and 3rd Street. The project includes street widening, signing and striping enhancements, including proposed curb, gutter and sidewalk improvements construction for increased pedestrian safety. The project includes 1 mile of street improvements together with structural bridge widening over existing drainage channel, right-of-entry acquisition, , Caltrans funding coordination and management, public outreach and utility relocations and coordination.
- **Calimesa Creek Storm Drainage Improvements,** *City of Calimesa* – Mr. Ledbetter is serving as the project engineer for the Calimesa Creek Storm Drainage Improvements Project, located in the City of Calimesa along County Line Road between the Interstate 10 Freeway and 5th Street. The proposed project is planned to provide bank stabilization and storm water management improvements along a 0.6 mile portion of the Calimesa Creek to mitigate erosion and flooding of the earthen channel with undersized street culvert crossings and severely eroded side slopes with near vertical walls. The project will provide 100-year storm protection as well as other important benefits including groundwater recharge of storm water, environmental restoration and enhancement, recreational trails and increased protection to existing developments. The project will include environmental assessment and processing, preliminary engineering and project scoping, design, right-of-way acquisition, EPA funding coordination and management and additional drainage system improvements.
- **San Bernardino Avenue Street Improvements,** *City of Fontana*- Mr. Ledbetter provided Construction Administration services for the San Bernardino Avenue street and storm drain improvements project which is located in the City of Fontana north of Interstate 10 Freeway and East of the Interstate 15 Freeway from Commerce Drive to Cherry Avenue. The proposed median and sidewalk improvements minimize turning movements providing for increased vehicular capacity, corridor beautification, and improved traffic and pedestrian safety. Mr. Nix, has over 39 years of experience as a Civil Engineer. He has worked on a variety of development projects, ranging in size from small to very large, as the municipal agency's technical review staff. He has provided development project screen checks, responded to development community inquiries, accepted submittals on behalf of agencies, determined project impacts, developed conditions of approval, presented projects to planning commissions, prepared council agenda reports, performed plan checks, seamlessly executed the entitlement process, as well as many other municipal development services. In addition, His experience includes survey, design and construction management of all types of civil engineering projects ranging from single and multi-family residential, commercial and industrial development projects, public works projects including street, sewer, water, storm drain improvements, water wells construction including wellhead treatment, sewage and water pump stations, water reservoirs as well as sewage treatment and transmission.

DETAILED PROJECT EXPERIENCE

- **On-Call Plan Checking Services,** *City of Hesperia, CA*- Mr. Nix serves as the Senior Plan Checker. The services included development project screen checks, response to development community inquiries, accept submittals on behalf of agencies, determine project impacts, develop conditions of approval, present projects to planning commissions, prepare council agenda reports, perform plan and map checking for grading, street, storm drain, hydrology, hydraulics, landscaping, street lighting, traffic signal, SWPPP, erosion control, and WQMP plans as well as many other municipal development related services.
- **On-Call Plan Checking Services,** *City of Highland, CA*- Mr. Nix serves as the Senior Plan Checker. The services included development project screen checks, response to development community inquiries, accept submittals on behalf of agencies, determine project impacts, develop conditions of approval, present projects to planning commissions, prepare council agenda reports, perform plan and map checking for grading, street, storm drain, hydrology, hydraulics, landscaping, street lighting, traffic signal, SWPPP, erosion control, and WQMP plans as well as many other municipal development related services.
- **On-Call Plan Checking Services,** *City of Calimesa, CA*- Mr. Nix serves as the Senior Plan Checker. The services included development project screen checks, response to development community inquiries, accept submittals on behalf of agencies, determine project impacts, develop conditions of approval, present projects to planning commissions, prepare council agenda reports, perform plan and map checking for grading, street, storm drain, hydrology, hydraulics, landscaping, street lighting, traffic signal, SWPPP, erosion control, and WQMP plans as well as many other municipal development related services.
- **On-Call Plan Checking Services,** *City of Needles, CA*- Mr. Nix serves as the Senior Plan Checker. TKE provides on-call plan checking services to the City, including City Engineer. TKE managed more than $100 million in public improvements. While providing these services to the City, TKE represented the City with other agencies at numerous meetings, represented engineering with the City's council and other public meetings, managed engineering budgets and project schedules, retained other consultants to prepare improvement design projects, managed funding programs, and various related work.
- **On-Call Plan Checking Services,** *City of Hesperia, CA*- Mr. Nix serves as the Senior Plan Checker. TKE provides on-call plan checking services to the City, including City Engineer. TKE managed more than $100 million in public improvements. While providing these services to the City, TKE represented the City with other agencies at numerous meetings, represented engineering with the City's council and other public meetings, managed engineering budgets and project schedules, retained other consultants to prepare improvement design projects, managed funding programs, and various related work.

Brian Wolfe has over 22 years of experience in civil engineering and land surveying for both private and public sectors of the industry. His experience in design, construction and plan checking has been applied to a variety of capital improvement projects. He has provided City Engineering, staff augmentation, capital improvement design, utility coordination, construction management and plan checking services for several Southern California public agencies. His experience also includes public works construction inspection, composing legal descriptions for easements, topographic surveying and construction surveying. Mr. Wolfe is also well versed in traffic calming, bicycle facility design, traffic engineering studies including warrant analysis and temporary traffic control. Previous traffic engineering duties included close collaboration with City Police Departments to resolve parking violation enforcement issues and increasing traffic safety. Mr. Wolfe looks forward to bringing his knowledge and expertise to support the City in establishing an improved QA/QC process. He will introduce a plan development and plan check review checklist to ensure continuity and uniformity with regard to all project-related components; from the means by which signs are installed to how reports are written. He will evaluate field op procedures and recommend methodologies for brief and concise reporting.

DETAILED PROJECT EXPERIENCE

- **City of Adelanto City Engineering Services-2017 – 2022** – Mr. Wolfe provides on-call civil engineering services to the City, including City Engineer. He has managed more than $5 million in public improvements. While providing these services to the City, he has represented the City with other agencies at numerous meeting, represented engineering with the City's council and other public meetings, managed engineering budgets and project schedules, retained other consultants to prepare improvement design projects, managed funding programs, and various related work. In addition, he has managed infrastructure development projects and assisted with management of water and sewer utilities department.
- **On-Call Plan Checking,** *City of Hesperia*- Mr. Wolfe serves as the project manager. TKE provides on-call plan and map checking services to the City. TKE is providing plan checking services for several small and large tract developments, single family residential units and commercial retail centers within the City. In addition, TKE is performing plan check on several capital improvement projects within the City.
- **On-Call Plan Checking,** *City of Highland*-Mr. Wolfe serves as the project manager. TKE provides on-call plan and map checking services to the City. TKE is providing plan checking services for several small and large tract developments, single family residential units and commercial retail centers within the City. In addition, TKE is performing plan check on several capital improvement projects within the City.
- **Engineering Support and Staff Augmentation,** *City of Highland* - Mr. Wolfe has provided continuing design services for street widening, traffic calming, bike lanes, signing and striping on various capital improvement projects. In addition, Mr. Wolfe has assisted with grant application preparation and project scoping for upcoming grant cycles.
- **CDBG Street Improvement Project**, *City of El Monte*- Mr. Wolfe was responsible for design of CDBG funded pavement rehabilitation on Klingerman Street, Strozier Avenue and Fern Street for the City of El Monte. This project consists of the preparation of full Construction documents including plans, technical specifications, construction cost estimates (PS&E) and construction support services for the design of the pavement rehabilitation, curb, gutter, sidewalk, ADA curb ramps, and striping replacement.
- **Safe Routes to Schools,** *City of Redlands*-Mr. Wolfe provided design, and construction inspection for two safe Routes to Schools projects in the City of

Redlands. Projects constructed over 2 miles of new sidewalk through residential neighborhoods and over 200 new ADA compliant ramps. Also assisted with labor compliance documentation. Projects included installation of crosswalk flashing beacons, feedback signs and school zone signage.

- **CDBG,** *City of Redlands* - Mr. Wolfe provided plan and profile designs for street widening, new ADA compliant ramps and new sidewalks through developed residential neighborhoods in Redlands, CA. Designed paving plans to improve unpaved alleys within CDBG designated areas. Projects required careful coordination with residents and businesses for driveway reconstruction.
- **Land Development,** *Various Cities* – Mr. Wolfe has 10 years of experience designing improvement plans for retail, commercial, light industrial and residential development projects throughout Southern California. Design responsibilities included grading, drainage and onsite utility plans. Developed SWPPP, WQMP and erosion control documents as required.
- **Surveying/Mapping,** *Various Locations* – Performed topographic surveys and construction staking for both public improvements and land development projects. Also prepared ALTA maps, parcel maps, easement exhibit maps and wrote legal descriptions for various utility and access easements.

Mr. Musser has nearly 53 years of experience in performing field and office surveying and plan checking services for public and private projects including roadway and highway projects. He has performed design topographic surveying and construction staking on all of TKE's respective design and construction management projects and map checking over the past 10 years. In addition, he has prepared records of survey, parcel maps and tract maps in San Bernardino County, Riverside County, San Diego County, Orange County and Los Angeles County. .

DETAILED PROJECT EXPERIENCE

- **LPP County Line Road Project**, *City of Yucaipa/Calimesa, CA* - Mr. Musser served as the Director of Surveys for design of the SB1 Local Partnership Program project. This project consists of the preparation of full construction documents including environmental compliance documents, right-of-way acquisition, utility relocations, plans, technical specifications, construction cost estimates (PS&E) and construction support services for the design of four roundabouts, street widening, bicycle lanes, curb and gutter, sidewalk, crosswalks, ADA curb ramps, storm drain, and signing and striping along County Line Road from 4th Street to Bryant Street.
- **ATP Cycle 3 Street Safe Routes to School Pedestrian Improvement Project,** *City of Fontana, CA* – Mr. Musser served as the Director of Surveys for the ATP Cycle 3 Safe Routes to School Pedestrian Improvement Project. TKE provided design engineering services for the Safe Routes to Schools project funded through ATP Cycle 2 for the City of Fontana for Fontana Ave and Arrow Boulevard. This project consisted of the preparation of full Construction documents including plans, technical specifications, construction cost estimates (PS&E) and construction support services for the 5,900 linear foot ADA and pedestrian enhancement project. The project included the construction of curb, gutter, sidewalk, curb ramp, bike lane improvements, utility relocations, storm drain modifications, private improvement restoration and signing and striping. TKE successfully coordinated with Caltrans for completion of the PES, right-of-way certifications and obtaining the RFA for construction.
- **A-04 Drainage Corridor Project,** *City of Hesperia, CA* – Mr. Musser served as the Director of Surveys. TKE provided investigation and acquired grant funding, planning, design, topographic survey, hydrology, and hydraulic analysis, bidding services, construction administration, State and Federal funding coordination services for the City of Hesperia. The A-04 Drainage Corridor project is located in the southwesterly portions of the City of Hesperia. The A-04 drainage corridor is the City's largest drainage tributary containing more than 4,380 acres and conveys flows in excess 5,000cfs. The project includes construction of three proposed flood control basins totaling over 1,000 feet of storage and more than 17,000 linear feet of various size storm drain pipe and box culverts, together with inlet and outlet facilities. During moderate and larger storm events, flooding and sediment accumulation occurs along the entire drainage corridor downstream of the proposed project; in particular, on Main Street, one of the highest volume streets in the city. The project will enhance quality, reduce the region's dependence on imported water supplies, and simulate economic development.
- **Sierra Avenue Widening Project**, *City of Fontana, CA* - Mr. Musser provides survey services to the City of Fontana for the Sierra Avenue Widening Project. The project is approximately 1 mile of widening for the City's primary north south arterial street widening the roadway from 4 lanes to 6 lanes. The project includes street widening, raised landscape median, new sewer main installation, traffic signal installation and modifications, traffic signal interconnect and fiber optic cable installation, and extensive utility coordination for water main replacement, Rule 20A and Rule 20B

undergrounding work. He is currently responsible for management of utility coordination, right-of-way acquisition for 76 parcels, traffic analysis, review of construction plans, coordination with project design consultants, construction management and construction staking services. While providing these services to the City, Mr. Renner has represented the City with other agencies, represented engineering with the City's management personnel and other meetings, managed engineering budgets and project schedules.

- **On-Call Survey and Map Checking Services,** *City of Calimesa, CA* - Mr. Musser provides on-call map checking services to the City of Calimesa. Mr. Musser is providing map checking services for several small and large tract developments, single family residential units and commercial retail centers within the city. Services include closure calculations, development project screen checks, response to development community inquiries, perform map checking for tract maps, parcel maps, lot line adjustments, lot mergers, records of survey, corner records, easement and right-of-way acquisitions.
- **On-Call Survey and Map Checking Services,** *City of Hesperia, CA* - Mr. Musser provides on-call map checking services to the City of Hesperia. Mr. Musser is providing map checking services for several small and large tract developments, single family residential units and commercial retail centers within the city. Services include closure calculations, development project screen checks, response to development community inquiries, perform map checking for tract maps, parcel maps, lot line adjustments, lot mergers, records of survey, corner records, easement and right-of-way acquisitions.
- **On-Call Map Checking Services,** *City of Upland, CA* - Mr. Musser provides on-call map checking services to the City of Upland. Mr. Musser is providing map checking services for several tract developments, single family residential units and commercial retail centers within the city. Services include closure calculations, development project screen checks, response to development community inquiries, perform map checking for tract maps, parcel maps, lot line adjustments, lot mergers, records of survey, corner records, easement and right-of-way acquisitions.
- **On-Call Map Checking Services,** *City of Wildomar, CA* - Mr. Musser provides on-call map checking services to the City of Wildomar. Mr. Musser is providing map checking services for several tract developments, single family residential units and commercial retail centers within the city. Services include closure calculations, development project screen checks, response to development community inquiries, perform map checking for tract maps, parcel maps, lot line adjustments, lot mergers, records of survey, corner records, easement and right-of-way acquisitions.

