Source: South Coast Air Quality Management District. 2020. *South Coast AQMD Public Notification Procedures for Facilities Under the Air Toxics "Hot Spots" Information and Assessment Act (AB 2588) and Rule 1402, Updated October 2020.* http://www.aqmd.gov/docs/default-source/planning/risk-assessment/ab-2588-facility-prioritization-procedure.pdf?sfvrsn=26. (accessed April 2023).

Under the California Supreme Court's decision in *California Building Industry Association v. Bay Area Air Quality Management District* (2015) 62 Cal.4th 369), where a project will exacerbate an existing environmental hazard, CEQA requires an analysis of the worsened condition on future project residents and the public at large. Projects that do not generate emissions that exceed the values in ***Table 4.3-7*** would not substantially contribute to cumulative air quality hazards or exacerbate an existing environmental hazard. Residential, commercial, office, and institutional uses (such as the hospital land uses) do not use substantial quantities of TACs and typically do not exacerbate existing hazards. Thus, these thresholds are typically applied to new industrial and warehouse projects.

Methodology

This air quality impact analysis considers construction and operational impacts associated with the Project. Where criteria air pollutant quantification was required, emissions were modeled using the California Emissions Estimator Model (CalEEMod; see ***Appendix B1***. CalEEMod is a Statewide land use emissions computer model designed to quantify potential criteria pollutant emissions associated with

both construction and operations from a variety of land use projects. Air quality impacts were assessed according to methodologies recommended by CARB and the SCAQMD.

Construction equipment, trucks, worker vehicles, and ground-disturbing activities associated with Project construction would generate emissions of criteria air pollutants and precursors. Although Project construction would be dependent on market conditions, daily regional construction emissions are estimated by assuming construction occurs at the earliest feasible date. It is assumed that construction would occur from late-2024 to late-2026. This approach is conservative given that emissions factors decrease in future years due to regulatory and technological improvements.

As previously stated in ***Section 3.0: Project Description***, based upon information from the Project applicant, it is assumed an opening year of the Planning Areas 1, 2 (excluding the southwest section of the Project Area), the northwest portions of Planning Areas 3, 4 and 5 (Phase 1 of the Project) would be 2025. The development would include 13 warehousing buildings totaling a maximum buildout of up to 1,000,595 square feet (sf) of business park and office use development. No specific development proposals have been identified for the remaining portions of Planning Areas 2 and 3 (Phase 2 of the Project), which would allow approximately 466 multi-family dwelling units, an additional 163,600 sf industrial warehouse, 10,250 sf retail space, and 20,000 sf of restaurant use. For purposes of this analysis, construction of Phase 1 of the Project is not anticipated to overlap with the construction of Phase 2 of the Project as there are still no proposals for this portion of the Project. The operations for buildout of the entire development is anticipated to begin in 2026. Air quality modeling was conservatively done based on this maximum buildout.

The Project would result in emissions of area sources (consumer products), energy sources (natural gas usage and offsite electricity generation), and mobile sources (motor vehicles from Project-generated vehicle trips). Project-generated increases in operational emissions would be predominantly associated with motor vehicle use. The Project vehicle trip generation was obtained from the Project's Traffic Analysis Study (***Appendix I1: Traffic Analysis***), which includes 7,938 total daily passenger car vehicle trips and 882 daily truck trips. Other operational emissions from area, energy, and stationary sources were quantified in CalEEMod based on land use activity data.

As discussed under *Section 4.3.4: Impact Thresholds and Significant Criteria*, the SCAQMD provides significance thresholds for emissions associated with proposed Project construction and operations. The proposed Project's construction and operational emissions are compared to the daily criteria pollutant emissions significance thresholds in order to determine the significance of a Project's impact on regional air quality.

The localized effects from the Project's on-site emissions were evaluated in accordance with the SCAQMD's Localized Significance Threshold (LST) Methodology, which uses on-site mass emissions rate look-up tables and Project-specific modeling. LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standards and are developed based on the ambient concentrations of that pollutant for each source receptor area and distance to the nearest sensitive receptor.

Risk and hazard assessment for cancer risk and non-cancer hazards are based on OEHHA methodology. Residential inhalation cancer risk from annual average DPM concentrations are calculated by multiplying the daily inhalation dose, cancer potency factor, age sensitivity factor (ASF), frequency of time spent at home, and exposure duration divided by averaging time, yielding the excess cancer risk. Chronic non-cancer impacts are calculated by dividing the annual average concentration by the reference exposure level (REL) for that substance. The REL is defined as the concentration at which no adverse non-cancer health effects are anticipated. Acute non-cancer hazards is evaluated by comparing the maximum short-term exposure level to an acute REL. RELs are designed to protect sensitive individuals within the population.

4.3.5 Plans, Programs, and Policies

PPP AIR-1 New buildings are required to achieve the current California Building Energy Efficiency Standards (Title 24, Part 6) and California Green Building Standards Code (CALGreen) (Title 24, Part 11). The 2022 Building Energy Efficiency Standards became Effective January 1, 2023. The Building Energy Efficiency Standards and CALGreen are updated triennially with a goal to achieve zero net energy for residential buildings and nonresidential buildings in the future.

PPP AIR-2 New buildings are required to adhere to the California Green Building Standards Code (CALGreen) requirement to provide bicycle parking for new non-residential buildings, or meet local bicycle parking ordinances, whichever is stricter (CALGreen Section 5.106.4.1, 14.106.4.1, and Section 5.106.4.1.2).

PPP AIR-3 Construction activities will be conducted in compliance with 13 California Code of Regulations (CCR) Section 2499, which requires that nonessential idling of construction equipment is restricted to five minutes or less.

PPP AIR-4 Construction activities will be conducted in compliance with any applicable SCAQMD rules and regulations, including but not limited to the following:

- Rule 403, Fugitive Dust, for controlling fugitive dust and avoiding nuisance.
- Rule 402, Nuisance, which states that a project shall not "discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property."
- Rule 1113, which limits the volatile organic compound content of architectural coatings.

PPP AIR-5 Heavy duty tractors and trailers (i.e., trucks that are 53-foot or longer) must use U.S. EPA SmartWay certified tractors and trailers or retrofit their existing fleet with SmartWay verified technologies in accordance with CARB's Heavy-Duty (Tractor-Trailer) GHG Regulation. Owners are responsible for replacing or retrofitting their affected vehicles with compliant aerodynamic technologies and low rolling resistance

tires. Sleeper cab tractors model year 2011 and later must be SmartWay certified. All other tractors must use SmartWay verified low rolling resistance tires. Trailers must have low rolling resistance tires and aerodynamic devices.

PPP AIR-6 The medium-duty and heavy-duty vehicle engines are required to comply with the U.S. EPA's GHG and fuel efficiency standards. The federal and California Phase 1 standards took effect with model year 2014 tractors, vocational vehicles, and heavy-duty pick-up trucks and vans and the engines powering such vehicles (the Phase 1 standards excludes trailers). The federal Phase 2 standards cover model years 2018-2027 for certain trailers and model years 2021-2027 for semi-trucks and large pick-up trucks, vans and all types and sizes of buses and work trucks. California is aligned with the federal Phase 2 standards in structure, timing, and stringency, but with some minor California differences. The California Phase 2 regulations became effective April 1, 2019.

PPP AIR-7 All existing and proposed warehouses over 100,000 square feet located in SCAQMD are required to track annual VMT associated with truck trips to and from the warehouse. These trip miles are used to calculate the warehouses' WAIRE Points Compliance Obligation and warehouse operators are required to submit an annual WAIRE Report which includes truck trip data and emission reduction measures. WAIRE Points are earned based on emission reduction measures and warehouse operators that do not earn a sufficient number of WAIRE points to satisfy the WAIRE Points Compliance Obligation are required to pay a mitigation fee.

4.3.6 Impacts and Mitigation Measures

The following impact analysis addresses thresholds of significance. The applicable thresholds are identified in brackets after the impact statement.

Impact 4.3-1 ***Would the Project conflict with or obstruct implementation of the applicable air quality plan?***

Level of Significance: Significant and Unavoidable Impact

As part of its enforcement responsibilities, the U.S. EPA requires each state with nonattainment areas to prepare and submit a State Implementation Plan (SIP) that demonstrates the means to attain the federal standards. The SIP must integrate federal, state, and local plan components and regulations to identify specific measures to reduce pollution in nonattainment areas, using a combination of performance standards and market-based programs. Similarly, under State law, the CCAA requires an air quality attainment plan to be prepared for areas designated as nonattainment regarding the state and federal ambient air quality standards. Air quality attainment plans outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date.

The project site is located within the SCAB, which is under the jurisdiction of the SCAQMD. The SCAQMD is required, pursuant to the FCAA, to reduce emissions of criteria pollutants for which the SCAB is in nonattainment. To reduce such emissions, the SCAQMD adopted the 2016 and 2022 AQMPs (AQMPs).

The AQMPs establish a program of rules and regulations directed at reducing air pollutant emissions and achieving State (California) and national air quality standards. The AQMPs are a regional and multi-agency effort including the SCAQMD, the CARB, the SCAG, and the U.S. EPA. The AQMPs pollutant control strategies are based on the latest scientific and technical information and planning assumptions, including SCAG's RTP/SCS, updated emission inventory methodologies for various source categories, and SCAG's latest growth forecasts. SCAG's latest growth forecasts were defined in consultation with local governments and with reference to local general plans. The Project is subject to the SCAQMD's AQMPs.

Criteria for determining consistency with the AQMP are defined by the following indicators:

- **Consistency Criterion No. 1**: The Project will not result in an increase in the frequency or severity of existing air quality violations, or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.
- **Consistency Criterion No. 2**: The Project will not exceed the assumptions in the AQMP or increments based on the years of the Project build-out phase.

According to the SCAQMD's *CEQA Air Quality Handbook*, the purpose of the consistency finding is to determine if a project is inconsistent with the assumptions and objectives of the regional air quality plans, and thus if it would interfere with the region's ability to comply with CAAQS and NAAQS. Consistency with both Criterion No. 1 and Criterion No. 2 would result in a less than significant impact.

Consistency Criterion No. 1 refers to CAAQS and NAAQS emission standards. If the Project does not exceed emission standards it would not contribute to an existing air quality violation. Consistency Criterion No. 2 refers to AQMP emission assumptions based on SCAG's latest growth forecasts. If the Project proposes land uses consistent with SCAG's growth forecast or land uses that would generate less emissions than those identified in SCAG's growth forecast, then the Project would not exceed the AQMP assumptions.

Project Buildout (Phase I + Phase II)

Consistency Criterion No. 1

As shown in ***Table 4.3-8: Construction-Related Emissions***, the Project (Phase I) would not exceed construction emission standards with **MM AQ-1**. As shown in ***Table 4.3-10*** (Phase II) would not exceed construction emissions standards with MM AQ-1. However, the combined Project (Phase I and Phase II) operational emissions would exceed the operational standard for ROG and NO_X despite the implementation of all feasible mitigation, as shown in ***Table 4.3-12: Project Buildout – Total Maximum Daily Operational Emissions***. **MM AQ-2** through **MM AQ-7** are included to reduce operation emissions to the greatest amount feasible. However, even with mitigation, operational emissions would remain above the SCAQMD threshold. Therefore, the Project would potentially contribute to an existing air quality violation. Thus, the Project is not consistent with the first criterion.

Project Buildout (Phase I + Phase II)

Consistency Criterion No. 2

The AQMP contains air pollutant reduction strategies based on SCAG's latest growth forecasts, and SCAG's growth forecasts were defined in consultation with local governments and with reference to local general plans. The Project would not result in a change of land use designations reflected in the AQMP. Therefore, the Project is assumed to generate emissions reflected within the current 2022 AQMP regional emissions inventory for the SCAB and is considered to be consistent with the AQMP.

The Project's operational emissions would result in air pollutant emissions that exceed SCAQMD's operational emission thresholds. Although feasible mitigation would reduce emissions levels they would remain significant and would contribute to the nonattainment designations in the SCAB. Therefore, the Project would be inconsistent with the AQMP, resulting in a significant and unavoidable impact despite the implementation of all feasible mitigation.

In addition, in accordance with SCAQMD Rule 2305 (refer to SCAQMD under *Section 3.4: Regulatory Setting*) the Project operator would be required to pay a mitigation fee if the Project does not generate enough WAIRE Points. The Project operator may be required to implement additional emission reduction strategies. Conservatively, this analysis does not take credit for these potential reductions. Compliance with proposed Rule 2305 may reduce emissions below what is currently analyzed.

Mitigation Measures

Refer to **MM AQ-1** through **AQ-7** (refer to Impact Threshold 4.3-2, below).

Impact 4.3-2 ***Would the proposed project, result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard? [Threshold AQ-2]***

Level of Significance: Significant and Unavoidable Impact

Construction associated with the Project would generate short-term emissions of criteria air pollutants. The criteria pollutants of primary concern within the Project area include O_3-precursor pollutants (i.e., ROG and NO_X), PM_{10}, and $PM_{2.5}$. Construction-generated emissions are short term and of temporary duration, but would be considered a significant air quality impact if the volume of pollutants generated exceeds the SCAQMD's thresholds of significance.

Construction results in the temporary generation of emissions resulting from site grading, road paving, motor vehicle exhaust associated with construction equipment and worker trips, and the movement of construction equipment, especially on unpaved surfaces. Emissions of airborne particulate matter are largely dependent on the amount of ground disturbance associated with site preparation activities as well as weather conditions and the appropriate application of water.

Operational emissions from the Project would be associated with area sources, energy sources, mobile sources (i.e., motor vehicle use), and off-road emissions cargo handling equipment. Emissions from these categories are discussed below.

- **Area Source Emissions.** Area source emissions would be generated due to consumer products, on-site equipment, architectural coating, and landscaping.

- **Energy Source Emissions.** Energy source emissions would be generated due to electricity and natural gas usage associated with the Project. Primary uses of electricity and natural gas by the Project would be for miscellaneous warehouse equipment, space heating and cooling, water heating, ventilation, lighting, appliances, and electronics.
- **Mobile Source Emissions.** Mobile sources are emissions from motor vehicles, including tailpipe and evaporative emissions. Depending upon the pollutant being discussed, the potential air quality impact may be of either regional or local concern. For example, ROG, NO_X, PM_{10}, and $PM_{2.5}$ are all pollutants of regional concern. NO_X and ROG react with sunlight to form O_3, known as photochemical smog. Additionally, wind currents readily transport PM_{10} and $PM_{2.5}$. However, CO tends to be a localized pollutant, dispersing rapidly at the source.

  Project-generated vehicle emissions are based on the trip generation within the Project Traffic Analysis and incorporated into CalEEMod as recommended by the SCAQMD. Per the Project Traffic Analysis, the Project would generate 8,820 daily trips at buildout, which includes 7,938 passenger cars and 882 trucks. For modeling purposes, all truck trips were assumed to be 33.2 miles, one way.
- **Off-Road Emissions.** Operational off-road emissions would be generated by off-road equipment used during operational activities. For this Project it was assumed that the Project buildout would employ 23 forklifts based on surveys conducted for the SCAQMD High Cube Warehouse Truck Trip Study White Paper. This paper found that on average, warehouses would employ 0.12 pallet jacks and forklifts per thousand square feet of warehouse area. However, because this number includes unpowered pallet jacks which do not generate emissions, the number of forklifts was estimated to be 0.02 forklifts per thousand square feet of warehouse area.

Specific Plan – Phase I

Construction

Construction activities associated with Phase I of the Project are estimated to be completed within approximately 18 months. Construction-generated emissions associated with the Project were calculated using the CARB-approved CalEEMod computer program, which is designed to model emissions for land use development projects, based on typical construction requirements. Phase 1 of the Project would require demolition (2023), site preparation (2023), grading (2023 - 2024), paving (2024), and building construction (2024 - 2025). Typical construction equipment assumed by CalEEMod include industrial saws, excavators, and dozers for demolition; dozers and tractors for site preparation; excavators, graders, dozers, scrapers and tractors for grading; cranes, forklifts, generators, tractors, and welders for construction; pavers, paving equipment, and rollers for paving. See ***Appendix B1*** for more information regarding the construction assumptions used in this analysis. Predicted maximum daily construction-generated emissions for the Project are summarized in ***Table 4.3-8: Phase I - Maximum Daily Construction-Related Emissions***.

Table 4.3-8: Phase I – Maximum Daily Construction-Related Emissions

Construction Year	Maximum Pounds Per Day					
	Reactive Organic Gases (ROG)	Nitrogen Oxides (NO_x)	Carbon Monoxide (CO)	Sulfur Dioxide (SO_2)	Coarse Particulate Matter (PM_{10})	Fine Particulate Matter ($PM_{2.5}$)
Unmitigated Emissions[1]						
Year 2023	4.04	39.80	37.10	0.06	7.14	4.34
Year 2024	9.43	62.60	85.90	0.14	12.30	4.99
Year 2025	3.20	17.90	48.80	0.06	7.40	2.15
SCAQMD Threshold	*75*	*100*	*550*	*150*	*55*	*150*
Exceed SCAQMD Threshold?	**No**	**No**	**No**	**No**	**No**	**No**

1. SCAQMD Rule 403 Fugitive Dust applied. The Rule 403 reduction/credits include the following: properly maintain mobile and other construction equipment; water exposed surfaces three times daily; and limit speeds on unpaved roads to 15 miles per hour. Reductions percentages from the SCAQMD CEQA Handbook (Tables XI-A through XI-E) were applied. No mitigation was applied to construction equipment. Refer to ***Appendix B1*** for Model Data Outputs.
2. Mitigation includes the incorporation of MM AQ-1 and MM AQ-8. MM AQ-1 requires the use of "Super-Compliant" low VOC paints. MM AQ-8 requires off-road equipment 50 horsepower or greater to meet CARB Tier 4 Final standards. MM AQ-1 and MM AQ-8 are not required to reduce construction related criteria pollutants for Phase I. Therefore, the emission reductions have not been included in ***Table 4.3-8*** for informational purposes.

Source: CalEEMod version 2022.1. Refer to ***Appendix B1*** for model outputs.

Fugitive dust emissions may have a substantial, temporary impact on local air quality. In addition, fugitive dust may be a nuisance to those living and working in the Project vicinity. Uncontrolled dust from construction can become a nuisance and potential health hazard to those living and working nearby. SCAQMD Rules 402 and 403 (prohibition of nuisances, watering of inactive and perimeter areas, track out requirements, etc.), are applicable to the Project and were applied in CalEEMod to minimize fugitive dust emissions. Regulatory Requirement **(RR) AQ-1** requires the implementation of Rule 402 and 403 dust control techniques to minimize PM_{10} and $PM_{2.5}$ concentrations. While impacts would be considered less than significant, the Project would be subject to SCAQMD Rules for reducing fugitive dust, described in the Regulatory Framework subsection above and identified in Standard Condition (SC) AQ-1 below.

Table 4.3-8 shows that unmitigated construction emissions would not exceed the SCAQMD criteria pollutant thresholds. Therefore, construction emissions related to Phase I of the Project would be less than significant.

Operations

Long-term operational emissions attributable to the Project are summarized in ***Table 4.3-9: Phase I – Maximum Daily Operation Emissions***. Primary sources of operational criteria pollutants are from motor vehicle use and area sources.

- **Area Source Emissions and Energy Source Emissions.** Area source emissions and energy source emissions are based on land use and the area of the buildings. Phase I air quality modeling is based on 809,217 square feet of unrefrigerated warehouse (see Mitigation Measure MM AQ-7), 191,378 square feet of industrial business park, and approximately 1,568,160 square feet of trailer parking and parking lot.
- **Mobile Source Emissions.** Project-generated vehicle emissions are based on the trip generation within the Project Traffic Impact Analysis (see ***Appendix I***) and incorporated into CalEEMod as recommended by the SCAQMD. Per the Project Traffic Impact Analysis, Phase I of the Project

would generate a total of 2,267 daily trips; 1,484 passenger vehicle trips from employees and 783 trips from trucks (2-axle, 3-axle, and 4+ axle delivery trucks) (***Appendix I***).

- **Off-Road Equipment Emissions**. Modeling assumed 20 forklifts, each operating twelve hours per day loading and unloading goods. Off-road emissions also include four hostler/yard truck, each operating twelve hours per day moving trailers.

Table 4.3-9: Phase I - Maximum Daily Operation Emissions

Sources	Pollutants (pounds per day)[1]

Source: CalEEMod, Version 2022.1. Based on trip generation information provided by Urban Crossroads (***Appendix I***).
Notes: Highest winter or summer. Emissions totals may not equal 100 percent due to rounding. **Bold** = Exceedance.

As noted above, ***Table 4.2-9*** shows that unmitigated Phase I operational emissions would exceed the SCAQMD thresholds for ROGs, NO_X, and CO, and mitigation measures would be required to reduce emissions to the maximum extent feasible. The majority of the Project's VOC emissions are from consumer products. For analytical purposes, consumer products include cleaning supplies, aerosols, and other consumer products.[2] The Project could require limitations on the use of VOC emitting products through lease or property agreements. However, this mitigation is not feasible as it would be it would be difficult to enforce. As such, the Project Applicant cannot meaningfully control the use of consumer products by future building users via mitigation. On this basis, it is concluded that Project operational-source VOC emissions cannot be reduced below the SCAQMD threshold.

The majority of the Project's NO_X emissions are from mobile sources. **MM AQ-3** and **MM AQ-4**, within the control of the City to enforce, would be required to reduce emissions to the maximum extent feasible; however, emissions of motor vehicles are controlled by State and Federal standards and neither the City

[2] California Air Pollution Control Officers Association (CAPCOA), *California Emissions Estimator Model User's Guide*, 2017.

nor the Project has control over these standards. Federal and State agencies regulate and enforce vehicle emission standards.

Further, the City while the City has considered a prohibition on trucks with certain emissions-levels from entering the property that are otherwise permitted to operate in California and access other properties in the City, region, and State, but has rejected such a mitigation measure as infeasible. This because, even if the City were to apply such a restriction, a) it could not legally bar vehicles from driving down public streets to the Project and b) would cause warehouse operators using older truck fleets to travel to other facilities in the SCAB where the restriction does not apply, thereby resulting in no improvement to regional air quality. Based on data from CARB, most heavy-duty trucks entering the Project site would meet or exceed 2010 model year emission standards when Phase I becomes fully operational in 2025, as all trucks are required to meet or exceed such standards by 2023. Specifically, according to CARB EMFAC inventories, approximately 50 percent of all instate heavy-duty trucks met the 2010 engine standard in 2019, 59 percent in 2020, and 62 percent in 2021. Additionally, 65 percent and 90 percent of trucks are projected to meet the 2010 engine standard in 2022 and 2023 respectively.[3] Finally, CARB is addressing emissions from heavy duty vehicles through various regulatory programs including lower emission standards, restrictions on idling, the use of post-combustion filter and catalyst equipment, and retrofits for diesel truck fleets. These programs are expected to result in significant reductions in ROG, NOx, PM_{10}, $PM_{2.5}$, and CO emissions as they are fully implemented in the future, however this EIR, conservatively, does not assume any of these reductions will occur.

MM AQ-2 through **MM AQ-7** have been identified to reduce operational emissions. **MM AQ-2** requires that all cargo handling equipment used on a daily basis (yard trucks/hostlers, forklifts, etc.) be electric. **MM AQ-3** requires the implementation of a Transportation Demand Management (TDM) program to reduce single occupant vehicle trips and encourage transit. **MM AQ-4** requires the buildings to be designed to accommodate electric vehicle (EV) infrastructure, and **MM AQ-5** prohibits idling when engines are not in use. **MM AQ-7** prohibits refrigerated warehouse space/cold storage. Additionally, **SC AQ-9** through **SC AQ-11** would provide designated parking to promote the use of alternative fuels and clean fleets, facilitate future installation of EV supply equipment, and limit idling times. ***Table 4.3-9*** shows that despite the implementation of **MM AQ-2** through **MM AQ-5** and **MM AQ-7**, operational emissions of ROG and NO_x would remain above the SCAQMD's thresholds; therefore, impacts would be significant and unavoidable.

Specific Plan – Phase II Future Development Areas

Construction

The duration of construction activities associated with Phase II of the Project were modeled to last approximately 18 months. The exact construction timeline is unknown; however, to be conservative, earliest dates possible were utilized in the modeling (assumed June 2, 2025. This approach is conservative given that emissions factors decrease in future years due to regulatory and technological improvements and fleet turnover. Construction-generated emissions associated the Project were calculated using the

[3] California Air Resources Board. 2017. *EMFAC2017, An Update to California On-Road Mobile Source Emissions Inventory*. Available at: https://ww2.arb.ca.gov/our-work/programs/mobile-source-emissions-inventory/msei-modeling-tools-emfac-software-and. (accessed April 2023).

CARB-approved CalEEMod computer program, which is designed to model emissions for land use development projects, based on typical construction requirements. See ***Appendix B1*** for more information regarding the construction assumptions used in this analysis. Predicted maximum daily construction-generated emissions for the Project are summarized in ***Table 4.3-10: Phase II – Maximum Daily Construction-Related Emissions***.

Table 4.3-10: Phase II - Maximum Daily Construction-Related Emissions

Construction Year	Pollutants (pounds per day)[1, 2]					
	VOC	NOX	CO	SO_2	PM_{10}	$PM_{2.5}$
Unmitigated Emissions						
Year 2025	3.39	31.70	46.90	0.06	21.30	11.40
Year 2026	206	14.50	44.4	0.04	6.55	1.85

Significant?	No	No	No	No	No	No

Source: CalEEMod Version 2022.1
Notes: Emissions totals may not equal 100 percent due to rounding. **Bold** = Exceedance
[1] Construction assumptions were based on CalEEMod defaults, which are based on construction surveys conducted by SCAQMD of construction equipment.
[2] Includes implementation of fugitive dust control measures required by SCAQMD under Rule 403 (SC AQ-1), including watering disturbed areas three times per day, reducing speed limit to 15 miles per hour on unpaved surfaces, and street sweeping.

Fugitive dust emissions may have a substantial, temporary impact on local air quality. In addition, fugitive dust may be a nuisance to those living and working in the Project vicinity. Uncontrolled dust from construction can become a nuisance and potential health hazard to those living and working nearby. SCAQMD Rules 402 and 403 (prohibition of nuisances, watering of inactive and perimeter areas, track out requirements, etc.), are applicable to the Project and were applied in CalEEMod to minimize fugitive dust emissions. RR AQ-1 requires the implementation of Rule 402 and 403 dust control techniques to minimize PM_{10} and $PM_{2.5}$ concentrations.

As shown in ***Table 4.3-10***, unmitigated Phase II construction emissions would exceed the SCAQMD threshold for the ozone precursor VOC. The majority of these emissions are generated during the architectural coatings phase of construction which use VOC emitting paints. The VOC exceedance occurs during the painting phase of construction. Low VOC paint must be used during the painting phase to reduce impacts. **MM AQ-1** is required to reduce maximum daily VOC emissions below the SCAQMD threshold. **MM AQ-1** requires the Project to use "Super-Compliant" low VOC paints. Implementation of **MM AQ-1** will reduce Phase II construction impacts to less than significant.

Operations

Long-term operational emissions attributable to the Project are summarized in ***Table 4.3-11: Phase II – Maximum Daily Operation Emissions***. Primary sources of operational criteria pollutants are from motor vehicle use and area sources.

- **Area Source Emissions and Energy Source Emissions**. Area source emissions and energy source emissions are based on land use and the area of the buildings. Phase II air quality modeling is based on 466 dwelling unit apartments, 163,600 square feet of unrefrigerated warehouse, 10,225 square feet of strip mall, 10,000 square foot of Fast Food Restaurant with Drive Thru, 10,000 square foot of Fast Food Restaurant without Drive Thru, and 487,872 square feet of parking lot.
- **Mobile Source Emissions.** Project-generated vehicle emissions are based on default CalEEMod assumptions for all land uses apart from the unrefrigerated warehouse. Per the Project Traffic Analysis, all land uses apart from the unrefrigerated warehouse in Phase II of the Project would generate a total of 6,272 daily trips. The unrefrigerated warehouse would generate 181 daily passenger vehicle trips and 99 daily truck trips.

Off-Road Equipment Emissions. Modeling for Phase II of the Project assumed three forklifts, each operating twelve hours per day loading and unloading goods. Off-road emissions also include one hostler/yard truck operating twelve hours per day moving trailers.

Table 4.3-11: Phase II - Maximum Daily Operation Emissions

Sources	Pollutants (pounds per day)[1]					
	VOC	NOX	CO	SO_2	PM_{10}	$PM_{2.5}$
Unmitigated Emissions						
Area	16.50	0.32	34.90	0.00	0.02	0.03
Energy	0.16	2.76	1.78	0.05	0.22	0.22
Mobile	23.95	30.72	219.49	0.63	21.30	4.25
Off-Road Equipment	1.41	9.68	98.19	0.02	0.31	0.27
Maximum Daily Emissions	42.02	43.48	354.36	0.70	21.85	4.77
SCAQMD Threshold	55	55	550	150	150	55
Exceeds Threshold	No	No	No	No	No	No
Mitigated Emissions						
Area	16.50	0.32	34.90	0.00	0.02	0.03

Source: CalEEMod, Version 2022.1. Based on trip generation information provided by Urban Crossroads (***Appendix I***).
Notes: Highest winter or summer. Emissions totals may not equal 100 percent due to rounding. **Bold** = Exceedance.

As noted above, ***Table 4.3-11*** shows that Phase II unmitigated operational emissions would not exceed the SCAQMD thresholds. **MM AQ-2** through **MM AQ-7** have been identified to reduce operational emissions for Phase I of the Project and would also be implemented for Phase II of the Project. **MM AQ-2** requires that all cargo handling equipment used on a daily basis (yard trucks/hostlers, forklifts, etc.) be electric. **MM AQ-3** requires the implementation of a Transportation Demand Management (TDM)

program to reduce single occupant vehicle trips and encourage transit. **MM AQ-4** requires the buildings to be designed to accommodate electric vehicle (EV) infrastructure, **MM AQ-5** prohibits idling when engines are not in use, and **MM AQ-6** prohibits the installation of wood-burning and natural gas devices. **MM AQ-7** prohibits refrigerated warehouse space/cold storage. Additionally, **SC AQ-9** through **SC AQ-11** would provide designated parking to promote the use of alternative fuels and clean fleets, facilitate future installation of EV supply equipment, and limit idling times. ***Table 4.3-10: Mitigated Operational Emissions*** shows that with the mitigation, emissions related Phase II of the project would be further below SCAQMD thresholds; therefore, Phase II operational impacts would be less than significant.

Project Buildout (Phase I + Phase II)

Operations

Long-term operational emissions attributable to the total Project are summarized in ***Table 4.3-12: Project Buildout (Phase I and Phase II) – Maximum Daily Operation Emissions***.

- **Area Source Emissions and Energy Source Emissions**. Area source emissions and energy source emissions are based on land use and the area of the buildings. Project buildout (Phase I and Phase II) air quality modeling is based on a total of 191,378 square feet of business park, 972,817 square feet of unrefrigerated warehouse, 10,225 square feet of strip mall, 10,000 square feet of Fast Food Restaurant with Drive Thru, 10,000 square feet of Fast Food Restaurant without Drive Thru, 466 Apartments, and 2,047,320 square feet of trailer parking and parking lot (see ***Appendix I***).
- **Mobile Source Emissions.** Total combined project-generated vehicle emissions are based on the trip generation within the Project Traffic Impact Analysis and incorporated into CalEEMod as recommended by the SCAQMD. Per the Project Traffic Analysis (see ***Appendix I***), at Project buildout the entire Project would generate a total of 8,820 daily trips (10 percent trucks).
- **Off-Road Equipment Emissions**. The entire Project would employ a total of 23 forklifts (20 for Phase I and 3 for Phase II), each operating twelve hours per day and 5 hostlers/yard trucks (4 for Phase I and 1 for Phase II), each operating twelve hours per day.

Table 4.3-12: Project Buildout – Total Maximum Daily Operation Emissions

Sources	Pollutants (pounds per day)					
	VOC	NOX	CO	SO_2	PM_{10}	$PM_{2.5}$
Unmitigated Emissions						
Maximum Daily Emissions for Phase I Only	68.73	191.98	611.85	1.01	23.53	10.07
Maximum Daily Emissions for Phase II Only	42.02	43.48	354.36	0.70	21.85	4.77
Total Maximum Daily Emissions (Phase I + Phase II)	**110.75**	**235.46**	**966.21**	1.71	45.38	14.84
SCAQMD Threshold	55	55	550	150	150	55
Exceeds Threshold	**Yes**	**Yes**	**Yes**	No	No	No
Mitigated Emissions						
Maximum Daily Emissions for Phase I Only	59.89	145.59	207.35	0.91	21.93	8.64
Maximum Daily Emissions for Phase II Only	40.61	33.80	256.17	0.68	21.54	4.50
Total Maximum Daily Emissions (Phase I + Phase II)	**100.50**	**179.39**	463.52	1.59	43.47	13.14
SCAQMD Threshold	55	55	550	150	150	55
Exceeds Threshold	**Yes**	**Yes**	No	No	No	No

Sources	Pollutants (pounds per day)					
	VOC	NOX	CO	SO_2	PM_{10}	$PM_{2.5}$
Source: CalEEMod, Version 2022.1. Based on trip generation information provided by Urban Crossroads (***Appendix I***). Notes: Highest winter or summer. Emissions totals may not equal 100 percent due to rounding. **Bold** = Exceedance.						

As indicated in ***Table 4.3-12***, total operation emissions for Project at buildout would exceed SCAQMD thresholds for VOC and NO_X. As mentioned previously, the majority of the Project's VOC emissions are from consumer products and cannot be reduced below the SCAQMD threshold with mitigation. Even with the implementation of lease or property agreements, enforceability of the mitigation would not be feasible. The majority of NO_X emissions are from mobile sources. **MM AQ-2** through **MM AQ-7** have been identified to reduce operational emissions. **MM AQ-2** requires that all cargo handling equipment used on a daily basis (yard trucks/hostlers, forklifts, etc.) be electric. **MM AQ-3** requires the implementation of a Transportation Demand Management (TDM) program to reduce single occupant vehicle trips and encourage transit. **MM AQ-4** requires the buildings to be designed to accommodate electric vehicle (EV) infrastructure, **MM AQ-5** prohibits idling when engines are not in use, and **MM AQ-6** prohibits the installation of wood-burning and natural gas devices. **MM AQ-7** prohibits refrigerated warehouse space/cold storage. Additionally, **SC AQ-9** through **SC AQ-11** would provide designated parking to promote the use of alternative fuels and clean fleets, facilitate future installation of EV supply equipment, and limit idling times. ***Table 4.3-10: Mitigated Operational Emissions*** shows that despite the implementation of **MM AQ-2** through **MM AQ-7**, operational emissions of NO_x would remain above the SCAQMD's thresholds; therefore, impacts would be significant and unavoidable.

Conclusion

As shown in ***Table 4.3-8***, ***Table 4.3-9***, ***Table 4.3-10***, ***Table 4.3-11***, and ***Table 4.3-12***; construction and operation of the Project would result in air pollutant emissions that exceed SCAQMD's emission thresholds. The implementation of SC AQ-1 and **MMs AQ-1** through **AQ-7** would reduce Project emissions by the greatest amount feasible; however, operation related Project emissions would remain significant and would potentially contribute to the O_3, NO_2, PM_{10}, and $PM_{2.5}$ nonattainment designations of the SCAB. Therefore, the Project would result in a significant and unavoidable impact.

In addition, SCAQMD Rule 2305 requires the Project operator to directly reduce NO_X and particulate matter emissions or to otherwise facilitate emission and exposure reductions of these pollutants in nearby communities. Alternatively, warehouse operators can choose to pay a mitigation fee. Funds from the mitigation fee would be used to incentivize the purchase of cleaner trucks and charging/fueling infrastructure in communities nearby.

Warehouse owners and operators are required to earn WAIRE points each year. WAIRE points are a menu-based system earned by emission reduction measures. Warehouse operators are required to submit an annual WAIRE Report which includes truck trip data and emission reduction measures. WAIRE points can be earned by completing actions from a menu that can include acquiring and using natural gas, NZE and/or ZE on-road trucks, zero-emission cargo handling equipment, solar panels or zero-emission charging and fueling infrastructure, or other options. Therefore, the Project operator would be required to implement additional emission reduction strategies. Compliance with SCAQMD Rule 2305 would reduce emissions

below what is currently analyzed. Conservatively, this analysis does not take credit for these potential reductions.

Regulatory Requirements

RR AQ-1 Prior to the issuance of grading permits, the City Engineer shall confirm that the Grading Plan, Building Plans and Specifications require all construction contractors to comply with South Coast Air Quality Management District's (SCAQMD's) Rules 402 and 403 to minimize construction emissions of dust and particulates. The measures include, but are not limited to, the following:

- Portions of a construction site to remain inactive longer than a period of three months will be seeded and watered until grass cover is grown or otherwise stabilized.
- All on-site roads will be paved as soon as feasible or watered periodically or chemically stabilized.
- All material transported off-site will be either sufficiently watered or securely covered to prevent excessive amounts of dust.
- The area disturbed by clearing, grading, earthmoving, or excavation operations will be minimized at all times.
- Where vehicles leave a construction site and enter adjacent public streets, the streets will be swept daily or washed down at the end of the workday to remove soil tracked onto the paved surface.

RR AQ-2 Pursuant to SCAQMD Rule 1113, the Project Applicant shall require by contract specifications that the interior and exterior architectural coatings (paint and primer including parking lot paint) products used would have a volatile organic compound rating of 50 grams per liter or less.

RR AQ-3 Require construction equipment to turn off when not in use per Title 13 of the California Code of Regulations, Section 2449.

RR AQ-4 In accordance with California Title 24 Standards, buildings will be designed to have 15 percent of the roof area "solar ready" that will structurally accommodate later installation of rooftop solar panels. If future building operators pursue providing rooftop solar panels, they will submit plans for solar panels prior to occupancy.

RR AQ-5 Install water-efficient irrigation systems and devices, such as soil moisture-based irrigation controls and sensors for landscaping according to the City's Landscape Development Guidelines.

RR AQ-6 Design buildings to be water-efficient. Install water-efficient fixtures in accordance with Section 5.303 of the California Green Building Standards Code Part 11.

RR AQ-7 Recycle and/or salvage for reuse a minimum of 65 percent of the nonhazardous construction and demolition waste in accordance with Section 5.408.1 of the California Green Building Standards Code Part 11.

RR AQ-8 Provide storage areas for recyclables and green waste and adequate recycling containers located in readily accessible areas in accordance with Section 5.410.1 of the California Green Building Standards Code Part 11.

RR AQ-9 Provide designated parking for any combination of low-emitting, fuel efficient and carpool/vanpool vehicles. At least eight percent of the total parking spaces are required to be designated in accordance with Section 5.106.5.2, Designated Parking for Clean Air Vehicles, of the California Green Building Standards Code Part 11.

RR AQ-10 Provide at least six percent of the total parking spaces to facilitate future installation of electric vehicle supply equipment in accordance with Section 5.106.5.3.2, Multiple Charging Space Requirements, of the California Green Building Standards Code Part 11.

RR AQ-11 Limit idling time for commercial vehicles to no more than five minutes per Title 13 of the California Code of Regulations, Section 2485.

Mitigation Measures

MM AQ-1 The Project shall utilize "Super-Compliant" low VOC paints which have been reformulated to exceed the regulatory VOC limits (i.e., have a lower VOC content than what is required) put forth by SCAQMD's Rule 1113 for all architectural coatings. Super-Compliant low VOC paints shall be no more than 10g/L of VOC. Prior to issuance of a building permit, the Ontario Building and Safety Department shall confirm that plans specify that all architectural coatings will be super-compliant low VOC paints.

MM AQ-2 Only electric-powered off-road equipment (e.g., yard trucks/hostlers, forklifts, indoor material handling equipment, etc.) shall be utilized onsite for daily warehouse and business operations. The Project developer/facility owner shall disclose this requirement to all tenants/business entities prior to the signing of any lease agreement. In addition, the limitation to use only electric-powered off-road equipment shall be included in all leasing agreements.

Prior to issuance of a Business License for a new tenant/business entity, the Project developer/facility owner and tenant/business entity shall provide to the City of Ontario Planning Department and Business License Department a signed document (verification document) noting that the Project development/facility owner has disclosed to the tenant/business entity the requirement to use only electric-powered equipment for daily operations. This verification document shall be signed by authorized agents for the Project developer/facility owner and tenant/business entities. In addition, if applicable, the tenant/business entity shall provide documentation (e.g., purchase or rental agreement) to the City of Ontario Planning

Department and Business License Department to verify, to the City's satisfaction, that any off-road equipment utilized will be electric-powered.

Prior to the issuance of building permits, the City of Ontario Building Department shall confirm that if emergency generators are proposed, the Project applicant shall explore non-diesel options. If non-diesel generators are determined to not be feasible due commercial availability or the energy requirements of the project, the Project applicant shall provide written justification to be approved by the City's Building Department.

MM AQ-3 Prior to issuance of occupancy permits, the Project operator shall prepare and submit a Transportation Demand Management (TDM) program detailing strategies that would reduce the use of single occupant vehicles by employees by increasing the number of trips by walking, bicycle, carpool, vanpool and transit. The TDM shall include, but is not limited to the following:

- Provide a transportation information center and on-site TDM coordinator to educate residents, employers, employees, and visitors of surrounding transportation options;
- Promote bicycling and walking through design features such as showers for employees, self-service bicycle repair area, etc. around the Project site;
- Provide on-site car share amenities for employees who make only occasional use of a vehicle, as well as others who would like occasional access to a vehicle of a different type than they use day-to-day;
- Promote and support carpool/vanpool/rideshare use through parking incentives and administrative support, such as ride-matching service; and
- Incorporate incentives for using alternative travel modes, such as preferential load/unload areas or convenient designated parking spaces for carpool/vanpool users.

MM AQ-4 Prior to the issuance of a building permit, the Planning Department shall confirm that the Project is designed to include the following:

- The buildings' electrical room shall be sufficiently sized to hold additional panels that may be needed to supply power for the future installation of electric vehicle (EV) truck charging stations on the site. Conduit should be installed from the electrical room to tractor trailer parking spaces in a logical location(s) on the site determined by the Project Applicant during construction document plan check, for the purpose of accommodating the future installation of EV truck charging stations at such time this technology becomes commercially available and the buildings are being served by trucks with electric-powered engines.

MM AQ-5 All truck access gates and loading docks within the Project site shall have a sign posted that states:

- Truck drivers shall turn off engines when not in use.

- Truck drivers shall shut down the engine after five minutes of continuous idling operation (pursuant to Title 13 of the California Code of Regulations, Section 2485). Once the vehicle is stopped, the transmission is set to "neutral" or "park," and the parking brake is engaged.
- Telephone numbers of the building facilities manager and CARB to report violations.
- Truck travel is restricted to truck routes identified in Figure M-04 of the Mobility Element in TOP 2050.

In addition, signage shall be installed to direct trucks to the appropriate designated truck routes.

MM AQ-6 The installation of wood-burning and natural gas equipment shall be prohibited. The purpose of this measure is to limit emissions of ROG, CO, particulate matter, and visible emissions from wood-burning and natural gas devices used for primary heat, supplemental heat, or ambiance. This prohibition shall be noted on the deed and/or lease agreements for future property owners/tenants to obey.

MM AQ-7 The installation of cold storage logistics (warehouse) space is prohibited. Should cold storage logistics (warehouse) space be considered in the future, a separate discretionary approval would be required.

Impact 4.3-3 ***Would the proposed project expose sensitive receptors to substantial pollutant concentrations?***

Level of Significance: Less Than Significant with Mitigation Incorporated

Specific Plan – Phase I

Construction LST

To identify impacts to sensitive receptors, the SCAQMD recommends addressing LSTs for construction. LSTs were developed in response to SCAQMD Governing Boards' Environmental Justice Enhancement Initiative (I-4). The SCAQMD provided the *Final Localized Significance Threshold Methodology* (dated June 2003 [revised 2008]) for guidance. The LST methodology assists lead agencies in analyzing localized impacts associated with Project-specific emissions.

Since CalEEMod calculates construction emissions based on the number of equipment hours and the maximum daily soil disturbance activity possible for each piece of equipment, equipment-specific grading rates are used to determine the maximum daily disturbed acreage for comparison to LSTs. Based on CalEEMod modeling, construction of Phase I and Phase II would use the same number of and types of equipment, therefore ***Table 4.3-13: Equipment-Specific Grading Rates***, is used to determine the maximum daily disturbed acreage for comparison to LSTs. The appropriate SRA for the localized significance thresholds is the Southwest San Bernardino Valley Area (SRA 33) since this area includes the Project. LSTs apply to CO, NO_2, PM_{10}, and $PM_{2.5}$. Based on ***Table 4.3-13***, Project construction is anticipated to disturb a maximum of 4.0 acres in a single day.

Table 4.3-13: Equipment-Specific Grading Rates

Construction Phase	Equipment Type	Equipment Quantity	Acres Graded per 8-Hour Day	Operating Hours per Day	Acres Graded per Day
Grading	Tractors	2	0.5	8	1.0
	Graders	1	0.5	8	0.5
	Dozers	1	0.5	8	0.5
	Scrapers	2	1.0	8	2.0
				Total Acres Graded per Day	**4.0**

Sources: CalEEMod version 2022.1. Refer to ***Appendix B1*** for model outputs.

The SCAQMD produced look-up tables to provide thresholds for projects based on area disturbed and the distance from sensitive receptors.

The SCAQMD's methodology states that "off-site mobile emissions from the Project should not be included in the emissions compared to LSTs." Therefore, only emissions included in the CalEEMod "on-site" emissions outputs were considered. The nearest sensitive receptor to Phase I is a single-family residence located 135 feet (41 meters) west of the Project. Therefore, LSTs for receptors located at 39 meters were interpolated and utilized for this analysis. ***Table 4.3-14: Phase I –Localized Significance of Construction Emissions***, presents the results of localized emissions during each construction phase. In addition, construction and paving emissions were combined since these phases are anticipated to overlap. Because LST emissions do not include VOCs, construction **MM AQ-1** was not included when calculating construction LST. ***Table 4.3-14*** shows that emissions of these pollutants on the peak day of construction would not result in significant concentrations of pollutants at nearby sensitive receptors. Significant impacts would not occur concerning LSTs during construction.

Table 4.3-14: Phase I — Localized Significance of Construction Emissions

Construction Activity	Maximum Pounds Per Day			
	Nitrogen Oxides (NO_x)	Carbon Monoxide (CO)	Coarse Particulate Matter (PM_{10})	Fine Particulate Matter ($PM_{2.5}$)
Demolition[1]	27.30	23.50	3.71	1.48
Site Preparation	39.70	35.50	6.92	4.29
Grading	37.30	31.40	3.98	2.42
Building Construction	11.20	13.10	0.50	0.46
Paving	7.81	10.00	0.39	0.36
Building Construction and Paving Combined[2]	19.01	23.10	0.89	0.82
SCAQMD Localized Screening Threshold (adjusted for 4.0 acres at 41 meters)	*257*	*2,345*	*30*	*10*
Exceed SCAQMD Threshold?	**No**	**No**	**No**	**No**

1. Includes particulate matter from crushing debris, EPA AP-42 Section 11.19.2. Refer to ***Appendix B1*** for Model Data Outputs.
2. Building Construction and Paving overlap. Therefore, construction emissions are combined to show worst case daily emissions.

Source: CalEEMod version 2022.1. Refer to ***Appendix B1*** for model outputs.

Operational LST

Operational emissions are based on CalEEMod operational outputs and conservatively includes all on-site Project-related stationary sources, and on-site off-road equipment (forklifts and hostler/yard trucks). In addition, a portion of mobile sources are included to capture on-site vehicle emissions including idling trucks. Based on Project site plans, it was assumed that each vehicle would drive a maximum of one mile

on-site (0.5 miles when entering and 0.5 miles when leaving), for a total of 2,548 miles driven on site. In CalEEMod, each passenger car is assumed to drive 25 miles and each truck is assumed to drive 33.2 miles for a total of 70,932 daily miles. Because 2,548 on-site miles is 3.6 percent of the total 70,932 daily miles, on-site mobile emissions are assumed to be four percent of the total mobile emissions. The Phase I operational localized emissions shown in ***Table 4.3-15: Phase I – Localized Significance of Operational Emissions***, indicates that Phase I mitigated emissions would not exceed thresholds with the exception of $PM_{2.5}$.

Table 4.3-15: Phase I — Localized Significance of Operational Emissions

Activity	Maximum Pounds Per Day			
	Nitrogen Oxides (NO_x)	Carbon Monoxide (CO)	Coarse Particulate Matter (PM_{10})	Fine Particulate Matter ($PM_{2.5}$)
Unmitigated Emissions				
On-Site and Mobile Source Emissions[1]	121.22	546.01	6.27	**5.59**
SCAQMD Localized Screening Threshold (adjusted for 4 acres at 39 meters)	*257*	*2,345*	*7*	*2*
Exceed SCAQMD Threshold?	**No**	**No**	**No**	**Yes**
Mitigated Emissions				
On-Site and Mobile Source Emissions[1,2]	74.83	141.51	4.67	**4.16**
SCAQMD Localized Screening Threshold (adjusted for 4 acres at 41 meters)	*257*	*2,345*	*7*	*2*
Exceed SCAQMD Threshold?	**No**	**No**	**No**	**Yes**

1. Includes all on-site and four percent of mobile source emissions.
2. Includes MM AQ-2 through MM AQ-6
Source: CalEEMod version 2022.1 Refer to ***Appendix B1*** for model outputs.

As shown above, Phase I operational emissions generated on-site by the Project would exceed the threshold for $PM_{2.5}$. Therefore, $PM_{2.5}$ dispersion modeling has been conducted to determine if Project Phase I operations would result in significant $PM_{2.5}$ concentrations at nearby sensitive receptors in accordance with SCAQMD LST methodology. Localized $PM_{2.5}$ construction emissions were estimated using the U.S. EPA AERMOD dispersion model to determine the worst-case $PM_{2.5}$ concentrations (see ***Appendix B3*** for LST modeling results). AERMOD is a steady-state, multiple-source, Gaussian dispersion model designed for use with emission sources situated in terrain where ground elevations can exceed the stack heights of the emission sources. AERMOD requires hourly meteorological data consisting of wind vector, wind speed, temperature, stability class, and mixing height. ***Table 4.3-16*** shows on-site operational $PM_{2.5}$ emissions would not exceed the SCAQMD's 24-hour average $PM_{2.5}$ operational standard.[4] Therefore, the Project would result in a less than significant localized operational impact.

Table 4.3-16: Phase I — Operational Dispersion Modeling

Emissions Source	$PM_{2.5}$ (24-hour) ($\mu g/m^3$)
Phase I Mitigated Operations	**0.003**
Threshold[1]	**2.5**
Threshold Exceeded?	**No**

1. The $PM_{2.5}$ threshold is from South Coast Air Quality Management District, *Air Quality Significance Thresholds*, April 2019. The $PM_{2.5}$ threshold is an incremental threshold; therefore, the incremental concentration without background is compared to the threshold.

[4] South Coast Air Quality Management District, *Air Quality Significance Thresholds*, April 2019.

Criteria Pollutant Health Impacts

In December 2018, in the case of *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, California Supreme Court held that an EIR's air quality analysis must meaningfully connect the identified air quality impacts to the human health consequences of those impacts, or meaningfully explain why that analysis cannot be provided. As noted in the *Brief* of Amicus Curiae by the SCAQMD in the Friant Ranch case (April 6, 2015, Appendix 10.1), SCAQMD has among the most sophisticated air quality modeling and health impact evaluation capability of any of the air districts in the State, and thus it is uniquely situated to express an opinion on how lead agencies should correlate air quality impacts with specific health outcomes.

The SCAQMD discusses that it may be infeasible to quantify health risks caused by projects similar to the proposed Project, due to many factors. It is necessary to have data regarding the sources and types of air toxic contaminants, location of emission points, velocity of emissions, the meteorology and topography of the area, and the location of receptors (worker and residence). The *Brief* states that it may not be feasible to perform a health risk assessment for airborne toxics that will be emitted by a generic industrial building that was built on "speculation" (i.e., without knowing the future tenant[s]). Even where a health risk assessment can be prepared, however, the resulting maximum health risk value is only a calculation of risk—it does not necessarily mean anyone will contract cancer as a result of the Project. The *Brief* also cites the author of the CARB methodology, which reported that a $PM_{2.5}$ methodology is not suited for small projects and may yield unreliable results. Similarly, SCAQMD staff does not currently know of a way to accurately quantify O_3-related health impacts caused by NO_X or VOC emissions from relatively small projects, due to photochemistry and regional model limitations. The *Brief* concludes, with respect to the Friant Ranch EIR, that although it may have been technically possible to plug the data into a methodology, the results would not have been reliable or meaningful.

The SCAQMD has set its CEQA significance thresholds based on the FCAA, which defines a major stationary source (in extreme O_3 nonattainment areas such as the SCAB) as emitting 10 tons per year. The thresholds correlate with the trigger levels for the federal New Source Review (NSR) Program and SCAQMD Rule 1303 for new or modified sources. The NSR Program[5] was created by the FCAA to ensure that stationary sources of air pollution are constructed or modified in a manner that is consistent with attainment of health-based NAAQS. The NAAQS establish the levels of air quality necessary, with an adequate margin of safety, to protect the public health. Therefore, projects that do not exceed the SCAQMD's LSTs and mass emissions thresholds would not violate any air quality standards or contribute substantially to an existing or projected air quality violation and no criteria pollutant health impacts.

NO_X and ROG are precursor emissions that form O_3 in the atmosphere in the presence of sunlight where the pollutants undergo complex chemical reactions. It takes time and the influence of meteorological conditions for these reactions to occur, so O_3 may be formed at a distance downwind from the sources. Breathing ground-level O_3 can result in health effects that include reduced lung function, inflammation of airways, throat irritation, pain, burning, or discomfort in the chest when taking a deep breath, chest tightness, wheezing, or shortness of breath. In addition to these effects, evidence from observational studies strongly indicates that higher daily O_3 concentrations are associated with increased asthma

[5] Code of Federal Regulation (CFR) [i.e. PSD (40 CFR 52.21, 40 CFR 51.166, 40 CFR 51.165 (b)), Non-attainment NSR (40 CFR 52.24, 40 CFR 51.165, 40 CFR part 51, Appendix S)

attacks, increased hospital admissions, increased daily mortality, and other markers of morbidity. The consistency and coherence of the evidence for effects upon asthmatics suggests that O_3 can make asthma symptoms worse and can increase sensitivity to asthma triggers.

According to the SCAQMD's 2022 AQMP, O_3, NO_X, and ROG have been decreasing in the SCAB since 1975 and are projected to continue to decrease in the future. Although VMT in the SCAB continue to increase, NO_X and ROG levels are decreasing because of the mandated controls on motor vehicles and the replacement of older polluting vehicles with lower-emitting vehicles. NO_X emissions from electric utilities have also decreased due to the use of cleaner fuels and renewable energy. In addition, since NO_X emissions also lead to the formation of $PM_{2.5}$, the NO_X reductions needed to meet the O_3 standards will likewise lead to the improvement of $PM_{2.5}$ levels and attainment of $PM_{2.5}$ standards.

The SCAQMD's air quality modeling demonstrates that NO_X reductions prove to be much more effective in reducing O_3 levels than VOCs and will also lead to significant improvement in $PM_{2.5}$ concentrations. NO_X-emitting stationary sources regulated by the SCAQMD include Regional Clean Air Incentives Market (RECLAIM) facilities (e.g., refineries, power plants, etc.), natural gas combustion equipment (e.g., boilers, heaters, engines, burners, flares), and other combustion sources that burn wood or propane. The 2016 AQMP identifies robust NO_X reductions from new regulations on RECLAIM facilities, non-refinery flares, commercial cooking, and residential and commercial appliances. Such combustion sources are already heavily regulated with the lowest NO_X emissions levels achievable but there are opportunities to require and accelerate replacement with cleaner ZE alternatives, such as residential and commercial furnaces, pool heaters, and backup power equipment. The AQMD plans to achieve such replacements through a combination of regulations and incentives. Technology-forcing regulations can drive development and commercialization of clean technologies, with future year requirements for new or existing equipment. Incentives can then accelerate deployment and enhance public acceptability of new technologies.

As previously discussed, localized effects of on-site Project emissions on nearby receptors for the Project would be less than significant with mitigation (refer to ***Table 4.3-14*** through ***Table 4.3-16***). The LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable NAAQS or CAAQS. The LSTs were developed by the SCAQMD based on the ambient concentrations of that pollutant for each SRA and distance to the nearest sensitive receptor. The AAQS establish the levels of air quality necessary, with an adequate margin of safety, to protect public health, including protecting the health of sensitive populations. However, as discussed above, neither the SCAQMD nor any other air district currently have methodologies that would provide Lead Agencies and CEQA practitioners with a consistent, reliable, and meaningful analysis to correlate specific health impacts that may result from a proposed project's mass emissions. Information on health impacts related to exposure to O_3 and particulate matter emissions published by the U.S. EPA and CARB have been summarized above and discussed in the Regulatory Setting section. Health studies are used by these agencies to set the NAAQS and CAAQS.

Ozone concentrations are dependent upon a variety of complex factors, including the presence of sunlight and precursor pollutants, natural topography, nearby structures that cause building downwash, atmospheric stability, and wind patterns. Because of the complexities of predicting ground-level O3 concentrations in relation to the NAAQS and CAAQS, none of the health-related information can be

directly correlated to the pounds/day or tons/year of emissions estimated from a single, proposed project. It should also be noted that this analysis identifies health concerns related to particulate matter, CO, O3, and NO2. Table 4.3-1 includes a list of criteria pollutants and summarizes common sources and effects. Thus, this analysis is reasonable and intended to foster informed decision making.

Carbon Monoxide Hotspots

An analysis of CO "hot spots" is needed to determine whether the change in the level of service of an intersection resulting from the Project would have the potential to result in exceedances of the CAAQS or NAAQS. It has long been recognized that CO exceedances are caused by vehicular emissions, primarily when vehicles are idling at intersections. Vehicle emissions standards have become increasingly stringent in the last 20 years. Currently, the CO standard in California is a maximum of 3.4 grams per mile for passenger cars (requirements for certain vehicles are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of control technology on industrial facilities, CO concentrations have steadily declined. Accordingly, with the steadily decreasing CO emissions from vehicles, even very busy intersections do not result in exceedances of the CO standard.

The SCAB was re-designated as attainment for CO in 2007 and is no longer addressed in the SCAQMD's AQMP. The 2003 AQMP is the most recent version that addressed CO concentrations. As part of the SCAQMD *CO Hotspot Analysis*, the Wilshire Boulevard and Veteran Avenue intersection, one of the most congested intersections in southern California with an average daily traffic (ADT) volume of approximately 100,000 vehicles per day, was modeled for CO concentrations. This modeling effort identified a CO concentration high of 4.6 ppm, which is well below the 35-ppm Federal standard. The Project considered herein would not produce the volume of traffic required to generate a CO hot spot in the context of SCAQMD's *CO Hotspot Analysis*. As the CO hotspots were not experienced at the Wilshire Boulevard and Veteran Avenue intersection even as it accommodates 100,000 vehicles daily, it can be reasonably inferred that CO hotspots would not be experienced at any vicinity intersections resulting from 2,267 additional vehicle trips attributable to the Phase I of the Project. Therefore, impacts would be less than significant.

Construction-Related Diesel Particulate Matter

Project construction would result in the generation of DPM emissions from the use of required off-road diesel equipment required. The amount to which the receptors are exposed (a function of concentration and duration of exposure) is the primary factor used to determine health risk (i.e., potential exposure to TAC emission levels that exceed applicable standards). Health-related risks associated with diesel-exhaust emissions are primarily linked to long-term exposure and the associated risk of contracting cancer.

The use of diesel-powered construction equipment would be temporary and episodic. The duration of exposure would be short and exhaust from construction equipment dissipates rapidly. Current models and methodologies for conducting health risk assessments are associated with longer-term exposure periods of 9, 30, and 70 years, which do not correlate well with the temporary and highly variable nature of construction activities. The California Office of Environmental Health Hazard Assessment (OEHHA) has not identified short-term health effects from DPM. Construction is temporary and would be transient throughout the site (i.e., move from location to location) and would not generate emissions in a fixed

location for extended periods of time which would limit the exposure of any proximate individual sensitive receptor to TACs.

Additionally, construction is subject to and would comply with California regulations (e.g., Title 13, CCR, Sections 2485 and 2449), which reduce DPM and criteria pollutant emissions from in-use off-road diesel-fueled vehicles and limit the idling of heavy-duty construction equipment to no more than five minutes. These regulations would further reduce nearby sensitive receptors' exposure to temporary and variable DPM emissions.

An HRA was conducted based on the SCAQMD's Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis and the SCAQMD Risk Assessment Procedures and the guidance from OEHHA. Construction-related activities would result in Project-generated emissions of DPM from the exhaust of off-road, heavy-duty diesel equipment for site preparation (e.g., clearing, grading); paving; application of architectural coatings; on-road truck travel; and other miscellaneous activities. For construction activity, DPM is the primary TAC of concern. On-road diesel-powered haul trucks traveling to and from the construction area to deliver materials and equipment are less of a concern because they would not stay on the site for long durations. Diesel exhaust from construction equipment operating at the site poses a health risk to nearby sensitive receptors.

PM_{10} construction emissions rates in grams per second were calculated from the total annual on-site exhaust emissions reported in CalEEMod during construction. Maximum (worst case) PM_{10} exhaust construction emissions over the entire construction period were used in AERMOD, a U.S. EPA-approved dispersion model, to approximate construction DPM emissions. Risk levels were calculated based on the California OEHHA guidance document, *Air Toxics Hot Spots Program Risk Assessment Guidelines* (February 2015). SCAQMD's threshold for cancer risk is 10-in-one-million and the acute or chronic noncancer hazard index is one. Projects that do not exceed these thresholds would not result in a significant impact.

The construction phase HRA was conducted for the Phase I (see ***Appendix B2*** for HRA modeling results). Results of the assessment indicate that the highest unmitigated cancer risk would be 12-in-one-million near the residence at the southeast corner of Edison Avenue and Sultana Avenue, which exceeds the SCAQMD threshold of 10-in-one-million. Therefore, **MM AQ-8**, requiring the use of Tier 4 construction equipment is required to reduce the cancer risk. With **MM AQ-8** the cancer risk would be reduced to 1-in-one-million which is below the SCAQMD threshold of 10-in-one-million. With the implementation of **MM AQ-8** non-cancer hazards for DPM would be below SCAQMD threshold of 1.0, with a chronic hazard index computed at 0.0006. Therefore, construction risk levels would be less than SCAQMD thresholds and impacts would be less than significant.

Operational Diesel Particulate Matter

An operational phase HRA was also conducted for this Project. Analysis included both on-site and off-site impacts from the diesel trucks accessing the warehouse development on nearby residential and worker receptors.

Vehicle DPM emissions were estimated using PM_{10} emission factors generated with CARB's On-Road Motor Vehicle Emission Inventory Model (EMFAC) 2021. EMFAC is a mathematical model that was developed to calculate emission rates from motor vehicles that operate on highways, freeways, and local roads in California and is commonly used by CARB to project changes in future emissions from on-road mobile sources. EMFAC incorporates regional motor vehicle data, information and estimates regarding the distribution of VMT by speed, and number of starts per day.

For this Project, annual average tailpipe PM_{10} emission factors were generated by running EMFAC for vehicles in the SCAQMD within the South Coast portion of San Bernardino County. EMFAC generates emission factors in terms of grams of pollutant emitted per vehicle activity and can calculate a matrix of emission factors at specific values of vehicle speed, temperature, and relative humidity. Truck emissions were based on the first possible year of operations for a fleet mix of various aged vehicles, as opposed to average emissions over a 30-year window. Trucks were assumed to travel at a speed of 45 miles per hour (mph) along Schaefer Avenue, Edison Avenue, Sultana Avenue, and Euclid Avenue and 15 mph for on-site truck travel.

Air dispersion modeling was performed using the U.S. EPA AERMOD dispersion model. AERMOD is a steady-state, multiple-source, Gaussian dispersion model designed for use with emission sources situated in terrain where ground elevations can exceed the stack heights of the emission sources. AERMOD requires hourly meteorological data consisting of wind vector, wind speed, temperature, stability class, and mixing height. Uniform Cartesian receptors were used to evaluate the locations of the maximally exposed sensitive receptors. Surface and upper air meteorological data from the Chino Airport Monitoring Station provided by the SCAQMD was selected as being the most representative meteorology. In addition, National Elevation Dataset (NED) terrain data was imported into AERMOD for the Project. The modeling and analysis were prepared in accordance with the SCAQMD Modeling Guidance for AERMOD.[6]

Idling emissions were represented in the model via line volume sources along each loading dock and 15 minutes of idling[7] for each truck was assumed. Truck travel emissions were represented in the model via line volume sources along local roads and inside the facility where the trucks are expected to travel. Trucking routes were determined per the Traffic Analysis Study (***Appendix I1***) conducted for the proposed Project.

Note that the concentration estimate developed using this methodology is conservative and is not a specific prediction of the actual concentrations that would occur at the Project site at any one point in time. Actual one-hour and annual average concentrations are dependent on many variables, particularly the number and type of vehicles and equipment operating at specific distances during time periods of adverse meteorology.

[6] South Coast Air Quality Management District. 2023. *SCAQMD Modeling Guidance for AERMOD.* http://www.aqmd.gov/home/air-quality/meteorological-data/modeling-guidance. (accessed March 2023).

[7] An idling time of 15 minutes per truck has been used per SCAQMD recommendations. Although the Project is required to comply with CARB's idling limit of 5 minutes, the SCAQMD recommends the on-site idling emissions should be estimated for 15 minutes of truck idling, which would take into account on-site idling that occurs while the trucks are waiting to pull up to the truck bays, idling at the bays, idling at check-in and check-out, etc.

A health risk computation was performed to determine the risk of developing an excess cancer risk calculated on a 30-year exposure scenario using CARB's Risk Assessment Standalone Tool (RAST). Health risks were analyzed at the point of maximum impact and are a conservative estimate. The pollutant concentrations are then used to estimate the long-term cancer health risk to an individual as well as the non-cancer chronic health index. SCAQMD's threshold for cancer risk is ten-in-one-million and the chronic noncancer hazard index is one. Projects that do not exceed these thresholds would not result in a significant impact.

The cancer and chronic health risks are based on the annual average concentration of PM_{10} (used as a proxy for DPM). It should be noted that there is no acute reference exposure level (REL) for DPM and acute health risk cannot be calculated. The chronic and carcinogenic health risk calculations are based on the standardized equations contained in the U.S. EPA Human Health Evaluation Manual (1991) and the OEHHA Guidance Manual (2015).

Based on the AERMOD outputs, the highest unmitigated annual average diesel PM_{10} emission concentrations from diesel truck traffic and offroad diesel equipment near sensitive receptors located near the northeast corner of Schaefer Avenue and Sultana Avenue would be 0.1426 $\mu g/m^3$. The calculations conservatively assume no cleaner technology with lower emissions in future years. The highest calculated carcinogenic risk resulting from Phase I operations at off-site sensitive receptors is 80 per million, which exceed SCAQMD's threshold of 10 in one million. The highest unmitigated concentrations at future on-site sensitive receptors would be 0.1076 $\mu g/m^3$, with a carcinogenic risk of 60 in one million. Therefore, **MM AQ-2** through **MM AQ-5** and **MM AQ-7**are required to reduce impacts. Implementation of operational mitigation measures reduces the diesel exhaust PM_{10} concentrations at the northeast corner of Schaefer Avenue and Sultana Avenue to 0.0010 $\mu g/m^3$. As such, the mitigated carcinogenic risk at the northeast corner of Schaefer Avenue and Sultana Avenue would be reduced to 0.57 in one million. Sensitive receptors located near the southeast corner of Edison Avenue and Sultana Avenue would be exposed to the highest mitigated PM_{10} concentrations of 0.0018 $\mu g/m^3$, with a mitigated carcinogenic risk of 1.01 in one million. Future on-site sensitive receptors would be exposed to mitigated concentrations of 0.021 $\mu g/m^3$, with a carcinogenic risk of 0.57 in one million. Impacts would be less than significant.

Chronic impacts were also evaluated in the HRA. A chronic hazard index of 1.0 is considered individually significant. The hazard index is calculated by dividing the chronic exposure by the REL. After incorporating operational **MM AQ-2** through **MM AQ-5** and **MM AQ-7**, the highest maximum chronic hazard index associated with DPM emissions from Phase I operations would be 0.0004 at the southeast corner of Edison Avenue and Sultana Avenue and 0.0002 at future on-site sensitive receptors. As a result, non-carcinogenic hazards are calculated to be within acceptable limits. Therefore, impacts would be less than significant with mitigation.

Specific Plan – Phase II Future Development Areas

Construction LST

The SCAQMD's methodology states that "off-site mobile emissions from the Project should not be included in the emissions compared to LSTs." Therefore, only emissions included in the CalEEMod "on-

site" emissions outputs were considered. The nearest sensitive receptors to Phase II is a single-family residence located 110 feet (33 meters) east of the Project. Therefore, LSTs for receptors located at 33 meters were utilized for this analysis. ***Table 4.3-17: Phase II – Unmitigated Localized Significance of Construction Emissions***, presents the results of localized emissions during each construction phase. Because LST emissions do not include VOCs, **MM AQ-1** was not included when calculating construction LST. ***Table 4.3-17*** shows that emissions of these pollutants on the peak day of construction would not result in significant concentrations of pollutants at nearby sensitive receptors. Significant impacts would not occur concerning LSTs during construction.

Table 4.3-17: Phase II – Unmitigated Localized Significance of Construction Emissions

Construction Activity	Maximum Pounds Per Day			
	Nitrogen Oxides (NO_x)	Carbon Monoxide (CO)	Coarse Particulate Matter (PM_{10})	Fine Particulate Matter ($PM_{2.5}$)
Demolition[1]	22.20	19.90	0.92	0.84
Site Preparation	31.60	60.20	21.07	11.36
Grading	29.70	28.30	10.43	4.79
Building Construction	10.40	13.00	0.43	0.40
Paving	7.12	9.94	0.32	0.29
Architectural Coating	0.86	1.13	0.02	0.02

Operational LST

Operational emissions are based on CalEEMod operational outputs and conservatively includes all on-site Project-related stationary sources, on-site off-road equipment (forklifts and hostler/yard trucks. Similar to Phase I, a portion of mobile sources are included to capture on-site vehicle emissions including idling trucks. Based on Project site plans, it was assumed that each vehicle would drive a maximum of one mile on-site (0.5 miles when entering and 0.5 miles when leaving), for a total of 6,605 miles driven on site. In CalEEMod, each passenger car is assumed to drive 25 miles and each truck is assumed to drive 33.2 miles for a total of 163,679 daily miles. Because 6,605 on-site miles is 4.0 percent of the total 163,679 daily miles, on-site mobile emissions are assumed to be four percent of the total mobile emissions. The Phase II operational localized emissions shown in ***Table 4.3-18: Phase II – Unmitigated Localized Significance of Operational Emissions***, indicates that Phase II unmitigated emissions would not exceed thresholds. Therefore, the Phase II operations would result in a less than significant localized operational impact.

Table 4.3-18: Phase II – Unmitigated Localized On-Site Operational Emissions

Source	Pollutants (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
On-Site and Mobile Source Emissions[1]	13.99	134.65	1.40	0.69
SCAQMD Localized Screening Threshold (adjusted for 4 acres at 33 meters)	*247*	*2,109*	*5*	*2*
Exceed SCAQMD Threshold?	No	No	No	No
1. Includes all on-site and four percent of mobile source emissions. Source: CalEEMod version 2022.1 Refer to ***Appendix B1*** for model outputs.				

Criteria Pollutant Health Impacts

As previously discussed, localized effects of on-site Project emissions on nearby receptors for Phase II would be less than significant (refer to ***Table 4.3-17*** and ***Table 4.3-18***). The LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable state or federal ambient air quality standard. The LSTs were developed by the SCAQMD based on the ambient concentrations of that pollutant for each SRA and distance to the nearest sensitive receptor. The ambient air quality standards establish the levels of air quality necessary, with an adequate margin of safety, to protect public health, including protecting the health of sensitive populations. However, as discussed above, neither the SCAQMD nor any other air district currently have methodologies that would provide Lead Agencies and CEQA practitioners with a consistent, reliable, and meaningful analysis to correlate specific health impacts that may result from a proposed project's mass emissions. Information on health impacts related to exposure to ozone and particulate matter emissions published by the U.S. EPA and CARB have been summarized above and discussed in the Regulatory Framework section. Health studies are used by these agencies to set the Federal and State AAQS. None of the health-related information can be directly correlated to the pounds/day or tons/year of emissions estimated from a single, proposed project. Therefore, without thresholds and standards there is no way to ascertain if there is a significant environmental impact.

Carbon Monoxide Hotspots

As noted above, CO hotspots were not experienced at the Wilshire Boulevard/Veteran Avenue intersection with approximately 100,000 vehicles per day. Therefore, any project generating less than 100,000 vehicles per day would not exceed the CO standard. As such, it can be reasonably inferred that CO hotspots would not be experienced at any vicinity intersections resulting from 6,272 additional vehicle trips attributable to Phase II. Trip generation is calculated based on Project assumptions (see ***Appendix I***). Therefore, impacts would be less than significant.

Construction-Related Diesel Particulate Matter

A construction phase HRA was conducted for Phase II (see ***Appendix B2*** for HRA modeling results). Results of the assessment indicate that the highest cancer risk would be 1.02 in one million, which would not exceed the SCAQMD threshold of 10 in-one-million. Non-cancer hazards for DPM would be below SCAQMD threshold of 1.0, with a chronic hazard index computed at 0.0010. Therefore, construction risk levels would be less than SCAQMD thresholds. Impacts would be less than significant.

Operational Diesel Particulate Matter

The HRA for Phase II operations determined the highest annual average diesel PM_{10} emission concentrations from diesel truck traffic and off-road equipment near sensitive receptors would be 0.0160 $\mu g/m^3$. The calculations conservatively assume no cleaner technology with lower emissions in future years. The highest calculated carcinogenic risk resulting from the Phase II operations at off-site sensitive receptors is 8.25 in one million. The highest maximum chronic hazard index associated with DPM emissions from Phase II operations would be 0.0285. The highest calculated carcinogenic risk resulting from the Phase II operations at future on-site sensitive receptors is 21 in one million. Therefore, **MM AQ-2** through **MM AQ-5** and **MM AQ-7** are required to reduce impacts. Implementation of operational

mitigation measures reduces the diesel exhaust PM_{10} concentrations at off-site sensitive receptors to 0.0021 µg/m^3, with a mitigated carcinogenic risk of 1 in one million. Future on-site sensitive receptors would be exposed to mitigated concentrations of 0.0006 µg/m^3, with a carcinogenic risk of 0.32 in one million. The highest maximum chronic hazard index associated with DPM emissions from Phase II operations would be 0.0004 at off-site receptors and 0.0001 at on-site receptors. As a result, the carcinogenic risk would not exceed 10 in one million and non-carcinogenic hazards would not exceed 1. Therefore, impacts would be less than significant.

Project Buildout (Phase I and Phase II)

Construction LST and Operational LST

As shown in ***Table 4.3-15***, ***4.3-16***, and ***4.3-18***, emissions for Phase I and Phase II individually do not exceed operational LSTs. ***Table 4.3-19: Project Buildout – Localized Operational Emissions*** shows the combined mitigated operational emissions for the entire Project. As noted above, LSTs are screening thresholds and are therefore conservative. The operational LST acreage is based on a maximum 5-acre site. Although the Project site is greater than five acres, the 5-acre operational LSTs are conservatively used as a screening evaluation. Project operations would occur over an approximately 78.1-acre site. Therefore, on-site emissions would disperse over a larger area, which would decrease the concentrations.

Table 4.3-19: Mitigated Project Buildout - Localized Operational Emissions

Source	Pollutants (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Phase I and Phase II On-Site and Mobile Source Emissions Combined[1]	79.14	177.97	**5.76**	**4.58**
SCAQMD Localized Screening Threshold (adjusted for 4 acres at 33 meters)	*247*	*2,109*	*5*	*2*
Exceed SCAQMD Threshold?	No	No	**Yes**	**Yes**

1. Includes all on-site and four percent of mobile source emissions.
2. Includes MM AQ-2 through MM AQ-6
Source: CalEEMod version 2022.1 Refer to ***Appendix B1*** for model outputs.

As shown above, Project buildout operational emissions generated on-site by the Project would exceed the threshold for PM_{10} and $PM_{2.5}$. Therefore, PM_{10} and $PM_{2.5}$ dispersion modeling has been conducted to determine if Project buildout operations would result in significant PM_{10} and $PM_{2.5}$ concentrations at nearby sensitive receptors in accordance with SCAQMD LST methodology. Localized PM_{10} and $PM_{2.5}$ construction emissions were estimated using AERMOD to determine the worst-case PM_{10} and $PM_{2.5}$ concentrations. Due to the size of the site, receptors exposed to the greatest Phase I concentrations would differ from the receptors exposed to the greatest Phase II concentrations. Therefore, combined Phase I and Phase II concentrations are shown for the maximally exposed receptor for each phase. ***Table 4.3-20*** shows on-site operational PM_{10} and $PM_{2.5}$ emissions would not exceed the SCAQMD's 24-hour average PM_{10} and $PM_{2.5}$ operational standards.[8] Therefore, the Project would result in a less than significant localized operational impact.

[8] South Coast Air Quality Management District. 2019. *Air Quality Significance Thresholds*.

Table 4.3-20: Buildout - Operational Dispersion Modeling

Emissions Source	PM_{10} (24-hour) ($\mu g/m^3$)	$PM_{2.5}$ (24-hour) ($\mu g/m^3$)
Location of Maximum Concentration from Phase I Operations		
Phase I Mitigated Operations	0.0033	0.0033
Phase II Mitigated Operations	0.0025	0.0025
Total Project Buildout Operations	**0.0058**	**0.0058**
Location of Maximum Concentration from Phase II Operations		
Phase I Mitigated Operations	0.0007	0.0007
Phase II Mitigated Operations	0.0063	0.0063
Total Project Buildout Operations	**0.0070**	**0.0070**
Threshold[1]	**2.5**	**2.5**
Threshold Exceeded?	**No**	**No**

1. The PM_{10} and $PM_{2.5}$ thresholds are from South Coast Air Quality Management District, *Air Quality Significance Thresholds*, April 2019. The PM_{10} and $PM_{2.5}$ thresholds are incremental thresholds; therefore, the incremental concentration without background is compared to the threshold.