CITY OF ONTARIO *Agenda Report* **June 4, 2024**	**SECTION:** **CONSENT CALENDAR**
Department: Utilities Prepared By: Dennis Mejia Staff Member Presenting: Scott Burton, Utilities General Manager Reviewed By: Dennice Raygoza, Albert G Gastelum, Michael Sigsbee Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 20

SUBJECT: PROFESSIONAL SERVICES AGREEMENTS FOR ON-CALL PROJECT MANAGEMENT SERVICES

RECOMMENDATION: That the City Council approve three-year Professional Services Agreements with five firms to provide On-Call Project Management Services in the amount of $200,000 per year for a three-year total not-to-exceed amount of $600,000 for each firm; and authorize the City Manager, or his designee, to execute said Agreements and future amendments within the authorized limits.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Operate in a Businesslike Manner
Invest in the Growth and Evolution of the City's Economy
Focus Resources in Ontario's Commercial and Residential Neighborhoods
Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)

FISCAL IMPACT: The Fiscal Year 2024-25 Proposed Capital Improvement Program (CIP) Budget includes appropriations in the Water and Sewer Capital Funds for on-call project management services. Additional appropriations will also be included in future annual budgets presented to council for approval. There is no impact to the General Fund.

The proposed firms have agreed to fixed billing rates set forth in their respective Agreements on an on-call, as-needed basis for the first year and will have an option to negotiate for hourly rate increases not to exceed 3% per year for the additional years. At the City's discretion, up to two additional one-year extensions may be executed.

BACKGROUND & ANALYSIS: The City's Water and Sewer Master Plans recommend numerous capital improvement projects to maintain water and sewer service reliability to the community. The City's sewer system includes approximately 450 miles of pipeline, about 40% of which is more than

50 years old. Similarly, the City's water system includes approximately 630 miles of pipeline, about 20% of which is more than 50 years old. Replacement and maintenance of aging and undersized facilities is a part of the City's ongoing CIP to maintain the reliability of water and sewer services to the residents and businesses of Ontario.

Over the next three years, Ontario Municipal Utilities proposes to engage these firms to provide construction management support services on various CIP projects scheduled for construction. Anticipated projects include Advanced Metering Infrastructure Antenna Towers Phase II, Pressure Reducing Station Rehabilitation, Onsite Chlorine Generation Upgrades, various Citywide water and sewer main improvements, and sewer service lateral installations. Concurrently planning and design efforts are occurring for other CIP projects included in the current CIP budget. There are approximately 60 water and sewer projects totaling approximately $230 Million in design and construction scheduled for the next three years.

Due to the volume of projects, Staff is recommending Agreements to be awarded to a total of five qualified firms to ensure timely and cost-effective options for each project. Additionally, Staff is recommending that all Agreements be executed between the firms and the City so that any City Agency can use these firms (other Agencies are required to amend the Agreements for their specific projects and provide funding sources). This procedure reduces overhead costs and increases efficiency in completing critical projects, ultimately resulting in more satisfactory work product delivery.

Firms will be utilized for small and large-scale projects. As projects arise, Staff will request cost proposals from the firms and evaluate. It is anticipated that cost will exceed $200,000 per year based on the amount of Capital projects within the next three years. Once costs exceed the $200,000 limit per year, Staff will bring proposed Amendments to City Council with specific project cost increases.

On December 22, 2023, the City solicited requests for qualifications (RFQ) for On-Call Project Management Services. Twenty bids were received through the City's electronic bid management system in response to Bid No. 1739. Responses from the following companies were evaluated:

Company	**Location**
AKM Consulting Engineers Inc.	Irvine, CA
Anser Advisory Management LLC	Irvine, CA
Ardurra Group, Inc.	Tampa, FL
Bowman Infrastructure Engineers Ltd.	Brea, CA
California Professional Management	Rancho Cucamonga, CA
CCK & Associates Construction Inc.	Upland, CA
Cordoba Corporation	Ontario, CA
Cumming Management Group Inc.	Murrieta, CA
DG Jones & Partners USA Inc.	Chicago, IL

EPC Consultants Inc.	San Francisco, CA
FCG Consultants Inc.	Yorba Linda, CA
Griffin Structures, Inc.	Irvine, CA
Interwest Consulting Group Inc.	Ontario, CA
Jenkins/Gales & Martinez Inc.	Los Angeles, CA
Ladayu Consulting Group	Palos Verdes Estates, CA
Pacific Pros Consultants Inc.	Aliso Viejo, CA
Project Partners Inc.	Laguna Hills, CA
TKE Engineering Inc.	Riverside, CA
Transtech Engineers Inc.	Chino, CA
Z&K Consultants Inc.	Riverside, CA

Using a qualifications-based selection process, a panel of City Staff reviewed the statements of qualifications for all companies that submitted a response to the RFQ. Anser Advisory Management LLC., Ardurra Group Inc., Z&K Consultants Inc., FCG Consultants Inc., and AKM Consulting Engineers Inc., were determined to be the most qualified firms. The recommendation to award Professional Services Agreements to these firms is based on their broad range of expertise as demonstrated by their services provided to municipal agencies and capability to perform the work in a timely manner.

CITY OF ONTARIO
PROFESSIONAL SERVICES AGREEMENT

1. PARTIES AND DATE.

This Agreement is made and entered as of _____ ___, **2024**, by and between the City of Ontario, a municipal corporation organized under the laws of the State of California with its principal place of business at 303 East "B" Street, Ontario, California 91764-4196, County of San Bernardino, State of California ("City") and **Z&K Consultants, Inc.**, a **CORPORATION**, with its principal place of business at **17130 Van Buren Blvd, Suite 122, Riverside CA 92504** ("Consultant"). City and Consultant are sometimes individually referred to herein as "Party" and collectively as "Parties."

2. RECITALS.

2.1 Consultant.

Consultant desires to perform and assume responsibility for the provision of certain professional services required by the City on the terms and conditions set forth in this Agreement. Consultant represents that it is experienced in providing **construction management and inspection services** to public clients, is licensed in the State of California, and is familiar with the plans of City.

2.2 Project.

City desires to engage Consultant to render such professional services for the **On-Call Project Management Services** project ("Project") as set forth in this Agreement.

3. TERMS.

3.1 Scope of Services and Term.

3.1.1 General Scope of Services. Consultant promises and agrees to furnish to the City all labor, materials, tools, equipment, services, and incidental and customary work necessary to fully and adequately supply the professional **construction management and inspection** consulting services necessary for the Project ("Services"). The Services are more particularly described in Exhibit "A" attached hereto and incorporated herein by reference. All

Services shall be subject to, and performed in accordance with, this Agreement, the exhibits attached hereto and incorporated herein by reference, and all applicable local, state and federal laws, rules and regulations.

3.1.2 Term. The term of this Agreement shall be from **June 4, 2024** to **June 4, 2027,** unless earlier terminated as provided herein The City shall have the unilateral option, at its sole discretion, to renew this Agreement automatically for no more than **two** additional one-year terms. Consultant shall complete the Services within the term of this Agreement, and shall meet any other established schedules and deadlines. The Parties may, by mutual, written consent, extend the term of this Agreement if necessary to complete the Services.

3.2 Compensation.

3.2.1 Compensation. Consultant shall receive compensation, including authorized reimbursements, for all Services rendered under this Agreement at the rates set forth in Exhibit "C" attached hereto and incorporated herein by reference. The total compensation shall not exceed **Six Hundred Thousand Dollars** (**$600,000**) without written approval of the City Council or City Manager, as applicable. Extra Work may be authorized, as described below, and if authorized, will be compensated at the rates and manner set forth in this Agreement.

3.2.2 Payment of Compensation. Consultant shall submit to City a monthly invoice which indicates work completed and hours of Services rendered by Consultant. The invoice shall describe the amount of Services provided since the initial commencement date, or since the start of the subsequent billing periods, as appropriate, through the date of the invoice. City shall, within 30 days of receiving such invoice, review the invoice and pay all non-disputed and approved charges. If the City disputes any of Consultant's fees, the City shall give written notice to Consultant within thirty (30) days of receipt of an invoice of any disputed fees set forth therein. Payment shall not constitute acceptance of any Services completed by Consultant. The making of final payment shall not constitute a waiver of any claims by the City for any reason whatsoever.

3.2.3 Reimbursement for Expenses. Consultant shall not be reimbursed for any expenses unless authorized in writing by City, or included in Exhibit "C" of this Agreement.

3.2.4 Extra Work. At any time during the term of this Agreement, City may request that Consultant perform Extra Work. As used herein, "Extra Work" means any work which is determined by City to be necessary for the proper completion of the Project, but which the Parties did not reasonably anticipate would be necessary at the execution of this Agreement. Consultant shall not perform, nor be compensated for, Extra Work without written authorization from the City.

3.3 Responsibilities of Consultant.

3.3.1 Independent Contractor; Control and Payment of Subordinates. The Services shall be performed by Consultant or under its supervision. Consultant will determine the means, methods and details of performing the Services subject to the requirements of this Agreement. City retains Consultant on an independent contractor basis and not as an employee. Any personnel performing the Services on behalf of Consultant shall not be employees of City and shall at all times be under Consultant's exclusive direction and control. Neither City, or any of its officials, officers, directors, employees or agents shall have control over the conduct of

Consultant or any of Consultants officers, employees or agents, except as set forth in this Agreement. Consultant shall pay all wages, salaries, and other amounts due such personnel in connection with their performance of Services under this Agreement and as required by law. Consultant shall be responsible for all reports and obligations respecting such additional personnel, including, but not limited to: social security taxes, income tax withholding, unemployment insurance, disability insurance, and workers' compensation insurance.

3.3.2 Schedule of Services. Consultant shall perform the Services in a prompt and timely manner and in accordance with the Schedule of Services set forth in Exhibit "B" attached hereto and incorporated herein by reference. Consultant represents that it has the professional and technical personnel required to perform the Services expeditiously. Upon request of City, Consultant shall provide a more detailed schedule of anticipated performance to meet the Schedule of Services.

3.3.3 Conformance to Applicable Requirements. All work prepared by Consultant shall be subject to the approval of City.

3.3.4 Substitution of Key Personnel. Consultant has represented to City that certain key personnel will perform and coordinate the Services under this Agreement. Should one or more of such personnel become unavailable, Consultant may substitute other personnel of at least equal competence upon written approval of City. In the event that City and Consultant cannot agree as to the substitution of key personnel, City shall be entitled to terminate this Agreement for cause. The key personnel for performance of this Agreement are as follows: **Crystal Fraire, PE, QSD/P, Nadeem Syed, PE, QSD/P, Amy Czajkowski, PE, CCM, QSD/P, Brittany Duhn, PE, QSD/P, Lisa Naslund, PE, QSD/P, and Pernilla Brandt BSCE..**

3.3.5 City's Representative. The City hereby designates **Dennis Mejia (Utilities Engineering Division Manager)** or his/her designee, to act as its representative in all matters pertaining to the administration and performance of this Agreement ("City's Representative"). City's Representative shall have the power to act on behalf of the City for review and approval of all products submitted by Consultant but not the authority to enlarge the Scope of Services or change the total compensation due to Consultant under this Agreement. The City Manager shall be authorized to act on City's behalf and to execute all necessary documents which enlarge the Scope of Services or change the Consultant's total compensation subject to the provisions contained in this Agreement. Consultant shall not accept direction or orders from any person other than the City Manager, City's Representative or his/her designee.

3.3.6 Consultant's Representative. Consultant hereby designates **Zack Faqih, PE, Principal-in-Charge**, or his/her designee, to act as its representative for the performance of this Agreement ("Consultant's Representative"). Consultant's Representative shall have full authority to represent and act on behalf of the Consultant for all purposes under this Agreement. The Consultant's Representative shall supervise and direct the Services, using his/her best skill and attention, and shall be responsible for all means, methods, techniques, sequences, and procedures and for the satisfactory coordination of all portions of the Services under this Agreement.

3.3.7 Coordination of Services. Consultant agrees to work closely with City staff in the performance of Services and shall be available to City's staff, consultants and other staff at all reasonable times.

3.3.8 Standard of Care; Performance of Employees. Consultant shall perform all Services under this Agreement in a skillful and competent manner, consistent with the standards generally recognized as being employed by professionals in the same discipline in the State of California. Consultant represents and maintains that it is skilled in the professional calling necessary to perform the Services. Consultant warrants that all employees and subconsultants shall have sufficient skill and experience to perform the Services assigned to them. Consultant represents that it, its employees and subconsultants have all licenses, permits, qualifications and approvals of whatever nature that are legally required to perform the Services, and that such licenses and approvals shall be maintained throughout the term of this Agreement. Consultant shall perform, at its own cost and expense and without reimbursement from the City, any services necessary to correct errors or omissions which are caused by the Consultant's failure to comply with the standard of care provided for herein. Any employee of the Consultant or its subconsultants who is determined by the City to be uncooperative, incompetent, a threat to the adequate or timely completion of the Project, a threat to the safety of persons or property, or any employee who fails or refuses to perform the Services in a manner acceptable to the City, shall be promptly removed from the Project by the Consultant and shall not be re-employed to perform any of the Services or to work on the Project.

3.3.9 Period of Performance.

3.3.9.1 Consultant shall perform and complete all Services under this Agreement within the term set forth in Section 3.1.2 above ("Performance Time"). Consultant shall also perform the Services in strict accordance with any completion schedule or Project milestones described in Exhibits "A" or "B" attached hereto, or which may be separately agreed upon in writing by the City and Consultant ("Performance Milestones"). Consultant agrees that if the Services are not completed within the aforementioned Performance Time and/or pursuant to any such Performance Milestones developed pursuant to provisions of this Agreement, it is understood, acknowledged and agreed that the City will suffer damage.

3.3.9.2 Neither City nor Consultant shall be considered in default of this Agreement for delays in performance caused by circumstances beyond the reasonable control of the non-performing Party. For purposes of this Agreement, such circumstances include a Force Majeure Event. A Force Majeure Event shall mean an event that materially affects a Party's performance and is one or more of the following: (1) Acts of God or other natural disasters; (2) terrorism or other acts of a public enemy; (3) orders of governmental authorities (including, without limitation, unreasonable and unforeseeable delay in the issuance of permits or approvals by governmental authorities that are required for the services); (4) strikes and other organized labor action occurring at the site and the effects thereof on the services, only to the extent such strikes and other organized labor action are beyond the control of Consultant and its subcontractors, and to the extent the effects thereof cannot be avoided by use of replacement workers; and (5) pandemics, epidemics or quarantine restrictions. For purposes of this section, "orders of governmental authorities," includes ordinances, emergency proclamations and orders, rules to protect the public health, welfare and safety, and other actions of a public agency applicable to the services and Agreement.