Carbon Monoxide Hotspots

As noted above, CO hotspots were not experienced at the Wilshire Boulevard/Veteran Avenue intersection with approximately 100,000 vehicles per day. Therefore, any project generating less than 100,000 vehicles per day would not exceed the CO standard. As such, it can be reasonably inferred that CO hotspots would not be experienced at any vicinity intersections resulting from 8,820 additional vehicle trips attributable to Phase I and Phase II. Therefore, impacts would be less than significant.

Construction-Related Diesel Particulate Matter

Construction of Phase I and Phase II would occur sequentially, and emissions would cease once construction is completed. That said, Phase I and Phase II construction would result in a combined mitigated construction-related cancer risk of 1.08 in one million at off-site sensitive receptors, which would still not exceed the SCAQMD threshold of 10 in one million. Non-cancer hazards for DPM would be below SCAQMD threshold of 1.0, with a maximum chronic hazard index computed at 0.0008. Therefore, construction risk levels would be less than SCAQMD thresholds. Impacts would be less than significant.

Operational Diesel Particulate Matter

Health risks from the combined operations of both Phase I and Phase II were evaluated. The mitigated carcinogenic risk would not exceed 10 in one million and non-carcinogenic hazards would not exceed 1 at off-site or future on-site sensitive receptors. Therefore, impacts would be less than significant.

Combined Total Diesel Particulate Matter

Health risks from the combined construction and operations of both Phase I and Phase II were evaluated with results summarized in ***Table 4.3-21*** and ***Table 4.3-22***. Due to the size of the site, receptors exposed to the greatest Phase I concentrations would differ from the receptors exposed to the greatest Phase II concentrations. Therefore, combined Phase I and Phase II cancer risks and maximum concentrations are shown for the maximally exposed receptor for each phase. The mitigated carcinogenic risk would not exceed 10 in one million and non-carcinogenic hazards would not exceed 1 at off-site or future on-site sensitive receptors. Therefore, impacts would be less than significant.

Table 4.3-21: Combined Project Carcinogenic Risk

Exposure Scenario	Cancer Risk (Risk per Million) [1, 2]	Significance Threshold (Risk per Million)	Exceeds Significance Threshold?
Unmitigated Emissions			
Off-Site Receptors			
Residential receptors at northeast corner of Schaefer Avenue and Sultana Avenue	84.47	10	**Yes**
Residential Receptors at southeast corner of Edison Avenue and Sultana Avenue	37.57	10	**Yes**

[1] Refer to Appendix A.
[2] The reported annual pollutant concentration combined at the closest maximally exposed individual residents (MEIRs) for Phase I and Phase II.

Conclusion

Project construction and operations would not expose sensitive receptors to substantial pollutant concentrations. Construction and operations would not exceed SCAQMD LST thresholds, would not create a CO hotspot, and would not generate concentrations of DPM that would result in carcinogenic, chronic, or acute health risk effects. Therefore, Project impacts would be less than significant in this regard.

In addition, the recent adoption of South Coast AQMD's proposed Rule 2305 (refer to SCAQMD under *Section 4.3.3: Regulatory Setting*) means that the Project operator could potentially be required to pay mitigation fee if the Project does not generate enough WAIRE Points. The Project operator may be required to implement additional emission reduction strategies. Conservatively, this EIR is not taking credit for these potential reductions. Compliance with proposed Rule 2305 would reduce emissions below what is currently analyzed. The impact is less than significant with mitigation.

Mitigation Measures

Refer to **MM AQ-1** through **MM AQ-7**.

MM AQ-8 Prior to issuance of grading permits, the applicant shall prepare and submit documentation to the City of Ontario that demonstrate that all off-road diesel-powered construction equipment greater than 50 horsepower meets California Air Resources Board Tier 4 Final off-road emissions standards. Requirements for Tier 4 Final equipment shall be included in applicable bid documents and successful contractor(s) must demonstrate the ability to supply such equipment. A copy of each unit's Best Available Control Technology (BACT) documentation (certified tier specification or model year specification), and CARB or SCAQMD operating permit (if applicable) shall be provided to the City at the time of mobilization of each applicable unit of equipment.

Impact 4.3-4: ***Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?***

Level of Significance: Less than Significant

Project Buildout (Phase I + Phase II)

Construction

During construction activities, construction equipment exhaust and application of asphalt and architectural coatings would temporarily generate odors. Any construction-related odor emissions would be temporary and intermittent. Standard construction requirements and compliance with established regulations (Code of Federal Regulations [CFR], Part 1926 – *Safety and Health Regulations for Construction,* Subpart H – *Materials Handling, Storage Use and Disposal, et al*.) addressing construction materials storage, use, and disposal would minimize odor impacts from construction activity. Furthermore, short-term construction-related odors are expected to cease upon the drying or hardening of odor-producing materials. Therefore, impacts associated with construction-generated odors are considered less than significant.

Operations

The type of facilities that are considered to have objectionable odors include wastewater treatment plants, compost facilities, landfills, solid waste transfer stations, fiberglass manufacturing facilities, paint/ coating operations (e.g., auto body shops), dairy farms, petroleum refineries, asphalt batch plants, chemical manufacturing, and food manufacturing facilities. The warehouses and office uses proposed under the Project would not result in these types of uses. In addition, the proposed Project would be required to comply with SCAQMD Rule 402 which prevents discharging nuisance odors. Therefore, the Project would not create objectionable odors.

Conclusion

The Project will comply with all applicable SCAQMD rules including Rule 402 which prevents discharging nuisance odors. In addition, the Project does not include any land uses that have been identified by the SCAQMD as odor sources. Therefore, the Project would not create objectionable odors and this impact would be less than significant.

Mitigation Measures

No mitigation is necessary.

4.3.7 Cumulative Impacts

Regional

In accordance with SCAQMD's methodology, any project that produces a significant project-level regional air quality impact in an area that is in nonattainment contributes to the cumulative impact. Cumulative projects in the local area include new mixed-use and residential development and general growth in the surrounding area. The greatest source of emissions in the SCAB is mobile sources. Due to the extent of the area potentially impacted from cumulative project emissions (i.e., the SCAB), SCAQMD considers a project cumulatively significant when project-related emissions exceed the SCAQMD regional emissions thresholds.

Construction

The SCAB is designated nonattainment for O_3 and $PM_{2.5}$ under both the California and federal standards and nonattainment for PM_{10} and lead (Los Angeles County only) under the federal standards. O_3 is created by chemical reactions between NO_X and VOCs; thus, NO_X and VOCs are precursor to O_3. Construction of cumulative projects will further degrade the regional and local air quality. The Project would not make a cumulative considerable contribution to $PM_{2.5}$ or PM_{10}, but air quality from VOCs would potentially be impacted during construction activities. However, as discussed under Impact 4.3-2, implementation of **MM AQ-1** would reduce Project-related construction emissions to below the SCAQMD regional significance thresholds on a Project and cumulative basis. Therefore, the proposed Project's contribution to cumulative air quality impacts would not be cumulatively considerable with incorporation of mitigation. Additionally, the Project cumulative construction impacts would be consistent with the findings of TOP 2050 Final Supplemental EIR.

Operation

For operational air quality emissions, any project that does not exceed or can be mitigated to less than the daily regional threshold values is not considered by SCAQMD to be a substantial source of air pollution and does not add significantly to a cumulative impact. Operation of the Project, after incorporation of mitigation, would still result in emissions in excess of the SCAQMD regional emissions thresholds for ROGs and NO_X. Therefore, the air pollutant emissions associated with the proposed Project would be cumulatively considerable and therefore significant and unavoidable. Additionally, the Project cumulative operation impacts would be consistent with the findings of TOP 2050 Final Supplemental EIR.

Localized

Under SCAQMD guidance, projects that exceed the project-specific significance threshold of 10 in a million are considered to be cumulatively considerable (SCAQMD 2003). Per the MATES IV study, the proposed Project is in an area that has an estimated cancer risk of about 898.83 in a million.[9] Project-related construction activities would result in a cancer risk of 1.08 in a million to the maximally exposed individual resident (MEIR). Development and operation of the proposed Project would result in cancer risk of 2.07 in a million to the MEIR, which would be below 10 in a million. As a result, the Project would not cumulatively contribute to the overall elevated levels of DPM in the SCAB. Additionally, the Project would be pursuant to TOP 2050 and would represent a consistent and logical continuation of the existing and planned pattern of development in Ontario, specifically the Ontario Ranch area. The City has long anticipated that this area would transition from dairy/agricultural to urban uses, and the Project Specific Plan is implementing TOP 2050.[10] Therefore, the Project's contribution to health risk impacts in the SCAB is less than significant with mitigation incorporated.

4.3.8 Significant Unavoidable Impacts

Even with implementation of regulatory requirements, standard conditions of approval and implementation of reasonable and feasible mitigation measures, the Project would result in unavoidable significant impacts with respect to air quality plan consistency (Impact 4.3-1) and operational emissions (Impact 4.3-2).

4.4 BIOLOGICAL RESOURCES

4.4.1 Introduction

This section of the Draft Environmental Impact Report (EIR) examines the existing biological resources and potential impacts that may result from the construction and operation of the proposed Euclid Mixed Use Specific Plan Project (Project). The analysis in this section is based in part on the following resources:

- Cadre Environmental. October 2022. *Biological Resources Technical Report for Euclid Mixed-Use Specific Plan*. (***Appendix C***)
- The Ontario Plan 2050
- City of Ontario Municipal Code
- City of Ontario TOP 2050 Final Supplemental EIR

The Project site is anticipated to be developed in two phases within five planning areas (PAs), with only Phase I proposed at a project-level entitlement. Phase I would include PAs 1, 2A, and 3A, consisting of the construction of 13 business park buildings with ancillary office space, approximately 1,386,777 square feet (sf) of business park uses and designated open space. Future Development Areas associated with Phase II would be evaluated at a programmatic level in this Draft EIR. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. The Applicant does not own the parcels within the Phase II area (PAs 2B and 3B) and does not have access to the Phase II area at this time. At the time of Phase II development, it will undergo its own site-specific CEQA analysis.

4.4.2 Environmental Setting

Existing Conditions

The Project site is located in the southwestern portion of the City of Ontario (City), immediately north of the City of Chino in San Bernardino County. The Project site is bounded by Schaefer Avenue to the north, Sultana Avenue to the east, Edison Avenue to the south, and Euclid Avenue to the west (refer to ***Section 3.0: Project Description***, ***Figure 3-2: Local Vicinity Map*** and ***Figure 3-3: Project Boundary***). The Project site consists of 18 existing parcels totaling 84.1 acres in the City. The Assessor Parcel Numbers (APNs) for this Project are 1053-071-01, -02, -03, -04; 1053-211-01, -02, -05; 1053-281-01, -02, -03, -04, -05, -07, -08; 1053-081-01, -02, -03, -04. The 84.1-acre Project site is currently occupied by agricultural uses, including the raising of livestock, dairy farming activities, and a commercial nursery. The majority of the site exists as fallow or cultivated fields. Existing uses surrounding the Project site are similar to those on the site. Ongoing crop farming is located to the north of the Project site and a vacant property that was a former dairy farm is located to the east of the site. The property to the south is currently utilized for residential, farming, or trucking related uses. North across Schaefer Avenue is an existing dairy farm; south across Edison Avenue is an existing trucking facility; east across Sultana Avenue is vacant land and an existing trucking facility; west across Euclid Avenue, is the City of Chino with existing commercial and residential uses, and a truck/trailer storage (refer to ***Section 3.0: Project Description***, ***Figure 3-4: Surrounding Land Uses***).

The City lies within the broad alluvial fan originating from the southern flank of the San Gabriel Mountains, and dips gradually southward to the confluence of San Antonio Channel, Cucamonga Channel/Mill Creek, and the Santa Ana River at the Prado Dam Flood Control Basin in Riverside County. The Santa Ana River flows to the south of the City and Cucamonga Creek and Deer Creek traverse north to south through the City. The Project site is generally flat, with a gentle slope and elevations ranging from approximately 730 feet above mean sea level (AMSL) in the northeast portion of the site to approximately 690 feet AMSL in the southwest portion of the site.

The entire Project site has been disturbed by the previous development and agriculture and farming uses. Approximately portions of the Project Site continue to be utilized as an active dairy including dry lots, milking parlors/feed storage facilities, a nursery and agricultural residences. These areas are either devoid of vegetation or dominated by ornamental, ruderal non-native, and native species commonly detected in disturbed habitats. Furthermore, portions of the Project site continue to be actively farmed including the current production of pumpkin (*Cucurbita* sp.) and field corn (*Zea mays*). Disturbed portions of the Project Site are either devoid of vegetation (dirt roads and follow fields) or dominated by the following species including golden crown beard (*Verbesina encelioides*), London rocket (*Sisymbrium irio*), milk thistle (*Silybum marianum*), Australian saltbush (*Atriplex semibaccata*), big saltbush (*Atriplex lentiformis*), spiny cocklebur (*Xanthium spinosum*), field bindweed (*Convolvulus arvensis*), common sow thistle (*Sonchus oleraceus*), and annual sunflower (*Helianthus annus*).[1]

The Project site occurs on the "Prado Dam" California USGS 7.5-minute quadrangle map, Township 2 South, Range 7 West. Dairy farming and agriculture have been the primary uses of the Project site since before the 1930s. The majority of the Project site exists as fallow or cultivated fields. There is a private recreational vehicle storage facility in the southwestern portion of the site. Numerous single family residential structures, as well as agricultural related buildings and open structures, are located within the Project site. Two Southern California Edison (SCE) easements extend across the Project site. No structures are located within the SCE easements; however, they have been used for various agricultural uses historically. Projects proposed in the area that contain potentially suitable habitat to support sensitive biological resources must demonstrate to reviewing agencies (e.g., U.S. Fish and Wildlife Service [USFWS], California Department of Fish and Game [CDFG - currently Department of Fish and Wildlife or CDFW], County, and City) that potential Project-related impacts to sensitive biological resources are adequately addressed and mitigated pursuant to the California Environmental Quality Act (CEQA) and other environmental regulations as part of Project approval.

The biological resources report prepared by Cadre Environmental analyzed a 70.04-acre portion of the Project site that represents the Phase I development area, consisting of ten parcels of active dairy and agricultural land. The Assessor Parcel Numbers for the Phase I area are 1053-071-01, -02, -03, -04, 1053-211-01, -02, 1053-281-08, 1053-081-01, -03, -04, as well as 10.06-acres of off-site assessment area (right of ways). This report includes a thorogouh literature review, field investigation, and biological resources recommendations for the proposed development (see ***Appendix C: Biological Resources Technical Report***). Currently, the Applicant does not control the Phase II parcels therefore, a biological resources

[1] Cadre Environmental. 2022. *Biological Resources Technical Report*. Page 6. See **Appendix C.**

report was not completed at this time. At the time of Phase II development, it will undergo its own site-specific CEQA analysis.

Plant Communities/Habitat

As mentioned above, portions of the Project Site continue to be utilized as an active dairy including dry lots, milking parlors/feed storage facilities and housing (Venegas Family Farm). These areas are either devoid of vegetation or dominated by ornamental, ruderal non-native and native species commonly detected in disturbed habitats. Based on the field investigation of the Phase I area conducted by Cadre Environmental, these species include Palmer's amaranth (*Amaranthus palmeri*), summer cypress (*Bassia scoparia*), horseweed (*Erigeron canadensis*), Russian thistle (*Salsola tragus*), prostate knotweed (*Polygonum aviculare*), cheeseweed (*Malva parviflora*), red-stemmed filaree (*Erodium cicutarium*), castor bean (*Ricinus communis*), prickly lettuce (Lactuca serriola), Bermuda grass (*Cynodon dactylon*), barnyard grass (*Echinochloa crus-galli*), goose grass (*Eleusine indica*), wild oat (*Avena fatua*), foxtail barley (*Hordeum murinum*), ripgut brome (*Bromus diandrus),* Peruvian peppertree (*Schinus molle*), Bougainvillea (*Bougainvillea sp*.), pine (*Pinus sp*.), Mexican fan palm (*Washingtonia robusta*), and jacaranda (*Jacaranda sp*.).[2]

Sensitive Biological Resources[3]

Discussed below are plant and wildlife species potentially present in the Project site that have been afforded special recognition by federal or State agencies. This discussion is based on species that would pose considerable constraints on the Project because of their high sensitivity status (listed or proposed for listing as rare, threatened, or endangered) with State and/or federal resource agencies. In addition, plants included on Lists 1, 2, 3, or 4 of the California Native Plant Society (CNPS) inventory are also considered of special status. Vegetation communities that are unique, of relatively limited distribution, or of particular value to wildlife and considered sensitive by State and/or federal resource agencies are also generally discussed. There is a low probability of occurrence due to the Project's site-specific factors (e.g., disturbance level, land use, etc.).

In general, those species presented in ***Table 4.4-1: Special-Status Plant Species Potentially Occurring in the Site Vicinity*** and ***Table 4.4-2: Special-Status Wildlife Species Potentially Occurring in the Site Vicinity*** that are "not expected" or that have a "low occurrence potential" generally correspond to "less than significant" under CEQA. As it relates to the occurrence potential of special-status plant species, "not detected" refers to perennial plants and shrubs that are identifiable year-round. Therefore, if they are not detected they are not present at any time. "No potential" addresses annual plants that are not detectable year-round. In ***Table 4.4-1***, "no potential" is followed by justification of why they are not expected to occur onsite. The occurrence potential of special-status plant and wildlife species is primarily based on habitat types present, occurrence records of sensitive species from the site vicinity, and results of the on-site reconnaissance surveys. Because the disturbance level, land use, and other environmental factors are consistent between the Phase I and Phase II areas, occurrence potential of special-status plant and wildlife

[2] Ibid. Page 6.
[3] Ibid. Page 24 through Page 34.

species analyzed for the Phase I area is anticipated to be the same for the Phase II area. Additionally, no focused wildlife or botanical surveys were conducted within the Project site.

Special-Status Plant Species

No special-status plant species were detected within the Phase I area during the reconnaissance survey, and none are expected within the Project site due to lack of suitable habitat. Special-status plant species known from the region that potentially occur within the Project site are summarized below in ***Table 4.4-1: Special-Status Plant Species Potentially Occurring in the Site Vicinity***.

Table 4.4-1: Special-Status Plant Species Potentially Occurring in the Site Vicinity

Common Name Scientific Name	Status			Habitat Requirements	Occurrence Potential
	Federal	State	CRPR		
Nevin's barberry *(Berberis nevinii)*	FE	SE	1B.1	Perennial evergreen shrub which generally blooms from February to June within chaparral, cismontane woodland, coastal scrub, and riparian scrub in sandy, gravelly substrates.	**Not Detected.**
Coulter's saltbush *Atriplex coulteri* Plummer's mariposa-lily *(Calochortus plummerae)*	--	--	4.2	Perennial bulbiferous herb which generally blooms from May to June within chaparral, cismontane woodland, coastal scrub, lower montane coniferous forest, and grassland habitats with granite and rocky substrates.	**No Potential:** Not expected to occur on-site based on lack of suitable undisturbed vegetation or soils.
Lucky morning glory *(Calystegia felix)*	--	--	1B.1	Annual rhizomatous herb generally blooming from March to September within meadows, seeps and riparian scrub habitat	**No Potential:** Not expected to occur on-site based on lack of suitable undisturbed vegetation or soils.
Parry's spineflower (Chorizanthe parryi var. parryi)	--	--	1B.1	Annual herb which generally blooms from April to June within chaparral, cismontane woodland, coastal scrub and grassland habitats with sandy and/or rocky openings.	**No Potential:** Not expected to occur on-site based on lack of suitable undisturbed vegetation or soils.
Slender-horned spineflower (Dodecahema leptoceras)	FE	SE	1B.1	Annual herb which generally blooms from April to June within chaparral, cismontane woodland and coastal scrub (alluvial fan) with sandy substrates.	**No Potential:** Not expected to occur on-site based on lack of suitable undisturbed vegetation or soils.
Mesa horkelia (*Horkelia cuneata ssp. puberula)*	--	--	1B.1	Perennial herb which generally blooms from February to September within chaparral (maritime), cismontane woodland and coastal scrub with sandy or gravelly substrates.	**Not Detected.**
Robinson's pepper-grass (*Lepidium virginicum var. robinsonii*)	--	--	4.3	Annual herb which generally blooms from January to July within chaparral and coastal sage scrub habitats	**No Potential:** Not expected to occur on-site based on lack of suitable undisturbed vegetation or soils.
Prostate vernal pool navarretia (*Navarretia prostrata*)	--	--	1B.2	Annual herb generally blooming from April to July within coastal scrub, meadows and seeps, valley and foothill grasslands and vernal pools	**No Potential:** Not expected to occur on-site based on lack of suitable undisturbed vegetation or soils.
Brand's star phacelia (*Phacelia stellaris*)	--	--	1B.1	Annual herb generally blooming from March to June within coastal sage scrub and dune habitats	**No Potential:** Not expected to occur on-site based on lack of suitable undisturbed vegetation or soils.
White rabbit tobacco (*Pseudognaphalium leucocephalum*)	--	--	2B.2	Perennial herb generally blooming from July to December within chaparral,	**Not Detected.**

Common Name Scientific Name	Status			Habitat Requirements	Occurrence Potential
	Federal	State	CRPR		
				cismontane woodland, coastal scrub and riparian woodland habitats	
Salt spring checkerbloom (*Sidalcea neomexicana*)	--	--	2.2	Perennial herb which generally blooms from March to June within chaparral, coastal scrub, lower montane coniferous forest, Mojavean desert scrub, and playas within alkaline/mesic gravelly substrates	**Not Detected.**
San Bernardino aster (*Symphyotrichum defoliatum*)	--	--	1B.2	Perennial rhizomatous herb generally blooming from July to December within various vegetation communities in associating with wetland substrates (ditches, streams and springs)	**Not Detected.**
Rigid fringepod (*Thysanocarpus rigidus*)	--	--	1B.2	Annual herb generally blooming from February to May within pinyon and juniper woodland habitats	**No Potential:** Not expected to occur on-site based on lack of suitable undisturbed vegetation or soils.

California Native Plant Society (CNPS): California Rare Plant Rank (CRPR)
CRPR 1A – plants presumed extinct in California
CRPR 1B – plants rare, threatened, or endangered in California, but more common elsewhere
CRPR 2A – plants presumed extirpated in California but common elsewhere
CRPR 2B – plants rare, threatened, or endangered in California but more common elsewhere
CRPR 3 – plants about which we need more information, a review list
CRPR 4 – plants of limited distribution, a watch list
.1 – Seriously endangered in California
.2 – Fairly endangered in California
3 – Not very endangered in California
Federal (USFWS) Protection and Classification
FE – Federally Endangered
FT – Federally Threatened
FC – Federal Candidate for Listing
State (CDFW) Protection and Classification
SE – State Endangered
ST – State Threatened

Special-Status Wildlife Species

Two special-status wildlife species were directly observed within the Phase I area. The species observed were the Northern harrier (*Circus cyaneus)* and the White-faced ibis (*Plegadis chihi*). Additionally, several species observed during the survey were deemed to have a moderate occurrence potential (primarily as foragers). Most remaining potentially occurring sensitive wildlife species are not expected to occur on-site due to lack of suitable habitat. Sensitive wildlife species potentially occurring on the Project site are summarized below in ***Table 4.4-2: Special-Status Wildlife Species Potentially Occurring in the Site Vicinity***.

Table 4.4-2: Special-Status Wildlife Species Potentially Occurring in the Site Vicinity

Common Name Scientific Name	Status		Habitat Requirements	Occurrence Potential
	Federal	State		
Invertebrates				
Crotch bumble bee (*Bombus crotchii*)	--	SC	Inhabits grasslands and shrublands and requires a hotter and drier environment than other bumblebee species.	**No Potential:** Not expected to occur on-site based on lack of suitable undisturbed vegetation or soils.
Delhi Sands flower-loving fly (*Rhaphiomidas terminatus abdominalis*)	FE	--	Restricted to Delhi sand formations in Riverside and San Bernardino Counties.	**No Potential;** No Delhi soils mapped on-site
Reptiles and Amphibians				
Western spadefoot (*Spea hammondii*)		SSC	Primary habitat for this species includes suitable breeding habitat below 1500 meters (i.e., vernal pools or other standing water that is free of exotic species) with secondary habitats including adjacent chaparral, sage scrub, grassland, and alluvial scrub habitats.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed soils and continuous agricultural activities conducted throughout the Project Site.
Southern California legless lizard (*Anniella stebbinsi*)		SSC	Broadleaved upland forest, chaparral, coastal dunes, and coastal scrub. Occurs in sandy or loose loamy soils under sparse vegetation, generally in moist, loose soil.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed vegetation or soils.
California glossy snake (*Arizona elegans occidentalis*)		SSC	Generalist reported from a range of scrub and grassland habitats, often with loose or sandy soils.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed vegetation or soils.
Coastal western whiptail (*Aspidoscelis tigris stejnegeri*)		SSC	The coastal western whiptail occurs in a wide variety of habitats including coastal sage scrub, desert scrub, Riversidean alluvial fan scrub, woodlands, grasslands, playas, and respective ecotones between these habitats.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed vegetation **or soils.**
San Bernardino ringneck snake (*Diadophis punctatus modestus*)	--	--	Chaparral, coastal sage scrub, grassland, riparian, and woodlands.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed vegetation or soils
Western pond turtle (*Actinemys marmorata*)	--	SSC	The western pond turtle inhabits slow moving permanent or intermittent streams, small ponds, small lakes, reservoirs, abandoned gravel pits, permanent and ephemeral shallow wetlands, stock ponds, and sewage treatment lagoons.	**Not Detected.** Not expected to occur on-site based on a lack of suitable undisturbed basking sites and permanent water.
Coast horned lizard (*Phrynosoma blainvillii*)	--	SSC	Open areas of sandy soil with coastal sage scrub, chaparral, grassland, riparian, and washes and watercourses.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed vegetation or soils.
Coast patch-nosed snake (*Salvadora hexalepis virgultea*)	--	SSC	The coast patch-nosed snake prefers brushy coastal sage scrub/ chaparral habitats.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed vegetation or soils.
Two-striped gartersnake (*Thamnophis hammondii*)	--	SSC	Marsh and swamp, riparian scrub, riparian woodland, and wetland. Highly aquatic, found in or near permanent fresh water. Often along streams with rocky beds and riparian growth.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed vegetation, soils or permanent water.
Birds				
Cooper's hawk (*Accipiter cooperii*)	--	SSC	Cooper's hawk is most commonly found within or adjacent to riparian/oak forest and woodland habitats. This uncommon resident of California increases in numbers during winter migration.	**Low Potential –** May occasionally forage on-site and breed within the mature Eucalyptus trees**.**

Common Name Scientific Name	Status		Habitat Requirements	Occurrence Potential
	Federal	State		
Sharp-shinned hawk (*Accipiter striatus*)	--	CWL	Potential habitat for the sharp-shinned hawk includes montane coniferous forest for potential breeding areas and riparian scrub, woodland, and forest habitat, oak woodland and forest, chaparral, coastal sage scrub, desert scrub, and Riversidean alluvial fan sage scrub for foraging.	**Low Potential –** May occasionally forage on-site.
Tri-colored blackbird (*Agelaius tricolor*)	--	ST/SSC	Marshes and grasslands. Breeding colonies require nearby water, nesting substrate, and open range foraging habitat of natural grassland, woodland, or agricultural cropland.	**No Potential.** Not expected to occur on-site based on a lack of nesting habitat (cattail, rushes, and willows) within or adjacent to the Project Site.
Golden eagle (*Aquila chrysaetos*)	--	CWL, SFP	Within southern California, the species prefers grasslands, brushlands (coastal sage scrub and chaparral), deserts, oak savannas, open coniferous forests, and montane valleys.	**Low Potential –** May occasionally forage on-site.
Great egret (*Ardea alba*)	--	Nesting Colony	Wet areas, fields, margins of open water.	**Moderate Potential –** Expected to occasionally forage on-site but not breed.
Great blue heron (*Ardea herodias*)	--	Nesting Colony	Wet areas, fields, margins of open water.	**Moderate Potential –** Expected to occasionally forage on-site but not breed.
Burrowing owl (*Athene cunicularia*)	--	SSC	The burrowing owl uses predominantly open land, including grassland, agriculture, playa, sparse coastal sage scrub, desert scrub habitats. Some breeding burrowing owls are year-round residents and additional individuals from the north may winter throughout the region.	**Low Potential –** Suitable burrows larger than 4 inches in diameter and foraging habitat documented within and east of the Project Site
Ferruginous hawk (*Buteo regalis*)	--	CWL	Grasslands and other open terrain of the plains and foothills. Wintering species. Primarily open fields with low vegetation.	**Low Potential – May occasionally forage on-site.**
Swainson's hawk (*Buteo swainsoni*)	--	ST	Grasslands and other open terrain.	**Low Potential –** May occasionally forage **on-site.**
Mountain plover (*Charadrius montanus*)	--	SSC	Dry upland prairies and plains, semidesert, bare dirt fields.	**No Potential**. Not expected to occur on-site based on a lack of suitable undisturbed vegetation.
Northern harrier (*Circus cyaneus*)	--	SSC	The northern harrier frequents open wetlands, wet/lightly grazed pastures, fields, dry uplands/prairies, mesic grasslands, drained marshlands, croplands, meadows, grasslands, open rangelands, fresh and saltwater emergent wetlands.	**Observed**
Western yellow-billed cuckoo (*Coccyzus americanus occidentalis*)	FT	SE	Riparian. Uncommon to rare summer resident of valley foothill and desert riparian habitats.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed riparian scrub, forest or woodland vegetation.
Snowy egret (*Egretta thula*)	--	Nesting Colony	Wet areas, fields, margins of open water.	**Moderate Potential –** Expected to occasionally forage on-site but not breed.
White-tailed kite (*Elanus leucurus*)	--	SFP	The white-tailed kite is found in riparian, oak woodlands adjacent to large open spaces including grasslands, wetlands, savannahs and agricultural fields. This non-migratory bird species occurs	**Low Potential –** May occasionally forage on-site.

Common Name Scientific Name	Status		Habitat Requirements	Occurrence Potential
	Federal	State		
			throughout the lower elevations of California and commonly nests in coast live oaks.	
California horned lark (*Eremophila alpestris actia*)	--	CWL	Variety of open habitats, usually where trees and large shrubs are absent.	**Moderate Potential –** Expected to occasionally forage and breed on-site.
Merlin (*Falco columbarius*)	--	CWL	Grasslands, coastal sage scrub and estuaries, windrows, open fields.	**Low Potential –** May occasionally forage on-site.
Prairie falcon (*Falco mexicanus*)	--	CWL	Habitat use of the prairie falcon includes annual grasslands to alpine meadows. The prairie falcon is associated primarily with perennial grasslands, savannahs, rangeland, some agricultural fields during the winter season, and desert scrub areas, all typically dry environments of western North American where there are cliffs or bluffs. for nest sites.	**Low Potential –** May occasionally forage on-site.
American peregrine falcon (*Falco peregrinus anatum*)	--	SFP	Throughout the species' range, peregrine falcons are found in a large variety of open habitats, including tundra, marshes, seacoasts, savannahs and high mountains.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed vegetation.
Loggerhead shrike (*Lanius ludovicianus*)	--	SSC	This species of shrike hunts in open or grassy areas and nests in large chaparral shrubs such as ceanothus and lemonade berry.	**Low Potential –** May occasionally forage on-site.
California gull (*Larus californicus*)	--	CWL	Nearly all types of fresh and salt water, cropland, landfills, refuse areas, open lawns.	**Moderate Potential –** Expected to occasionally forage on-site.
California black rail (*Laterallus jamaicensis coturniculus*)	--	ST/SFP	Brackish marsh, freshwater marsh, marsh and swamp, salt marsh, wetland. Inhabits freshwater marshes, wet meadows and shallow margins of saltwater marshes bordering large bays.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed habitats.
Long-billed curlew (*Numenius americanus*)	--	CWL	Coastal estuaries, upland herbaceous areas,5 croplands, wet areas, open fields, shores of open water.	**Moderate Potential –** Expected to occasionally forage on-site.
Double-crested cormorant (*Nannopterum auritum*)	--	CWL	Lakes, fresh, salt, and estuarine waters.	**Moderate Potential –** Expected to occasionally forage on-site.
White-faced ibis (*Plegadis chihi*)	--	CWL	Freshwater marshes and brackish areas.	**Observed**
Coastal California gnatcatcher (*Polioptila californica californica*)	FT	SSC	The coastal California gnatcatcher is a nonmigratory bird species that primarily occurs within sage scrub habitats in coastal southern California dominated by California sagebrush.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed habitats including coastal sage scrub and associations.
Mammals				
Pallid bat (*Antrozous pallidus*)	--	SSC	Chaparral, coastal scrub, desert wash, Great Basin grassland, Great Basin scrub, Mojavean desert scrub, riparian woodland, Sonoran desert scrub, upper montane coniferous forest, and valley and foothill grassland. Oak and grassland ecotones. Prefers foraging in the open. Roosts in attics or rock cracks; in the open, near foliage at night.	**Low Potential.** Expected to occasionally forage on-site

Common Name Scientific Name	Status		Habitat Requirements	Occurrence Potential
	Federal	State		
Northwestern San Diego pocket mouse (*Chaetodipus fallax fallax*)	--	SSC	The northwestern San Diego pocket mouse occurs in coastal sage, upland sage scrubs, and alluvial fan sage scrub, sage scrub/grassland ecotones, chaparral, and desert scrubs at all elevations up to 6,000 feet.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed habitats including coastal sage scrub and associations.
Townsend's big-eared bat (*Corynorhinus townsendii*)	--	SSC	A wide variety of habitats including woodlands and arid grasslands. Roosts in mines and caves.	**Low Potential.** Expected to occasionally forage on-site.
San Bernardino kangaroo rat (*Dipodomys merriami parvus*)	FE	SSC	Prefers alluvial scrub, coastal sage scrub habitats with sandy and gravelly substrates.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed habitats including Riversidean alluvial fan sage scrub and associations.
Stephens' kangaroo rat (*Dipodomys stephensi*)	Fe	ST	The Stephens' kangaroo rat is found almost exclusively in open grasslands or sparse shrublands with cover of less than 50 percent during the summer.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed habitats.
Western mastiff bat (*Eumops perotis californicus*)	--	SSC	Roosts in rocky areas and forages in grassland, shrublands, and woodlands.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed habitats.
Western yellow bat (*Lasiurus xanthinus*)	--	SSC	Roosts in the skirts of palm trees and forages in adjacent habitats. forests and meadows.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed habitats.
San Diego black-tailed jackrabbit (*Lepus californicus bennettii*)	--	SSC	The San Diego blacktailed jackrabbit in open habitats, primarily including grasslands, sage scrub, alluvial fan sage scrub, and Great Basin sage scrub.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed habitats.
Western small-footed myotis *(Myotis ciliolabrum*)	--	--	Feeds among trees or over brush. Roosts in caves, mines, and in cliff or rock openings.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed habitats.
Yuma myotis (*Myotis yumanensis*)	--	--	Water and wooded canyon bottoms. Roosts in caves and abandoned buildings.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed habitats.
San Diego desert woodrat (*Neotoma lepida intermedia*)	--	SSC	Riversidean and coastal sage scrub, chaparral and nonnative grasslands. Shrub and desert habitats, primarily associated with rock outcroppings, boulders, cacti, or areas of dense undergrowth.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed habitats.
Pocketed free-tailed bat (*Nyctinomops femorosaccus*)	--	SSC	Desert habitats. Roosts in rock crevices in cliffs.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed habitats.
Big free-tailed bat (*Nyctinomops macrotis*)	--	SSC	Desert habitats. Roosts in rock crevices in cliffs.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed habitats.
Los Angeles pocket mouse (*Perognathus longimembris brevinasus*)		SSC	Low elevation grassland alluvial sage scrub and coastal sage scrub habitats.	**No Potential.** Not expected to occur on-site based on a lack of suitable undisturbed habitats.

Federal (USFWS) Protection and Classification
FE – Federally Endangered
FT – Federally Threatened
FC – Federal Candidate for Listing

State (CDFW) Protection and Classification
SE – State Endangered
SSC – State Species of Special Concern
CWL – California Watch List
SFP – State Fully Protected
SC – State Candidate for Listing

Special-Status Habitats

Special-status habitat types are vegetation communities that support concentrations of sensitive plant or wildlife species, are of relatively limited distribution, or are of particular value to wildlife. Although sensitive habitats are not necessarily afforded legal protection unless they support protected species, potential impacts to them may increase concerns and mitigation suggestions by resources agencies. Sensitive habitat types known from the Project site vicinity (mostly associated with Prado Dam and the Santa Ana River) include Riversidean Alluvial Fan Sage Scrub, Southern California Arroyo Chub/Santa Ana Sucker Stream, Southern Coast Live Oak Forest, Southern Cottonwood Willow Riparian Forest, Southern Interior Cypress Forest, Southern Riparian Forest, Southern Sycamore Alder Riparian Woodland, and Southern Willow Scrub. No sensitive or undisturbed native habitats were documented within the Phase I area. As mentioned above, no sensitive or undisturbed native habitats are expected within the Phase II area because the disturbance level, land use, and other environmental factors are consistent between the Phase I and Phase II areas.

Sensitive Habitats in the Project Vicinity

The consultant did not document any sensitive or undisturbed native habitats within the Project site. The Project Site is characterized as 84.1 acres of heavily disturbed active dairy and agricultural facilities. All of the active retention ponds are devoid of wetland vegetation including but not limited to riparian scrub, forest, or woodland habitat. The nearest known habitats (as mentioned above) that would support sensitive biological resources would be the Santa Ana River and Prado Dam areas located approximately 3.5 miles south of the Project site. The species associated with these sensitive biological resource areas would not be expected to occur on-site due to lack of suitable habitat.

Jurisdictional Resources

The Project site is located within the Chino Basin between the Chino Hills to the southwest and San Gabriel Basin to the north. The presence of wetland hydrology was evaluated throughout the Project site by recording the extent of observed surface flows, depth of inundation, depth to saturated soils, and depth to free water in the soil pits. Indicators of wetland or riverine hydrology were then recorded, such as water marks, drift lines, rack, debris, and sediment deposits. Additionally, indicators of hydric soils, such as redoximorphic features, buried organic matter, organic streaking, reduced soil conditions, gleied or low-chroma soils, or sulfidic odor were recorded. The on-site active dairy/effluent pond would not be subject to federal wetland regulatory requirements and would not be considered a freshwater pond. Furthermore, the active dairy/effluent pond is not connected to a natural stream and does not divert natural flow from any river, stream, or lake. Since these waters are not a part of a natural stream, river, or lake, they would not be considered jurisdictional under the CDFW Lake and Streambed Alteration Program. The program states: “An entity shall not substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake, or deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake….” Furthermore, the active dairy/effluent pond is an isolated feature and is not tributary to, nor has a significant nexus (biological, chemical, or physical connection) to traditional navigable waters of the United States. Therefore, the artificial basins on the Project site would not be considered federally jurisdictional under the Clean Water Act (CWA).

Based on the field investigation conducted, no wetlands or jurisdictional resources regulated by the United State Army Corps of Engineers (USACE), CDFW, or the Regional Water Quality Control Board (RWQCD) were documented within the Phase I area. Similarly, the Phase II area contains an artificial basin that would not be considered federally jurisdictional.

Additionally, Project construction and operation would be subject to prepare a Water Quality Management Plan (WQMP), Storm Water Pollution Prevention Plan (SWPPP) and comply with the National Pollutant Discharge Elimination System (NPDES) permit and the San Bernardino County Regional Municipal Separate Stormwater Sewer System (MS4) code provisions. Refer to ***Section 4.10: Hydrology*** for additional information.

Wildlife Movement Corridors

The Project site is surrounded by various forms of existing development. The Project Site is completely bordered by high traffic roads, commercial/residential development, active dairy/agricultural facilities and does not represent a wildlife movement corridor or route between open space habitats. Therefore, it is highly unlikely that the Project site occupies an important location relative to regional wildlife movement.

4.4.3 Regulatory Setting

Federal

Federal Endangered Species Act

The Federal Endangered Species Act (FESA), as amended, protects, and conserves any species of plant or animal and their habitats that are threatened or endangered with extinction. The "take" of endangered species is prohibited under FESA Section 9. The term "take" in this instance means to "harass, harm, pursue, hunt, wound, kill, trap, capture, collect, or attempt to engage in any such conduct." FESA Section 7 requires federal agencies to consult with the USFWS on proposed federal actions that may affect any endangered, threatened, or proposed species or critical habitat that may support the species. FESA Section 4(a) requires that critical habitat be designated by the USFWS "to the maximum extent prudent and determinable, at the time a species is determined to be endangered or threatened." This provides guidance for planners/managers and biologists by indicating locations of suitable habitat and where preservation of a species has high priority. FESA Section 10 provides the regulatory mechanism for incidental take of a listed species by private interests and nonfederal government agencies during lawful activities. Habitat Conservation Plans (HCPs) for the impacted species must be developed in support of incidental take permits to minimize impacts to the species and formulate viable mitigation measures.

Migratory Bird Treaty Act

The Migratory Bird Treaty Act of 1918 (MBTA; 16 United States Code [USC] Section 703-712 et seq.) is a federal statute that affirms and implements four international conservation treaties that the United States entered into with Canada, Mexico, Japan, and Russia. This treaty is intended to protect shared migratory bird resources and ensures the sustainability of populations. The MBTA governs the transportation of migratory birds, their eggs, their parts, and their nests. It also prohibits the sale, purchase, barter, or

offering of these items, except under a valid permit or as permitted in the implementing regulations. USFWS administers permits concerning migratory birds in accordance with the MBTA. According to the Code of Federal Regulations (CFR), one can locate this list of protected migratory bird species under CFR Title 50 Part 10.13 (10.13 list). The 10.13 list was last updated in 2020, incorporating the most current scientific information on taxonomy and natural distribution.

Clean Water Act, Section 404

The USACE regulates discharge of dredged or fill material into waters of the United States, including wetlands under the CWA. Activities in waters of the United States regulated under this program include fill for development, water resource projects, infrastructure development and mining projects. A permit is required before dredged or fill material may be discharged into waters of the United States, which entails assessment of potential adverse impacts to USACE wetlands and jurisdictional waters and any mitigation measures that the USACE requires unless the activity is exempt from Section 404 regulation (e.g., certain farming and forestry activities). Section 7 consultation with USFWS may be required for impacts to a federally-listed species. If cultural resources may be present, Section 106 review may also be required. When a Section 404 permit is required, a Section 401 Water Quality Certification is also required from the Regional Water Quality Control Board (RWQCB).

Clean Water Act, Section 401 and 402

Section 401(a)(1) of the CWA specifies that any applicant for a federal license or permit to conduct any activity that may result in any discharge into navigable waters shall provide the federal permitting agency with a certification, issued by the state in which the discharge originates, that any such discharge will comply with the applicable provisions of the CWA. In California, the applicable RWQCB must certify that the Project will comply with water quality standards. Permits requiring Section 401 certification include USACE Section 404 permits and National Pollutant Discharge Elimination System (NPDES) permits issued by the U.S. Environmental Protection Agency (EPA) under Section 402 of the CWA. NPDES permits are issued by the applicable RWQCB. The City of Ontario is in the jurisdiction of the Santa Ana RWQCB (Region 8).

State

California Fish and Game Code, Section 1600

The California Fish and Game Code (CFGC) Section 1600 requires a Project proponent to notify the CDFW of any proposed alteration of streambeds, rivers, and lakes. The intent is to protect habitats that are important to fish and wildlife. CDFW may review and place conditions on the Project, as part of a Streambed Alteration Agreement (SAA), that address potentially significant adverse impacts within CDFW's jurisdictional limits.

California Fish and Game Code, Section 3503.5, 3511, 3515,3800

Section 3503.5 of the CFGC states that it is "unlawful to take, possess, or destroy any birds in the order Falconiformes or Strigiformes (birds of prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by this code or any regulation adopted pursuant thereto." Activities

that result in the abandonment of an active bird of prey nest may also be considered in violation of this code. In addition, CFGC, Section 3511 prohibits the taking of any bird listed as fully protected, and CFGC, Section 3515 states that it is unlawful to take any non-game migratory bird protected under the MBTA. Section 3800 states that it is unlawful to take any nongame bird except as provided in this code or in accordance with regulations of the commission or, when relating to mining operations, a mitigation plan approved by the department.

California Endangered Species Act

The California Endangered Species Act (CESA), enacted in 1970 and amended in 1984, is a California law that conserves and protects plant and animal species at risk of extinction. It generally parallels the main provisions of the FESA and is administered by the CDFW. Plant and animal species may be designated threatened or endangered under CESA after a formal listing process by the CFGC. With already approximately 250 species currently listed, a CESA-listed species, or any part or product of the plant or animal, may not be imported into the state, exported out of the state, "taken" (i.e., killed), possessed, purchased, or sold without proper authorization. Implementation of CESA has reduced and avoided impacts to California's most imperiled plants and animals, has protected hundreds of thousands of acres of vital habitat, and has led to a greater scientific understanding of California's incredible biodiversity. Candidate species may be afforded temporary protection as though they were already listed as threatened or endangered at the discretion of the Fish and Game Commission. Unlike the FESA, CESA does not include listing provisions for invertebrate species. Under certain conditions and if the take is incidental to otherwise lawful activities, CESA has provisions for take through Incidental Take Permits (ITP) or memorandum of understanding (MOU). In addition, some sensitive mammals and birds are protected by the State as "fully protected species." California "species of special concern" are species designated as vulnerable to extinction due to declining population levels, limited ranges, and/or continuing threats. This list is primarily a working document for the CDFW's California Natural Diversity Database (CNDDB), which maintains a record of known and recorded occurrences of sensitive species. Informally listed taxa are not protected per se but warrant consideration in the preparation of biological resources assessments.

Porter-Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act provides for statewide coordination of water quality regulations. The State Water Resources Control Board (SWRCB) was established as the Statewide authority and nine separate RWQCBs were developed to oversee water quality on a day-to-day basis.

The SWRCB is the primary agency responsible for protecting water quality in California. As discussed above, the RWQCBs regulate discharges to surface waters under the CWA. In addition, the RWQCBs are responsible for administering the Porter-Cologne Water Quality Control Act.

Pursuant to the Porter-Cologne Water Quality Control Act, the state is given authority to regulate waters of the state, which are defined as any surface water or groundwater, including saline waters. As such, any person proposing to discharge waste into a water body that could affect its water quality must first file a Report of Waste Discharge if Section 404 of the CWA is not required for the activity. "Waste" is partially defined as any waste substance associated with human habitation, including fill material discharged into water bodies.

Natural Community Conservation Planning Act

In 1991, the California Natural Community Conservation Planning Act (NCCP Act; CFGC Section 1900 et seq.) was approved and the NCCP Coastal Sage Scrub program was initiated in southern California. California law (CFGC Section 2800 et seq.). The Act established the NCCP program "to provide for regional protection and perpetuation of natural wildlife diversity while allowing compatible land use and appropriate development and growth." The NCCP Act encourages preparation of plans that address habitat conservation and management on an ecosystem basis rather than one species or habitat at a time.

CDFW Lake and Streambed Alteration Program

The Lake and Streambed Alteration Program requires that an entity shall not substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake, or deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake.

Local

City of Ontario General Plan – The Ontario Plan 2050

The Ontario Plan (TOP) 2050 Environmental Resources Element defines the ethic to guide management of the City's environmental resources; establishes goals for Environmental Infrastructure; maps environmental justice areas; and establishes policies that support system integration, resource conservation and regeneration, energy independence, environmental justice, and healthy communities. Included in TOP 2050 is the Policy Plan, which is a framework that would guide the City's future growth through the application of policies and goals. The following goals of TOP 2050 relate to visual and scenic resources. The TOP 2050 Environmental Resources Element contains policies which pertain to biological resources.

The following policy contained in the Environmental Resources Element is relevant to the Project:

Environmental Resources Element[4]

Goal ER5	**Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.**
Policy ER5-1	Habitat Conservation Areas. We support the protection of biological resources through the establishment, restoration, and conservation of high-quality habitat areas.
Policy ER5-2	Entitlement and Permitting Process. We comply with state and federal regulations regarding protected species.
Policy ER5-4	Transition of Farms. We protect both existing farms and sensitive uses around them as agricultural areas transition to urban uses.

[4] City of Ontario. 2022. *TOP 2050, Environmental Resources Element*. https://www.ontarioca.gov/about-ontario-ontario-plan-policy-plan/environmental-resources. (accessed March 2023).

City of Ontario Municipal Code

Municipal Code, Section 6.05.020

Section 6.05.020, Tree Preservation Policy and Protection Measures, of the Ontario Development Code establishes policies and measures that would further the preservation, protection, and maintenance of established and healthy heritage trees within the City. A Heritage Tree is one that is designated for preservation as a tree of historic or cultural significance, or a tree of importance to the community due to any one of the following factors:

- It is one of the largest or oldest trees of species located within the City and has a trunk diameter of 18 inches or greater when measured at 54 inches above grade;
- It has a historical significance due to association with a historic building, site, street, person, or event;
- It is a defining landmark or significant outstanding feature of a neighborhood or district, typical of early Ontario Landscapes. This includes Camphor Tree (*Cinnamomum camphora*), Deodar Cedar (*Cedrus deodara*), London Planetree (*Platanus acerifolia*), Cork Oak (*Quercus suber*), Holly Oak (*Quercus ilex*), and California Pepper (*Schinus molle*);
- It is a Native Tree. This means that it is one of the following California native tree species with a trunk diameter of more than 8 inches, measured at 54 inches above natural grade: California Sycamore (*Platanus racemose*), Torrey Pine (*Pinus torreyana*), Coast Live Oak (*Quercus agrifolia*), Engelmann Oak (*Quercus engelmannii*), Valley Oak (*Quercus lobata*), or California Bay (*Umbellularia californica*).

Healthy Heritage Trees that are approved for removal shall be replaced with new trees with a total trunk diameter equal to the tree(s) removed, or as deemed appropriate by the Approve Authority based on lot size and available planting space. Replacement trees are to be in addition to the quantity of trees required for landscaping. The Approving Authority is responsible for reviewing the landscape plan and approving appropriate species for tree replacement (The Ontario Plan 2022).

Several blue gum (*Eucalyptus globulus*) and red gum (*Eucalyptus camaldulensis*) are located adjacent to the northeast and western Project Site boundaries, although these are not known to be Heritage Trees meeting the criteria set forth above.

Municipal Code, Volume II, Chapter 2

The City's Municipal Code (MC), Volume II, Chapter 2 contains a provision for "Parkway Tree Regulations" (Ordinance 1664), to preserve parkway trees and to regulate the maintenance and removal of such trees. Parkway is defined as "…that portion of any public street right-of-way between the right-of-way boundary line and the curb line, and also the area enclosed within the curb lines of a medial divider." The property owner abutting upon public rights-of-way (ROW) is responsible to water any tree located in the parkway and for trimming that can be done from the ground to preserve the neat appearance and non-obstructed use of the parkway, while the City is responsible for all major pruning. Removal or relocation of any parkway tree requires prior authorization from the Public Works Agency of the City through a permit process, and planting of a replacement tree, whenever feasible, shall be a condition included in any permit

issued by the City for the removal of any parkway tree. Alternatively, a cash-in-lieu deposit may be accepted by the City as an alternate to the actual planting of any required parkway tree based on a fair value established by the Public Facilities Manager.

City of Ontario Biological Resources Habitat Mitigation Fee[5]

Since the Settlement Agreement, the City has established a habitat mitigation fee to cover potential environmental impacts to the Burrowing Owl, Delhi sands flower-loving-fly (DSFLF), raptor foraging, loss of open space, and agricultural lands. Development impact fees for new development in Ontario Ranch were adopted on June 23, 2003, by the City Council. The Ontario Ranch development impact fees include a habitat mitigation fee of $4,320 per net acre for proposed residential, commercial, hotel and restaurant, office, and industrial development. Mitigation fees have been collected by the City and have been deposited into a trust fund to be used for the acquisition, restoration, rehabilitation, and maintenance of lands deemed to have long-term conservation value. Up to $500 of the fees may be used for DSFLF. In addition, current City procedure is to require a habitat assessment to determine existing habitat and biological resources on proposed development sites. If the assessment determines that there is potential habitat for sensitive species, focused protocol surveys are required. If potential DSFLF habitat is present, two-year (consecutive) protocol surveys per the USFWS Interim General Survey Guidelines for DSFLF are required.

The City has approved a Memorandum of Agreement with Inland Empire Resource Conservation District to administer the Greater Prado Basin Habitat Conservation Program and associated Ontario Ranch Habitat Mitigation Fees.

4.4.4 Impact Thresholds and Significance Criteria

According to Appendix G of the state CEQA Guidelines, a project would a have significant effect on the biological resources if the project would:

- Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service;
- Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service;
- Have substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means; or
- Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

[5] City of Ontario. 2022. *TOP 2050 Final Supplemental Environmental Impact Report, Section 5.4, Biological Resources*. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (accessed March 2023).

- Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?
- Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Methodology

The Project and associated Plans, Program, and Policies in *Section 4.4.5* are evaluated as to the aforementioned significance criteria/thresholds, to determine the potential level of significance of any impact concerning biological resources. This analysis considers the existing regulatory framework (i.e., laws, ordinances, regulations, and standards) that avoid or reduce the potentially significant environmental impact. Where significant impacts remain despite compliance with the regulatory framework, feasible mitigation measures are recommended, to avoid or reduce the Project's potentially significant environmental impacts.

Biological Resource Survey

Consultant conducted a field survey of the Phase I area on October 7, 2022. The purpose of the field survey was to document the existing habitat conditions, obtain plant and animal species information, view the surrounding uses, assess the potential for state and federal waters, assess potential for wildlife movement corridors, and if critical habitat is present, assess for the presence of constituent elements.

Aerial imagery, topographic maps, as well as vegetation and rare plant maps were previously prepared for the region and were used to determine community types and other physical features that could support sensitive plants or wildlife within or adjacent to the Project site.

A general plant survey was conducted throughout the Phase I area and all plants observed were either identified in the field or collected and later identified using taxonomic keys. All animals identified during the reconnaissance survey by sight, call, tracks, scat, or other characteristic sign were documented. In addition to species actually detected, expected use of the site by other wildlife was derived from the analysis of habitats on the site, combined with known habitat preferences of regionally occurring wildlife species. Currently, the Applicant does not control the Phase II parcels therefore, a biological resources report was not completed at this time. At the time of Phase II development, it will undergo its own site-specific CEQA analysis. However, because the disturbance level, land use, and other environmental factors are generally consistent between the Phase I and Phase II areas, occurrence potential of special-status plant and wildlife species analyzed for the Phase I area is anticipated to be the same for the Phase II area.

Burrowing Owl Survey

The BUOW (SSC) uses predominantly open land, including grassland, agriculture, playa, sparse coastal sage scrub, and desert scrub habitats. The consultant concluded there would be a low potential for BUOW within the Project site. Suitable habitat including burrows larger than 4-inches in diameter, which is suitable habitat for the BUOW, was observed within and adjacent to the east of the Project site.

4.4.5 Plans, Programs, and Policies

PPP BIO-1 The Project shall comply with the Federal Endangered Species Act and Migratory Bird Treaty Act.

PPP BIO-2 The Project shall comply with the California Endangered Species Act and Fish and Game Code.

4.4.6 Impacts and Mitigation Measures

The following impact analysis addresses thresholds of significance.

Impact 4.4-1 ***Would the Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?***

Level of Significance: Less than Significant with Mitigation Incorporated (Phase I Project) and Significant and Unavoidable (Phase II Only)

Specific Plan – Phase I

Construction

A substantial adverse effect to special-status species would occur if the Project would:

1) Reduce the population size or reduce the area of occupied habitat of a rare, threatened, or endangered species; or
2) Reduce the population size or reduce the area of occupied habitat of a locally uncommon species.

A substantial adverse effect on a special-status wildlife species occurs if the Project would:

1) Increase predation of a species, leading to population reduction;
2) Reduce habitat availability sufficiently to affect potential reproduction; or
3) Reduce habitat availability sufficiently to constrain the distribution of a species and not allow for natural changes in distributional patterns over time.

Project Implementation would cover a total of 84.1 acres within the City on 18 parcels allowing for a business park and mixed-use development. Furthermore, the Phase I area within the Project Specific Plan is mostly comprised of heavily disturbed active dairy and agricultural facilities.

Sensitive Plants

Refer to ***Table 4.4-1: Special-Status Plant Species Potentially Occurring in the Site Vicinity*** above. A total of thirteen sensitive plant species have potential to occur within the Project vicinity, however of these 13 plant species, eight were deemed to have no potential to occur, and five were not detected during the reconnaissance survey for the Phase I area. Lack of suitable habitat within the Project vicinity would make it difficult for these plant species to survive. Long-standing use of the Phase I area for agricultural uses

and other anthropogenic disturbances have likely altered soil chemistry and other substrate characteristics such that on-site soils are not likely capable of supporting those sensitive plant species known from the Project vicinity. Phase I area development would not eliminate significant amounts of habitat for potentially occurring special-status plant species, nor reduce population size of sensitive plant species below self-sustaining levels on a local or regional basis (if present). Therefore, the development of the Project would not result in a substantial adverse effect, either directly or through habitat modification, on any plant specifies identified as a candidate, sensitive or special status species in local or regional plans, policies, or regulation or by the CDFW or USFWS in the Phase I area. Hence, no significant impact to special-status plant species or their habitat would occur.

Sensitive Wildlife

Two special-status wildlife species were directly observed in the Phase I area. The species observed were the Northern harrier (SCC) and the White-faced ibis (CWL). Additionally, several species observed during the survey were deemed to have a moderate occurrence potential (primarily as foragers). Most remaining potentially occurring sensitive wildlife species are not expected to occur on-site due to lack of suitable habitat. Impacts to agricultural-related habitats could amount to an incremental reduction of potential foraging habitat for certain species that may be considered locally adverse. However, development would not eliminate significant amounts of habitat for these species, nor reduce population size below self-sustaining levels on a local or regional basis, and impacts would be less than significant.

Nesting Birds

Most native bird species are protected under the federal MBTA and CDFG Code Sections 3503, 3503.5, and 3800 which prohibit take, possession, or destruction of birds, their nests, or eggs. If it were later determined that active nests of any of special-status or native species would be lost or indirectly impacted as a result of site-preparation, it could result in adverse impacts and would be in conflict with these regulations. If construction activities (e.g., site disturbances) are proposed during the nesting season, a nesting bird survey(s) may be required prior to development. Development activities performed outside of the avian breeding season (generally September 1 to December 31) usually eliminates the need to conduct pre-activity nesting surveys for most native species known from the site vicinity and ensure that there were no constraints to construction relative to the MBTA/CDFG Code. Compliance with the MBTA/CDFG Code would be necessary prior to development; however, no special permit or approval is typically required in most instances where BUOW are not present. Development activities performed outside of the avian breeding season would generally eliminate the need to conduct pre-activity nesting surveys for most common native species (other than BUOW) known from the Project site vicinity, and likely ensure that there were no constraints to construction relative to the MBTA/CDFG codes.

Suitable foraging and nesting habitat for the Cooper's hawk (SSC), sharp-shinned hawk (CWL), golden eagle (CWL,SFP), great egret (Nesting Colony), great blue heron (Nesting Colony), ferruginous hawk (CWL), snowy egret (Nesting Colony), white-tailed kite (SFP), California horned lark (CWL), Swainson's hawk (ST), merlin (CWL), prairie falcon (CWL), loggerhead shrike (SSC), California gull (CWL), long-billed curlew (CWL), and double crested cormorant (CWL) was observed in the Phase I area within the agricultural fields and the artificially created unvegetated dairy effluent retention ponds. The Project would adhere to the required Ontario Ranch development impact fees which include a habitat mitigation fee of $4,320 per net

acre for proposed residential, commercial, hotel and restaurant, office, and industrial development. These paid mitigation fees would then be collected by the City and be deposited into a trust fund to use for the acquisition, restoration, rehabilitation, and maintenance of lands deemed to have long-term conservation value. As stated in *Section 4.4.3: Regulatory Setting*, the City has approved a Memorandum of Agreement with Inland Empire Resource Conservation District to administer the Greater Prado Basin Habitat Conservation Program and associated Ontario Ranch Habitat Mitigation Fees. Additionally, **MM BIO-1** would require a qualified biologist to conduct a nesting bird survey(s) to be reviewed by the City to reduce impacts to nesting birds to less than significant levels.

Many North American bat species tend to congregate at preferred roosting sites or at isolated water sources, several field methods are available to identify species and broad habitat associations (e.g., tree cavities, exfoliating bark, bark fissures, crevices, cliff faces, and/or dense foliage). Suitable foraging and roosting habitat for the pallid bat (SSC), Townsend's big-eared bat (SSC), and the western mastiff bat (SSC) was observed within the Phase I area. Potential impacts to foraging habitat for these species would be mitigated to a level of less than significant level with implementation of **MM BIO-2**. **MM BIO-2** would require a qualified biologist to determine whether potential roosting sites for bats may be affected through exit counts and acoustic surveys that would be performed prior to ground disturbance activities. If the results of the bat survey find a total of one single roosting individual of a special status bat species or 25 or more individuals of a non-special status bat species with potential to be present in the Phase I area (i.e., western Mastiff bat, big free-tailed bat, or pallid bat), a Bat Management Plan shall be developed to ensure mortality to bats does not occur. The plan would be reviewed and approved by the CDFW.

Although there is suitable foraging and nesting habitat located on the Project site for the aforementioned species, suitable habitat for breeding was not documented within the Project site, and mitigation would reduce potential impacts to these species to less than significant levels. Furthermore, the biological assessment prepared did not document any sensitive or undisturbed native habitats within the Project site.

Burrowing Owl (BUOW)

Furthermore, suitable habitat including burrows larger than 4-inches in diameter, which is suitable habitat for the BUOW, was observed within and adjacent to the east of the Project site. Although there is suitable habitat for the BUOW, potential impacts to refugia, nesting and foraging habitat for this species would be mitigated to a level of less than significant following implementation of **MM BIO-3** which would ensure BUOW surveys are completed prior to construction. **MM BIO-3** would implement focused and preconstruction surveys to ensure potential impacts to refugia, nesting, and foraging habitat for the BUOW would be reduced to less than significant levels. Upon arrival at the survey area and prior to initiating the walking surveys, the biologist would use binoculars and/or spotting scope to scan suitable habitat. A total of four (4) surveys would be conducted with at least one site visit between February 15th and April 15th, and a minimum of three surveys at least three weeks apart between April 15th and July 15th. Furthermore, one site visit will occur after June 15th.

BUOW is a CDFW Species of Special Concern. The BUOW uses predominantly open land, including grassland, agriculture, playa, sparse coastal sage scrub, and desert scrub habitats. Suitable burrows larger than 4 inches in diameter and foraging habitat for the BUOW were documented within and adjacent to

the east of the Phase I area. However, despite that fact that the site has been exposed to long-standing disturbances, the BUOW (low-occurrence potential) often occur in less than optimal and/or disturbed conditions. While this species is not protected by state or federal endangered species acts, BUOW (and other native avian species) are protected under the MBTA and CDFG Code Sections 3503, 3503.5, and 3800 which prohibits take, possession, or destruction of birds, their nests, or eggs (in particular raptor species such as BUOW). If it were later determined that active nests of BUOW (or other native species) would be lost as a result of Project site-preparation, it could result in significant adverse impacts and would be in conflict with these regulations. Specific BUOW survey and mitigation guidelines were developed and described in the 2012 CDFG Staff Report on Burrowing Owl Mitigation in order to reduce project-related impacts to BUOW (**MM BIO-3**). If Project site-preparation activities occur within potential BUOW habitat, a pre-construction BUOW / Initial Take Avoidance Survey conducted no less than 14 days prior to initiating ground disturbance activities using the recommended methods described in the 2012 Staff Report is required by CDFG to determine if active nests of species protected by the MBTA and/or CDFG codes are present in the construction zone for CEQA compliance and to subsequently evaluate appropriate measures that may reduce potential adverse project-related impacts. Therefore, implementation of **MM BIO-3** would reduce impacts to less than significant.

Operations

Operations of the Project would not have a significant effect on sensitive plants, animals, or their habitat. Once construction activities for the Project are completed, no additional impacts would occur with Project operations as it relates to sensitive species. Therefore, impacts would be less than significant, and no further mitigation would be required.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Upon commencement of project-level CEQA review for the Phase II area, a focused biological resources assessment and site reconnaissance survey would be conducted, similar to that of the Phase I analysis. During future development of the Phase II area, existing vegetation and habitat would be removed by grading, excavation, and other construction activities. Note that, in its current state, the Project site is devoid of vegetation or dominated by ornamental, non-native and native species commonly detected in disturbed habitats. These disturbed habitats would be removed upon implementation of Phase II. Similar to Phase I, development occurring within the Phase II area would be subject to **MM BIO-1** through **MM BIO-3** to reduce potential impacts to special status wildlife species. However, in the absence of focused biological surveys, impacts within the Phase II area are not fully known and could be potentially significant. At the time of the project-level CEQA analysis and associated biological resources assessment of the Phase II area, unforeseen site conditions could be discovered that warrant a finding of potentially significant impact. In that case, a subsequent CEQA analysis, in the form of a subsequent EIR or EIR Addendum, may be required pursuant to Sections 15162(a) and 15164 of the State CEQA Guidelines. This determination will be made by City staff at the time of future Phase II area site-specific development applications.

A focused biological resources assessment and impact analysis would be conducted for future development areas prior to approval of any development in this region to ensure potential adverse effects to sensitive species and resources would be minimized. Furthermore, any focused surveys and required mitigation measures would be implemented prior to Project approval and construction initiation (refer to **MM BIO-4** below). Future development would modify the existing habitat when Planning Areas 2B and 3B are completed; however, impacts on sensitive species due to habitat modifications would be minimized with mitigation incorporated along with compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[6] Furthermore, the proposed Project Specific Plan land use designations are the same land use designations as contained in TOP 2050. As mentioned above, a subsequent CEQA analysis may be required should the new information presented by the focused surveys or focused biological resources assessment indicate that the Project will have significant impacts relating to biological resources.

Conclusion

As noted above, the Project is not anticipated to significantly impact sensitive species. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. **MM BIO-1** through **MM BIO-4** would be required to reduce impacts. For the Phase I portion of the Project, impacts would be reduced to less than significant levels. However, because the extent of impacts within the Phase II area cannot be known at this time, Project impacts relating to biological resources within the Phase II area are considered potentially significant and unavoidable even with the implementation of recommended mitigation.

Mitigation Measures

MM BIO-1 **Nesting Bird and Raptor Preconstruction Survey.** Regulatory requirement for potential direct/indirect impacts to nesting common and sensitive bird and raptor species will require compliance with the CDFG Code Section 3503. Construction outside the nesting season (between Septem^{be}r 1st and Janua^{ry} 31st) do not require pre-removal nesting bird surveys. If construction is proposed during nesting season (February 1st and August 31st), a qualified biologist will conduct a nesting bird survey(s) no more than three (3) days prior to initiation of grading to document the presence or absence of nesting birds within or directly adjacent (200 ft -500 ft for raptors) to the Project site.

The survey(s) will focus on identifying any raptors and/or bird nests that are directly or indirectly affected by construction activities. If active nests are documented, the qualified biologist will prepare and implement specific measures to prevent abandonment of the active nest. At a minimum, grading in the vicinity of a nest will be postponed until the young birds have fledged. The perimeter of the nest setback zone will be fenced or adequately demarcated with stakes and flagging at 20-foot intervals, and construction personnel and activities will be restricted from the area.

[6] City of Ontario. 2022. *TOP 2050 Final Supplemental Environmental Impact Report, Section 5.4, Biological Resources*. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (accessed March 2023).

The biologist shall establish a no-disturbance buffer around each active nest. The buffer area will be determined by the biologist based on the species present, surrounding habitat, and type of construction activities proposed in the area. The survey report will be submitted by the qualified biologist to the City of Ontario for review and approval prior to initiation of grading in the nest-setback zone.

Additionally, the qualified biologist will serve as a construction monitor during those periods when construction activities occur near active nest areas to ensure that no inadvertent impacts on these nests occur. A final monitoring report of the findings, prepared by a qualified biologist, will be submitted to the City of Ontario documenting compliance with the CDFG Code. Any nest permanently vacated for the season would not warrant protection pursuant to the CDFG Code.

MM BIO-2 **Focused Bat Survey.** Prior to implementation of Project activities, a qualified biologist shall be retained to determine whether potential roosting sites for bats may be affected. For large ornamental trees suitable for bat roosting/nursery, exit counts and acoustic surveys shall be performed prior to initial ground disturbance, vegetation or structure removal to determine whether the Project Site and a 300-foot buffer supports a nursery or roost, and by which species. This work will occur between late -spring and late summer and/or in the fall (generally mid-March through late October).

If the results of the bat survey find a total of a single roosting individual of a special status bat species or 25 or more individuals of a non-special status bat species with potential to be present in the Project Site (i.e., western Mastiff bat, big free-tailed bat, or pallid bat), a Bat Management Plan shall be developed to ensure mortality to bats does not occur. For each location confirmed to be occupied by bats, the plan will provide details both in text and graphically where exclusion devises/and or staged tree removal will need to occur, the timing for exclusion work and the timeline and methodology needed to exclude the bats. The plan will need to be reviewed and approved by CDFW prior to disturbance of the roost(s).

MM BIO-3 **Focused and Preconstruction Burrowing Owl Surveys.** Focused surveys for burrowing owl will be conducted in accordance with the March 7, 2022, CDFG staff report on Burrowing Owl Mitigation. Specifically, A total of 4 surveys will be conducted: 1) at least one site visit between Februa[ry] 15th and Apr[il] 15th, and 2) a minimum of three (3) surveys, at least three weeks apart, between Apr[il] 15th and Ju[ly] 15th, with at least one visit after Ju[ne] 15th. A report of the findings prepared by a qualified biologist shall be submitted to the City of Ontario prior to any permit or approval for ground disturbing activities.

A 14-day burrowing owl preconstruction survey will also be conducted immediately prior to the initiation of ground-disturbing construction to ensure protection for this species. The survey will be conducted in compliance with CDFW guidelines (CDFW 2012). A report of the findings prepared by a qualified biologist shall be

submitted to the City of Ontario prior to any permit or approval for ground disturbing activities.

If burrowing owls are detected on-site during the focused surveys or 14-day preconstruction survey efforts, during the breeding season (February 1st to August 31st) then construction activities shall be limited to beyond 300 feet of the active burrows until a qualified biologist has confirmed that nesting efforts are compete or not initiated. In addition to monitoring breeding activity, if construction is proposed to be initiated during the breeding season or active relocation is proposed, a burrowing owl relocation plan will be developed and approved by the City of Ontario, CDFW and USFWS.

MM BIO-4 **Programmatic Assessment Area CEQA Analysis.** The Programmatic Assessment Area located within the southwest region of the Specific Plan Boundary, including APN's 1053-281-01, -02, -03, -04, -05, 07 and – 08, was not evaluated for biological resources as part of this analysis. To ensure that potential adverse effects to sensitive species and resources are reduced to a less than significant level, a focused biological resources assessment and impact analysis shall be conducted in the un-surveyed portion of the Specific Plan Boundary prior to approval of development within this region. In addition to completing CEQA review, any focused surveys and required mitigation measures shall be implemented prior to project approval and initiation of construction.

Impact 4.4-2 ***Would the Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?***

Level of Significance: Less than Significant with Mitigation Incorporated (Phase I Project) and Significant and Unavoidable (Phase II Only)

Specific Plan - Phase I

Construction and Operations

As previously mentioned, the Phase I area is heavily disturbed and mostly consists of active dairy and agricultural facilities. A total of 70.04 acres of vegetation communities would be directly impacted as a result of project implementation as summarized in ***Table 4.4-3: Project Site Vegetation Community Impacts.*** However, no riparian, sensitive, or undisturbed native/natural habitats were documented during the biological assessment. In addition, no riparian scrub, forest, or woodland habitat was observed within the artificially created dairy effluent retention ponds located within the Phase I area. Furthermore, the adherence to the City's Biological Resources habitat mitigation fee, described previously, would reduce potential impacts to Burrowing Owl, raptor foraging, loss of open space, and agricultural lands to a less than significant level.

Table 4.4-3: Project Site Vegetation Community Impacts

Vegetation Community	On-site Acres	Off-site Acres	Total/Impacted
Active Dairy	31.17	2.69	33.86
Active Agriculture	25.71	1.62	27.33
Disturbed	3.02	4.04	7.06
Developed	--	1.18	1.18
Ornamental	0.08	0.53	0.61
Total	**59.98**	**10.06**	**70.04**

Source: Cadre Environmental. 2022. *Biological Resources Technical Report*. Page 7. See **Appendix C**.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Furthermore, the proposed Project Specific Plan land use designations are the same land use designations as contained in TOP 2050. When Phase II Planning Areas 2B and 3B are completed, impacts to riparian habitat would be minimized with compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[7] However, in the absence of focused biological surveys, impacts within the Phase II area are not fully known and could be potentially significant. At the time of the project-level CEQA analysis and associated biological resources assessment of the Phase II area, unforeseen site conditions could be discovered that warrant a finding of potentially significant impact. In that case, subsequent CEQA analysis, in the form of a subsequent EIR or EIR Addendum, may be required pursuant to Sections 15162(a) and 15164 of the State CEQA Guidelines. This determination will be made by City staff at the time of future Phase II area site-specific development applications.

A focused biological resources assessment and impact analysis would be conducted for Future Development Areas area prior to approval of any development in this region to ensure potential adverse effects to sensitive species and resources would minimized. Furthermore, any focused surveys and required mitigation measures would be implemented prior to Project approval and construction initiation (refer to **MM BIO-4** located above in Impact 4.4-1). As mentioned above, a subsequent CEQA analysis may be required should the new information presented by the focused surveys or focused biological resources assessment indicate that the Project will have significant impacts relating to biological resources.

Conclusion

As noted above, the Project is not anticipated to significantly impact any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service. Impacts would be less than significant with mitigation incorporated. Adherence to the City's habitat mitigation fee would be required to reduce impacts to less significant levels. For the Phase I portion of the Project, impacts would be reduced to less than significant levels. However, because the extent of impacts within the Phase II area cannot be known at this time, Project impacts relating to biological resources within the Phase II area are considered potentially significant and unavoidable even with the implementation of recommended mitigation.

[7] Ibid.

Mitigation Measures

MM BIO-4 would apply.

Impact 4.4-3 ***Would the Project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?***

Level of Significance: Less than Significant (Phase I Project) and Significant and Unavoidable (Phase II Only)

Specific Plan – Phase I

Construction and Operations

Jurisdictional Resources

The presence of wetland hydrology was evaluated throughout the Phase I area by recording the extent of observed surface flows, depth of inundation, depth to saturated soils, and depth to free water in the soil pits. Indicators of wetland or riverine hydrology were then recorded, such as watermarks, drift lines, rack, debris, and sediment deposits. Additionally, indicators of hydric soils, such as redoximorphic features, buried organic matter, organic streaking, reduced soil conditions, gleied or low-chroma soils, or sulfidic odor were recorded. Based on the field investigation of the Phase I area conducted by Cadre Environmental, no wetlands or jurisdictional resources regulated by the USACE, CDFW, or RWQCB were documented within the Phase I area.[8]

The on-site active dairy/effluent pond would not be subject to federal wetland regulatory requirements and would not be considered a freshwater pond. Furthermore, the active artificially created, unvegetated, dairy effluent retention ponds are devoid of wetland, riparian scrub, forest, and/or woodland habitats. The active dairy/effluent pond is not connected to a natural stream and does not divert natural flow from any river, stream, or lake. Since these waters are not a part of a natural stream, river, or lake, they would not be considered jurisdictional under the CDFW Lake and Streambed Alteration Program. The program states: "An entity shall not substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake, or deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake…." Furthermore, the active dairy/effluent pond is an isolated feature and is not tributary to, nor has a significant nexus (biological, chemical, or physical connection) to traditional navigable waters of the United States. Therefore, a less than significant impact would occur.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Furthermore, the proposed Project Specific Plan land use designations are the same land use designations as contained in TOP 2050. Phase II would be located on Planning Areas 2B and 3B. Furthermore, any focused surveys and required mitigation measures

[8] Cadre Environmental. 2022. *Biological Resources Technical Report*. Page 39. See **Appendix C.**

would be implemented prior to Project approval and construction initiation (refer to **MM BIO-4** located above in *Impact 4.4-1*) However, because the extent of impacts within the Phase II area cannot be known at this time, Project impacts relating to biological resources within the Phase II area are considered potentially significant and unavoidable even with the implementation of recommended mitigation.

Conclusion

As noted above, the Project is not anticipated to significantly impact federally protected wetlands, as no federally protected wetlands exist in the Project area. For the Phase I portion of the Project, impacts would be less than significant. However, because the extent of impacts within the Phase II area cannot be known at this time, Project impacts relating to biological resources within the Phase II area are considered potentially significant and unavoidable even with the implementation of recommended mitigation.

Mitigation Measures

Refer to **MM BIO-4**.

Impact 4.4-4 ***Would the Project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?***

Level of Significance: Less than Significant with Mitigation Incorporated (Phase I Project) and Significant and Unavoidable (Phase II Only)

Specific Plan – Phase I

Construction

Wildlife Movement Corridors

The Phase I area is currently developed with manmade structures and is surrounded by development including high traffic roads, commercial/residential development, active dairy/agricultural facilities, and therefore, it is highly unlikely that the Phase I area occupies an important location relative to regional wildlife movement. As such, Project implementation would not have any substantial effect on local or regional wildlife movement. The Phase I area is separated from regional wildlife movement corridors associated with the Prado Dam Flood Control Basin and Santa Ana River. Therefore the Phase I area does not function as a wildlife movement corridor.

Furthermore, although vegetation, including trees and shrubs would provide nesting habitat for raptors and migratory birds protected under the CDFG Codes are present within the Phase I area, the Project would comply with CDFG Code Section 3503 and implementation of **MM BIO-1** would require a qualified biologist to conduct a nesting bird and raptor survey(s) no more than three (3) days prior to initiation of grading. Furthermore, construction activities outside of the nesting season (between September 1st and January 31st) would not require any preconstruction nesting bird survey(s).