3.3.9.3 Should a Force Majeure Event occur, the non-performing Party shall, within a reasonable time of being prevented from performing, give written notice to the other Party describing the circumstances preventing continued performance and the efforts being made to resume performance of this Agreement. Force Majeure Events and/or delays, regardless of the Party responsible for the delay, shall not entitle Consultant to any additional compensation.

Notwithstanding the foregoing in this section, the City may still terminate this Agreement in accordance with the termination provisions of this Agreement.

3.3.10 Laws and Regulations; Employee/Labor Certification.

3.3.10.1 Compliance with Laws. Consultant shall keep itself fully informed of and in compliance with all local, state and federal laws, rules and regulations in any manner affecting the performance of the Project or the Services, including all Cal/OSHA requirements, and shall give all notices required by law. Consultant shall be liable for all violations of such laws and regulations in connection with the Services and this Agreement. All violations of such laws and regulations shall be grounds for the City to terminate the Agreement for cause.

3.3.10.2 Employment Eligibility; Consultant. Consultant certifies that it fully complies with all requirements and restrictions of state and federal law respecting the employment of undocumented aliens, including, but not limited to, the Immigration Reform and Control Act of 1986, as may be amended from time to time and shall require all subconsultants and sub-subconsultants to comply with the same. Consultant certifies that it has not committed a violation of any such law within the five (5) years immediately preceding the date of execution of this Agreement, and shall not violate any such law at any time during the term of the Agreement.

3.3.10.3 Equal Opportunity Employment. Consultant represents that it is an equal opportunity employer and it shall not discriminate against any subconsultant, employee or applicant for employment because of race, religion, color, national origin, handicap, ancestry, sex or age. Such non-discrimination shall include, but not be limited to, all activities related to initial employment, upgrading, demotion, transfer, recruitment or recruitment advertising, layoff or termination. Consultant shall also comply with all relevant provisions of City's Minority Business Enterprise program, Affirmative Action Plan or other related programs or guidelines currently in effect or hereinafter enacted.

3.3.10.4 Air Quality. To the extent applicable, Consultant must fully comply with all applicable laws, rules and regulations in furnishing or using equipment and/or providing services, including, but not limited to, emissions limits and permitting requirements imposed by the South Coast Air Quality Management District (SCAQMD) and/or California Air Resources Board (CARB). Consultant shall indemnify City against any fines or penalties imposed by SCAQMD, CARB, or any other governmental or regulatory agency for violations of applicable laws, rules and/or regulations by Consultant, its subconsultants, or others for whom Consultant is responsible under its indemnity obligations provided for in this Agreement.

3.3.10.5 Water Quality Management and Compliance. Consultant shall keep itself and all subcontractors, staff, and employees fully informed of and in compliance with all local, state and federal laws, rules and regulations that may impact, or be implicated by the performance of the Services including, without limitation, all applicable provisions of the City's ordinances regulating water quality and storm water; the Federal Water Pollution Control Act (33 U.S.C. § 1251, *et seq.*); the California Porter-Cologne Water Quality Control Act (Water Code § 13000 *et seq.*); and any and all regulations, policies, or permits issued pursuant to any such authority. Consultant must additionally comply with the lawful requirements of the City, and any other municipality, drainage district, or other local agency with jurisdiction over the location where the Services are to be conducted, regulating water quality and storm water discharges. City may seek damages from Consultant for delay in completing the Services caused by Consultant's

failure to comply with the laws, regulations and policies described in this Section, or any other relevant water quality law, regulation, or policy.

3.3.10.6 Safety. Consultant shall execute and maintain its work so as to avoid injury or damage to any person or property. In carrying out its Services, the Consultant shall at all times be in compliance with all applicable local, state and federal laws, rules and regulations, and shall exercise all necessary precautions for the safety of employees appropriate to the nature of the work and the conditions under which the work is to be performed.

3.3.11 Insurance.

3.3.11.1 Time for Compliance. Consultant shall not commence work under this Agreement until it has provided evidence satisfactory to the City that it has secured all insurance required under this section. In addition, Consultant shall not allow any subconsultant to commence work on any subcontract until it has provided evidence satisfactory to the City that the subconsultant has secured all insurance required under this section. Failure to provide and maintain all required insurance shall be grounds for the City to terminate this Agreement for cause.

3.3.11.2 Types of Insurance Required. As a condition precedent to the effectiveness of this Agreement for work to be performed hereunder, and without limiting the indemnity provisions of the Agreement, the Consultant, in partial performance of its obligations under such Agreement, shall procure and maintain in full force and effect during the term of the Agreement the following policies of insurance. If the existing policies do not meet the insurance requirements set forth herein, Consultant agrees to amend, supplement or endorse the policies to do so.

(A) Commercial General Liability: Commercial General Liability Insurance which affords coverage at least as broad as Insurance Services Office "occurrence" form CG 00 01, or the exact equivalent, with limits of not less than $2,000,000 per occurrence and no less than $4,000,000 in the general aggregate. Defense costs shall be paid in addition to the limits. The policy shall contain no endorsements or provisions (1) limiting coverage for contractual liability; (2) excluding coverage for claims or suits by one insured against another (cross-liability); (3) products/completed operations liability; or (4) containing any other exclusion(s) contrary to the terms or purposes of this Agreement.

(B) Automobile Liability Insurance: Automobile Liability Insurance with coverage at least as broad as Insurance Services Office Form CA 00 01 covering "Any Auto" (Symbol 1), or the exact equivalent, covering bodily injury and property damage for all activities with limits of not less than $2,000,000 combined limit for each occurrence.

(C) Workers' Compensation: Workers' Compensation Insurance, as required by the State of California and Employer's Liability Insurance with a limit of not less than $1,000,000 per accident for bodily injury and disease.

(D) Professional Liability (Errors & Omissions): Professional Liability insurance or Errors & Omissions insurance appropriate to Consultant's profession with limits of not less than $2,000,000. Covered professional services shall specifically include all work to be performed under the Agreement and delete any exclusions that may potentially affect the work to be performed (for example, any exclusions relating to lead, asbestos, pollution, testing, underground storage tanks, laboratory analysis, soil work, etc.). If coverage is written on

a claims-made basis, the retroactive date shall precede the effective date of the initial Agreement and continuous coverage will be maintained or an extended reporting period will be exercised for a period of at least five (5) years from termination or expiration of this Agreement.

3.3.11.3 Insurance Endorsements. Required insurance policies shall contain the following provisions, or Consultant shall provide endorsements on forms approved by the City to add the following provisions to the insurance policies:

(A) Commercial General Liability: (1) Additional Insured: The City, its officials, officers, employees, agents, and volunteers shall be additional insureds with regard to liability and defense of suits or claims arising out of the performance of the Agreement. Additional Insured Endorsements shall not (1) be restricted to "ongoing operations"; (2) exclude "contractual liability"; (3) restrict coverage to "sole" liability of Consultant; or (4) contain any other exclusions contrary to the terms or purposes of this Agreement. For all policies of Commercial General Liability insurance, Consultant shall provide endorsements in the form of ISO CG 20 10 10 01 and 20 37 10 01 (or endorsements providing the exact same coverage) to effectuate this requirement. (2) Cancellation: Required insurance policies shall not be canceled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium.

(B) Automobile Liability: (1) Additional Insured: The City, its directors, officials, officers, employees, agents, and volunteers shall be covered as additional insureds with respect to the ownership, operation, maintenance, use, loading or unloading of any auto owned, leased, hired or borrowed by the Vendor or for which the Vendor is responsible. (2) Cancellation: Required insurance policies shall not be canceled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium.

(C) Professional Liability (Errors & Omissions): (1) Cancellation: Required insurance policies shall not be canceled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium. (2) This insurance shall be written on a policy form coverage specifically designed to protect against acts, errors or omissions of the Consultant. "Covered Professional Services" as designated in the policy must specifically include work performed under this Agreement. The policy must "pay on behalf of" the insured and include a provision establishing the insurer's duty to defend.

(D) Workers' Compensation: (1) Cancellation: Required insurance policies shall not be canceled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium. (2) Waiver of Subrogation: A waiver of subrogation stating that the insurer waives all rights of subrogation against the City, its officials, officers, employees, agents, and volunteers.

3.3.11.4 Primary and Non-Contributing Insurance. All policies of Commercial General Liability and Automobile Liability insurance shall be primary and any other insurance, deductible, or self-insurance maintained by the City, its officials, officers, employees, agents, or volunteers shall not contribute with this primary insurance. Policies shall contain or be endorsed to contain such provisions.

3.3.11.5 Waiver of Subrogation. All required insurance coverages, except for the professional liability coverage, shall contain or be endorsed to waiver of subrogation in favor of the City, its officials, officers, employees, agents, and volunteers or shall specifically allow Consultant or others providing insurance evidence in compliance with these specifications to waive their right of recovery prior to a loss. Consultant hereby waives its own right of recovery against City, and shall require similar written express waivers and insurance clauses from each of its subconsultants.

3.3.11.6 Deductibles and Self-Insured Retentions. Any deductible or self-insured retention must be approved in writing by the City and shall protect the City, its officials, officers, employees, agents, and volunteers in the same manner and to the same extent as they would have been protected had the policy or policies not contained a deductible or self-insured retention.

3.3.11.7 Evidence of Insurance. The Consultant, concurrently with the execution of the Agreement, and as a condition precedent to the effectiveness thereof, shall deliver either certified copies of the required policies, or original certificates on forms approved by the City, together with all endorsements affecting each policy. Required insurance policies shall not be in compliance if they include any limiting provision or endorsement that has not been submitted to the City for approval. The certificates and endorsements for each insurance policy shall be signed by a person authorized by that insurer to bind coverage on its behalf. At least fifteen (15 days) prior to the expiration of any such policy, evidence of insurance showing that such insurance coverage has been renewed or extended shall be filed with the City. If such coverage is cancelled or reduced and not replaced immediately so as to avoid a lapse in the required coverage, Consultant shall, within ten (10) days after receipt of written notice of such cancellation or reduction of coverage, file with the City evidence of insurance showing that the required insurance has been reinstated or has been provided through another insurance company or companies.

3.3.11.8 Acceptability of Insurers. Each such policy shall be from a company or companies with a current A.M. Best's rating of no less than A:VII and authorized to transact business of insurance in the State of California, or otherwise allowed to place insurance through surplus line brokers under applicable provisions of the California Insurance Code or any federal law.

3.3.11.9 Enforcement of Agreement Provisions (non estoppel). Consultant acknowledges and agrees that actual or alleged failure on the part of the City to inform Consultant of non-compliance with any requirement imposes no additional obligation on the City nor does it waive any rights hereunder.

3.3.11.10 Requirements Not Limiting. Requirement of specific coverage or minimum limits contained in this Section are not intended as a limitation on coverage, limits, or other requirement, or a waiver of any coverage normally provided by any insurance.

3.3.11.11 Additional Insurance Provisions

(A) The foregoing requirements as to the types and limits of insurance coverage to be maintained by Consultant, and any approval of said insurance by the City, is not intended to and shall not in any manner limit or qualify the liabilities and obligations

otherwise assumed by the Consultant pursuant to this Agreement, including but not limited to, the provisions concerning indemnification.

(B) If at any time during the life of the Agreement, any policy of insurance required under this Agreement does not comply with these specifications or is canceled and not replaced, City has the right but not the duty to obtain the insurance it deems necessary and any premium paid by City will be promptly reimbursed by Consultant or City will withhold amounts sufficient to pay premium from Consultant payments. In the alternative, City may cancel this Agreement.

(C) The City may require the Consultant to provide complete copies of all insurance policies in effect for the duration of the Project.

(D) Neither the City nor any of its officials, officers, employees, agents or volunteers shall be personally responsible for any liability arising under or by virtue of this Agreement.

(E) The limits set forth herein shall apply separately to each insured against whom claims are made or suits are brought, except with respect to the limits of liability. Further the limits set forth herein shall not be construed to relieve the Consultant from liability in excess of such coverage, nor shall it limit the Consultant's indemnification obligations to the City and shall not preclude the City from taking such other actions available to the City under other provisions of the Agreement or law.

(F) Consultant shall report to the City, in addition to Consultant's insurer, any and all insurance claims submitted by Consultant in connection with the Services under this Agreement.

3.3.11.12 Insurance for Subconsultants. Consultant shall include all subconsultants engaged in any work for Consultant relating to this Agreement as additional insureds under the Consultant's policies, or the Consultant shall be responsible for causing subconsultants to purchase the appropriate insurance in compliance with the terms of these Insurance Requirements, including adding the City, its officials, officers, employees, agents, and volunteers as additional insureds to the subconsultant's policies. All policies of Commercial General Liability insurance provided by Consultant's subconsultants performing work relating to this Agreement shall be endorsed to name the City, its officials, officers, employees, agents and volunteers as additional insureds using endorsement form ISO CG 20 38 04 13 or an endorsement providing equivalent coverage. Consultant shall not allow any subconsultant to commence work on any subcontract relating to this Agreement until it has received satisfactory evidence of subconsultant's compliance with all insurance requirements under this Agreement, to the extent applicable. The Consultant shall provide satisfactory evidence of compliance with this section upon request of the City.

3.4 Labor Code Requirements.

3.4.1 Prevailing Wages. Consultant is aware of the requirements of California Labor Code Section 1720, et seq., and 1770, et seq., as well as California Code of Regulations, Title 8, Section 16000, et seq., ("Prevailing Wage Laws"), which require the payment of prevailing wage rates and the performance of other requirements on "public works" and "maintenance" projects. If the Services are being performed as part of an applicable "public works" or

"maintenance" project, as defined by the Prevailing Wage Laws, and if the total compensation is $1,000 or more, Consultant agrees to fully comply with such Prevailing Wage Laws. City shall provide Consultant with a copy of the prevailing rates of per diem wages in effect at the commencement of this Agreement. Consultant shall make copies of the prevailing rates of per diem wages for each craft, classification or type of worker needed to execute the Services available to interested parties upon request, and shall post copies at the Consultant's principal place of business and at the project site. It is the intent of the parties to effectuate the requirements of sections 1771, 1774, 1775, 1776, 1777.5, 1813, and 1815 of the Labor Code within this Agreement, and Consultant shall therefore comply with such Labor Code sections to the fullest extent required by law. Consultant shall defend, indemnify and hold the City, its officials, officers, employees, agents, and volunteers free and harmless from any claim or liability arising out of any failure or alleged failure to comply with the Prevailing Wage Laws.

3.4.2 Registration/DIR Compliance. If the Services are being performed on a public works project of over $25,000 when the project is for construction, alteration, demolition, installation, or repair work, or a public works project of over $15,000 when the project is for maintenance work, in addition to the foregoing, then pursuant to Labor Code sections 1725.5 and 1771.1, the Consultant and all subconsultants must be registered with the Department of Industrial Relations ("DIR"). Consultant shall maintain registration for the duration of the Project and require the same of any subconsultants.

3.4.3 Compliance Monitoring. This Project may also be subject to compliance monitoring and enforcement by the DIR. It shall be Consultant's sole responsibility to comply with all applicable registration and labor compliance requirements, including the submission of payroll records directly to the DIR. Any stop orders issued by the DIR against Consultant or any subconsultant that affect Consultant's performance of services, including any delay, shall be Consultant's sole responsibility. Any delay arising out of or resulting from such stop orders shall be considered Consultant caused delay and shall not be compensable by the City. Consultant shall defend, indemnify and hold the City, its officials, officers, employees and agents free and harmless from any claim or liability arising out of stop orders issued by the DIR against Consultant or any subconsultant.

3.4.4 Labor Certification. By its signature hereunder, Consultant certifies that it is aware of the provisions of Section 3700 of the California Labor Code which require every employer to be insured against liability for Worker's Compensation or to undertake self-insurance in accordance with the provisions of that Code, and agrees to comply with such provisions before commencing the performance of the Services.

3.5 Termination of Agreement.

3.5.1.1 Grounds for Termination. City may, by written notice to Consultant, terminate the whole or any part of this Agreement at any time and without cause by giving written notice to Consultant of such termination, and specifying the effective date thereof, at least seven (7) days before the effective date of such termination. Upon termination, Consultant shall be compensated only for those Services which have been adequately rendered to City, and Consultant shall be entitled to no further compensation. Consultant may not terminate this Agreement except for cause. The rights and remedies of the City provided in this section shall not be exclusive and are in addition to any other rights and remedies provided by law, equity or under this Agreement.

3.5.1.2 Effect of Termination. If this Agreement is terminated as provided herein, City may require Consultant to provide all finished or unfinished Documents and Data and other information of any kind prepared by Consultant in connection with the performance of Services under this Agreement. Consultant shall be required to provide such document and other information within fifteen (15) days of the request.

3.5.1.3 Additional Services. In the event this Agreement is terminated in whole or in part as provided herein, City may procure, upon such terms and in such manner as it may determine appropriate, services similar to those terminated.

3.6 Indemnification.

3.6.1 To the fullest extent permitted by law, Consultant shall defend (with counsel of City's choosing), indemnify and hold the City, its officials, officers, employees, volunteers, and agents free and harmless from any and all claims, demands, causes of action, costs, expenses, liability, loss, damage or injury of any kind, in law or equity, to property or persons, including wrongful death, in any manner arising out of, pertaining to, or incident to any acts, errors or omissions, or willful misconduct of Consultant, its officials, officers, employees, subcontractors, consultants or agents in connection with the performance of the Consultant's Services, the Project or this Agreement, including without limitation the payment of all damages, expert witness fees and attorney's fees and other related costs and expenses except such loss or damage caused by the sole negligence or willful misconduct of the City. Consultant's obligation to indemnify shall survive expiration or termination of this Agreement and shall not be restricted to insurance proceeds, if any, received by Consultant, the City, its officials, officers, employees, agents, or volunteers.

3.6.2 If Consultant's obligation to defend, indemnify, and/or hold harmless arises out of Consultant's performance as a "design professional" (as that term is defined under Civil Code section 2782.8), then, and only to the extent required by Civil Code section 2782.8, which is fully incorporated herein, Consultant's indemnification obligation shall be limited to claims that arise out of, pertain to, or relate to the negligence, recklessness, or willful misconduct of the Consultant, and, upon Consultant obtaining a final adjudication by a court of competent jurisdiction, Consultant's liability for such claim, including the cost to defend, shall not exceed the Consultant's proportionate percentage of fault.

3.7 General Provisions.

3.7.1 Accounting Records. Consultant shall maintain complete and accurate records with respect to all costs and expenses incurred under this Agreement. All such records shall be clearly identifiable. Consultant shall allow a representative of City during normal business hours to examine, audit, and make transcripts or copies of such records and any other documents created pursuant to this Agreement. Consultant shall allow inspection of all work, data, documents, proceedings, and activities related to the Agreement for a period of three (3) years from the date of final payment under this Agreement.

3.7.2 Independent Contractors and Subcontracting.

3.7.2.1 Use of Consultants. Consultant is aware of statutory and case law regarding classification of workers as independent contractors, including California Labor Code Section 2750.3 and Dynamex Operations West, Inc. v. Superior Court, 4 Cal. 5th 903

(2018). To ensure that Consultant is in compliance with the California Labor Code, Consultant shall only utilize its employees to provide the Services. Consultant may not provide the services through any independent contractor, subcontractor or subconsultant ("Subcontractor(s)") unless approved by the City as set forth in Section 3.7.2.2 below. Consultant represents and warrants that all personnel who perform the Services on Consultant's behalf are Consultant's employees, and that Consultant complies with all applicable laws, rules and regulations governing its employees, including, but not limited to, the California Labor Code, Unemployment Insurance Code and all applicable Industrial Welfare Commission Wage Orders.

3.7.2.2 Prior Approval Required. Consultant shall not use any Subcontractor to provide the Services, or any portion of the work required by this Agreement, without prior written approval of City. In the event that City authorizes Consultant to use a Subcontractor, Consultant shall enter into a written agreement with the Subcontractor, which must include all provisions of the Agreement, including a restriction on the Subcontractor's use of further independent contractors, subcontractors or subconsultants without the City's prior written consent.

3.7.3 Delivery of Notices. All notices permitted or required under this Agreement shall be given to the respective parties at the following address, or at such other address as the respective parties may provide in writing for this purpose:

Consultant: **Z&K Consultants, Inc.**
17130 Van Buren Blvd, Suite 122
Riverside, CA 92504
ATTN: **Zack Faqih**

City: City of Ontario
303 East "B" Street
Ontario, CA 91764
ATTN: **Dennis Mejia, P.E., Utilities Engineering Division Manager, OMUC**

Such notice shall be deemed made when personally delivered or when mailed, forty-eight (48) hours after deposit in the U.S. Mail, first class postage prepaid and addressed to the party at its applicable address. Actual notice shall be deemed adequate notice on the date actual notice occurred, regardless of the method of service.

3.7.4 Ownership of Materials and Confidentiality.

3.7.4.1 Documents & Data; Licensing of Intellectual Property. This Agreement creates a non-exclusive and perpetual license for City to copy, use, modify, reuse, or sublicense any and all copyrights, designs, and other intellectual property embodied in plans, specifications, studies, drawings, estimates, and other documents or works of authorship fixed in any tangible medium of expression, including but not limited to, physical drawings or data magnetically or otherwise recorded on computer diskettes, which are prepared or caused to be prepared by Consultant under this Agreement ("Documents & Data"). All Documents & Data shall be and remain the property of City, and shall not be used in whole or in substantial part by Consultant on other projects without the City's express written permission. Within thirty (30) days following the completion, suspension, abandonment or termination of this Agreement, Consultant shall provide to City reproducible copies of all Documents & Data, in a form and amount required

by City. City reserves the right to select the method of document reproduction and to establish where the reproduction will be accomplished. The reproduction expense shall be borne by City at the actual cost of duplication. In the event of a dispute regarding the amount of compensation to which the Consultant is entitled under the termination provisions of this Agreement, Consultant shall provide all Documents & Data to City upon payment of the undisputed amount. Consultant shall have no right to retain or fail to provide to City any such documents pending resolution of the dispute. In addition, Consultant shall retain copies of all Documents & Data on file for a minimum of fifteen (15) years following completion of the Project, and shall make copies available to City upon the payment of actual reasonable duplication costs. Before destroying the Documents & Data following this retention period, Consultant shall make a reasonable effort to notify City and provide City with the opportunity to obtain the documents.

3.7.4.2 Subconsultants. Consultant shall require all subconsultants to agree in writing that City is granted a non-exclusive and perpetual license for any Documents & Data the subconsultant prepares under this Agreement. Consultant represents and warrants that Consultant has the legal right to license any and all Documents & Data. Consultant makes no such representation and warranty in regard to Documents & Data which were prepared by design professionals other than Consultant or its subconsultants, or those provided to Consultant by the City.

3.7.4.3 Right to Use. City shall not be limited in any way in its use or reuse of the Documents and Data or any part of them at any time for purposes of this Project or another project, provided that any such use not within the purposes intended by this Agreement or on a project other than this Project without employing the services of Consultant shall be at City's sole risk. If City uses or reuses the Documents & Data on any project other than this Project, it shall remove the Consultant's seal from the Documents & Data and indemnify and hold harmless Consultant and its officers, directors, agents and employees from claims arising out of the negligent use or re-use of the Documents & Data on such other project. Consultant shall be responsible and liable for its Documents & Data, pursuant to the terms of this Agreement, only with respect to the condition of the Documents & Data at the time they are provided to the City upon completion, suspension, abandonment or termination. Consultant shall not be responsible or liable for any revisions to the Documents & Data made by any party other than Consultant, a party for whom the Consultant is legally responsible or liable, or anyone approved by the Consultant.

3.7.4.4 Indemnification. Consultant shall defend, indemnify and hold the City, its directors, officials, officers, employees, volunteers and agents free and harmless, pursuant to the indemnification provisions of this Agreement, for any alleged infringement of any patent, copyright, trade secret, trade name, trademark, or any other proprietary right of any person or entity in consequence of the use on the Project by City of the Documents & Data, including any method, process, product, or concept specified or depicted.

3.7.4.5 Confidentiality. All ideas, memoranda, specifications, plans, procedures, drawings, descriptions, computer program data, input record data, written information, and other Documents & Data either created by or provided to Consultant in connection with the performance of this Agreement shall be held confidential by Consultant. Such materials shall not, without the prior written consent of City, be used by Consultant for any purposes other than the performance of the Services. Nor shall such materials be disclosed to any person or entity not connected with the performance of the Services or the Project. Nothing furnished to Consultant which is otherwise known to Consultant or is generally known, or has

become known, to the related industry shall be deemed confidential. Consultant shall not use City's name or insignia, photographs of the Project, or any publicity pertaining to the Services or the Project in any magazine, trade paper, newspaper, television or radio production or other similar medium without the prior written consent of City.

3.7.4.6 Confidential Information. The City shall refrain from releasing Consultant's proprietary information ("Proprietary Information") unless the City's legal counsel determines that the release of the Proprietary Information is required by the California Public Records Act or other applicable state or federal law, or order of a court of competent jurisdiction, in which case the City shall notify Consultant of its intention to release Proprietary Information. Consultant shall have five (5) working days after receipt of the release notice to give City written notice of Consultant's objection to the City's release of Proprietary Information. Consultant shall indemnify, defend and hold harmless the City, and its officers, directors, employees, and agents from and against all liability, loss, cost or expense (including attorney's fees) arising out of a legal action brought to compel the release of Proprietary Information. City shall not release the Proprietary Information after receipt of an objection notice unless either: (1) Consultant fails to fully indemnify, defend (with City's choice of legal counsel), and hold City harmless from any legal action brought to compel such release; and/or (2) a final and non-appealable order by a court of competent jurisdiction requires that City release such information.

3.7.5 Cooperation; Further Acts. The Parties shall fully cooperate with one another, and shall take any additional acts or sign any additional documents as may be necessary, appropriate or convenient to attain the purposes of this Agreement.

3.7.6 Entire Agreement. This Agreement contains the entire agreement of the Parties with respect to the subject matter hereof, and supersedes all prior negotiations, understandings or agreements.

3.7.7 Attorneys' Fees. If either party commences an action against the other party, either legal, administrative or otherwise, arising out of or in connection with this Agreement, the prevailing party in such litigation shall be entitled to have and recover from the losing party reasonable attorneys' fees and all costs of such action.

3.7.8 Governing Law. This Agreement shall be governed by the laws of the State of California. Venue shall be in San Bernardino County. In addition to any and all contract requirements pertaining to notices of and requests for compensation or payment for extra work, disputed work, claims and/or changed conditions, Consultant must comply with the claim procedures set forth in Government Code sections 900 et seq. prior to filing any lawsuit against the City. Such Government Code claims and any subsequent lawsuit based upon the Government Code claims shall be limited to those matters that remain unresolved after all procedures pertaining to extra work, disputed work, claims, and/or changed conditions have been followed by Consultant. If no such Government Code claim is submitted, or if any prerequisite contractual requirements are not otherwise satisfied as specified herein, Consultant shall be barred from bringing and maintaining a valid lawsuit against the City.

3.7.9 Time of Essence. Time is of the essence for each and every provision of this Agreement.

3.7.10 City's Right to Employ Other Consultants. City reserves right to employ other consultants in connection with this Project.

3.7.11 Successors and Assigns. This Agreement shall be binding on the successors and assigns of the parties.

3.7.12 Assignment or Transfer. Consultant shall not assign, sublet, or transfer this Agreement or any rights under or interest in this Agreement without the written consent of the City, which may be withheld for any reason. Any attempt to so assign or so transfer without such consent shall be void and without legal effect and shall constitute grounds for termination. Consultant shall not subcontract any portion of the Services required by this Agreement, except as expressly stated herein, without prior written approval of City. Subcontracts, if any, shall contain a provision making them subject to all provisions stipulated in this Agreement.

3.7.13 Construction; References; Captions. Since the Parties or their agents have participated fully in the preparation of this Agreement, the language of this Agreement shall be construed simply, according to its fair meaning, and not strictly for or against any Party. Any term referencing time, days or period for performance shall be deemed calendar days and not work days. All references to Consultant include all personnel, employees, agents, and subconsultants of Consultant, except as otherwise specified in this Agreement. All references to City include its elected officials, officers, employees, agents, and volunteers except as otherwise specified in this Agreement. The captions of the various articles and paragraphs are for convenience and ease of reference only, and do not define, limit, augment, or describe the scope, content, or intent of this Agreement.