The Phase I area does not represent a wildlife movement corridor or route between open space habitats. Additionally, the Phase I area is separated from regional wildlife movement corridors associated with the Prado Damn Flood Control Basin and Santa Ana River. Therefore, the Phase I area does not function as a

wildlife movement corridor. With implementation of **MM BIO-1**, Project development would not impede on any native resident or migratory fish or wildlife species and would not be located in a migratory wildlife corridor. Therefore, with mitigation incorporated, impacts would be reduced to a less than significant level.

Operations

The Phase I area does not function as a wildlife movement corridor. As previously stated, the Phase I area has been previously disturbed for agricultural use with multiple manmade structures present. Operation of the Project would involve mixed-use and business park infrastructure within the Phase I area. This usage would be consistent with previous uses of the site in that both would reduce the area's ability to act as a natural wildlife corridor. Therefore, operation of the Project would not interfere with the movement of any native resident or migratory fish or wildlife species. Thus, operation of the Project would not create a significant impact.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. Similar to the Phase I area, the Phase II area has been previously disturbed for agricultural use with multiple manmade structures present. Operation of the Project would involve mixed-use and business park infrastructure within the Phase II area. This usage would be consistent with previous uses of the site in that both would reduce the area's ability to act as a natural wildlife corridor. Additionally, the Project site (both the Phase I and II areas) is separated from regional wildlife movement corridors associated with the Prado Dam Flood Control Basin and Santa Ana River. Therefore, the Phase II area does not function as a wildlife movement corridor. Therefore, development of the Phase II area would not interfere with the movement of any native resident or migratory fish or wildlife species.

The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Furthermore, the proposed Project Specific Plan land use designations are the same land use designations as contained in TOP 2050. In consideration of the above, when the development of Phase II Planning Areas 2B and 3B are completed, impacts to wildlife corridors are anticipated to remain less than significant with mitigation and compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[9]

A focused biological resources assessment and impact analysis would be conducted for Future Development Areas prior to approval of any development in this region to ensure potential adverse effects to sensitive species and resources would be reduced to a less than significant level. Furthermore, any focused surveys and required mitigation measures would be implemented prior to Project approval and construction initiation (refer to **MM BIO-4** located above in Impact 4.4-1). As mentioned above, a subsequent CEQA analysis may be required should the new information presented by the focused surveys

[9] Ibid.

or focused biological resources assessment indicate that the Project will have significant impacts relating to biological resources.

Conclusion

As noted above, the Project is not anticipated to significantly impact any established native resident or migratory wildlife corridors, nor impede the use of native wildlife nursery sites.**MM BIO-1** is required to reduce impacts to less than significant levels. For the Phase I portion of the Project, impacts would be reduced to less than significant levels. However, because the extent of impacts within the Phase II area cannot be known at this time, Project impacts relating to biological resources within the Phase II area are considered potentially significant and unavoidable even with the implementation of recommended mitigation.

Mitigation Measures

MM BIO-1 and **MM BIO-4** would apply.

Impact 4.4-5 Would the Project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Level of Significance: Less than Significant with Mitigation Incorporated (Phase I Project) and Significant and Unavoidable (Phase II Only)

Specific Plan – Phase I

Construction and Operations

A Heritage Tree is one that is designated for preservation as a tree of historic or cultural significance, or a tree of importance to the community. As noted above, the majority of the site is occupied by agricultural operations, associated access roads and agricultural residential uses. The site has sparse mature trees other than ornamental landscaping and the existing nursery located along Euclid Avenue. The nursery will be relocated prior to Project site construction activities. None of the trees on-site are known to meet the City's Heritage Tree policy (they are not known to be the oldest or largest of their kind, are not known to have any historic significance, are not known to be a defining landmark or significant outstanding feature of the area, and are not known to include any of the listed native trees with trunk diameter greater than eight inches).

As previously mentioned, several blue gum (*Eucalyptus globulus*) and red gum (*Eucalyptus camaldulensis*) are located in the northeast and western portions of the Project Site boundaries, although these trees do not meet the City's Heritage Tree policy criteria. Prior to any site clearing or grading, a tree inventory would be prepared to ensure compliance with Ontario MC Section 6.05.020, Tree Preservation Policy and Protection Measures (refer to **MM BIO-5**). This policy would ensure healthy Heritage Trees that are approved for removal would be replaced with new trees with a total trunk diameter equal to the trees removed, or as deemed appropriate by the Approve Authority. With implementation of **MM BIO-5**, impacts would be reduced to less than significant levels.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Furthermore, the proposed Project Specific Plan land use designations are the same land use designations as contained in TOP 2050. When Phase II Planning Areas 2B and 3B are completed, impacts to local policies or ordinances protecting biological resources would be minimized with mitigation incorporated and would comply with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[10] However, in the absence of focused biological surveys, impacts within the Phase II area are not fully known and could be potentially significant. At the time of the project-level CEQA analysis and associated biological resources assessment of the Phase II area, unforeseen site conditions could be discovered that warrant a finding of potentially significant impact. In that case, subsequent CEQA analysis, in the form of a subsequent EIR or EIR Addendum, may be required pursuant to Sections 15162(a) and 15164 of the State CEQA Guidelines. This determination will be made by City staff at the time of future Phase II area site-specific development applications.

A focused biological resources assessment and impact analysis would be conducted for the Phase II area prior to approval of any development in this region to ensure potential adverse effects to biological resources would minimized. The site-specific biological resources studies would include a Heritage Tree survey prior to approving any future development within the Project's Phase II area (refer to **MM BIO-5**). As mentioned above, a subsequent CEQA analysis may be required should the new information presented by the focused surveys or focused biological resources assessment indicate that the Project will have significant impacts relating to biological resources.

Conclusion

As noted above, the Project is not anticipated to significantly impact an established Tree Preservation Policy. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. Impacts would be less than significant with mitigation incorporated, along with compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050. **MM BIO-5** is required to reduce impacts to less than significant levels. For the Phase I portion of the Project, impacts would be reduced to less than significant levels. However, because the extent of impacts within the Phase II area cannot be known at this time, Project impacts relating to biological resources within the Phase II area are considered potentially significant and unavoidable even with the implementation of recommended mitigation.

Mitigation Measures

MM BIO-5 **Tree Inventory.** Prior to implementation of Project site clearing or grading, a qualified biologist shall provide a tree inventory to ensure compliance with Ontario MC Section 6.05.020, Tree Preservation Policy and Protection Measures. Healthy Heritage Trees that are approved for removal shall be replaced with new trees with a total trunk

[10] Ibid.

diameter equal to the tree(s) removed, or as deemed appropriate by the Approving Authority based on lot size and available planting space. Replacement trees are to be in addition to the quantity of trees required for landscaping. The Approving Authority is responsible for reviewing the landscape plan and approving appropriate species for tree replacement (The Ontario Plan 2050).

Impact 4.4-6 ***Would the Project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?***

Level of Significance: No Impact

Specific Plan - Phase I and Phase II Future Development Areas

Construction and Operations

The Project is not located within or adjacent to a Conservation Program Area. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Furthermore, the proposed Project Specific Plan land use designations are the same land use designations as contained in TOP 2050. Phase II future development area is not located within or adjacent to a Conservation Program Area. Therefore, implementation of the Project would not result in a conflict with the provisions of an adopted habitat conservation plan and no impact would occur. Therefore, no mitigation is required or proposed.

Conclusion

As noted above, the Project would not significantly impact an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. No impacts would occur, and no mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[11]

Mitigation Measures

No mitigation is necessary.

4.4.7 Cumulative Impacts

The cumulative study area for biological resources includes the southwestern San Bernardino County. This area consists of a variety of land uses that includes agricultural, residential, commercial, and industrial uses. The agricultural areas may include sensitive habitats which may contain special-status plants, migratory bird species, and jurisdictional resources. However, as discussed above the Project would implement mitigation measures to reduce impacts to the identified species to less than significant levels. Therefore, the Project would result in a less than significant contribution to cumulative impacts to these resources, and impacts would be less than cumulatively significant.

[11] Ibid.

Project development would not involve the removal of critical habitat and would not make a considerable contribution to the decline of wildlife species. The Project would remove potential raptor foraging habitat through development of the mixed-use and business park structures. Although the existing agriculture may provide foraging habitat for raptors, it is not expected to be valuable, as the lands are actively maintained to minimize use by small mammals (prey for raptors) and active ground squirrel management programs are continually implemented. This loss of potential raptor foraging habitat would not make a cumulatively considerable contribution to the regional decline of raptors.

Mitigation has been incorporated into the Project that would avoid direct impacts to any potentially sensitive wildlife species that may occur on-site. Therefore, the mitigation measures for the Project would mitigate the potential of the Project to cumulatively combine with other projects; and the Project Specific Plan would not contribute to the cumulative loss of any special status wildlife species.

Additionally, **MM BIO-3** would ensure focused surveys for BUOW would be conducted and potential BUOW impacts to less than significant levels.

The types of birds affected are common to the region and the number of individuals would be limited given the type of vegetation proposed for removal (i.e., agriculture, ornamental plantings). Based on the types of species and expected limited number of nesting pairs affected, development of the Project would not make a cumulatively considerable contribution to the regional decline of native nesting bird populations. However, because native birds are protected by MBTA, mortality to a single native bird due to the Project would be in violation of the MBTA, CESA or FESA. Therefore, cumulative impacts related to nesting birds would be less than cumulatively significant.

The Biological Resource Assessment also indicated that the Project would not impact CDFW jurisdictional waters and riparian habitats. Thus, the Project would not make a cumulatively considerable contribution to the regional decline of jurisdictional waters.

Additionally, the Project would be pursuant to TOP 2050 and would represent a consistent and logical continuation of the existing and planned pattern of development in Ontario, specifically the Ontario Ranch area. The City has long anticipated that this area would transition from dairy/agricultural to urban uses, and the Project Specific Plan is implementing TOP 2050.[12]

4.4.8 Significant Unavoidable Impacts

No significant unavoidable biological resources impacts have been identified for Phase I of the Project. However, the Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Impacts within the Phase II area are not fully known and could be potentially significant. At the time of the project-level CEQA analysis and associated biological resources assessment of the Phase II area, unforeseen site conditions could be discovered that warrant a finding of potentially significant impact. In that case, a subsequent CEQA analysis, in the form of a subsequent EIR or EIR Addendum, may be required pursuant to Sections 15162(a) and 15164 of the State CEQA

[12] Ibid.

Guidelines. This determination will be made by City staff at the time of future Phase II area site-specific development applications.

4.5 CULTURAL RESOURCES

4.5.1 Introduction

This section of the Draft Environmental Impact Report (EIR) analyzes the potential impacts of the Euclid Mixed Use Specific Plan Project (Project) on the surrounding cultural resources on a regional and local level, within the City of Ontario (City). Cultural resources comprise of buildings, sites, structures, or objects that may have historic, architectural, archaeological, cultural, and/or scientific importance. Historical resources are cultural resources that are considered significant and eligible for listing on the California Register of Historical Resources (CRHR). Refer to ***Section 4.5.6: Impacts and Mitigation***, for legal definitions and significance thresholds associated with cultural resources. Paleontological resources, which are the fossilized remnants of plants and animals, are analyzed in ***Section 4.7: Geology and Soils***, and Tribal Cultural Resources are analyzed in ***Section 4.16: Tribal Cultural Resources***, of this Draft EIR. The evaluation of the Project area and the potential impact on cultural resources is largely based on the following sources:

- BCR Consulting LLC. August 2023. *Cultural Resources Assessment Euclid Mixed Use Specific Plan Project, City of Ontario, San Bernardino County, California*. (***Appendix D1***)
- Structural Focus. November 2023. *Relocation of Milking Parlors – Feasibility Study Venegas Farm (13813 Euclid Ave) and Drake Farm (7275 Schaefer Ave) Ontario, California.* (***Appendix D2***)
- The Ontario Plan 2050 Final Supplemental EIR
- City of Ontario Municipal Code

4.5.2 Environmental Setting

Existing Conditions

The 84.1-acre Project site is bounded by Schaefer Avenue on the north, Sultana Avenue on the east, Edison Avenue on the south, and Euclid Avenue on the west, in the City of Ontario, San Bernardino County (County), California. The Project area consists of 18 parcels, identified as Assessor's Parcel Numbers (APNs) 1053-071-01, -02, -03, -04; 1053-211-01, -02, -05; 1053-281-01, -02, -03, -04, -05, -07, -08; 1053-081-01, -02, -03, -04. Existing uses surrounding the Project site are similar to those on the site. Ongoing crop farming is located to the north of the Project site and a vacant property that was a former dairy farm is located to the east of the site. The property to the south of the Project site is currently utilized for residential, farming, or trucking related uses. North across Schaefer Avenue is an existing dairy farm. South across Edison Avenue is an existing trucking facility. East across Sultana Avenue is vacant land and an existing trucking facility. West across Euclid Avenue is the City of Chino with existing commercial and residential uses and a truck/trailer storage.

The Project site is located in the Chino Valley, which is bounded on the west by the San Jose Hills, on the south by the Chino Hills, on the north by the foothills of the San Gabriel Mountains, and on the east by La Sierra and the Jurupa Mountains. The Project site and immediate surroundings exhibits a gradual southerly slope and lies on a flood plain that feeds the Santa Ana River approximately five miles to the south. The native, historic biology of the region is difficult to reconstruct due to recent and historical

agricultural, municipal, and industrial impacts. However, the Project site is situated in the Upper Sonoran Life Zone, which is locally present between approximately 500 and 5,000 feet above mean sea level (asml). This zone typically comprises cismontane valleys and low mountain slopes dominated by mixed coastal sage scrub and chaparral vegetation communities.

Cultural Setting

Prehistoric Context

The Project site is located within the traditional boundaries of the Gabrielino. The Gabrielino likely first encountered Europeans when Spanish explorers reached California's southern coast during the 15th and 16th centuries. The first documented encounter, however, occurred in 1769 when Gaspar de Portola's expedition crossed Gabrielino territory. The Gabrielino name has been attributed by association with the Spanish mission of San Gabriel and refers to a subset of people sharing speech and customs with other Cupan speakers (such as the Juaneño/Luiseño/Ajachemem) from the greater Takic branch of the Uto-Aztecan language family. Gabrielino villages occupied the watersheds of various rivers (locally including the Santa Ana) and intermittent streams. Chiefs were usually descended through the male line and often administered several villages. Gabrielino society was somewhat stratified and is thought to have contained three hierarchically ordered social classes which dictated ownership rights and social status and obligations. Plants utilized for food were heavily relied upon and included acorn-producing oaks, as well as seed-producing grasses and sage. Animal protein was commonly derived from rabbits and deer in inland regions, while coastal populations supplemented their diets with fish, shellfish, and marine mammals.

Historical Setting

Historic-era California is generally divided into three periods: the Spanish or Mission Period (1769 to 1821), the Mexican or Rancho Period (1821 to 1848), and the American Period (1848 to present).

Spanish Period. The Spanish period began in 1769 with Captain Gaspar de Portolá's land expedition and ended in 1821 with Mexican Independence. During the Spanish Period, the establishment of the Mission San Gabriel Arcángel (1771) was influential throughout the surrounding regions, using the area for cattle grazing. An asistencia was established within the area nearby in Redlands in 1819 and helped facilitate the Mission's control of the surrounding area. However, after control of the area shifted to Mexico, secularization began throughout the area and the missions and their associated ranches began to decline. The Mexican government proceeded to push settlements of Mexican populations from the south by deeding large grants to individuals who promised to employ settlers.

Mexican Period. In 1821, Mexico overthrew Spanish rule, and the missions began to decline. By 1833, the Mexican government passed the Secularization Act, and the missions, reorganized as parish churches, lost their vast land holdings and released their neophytes.

American Period. The American Period (1848–Present) began with the Treaty of Guadalupe Hidalgo. The Gold Rush of 1849 would see tremendous influx of Americans and Europeans flooding into Southern California. In 1850, California was accepted into the Union of the United States primarily due to the

population increase created by the Gold Rush of 1849. The cattle industry reached its greatest prosperity during the first years of the American Period. Mexican Period land grants had created large pastoral estates in California, and demand for beef during the Gold Rush led to a cattle boom that lasted from 1849–1855. However, beginning about 1855, the demand for beef began to decline due to imports of sheep from New Mexico and cattle from the Mississippi and Missouri Valleys. When the beef market collapsed, many California ranchers lost their ranchos through foreclosure. A series of disastrous floods in 1861–1862, followed by a significant drought further diminished the economic impact of local ranching. This decline combined with ubiquitous agricultural and real estate developments of the late 19th century, set the stage for diversified economic pursuits that continue to this day.

Ontario. In 1839, the Mexican government granted the 12,000-acre Rancho de Cucamonga to Tiburcio Tapia. In the 1840s, Americans began settling in California in large numbers due to the Gold Rush, and California's statehood in 1850 accelerated settlement. In 1881, George and William Chaffey purchased part of Rancho Cucamonga in order to develop Etiwanda, where they tested their ground-breaking irrigation and town planning ideas. That same year, the Chaffeys purchased 6,000 acres (along with water rights) west of Etiwanda, which became the cities of Ontario and Upland. In 1883, the Chaffeys added the Kincaid Ranch at the mouth of San Antonio Canyon to their holdings. They established the Ontario Land Company and subdivided the land into 10-acre farm lots, all of which had street frontage.

The Chaffeys set aside a town site for Ontario as well as land for an agricultural college, making water available to each parcel to encourage farmers to settle there. George Chaffey laid out a boulevard named Euclid, which stretched from the Southern Pacific Depot to the mesa at the north end of their holdings. The Chaffey brothers sold off their land and left California for Australia in 1886. Charles Frankish had moved to Ontario from Riverside that same year to participate in the Chaffeys' "Model Colony," and invested in undeveloped land along Euclid Avenue. He recruited a group of investors and formed the Ontario Land and Improvement Company, which bought the Chaffey brothers' land holdings in 1886. Frankish acted as Manager and later President, and actively participated in the sale of real estate as well as planning and developing Ontario. Frankish extended Euclid past the depot to the south end of the company's holdings, platting the street grid and planting trees. In 1887, he organized the Ontario and San Antonio Heights Railroad Company (O&SA) as a subsidiary of the land company. In the 1890s, the O&SA constructed a hydro-electric plant at the mouth of San Antonio Canyon and electrified the system, making it the first electrified trolley west of Chicago. Ontario officially incorporated as a city in 1891. In 1912, Frankish bought the land company's Ontario-area assets and formed the Frankish Company. Frankish installed electric streetlights in Ontario, established its first bank, and was involved in local commerce and planning until his abrupt departure from the area in 1927.

Aviation interests were introduced to Ontario in 1923 when Waldo Waterman and Archie Mitchell established Latimer Field in the City limits. As more people moved to Ontario, its urban growth forced aviators eastward until they established an airport at the current location of Ontario International Airport. During World War II, Ontario's airport brought many to the area for its pilot training facilities. It was about this time that the citrus industry that had contributed to Ontario's nascent years of growth started to experience a broad decline. Land values increased as more Americans began moving westward and settling in the area. In subsequent years and decades, farmers sold their land to incoming residential

developers. The population of Ontario swelled, and by the late 1950s, the City's residential area had expanded south and east. Manufacturing, defense, and dairy industries began to take the place of citrus as the local economic staples drawing in new residents. By the late twentieth century, manufacturing had waned and was replaced by service industries and warehousing. Today, the City has expanded to a population of more than 166,000 people living within a 50 square-mile area. The City's economic base is now heavily dependent on industrial and manufacturing, and with three freeways, three major railroads, and Ontario International Airport, the region is rich in transportation resources.

Local Dairies. Ontario and Chino are located in the Chino Valley basin of southwestern San Bernardino County. Dairy cows came to California with American settlers during the Gold Rush, and by 1876, a State Dairyman's Association had been organized. Dairies were first established in Chino Valley in the 1890s. The first dairy was most likely the Steel and Green Dairy, comprised of adobe buildings on the site of the Battle of Chino. The industry was based on free grazing during this era, and the availability of large tracts of fertile and inexpensive pastureland drew dairy farmers from Los Angeles County. However, most dairies in the region remained closer to Los Angeles population centers for several decades and citrus groves dominated the landscape through the end of the 1940s. Through 1930, the dairies in the region were small family businesses. Yet, by 1915, milk shipments already totaled over 6,000 pounds out of Chino. As Los Angeles County grew in population, so did the regional dairy industry. In the 1920s, many Dutch immigrants started dairy farms near Los Angeles. In the 1930s, to optimize milk production, dairies began switching from free grazing to dry-lot dairying and mechanized milking.

In the early years, the milking equipment was sanitized with steam tanks heated by oil burners. By 1920, dairy health and sanitation laws were established. Milk was originally filtered through cloth into the cans it was shipped in. The new laws required that a milk house had to be at least sixty feet from the barn, milkers must wear clean clothes before each milking, and milk house drains were constantly flushed with water. New ammonia colling systems were also created. After World War I, many cows in California had tuberculosis, thus pasteurization became a requirement. The Dairy Herd Improvement Association (DHIA), formerly the Cow Testing Association, was also created to improve the quality of the milk cattle. The association was first started in the United States in 1906 by Danish immigrant, Helmer Rabild, and a small group of dairy farmers in Michigan. The Diary Division of the U.S. Department of Agriculture was the biggest supporter of the DHIA. By 1926, over one-hundred associations were established across the country.

During and after World War II, the Los Angeles Basin grew as a metropolitan area, pushing dairy farms to peripheral areas such as the Chino Valley. In 1949, Chino dairies produced one-third of the total dairy production in San Bernardino County. In 1950, there were 79 dairies with an average of 145 cows to a herd in the Chino area. Suburbanization in Los Angeles County allowed dairymen, many of whom were Dutch, to purchase larger acreage and build bigger homes in Chino Valley. During this era, dry lot operations (which purchased all feed) began to replace traditional dairy farms, which grew some or all cattle feed. By 1957, there were more than 135 dairies in Chino Valley. The late 1950s and early 1960s dairies established in Chino Valley were the most technologically sophisticated in the US, capable of milking 450 cows a day for each worker. Herringbone milking parlors, in which cows were raised on a platform so milkers did not have to kneel, became popular during this era to control labor costs. In 1960,

an agricultural dairy preserve was established to protect the land from development, and by 1965, there were around 350 dairies in Chino Valley. In 1979, sixty percent of milk produced in California was from Chino Valley. Dairy products became California's number one agricultural commodity in 1993, and the state continued to lead the country in milk production throughout the twenty-first century.

Cultural Resource Assessment

A Cultural Resources Assessment (***Appendix D1*** of this Draft EIR) was prepared for the Project site. The Cultural Resource Assessment includes a thorough literature review, an intensive-level cultural resources field survey field investigation, and cultural resources recommendations for the proposed development (see ***Appendix D1***). Currently, the Applicant does not own or control the Phase II (Planning Areas 2B and 3B) parcels therefore, these inaccessible parcels (1053-281-01, -02,-03, -04, -05, and -07) were photographed from the public right of way, and as a result, built environment resources could be assessed and evaluated on these properties.

Research

Records Search. On November 17th, 2022, a records search was conducted at the South-Central Coastal Information Center (SCCIC) at California State University, Fullerton. This archival research reviewed the status of all recorded historic and prehistoric cultural resources, and survey and excavation reports completed within one half-mile of the project site. Additional resources reviewed included the NRHP, the CRHR, and documents and inventories published by the California Office of Historic Preservation (OHP). These include the lists of California Historical Landmarks, California Points of Historical Interest, Listing of National Register Properties, and the Inventory of Historic Structures.

Additional Research. BCR Consulting performed additional research through City of Ontario permit records, the Robert E. Ellingwood Model Colony History Room of the Ontario Library, the San Bernardino County Historical Archives, and through various internet resources. The research focused on land-use history, and on acquiring and consulting primary and secondary sources such as building permits, property title documents, census records, birth and death records, newspaper articles, scholarly journal articles, and biographical sources.

Field Survey

An intensive-level cultural resources field survey of the Project site was conducted on October 31, 2022, February 8, 2023, and on May 22, 2023. The survey was conducted by walking parallel transects spaced approximately 15 meters apart across the accessible Project site. The following Assessor Parcel Numbers were not accessible: 1053-281-01, -02, -03, -04, -05, and -07. Also, inaccessible areas such as fenced yards, building interiors, and livestock enclosures and feeding areas were not subject to systematic survey. However, inaccessible parcels were photographed from the public right of way, and as a result, built environment resources could be assessed and evaluated on these properties. Cultural Resources were recorded on DPR 523 forms. Digital photographs were taken at various points within the project site. These included overviews as well as detail photographs of all cultural resources. Cultural resources were recorded per the California OHP Instructions for Recording Historical Resources in the field using:

- Detailed note taking for entry on DPR Forms

- Hand-held Garmin Global Positioning systems for mapping purposes
- Digital photographic overviews and photographs of all cultural resources

Results of the Cultural Resource Assessment are discussed below under ***Section 4.5.4***.

4.5.3 Regulatory Setting

Federal

National Register Bulletin 38[1]

The National Park Service (NPS) has prepared guidelines to assist in the documentation of Traditional Cultural Properties (TCPs) by public entities. While it is federal guidance, it serves as the best and most recognized guidance for identifying TCPs. National Register Bulletin (NRB) 38 is intended to be an aid in determining whether properties have traditional cultural significance and if they are eligible for inclusion in the NRHP. It is also intended to assist federal agencies, State Historic Preservation Offices (SHPO), Certified Local Governments, tribes, and other historic preservation practitioners who need to evaluate such properties when considering their eligibility for the NRHP as part of the review process prescribed by the Advisory Council on Historic Preservation (ACHP).

National Historic Protection Act Section 106

The Project will be reviewed in accordance with Section 106 of the National Historic Preservation Act (NHPA). The NHPA of 1966, as amended, is the primary set of federal laws governing projects that may affect cultural resources. Section 106 of the NHPA addresses Federal undertakings and requires agencies to review and evaluate how undertakings may impact historic properties.

A "Federal Undertaking" is defined as a project, activity or program that is funded, permitted, licensed, or approved by a Federal agency. Federal undertakings can occur on or off federally controlled properties and include new and continuing projects, activities, or programs, or any element thereof. Permitting pursuant to the Clean Water Act is considered a Federal undertaking for purposes of compliance with the NHPA.

Under Section 106 of the NHPA, federal agencies are required to consider the effects of their actions on properties that are listed in, or eligible for listing in, the NRHP. The following are the four general processing steps for Section 106 compliance:

1. Initiate the Section 106 process by establishing the undertaking, developing a plan for public involvement and identifying other consulting parties;
2. Identify historic properties by determining the scope of efforts, identifying cultural resources and evaluating their eligibility for inclusion in the NRHP;
3. Assess adverse effects to historic properties by applying the criteria of adverse effects to historic properties; and

[1] United States Department of the Interior, National Park Service – Interagency Resources Division. 1992. *National Register Bulletin 38.* https://www.nps.gov/subjects/nationalregister/upload/NRB38-Completeweb.pdf (accessed April 2023).

4. Resolve adverse effects by consulting with the SHPO and other consulting agencies, including the ACHP if necessary, to develop an agreement that addresses the treatment of historic properties.

To address their Section 106 obligations, the United States Army Corps of Engineers (USACE) promulgated implementing regulations at 33 Code of Federal Regulations (CFR) Part 325, ***Appendix C***.[2] ***Appendix C*** establishes procedures to fulfill the requirements set forth in the NHPA. The USACE follows these procedures rather than those outlined in 36 CFR Part 800.

Per ***Appendix C***, "designated historic property" is a historic property listed in the NRHP or which has been determined eligible for listing in the NRHP pursuant to 36 CFR Part 63. A historic property that, in both the opinion of the SHPO and the USACE district engineer, appears to meet the criteria for inclusion in the NRHP will be treated as a "designated historic property."

The USACE will identify a “permit area” for the Project, in accordance with the following:

1. The term "permit area" as used in this appendix means those areas comprising the waters of the United States that will be directly affected by the proposed work or structures and uplands directly affected as a result of authorizing the work or structures. The following three tests must all be satisfied for an activity undertaken outside the waters of the United States to be included within the "permit area":
    i. Such activity would not occur but for the authorization of the work or structures within the waters of the United States;
    ii. Such activity must be integrally related to the work or structures to be authorized within waters of the United States. Or, conversely, the work or structures to be authorized must be essential to the completeness of the overall project or program; and
    iii. Such activity must be directly associated (first-order impact) with the work or structures to be authorized.

Title 36 CFR Section 60.4[3] provides the criteria for evaluation of NRHP eligibility.

National Register Criteria for Evaluation. The quality of significance in American history, architecture, archaeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association and:

a) that are associated with events that have made a significant contribution to the broad patterns of our history; or

b) that are associated with the lives of persons significant in our past; or

c) that embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or

[2] United States Army Corps of Engineers. ND. *33 SFR 325 Appendix C – Procedures for the Protection of Historic Properties*. https://www.lrl.usace.army.mil/Portals/64/docs/regulatory/Coordination/33%20CFR%20325%20Appendix%20C.pdf. (accessed April 2023).
[3] Electronic Code of Federal Regulations (eCFR). 2019. *Title 36, Chapter I, Part 60, Section 60.4 – Criteria for evaluation*. https://www.ecfr.gov/current/title-36/chapter-I/part-60/section-60.4. (accessed April 2023).

d) that have yielded, or may be likely to yield, information important in prehistory or history.

Criteria considerations. Ordinarily cemeteries, birthplaces, or graves of historical figures, properties owned by religious institutions or used for religious purposes, structures that have been moved from their original locations, reconstructed historic buildings, properties primarily commemorative in nature, and properties that have achieved significance within the past 50 years shall not be considered eligible for the NRHP. However, such properties will qualify if they are integral parts of districts that do meet the criteria of if they fall within the following categories:

a) A religious property deriving primary significance from architectural or artistic distinction or historical importance;

b) A building or structure removed from its original location, but which is significant primarily for architectural value, or which is the surviving structure most importantly associated with a historic person or event;

c) A birthplace or grave of a historical figure of outstanding importance if there is no appropriate site or building directly associated with his or her productive life;

d) A cemetery which derives its primary significance from graves of persons of transcendent importance, from age, from distinctive design features, or from association with historic events;

e) A reconstructed building when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived;

f) A property primarily commemorative in intent if design, age, tradition, or symbolic value has invested it with its own exceptional significance; or

g) A property achieving significance within the past 50 years if it is of exceptional importance.

Establishing NRHP eligibility also depends on integrity of location, design, setting, materials, workmanship, feeling, and association. Sites that meet one or more NRHP eligibility criteria but do not retain integrity are not eligible for the NRHP. Guidance regarding integrity of location, design, setting, materials, workmanship, feeling, and association is provided by NRB 15.[4]

Location - Location is the place where the historic property was constructed or the place where the historic event occurred. The relationship between the property and its location is often important to understand why the property was created or why something happened. The actual location of a historic property, complemented by its setting, is particularly important in recapturing the sense of historic events and persons. Except in rare cases, the relationship between a property and its historic associations is destroyed if the property is moved.

Design - Design is the combination of elements that create the form, plan, space, structure, and style of a property. It results from conscious decisions made during the original conception and planning of a property (or its significant alteration) and applies to activities as diverse as community planning,

[4] United States Department of the Interior, National Park Service – Cultural Resources Division, National Register of History and Education. 1995. *National Register Bulletin 15*. https://www.nps.gov/subjects/nationalregister/upload/NRB-15_web508.pdf (accessed April 2023).

engineering, architecture, and landscape architecture. Design includes such elements as organization of space, proportion, scale, technology, ornamentation, and materials.

A property's design reflects historic functions and technologies as well as aesthetics. It includes such considerations as the structural system; massing; arrangement of spaces; pattern of fenestration; textures and colors of surface materials; type, amount, and style of ornamental detailing; and arrangement and type of plantings in a designed landscape.

Design can also apply to districts, whether they are important primarily for historic association, architectural value, information potential, or a combination thereof. For districts significant primarily for historic association or architectural value, design concerns more than just the individual buildings or structures located within the boundaries. It also applies to the way in which buildings, sites, or structures are related: for example, spatial relationships between major features; visual rhythms in a streetscape or landscape plantings; the layout and materials of walkways and roads; and the relationship of other features, such as statues, water fountains, and archaeological sites.

Setting - Setting is the physical environment of a historic property. Whereas location refers to the specific place where a property was built or an event occurred, setting refers to the character of the place in which the property played its historical role. It involves how not just where the property is situated and its relationship to surrounding features and open space. Setting often reflects the basic physical conditions under which a property was built and the functions it was intended to serve. In addition, the way in which a property is positioned in its environment can reflect the designer's concept of nature and aesthetic preferences. The physical features that constitute the setting of a historic property can be either natural or man-made, including such elements as: topographic features (a gorge or the crest of a hill); vegetation; simple manmade features (paths or fences); and relationships between buildings and other features or open space. These features and their relationships should be examined not only within the exact boundaries of the property but also between the property and its surroundings. This is particularly important for districts.

Materials - Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property. The choice and combination of materials reveal the preferences of those who created the property and indicate the availability of particular types of materials and technologies. Indigenous materials are often the focus of regional building traditions and thereby help define an area's sense of time and place.

A property must retain the key exterior materials dating from the period of its historic significance. If the property has been rehabilitated, the historic materials and significant features must have been preserved. The property must also be an actual historic resource, not a re-creation; a recent structure fabricated to look historic is not eligible. Likewise, a property whose historic features and materials have been lost and then reconstructed is usually not eligible.

Workmanship - Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. It is the evidence of artisans' labor and skill in constructing or altering a building, structure, object, or site. Workmanship can apply to the property as a whole or to its

individual components. It can be expressed in vernacular methods of construction and plain finishes or in highly sophisticated configurations and ornamental detailing. It can be based on common traditions or innovative period techniques.

Workmanship is important because it can furnish evidence of the technology of a craft, illustrate the aesthetic principles of a historic or prehistoric period, and reveal individual, local, regional, or national applications of both technological practices and aesthetic principles. Examples of workmanship in historic buildings include tooling, carving, painting, graining, turning, and joinery. Examples of workmanship in prehistoric contexts include Paleo-Indian clovis projectile points; Archaic period beveled adzes; Hopewellian birdstone pipes; copper earspools and worked bone pendants; and Iroquoian effigy pipes.

Feeling - Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. It results from the presence of physical features that, taken together, convey the property's historic character. For example, a rural historic district retaining original design, materials, workmanship, and setting will relate the feeling of agricultural life in the 19th century. A grouping of prehistoric petroglyphs, unmarred by graffiti and intrusions and located on its original isolated bluff, can evoke a sense of tribal spiritual life.

Association - Association is the direct link between an important historic event or person and a historic property. A property retains association if it is the place where the event or activity occurred and is sufficiently intact to convey that relationship to an observer. Like feeling, association requires the presence of physical features that convey a property's historic character. For example, a Revolutionary War battlefield whose natural and manmade elements have remained intact since the 18th century will retain its quality of association with the battle.

Because feeling and association depend on individual perceptions, their retention alone is never sufficient to support eligibility of a property for the NRHP.

The Project is not anticipated to be subject to the federal permitting processes, as there are no anticipated federal actions or approvals that would be required and trigger compliance under Section 106 of the NHPA. Under the NHPA, federal agencies are required to consider the effects of their actions on places that are listed in, or eligible for listing in, the NRHP.

Natural Register of Historic Places

The NRHP was established by the NHPA as “an authoritative guide to be used by federal, state, and local governments, private groups and citizens to identify the Nation’s historic resources and to indicate what properties should be considered for protection from destruction or impairment” (CFR 36 Section 60.2). The NRHP recognizes both historical-period and prehistoric archaeological properties that are significant at the national, state, and local levels.

To be eligible for listing in the NRHP, a resource must be significant in American history, architecture, archaeology, engineering, or culture. Districts, sites, buildings, structures, and objects of potential significance must meet one or more of the following four established criteria: Are associated with events that have made a significant contribution to the broad patterns of our history;

1) Are associated with the lives of persons significant in our past;
2) Embody the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
3) Have yielded, or may be likely to yield, information important in prehistory or history.

Unless the property possesses exceptional significance, it must be at least 50 years old to be eligible for listing in the NRHP. In addition to meeting the criteria of significance, a property must have integrity. Integrity is defined as "the ability of a property to convey its significance." The NRHP recognizes seven qualities that, in various combinations, define integrity: location, design, setting, materials, workmanship, feeling, and association. To retain historic integrity a property must possess several, and usually most, of these seven aspects. Thus, the retention of the specific aspects of integrity is paramount for a property to convey its significance.

Archaeological Resources Protection Act

The Archaeological Resources Protection Act of 1979 regulates the protection of archaeological resources and sites on federal and Indian lands.

State

California Environmental Quality Act

California public agencies must consider the effects of their actions on both "historical resources" and "unique archaeological resources." Pursuant to Public Resources Code (PRC) Section 21084.1, a "project that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment." PRC Section 21083.2 additionally requires agencies to determine whether proposed projects would have effects on "unique archaeological resources."

"Historical resource" is a term with a defined statutory meaning. Under California Code of Regulations (CCR), Title 14, Chapter 3 (California Environmental Quality Act [CEQA] Guidelines), Section 15064.5(a) "historical resource" includes the following:

A resource listed in or determined to be eligible by the State Historical Resources Commission (SHRC), for listing in the CRHR (PRC Section 5024.1 and Title 14 CCR, Section 4850 et seq.).

A resource included in a local register of historical resources, as defined in Section 5020.1(k) of the PRC or identified as significant in a historical resource survey meeting the requirements of Section 5024.1(g) of the PRC, shall be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.

Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be a historical

resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the CRHR (PRC Section 5024.1 and Title 14 CCR Section 4852) including the following:

- **Criterion 1** - Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
- **Criterion 2** - Is associated with the lives of persons important in our past;
- **Criterion 3** - Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
- **Criterion 4** - Has yielded, or may be likely to yield, information important in prehistory or history.

CEQA addresses significant impacts to historical resources. "A project with an effect that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment. Substantial adverse change in the significance of a historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired." (CEQA Guidelines Section 15064.5(b)(1)).

CEQA also requires agencies to consider whether projects will affect "unique archaeological resources." PRC Section 21083.2(g) states that "'unique archaeological resources' means an archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

1. Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.
2. Has a special and quality such as being the oldest of its type or the best available example of its type.
3. Is directly associated with a scientifically recognized, important prehistoric or historic event or person."

However, if a resource is identified as both a historical resource and a "unique archaeological resource," then it would undergo the provisions outlined for historical resources (CEQA Guidelines Section 15064.5 and PRC § 21084.1 and 21083.2(l)).

California Public Records Act

Sections 6254(r) and 6254.10 of the California Public Records Act (Government Code Section 6250 et seq.) were enacted to protect archaeological sites from unauthorized excavation, looting, or vandalism. Section 6254(r) explicitly authorizes public agencies to withhold information from the public relating to "Native American graves, cemeteries, and sacred places and records of Native American places, features, and objects… maintained by, …, the Native American Heritage Commission….". Section 6254.10 specifically exempts from disclosure requests for "records that relate to archaeological site information

and reports maintained by, or in the possession of, the Department of Parks and Recreation, the SHRC, the State Lands Commission, the Native American Heritage Commission (NAHC), another state agency, or a local agency, including the records that the agency obtains through a consultation process between a California Native American tribe and a state or local agency."

California Public Resources Code

Archaeological, paleontological, and historical sites are protected under a wide variety of State policies and regulations in the California PRC (PRC Sections 5020 to 5029.5, PRC Section 5079 to 5079.65, and PRC Section 5097.9 to 5097.991). In addition, cultural and paleontological resources are recognized as nonrenewable resources and receive protection under the PRC and CEQA.

PRC Sections 5020 to 5029.5 continued the former Historical Landmarks Advisory Committee as the SHRC. The commission oversees the administration of the CRHR and is responsible for designating State Historical Landmarks and Historical Points of Interest.

PRC Section 5079 to 5079.65 define the functions and duties of the Office of Historic Preservation (OHP), which administers federal- and state-mandated historic preservation programs in California as well as the California Heritage Fund.

PRC Section 5097.9 to 5097.991 provide protection to Native American historical and cultural resources and sacred sites; identify the powers and duties of the NAHC; require that descendants be notified when Native American human remains are discovered; and provide for treatment and disposition of human remains and associated grave goods.

California Register of Historical Resources

Created in 1992 and implemented in 1998, the CRHR is "an authoritative guide in California to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change" (PRC Section 5024.1). Certain properties, including those listed in or formally determined eligible for listing in the NRHP and California Historical Landmarks (CHL) numbered 770 and higher, are automatically included in the CRHR. Other properties recognized under the Point of Historical Interest (PHI) program, identified as significant in historical resources surveys, or designated by local landmarks programs, may be nominated for inclusion in the CRHR. A resource, either an individual property or a contributor to a historic district, may be listed in the CRHR if the SHRC determines that it meets any of the following criteria, which are modeled on NRHP criteria:

- Criterion 1: It is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
- Criterion 2: It is associated with the lives of persons important in our past.
- Criterion 3: It embodies the distinctive characteristics of a type, period, region, or method of construction; represents the work of an important creative individual; or possesses high artistic values.
- Criterion 4: It has yielded, or may be likely to yield, information important in history or prehistory.

According to 14 CCR Section 4852(a), types of resources eligible for nomination:

1) **Building**. A resource, such as a house, barn, church, factory, hotel, or similar structure created principally to shelter or assist in carrying out any form of human activity. "Building" may also be used to refer to a historically and functionally related unit, such as a courthouse and jail or a house and barn;

2) **Site**. A site is the location of a significant event, a prehistoric or historic occupation or activity, or a building or structure, whether standing, ruined, or vanished, where the location itself possesses historical, cultural, or archaeological value regardless of the value of any existing building, structure, or object. A site need not be marked by physical remains if it is the location of a prehistoric event, and if no buildings, structures, or objects marked it at that time. Examples of such sites are trails, designed landscapes, battlefields, habitation-sites, Native American ceremonial areas, petroglyphs, and pictographs;

3) **Structure**. The term "structure" is used to describe a construction made for a functional purpose rather than creating human shelter. Examples of structures include mines, bridges, and tunnels;

4) **Object**. The term "object" is used to describe those constructions that are primarily artistic in nature or are relatively small in scale and simply constructed, as opposed to a building or a structure. Although it may be moveable by nature or design, an object is associated with a specific setting or environment. Objects should be in a setting appropriate to their significant historic use, role, or character. Objects that are relocated to a museum are not eligible for listing in the CRHR. Examples of objects include fountains, monuments, maritime resources, sculptures, and boundary markers; and

5) **Historic district**. Historic districts are unified geographic entities which contain a concentration of historic buildings, structures, objects, or sites united historically, culturally, or architecturally. Historic districts are defined by precise geographic boundaries. Therefore, districts with unusual boundaries require a description of what lies immediately outside the area, in order to define the edge of the district and to explain the exclusion of adjoining areas. The district must meet at least one of the criteria for significance discussed in Section 4852(b)(1)-(4) of this chapter.

Under PRC Section 5024.1 and 14 CCR Section 4852(c), a cultural resource must retain integrity to be considered eligible for the CRHR. Specifically, it must retain enough character or appearance to be recognizable as a historical resource and convey reasons of significance. Integrity is evaluated with regard to retention of such factors as location, design, setting, materials, workmanship, feeling, and association. Cultural sites that have been affected by ground-disturbing activities, such as agricultural activities and off-road vehicle use (both of which occur within the Project area), often lack integrity because they have been directly damaged or removed from their original location, among other changes.

Typically, a prehistoric archaeological site in California is recommended eligible for listing in the CRHR based on its potential to yield information important in prehistory or history (Criterion 4). Important information includes chronological markers such as projectile point styles or obsidian artifacts that can be subjected to dating methods or undisturbed deposits that retain their stratigraphic integrity. Sites such as these have the ability to address research questions.

California Historical Landmarks

CHLs are buildings, structures, sites, or places that have anthropological, cultural, military, political, architectural, economic, scientific or technical, religious, experimental, or other value and that have been determined to have statewide historical significance by meeting at least one of the criteria listed below. The resource also must have written consent of the property owner; be recommended by the SHRC; and be officially designated by the Director of California State Parks. The specific standards now in use were first applied in the designation of CHL No. 770. CHLs numbered 770 and above are automatically listed in the CRHR.

To be eligible for designation as a CHL, a resource must meet at least one of the following criteria:

- It is the first, last, only, or most significant of its type in the state or within a large geographic region (northern, central, or southern California);
- It is associated with an individual or group having a profound influence on the history of California; or,
- It is a prototype of, or an outstanding example of, a period, style, architectural movement, or construction or is one of the more notable works or the best surviving work in a region of a pioneer architect, designer, or master builder.

California Historical Resources Status Codes

In order to be considered as significant, a resource must meet at least one of the above-listed NRHP or CRHR criteria and retain enough integrity to support its period of significance and association within a historical context. A resource is assigned a California Historical Resources (CHR) status code following evaluation, which identifies its significance level. The status codes and descriptions are:

1. Properties listed in the NRHP or the CRHR.
2. Properties determined eligible for listing in the NRHP or CRHR.
3. Appears eligible for NRHP or CRHR through survey evaluation.
4. Appears eligible for NRHP or CRHR through other evaluation.
5. Properties recognized as historically significant by local government.
6. Not eligible for listing or designation as specified.
7. Not evaluated for NRHP or CRHR or needs re-evaluation.

Typically, resources designated as CHR Status Code 6 are determined ineligible for designation under any criteria and are not considered historical resources. However, there are several subcategories that exist within each of the status codes that allow for various exemptions, such as whether a resource contributes to a Historic District.

California Historic Building Code (CHBC)

The CHBC provides guidelines for the preservation, restoration, rehabilitation, relocation, and reconstruction of buildings or structures designated as qualified historical buildings or properties by a

local, state, or federal jurisdiction, as defined by CHBC Section 8-218. The CHBC provides guidelines for long-term preservation efforts of qualified historical buildings or properties to allow owners to make improvements for access for persons with disabilities; to provide a cost-effective approach to preservation; and, to ensure overall safety of affected occupants or users.

As defined by the CHBC, a "qualified historical building" is "any building, site, structure, object, district, or collection of structures, and their associated sites, deemed of importance to the history, architecture, or culture of an area by an appropriate local, state, or federal governmental jurisdiction. This includes designated buildings or properties on, or determined eligible for, official national, state, or local historical registers or official inventories, such as the NRHP, CRHR, CHLs, California PHI, and officially adopted city or county registers, inventories, or surveys of historical or architecturally significant sites, places, or landmarks."[5]

California Health and Safety Code Section 7050.5 and 7052

State Health and Safety Code (HSC), Section 7050.5, declares that, in the event of the discovery of human remains outside of a dedicated cemetery, all ground disturbance must cease, and the county coroner must be notified. HSC Section 7052 establishes a felony penalty for mutilating, disinterring, or otherwise disturbing human remains, except by relatives.

More precisely, if human remains are encountered, Section 7050.5 states that:

a) "Every person who knowingly mutilates or disinters, wantonly disturbs, or willfully removes any human remains in or from any location other than a dedicated cemetery without authority of law is guilty of a misdemeanor, except as provided in Section 5097.99 of the PRC. The provisions of this subdivision shall not apply to any person carrying out an agreement developed pursuant to subdivision (l) of Section 5097.94 of the PRC or to any person authorized to implement Section 5097.98 of the PRC.

b) In the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains until the coroner of the county in which the human remains are discovered has determined, in accordance with Chapter 10 (commencing with Section 27460) of Part 3 of Division 2 of Title 3 of the Government Code, that the remains are not subject to the provisions of Section 27491 of the Government Code or any other related provisions of law concerning investigation of the circumstances, manner and cause of any death, and the recommendations concerning the treatment and disposition of the human remains have been made to the person responsible for the excavation, or to his or her authorized representative, in the manner provided in Section 5097.98 of the PRC. The coroner shall make his or her determination within two working days from the time the person responsible for the excavation, or his or her authorized representative, notifies the coroner of the discovery or recognition of the human remains.

[5] State of California. ND. *Health and Safety Code*, *Division 13 – Part 2.7, Sections 18950 to 18962 of the California Historic Building Code*. https://leginfo.legislature.ca.gov/faces/codes_displayText.xhtml?lawCode=HSC&division=13.&title=&part=2.7.&chapter=&article=. (accessed April 2023).

If the coroner determines that the remains are not subject to his or her authority and if the coroner recognizes the human remains to be those of a Native American, or has reason to believe that they are those of a Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission."[6]

PRC Section 5097.91, PRC Section 5097.98, PRC Section 5097.94 and the Native American Heritage Commission

PRC Section 5097.91 established the NAHC, the duties of which include inventorying places of religious or social significance to Native Americans and identifying known graves and cemeteries of Native Americans on private lands. PRC Section 5097.98 specifies a protocol to be followed when the NAHC receives notification of a discovery of Native American human remains from a county coroner.

PRC Section 5097.94 establishes the powers and duties of the NAHC, including, but not limited to:

a) To identify and catalog places of special religious or social significance to Native Americans and known graves and cemeteries of Native Americans on private lands. The identification and cataloging of known graves and cemeteries shall be completed on or before January 1, 1984. The commission shall notify landowners on whose property the graves and cemeteries are determined to exist and shall identify the Native American group most likely descended from those Native Americans who may be interred on the property.

b) To make recommendations relative to Native American sacred places that are located on private lands, are inaccessible to Native Americans, and have cultural significance to Native Americans for acquisition by the state or other public agencies for the purpose of facilitating or assuring access thereto by Native Americans.

c) To make recommendations to the Legislature relative to procedures that will voluntarily encourage private property owners to preserve and protect sacred places in a natural state and to allow appropriate access to Native American religionists for ceremonial or spiritual activities.

For a complete list of powers and duties, visit:
https://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?lawCode=PRC&sectionNum=5097.94.

California Penal Code, Section 622.5

California Penal Code, Section 622.5, provides misdemeanor penalties for injuring or destroying objects of historic or archaeological interest located on public or private lands but specifically excludes the landowner.

California Penal Code, Section 622.5

California Penal Code, Section 622.5, provides misdemeanor penalties for injuring or destroying objects of historic or archaeological interest located on public or private lands but specifically excludes the landowner.

Local

City of Ontario General Plan – The Ontario Plan 2050

The Ontario Plan (TOP) 2050 Community Design Element articulates design qualities that will create locally and regionally significant places and utilizes community design to help achieve the Vision in the areas of economic development, land use, housing, community health, infrastructure, and transportation. Included in TOP 2050 is the Policy Plan, which is a framework that would guide the City's future growth through the application of policies and goals. The following goals of TOP 2050 relate to cultural and historic resources.

The following policy contained in the Land Use Element is relevant to the Project:

Community Design Element[7]

Goal CD-4 **Historic buildings, streets, landscapes, and neighborhoods, as well as the story of Ontario's people, businesses, and social and community organizations, have been preserved and serve as a focal point for civic pride and identity.**

Policy CD-4.1 **Cultural Resource Management.** We update and maintain an inventory of historic sites and buildings, professional collections, artifacts, manuscripts, photographs, documents, maps, and other archives.

Policy CD-4.2 **Collaboration with Property Owners and Developers.** We educate and collaborate with property owners and developers to implement strategies and best practices that preserve the character of our historic buildings, streetscapes, and unique neighborhoods.

Policy CD-4.3 **Collaboration with Outside Agencies.** We pursue opportunities to team with other agencies, local organizations, and nonprofits in order to preserve and promote Ontario's heritage.

Policy CD-4.4 **Incentives.** We use the Mills Act and other federal, state, regional and local programs to assist property owners with the preservation of select properties and structures.

Policy CD-4.5 **Adaptive Reuse.** We actively promote and support the adaptive reuse of historic sites and buildings to preserve and maintain their viability.

City of Ontario Development Code

The City Development Code Chapters 4 and 7 establish the City's scope of historic preservation activities and is the primary body of local law relating to historic preservation. Division 7.01 includes the purpose and authority for historic preservation, and Division 4.02 includes criteria for local historic designation and procedures for the alteration or demolition of historic properties.

Properties may be designated at the local level as Historic Landmarks or Districts. The City Council maintains a record of historic properties that are eligible to apply for placement on the City's List of

[7] City of Ontario. 2022. *TOP 2050, Community Design Element*. https://www.ontarioca.gov/about-ontario-ontario-plan-policy-plan/community-design. (accessed April 2023).

Designated Historic Landmarks or Districts. Any property owner may request the designation of a Historical Resource as a Historic Landmark or District by applying to the City's Planning Department.

Pursuant to Development Code Section 4.02.040, a property that meets one or more of the following criteria is eligible to be placed on the City's List of Historic Landmarks and Districts as a Landmark:

- It meets the criteria for listing in the NRHP; or
- It meets the criterion for listing in the CRHR; or
- It meets one or more of the following criteria:
  - It exemplifies or reflects special elements of the City's history;
  - It is identified with persons or events significant in local, state, or national history;
  - It is representative of the work of a notable builder, designer, architect, or artist;
  - It embodies distinguishing characteristics of a style, type, period, or method of construction;
  - It is noteworthy example of the use of indigenous materials or craftsmanship;
  - It embodies elements that represent a significant structural, engineering, or architectural achievement or innovation;
  - It has a unique location, a singular physical characteristic, or is an established and familiar visual feature of a neighborhood, community of the City;
  - It is one of the few remaining examples in the City, region, state, or nation possessing distinguishing characteristics of an architectural or historical type or specimen; or
  - It has yielded or is likely to yield information important to the City's history or prehistory.

Pursuant to Development Code Section 4.02.040, any neighborhood or area that meets one or more of the following criteria is eligible to be placed on the City's List of Historic Landmarks and Districts as a District:

- Is a geographically definable area possessing a concentration of Historical Resources or thematically related grouping of structures which contribute to each other and are unified by plan, style, or physical development; and embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master and possesses high artistic values;
- Reflects significant geographical patterns, including those associated with different eras of settlement and growth, particular transportation modes, or distinctive examples of a park landscape, site design, or community planning;
- Is associated with, or the contributing resources are unified by events that have a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States; or
- The historic resource is, or the contributing resources are associated with lives of persons important to Ontario, California, or national history.

Landmarks and Districts listed in the NRHP or the CRHR are automatically placed on the City's List of Historic Landmarks and Districts. In addition to the criteria listed above that refer to the historical significance of the resource, the City also requires Landmarks and Districts to have integrity for the time in which they are significant.

The City requires that EIRs associated with Specific Plans in New Model Colony (also referred to as NMC, or Ontario Ranch [OR]) must consider the findings discovered in the City of Ontario's Historic Context for the New Model Colony Area[8] and address impacts to historical resources. Therefore, this analysis of the resources on the Project area considers the contextual aspects of the NMC Historic Context with an analysis of the Project.

The City Development Code Article 26, Historic Preservation[9], promotes the public health, safety, and general welfare by:

- Safeguarding the character and history of the City which is reflected in its unique cultural, historical, and architectural heritage, with emphasis on the "Model Colony" as recognized by an Act of Congress and presented at the St. Louis World's Fair in 1904;
- Promoting public knowledge, appreciation, and understanding of the City's past;
- Fostering civic and neighborhood pride in the beauty and accomplishments of the past;
- Promoting the enjoyment and use of Historical Resources appropriate for the education and recreation of the people of the City;
- Enhancing the visual and aesthetic character, diversity, and interest of the City;
- Enhancing property values and stabilizing neighborhoods within the City;
- Recognizing Historical Resources and protecting areas of historical buildings from encroachment of incompatible designs;
- Providing economic benefits to the City and its inhabitants through financial incentives for preservation;
- Protecting and enhancing the City's attraction to tourists and visitors,
- Stimulating business and industry;
- Promoting public awareness of the benefits of preservation; and
- Encouraging public participation in historic preservation, thereby increasing civic pride in the City's heritage.

The Project area would comply with the City's Historic Preservation Ordinance, ensuring all historically-significant findings within the City, including the Project area, would align with the above standards.

4.5.4 Impact Thresholds and Significance Criteria

State CEQA Guidelines Appendix G contains the Environmental Checklist Form, which includes questions concerning cultural resources. The questions presented in the Environmental Checklist Form have been utilized as significance criteria in this section.

Accordingly, the Project would have a significant effect on the environment if it would:

- Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5;
- Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5; or
- Disturb any human remains, including those interred outsides of dedicated cemeteries.

Historical Resources

State CEQA Guidelines §15064.5 provides direction on determining significance of impacts to archaeological and historical resources. Generally, a resource shall be considered "historically significant" if the resource meets the criteria for listing on the CRHR.

- Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
- Is associated with the lives of persons important in our past;
- Embodies the distinctive characteristics of a type, period, region or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
- Has yielded, or may be likely to yield, information important in prehistory or history. (PRC Section 5024.1; 14 CCR Section 4852)

The fact that a resource is not listed in the CRHR, not determined to be eligible for listing, or not included in a local register of historical resources does not preclude a lead agency from determining that it may be a historical resource. The City is a Certified Local Government (CLG) that is required to review historic resource surveys and make a determination of eligibility for listing on an ongoing basis as part of the implementation of the certified historic preservation program.

Methodology and Assumptions

Cultural Resource Assessment Results

As discussed previously, a Cultural Resources Assessment (***Appendix D1*** of this Draft EIR) was prepared for the Project site. The Cultural Resource Assessment includes a thorough literature review, an intensive-level cultural resources field survey field investigation, and cultural resources recommendations for the proposed development. The results are discussed herein.

Records Search

Data from the SCCIC revealed that 10 previous cultural resources studies have taken place and two cultural resources have been recorded within one half-mile of the Project site. Two of the previous studies have assessed small portions of the Project site for cultural resources resulting in one cultural resource (a transmission alignment designated P-36-25440) previously recorded within its boundaries. Records search results are summarized in ***Table 4.5-1: Cultural Resources and Reports Within One Half-Mile of the Project Site*** below.

Table 4.5-1: Cultural Resources and Reports Within One Half-Mile of the Project Site

USGS 7.5 Min Quad	Cultural Resources Within One Half-Mile of Project Site	Studies W/in One Half-Mile
Ontario (1981), Prado Dam (1981), California	P-36-25440: Historic-Period Chino-Mira Loma No.1 Transmission Alignment (Crosses Project Site) P-36-26725: Historic-Period Building (1/2 Mile SW)	SB-1499, 2623, 2678, 3012, 3688, 4402, 4404*, 6095*, 7898, 7968
Source: ***Appendix D1***. Notes: *Previously assessed a portion of the Project site.		

Field Survey

BCR Consulting conducted the field survey on October 31, 2022, February 8, 2023, and on May 22, 2023. The Project site has been completely disturbed by historic-period and modern dairy and agricultural developments, and by the installation of public utility alignments. Vegetation at the time of survey included a seasonal pumpkin patch on the northern portion of the project site and seasonal grasses were seen throughout the *P*roject area. Average visibility was approximately 50 percent and sediment comprised sandy silt with very few rocks. Two historic-period dairies and one historic-period transmission alignment were recorded during the survey and are discussed below.

Significance Criteria and Evaluation Results

California Register of Historical Resources. The CRHR criteria are based on NRHP criteria. For a property to be eligible for inclusion on the CRHR or as a City Landmark, one or more of the following criteria must be met:

1. It is associated with the events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the U.S.;
2. It is associated with the lives of persons important to local, California, or U.S. history;
3. It embodies the distinctive characteristics of a type, period, region, or method of construction, represents the work of a master, possesses high artistic values; and/or
4. It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

In addition to meeting one or more of the above criteria, the CRHR requires that sufficient time has passed since a resource's period of significance to "obtain a scholarly perspective on the events or individuals

associated with the resources." (CCR Section 4852 [d][2]). The CRHR also requires that a resource possess integrity. This is defined as the ability for the resource to convey its significance through seven aspects: location, setting, design, materials, workmanship, feeling, and association.

In addition to evaluation for NRHP and CRHR listing eligibility, the City of Ontario Development Code Article 26: Historic Preservation (Section 9-1.2615) provides the following designation criteria for a property to qualify as a City Historic Landmark:

a) It exemplifies or reflects special elements of the City's history;

b) It is identified with persons or events significant in local, state, or national history;

c) It is representative of the work of a notable builder, designer, architect, or artist;

d) It embodies distinguishing architectural characteristics of a style, type, period, or method of construction;

e) It is a noteworthy example of the use of indigenous materials or craftsmanship;

f) It embodies elements that represent a significant structural, engineering, or architectural achievement or innovation;

g) It has a unique location, a singular physical characteristic, or is an established and familiar visual feature of a neighborhood, community or the City; or

h) It is one of the few remaining examples in the City, region, state, or nation possessing distinguishing characteristics of an architectural or historical type or specimen.

California Register of Historical Resources Results

During the research and field survey, six resources were identified, recorded, and evaluated for CRHR listing eligibility (i.e., significance under CEQA). These include the historic-period Grant Dairy at 13813 Euclid Avenue, a historic-period rural-residential property at 14095 Euclid Avenue, an unnamed historic-period dairy at 7275 Schaefer Avenue, a historic-period rural-residential property at 7218 & 7226 Edison Avenue, an unnamed historic-period dairy at 7244 & 7260 Edison Avenue, and a historic-period transmission alignment designated P-36-25440. CRHR listing eligibility recommendations are summarized in the below ***Table 4.5-2: Historic-Period Resources***; see ***Appendix D1*** of the Draft EIR for additional detail.

Table 4.5-2: Historic-Period Resources

Property Type	Address	California Register of Historic Resources Eligibility
Historic-Period Grant Dairy	13813 Euclid Avenue	Recommended Eligible
Historic-Period Rural Residential	14095 Euclid Avenue	Recommended Not Eligible
Historic-Period Dairy	7275 Schaefer Avenue	Recommended Eligible
Historic-Period Rural Residential	7218 & 7226 Edison Avenue	Recommended Not Eligible
Historic-Period Dairy	7244 & 7260 Edison Avenue	Recommended Eligible
Historic-Period Transmission	P-36-25440	Recommended Not Eligible

Property Type	Address	California Register of Historic Resources Eligibility
Alignment

City of Ontario Criteria Results

13813 Euclid Avenue City of Ontario Designation Criteria. The Historic-Period Grant Dairy at 13813 Euclid Avenue comprises a Streamline Moderne-style milk parlor, two residences and several ancillary buildings, and other dairy features; refer to ***Appendix D1*** for information regarding Streamline Moderne-style milk parlors. The dairy is recommended eligible for CRHR listing under Criterion 1, 2, and 3. The property is therefore considered a "historical resource" under CEQA. However, the two residences, ancillary buildings, and other features have been modified outside the historic period. They do not contribute to the overall significance of the Grant Dairy and as such do not warrant preservation. The milk parlor is an excellent example of a Streamline Moderne milk parlor, which has been previously identified in a historic context statement as an important local property type. It features design elements such as the rounded corners of the facades, a shaped parapet, glass block windows, and a flat clay tile roof. The Streamline Moderne milk parlor warrants preservation.

The property meets the requirements for designation under the following criteria:

a) The property exemplifies/reflects special elements of the City's dairy history.

b) It is identified with Austin Grant-a pioneer in the dairy industry.

d) The milk parlor embodies distinguishing architectural characteristics.

h) The milk parlor is one of the few remaining examples in the region of its type.

14095 Euclid Avenue CRHR Evaluation. This property was never used as a dairy and therefore has no associations with the New Model Colony.

14095 Euclid Avenue City of Ontario Designation Criteria. The property does not meet any of the eight City Designation Criteria, and as such does not qualify as a City Historic Landmark.

7275 Schaefer Avenue City of Ontario Designation Criteria. The historic-period dairy at 7275 Schaefer Avenue comprises a Streamline Moderne-style milk parlor, a second milk parlor (c1965), and two residences as well as outbuildings, several goat barns, hay storage structures, and an effluent pond to the south. Of these elements, only the Streamline Moderne-style milk parlor is eligible because it is an important local property type under Criterion 3 of the CRHR. It has been previously identified in a historic context statement as an important local property type. It features design elements such as the rounded corners of the facades, a shaped parapet, glass block windows that curve around a corner, and a flat clay tile roof. The property is therefore considered a "historical resource" under CEQA, based on the significance of the milk parlor (which warrants preservation or mitigation). The other buildings lack significance and do not warrant preservation or mitigation under CEQA.

The property meets the requirements for designation under the following criteria:

a) The property exemplifies/reflects special elements of the City's dairy history.

d) The milk parlor embodies distinguishing architectural characteristics.

h) The milk parlor is one of the few remaining examples in the region of its type.

7218 & 7226 Edison Avenue CRHR Evaluation. This property was never used as a dairy and therefore has no associations with this local historic context.

7218 & 7226 Edison Avenue City of Ontario Designation Criteria. The property does not meet any of the eight City Designation Criteria, and as such does not qualify as a City Historic Landmark.

7244 & 7260 City of Ontario Designation Criteria. The historic-period dairy at 7244 & 7260 Edison Avenue comprises a historic-period residence to the west, a historic-period residence to the east, and a historic-period Streamline Moderne-style milking parlor at the center. This dairy is recommended eligible for CRHR listing under Criterion 1, 2, and 3. The property is therefore considered a "historical resource" under CEQA. However, the two residences do not contribute to the overall significance of the historic-period dairy and as such do not warrant preservation. The milk parlor is an excellent example of a Streamline Moderne-style milk parlor, which has been previously identified in a historic context statement as an important local property type. It features design elements such as the smooth stucco finish, projecting center volume, rounded corners, shaped parapet, and decorative clay tile roof, and it warrants preservation under CEQA.

The property meets the requirements for designation under the following criteria:

a) The property exemplifies/reflects special elements of the City's dairy history.

b) It is identified with Floris Ykema-a prominent leader in the dairy industry.

d) The milk parlor embodies distinguishing architectural characteristics.

h) The milk parlor is one of the few remaining examples in the region of its type.

Approach To Analysis

This analysis of impacts on cultural resources examines the Project's temporary (i.e., construction) and permanent (i.e., operational) effects based on application of the significance criteria/thresholds outlined above. Each criterion is discussed in the context of the Project area and the surrounding characteristics/ geography. The impact conclusions consider the potential for changes in environmental conditions, as well as compliance with the regulatory framework enacted to protect the environment.

The baseline conditions and impact analyses are based on field observations, review of Project maps and drawings; analysis of aerial and ground-level photographs; and review of various data available in public records, including local planning documents. The determination that any components of the Project may result in "significant" adverse effects on historical and archaeological resources and human remains considers the existing site's historical resource value and the severity of the Project implementation on resources that may be considered historical.

4.5.5 Plans, Programs, and Policies

PPP CUL-1 Cultural and paleontological resources are recognized as nonrenewable resources and receive protection under the PRC and CEQA.

PPP CUL-2 Native American historical and cultural resources and sacred sites are protected under PRC Sections 5097.9 to 5097.991, which require that descendants be notified when Native American human remains are discovered and provide for treatment and disposition of human remains and associated grave goods.

PPP CUL-5 If human remains are discovered within a project area, disturbance of the site must stop until the coroner has investigated and made recommendations for the treatment and disposition of the human remains to the person responsible for the excavation, or to his or her authorized representative. If the coroner has reason to believe the human remains are those of a Native American, he or she shall contact, by telephone within 24 hours, the NAHC. (California HSC Section 7050.5).

4.5.6 Impacts and Mitigation Measures

Impact 4.5-1 ***Would the Project cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?***

Level of Significance: Significant and Unavoidable

Specific Plan – Phase I and Phase II Future Development Areas

Construction and Operation

Under CEQA, a project has a significant impact on a historical resource if it "would result in the physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resources would be materially impaired" (State CEQA Guidelines Section 15064.5(b)(1)). Material impairment would occur if the Project would result in demolition or material alteration of those physical characteristics that convey the resource's historical significance (State CEQA Guidelines Section 15064.5(b)(2)).

BCR Consulting conducted the Cultural Resources Assessment (***Appendix D1***) for the Project. As stated previously, during the research and field survey, six resources were identified, recorded, and evaluated for CRHR listing eligibility (i.e., significance under CEQA). These include the historic-period Grant Dairy at 13813 Euclid Avenue, a historic-period rural-residential property at 14095 Euclid Avenue, an unnamed historic-period dairy at 7275 Schaefer Avenue, a historic-period rural-residential property at 7218 & 7226 Edison Avenue, an unnamed historic-period dairy at 7244 & 7260 Edison Avenue, and a historic-period transmission alignment designated P-36-25440.

Based on the results of the Cultural Resources Assessment (***Appendix D1***), the historic-period rural residential property at 14095 Euclid Avenue, the historic-period rural residential property at 7218 & 7226 Edison Avenue, and the transmission alignment designated P-36-25440 have been evaluated and are recommended not eligible for CRHR eligibility. They do not warrant further consideration. However, as stated above, potential historical resources in the Project study area consist of the historic-period Grant

Dairy at 13813 Euclid Avenue, the historic-period Dairy at 7275 Schaefer Avenue, and the historic-period dairy at 7244 & 7260 Edison Avenue. As proposed, these buildings would be demolished to facilitate development of the Project.

Preservation in place is the preferred manner of mitigating impacts to historical resources under CEQA. Based on results of the current study, the Art Deco Milk Parlor located at the Grant Dairy merits preservation. If preservation of the Art Deco Milk Parlor is feasible, no other cultural resources work, or monitoring is recommended for the portions of the project site that have been subject to inventory. The significance of a historical resource is impaired when a project demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for the CRHR. If an impact on a historical or archaeological resource is significant, CEQA requires feasible measures to minimize the impact (State CEQA Guidelines Section 15126.4 (a)(1)). Mitigation of significant impacts must lessen or eliminate the physical impact that the project will have on the resource. Where preservation is not an option, a data collection mitigation program has been developed in which potential adverse effects of any proposed demolition would be reduced. Preservation in place is considered infeasible in regard to the three potential historic resources, identified above. Preserving these buildings in place would inhibit the attainment of basic Project objectives, as described in ***Section 6.0: Alternatives***. Therefore, it is required to assess the feasibility of relocating the three historic milk parlors. However, relocation would not mitigate impacts to historic resources to less than significant levels.

A Feasibility Study (***Appendix D2***) for the relocation of two historic milk parlors, located on the Venegas Farm (13813 Euclid Avenue) and the Drake Farm (7275 Schaefer Avenue), was conducted by Structural Focus in November 2023. The Feasibility Study makes determinations on the feasibility of relocation for the two milk parlors located within the Phase I area of the Project site. The findings are based on visual observations made while on both milk parlor sites on October 25, 2023. Structural Focus observed that the Drake Farm Milk Parlor is in relatively good condition and is currently functioning as a working parlor. The Venegas Farm Milk Parlor is also functioning as a working parlor, but the wood and corrugated metal roof of the back portion is in bad condition. Additionally, approximately 20 feet at the back of the building has been demolished, and the back 20 feet of the existing building is severely deteriorated and in danger of collapse. Based on these observations, the Feasibility Study presents the following findings related to the relocation of the two historic milk parlors:

- **Venegas Farm Milk Parlor** – The roof of the front portion of the building could be lifted and relocated. It is not feasible to relocate the remainder of the front portion and the entire back portion of the building.
- **Drake Farm Milk Parlor** – It is feasible to relocate the building in its entirety (with the exception of the stem walls in the front and back portion of the parlor and the animal stalls in the back portion of the parlor).

Prior to any project-related impacts to significant resources, the City would complete or require the completion of Historic American Building Survey (HABS) style photographic documentation of the subject property. While the photographs would meet HABS standards, only local curation (and no federal curation

or involvement) would be necessary. The photographic documentation will be provided to the City (and any required local repositories) for curation. However:

> In most cases the use of drawings, photographs, and/or displays does not mitigate the physical impact on the environment caused by demolition or destruction of an historical resource (14 CCR § 15126.4(b)). However, CEQA requires that all feasible mitigation be undertaken even if it does not mitigate below a level of significance. In this context, recordation serves a legitimate archival purpose. The level of documentation required as a mitigation should be proportionate with the level of significance of the resource (http://ohp.parks.ca.gov/?page_id=21727).

Through this mitigation measure, impacts to the Project site would be reduced. However, it may not be possible to reduce impacts of demolition below a level of significance.

Therefore, impacts would be potentially significant (impacts to residences and/or dairy properties) and mitigation would be required. The application of **MM CUL-1** through **MM CUL-8** would ensure that every effort would be made to reduce impacts to the historical resources on-site to the extent feasible. **MM CUL-1** ensures that every effort would be made to relocate the eligible historic buildings on the Project site, including offering relocation for the historical buildings off-site at no cost; and advertisements notifying the public of the opportunity to relocate the buildings would be placed on-site with temporary signage, in at least three local publications (newspapers, magazines, local organization newsletters), and on local bulletin boards (realtor's offices, local business), for a minimum of 45 days. **MM CUL-2** would require full documentation of the historical buildings following Historic American Buildings Survey standards, of the historical resource be submitted to the Planning Department for review and approval and subsequent release to the Ovitt Family Community Library, Model Colony History Room prior to issuance of demolition building permit. **MM CUL-3** ensures a mitigation fee payment is made to the Planning Department, pursuant to Section 7.01.030 of the Ontario Development Code. **MM CUL-4** requires that the Planning Department determine whether items within or on the historical resource should be salvaged. The applicant shall be responsible for the removal, relocation and donation of such items selected for salvaging. An inventory of salvaged items shall be provided by the applicant to the Planning Department prior to be to issuance of demolition permit. **MM CUL-5** requires the applicant to obtain a building permit prior to any demolition, relocation, or construction.

In the absence of a relocation feasibility study for the historic milk parlor located in the Phase II area, impacts within the Phase II area are not fully known. Thus, **MM CUL-6** would apply. **MM CUL-6** requires that a feasibility study of the relocation and adaptive reuse be completed for the milk parlor located within the Phase II area (at 7244 and 7260 Edison Avenue), such as that conducted for the Phase I area historic resources (at 13813 Euclid Avenue and 7275 Schaefer Avenue; refer to **Appendix E3**). Should relocation be deemed infeasible, **MM CUL-1** would apply to the milk parlor within the Phase II area. Further, **MM CUL-7** would require that a comparative study of other dairy areas within California be conducted to further understand the significance of dairy farming at a local, regional, and statewide level.

Finally, **MM CUL-8** would require the creation of a 12-15 minute documentary that focuses on the dairy history, themes, site, building, and stories gathered from new and archived oral interviews, dairy context

and recent dairy surveys. Implementation of **MM CUL-1** through **MM CUL-8** would reduce impacts to historic resources, however impacts would remain significant and unavoidable.

Conclusion

As noted above, the Project would have significant and unavoidable impacts pertaining to historical resources. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. Implementation of **MM CUL-1** through **MM CUL-8** is required, in addition to compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.[10]

Mitigation Measures

MM CUL-1 Prior to issuance of a demolition building permit, every effort shall be made to relocate the Milk Parlor (front portion). The building shall be offered at no cost for those who can relocate off site. Advertisements notifying the public of the opportunity to relocate the building shall be placed for a minimum of 30 days: on-site with temporary signage, in at least three local publications (newspapers, magazines, local organization newsletters), and on local bulletin boards.

MM CUL-2 Full documentation, including but not limited to as built drawing, historical narrative, and Historic American Building Survey (HABS) photographs of the historic resource pursuant to HABS Level 3 standards shall be submitted to the Planning Department for subsequent release to the Ovitt Family Community Library, Model Colony History Room prior to issuance of demolition building permit.

MM CUL-3 A mitigation fee pursuant to Section 7.01.030 of the Ontario Development Code shall be paid to the Planning Department prior to issuance of building permit for demolition. Mitigation fee is equal to 30% of the price per square foot construction cost as established in the most current International Code Council Building Valuation Data. The fee amount will be provided by the Planning Department at the time of payment. Funds will be deposited into the City's Historic Preservation Trust Fund.

MM CUL-4 A determination whether items within or on the resource should be salvaged shall be made by the Planning Department. The applicant shall be responsible for the removal, relocation and donation of such items selected for salvaging. An inventory of salvaged items shall be provided by the applicant to the Planning Department prior to the issuance of building permit.

MM CUL-5 The applicant shall obtain a building permit prior to any demolition, relocation, or construction.

MM CUL-6 A feasibility study of the relocation and adaptive reuse shall be completed by a qualified architect and structural engineer who specializes in historic buildings in consultation with contractors who specialize in moving buildings for the Milk Parlor

[10] City of Ontario. 2022. *TOP 2050 Final Supplemental Environmental Impact Report, Section 5.5, Cultural Resources*. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (accessed April 2023).

located within the area identified as Phase II. MM CUL-1 shall be implemented if determined relocation is feasible.

MM CUL-7 Conduct a comparative study of other dairy areas within California such as the San Joaquin Valley, Arcata Bottoms in Humboldt County, and the Fresno region to further understand the significance of dairy farming at a local, regional, and statewide level.

MM CUL-8 Produce a short video documentary on the operations of a functioning dairy located within the Ontario Ranch area. The 12-15 minute documentary should focus on the dairy history, themes, site, building, and stories gathered from new and archived oral interviews, dairy context and recent dairy surveys.

Impact 4.5-2 Would the Project cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?

Level of Significance: Less Than Significant with Mitigation Incorporated

Specific Plan – Phase I and Phase II Future Development Areas

Construction and Operation

One purpose of the Cultural Resources Assessment was to determine whether significant archaeological deposits were present within the proposed Project area. Although none were identified during the records search and field survey, ground-disturbing activities have the potential to reveal buried deposits not observed on the surface. If discovered, impacts to those resources would be potentially significant. In order to minimize any potential impact to the environment, impacts to archaeological resources are considered potentially significant and mitigation measures are required to ensure the proper treatment of undiscovered archaeological resources that may be encountered during grading. The application of mitigation measures **MM CUL-9** and **MM CUL-10** below requiring Cultural Awareness training for all construction and field personnel and ensure the proper treatment of undiscovered archaeological resources that may be encountered during grading would reduce the impacts to less than significant levels.

Following the completion of construction of the Project and disturbances to the site, the Project operation will not include further ground disturbing activities, and it is not anticipated to cause a substantial or adverse change in the significant of an archaeological resource since construction will be completed and mitigation measures applied. Therefore, impacts will be less than significant.

Conclusion

As noted above, the Project would have a less than significant impact with mitigation incorporated pertaining to archaeological resources. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. Impacts would be less than significant with implementation of **MM CUL-9** and **MM CUL-10** below, in addition to applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.[11]

[11] Ibid.