3.7.14 Amendment; Modification. No supplement, modification, or amendment of this Agreement shall be binding unless executed in writing and signed by both Parties.

3.7.15 Waiver. No waiver of any default shall constitute a waiver of any other default or breach, whether of the same or other covenant or condition. No waiver, benefit, privilege, or service voluntarily given or performed by a Party shall give the other Party any contractual rights by custom, estoppel, or otherwise.

3.7.16 No Third-Party Beneficiaries. There are no intended third party beneficiaries of any right or obligation assumed by the Parties.

3.7.17 Invalidity; Severability. If any portion of this Agreement is declared invalid, illegal, or otherwise unenforceable by a court of competent jurisdiction, the remaining provisions shall continue in full force and effect.

3.7.18 Prohibited Interests. Consultant maintains and warrants that it has not employed nor retained any company or person, other than a bona fide employee working solely for Consultant, to solicit or secure this Agreement. Consultant warrants that it has not paid nor has it agreed to pay any company or person, other than a bona fide employee working solely for Consultant, any fee, commission, percentage, brokerage fee, gift or other consideration contingent upon or resulting from the award or making of this Agreement. Consultant further agrees to file, or shall cause its employees or subconsultants to file, a Statement of Economic Interest with the City's Filing Officer as required under state law in the performance of the Services. For breach or violation of this warranty, City shall have the right to rescind this Agreement without liability. For the term of this Agreement, no member, officer or employee of City, during the term of his or her service with City, shall have any direct interest in this Agreement, or obtain any present or anticipated material benefit arising therefrom.

3.7.19 Authority to Enter Agreement. Consultant has all requisite power and authority to conduct its business and to execute, deliver, and perform the Agreement. Each Party warrants that the individuals who have signed this Agreement have the legal power, right, and authority to make this Agreement and bind each respective Party.

3.7.20 Counterparts. This Agreement may be signed in counterparts, each of which shall constitute an original.

3.7.21 Survival. All rights and obligations hereunder that by their nature are to continue after any expiration or termination of this Agreement, including, but not limited to, the indemnification obligations, shall survive any such expiration or termination.

SCOPE OF SERVICES

EXHIBIT "A"

RFQ PROPOSED SCOPE OF SERVICES

The City of Ontario is seeking Statement of Qualifications from qualified consulting project management to provide On-Call Services for three (3) years, with an option of renewing for two (2) consecutive one (1) year terms. The City desires to obtain the services of a maximum of four (4) qualified firms to assist with On-Call Project Management Services. At least ten (10) years of experience providing similar services is required to oversee the work, stamp, and sign all project related documents as required.

Request for Qualifications (RFQ) for various services in various project disciplines (e.g. Architecture, Capital Improvement, Facilities Maintenance, Public Works, Water and Wastewater Distribution, Water Facilities, Extended Staff Services, etc.) with the intention of maintaining a list of multiple qualified prime consulting firms, with subconsultant support services as needed. Task orders will be issued to firms on a competitive basis based on the qualifications and expertise of the firm and their subconsultants. There is no designated minimum nor maximum value of services to be awarded to any one consultant.

Each Prospective Consultant needs to be able to provide all the services (or provide sub-consultants that must also be listed as part of their statement of qualifications) listed in this RFQ.

The following scope of services provides general categories of services that may be required for each task order requested. The categories are not an exhaustive list of services but rather a sampling of the services that are typically included, but not limited to, within that area of the scope in order to demonstrate the qualifications needed for that scope of services.

Specific services requested under these agreements shall be identified by the City at the time of the request for a specific task order. For each task order requested by the City, the Consultant shall provide a task order proposal that identifies the specific scope of services to be performed, the necessary project management activities, task budget, and task schedule. Upon City's approval of the proposed task's scope of services, the City will issue a notice to proceed with purchase order requisition for the work. The Consultant is encouraged to provide recommendations with respect to scope and order of completion.

No task order or scope of services shall be performed without first receiving authorization from the City and notice to proceed with the task order.

GENERAL REQUIREMENTS.

Consultant will be expected to work closely with staff for the duration of the assigned projects (i.e. task orders), and attend all meetings and workshops, as necessary. Any adjustments can be verified based on the need of City Project Managers. All field services must include appropriate traffic control.

Some or all of the following General Requirements and Services may be incorporated into specific tasks orders generated from the On-Call contract. The applicable General Requirements shall be based on needs of specific tasks and the City Project Managers:

Refer to Professional Services Agreement in Exhibit "B" to review the General Requirements and other conditions.

ON-CALL PROJECT MANAGEMENT SERVICES

The City of Ontario is seeking Statement of Qualifications from firms for On-Call Project Management Services:

Consultant shall be aware that certain labor categories above may be subject to prevailing wage rates as identified in the California Labor Code commencing Section 1770 et Seq. Determination of whether or not Prevailing Wages shall apply will be determined when the City's Project Manager identifies the scope of specific task orders. Please refer to Paragraph XI.11 "Prevailing Wage and Contractor Registration" of this RFQ, and Paragraph 3.10.6 "Prevailing Wages" of the Professional Services Agreement for further requirements.

Expected services to be provided under this on-call contract are as followed:

ACHITECTURAL PRE-QUALIFICATION

- Attend meetings and provide Meeting Minutes
- Review and prepare draft RFQ and provide comments
- Prepare Spreadsheet evaluating responses
- Provide support as required

ARCHITECTURAL BIDDING and SELECTION

- Attend meetings and provide Meeting Minutes
- Review and prepare draft RFP and provide comments
- Prepare Spreadsheet evaluating responses
- Provide support as required

DESIGN and CONSTRUCTION DOCUMENTS

- Attend meetings and prepare Meeting Minutes.
- Attend job-walks with architect and engineers
- Review plans at various stages and provide comments
- Provide support as required
- Review the 60 and 90% Plans and Specifications to identify potential errors, omissions, National Electric Code and coordination issues.
    - Detailed review of the Electrical drawings, Latter Logic, Relay logic, Control Logic, verification of the Instrumentation and Mechanical Drawings, and confirm that all electrical equipment are properly shown at their corresponding placements with their required signals, tagging, SCADA network connectivity, Verify all needed points and PLC Address on a list etc.
- Ensure all submittal comments have been addressed in the 100% package.

CONTRACTOR PRE-QUALIFICATION

- Attend meetings and provide Meeting Minutes
- Review and prepare draft RFQ and provide comments
- Prepare Spreadsheet evaluating responses
- Provide support as required

CONTRACTOR BIDDING and SELECTION

- Attend meetings and provide Meeting Minutes
- Review and prepare draft RFP and provide comments
- Attend Mandatory Pre-Bid Conference, Bid Scrub, and job-walks
- Assist with RFI responses, keep logs as required
- Prepare Spreadsheet evaluating responses
- Provide support as required

PRE-CONSTRUCTION

- Develop and update the over-all Project Schedule
- Develop and update the overall Project Budget
- Work with City staff and vendors to prepare the construction site for closure and construction
- Provide support as needed relating to Contractor Mobilization, administrative tasks, Facility Rules and Regulations for Contractors, etc.
- Attend job-walks as required to familiarize contractor with the facility and job-site
- Attend staff presentations to familiarize the affected staff as to expectations
- Attend planning meetings
- Meet with vendors as needed and as directed to obtain quotes, coordination, etc. Provide support as needed

CONSTRUCTION

- Monitor quality of construction via regular job-site inspections.
- Prepare, monitor, report periodically, and revise, as needed the Project Schedule.
- Prepare, monitor, report periodically, and revise, as needed the Project Budget.
- Attend weekly construction meetings, and provide meeting minutes, distributed to all parties
- Photograph site weekly and archive photos
- Monitor all standard construction documentation, including submittals, RFI's, etc.
- Review all contractor change orders for scope and cost approval.
- Review and monitor payment of all contractor and vendor invoices.
- Attend punchwalk on behalf of Client
- Monitor punch-list progress and completion to 100%
- Assist during punchlist period for complaints, modifications, etc.
- Provide support as needed
- On-site inspection services to ensure all electrical scope of work complies with the conformed set of plans and specifications.
    - Inspection team to be knowledgeable of all electrical, instrumentation, control logical, Discrete Input/Outputs, Analog (4-20ma) Inputs/Outputs and all SCADA/RTU systems at the project site.

FIXTURIZATION

- Assist Client with de-install and removal of existing furniture, and installation of new furniture and fixtures by Client's furniture vendor
- Obtain competitive bidding for any items or services, as directed by Client
- Prepare punchlists for furniture and fixtures
- Provide support as needed
- Attend jobwalks and/or meet vendors on site as needed

POST-CONSTRUCTION

- Attend meetings and provide Meeting Minutes
- Review requests for additional scope or services; obtain pricing, and implement, if so directed
- Provide support as required

ACCOUNTING AND PROJECT CLOSE-OUT

- Obtain close-out package from General Contractor including but not limited to as-built drawings, air-balance reports, warranty, maintenance and operations manuals, etc.
- Assist with coordination of final payment to General Contractor
- Assist with completion of Lien Release process
- Provide summary documentation, spreadsheets, analysis, etc, as directed
- Archive all electronic and paper files; provide copies of key documents and photos to Client

REQUEST FOR QUALIFICATIONS FOR ON-CALL PROJECT MANAGEMENT SERVICES

Z&K CONSULTANTS

1. EXECUTIVE SUMMARY

February 2, 2024

Purchasing Department
303 East "B" Street, Ontario, CA 91764

Subject: Request for Qualifications for On-Call Project Management Services

Dear Purchasing Department,

Z&K Consultants Inc. (Z&K) proudly presents our proposal to the City of Ontario for **Project Management Services**. Z&K specializes in the provision of Project Management, Program Management, Construction Management, Construction Inspection, Construction Administration, Pre-Construction Inspection, Staff Augmentation, and other Engineering Consulting Services. The Z&K Team has held numerous similar contracts for local agencies.

Z&K is proposing the same experienced team members that successfully managed Architectural Projects, Capital Improvement Projects, Design and Construction Projects, Facilities Maintenance Projects, Public Works Projects, Water and Wastewater Distribution, Water Facilities including pressure reducing stations, reservoirs, and treatment plants, and as-needed Project/Construction Management Services (Extended Staff Services). This Team works efficiently and with great comradery with City staff to achieve the community's goals.

Z&K has successfully held **over 50 On-Call** (Project Management, Construction Management, and Construction Inspection) contracts in the last 5 years.

Z&K is proud to team up with Ardurra to deliver excellent project management services to the City of Ontario. Our team members' versatile experience in Project Management Services of major projects and staff augmentation for the local jurisdictions makes the Z&K team uniquely qualified to provide the requested services. We have a track record of performing outstanding services on similar projects through saving significant time and cost from identification of the various critical elements controlling the project schedule to providing alternate practical solutions. Z&K is proud of our reputation for having seasoned personnel and of the industry's recognition of our ability to deliver complex capital improvement projects ahead-of-schedule, under budget, without claims, and with outstanding service for the community.

The Z&K Team is prepared to quickly provide exceptionally qualified personnel. Z&K has carefully selected this **"A-Team"** and committed our most qualified staff for the duration of the contract to deliver successful projects. The personnel identified bring specific and extensive field experience and have the qualifications required in the RFQ. Our team can assist the City with all aspects of the requested services. Z&K commits to providing our best Project Management services for timely project completion.

The Z&K Team offers many unique strengths and advantages for this contract, including:

- Z&K works extensively with numerous local cities and agencies providing similar services to the RFQ. Many of these contracts have multiple extensions.
- Z&K is a Disadvantaged Business Enterprise (DBE), Women's Business Enterprise (WBE), and Small Business Enterprise (SBE).
- Our team has reviewed the City of Ontario's CIP list and have extensive similar experience. We have current and in-depth **knowledge of the project types and has delivered over 500 Projects similar to the upcoming Projects that the City of Ontario anticipates**, including: Architectural Projects, Capital Improvement Projects, Design and Construction Projects, Facilities Maintenance Projects, Public Works Projects, Water and Wastewater Distribution, Water Facilities including pressure reducing stations, reservoirs, and treatment plants, and as-needed Project/Construction Management Services.
- Our team has experience successfully delivering projects within San Bernardino County and are local to the City of Ontario.
- Z&K has a great depth of resources with over 40 Project Mangers, Construction Managers, and Inspectors on-staff. Our team has an unmatched depth or resources and expertise on similar projects.
- Key Personnel possess all necessary licenses and registrations required for this project.
- Z&K Team provides **better project management quality** because our PMs are multi-disciplined and have construction and engineering backgrounds.
- Z&K Team has already prepared a Risk Matrix outlining critical elements to be top priority for typical similar projects to the projects that are in design and progress at the City of Ontario.

Our proposed key personnel are familiar with the City of Ontario's upcoming CIP projects and know the community well. The Z&K Team has carefully examined the project's requirements to identify key personnel best suited to deliver excellent project management services for this project. Our Team is composed of experts in Architectural Projects, Capital Improvement Projects, Design and Construction Projects, Facilities Maintenance Projects, Public Works Projects, Water and Wastewater Distribution, Water Facilities including pressure reducing stations, reservoirs, and treatment plants, and as-needed Project/Construction Management Services.

Z&K CONSULTANTS
BUILDING SOLUTIONS

Z&K commits to providing our best project management services and all related services, such as construction management and inspection services for timely project completion. We will dedicate the necessary resources to complete each assignment on time and within budget.

Our team is available, committed, and eager to begin work on these projects. We welcome this opportunity and look forward to working with the City of Ontario to successfully deliver these important projects. Our key personnel will be assigned to the project for the entire duration and will not be removed or replaced without concurrence from the City. We maintain close attention to our clients by tracking our contract budgets and schedules.