Mitigation Measures

Refer to **MM CUL-1** through **MM CUL-8** above.

MM CUL-9 Prior to the issuance of any grading permits for the Project area, a Cultural Awareness Training Program shall be provided to all construction managers and construction personnel prior to commencing any ground disturbance work within the Project area. The training shall be prepared and conducted by a Qualified Archaeologist to the satisfaction of the City Planning Department. The training may be discontinued when ground disturbance is completed. Construction personnel shall not be permitted to operate equipment within the construction area unless they have attended the training. A copy of the training transcript and/or training video, as well as a list of the names of all personnel who attended the training and copies of the signed acknowledgment forms shall be submitted to the City Planning Department for their review and approval.

MM CUL-10 Should any cultural resources be discovered during Project implementation; the City Planning Department and a Qualified Archaeologist shall be notified to assess the nature and significance of the find. Should any cultural resources be deemed significant, the Qualified Archaeologist shall draft a treatment plan for review and approval by the City Planning Department. Tribes listed on the City's contact list for the Project shall be notified of any significance discovery that is Native American in origin and be given the opportunity to comment on the treatment plan prior to implementation. All final site records, reports, etc. associated with the discovery, evaluation, and treatment of cultural resources discovered during Project implementation shall be submitted to the South-Central Coastal Information Center (SCCIC).

Impact 4.5-3 ***Would the Project disturb any human remains, including those interred outsides of dedicated cemeteries?***

Level of Significance: Less Than Significant

Specific Plan – Phase I and Phase II Future Development Areas

Construction and Operation

No cemeteries or similar uses exist on the Project area. As well, no uses on the Project site would include the preservation, containment, or burial of human remains. Despite the lack of human remains on the Project area, there is still a remote possibility of encountering human remains buried since the existing uses were established in 1963. As the records search and field survey did not reveal any resources known to contain human remains within or near the Project area, the Cultural Resources Assessment conducted for the Project concluded that the potential presence of archeological deposits, which include human remains, would be low. However, though none were identified during the records search and field survey, ground-disturbing activities have the potential to reveal buried remains not observed on the surface. If discovered, impacts to human remains would be potentially significant.

In order to maintain a conservative consideration of potential impacts to human remains, the Project would comply with the mandates provided by State regulations, including Health and Safety Code (HSC) Sections 7050.5-7055, PRC Section 5097.94, and PRC Section 5097.98-5097.99. HSC Sections 7050.5-7055 describe the general provisions for process for discovery and treatment of human remains. Specifically, HSC Section 7050.5 prescribes the requirements for the treatment of any human remains that are accidentally discovered during excavation of a Project area. HSC §7050.5 requires that all activities cease within the vicinity of the find and the County Coroner be contacted immediately to inspect the remains. As set forth in HSC Section 7050.5 and PRC §5087.98, for Native American human remains, the County Coroner will contact the Native American Heritage Commission (NAHC), who would then designate the Most Likely Descendant (MLD) of the unearthed human remains. Following compliance with the established regulatory framework (i.e., HSC Sections 7050.5-7055, PRC Section 5097.94, and PRC Sections 5097.98-5097.99), the Project's impacts concerning potential to disturb human remains, would be reduced to less than significant.

Conclusion

As noted above, the Project would result in a less than significant impact pertaining to the disturbance of human remains. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. No mitigation is required other than compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.

Mitigation Measures

No mitigation is required.

4.5.7 Cumulative Impacts

Cultural resources impacts are site specific and generally do not combine to result in cumulative impacts. In the immediate vicinity of the Project area, no significant cultural resources were identified that could combine with the effects of the Project to result in a cumulatively significant impact to cultural resources. However, cultural resources investigations would be required for other projects before the City of Ontario would permit ground disturbances or demolition or substantial alteration of existing structures. Such investigations would identify resources on the affected Project areas that are or appear to be eligible for listing on the NRHP or CRHR. Such investigations would also recommend mitigation measures to protect and preserve cultural resources. The Project includes mitigation measures to ensure proper identification, treatment, and preservation of cultural resources on the Project. Therefore, cumulative impacts to cultural resources would be less than significant.

The Project could result in potential site-specific impacts to currently unknown archaeological and cultural resources discovered during grading and trenching activities. Other projects within the cumulative study area also have the potential to result in damage and/or loss to these resources. The combination of the Project as well as past, present, and reasonably foreseeable projects in the City and County would be required to comply with all applicable state, federal, County, and local regulations concerning preservation, salvage, or handling of cultural resources, including compliance with required mitigation. Similar to the Project, these projects also would be required to implement and conform to mitigation

measures, which would be likely to reduce impacts to less than significant. Although in the process of development, some known or unknown resources may be lost, it is not anticipated that these impacts would be cumulatively considerable. In addition, implementation of **MM CUL-1** through **MM CUL-10** would reduce Project-specific impacts to the extent feasible. However, despite implementation of all applicable mitigation measures, Project-specific impacts relating to historic resources would be significant and unavoidable. Additionally, the Project would be pursuant to TOP 2050 and would represent a consistent and logical continuation of the existing and planned pattern of development in Ontario, specifically the Ontario Ranch area. The City has long anticipated that this area would transition from dairy/agricultural to urban uses, and the Project Specific Plan is implementing TOP 2050.[12] Therefore, in consideration of the findings of the TOP 2050 Final Supplemental EIR, the Project's contribution to cumulative impacts would be less than significant.

4.5.8 Significant Unavoidable Impacts

The Project area consists of three cultural resources; the historic-period Grant Dairy at 13813 Euclid Avenue, an unnamed historic period dairy at 7275 Schaefer Avenue, and an unnamed historic-period dairy at 7244 & 7260 Edison Avenue, which were found to be significant and eligible for listing in the CRHR. These findings are consistent with the information provided by the City. As proposed, the Project will lead to significant impacts to this historical resource, as the buildings would be demolished to facilitate development of the Project. As mentioned above, every effort would be made to relocate the historic milk parlors, when feasible based on the structural integrity of the buildings. However, relocation does not mitigate impacts to a less than significant level and impacts to historic resources would be significant and unavoidable. This unavoidable significant impact is consistent with findings of the City's TOP 2010 Certified EIR and TOP 2050 Final Supplemental EIR, which implemented the interim Agricultural Overlay District in anticipation of future development for the site. Even with implementation of regulatory requirements, standard conditions of approval, and consideration of mitigation, the Project would result in significant and unavoidable impacts.

4.6 ENERGY

4.6.1 Introduction

This section of the Draft Environmental Impact Report (EIR) evaluates potential impacts related to energy resources associated with the Euclid Mixed-Use Specific Plan Project (Project), within the City of Ontario (City). The energy analysis consists of a summary of the existing conditions, the energy regulatory framework, a discussion of the Project's potential impacts on energy resources, and identification of mitigation of the Project that may reduce energy consumption, as needed.

This Section and environmental discussion use information from the following City documents:

- The Ontario Plan 2050
- City of Ontario Municipal Code
- City of Ontario TOP 2050 Final Supplemental EIR

Additionally, the following analysis is based in part on information obtained from:

- Kimley-Horn and Associates. April 2023. *Energy Calculations.* (***Appendix B4***)

4.6.2 Environmental Setting

Energy use is typically quantified using the British Thermal Unit (BTU), a unit of heat defined as the amount of heat energy required to raise one pound-mass of water by one degree Fahrenheit. Total energy use in California was 7,966.6 trillion BTU in 2018 (the most recent year for which this specific data is available), with a total consumption per capita being 202 million BTU. The State is the second largest consumer of energy in the U.S. but ranks 50th for energy consumption on a per capita basis. Of California's total energy use, the breakdown by sector is approximately 39.8 percent transportation, 23.2 percent industrial, 18.9 percent commercial, and 18.1 percent residential. Electricity and natural gas in California are generally used by stationary sources such as residences, commercial sites, and industrial facilities, whereas petroleum use is generally accounted for by transportation-related energy use.[1]

Electricity

Electricity as a utility is a man-made resource. The production of electricity requires the consumption or conversion of resources, including water, wind, oil, gas, coal, solar, geothermal, and nuclear resources, into energy. The delivery of electricity requires several system components including substations and transformers that lower transmission line power (voltage) to a level appropriate for distribution and use. The electricity generated is distributed through a network of transmission and distribution lines commonly called a power grid. Conveyance of electricity through transmission lines is typically responsive to market demands.

Energy capacity, or electrical power, is generally measured in watts (W), while energy use is measured in watt-hours (Wh). For example, if a light bulb has a capacity rating of 100 W, the energy required to keep

[1] US Energy Information Agency (USEIA). 2019. *California State Energy Profile*. https://www.eia.gov/state/print.php?sid=CA. (accessed April 2023).

the bulb on for 1 hour would be 100 Wh. If ten 100 W bulbs were on for 1 hour, the energy required would be 1,000 Wh or 1 kilowatt-hour (kWh). On a utility-scale, a generator's capacity is typically rated in megawatts (MW), which is one million watts, while energy use is measured in megawatt-hours (MWh) or gigawatt-hours (GWh), which is one billion Wh.

The Project site is in Southern California Edison's (SCE) service area, which spans much of southern California from Orange and Riverside counties on the south to Santa Barbara County on the west to Mono County on the north. Total electricity consumption in SCE's service area was 103,045 GWh in 2021.[2] Sources of electricity sold by SCE in 2021, the latest year for which data are available, were:

- 32 percent renewable, consisting mostly of solar and wind
- 2 percent large hydroelectric
- 22 percent natural gas
- 9 percent nuclear
- 35 percent unspecified sources – that is, not traceable to specific sources[3]

The Project site generates electricity demand for the day-to-day operations of the agricultural and residential uses on-site. Existing use of electricity on-site includes lighting, heating and cooling, ventilation, and milking equipment, such as pumps and cooling systems.

Natural Gas

Southern California Gas Company (SoCalGas) provides gas service in the City and has facilities throughout the City, including the Project site. The service area of SoCalGas spans much of the southern half of California, from Imperial County on the southeast to San Luis Obispo County on the northwest to part of Fresno County on the north to Riverside County and most of San Bernardino County on the east. Total natural gas consumption in SoCalGas's service area was 6,755 million therms in 2021.[4]

The Project site generates natural gas demand for the day-to-day operations of the dairy farm and residences on-site. Estimated annual natural gas demand for the existing on-site operations is 387,510 kilo-BTU per year (kBTU/year) or 3,876 therms.[3] Natural gas demands on-site mainly stem from the use of space and water heaters, cooking appliances, and laundry and water appliances.

4.6.3 Regulatory Setting

Federal

Energy Independence and Security Act of 2007

The Energy Independence and Security Act (EISA; Public Law 110-140) was signed into law by President George W. Bush on December 19, 2007. The Act's goal is to achieve energy security in the United States by increasing renewable fuel production, improving energy efficiency and performance, protecting consumers, improving vehicle fuel economy, and promoting research on greenhouse gas (GHG) capture and storage. Under the EISA, the Renewable Fuel Standard (RFS) program (RFS2) was expanded in several keyways:

- Expanded the RFS program to include diesel, in addition to gasoline;
- Increased the volume of renewable fuel required to be blended into transportation fuel from 9 billion gallons in 2008 to 36 billion gallons by 2022;
- Established new categories of renewable fuel and set separate volume requirements for each; and
- Required the U.S. Environmental Protection Agency (EPA) to apply lifecycle GHG performance threshold standards to ensure that each category of renewable fuel emits fewer GHGs than the petroleum fuel it replaces.

RFS2 lays the foundation for achieving significant reductions of GHG emissions from the use of renewable fuels, for reducing imported petroleum, and encouraging the development and expansion of our nation's renewable fuels sector.

The EISA also includes a variety of new standards for lighting and for residential and commercial appliance equipment. The equipment includes residential refrigerators, freezers, refrigerator-freezers, metal halide lamps, and commercial walk-in coolers and freezers.

State

Assembly Bill 32 and Senate Bill 32

California's major initiative for reducing GHG emissions is outlined in Assembly Bill (AB) 32, the "California Global Warming Solutions Act of 2006." AB 32 codifies the statewide goal of reducing GHG emissions to 1990 levels by 2020, and requires CARB to prepare a Scoping Plan that outlines the main State strategies for reducing GHGs to meet the 2020 deadline. In addition, AB 32 requires CARB to adopt regulations to require reporting and verification of statewide GHG emissions. Reductions in overall energy consumption have been implemented to reduce emissions. See ***Section 4.8: Greenhouse Gas Emissions,*** of this Draft EIR for a further discussion of AB 32.

In September 2016, the Governor signed into legislation SB 32, which builds on AB 32 and requires the state to cut GHG emissions to 40 percent below 1990 levels by 2030. With SB 32, the Legislature also passed AB 197, which provides additional direction for updating the Scoping Plan to meet the 2030 GHG

reduction target codified in SB 32. The California Air Resources Board (CARB) has published a draft update to the Scoping Plan and has received public comments on this draft but has not released the final version.

Additional energy efficiency measures beyond the current regulations are needed to meet these goals as well as the AB 32 GHG reduction goal of reducing Statewide GHG emissions to 1990 levels by 2020 and the SB 32 goal of 40 percent below 1990 levels by 2030 (see ***Section 4.8: Greenhouse Gas Emissions***, for a discussion of AB 32 and SB 32). Part of the effort in meeting California's long-term reduction goals include reducing petroleum use in cars and trucks by 50 percent, increasing from one-third to more than one-half of California's electricity derived from renewable sources, doubling the efficiency savings achieved at existing buildings and making heating fuels cleaner; reducing the release of methane, black carbon, and other short-lived climate pollutants, and managing farm and rangelands, forests, and wetlands so they can store carbon.

California Building Energy Efficiency Standards: Title 24, Part 6 (California Energy Code)

Building Energy Efficiency Standards for Residential and Nonresidential Buildings (California Code of Regulations [CCR], Title 24, Part 6), commonly referred to as "Title 24," California's energy efficiency standards for residential and non-residential buildings, was established by the California Energy Commission (CEC) in 1978 in response to a legislative mandate to create uniform building codes to reduce California's energy consumption, and provide energy efficiency standards for residential and non-residential buildings. The 2022 Building Energy Efficiency Standards, which took effect on January 1, 2023, promote photovoltaic (PV) systems in newly constructed buildings, electric ready requirements in new homes, and new electric heat pump requirements for buildings. The California Building Energy Efficiency Standards (CBEES) updates focus on several key areas to improve the energy efficiency of newly constructed buildings and additions and alterations to existing buildings and include requirements that will enable both demand reductions during critical peak periods and future solar electric and thermal system installations.

The Title 24, Part 6 was created as part of the California Building Standards Code by the California Building Standards Commission in 1978 to establish statewide building energy efficiency standards to reduce California's energy use. These standards include provisions applicable to all buildings, residential and non-residential, which describe requirements for documentation and certificates that the building meets the standards. These provisions include mandatory requirements for efficiency and design of the following types of systems, equipment, and appliances:

- Air Conditioning Systems
- Heat Pumps
- Water Chillers
- Gas- and Oil-Fired Boilers
- Cooling Equipment
- Water Heaters and Equipment
- Pool and Spa Heaters and Equipment

- Gas-Fired Equipment Including Furnaces and Stoves/Ovens
- Windows and Exterior Doors
- Joints and Other Building Structure Openings (Envelope)
- Insulation and Cool Roofs
- Lighting Control Devices
- Solar PV Systems

The standards include additional mandatory requirements for space conditioning (cooling and heating), water heating, indoor and outdoor lighting systems, as well as equipment in non-residential, high-rise residential, and hotel or motel buildings. Mandatory requirements for low-rise residential buildings cover indoor and outdoor lighting, fireplaces, space cooling and heating equipment (including ducts and fans), and insulation of the structure, foundation, and water piping. The standards require solar PV systems for new homes. In addition to the mandatory requirements, the standards call for further energy efficiency that can be provided through a choice between performance and prescriptive compliance approaches. Separate sections apply to low-rise residential and to non-residential, high-rise residential, and hotel or motel buildings. In buildings designed for mixed use (e.g., commercial and residential), each section must meet the standards applicable to that type of occupancy.

The performance approach set forth under these standards provides for the calculation of an energy budget for each building and allows flexibility in building systems and features to meet the budget. The energy budget addresses space-conditioning (cooling and heating), lighting, and water heating. Compliance with the budget is determined using a CEC-approved computer software energy model. The alternative prescriptive standards require demonstrating compliance with specific minimum efficiency for components of the building such as building envelope insulation R-values, fenestration (areas, U-factor and solar heat gain coefficients of windows and doors) and heating and cooling, and water heating and lighting system design requirements. These requirements vary depending on the building's location in the State's 16 climate zones.

The CBEES are updated on an approximately three-year cycle as technology and methods have evolved. As a result of new law under AB 970, passed in the fall of 2000 in response to the State's electricity crisis, an emergency update of the standards went into effect in June 2001. The CEC then initiated an immediate follow-on proceeding to consider and adopt updated standards that could not be completed during the emergency proceeding. The CBEES updates focus on several key areas to improve the energy efficiency of newly constructed buildings and additions and alterations to existing buildings, and include requirements that will enable both demand reductions during critical peak periods and future solar electric and thermal system installations.

California Green Building Standards

The California Green Building Standards Code (CCR, Title 24, Part 11), commonly referred to as the CALGreen Code, is a Statewide mandatory construction code that was developed and adopted by the California Building Standards Commission and the California Department of Housing and Community

Development. The CALGreen Code requires new residential and commercial buildings to comply with mandatory measures under five topical areas: planning and design; energy efficiency; water efficiency and conservation; material conservation and resource efficiency; and environmental quality. The CALGreen Code also provides voluntary tiers and measures that local governments may adopt which encourage or require additional measures in the five green building topics. The most recent CALGreen Code was adopted in 2022 and went into effect January 1, 2023.

2008 California Energy Action Plan Update

The 2008 Energy Action Plan (EAP) Update provides a status update to the 2005 EAP II, which is the State of California's principal energy planning and policy document. The 2008 EAP continues the goals of the original EAP and describes a coordinated implementation plan for State energy policies, and identifies specific action areas to ensure that California's energy is adequate, affordable, technologically advanced, and environmentally sound. First-priority actions to address California's increasing energy demands are energy efficiency, demand response (i.e., reduction of customer energy usage during peak periods in order to address system reliability and support the best use of energy infrastructure), and the use of renewable sources of power. If these actions are unable to satisfy the increasing energy and capacity needs, the plan supports clean and efficient fossil-fired generation.

2006 Appliance Efficiency Regulations

The CEC adopted Appliance Efficiency Regulations (Title 20, CCR §§1601 through 1608) on October 11, 2006. The regulations were approved by the California Office of Administrative Law on December 14, 2006. The regulations include standards for both federally regulated appliances and non-federally regulated appliances. While these regulations are now often viewed as "business-as-usual," they exceed the standards imposed by all other states and they reduce GHG emissions by reducing energy demand.

Executive Order B-30-15, Senate Bill 350, and Senate Bill 100

In April 2015, the Governor issued Executive Order B-30-15, which established a GHG reduction target of 40 percent below 1990 levels by 2030. SB 350 (Chapter 547, Statutes of 2015) advanced these goals through two measures. First, the law increases the renewable power goal from 33 percent renewables by 2020 to 50 percent by 2030. Second, the law requires the CEC to establish annual targets to double energy efficiency in buildings by 2030. The law also requires the California Public Utilities Commission (CPUC) to direct electric utilities to establish annual efficiency targets and implement demand-reduction measures to achieve this goal. In 2018, SB 100 revised the goal of the program to achieve the 50 percent renewable resources target by December 31, 2026, and to achieve a 60 percent target by December 31, 2030. SB 100 also established a further goal to have an electric grid that is entirely powered by clean energy by 2045.

Local

City of Ontario Climate Action Plan

The City adopted the Community Climate Action Plan (CAP) in August 2022. The primary purpose of the City's Community CAP is to design a feasible strategy is to establish the long-term framework for action on climate change to ensure greenhouse gas pollution is reduced while boosting low-carbon innovation.

The City implemented a Development Screening Table and that is used to determine the significance of a project's GHG impacts. The CAP includes a specific target for GHG reductions for 2030, 2040, and 2050. The targets are consistent with broader State and federal reduction targets and will reflect contemporary scientific understanding of GHG reductions required by 2050.

City of Ontario General Plan – The Ontario Plan 2050

The Ontario Plan (TOP) 2050 Environmental Resources Element defines the ethic to guide management of the City's environmental resources; establishes goals for Environmental Infrastructure; maps environmental justice areas; and establishes policies that support system integration, resource conservation and regeneration, energy independence, environmental justice, and healthy communities. Included in TOP 2050 is the Policy Plan, which is a framework that would guide the City's future growth through the application of policies and goals. The following goals of TOP 2050 relate to visual and scenic resources. The TOP 2050 Environmental Resources Element contains policies which pertain to existing farms and improving the transition of farms to urban uses.

The following policy contained in the Environmental Resources Element is relevant to the Project:

Environmental Resources Element[5]

Goal ER-3 **Cost-effective and reliable energy system sustained through a combination of low impact buildings, site and neighborhood energy conservation, and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.**

Policy ER-3.1 **Conservation Strategy.** We require conservation as the first strategy to be employed to meet applicable energy-saving standards.

Policy ER-3.2 **Green Development – Communities.** We encourage the use of the LEED Neighborhood Development rating system, or similar mechanism, to guide the planning and development of all new communities.

Policy ER-3.3 **Building and Site Design.** We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.

Policy ER-3.4 **Green Development – Public Buildings**. We require all new and substantially renovated City buildings in excess of 10,000 square feet achieve a LEED Silver Certification standard, as determined by the U.S. Green Building Council.

[5] City of Ontario. 2022. *TOP 2050, Environmental Resources Element*. https://www.ontarioca.gov/about-ontario-ontario-plan-policy-plan/environmental-resources. (accessed April 2023).

Policy ER-3.5 **Fuel Efficient and Alternative Energy Vehicles and Equipment.** We require purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use renewable sources of energy.

Policy ER-3.6 **Generation – Renewable Sources.** We promote the use of renewable energy sources (e.g., solar, wind, biomass) in public and private sector development.

4.6.4 Impact Thresholds of Significance Criteria

According to Appendix G of the State CEQA Guidelines, a project would normally have a significant effect on the environment if the project would:

- Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation.
- Conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

Methodology

Based on CEQA Guidelines Appendix G, Energy Conservation, in order to ensure energy implications are considered in project decisions, CEQA identifies that EIRs include a discussion of the potential impacts of proposed projects, with particular emphasis on avoiding or reducing wasteful, unnecessary, or inefficient use of energy resources as applicable. Environmental effects may include the Project's energy requirements and its energy use efficiencies by amount and fuel type during demolition, construction, and operation; the effects of the Project on local and regional energy supplies; the effects of the Project on peak and base period demands for electricity and other forms of energy; the degree to which the Project complies with existing energy standards; the effects of the Project on energy resources; and the Project's projected transportation energy use requirements and its overall use of efficient transportation alternatives, if applicable. The energy and fuel usage information provided in this section is based on the following:

- **Building Energy:** Electricity and natural gas usage associated with building energy that would be generated by land uses accommodated under the Project are based on CalEEMod default electricity and natural gas rates. New buildings are modeled to comply with the 2022 Building Energy Efficiency Standards.
- **On-Road Vehicle Fuel Usage:** Fuel usage associated with operation-related vehicle trips in addition to construction-related vehicle trips (i.e., worker and vendor trips) are based on fuel usage data obtained from EMFAC2021, Version 1.0.2, and on vehicle trip generation and Vehicle Miles Traveled (VMT) data provided Urban Crossroads (see ***Appendix I2: Vehicle Miles Traveled Analysis***).
- **Off-Road Equipment Fuel Usage:** Fuel usage for construction-related off-road equipment are based on fuel usage data obtained from OFFROAD2021, Version 1.0.4, and on the equipment mix and operations anticipated for the Project (see ***Table 4.6-1: Construction-Related Fuel Usage***, for details regarding the anticipated construction schedule and equipment).

4.6.5 Plans, Programs, and Policies

PPP E-1 New buildings are required to achieve the current CBEES (Title 24, Part 6) and the CALGreen Code (Title 24, Part 11). The 2022 Building Energy Efficiency Standards were effective starting January 1, 2023. The Building Energy Efficiency Standards and the CALGreen Code are updated tri-annually with a goal to achieve 100 percent clean carbon neutrality by 2050 within the State.

PPP E-2 New buildings are required to adhere to the CALGreen Code requirement to provide bicycle parking for new non-residential buildings, or meet local bicycle parking ordinances, whichever is stricter (CALGreen Code Sections 5.106.4.1, 14.106.4.1, and 5.106.4.1.2).

PPP E-3 The CALGreen Code requires the recycling and/or salvaging for reuse at minimum of 65 percent of the nonhazardous construction and demolition waste generated during most "new construction" projects (CALGreen Code Sections 4.408 and 5.408). Construction contractors are required to submit a construction waste management plan that identifies the construction and demolition waste materials to be diverted from disposal by recycling, reuse on the project, or salvaged for future use or sale and the amount (by weight or volume).

PPP E-4 Construction activities are required to adhere to Title 13 California Code of Regulations Section 2499, which requires that nonessential idling of construction equipment is restricted to five minutes or less.

PPP E-5 New buildings are required to adhere to the CALGreen Code and Water Efficient Landscape Ordinance requirements to increase water efficiency and reduce urban per capita water demand.

PPP E-6 CARB's RPS is a foundational element of the State's emissions reduction plan. These mandates apply directly to investor-owned utilities, which in the case of the Project is SCE. On September 10, 2018, SN 100 was signed into law and established the following RPS targets: 50 percent renewable resources target by December 31, 2026, and 60 percent target by December 31, 2030. SB 100 also requires that retail sellers and local publicly owned electric utilities procure a minimum quantity of electricity products from eligible renewable energy resources so that the total kilowatt hours of those products sold to their retail end-use customers achieve 44 percent of retail sales by December 31, 2024; 52 percent by December 31, 2027; and 60 percent by December 31, 2030.

PPP E-7 SB 375 requires the reduction of GHG emissions from light trucks and automobiles through land use and transportation efforts that will reduce vehicle miles traveled. In essence, SB 375's goal is to control GHGs by curbing urban sprawl and through better land use planning. SB 375 essentially becomes the land use contribution to the GHG reduction requirements of AB 32, California's global warming bill enacted in 2006, and SB 32.

Project Design Features

PDF E-1 The tilt-up concrete warehouse buildings would have rooftops that can support tenant improvements for solar panels (i.e., solar-ready).

PDF E-2 All outdoor water demands would be served with recycled water.

PDF E-3 The Project would include use of energy efficient Light Emitting Diodes (LEDs), implementation of passive design such as skylights, building orientation, landscaping, and strategic colors to improve building energy performance, and use of high-performance dual pane window glazing in office storefronts.

4.6.6 Impacts and Mitigation Measures

The following impact analysis addresses thresholds of significance. The applicable thresholds are identified in brackets after the impact statement.

Impact 4.6-1 ***Would the Project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during Project construction or operation?***

Level of Significance: Less Than Significant Impact

Project Buildout (Phase I + Phase II)

Short-Term Construction Impacts

Project construction would create temporary increased demands for electricity and vehicle fuels compared to existing conditions and would result in short-term transportation-related energy use. Energy consumption during construction (2023 through 2026) was calculated using the CalEEMod, Version 2022.1 computer model, and the results are shown in ***Table 4.6-1***: ***Construction-Related Fuel Usage***.

Table 4.6-1: Construction-Related Fuel Usage

Project Component	Gasoline (Gallons)	Diesel (Gallons)
Construction Worker Commute	195,564	0
Construction Hauling/Vendor Trips	0	129,044
Construction Off-Road Equipment	0	123,815
Total	195,564	252,859
Source: CalEEMod Version 2022.1;		

Electrical Energy

Construction activities associated with the land uses accommodated under the Project would require electricity use to power the construction equipment. The electricity use during construction would vary during different phases of construction, where the majority of construction equipment during demolition and grading would be gasoline-powered or diesel-powered, and the later construction phases would be electricity-powered, such as interior construction and architectural coatings. Overall, the use of electricity would be temporary in nature and would fluctuate according to the phase of construction. Additionally, it is anticipated that the majority of electric-powered construction equipment would be hand tools (e.g.,

power drills, table saws, compressors) and lighting, which would result in minimal electricity usage during construction activities. Therefore, Project-related construction activities would not result in wasteful or unnecessary electricity demands and impacts would be less than significant.

Natural Gas Energy

It is not anticipated that construction equipment used for the Project would be powered by natural gas, and no natural gas demand is anticipated during construction. Therefore, impacts would be less than significant with respect to natural gas usage.

Transportation Energy

Transportation energy use depends on the type and number of trips, VMT, fuel efficiency of vehicles, and travel mode. Transportation energy used during construction would come from the transport and use of construction equipment, delivery vehicles and haul trucks, and construction employee vehicles that would use diesel fuel and/or gasoline. It is anticipated that the majority of off-road construction equipment, such as those used during demolition and grading activities, would be gasoline-powered or diesel-powered.

The use of energy resources by vehicles and equipment would fluctuate according to the phase of construction. To limit wasteful and unnecessary energy consumption, the construction contractors are anticipated to minimize non-essential idling of construction equipment during construction in accordance with Section 2449 of the CCR, Title 13, Article 4.8, Chapter 9. In addition, electrical energy would be available for use during construction from existing power lines and connection, which could minimize or avoid the use of generators that are less efficient than tying into existing SCE infrastructure. Furthermore, construction trips would not result in unnecessary use of energy since the Project site is centrally located and is served by numerous regional freeway systems (e.g., Interstate 10 [I-10], Interstate 15 [I-15], State Route 83 [SR 83], and State Route 60 [SR 60]) that provides the most direct and shortest routes from various areas of the region. Moreover, all construction-equipment operation would cease upon completion of Project construction. Thus, impacts related to transportation energy use during construction would be temporary and would not require expanded energy supplies or the construction of new infrastructure. Additionally, over time as fuel efficiencies and fuel technologies improve, it is likely that transportation energy consumption will decrease. Overall, it is expected that construction fuel associated with land use developments accommodated under the Project would not be any more inefficient, wasteful, or unnecessary than similar development projects. Therefore, impacts would be less than significant with respect to transportation energy.

Long-Term Impacts during Operation

Project operation would create additional demands for electricity and natural gas compared to existing conditions and would result in increased transportation energy use. Operational use of energy would include heating, cooling, and ventilation of buildings; water heating; operation of electrical systems, use of on-site equipment and appliances; and indoor, outdoor, perimeter, and parking lot lighting.

Electrical Energy

Operation of the existing facility consumes electricity for various purposes, including, but not limited to heating, cooling, and ventilation of buildings, water heating, operation of electrical systems, security and control center functions, lighting, and use of on-site equipment and appliances. The proposed electricity consumption for the business park, warehouses, strip mall, restaurant, residential use, and associated parking lot are shown in ***Table 4.6-2: Electricity Consumption***.

Table 4.6-2: Electricity Consumption

Land Use	Electricity (kWh/year)
Warehouse (Unrefrigerated)	4,493,153
Industrial Park	3,339,907
Apartment	2,011,332
Strip Mall	99,472
Fast Food with Drive-Thru	350,667
Fast Food without Drive-Thru	350,667
Parking Lot	1,831,610
Proposed Project Total	12,904,184

Source: CalEEMod Version 2022.1
Notes: kWh = kilowatt hour

Electrical service to the Project would be provided by SCE through connections to existing offsite electrical lines and new on-site infrastructure. As shown in the table, the Project would have an annual electricity demand of 12,904,184 kWh/year. While the Project would increase energy demand at the Project site compared to existing conditions, it would be required to comply with the applicable Building Energy Efficiency Standards and the CALGreen Code. Because the Project would be consistent with the requirements of these energy-related regulations, it would not result in wasteful or unnecessary electricity demands. In addition, it is projected that 100 percent of the total outdoor water demand would be served by recycled water, which would contribute to minimizing the energy associated with the distribution and treatment of water. Therefore, the Project would not result in a significant impact related to electricity.

Natural Gas Energy

The proposed natural gas consumption for the Project site is shown in ***Table 4.6-3: Natural Gas Consumption***. As seen in the table, natural gas demand would total 31,234,353 kBTU/year with the Project. Because the Project would be built to meet the Building Energy Efficiency Standards, it would not result in wasteful or unnecessary natural gas demands. Therefore, operation of the Project would result in less than significant impacts with respect to natural gas usage.

Table 4.6-3: Natural Gas Consumption

Land Use	Natural Gas (kBTU/year)
Warehouse (Unrefrigerated)	18,493,912
Industrial Park	5,251,416
Apartment	5,143,326
Strip Mall	60,281
Fast Food with Drive-Thru	1,142,709
Fast Food without Drive-Thru	1,142,709
Parking Lot	0
Proposed Project Total	31,234,353

Source: CalEEMod Version 2022.1
Notes: kBTU = kilo-British thermal unit

Transportation Energy

The Project would consume transportation energy during operations from the use of motor vehicles. Because the efficiency of the motor vehicles in use, such as the average miles per gallon for motor vehicles involved with the Project are unknown, estimates of transportation energy use is assessed based on the overall VMT and related transportation energy use. The Project-related VMT would primarily come from future employees and for the commercial uses. As seen in ***Table 4.6-4: Operation-Related Fuel Usage***, the VMT for the Project is estimated to be 43,183,549. However, the Project would involve the construction of an industrial and business park and retail uses that would provide more opportunities for employment for residents of the City and would be within an urbanized area with nearby amenities and public transit options. Furthermore, the Project includes a Circulation Plan to provide connectivity to the trails and bikeway corridors identified in the Ontario Multipurpose Trails and Bikeway Corridor Plan. The City is also coordinating with regional transit agencies to implement Bus Rapid Transit (BRT) service that would include the segment of Euclid Avenue along the western boundary of the Project site. In addition, in compliance with the CALGreen Code, the Project would include bicycle racks and storage for employee use. These features and aspects of the Project would contribute to minimizing VMT and transportation-related fuel usage. Overall, it is expected that operation-related fuel usage associated with the Project would not be any more inefficient, wasteful, or unnecessary than similar development projects. Therefore, impacts would be less than significant with respect to operation-related fuel usage.

Table 4.6-4: Operation-Related Fuel Usage

Vehicle Type	Gasoline		Diesel	
	VMT	Gallons	VMT	Gallons
Passenger Vehicles	34,330,921	1,589,395	0	0
Light/Medium Trucks	0	0	7,773,039	451,921
Heavy Trucks	0	0	1,079,589	176,982
Total	34,330,921	1,589,395	8,852,628	628,903

Source: CalEEMod Version 2022.1

Impact 4.6-2 ***Would the Project conflict with or obstruct a State or Local plan for renewable energy or energy efficiency?***

Level of Significance: Less Than Significant Impact

Project Buildout (Phase I + Phase II)

City of Ontario Community Climate Action Plan (CAP)

As discussed in the ***Section 4.8: Greenhouse Gas Emissions***, the primary purpose of the City's Community CAP is to design a feasible strategy to reduce GHG emissions generated by community activities that is consistent with statewide CARB Scoping Plan GHG reduction efforts. The City has identified a series of reduction measures to be implemented by the City. These reduction measures include programs that relate to the energy efficiency of projects within the City. As shown in ***Table 4.8-8: Community CAP Consistency***, the Project would comply and would not conflict with the measures and goals established by the City's Community CAP. Therefore, implementation of the project would not be inconsistent with the energy efficiency and renewable energy standards of a City's local plan.

City of Ontario TOP

Table 4.6-5: Consistency with the TOP evaluates the consistency of the Project to the applicable policies of TOP. As shown in the table, the Project would generally be consistent with the applicable policies of TOP. For example, the sustainable design strategies in the Project Specific Plan Amendment includes use of energy efficient LEDs, implementation of passive design such as skylights, building orientation, landscaping, and strategic colors to improve building energy performance, use of high-performance dual pane window glazing in office storefronts, and incorporation of skylights into at least two percent of warehousing/distribution building roof area to provide natural light and to reduce electric lighting demand. Therefore, overall, the Project would be consistent and would not interfere with the City of Ontario TOP.

Table 4.6-5: Consistency with the TOP

Goal/Policy No.	Goal/ Policy	Consistency
Policy ER3-1	**Conservation Strategy**: Require conservation as the first strategy to be employed to meet applicable energy saving standards.	**Consistent:** The proposed Project incorporates energy-saving conservation strategies into its design guidelines by addressing lighting, bicycle parking, sustainable landscaping, and energy efficiency. Sustainable design strategies include design and construction of energy efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption.
Policy ER3-2	**Green Development – Communities:** Encourage the use of LEED Neighborhood Development rating system, or similar mechanism, to guide the planning and development of all new communities.	**Consistent:** Development of land uses accommodated under the Project would be in compliance with the CALGreen Code. Additionally, the proposed Project's Sustainable Design Strategies include the use of best practices through passive design to improve building energy performance.
Policy ER3-3	**Building and Site Design:** Require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive	**Consistent:** The proposed Project's Sustainable Design Strategies include the use of passive design to improve building energy performance through skylights, building orientation, landscaping, and use of select colors. Additionally, the development of

Goal/Policy No.	Goal/ Policy	Consistency
	solar and natural ventilation.	land uses accommodated under the proposed Project would also be designed in compliance with the CALGreen Code.
Policy ER3-4	**Green Development – Public Buildings:** We require all new and substantially renovated City buildings in excess of 10,000 square feet achieve a LEED Silver Certification standard, as determined by the U.S. Green Building Council.	**Not Applicable:** This policy is applicable to City-owned buildings.
Policy ER3-5	**Fuel Efficient and Alternative Energy Vehicles and Equipment:** We purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use renewable sources of energy.	**Not Applicable:** This policy is applicable to City-owned vehicles and equipment.
Policy ER3-6	**Generation – Renewable Sources:** Promote the use of renewable energy sources to serve public and private sector development.	**Consistent:** The buildings developed under the Project would have rooftops that can support solar panels (i.e., solar-ready) which will comply with solar ready requirements of the Building Energy Efficiency Standards, which would enable future tenants to install a PV system.
Source: City of Ontario. 2022. *TOP 2050, Environmental Resources Element*. https://www.ontarioca.gov/about-ontario-ontario-plan-policy-plan/environmental-resources. (accessed April 2023).		

The state's electricity grid is transitioning to renewable energy under California's RPS Program. Renewable sources of electricity include wind, small hydropower, solar, geothermal, biomass, and biogas. The statewide RPS requirements do not directly apply to individual development projects, but to utilities and energy providers such as SCE, whose compliance with RPS requirements would contribute to the State of California objective of transitioning to renewable energy. SCE's *Pathway 2045* concludes that reaching California's 2045 GHG goals requires the decarbonization of electricity, electrification of transportation, electrification of buildings, and utilization of low carbon fuels.[6] Achieving 100 percent renewable energy would be feasible with continued technical advances including the following:[7]

- Better weather forecasting technology is making it much easier for grid operators to know precisely how much wind or solar generation we can depend on at any given time.
- The cost of zero-carbon generation sources like wind and solar have dramatically decreased in the past decade and continue to decline.
- The cost of energy storage technologies, which will help us be able to use renewables when the wind isn't blowing and the sun isn't shining, also continues to decline.
- New advancements in the ability of large and small electricity users to shift usage towards times when electricity is cheaper and when the supply of renewables is most abundant are helping to make the grid more flexible and able to accommodate very high levels of renewable energy.

[6] Southern California Edison. 2023. *Carbon Neutrality by 2045*. https://www.edison.com/our-perspective/pathway-2045. (accessed April 2023).
[7] SB 100. 2023. *100% Clean Energy FAQs*. https://focus.senate.ca.gov/sb100/faqs. (accessed April 2023).

- Grid operators around the western United States are coordinating to gain access to larger markets for renewables and other carbon-free flexible grid resources.
- Targeting energy efficiency during times of the day when renewables are less abundant (after the sun sets) will also help the grid operate more efficiently.

As discussed herein, the Project would comply with the Building Energy Efficiency Standards, the CALGreen Code, and energy efficiency measures implemented by the City CAP. Consistent with the CAP, the buildings developed under the Project would have rooftops that can support solar panels (i.e., solar-ready) which will comply with solar ready requirements of the Building Energy Efficiency Standards, which would enable future tenants to install a PV system. Therefore, implementation of the Project would support the statewide goal of decarbonization by 2045.

4.6.7 Cumulative Impacts

The areas considered for cumulative impacts to electricity and natural gas supplies are the service areas of SCE and SoCalGas, respectively, described above in *Section 4.6.2: Environmental Setting*. Other projects would generate increased electricity and natural gas demands. However, all projects within the SCE and SoCalGas service areas would be required to comply with the Building Energy Efficiency Standards and the CALGreen Code, which would contribute to minimizing wasteful energy consumption. Additionally, the Project would be pursuant to TOP 2050 and would represent a consistent and logical continuation of the existing and planned pattern of development in Ontario, specifically the Ontario Ranch area. The City has long anticipated that this area would transition from dairy/agricultural to urban uses, and the Project Specific Plan is implementing TOP 2050.[8] Therefore, cumulative impacts would be less than significant, and Project impacts would not be cumulatively considerable.

4.6.8 Significant Unavoidable Impacts

No significant unavoidable aesthetic impacts have been identified.

4.7 GEOLOGY AND SOILS

4.7.1 Introduction

This section of the Draft Environmental Impact Report (EIR) identifies and analyzes the potential environmental impacts of the Euclid Mixed Use Specific Plan Project (Project) as they relate to geological and soil resources, paleontological resources, or unique geologic features in the City of Ontario (City) within San Bernardino County (County). The environmental setting will be discussed for the Project, along with any applicable federal, state, regional, and local policies and regulations. Additionally, this section will describe the specific mitigation measures that would be used to minimize any significant environmental impact, if any are identified. The data collected provides information on existing conditions in the Project region from literature search, review of existing data, and site surveys.

This Section and environmental discussion use information from the following City documents:

- The Ontario Plan 2050
- City of Ontario Municipal Code
- City of Ontario TOP 2050 Final Supplemental EIR

Additionally, the following analysis is based in part on information obtained from:

- Converse Consulting. March 2022. *Preliminary Geotechnical Investigation & Organic Soil/Manure Evaluation Report for the Euclid Mixed Use Specific Plan Project.* (***Appendix E1***)
- Converse Consulting. October 2022. *Geotechnical Evaluation Report of Soil Stockpile.* (***Appendix E2***)

The Project is anticipated to be developed in two phases within five planning areas (PAs), with only Phase I proposed at a project-level entitlement. Phase I would include PAs 1, 2A, and 3A, proposing the construction of 13 buildings with ancillary office space and commercial uses, approximating 1,386,776 square feet (sf) of business park uses and designated open space. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time.

The preliminary geotechnical investigation prepared by Converse Consulting analyzed the Phase I area only, which covers 59.6 acres of active dairy and agricultural land located on the southeast corner of Euclid Avenue and Schaefer Avenue. Currently, the Applicant does not control the Phase II parcels therefore, a geotechnical investigation was not completed at this time. At the time of Phase II development, it will undergo its own site-specific CEQA analysis. This investigation evaluated the current nature and engineering properties of the subsurface soils and groundwater conditions and provided geotechnical recommendations for the proposed residential development. The geotechnical evaluation prepared by Converse Consulting evaluated the soil stockpile located in the center of the analyzed 59.6-acre Phase I area (refer to ***Figure 4.7-1: Analyzed Site and Stockpile***). The soil stockpile is approximately 420 to 430 feet long, 70 to 85 feet wide, and 5 to 10 feet high.

Euclid Mixed Use Specific Plan

Not to scale

Kimley»Horn 1007

4.7.2 Environmental Setting

Existing Conditions

The Project is located at the southeast corner of Euclid Avenue and Schaefer Avenue within the City. The Project site (Phases I and II) consists of approximately 84.1 acres on 18 existing parcels, (refer to ***Section 3.0: Project Description, Figure 3-2: Local Vicinity Map*** and ***Figure 3-3: Project Boundary***). The Project site is bounded by Schaefer Avenue to the north, Euclid Avenue to the west, and existing active and abandoned dairy farms and agricultural uses to the east and south. The October 2021 Geotechnical Evaluation analyzed the Phase I area of the Project, which evaluated a stockpile located in the center of the 59.6 acres of active dairy and agricultural land (refer to ***Figure 4.7-1: Soil Stockpile Located in the Phase I Area***). The soil stockpile was approximately 420 to 430 feet long, 70 to 85 feet wide, and 5 to 10 feet high. Ground surface on and surrounding the stockpile consisted of some weeds and grasses and some scattered localized debris and trash.

The Phase I area is currently occupied by agricultural uses, including the raising of livestock, dairy farming activities, and a commercial nursery. The majority of this area consists of fallow or cultivated fields. There is a private recreational vehicle facility in the southwestern portion of the site and a scrap yard at the intersection of Euclid Avenue and Edison Avenue. Numerous single family residential structures, as well as agricultural related buildings and open structures are located within the Phase I area. Two Southern California Edison (SCE) easements extend across the Phase I area. No permanent structures, besides the transmission towers, are located within the SCE easements; however, they have been used for various agricultural uses historically.

Based on visual observations made at the time of the subsurface investigation and from elevation information obtained from Google Earth, the overall site topography slopes gently from the northeast to the southwest and south. Drainage appears to flow south and southwest. Site elevations range from approximately 730 feet above mean sea level (amsl) in the northeast portion of the site to approximately 690 feet amsl in the southwest portion of the site.

A Geotechnical Investigation of the Phase I area was prepared in March 2022 by Converse Consultants (see ***Appendix E1***), which reviewed the existing site soil characteristics and geotechnical feasibility of implementation of the Project. The majority of the information provided in this section uses the updated 2022 Geotechnical Evaluation (Geotechnical Evaluation). The data from the previous 2021 evaluation is included in the Geotechnical Evaluation. This Geotechnical Evaluation concluded the Phase I area is considered feasible from a geotechnical standpoint, based on field investigation and laboratory testing, to support Project development. Additionally, the Phase II area is being evaluated only at a programmatic level based on available information from The Ontario Plan (TOP) 2050, and there are no specific development proposals at this time. At the time of Phase II development, it will undergo its own site-specific CEQA analysis.

Near- and Sub-surface Conditions

Based on the field exploration and laboratory test results, the subsurface soil at the Phase I area consisted primarily of manure, organic artificial fill soil, topsoil, alluvium, and older alluvium.

Manure and Highly Organic Soil

Manure and highly organic soils partially cover the Phase I area within the fill berm located on the central eastern portion of the site. Approximately 16 ft to 23 ft of manure and highly organic soils are located on-site due to the site's history of being an active dairy farm.[1] This manure and highly organic soils would be removed from the site prior to Project construction.

Organic Artificial Fill

Based on the exploratory excavations of the Phase I area conducted by Converse Consultants, artificial fill soils were encountered on the Phase I area due to the current dairy and agricultural use of the majority of the ground surface. Approximately 0.9 ft to 10 ft of partially organic artificial fill soil is located on the ground surface of the Phase I area.[2] This material was encountered within some of the exploratory excavations and was generally comprised of fine to coarse-grained silty sands, and some gravel of 1.5 inches maximum dimensions with occasional scattered cobbles to 10 inches maximum dimension, trace clay, some desiccation, some localized debris, and some roots and rootlets. The fill stockpile area, located in the central portion of the site, consists of artificial fill soils that are generally comprised of a mixture of silty sand, clayey sand, sandy silt and sandy clay and silty clay, which are fine to coarse grained. These artificial fill soils also contain traces of manure, which is loose to medium dense, and moist.

Topsoil

Based on the exploratory excavations of the Phase I area conducted by Converse Consultants, topsoil was encountered at the surface and below the artificial fill soil within some of the exploratory excavations at depths ranging from approximately 4 ft to 8 ft below ground surface (bgs).[3] These soils are comprised of silty sand and sandy silt, which is fine to coarse grained with scattered gravel of a one inch maximum in dimension, trace clay, and a few organics, and some roots and rootlets. Topsoil ranged from up to about 2 ft to 5 ft thick.

Alluvium

Based on the exploratory excavations of the Phase I area conducted by Converse Consultants, Holocene alluvium was encountered below the artificial fill and topsoil in the majority of the exploratory excavations at depths ranging from approximately 0.9 ft to 7.5 ft bgs.[4] The alluvium observed on site was generally comprised of sand, silty sand, clayey sand, sandy silt and some sandy clay, which was fine to medium-grained with trace gravel with a one-inch maximum dimension. This material experienced some oxidation staining, and some pinhole pores. Based on some of the exploratory borings, the alluvium ranged from up to about 6.0 ft to 16.5 ft thick. Portions of the upper 0.5 ft to 2.0 ft are low in density.

[1] Converse Consultants. 2022. *Preliminary Geotechnical Investigation & Organic Soil/Manure Evaluation Report for the Euclid Mixed Use Specific Plan Project*. Page 6. See ***Appendix E1***.
[2] Ibid. Page 6.
[3] Ibid. Page 7.
[4] Ibid. Page 7.

Older Alluvium

Early Holocene to late Pleistocene older alluvium was encountered at depths ranging from approximately 11.0 ft to 15.0 ft bgs. Where observed, this material was generally comprised of sand, silty sand and sandy clay, which was fine to coarse-grained, with trace of few gravel to a one-inch maximum dimension, slightly to very desiccated, moderate oxidation staining, medium dense to very dense/medium stiff to stiff and various shades of brown, orange, and red.

Groundwater

The National Water Information System was reviewed for current and historical groundwater data from all sites within an approximately one-mile radius of the Phase I area.[5] No groundwater was identified. Additionally, the California Department of Water Resources database was reviewed for historical groundwater data from sites within an approximately one-mile radius of the Phase I area as well. One site (CHINO-1208672: Station 340045N1176407W001), located approximately 1,650 ft east of the Phase I area, was identified and reported groundwater at depths ranging from 137.01 ft to 145.74 ft bgs between 2011 and 2021. The historical high groundwater level and the current groundwater level is estimated to be deeper than 137 ft bgs, and groundwater is not expected to be encountered during Project construction activities.[6] The groundwater conditions of the Phase II future development area is expected to be similar to the anticipated groundwater depth of the Phase I area.

Faulting and Seismicity

The Project site is located within the Chino Basin between the Chino Hills to the southwest and San Gabriel Basin to the north. The Project site is not located within an Alquist-Priolo Earthquake Fault Zone, and no evidence of faulting within the Phase I area was identified during the Geotechnical Investigation. Additionally, there are no Alquist-Priolo Earthquake fault zones within the proximity of the Project site. The nearest Alquist-Priolo Earthquake fault zone is located approximately 3.5 miles southwest from the Project site boundary. The Elsinore Fault Zone is located approximately 4.0 miles southwest of the Project site. This fault is a north to northwest trending reverse fault that dips steeply towards the southwest. The Chino-Central Avenue Fault acts as a groundwater barrier along the western margin of the Chino Basin.[7] The Chino-Central Avenue Fault is located along the southwest-facing mountain front of the Puente Hills(also referred to as Chino Hills). This fault follows CA Highway 71 north for approximately five miles and then continues to the Los Serranos Country Club area and into the Chino/Pomona region of Los Angeles (approximately 12 miles).

There have been no notable earthquakes, of a magnitude of 5.5 or more, affecting the Ontario-Chino region within the last 50 years. The most recent earthquake, the 2008 Chino Hills Earthquake, occurred southwest of the Project site and had a magnitude of 5.4.

Surface Fault Rupture

No portion of the Project site located within a currently designated State of California or San Bernadino County Earthquake Fault Zone.[8] The potential for surface rupture resulting from the movement of nearby or distant faults is not known with certainty but is considered very low.

Seismic Ground Shaking

Horizontal ground acceleration, which frequently results in widespread damage to structures, is estimated as a percentage of the acceleration of gravity (g). The damage that an earthquake will cause to a structure depends on the earthquake's size, location, distance, and depth; the types of rock and soil at the surface of the Project site; and the type of construction of the structure.

When comparing the sizes of earthquakes, the most meaningful feature is the amount of energy released. Thus, scientists most often consider seismic moment, a measure of the energy released when a fault ruptures. We are more familiar, however, with scales of magnitude, which measure amplitude of ground motion. The energy released by an earthquake is measured as moment magnitude (Mw). The moment magnitude scale is logarithmic; therefore, each one-point increase in magnitude represents a 10-fold increase in amplitude of the waves as measured at a specific location and a 32-fold increase in energy. That is, a magnitude 7 earthquake produces 100 times (10 x 10) the ground motion amplitude of a magnitude 5 earthquake.

The Project site is situated in a seismically active region and ground shaking resulting from earthquakes associated with nearby and more distant faults may occur at the Project site. The most prominent of the nearby fault zones include the San Jacinto, Cucamonga, and San Andreas Fault Zones. The Project site is located within the Chino Basin between the Chino Hills to the southwest and San Gabriel Basin to the north. The Elsinore Fault Zone is located approximately 4.0 miles southwest of the Project site. This fault is a north to northwest trending reverse fault that dips steeply towards the southwest. The Chino-Central Avenue Fault acts as a groundwater barrier along the western margin of the Chino Basin. The Chino-Central Avenue Fault is a northern fault strand that merges into the Elsinore Fault Zone. The maximum magnitude recorded for this portion of the Chino Fault was 6.8. The Geotechnical Investigation indicated that the seismic hazard for the Project site is high.

Geologic Hazards

Liquefaction and Related Ground Failure

Liquefaction is the loss of strength in generally cohesionless, saturated soils when the pore-water pressure induced in the soil by a seismic event becomes equal to or exceeds the overburden pressure. The primary factors which influence the potential for liquefaction include groundwater table elevation, soil type and plasticity characteristics, relative density of the soil, initial confining pressure, and intensity and duration of ground shaking. Based on the exploratory excavations of the Phase I area conducted by Converse Consultants, the depth within which the occurrence of liquefaction may impact surface improvements is

[8] California Geological Survey. 2015. *Fault Activity Map of California*. https://maps.conservation.ca.gov/cgs/fam/. (accessed March 2023).

generally identified as the upper 50 feet bgs.[9] Liquefaction potential is greater in saturated, loose, poorly graded fine sands with a mean (d50) grain size in the range of 0.075 to 0.2 millimeters (mm). Non-sensitive clayey (cohesive) soils which possess a plasticity index of at least 18 are generally not considered to be susceptible to liquefaction, nor are those soils which are above the historic static groundwater table.

Based on review of hazard maps, the Project site is not located within a State of California or San Bernadino County designated zone of liquefaction susceptibility.[10,11] Based on groundwater being deeper than approximately 137 feet bgs, it is estimated that the liquefaction induced settlement of the Project site is negligible.

Earthquake-Induced Landslides

Seismically induced landslides and slope failures are common occurrences during or soon after large earthquakes. There are no slopes on or near the Project site that would cause earthquake-induced landslides.

Settlement

Dynamic dry settlement may occur in loose, granular, unsaturated soils during a large seismic event. Based on dense soil conditions, site-specific boring logs, soil types, soil conditions and blow counts, dry seismic settlement is expected to be minimal.

Lateral Spreading

Seismically induced lateral spreading involves primarily lateral movement of earth materials over underlying materials which are liquefied due to ground shaking. It differs from the slope failure in that complete ground failure involving large movement does not occur due to the relatively smaller gradient of the initial ground surface. Lateral spreading is demonstrated by near-vertical cracks with predominantly horizontal movement of the soil mass involved. Generally due to the negligible risk for liquefaction and flat nature of the Project site, the risk of lateral spreading is considered low.

Shrinkage/Subsidence

The volume of excavated and recompacted soils decreases as a result of grading. The shrinkage would depend on, among other factors, the depth of cut and/or fill, the grading method, and the equipment used. The Geotechnical Investigation concluded shrinkage factors for various units of earth material from the Phase I area would range from approximately 0 to 14 percent for the upper 15 feet of soils.[12] Subsidence occurs when a large portion of land sinks, usually due to the withdrawal of groundwater, oil, or natural gas. Soils that are particularly subject to subsidence include those with high silt or clay content. Subsidence would depend on the construction methods and the type of equipment used. Ground

[11] County of San Bernardino. 2020. *Countywide Plan Policy Map HZ-2 Liquefaction and Landslides.* https://www.arcgis.com/apps/webappviewer/index.html?id=5864a434814c4e53adc74101b34b1905. (accessed July 2023).
[12] Converse Consultants. 2022. *Preliminary Geotechnical Investigation & Organic Soil/Manure Evaluation Report for the Euclid Mixed Use Specific Plan Project*. Page 12. See ***Appendix E1***.

subsidence for the Phase I area is estimated to be approximately 0.20 foot to 0.25 foot. The consultant recommends that field-testing using the actual grading equipment and techniques be conducted.

Expansive Soils

Expansive soils are characterized by their ability to undergo significant volume changes (shrink or swell) due to variations in moisture content. Changes in soil moisture content can result from precipitation, landscape irrigation, utility leakage, roof drainage, perched groundwater, drought, or other factors and may result in unacceptable settlement or heave of structures or concrete slabs supported on grade. Depending on the extent and location below finish subgrade, expansive soils can have a detrimental effect on structures.

Expansive soils contain substantial amounts of clay that swells when wetted and shrinks when dried; the swelling or shrinking can shift, crack, or break structures built on such soils. The composition of the near surface soils at this site ranges from sands, silty sands, and sandy silts to silty clays, sandy clays, and clayey silts. Laboratory testing performed on representative samples of these materials indicate that the upper 5 to 9 feet of the general site soils had a very low expansion potential (Expansion Index = 0 to 4), and the stockpiled soils possess a medium expansion potential (Expansion Index = 53 to 79).[13]

Corrosive Soils

The results of laboratory testing indicate that the tested samples of the near surface soils possess resistivity values ranging between 300 to 1,703 ohms centimeter (ohm-cm). This indicates that the soils tested are corrosive to severely corrosive to ferrous metals in contact with the soil. The proposed concrete structures would not be exposed to external sources of chlorides, such as deicing chemicals, salt, brackish water, or seawater, according to the Geotechnical Investigation.[14]

Tsunamis

Tsunamis are large waves generated in open bodies of water by fault displacement or major ground movement. Due to the inland location of the Project site, tsunamis are not considered to be a risk.

Seiches

Seiches are large waves generated in enclosed bodies of water in response to ground shaking. There are no enclosed bodies of water near the Project site, therefore, seiching is not considered to be a risk during construction or operation.

Paleontological Setting

According to the California Geological Survey (CGS), the Project site is underlain by Quaternary Alluvium composed of alluvium, lake, playa, and terrace deposits or unconsolidated and semi-consolidated sediments.[15] The Project site is within the Transverse Ranges Geomorphic Province of California, which is

[13] Converse Consultants. 2022. *Preliminary Geotechnical Investigation & Organic Soil/Manure Evaluation Report for the Euclid Mixed Use Specific Plan Project*. Page 15. See ***Appendix E1.***

[14] Ibid. Page 31.

[15] California Department of Conservation (DOC). 2015. *Geologic Map of California*. https://maps.conservation.ca.gov/cgs/gmc/. (accessed April 2023).

an east-west trending series of steep mountain ranges and valleys. It extends offshore, slanted against the coastline, including islands and prominent mountain ranges, like the San Bernardino Mountains which resides along the San Andreas fault. Apart from the east-west direction, intense north-south compression of the province is squeezing the Transverse Ranges, causing the region to become "one of the most rapidly rising regions on earth." Within this region of California, the "thickness of Cenozoic petroleum-rich sedimentary rocks has been folded and faulted, making this one of the important oil-producing areas in the United States."[16]

Paleontological Resources

Archaeological, paleontological, and historical sites are protected under a wide variety of state policies and regulations in the California Public Resources Code (PRC). In addition, cultural and paleontological resources are recognized as nonrenewable resources and receive protection under the PRC and CEQA. The Project area is situated in the San Bernardino Basin, adjacent to the Transverse Ranges Geomorphic Province. This province is comprised of a series of mountain ranges that run transverse to most mountain ranges in southern California – roughly east/west trending. The mountains within the Transverse Ranges Geomorphic Province, including the San Gabriel and San Bernardino mountains to the north and northeast, were uplifted by tectonic activity, and provide a major sedimentary source for the alluvium basins of the adjacent areas. The geologic units underlying the Phase I area are mapped entirely as younger Quaternary alluvium (Qyfa) dating from the late Holocene to Pleistocene. These deposits derived broadly as alluvial fan deposits from the San Bernardino Mountains to the north.

Qyfa are Holocene to late Pleistocene-aged alluvial fan deposit that typically consists of river and stream derived sediments. The sediments are comprised of slightly consolidated gray-hued arkosic, sandy and gravel-sand deposits derived from local Peninsular Ranges batholith granitic bodies.

4.7.3 Regulatory Setting

Federal

Earthquake Hazards Reduction Act

The Earthquake Hazards Reduction Act was enacted in 1997 to "reduce the risks to life and property from future earthquakes in the United States through the establishment and maintenance of an effective earthquake hazards and reduction program." To accomplish this, the act established the National Earthquake Hazard Reduction Program (NEHRP), which refined the description of agency responsibilities, program goals, and objectives. NEHRP's mission includes improved understanding, characterization, and prediction of hazards and vulnerabilities; improvement of building codes and land use practices; risk reduction through post-earthquake investigations and education; development and improvement of design and construction techniques; improvement of mitigation capacity; and accelerated application of research results. NEHRP designates the Federal Emergency Management Agency (FEMA) as the lead agency of the program and assigns it several planning, coordinating, and reporting responsibilities.

[16] California Geological Survey. 2002. *California Geomorphic Provinces*. https://www.conservation.ca.gov/cgs/Documents/Publications/CGS-Notes/CGS-Note-36.pdf. (accessed April 2023).

Programs under NEHRP help inform and guide planning and building code requirements such as emergency evacuation responsibilities and seismic code standards.

State

Alquist-Priolo Earthquake Fault Zoning Act

The California Alquist-Priolo Earthquake Fault Zoning Act was signed into state law in 1972, and amended, with its primary purpose being to mitigate the hazard of fault rupture by prohibiting the location of structures for human occupancy across the trace of an active fault. The California Alquist-Priolo Earthquake Fault Zoning Act was a direct result of the 1971 San Fernando Earthquake, which was associated with extensive surface fault ruptures that damaged numerous homes, commercial buildings, and other structures. California Alquist-Priolo Earthquake Fault Zoning Act requires the State Geologist to delineate regulatory zones known as "earthquake fault zones" along faults that are "sufficiently active" and "well defined" and to issue and distribute appropriate maps to all affected cities, counties, and state agencies for their use in planning and controlling new or renewed construction. Pursuant to the California Alquist-Priolo Earthquake Fault Zoning Act and as stipulated in Section 3603(a) of the California Code of Regulations (CCR), structures for human occupancy are not permitted to be placed across the trace of an active fault. The California Alquist-Priolo Earthquake Fault Zoning Act also prohibits structures for human occupancy within 50 feet of the trace of an active fault, unless proven by an appropriate geotechnical investigation and report that the development site is not underlain by active branches of the active fault, as stipulated in Section 3603(a) of the CCR. Furthermore, the act requires that cities and counties withhold development permits for sites within an earthquake fault zone until geologic investigations demonstrate that the sites are not threatened by surface displacement from future faulting, as stipulated in Section 3603(d) of the CCR.

Seismic Hazard Mapping Act

The Seismic Hazard Mapping Act was adopted by the State in 1990 for the purpose of protecting the public from the effects of non-surface fault rupture earthquake hazards, including strong ground shaking, liquefaction, seismically induced landslides, or other ground failure caused by earthquakes. The goal of the act is to minimize loss of life and property by identifying and mitigating seismic hazards. The CGS prepares and provides local governments with seismic hazard zones maps that identify areas susceptible to amplified shaking, liquefaction, earthquake-induced landslides, and other ground failures.

California Building Code

The California Code of Regulations (CCR) Title 24, also known as the California Building Standards Code (CBSC), includes regulations for how buildings are designed and constructed, and are intended to ensure the maximum structural integrity and safety of private and public buildings. The CBSC, which applies to all applications for building permits, consists of 12 parts that contain CBSC administrative regulations for all State agencies that implement or enforce building standards. Local agencies must ensure the development complies with the CBSC standards. Cities and counties can adopt additional standards beyond the CBSC including CBSC Part 2, named the California Building Code (CBC).

California Public Resources Code

The California Public Resources Code (PRC), Chapter 1.7, Sections 5097.5 and 30244, include additional State-level requirements for the assessment and management of paleontological resources. These statutes require reasonable mitigation of adverse impacts to paleontological resources resulting from development on state lands, define the removal of paleontological "sites" or "features" from state lands as a misdemeanor, and prohibit the removal of any paleontological "site" or "feature" from state land without permission of the jurisdictional agency. These protections apply only to State land.

Local

City of Ontario General Plan – The Ontario Plan 2050

The TOP 2050 Safety Element states that the City is susceptible to earthquakes, alluvial deposits that underlie the region, and the rapid withdrawal of groundwater causing subsidence. The Safety Element policies ensure that the City is prepared for and would effectively deal with seismic and geologic hazards. Included in TOP 2050 is the Policy Plan, which is a framework that would guide the City's future growth through the application of policies and goals. The following goals of TOP 2050 relate to geology and soils.

The following policy contained in the Safety Element is relevant to the Project:

Safety Element[17]

Goal S-1	**Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by earthquake-induced and other geologic hazards.**
Policy S-1.1	**Implementation of Regulations and Standards.** We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.
Policy S-1.2	**Entitlement and Permitting Process.** We follow state guidelines and the California Building Code to determine when development proposals must conduct geotechnical and geological investigations.

City of Ontario Municipal Code

The City Municipal Code (MC) adopted the 2022 CBC by Ordinance NO. 3227, which incorporates the 2021 Edition of the International Building Code (IBC), as published by the International Code Council. These regulations provide applicable standards and documentation of requirements found in the CBC that address construction of structures and seismic safety. New construction, alteration, or rehabilitation shall comply with applicable ordinances set forth by the City and/or by the most recent City building and seismic codes in effect at the time of project design. In accordance with Section 1803A of the 2022 CBC, a geotechnical investigation is required that must evaluate soil classification, slope stability, soil strength, position and adequacy of load-bearing soils, the effect of moisture variation on soil-bearing capacity, compressibility, liquefaction, and expansiveness, as necessary, determined by the City building official.

[17] City of Ontario. 2022. *TOP 2050, Safety Element*. https://www.ontarioca.gov/about-ontario-ontario-plan-policy-plan/safety. (accessed April 2023).

The geotechnical investigation must be prepared by registered professionals (i.e., California Registered Civil Engineer or Certified Engineering Geologist).

4.7.4 Impact Thresholds and Significance Criteria

According to Appendix G of the State CEQA Guidelines, a project would normally have a significant effect on the environment if the project would:

- Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:
    i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault. (Refer to Division of Mines and Geology Special Publication 42.)
    ii) Strong seismic ground shaking.
    iii) Seismic-related ground failure, including liquefaction.
    iv) Landslides.
- Result in substantial soil erosion or the loss of topsoil.
- Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse.
- Be located on expansive soil, as defined in Table 18-1B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property.
- Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater.
- Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.

Methodology

The Phase I area was analyzed based on site-specific technical studies (refer to ***Appendix E***) while the Phase II area was analyzed programmatically based upon TOP 2050 and other available references. The Preliminary Geotechnical Investigation and organic soil/manure evaluation prepared for 59.6 acres of the active dairy and agricultural uses of the Phase I area evaluated the current nature and engineering properties of the subsurface soils and groundwater conditions. Grading at the Phase I area is anticipated to have cuts and fills of approximately 5 to 10 feet or less. Six exploratory borings (BH-01 through BH-06) were drilled using a truck-mounted CME 75 drill rig equipped with 8-inch diameter hollow-stem augers to investigate the subsurface conditions on January 20, 2022. The borings were drilled to depths ranging from 16.5 feet to 51.5 feet bgs. In addition, 8 exploratory test pits (TP-01 through TP-8) were previously excavated using a backhoe equipped with 24-inch-wide bucket to solely investigate the subsurface conditions of a soil stockpile on July 28, 2021, and obtain samples for organic content, expansion potential and corrosivity tests. The test pits were excavated from approximately 9.0 feet to 12.0 feet bgs.

Representative samples of the stockpiled soils were tested in the laboratory to aid in evaluating the suitability of the use of the soil for future development.

Paleontological Resources

Paleontological resources within the Phase I area were analyzed based on available references including TOP 2050.

4.7.5 Plans, Programs, and Policies

PPP GEO-1 The Project would be required to comply with the California Building Code and the Ontario MC Section 1803.2, which requires a geotechnical investigation to evaluate soil classification, slope stability, soil strength, position and adequacy of load-bearing soils, the effect of moisture variation on soil-bearing capacity, compressibility, liquefaction, and expansiveness, as necessary, determined by the City building official. The geotechnical investigation must be prepared by registered professionals (i.e., California Registered Civil Engineer or Certified Engineering Geologist.

PPP CUL-1 Cultural and paleontological resources are recognized as nonrenewable resources and receive protection under the PRC and CEQA.

PPP CUL-2 Native American historical and cultural resources and sacred sites are protected under PRC Sections 5097.9 to 5097.991, which require that descendants be notified when Native American human remains are discovered and provide for treatment and disposition of human remains and associated grave goods.

PPP CUL-3 The removal, without permission, of any paleontological site or feature is prohibited from lands under the jurisdiction of the state or any city, county, district, authority, or public corporation, or any agency thereof (PRC Section 5097.5). This applies to agencies' own activities, including construction and maintenance, and permit actions by others.

PPP CUL-4 Adverse impacts to paleontological resources from developments on public (state, county, city, and district) lands require reasonable mitigation. (PRC Section 5097.5).

PPP CUL-5 If human remains are discovered within a project area, disturbance of the site must stop until the coroner has investigated and made recommendations for the treatment and disposition of the human remains to the person responsible for the excavation, or to his or her authorized representative. If the coroner has reason to believe the human remains are those of a Native American, he or she shall contact, by telephone within 24 hours, the NAHC. (California HSC Section 7050.5).

4.7.6 Impacts and Mitigation Measures

Impact 4.7-1 ***Would the Project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:***

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area

or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Level of Significance: Less than Significant

Specific Plan - Phase I

Construction and Operations

The Phase I area is not within an Alquist-Priolo Earthquake fault zone and there are no Alquist-Priolo fault zones within the immediate surrounding area of Phase I. The nearest Alquist-Priolo Earthquake fault zone is approximately 3.5 miles southwest from the Phase I area. The nearest fault to the Phase I area is the Elsinore Fault located approximately four miles south. According to the Geotechnical Investigation, there was no evidence of faulting identified during the investigation of the Phase I area. The Phase I area's distance from the nearest fault line would minimize risks attributed to ground rupture and gapping. Therefore, the impacts associated with the rupture of a known fault would be less than significant and no mitigation would be required.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Furthermore, the proposed Project Specific Plan land use designations are the same land use designations as contained in TOP 2050. The Phase II future development area is not within an Alquist-Priolo Earthquake fault zone and there are no Alquist-Priolo fault zones within the vicinity of the Phase II area. The nearest Alquist-Priolo Earthquake fault zone is approximately 3.5 miles southwest from the Phase II area. The nearest fault to the Phase I area is the Elsinore Fault located approximately four miles south. Phase II would not be located within an Alquist-Priolo Earthquake fault zone when Planning Areas 2B and 3B are completed, and impacts concerning rupture of a known earthquake fault would remain less than significant. No mitigation would be required other than compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.[18]

Conclusion

As noted above, the Project would not result in significant impacts concerning the rupture of a known earthquake fault. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. Impacts would be less than significant. No mitigation is required other than compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.

Mitigation Measures

No mitigation is necessary.

[18] City of Ontario. 2022. *TOP 2050 Final Supplemental Environmental Impact Report, Section 5.7, Geology and Soils*. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (accessed April 2023).

Impact 4.7-2 ***Would the Project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:***

ii) Strong seismic ground shaking?

iii) Seismic-related ground failure, including liquefaction?

iv) Landslides?

Level of Significance: Less than Significant

Specific Plan - Phase I and Phase II Future Development Areas

Construction and Operations

Surface Fault Rupture

The Project site is not within an Alquist-Priolo Earthquake Fault Zone, and no evidence of faulting was identified during the Geotechnical Investigation. Furthermore, the Project site is not located within a currently designated State of California or San Bernardino County Earthquake Fault.[19] Therefore, the potential for surface rupture resulting from the movement of nearby or distant faults is considered very low.

Ground Shaking

Southern California is considered a seismically active region and the regional vicinity of the Phase I area contains a number of known earthquake faults. Therefore, the subject property would be exposed to moderate to strong ground shaking. However, the Project site is not located within a currently mapped State of California or San Bernadino County Earthquake Fault Zone for surface fault rupture. As part of the Geotechnical Investigation, 2022 CBC Seismic Design Parameters were generated for future structural improvements within the Project site. Structures for human occupancy must be designed to meet or exceed the most current CBC standards for earthquake resistance. The CBC contains provisions for earthquake safety based on factors including occupancy type, the types of soil and rock on-site, and the strength of ground motion with a specified probability at the Project site. Therefore, future development of habitable structures within the Project site would be conducted in accordance with the 2022 CBC Seismic Design Parameters generated as part of the Geotechnical Investigation, which would reduce impacts from seismic ground shaking to a less than significant level.

Liquefaction

Soil liquefaction generally occurs in submerged granular soils and non-plastic silts during or after strong ground shaking events. In order for liquefaction to occur, the soils must be submerged and loose to medium-dense, ground motion must be intense, and the duration of ground shaking must be sufficient enough for the soils to lose shear resistance. Based on review of hazard maps, the Project site is not located within a State of California or San Bernadino County designated zone of liquefaction

[19] California Department of Conservation. 2021. *Earthquake Zones of Required Investigation.* https://maps.conservation.ca.gov/cgs/EQZApp/app/. (accessed July 31, 2023).

susceptibility.[20,21] Based on groundwater being deeper than approximately 137 feet bgs, it is estimated that the liquefaction induced settlement of the Project site is negligible.

Landslides

Seismically induced landslides and slope failures are common occurrences during or soon after large earthquakes, however the Phase I area is relatively flat with no extreme elevation differences that would potentially lead to landslide effects. According to the San Bernardino County Geologic Hazard map, the Phase I area and the immediate area are not within a zone of generalized landslide susceptibility.[22] The relatively flat topography of the Project site along with its location outside of identified landslide susceptibility and rockfall/debris-flow hazard areas would lead to a less than significant impact from occurring due to landslides.

The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Furthermore, the proposed Project Specific Plan land use designations are the same land use designations as contained in TOP 2050. Phase II is not located within a currently designated State of California or San Bernardino County Earthquake Fault Zone and would adhere to 2022 CBC Seismic Design Parameters; therefore, impacts would continue to be less than significant. No mitigation is required except compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.[23]

Conclusion

As noted above, the Project would not result in a significant impact concerning strong seismic ground shaking or seismic-related ground failure. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. Impacts would be less than significant. No mitigation is required other than compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.

Mitigation Measures

No mitigation is necessary.

Impact 4.7-3 Would the Project result in substantial soil erosion or the loss of topsoil?

Level of Significance: Less than Significant with Mitigation Incorporated (Phase I Project) and Significant Unavoidable (Phase II Only)

[20] California Geological Survey. 2020. *Seismic Hazards Program: Liquefaction Zones*. https://gis.data.ca.gov/datasets/cadoc::cgs-seismic-hazards-program-liquefaction-zones-1/explore?location=35.720844%2C-119.759465%2C8.10. (accessed March 2023).

[23] City of Ontario. 2022. TOP 2050 Final Supplemental Environmental Impact Report, Section 5.7, Geology and Soils. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (accessed April 2023).

Specific Plan - Phase I

Construction

Topsoil was encountered at the surface and below the artificial fill soil within the exploratory excavations at depths ranging from 4.0 feet to 8.0 feet during the Geotechnical Investigation for the Phase I area. Due to the current dairy and agricultural use the surface of the majority of the Phase I area is generally partially covered by up to approximately 0.9 foot to 10.0 feet of partially organic artificial fill soil. The Phase I area was found to contain organic artificial fills at depths of up to five feet bgs. The organic artificial fill soils that were encountered were found to possess various levels of strength and density under testing.

The construction of the Project would involve excavation activities that would affect surface and near-surface soils. The Phase I area is generally underlain by approximately 3.0 to 9.0 feet of potentially compressible soils (artificial fill, topsoil, and the upper low-density portions of the alluvium), and locally as much as 10.0 feet to 17.0 feet in fill stockpile areas, which may be prone to future settlement under the surcharge of foundation, improvements and/or fill loads. Therefore, these materials would be over-excavated to competent alluvium, within all areas of proposed structures and other improvements, and replaced with compacted fill soils. Within the entire level portions of the building pad areas, over-excavations should also extend at least 5.0 feet below proposed pad grade, or at least 3.0 feet below the lowest proposed footings, within the proposed building areas, whichever is deeper. Within any proposed wall footings areas over-excavation should also be a minimum of 5.0 feet below proposed pad grade or 2.0 feet below the proposed wall footings areas, whichever is deeper. All over-excavations should extend at least 5.0 feet or equal to the depth of over-excavation, whichever is greater, outside the entire level portions of the building pad area.[24] In addition to the excavation and removal of the fill material, the development of the Project would require grading preparation, excavation, trenching and paving activities that could result in soil erosion if exposed to periods of high wind or storm-related events. **MM GEO-1** would be implemented to ensure future structure stability and guide over excavation and fill activities. Dust control measures such as watering would be utilized to control the potential for erosion to occur. Construction contractors would also be required to implement a dust control plan in compliance with South Coast Air Quality Management District Rule 403 to reduce wind erosion (further information about dust control can be found in ***Section 4.2: Air Quality*** of this EIR).