Our team currently holds over 50 On-Call Contracts with local cities and agencies, including the following:

- City of Lake Forest
- City of Irvine
- City of Newport Beach
- City of El Segundo
- City of Chino
- City of Rancho Pales Verdes
- City of Manhattan Beach
- City of Irwindale
- City of San Bernardino
- City of San Marino
- Long Beach Utilities
- WMWD
- LA County Public Works
- City of Lancaster
- City of Oceanside
- City of Norco
- City of Pomona
- City of Corona
- City of Beaumont
- City of Temecula
- City of Moreno Valley
- County of Los Angeles
- City of Eastvale
- City of Lancaster
- County of Riverside
- City of Laguna Beach
- City of Santa Monica
- City of Costa Mesa
- City of Compton
- City of Torrance
- City of San Marino
- City of Alhambra
- City of Norwalk
- City of Rosemead
- City of Costa Mesa
- City of Carson
- City of South Gate
- Riverside Public Utilities
- San Bernardino Municipal Water

We understand the Design and Construction Guidelines found on the City's website. We are a knowledgeable and responsive professional consulting firm and possess the expertise and resources to provide comprehensive coordination with various stakeholders in achieving the City's adopted goals and objectives. Z&K will maintain positive working relationships with all City staff as well as other consultants; possess the ability to think through project issues and recommend possible solutions early in the process on regulatory, technical, administrative, and managerial levels; coordinate and accomplish small and large tasks in a well-organized manner; communicate effectively in a public sector setting; and are enthusiastic about working as a team with City staff.

All contains of this Proposal shall remain valid for a period of not less than 120 days from the date of submittal. Z&K Consultants, Inc. does not have any exceptions to the language in the RFQ documents and does not have any language modifications to the contract language.

I will serve as the primary contact person for all communications pertaining to the proposal for the full duration of the contract. I am authorized to bind the firm to fulfill the commitments contained in the proposal. Z&K understands the scope of services to be provided and has the overall ability and qualifications to conduct the work and provide services as it relates to key points in the RFQ. By signing below, I attest that all information submitted is true and correct. We acknowledge Addendum No. 1 dated January 17, 2024, Q&A Set 1 dated January 3, 2024, Q&A Set 2 dated January 9, 2024, and Q&A Set 3 dated January 17, 2024. **We are excited about this opportunity to serve the City of Ontario are committed to the successful and early completion of these important projects.**

Sincerely,

Zack Faqih, PE

- City of Rancho Pales Verdes
- City of Riverside
- City of Rosemead
- City of San Bernardino
- City of San Marino
- City of Santa Monica
- City of South Gate
- City of Temecula
- City of Torrance
- County of Los Angeles
- County of Riverside Transportation Department
- County of San Bernardino
- Long Beach Water Department

With a large contingent of local resources to draw from, the Z&K project team can respond to whatever needs may arise. By effectively managing a balanced client workload among our staff, Z&K can respond promptly to meet with the City. This helps keep the project momentum moving forward so that the Z&K team is in place and ready to work within days of receiving a Notice to Proceed. Consistent with our proven long-term approach to large municipal on-call contracts, Z&K has the technical expertise and experience to provide all project types as requested in the RFQ. Our Team will perform the work on the specified project for the entire duration of the project unless requested or approved by the City. We understand that no staff substitution is allowed. We will monitor our approved budget and notify the City of additional work outside of contracted scope of work prior to performing such additional work.

Z&K's keys to success on this on-call contract includes our responsiveness, understanding of the City's needs, capability and availability of qualified staff, and our historically successful comprehensive project management approach for on-call, multiple-task, multiple-year contracts. Z&K will commit sufficient resources to adequately handle varying workloads that may result from multiple task orders progressing simultaneously, but technical strengths and resources are only of value if those resources can be well managed. The Z&K approach to effective project management starts with scope, schedule, and budget development, signed contracts, and kickoff meetings. The project management concepts for the duration of each task and the overall contract are then organized around a core framework of communication, coordination, thorough documentation, and quality control for each submittal on each task.

All proposed staff possess the certifications and licenses required to provide professional Project Management services. Our staff licenses include registered civil engineers, traffic engineers, QSD/QSP, ICC Certified in all trades, certified plan reviewers, and Certified Building Officials for building projects. Our team has specialized project management training. The Z&K team understands the importance of meeting deadlines in a timely manner. We commit to providing adequate staffing (both as to number of personnel and their qualifications) for every task. Our approach is flexible and adaptive to each task, and we can also commit to making use of personnel from other offices throughout the company and bringing on additional staff. Z&K is capable to scale up or down as needed with a focus on our unmatched responsiveness.

4. STAFFING RESOURCES

Z&K has a depth of resources to provide the requested services to the City. In addition to project management personnel, we have support staff and extensive construction management, inspection, and office engineer/document control personnel available to the City as needed. Z&K has identified Ms. Crystal Fraire, PE, QSD/P, Mr. Nadeem Syed, PE, QSD/P, and Ms. Amy Czajkowski, PE, CCM, QSD/P (Ardurra) as the three (3) persons who will be principally responsible for working with the City. We understand that if Z&K is chosen as a finalist, these principal individuals must attend the interview and in-person presentation. Resumes are included in Appendix A.

ORGANIZATION CHART

SUBCONSULTANT | ARDURRA

ARDURRA

We are proud to Team up with Ardurra to provide additional Project Management Services. Ardurra focuses on several key service areas, including public works/civil planning, design and construction management, water/wastewater planning design and construction management, environmental, land development, emergency management, electrical engineering, structural engineering, and survey, as well as public outreach, code compliance enforcement, and grant administration. With an emphasis on practical, proven, and cost-effective solutions, Ardurra's capabilities are focused on the planning and design of roadway and utility improvements, as well as managing multi-project capital improvement programs for public agencies. Ardurra's reputation for providing quality services has been confirmed by its ongoing relationships and extended contracts with agencies throughout the region with projects such as street reconstruction/rehabilitation, landscape/median enhancements, traffic and transportation engineering, hydrologic and hydraulic (H&H) analyses and reports, sewer and storm drain improvements, water/sewer/recycled water pipelines, pump stations, and storage facilities.

STAFFING CHART

Z&K Consultants, Inc. has first-hand experience on the expectations and requirements to make the City's Projects a success. These are important Projects for the City, community, and Councilmembers. We understand the staff effort needed to complete these projects on time and within budget.

PROFESSIONAL AND QUALIFIED TEAM | The key to a successful project is a highly qualified and well-managed team. We offer the City a cohesive, talented team of licensed and certified professionals. Our Professionals are recognized as leaders in the industry and will act as a seamless extension of Staff. Our Project Management professionals keep these key objectives in mind: Quality services and project deliverables; Time and budget efficiency; Adherence to quality and assurance standards; Constant communication; and Application of technical and practical expertise.

Z&K has carefully selected this "A-Team" and has committed our most qualified staff for the duration of the contract. The project team is committed 100% to this contract and all proposed personnel will be available to perform the requested services as required by the City of Ontario. Our staff will deploy efforts as the project schedule and construction activities dictate. We will reallocate staff hours, when possible, for cost savings to the City. By using highly qualified multi-disciplined inspectors, we are able to provide a cost of service well under industry standard.

Z&K Consultants commits that all assigned personnel will not be removed or replaced without prior written City approval. Key personnel will be available to the extent proposed for the duration of the contract and through the completion of the scope of services. Our proposed and fully committed team is fully capable and exceptionally qualified. All can multi-task, are multi-disciplined, and have a full understanding of all aspects of the proposed project requirements.

KEY PERSONNEL BIOS

All proposed staff possess the certifications and licenses required to provide professional construction management and inspection services. Our staff licenses include registered civil engineers, traffic engineers, QSD/QSP, ICC Certified in all trades, certified plan reviewers, and Certified Building Officials for building projects. Our team has specialized project management and construction management training.

Crystal Fraire, PE, QSD/P | Senior Principal Project Manager

Ms. Fraire has provided Program and Project Management for numerous projects totaling over $600M. She has successfully delivered over 300 capital improvement projects ranging from water/wastewater projects, street improvements, pavement rehabilitations, storm drain improvements, parks, bridges, culverts, traffic signal improvements, pipeline projects, wells, tanks, and various other public works projects. She has thorough knowledge of project management of public works and capital improvement projects including water and wastewater projects, involving flood risk management, water conservation facilities, water mains, pressure regulating and pumping stations, wells, valves, fittings, and other appurtenances, reservoirs, channels, and storm drains, as well as access roads, culverts, and bridges. She is knowledgeable of the latest construction practices and requirements, communicates effectively, and possesses computer usage and writing skills. Her experience includes an extensive background in construction management and inspection, construction contracting, project management, quality control and assurance, and project coordination She has excellent skills in understanding construction contracts, review and control project cost and schedule, coordinate and assist in negotiating change orders, provide project updates to the client, ensure timely review of critical path method (CPM) schedule to track any changes in critical path and delays, maintain project as-builts, managing multiple subconsultants and supervise inspection staff.

Nadeem Syed, PE, QSD/P | Senior Principal Project Manager

Mr. Syed has over 29 years of experience in project management, construction management, civil engineering, and traffic engineering, with expertise in Capital Improvement Program (CIP) development and management and has successfully delivered over 30 street rehabilitation projects. He spent 20+ years in engineering and implementing various CIP projects for municipalities, including the cities of San Bernardino, El Monte, Rialto, Fontana, Corona, Diamond Bar, San Marcos, and Baldwin Park. These capital projects have included parks, storm drain, street improvement, pavement rehabilitations, slurry seal, traffic signal, ADA improvements, pedestrian safety, concrete work including sidewalk, curb, gutter, ADA ramps, grade separations, interchanges, lift stations, sewer and water systems, park rehabilitation and municipal buildings. Mr. Syed participates in developing department budgets, conducts training and performance evaluations to staff, establishes an Assessment District for construction of sewer main line and streetlights, develops master plans for citywide projects, and he successfully applies for various grants such as HES, SR2S, and ATP grants.

Amy Czajkowski, PE, CCM, QSD/P | Senior Principal Project Manager (Ardurra)
Additional Position: Constructability Reviewer

Amy has nearly 30 years of experience in system planning, design engineering, and construction/project management of public utilities infrastructure projects. She has expertise in contract administration and change order management and knowledge of the roles and responsibilities of complex construction. She shares this knowledge and experience by teaching a Certified Construction Manager (CCM) course in Contract Administration, which specializes in fulfilling contract compliance. Amy is recognized for her project management, thorough design review and plan checking, and ability to work with a variety of contractors and permit applicants. An additional specialty of hers is stormwater management, which includes design services, assisting with permitting compliance, and performing inspection for effectiveness of BMP systems during construction. She has conducted master plans for water and sewer services, assessed impact fees, and developed capital improvement programs to ensure adequate service. She has managed onsite capital improvement projects and served as extension of staff acting on behalf of the client. Amy's engineering design experience includes pump and lift stations, conveyance systems, reservoir storage, and treatment facilities.

Brittany Duhn, PE, QSD/P | Senior Project Manager

Ms. Duhn has extensive experience in project management, program management, construction management, office engineering, contract administration, document control, and labor compliance oversight. She has successfully managed streets, CIPs, Public Works Projects, Water/Wastewater Projects, bridges, bike trails, drainage improvements, parks, buildings, open space amenities, landscaping, traffic signals, playground equipment, shade structures, and sports fields projects. She has managed over $500M in Projects during the design and construction phases. Her experience includes an extensive background in construction management and inspection, construction contracting, project management, quality control and assurance, and project coordination. She has excellent skills in understanding construction contracts, review and control project cost and schedule, coordinate and assist in negotiating change orders, provide project updates to the client, ensure timely review of critical path method (CPM) schedule to track any changes in critical path and delays, maintain project as-builts, managing multiple subconsultants and supervise inspection staff. She has provided Project Management services for all stages of projects, from design to construction.

Lisa Naslund, PE, QSD/P | Senior Project Manager
Additional Position: SWPPP/Environmental Specialist

Ms. Naslund has over 28 years of project management experience for various major capital improvement projects. Projects Ms. Naslund have successfully delivered are bridges, interchanges, transportation, street improvements, roadway widenings, bridges, water and wastewater projects, involving flood risk management, water conservation facilities, water mains, pressure regulating and pumping stations, wells, valves, fittings, and other appurtenances, reservoirs, channels, and storm drains, as well as access roads, and culverts. Ms. Naslund has extensive experience performing design reviews, constructability reviews, scheduling, managing consultants, interfacing with permitting agencies, reviewing billings and contracts for scope of work, preparing staff reports, preparing RFPs, preparing and administering bids, creating LID reports, performing hydrology calculations, preparing SWPPP, plan check, and designing and preparing tract and parcel maps. Ms. Naslund has extensive experience delivering projects within schedule and budget and collaboratively assisting agencies as an extension of staff.

Pernilla Brandt, BSCE | Senior Project Manager

Ms. Brandt is a seasoned engineer with over 20 years of experience in engineering design and management specializing in municipal, commercial and residential projects. Extensive experience in all aspects of engineering project leadership including strategic planning, engineering and architectural specifications and drawings, scheduling, resource allocations, reporting, and cross-functional team collaboration. Continually exceeds expectations by building valuable relationships and works well with people at all levels of an organization including management, team members, contractors, and clients. Ms. Brandt has extensive experience performing design reviews, constructability reviews, scheduling, managing consultants, interfacing with permitting agencies, reviewing billings and contracts for scope of work, preparing staff reports, preparing RFPs, preparing and administering bids, creating LID reports, performing hydrology calculations, preparing SWPPP, plan check, and designing and preparing tract and parcel maps.

Anthony Flores, BSCE, EIT | Senior Project Manager
Additional Positions: Constructability Reviewer& Scheduler/Estimator

Mr. Flores has experience in project management, construction management, contracting, field investigation, project management, and quality control for numerous capital improvement projects and federally funded projects, involving street improvement, bridge construction, storm drains, traffic signals, traffic signs, streetlights, pavement markings, construction projects, and maintenance projects. Mr. Flores has a thorough understanding of Cal-OSHA practices and procedures, ADA and Caltrans ADA requirements, as well as extensive knowledge of Caltrans construction practices, physical characteristics and properties of highway construction materials, and approved methods and equipment used in making physical tests of construction materials. Additionally, Mr. Flores is familiar with Caltrans field and construction office procedures, with experience assisting in inspection to assure compliance with plans and specifications, assisting in preparation of contract change orders, contract estimates, and progress payments, coordinating field testing of materials for compliance with project specifications and the Caltrans Quality Assurance Program, maintaining accurate project records, performing analytical calculations, and monitoring Contractor progress by preparing progress reports as required.