Construction activities such as excavation and grading would be minimal given that the Phase I area is relatively flat. No major grading or excavation would be needed to substantially alter the slope of the site, create, or remove steep slopes, create retaining walls, or make other landform modifications. Nevertheless, grading and earthwork activities during construction would expose soils to potential short-term erosion by wind and water. During construction, the Phase I area would be required to comply with erosion and siltation control measures. This would include measures such as sand-bagging, placement of silt fencing, erosion control blankets, straw wattles, mulching, etc., to reduce runoff from the site and to hold topsoil in place during all grading activities. As mass grading proceeds, finish grading commences, and construction begins the erosion measures would be removed or relocated as necessary. Additionally, the construction on the Phase I area would be required to comply with the National Pollutant Discharge

[24] Converse Consultants. 2022. *Preliminary Geotechnical Investigation & Organic Soil/Manure Evaluation Report for the Euclid Mixed Use Specific Plan Project*. See ***Appendix E1.***

Elimination System (NPDES); refer to ***Section 4.10: Hydrology and Water Quality*** for discussion of the anticipated NPDES permitting process. Construction impacts on the Phase I area would be minimized through compliance with the Construction General Permit (CGP). The NPDES permit requires development and implementation of a Stormwater Pollution Prevention Plan (SWPPP) and monitoring plan, which must include erosion-control and sediment-control Best Management Practices (BMPs). The BMPs would be required to meet or exceed measures required by the CGP to control potential construction-related pollutants and would comply with the OMC Title 6, Chapter 6 – Stormwater Drainage System.[25] Erosion-control BMPs are designed to prevent erosion, whereas sediment controls are designed to trap sediment once it has been mobilized. All required permits and the erosion control plan would be verified by the City prior to initiation of any construction and prior to the issuance of any grading permit. Conformance to these requirements and verification by the City as part of the development approval process for the Phase I area would ensure that potential impacts from construction are less than significant.

Operations

Operation of the Project would not involve procedures which would result in substantial soil erosion. Following construction of the Project, the Phase I area would be covered with hardscape which would not contribute to erosion. The Phase I area also would contain some landscaping, but these areas would include ground covers to reduce erosion and/or loss of on-site soils post-construction. This would ensure that operation of the Phase I area would not result in the loss of topsoil or sedimentation into local drainage facilities and water bodies; refer to ***Section 4.10: Hydrology and Water Quality***. In addition, a network of storm drains and gutters would be installed, upgraded if needed, and maintained as necessary throughout the developed site. Therefore, the potential for substantial soil erosion or the loss of topsoil is considered less than significant.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Upon commencement of project-level CEQA review for the Phase II area, a geotechnical would be conducted, similar to that of the Phase I analysis. During future development of the Phase II area, existing vegetation and habitat would be removed by grading, excavation, and other construction activities. Note that, in its current state, the Project site is devoid of vegetation or dominated by ornamental, non-native and native species commonly detected in disturbed habitats. These disturbed habitats would be removed upon implementation of Phase II. Similar to Phase I, development occurring within the Phase II area would be subject to **MM GEO-1** to reduce potential geological impacts. However, in the absence of a geotechnical investigation for Phase II, impacts within the Phase II area are not fully known and could be potentially significant. At the time of the project-level CEQA analysis and associated geotechnical investigation of the Phase II area, unforeseen site conditions could be discovered that warrant a finding of potentially significant impact. In that case, a subsequent CEQA analysis, in the form of a subsequent EIR or EIR Addendum, may be required pursuant

[25] City of Ontario. 2022. *Ontario Municipal Code*. https://codelibrary.amlegal.com/codes/ontarioca/latest/ontario_ca/0-0-0-42829. (accessed March 2023).

to Sections 15162(a) and 15164 of the State CEQA Guidelines. This determination will be made by City staff at the time of future Phase II area site-specific development applications.

A geotechnical investigation and impact analysis would be conducted for future development areas prior to approval of any development in this region to ensure potential adverse effects to geological resources would be minimized. Furthermore, any geotechnical investigation and required mitigation measures would be implemented prior to Project approval and construction initiation (refer to **MM GEO-1** below). However no major grading or excavation would be needed to substantially alter the slope of the site, create, or remove steep slopes, create retaining walls, or make other landform modifications. Furthermore, construction on the Phase II area would be required to comply with the NPDES permitting process. Future development would modify the existing conditions when Planning Areas 2B and 3B are completed; however, geological impacts would be minimized with mitigation incorporated along with compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050. Furthermore, the proposed Project Specific Plan land use designations are the same land use designations as contained in TOP 2050. As mentioned above, a subsequent CEQA analysis may be required should the new information presented by the geotechnical investigation indicate that the Project will have significant impacts relating to geological resources.

Conclusion

As noted above, the Project is not anticipated to result in substantial soil erosion or the loss of topsoil with mitigation incorporated. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. **MM GEO-1** would be required to reduce impacts. For the Phase I portion of the Project, impacts would be reduced to less than significant levels. However, because the extent of impacts within the Phase II area cannot be known at this time, Project impacts relating to geological resources within the Phase II area are considered potentially significant and unavoidable even with the implementation of recommended mitigation.

Mitigation Measures

MM GEO-1 As specified in the Preliminary Geotechnical Investigation & Organic Soil/Manure Evaluation Report for the Euclid Mixed Use Specific Plan Project by Converse Consulting, cut/fill transitions should be eliminated from all level portions of the building pad areas. This should be accomplished by over excavating the entire "cut" portion of the building pad area by at least 5.0 feet below proposed grade and replacing the excavated materials as properly compacted fill, so that all footings for structures and walls are founded into engineered fill with a minimum of 3.0 feet of fill below footings for proposed structures and 2.0 feet below footings for proposed walls.

No fill should be placed until excavations and/or natural ground preparation have been observed by the geotechnical consultant. The native soils encountered within the project sites are generally considered suitable for re-use as compacted fill. Excavated soils should be processed, including removal of roots and debris, removal

of oversized particles, mixing, and moisture conditioning, before placing as compacted fill. On-site soils used as fill should meet the following criteria.

- No particles larger than 8 inches in largest dimension.
- Rocks larger than 4 inches should not be placed within the upper 12 inches of subgrade soils.
- Free of all significant organic matter, debris, or other deleterious material.
- Expansion index of 50 or less.
- Sand Equivalent greater than 15 (greater than 30 for pipe bedding).
- Contain less than 30 percent by weight retained in 3/4-inch sieve.
- Contain less than 40 percent fines (passing #200 sieve).

Impact 4.7-4 ***Would the Project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?***

Level of Significance: Less than Significant

Specific Plan - Phase I

Construction and Operations

As discussed under *Impact 4.5-1*, above, liquefaction and landslides are not considered to be a design concern for the Project, and potential for lateral spreading would be low. Seismically induced lateral spreading involves primarily lateral movement of earth materials over underlying materials which are liquefied due to ground shaking. It differs from the slope failure in that complete ground failure involving large movement does not occur due to the relatively smaller gradient of the initial ground surface. Lateral spreading is demonstrated by near-vertical cracks with predominantly horizontal movement of the soil mass involved. Generally due to the negligible risk for liquefaction and flat nature of the Phase I area, the risk of lateral spreading is considered low.

The major cause of ground subsidence is the excessive withdrawal of groundwater. However, the Geotechnical Evaluation prepared for the Phase I area determined that groundwater is not expected to be encountered during Project construction activities. Therefore, based on anticipated groundwater depths, it is not expected that groundwater would affect excavations for the foundations and utilities. However, minor subsidence is expected to occur in the soils below the zone of soil removal, due to settlement and machinery working. The volume of excavated and recompacted soils decreases as a result of grading. The shrinkage would depend on, among other factors, the depth of cut and/or fill, the grading method, and the equipment used. The Geotechnical Investigation concluded shrinkage factors for various units of earth material from the Phase I area would range from approximately 0 to 14 percent for the upper 15 feet of soils. Subsidence occurs when a large portion of land sinks, usually due to the withdrawal of groundwater, oil, or natural gas. Soils that are particularly subject to subsidence include those with high silt or clay content. Subsidence would depend on the construction methods and the type of equipment used. Ground subsidence for the Phase I area is estimated to be approximately 0.20 foot to 0.25 foot.

Furthermore, collapse potential was tested on two representative samples in accordance with the ASTM Standard D4596. Based on the laboratory test result a collapse potential of 0.1 percent at a depth of 3.0 feet bgs in boring BH-03 was measured. A collapse potential of 0.2 percent at a depth of 2.5 feet bgs in boring BH-04 was measured. A collapse potential of 0.1 percent at a depth of 5.0 feet bgs in boring BH-02 was measured. No collapse potential at a depth of 8.0 feet bgs in boring BH-08 was measured. These indicate only a slight problem at the site. Collapse potential distress is typically considered a concern when collapse potential is over 2 percent, therefore the test results indicated a slight collapse potential. The consultant recommends that field-testing using the actual grading equipment and techniques be conducted. Additionally, the Project would be in compliance with all federal, State, and local policies and regulations including the CBC, and therefore impacts would be less than significant.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. As discussed under *Impact 4.5-1* and Phase I discussion, above, liquefaction and landslides are not considered to be a design concern for the Project, and potential for lateral spreading would be low.

The major cause of ground subsidence is the excessive withdrawal of groundwater. However, based on groundwater monitoring wells and groundwater boring conducted near to the Phase II area, groundwater is not expected to be encountered during Project construction activities. Therefore, based on anticipated groundwater depths, it is not expected that groundwater would affect excavations for the foundations and utilities. Additionally, the Project would be in compliance with all federal, State, and local policies and regulations including the CBC, and therefore impacts would be less than significant.

Furthermore, the proposed Project Specific Plan land use designations are the same land use designations as contained in TOP 2050. Phase II would result in less than significant impacts to landslides, lateral spreading, subsidence, liquefaction or collapse when Planning Areas 2B and 3B are completed. Liquefaction and landslides are not considered to be a design concern for the Project, and potential for lateral spreading would be low due to the geologic setting of the surrounding area. No mitigation is required other than compliance with applicable plans, policies, and programs, including the proposed Specific Plan and TOP 2050.[26]

Conclusion

As noted above, the Project would not be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse, and would not result in a significant impact. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. Impacts would be less than significant. No mitigation is required other than compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.

[26] Ibid.

Mitigation Measures

No mitigation is necessary.

Impact 4.7-5 ***Would the Project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?***

Level of Significance: Less than Significant with Mitigation Incorporated (Phase I Project) and Significant Unavoidable (Phase II Only)

Specific Plan - Phase I

Construction and Operations

Expansive soils are soils that expand and contract depending on their moisture level. This change can occur seasonally as water levels and precipitation changes throughout the year. These soils normally occur within the first five feet below the surface. Expansive soils can lead to structural damage as their compositions and volume changes dramatically. The composition of the near surface soils at the Phase I site ranges from sands, silty sands, and sandy silts to silty clays, sandy clays, and clayey silts. Laboratory testing performed on representative samples of these materials indicate that the upper 5 to 9 feet of the general site soils had a very low potential (Expansion Index = 0 to 4), and the stockpiled soils possess a medium expansion potential (Expansion Index = 53 to 79).[27] **MM GEO-2** would be implemented to further reduce expansion potential. Corrosive soils present on-site can pose additional risk to structures and infrastructure, particularly those composed of ferrous metals that are in context with the soils. **MM GEO-3** would be implemented to reduce impacts associated with corrosive soils. Therefore, a less than significant impact would occur with mitigation incorporated.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Based on available soil data, soils within the Phase II future development area are anticipated to be similar to those within the Phase I area.[28] Therefore, expansive and corrosive soil characteristics are expected to be similar throughout the entire Project site. Upon commencement of project-level CEQA review for the Phase II area, a geotechnical investigation would be conducted, similar to that of the Phase I analysis. During future development of the Phase II area, existing vegetation and habitat would be removed by grading, excavation, and other construction activities. Note that, in its current state, the Project site is devoid of vegetation or dominated by ornamental, non-native and native species commonly detected in disturbed habitats. These disturbed habitats would be removed upon implementation of Phase II. Similar to Phase I, development occurring within the Phase II area would be subject to subject to **MM GEO-2** and **MM GEO-3**, which would reduce

[27] Converse Consultants. 2022. *Preliminary Geotechnical Investigation & Organic Soil/Manure Evaluation Report for the Euclid Mixed Use Specific Plan Project*. See ***Appendix E1.***

[28] United States Department of Agriculture Natural Resources Conservation Service. ND. *Web Soil Survey.* https://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx. *(accessed August 3, 2023).*

impacts associated with soil expansion potential and corrosive soils. However, in the absence of a geotechnical investigation for Phase II, impacts within the Phase II area are not fully known and could be potentially significant. At the time of the project-level CEQA analysis and associated geotechnical investigation of the Phase II area, unforeseen site conditions could be discovered that warrant a finding of potentially significant impact. In that case, a subsequent CEQA analysis, in the form of a subsequent EIR or EIR Addendum, may be required pursuant to Sections 15162(a) and 15164 of the State CEQA Guidelines. This determination will be made by City staff at the time of future Phase II area site-specific development applications.

A geotechnical investigation and impact analysis would be conducted for future development areas prior to approval of any development in this region to ensure potential adverse effects to geological resources would be minimized. Furthermore, any geotechnical investigation and required mitigation measures would be implemented prior to Project approval and construction initiation (refer to **MM GEO-2** and **MM GEO-3** below). Future development would modify the existing conditions when Planning Areas 2B and 3B are completed; however, geological impacts would be minimized with mitigation incorporated along with compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050. As mentioned above, a subsequent CEQA analysis may be required should the new information presented by the geotechnical investigation indicate that the Project will have significant impacts relating to geological resources.

Conclusion

As noted above, the Project would result is not anticipated to result in impact to expansive soils with mitigation incorporated. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. **MM GEO-2** and **MM GEO-3** would be required to reduce impacts. For the Phase I portion of the Project, impacts would be reduced to less than significant levels. However, because the extent of impacts within the Phase II area cannot be known at this time, Project impacts relating to geological resources within the Phase II area are considered potentially significant and unavoidable even with the implementation of recommended mitigation.

Mitigation Measures

MM GEO-2 Stockpiled fill soils would be placed in deeper fills (at least 5 feet below proposed grade), landscaped areas, or non-structural fills, or blended with sandier soils on site outside of the subject fill stockpile in order to reduce the expansion potential of the stockpiled soils. The expansion potential of the finish-grade soils shall be tested at grading completion.

Slabs-on-grade shall have a minimum thickness of 5 inches for support of nominal live loads and be reinforced with No. 3 bars spaced 24 inches or less on-centers both ways. Slab reinforcement shall be supported on concrete chairs so that the desired placement is properly placed per the design engineer. Structural design elements of slabs-on-grade, including but not limited to thickness, reinforcement, and joint spacing of more heavily loaded slabs shall be dependent upon the anticipated loading

conditions and the modulus of subgrade reaction (200kcf) of the supporting materials and shall be designed by a structural engineer.

Subgrade for slabs-on-grade shall be firm and uniform. All loose or disturbed soils, including under-slab utility trench backfill shall be recompacted. Prior to placing concrete, the subgrade soils below all floor slabs shall be pre-watered to achieve a moisture content that is equal to 100 percent of the optimum moisture content of the subgrade soils. The moisture content should penetrate to a minimum depth of 12 inches. This should promote uniform curing of the concrete and minimize the development of shrinkage cracks.

MM GEO-3 **Corrosive Materials.** Prior to issuance of a building permit, the Director of the City Public Works Department, or designee, shall verify that the Project Applicant/Developer has retained the services of a licensed corrosion engineer to provide detailed corrosion protection measures. Where steel may come in contact with on-site soils, project construction shall include the use of steel that is protected against corrosion. Corrosion protection may include, but is not limited to, sacrificial metal, the use of protective coatings, and/or cathodic protection. Additional site testing and final design evaluation regarding the possible on-site presence of significant volumes of corrosive soils shall be performed by the Project Geotechnical Consultant to refine and enhance these recommendations. On-site inspection during grading shall be conducted by a qualified corrosion consultant and City of Director of Public Works/City Engineer, or designee, to ensure compliance with geotechnical specifications as incorporated into Project plans.

Impact 4.7-6 ***Would the Project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?***

Level of Significance: Less than Significant

Specific Plan - Phase I

Construction and Operations

No septic tanks or other alternative wastewater disposal systems are proposed. From a geotechnical standpoint, any seepage pits, other private sewage systems, and/or other subsurface structures that may be encountered should be located, mapped on the grading plans, removed and/or properly abandoned. Seepage pits, if abandoned in-place, would be pumped clean, backfilled with gravel or clean sand jetted into place, and then capped with a minimum of 2 feet of a 2-sack or greater slurry or concrete for a minimum distance of 2 feet outside the edge of the seepage pit. The top of the slurry or concrete cap would be at a minimum 10 feet below proposed grade. Water and wastewater systems and their development are further discussed in ***Section 4.17: Utilities and Service Systems*** of this EIR. A less than significant Impact would occur.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. The same impact analysis for the Phase I area would also apply to the Phase II future development area. No septic tanks or other alternative wastewater disposal systems are proposed within the Phase II area. Furthermore, the proposed Project Specific Plan land use designations are the same land use designations as contained in TOP 2050. Phase II would not propose septic tanks or other alternative wastewater disposal systems when Planning Areas 2B and 3B are completed. No mitigation is required other than compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.[29]

Conclusion

As noted above, the Project does not propose the use of septic tanks or other alternative wastewater disposal systems and would not result in a significant impact. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. No mitigation is required other than compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.

Mitigation Measures

No mitigation is necessary.

Impact 4.7-7 Would the Project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Level of Significance: Less than Significant with Mitigation Incorporated.

Specific Plan - Phase I and Phase II Future Development Areas

Construction and Operations

The Project site currently operates with agricultural uses and is frequently disturbed by human and machine activity. A paleontological resource overview was prepared for the Project to review the susceptibility of subsurface geologic units to provide paleontological resources as well as review records for fossil localities near the Project site.[30] Additionally, no paleontological resources or unique geologic formations were identified on the Phase I area during the field survey. A records search within a one-mile radius of the Project site did not yield any fossil localities and there were no fossil localities identified within the Phase I area boundaries.

The City of Ontario is underlain by deposits of Quaternary and upper-Pleistocene sediments deposited during the Pliocene and early Pleistocene. Quaternary Older Alluvial sediments may contain significant, nonrenewable, paleontological resources and are therefore considered to have high sensitivity. Older Pleistocene alluvial sediments may contain fossil remains found at 10 ft bgs or greater depths. The

[29] Ibid.
[30] BCR Consulting LLC. April 2023. *Cultural Resources Assessment Euclid Mixed Use Specific Plan Project, City of Ontario, San Bernardino County, California.* (***Appendix D***)

San Bernardino County Museum, Division of Geological Sciences, conducted the paleontological records search at the time of the 2010 Certified EIR and discovered one paleontological locality for the City area. This locality contained the remains of a mammoth located approximately 20 ft below the ground surface. Therefore, the possibility of discovering additional paleontological resources within City boundaries is moderate to high at depths of 10 ft bgs or greater depths.

Development of the Project would include grading and other ground disturbing activities that could potentially disturb paleontological resources or unearth previously recorded resources. Therefore, the implementation of **MM GEO-4** would reduce the impact of Project development on paleontological resources or unique geologic features to less than significant impact levels with mitigation incorporated.

Because fossils may be present at depths greater than 10 feet below the existing ground surface, paleontological spot-checking/monitoring in these areas is required. **MM GEO-4** would require a paleontological monitor to ensure that any paleontological finds are properly collected and recorded, and that construction is relocated to assess the find for significance. With the implementation of **MM GEO-4** potential impacts associated with paleontological resources would be less than significant. Therefore, no significant unavoidable adverse impacts relating to paleontological resources have been identified.

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Furthermore, the proposed Project Specific Plan land use designations are the same land use designations as contained in TOP 2050. Phase II would potentially unearth paleontological resources; however, mitigation would reduce potential impacts to less than significant levels when Planning Areas 2B and 3B are completed. Impacts affecting paleontological resources would be less than significant with mitigation incorporated, in addition to compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.[31]

Conclusion

As noted above, the Project would have a less than significant impact to paleontological resources with mitigation incorporated. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. The Impacts would be less than significant with mitigation incorporated, in addition to compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.

Mitigation Measures

MM GEO-4 In areas of documented or inferred archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan based on the recommendations of a qualified cultural preservation expert. Additionally, a paleontological resource monitoring plan (PRMP) would be prepared and

[31] City of Ontario. 2022. *TOP 2050 Final Supplemental Environmental Impact Report, Section 5.7, Geology and Soils*. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (accessed April 2023).

implemented. Periodic paleontological spot checks would be conducted when excavation exceeds depths of 5 feet to determine if older, paleontologically sensitive sediments are present. If present, monitoring would be implemented. Prior to the start of construction, a paleontological resource monitoring plan (PRMP) would be prepared and implemented. The Project's PRMP would implement the following procedures:

- A trained and qualified paleontological monitor would perform spot-check and/or monitoring of any excavations on the Project that have the potential to impact paleontological resources in undisturbed native sediments below five feet in depth. The monitor would have the ability to redirect construction activities to ensure avoidance of adverse impacts to paleontological resources.
- The Project paleontologist may re-evaluate the necessity for paleontological monitoring after examination of the affected sediments during excavation, with approval from Lead Agency and Client representatives.
- Any potentially significant fossils observed shall be collected and recorded in conjunction with best management practices and Society of Vertebrate Paleontology professional standards.
- Any fossils recovered during mitigation shall be deposited in an accredited and permanent scientific institution for the benefit of current and future generations.
- A report documenting the results of the monitoring, including any salvage activities and the significance of any fossils, shall be prepared and submitted to the appropriate personnel.

4.7.7 Cumulative Impacts

Geology and soils impacts are site-specific and generally do not combine to result in cumulative impacts. Like the Project, future development projects would be required to comply with applicable state and local building regulations, including the most recent CBC. Site-specific geologic hazards would be addressed in each project's geotechnical investigation. Further, future developments would be required to comply with environmental analysis and review. Therefore, no significant cumulative impact would occur.

Additionally, other projects in the area would involve ground disturbance and could damage paleontological resources that could be buried in those project sites. As with the Project, other projects would require site-specific paleontological analysis that could lead to mitigation requiring monitoring and recovery, identification, and curation of any resources discovered. Cumulative impacts to paleontological resources would be less than significant, and Project contribution would not be cumulatively considerable.

Lastly, the Project would be pursuant to TOP 2050 and would represent a consistent and logical continuation of the existing and planned pattern of development in Ontario, specifically the Ontario Ranch

area. The City has long anticipated that this area would transition from dairy/agricultural to urban uses, and the Project Specific Plan is implementing TOP 2050.[32]

4.7.8 Significant Unavoidable Impacts

No significant unavoidable impacts were identified for Phase I of the Project. However, the Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Impacts within the Phase II area are not fully known and could be potentially significant. At the time of the project-level CEQA analysis and associated geotechnical investigation of the Phase II area, unforeseen site conditions could be discovered that warrant a finding of potentially significant impact. In that case, a subsequent CEQA analysis, in the form of a subsequent EIR or EIR Addendum, may be required pursuant to Sections 15162(a) and 15164 of the State CEQA Guidelines. This determination will be made by City staff at the time of future Phase II area site-specific development applications.

4.8 GREENHOUSE GAS EMISSIONS

4.8.1 Introduction

This section of the Draft EIR evaluates the potential for implementation of the Euclid Mixed Use Specific Plan (proposed Project) to cumulatively contribute to greenhouse gas (GHG) emissions impacts, within the City of Ontario (City). Because no single project is large enough to result in a measurable increase in global concentrations of GHG, climate change impacts of a project are considered on a cumulative basis.

This evaluation is based on the methodology recommended by the South Coast Air Quality Management District (SCAQMD). Modeling of GHG emissions was conducted using the California Emissions Estimator Model (CalEEMod), Version 2022.1, the California Air Resources Board's (CARB) EMFAC2021, Version 1.0.2, and CARB's OFFROAD2021 (Orion Web Database), Version 1.0.1. Model outputs are in ***Appendix B1: Air Quality Emissions Model Data,*** of this Draft EIR.

This Section and environmental discussion use information from the following City documents:

- The Ontario Plan 2050
- City of Ontario Municipal Code
- City of Ontario TOP 2050 Final Supplemental EIR

Additionally, the following analysis is based in part on information obtained from:

- Kimley-Horn and Associates. 2023. Greenhouse Gas Emissions Model Data. (***Appendix B3***)

4.8.2 Environmental Setting

Greenhouse Gases and Climate Change

Certain gases in the earth's atmosphere classified as GHGs play a critical role in determining the earth's surface temperature. Solar radiation enters the earth's atmosphere from space. A portion of the radiation is absorbed by the earth's surface and a smaller portion of this radiation is reflected back toward space. This absorbed radiation is then emitted from the earth as low-frequency infrared radiation. The frequencies at which bodies emit radiation are proportional to temperature. Because the earth has a much lower temperature than the sun, it emits lower-frequency radiation. Most solar radiation passes through GHGs; however, infrared radiation is absorbed by these gases. As a result, radiation that otherwise would have escaped back into space is instead "trapped," resulting in a warming of the atmosphere. This phenomenon, known as the greenhouse effect, is responsible for maintaining a habitable climate on earth.

The primary GHGs contributing to the greenhouse effect are carbon dioxide (CO_2), methane (CH_4), and nitrous oxide (N_2O). Fluorinated gases also make up a small fraction of the GHGs that contribute to climate change. Examples of fluorinated gases include chlorofluorocarbons (CFCs), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulfur hexafluoride (SF_6), and nitrogen trifluoride (NF_3); however, it is noted that these gases are not associated with typical land use development. Human-caused emissions of GHGs exceeding natural ambient concentrations are believed to be responsible for intensifying the greenhouse

effect and leading to a trend of unnatural warming of the Earth's climate, known as global climate change or global warming.

GHGs are global pollutants, unlike criteria air pollutants and toxic air contaminants (TACs), which are pollutants of regional and local concern. Whereas pollutants with localized air quality effects have relatively short atmospheric lifetimes (about one day), GHGs have long atmospheric lifetimes (one to several thousand years). GHGs persist in the atmosphere for long enough time periods to be dispersed around the globe. Although the exact lifetime of a GHG molecule is dependent on multiple variables and cannot be pinpointed, more CO_2 is emitted into the atmosphere than is sequestered by ocean uptake, vegetation, or other forms of carbon sequestration. Of the total annual human-caused CO_2 emissions, approximately 55 percent is sequestered through ocean and land uptakes every year, averaged over the last 50 years, whereas the remaining 45 percent of human-caused CO_2 emissions remains stored in the atmosphere.[1] ***Table 4.8-1: Description of Greenhouse Gases*** describes the primary GHGs attributed to global climate change, including their physical properties.

Table 4.8-1: Description of Greenhouse Gases

Greenhouse Gas	Description
Carbon Dioxide (CO_2)	CO_2 is a colorless, odorless gas that is emitted naturally and through human activities. Natural sources include decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungus; evaporation from oceans; and volcanic outgassing. Anthropogenic sources are from burning coal, oil, natural gas, and wood. The largest source of CO_2 emissions globally is the combustion of fossil fuels such as coal, oil, and gas in power plants, automobiles, and industrial facilities. The atmospheric lifetime of CO_2 is variable because it is readily exchanged in the atmosphere. CO_2 is the most widely emitted GHG and is the reference gas (Global Warming Potential of 1) for determining Global Warming Potentials for other GHGs.
Nitrous Oxide (N_2O)	N_2O is largely attributable to agricultural practices and soil management. Primary human-related sources of N_2O include agricultural soil management, sewage treatment, combustion of fossil fuels, and adipic and nitric acid production. N_2O is produced from biological sources in soil and water, particularly microbial action in wet tropical forests. The atmospheric lifetime of N_2O is approximately 120 years. The Global Warming Potential of N_2O is 298.
Methane (CH_4)	CH_4, a highly potent GHG, primarily results from off-gassing (the release of chemicals from nonmetallic substances under ambient or greater pressure conditions) and is largely associated with agricultural practices and landfills. Methane is the major component of natural gas, about 87 percent by volume. Human-related sources include fossil fuel production, animal husbandry, rice cultivation, biomass burning, and waste management. Natural sources of CH_4 include wetlands, gas hydrates, termites, oceans, freshwater bodies, non-wetland soils, and wildfires. The atmospheric lifetime of CH_4 is about 12 years and the Global Warming Potential is 25.
Hydrofluorocarbons (HFCs)	HFCs are typically used as refrigerants for both stationary refrigeration and mobile air conditioning. The use of HFCs for cooling and foam blowing is increasing, as the continued phase out of CFCs and HCFCs gains momentum. The 100-year Global Warming Potential of HFCs range from 124 for HFC-152 to 14,800 for HFC-23.
Perfluorocarbons (PFCs)	PFCs have stable molecular structures and only break down by ultraviolet rays about 60 kilometers above Earth's surface. Because of this, they have long lifetimes, between 10,000 and 50,000 years. Two main sources of PFCs are primary aluminum production and semiconductor manufacturing. Global Warming Potentials range from 6,500 to 9,200.

In: Climate Change 2013: The Physical Science Basis, Contribution of Working Group I to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change*, 2013. http://www.climatechange2013.org/ images/report/WG1AR5_ALL_FINAL.pdf.

Greenhouse Gas	Description
Chlorofluorocarbons (CFCs)	CFCs are gases formed synthetically by replacing all hydrogen atoms in methane or ethane with chlorine and/or fluorine atoms. They are nontoxic, nonflammable, insoluble, and chemically unreactive in the troposphere (the level of air at the earth's surface). CFCs were synthesized in 1928 for use as refrigerants, aerosol propellants, and cleaning solvents. The Montreal Protocol on Substances that Deplete the Ozone Layer prohibited their production in 1987. Global Warming Potentials for CFCs range from 3,800 to 14,400.
Sulfur Hexafluoride (SF_6)	SF_6 is an inorganic, odorless, colorless, and nontoxic, nonflammable gas. It has a lifetime of 3,200 years. This gas is manmade and used for insulation in electric power transmission equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas. The Global Warming Potential of SF_6 is 23,900.
Hydrochlorofluorocarbons (HCFCs)	HCFCs are solvents, similar in use and chemical composition to CFCs. The main uses of HCFCs are for refrigerant products and air conditioning systems. As part of the Montreal Protocol, HCFCs are subject to a consumption cap and gradual phase out. The United States is scheduled to achieve a 100 percent reduction to the cap by 2030. The 100-year Global Warming Potentials of HCFCs range from 90 for HCFC-123 to 1,800 for HCFC-142b.
Nitrogen Trifluoride (NF_3)	NF_3 was added to Health and Safety Code §38505(g)(7) as a GHG of concern. This gas is used in electronics manufacture for semiconductors and liquid crystal displays. It has a high global warming potential of 17,200.

4.8.3 Regulatory Setting

This section describes the federal, State, and local regulations applicable to GHG emissions.

To date, national standards have not been established for nationwide GHG reduction targets, nor have any regulations or legislation been enacted specifically to address climate change and GHG emissions reduction at the project level. Various efforts have been promulgated at the federal level to improve fuel economy and energy efficiency to address climate change and its associated effects.

Federal

Energy Independence and Security Act of 2007

The Energy Independence and Security Act of 2007 (EISA; December 2007), among other key measures, requires the following, which would aid in the reduction of national GHG emissions:

- Increase the supply of alternative fuel sources by setting a mandatory Renewable Fuel Standard (RFS) requiring fuel producers to use at least 36 billion gallons of biofuel in 2022.
- Set a target of 35 miles per gallon for the combined fleet of cars and light trucks by model year 2020 and direct the National Highway Traffic Safety Administration (NHTSA) to establish a fuel economy program for medium- and heavy-duty trucks and create a separate fuel economy standard for work trucks.
- Prescribe or revise standards affecting regional efficiency for heating and cooling products and procedures for new or amended standards, energy conservation, energy efficiency labeling for consumer electronic products, residential boiler efficiency, electric motor efficiency, and home appliances.

It should be noted that the Energy Independence and Security Act of 2022 has been proposed by the United States Senate. The plan would build upon the EISA of 2007 and would include additional requirements for the United States to achieve energy independence by 2024.

U.S. Environmental Protection Agency Endangerment Finding

The U.S. Environmental Protection Agency (EPA) authority to regulate GHG emissions stems from the U.S. Supreme Court decision in *Massachusetts v. EPA* (2007). The Supreme Court ruled that GHGs meet the definition of air pollutants under the existing Federal Clean Air Act (FCAA) and must be regulated if these gases could be reasonably anticipated to endanger public health or welfare. Responding to the Court's ruling, the U.S. EPA finalized an endangerment finding in December 2009. Based on scientific evidence it found that six GHGs (CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6) constitute a threat to public health and welfare. Thus, it is the Supreme Court's interpretation of the existing FCAA and the U.S. EPA's assessment of the scientific evidence that form the basis for the U.S. EPA's regulatory actions.

Federal Vehicle Standards

In response to the U.S. Supreme Court ruling discussed above, Executive Order 13432 was issued in 2007 directing the U.S. EPA, the U.S. Department of Transportation, and the U.S. Department of Energy to establish regulations that reduce GHG emissions from motor vehicles, non-road vehicles, and non-road engines by 2008. In 2009, the NHTSA issued a final rule regulating fuel efficiency and GHG emissions from cars and light-duty trucks for model year 2011, and in 2010, the U.S. EPA and NHTSA issued a final rule regulating cars and light-duty trucks for model years 2012–2016.

In 2010, an Executive Memorandum was issued directing the Department of Transportation, Department of Energy, U.S. EPA, and NHTSA to establish additional standards regarding fuel efficiency and GHG reduction, clean fuels, and advanced vehicle infrastructure. In response to this directive, the U.S. EPA and NHTSA proposed stringent, coordinated federal GHG and fuel economy standards for model years 2017-2025 light-duty vehicles. The proposed standards projected to achieve 163 grams per mile of CO_2 in model year 2025, on an average industry fleet-wide basis, which is equivalent to 54.5 miles per gallon (mpg) if this level were achieved solely through fuel efficiency. The final rule was adopted in 2012 for model years 2017–2021, and NHTSA intends to set standards for model years 2022–2025 in a future rulemaking. On January 12, 2017, the U.S. EPA finalized its decision to maintain the current GHG emissions standards for model years 2022–2025 cars and light trucks. It should be noted that the U.S. EPA is currently proposing to freeze the vehicle fuel efficiency standards at their planned 2020 level (37 mpg), canceling any future strengthening (currently 54.5 mpg by 2026).

In addition to the regulations applicable to cars and light-duty trucks described above, in 2011, the U.S. EPA and NHTSA announced fuel economy and GHG standards for medium- and heavy-duty trucks for model years 2014–2018. The standards for CO_2 emissions and fuel consumption are tailored to three main vehicle categories: combination tractors, heavy-duty pickup trucks and vans, and vocational vehicles. According to the U.S. EPA, this regulatory program will reduce GHG emissions and fuel consumption for the affected vehicles by 6 to 23 percent over the 2010 baselines.

In August 2016, the U.S. EPA and NHTSA announced the adoption of the phase two program related to the fuel economy and GHG standards for medium- and heavy-duty trucks. The phase two program will apply to vehicles with model year 2018 through 2027 for certain trailers, and model years 2021 through 2027 for semi-trucks, large pickup trucks, vans, and all types and sizes of buses and work trucks. The final standards are expected to lower CO_2 emissions by approximately 1.1 billion metric tons and reduce oil consumption by up to 2 billion barrels over the lifetime of the vehicles sold under the program.

On September 27, 2019, the U.S. EPA and the NHTSA published the "Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule Part One: One National Program." (84 Fed. Reg. 51,310 (Sept. 27, 2019.) The Part One Rule revokes California's authority to set its own GHG emissions standards and set zero-emission vehicle mandates in California. On March 31, 2020, the U.S. EPA and NHTSA finalized rulemaking for SAFE Part Two, which sets CO_2 emissions standards and corporate average fuel economy (CAFE) standards for passenger vehicles and light duty trucks, covering model years 2021-2026.

Presidential Executive Order 13783

Presidential Executive Order 13783, Promoting Energy Independence and Economic Growth issued on March 28, 2017, orders all federal agencies to apply cost-benefit analyses to regulations of GHG emissions and evaluations of the social cost of CO_2, N_2O, and CH_4.

State

California Air Resources Board

The California Air Resources Board (CARB) is responsible for the coordination and oversight of State and local air pollution control programs in California. Various statewide and local initiatives to reduce California's contribution to GHG emissions have raised awareness about climate change and its potential for severe long-term adverse environmental, social, and economic effects. California is a significant emitter of CO_2e in the world and produced 369 million gross metric tons (MMT) of CO_2e in 2020. The transportation sector is the State's largest emitter of GHGs, followed by industrial operations such as manufacturing and oil and gas extraction.

The State of California legislature has enacted a series of bills that constitute the most aggressive program to reduce GHGs of any state in the nation. Some legislation, such as the landmark AB 32 California Global Warming Solutions Act of 2006, was specifically enacted to address GHG emissions. Other legislation, such as Title 24 building efficiency standards and Title 20 appliance energy standards, were originally adopted for other purposes such as energy and water conservation, but also provide GHG reductions. This section describes the major legislation related to GHG emissions reduction.

Assembly Bill 32 (California Global Warming Solutions Act of 2006)

AB 32 instructs the CARB to develop and enforce regulations for the reporting and verification of statewide GHG emissions. AB 32 also directed CARB to set a GHG emissions limit based on 1990 levels, to be achieved by 2020. It set a timeline for adopting a scoping plan for achieving GHG reductions in a technologically and economically feasible manner.

CARB Scoping Plan

Adopted December 15, 2022, CARB's 2022 Scoping Plan for Achieving Carbon Neutrality (2022 Scoping Plan) sets a path to achieve targets for carbon neutrality and reduce anthropogenic GHG emissions by 85 percent below 1990 levels by 2045 in accordance with AB 1279. To achieve the targets of AB 1279, the 2022 Scoping Plan relies on existing and emerging fossil fuel alternatives and clean technologies, as well as carbon capture and storage. Specifically, the 2022 Scoping Plan focuses on zero-emission transportation; phasing out use of fossil gas use for heating homes and buildings; reducing chemical and refrigerants with high GWP; providing communities with sustainable options for walking, biking, and public transit; displacement of fossil-fuel fired electrical generation through use of renewable energy alternatives (e.g., solar arrays and wind turbines); and scaling up new options such as green hydrogen. The 2022 Scoping Plan sets one of the most aggressive approaches to reach carbon neutrality in the world. Unlike the 2017 Scoping Plan, CARB no longer includes a numeric per capita threshold and instead advocates for compliance with a local GHG reduction strategy (i.e., Climate Action Plan) consistent with CEQA Guidelines section 15183.5.

The key elements of the 2022 CARB Scoping Plan focuses on transportation. Specifically, the 2022 Scoping Plan aims to rapidly move towards zero-emission transportation (i.e., electrifying cars, buses, trains, and trucks), which constitutes California's single largest source of GHGs. The regulations that impact the transportation sector are adopted and enforced by CARB on vehicle manufacturers and are outside the jurisdiction and control of local governments. The 2022 Scoping Plan accelerates development of new regulations as well as amendments to strengthen regulations and programs already in place.

Included in the 2022 Scoping Plan is a set of Local Actions (2022 Scoping Plan Appendix D) aimed at providing local jurisdictions with tools to reduce GHGs and assist the state in meeting the ambitious targets set forth in the 2022 Scoping Plan. Appendix D to the 2022 Scoping Plan includes a section on evaluating plan-level and project-level alignment with the State's Climate Goals in CEQA GHG analyses. In this section, CARB identifies several recommendations and strategies that should be considered for new development in order to determine consistency with the 2022 Scoping Plan. Notably, this section is focused on Residential and Mixed-Use Projects. CARB specifically states that Appendix D does not address other land uses (e.g., industrial). However, CARB plans to explore new approaches for other land use types in the future.

Senate Bill 32 (California Global Warming Solutions Act of 2006: Emissions Limit)

Signed into law in September 2016, SB 32 codifies the 2030 GHG reduction target in Executive Order B-30-15 (40 percent below 1990 levels by 2030). The bill authorizes CARB to adopt an interim GHG emissions level target to be achieved by 2030. CARB also must adopt rules and regulations in an open public process to achieve the maximum, technologically feasible, and cost-effective GHG reductions.

With SB 32, the Legislature passed companion legislation, AB 197, which provides additional direction for developing the Scoping Plan. On December 12, 2022, CARB adopted a third update to the Scoping Plan. The 2022 Scoping Plan details how the State will reduce GHG emissions to meet the 2030 target set by Executive Order B-30-15 and codified by SB 32. Other objectives listed in the 2022 Scoping Plan are to

provide direct GHG emissions reductions; support climate investment in disadvantaged communities; and support the Clean Power Plan and other Federal actions.

SB 375 (The Sustainable Communities and Climate Protection Act of 2008)

Signed into law on September 30, 2008, SB 375 provides a process to coordinate land use planning, regional transportation plans, and funding priorities to help California meet the GHG reduction goals established by AB 32. SB 375 requires metropolitan planning organizations to include sustainable community strategies in their regional transportation plans for reducing GHG emissions, aligns planning for transportation and housing, and creates specified incentives for the implementation of the strategies.

AB 1493 (Pavley Regulations and Fuel Efficiency Standards)

AB 1493, enacted on July 22, 2002, required CARB to develop and adopt regulations that reduce GHGs emitted by passenger vehicles and light duty trucks. Implementation of the regulation was delayed by lawsuits filed by automakers and by the U.S. EPA's denial of an implementation waiver. The U.S. EPA subsequently granted the requested waiver in 2009, which was upheld by the U.S. District Court for the District of Columbia in 2011. The regulations establish one set of emission standards for passenger vehicles sand light duty truck model years 2009 to 2016 and a second set of emissions standards for model years 2017 to 2025. By 2025, when all rules will be fully implemented, new automobiles will emit 34 percent fewer CO_2e emissions and 75 percent fewer smog-forming emissions.

SB 350 (Clean Energy and Pollution Reduction Act of 2015)

Signed into law on October 7, 2015, SB 350 implements the goals of Executive Order B-30-15. The objectives of SB 350 are to increase the procurement of electricity from renewable sources from 33 percent to 50 percent (with interim targets of 40 percent by 2024, and 45 percent by 2027) and to double the energy efficiency savings in electricity and natural gas end uses of retail customers through energy efficiency and conservation. SB 350 also reorganizes the Independent System Operator to develop more regional electricity transmission markets and improve accessibility in these markets, which will facilitate the growth of renewable energy markets in the western United States.

AB 398 (Market-Based Compliance Mechanisms)

Signed into law on July 25, 2017, AB 398 extended the duration of the Cap-and-Trade program from 2020 to 2030. AB 398 required CARB to update the Scoping Plan and for all GHG rules and regulations adopted by the State. It also designated CARB as the Statewide regulatory body responsible for ensuring that California meets its Statewide carbon pollution reduction targets, while retaining local air districts' responsibility and authority to curb toxic air contaminants and criteria pollutants from local sources that severely impact public health. AB 398 also decreased free carbon allowances by over 40 percent by 2030 and prioritized Cap-and-Trade spending to various programs including reducing diesel emissions in impacted communities.

SB 150 (Regional Transportation Plans)

Signed into law on October 10, 2017, SB 150 aligns local and regional GHG reduction targets with State targets (i.e., 40 percent below their 1990 levels by 2030). SB 150 creates a process to include communities

in discussions on how to monitor their regions' progress in meeting these goals. The bill also requires the CARB to regularly report on that progress, as well as on the successes and the challenges regions experience associated with achieving their targets. SB 150 provides for accounting of climate change efforts and GHG reductions and identifies effective reduction strategies.

SB 100 (California Renewables Portfolio Standard Program: Emissions of Greenhouse Gases)

Signed into law in September 2018, SB 100 increased California's renewable electricity portfolio from 50 to 60 percent by 2030. SB 100 also established a further goal to have an electric grid that is entirely powered by clean energy by 2045.

SB 1368 (Emission Performance Standards)

SB 1368 is the companion bill of AB 32, which directs the California Public Utilities Commission (CPUC) to adopt a performance standard for GHG emissions for the future power purchases of California utilities. SB 1368 limits carbon emissions associated with electrical energy consumed in California by forbidding procurement arrangements for energy longer than five years from resources that exceed the emissions of a relatively clean, combined cycle natural gas power plant. The new law effectively prevents California's utilities from investing in, otherwise financially supporting, or purchasing power from new coal plants located in or out of the state. The CPUC adopted the regulations required by SB 1368 on August 29, 2007. The regulations implementing SB 1368 establish a standard for baseload generation owned by, or under long-term contract to publicly owned utilities, for 1,100 pounds of CO_2 per megawatt-hour.

SB 1078, AB107, and SBX1-2 (Renewable Electricity Standards)

SB 1078 (2002) required California to generate 20 percent of its electricity from renewable energy by 2017. SB 107 (2006) changed the due date to 2010 instead of 2017. On November 17, 2008, Executive Order S-14-08 established a Renewable Portfolio Standard target for California requiring that all retail sellers of electricity serve 33 percent of their load with renewable energy by 2020. Executive Order S-21-09 also directed CARB to adopt a regulation by July 31, 2010, requiring the state's load serving entities to meet a 33 percent renewable energy target by 2020. CARB approved the Renewable Electricity Standard on September 23, 2010, by Resolution 10-23. SB X1-2 codified the 33 percent by 2020 goal.

AB 1346 (Air Pollution: Small Off-Road Engines)

Signed into Law in October 2021, AB 1346 requires CARB, to adopt cost-effective and technologically feasible regulations to prohibit engine exhaust and evaporative emissions from new small off-road engines, consistent with federal law, by July 1, 2022. The bill requires CARB to identify and, to the extent feasible, make available funding for commercial rebates or similar incentive funding as part of any updates to existing applicable funding program guidelines to local air pollution control districts and air quality management districts to implement to support the transition to zero-emission small off-road equipment operations.

AB 1279 (The California Climate Crisis)

AB 1279 establishes the policy of the State to achieve carbon neutrality as soon as possible, but no later than 2045; to maintain net negative GHG emissions thereafter; and to ensure that by 2045 statewide

anthropogenic GHG emissions are reduced at least 85 percent below 1990 levels. The bill requires CARB to ensure that Scoping Plan updates identify and recommend measures to achieve carbon neutrality, and to identify and implement policies and strategies that enable CO^2 removal solutions and carbon capture, utilization, and storage technologies.

SB 1020 (100 Percent Clean Electric Grid)

Signed on September 16, 2022, SB 1020 provides additional goals for the path to the 2045 goal of 100 percent clean electricity retail sales. It creates a target of 90 percent clean electricity retail sales by 2035 and 95 percent clean electricity retail sales by 2040.

SB 905 (Carbon Sequestration Program)

Signed on September 16, 2022, SB 905 establishes regulatory framework and policies that involve carbon removal, carbon capture, utilization, and sequestration. It also prohibits the injecting of concentrated carbon dioxide fluid into a Class II injection well for the purpose of enhanced oil recovery.

AB 1757 (Nature-Based Solutions)

Signed on September 16, 2022, AB 1757 requires State agencies to develop a range of targets for natural carbon sequestration and nature-based climate solutions that reduce GHG emissions to meet the 2030, 2038, and 2045 goals which would be integrated into a scoping plan addressing natural and working lands.

Executive Orders Related to GHG Emissions

California's Executive Branch has taken several actions to reduce GHGs using executive orders. Although not regulatory, they set the tone for the State and guide the actions of state agencies.

Executive Order S-3-05

Executive Order S-3-05 was issued on June 1, 2005, which established the following GHG emissions reduction targets:

- By 2010, reduce greenhouse gas emissions to 2000 levels.
- By 2020, reduce greenhouse gas emissions to 1990 levels.
- By 2050, reduce greenhouse gas emissions to 80 percent below 1990 levels.

The 2050 reduction goal represents what some scientists believe is necessary to reach levels that will stabilize the climate. The 2020 goal was established to be a mid-term target. Because this is an executive order, the goals are not legally enforceable for local governments or the private sector.

Executive Order S-01-07

Issued on January 18, 2007, Executive Order S 01-07 mandates that a statewide goal shall be established to reduce the carbon intensity of California's transportation fuels by at least 10 percent by 2020. The executive order established a Low Carbon Fuel Standard (LCFS) and directed the Secretary for Environmental Protection to coordinate the actions of the California Energy Commission, CARB, the

University of California, and other agencies to develop and propose protocols for measuring the "life-cycle carbon intensity" of transportation fuels. CARB adopted the LCFS on April 23, 2009.

Executive Order S-13-08

Issued on November 14, 2008, Executive Order S-13-08 facilitated the California Natural Resources Agency development of the 2009 California Climate Adaptation Strategy. Objectives include analyzing risks of climate change in California, identifying and exploring strategies to adapt to climate change, and specifying a direction for future research.

Executive Order S-14-08

Issued on November 17, 2008, Executive Order S-14-08 expands the State's Renewable Energy Standard to 33 percent renewable power by 2020. Additionally, Executive Order S-21-09 (signed on September 15, 2009) directs CARB to adopt regulations requiring 33 percent of electricity sold in the State to come from renewable energy by 2020. CARB adopted the Renewable Electricity Standard on September 23, 2010, which requires 33 percent renewable energy by 2020 for most publicly-owned electricity retailers.

Executive Order S-21-09

Issued on July 17, 2009, Executive Order S-21-09 directs CARB to adopt regulations to increase California's Renewable Portfolio Standard (RPS) to 33 percent by 2020. This builds upon SB 1078 (2002), which established the California RPS program, requiring 20 percent renewable energy by 2017, and SB 107 (2006), which advanced the 20 percent deadline to 2010, a goal which was expanded to 33 percent by 2020 in the 2005 Energy Action Plan II.

Executive Order B-30-15

Issued on April 29, 2015, Executive Order B-30-15 established a California GHG reduction target of 40 percent below 1990 levels by 2030 and directs CARB to update the Climate Change Scoping Plan to express the 2030 target in terms of $MMTCO_2e$. The 2030 target acts as an interim goal on the way to achieving reductions of 80 percent below 1990 levels by 2050, a goal set by Executive Order S-3-05. The executive order also requires the State's climate adaptation plan to be updated every three years and for the State to continue its climate change research program, among other provisions. With the enactment of SB 32 in 2016, the Legislature codified the goal of reducing GHG emissions by 2030 to 40 percent below 1990 levels.

Executive Order B-55-18

Issued on September 10, 2018, Executive Order B-55-18 establishes a goal to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net negative emissions thereafter. This goal is in addition to the existing statewide targets of reducing GHG emissions. The executive order requires CARB to work with relevant state agencies to develop a framework for implementing this goal. It also requires CARB to update the Scoping Plan to identify and recommend measures to achieve carbon neutrality. The executive order also requires state agencies to develop sequestration targets in the Natural and Working Lands Climate Change Implementation Plan.

Executive Order B-79-20

Signed in September 2020, Executive Order N-79-20 establishes as a goal that where feasible, all new passenger cars and trucks, as well as all drayage/cargo trucks and off-road vehicles and equipment, sold in California, will be zero-emission by 2035. The executive order sets a similar goal requiring that all medium and heavy-duty vehicles will be zero-emission by 2045 where feasible. It also directs CARB to develop and propose rulemaking for passenger vehicles and trucks, medium-and heavy-duty fleets where feasible, drayage trucks, and off-road vehicles and equipment "requiring increasing volumes" of new zero emission vehicles (ZEVs) "towards the target of 100 percent." The executive order directs the California Environmental Protection Agency, the California Geologic Energy Management Division (CalGEM), and the California Natural Resources Agency to transition and repurpose oil production facilities with a goal toward meeting carbon neutrality by 2045. Executive Order N-79-20 builds upon the CARB Advanced Clean Trucks regulation, which was adopted by CARB in July 2020.

California Regulations and Building Codes

California has a long history of adopting regulations to improve energy efficiency in new and remodeled buildings. These regulations have kept California's energy consumption relatively flat, even with rapid population growth.

Title 20 Appliance Efficiency Regulations

The appliance efficiency regulations (California Code of Regulations [CCR] Title 20, Sections 1601-1608) include standards for new appliances. Twenty-three categories of appliances are included in the scope of these regulations. These standards include minimum levels of operating efficiency, and other cost-effective measures, to promote the use of energy- and water-efficient appliances.

Title 24 Building Energy Efficiency Standards

California's Energy Efficiency Standards for Residential and Nonresidential Buildings (CCR Title 24, Part 6) was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases GHG emissions. The California Energy Commission (CEC) adopted the 2022 Energy Code on August 11, 2021, which was subsequently approved by the California Building Standards Commission for inclusion into the California Building Standards Code. The 2022 Title 24 standards will result in less energy use, thereby reducing air pollutant emissions associated with energy consumption across California. For example, the 2022 Title 24 standards will require efficient electric heat pumps, establishes electric-ready requirements for new homes, expands solar photovoltaic and battery storage standards, and strengthens ventilation standards.

Title 24 California Green Building Standards Code

The California Green Building Standards Code (CCR Title 24, Part 11 code) commonly referred to as CALGreen, is a statewide mandatory construction code developed and adopted by the California Building Standards Commission and the Department of Housing and Community Development. The CALGreen standards require new residential and nonresidential buildings to comply with mandatory measures under

the topics of planning and design, energy efficiency, water efficiency/conservation, material conservation and resource efficiency, and environmental quality. CALGreen also provides voluntary tiers and measures that local governments may adopt that encourage or require additional measures in the five green building topics. The latest CALGreen Code took effect on January 1, 2023 (2022 CALGreen). The 2022 CALGreen standards has improved upon the 2019 standards for new construction of, and additions and alterations to, residential and nonresidential buildings.

CARB Advanced Clean Truck Regulation

CARB adopted the Advanced Clean Truck Regulation in June 2020 requiring truck manufacturers to transition from diesel trucks and vans to electric zero-emission trucks beginning in 2024. By 2045, every new truck sold in California is required to be zero-emission. This rule directly addresses disproportionate risks and health and pollution burdens and puts California on the path for an all zero-emission short-haul drayage fleet in ports and railyards by 2035, and zero-emission "last-mile" delivery trucks and vans by 2040. The Advanced Clean Truck Regulation accelerates the transition of zero-emission medium-and heavy-duty vehicles from Class 2b to Class 8. The regulation has two components including a manufacturer sales requirement, and a reporting requirement:

- Zero-Emission Truck Sales: Manufacturers who certify Class 2b through 8 chassis or complete vehicles with combustion engines are required to sell zero-emission trucks as an increasing percentage of their annual California sales from 2024 to 2035. By 2035, zero-emission truck/chassis sales need to be 55 percent of Class 2b – 3 truck sales, 75 percent of Class 4 – 8 straight truck sales, and 40 percent of truck tractor sales.
- Company and Fleet Reporting: Large employers including retailers, manufacturers, brokers and others would be required to report information about shipments and shuttle services. Fleet owners, with 50 or more trucks, would be required to report about their existing fleet operations. This information would help identify future strategies to ensure that fleets purchase available zero-emission trucks and place them in service where suitable to meet their needs.

Regional

South Coast Air Quality Management District

The following SCAQMD rule related to GHG emissions is required of the Project:

- Rule 2305 (Warehouse Indirect Source Rule) - SCAQMD has adopted Rule 2305 in May 2021 to reduce emissions associated with warehouses and mobile sources attracted to warehouses. This rule applies to all existing and proposed warehouses over 100,000 square feet located in SCAQMD. Rule 2305 requires warehouse operators to track annual vehicle miles traveled (VMT) associated with truck trips to and from the warehouse. These trip miles are used to calculate the warehouses' WAIRE (Warehouse Actions and Investments to Reduce Emissions) Points Compliance Obligation. WAIRE Points are earned based on emission reduction measures and warehouse operators are required to submit an annual WAIRE Report which includes truck trip data and emission reduction measures. Reduction strategies listed in the WAIRE menu include acquire zero emission (ZE) or near zero emission (NZE) trucks; require ZE/NZE truck visits; require ZE yard trucks; install on-site ZE charging/fueling infrastructure; install onsite energy systems; and install filtration systems in residences, schools, and other buildings in the adjacent community.

Warehouse operators that do not earn a sufficient number of WAIRE points to satisfy the WAIRE Points Compliance Obligation are required to pay a mitigation fee.

Southern California Association of Governments

Per SB 375, CARB set the following regional transportation GHG emissions reduction targets for the Southern California Association of Governments (SCAG):

- 8 percent reduction from the 2005 per capita amount by 2020
- 13 percent reduction from the 2005 per capita amount by 2035

SCAG's Sustainable Communities Strategy (SCS) is included in the SCAG 2016-2040 Regional Transportation Plan Sustainable Communities Strategy (RTP/SCS). The goals and policies of the 2016-2040 RTP/SCS that reduce VMT focus on transportation and land use planning that include building infill projects, locating residents closer to where they work and play and designing communities so there is access to high quality transit service. The 2016-2040 RTP/SCS would result in an eight percent reduction in GHG emissions per capita by 2020, an 18 percent reduction by 2035 and a 21 percent reduction by 2040— compared with 2005 levels. This meets or exceeds the State's mandated reductions established by CARB and meets the requirements of SB 375 as codified in Government Code §65080(b) et seq., which are eight percent by 2020 and 13 percent by 2035. The 2016-2040 RTP/SCS is expected to reduce the number of VMT per capita by more than seven percent and Vehicle Hours Traveled (VHT) per capita by 17 percent (for automobiles and light/medium duty trucks) as a result of more location efficient land use patterns and improved transit service.

On September 3, 2020, SCAG's Regional Council adopted Connect SoCal (2020-2045 RTP/SCS). Connect SoCal outlines more than $638 billion in transportation system investments through 2045 to increase mobility options and achieve a more sustainable growth pattern. Connect SoCal includes plans to support development of ZEV trucks and passenger vehicles to reduce air pollution and GHG emissions.

CARB updated the regional targets in 2018 to ensure consistency with the more stringent statewide reduction goals subsequently introduced by the California legislature and the Governor's office. For the SCAG region, the updated targets are eight percent below 2005 per capita emissions levels by 2020 (this value is unchanged from the previous 2020 CARB target), and 19 percent below 2005 per capita emissions levels by 2035.

Connect SoCal SCS has been found to meet State targets for reducing GHG emissions from cars and light trucks. Connect SoCal achieves per capita GHG emission reductions relative to 2005 levels of eight percent in 2020, and 19 percent in 2035, thereby meeting the GHG reduction targets established by the CARB for the SCAG region.

Chino Airport Land Use, Compatibility Plan

The Project site is within the Chino Airport Influence Area. The Chino Airport is located just south of the Project site across Merrill Avenue. The Chino Airport has adopted its own Airport Comprehensive Land Use Plan (ACLUP).

Local

Ontario Community Climate Action Plan

The City adopted the Community Climate Action Plan (CAP) in August 2022. The primary purpose of the City's Community CAP is to design a feasible strategy to reduce GHG emissions generated by community activities that is consistent with statewide Scoping Plan GHG reduction efforts. Community activities are those activities occurring in association with the land uses and activities within the City's jurisdictional boundary, generally from sources of emissions that the City's community can influence or control. The GHG emissions reduction target established under the CAP is 40 percent under year 1990 levels by 2030. This goal is consistent with CARB's 2017 Scoping Plan, which was developed to implement AB 32 and provide a recommended GHG reduction target of 40 percent below 1990 levels to local communities by the year 2030.

As part of the previous CAP, the City published a guidance document titled "Greenhouse Gas Emissions, CEQA Thresholds and Screening Tables" (December 2014) (Screening Tables).[2] As part of this guidance, a project would need to achieve a minimum of 100 points pursuant to measures identified in the Screening Tables. The Screening Tables include a variety of measures to choose from, including building energy efficiency, water conservation, and VMT (vehicle miles traveled) reduction. The City developed an interim Development Screening Table, and the latest draft was revised on May 1, 2018. The 2022 CAP is continuing to update the screening tables and is still currently using the screening tables to evaluate a project's GHG impact.

4.8.4 Impact Thresholds and Significance Criteria

According to Appendix G of the State CEQA Guidelines, a project would normally have a significant effect on the environment if the project would:

GHG-1 Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment.

GHG-2 Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

Addressing GHG emissions generation impacts requires an agency to determine what constitutes a significant impact. The amendments to the State CEQA Guidelines specifically allow lead agencies to determine thresholds of significance that illustrate the extent of an impact and are a basis from which to apply mitigation measures. This means that each agency is left to determine whether a project's GHG emissions will have a "significant" impact on the environment. The guidelines direct that agencies are to use "careful judgment" and "make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate" the project's GHG emissions.

[2] City of Ontario. 2022. *Community Climate Action Plan,* Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/Applications/Community%20Climate%20Action%20Plan%20-%20Appendix%20B.pdf. (Accessed April 3, 2023).

Ontario Community Climate Action Plan

To ensure new development projects are consistent with the Community CAP, the Community CAP includes implementation of a Development Review Process (DRP) to reduce GHG emissions associated with new development. The DRP sets forth procedures for evaluating GHG impacts and determining significance for CEQA purposes by using the Greenhouse Reduction Measures Screening Threshold Table to mitigate project GHG emissions that exceed the threshold level. The Screening Tables provide a menu of options that both ensures implementation of the reduction strategies and flexibility for projects to reduce GHG emissions to levels that align with the City's reduction goals.

4.8.5 Plans, Programs, and Policies

PPP GHG-1 New buildings are required to achieve the current California Building Energy Efficiency Standards (Title 24, Part 6) and the CALGreen Code. The 2022 Building Energy Efficiency Standards become effective on January 1, 2023. The Building Energy Efficiency Standards and CALGreen Code are updated triannually with a goal to achieve 100 percent clean carbon neutrality by 2050 within the State.

PPP GHG-2 New buildings are required to adhere to the California Green Building Standards Code (CALGreen Code) requirement to provide bicycle parking for new non-residential buildings, or meet local bicycle parking ordinances, whichever is stricter (CALGreen Code Sections 5.106.4.1).

PPP GHG-3 California's Green Building Standards Code (CALGreen Code) requires the recycling and/or salvaging for reuse at minimum of 65 percent of the nonhazardous construction and demolition waste generated during most "new construction" projects (CALGreen Code Sections 4.408 and 5.408). Construction contractors are required to submit a construction waste management plan that identifies the construction and demolition waste materials to be diverted from disposal by recycling, reuse on the project, or salvaged for future use or sale and the amount (by weight or volume).

PPP GHG-4 Construction activities are required to adhere to Title 13 CCR 2499, which requires that nonessential idling of construction equipment is restricted to five minutes or less.

PPP GHG-5 New buildings are required to adhere to the CALGreen Code and Water Efficient Landscape Ordinance requirements to increase water efficiency and reduce urban per capita water demand.

PPP GHG-6 CARB's RPS is a foundational element of the State's emissions reduction plan. These mandates apply directly to investor-owned utilities, which in the case of the proposed Project is Southern California Edison (SCE). On September 10, 2018, SB 100 was signed into law and established the following RPS targets: 50 percent renewable resources target by December 31, 2026, and 60 percent target by December 31, 2030. SB 100 also requires that retail sellers and local publicly owned electric utilities procure a minimum quantity of electricity products from eligible renewable energy resources so that the total kilowatt hours of those products sold to their retail end-use

customers achieve 44 percent of retail sales by December 31, 2024; 52 percent by December 31, 2027; and 60 percent by December 31, 2030.

PPP GHG-7 SB 375 requires the reduction of GHG emissions from light trucks and automobiles through land use and transportation efforts that will reduce VMT. In essence, SB 375's goal is to control GHGs by curbing urban sprawl and through better land use planning. SB 375 essentially becomes the land use contribution to the GHG reduction requirements of AB 32, California's global warming bill enacted in 2006, and SB 32.

PPP GHG-8 The heavy-duty tractors and trailers (i.e., trucks that are 53-foot or longer) must use U.S. EPA SmartWay certified tractors and trailers or retrofit their existing fleet with SmartWay verified technologies in accordance with CARB's Heavy-Duty (Tractor-Trailer) GHG Regulation. Owners are responsible for replacing or retrofitting their affected vehicles with compliant aerodynamic technologies and low rolling resistance tires. Sleeper cab tractors model year 2011 and later must be SmartWay certified. All other tractors must use SmartWay verified low rolling resistance tires. Trailers must have low rolling resistance tires and aerodynamic devices.

PPP GHG-9 The medium-duty and heavy-duty vehicle engines are required to comply with the U.S. EPA's GHG and fuel efficiency standards. The federal and California Phase 1 standards took effect with model year 2014 tractors, vocational vehicles, and heavy-duty pick-up trucks and vans and the engines powering such vehicles (the Phase 1 standards excludes trailers). The federal Phase 2 standards cover model years 2018-2027 for certain trailers and model years 2021- 2027 for semi-trucks and large pick-up trucks, vans and all types and sizes of buses and work trucks. California is aligned with the federal Phase 2 standards in structure, timing, and stringency, but with some minor California differences. The California Phase 2 regulations became effective April 1, 2019.

Project Design Features

PDF GHG-1 Indoor material handling equipment used throughout the Project area shall be electric and may not be propane or diesel-powered.

PDF GHG-2 The tilt-up concrete warehouse buildings shall have rooftops that can support tenant improvements for solar panels (i.e., solar-ready).

PDF GHG-3 All outdoor water demands shall be served with recycled water.

Methodology

Global climate change is, by definition, a cumulative impact of GHG emissions. Therefore, there is no project-level analysis. The baseline against which to compare potential impacts of the project includes the natural and anthropogenic drivers of global climate change, including worldwide GHG emissions from human activities which almost doubled between 1970 and 2010 from approximately 27 gigatons (Gt) of

CO_2 per year to nearly 49 $GtCO_2$ per year.[3] As such, the geographic extent of climate change and GHG emissions cumulative impact discussion is worldwide.

The Project's construction and operational emissions were calculated using the California Emissions Estimator Model version 2022.1 (CalEEMod). Details of the modeling assumptions and emission factors are provided in ***Appendix B1: Air Quality Emissions Model Data***. For construction, CalEEMod calculates emissions from off-road equipment usage and on-road vehicle travel associated with haul, delivery, and construction worker trips. GHG emissions during construction were forecasted based on the proposed construction schedule and applying the mobile-source and fugitive dust emissions factors derived from CalEEMod. The Project's construction-related GHG emissions would be generated from off-road construction equipment, on-road hauling and vendor (material delivery) trucks, and worker vehicles.

The Project's operations-related GHG emissions would be generated by vehicular traffic, off-road equipment, area sources (e.g., landscaping maintenance, consumer products), electrical generation, natural gas consumption, water supply and wastewater treatment, and solid waste. The increase of traffic over existing conditions as a result of the Project was obtained from the Project's Traffic Analysis Study (see ***Appendix I1: Traffic Analysis***) prepared by Urban Crossroads (January 2023). Project trip generation from the Trip Generation Analysis is based on the following Institute of Transportation Engineers (ITE) land use categories:

- ITE Land Use 130: Industrial Park
- ITE Land Use 150: Warehousing
- ITE Land Use 220: Multifamily Low-Rise Residential
- ITE Land Use 822: Strip Retail
- ITE Land Use 933: Fast-Food Restaurant Without Drive-Through
- ITE Land Use: 934: Fast-Food Restaurant With Drive-Through

The ITE Trip Generation Manual does not contain trip generation rates for truck/trailer parking lots. Therefore, the traffic study developed rates with data from other truck/trailer parking facilities located in the surrounding area. Truck mix percentages are based on the SCAQMD Truck Trip Generation Study applied to ITE truck percentages. Other operational emissions from area, energy, and stationary sources were quantified in CalEEMod based on land use activity data.

4.8.6 Impacts and Mitigation Measures

The following impact analysis addresses thresholds of significance for which the Initial Study disclosed potentially significant impacts.

[3] Intergovernmental Panel on Climate Change, *Climate Change 2013 Mitigation of Climate Change Working Group III Contribution to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change*, 2013.

Impact 4.8-1: Would the Project generate GHG emissions, either directly or indirectly, that could have a significant impact on the environment?

Level of Significance: Less than Significant with Mitigation Incorporated

Construction associated with the Project would result in direct emissions of CO_2, N_2O, and CH_4 from construction equipment and the transport of materials and construction workers to and from the Project Site. Construction-related emissions are only temporary and would cease once construction is complete. Construction GHG emissions are typically summed and amortized over the lifetime of the Project (assumed to be 30 years), then added to the operational emissions.[4]

Operational or long-term emissions occur over the life of the Project. GHG emissions would result from direct emissions such as Project generated vehicular traffic, on-site combustion of natural gas, and operation of any landscaping equipment. Operational GHG emissions would also result from indirect sources, such as off-site generation of electrical power, the energy required to convey water to, and wastewater from the Project, the emissions associated with solid waste generated from the Project, and any fugitive refrigerants from air conditioning or refrigerators.

Specific Plan – Phase I

Construction

The total GHG emissions generated during construction of Phase I are combined and are shown in ***Table 4.8-2: Phase I Construction-Related Greenhouse Gas Emissions***.

Table 4.8-2: Phase I Construction-Related Greenhouse Gas Emissions

Category	$MTCO_2e$
2023 Construction	400
2024 Construction	1,591
2025 Construction	780
Total Construction Emissions	2,771
30-Year Amortized Construction	92
Source: CalEEMod, Version 2022.1.	

As shown in ***Table 4.8-2***, Phase I would result in the generation of approximately 2,771 $MTCO_2e$ over the course of construction. The amortized Project construction emissions would be 92 $MTCO_2e$ per year.

Operations

Operational GHG emissions associated with the Phase I are summarized in ***Table 4.8-3: Phase I - Operational GHG Emissions***. ***Table 4.8-3*** shows that the unmitigated Project would generate approximately 24,271 $MTCO_2e$ per year.

Mitigation measures have been identified in ***Section 4.3: Air Quality*** that would reduce GHG emissions to the maximum extent feasible and are shown in ***Table 4.8-3*** under "mitigated." **MM AQ-2** requires the use of electrical off-road equipment such as forklifts and hostlers/yard trucks that would also reduce GHG

[4] The project lifetime is based on the standard 30-year assumption of the South Coast Air Quality Management District (South Coast Air Quality Management District, *Minutes for the GHG CEQA Significance Threshold Stakeholder Working Group #13,* August 26, 2009).

emissions from combustion engines. **MM AQ-3** requires the implementation of a Transportation Demand Management (TDM) program to reduce single occupant vehicle trips and encourage transit. **MM AQ-4** requires the buildings to be designed to accommodate electric vehicle (EV) infrastructure. **MM AQ-5** prohibits idling when engines are not in use to reduce GHG emissions from trucks.

Table 4.8-3: Phase I - Operational GHG Emissions

Source	$MTCO_2e$ Per Year
Unmitigated

Mobile	14,211
Generators	274
Off-Road Equipment[2]	342
Solid Waste	311
Water	702
Refrigerants	3,579
Construction-Amortized	92
Total Emissions	**22,787**

Source: CalEEMod, Version 2022.1.
Notes: Totals may not equal 100 percent due to rounding.
[1] Unmitigated off-road equipment includes emissions from diesel powered forklifts and yard trucks/hostlers.
[2] Mitigated off-road equipment includes the energy emissions necessary to power electric forklifts and yard trucks/hostlers as required by mitigation measure AQ- 2

With the implementation of **MM AQ-2** through **AQ-6,** Phase I would generate approximately 22,787 $MTCO_2e$ annually from both construction and operations. It should be noted that emissions of motor vehicles are controlled by State and Federal standards and the Project has no control over these standards.

To ensure that the Project reduces emissions by the maximum amount feasible, **MM GHG-1** would require that the Project incorporate project design features to achieve a minimum score of 100 points on the Screening Tables. As stated in the Community CAP, Projects that achieve a minimum score of 100 points are considered less than significant. At the time of this analysis, the Project is in the design phase, where project design features needed to achieve consistency with the Screening Tables are being considered and implemented. A preliminary set of the screening tables has been completed to show that the Project can feasibly achieve 100 points (refer to ***Appendix B***). The applicant must complete and submit a final set of screening tables showing the achievement of the required 100 points prior to issuance of the building

permit, as required by MM GHG-1. Therefore, with the implementation of **MM AQ-2** through **AQ-6** and **MM GHG-1,** the Project impact is considered less than significant with mitigation.

Specific Plan – Phase II Future Development Areas

Construction

The total GHG emissions generated during construction of Phase II are combined and are shown in ***Table 4.8-4: Phase II Construction-Related Greenhouse Gas Emissions***.

Table 4.8-4: Phase II Construction-Related Greenhouse Gas Emissions

Category	$MTCO_2e$
2025 Construction	594
2026 Construction	1,001
Total Construction Emissions	1,595
30-Year Amortized Construction	53
Source: CalEEMod, Version 2022.1.	

As shown in ***Table 4.8-4***, the Phase II would result in the generation of approximately 1,595 $MTCO_2e$ over the course of construction. The amortized Project construction emissions would be 53 $MTCO_2e$ per year.

Operations

Total GHG emissions associated with the Phase II are summarized in ***Table 4.8-5: Phase II - Operational GHG Emissions***. ***Table 4.8-5*** shows that the unmitigated Project would generate approximately 13,660 $MTCO_2e$ per year.

Mitigation measures have been identified in ***Section 4.3: Air Quality*** that would also reduce GHG emissions to the maximum extent feasible and are shown in ***Table 4.8-5*** under "mitigated." **MM AQ-2** requires the use of electrical off-road equipment such as forklifts and hostlers/yard trucks that would also reduce GHG emissions from combustion engines. **MM AQ-3** requires the implementation of a Transportation Demand Management (TDM) program to reduce single occupant vehicle trips and encourage transit. **MM AQ-4** requires the buildings to be designed to accommodate electric vehicle (EV) infrastructure. **MM AQ-5** prohibits idling when engines are not in use to reduce GHG emissions from trucks and **MM AQ-6** prohibits the installation of wood-burning and natural gas devices.

Table 4.8-5: Phase II - Operational GHG Emissions

Mobile	10,523
Off-Road Equipment[2]	67
Solid Waste	231
Water	197
Refrigerants	727
Construction-Amortized	53
Total Emissions	**13,342**

Source: CalEEMod, Version 2022.1.
Notes: Totals may not equal 100 percent due to rounding.
[1] Unmitigated off-road equipment includes emissions from diesel powered forklifts and yard trucks/hostlers.
[2] Mitigated off-road equipment includes the energy emissions necessary to power electric forklifts and yard trucks/hostlers as required by mitigation measure AQ- 2

With the implementation of **MM AQ-2** through **AQ-6** Phase II would generate approximately 13,342 $MTCO_2e$ annually from both construction and operations. It should be noted that emissions of motor vehicles are controlled by State and Federal standards and the Project has no control over these standards.

To ensure that the Project reduces emissions by the maximum amount feasible, **MM GHG-1** would require that the Project incorporate project design features to achieve a minimum score of 100 points on the Screening Tables. As stated in the Community CAP, projects that achieve a minimum score of 100 points are considered less than significant. A preliminary set of the screening tables can be found in **Appendix B** for reference. However, at the time of this analysis, the Project is in the design phase, where project design features needed to achieve consistency with the Screening Tables are being considered and implemented. A preliminary set of the screening tables has been completed to show that the Project can feasibly achieve 100 points (refer to ***Appendix B***). The applicant must complete and submit a final set of screening tables showing the achievement of the required 100 points prior to issuance of the building permit, as required by **MM GHG-1**. Therefore, with the implementation of **MM AQ-2** through **MM AQ-6** and **MM GHG-1,** the Project impact is considered less than significant with mitigation.

Project Buildout (Phase I + Phase II)

Construction

The total GHG emissions generated during construction of Phase I and Phase II are combined and are shown in ***Table 4.8-6: Project Buildout - Construction-Related Greenhouse Gas Emissions***.

Table 4.8-6: Project Buildout - Construction-Related Greenhouse Gas Emissions

Category	$MTCO_2e$
2023 Construction	400
2024 Construction	1,591
2025 Construction	1,374
2026 Construction	1,001
Total Construction Emissions	4,366
30-Year Amortized Construction	146
Source: CalEEMod, Version 2022.1.	

As shown in ***Table 4.8-6,*** Project Buildout would result in the generation of approximately 4,366 $MTCO_2e$ over the course of construction. The amortized Project construction emissions would be 146 $MTCO_2e$ per year.

Operations

Total GHG emissions associated with the Project Buildout are summarized in ***Table 4.8-7: Project Buildout Operational GHG Emissions***. ***Table 4.8-7*** shows that the unmitigated Project would generate approximately 37,992 $MTCO_2e$ per year.

Mitigation measures have been identified in ***Section 4.3: Air Quality*** that would also reduce GHG emissions to the maximum extent feasible and are shown in ***Table 4.8-7*** under "mitigated." **MM AQ-2** requires the use of electrical off-road equipment such as forklifts and hostlers/yard trucks that would also reduce GHG emissions from combustion engines. **MM AQ-3** requires the implementation of a Transportation Demand Management (TDM) program to reduce single occupant vehicle trips and encourage transit. **MM AQ-4** requires the buildings to be designed to accommodate electric vehicle (EV) infrastructure. **MM AQ-5** prohibits idling when engines are not in use to reduce GHG emissions from trucks and **MM AQ-6** prohibits the installation of wood-burning and natural gas devices.

Table 4.8-7: Project Buildout Operational GHG Emissions

Source	$MTCO_2e$ Per Year
Unmitigated	
Phase I GHG Emissions	24,271
Phase II GHG Emissions	13,660
Total Emissions	**37,931**
Mitigated	
Phase I GHG Emissions	22,787
Phase II GHG Emissions	13,342
Total Emissions	**36,129**

Source: CalEEMod, Version 2022.1.
Notes: Totals may not equal 100 percent due to rounding.
[1] Unmitigated off-road equipment includes emissions from diesel powered forklifts and yard trucks/hostlers.
[2] Mitigated off-road equipment includes the energy emissions necessary to power electric forklifts and yard trucks/hostlers as required by mitigation measure AQ- 2

With the implementation of **MM AQ-2** through **MM AQ-6** the Project would generate approximately 36,129 $MTCO_2e$ annually from both construction and operations of Phase I and Phase II. It should be noted that emissions of motor vehicles are controlled by State and Federal standards and the Project has no control over these standards.

To ensure that the Project reduces emissions by the maximum amount feasible, MM GHG-1 would require that the Project incorporate project design features to achieve a minimum score of 100 points on the Screening Tables. As stated in the Community CAP, projects that achieve a minimum score of 100 points are considered less than significant. At the time of this analysis, the Project is in the design phase, where project design features needed to achieve consistency with the Screening Tables are being considered and implemented. A preliminary set of the screening tables has been completed to show that the Project can feasibly achieve 100 points (refer to ***Appendix B***). The applicant must complete and submit a final set of screening tables showing the achievement of the required 100 points prior to issuance of the building permit, as required by MM GHG-1. Therefore, with the implementation of **MM AQ-2** through **MM AQ-6** and **MM GHG-1**, the Project impact is considered less than significant with mitigation.

Conclusion

As shown in Table 4.8-7, Project Buildout would generate approximately 36,129 MTCO2e per year with the implementation of operational air quality MM AQ-2 through MM AQ-6. Since the majority of emissions are from mobile sources and neither the Project Applicant nor the City have regulatory authority to control tailpipe emissions, no feasible mitigation measures exist that would reduce the Project's impacts with respect to mobile operational emissions. While the Project has some control over GHG emissions (refer to MM AQ-2 through MM AQ-6), the majority of emissions are beyond the Project's control. MM GHG-1 would require that the Project incorporate project design features to achieve a minimum score of 100 points on the Screening Tables. As stated in the Community CAP, projects that achieve a minimum score of 100 points are considered less than significant. At the time of this analysis, the Project is in the design phase, where project design features needed to achieve consistency with the Screening Tables are being considered and implemented. A preliminary set of the screening tables has been completed to show that the Project can feasibly achieve 100 points (refer to Appendix B). The applicant must complete and submit a final set of screening tables showing the achievement of the required 100 points prior to issuance of the building permit, as required by MM GHG-1. Therefore, even with the implementation of MM AQ-2 through MM AQ-6 and MM GHG-1, this Project impact is less than significant.

The Project would be pursuant to TOP 2050 and would represent a consistent and logical continuation of the existing and planned pattern of development in Ontario, specifically the Ontario Ranch area. The City has long anticipated that this area would transition from dairy/agricultural to urban uses, and the Project Specific Plan is implementing TOP 2050.[5] Pursuant to TOP 2050, implementation of the Project Specific Plan would represent a consistent and logical continuation of the existing and planned pattern of development in Ontario, specifically the Ontario Ranch area. Therefore, although Project emissions are conservatively considered to be significant and unavoidable, emissions have been included in the emissions forecasts for TOP 2050.

[5] City of Ontario. (2022). TOP 2050 Final Supplemental EIR. Section 5.3, Air Quality. Retrieved from: https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (accessed April 2023)

Mitigation Measures

Refer to **MM AQ-2** through **AQ-6** in ***Section 4.3: Air Quality***.

MM GHG-1 Project development proposals with building permit applications on file with the City shall implement Screening Table Measures that achieve at least 100 points per the Screening Tables. The City shall verify that Screening Table Measures achieving the 100-point performance standard are incorporated in development plans prior to the issuance of building permit(s) and/or site plans (as applicable). The City shall verify implementation of the selected Screening Table Measures prior to the issuance of Certificate(s) of Occupancy. At the discretion of the City, measures that provide GHG reductions equivalent to GHG emissions reductions achieved via the Screening Table Measures may be implemented. Multiple development proposals may, at the discretion of the City, be allowed to collectively demonstrate achievement of at least 100 points per the Screening Tables.

Impact 4.8-2: ***Would the Project conflict with an applicable plan, policy, or regulation of an agency adopted for the purpose of reducing GHG emissions?***

Level of Significance: Significant and Unavoidable Impact

Project Buildout (Phase I + Phase II)

City of Ontario Community Climate Action Plan

The primary purpose of the City's Community CAP is to design a feasible strategy to reduce GHG emissions generated by community activities that is consistent with statewide Scoping Plan GHG reduction efforts. The City has identified a series of reduction measures to be implemented by the City. These reduction measures include programs that improve building energy efficiency, increase use of public and active transit, and decrease VMT, increase use of alternative-fueled vehicles, increase use of renewable energy, reduce water consumption, and reduce waste.

Table 4.8-8: Community CAP Consistency evaluates the consistency of the proposed Project to the applicable measures of the Community CAP. As discussed in the table, the proposed Project would be consistent with all applicable measures. By using energy more efficiently, harnessing renewable energy to power buildings, recycling waste, and enhancing access to sustainable transportation modes, the City can keep dollars in local economy, create new green jobs, and improve community quality of life. As shown in ***Table 4.8-8***, the Project would not conflict with the goals of the Community CAP.

Table 4.8-8: Community CAP Consistency

CAP Measure Name	Measure Description	Consistency	
Energy			
Energy – Strategy 1	**Building electrification.** Promote and incentivize the phase-out of gas appliances in new and existing homes and businesses throughout the community to advance GHG reductions, increase energy efficiency, and protect public safety and environmental health.	Consistent	This measure is to be taken at the City level.
Energy – Strategy 2	**Onsite solar energy for existing residential development.** Continue to support and facilitate installation of rooftop solar photovoltaic and onsite solar energy systems in existing residential development.	N/A	This measure only applies to existing residential development.
Energy – Strategy 3	**Onsite Solar Energy Systems for Nonresidential Development:** Ensure new large non-residential development, including City facilities, includes onsite renewable energy to support the site's energy needs by requiring solar photovoltaic panels or other appropriate onsite renewable energy generation systems for the following types of projects: • New commercial and office buildings, or existing commercial and office building expansions greater or equal to 45,000 square feet in size. • New industrial or existing industrial buildings expansions greater or equal to 100,000 square feet in size.	Consistent	The proposed Project would promote renewable energy sources including passive solar collection, subject to the City of Ontario policies and development regulations, within the Business Park and Mixed-Use Districts. The residential buildings on-site would be prewired for the future installation of solar collection improvements.
Energy – Strategy 4	**Green roofs.** Promote and incentivize residents and business owners to install green roofs to conserve energy and reduce surface water runoff.	N/A	This measure is to be taken at the City level.
Energy – Strategy 5	**Urban Cooling:** Maintain and expand the City's existing tree canopy, with a goal of planting 500 trees annually through 2050 and promote the use of pervious concrete and cool pavement for pavement projects.	Consistent	The Proposed project would include provisions for planting street parkway and median trees and would provide landscape installation, including trees, within all neighborhood edges. The project would also incorporate pervious surfaces and shade trees in surface parking lots consistent with Policy CD-2.10 of TOP 2050.
Energy – Strategy 6	**Energy efficiency retrofits for low-income households.** Promote and incentivize voluntary energy efficiency retrofits of homes to reduce natural gas and electricity usage, with the goal of retrofitting 9,000 low-income homes by 2050. Partner with community services agencies to fund energy efficiency projects, including heating, ventilation, air conditioning, indoor lighting, water heating equipment, insulation, and weatherization for low-income residents.	N/A	This measure is not applicable to the proposed Project.

CAP Measure Name	Measure Description	Consistency	
Energy – Strategy 7	**Energy efficiency retrofits.** Promote and incentivize voluntary energy efficiency retrofits to reduce in natural gas and electricity usage. Partner with regional agencies to expand access to existing energy efficiency and conservation opportunities, incentives, and technical assistance for residents and businesses.	Consistent	The Project would include tolerant landscaping, skylights in warehouse areas, high performance dual glazing in office storefronts, and LED products for energy efficient site lighting.
Energy – Strategy 8	**Smart Growth and Infill.** Encourage revitalization of neighborhoods through higher-density, mixed-use, infill development and creative reuse of underutilized sites within the urban core.	N/A	This measure is not applicable to the proposed Project.
Transportation			
Transportation – Strategy 9	**Transit-Oriented Development:** Encourage development of compact, mixed-use, and transit-oriented development to improve the regional jobs-housing balance, especially on corridors served by high-ridership transit and bus rapid transit, such as Holt Avenue.	Consistent	The proposed Project would provide a mixed-use development along a high-volume corridor, Euclid Avenue. Transit turnouts would be constructed within the Specific Plan Area.
Transportation – Strategy 10	**Increase Transportation Ridership.** Ensure a reliable and responsive transit system with dedicated and secure funding and resources to support increased ridership.	N/A	This measure is to be taken at a City level.
Transportation – Strategy 11	**Traffic signal synchronization and roadway management.** Implement traffic and roadway management strategies to improve mobility and efficiency and reduce associated emissions.	N/A	This measure is to be taken at the City level.
Transportation – Strategy 12	**Community vehicle electrification.** Promote and incentivize the adoption of electric vehicles (EV) citywide, including light-duty and heavy-duty vehicles, for municipal, commercial, and residential uses.	N/A	This measure is to be taken at the City level.
Transportation – Strategy 13	**Active Transportation Networks:** Work with transit agencies, school districts, and employers to facilitate an interconnected transportation system that allows a shift in travel from private passenger vehicles to alternative modes, including public transit, ride sharing, car sharing, bicycling, and walking.	Consistent	The proposed Project would provide multipurpose trails along Euclid and Schaefer Avenues and public accessible sidewalks along Euclid, Schaefer, Sultana, and Edison Avenues. Transit turnouts would be constructed within the Specific Plan Area.
Transportation – Strategy 14	**Vehicle Idling:** Limit idling of heavy-duty trucks. Support the SCAMQD and CARB anti-idling requirements and provide signage in key areas where idling that is not consistent with SCAMQD or CARB requirements might occur.	Consistent	Per **MM AQ-5**, all truck access gates and loading docks within the Project site shall have a sign posted that states that truck drivers shall turn off engines when not in use or after five minutes of continuous idling operation pursuant to Title 13 of the California Code of Regulations Section 2485.
Transportation – Strategy 15	**Parking policy and event parking.** Adopt a comprehensive parking policy that encourages carpooling and the use of alternative transportation, including providing parking	N/A	This measure is to be taken at a City level.

CAP Measure Name	Measure Description	Consistency	
	spaces for car-share vehicles at convenient locations with access to public transportation.		
Off-road Equipment			
Off-Road Equipment – Strategy 16	**Electrification of construction and landscaping equipment.** Promote and incentivize the transition to electric construction and landscaping equipment.	Consistent	This measure is to be taken at the City level.
Off-Road Equipment – Strategy 17	**Idling Ordinance for Construction Equipment:** Limit idling of heavy-duty off-road construction equipment to reduce air pollution and GHG emissions from construction activity.	Consistent:	Construction would be required to comply with California Code of Regulations Section 2485 and 2499 which would limit the idling of heavy-duty construction equipment to no more than five minutes.
Waste			
Waste - Strategy 18	**Methane capture at landfills.** Support efforts to reduce methane emissions from regional landfills.	N/A	This measure is not applicable to the proposed Project.
Waste - Strategy 19	**Waste Diversion:** Exceed waste diversion goals recommended by AB 939 and CALGreen by adopting a citywide diversion target of at least 75 percent of waste.	Consistent:	The proposed Project would be subject to all applicable local, State, and federal waste diversion requirement.
Waste – Strategy 20	**Construction and Demolition Waste Recovery Ordinance:** Increase the amount of waste recycled during construction and demolition of buildings.	Consistent:	The proposed Project is anticipated to recycle and reuse leftover or unused building materials.
Water			
Water – Strategy 21	**Indoor water efficiency.** Encourage water-efficient retrofits of new and existing buildings by working with water providers and regional agencies.	Consistent	Coordination with water providers and regional agencies would be taken at the City level. However, the Project plans to connect to the recycled water system for indoor use.
Water – Strategy 22	**Water Efficient Landscapes and Water Recycling:** Promote drought-tolerant and fire-wise landscaping. Encourage increased use of reclaimed water for landscape irrigation, agricultural, and industrial use.	Consistent	The proposed Project plans to incorporate native drought tolerant landscaping and would use recycled water to irrigate landscape areas as required by the City of Ontario Recycled Water Master Plan.
Water – Strategy 23	**Water system and wastewater operations efficiency.** Maximize efficiency at drinking water treatment, pumping, and distribution facilities, including development of off-peak demand schedules for heavy commercial and industrial users.	N/A	This measure is not applicable to the proposed Project.
Water – Strategy 24	**Methane capture for wastewater treatment.** Work with Inland Empire Utilities Agency (IEUA), the local wastewater treatment provider, to increase methane capture rate.	N/A	This measure is not applicable to the proposed Project.
Other			
Strategy 25	**Methane capture for dairy operations.** Encourage and incentivize local dairy operations	N/A	This measure is not applicable to the proposed Project.

CAP Measure Name	Measure Description	Consistency	
	to reduce methane emissions through methane capture technology.		
Strategy 26	**Climate change awareness and education.** Promote climate change awareness and GHG reduction community-wide through a variety of mechanisms, including through support of climate change education in schools or community colleges.	N/A	This measure is to be taken at the City level
Strategy 27	**Carbon sequestration.** Establish a citywide carbon sequestration project and sequestration goal of 5,000 MT CO2 per year.	N/A	This measure is to be taken at the City level
Strategy 28	**Green jobs.** Support green job training and opportunities to create sustainable, living wage, quality employment opportunities.	N/A	This measure is to be taken at the City level
Source: City of Ontario, 2022. *Community Climate Action Plan*. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/Applications/Community%20Climate%20Action%20Plan%20-%20Appendix%20B.pdf. (accessed April 2023).			

The CAP establishes a city points system that assigns values for each GHG emissions mitigation design element or operational program feature incorporated into a given development project. The CAP Screening Tables point values correspond to the minimum GHG emissions reduction expected from each feature. Projects with features that yield at least 100 Screening Table points are considered consistent with the reduction quantities anticipated in the City's CAP. Such projects would be determined to have a less than significant individual and cumulative GHG emissions impact. ***Table 4.8-9: GHG Reduction Measures Screening Table for Industrial Development*** identifies potential design features and their associated scores. The Project Applicant may work with the City to determine point values for additional design features with the goal of achieving a minimum of 100 points. Since the Project contains both residential and industrial/commercial developments, both the residential and industrial/commercial screening tables must be filled out. A proportion of the points identical to the proportion of the multiple uses would be used to determine the total number of points for the development. For the Project, approximately 90 percent of the total area is industrial/commercial and approximately 10 percent is residential. Therefore, a 0.9 multiplier would be used for the industrial/commercial screening table points and a 0.1 multiplier would be used for the residential screening table. ***Table 4.8-9*** shows that the proposed Project has the potential to achieve 100 points on the CAP's screening tables.

Table 4.8-9: GHG Reduction Measures Screening Table for Ontario Development

Feature	Description	Assigned Point Value
Residential		
Insulation	2008 Baseline (walls: R-13; roof/attic: R-30)	0
	Modestly Enhanced Insulation (walls: R-13; roof/attic: R-38)	15
	Enhanced Insulation (rigid wall insulation: R-13; roof/attic: R-38)	18
	Greatly Enhanced Insulation (spray foam wall insulated walls R-15 or higher) roof/attic R-38 or higher)	20

Feature	Description	Assigned Point Value
Windows	2008 Baseline Windows (0.57 U-factor, 0.4 solar heat gain coefficient (SHGC)	0
	Modestly Enhanced Window Insulation {0.4 U-Factor, 0.32 SHGC)	7
	Enhanced Window Insulation {0.32 U-Factor, 0.25 SHGC)	8
	Greatly Enhanced Window Insulation {0.28 or less U-Factor, 0.22 or less SHGC)	12
Cool Roof	Modest Cool Roof (CRRC Rated 0.15 aged solar reflectance, 0.75 thermal emittance)	12
	Enhanced Cool Roof (CRRC Rated 0.2 aged solar reflectance, 0.75 thermal emittance)	14
	Greatly Enhanced Cool Roof (CRRC Rated 0.35 aged solar reflectance, 0.75 thermal emittance)	16
Air Infiltration	Air barrier applied to exterior walls, calking, and visual inspection such as the HERS Verified Quality Insulation Installation (Q11 or equivalent)	12
	Blower Door HERS Verified Envelope Leakage or equivalent	10
Thermal Storage of Building	Modest Thermal Mass (10% of floor or 10% of walls: 12" or more thick exposed concrete or masonry. No permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)	4
	Enhanced Thermal Mass (20% of floor or 20% of walls: 12" or more thick exposed concrete or masonry. No permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)	6
	Enhanced Thermal Mass (80% of floor or 80% of walls: 12" or more thick exposed concrete or masonry. No permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)	24
Indoor Space Efficiencies		
Heating/Cooling Distribution System	Minimum Duct Insulation (R-4.2 required)	0
	Modest Duct insulation (R-6)	8
	Enhanced Duct Insulation (R-8)	10
Space Heating/ Cooling Equipment	2008 Minimum HVAC Efficiency (SEER 13/60% AFUE or 7.7 HSPF}	0
	Improved Efficiency HVAC (SEER 14/65% AFUE or 8 HSPF)	7
	High Efficiency HVAC (SEER 15/72% AFUE or 8.5 HSPF)	8
	Very High Efficiency HVAC (SEER 16/80% AFUE or 9 HSPF)	12
Water Heaters	2008 Minimum Efficiency (0.57 Energy Factor)	0
	Improved Efficiency Water Heater (0.675 Energy Factor)	14
	High Efficiency Water Heater (0.72 Energy Factor)	16
	Very High Efficiency Water Heater (0.92 Energy factor)	19
	Solar Pre-heat System (0.2 Net Solar Fraction)	4
	Enhanced Solar Pre-heat System (0.35 Net Solar Fraction)	8

Feature	Description	Assigned Point Value
Daylighting	All peripheral rooms within the living space have at least one window (required)	1
	All rooms within the living space have daylight (through use of windows, solar tubes, skylights, etc.)	5
	All rooms daylighted	7
Artificial Lighting	2008 Minimum (required)	0
	Efficient lights (25% of In-unit fixtures considered high efficacy. High efficacy is defined as 40 lumens/watt for 15 watt or less fixtures: SO lumens/watt for15 to 40-watt fixtures, 60 lumens/watt for fixtures >40watt)	9
	High Efficiency lights (50% of in-unit fixtures are high efficacy)	12
	Very High Efficiency Lights (100% of in-unit fixtures are high efficacy)	14
Appliances	Energy Star Commercial Refrigerator (new)	4
	Energy Star Commercial Dish Washer (new)	4
	Energy Star Commercial Cloths Washing	4
Building Placement	North/South alignment of building or other building placement such that the orientation of the buildings optimizes natural heating, cooling, and lighting.	5
Energy Star Homes	EPA Energy Star for Homes (version 3 or above)	25
Irrigation and Landscaping		
Water Efficient Landscaping	Eliminate conventional turf from landscaping	0
	Only moderate water using	3
	Only low water using plants	4
	Only California Native landscape that requires no, or only supplemental, irrigation	8
Water Efficient Irrigation Systems	Low precipitation spray heads <. 75"/hour, or drip irrigation	1
	Weather based Irrigation control systems combined with drip irrigation (demonstrate 20% reduced water use)	5
Recycled Water	Recycled connections (purple pipe) to irrigation system on-site	5
Potable Water		
Showers	Water Efficient Showerheads (2.0 gpm)	3
Toilets	Water Efficient Toilets (1.5 gpm)	3
Faucets	Water Efficient faucets (1.28 gpm)	3
Commercial Dishwashers	Water Efficient Dishwasher (6 gallons per cycle or less)	1
Commercial Laundry Washers	Water Efficient Washing Machine (Water factor < 5.5)	1
Bicycle Master Plan		
Bicycle	Provide bicycle path linkages between residential and other land uses.	2

Feature	Description	Assigned Point Value
Infrastructure	Provide bicycle path linkages between residential and transit.	5
Industrial		
Insulation	2008 Baseline (walls: R-13; roof/attic: R-30)	0
	Modestly Enhanced Insulation (walls: R-13; roof/attic: R-38)	15
	Enhanced Insulation (rigid wall insulation: R-13; roof/attic: R-38)	18
	Greatly Enhanced Insulation (spray foam wall insulated walls R-15 or higher) roof/attic R-38 or higher)	20
Windows	2008 Baseline Windows (0.57 U-factor, 0.4 solar heat gain coefficient (SHGC)	0
	Modestly Enhanced Window Insulation {0.4 U-Factor, 0.32 SHGC)	7
	Enhanced Window Insulation {0.32 U-Factor, 0.25 SHGC)	8
	Greatly Enhanced Window Insulation {0.28 or less U-Factor, 0.22 or less SHGC)	12
Cool Roof	Modest Cool Roof (CRRC Rated 0.15 aged solar reflectance, 0.75 thermal emittance)	12
	Enhanced Cool Roof (CRRC Rated 0.2 aged solar reflectance, 0.75 thermal emittance)	14
	Greatly Enhanced Cool Roof (CRRC Rated 0.35 aged solar reflectance, 0.75 thermal emittance)	16
Air Infiltration	Air barrier applied to exterior walls, calking, and visual inspection such as the HERS Verified Quality Insulation Installation (Q11 or equivalent)	12
	Blower Door HERS Verified Envelope Leakage or equivalent	10
Thermal Storage of Building	Modest Thermal Mass (10% of floor or 10% of walls: 12" or more thick exposed concrete or masonry. No permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)	4
	Enhanced Thermal Mass (20% of floor or 20% of walls: 12" or more thick exposed concrete or masonry. No permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)	6
	Enhanced Thermal Mass (80% of floor or 80% of walls: 12" or more thick exposed concrete or masonry. No permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)	24
Indoor Space Efficiencies		
Heating/Cooling Distribution System	Minimum Duct Insulation (R-4.2 required)	0
	Modest Duct insulation (R-6)	8
	Enhanced Duct Insulation (R-8)	10
Space Heating/ Cooling Equipment	2008 Minimum HVAC Efficiency (SEER 13/60% AFUE or 7.7 HSPF}	0
	Improved Efficiency HVAC (SEER 14/65% AFUE or 8 HSPF)	7
	High Efficiency HVAC (SEER 15/72% AFUE or 8.5 HSPF)	8
	Very High Efficiency HVAC (SEER 16/80% AFUE or 9 HSPF)	12

Feature	Description	Assigned Point Value
Water Heaters	2008 Minimum Efficiency (0.57 Energy Factor)	0
	Improved Efficiency Water Heater (0.675 Energy Factor)	14
	High Efficiency Water Heater (0.72 Energy Factor)	16
	Very High Efficiency Water Heater (0.92 Energy factor)	19
	Solar Pre-heat System (0.2 Net Solar Fraction)	4
	Enhanced Solar Pre-heat System (0.35 Net Solar Fraction)	8
Daylighting	All peripheral rooms within the living space have at least one window (required)	1
	All rooms within the living space have daylight (through use of windows, solar tubes, skylights, etc.)	5
	All rooms daylighted	7
Artificial Lighting	2008 Minimum (required)	0
	Efficient lights (25% of In-unit fixtures considered high efficacy. High efficacy is defined as 40 lumens/watt for 15 watt or less fixtures: SO lumens/watt for15 to 40-watt fixtures, 60 lumens/watt for fixtures >40watt)	9
	High Efficiency lights (50% of in-unit fixtures are high efficacy)	12
	Very High Efficiency Lights (100% of in-unit fixtures are high efficacy)	14
Appliances	Energy Star Commercial Refrigerator (new)	4
	Energy Star Commercial Dish Washer (new)	4
	Energy Star Commercial Cloths Washing	4
Irrigation and Landscaping		
Water Efficient Landscaping	Eliminate conventional turf from landscaping	0
	Only moderate water using	3
	Only low water using plants	4
	Only California Native landscape that requires no, or only supplemental, irrigation	8
Water Efficient Irrigation Systems	Low precipitation spray heads <. 75"/hour, or drip irrigation	1

Faucets	Water Efficient faucets (1.28 gpm)	3
Commercial Dishwashers	Water Efficient Dishwasher (6 gallons per cycle or less)	1

Feature	Description	Assigned Point Value
Commercial Laundry Washers	Water Efficient Washing Machine (Water factor < 5.5)	1
Source: City of Ontario 2018. *Greenhouse Gas Reduction Measures Screening Threshold Table Directions.* https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/Applications/Greenhouse%20Gas%20-%20Threshold%20%26%20Screening%20Tables.pdf. (accessed April 2023).		

The Project would have the opportunity to receive more points for additional measures including renewable energy installments, EV recharging stations, and land use-based trips and VMT reductions. As noted above, a preliminary set of the screening tables has been completed to show that the Project can feasibly achieve 100 points (refer to ***Appendix B***). The applicant must complete and submit a final set of screening tables showing the achievement of the required 100 points prior to issuance of the building permit, as required by MM GHG-1. This measure would ensure that future Project development is consistent with the City's Community CAP and would reduce impacts to less than significant.

SCAG Regional Transportation Plan/Sustainable Communities Strategy Consistency

On September 3, 2020, SCAG's Regional Council adopted Connect SoCal (2020 - 2045 Regional Transportation Plan/Sustainable Communities Strategy [RTP/SCS]). The RTP/SCS is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. SCAG's RTP/SCS establishes GHG emissions goals for automobiles and light-duty trucks for 2020 and 2035 as well as an overall GHG target for the Project region consistent with both the target date of AB 32 and the post-2020 GHG reduction goals of Executive Orders 5-03-05 and B-30-15.

The 2020-2045 RTP/SCS contains over 4,000 transportation projects, ranging from highway improvements, railroad grade separations, bicycle lanes, new transit hubs and replacement bridges. These future investments were included in county plans developed by the six county transportation commissions and seek to reduce traffic bottlenecks, improve the efficiency of the region's network, and expand mobility choices for everyone. The 2020-2045 RTP/SCS is an important planning document for the region, allowing project sponsors to qualify for federal funding.

The plan accounts for operations and maintenance costs to ensure reliability, longevity, and cost effectiveness. The 2020-2045 RTP/SCS is also supported by a combination of transportation and land use strategies that help the region achieve State GHG emissions reduction goals and FCAA requirements, preserve open space areas, improve public health and roadway safety, support our vital goods movement industry, and utilize resources more efficiently. GHG emissions resulting from development-related mobile sources are the most potent source of emissions, and therefore Project comparison to the 2020-2045 RTP/SCS is an appropriate indicator of whether the Project would inhibit the post-2020 GHG reduction goals promulgated by the state. The Project's consistency with the 2020-2045 RTP/SCS goals is analyzed in detail in ***Table 4.8-10: 2020-2045 RTP/SCS Consistency***.

Table 4.8-10: 2020-2045 RTP/SCS Consistency

SCAG Goals		Consistency	
GOAL 1:	Encourage regional economic prosperity and global competitiveness.	N/A:	This is not a project-specific policy and is therefore not applicable. However, the Project will include industrial development which would contribute to regional economic prosperity.
GOAL 2:	Improve mobility, accessibility, reliability, and travel safety for people and goods.	Consistent:	Although this Project is not a transportation improvement project, the Project is located near the Chino Airport and existing transit routes on State Route (SR) 60, SR 71, and SR 83, and Interstate (I)-10 and I-15.
GOAL 3:	Enhance the preservation, security, and resilience of the regional transportation system.	N/A:	The Project is not a transportation improvement project and is therefore not applicable.
GOAL 4:	Increase person and goods movement and travel choices within the transportation system.	N/A:	The Project is not a transportation improvement project and is therefore not applicable. However, the Project includes warehouse use that would support goods movement.
GOAL 5:	Reduce greenhouse gas emissions and improve air quality.	Consistent:	The Project is located in proximity to existing truck routes and freeways. Location of the Project within a developed area would reduce trip lengths, which would reduce GHG and air quality emissions.
GOAL 6:	Support healthy and equitable communities	Consistent:	Although the Project exceeds regional thresholds for NO_X, the Project does not exceed localized thresholds. Based on the Friant Ranch decision, projects that do not exceed the SCAQMD's LSTs would not violate any air quality standards or contribute substantially to an existing or projected air quality violation and result in no criteria pollutant health impacts.
GOAL 7:	Adapt to a changing climate and support an integrated regional development pattern and transportation network.	N/A:	This is not a project-specific policy and is therefore not applicable.
GOAL 8:	Leverage new transportation technologies and data-driven solutions that result in more efficient travel.	N/A:	This is not a project-specific policy and is therefore not applicable.
GOAL 9:	Encourage development of diverse housing types in areas that are supported by multiple transportation options.	N/A:	The Project involves development of warehouse use and includes housing. The project site is located near to bus stops located at the intersections of Euclid Avenue and Edison Avenue, and Euclid Avenue and Schaefer Avenue
GOAL 10:	Promote conservation of natural and agricultural lands and restoration of habitats.	Consistent:	Although the Project would remove Prime Farmland, this development is consistent with the City's TOP EIR and Agricultural Overlay District, which is an interim overlay while this area transitions to urban development.

Source: Southern California Association of Governments. 2020. *Regional Transportation Plan/Sustainable Communities Strategy*. https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocal-plan_0.pdf?1606001176. (accessed April 2023).

As shown in ***Table 4.8-10***, the Project would be consistent with all applicable stated goals of the 2020-2045 RTP/SCS. Implementation of the Project would not result in any significant impacts or interfere with SCAG's ability to achieve the region's post-2020 mobile source GHG reduction targets.

Consistency with the CARB Scoping Plan

The 2022 Scoping Plan sets a path to achieve targets for carbon neutrality and reduce anthropogenic GHG emissions by 85 percent below 1990 levels by 2045 in accordance with AB 1279. The transportation, electricity, and industrial sectors are the largest GHG contributors in the State. The 2022 Scoping Plan plans to achieve the AB 1279 targets primarily through zero-emission transportation (e.g., electrifying cars, buses, trains, and trucks). Additional GHG reductions are achieved through decarbonizing the electricity and industrial sectors.

Statewide strategies to reduce GHG emissions in the latest 2022 Scoping Plan include implementing SB 100, which would achieve 100 percent clean electricity by 2045; achieving 100 percent zero emission vehicle sales in 2035 through Advanced Clean Cars II; and implementing the Advanced Clean Fleets regulation to deploy zero-electric vehicle buses and trucks. Additional transportation policies include the Off-Road Zero-Emission Targeted Manufacturer rule, Clean Off-Road Fleet Recognition Program, In-use Off-Road Diesel-Fueled Fleets Regulation, Off-Road Zero-Emission Targeted Manufacturer rule, Clean Off-Road Fleet Recognition Program, and Amendments to the In-use Off-Road Diesel-Fueled Fleets Regulation. The 2022 Scoping Plan would continue to implement SB 375. GHGs would be further reduced through the Cap-and-Trade Program carbon pricing and SB 905. SB 905 requires CARB to create the Carbon Capture, Removal, Utilization, and Storage Program to evaluate, demonstrate, and regulate carbon dioxide removal projects and technology.

As shown previously, a majority of the Project's GHG emissions are from energy and mobile sources which would be further reduced by the 2022 Scoping Plan measures described above. It should be noted that the City has no control over vehicle emissions. However, these emissions would decline in the future due to statewide measures discussed above, as well as cleaner technology and fleet turnover. Several of the State's plans and policies would contribute to a reduction in mobile source emissions from the Project. These include the following:

- **CARB's Advanced Clean Truck Regulation**: Adopted in June 2020, CARB's Advanced Clean Truck Regulation requires truck manufacturers to transition from diesel trucks and vans to electric zero-emission trucks beginning in 2024. By 2045, every new truck sold in California is required to be zero-emission. The Advanced Clean Truck Regulation accelerates the transition of zero-emission medium-and heavy-duty vehicles from Class 2b to Class 8.
- **Executive Order N-79-20**: Executive Order N-79-20 establishes the goal for all new passenger cars and trucks, as well as all drayage/cargo trucks and off-road vehicles and equipment, sold in California, will be zero-emission by 2035 and all medium and heavy-duty vehicles will be zero-emission by 2045. It also directs CARB to develop and propose rulemaking for passenger vehicles and trucks, medium-and heavy-duty fleets where feasible, drayage trucks, and off-road vehicles and equipment "requiring increasing volumes" of new ZEVs "towards the target of 100 percent."

- **CARB's Mobile Source Strategy**: CARB's Mobile Source Strategy takes an integrated planning approach to identify the level of transition to cleaner mobile source technologies needed to achieve all of California's targets by increasing the adoption of ZEV buses and trucks.
- **CARB's Sustainable Freight Action Plan**: The Sustainable Freight Action Plan which improves freight system efficiency, utilizes near-zero emissions technology, and deployment of ZEV trucks. This Plan applies to all trucks accessing the project site and may include existing trucks or new trucks that are part of the statewide goods movement sector.
- **CARB's Emissions Reduction Plan for Ports and Goods Movement**: CARB's Emissions Reduction Plan for Ports and Goods Movement identifies measures to improve goods movement efficiencies such as advanced combustion strategies, friction reduction, waste heat recovery, and electrification of accessories.

While these measures are not directly applicable to the Project, any commercial activity associated with goods movement would be required to comply with these measures as adopted. The Project would not obstruct or interfere with efforts to increase ZEVs or State efforts to improve system efficiency. Compliance with applicable State standards (e.g., continuation of the Cap-and-Trade regulation; CARB's Mobile Source Strategy, Sustainable Freight Action Plan, and Advanced Clean Truck Regulation; Executive Order N-79-20; SB 100/renewable electricity portfolio improvements that require 60 percent renewable electricity by 2030 and 100 percent renewable by 2045, etc.) would ensure consistency with State and regional GHG reduction planning efforts, including the 2022 Scoping Plan. It should also be noted that the Project would convert Natural and Working Lands (NWL). However, as mentioned previously, the Project is consistent with the City's TOP EIR and Agricultural Overlay District, which is an interim overlay while this area transitions to urban development.

The Project does not conflict with the applicable plans that are discussed above, would not conflict with statewide measures to obtain carbon neutrality by the year 2045, and therefore with respect to this particular threshold, the Project does not have a significant impact.

The state's electricity grid is transitioning to renewable energy under California's RPS Program. Renewable sources of electricity include wind, small hydropower, solar, geothermal, biomass, and biogas. The statewide RPS requirements do not directly apply to individual development projects, but to utilities and energy providers such as SCE, whose compliance with RPS requirements would contribute to the State of California objective of transitioning to renewable energy. SCE's *Pathway 2045* concludes that reaching California's 2045 GHG goals requires the decarbonization of electricity, electrification of transportation, electrification of buildings, and utilization of low carbon fuels.[6] Achieving 100 percent renewable energy would be feasible with continued technical advances including the following:[7]

- Better weather forecasting technology is making it much easier for grid operators to precisely how much wind or solar generation we can depend on at any given time.

[6] Southern California Edison. 2023. *Carbon Neutrality by 2045*. https://www.edison.com/our-perspective/pathway-2045. (accessed April 2023).
[7] SB 100. ND. 100% Clean Energy FAQs. https://focus.senate.ca.gov/sb100/faqs. (accessed April 2023).

- The cost of zero-carbon generation sources like wind and solar have dramatically decreased in the past decade and continue to decline.
- The cost of energy storage technologies, which will help us be able to use renewables when the wind isn't blowing and the sun isn't shining, also continues to decline.
- New advancements in the ability of large and small electricity users to shift usage towards times when electricity is cheaper and when the supply of renewables is most abundant are helping to make the grid more flexible and able to accommodate very high levels of renewable energy.
- Grid operators around the western United States are coordinating to gain access to larger markets for renewables and other carbon-free flexible grid resources.
- Targeting energy efficiency during times of the day when renewables are less abundant (after the sun sets) will also help the grid operate more efficiently.

As discussed herein, the Project would comply with the Building Energy Efficiency Standards, the CALGreen Code, and energy efficiency measures implemented by the City CAP. Consistent with the CAP, the buildings developed under the Project would have rooftops that can support solar panels (i.e., solar-ready) which will comply with solar ready requirements of the Building Energy Efficiency Standards, which would enable future tenants to install a PV system. Therefore, implementation of the Project would support the statewide goal of decarbonization by 2045.

Conclusion

As seen in ***Table 4.8-9*** *and* ***Table 4.8-10*** and above, the Project would be consistent with applicable plan goals. In addition, the Project would include several sustainable design features as required by **MM GHG-1** that would help reduce GHG emissions.

Regarding goals for 2050 under Executive Order S-3-05, at this time it is not possible to quantify the emissions savings from future regulatory measures, as they have not yet been developed; nevertheless, it can be anticipated that operation of the proposed Project would benefit from the implementation of current and potential future regulations (e.g., improvements in vehicle emissions, SB 100/renewable electricity portfolio improvements, etc.) enacted to meet an 80 percent reduction below 1990 levels by 2050.

The majority of the GHG reductions from the Scoping Plan would result from continuation of the Cap-and-Trade regulation. AB 398 extends the State's Cap-and-Trade program through 2030 and the Scoping Plan provide a comprehensive plan for the state to achieve its GHG targets through a variety of regulations enacted at the State level. Additional reductions are achieved from electricity sector standards (i.e., utility providers to supply 60 percent renewable electricity by 2030 and 100 percent renewable by 2045), doubling the energy efficiency savings at end uses, additional reductions from the LCFS, implementing the short-lived GHG strategy (e.g., hydrofluorocarbons), and implementing the Mobile Source Strategy and Sustainable Freight Action Plan.

The Project would not obstruct or interfere with efforts to increase ZEVs or state efforts to improve system efficiency. As discussed above and *in* ***Section 4.3: Air Quality,*** of the Draft EIR, **MM AQ-2** through

MM AQ-6 would reduce mobile source emissions and would support the State's transition to ZEVs. The Project would also benefit from implementation of the State programs for ZEVs and goods movement efficiencies that reduce future GHG emissions from trucks.

The CAP establishes a city points system that assigns values for each GHG emissions mitigation design element or operational program feature incorporated into a given development project. The CAP Screening Tables point values correspond to the minimum GHG emissions reduction expected from each feature. Projects with features that yield at least 100 Screening Table points are considered consistent with the reduction quantities anticipated in the City's CAP. Such projects would be determined to have a less than significant individual and cumulative GHG emissions impact. As discussed above, both Phase I and Phase II of the Project can feasibly achieve 100 points individually, based on the completion of preliminary Screening Tables (see ***Appendix B***). Achieving 100 points ensures that the Project would not impede California's statewide GHG reduction goals for 2030 and 2050. Therefore, impacts would be less than significant with implementation of mitigation.

Mitigation Measures

Refer to **MM AQ-2** through **MM AQ-6** in ***Section 4.3: Air Quality*** and **MM GHG-1** (refer to Impact Threshold 4.8-1).

4.8.7 Cumulative Impacts

Project-related GHG emissions are not confined to a particular air basin but are dispersed worldwide. Therefore, impacts under Impact Threshold 4.8-1 are not Project-specific impacts, but the proposed Project's contribution to cumulative GHG impact. As discussed previously, incorporation of mitigation would minimize emissions and both Phase I and Phase II of the Project can achieve 100 points on the CAP Screening Tables. Projects with features that yield at least 100 Screening Table points are considered consistent with the reduction quantities anticipated in the City's CAP. Such projects would be determined to have a less than significant individual and cumulative GHG emissions impact. Additionally, the Project would be pursuant to TOP 2050 and would represent a consistent and logical continuation of the existing and planned pattern of development in Ontario, specifically the Ontario Ranch area. The City has long anticipated that this area would transition from dairy/agricultural to urban uses, and the Project Specific Plan is implementing TOP 2050.[8] Therefore, Project-related GHG emissions and their contribution to global climate change would not be cumulatively considerable, and GHG emissions impacts would be less than significant. Pursuant to TOP 2050, implementation of the Project Specific Plan would represent a consistent and logical continuation of the existing and planned pattern of development in Ontario, specifically the Ontario Ranch area. The City has long anticipated that this area would transition from dairy/agricultural to urban uses, and the Project Specific Plan is implementing TOP 2050.

[8] City of Ontario. 2022. *TOP 2050 Final Supplemental EIR. Section 5.8, Greenhouse Gas Emissions*. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (accessed April 2023).

4.8.8 Significant Unavoidable Impacts

With implementation of regulatory requirements, standard conditions of approval, and reasonable and feasible mitigation, the Project would result less than impacts with respect to consistency with GHG plans and GHG emissions, on an individual and cumulative basis.

4.9 HAZARDS AND HAZARDOUS MATERIALS

4.9.1 Introduction

The purpose of this section is to describe the existing regulatory and environmental conditions related to hazards and hazardous materials in the vicinity of the Euclid Mixed Use Specific Plan Project (Project), within the City of Ontario (City). This section of the Draft Environmental Impact Report (EIR) identifies potential impacts that could result from the Project. This chapter discusses the changes to existing hazards and hazardous materials that would occur upon implementation of the Project, and as necessary, recommends mitigation measures to avoid and/or reduce the significance of impacts. Impacts are discussed in terms of the changes that would result from Project implementation and includes analysis of the Project's potential to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials or through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment; to emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school; to cause a significant hazard to the public or the environment if located on a site which is included on a list of hazardous materials sites; result in a safety hazard or excessive noise for people residing or working in the Project area due to its location within or proximity to an airport land use plan; impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan; or expose people or structures to a significant risk of loss, injury or death involving wildland fires.

This Section and environmental discussion use information from the following City documents:

- The Ontario Plan 2050
- City of Ontario Municipal Code
- City of Ontario TOP 2050 Final Supplemental EIR

Additionally, the following analysis is based in part on information obtained from:

- Converse Consultants. July 2021. Phase I Environmental Site Assessment Report. (**Appendix F1**)
- Converse Consultants. October 2021. Limited Phase II Environmental Site Assessment Report. (**Appendix F2**)

4.9.2 Environmental Setting

Current Uses of Property

The 84.1-acre Project site is currently occupied by agricultural uses, including the raising of livestock, dairy farming activities, and a commercial nursery. Dairy farming and agriculture have been the primary uses of the Project site since before the 1930s. The majority of the Project site exists as fallow or cultivated fields. There is a private recreational vehicle facility in the southwestern portion of the site and a scrap yard at the intersection of Euclid Avenue and Edison Avenue. Numerous single family residential structures, as well as agricultural related buildings and open structures are located within the Project site. Two Southern

California Edison (SCE) easements extend across the Project site. No structures are located within the SCE easements; however, they have been used for various agricultural uses historically.

Existing uses surrounding the Project site are similar to those on the site. Ongoing crop farming is located to the north of the Project site and a vacant property that was a former dairy farm is located to the east of the site. The property to the south is currently utilized for residential, farming, or trucking related uses. North across Schaefer Avenue is an existing dairy farm; south across Edison Avenue is an existing trucking facility; east across Sultana Avenue is vacant land and an existing trucking facility; and west across Euclid Avenue, is the City of Chino with existing commercial and residential uses, and a truck/trailer storage (see ***Figure 3-4: Surrounding Land Uses***).

Historical Uses of Property

According to the Phase I Environmental Site Assessment Report (ESA), a review of historical photographs and records showed that the Project site was generally occupied by agricultural uses, including the raising of livestock, dairy farming activities, and a commercial nursery, as early as the 1930s. Historically, as early as 1987 the Project site was undeveloped land. From as early as 1933, structures were evident along the northeastern and western boundaries of the Project site, which were associated with agricultural operations by 1938. Between 1946 and the present, the Project site was used agriculturally, including one dairy operation on the western portion of the Project site, and another dairy operation on the northeastern portion of the Project site. The current day nursery operation on the southwestern portion of the Project site has been established since as early as 2006.[1]

Adjoining properties to the Project site vicinity appeared generally undeveloped in 1897. By 1902, apparent residential structures were noted on adjoining properties. From as early as 1938, agricultural uses were noted as well, including row crops. Commercial developments were noted as early as 1959. By 1975, most of the north and east adjoining land was occupied by dairy farms, and commercial uses were concentrated to the southwest and west. Commercial, as well as residential uses, remain to the west along Euclid Avenue until the present day, whereas north and east adjoining land remains for agricultural use. Part of this land is currently fallow/vacant.

Environmental Site Assessment

A *Phase I ESA Report* and Limited *Phase II ESA Report* were conducted for the approximately 60-acre Phase I development area of the Project site on July 29, 2021, and October 8, 2021, respectively. The Phase II area is being evaluated only at a programmatic level based on available information from The Ontario Plan (TOP) 2050, and there are no specific development proposals at this time. The Applicant does not own the parcels within the Phase II area (PAs 2B and 3B) and does not have access to the Phase II area at this time. At the time of Phase II development, it will undergo its own site-specific CEQA analysis.

The Phase I ESA was conducted in accordance with: (1) the U.S. Environmental Protection Agency (U.S. EPA) Standards and Practices for All Appropriate Inquiries, 40 Code of Federal Regulations (CFR) Part 312) and (2) guidelines established by the American Society for Testing and Materials (ASTM) in the

[1] Converse Consultants. July 2021. *Phase I Environmental Site Assessment Report, page 20*. (**Appendix F1**).

Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process/ Designation E 1527 13 (ASTM Standard Practice E 1527-13).

ASTM Standard Practice E 1527-13 defines a Recognized Environmental Condition (REC) as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. A Controlled REC (CREC) is as defined as,"…resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)." A Historical REC (HREC) is defined as, "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

The limited Phase II subsurface investigation was conducted, which included soil and soil gas sampling to identify potential contamination from unknown but probable former onsite sources, or from the existing service station to the north. The objective was to determine the current representative subsurface conditions in targeted areas of the Project site.

Regulatory Agencies

The GeoTracker Database is the California State Water Resources Control Board's (SWRCB) Internet accessible database system used by the SWRCB, regional boards, and local agencies to track and archive compliance data from authorized or unauthorized discharges of waste to land, or unauthorized releases of hazardous substances from USTs. The Project site was not identified in the database. According to GeoTracker, the nearest ongoing Cleanup Program Site (CPS) is the Chino Airport, located at 7000 Merrill Avenue, approximately 1.2 miles south of the Project site. The primary chemicals of concern (COCs) in the groundwater at this CPS include trichloroethene (TCE); 1,2,3-trichloropropane (1,2,3-TCP); cis-1,2-dichloroethane; and 1,1 dichloroethene.

Environmental Conditions

According to American Society for Testing and Materials (ASTM) Standard of Practice E1527-13, a recognized environmental condition (REC), fall under three specific categories when evaluating a site or properties within the Project site vicinity. These categories are defined below.

A recognized environmental condition (REC) means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not RECs.

A controlled REC (CREC) is a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

A historical REC (HREC) is a past release of any hazardous substances or petroleum products that has occurred in connection with the Project site and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Project site to any required controls (e.g., use restrictions, activity and use limitations, institutional controls, or engineering controls).

According to ASTM E2600-15, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of COC vapors in the subsurface of the target property caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Non-ASTM Scope Considerations

The Project site contains buildings that were constructed prior to bans using asbestos-containing building materials (ACBMs), lead-based paint (LBP), and polychlorinated biphenyls (PCBs) in electrical equipment came into effect in 1989, 1978, and 1978, respectively. No testing is known to have been performed to evaluate for the presence of ACBMs, LBPs, or PCBs at the Project site.

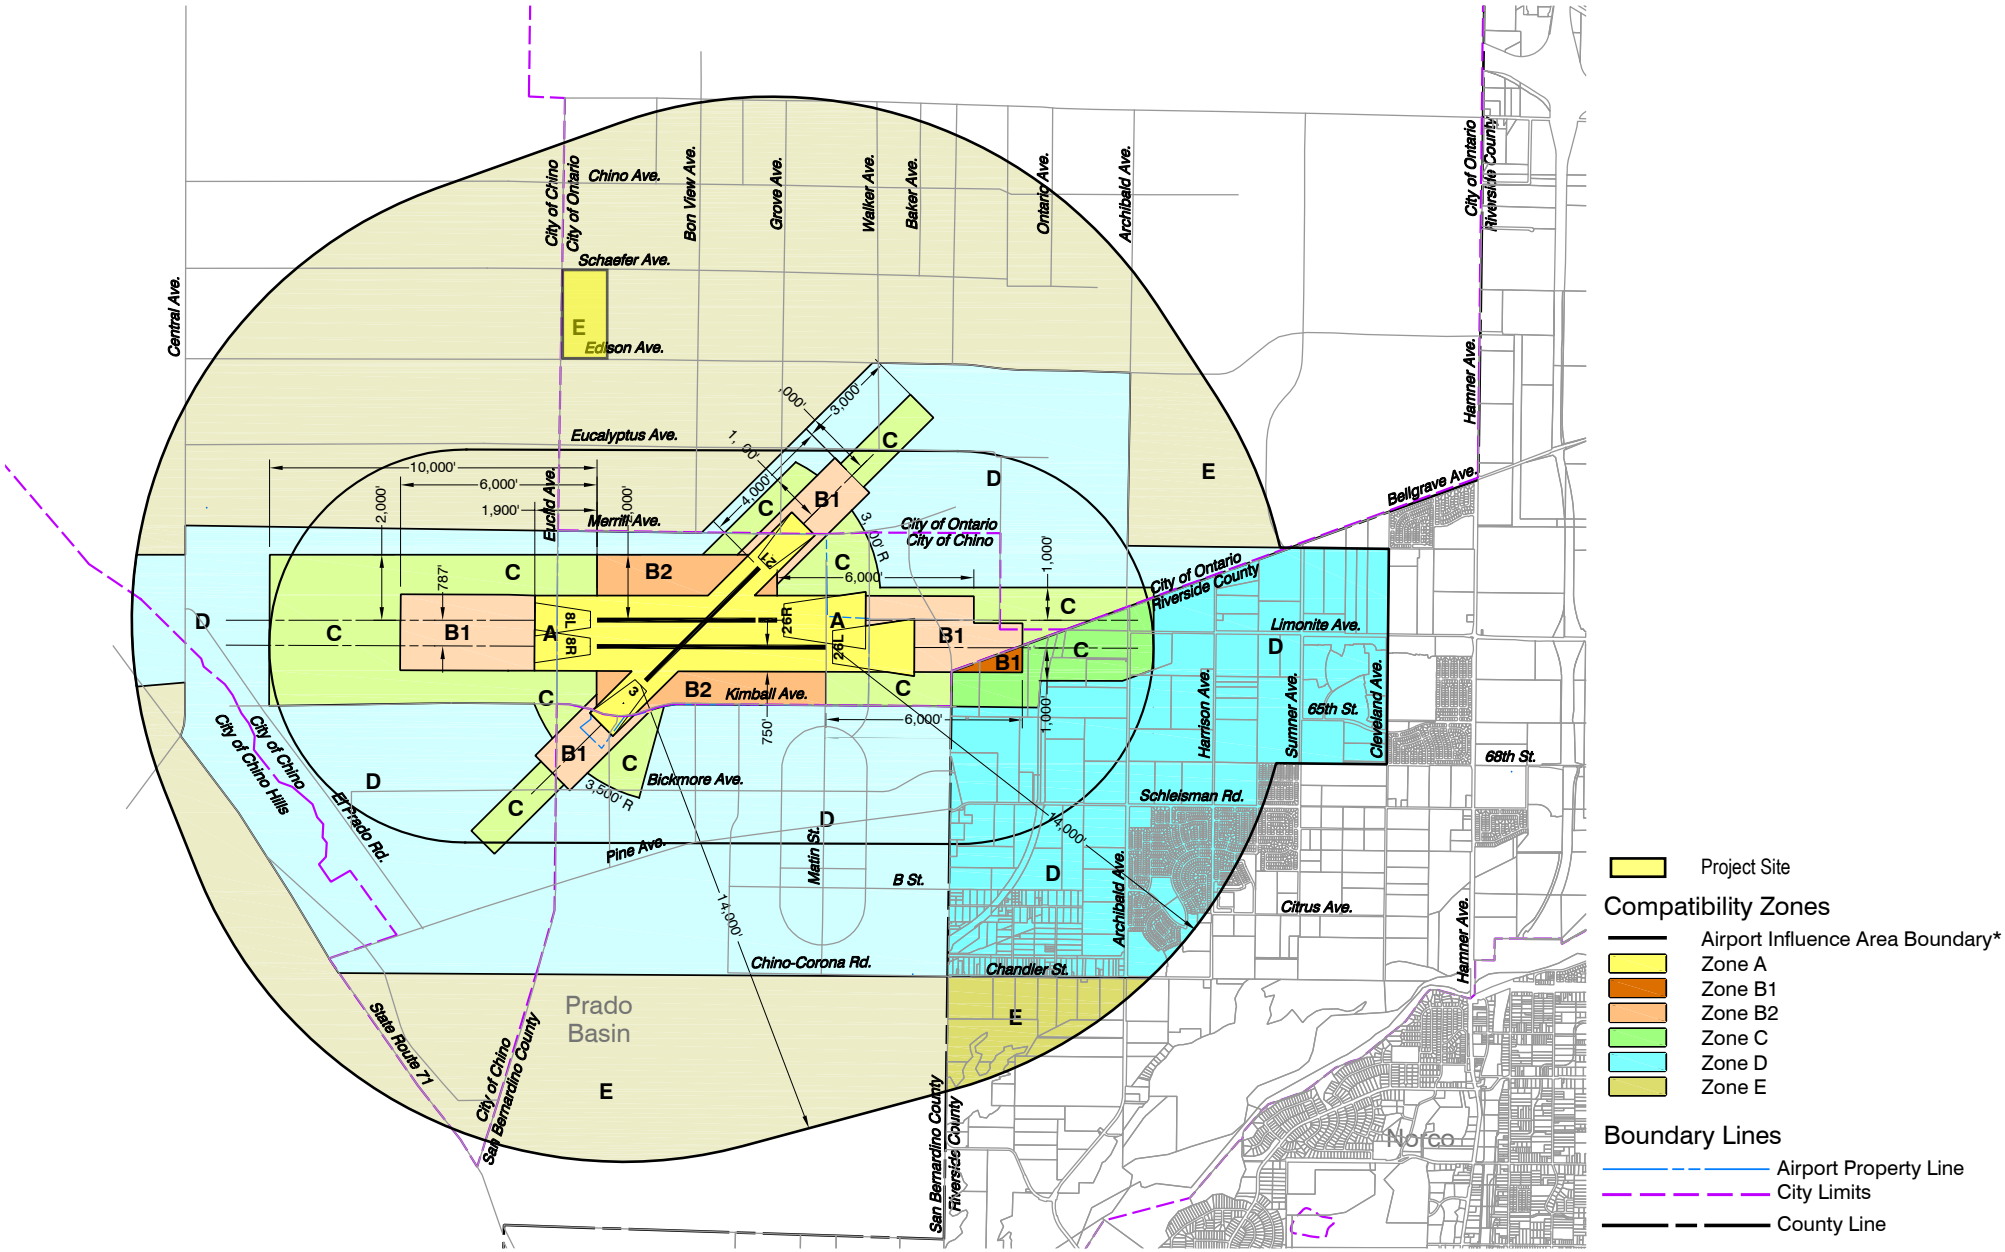
The California Bureau of Mines and Geology and California Department of Public Health (CADPH) participated in the U.S. Environmental Protection Agency's (EPA) State Radon Survey, a Federal survey to measure levels of indoor radon in all states. Based on the results of this survey, CADPH predicted that approximately 0.5 percent of homes in Region 9, where the Project site is located, would have radon concentrations over the U.S. EPA action level of 4.0 picocuries per liter (pCi/L).

The Federal U.S. EPA Radon Zone for San Bernardino County is Zone 2, which indicates an average indoor concentration greater than or equal to 2.0 pCi/L of air and less than or equal to 4.0 pCi/L. In a survey, one test was conducted within the 91762-zip code, where the Project site is located, for the presence of radon. Of these, none were found to contain radon in excess of the U.S. EPA's action level of 4.0 pCi/L.[2]

[2] Ibid. Page A-15.

According to the Phase I ESA, two on-site water wells, associated with dairy operations, were observed. A third well, located near the northeastern portion of the Project site, was decommissioned. Per Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) No. 06071C8620H and 06071C9335H, the Project site and adjacent properties are located within areas in which flood hazards are undetermined but possible (Zone D).[3] According to the National Wetlands Inventory (NWI) database, wetland areas identified as a Freshwater Ponds, are located within the Project site.[4] The artificially created unvegetated dairy effluent retention ponds are isolated located in uplands and currently rotated in use resulting in a wet (inundated) and dry phase. However, no wetlands or jurisdictional resources regulated by the United State Army Corps of Engineers, California Department of Fish and Wildlife, or Regional Water Quality Control Boards (RWQCB) were documented within the Project Site.[5]

Airport-Related Hazards



The Project site is located approximately 1.2 miles north of the Chino Airport and is approximately 3.7 miles southwest of the Ontario International Airport (ONT). The Project site is within the Chino Airport Influence Area and is within the Zone E compatibility zone, as depicted ***in Figure 4.9-1: Chino Airport Compatibility Zones***.[6] Within Compatibility Zone E, generally, there is no concern with regard to any object up to 100 feet tall unless it is located on high ground or it is a solitary object (e.g., an antenna) more than 35 feet above the ground. Projects within the Project boundary shall be required to be consistent with the policies and criteria of the Airport Land Use Compatibility Plans for Ontario International Airport and Chino Airport. Additionally, the Project site is not within the Ontario International Airport or the Chino Airport Safety Zones, depicted in ***Figure 4.9-2: Airport Safety Zones***. Additionally, ***Figure 4.9-3: Ontario International Airport Land Use Compatibility***, shows the Project site as being in the Ontario Airport's airport influence areas. Land use compatibility assessments for ONT are included in the ALUCP.

4.9.3 Regulatory Setting

Federal

Resource Conservation and Recovery Act

The Resource Conservation and Recovery Act (RCRA) of 1976 (42 United States Code [USC] Section 6901 et seq.) is the principal federal law that regulates the generation, management, and transportation of waste. Hazardous waste management includes the treatment, storage, or disposal of hazardous waste. The RCRA gave the U.S. EPA the authority to control hazardous waste from "cradle to grave," that is, from generation to transportation, treatment, storage, and disposal, at active and future facilities. It does not address abandoned or historical sites. The RCRA also set forth a framework for managing nonhazardous wastes. Later amendments required phasing out land disposal of hazardous waste and added underground tanks storing petroleum and other hazardous substances.

Comprehensive Environmental Response, Compensation, and Liability Act of 1980

The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), commonly known as "Superfund," was enacted by Congress on December 11, 1980. This law provides broad federal authority to respond directly to releases or threatened releases of hazardous substances that may endanger public health or the environment. CERCLA established requirements concerning closed and abandoned hazardous waste sites, provided for liability of persons responsible for releases of hazardous waste at these sites, and established a trust fund to provide for cleanup when no responsible party could be identified. CERCLA also enabled the revision of the National Contingency Plan. The National Contingency Plan provides the guidelines and procedures needed to respond to releases and threatened releases of hazardous substances, pollutants, or contaminants. The National Contingency Plan also establishes the National Priorities List (NPL), which is a list of contaminated sites warranting further investigation by the U.S. EPA. CERCLA was amended by the Superfund Amendments and Reauthorization Act on October 17, 1986, to help further manage contaminated sites.

Emergency Planning and Community Right-to-Know Act

Title III of the Superfund Amendments and Reauthorization Act (SARA) authorized the Emergency Planning and Community Right-to-Know Act (EPCRA; 42 USC Section 11001 et seq.) to inform communities and citizens of chemical hazards in their areas by requiring businesses to report the locations and quantities of chemicals stored on-site to state and local agencies; releases to the environment of more than 600 designated toxic chemicals; off-site transfers of waste; and pollution prevention measures and activities and to participate in chemical recycling. The U.S. EPA maintains and publishes an online, publicly available, national database of toxic chemical releases and other waste management activities by certain industry groups and federal facilities—the Toxics Release Inventory.

To implement EPCRA, each state appointed a state emergency response commission to coordinate planning and implementation activities associated with hazardous materials. The commissions divided their states into emergency planning districts and named a local emergency planning committee for each district. The federal EPCRA program is implemented and administered in California Governor's Office of Emergency Services (Cal OES), a state commission, six local committees, and 81 Certified Unified Program

Agencies (CUPAs). Cal OES coordinates and provides staff support for the state commission and local committees.

Toxic Substances Control Act

The Toxic Substances Control Act of 1976 (TSCA) provides U.S. EPA with authority to require reporting, record-keeping and testing requirements, and restrictions relating to chemical substances and/or mixtures. TSCA addresses the production, importation, use, and disposal of specific chemicals including PCBs, asbestos, radon, and LBP. Title IV of the TSCA directs U.S. EPA to regulate LBP hazards.

TSCA Sections 402 and 404 requires that those engaged in lead abatements, risk assessments and inspections in homes or child-occupied facilities (e.g., day care centers and kindergartens) built prior to 1978 be trained and certified in specific practices to ensure accuracy and safety. TSCA Section 403, sets standards for dangerous levels of lead in paint, household dust, and residential soil.

Occupational Safety and Health Act

The Federal Occupational Safety and Health Act of 1970 (OSHA) (29 USC Section 651 et seq.) authorizes each state (including California) to establish their own safety and health programs with the U.S. Department of Labor, with OSHA approval. The California Department of Industrial Relations regulates implementation of worker health and safety in California. California OSHA enforcement units conduct on-site evaluations and issue notices of violation to enforce necessary improvements to health and safety practices. California standards for workers dealing with hazardous materials are contained in Title 8 of the California Code of Regulations (CCR) and include best practices for all industries (General Industrial Safety Orders), and specific practices for construction and other industries. Workers at hazardous waste sites (or working with hazardous wastes as might be encountered during excavation of contaminated soil) must receive specialized training and medical supervision according to the Hazardous Waste Operations and Emergency Response (HAZWOPER) regulations.

OSHA Regulation 29 Code of Federal Regulations (CFR) Standard 1926.62 regulates the demolition, renovation, or construction of buildings involving lead materials. Federal, State, and local requirements also govern the removal of asbestos or suspected asbestos containing materials (ACMs), including the demolition of structures where asbestos is present. All friable (crushable by hand) ACMs, or non-friable ACMs subject to damage, must be abated prior to demolition following all applicable regulations.

Title 40, Code of Federal Regulations, Section 61 Subpart M

Title 40 CFR Section 61 Subpart M—National Emissions Standards for Asbestos—sets forth emissions standards for asbestos from demolition and renovation activities, and for waste disposal from such activities.

Title 40, Code of Federal Regulations, Part 745

Title 40, Part 745 contains regulations developed under Section 402 and 406 of the TSCA and applies to all renovations performed for compensation in target housing and child-occupied facilities. The purpose of this subpart is to ensure the following:

- Owners and occupants of target housing and child-occupied facilities receive information on LBP hazards before these renovations begin; and
- Individuals performing renovations regulated in accordance with Section 745.82 are properly trained; renovators and firms performing these renovations are certified; and the work practices in Section 745.85 are followed during these renovations.

Title 29, Code of Federal Regulations, Section 1926.62

Title 29 CFR Section 1926.62 sets standards for occupational health and environmental controls for lead exposure in construction, regardless of the lead content of paints and other materials. The standards include requirements addressing exposure assessment, methods of compliance, respiratory protection, protective clothing and equipment, hygiene facilities and practices, medical surveillance, medical removal protection, employee information and training, signs, recordkeeping, and observation and monitoring.

US EPA's Lead Renovation, Repair and Painting Program Rules.

The U.S. EPA's 2008 Lead-Based Paint Renovation, Repair and Painting (RRP) Rule (as amended in 2010 and 2011), aims to protect the public from LBP hazards associated with renovation, repair, and painting activities. These activities can create hazardous lead dust when surfaces with lead paint, even from many decades ago, are disturbed. The rule requires workers to be certified and trained in the use of lead-safe work practices, and requires renovation, repair, and painting firms to be U.S. EPA-certified. These requirements became fully effective April 22, 2010.

State

California Environmental Protection Agency

The California Environmental Protection Agency (Cal/EPA) was created in 1991, unifying California's environmental authority in a single cabinet-level agency and bringing the California Air Resources Board (CARB), SWRCB, RWQCB, California Department of Resources Recycling and Recovery (known as CalRecycle and formerly the Integrated Waste Management Board), Department of Toxic Substances Control (DTSC), Office of Environmental Health Hazard Assessment (OEHHA), and Department of Pesticide Regulation under one agency. These agencies were placed within the Cal/EPA "umbrella" for the protection of human health and the environment and to ensure the coordinated deployment of state resources. Its mission is to restore, protect, and enhance the environment, to ensure public health, environmental quality, and economic vitality.

California Fire Code

The California Fire Code (CFC), which is updated every three years, is included in CCR Title 24, Chapter 9 and was created by the California Building Standards Commission. Based on the International Fire Code, the CFC serves as the primary means for authorizing and enforcing procedures and methods to ensure the safe handling and storage of hazardous substances that pose potential public health and safety hazards. The CFC regulates the use, handling, and storage requirements for hazardous materials at certain facilities. The CFC and the California Building Code (CBC) apply a classification system in identifying appropriate protective measures relative to fire protection and public safety. Such measures may include identification

and use of proper construction standards, setbacks from property lines, and/or installation of specialized equipment.

State Fire Regulations

Fire regulations for California are established in Sections 13000 et seq. of the California Health and Safety Code (HSC), which includes regulations for structural standards (similar to those identified in the CBC), fire protection and public notification systems, fire protection devices such as extinguishers and smoke alarms, standards for high-rise structures and childcare facilities, and fire suppression training. The State Fire Marshal is responsible for enforcement of these established regulations and building standards for all state-owned buildings, state-occupied buildings, and state institutions in California.

Government Code Section 65962.5(a), Cortese List

As required by California Government Code (CGC) Section 65962.5, Cal/EPA develops an annual update to the Hazardous Waste and Substances Sites (Cortese) List, which is a planning document used by the state, local agencies, and developers to comply with CEQA requirements in providing information about the location of hazardous materials release sites. The DTSC is responsible for a portion of the information contained in the Cortese List. Other state and local government agencies are required to provide additional hazardous material release information for the list.

The EnviroStor database constitutes the DTSC's component of Cortese List data by identifying State response sites, federal Superfund sites, school cleanup sites, and voluntary cleanup sites. The EnviroStor database identifies sites that have known contamination or sites for which further investigation is warranted. It also identifies facilities that are authorized to treat, store, dispose, or transfer hazardous waste.

State agencies with involvement and/or jurisdiction over public health hazards and hazardous materials management and regulations include the:

- Cal/EPA: The boards, departments, and offices that make up the Cal/EPA include CARB, the Department of Pesticide Regulation, the Department of Resources Recycling and Recovery, DTSC, OEHHA, and the SWRCB. These boards, departments and offices were placed within the Cal/EPA "umbrella" to create a cabinet-level voice for the protection of human health and the environment (such as clean air, clean water, clean soil, safe pesticides, and waste recycling and reduction) to assure the coordinated deployment of state resources.
- DTSC: The mission of the DTSC is to protect California's people and environment from harmful effects of toxic substances by restoring contaminated resources, enforcing hazardous waste laws, reducing hazardous waste generation, and encouraging the manufacture of chemically safer products. As part of its mission, the DTSC maintains its Enforcement and Emergency Response Division (EERD) to administer the technical implementation of the State Unified Program. The Unified Program is a consolidation of six environmental programs at the local level. Those agencies at the local level with responsibility for the program are known as CUPAs. The DTSC also has the responsibility of overseeing and regulating hazardous materials, generators, transporters, and facilities that may use, generate, store, transport, or recycle, hazardous materials.

- SWRCB: Brownfields are underutilized properties where reuse is hindered by the actual or suspected presence of pollution or contamination. The SWRCB Brownfield Program goals are to:
    - Expedite and facilitate site cleanups and closures for brownfield sites to support reuse of those sites;
    - Preserve open space and green fields;
    - Protect groundwater and surface water resources, safeguard public health, and promote environmental justice; and
    - Streamline site assessment, clean up, monitoring, and closure requirements and procedures within the various SWRCB site cleanup programs.

Site clean-up responsibilities for brownfields primarily reside within four main SWRCB programs: The UST Program; Site Cleanup Program; Department of Defense Program; and the Land Disposal Program. These SWRCB cleanup programs are charged with ensuring sites are remediated to protect California's surface and groundwater and return them to beneficial uses.

Hazardous chemical and biohazardous materials management laws in California include the following statutes:

- Hazardous Materials Management Act – requires that businesses handling or storing certain amounts of hazardous materials prepare a hazardous materials business plan, which includes an inventory of hazardous materials stored on site (above specified quantities), an emergency response plan, and an employee training program.
- Hazardous Waste Control Act (California Health and Safety Code, Division 20, Chapter 6.5, Article 2, Section 25100, et seq.) – authorizes the DTSC and local CUPAs to regulate facilities that generate or treat hazardous waste.
- Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65) – requires the governor to publish and update, at least annually, a list of chemicals known to the state to cause cancer, birth defects, or other reproductive harm, and to inform citizens about exposures to such chemicals. Hazardous Waste Management Planning and Facility Siting, also known as the Tanner Act (Assembly Bill [AB] 2948, 1986) – requires counties to prepare, for California DTSC approval, hazardous waste management plans, and prescribes specific public participation activities, which must be carried out during the local land use permit process for siting new or expanding off-site commercial treatment, storage, and disposal facilities.
- Hazardous Materials Storage and Emergency Response (AB 2185) – requires the immediate reporting to local fire departments and Offices of Emergency Services of any release or threatened release of a hazardous material, regardless of the amount handled by the business.
- California Medical Waste Management Act (HSC Sections 117600–118360) – establishes procedures for the proper handling, storage, treatment, and transportation of medical waste.
- Land Disposal Restrictions (CCR, Chapter 18, Title 22) – set up by Congress in 1984 for the U.S. EPA, ensures that toxic constituents present in hazardous waste are properly treated before hazardous waste is land disposed.

Department of Toxic Substance Control

The mission of the DTSC is to protect California's people and environment from harmful effects of toxic substances by restoring contaminated resources, enforcing hazardous waste laws, reducing hazardous waste generation, and encouraging the manufacture of chemically safer products. As part of its mission, the DTSC maintains its EERD to administer the technical implementation of the State Unified Program. The Unified Program is a consolidation of six environmental programs at the local level. Those agencies at the local level with responsibility for the program are known as CUPAs. The DTSC also has the responsibility of overseeing and regulating hazardous materials, generators, transporters, and facilities that may use, generate, store, transport, or recycle, hazardous materials.

Government Code Section 65962.5

Pursuant to CGC Section 65962.5, environmental regulatory database lists were reviewed to identify and locate properties with known hazardous substance contamination within the proposed one-mile radius of the Project area (CGC, Section 65960 et seq.). Four state agencies are required to provide lists of facilities that have contributed, harbor, or are responsible for environmental contamination within their jurisdiction. The four state agencies that are required to provide these lists to the Secretary for Environmental Protection include the DTSC, the State Department for Health Services, the SWRCB, and CalRecycle. The Secretary for Environmental Protection then takes each of the four respective agency lists and forms one list, referred to as the Cortese List, which is made available to every city and/or county in California.

Regional Water Quality Control Board

The RWQCB is a department of Cal/EPA that oversees investigation and cleanup of sites including USTs where wastes have been discharged in order to protect the water quality of the state. The RWQCB regulates wastewater discharges to surface waters and to groundwater. They also regulate storm water discharges from construction, industrial, and municipal activities.

California Health and Safety Code

Cal/EPA has established rules governing the use of hazardous materials and the management of hazardous wastes. California HSC Section 25531, et seq. incorporate the requirement of Superfund Amendments and Reauthorization Act and the Clean Air Act as they pertain to hazardous materials. HSC Section 25534 directs owners or operators storing, handling, or using regulated substances exceeding threshold planning quantities to develop and implement a Risk Management Plan. The Risk Management Plans are submitted to the administering agency and possibly U.S. EPA, depending upon the chemical and the amount, for review. California law defines a hazardous material as any material that, because of its quantity, concentration, or physical, chemical, or infectious characteristics, may pose a present or potential hazard to human health and safety or to the environment if released in the workplace or the environment (California HSC Section 25501).

California Hazardous Waste Control Law

The California Hazardous Waste Control Law (HSC Division 20, Chapter 6.5) is administered by the Cal/EPA to regulate the management of hazardous wastes. While the Hazardous Waste Control Law is generally

more stringent than the RCRA, until the U.S. EPA approves the California hazardous waste control program (which is charged with regulating the generation, treatment, storage, and disposal of hazardous waste), both the State and federal laws apply in California. The Hazardous Waste Control Law lists 791 chemicals and approximately 300 common materials that may be hazardous; establishes criteria for identifying, packaging, and labeling hazardous wastes; prescribes management controls; establishes permit requirements for treatment, storage, disposal, and transportation; and identifies wastes that cannot be disposed of in landfills.

California Accidental Release Prevention Program

Similar to the Federal Risk Management Program, the California Accidental Release Prevention Program includes state requirements as well as a list of regulated substances and thresholds. The regulations of the program are contained in CCR Title 19, Division 2, Chapter 4.5. The intent of California Accidental Release Prevention Program is to prevent accidental releases of substances that can cause serious harm to the public and the environment, to minimize the damage if releases do occur, and to ensure compliance with community right-to-know laws.

Hazardous Materials Release Response Plans and Inventory Law

The Hazardous Materials Release Response Plans and Inventory Law (HSC Section 25500 et seq.) aims to minimize the potential for accidents involving hazardous materials and to facilitate an appropriate response to possible hazardous materials emergencies. The law requires businesses that use hazardous materials to provide inventories of those materials to designated emergency response agencies, to illustrate on a diagram where the materials are stored on-site, to prepare an emergency response plan, and to train employees to use the materials safely. Any business that handles hazardous materials in quantities equal to or greater than 55 gallons, 500 pounds, or 200 cubic feet of gas must submit a business plan.

Hazardous Materials Transportation

Section 31303 of the California Vehicle Code and U.S. Department of Transportation regulate hazardous materials transport. The California Highway Patrol and California Department of Transportation are the enforcement agencies. Cal OES provides emergency response services involving hazardous materials incidents.

Worker and Workplace Hazardous Materials Safety

Cal/OSHA is responsible for developing and enforcing workplace safety standards and ensuring worker safety in the handling and use of hazardous materials. Among other requirements, Cal/OSHA obligates many businesses to prepare Injury and Illness Prevention Plans and Chemical Hygiene Plans. The Hazard Communication Standard requires that workers be informed of the hazards associated with the materials they handle.

Hazardous Materials in Structures: Asbestos-Containing Materials and Lead-Based Paint

Several regulations and guidelines pertain to abatement of and protection from exposure to ACM and LBP, including Construction Safety Orders 1529 (pertaining to ACM) and Section 1532.1 (pertaining to LBP)

from Title 8 of the CCR and Part 61, Subpart M, of the CFR (pertaining to ACM). In California, ACM and LBP abatement must be performed and monitored by contractors with appropriate certification from the California Department of Health Services. Asbestos is also regulated as a hazardous air pollutant under the Clean Air Act and a potential worker safety hazard under the authority of Cal/OSHA.

Requirements for limiting asbestos emissions from building demolition and renovation are specified in SCAQMD Rule 1403 (Asbestos Emissions from Demolition/Renovation Activities). CGC Section 1529 and 1532.1 provide for exposure limits, exposure monitoring, respiratory protection and good working practice by workers exposed to lead and ACMs.

Requirements for Phase I Environmental Site Assessments

Phase I ESAs are required for land purchasers to qualify for the Innocent Landowner Defense under CERCLA, to minimize environmental liability under other laws such as RCRA, and as a lender prerequisite to extend a loan for purchase of land.

Certified Unified Program Agency

A CUPA is an agency of a county or city that administers several state programs regulating hazardous materials and hazardous wastes. The San Bernardino County Fire Department (SBCFD) is the CUPA for all incorporated cities and towns and unincorporated areas. SBCFD administers the following programs:

- Hazardous Materials Release Response Plans and Inventory Program
- California Accidental Release Prevention Program, a combination of federal and state programs for the prevention of accidental release of regulated toxic and flammable substances
- UST Program
- Aboveground Petroleum Storage Act Program
- Hazardous Waste Generator and Onsite Hazardous Waste Treatment Programs Program
- Hazardous Materials Management Plan (HMMP) and Hazardous Material Inventory Statement (HMIS) in California Fire Code Program

Hazardous Materials Business Plan

The San Bernardino County Hazardous Materials Business Plan (HMBP) program was established in 1986. The purpose of this CUPA program is to prevent or minimize the damage to public health and safety and the environment, from a release or threatened release of hazardous materials. It also satisfies community right-to-know laws. The HMBP provides information regarding hazardous materials at facilities to emergency responders and to the general public.

Businesses that handle hazardous materials (including hazardous waste) or extremely hazardous substances are required to submit an HMBP via the California Environmental Reporting System (CERS), if using, handling or storing hazardous materials in quantities equal to or greater than:

- 55 gallons of a liquid,
- 500 pounds of a solid, or

- 200 cubic feet of compressed gas, or
- Extremely hazardous substances above the threshold planning quantity
- Facilities in this jurisdiction must also report any amount of hazardous waste via the California Environmental Reporting System.

8 CCR Section 1529 and 1532.1: Worker Safety Standards: Asbestos and Lead

CCR Title 8 Section 1529 sets forth worker safety standards for lead exposure for employees conducting demolition, construction, and renovation work, including painting, and decorating.

CCR Title 8 Section 1532.1 sets forth worker safety standards for employees in work including construction, demolition, renovation, and maintenance.

California Aeronautics Act

The State Aeronautics Act included in the California Public Utilities Code establishes statewide requirements for airport land use compatibility planning and requires nearly every county to create an Airport Land Use Commission (ALUC) or other alternative. The County opted for an alternative to the ALUC and delegated responsibility to prepare an ALUCP for each airport jurisdiction.

California Airport Land Use Compatibility Planning Handbook

The California Airport Land Use Compatibility Planning Handbook provides planning guidance to ALUCs and counties and cities with jurisdiction over airport area land uses. The purpose of the handbook is to support the State Aeronautics Act. The handbook allows jurisdictions flexibility in determining air safety zones that represent areas of assumed accident potential.

Regional

SCAQMD

SCAQMD Rule 1403 governs the demolition of buildings containing asbestos materials. Rule 1403 specifies work practices with the goal of minimizing asbestos emissions during building demolition and renovation activities, including the removal and associated disturbance of ACM.

San Bernardino County Public Health Agencies

The County Department of Public Health, Division of Environmental Health Services has regulatory control over hazardous and solid waste, land use, wastewater.

Additionally, the Department of Public Works manages solid waste, transportation, and storm water. This department also manages all construction and demolition activities.

The Hazardous Materials Division of the SBCFD is designated by the State Secretary for Environmental Protection as the CUPA for the County in order to focus the management of specific environmental programs at the local government level. The CUPA is charged with the responsibility of conducting compliance inspections for over 7,000 regulated facilities in the County. The SBCFD manages six hazardous

material and hazardous waste programs. This includes hazardous waste management and above/underground storage tanks. The CUPA program is designed to consolidate, coordinate, and uniformly and consistently administer permits, inspection activities, and enforcement activities throughout the County.

San Bernardino County Hazardous Materials Release Response Plans and Inventory Program

In the County, the Business Emergency/Contingency Plan (Business Plan) is also used to satisfy the contingency plan requirement for hazardous waste generators. Any business subject to any of the CUPA permits is required in the County to file a Business Emergency/Contingency Plan using the California Environmental Reporting System. This submission is used as the basis for the permit application. A new business going through the process of obtaining County planning or building approval is required to comply with the Business Emergency/Contingency Plan requirement prior to obtaining final certificate of occupancy and prior to bringing hazardous materials onto the property.