Anissa Voyiatzes, PE, QSD, ENV SP | Senior Project Manager (Ardurra)
Additional Position: SWPPP/Environmental Specialist Estimator

Anissa Voyiatzes has 29 years of experience in civil engineering planning, design, program and project management for transportation and public works facilities. These projects have included bikeway, roadway widening, rehabilitation, ADA compliance evaluation and improvements, complete streets and streetscape projects, utility engineering, site grading, traffic engineering, flood control facilities, drainage systems, sewer and water systems, parking lots and retaining walls. Anissa specializes in public works engineering projects that incorporate sustainable design practices.

Omar Alameddine, EIT | Senior Project Manager (Ardurra)

Omar Alameddine brings an extensive background in construction management and inspection on public works and Caltrans projects. Omar has delivered projects to renew city streets and freeways, applying his firm grasp of Caltrans and Greenbook standards. He has also managed and inspected construction of recreational facilities such as soccer fields, public parks and a dog park, public facilities, domestic water, sewer, and drainage improvements. Clients appreciate Omar's penchant for precision and thorough documentation.

This "A-Team" has worked together in this same capacity on multiple contracts. In addition to their extensive project specific experience, this team has great synergy and works very well together as well as with City Staff. All above key members are local to the area and are excited about the opportunity to improve their community. Our strategic and efficient staffing approach also results in significant cost savings to the City of Lawndale. We are confident that our proposed "A-Team" will provide outstanding customer service and cost savings for the City.

6. EXPERIENCE AND TECHNICAL COMPETENCE

Z&K specializes in the provision of Project Management, Program Management, Construction Management, Construction Inspection, Construction Administration, Pre-Construction Inspection, Staff Augmentation, and other Engineering Consulting Services. The Z&K Team has held numerous similar contracts for local agencies. Our Team is comprised of Senior Personnel who are leaders in our industry. Z&K Consultants' experience, technical and professional skills will ensure that we can meet the goals and fulfill the general functions identified in the RFQ. Z&K has conducted business for over 15 years providing the required scope of services for public clients. Our Team is familiar with the City of Ontario and have local experience and knowledge of the City.

Z&K is proposing the same experienced team members that successfully managed Architectural Projects, Capital Improvement Projects, Design and Construction Projects, Facilities Maintenance Projects, Public Works Projects, Water and Wastewater Distribution, Water Facilities including pressure reducing stations, reservoirs, and treatment plants, and as-needed Project/Construction Management Services (Extended Staff Services). This Team works efficiently and with great comradery with City staff to achieve the community's goals. We have a track record of performing outstanding services on similar projects through saving significant time and cost from identification of the various critical elements controlling the project schedule to providing alternate practical solutions. Z&K is proud of our reputation for having seasoned personnel and of the industry's recognition of our ability to deliver complex capital improvement projects ahead-of-schedule, under budget, without claims, and with outstanding service for the community.

The Z&K Team is prepared to quickly provide exceptionally qualified personnel. Z&K has carefully selected this **"A-Team"** and committed our most qualified staff for the duration of the contract to deliver successful projects. The personnel identified bring specific and extensive field experience and have the qualifications required in the RFQ. Our team can assist the City with all aspects of the requested services. Z&K commits to providing our best Project Management services for timely project completion.

PROJECT EXPERIENCE

The Z&K Team has successfully performed Project Management, Construction Management, and Construction Inspection for projects for numerous public agencies. **The following projects have been completed on time and within budget.**

Our Projects include the following similarities to the City of Ontario's upcoming projects:

- ✓ Street Improvements
- ✓ Bridge Projects
- ✓ Bike Trails
- ✓ Drainage Improvements
- ✓ Park Projects
- ✓ Buildings
- ✓ Open Space Amenities
- ✓ Landscaping Improvements
- ✓ Traffic Signal Improvements
- ✓ Playground Equipment
- ✓ Shade Structures
- ✓ Sewer and Storm Drain Improvements
- ✓ Pavement Rehabilitation
- ✓ Concrete & Sidewalks
- ✓ Facility Projects
- ✓ Driveway Aprons
- ✓ ADA Ramps
- ✓ Signing, Striping, Markings, & Pavement Legends
- ✓ Traffic Signal Loops
- ✓ Water Valves & Meters
- ✓ Street Widenings
- ✓ Project Management
- ✓ Construction Management
- ✓ Design Review
- ✓ Bidding Assistance
- ✓ SWPPP Review
- ✓ Traffic Control
- ✓ Geotechnical and Material Testing Coordination
- ✓ Public Relations Management
- ✓ Labor Compliance Oversight
- ✓ QA/QC

TRANSPORATION PROJECTS

CITY OF LAKE FOREST | STREET RESURFACING OF GLENN RANCH ROAD FROM PORTOLA TO EL TORO AND PRE-CONSTRUCTION INSPECTION SERVICES FOR SLURRY SEAL ZONE F AND ARTERIAL SLURRY SEAL JERONIMO AND MUIRLANDS FROM LOS ALISOS TO BAKE

Relevant project features include street resurfacing and rehabilitation, application of slurry seal, grinding and overlay, cold milling, concrete improvements, ARHM pavement, AC base course, aggregate base, signing, striping, markings and pavement legends, removal and replacement of PCC curb ramps, removal and replacement of PCC sidewalk, bike lane traffic loops, Type E traffic loops, dig-outs, sewer and storm drain manhole adjustments, and water valves adjustments.

Z&K has successfully delivered over 50 street improvement projects over the past 5 years.

CITY OF COSTA MESA | CITYWIDE PARKWAY MAINTENANCE & STREET REHABILITATION PROJECT

Z&K Consultants, Inc. is providing Construction Management and Project Management Services for this citywide street improvement program in the City of Costa Mesa. This project includes street improvements, intersection improvements, ADA ramp improvements, conduit installation, traffic signal improvements, mobilization, curb and gutters, sidewalks, driveway approaches, spandrels, cross gutters, adjustment of manholes and utility covers to grade, procurement and application of slurry seal Type II, crack sealing, traffic signing, striping and markings, installation of traffic markers and speed humps, and implementation of traffic control.

CITY OF CHINO | SLURRY SEAL PROGRAM (VARIOUS LOCATIONS CITYWIDE)

Z&K Consultants Inc. is providing Project Management, Construction Management, and Inspection oversight services for this Project which includes street rehabilitation and slurry seal of various streets, including, Pipeline Ave from City Limits to City Limits, Chino Ave from City Limits to City Limits and Schaefer Ave from City Limits to City Limits. Scope of work includes pavement improvements, street resurfacing, crack sealing, slurry seal, localized dig-outs, striping removal/install, and traffic loop detectors.

CITY OF CHINO | ALLEY/SANITATION REHABILITATION PROJECT

Z&K Consultants Inc. is providing Project Management and Construction Management for this Project which includes removal of existing alley pavement and base section to construct new AC pavement section and ribbon gutter in multiple alleys in the City of Chino. Scope of work includes new PCC drive and alley approaches, curb and gutter, 4' PCC alley gutter, new AC pavement section over compacted crushed miscellaneous base, and the construction of several block walls.

CITY OF SAN BERNARDINO | STREET REHABILITATION PROGRAM (30+ MAJOR CITY STREETS)

Z&K Consultants, Inc. is providing Project Management, Construction Management and Inspection Services for this long-term, on-call contract with the City of San Bernardino, which includes street resurfacing and pavement rehabilitation for over 30 major streets and multiple major street intersections in the City. The projects include roadway and pavement rehabilitation, concrete improvements, cross gutters, curb and gutters, curb ramps, ADA improvements, storm drain and pipeline relocation, traffic signal improvements, traffic control, full depth removal and replacement of asphalt concrete, cold milling and AC overlay of existing asphalt concrete, slurry seal application PCC sidewalk, replacement of existing PCC driveways, driveway approaches, curb ramps, retaining curbs, 3' high retaining wall, parkway culverts, cross gutters, asphalt-concrete pavement, removal and replacement of trees, clearing and grubbing, installation and configuration of multiple traffic loop detectors and bicycle traffic loop detectors, installation of city project signs, preservation of existing city survey monuments, reconfiguration and installation of street lighting, and installation of pavement markings and striping.

CITY OF COMPTON | ANNUAL RESIDENTIAL STREET REHABILITATION PROJECT, PHASE 1 & PHASE 2A

Z&K Consultants, Inc. is providing Project Management, Construction Management, Inspection, and Labor Compliance services for this Project. The scope of work consists of roadway and pavement rehabilitation, concrete improvements, asphalt overlay, construction staging, heavily travelled intersections, traffic control, clearing and grubbing, SWPPP preparation, cold mill and overlay, PCC sidewalk, manholes and utility covers, speed humps, pedestrian crossings, ADA improvements, slurry seal application, HMA pavement, ARHM overlay, AC base course, aggregate base, full depth AC slot pavement, alley intersection, driveway and driveway approach, landscaping, irrigation, adjusting manhole and utility covers to grade, water valve, water meter, street lighting, installation of loop detectors, traffic signal modification, adjustment of streetlight and traffic signal pull boxes to grade. (Two Separate Projects)

CITY OF SAN MARINO | STREET REHABILITATION PROGRAM PHASE 1 & PHASE 2

Z&K Consultants, Inc. provided Project Management and Construction Inspection Services for this program, which consisted of citywide roadway pavement rehabilitation. The program's improvements included construction of roadway and pavement rehabilitation, concrete improvements, cross gutters, curb and gutters, curb ramps, ADA improvements, cold-milling asphalt concrete pavement and re-paving with hot mix asphalt (HMA) and asphalt rubber hot mix (ARHM), clearing and grubbing, , localized pavement repairs, replacing impacted traffic striping, markings, pavement legends, loop detectors, curb painting, driveways and driveway approaches, installing speed humps, adjusting utility frames and grates, inspection and replacement of sewer manholes, water valves, water meters, and storm drain manholes, preparation and implementation of SWPPP and temporary construction BMPs, and providing temporary traffic control. (Two Separate Projects)

CITY OF NORWALK | CDBG LOCAL STREETS REHABILITATION PROJECT

Z&K Consultants, Inc. is providing Construction Management and Inspection services for the Local Streets Rehabilitation Project, funded by the Community Development Block Grant (CDBG) fund. The scope of work includes improvements to concrete appurtenances, including cross gutters, curb and gutters, upgrades of curb ramps to ADA standards, and intersection improvements, traffic signal improvements, bike lanes, underground utility coordination, conduit installation, and rehabilitation of roadway pavement conditions.

CITY OF ROSEMEAD | WALNUT GROVE AVE. RESURFACING PROJECT, PHASE I

Z&K Consultants, Inc. is providing Project Management, Construction Management and Inspection Services for this project, which involves street resurfacing of Walnut Grove Ave., from Marshall St. to Grand Ave. in the City of Rosemead. In addition to street improvements, the project included intersection improvements, removal and replacement of existing AC pavement, cold mill and overlay, asphalt pothole repairs, replacement of PCC sidewalk, removal and replacement of ADA ramps, curb and gutter, bike lane and bike trail, traffic signal modifications, installation of medians, adjustment of manholes and utility covers to grade, installation of specialty and bicycle loop detectors, installation of speed humps, pedestrian crossings, and guardrail and roadway markers.

CITY OF ALHAMBRA | FY 19-20 & 20-21 STREET REHABILITATION PROJECTS

The Z&K Team is performing Project Management, Construction Management, Construction Inspection, and Labor Compliance Services for this project, which consists of the pavement and street rehabilitation of 23 local street segments located south of Mission Road, west of Garfield Avenue, east of Atlantic Boulevard, and north of Valley Boulevard. Improvements include street resurfacing, slurry seal treatment, varying depths of cold mill and overlay, construction staging, full depth removal and reconstruction, concrete improvements such as removal and replacement of broke and off-grade sidewalk, ADA ramps that need updating, broke and off-grade curb and gutter, PCC sidewalk, installation of loop detectors, adjustment of manhole covers and utility covers to grade, driveway aprons in need of repairs, and concrete cross gutter reconstruction. (Two Separate Projects)

CITY OF TORRANCE | RESIDENTIAL & ARTERIAL PAVEMENT IMPROVEMENT PROJECT, I-159/I-139

Z&K Consultants, Inc. is providing Project Management, Construction Management and Construction Inspection services for this project, which consists of pavement improvements to a residential neighborhood and four arterial streets. Improvements include roadway and pavement rehabilitation, concrete improvements, cross gutters, curb and gutters, curb ramps, ADA improvements, clearing and grubbing, application of slurry seal, cold mill and AC overlay, localized pavement repairs, as well as tree removals and replacements, asphalt berm replacement, AC base course, PCC sidewalk, PCC driveways and driveway approaches, access and ramps, and installation of raised pavement markers and City project signs.

CITY OF IRWINDALE | 2021-2022 RESURFACING PROJECT: RESIDENTIAL RESURFACING PHASE I

Z&K provided Construction/Project Management and Inspection for this project. The project included street resurfacing, traffic control, raised crosswalks, speed humps, cold milling and AC overlay of existing asphalt concrete, construction of new curb and gutter, PCC sidewalk, installation and configuration of multiple traffic loop detectors, installation of city project signs, preservation of existing city survey monuments, adjusting manhole and utility covers to grade, installation of pavement markings and striping.

CITY OF TORRANCE | ANZA/VISTA MONTANA/PACIFIC COAST HIGHWAY INTERSECTION IMPROVEMENTS

Z&K Consultants, Inc provided Project Management and Inspection services for the Anza/Vista Montana/Pacific Coast Highway Intersection Improvements Project. This Project consists of construction of the Pacific Coast Highway/Anza Intersection Improvements with appurtenances as shown on City of Torrance Plan No.'s ST-1019/SD-517/C- 2019-8/TS-2019-2/ST-1019-TC; curb, gutter, sidewalk, catch basins, curb ramps, raised medians, striping, traffic signal replacement; grind and overlay, and AC pavement; and all other incidental work in this specification document.

ENTERPRISE (WATER, SEWER, STORM DRAIN, AND SANITATION)

CITY OF LAGUNA BEACH | JASMINE STREET STORM DRAIN IMPROVEMENTS CIP NO. 154

Z&K Consultants, Inc is providing Construction Inspection Services for this project for the City of Laguna Beach. The project includes the installation of approximately 2,400 linear feet of storm drainpipe; including the jacking of one 28-inch steel casing and the installation of a 24-inch PVC pipe within the casing beneath North Coast Highway. The work also includes the installation of a Low-flow diversion with a 12-inch PVC pipe, the installation and/or replacement of catch basins, and connecting storm drain laterals at various locations along the project alignment, trenching, the removal and replacement of A.C. pavement and P.C.C. street improvements as required to install storm drain facilities, jacking of 28-inch steel casing, striping, pavement markings, pavement markers, and traffic control.