The quantities that trigger disclosure are based on the maximum quantity on-site at any time excluding materials under active shipping papers or for direct retail sale to the public. The basic quantities are hazardous materials at or exceeding 55 gallons, 500 pounds, or 200 cubic feet at any time in the course of a year; specified amounts of radio actives, and extremely hazardous substances above the threshold planning quantity.

Local

City of Ontario Hazard Mitigation Plan

The City developed a Hazard Mitigation Plan to make the City infrastructure, business, and residents less vulnerable to future incidents. The plan was prepared in accordance with the requirements of the Disaster Mitigation Act of 2000. A risk assessment was conducted to identify and profile natural and man-made hazards that pose a risk to the City, assess the City's vulnerability to these hazards, and examine the capabilities in place to mitigate them. Based on the risk assessment, goals, and objectives for reducing the City's vulnerability to hazards were identified. The four goals of the multi-hazard mitigation plan are:

- Minimize loss of life and property from natural and man-made hazard events
- Protect public health and safety
- Increase public awareness of risk from natural and man-made hazards
- Enhance emergency systems including warning systems

City of Ontario General Plan – The Ontario Plan 2050

The TOP 2050 Safety Element states that the City's role as a transportation hub and manufacturing center make the City susceptible to spills of toxic materials and vulnerable to the byproducts generated in industrial areas, especially if exacerbated by earthquakes, fires, floods, and strong winds. The Safety Element policies ensure that the City is prepared for and would effectively deal with hazards and hazardous materials. Included in TOP 2050 is the Policy Plan, which is a framework that would guide the

City's future growth through the application of policies and goals. The following goals of TOP 2050 relate to geology and soils.

The following policy contained in the Safety Element is relevant to the Project:

Safety Element[7]

Goal S-6	**Reduced potential for hazardous materials exposure and contamination.**
Policy S-6.1	**Disclosure and Notification.** We enforce disclosure laws that require all users, producers, and transporters of hazardous materials and wastes to clearly identify the materials that they store, use, or transport.
Policy S-6.2	**Response to Hazardous Materials Releases.** We respond to hazardous materials incidents and coordinate these services with other jurisdictions.
Policy S-6.4	**Safe Storage and Maintenance Practices.** We require that the users of hazardous materials be adequately prepared to prevent and mitigate hazardous materials releases.
Policy S-6.5	**Location of Hazardous Material Facilities.** We regulate facilities that will be involved in the production, use, storage, or disposal of hazardous materials, pursuant to federal, state, county, and local regulations, so that impacts to the environment and sensitive land uses are mitigated. We prohibit new hazardous waste facilities in close proximity to sensitive land uses and environmental justice areas.
Policy S-6.9	**Remediation of Methane.** We require development to assess and mitigate the presence of methane, per regulatory standards and guidelines.

City of Ontario Municipal Code (MC)

MC Section 7-3.07.[8] Safety devices, lights, and barricades. Any activity or encroachment on a right-of-way which is hazardous, creates a hazard, or is in conflict with the normal use of a right-of-way shall be adequately safeguarded as required by the City. In the conduct of such activity or encroachment, materials, supplies, excavated material, and equipment shall be properly placed, and the permittee shall provide and maintain such safety devices, including, but not limited to, lights, barricades, signs, and guards, as are necessary to protect the public.

MC Section 9-1.3330.[9] Environmental Performance Standards that require: "The use, handling, storage, and transportation of combustibles and explosives shall comply with applicable provisions of the Uniform

(accessed March 2023).

Fire Code, the City of Ontario Hazardous Waste Ordinance and all other local, state and federal regulations."

Ontario International Airport Land Use Compatibility Plan

The ONT ALUCP was adopted by Ontario City Council on April 19, 2011, and amended in 2018. The basic function of the ALUCP is to provide guidance to affected jurisdictions and promote compatibility between the airport and surrounding land uses. The ALUCP designates the airport influence area, safety zones, noise impact zones, airspace protection zones, and overflight notification zones. Height and noise restrictions for future land uses are established for the airport approach safety zones. All development shall be constructed or reconstructed in accordance with Federal Aviation Regulations Part 77.

Chino Airport Land Use Compatibility Compliance

The Project site is located directly north of the Chino Airport and within the Chino Airport airport influence areas. The City is currently preparing an ALUCP for Chino Airport which relies on the California Airport Land Use Planning Handbook published by Caltrans Division of Aeronautics, that is expected to be adopted in 2022. The Chino ALUCP will establish policies and criteria for the four types of compatibility impacts which include safety, noise, airspace protection, and overflight. The Project site is not within the Chino Airport noise impact zone. Projects within the Project Specific Plan boundary shall be required to be consistent with the policies and criteria of the ALUCP for Chino Airport.

Phase I Environmental Site Assessment

A Phase I ESA was completed in July 2021 for the Phase I development area; see ***Appendix F1: Phase I Environmental Site Assessment Report***. The Phase II area is being evaluated only at a programmatic level based on available information from The Ontario Plan (TOP) 2050, and there are no specific development proposals at this time. The Applicant does not own the parcels within the Phase II area (PAs 2B and 3B) and does not have access to the Phase II area at this time. At the time of Phase II development, it will undergo its own site-specific CEQA analysis. The Project site and its adjoining properties were cross-referenced with the following environmental databases: Hazardous Substance Storage Container Database (HIST UST), Statewide Environmental Evaluation and Planning System (SWEEPS UST), Facility Inventory Database (CA FID UST), Waste Discharge System (WDS), California Environmental Reporting System (CERS), California Environmental Reporting System (CERS HAZ WASTE), Hazardous Waste Tracking System (HWTS), Facility Index System/Facility Registry System (FINDS), California Integrated Water Quality System (CIWQS), Water Board Enforcement Action Listings (ENF), and San Bernardino County Permit. The Project site was identified on the following regulatory databases: CERS, HWTS, CERS HAZ WASTE, ENF, CIWQS, and San Bernardino County Permit. Violations were noted regarding hazardous material reporting and housekeeping practices at the Property; refer to ***Appendix F1*** for further information. An under-ground storage tank (UST) on the northern portion of the Project site, operated by a historical occupant, was removed and received regulatory closure in 2011. From observations and interviews during Phase I ESA reconnaissance, current on-site petroleum product storage is limited to one, 300-gallon above-ground storage tank (AST) for diesel at Art Venegas Dairy. De minimis ground staining was observed on the concrete floor in the general area. The Drake Family Farm operation only stores petroleum product in

one to three-gallon containers. The Phase I ESA identifies the following, additional existing conditions within the Project site.

- Art Venegas Dairy, located at 13835 Euclid Avenue within the Project site, currently disposes of manure on-site as part of ongoing agricultural operations. Five manure piles were observed throughout the corrals on the central and western portions of the Project site.
- Five or six septic tanks of unknown capacity are located on the Project site. Three known tanks are associated with the Venegas Dairy buildings (milk barn and two known residential structures), and two tanks are located at the Drake Dairy facility.
- Each of the two dairies features one active water well. A decommissioned water well is found near the northeastern corner of the Project site.
- Catch basins for dairy runoff are located on the Project site. Observed chemicals inside production areas for both on-site dairies included 55-gallon poly drums of acid/base cleaners and disinfectants, and five-gallon containers of medicated ointments/dips for animals. Compressed gas cylinders for welding gases, car/equipment batteries, and tires were stored in maintenance areas, mainly on the central-west portion of the Project site (Venegas Dairy). Abandoned vehicles/equipment were noted in the same general area, and also in storage areas on the northeastern portion of the Project site.

Adjoining property regulatory database listings included, but were not limited to LUST, CERS HAZ WASTE, CORTESE, CERS TANKS, San Bernardino County Permit, and CERS database listings. Pertinent historical Leaking Underground Storage Tank (LUST) cases on adjoining properties all received regulatory closure. All cases were limited to soil contamination only. Regulatory compliance inspections by the San Bernardino County Fire Department were noted for all hazardous material handlers/hazardous waste generators.[10]

The Phase I ESA identified the following Recognized Environmental Conditions (RECs) in connection with the Project site:

- Agricultural use from as early as 1938 is a REC due to potential residual contamination from agricultural chemical use.
- On-site dairy operations and associated chemicals, manure, and equipment, from as early as 1946 are RECs.

The Phase I recommended the following:

- Soil sampling over the Site. Areas to be assessed should include the farmland catch basins, maintenance areas, aboveground storage tank (AST; and drain underneath the AST) & underground storage tank (UST) areas, and livestock/manure areas.
- Containers of hazardous materials, equipment, and tires should be removed in accordance with applicable regulations.

[10] Converse Consultants. 2021. Phase I Environmental Site Assessment. Page 39-40. (**Appendix F1**).

- A methane assessment in accordance with the City of Ontario requirements should be conducted.

Phase II Environmental Site Assessment Report

Based on the recommendations contained in the Phase I ESA, a Phase II ESA was completed in October 2021; see ***Appendix F2: Limited Phase II Environmental Site Assessment Report***. The Project area for Phase II is being evaluated only at a programmatic level based on available information from The Ontario Plan (TOP) 2050, and there are no specific development proposals at this time. The Applicant does not own the parcels within the Phase II area (PAs 2B and 3B) and does not have access to the Phase II area at this time. At the time of Phase II development, it will undergo its own site-specific CEQA analysis. The Phase II ESA included borings taking at nine locations and an analysis of soil and soil vapors. The Phase II ESA identified the following findings:

- All reported metals concentrations were less than their respective screening levels for both residential and commercial land use scenarios, or applicable regional background concentrations. All reported values were less than their respective hazardous waste disposal criteria.
- Total petroleum hydrocarbon (TPH) are generally described hydrocarbons derived from crude oil and can contaminate a site through accidental release such as through spilled oil, gasoline fumes, or certain pesticides and other chemicals that contain TPH components as solvents. These chemicals may have toxic affects to those exposed. TPH in the diesel range was reported in four (4) samples at the former UST location. The concentration in sample UST-1-15 was above the screening level for residential and commercial land use. The concentration in sample UST-2-15 was above the screening level for residential land use, but equal to the screening level for commercial land use. UST-1-15 and UST-2-15 are located in the northern portion of the Project site (APN 1053-081-01) at a depth of 15 ft bgs. Concentrations of volatile organic compounds (VOCs) and TPH in the gasoline and heavy oil ranges were not reported in any of the samples analyzed. VOCs are compounds that are emitted as gases from certain volatile solids or liquids and are a concern as both indoor and outdoor air pollutants that have the potential to adversely impact the health of people that are exposed. VOCs may be mitted by a variety of products that contain organic solvents including paint supplies, cleaning supplies, pesticides, and certain building materials.
- All detected organochlorine pesticide concentrations were less than their respective screening levels for residential land use, and applicable hazardous waste disposal criteria.
    - A total of 15 VOCs were detected in soil vapor sample AST-1-10, located and a total of 12 VOCs were detected in soil vapor sample UST-1-10. AST-1-10 is located in the central portion of the Project site (APN 1053-071-01) at a depth of 10 ft bgs, and UST-1-10 is located in the northern portion of the Project site (APN 1053-081-01) at a depth of 15 ft bgs. Except for benzene, ethylbenzene, and xylenes, the maximum concentrations of reported VOCs detected were below their screening levels for both residential and commercial land uses.
        - Benzene and ethylbenzene were detected at concentrations in excess of the respective screening levels for residential land use, and for commercial land use at both the current AST location, and the former UST location.

- Concentrations of meta- (m-) and para- (p-) xylenes were reported in soil vapor sample AST-1-10 at 3,400 micrograms per cubic meter air (µg/m3), which is more than the residential screening level of 3,300 µg/m3, but less than the commercial screening level of 15,000 µg/m3. The impacts from m,p-xylenes are therefore considered to be relatively minor and limited.

Based on the findings of the Phase II concluded the following:

- No impacts were identified associated with former agricultural uses of the Project site.
- Both the soil and soil vapor appear to be impacted in the vicinity of the current AST and former UST used for diesel.
  - The impacts to the soil appear to be relatively limited. Although TPH diesel was reported in excess of the commercial screening level at a depth of 15 feet below ground surface (bgs) in boring UST-1, located within the northern portion of the Project site (APN 1053-081-01), it was not detected in the samples from depths of 10 or 20 feet bgs. In boring UST-2 TPH diesel was only reported in the sample from 15 feet bgs, and the concentration was equal to the commercial screening level.
  - Concentrations of benzene, ethylbenzene, and xylenes were detected in both soil vapor samples at concentrations in excess of screening levels. The screening levels that these concentrations exceed are based on potential impacts to occupants from vapor intrusion. The current impact to the Project site from these concentrations is considered to be minimal based on the lack of future occupied structures in the vicinity of the AST and UST areas. The impacted area would not contain residential uses based on the current development plan and land use plan for the Phase I area; refer to ***Section 3.0: Project Description***.

Based on the findings of the Phase II ESA, the Project site has been impacted from the diesel storage tanks (former UST and current AST).[11] The impacts to the soil are considered to be relatively minor. The elevated concentrations of Benzene, Toluene, Ethylbenzene and Xylene (BTEX) in soil vapor samples are not considered to pose a significant risk to occupied structures because no residential uses are proposed to be located over these impacted soils. However, further testing is recommended to be conducted if Project site uses change and structures are planned to be developed in the vicinity of the AST or former UST.

4.9.4 Impact Thresholds and Significance Criteria

State CEQA Guidelines Appendix G contains the Environmental Checklist Form, which includes questions concerning hydrology and water quality. The questions presented in the Environmental Checklist Form have been utilized as significance criteria in this section. Accordingly, the Project would have a significant effect on the environment if it would:

- Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials;

[11] Converse Consultants. 2021. *Limited Phase II Environmental Site Assessment*. Page 18. (**Appendix F2**).

- Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment;
- Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school;
- Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment;
- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area;
- Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan; or
- Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires.

Methodology and Assumptions

This analysis evaluates the potential impacts of the Project on human health and the environment due to potential exposure of hazardous materials or conditions associated with the Project site, Project construction, and Project operations. The Phase I ESA was conducted in accordance with the ASTM Standard of Practice E1527-13 and the standards of care and diligence normally practiced by recognized consulting firms in performing services of a similar nature. The assessment included:

- Site inspection to verify current Site conditions, and check for visible evidence of previously disposed and/or currently present hazardous waste, surface contamination, USTs and ASTs, suspect PCBs, and other potential environmental hazards.
- A visual survey of the adjacent properties and the immediate vicinity to determine if any nearby sites posed a significant environmental threat to the site.
- Review of currently and readily available documents, including maps, aerial photographs, governmental databases of known hazardous waste sites and underground tanks, other consultant reports (if any), fire insurance maps, and other accessible records.
- Review of results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.
- Consultation with appropriate governmental agencies having jurisdiction relative to the past history of the property, complaints, or incidents in the immediate area, and permits that may have been issued.

The Phase I ESA includes the following recommendations:

- Soil sampling over the Property. Areas to be assessed should include the farmland, catch basins, maintenance areas, AST (and drain located underneath the AST) & UST areas, and livestock/manure areas.

- Containers of hazardous materials, equipment, and tires should be removed from the Property prior to Project construction and will be disposed of in accordance to applicable regulations. (see **MM HAZ-3)**.
- A methane assessment in accordance with the City of Ontario requirements should be conducted. (see **MM HAZ-4)**.

4.9.5 Plans, Programs, and Policies

PPP HAZ-1 **Transportation of Hazardous Waste.** Hazardous materials and hazardous wastes shall be transported to and/or from the proposed project in compliance with any applicable State and federal requirements, including the U.S. Department of Transportation regulations listed in the CFR (Title 49, Hazardous Materials Transportation Act); Caltrans standards; and the Cal/OSHA standards.

PPP HAZ-2 **RCRA.** Hazardous waste generation, transportation, treatment, storage, and disposal shall be conducted in compliance with the Subtitle C of the RCRA (Title 40 CFR Part 263), including the management of nonhazardous solid wastes. The SBCFD serves as the designated CUPA and which implements State and federal regulations for the following programs: (1) Hazardous Materials Release Response Plans and Inventory Program, (2) California Accidental Release Prevention (CalARP) Program, (3) Aboveground Petroleum Storage Act Program, and (4) UST Program (5) Hazardous Waste Generator and Onsite Hazardous Waste Treatment Programs (6) HMMP and Hazardous Material Inventory Statement Program.

PPP HAZ-3 **ACMs.** Demolition activities that have the potential to expose construction workers and/or the public to ACMs shall be conducted in accordance with applicable regulations, including, but not limited to:

- SCAQMD Rule 1403
- HSC Section 39650 et seq.
- Title 8 CCR Section 1529
- Cal/OSHA regulations (Title 8 CCR Section 1529)
- CFR (Title 40, Part 61, Title 40, Part 763, and Title 29, Part 1926)

PPP HAZ-4 **Removal of Hazardous Materials.** The removal of hazardous materials, such as PCBs, mercury-containing light ballast, and mold shall be completed in accordance with applicable regulations pursuant to 40 CFR 761 (PCBs), 40 CFR 273 (mercury-containing light ballast), and 29 CFR 1926 (molds) by workers with the HAZWOPER training, as outlined in 29 CFR 1910.120 and 8 CCR 5192.

PPP HAZ-5 **LBPs.** Demolition activities that have the potential to expose construction workers and/or the public to LBP shall be conducted in accordance with applicable regulations, including, but not limited to:

- Cal/OSHA regulations (CCR Title 8 Section 1532.1)

- CFR (Title 40, Part 745, and Title 29, Part 1926)
- U.S. EPA's Lead Renovation, Repair and Painting Program Rules and Residential Lead-Based Paint Disclosure Program
- Sections 402/404 and 403, and Title IV of the TSCA

4.9.6 Impacts and Mitigation Measures

Impact 4.9-1 ***Would the Project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?***

Level of Significance: Less Than Significant with Mitigation Incorporated (Phase I Project) and Significant and Unavoidable (Phase II Only)

Specific Plan – Phase I

Construction

Project-related construction activities would involve the use of larger amounts of hazardous materials than would Project operation. Construction activities would include the use of materials such as fuels, lubricants, and greases in construction equipment and coatings used in construction. According to the City's Fire Department Hazardous Materials standards, the materials used would be in small quantities or stored in such a manner as to reduce any safety hazards.[12] The use of these materials would also be temporary and short-term or single-use in nature and would cease upon completion of the proposed Project's construction phase. Project construction workers would also be required to conduct the safe handling of hazardous materials use as proposed in **MM HAZ-1**.

Additionally, as with Project operation, the use, storage, transport, and disposal of construction-related hazardous materials would be required to conform to existing laws and regulations. Compliance with applicable laws and regulations governing the use, storage, transportation, and disposal of hazardous materials would ensure that all potentially hazardous materials are used and handled in an appropriate manner and would minimize the potential for safety impacts. For example, all spills or leakage of petroleum products during construction activities are required to be immediately contained, the hazardous material identified, and the material remediated in compliance with applicable state and local regulations for the cleanup and disposal of that contaminant. All contaminated waste would be required to be collected and disposed of at an appropriately licensed disposal or treatment facility. Furthermore, strict adherence to all emergency response plan requirements set forth by SBCFD would be required through the duration of the Project construction phase. Therefore, with implementation of **MM HAZ-1**, hazards to the public or the environment arising from the routine use of hazardous materials during Project construction would be less than significant.

Grading Activities

Grading activities required to develop the Project would involve the disturbance of on-site soils. There is the potential for the discovery of contamination during grading activities, due to potential for chemical

[12] Ontario Fire Department. 2021. *Hazardous Material Information Packet.* https://www.ontarioca.gov/sites/default/files/Ontario-Files/Fire/hazardous_material_information_packet.pdf. (accessed March 2023).

constituents to accumulate in the ponds and become trapped in the sediment (i.e., pesticides, heavy metals, or chemicals).

Contaminated soils encountered during grading would be required to be removed and disposed of off-site in accordance with all applicable regulatory guidelines. The handling and transport of these materials and exposure to contaminated soils for workers and the surrounding environment could result in a significant impact. **MM HAZ-5** would further reduce these risks, as a Phase II subsurface assessment would be required.

Site grading also requires the removal of ASTs, where areas of staining were observed, and septic tanks prior to site development. A demolition permit from San Bernardino County Building & Safety Division would be required to remove the septic tank(s). **MM HAZ-2** and **HAZ-3** would be applied to these activities prior to the commencement of construction activities.

MM HAZ-2 requires a Soil Management Plan that details procedures and protocols for on-site management of soils containing potentially hazardous materials, to be implemented during grading activities on-site to ensure that soils containing residual levels of hydrocarbons or arsenic are properly identified, monitored, and managed during construction. **MM HAZ-3** would require the proper removal and disposal of all ASTs and USTs, such as by a State licenses contractor in compliance with SBCFD regulations, and, in the even that contaminated soils are encountered, a SMP shall be prepared to management contaminated soils during redevelopment.

The historic and current use of the Project site as various agricultural operations – including a dairy-farm and the raising of livestock – may produce methane gas in the subsurface from animal wastes. A methane assessment should be conducted to assess subsurface methane levels across the site. **MM HAZ-4** would be applied in order to minimize risks associated with the risk of methane encountered on the Project site.

Demolition

Demolition of buildings and equipment on-site has the potential to expose and disturb ACMs, PCBs, LBP, and mercury. Project site buildings were constructed prior to bans on ACBMs, PCBs, and LBP coming into effect. Such releases could pose significant risks to persons living and working in and around the Project site, as well as to Project construction workers. Before demolition, a comprehensive ACM survey would be conducted to identify the locations and quantities of ACM in above-ground structures, pursuant to **MM HAZ-6**. **MM HAZ-6** would be incorporated to reduce the risk from ACMs. The removal of hazardous materials, such as PCBs, mercury-containing light ballast, and mold, shall be completed in accordance with applicable regulations pursuant to 40 CFR 761 (PCBs), 40 CFR 273 (mercury-containing light ballast), and 29 CFR 1926 (molds) by workers with the HAZWOPER training, as outlined in 29 CFR 1910.120 and 8 CCR 5192. The removal of LBP material shall be implemented in accordance with CCR, Title 8 Section 1532.1, the CFR (Title 40, Part 745, and Title 29, Part 1926), the U.S. EPA's Lead Renovation, Repair and Painting Program Rules and Residential Lead-Based Paint Disclosure Program, and sections 402/404 and 403, and Title IV of the TSCA.

The potential exposure of construction workers to ACMs, PCBs, LBP, or mercury is a potentially significant impact. Through **MM HAZ-6**, a survey of existing structures prior to demolition will characterize the

potential exposure and further reduce impacts from the potential release of these materials. Additionally, **PPP HAZ-5** would reduce the potential of demolition activities to expose construction workers and/or the public to LBP through compliance with Cal/OSHA regulations, CFR Title 40 and 29, U.S. EPA regulations regarding LBP, and Sections 402/404 and 403, and Title IV of the TSCA.

Operations

Operation of the Project would involve the use of small amounts of hazardous materials, such as industrial and household cleansers, greases, and oils for cleaning and maintenance purposes as well as the storage and periodic application of pesticides, herbicides, and fertilizers, and use of toxic fuels and solvents. The use, storage, transport, and disposal of hazardous materials would be governed by existing regulations of several agencies, including the U.S. EPA, U.S. Department of Transportation, California Division of Occupational Safety and Health, and the San Bernardino County Fire Protection District. Compliance with applicable laws and regulations governing the use, storage, transportation, and disposal of hazardous materials would ensure that all potentially hazardous materials are used and handled in an appropriate manner and would minimize the potential for safety impacts. Additionally, the Project would also be operated with strict adherence to all emergency response plan requirements set forth by the San Bernardino County Fire Protection District. Mandatory compliance with laws and regulations, would ensure that operational impacts would be less than significant.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. The future development areas are comprised of Assessor Parcel Numbers (APNs) 1053-281-01, -02, -03, -04, -05, -07, and 1053-211-05 which are characterized by agricultural uses and urban development consisting of a private recreational vehicle facility and a scrap yard. The Phase II future development areas have not been previously subject to a Phase I of the Project. In the absence of a Phase I ESA for the Phase II area, impacts within the Phase II area are not fully known and could be potentially significant. At the time of the project-level CEQA analysis and associated site assessment of the Phase II area, unforeseen site conditions could be discovered that warrant a finding of potentially significant impact. In that case, subsequent CEQA analysis, in the form of a subsequent EIR or EIR Addendum, may be required pursuant to Sections 15162(a) and 15164 of the State CEQA Guidelines. This determination will be made by City staff at the time of future Phase II area site-specific development applications.

Similar to the Phase I area, potential future development under Phase II could result in impacts related to the routine transport, use, or disposal of hazardous materials. However, no specific development is proposed at this time. Any potential future development within the Phase II future development areas would be subject to the City's standard discretionary review process and existing local, state, and federal regulations as described under Regulatory Setting above, including the City Municipal Code and CEQA compliance. In consideration of the above, and with implementation of **MM HAZ-1** through **MM HAZ-6** and compliance with applicable plans, policies, and programs, including the proposed Specific Plan and TOP 2050, potential impacts would be minimized. However, in the absence of a Phase I ESA, current site

conditions relating to hazards and hazardous materials are yet unknown, and impacts could be potentially significant. As mentioned above, a subsequent CEQA analysis may be required should the new information from the Phase I ESA for Phase II show that the Project will have significant impacts relating to hazards and hazardous materials. However, because the extent of impacts within the Phase II area cannot be known at this time, Project impacts relating to hazardous materials within the Phase II area are considered potentially significant and unavoidable even with the implementation of recommended mitigation.

Conclusion

As noted above, the Project is not anticipated to significantly impact the public or the environment through the routine transport, use, or disposal of hazardous materials with mitigation incorporated. However, because the extent of impacts within the Phase II area cannot be known at this time, Project impacts relating to hazardous materials within the Phase II area are considered potentially significant and unavoidable even with the implementation of recommended mitigation.

Mitigation Measures

MM HAZ-1 **Construction period testing.** Construction at the Project site shall be conducted under a Project-specific Construction Risk Management Plan (CRMP) to protect construction workers, the general public, and the environment from subsurface hazardous materials previously identified and to address the possibility of encountering unknown contamination or hazards in the subsurface. The CRMP shall summarize soil and groundwater analytical data collected on the Project sites during past investigations and during site investigation activities; delineate areas of known soil and groundwater contamination, if applicable; and identify soil and groundwater management options for excavated soil and groundwater, in compliance with local, state, and federal statutes and regulations. The CRMP shall:

- Provide procedures for evaluating, handling, storing, testing, and disposing of soil and groundwater during Project excavation and dewatering activities, respectively.
- Require the preparation of a Project-specific Health and Safety Plan that identifies hazardous materials present, describes required health and safety provisions and training for all workers potentially exposed to hazardous materials in accordance with State and Federal worker safety regulations, and designates the personnel responsible for Health and Safety Plan implementation.
- Require the preparation of a contingency plan that shall be applied should previously unknown hazardous materials be encountered during construction activities. The contingency plan shall include provisions that require collection of soil and/or groundwater samples in the newly discovered affected area by a qualified environmental professional prior to further work, as appropriate. The analytical results of the sampling shall be reviewed by the qualified environmental professional and submitted to the appropriate regulatory agency. The environmental professional shall provide recommendations, as applicable, regarding soil/waste management, worker health and safety training, and

regulatory agency notifications, in accordance with local, state, and federal requirements. Work shall not resume in the area(s) affected until these recommendations have been implemented under the oversight of the County or regulatory agency, as appropriate.

- Designate personnel responsible for implementation of the CRMP. The CRMP shall be submitted to the County for review and approval prior to the issuance of construction and demolition permits.

MM HAZ-2 **Soil Management Plan.** Prior to issuance of a grading permit, the Project applicant shall retain a qualified environmental consultant to prepare a Soil Management Plan that details procedures and protocols for on-site management of soils containing potentially hazardous materials. The SMP would be implemented during grading activities on-site to ensure that soils containing residual levels of hydrocarbons or arsenic are properly identified, monitored, and managed on-site, and include the following:

- A certified hazardous waste hauler shall remove all potentially hazardous soils. In addition, sampling of soil shall be conducted during excavation to ensure that all petroleum hydrocarbon and arsenic impacted soils are removed, and that Environmental Screening Levels (ESLs) for non-residential uses are not exceeded. Excavated materials shall be transported per California Hazardous Waste Regulations to a landfill permitted by the State to accept hazardous materials.
- Any subsurface materials exposed during construction activities that appear suspect of contamination, either from visual staining or suspect odors, shall require immediate cessation of excavation activities. Soils suspected of contamination shall be tested for potential contamination. If contamination is found to be present per the Department of Toxic Substances Control Screening Levels for industrial/commercial land use (DTSCSLi) and the U.S. EPA Regional Screening Levels for industrial/commercial land use (EPARSLi), it shall be transported and disposed of per state regulations to an appropriately permitted landfill.
- The SMP shall include a Health and Safety Plan (HSP) that addresses potential safety and health hazards and includes the requirements and procedures for employee protection; each contractor will be required to have their own HSP tailored to their particular trade that addresses the general project safety requirements. The HSP shall also outline proper soil handling procedures and health and safety requirements to minimize worker and public exposure to hazardous materials during construction.
- The SMP shall be prepared and executed in accordance with South Coast Air Quality Management District (SCAQMD) Rule 1166, Volatile Organic Compound Emissions from Decontamination of Soil. The SMP shall require the timely testing and sampling of soils so that contaminated soils can be separated from inert soils for proper disposal. The SMP shall specify the testing parameters and sampling frequency. Anticipated testing includes total petroleum hydrocarbons (TPH),

volatile organic compounds (VOCs), and semi-volatile organic compounds (SVOCs). During excavation, Rule 1166 requires that soils identified as contaminated shall be sprayed with water or another approved vapor suppressant or covered with sheeting during periods of inactivity of greater than an hour, to prevent contaminated soils from becoming airborne. Under Rule 1166, contaminated soils shall be transported from the project site by a licensed transporter and disposed of at a licensed storage/treatment facility to prevent contaminated soils from becoming airborne or otherwise released into the environment.

- All SMP measures shall be printed on the construction documents, contracts, and project plans prior to issuance of grading permits.
- The SMP would also include procedures for the safe handling and transportation of soils on the Project Site that may impact sensitive receptors such as schools.

MM HAZ-3 Prior to the commencement of any construction-related site activities (clearing, demolition, grading etc.), all above-ground storage tanks (ASTs) and underground storage tanks (USTs) shall be removed. ASTs storing diesel shall be disposed of by a State of California licensed contractor and in compliance with the required San Bernardino County Fire Department (SBCFD) Hazardous Materials Division regulations for tank removals. For stained soils in the vicinity of diesel containing ASTs, as identified in the Phase I Environmental Site Assessment (ESA) dated July 29, 2021 soil samples shall be collected, as directed by the SBCFD inspector, for chemical analysis at a laboratory licensed by the State of California. If contaminated soils are encountered, a soil management plan shall be prepared to manage the stained soils during redevelopment. USTs shall be removed through reviewing available files at the SBCFD and ensuring the proper removal of the UST and a subsurface investigation to determine if the UST had impacted the subsurface.

MM HAZ-4 Prior to the issuance of grading permits, the Project applicant shall conduct testing for the presence of methane on the Project site, in accordance with DTSC methane assessment guidelines. The Project applicant shall prepare a methane gas soil survey and implement grading activity recommendations to the satisfaction of the City Building Department. This survey and recommendation shall include a post-construction soil gas investigation and installation of methane gas mitigation systems where post-grading methane levels exceed 5,000 ppmv, should any such levels occur.

MM HAZ-5 Following drainage of the on-site ponds, the Project applicant shall conduct a limited Phase II subsurface assessment of sediments to evaluate the sediments for chemical risks to human health and the environment. If contamination from dairy and animal-related wastes is encountered at a level above Environmental Screening Levels (ESLs) for non-residential uses, the appropriate environmental agency (Regional Water Quality Control Board, Department of Toxic Substance Control, South Coast Air Quality Management District) shall be notified. Any contamination identified as a result of such testing/sampling shall be investigated and removed or remediated to the satisfaction of the environmental agency and established Regional Screening

Levels with evidence provided to the City, such that there are no residual significant impacts following mitigation. Prior to allowing the commencement of any soil removal or hauling activities at the Proposed Project, the City will review and/or evaluate potential air quality impacts (criteria pollutants and toxic air contaminants from equipment exhaust, earthmoving, and other on-site remedial activities, as applicable) to verify that impacts are properly assessed and disclosed in accordance with CEQA.

MM HAZ-6 Prior to the issuance of a demolition permit for any buildings or structures on-site, the Project applicant shall conduct comprehensive ACM and mercury contamination surveys to identify the locations and quantities of ACM and mercury in above-ground structures. The Project applicant shall retain a licensed or certified asbestos consultant to inspect buildings and structures on-site. The consultant's report shall include requirements for abatement, containment, and disposal of ACM, if encountered, in accordance with the South Coast Air Quality Management District's Rule 1403.

Prior to issuance of a demolition permit of the onsite structure, preparation of a demolition plan for the safe dismantling and removal of building components and debris including a plan for lead and asbestos abatement shall be required. The demolition plan shall be submitted to the City for review and approval prior to commencement of construction activities.

Impact 4.9-2 ***Would the Project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?***

Level of Significance: Less Than Significant with Mitigation Incorporated (Phase I Project) and Significant and Unavoidable (Phase II Only)

Specific Plan – Phase I

Construction

The construction of new developments such as the Project site could result in hazards to the public or the environment through the accidental upset or release of hazardous materials caused by accidental spillage of hazardous materials used during construction phases, or as a result of the exposure of contaminated soil during grading activities. Database searches did not reveal any active USTs. The Project site itself is not on a Cortese list. The closest UST that is listed is a site 1.2 miles away, located at the Chino Road Yard at 7000 Merrill Avenue, Chino, CA 91710, which is currently under military evaluation and the status remains inactive. Additionally, the Project site has been cited or issued violation notices by applicable environmental regulatory agencies for improper use or disposal of hazardous materials; as stated above in ***Section 4.9.2: Environmental Setting***. However, the majority of the violations incurred within the Project site have been brought up to compliance as of 2018. For those that are potentially out of compliance, implementation of **MM HAZ-1** through **MM HAZ-6** would reduce the potential for accidental upset conditions incurred by any present hazards.

Compliance with applicable laws and regulations concerning hazardous materials would ensure that all potentially hazardous materials are used and handled in an appropriate manner and would minimize the potential for safety impacts. For example, all spills or leakage of petroleum products during construction activities are required to be immediately contained, the hazardous material identified, and the material remediated in compliance with applicable regulations, such as RCRA, for the clean-up and disposal of that contaminant. All contaminated waste would be required to be collected and disposed of at an appropriately licensed disposal or treatment facility under SCAQMD Rule 1166. Furthermore, strict adherence to all emergency response plan requirements set forth by San Bernardino County Fire Protection District would be required through the duration of the Project construction phase. Project construction workers would also be required to conduct safe handling of hazardous materials as proposed in **MM HAZ-1**. Implementation of **MM HAZ-1** through **MM HAZ-6** will further reduce the potential for accidental upset conditions by conducting additional site investigations to quantify, manage and mitigate hazardous materials conditions on the site. As a result, with the implementation of mitigation measures, impacts would be less than significant.

Operations

Operation of the Project site would involve typical hazardous materials and chemicals such as solvents and cleaning products associated with operation of business park, commercial, and residential development. Hazardous chemicals such as pesticides and herbicides would be associated with landscaping activities. As discussed in *Impact 4.9-1* above, any routine transport, use, and disposal of these materials during business park operations must adhere to Federal, State, and local regulations for transport, handling, storage, and disposal of hazardous substances. Prior to Project approval, a Hazardous Materials Business Plan (MBP) may also be required for approval to show conformance with all applicable materials handling protocols. Adherence to these regulations is overseen and enforced by the SBCFD.

Furthermore, routine cleaners and solvents contain such low quantities of liquid and material that they do not pose a significant threat related to the release of hazardous materials into the environment. Additionally, the Project would require various outdoor landscape maintenance activities. These demands would include the storage of, and periodic application of pesticides, herbicides, and fertilizers. If equipment needed for landscaping are used and housed on-site, the Project may require the storage and of fuels and solvents on-site. Use of this type of equipment and listed materials are common to such facilities and compliance with existing regulations regarding their use would be sufficient to reduce potential impacts to a less than significant. Compliance with the applicable regulatory framework would ensure Project operations would not create a significant hazard due to the use of routine hazardous materials such as cleaners, solvents, and pesticides related to landscaping. A less than significant impact would occur in this regard.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. These potential impacts are anticipated to be similar to that described above for the Project site. The Phase II future development areas would be

subject to **MM HAZ-1** through **MM HAZ-6**, as well as other applicable local, state, and federal regulations as described in the Regulatory Setting section, including the City's standard discretionary review process, the City's municipal code, and CEQA compliance. However, in the absence of a Phase I ESA, current site conditions relating to hazards and hazardous materials are yet unknown, and impacts could be potentially significant. As mentioned above, a subsequent CEQA analysis may be required should the new information from the Phase I ESA for Phase II show that the Project will have significant impacts relating to hazards and hazardous materials. However, because the extent of impacts within the Phase II area cannot be known at this time, Project impacts relating to hazardous materials within the Phase II area are considered potentially significant and unavoidable even with the implementation of recommended mitigation.

Conclusion

As noted above, the Project is not anticipated to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions with incorporation of **MM HAZ-1** through **MM HAZ-6** and compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050. Impacts would be less than significant.

Mitigation Measures

Reference **MM HAZ-1** through **MM HAZ-6** above.

Impact 4.9-3 ***Would the Project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?***

Level of Significance: Less Than Significant Impacts with Mitigation Incorporated (Phase I Project) and Significant and Unavoidable (Phase II Only)

Specific Plan – Phase I

There are existing schools within one-quarter mile of the Project site. Blue Ribbon Academy located at 7041 Schaefer Avenue is located approximately 158 feet west of the Project site, Options for Youth Charter School located at 7011 Schaefer Avenue approximately 422 feet west of the Project site, and Fern Academy Educational Childcare located at 6921 Schaefer Avenue approximately 950 feet west of the Project site. All nearby educational facilities are within the City of Chino. Euclid Avenue and the Euclid Avenue right-of-way lie between the Project site and these educational facilities.

Construction

The transport of hazardous substances or materials to-and-from the Project site during construction and long-term operational activities would be required to comply with applicable federal, State, and local regulations intended to reduce public safety hazards. Implementation of **MM HAZ-2** would implement a Soil Management Plan that details procedures and protocols for on-site management of soils containing potentially hazardous materials. The SMP would be implemented during grading activities on-site to ensure that soils containing residual levels of hydrocarbons or arsenic are properly identified, monitored, and managed on-site, and would also include procedures for the safe handling and transportation of soils

on the Project Site that may impact sensitive receptors such as schools. As a result, with the implementation of mitigation measures, impacts would be less than significant.

Operations

Operation of the Project would involve the use of small amounts of hazardous materials, such as industrial and household cleansers, greases, pesticides related to landscaping, and oils for cleaning and maintenance purposes. As discussed in *Impact 4.9-2* above, compliance with applicable laws and regulations governing the use, storage, transportation, and disposal of hazardous materials would ensure that all potentially hazardous materials are used and handled in an appropriate manner and would minimize the potential for safety impacts. Due to the nature of the proposed land uses, the Project would not emit hazardous emissions or include the handling of hazardous or acutely hazardous materials, substances, and/or wastes within one-quarter mile of an existing or proposed school.

Refer to ***Section 4.3: Air Quality*** for analysis pertaining to human health risks associated with the Project's air pollutant emissions. As concluded in ***Section 4.3***, the Project's toxic air contaminant emissions (and their associated health risks) would be less than significant with mitigation incorporated to all sensitive receptors, including school children near the Project site and the primary truck travel routes to/from the Project site.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above regarding potential impacts. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. No existing or proposed schools are located within one-quarter mile of the Phase II future development areas. The nearest existing school is Options for Youth, a charter school located at 7011 Schaefer Avenue, Chino approximately 0.28-miles northwest of the Phase II future development areas. The Phase II future development areas would be subject to applicable local, state, and federal regulations as described in the Regulatory Setting section, including the City's standard discretionary review process, the City's municipal code, and CEQA compliance. In consideration of the above, a less than significant impact is anticipated. However, in the absence of a Phase I ESA, current site conditions relating to hazards and hazardous materials are yet unknown, and impacts could be potentially significant. As mentioned above, a subsequent CEQA analysis may be required should the new information from the Phase I ESA for Phase II show that the Project will have significant impacts relating to hazards and hazardous materials. However, because the extent of impacts within the Phase II area cannot be known at this time, Project impacts relating to hazardous materials within the Phase II area are considered potentially significant and unavoidable even with the implementation of recommended mitigation.

Conclusion

As noted above, the Project is not anticipated to emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.

Impacts would be less than significant with mitigation and compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.[13]

Mitigation Measures

Refer to **MM HAZ-2**.

Impact 4.9-4 ***Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?***

Level of Significance: Less Than Significant with Mitigation Incorporated

The Project site was not identified on the WDS database as an agricultural facility with designated/influent or solid wastes that pose a significant threat to water quality (dairy waste ponds). As noted in *Impact 4.91*, the Project Applicant shall perform a Phase II subsurface assessment, pursuant to **MM HAZ-5** of the sediments after the ponds have been drained. If the Phase II subsurface assessment detects chemical risks to human health and the environment due to sediments in the ponds, the Project Applicant is required to prepare a soils management plan, and any engineering or administrative controls or long-term operations and maintenance plan that is required by DTSC. This is considered a potentially significant impact.

Specific Plan – Phase I

Construction and Operations

The Project site contains areas with artificial, intermittent retention ponds. These dairy effluent ponds are devoid of wetland, riparian scrub, forest, and/or woodland habitats and are not connected or diverted to a natural stream; as discussed in ***Section 4.4: Biological Resources***. However, as an agricultural facility with designated/influent or solid wastes, this can pose a significant threat to water quality (dairy waste ponds). Therefore, with implementation of **MM HAZ-5**, the Project site shall have a Phase II subsurface assessment performed of the sediments after the ponds have been drained. If the Phase II subsurface assessment detects chemical risks to human health and the environment due to sediments in the ponds, the Project applicant is required to prepare a soils management plan, and any engineering or administrative controls or long-term operations and maintenance plan that is required by DTSC. The Project site was not identified on the Waste Discharge System database as a site that would pose a significant threat to water quality.[14] Furthermore, this site is not listed to have any Cortese List items. The nearest active facility to the Project site listed under the DTSC Cortese List is located approximately 1.9 miles north.[15] Lastly, according to the SWRCB Geotracker for leaking underground storage tanks, the Project site is approximately one mile north from an open Clean-up Program Site dedicated to

[13] Ibid.

[15] Department of Toxic Substances Control. EnviroStor. 2016. *Sunshine Cleaners – Driftwood Village (60002433).* https://www.envirostor.dtsc.ca.gov/public/profile_report?global_id=60002433.

remediation.[16] Therefore, with incorporation of **MM HAZ-5**, the Project site would not create a significant impact to the public environment.

Specific Plan – Phase II Future Development Areas

Construction and Operations

The Project site was not identified on the Waste Discharge System database as a site that would pose a significant threat to water quality.[17] Furthermore, this site is not listed to have any Cortese List items. The nearest active facility to the Project site listed under the DTSC Cortese List is located approximately 1.9 miles north.[18] Lastly, according to the SWRCB Geotracker for leaking underground storage tanks, the Project site is approximately one mile north from an open Clean-up Program Site dedicated to remediation.[19] Therefore, with incorporation of **MM HAZ-5**, the Project site would not create a significant impact to the public environment.

Refer to discussion for Phase I. The same policies, ordinances, and codes described above would apply to Phase II. As noted above, the Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Impacts would be less than significant. [20]

Conclusion

As noted above, the Project is not anticipated to create a significant hazard to the public or the environment due to being located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. Impacts would be less than significant with mitigation and compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.[21]

Mitigation Measures

Reference **MM HAZ-5** above.

Impact 4.9-5 ***For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?***

Level of Significance: Less Than Significant

[21] Ibid.

As stated previously, the Project site is within the ONT and Chino Airport's airport influence area. However, the Project site is not within the Chino Airport's safety zone, noise impact zone, or airspace protection zone. Additionally, the Project site is not within the ONT safety zone, noise impact zone, or airspace protection zone. Therefore, the Project would not result in a safety hazard or excessive noise for people residing or working in the Project area and impacts would be less than significant.

Specific Plan – Phase I and Phase II Future Development Areas

Construction and Operations

As discussed previously and shown in ***Figures 4.9-1*** and ***4.9-2*** the Project site is within the ONT and Chino Airport's airport influence area. In addition, the Project area is within Zone E of the Chino Airport Land Use Compatibility Zones. Zone E is categorized as other airport environs and prohibits only hazards to flight. Zone E places no requirements on open land, no limit on residential densities, and discourages major spectator-oriented facilities such as sports stadiums, amphitheaters, and concert halls beneath principal flight tracks. In addition, airspace review is required for objects that exceed 100 feet tall. Zone E requirements align with the Project Specific Plan. Furthermore, the maximum building height for the Project is 45 feet in the Business Park district and 55 feet in the Mixed-Use district and the Project does not require ALUCP review. In the San Bernardino County Chino Airport Comprehensive Land Use Plan, the Project site is not within a Safety Zone of the Chino Airport Overlay (Generic Safety Zones for General Aviation Airports from the Caltrans Division of Aeronautics – California Airport Land Use Planning Handbook). Therefore, Project implementation is not required to comply with the criteria of the Chino Airport final composite safety zones.

As noted above, the Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Furthermore, the Project site is not within a ONT safety zone, noise impact zone, or airspace protection zone. Therefore, the Project would not result in a safety hazard or excessive noise for people residing or working in the Project area and impacts would be less than significant and no mitigation is required.

Conclusion

As noted above, the Project is not anticipated to result in a safety hazard or excessive noise for people residing or working in the Project area. Impacts would be less than significant with mitigation and compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.[22]

Mitigation Measures

No mitigation is necessary.

[22] Ibid.

Impact 4.9-6 Would the Project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Level of Significance: Less Than Significant Impact

Specific Plan – Phase I

Construction and Operations

The Project site does not contain any emergency facilities, nor does it serve as an emergency evacuation route. During construction and long-term operation of the Project, adequate emergency access for emergency vehicles would be maintained along public streets that abut the Project site. Access roads to the site would be constructed throughout the Project site for construction staff/inspectors, construction equipment and materials delivery/removal, and emergency response vehicles. The access roads would be kept or maintained in such condition to allow for the safe passage for emergency response vehicles as discussed in ***Section 4.15: Transportation and Traffic***. The City, as part of its discretionary review process, reviewed the Project's application materials to ensure that appropriate emergency ingress and egress would be available to-and-from the Project site and that circulation on the Project site was adequate for emergency vehicles.

The City has adopted an Emergency Operations Plan to identify evacuation routes, emergency facilities, and City personnel and equipment available to effectively deal with emergency situations. No revisions to the adopted Emergency Operations Plan would be required as a result of the Project.

The nearest fire station is the Chino Valley Fire Department Station 63, located approximately 2 miles south of the site at 7550 Kimball Ave, Chino, CA 91708. Response times at this station would not be impaired by Project implementation because primary access to all major roads would be maintained during construction and operation of the Project.

Because both Project construction and operations would not disrupt or interfere with emergency access to nearby roadways, would not interfere with the City's emergency response plan, and would comply with design standards for emergency services, impacts would be less than significant.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. During Phase II construction and long-term operation, adequate emergency access for emergency vehicles would be maintained along public streets that abut the future development areas. Access roads to the site would be constructed throughout the Project site for construction staff/inspectors, construction equipment and materials delivery/removal, and emergency response vehicles. The access roads would be kept or maintained in such condition to allow for the safe passage for emergency response vehicles; as discussed in ***Section 4.15: Transportation and Traffic***. While the structures and associate operations would alter the existing circulation of the site, impacts regarding emergency response plans would be less than significant, as the Project site does not contain any emergency facilities, nor does it serve as an emergency evacuation route. No mitigation is

required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[23]

Conclusion

As noted above, the Project is not anticipated to significantly impair implementation of or physically interfere with an adopted emergency response plan. Impacts would be less than significant with mitigation and compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.[24]

Mitigation Measures

No mitigation is necessary.

Impact 4.9-7 ***Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?***

Level of Significance: Less Than Significant Impact

Specific Plan – Phase I and Phase II Future Development Areas

Construction and Operations

The Project site is not located within a State Responsibility Area or a very high fire hazard severity zone; see ***Section 7.4: Wildfire*** for additional information. Neither the California Department of Forestry and Fire Protection (CalFire) nor the County of San Bernardino identify the Project site within an area susceptible to wildland fires. The Project site generally consists of agricultural, industrial and/or residential uses, which are generally not associated with wildland fire hazards. Additionally, Project development would remove the existing agriculture and vegetation on site, reducing the risk of any potential fire outbreak. Thus, wildfire is not anticipated to occur on-site that would expose Project occupants, employees, or structures to significant risk of loss, injury or death involving wildfire or the uncontrolled spread of a wildfire. The Project would comply with all applicable local and state regulations related to fire safety, as evaluated through the City's standard development review process. Impacts would be less than significant.

Conclusion

As noted above, the Project is not anticipated to expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires. Impacts would be less than significant with mitigation and compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.[25]

[23] Ibid.
[24] Ibid.
[25] Ibid.

Mitigation Measures

No mitigation is necessary.

4.9.7 Cumulative Impacts

Hazards and hazardous waste impacts are typically unique to each site and do not usually contribute to cumulative impacts. Cumulative development projects would be required to assess potential hazardous materials impacts on the development site prior to grading. The Project and other cumulative projects would be required to comply with laws and regulations governing hazardous materials and hazardous wastes used and generated as described previously. Therefore, cumulative impacts related to hazards and hazardous materials would be less than significant after regulatory compliance.

The areas considered for cumulative airport-related hazards impacts are the airport influence areas of ONT and Chino Airport. Some related projects may be proposed within the safety compatibility zones of the ONT and Chino airport influence areas, and thus could expose the nearby population to potential hazards such as aircraft crashes. Airport land use planning agencies for ONT and Chino Airport regulate development within their safety compatibility zones. Related projects proposed within safety compatibility zones would be required to comply with each safety zone's respective land use regulations set forth by the affected agencies. Additionally, the Project would be pursuant to TOP 2050 and would represent a consistent and logical continuation of the existing and planned pattern of development in Ontario, specifically the Ontario Ranch area. The City has long anticipated that this area would transition from dairy/agricultural to urban uses, and the Project Specific Plan is implementing TOP 2050.[26] After regulatory compliance, cumulative impacts would be less than significant.

4.9.8 Significant Unavoidable Impacts

No significant unavoidable impacts related to hazards and hazardous materials have been identified for Phase I of the Project. However, the Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Impacts within the Phase II area are not fully known and could be potentially significant. At the time of the project-level CEQA, and associated ESA report of the Phase II area, unforeseen site conditions could be discovered that warrant a finding of potentially significant impact. In that case, a subsequent CEQA analysis, in the form of a subsequent EIR or EIR Addendum, may be required pursuant to Section 15162(a) and 15164 of the State CEQA Guidelines. The determination will be made by City staff at the time of future Phase II area site-specific development applications.

4.10 HYDROLOGY AND WATER QUALITY

4.10.1 Introduction

The purpose of this section is to describe the existing regulatory and environmental conditions related to hydrology and water quality in the vicinity of the Euclid Mixed Use Specific Plan Project (Project), within the City of Ontario (City). This section of the Draft Environmental Impact Report (EIR) identifies potential impacts that could result from the Project. This chapter discusses the changes to existing hydrological conditions and water quality that would occur upon implementation of the Project, and as necessary, recommends mitigation measures to avoid and/or reduce the significance of impacts. Hydrology deals with the distribution and circulation of water, both on land and underground. Water quality deals with the quality of surface water and groundwater. Surface water includes lakes, rivers, streams, and creeks; groundwater is under the earth's surface. Impacts are discussed in terms of the changes that would result from Project implementation and includes analysis of potential violations of water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality; adverse effects on groundwater supplies or substantial interference with groundwater recharge; substantial alterations to existing drainage patterns that result in adverse effects (i.e., substantial erosion or siltation, runoff, or redirected stormflows); increased risk of pollutants due to project inundation; or adverse conflicts with or obstructions to the implementation of a water quality control plan or sustainable groundwater management plan.

This Section and environmental discussion use information from the following City documents:

- The Ontario Plan 2050
- City of Ontario Municipal Code
- City of Ontario TOP 2050 Final Supplemental EIR

Additionally, the following analysis is based in part on information obtained from:

- Converse Consultants. July 29, 2021. Phase I Environmental Site Assessment Report. (**Appendix F1**)
- JLC Engineering and Consulting, Inc. March 16, 2023. *Hydrology and Hydraulic Report*. (***Appendix G1***)

- Ontario Municipal Utilities Company. May 2023. Water Supply Assessment and Written Verification of Sufficient Water Supply for the Euclid Mixed Use Specific Plan (File No. PSP22-001). (**Appendix J**)

4.10.2 Environmental Setting

Existing Conditions

Regional Drainage

The City is within the Chino Creek Watershed, which is part of the larger Santa Ana River Watershed. The Chino Creek Watershed encompasses parts of San Bernardino County (County), Riverside County, and Los Angeles County and includes the cities of Rancho Cucamonga, Upland, Montclair, Ontario, Fontana, Chino, and Chino Hills. It drains a basin of approximately 218 square miles from the San Gabriel Mountains to the Santa Ana River near Corona. The watershed is intensely developed for residential, industrial, and agricultural use. As a result, the creek and its tributaries are highly polluted and receive effluent from multiple wastewater treatment plants, storm drains, and agricultural runoff.

Local Drainage

The City is divided into two distinct areas: Old Model Colony (OMC) and New Model Colony, now known as Ontario Ranch (OR). The two areas are generally divided by Riverside Drive. The City presently owns and maintains over 136 miles of storm drains, mostly serving the OMC area of the City. In addition to the City-owned storm drains there are the State-owned storm drains along California Department of Transportation's (Caltrans) Interstate 10 (I-10) and State Route 60 (SR 60) corridors. All the City and State storm drain facilities discharge to regional backbone facilities owned and operated by San Bernardino County Flood Control District (SBCFCD) that are tributary to the U.S. Army Corps of Engineers' (USACE) Prado Flood Control Basin.

The City lies in the western portion of the Santa Ana River's watershed, upstream of the Prado Flood Control Basin. It is in a 277-square-mile area referred to as Zone 1 by SBCFCD. Zone 1 generally slopes towards the south. Four major regional channel systems traverse Zone 1 in a north-south direction; they include San Antonio Channel, Cucamonga Channel, Day Creek Channel, and San Sevaine Channel.

Site Hydrology

The Project site is located in the Upper Santa Ana Valley Groundwater Basin, Chino Subbasin (No. 8-2.01) as determined by the California Department of Water Resources.[1] The subbasin is bounded by the impermeable rocks of the San Gabriel Mountains and the Cucamonga fault to the north; the Rialto- Colton fault to the east; the contact with impermeable rocks forming the Jurupa Mountains and low divides connecting the exposures to the southeast; the contact with impermeable rocks of the Puente Hills and the Chino fault to the south; and the San Jose fault to the west. San Antonio Creek and Cucamonga Creek drain the surface of the subbasin southward to join the Santa Ana River.

The water-bearing units include the alluvial-fan deposits from the Holocene age and the interfingering finer, alluvial-fan deposits and coarser, fluvial deposits from the Pleistocene age. Groundwater recharge occurs by direct infiltration or precipitation on the subbasin floor, by infiltration of surface flow, and by underflow of groundwater from adjacent basins. The five recharge facilities include Deer Creek, Day Creek,

[1] California Department of Water Resources. 2006. *Chino Subbasin.* https://water.ca.gov/-/media/DWR-Website/Web-Pages/Programs/Groundwater-Management/Bulletin-118/Files/2003-Basin-Descriptions/8_002_01_ChinoSubbasin.pdf. (accessed April 2023).

East Etiwanda Creek, San Sevaine Channel, and Victoria Basin. Regional groundwater flow direction was estimated toward the south.[2]

The Project site currently consists of numerous single-family residential structures, an operational dairy farm and irrigated cropland. There are large existing retention ponds that collect surface waste from the dairy farming practices. Current drainage for the southeast portion of the site surface is southerly to a dirt swale adjacent to Merrill Avenue, then westerly to a set of four corrugated steel pipes, then southerly to an earthen channel (Airport Channel) adjacent to Euclid Avenue in the City of Chino. The 25-year and 100-year existing condition peak flow rates from this area are approximately 49.5 cubic feet per second (cfs) and 85.1 cfs, respectively.

Surface Water Quality

Section 303(d) of the 1972 federal CWA requires states to identify water bodies that do not meet water quality objectives and are not supporting their beneficial uses. Each state must submit an updated list, called the 303(d) list, to the U.S. Environmental Protection Agency (U.S. EPA) every two years. In addition to identifying the water bodies that are not supporting beneficial uses, the list also identifies the pollutant or stressor causing impairment and establishes a priority for developing a control plan to address the impairment. The list also identifies water bodies where 1) a Total Maximum Daily Load (TMDL) has been approved by the U.S. EPA and an implementation plan is available, but water quality standards are not yet met, and 2) water bodies where the water quality problem is being addressed by an action other than a TMDL and water quality standards are not yet met.

Currently, stormwater from the Project site discharges to the Airport Channel, which eventually discharges into Prado Park Lake (Prado Basin). This basin is currently listed on the California 303(d) list as a Category 5 water body which is defined as "a water segment where standards are not met and a TMDL is required, but not yet completed, for at least one of the pollutants listed."[3] The water quality impairments listed for the Prado Basin are nutrients and indicator bacteria (pathogens). The available information from the Regional Board 8 indicates a TMDL completion date of 2019 for nutrients. The TMDL for pathogens was approved in 2007.[4]

Groundwater

The City obtains its groundwater from the Chino Groundwater Basin (Chino Basin).[5] The Chino Basin is one of the largest groundwater basins in southern California and consists of approximately 220 square miles, where 80 percent of the basin lies within San Bernardino County, 15 percent within Riverside County, and five percent within Los Angeles County.[6] Due to its sprawling geographical area that extends across multiple jurisdictions, and because groundwater from the Chino Basin is the principal water supply

[2] Converse Consultants. 2021. *Phase I Environmental Site Assessment Report*, Page 16.

[5] City of Ontario 2022. TOP *2050 Final Supplemental Environmental Impact Report, Section 5.10 Hydrology and Water Quality*. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (accessed April 2023).
[6] Chino Basin Water Conservation District. 2021. *The Chino Groundwater Basin.* https://cbwcd.org/387/The-Chino-Groundwater-Basin. (accessed April 2023).

for 20 municipal agencies and approximately 400 agricultural and dairy operations, the Chino Basin serves as an integral part of the regional and Statewide water supply system.[7] The Chino Basin has approximately five million acre-feet of water in storage and an estimated one million acre-feet of additional unused storage capacity. Prior to 1978, the Chino Basin was in overdraft. After 1978, the Chino Basin was managed via adjudication by the Chino Basin Watermaster.[8]

Groundwater quality in Chino Basin is generally good with better quality in the northern portion of the basin where recharge occurs. Generally, salinity, measured as total dissolved solids (TDS) exceeds 500 milligrams per liter (mg/l) and nitrate concentrations exceed 50 mg/l south of Riverside Drive.[9] There also are several groundwater contamination plumes that affect the City of Ontario's groundwater supply. The Project site is not within any of the groundwater contamination plumes.[10]

The Project site is currently agricultural land use, including dairy operations and field crops. The Project site is not connected to the City's water supply and uses an on-site groundwater well for irrigation of crops and other agricultural-related uses.[11] The use of this water supply would cease upon implementation of the Project, and the Project would be connected to the City's municipal water supply.

Flood and Dam Inundation Zones

The Project site is within Federal Emergency Management Act (FEMA) Flood Zone D, as per the FEMA Flood Insurance Rate Map (FIRM) Map No. 06071C8620H and 06071C9335H, effective August 28, 2008.[12] Zone D is an area where there are possible but undetermined flood hazards, as no analysis of flood hazards has been conducted. There are no nearby water bodies or streams that would result in flooding at the Project site.

The site is also located within the dam inundation area for San Antonio Dam, which is a flood control and debris dam on San Antonio Creek. The dam is owned and operated by the USACE.[13]

Seiche

A seiche is an oscillation of a body of water in an enclosed or semi-enclosed basin such as a reservoir, harbor, lake, or storage tank. The Project site is not located near any water storage tanks or reservoirs that would be at risk of seiche during seismic activity. The nearest body of water is the San Antonio Dam, approximately 12 miles to the north. A seiche at San Antonio Dam would cover a much smaller area than

a catastrophic failure of the dam and it is highly unlikely that any flood waters would reach the Project site.

Tsunami

A tsunami is a great sea wave produced by undersea disturbances such as tectonic displacement or large earthquakes. The Project site is approximately 30 miles from the ocean and is therefore not at risk of flooding from a tsunami.

4.10.3 Regulatory Setting

Federal

Clean Water Act and National Pollution Elimination Discharge System

The federal Clean Water Act (CWA) establishes regulations to control the discharge of pollutants into the waters of the United States and regulates water quality standards for surface waters (U.S. Code, Title 33 Section 1251 et seq.). Under the act, the U.S. EPA is authorized to set wastewater standards and runs the National Pollutant Discharge Elimination System (NPDES) permit program. Under the NPDES program, permits are required for all new developments that discharge directly into waters of the United States. The federal CWA requires wastewater treatment of all effluent before it is discharged into surface waters. NPDES permits for such discharges in the Project region are issued by the Santa Ana Regional Water Quality Control Board (RWQCB).

Safe Drinking Water Act

The Safe Drinking Water Act (SDWA), the principal federal law intended to ensure safe drinking water to the public, was enacted in 1974 and has been amended several times since it came into law. The Act authorizes the U.S. EPA to set national standards for drinking water, called the National Primary Drinking Water Regulations, to protect against both naturally occurring and man-made contaminants. These standards set enforceable maximum contaminant levels in drinking water and require all water providers in the United States to treat water to remove contaminants, except for private wells serving fewer than 25 people. In California, the State Water Resources Control Board (SWRCB) conducts most enforcement activities. If a water system does not meet standards, it is the water supplier's responsibility to notify its customers.

Federal Emergency Management Agency

FEMA administers the National Flood Insurance Program (NFIP) to provide subsidized flood insurance to communities that comply with FEMA regulations limiting development in floodplains. FEMA also issues FIRMs that identify which land areas are subject to flooding. These maps provide flood information and identify flood hazard zones in the community. The design standard for flood protection is established by FEMA. FEMA's minimum level of flood protection for new development is the 100-year flood event, also described as a flood that has a 1-in-100 chance of occurring in any given year. The Project site is not located within a 100-year floodplain.

State

Porter-Cologne Water Quality Control Act

Under the Porter-Cologne Water Quality Control Act (Water Code Section 13000 et seq.), which was passed in California in 1969 and amended in 2013, the SWRCB has authority over State water rights and water quality policy. This Act divided the state into nine regional basins, each under the jurisdiction of a RWQCB to oversee water quality on a day-to-day basis at the local and regional level. RWQCBs engage in a number of water quality functions in their respective regions. RWQCBs regulate all pollutant or nuisance discharges that may affect either surface water or groundwater. The Project site and the City of Ontario are within the jurisdiction of the Santa Ana RWQCB.

State Water Resources Control Board Construction General Permit

The SWRCB has adopted a Statewide Construction General Permit (CGP) (Order No. 2012-0006-DWQ) for stormwater discharges associated with construction activity. These regulations prohibit the discharge of stormwater from construction projects that include one acre or more of soil disturbance. Construction activities subject to this permit include clearing, grading, and other disturbance to the ground, such as stockpiling or excavation, which results in soil disturbance of at least one acre of total land area. Individual developers are required to submit Permit Registration Documents (PRDs) to the SWRCB for coverage under the NPDES permit prior to the start of construction. The PRDs include a Notice of Intent (NOI), risk assessment, site map, Stormwater Pollution Prevention Plan (SWPPP), annual fee, and a signed certification statement. The PRDs are submitted electronically to the SWRCB via the Stormwater Multiple Application and Report Tracking System (SMARTS) website.

The NPDES CGP requires all dischargers to (1) develop and implement a SWPPP, which specifies best management practices (BMPs) to be used during construction of the project; (2) eliminate or reduce non-stormwater discharge to stormwater conveyance systems; and (3) develop and implement a monitoring program of all specified BMPs. The two major objectives of the SWPPP are to (1) help identify the sources of sediment and other pollutants that affect the water quality of stormwater discharges and (2) to describe and ensure the implementation of BMPs to reduce or eliminate sediment and other pollutants in stormwater as well as non-stormwater discharges.

State Water Resources Control Board Trash Amendments

On April 7, 2015, the SWRCB adopted an Amendment to the Water Quality Control Plan for Ocean Waters of California (Ocean Plan) to Control Trash and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California (ISWEBE Plan). Together, they are collectively referred to as "the Trash Amendments." The purpose of the trash amendments is to reduce trash entering waterways Statewide, provide consistency in the SWRCB's regulatory approach to protect aquatic life and public health beneficial uses, and reduce environmental issues associated with trash in State waters. There are two compliance tracks:

- Track 1: Permittees install, operate, and maintain a network of certified Full Capture Systems (FCS) to capture trash in storm drains, located in priority land use areas for municipal systems, and the entire facility for industrial and commercial permit holders

- Track 2: Permittees install, operate, and maintain any combination of controls (structural and/or institutional) anywhere in their jurisdiction as long as they demonstrate that their system performs as well as Track 1

The Trash Amendments provide a framework for permittees to implement its provisions. Full compliance must occur within 10 years of the permit and permittees must also meet interim milestones such as average load reductions of 10 percent per year.

Senate Bill 92

On June 27, 2017, Governor Brown signed Senate Bill (SB) 92 into law, which set forth new requirements focused on dam safety. As part of this legislation, dam owners must now submit inundation maps to the Department of Water Resources (DWR). After the maps are approved, the dam owner must submit an emergency action plan to the California Office of Emergency Services (Cal OES). The dam owner must submit updated plans and inundation maps every 10 years, or sooner under certain conditions. Cal OES will review and approve the emergency action plans. This legislation set forth additional provisions for the emergency action plans including compliance requirements, exercises of the plan, and coordination with local public safety agencies (Cal OES 2019).

California Water Code Section 13751

In 1949, the California Legislature concluded that collecting information on newly constructed, modified or destroyed wells would be valuable in the event of underground pollution, and would also provide geologic information to better manage California's groundwater resources. Section 13751 of the Water Code requires Well Completion Reports (WCR) forms to be filed with DWR within 60 days from the date that construction, alteration, abandonment, or destruction of a well is completed. Completed WCR forms are sent to the DWR Region Office whose boundaries include the area where the well is located.

Regional

Santa Ana River Basin Water Quality Control Plan (Basin Plan)

The Basin Plan establishes water quality standards for the ground and surface waters of the region and includes an implementation plan describing the actions by the Santa Ana RWQCB and others that are necessary to achieve and maintain the water quality standards. The Santa Ana RWQCB regulates waste discharges to minimize and control their effects on the quality of the region's ground and surface water. Permits are issued under various programs and authorities. The terms and conditions of these discharge permits are enforced through a variety of technical, administrative, and legal means. Water quality problems in the region are listed in the Basin Plan, along with the causes of the water quality problems, if known. For waterbodies with quality below the levels necessary to allow all the beneficial uses of the water to be met, plans for improving water quality are included. The latest update for the 1995 Basin Plan was issued in February 2016.

San Bernardino County Regional Municipal Separate Stormwater Sewer System (MS4) Permit

Within the San Bernardino County area of the Santa Ana River Basin, management and control of the municipal separate storm sewer system (MS4) is shared by a number of agencies, including the SBCFCD,

San Bernardino County, and the cities of Big Bear Lake, Chino, Chino Hills, Colton, Fontana, Grand Terrace, Highland, Lom a Linda, Montclair, Ontario, Rancho Cucamonga, Redlands, Rialto, San Bernardino, Upland, and Yucaipa.

On January 29, 2010, the Santa Ana RWQCB issued an area wide MS4 permit to the County and municipalities in San Bernardino County. Waste discharge requirements for stormwater entering municipal storm drainage systems are set forth in the MS4 permit, Order No. R8-2010-0036, NPDES No. CAS618036. This permit expired on January 29, 2015. On August 1, 2014, the SBCFCD submitted a Report of Waste Discharge (ROWD) on behalf of San Bernardino County and the 16 incorporated cities within San Bernardino County. The submitted ROWD serves as the permit renewal application for the fifth term MS4 permit for San Bernardino County.

San Bernardino County Stormwater Program

The Technical Guidance Document for Water Quality Management Plans (WQMPs) for the Santa Ana Region of San Bernardino County is the guidance document for the Project's stormwater design in compliance with Santa Ana RWQCB requirements for Priority Projects or Transportation Projects. The MS4 Permit requires that a preliminary project-specific WQMP be prepared for review early in the project development process and that a Final WQMP be submitted prior to the start of construction. A project-specific WQMP is required to address the following:

- Develop site design measures using Low Impact Development (LID) principles
- Establish project-specific design capture volume (DCV) and applicable Hydrologic Conditions of Concern (HCOC) requirements
- Evaluate feasibility of on-site LID BMPs
- Maximum hydrologic source control, infiltration, and biotreatment BMPs
- Select applicable source control BMPs
- Address post-construction BMP maintenance requirements

Local

City of Ontario Standard Conditions of Approval for New Development

- SC 3.66: A hydrology study and drainage analysis, prepared in accordance with the San Bernardino County Hydrology Manual and the City of Ontario's Standards and Guidelines, and signed by a Civil Engineer registered in the State of California, shall be submitted to the Engineering Department prior to Grading Plan approval. Additional drainage facilities may be required as a result of the findings of the study.
- SC 3.68: Prior to Grading Plan approval and the issuance of a grading permit, an Erosion and Sediment Control Plan shall be submitted to, and approved by, the Engineering Department. The Erosion and Sediment Control Plan shall identify the Best Management Practices (BMPs) that will be implemented by the Project during construction in order to reduce the discharge of sediment and other pollutants into the City's storm drain system.

- SC 3.69: Prior to Grading Plan approval and the issuance of a grading permit, a completed WQMP shall be submitted to, and approved by, the Engineering Department. The WQMP shall be submitted using the San Bernardino County Stormwater Program's model template and shall identify all Post Construction, Site Design, Source Control, and Treatment Control BMPs that will be incorporated into the Project, in order to minimize the adverse effects on receiving waters.

City of Ontario Master Plan of Drainage

The City of Ontario's Master Plan of Drainage (MPD) is a planning level drainage study that includes the following:

- Update and evaluation of inventory and capacities of the existing City-owned storm drain facilities.
- Preparation of hydrology studies to quantify peak flow rates for runoffs during major storm events, which are based on built-out conditions as per the Land Use Plan adopted by City Council on January 27, 2010, and the Ontario Plan.
- Identification and quantification of upgrades to existing City-owned storm drain systems to provide adequate flood protection and mitigate development impacts, based on the City's latest policies and goals.
- Evaluation of alternatives to eliminate drainage deficiencies using the existing facilities to the maximum extent.
- Development of a master plan that establishes preliminary alignment and sizes for recommended future backbone drainage facilities that will ensure adequate flood protection.
- Development of project costs and prioritization for the implementation of the recommended master plan facilities.

City of Ontario General Plan – The Ontario Plan 2050

The Ontario Plan 2050 (TOP 2050) Environmental Resources and Safety Elements contains policies and goals addressing stormwater infrastructure.

The following policy contained in the Environmental Resources Element is relevant to the Project:

Environmental Resources Element[14]

Goal ER-1 **A reliable and cost-effective system that permits the City to manage its diverse water resources and needs.**

Policy ER-1.4 **Supply-Demand Balance:** We require that available water supply and demands be balanced.

Policy ER-1.6 **Urban Run-off Quantity:** We encourage the use of low impact development strategies to intercept run-off, slow the discharge rate, increase infiltration and ultimately reduce discharge volumes to traditional storm drain systems.

[14] City of Ontario. (2022). *TOP 2050 Environmental Resources Element*. https://www.ontarioca.gov/about-ontario-ontario-plan-policy-plan/environmental-resources. (accessed April 2023).

Policy ER-1.7 **Urban Run-off Quality:** We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.

The following policy contained in the Safety Element is relevant to the Project:

Safety Element[15]

Goal S-2 **Minimized risk of injury, loss of life, property damage and economic and social disruption caused by flooding and inundation hazards.**

Policy S-2.1 **Entitlement and Permitting Process:** We follow State guidelines and building code to determine when development proposals require hydrological studies prepared by a State-certified engineer to assess the impact that the new development will have on the flooding potential of existing development down-gradient.

Policy S-2.5 **Stormwater Management:** We maintain the storm drain system to convey a 100-year storm, when feasible, and encourage environmental site design practices to minimize flooding and increase groundwater recharge, including natural drainage, green infrastructure, and permeable ground surfaces.

Policy S-2.6 **Use of Flood Control Facilities:** We encourage joint use of flood control facilities as open space or other types of recreational facilities.

4.10.4 Impact Thresholds and Significant Criteria

State CEQA Guidelines Appendix G contains the Environmental Checklist Form, which includes questions concerning hydrology and water quality. The questions presented in the Environmental Checklist Form have been utilized as significance criteria in this section. Accordingly, the Project would have a significant effect on the environment if it would:

- Project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality;
- Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin;
- Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:
    - Result in substantial erosion or siltation on- or off-site;
    - Substantially increase the rate or amount of surface run-off in a manner which would result in flooding on- or off-site;
    - Create or contribute run-off water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted run-off;

[15] City of Ontario. 2022. *TOP 2050, Safety Element*. https://www.ontarioca.gov/about-ontario-ontario-plan-policy-plan/safetys. (accessed March 2023).

  - Create or contribute run-off water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted run-off; or
  - Impede or redirect flood flows.
- In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation; or
- Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan.

Methodology

A Hydrology and Hydraulics Report (see ***Appendix G1***) and Preliminary WQMP (see ***Appendix G2***) were prepared for the entire 84.1-acre Project site. Hydrology calculations were computed using San Bernardino County Rational Method program (by AES Software). The soil type is "B" per the San Bernardino County Hydrology Manual.[16] The San Bernardino County Small Area Unit Hydrograph Model (also by AES Software) was used for detention calculations.

4.10.5 Plans, Programs, and Policies

PPP HYD-1 The Project will be constructed and operated in accordance with the City's Standard Condition SC 3.66 that requires a hydrology study and drainage analysis be prepared and signed by a California registered civil engineer in accordance with the San Bernardino County Hydrology Manual and the City of Ontario's Standards and Guidelines. Additional drainage facilities may be required after review of the studies by the City.

PPP HYD-2 Any construction shall be regulated by the SWRCB in a manner pursuant to and consistent with applicable requirements contained in the General Permit No. CAS000002, SWRCB Order Number 2009-0009-DWQ. This includes preparation of a SWPPP and an Erosion Sediment and Control Plan, as per the City of Ontario's requirements.

PPP HYD-3 The Project will be constructed and operated in accordance with the San Bernardino County MS4 Permit (Order No. R8-2010-0036, NPDES No. CAS618036 as renewed by the ROWD submitted on August 1, 2014). The MS4 Permit requires new development and redevelopment projects to prepare a preliminary WQMP and a final WQMP to:

- Develop site design measures using LID principles
- Establish Project-specific DCV and applicable HCOC requirements
- Evaluate feasibility of on-site LID BMPs
- Maximize hydrologic source control, infiltration, and biotreatment BMPs
- Select applicable source control BMPs

[16] County of San Bernardino. 1986. San Bernardino County Hydrology Manual. https://www.sbcounty.gov/uploads/DPW/docs/HydrologyManual.pdf. (accessed April 2023).

- Address post-construction BMP maintenance requirements

PPP HYD-4: On-site wells shall be abandoned in compliance with DWR standards and San Bernardino County well permit requirements.

4.10.6 Impacts and Mitigation Measures

Impact 4.10-1 ***Would the Project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?***

Level of Significance: Less than Significant Impact

Specific Plan – Phase I

Construction

Clearing, grading, excavation, and construction activities associated with the Project have the potential to impact water quality through soil erosion and increasing the amount of silt and debris carried in runoff. Additionally, the use of construction materials, such as fuels, solvents, and paints may present a risk to surface water quality. Finally, the refueling and parking of construction vehicles and other equipment on-site during construction may result in oil, grease, or related pollutant leaks and spills that may discharge into the storm drain system.

To minimize these potential impacts, development of the Project would require compliance with the CGP Water Quality Order 2009-0009-DWQ (as amended by Order No. 2010 0014-DWQ and 2012-006-DWQ), which requires the preparation and implementation of a SWPPP. A SWPPP requires the incorporation of BMPs to control sediment, erosion, and hazardous materials contamination of runoff during construction and prevent contaminants from reaching receiving water bodies. The SWRCB mandates that projects that disturb one or more acres of land must obtain coverage under the Statewide CGP. As required by the CGP, prior to the start of construction activities, the Project Applicant must file PRDs with the SWRCB, which includes a NOI, risk assessment, site map, annual fee, signed certification statement, SWPPP, and post-construction water balance calculations. The construction contractor is always required to maintain a copy of the SWPPP at the site and implement all construction BMPs identified in the SWPPP during construction activities. Prior to the issuance of a grading permit, the Project Applicant would be required to provide proof of filing of the PRDs with the SWRCB, which include preparation of SWPPP. Categories of potential BMPs that would be implemented for this Project are described in ***Table 4.10-1: Construction BMPs***.