Z&K has successfully provided CA/CI Services for over 40 water, storm drain, and sewer projects over the last 5 years.

CITY OF VERNON | 50th STREET WATER MAIN REPLACEMENT PROJECT

The Z&K Team is providing Project Management and Inspection Services this Project. The project's scope of work includes demolition and reconstruction of the 12" iron ductile pipeline and all associated renovations to the City's existing water services, such as installation of all appurtenances, fittings, valves, blow-offs, siphons, concrete pipe supports, thrust blocks, trenching, bedding and backfill, replacement of traffic markings, shoring, over excavation, fill re-grade, temporary and permanent pavement, steel plating, and roadway improvements and repair.

CITY OF FULLERTON | LONGVIEW DRIVE WATER/SEWER MAIN REPLACEMENT & STREET IMPROVEMENTS

The Z&K Team is providing Construction Management and Inspection Services. This water, sewer, and street rehabilitation project for the City of Fullerton included replacing 2,500 LF of an 8-inch ductile iron pipe water main, as well as 2,500 LF of 8-inch vitrified clay pipe (VCP), PVC SDR 26 sewer main, installation of new manholes, removal and replacement of existing sewer and video inspection and abandoning existing water mains and valves. Inspectors provided oversight during operations including pipe welding, trench excavation, shoring, backfill, traffic control operations, and replacement of traffic signals, signing, and striping. The project also included street and drainage improvement work, which included asphalt paving, cold planning, excavation, concrete paving, aggregate base, curb and gutter, access ramps, cross gutter, driveway approach and sidewalk replacement.

LBWD | LADWP HAYNES GENERATING STATION RECYCLED WATER PIPELINE & SEWER PIPELINE PROJECT

Z&K is providing Project Management services for the 24-inch diameter water pipeline. Approximately 7,940 LF and construction estimate of $14M. Pipeline begins at Haynes Generating Station and connect to LBWD 21-inch recycled water pipeline at Atherton Street and Studebaker Road. Project requires extensive coordination with City of Long Beach upcoming public works projects. Project required CEQA, Caltrans permitting, California Coastal Commission, and coordination with LADWP. Z&K is providing project management services for the 14-inch sewer force main. It is approximately 12,930 LF. The pipeline begins at Haynes Generating Station and connects to LACSD 42-in sewer located west of Coyote Creek. Estimated Construction Cost is $15.8M. The pipeline has many crossings, is within Caltrans, SCE, LADWP, and LACFCD right-of-way, and has a perpendicular crossing through SCE right-of-way that will require CPUC. Project requires both CEQA and California Coastal Commission.

CITY OF CHINO | YORBA AVENUE & EUCALYPTUS AVENUE SEWER MAIN REPLACEMENT PROJECT

Z&K is providing Project Management and Construction Management services for this Project. This Project includes the replacement of an existing 10-inch vitrified clay sewer pipe along Yorba Avenue between Murrieta Street and Cheyenne Way. There are two industrial businesses discharging wastewater with combined volumes of approximately 400,000 GPM, when compliant. This number can reach up to 500,000 GPM when non-compliant and causes existing pipes to reach nearly 75% capacity. The project includes an independent sewer flow study to assist the City in a decision to remove and replace or add additional sewer line(s) at these locations.

CITY OF CHINO | CENTRAL AVENUE AND DUPONT AVENUE WATERLINE REPLACEMENT PROJECT

Z&K is providing Project Management and Construction Management services for this Project. The Central Avenue project includes the replacement of a 16" steel to an 18" PVC water main on Central Avenue from Chino Avenue to C Street. The Project will also include the replacement of an 8" steel line on D Street pipe from Central Ave to the alley west of 6th Street.

CITY OF CHINO | STATE STREET WATER TREATMENT PROJECT

Z&K is providing Project Management services for this Project. This project includes the construction of a centralized water treatment plant (WTP) at the City's Reservoir 5 and Well 14 sites. The proposed project is anticipated to include cartridge filters, GAC, IX, and chlorination equipment for a total treatment capacity of 4,000 gpm. In addition, the project includes a 3,800 LF brine disposal pipeline connecting to the Non-recoverable Waste System operated by IEUA and LA County Sanitation, a connection to the City of Montclair sewer system, and a 7,000 LF raw water transmission main from Well 12 to the State Street site. Both Well Pump 12 and Well Pump 14 will be replaced as part of the treatment improvements.

CITY OF OCEANSIDE | SAN LUIS REY (SLR) WASTEWATER TREATMENT PLANT PROJECT

The Z&K Team is providing Construction Management and Inspection Services as a subconsultant for the SLR Wastewater Treatment Plant and Aeration Basin Effluent Piping Replacement project located at the San Luis Rey Wastewater Reclamation Facility. The project scope of work includes the removal and replacement of six (6) 24-inch aeration basin effluent piping, including the installation of new plug valves, fittings, pipe, wall penetrations and installations of gate valves and flow meters or other operations required for the fulfillment of the Contract in strict accordance with the Contract Documents.

VICTORIA AVENUE RECHARGE WATER FACILITY | WESTERN MUNICIPAL WATER DISTRICT

The Z&K team provided Construction Management and Inspection Services for this major capital improvement project for WMWD. This project includes the installation of new groundwater extraction wells to help increase the groundwater basin quantity and improve its quality. Major improvements on this project include mass grading operations, installation storm water basins, a divergent structure, two concrete trapezoidal rerouting channels into the water basin, storm water collection structure, the installation of 4000 linear feet of 20" reclaimed water pipeline three local city streets connecting the gage canal reservoir into the three proposed storm water basins.

CITY OF BEAUMONT | WASTEWATER TREATMENT PLANT EXPANSION & BRINE PIPELINE PROJECT

The Z&K Team provided Construction Management and Inspection Services for this project. Per the City's NPDES Permit, once flows at the WWTP reached 75% of the permitted capacity, the City is required to begin the planning, design and funding process to expand the plant. In addition to the need for more capacity to serve the City's growing customer base, the City is mandated by the Regional Water Quality Control Board (Regional Board) to upgrade its WWTP to meet groundwater basin objectives. The City of Beaumont's Wastewater Treatment Plant (WWTP) Expansion/Renovation Project includes increased the permitted capacity from 4 MGD to 6 MGD.

PARK AND FACILITY PROJECTS

CITY OF SOUTH GATE | HOLLYDALE COMMUNITY PARK IMPROVEMENTS PROJECT

The Z&K Team provided Project Management, Construction Management and Inspection services for the City of South Gate's Hollydale Community Improvement Project. The project involves the renovation of Hollydale Community Park which is located at 12119 Industrial Avenue, in the City of South Gate. The Project improvements include a new community center, new lighting and electrical systems, concrete improvements, stormwater chambers, new irrigation system and landscaping, site furniture, new playground and exercise equipment, basketball court, block wall fence, construction of a new 1,675 SF community building and other miscellaneous work.

Z&K has successfully delivered over 35 parks and facility projects serving in a similar capacity over the past 5 years.

CITY OF COSTA MESA | JACK HAMMETT SPORTS COMPLEX IMPROVEMENT PROJECT

The Z&K Team is providing Construction Management and Inspection services for the City of Costa Mesa's Jack Hammett Sports Complex Improvement project. Relevant improvements within the project include sports field construction, synthetic turf installation, concrete improvements, parking lot improvements including increase of parking and improved circulation, ADA improvements, electrical runs to the pull boxes for storage buildings within the complex, construction of retaining walls, block wall fencing, replacement of lighting system, irrigation improvements, landscaping, rough and precise grading, foundation improvements, construction and installation of two new storage buildings, and all electrical and mechanical work within the buildings.

CITY OF LAKE FOREST | ARBOR MINI PARKS, VINTAGE AND SUNDOWNER PARKS, BORREGO OVERLOOK, REGENCY, AND RANCHO SERRANO PARKS (SIX (6) PARK IMPROVEMENT PROJECTS)

Z&K Consultants provided Construction Management, Construction Inspection, and Contract administration for the Arbor Mini Parks and Neighborhood Park Renovations, which includes Borrego Overlook, Regency, Rancho Serrano, Sundowner, and Vintage Parks. This program includes improvements such as removal of existing hardscape, installation of new landscaping and irrigation, installation of block wall and iron fencing around perimeter of park sites, installation of new playground equipment and park amenities, construction of ADA compliance ramps, erosion control, storm drain construction, construction of concrete walkways and exercise trails, installation of exercise equipment, installation of barbecues, picnic tables, park lighting system and electrical system, installation of drinking fountains, installation of shade structures, rubber surfacing, and concrete loop walkways.

CITY OF TUSTIN | VETERANS SPORTS PARK AT TUSTIN LEGACY

Z&K Consultants provided Construction Management and Construction Inspection Services as a subconsultant for the City of Tustin's Veterans Sports Park at Tustin Legacy. This park is the City of Tustin's largest park carved from 31.5-acres. It is bounded by Lansdowne Road, Valencia Avenue, and Severyns Road. This project is 100% locally funded, utilizing several funding sources. Phase 1 of the construction for the Veterans Sports Park is complete and consists of demolition, grading, storm drain, water, reclaimed water, and sanitary sewer installation. The sports park contains a wide variety of recreational facilities such as softball, soccer, tennis, basketball, racquetball, sand volleyball and pickleball. The park includes a passive recreation area, fitness stations, concession/restroom/storage buildings, a veteran's memorial feature, skate plaza, a parking lot, and a children's play environment. Additional relevant park features include lighting installation, retaining walls, synthetic turf, outlet structures, outdoor seating areas, ADA compliant ramps and concrete walkways, ADA compliant parking lot spaces, landscaping, and water features.

CITY OF LYNWOOD | YVONNE BURKE – JOHN HAM PARK COMMUNITY CENTER

Z&K Consultants provided Construction Management and Inspection Services for this new 8,645 SF community center and park. The project includes building improvements, such as a kitchen, multipurpose rooms, administration offices, restrooms, game room, concession room, as well as improvements to the park, such as landscaping, irrigation, retaining walls, block wall fencing, site lighting, concrete walkways, water features, outdoor exercise stations, a natural grass baseball field, outdoor basketball court, covered picnic and barbecue areas, playground equipment, public restrooms, a ¾ mile ADA accessible walkway, outlet structures, and paving improvements. The building is utilizing a dual plumbed system and the site is using reclaimed water for irrigation. The project has required close coordination with SCE, Region Water Quality Control Board, and Los Angeles County Department of Public Health.

CITY OF LA QUINTA | SILVERROCK PARK VENUE SITE

Z&K provided Construction Management and Inspection Services for this Project, which sits on approximately 14 acres with approximately eight (8) acres of walking paths, turf, and landscaping. Construction work included precise grading, hardscape, landscaping and irrigation, stream and lake construction, furnishing and installation of lighting, decomposed granite parking lot construction, concrete ADA parking space construction, concrete and decomposed walkways, construction of a stage, installation of playground equipment, picnic and BBQ areas, park lighting, construction of an outdoor theater with seating area. Project included traffic control, dust control, SWPPP, 6" PCC paving, 6" concrete vertical curb, 4" concrete rolled curb, over 70,000 SF of decomposed stabilized granite, concrete cross gutter, parking lot signage and striping, ADA curb ramps, ADA parking stalls, fire line, water line, headwalls, and rip rap, drinking fountains, parking lot lighting, and landscaping.

CITY OF SAN BERNARDINO | SECCOMBE LAKE PARK AND PERRIS HILLS PARK

The Z&K Team provided Construction Management and Inspection services for this project, which involved improvements to Seccombe Lake Park and Perris Hills Park. Z&K personnel performed constructability reviews of the project plans and specifications prior to the bid release. The project includes grading, fencing, new CMU restroom buildings, and ADA parking space construction. The project also includes landscaping and irrigation improvements, ADA sidewalk improvements, installation of playground and exercise equipment, installation of horseshoe pits, improvements to a baseball diamond, playground areas, picnic and barbecue areas, and installation of several benches.

CITY OF SAN BERNARDINO | PLAYGROUND EQUIPMENT REPLACEMENT FOR SIX PARKS

The Z&K Team provided Construction Management and Inspection services for this project, which consisted of park improvements to six community parks in the City of San Bernardino. Parks that received improvements included Jack Reilly Park, Encanto Park, Gutierrez Park, Colony Park, Delmann Heights Park, and La Plaza Park. Z&K oversaw the replacement of playground and exercise equipment, installation of block wall fencing, grading, irrigation and landscaping improvements, construction of a basketball courts and other sports fields, installation of barbecue and picnic areas, ADA accessible curb ramps and walkways, storm drain construction, and various concrete improvements. Z&K managed and coordinated all aspects of the project, performed pre-construction services, coordinated field meetings and construction progress meetings, reviewed and approved contractor's construction schedule, monthly accounting of construction costs, reviewed shop drawings, processed submittals and requests for information, performed labor compliance and certified payroll review, participated in public outreach activities, provided full time inspection of project activities, ensured compliance with approved PS&E, coordinated materials testing services and reviewing results, coordinated with utility companies.

BRIDGE PROJECTS

CITY OF SAN BERNARIDNO | SECOND STREET BRIDGE OVER WARM CREEK

Z&K Consultants provided Construction Management Services as a prime consultant for the Second Street Bridge Over Warm Creek. This project is located in downtown San Bernardino; this project involves construction on the 2nd Street bridge between Arrowhead and Mountain View Avenues. Overall, the project involves demolishing the existing bridge, widening sidewalk by one foot on each side, installing bridge barrier railings in conformance with AASHTO standards, street improvements, retaining walls, steel piles, pavement grinding, new asphalt concrete pavement, reinforced concrete pipe, utility relocations, and winterization of the creek. This project must comply with the Santa Ana Regional Water Quality Control Board (401 Permit), U.S. Army Corps of Engineers (404 Permit), and Department of Fish and Wildlife (1602 permit). This project intends to improve the sufficiency rating of the bridge, reducing the need for constant significant maintenance, extending its lifetime and longevity by improving its seismic performance and ensuring the bridge design is in compliance with the Association State Highway and Transportation Officials standards.

The Z&K Team has successfully delivered over 20 Bridge and Interchange Projects.