Table 4.10-1: Construction BMPs

Category	Purpose	Examples
Erosion Controls and Wind Erosion Controls	• Use project scheduling and planning to reduce soil or vegetation disturbance (particularly during the rainy season). • Prevent or reduce erosion potential by diverting or controlling drainage. • Prepare and stabilize disturbed soil areas.	Scheduling, preservation of existing vegetation, hydraulic mulch, hydroseeding, soil binders, straw mulch, geotextile and mats, wood mulching, earth dikes and drainage swales, velocity dissipation devices, slope drains, streambank stabilization, compost blankets, soil preparation/roughening, and non-vegetative stabilization.
Sediment Controls	Filter out soil particles that have been detached and transported in water.	Silt fence, sediment basin, sediment trap, check dam, fiber rolls, gravel bag berm, street sweeping and vacuuming, sandbag barrier, straw bale barrier, storm drain inlet protection, manufactured linear sediment controls, compost socks and berms, and biofilter bags.
Wind Erosion Controls	Apply water or other dust palliatives to prevent or minimize dust nuisance.	Dust control soil binders, chemical dust suppressants, covering stockpiles, permanent vegetation, mulching, watering, temporary gravel construction, synthetic covers, and minimization of disturbed area.
Tracking Controls	Minimize the tracking of soil off-site by vehicles.	Stabilized construction roadways and construction entrances/exits, and entrance/ outlet tire wash.
Non-Storm Water Management Controls	• Prohibit discharge of materials other than stormwater, such as discharges from the cleaning, maintenance, and fueling of vehicles and equipment. • Conduct various construction operations, including paving, grinding, and concrete curing and finishing, in ways that minimize non-stormwater discharges and contamination of any such discharges.	Water conservation practices, temporary stream crossings, clear water diversions, illicit connection/discharge, potable and irrigation water management, and the proper management of the following operations: paving and grinding, dewatering, vehicle and equipment cleaning, fueling and maintenance, pile driving, concrete curing, concrete finishing, demolition adjacent to water, material over water, and temporary batch plants.
Waste Management and Controls (i.e., good housekeeping practices)	Manage materials and wastes to avoid contamination of stormwater.	Stockpile management, spill prevention and control, solid waste management, hazardous waste management, contaminated soil management, concrete waste management, sanitary/septic waste management, liquid waste management, and management of material delivery storage and use.

Source: California Stormwater Quality Association 2003. *Construction BMP Handbook*. https://www.casqa.org/resources/bmp-handbooks. (accessed April 2023).

In addition, the City requires that an erosion and sediment control plan be submitted prior to grading plan approval and the issuance of a grading permit. Implementation of the erosion control plan would address any potential erosion issues associated with the proposed grading and site preparation activities. In addition, implementation of a Soil Management Plan, per **MM HAZ-2**, during grading activities would ensure that soils containing residual level of hazardous materials and vapors (such as hydrocarbons or arsenic) are properly identified, monitored, and managed on-site; refer to ***Section 4.9: Hazards and Hazardous Materials***.

Operations

Once the Project has been constructed, urban runoff could include a variety of contaminants that could impact water quality. Runoff from buildings and parking lots typically contain oils, grease, fuel, antifreeze, by-products of combustion (such as lead, cadmium, nickel, and other metals), as well as fertilizers, herbicides, pesticides, and other pollutants. Precipitation at the beginning of the rainy season may result in an initial stormwater runoff (first flush) with high pollutant concentrations.

According to the Santa Ana RWQCB MS4 permit, this project would be classified as a Priority Development Project because it would create more than 10,000 square feet of impervious surfaces. Therefore, a preliminary WQMP and a final WQMP would be required for the Project under the MS4 Permit. A preliminary WQMP has been prepared by JLC Engineering and Consulting Inc. on March 16, 2023 (see ***Appendix G2***) and a final WQMP would be submitted to the City prior to the start of construction.

The preliminary WQMP for the Project includes the following site design/ LID BMPs:

- Install underground stormwater retention chambers where downstream landscaped areas are limited.
- Install approved Stormwater Drywells in detention areas.
- Construct streets, sidewalks, and parking lot stalls to the minimum widths necessary.

Source control BMPs are designed to minimize the potential for pollutants to come into contact with stormwater, thereby limiting the potential for water quality impacts downstream. A variety of source control BMPs will be incorporated into the Project and implemented during its operation, including the following:

- Minimize non-stormwater site runoff through efficient irrigation system design and controllers.
- Minimize trash and debris in storm runoff in parking lots, and roadways through a regular sweeping program.
- Provide solid roofs overall trash enclosures.
- Provide site occupants/site owners/property managers with a copy of the project WQMP and stormwater BMPs.
- Provide site occupants and employees with education/training materials for operation and maintenance of the stormwater BMPs.

- Install stormwater placards/stenciled messages with a "No Dumping" message on all on-site/off-site storm drain inlets.

Treatment control BMPs (single or in combination) remove pollutants of concern from on-site runoff. The following BMPs are designed to control stormwater pollutants where it is not feasible to install on-site or off-site Site Design/LID BMPs, with the requisite capacity to treat the DCV for identified Pollutants of Concern or where pretreatment of stormwater runoff is required, ahead of infiltration all treatment control BMPs would be designed in accordance with the procedures and spreadsheets provided in the San Bernardino County Technical Guidance Document for WQMPs and include:

- Gravity Separator devices for pretreatment of sediment, trash/litter or Oil & Grease

The preliminary WQMP shows that the Project can treat the full DCV on-site. The DCV would be captured and treated by seven Chemical Mechanical Polishing (CMP) underground detention basins. Stormwater runoff is captured via catch basins that convey the runoff into hydrodynamic separators (Debris Separating Baffle Boxes [DSBB]). The DSBBs consist of settling chambers for separating out larger solids and a media filter cartridge for capturing fine total suspended solids that may contain metals, nutrients, and bacteria. Runoff is then released into the on-site storm drains for eventual discharge into the regional storm drain system.

As specified in the preliminary WQMP, the HCOC requirements are achieved by using LID and hydromodification BMPs. The mitigation volume is approximately 161,261 cu-ft. The total storage volume is 430,485 cu-ft which is greater than the mitigation volume needed. As a result, the mitigation volume has been contained by the proposed BMPs. Thus, operational water quality impacts would be less than significant with the implementation of **PPP HYD-3** and maintenance of the BMPs described above and as specified in the WQMP. Furthermore, the Project would comply with all state, county, and local regulations regarding stormwater runoff during construction and operational phases of the Project. Therefore, water quality standards and waste discharge requirements would not be exceeded, and surface water and groundwater quality would not be degraded. Impacts would be less than significant.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. Note that the Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals for Phase II at this time. Phase II would add to the impervious surfaces within the site when Planning Areas 2B and 3B are completed, which could result in urban runoff which would include a variety of contaminants that could impact water quality. While the Phase II development structures and associated operations would alter the existing hydrological characteristics of the site, impacts associated with water quality would be less than significant, as the Project would not increase the time of concentration and the post-development runoff volume and would

incorporate applicable BMPs. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[17]

Conclusion

As noted above, the Project would not violate water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality with implementation of **PPP HYD-1** through **HYD-3** and compliance with all applicable regulation and permitting. The Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. Impacts would be less than significant. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[18]

Mitigation Measures

No mitigation is necessary.

Impact 4.10-2 ***Would the Project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?***

Level of Significance: Less than Significant Impact

Specific Plan – Phase I

Construction and Operations

The Project site contains several active wells that feed into man-made ponds and channels. In compliance with the Chino Basin Water Master's Well Procedure for Developers, a well use/destruction plan and schedule for all existing private/agricultural wells shall be submitted to the City for approval prior to the issuance of permits for any construction activity. If a private well is actively used for water supply, the Developer shall submit a plan to abandon such well and connect users to the City's water system when available. Wells shall be destroyed/abandoned per the California Water Resource Guidelines and require permitting from County Health Department. Pursuant to **PPP HYD-4,** a copy of such permit and Form DWR 188 Well Completion Form shall be provided to the Development Engineering Department and the Utilities Engineering Department prior to issuance of grading and/or building permits. If the Developer proposes temporary use of an existing agricultural well for purposes other than agriculture, such as grading, dust control, etc., the developer shall make a formal request to the City of Ontario for such use prior to issuance of permits for any construction activity. Upon approval, the Developer shall enter into an agreement with the City and pay any applicable fees as set forth by the agreement. Therefore, with **PPP HDY-4** implemented, construction-related impacts are not anticipated.

As outlined in Draft EIR ***Section 3.0: Project Description***, water service to the Project would be provided by the City, which currently receives approximately 70 to 80 percent of its groundwater supply from the Chino Basin in addition to imported, local, and recycled water provided from the Water Facilities Authority

[17] City of Ontario. 2022. *TOP 2050 Final Supplemental EIR Section 5.10, Hydrology and Water Quality.* https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (accessed April 2023).
[18] Ibid.

(WFA), Chino Basin Desalter Authority (CDA), and Inland Empire Utilities Agency (IEUA), respectively. The Chino Basin is one of the largest groundwater basins in southern California, with approximately 5 million acre-feet of water demand in storage and has an unused capacity to store approximately 1 million acre-feet of additional water. Thus, the basin has the capacity to store an additional amount of water similar to the storage capacity of Diamond Valley Lake. The availability of additional storage in the basin allows the City to take advantage of wet years by storing additional water for use in dry years. Ontario participates in the Dry Year Yield (DYY) program with IEUA and Metropolitan Water District (MWD). In addition, the City benefits from recharge of IEUA recycled water, in compliance with Title 22 water quality standards, which can be pumped or stored for future use.

A Water Supply Assessment (WSA) has been prepared (**Appendix J**) to assess water use and water supply information upon total Project buildout (Phase I and Phase II); discussed further in Draft EIR ***Section 4.17: Utilities and Service Systems***. The WSA demonstrates that the Project's projected water demands are generally consistent with those assumed in the City's Urban Water Management Plan. Therefore, due to the availability of water supplies, payment of fees, and ability for the City to meet the Project's water demand, the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin.

Specific Plan – Phase II, Future Development Areas

Construction and Operations

Refer to Phase I discussion above. Note that the Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals for Phase II at this time. Phase II would add to the impervious surfaces within the site when Planning Areas 2B and 3B are completed. While the Phase II structures and associate operations would alter the existing hydrological characteristics of the site, impacts associated with sustainable groundwater management of the basin would be less than significant, as the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[19]

Conclusion

As noted above, the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[20]

[19] Ibid.
[20] Ibid.

Mitigation Measures

No mitigation is necessary.

Impact 4.10-3 ***Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would?***

i) Result in substantial erosion or siltation on- or off-site?

ii) Substantially increase the rate or amount of surface run-off in a manner which would result in flooding on- or off-site?

iii) Create or contribute run-off water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted run-off?

iv) Impede or redirect flood flows.

Level of Significance: Less than Significant Impact

Specific Plan – Phase I

Construction and Operations

Construction of the Project would alter the existing drainage pattern of the site, but not in a manner that would result in substantial erosion or siltation. The Project would include the use of an Erosion Control Plan and methods that reduce overall erosion during construction and operation, such as preserving vegetation, soil binders, mulching, soil roughening, and stabilization. Furthermore, this Project will be conditioned to contribute funding to the construction of the Master Planned Euclid Avenue storm drain. The Project area storm drain improvements, shown in ***Figure 3-20: Storm Drain Plan***, are consistent with the facilities specified in Drainage Area XIV of the City Planned Drainage Facilities (refer to ***Figure 3-21: City of Ontario Ultimate Storm Drain System***).

Drainage Area XIV consists of an area approximately 2.8 square miles along the westerly boundary of Ontario Ranch-West. The area is generally bounded by Riverside Drive to the north, Euclid Avenue to the west, Merrill Avenue to the south, and Bon View Avenue to the east. There are no improved drainage facilities other than graded earthen ditches since the majority of the area is currently being used for agriculture. Drainage Area XIV drains to the City of Chino. It discharges to the existing Airport Channel at the intersection of Euclid Avenue and Merrill Avenue. The Airport Channel is an interim facility that runs south along the east side of Euclid Avenue to the Prado Flood Control Basin. The City of Chino's future master-planned storm drain, the Euclid Avenue Storm Drain (Line "I" per City of Chino's Master Plan of Drainage for Subarea 2), would need to be re-evaluated by the City of Chino, to accommodate updated flow rates projected to be discharged from Drainage Area XIV, within the Ontario Ranch area, per this study. In 2003, the Master Plan of Drainage was revised (Revision No. 2) to include Subarea 2 "The Preserve," which identified capacity expansion due to the addition of 8.5 square miles in the southeast area of the City of Chino. The Preserve is encompassed by the City (Ontario Ranch area) to the north, Riverside County to the south and east, and Euclid Avenue to the west. Drainage Basin Areas were added and redefined from the Chino Airport Master Plan and the City's New Model Colony (Ontario Ranch)

Drainage Master Plan. In 2004 and 2007, two unofficial amendments were prepared to update Revision No. 2, which identified revisions necessary for the Drainage Basins B, D, and J, and Drainage Basin G respectively for the ultimate build-out of The Preserve area. On-site drain improvements for the Project would include storm water detention/ retention/ water quality basins, which would capture, treat, and/or gradually release storm water into the downstream public storm drain systems. On-site storm water treatment would incorporate a system of catch basins within each building's parking area. Each storm drain in Ontario Ranch Road, Schaefer Avenue, and Euclid Avenue will be designed with conveyance tributary to a sub-regional full trash capture system such as a debris separating baffle box, continuous deflective system, or an equivalent hydrodynamic separator which has been approved by the SWRCB to satisfy the statewide trash mandate. Each device will be approved by and listed on the Certified Full Capture System List of Trash Treatment Control Devices of the SWRCB. Refer to *Impact 4.10-1* above for discussion regarding the Project's NDPES permitting process. As previously discussed above, the Project's proposed hydrology would include an on-site internal storm drain system that discharges via catch basins to subsurface facilities throughout each on-site truck yard. The treated water would be discharged from the proposed on-site storm drain system into the City's 108-inch storm drain at Euclid Avenue and Eucalyptus Avenue.

There are currently no improved drainage facilities aside from a few on-site detention areas located in the eastern portion of the site. Thus, the Project would include storm drain improvements consistent with the facilities specified in Drainage Area XIV of the City of Ontario Planned Drainage Facilities.

As part of the PM 20016 Project (Ontario Ranch Business Park) storm drain infrastructure is being constructed along Euclid Avenue, Eucalyptus Avenue, Merrill Avenue, Sultana Avenue, Campus Avenue, and Bon View Avenue. The PM 20016 Project was assessed based on the downstream storm drain construction being completed and operational. The existing Master Drainage Plan facilities constructed per PM 20016 are provided in ***Appendix G1*** as Figure 2. Based on the PM 20016 study, upstream projects, including the Euclid Mixed Use Specific Plan Project, are required to mitigate their flows to 80 percent of pre-project levels.

Catch basins located throughout the site would collect runoff. On-site storm drain systems would convey runoff to the following facilities:

- 90-inch storm drain in Euclid Avenue along the western perimeter of the Project site.
- 48-inch to 90-inch storm drain in Schaefer Avenue along the northern perimeter of the Project site.
- 78-inch to 96-inch storm drain in Ontario Ranch Road along the southern perimeter of the Project site.
- 102-inch trunk line in Euclid Avenue south to connect to the existing 108-inch storm drain at Euclid Avenue and Eucalyptus Avenue.

The existing storm drain infrastructure does not have the capacity to accept stormwater flows in excess of the 100-year storm. Based on the existing downstream Master Drainage Plan systems, the Project is required to mitigate on-site runoff to 80% of pre-project levels. According to the unit hydrograph analysis presented by ***Appendix G1***, the peak flow rate for existing conditions on-site is 78.69 cfs. Upon

implementation of the Project, the peak flow rate from the Project site would be 181.58 cfs (alternatively, 149.69 cfs based on the rational method results; provided in ***Appendix G1***). This represents an approximately 131 percent increase from existing conditions. The Project proposes on-site storm drain systems to sufficiently flood protect the project site and provide mitigation for water quality and increased runoff. The Project proposes to construct three drainage systems located to the north, west, and south of the Project site. These drainage facilities will provide the necessary flood protection for the Project. Note that the proposed on-site storm drains would be sized during the Project's final design phase to restrict site discharge such that there would be no negative impact on existing downstream drainage facilities.

The Hydraulic Reports for the Euclid Avenue Strom Drain, provided as ***Appendix G3*** and ***Appendix G4***, concluded that the storm drain improvements located in Euclid Avenue and Schaefer Avenue, associated with the Project, have been accounted for by the City of Ontario Master Drainage Plan and would not impact adversely impact the existing or planned storm drain system.

With the implementation of the **PPP HYD-1** through **HYD-3** which includes SWPPP, Erosion Control Plans, BMPs and storm plan Project features, the Project would not substantially increase the rate or amount of erosion/siltation and surface runoff in a manner that would result in on- or off-site flooding. Additionally, site design LID features and on-site detention facilities would ensure that stormwater runoff does not exceed the capacity of the storm drain system. The calculated stormwater runoff volume for the 100-year storm under post-development conditions would be less than the amount of stormwater runoff for the 100-year storm under existing conditions (refer to *Impact 4.10-1* for more information regarding proposed BMPs). Therefore, this impact would be less than significant.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. Note that the Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals for Phase II at this time. Phase II would add to the impervious surfaces within the site when Planning Areas 2B and 3B are completed. While the Phase II development structures and associate operations would alter the existing hydrological characteristics of the site, impacts associated with the alteration of the existing drainage pattern of the Project would be less than significant, as the Project would include storm drain improvements and would not substantially increase the rate or amount of erosion/siltation. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[21]

Conclusion

As noted above, with implementation of **PPP HYD-1** through **HYD-3**, the Project would not result in substantial erosion or siltation on- or off-site, substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site, create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff, or impede or redirect flood flows. The proposed Project Specific Plan proposes

[21] Ibid.

the same land uses as contained in the City's TOP 2050. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[22]

Mitigation Measures

No mitigation is necessary.

Impact 4.10-4 Would the Project in flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Level of Significance: Less Than Significant Impact

Specific Plan – Phase I and Phase II Future Development Areas

Construction and Operations

The Project site is not within a 100-year floodplain, as per FEMA FIRM No. 06071C8620H and 06071C9335H, dated August 28, 2008. It is designated as within Zone D, where no analysis of flood hazards has been conducted. However, the Project site is relatively flat and there are no nearby water bodies or streams or other conditions that would result in flooding at the Project site.

The Project site, as well as a large portion of the City, is within the dam inundation zone of San Antonio Dam. The dam is owned and operated by the USACE and functions as a flood control and debris dam for the San Antonio River. Dams in California are monitored and inspected annually by the California Division of Safety of Dams (DSOD). In addition, dam owners are required to maintain Emergency Action Plans (EAPs) that include procedures for damage assessment and emergency warnings. An EAP identifies potential emergency conditions at a dam and specifies preplanned actions to help minimize property damage and loss of life should those conditions occur. EAPs contain procedures and information that instruct dam owners to issue early warning and notification messages to downstream emergency management authorities.

The probability of dam failure is very low, and the City of Ontario has never been impacted by a major dam failure. According to the latest dam inundation map dated February 1986, the arrival time of the first flood wave would be between 8 and 10 hours after the catastrophic failure of the dam and the depth of water is estimated to be approximately two feet. This would provide ample time for implementing evacuation procedures, as specified in the City's 2018 Hazard Mitigation Plan. In addition, the proposed BMPs and LID measures at the Project site would result in the treatment and biofiltration of any floodwaters that enter the site and prevent pollutants from entering the regional storm drain system.

The Project site is also not located near any water storage tanks or reservoirs that would result in a seiche during seismic activity. The Project site is inland and approximately 30 miles from the Pacific Ocean and therefore is not at risk of flooding due to tsunamis. Therefore, impacts associated with the release of pollutants due to inundation would be less than significant.

[22] Ibid.

Note that the Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals for Phase II at this time. While the proposed Phase II development structures and associate operations would alter the existing hydrological characteristics of the site, impacts associated with the release of pollutants due to inundation would be less than significant, as risk of flooding and dam failure is low in the Project area, and risk of flooding due to tsunamis is nonexistent. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[23]

Conclusion

As noted above, the Project would not significantly risk release of pollutants due to project inundation in flood hazard, tsunami, or proximity to seiche zones, as there is a low risk of flooding in the Project area. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. Impacts would be less than significant. No mitigation is required other than compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.[24]

Mitigation Measures

No mitigation is necessary.

Impact 4.10-5: Would the Project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Level of Significance: Less Than Significant Impact

Specific Plan – Phase I

Construction and Operations

As discussed throughout the impact analyses of this section, the Project would adhere to all applicable state, regional, and local regulatory framework which would ensure that surface and groundwater quality are not adversely impacted during construction. In addition, implementation of the LID and BMP measures at the site, including hydrodynamic separators, underground detention, and Maxwell drywells would ensure that water quality is not impacted during the operational phase of the Project. As a result, the Project would not obstruct or conflict with the implementation of the Santa Ana River Basin Water Quality Control Plan (refer to *Impact 4.10-1*). On-site groundwater wells would be abandoned per the California DWR Standards and would require a permit from the San Bernardino DEHS and completion of a DWR 188 Well Completion Form (refer to *Impact 4.10-2*).

Upon development, the Project site would be connected to the City's public water supply and there would be no on-site wells for use of groundwater. The City manages both the potable and non-potable supplies to ensure withdrawals from the Chino Groundwater Basin do not exceed the safe yield for the Basin, as per the Chino Basin Watermaster's Optimum Basin Management Program (OBMP). The Chino Basin is listed as "very low" priority pursuant to the Sustainable Groundwater Management Act (SGMA), and therefore is not operating under a Groundwater Sustainability Plan (GSP) pursuant to SGMA. However,

[23] Ibid.
[24] Ibid.

the Chino Basin is an adjudicated basin operating under the OBMP noted above (refer to ***Section 4.17: Utilities and Service Systems*** for more information regarding potable water). As discussed above in *Impact 4.10-1* and *Impact 4.10-2* regarding water quality and groundwater supplies, the Project would meet applicable local and regional water consumption and water quality goals of the OBMP. Therefore, the Project would not obstruct or conflict with the OBMP. With adherence to all applicable regulative framework, and implementation of **PPP HYD-1** through **HYD-4**, impacts would be less than significant.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. Note that the Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals for Phase II at this time. Phase II would add up to 466 residential units within Planning Area (PA) 3B and 204,861 SF of business park uses, as well as open space/non-recreational uses when Planning Area 5 is completed. Upon development, residential uses would be connected to the City's public water supply which withdraws water from the Chino Basin. Per the Phase I discussion above, the Chino Basin is not subject to a GSP, and the Project would not obstruct or conflict with the OBMP. While the structures and associated operations would alter the existing hydrological characteristics of the site, impacts related to the implementation of a water quality control plan or sustainable groundwater management plan would be less than significant. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[25]

Conclusion

As noted above, the Project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[26]

Mitigation Measures

No mitigation is necessary.

4.10.7 Cumulative Impacts

Hydrology and Drainage

The Project would be pursuant to TOP 2050 and would represent a consistent and logical continuation of the existing and planned pattern of development in Ontario, specifically the Ontario Ranch area. The City has long anticipated that this area would transition from dairy/agricultural to urban uses, and the Project Specific Plan is implementing TOP 2050.[27]

[25] Ibid.
[26] Ibid.
[27] Ibid.

Cumulative projects within the Chino Creek Watershed would increase impervious areas and increase stormwater runoff rates. However, all projects within the watershed would be required to comply with all regulative framework and prepare and implement WQMPs that include provisions for the capture and infiltration of runoff or the temporary detention of stormwater runoff in HCOC areas so that post-development runoff discharges do not exceed pre-development runoff rates, in accordance with the NPDES MS4 permit. Thus, no significant cumulative drainage impacts would occur, and Project drainage impacts would not be cumulatively considerable.

Water Quality

Cumulative projects have the ability to generate pollutants during project construction and operation. All construction projects that disturb one acre or more of land would be required to prepare and implement SWPPPs in order to obtain coverage under the statewide GCP. All projects within the watershed would also be required to prepare and implement WQMPs specifying BMPs, including LID measures, which would be applied during project design and project operation to minimize water pollution from project operation. Furthermore, all future development would be required to comply with applicable local, state and federal requirements, as part of the City's discretionary review process. This includes compliance with the City's municipal code, which specifically addresses water quality (Municipal Code Article 5, Construction Requirements). Thus, no significant cumulative water quality impacts would occur, and project water quality impacts would not be cumulatively considerable.

4.10.8 Significant Unavoidable Impacts

No significant unavoidable impacts related to hydrology and water quality have been identified.

4.11 LAND USE AND PLANNING

4.11.1 Introduction

This section of the Draft Environmental Impact Report (EIR) evaluates potential impacts to land use in the City of Ontario (City) from implementation of the proposed Euclid Mixed Use Specific Plan Project (Project). The analysis in this section is based on the proposed land use designations described in Chapter 3: Development Plan and Chapter 4: Land Use and Development Standards; and Chapter 5: Design Guidelines of the Euclid Mixed Use Specific Plan (Project Specific Plan). The Project, including the Specific Plan, has been evaluated for its consistency with relevant goals and policies in The Ontario Plan (TOP) 2050 and the Southern California Association of Governments' (SCAG) 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal).

Potential land use impacts of the Project analyzed in this section of the Draft EIR include those that could result in land use incompatibilities, division of neighborhoods or communities, or interference with other land use plans. Where applicable, mitigation measures are proposed to ensure the application of actions which would minimize or remove land use impacts that are identified as significant.

This Section and environmental discussion use information from the following City documents:

- The Ontario Plan 2050
- City of Ontario Municipal Code
- City of Ontario TOP 2050 Final Supplemental EIR

4.11.2 Environmental Setting

The Project site is in the southwestern portion of the City, immediately north of the City of Chino in San Bernardino County. The proposed Project site is bounded by Schaefer Avenue on the north, Sultana Avenue on the east, Edison Avenue on the south, and Euclid Avenue on the west (See ***Figure 3-2: Local Vicinity Map*** and ***Figure 3-3: Project Boundary***). The Assessor Parcel Numbers (APNs) for this Project are 1053-071-01, -02, -03, -04; 1053-211-01, -02, -05; 1053-281-01, -02, -03, -04, -05, -07, -08; 1053-081-01, -02, -03, -04. The proposed Project consists of a Project specific plan to allow for a business park and mixed-use development on 18 parcels covering 84.1 acres in the City. The development would include up to 290,110 square feet of commercial retail/office uses, up to 466 residential units, and 1,386,777 square feet of business park uses, as described further below. The Project site is anticipated to be developed in two phases within five planning areas (PAs), with only Phase I proposed at a project-level entitlement. Phase I would include PAs 1, 2A, and 3A, proposing the construction of 13 buildings. Cumulatively, the 13 buildings provide 1,000,595 square feet of development, however, this could increase when development proceeds beyond Phase 1 to a maximum amount of up to 1,676,887 square feet, as shown in Table 3-1: Maximum Project Buildout, below. Note that the applicant intends to process a Development Plan and Tentative Parcel Map for the Phase I Project following processing of the Project specific plan.

No development is proposed for the Phase II area at this time. Phase I is expected to start construction in 2024, with an anticipated opening year in 2032. Phase I is depicted in Figure 3-6: Phase I Conceptual Site Plan, and is evaluated at a "project-level" in the EIR. The EIR also evaluates, at a "programmatic" level, potential future development of Phase II, comprised of PAs 2B and PA 3B (no specific development proposals have been identified for the Phase II area). The EIR will evaluate the total maximum allowable development in the Project Specific Plan, which is 1,676,887 square feet of business park and mixed-use land uses, in addition to up to 466 residential units and associated on-site and off-site infrastructure improvements.

Existing Conditions

The 84.1-acre Project site is currently occupied by agricultural uses, including the raising of livestock, dairy farming activities, and a commercial nursery. Dairy farming and agriculture have been the primary uses of the Project site since before the 1930s. The majority of the site exists as fallow or cultivated fields. There is a private recreational vehicle facility in the southwestern portion of the site and a scrap yard at the intersection of Euclid Avenue and Edison Avenue. Numerous single family residential structures, as well as agricultural related buildings and open structures, are located within the Project site. Two Southern California Edison (SCE) easements extend across the Project site. No permanent structures, besides the transmission towers, are located within the SCE easements; however, they have been used for various agricultural uses historically.

Surrounding Land Uses

Existing uses surrounding the Project site are similar to those on the site. Ongoing crop farming is located to the north of the Project site and a vacant property that was a former dairy farm is located to the east of the site. The property to the south is currently utilized for residential, farming, or trucking related uses. North across Schaefer Avenue is an existing dairy farm; south across Edison Avenue is an existing trucking facility; east across Sultana Avenue is vacant land and an existing trucking facility; west across Euclid Avenue, is the City of Chino with existing commercial and residential uses, and a truck/trailer storage (see ***Figure 3-4: Surrounding Land Uses***).

Existing General Plan Land Use Designations and Zoning Classifications

The City's General Plan was comprehensively updated and adopted as TOP 2050 on August 16, 2022. TOP 2050 serves as the City's business plan and includes a long-term vision and a principle-based Policy Plan, which functions as the City's General Plan. TOP 2050 land use designations and the Ontario Municipal Code - Title 9 Development Code (Ontario MC) zoning classifications for the Project site are consistent with the TOP 2050's existing land designations (see ***Figure 3-5: Existing Land Use and Zoning***). The City's TOP 2050 designates the Project site for development of Business Park (BP) (0.6 floor area ratio [FAR]), and Mixed-Use (MU) at 14.0 to 65.0 du/ac; 1.5 FAR office; 1.0 FAR retail.[1]

[1] City of Ontario. 2022. *TOP 2050, Figure LU-01, Official Land Use Plan*. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/Land%20Use/Figure%20LU-01%20Official%20Land%20Use%20Plan_0.pdf. (accessed March 2023).

TOP land use designations for the Project site by parcel number are as follows:

- Business Park
  - APNs: 1053-071-01, -02, -03, -04; 1053-211-01, -02, -05; 1053-081-01, -02, -03, -04.
- Mixed-Use
  - APNs: 1053-281-01, -02, -03, -04, -05, -07, -08.

The existing zoning designation is Specific Plan (SP) Zoning District. The SP Zoning District designation requires approval of a specific plan by the City for urban development of the Project site. Specific Plan will be the zoning for the Project site, consistent with TOP 2050.

Additionally, the Phase II portion of the Project site (PA 2B and 3B) where no site-specific development plans have been submitted as of yet, is located within the TOP 2050 South Euclid District Place Type. Lying at the southwest corner of the City, the South Euclid District Place Type is envisioned to develop as a vertically and horizontally mixed-use area to serve the populations of newly developing Ontario Ranch and adjoining communities.[2] The district will include a range of housing types integrated within and alongside retail, commercial, and office uses, as well as public spaces and trails that connect the "Great Park" to Euclid Avenue. The area is intended to be highly walkable with pedestrian-oriented site design and road network and transit stops with amenities.

4.11.3 Regulatory Setting

Regional

Southern California Association of Governments

SCAG is a regional council of governments representing Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura counties, which encompass over 38,000 square miles. SCAG is the federally recognized metropolitan planning organization (MPO) for this region and a forum for addressing regional issues concerning transportation, the economy, community development, and the environment. SCAG is also the regional clearinghouse for projects requiring environmental documentation under federal and state law. In this role, SCAG reviews proposed development and infrastructure projects to analyze their impacts on regional planning programs. As the southern California region's MPO, SCAG cooperates with the South Coast Air Quality Management District (SCAQMD), the California Department of Transportation (Caltrans), and other agencies in preparing regional planning documents. SCAG has developed regional plans to achieve specific regional objectives, as discussed below.

The Specific Plan is considered a project of "regionwide significance" pursuant to the criteria in SCAG's Intergovernmental Review Procedures Handbook (November 1995) and Section 15206 of the state CEQA Guidelines. Therefore, this section addresses the Project's consistency with the applicable SCAG regional planning guidelines and policies.

[2] City of Ontario. (2022). *TOP 2050, Page 107*. https://www.ontarioca.gov/OntarioPlan. (accessed March 2023).

Regional Transportation Plan/Sustainable Communities Strategy

In September 2020, SCAG adopted the 2020–2045 RTP/SCS, a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. The 2020-2045 RTP/SCS includes a strong commitment to reduce emissions from transportation sources to comply with Senate Bill (SB) 375, improve public health, and meet the National Ambient Air Quality Standards (NAAQS). This long-range plan, required by the State of California and the federal government, is updated by SCAG every four years as demographic, economic, and policy circumstances change. The RTP/SCS is a living, evolving blueprint for the region's future.

The City is a member jurisdiction of the San Bernardino Council of Governments (SBCOG), and a participating agency in SCAG's 2020-2045 RTP/SCS.

Ontario International Airport Land Use Compatibility Plan

The Project site is within the Ontario Airport Influence Area (AIA). The Ontario International Airport (ONT) Land Use Compatibility Plan (ALUCP) was adopted on April 19, 2011, by the Ontario City Council to promote compatibility with surrounding land uses. The ONT ALUCP provides guidance to local jurisdictions that may be affected by ONT, and the objective of the ALUCP is to avoid future compatibility conflicts. Projects within the Specific Plan boundary shall be required to be consistent with the policies and criteria of the ALUCP for ONT.

Chino Airport Land Use Compatibility Plan

The Project site is within the Chino Airport AIA. The Chino Airport is located approximately one-mile south of the Project site. The City of Chino is currently preparing an ALUCP for Chino Airport which relies on the California Airport Land Use Planning Handbook published by Caltrans Division of Aeronautics. The Chino ALUCP will establish policies and criteria for the four types of compatibility impacts which include safety, noise, airspace protection, and overflight. Projects within the Specific Plan boundary shall be required to be consistent with the policies and criteria of the ALUCP for Chino Airport. The purpose of an ALUCP is to promote peaceful and safe coexistence with the airport's surrounding communities and to identify areas that would be influenced by future airport operations. The ALUCP is intended to:

- Provide for the orderly development of the public use airport and the area surrounding to promote the overall goals and objectives of the California airport noise and to prevent the creation of new noise and safety problems;
- Protect public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas surrounding the airport.

Local

City of Ontario General Plan - The Ontario Plan 2050

The City adopted the TOP 2050 in August 2022, which shows the Project site designated for Business Park, Mixed-Use, and Open Space-Non-recreational uses, consistent with the Specific Plan. In addition, the

Project site is within the ONT and Chino Airport AIA's.[3,4] The existing land use designations, their density or intensity, and intention according to TOP 2050, are described in ***Table 4.11-1: Land Use Designations***.

Included in TOP 2050 is the Policy Plan (General Plan), which is a framework that would guide the City's future growth through the application of policies and goals. TOP 2050 Land Use Element reflects the City's Vision to be a complete community. Through the Land Use Element, the City desires to have distinct neighborhoods and activity centers, corridors, and districts; diversity of residential, employment, retail, entertainment, community, and recreational services; and a world-class airport which are connected through a unified mobility system.

Table 4.11-1: Land Use Designations

Land Use	Dwelling Units per Acre or Floor Area Ratio	Description
Business Park	0.60 FAR	Employee-intensive office uses including corporate offices, technology centers, research and development, "clean" industry, light manufacturing, and supporting retail within a business park. setting.
Mixed-Use – Great Park	14.01 to 65.0 dwelling units per acre 1.5 FAR for office uses 1.0 FAR for retail uses *Subject to Specific Plan.*	The Great Park Mixed Use Areas are envisioned as the southwestern activity centers for citizens of Ontario. These areas accommodate a vertical and horizontal mixture of commercial, office, entertainment, and residential uses all connecting to the Great Park with a pedestrian oriented atmosphere. It is envisioned that the major roads through these Mixed-Use areas are couplets, which are a series of one-way streets that disperse traffic and allow reduced street widths, maximize the sense of community, and emphasize pedestrian accessibility. These Mixed-Use areas are envisioned as low-rise (3-5 stories) with some mid-rise (5-10 stories) near the intersection of Euclid Avenue and Edison Avenue/Ontario Ranch Road.
Open Space – Non-Recreation (OS – NR)[1]	Not Applicable	Open space that includes utility easements, and drainage channels. We desire to realize multiple uses from these open spaces, such as trails, greenways, joint-use recreational amenities, landscaped parkways/medians, parking lots, and nurseries.
Overlays		
ONT Airport Influence Area	Varies	An area in which current or future airport-related noise, overflight, safety, or airspace protection factors may significantly affect land uses or necessitate restriction on those uses. Refer to the Airport Land Use Compatibility Plan for Ontario International Airport.
Chino Airport Influence Area	Varies	An area in which current or future airport-related noise, overflight, safety, or airspace protection factors may significantly affect land uses or necessitate restriction on those Uses. Refer to the Ontario Development Code for Chino Airport land use policies and criteria for development.
Plan Required Overlays		
Ontario Ranch	Per approved individual specific plans	Envisioned as a mixture of residential neighborhoods integrated with areas of high intensity (3-10 stories) employment, retail, service, entertainment, cultural, and residential uses united by a network of greenways/trails, open spaces, amenities, and infrastructure. All

Land Use	Dwelling Units per Acre or Floor Area Ratio	Description
		development to be oriented toward or designed to leverage the "Great Park," a linear open space amenity containing active and passive recreational features, gardens, water features, and cultural facilities. Additional direction may be provided through the application of place types and specific plans.

Source: City of Ontario. 2022. *TOP 2050, Table 3-2 Land Use Designations in the City of Ontario*. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf (accessed March 2023).
Notes:
1. Some parcels with this designation may fall within a Place Type, which characterize the vision and urban design intent within a specified area. If any portion of a parcel is within a Place Type boundary, as shown in TOP 2050 Figure CD-01, Place Types in the Community Design Element, that parcel is subject to Goal CD-3 and related policies. Projects must demonstrate that they are consistent with the vision and policy intent for the applicable Place Type as defined in TOP 2050 Exhibits CD-02 – CD-09. Link to Community Design Element Urban, Mixed Use, and Transit-oriented Place Types Section.

The following goals and policies contained in the Land Use Element are relevant to the Project:

Land Use Element[5]

Goal LU-1 **A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.**

Policy LU-1.3 **Adequate Capacity**. We require adequate infrastructure and services for all development.

Policy LU-1.4 **Multimodal Mobility**. We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on active transportation, transit, electric vehicles, and multimodal transportation opportunities.

Policy LU-1.6 **Complete Community**. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

Goal LU-4 **Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.**

Policy LU-4.2 **Interim Development**. We allow development in urban, mixed use, and transit-oriented Place Types that is not immediately reflective of our ultimate Vision for the Place Type, provided it can be modified or replaced when circumstances are right to support development aligned with the Place Type Vision. We will not allow development that impedes, precludes, or compromises our ability to achieve our Vision.

Policy LU-4.4 **Shared Infrastructure**. We encourage and facilitate the use of shared infrastructure (including shared or managed parking) in urban, mixed use, and transit-oriented Place Types.

[5] City of Ontario. 2022. *TOP 2050, Land Use Element*. https://www.ontarioca.gov/about-ontario-ontario-plan-policy-plan/land-use. (accessed March 2023).

Goal LU-5 **Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.**

Policy LU-5.7 **ALUCP Consistency with Land Use Regulations**. We comply with state law that requires general plans, specific plans, and all new development to be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public-use airport.

City of Ontario Development Code

The City of Ontario Development Code, Title 9 of the Ontario MC, is designed to promote and protect public health, safety, and general welfare in the community. Development Code Chapter 5, Zoning and Land Use establishes zoning designations and development standards to regulate orderly development. The Project site is zoned as SP District. The SP zoning district was established to accommodate the adoption of Specific Plans pursuant to the Development Code and consistent with all land use designations of the Policy Plan component of the TOP.

4.11.4 Impact Thresholds and Significance Criteria

According to Appendix G of the state CEQA Guidelines, a project would normally have a significant effect on the environment if the project would:

- Physically divide an established community.
- Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

Methodology

This analysis analyzes the Project's consistency with regional and local plans, policies and regulations for the purposes of avoiding or mitigating an environmental effect. Specifically, the Project was analyzed with respect to the applicable regional planning guidelines and strategies of SCAG's 2020-2045 RTP/SCS and the City's TOP 2050.

Approach to Analysis

This analysis of impacts on land use and planning components examines the Project's temporary (i.e., construction) and permanent (i.e., operational) effects based on application of the significance criteria/thresholds outlined above. Each criterion is discussed in the context of the Project site and the surrounding characteristics/geography. The impact conclusions consider the potential for changes in environmental conditions, as well as compliance with the regulatory framework enacted to protect the environment.

The baseline conditions and impact analyses are based on review of Project maps and drawings; analysis of aerial and ground-level photographs; and review of various data available in public records, including local planning documents. The determination that a Project component would or would not result in "substantial" adverse effects on land use and planning standards considers the available policies and

regulations established by local and regional agencies and the amount of deviation from these policies in the Project's components.

4.11.5 Plans, Programs, and Policies

Refer to the Project Specific Plan which contains various development standards and design guidelines (see Project Specific Plan Chapter 5, Design Guidelines) that reduce or avoid potentially significant impacts.

4.11.6 Impacts and Mitigation Measures

Impact 4.11-1 Would the Project physically divide an established community?

Level of Significance: No Impact

Specific Plan – Phase I and Phase II Future Development Areas

Construction and Operations

The Project applicant proposes development that would include up to 290,110 square feet of commercial retail/office uses, up to 466 residential units, and 1,386,777 square feet of business park uses. The Project site is anticipated to be developed in two phases within five planning areas (PAs), with only Phase I proposed at a project-level entitlement. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time as the Applicant does not own the parcels within the Phase II area (PAs 2B and 3B) and does not have access to the Phase II area at this time. Phase I would include PAs 1, 2A, and 3A, proposing the construction of 13 business park buildings with ancillary office space, approximating 1,386,777 square feet of business park uses and designated open space. Phase I is expected to start construction in 2024, with an anticipated opening year in 2032. Refer to ***Figure 3-6: Phase I Conceptual Site Plan***.

Projects that are typically considered to have the potential to divide an established community include the construction of new freeways, highways, roads, or other uses that physically separate an existing or established neighborhood. As summarized in ***Section 4.11.2: Environmental Setting***, the Project site is developed with existing buildings and structures used for agricultural purposes and does not include an established community and is not currently zoned for residential use.

Project development would not include improvements which would substantially alter existing roadways and transportation corridors in a manner that would cause the removal or separation of existing adjacent communities from important resources and neighboring units. Roadway improvements associated with the Project would also increase transportation efficiency within the Project site and adjacent roadways without degrading the existing neighborhoods. Therefore, the Project would not physically divide an established community and there would be no impact.

Conclusion

As noted above, the Project would not physically divide an established community and there would be no impact. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP

2050. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[6]

Mitigation Measures

No mitigation is required.

Impact 4.11-2 ***Would the Project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?***

Level of Significance: Less Than Significant

Specific Plan – Phase I and Phase II Future Development Areas

Construction and Operations

The 84.1-acre Project site's proposed business park and mixed-use is consistent with the Project site's TOP 2050 land use designation. The Project Specific Plan would provide a land use plan, circulation plan, streetscape plan, infrastructure service plan, grading plan, maintenance plan, phasing plan, design guidelines, development regulations, and implementation measures to guide the development of the Project site. The Project would include up to 290,110 square feet of commercial retail/office uses, up to 466 residential units, and 1,386,777 square feet of business park uses. The Project site is anticipated to be developed in two phases within five PAs. The Business Park designation would allow for employee-intensive office uses including corporate offices, technology centers, research and development, "clean" industry, light manufacturing, and supporting retail within a business park setting. The Mixed-Use designation would accommodate a vertical and horizontal mixture of commercial, office, entertainment, and residential uses with a pedestrian oriented atmosphere.

Below is an evaluation of the Project's consistency with applicable plans and policies that have been adopted for the purpose of avoiding or mitigating an environmental effect.

Southern California Association of Governments RTP/SCS Compatibility

The Project is considered a project of regionwide significance pursuant to the criteria outlined in SCAG's *Intergovernmental Review Procedures Handbook* (November 1995) and state CEQA Guidelines Section 15206, because it would involve a net increase of over 500,000 square feet of business establishment. Therefore, a consistency analysis with the applicable regional planning guidelines and strategies of SCAG's 2020-2045 RTP/SCS is required. ***Table 4.11-2: Consistency with SCAG's 2020-2045 RTP/SCS Goals****,* provides an assessment of the Project's consistency with the recently adopted 2020-2045 RTP/SCS (Connect SoCal) goals. The RTP/SCS goals are directed toward transit, transportation and mobility, and protection of the environment and health of residents. Consistency with SCAG population growth projections is addressed separately in ***Section 4.13: Population and Housing***. The consistency

[6] City of Ontario. 2022. *TOP 2050 Final Supplemental Environmental Impact Report, Section 5.11, Land Use*. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (accessed March 2023).

analysis below focuses on the broad, policy-oriented goals of the 2020-2045 RTP/SCS to determine the Project's consistency with the RTP/SCS.

Table 4.11-2: Consistency with SCAG's 2020-2045 RTP/SCS Goals

RTP/SCS Goal	Project Consistency
RTP/SCS G1: Encourage regional economic prosperity and global competitiveness**.**	**Consistent:** The Project's objective is to create an economic engine to drive future growth in the City and the County, spur infrastructure improvements in the area, and implement the Specific Plan vision. The Project would allow for the development of urban uses on currently underutilized land.
RTP/SCS G2: Improve mobility, accessibility, reliability, and travel safety for people and goods.	**Consistent:** Implementation of the Project would include roadway improvements and other major infrastructure investments that would ensure that mobility accessibility for people and goods would be maximized. The vehicular and pedestrian improvements in the Project area would be implemented and maintained to meet the needs of employees and customers.
RTP/SCS G3: Enhance the preservation, security, and resilience of the regional transportation system.	**Consistent:** All modes of public and commercial transit throughout the Project area would be required to follow safety standards set by state, regional, and local regulatory documents. For example, sidewalks must follow precautions established in the Development Code. The Project would not remove or alter in a reductive manner access to the local public transportation near the Project site, including Euclid Omnitrans Bus Route 83.
RTP/SCS G4: Increase person and goods movement and travel choices within the transportation system.	**Consistent:** The Project would involve transportation improvements in the form of improvements to nearby streets. These improvements to Euclid Avenue, Edison Avenue, Schaefer Avenue, and Sultana Avenue would increase the efficiency of the streets after implementation of the Project. Further discussion regarding transportation impacts stemming from the implementation of the Project are discussed in ***Section 4.15, Transportation and Traffic***.
RTP/SCS G5: Reduce greenhouse gas emissions and improve air quality.	**Consistent:** Discussion regarding reduction in greenhouse gas (GHG) emissions can be found in ***Section 4.8, Greenhouse Gas Emissions***. Discussion regarding improvements to air quality can be found in ***Section 4.3, Air Quality***. The reduction of energy use, improvement of air quality, and promotion of more environmentally sustainable development would be encouraged through the existing and proposed alternative transportation modes, sustainable building and landscaping design techniques, and other best management practices for structures and non-structures. In addition, it is anticipated that less emissions would occur due to the mixed-use nature of the Project, which encourages an environment that is accessible through walkability and other sustainable alternatives. Further, the Project is within walking distance of the Euclid Omnitrans Bus Route 83. Omnitrans Bus Route 83 directly connects the site to the cities of Chino and Upland and to several stops in Ontario as well as the Chino Transit Center and Ontario Civic Center Transfer Station.

RTP/SCS Goal	Project Consistency
RTP/SCS G6: Support healthy and equitable communities.	**Consistent:** The Project would be constructed to current building codes and state and Federal requirements including CALGreen Code.
RTP/SCS G7: Adapt to a changing climate and support an integrated regional development pattern and transportation network.	**Consistent:** The Project would construct new roads, infrastructure, and buildings to support uses consistent with the 2020-2045 RTP/SCS and consistent with current building codes and state and Federal requirements including CALGreen Code. This includes electric vehicle (EV) Parking spaces, energy-efficient buildings, and use of construction and grading equipment that complies with current air quality standards, etc. See ***Section 4.3, Air Quality; 4.8, Green House Gas Emissions;*** and ***Section 4.15, Transportation and Traffic***.
RTP/SCS G8: Leverage new transportation technologies and data-driven solutions that result in more efficient travel.	
RTP/SCS G9: Encourage development of diverse housing types in areas that are supported by multiple transportation options.	**Consistent:** The TOP 2050 land use and zoning designations for the Project site are for Business Park and Mixed-Use which would allow for up to 466 residential dwelling units.
RTP/SCS G10: Promote conservation of natural and agricultural lands and restoration of habitats	**Consistent:** The Project would allow for approximately 12 acres of open space designated for non-recreational uses. While no buildings are proposed within this area, it is suitable for uses such as landscape plant nurseries, recreational vehicle and truck/trailer storage and other uses allowed by the City zoning. There are no habitat restoration sites present on the Project site.
Source: SCAG. 2020. *2020-2045 SCAG RTP/SCS Connect SoCal Goals*. https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocal-plan_0.pdf?1606001176. (accessed March 2023).	

The Ontario Plan Compatibility

An analysis of the Project's consistency with Citywide goals in the TOP 2050 is provided in ***Table 4.11-3: Consistency with the City of Ontario General Plan (TOP) 2050***. Because CEQA Impact Threshold 4.10-2 emphasizes consistency with land use goals "adopted for the purpose of avoiding or mitigating an environmental effect," ***Table 4.11-3*** focuses on consistency with the City's TOP 2050 Elements that address environmental issues. Goals and policies that do not address environmental effects or are not applicable to the Project are not addressed below. Note that the following TOP 2050 consistency analysis is based upon Project consistency with the City's TOP 2050, which the Project is consistent with.

Table 4.11-3: Consistency with the City of Ontario General Plan (TOP) 2050

General Plan Goals/Policies	Project Consistency
Land Use Element	
Goal LU-1: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.	
Policy LU-1.1 *Strategic Growth.* We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.	**Consistent:** The Project encourages concentrated development including high density residential neighborhoods, office and business park employment uses, and retail and mixed-use centers along major arterial roadways where future transit stops, multi-use trails and bikeways are planned. The Project Specific Plan Chapter 5, Design Guidelines encourage site planning criteria and architectural standards to create a unique and cohesive aesthetic character for the Project area.

General Plan Goals/Policies	Project Consistency
Policy LU-1.2 *Sustainable Community Strategy.* We integrate state, regional, and local Sustainable Community/Smart Growth principles into the development and entitlement process.	**Consistent:** The Project encourages the efficient use of energy resources in design, product selection, and operational techniques. The Project Specific Plan Chapter 5, Design Guidelines address lighting, bicycle parking, sustainable landscaping, and sustainable design strategies. Landscape provisions require the use of native drought resistant vegetation and shade trees to conserve water and reduce heat islands. The sustainable design strategies include design and construction of energy efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption. Protecting water quality, reducing runoff, and reducing water demand for landscaping are promoted in the Project Specific Plan Development Plan through the recycled water plan and storm drainage facilities source control and treatment practices.
Policy LU-1.3: *Adequate Capacity.* We require adequate infrastructure and services for all development.	**Consistent:** The Project Specific Plan establishes a Phasing Plan that has been coordinated with affected infrastructure providers and ensures that uses on the Project site would be adequately served. The Specific Plan requires infrastructure development to occur in a timely manner. Potable and recycled water, sewer, fiber optic communications, and storm drain infrastructure improvements that would ultimately serve the Project site are addressed in Section 3, Development Plan of the Project Specific Plan. Infrastructure and services would be consistent with City of Ontario infrastructure master plans and the approved development agreement. Please refer to ***Section 4.17, Utilities and Service Systems,*** for further discussion regarding utility infrastructure.
Policy LU-1.4 *Multimodal Mobility.* We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on active transportation, transit, electric vehicles, and multimodal transportation opportunities.	**Consistent:** The Project Specific Plan requires the construction of multi-purpose trails along Euclid and Schaefer Avenues and public accessible sidewalk along Euclid, Schaefer, Edison, and Sultana Avenues. These improvements are integral elements to create accessibility and mobility within the Project site and surrounding area. The Project Specific Plan requires the location and construction of transit turnouts within the Specific Plan area.
Policy LU-1.5 *Jobs-Housing Balance*. We coordinate land use, infrastructure, and transportation planning and analysis with regional, county, and other local agencies to further regional and subregional goals for jobs-housing balance.	**Consistent:** The Project Specific Plan requires all infrastructure needed to develop the property to be constructed per the City approved master plans as indicated in Section 5 of the Project Specific Plan. The Land Use Plan allows for up to 466 residential units and a variety of employment generating land uses totaling over 1,676,887 square feet to encourage a balance of jobs and nearby housing.
Policy LU-1.6 *Complete Community.* We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.	**Consistent:** The Project Specific Plan allows for up to 466 residential units and over 1,676,887 square feet of employment generating land uses to accommodate the design of a complete community with a balance of uses to allow a spectrum of choices for future employers, employees, residents, and visitors. The allowable land uses will allow for a balanced plan to support Ontario residents in all stages of life.

General Plan Goals/Policies	Project Consistency
Goal LU2: Compatibility between a wide range of uses and resultant urban patterns and forms.	
Policy LU2.3: *Hazardous Uses*. We regulate the development of industrial and similar uses that use, store, produce or transport toxic substances, air emissions, other pollutants, or hazardous materials.	**Consistent:** Uses within the Project Specific Plan are required to comply with federal, state, and local regulations pertaining to the use, storage, disposal, and transportation of hazardous materials, toxic substances, and other pollutants.
Policy LU2.5: *Regulation of Uses.* We regulate the location, concentration, and operation of uses that have impacts on surrounding land uses.	**Consistent:** The Project Specific Plan land use plan contained in Section 3, Development Plan, utilizes the Business Park designation (Planning Area 1,2A and 2B) and Mixed-Use designation (Planning Area 3A and 3B) to buffer varied existing land uses located across Euclid Avenue within the City of Chino. Project Specific Plan Section 4, Land Use and Development Standards, restricts Planning Area 1, 2A and 2B to smaller buildings along the Euclid frontage. Furthermore, the conceptual site plan for the business park places truck traffic ingress and egress and visible loading docks away from the existing residential uses.
Policy LU2.6: *Infrastructure Compatibility*. We require infrastructure to be aesthetically pleasing and in context with the community character.	**Consistent:** The Project Specific Plan Chapter 5, Design Guidelines are intended to support high-quality development that complements the surrounding community. Landscaped areas and drive entrances will be planned to separate parking areas and keep the parking lot from being the dominant visual element of the site. The Project Specific Plan also establishes landscape setback requirements (Section 4, Land Use and Development Standards) and conceptual streetscape design (Section 5, Design Guidelines) along all roadways within the Specific Plan area to create safe and attractive streets for pedestrians and motorists and ensure cohesive patterns of development.
Policy LU2.9: *Methane Gas Sites.* We require sensitive land uses and new uses on former dairy farms or other methane-producing sites be designed to minimize health risks.	**Consistent:** The Project Specific Plan incorporates into its Implementation Plan (Section 6) requirements for the Project to comply with any mitigation measures identified in the project environmental impact report, including those for soil remediation and proper venting to address the potential existence of methane gases within the Specific Plan area.
Policy LU-2.11 *Context-Aware Transitions and Connections.* We require new development projects and land-planning efforts to provide context-aware and appropriate transitions and connections between existing and planned neighborhoods, blocks, sites, and buildings.	**Consistent:** The Project Specific Plan includes the construction of multi-purpose trails along Euclid and Schaefer Avenues and public accessible sidewalks along Euclid, Schaefer, Edison and Sultana Avenues. These improvements provide transitions and connectivity to existing and planned neighborhoods.
Goal LU-3: Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the Vision	
Policy LU-3.1 *Development Standards.* We maintain clear development standards which allow flexibility to achieve our Vision and provide objective standards that ensure predictability and deliver the intended physical outcomes.	**Consistent:** The Project Specific Plan provides development standards intended to address the site and surrounding conditions and achieve the City's overall Vision for urban, mixed use, and transit-oriented land uses.
Goal LU-4: Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.	

General Plan Goals/Policies	Project Consistency
Policy LU-4.1 *Commitment to Vision.* We are committed to achieving our Vision but realize that it may take time and several interim steps to get there	**Consistent:** The Project Specific Plan allows for phased development coordinated with infrastructure improvements. Interim and transitional uses are permitted in order to allow for planned development to occur to achieve the City's long-term Vision for land uses.
Policy LU-4.3 *Infrastructure Timing* We require that the necessary infrastructure and services be in place prior to or concurrently with development.	**Consistent:** The Project Specific Plan requires the construction of all infrastructure needed to develop the property to be constructed per the City approved master plans as indicated in Section 5 of the Specific Plan.
Goal LU-5: Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.	
Policy LU-5.1 *Coordination with Airport Authorities.* We collaborate with FAA, Caltrans Division of Aeronautics, airport owners, neighboring jurisdictions, and other shareholders in the preparation, update, and maintenance of airport-related plans.	**Consistent:** The Project Specific Plan will comply with all ALUCP requirements for the Ontario and Chino Airports as outlined in Section 2.3 of the Specific Plan and future development will be required to meet all requirements and procedures outlined by airport related governmental agencies and mitigation measures.
Policy LU-5.2 *Airport Planning Consistency.* We coordinate with airport authorities to ensure The Ontario Plan is consistent with state law, federal regulations, and/or adopted master plans, and airport land use compatibility plans for ONT and Chino Airport.	
Policy LU-5.5 *Airport Compatibility Planning for ONT.* We create and maintain the Airport Land Use Compatibility Plan for ONT.	**Consistent:** The Project Specific Plan area is within the Ontario International AIA and the Chino Airport AIA. The Project Specific Plan discusses compliance with the ALUCP requirements for the Ontario Airport and the Chino Airport in Section 2.2, Airport Influence Areas.
Policy LU5.7: *ALUCP Consistency with Land Use Regulations.* We comply with state law that requires general plans, specific plans, and all new development to be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public use airport.	
Policy LU-5.8 *Chino Airport.* We will support the creation and implementation of the Airport Land Use Compatibility Plan for Chino Airport.	
Housing Element	
Goal H-1: Stable neighborhoods of quality housing, ample community services and public facilities, well-maintained infrastructure, and public safety that foster a positive sense of identity.	
Policy H-1.2 *Neighborhood Conditions.* We direct efforts to improve the long-term sustainability of neighborhoods through comprehensive planning, provision of neighborhood amenities, rehabilitation and maintenance of housing, and community building efforts.	**Consistent:** The Project Specific Plan allows for up to 466 residential units and recreational open space consistent with The Ontario Plan standards for parks/open space and neighborhood recreational amenities.
Policy H-1.3 *Community Amenities.* We shall provide adequate public services, infrastructure, open space, parking and traffic management, pedestrian, bicycle, and equestrian routes and public safety for	**Consistent:** The Project Specific Plan requires all infrastructure, open space, trails, and bikeways needed to develop the property to be constructed concurrently with future development per the City approved master plans as indicated in Section 3 of the Specific Plan. The Land Use Plan allows for up to 466 residential units.

General Plan Goals/Policies	Project Consistency
neighborhoods consistent with City master plans and neighborhood plans.	
Policy H-1.4 ***Historical Preservation.*** We support the preservation and enhancement of residential structures, properties, street designs, lot configurations, and other reminders of Ontario's past that are considered to be local historical or cultural resources.	**Consistent:** The Project Specific Plan area includes existing buildings that reflect the agricultural history as an important cultural resource of the City; see ***Section 4.5: Cultural Resources*** and ***MM CUL 1 – MM CUL 5***. The Specific Plan provides design guidelines for future buildings in Section 5 that include architectural styles that reinforce the City's rich agricultural history. Future development would comply with City requirements for documenting historical resources and mitigation measures identified in the project EIR.
Goal H-2: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.	
Policy H-2.1 ***Corridor Housing.*** We revitalize transportation corridors by encouraging the production of higher density residential and mixed-uses that are architecturally, functionally, and aesthetically suited to corridors.	**Consistent:** The Project Specific Plan includes a Mixed-Use District that will allow up to 466 residential units and a density of 35 to 60 du/ac to be developed along Edison Avenue in close proximity to transit turnouts within the Specific Plan area. The Specific Plan provides design guidelines for future buildings in Section 5 that include architectural styles and building guidelines to provide aesthetically pleasing and functional residential buildings.
Policy H-2.4 ***Ontario Ranch.*** We support a premier lifestyle community in the Ontario Ranch, distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.	**Consistent:** The Project Specific Plan allows for the development of up to 466 high density attached residential units linked to surrounding retail and open space uses by local sidewalks and walkways and master planned trails and bikeways. The Specific Plan provides design guidelines for future residential development in Section 5 that include architectural criteria that establish a high level of design and construction quality and encourage a cohesive neighborhood design character.
Policy H-2.5 ***Housing Design.*** We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.	**Consistent:** The Project Specific Plan provides design guidelines for future residential development in Section 5 that include site planning considerations, emphasize sustainable design, and establishes architectural criteria to ensure a high level of design excellence.
Goal H-5: A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age, or other status.	
Policy H-5.2 ***Family Housing.*** We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation, and other amenities.	**Consistent:** The Project Specific Plan allows for the development of up to 466 high density attached residential units that are suited for a range of future buyers or renters including families with children. Future residential development will be required to provide parks at a minimum of 2 acres/1000 residents. The Specific Plan also includes multi-purpose trails along Euclid and Schaefer Avenues and public accessible sidewalks along Euclid, Schaefer, Edison, and Sultana Avenues.
Parks and Recreation Element	
Goal PR-1: A system of safe and accessible parks that meets the needs of the community.	
Policy PR-1.1 ***Access to Parks.*** In all new residential development areas, we strive to provide a park and/or recreational facility within walking distance (¼ mile) of every residence and	**Consistent:** The Project Specific Plan would comply with the City requirement to provide two acres of Park per 1,000 residents onsite and pay an in-lieu fee for the equivalent of three acres of park per 1,000 residents for a total of five acres

General Plan Goals/Policies	Project Consistency
prioritize the establishment of parks in environmental justice areas that do not have adequate access to parks.	per 1,000 residents to ensure that recreational facilities are within walking distance of future residents within the Specific Plan area.
Policy PR-1.5 ***Acreage Standard.*** We strive to provide 5 acres of parkland (public and private) per 1,000 residents	**Consistent:** The Project Specific Plan would comply with the City requirement to provide five acres of Park per 1,000 residents by providing two aces on-site and paying an in-lieu fee for the equivalent of three acres of park per 1,000 residents.
Policy PR-1.6 ***Private Park.*** We expect development to provide a minimum of 2 acres of developed private park space per 1,000 residents.	**Consistent:** The Project Specific Plan would comply with the City requirement to provide two acres of Park per 1,000 residents on-site.
Policy PR-1.9 ***Phased Development.*** We require parks be built in new communities before a significant proportion of residents move in.	**Consistent:** The Project Specific Plan allows for phased development coordinated with required park improvements and payment of in-lieu park fees.
Policy PR-1.12 ***Trails.*** We promote connections between parks and local trails including those managed by other public agencies.	**Consistent:** The Project Specific Plan would comply with the City requirement to provide two acres of Park per 1,000 residents on-site and would develop the public multi-purpose trails along Euclid and Schaefer Avenues along the Project frontage to provided planned connection to Citywide parks and trail systems including the Great Park.
Policy PR-1.14 ***Multi-family Residential Developments.*** We require that new multi-family residential developments of five or more units provide recreational facilities or open space, in addition to paying adopted impact fees.	**Consistent:** The Project Specific Plan would include development standards to provide two acres of Park per 1,000 residents on-site for all types of residential development including multi-family neighborhoods.
Policy PR-1.15 ***Trail Connectivity.*** We strengthen and improve equestrian, bike, and multipurpose trail connections within the City and work to improve trail connections into adjacent jurisdictions.	**Consistent:** The Project Specific Plan would develop the public multi-purpose trails along Euclid and Schaefer Avenues along the Project frontage to provided planned connection to Citywide parks and trail systems including the Great Park.
Environmental Resources Element	
Goal ER-1: A reliable and cost-effective system that permits the City to manage its diverse water resources and needs.	
Policy ER1.3: ***Conservation and Sustainable Water Supply***. We work with regional water providers and users to conserve water and ensure sustainable local water supplies as more frequent droughts reduce long term local and regional water availability.	**Consistent**: The Project Specific Plan incorporates water conservation strategies into its development plan and design guidelines. The use of recycled water to irrigate landscape areas is required consistent with the City of Ontario Recycled Water Master Plan (Section 3, Development Plan). Landscape and irrigation plans are encouraged to use water conservation features such as drought tolerant plant species native to the region and drip irrigation (Section 5, Design Guidelines). The Specific Plan encourages the design and construction of energy-efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption.
Policy ER1.5: ***Water Resource Management***. Environmental justice areas are prioritized as we coordinate with local agencies to protect water quality, prevent pollution, address existing contamination, and remediate contaminated surface water and groundwater.	**Consistent:** In Section 3.8, Storm Drain Plan, the Specific Plan stipulates that prior to issuance of grading or construction permits, a Storm Water Pollution Prevention Plan (SWPPP) be prepared and approved by the City. The SWPPP will identify and detail appropriate Best Management Practices (BMPs) to prevent pollutant discharge into storm drain systems and

General Plan Goals/Policies	Project Consistency
	natural drainages and aquifers. In addition to the preparation of a SWPPP, a Water Quality Management Plan (WQMP) would be prepared and approved that will enforce long-term BMPs to prevent pollutant discharges into storm drain systems, for the life of the project. Section 5.8.2, Water Quality, requires the provision of on-site landscape swales to collect and treat stormwater run-off.
Policy ER1.6: ***Urban Run-off Quantity***. We encourage the use of low impact development strategies, including green infrastructure, to intercept run-off, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.	**Consistent**: The Project Specific Plan (Section 3.8, Storm Drain Plan) incorporates low impact development strategies including landscape designs that promote water retention; permeable surface designs in parking lots and areas with low traffic; parking lots that rain to landscaped areas to provide treatment, retention, or infiltration; and limited soil compaction during grading.
Policy ER1.7: ***Urban Run-off Quality***. We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.	**Consistent**: In Section 3.8, Storm Drain Plan, the Specific Plan states that prior to issuance of grading or construction permits, a WQMP is required to minimize stormwater runoff and provide on-site opportunities for groundwater recharge integrated into project design and amenities. The grading and drainage of the Specific Plan area would be designed to retain/infilter, harvest and re-use or biotreat surface runoff to comply with the current requirements of the San Bernardino County National Pollutant Discharge Elimination System (NPDES) Stormwater Program's WQMP for significant new development projects.
Policy ER1.8: ***Wastewater Management***. We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.	**Consistent**: In Section 3.6, Sewer Plan, the Specific Plan provides for design of a wastewater system consistent with City and Regional Water Quality Board requirements. The Specific Plan includes a network of new public sewer mains consistent with the City of Ontario's Ultimate Sewer System Plan.
Goal ER-3: Cost-effective and reliable energy system sustained through a combination of low impact buildings, site and neighborhood energy conservation, and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.	
Policy ER3.1: ***Conservation Strategy***. We require conservation as the first strategy to be employed to meet applicable energy-saving standards.	**Consistent**: The Specific Plan incorporates energy-saving conservation strategies into its design guidelines (Section 5) by addressing lighting, bicycle parking, sustainable landscaping, and energy efficiency. Sustainable design strategies (Section 5.8) include design and construction of energy-efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption.
Policy ER3.3: ***Building and Site Design***. We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.	**Consistent**: The Project Specific Plan encourages the use of passive design to improve building energy performance through skylights, building orientation, landscaping, and use of select colors.
Policy ER-3.6 ***Generation - Renewable Sources.*** We promote the use of renewable energy sources (e.g., solar, wind, biomass) in public and private sector development.	**Consistent:** The Project Specific Plan promotes renewable energy resource including passive solar collection, subject to consistency with City of Ontario policies and development regulations, within the Business Park and Mixed-Use Districts. Proposed architectural guidelines and development standards

General Plan Goals/Policies	Project Consistency
	encourage siting and orienting building with considerations for solar orientation and buildings with roof designs that allow for passive solar collectors. Residential buildings would be prewired or solar collection improvements.
Goal ER-4: Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.	
Policy ER-4.1 ***Land Use.*** We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.	**Consistent:** The Project Specific Plan allows for up to 466 residential units and a maximum of 1,676,887 square feet of employment generating land uses within the Project area. The Specific Plan included future transit stops and in close proximity to planned transit lines and helps to improve jobs housing balance in the City and the surrounding region with the provision of varied land use alternatives within the Mixed-Use District.
Policy ER-4.3 ***Greenhouse Gases (GHG) Emissions Reductions.*** We will reduce GHG emissions in accordance with regional, state, and federal regulations.	**Consistent:** The Project Specific Plan would comply with the regional, state and Federal laws and regulations to reduce GHG emissions and would require future development projects to comply with all City regulations to reduce GHG emissions and mitigation measures identified in the Project EIR.
Policy ER4.4: ***Indoor Air Quality***. We will comply with state Green Building Codes relative to indoor air quality. We seek funding to improve indoor air quality for households with poor indoor air quality, with priority for lower income households in environmental justice areas.	**Consistent**: The Project Specific Plan requires development projects in the Specific Plan area to comply with the State of California Building Code as adopted and implemented by the City. The Specific Plan's Sustainable Design Strategies (Section 5.8) include the design and construction of energy-efficient buildings to reduce air, water, and land pollution.
Policy ER-4.5 ***Transportation.*** We promote mass transit and non-motorized mobility options (walking, biking) to reduce air pollutant emissions.	**Consistent:** The Project Specific Plan requires the construction of multi-purpose trails along Euclid and Schaefer Avenues and public accessible sidewalks along Euclid, Schaefer, Edison, and Sultana Avenues. The Specific Plan requires the location and construction of transit turnouts within the Specific Plan area. These improvements encourage non-motorized mobility options to reduce air pollutant emissions.
Policy ER-4.8 ***Tree Planting.*** We protect healthy trees within the City and plant new trees to increase carbon sequestration and help the regional/local air quality. We expand the tree canopy in environmental justice areas to enhance air quality and reduce the "heat island" effect.	**Consistent:** The Project Specific Plan would implement the City of Ontario's master street plan including the provision for planting street parkway and median trees and would provide landscape installation, including trees, within all neighborhood edges. Section 5, Design Guidelines include criteria for landscaping parks, open space, and other common areas.
Goal ER-5: Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.	
ER5.2: ***Entitlement and Permitting Process.*** We comply with state and federal regulations regarding protected species.	**Consistent**. The Project Specific Plan acknowledges that all projects within the Specific Plan area shall comply with any and all mitigation measures of the Project EIR.
Community Economics Element	
Goal CE-1: A complete community that provides for all incomes and stages of life.	
Policy CE1.1: ***Jobs-Housing Balance***. We pursue improvement to the Inland Empire's balance between jobs and housing by promoting job growth that reduces the regional economy's reliance on out-commuting.	**Consistent.** The Project Specific Plan anticipates the creation of jobs in warehousing, logistics, light manufacturing, and administration within the Specific Plan area, which helps improve the region's jobs-housing balance. Actual job creation depends on the type of land uses ultimately developed on the site as a wide range of commercial, office, and business park

General Plan Goals/Policies	Project Consistency
	uses are permitted in the Specific Plan. The Land Use Plan (Section 3.1) implements the vision of The Ontario Plan by providing opportunities for employment in manufacturing, distribution, research and development, service, and supporting retail at intensities designed to meet the demand of current and future market conditions.
Policy CE1.5: *Business Attraction*. We proactively attract new and expanding businesses to Ontario in order to increase the City's share of growing sectors of the regional and global economy.	**Consistent.** The Euclid Specific Plan provides for opportunities for new businesses in the City within the Business Park District and the Mixed-Use District. In Section 3.1, Land Use Plan, the Specific Plan provides for the construction of 1,676,887 square feet of business park, commercial and/or office development in compliance with City and regional planning goals.
Policy CE-1.6 *Diversity of Housing.* We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.	**Consistent:** The Project Specific Plan allows for the development of up to 466 high density attached residential units within the Mixed-Use District. This would add to the housing diversity and choices for ownership or rental housing within the Ontario Ranch to accommodate people who live and/or work in the City.
Policy CE-1.7 Retail Goods and Services. We seek to ensure a mix of retail businesses that provide the full continuum of goods and services for the community.	**Consistent:** The Project Specific Plan allows for a maximum of 1,676,887 square feet of business park, retail or office uses. The Specific Plan provides opportunities for future business to contribute to the provision of continued goods and services within the Business Park and Mixed-Use Districts.
Policy CE-1.12 *Circulation.* We continuously plan and improve public transit and non-vehicular circulation for the mobility of all, including those with limited or no access to private automobiles.	**Consistent:** The Project Specific Plan provides for both public transit, including future transit stop locations, and multi-purpose trails and sidewalks to encourage non-vehicular circulation within the Project area.
Goal CE2: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.	
Policy CE2.1: *Development Projects.* We require new development and redevelopment to create unique, high-quality places that add value to the community.	**Consistent.** The Project Specific Plan contains design guidelines in Section 5 to guide future development, consistent with the vision for Ontario Ranch. The guidelines are intended to ensure high quality, cohesive and attractive development that complements and integrates into the community and adds value to the City. The Specific Plan also establishes landscape setbacks along all roadways within the Specific Plan area to create safe and attractive streets for pedestrians and motorists.
Policy CE2.2: *Development Review*. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.	**Consistent.** The Project Specific Plan establishes a land use plan (Section 3.1) and design guidelines (Section 5) concerning site design, building design, and landscape design that ensure high-quality, functional and sustainable development that is regionally competitive and appropriate for the Ontario Ranch community
Policy CE-2.4 *Protection of Investment.* We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.	**Consistent:** The Project Specific Plan has provisions to ensure that the development of up to 466 high density attached residential units will create attractive and high-quality architecture and urban planning that is equal or greater to similar development in the surrounding neighborhoods. The

General Plan Goals/Policies	Project Consistency
	Specific Plan provides design guidelines for future residential development in Section 5 that include architectural criteria that establish a high level of design and construction quality.
Policy CE2.5: ***Private Maintenance***. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.	**Consistent:** The Project Specific Plan includes a Maintenance Responsibility Matrix (Section 6.10) identifying the public, private, or utility providers responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, walls and monuments, infrastructure, and utilities within the Specific Plan area. A Property Owners Association would be established for the maintenance of on-site common areas, including such improvements as landscape areas and drive aisles.
Policy CE2.6: ***Public Maintenance***. We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm whether on private land, in rights-of-way, or on publicly-owned property.	**Consistent:** The Project Specific Plan includes a Maintenance Responsibility Matrix (Section 6.10) identifying the public, private, or utility providers responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, walls and monuments, infrastructure, and utilities within the Specific Plan area. Right-of-way for public streets within the Specific Plan area and infrastructure improvements shall be dedicated to the City of Ontario for maintenance purposes. Landscape improvements and public streetlights within the public right-of-way shall be maintained through a landscape and lighting district or other special maintenance district established by the City. Dry utilities such as electricity, natural gas, and communication systems would be maintained by the appropriate utility company.
Goal S-1: Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by earthquake-induced and other geologic hazards.	
Policy S1.1: ***Implementation of Regulations and Standards.*** We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.	**Consistent:** The Project Specific Plan requires all future development projects to comply with the State of California Building Code as adopted and implemented by the City.
Policy S-1.2 ***Entitlement and Permitting Process*****.** We follow state guidelines and the California Building Code to determine when development proposals must conduct geotechnical and geological investigations.	**Consistent:** The Project Specific Plan acknowledges that all projects within the Specific Plan area shall comply with state guidelines and the California Building Code. Research of available maps indicates that the Specific Plan site is not located within an Alquist-Priolo Earthquake Fault Zone. Furthermore, there was no visible evidence of faulting during a geotechnical investigation conducted in 2022.
Goal S-2: Minimized risk of injury, loss of life, property damage and economic and social disruption caused by flooding and inundation hazards.	
Policy S-2.1 ***Entitlement and Permitting Process.*** We require hydrological studies prepared by a state-certified engineer when new development is located in a 100-year or 500-year floodplain to assess the impact that the new development will have on the flooding potential of existing development down-gradient	**Consistent:** The Project Specific Plan acknowledges that all projects within the Specific Plan area shall comply with any and all applicable mitigation measures of the Project EIR, state guidelines, and the California Building Code regarding flooding and inundation hazards.
Goal S-3: Reduced risk of death, injury, property damage and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.	

General Plan Goals/Policies	Project Consistency
Policy S-3.3 ***Fire and Emergency Medical Services.*** We maintain sufficient fire stations, equipment and staffing to respond effectively to emergencies and meet the needs of the community and state requirements.	**Consistent:** The Project Specific Plan requires all infrastructure, including water systems needed to provide fire safety to be constructed concurrently with future development. The Specific Plan is located within the service area of Fire Station #2.
Policy S-3.8 ***Fire Prevention through Environmental Design*****.** We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open spaces, and buildings.	**Consistent:** The Project Specific Plan acknowledges that all projects within the Specific Plan area shall comply with the City's development review process, which provides for review by the City's Fire Department and potential redesign to incorporate fire prevention design elements within streetscapes, sites, open spaces, and buildings.
Goal S-4: An environment where noise does not adversely affect the public's health, safety, and welfare.	
Policy S4.1: ***Noise Mitigation*****.** We utilize the City's Noise Ordinance, building codes, and subdivision and development codes to mitigate noise impacts.	**Consistent:** The Project Specific Plan acknowledges that all projects within the Specific Plan area shall comply with any and all mitigation measures of the Project EIR, the City's noise ordinance, subdivision and development codes, and the California Building Code to mitigate noise impacts.
Goal S-5: Minimize the risk of injury, property damage, and economic loss resulting from windstorms and wind-related hazards.	
Policy S-5.1 ***Dust Control Measures.*** We require the implementation of Best Management Practices for dust control at all excavation and grading projects.	**Consistent:** The Project Specific Plan acknowledges that all projects within the Specific Plan area shall comply with any and all mitigation measures of the Project EIR, the construction management plan, and any subdivision and development codes regarding dust control.
Policy S-5.2 ***Grading in High Winds.*** We prohibit excavation and grading during strong wind conditions, as defined by the Building Code.	**Consistent:** Future construction within the Project Specific Plan would comply with all City regulations and would comply with the City approved construction management plan and mitigation measures identified in the Project EIR.
Goal S-6: Reduced potential for hazardous materials exposure and contamination.	
Policy S6.9: ***Remediation of Methane.*** We require development to assess and mitigate the presence of methane, per regulatory standards and guidelines.	**Consistent:** The Project Specific Plan acknowledges that all projects within the Specific Plan area shall comply with any and all mitigation measures of the Project EIR. **MM HAZ-1**, prior to the issuance of grading permits, the Project Applicant shall conduct further testing for the presence of methane on the Project site, in accordance with California Department of Toxic Substances Control (DTSC) methane assessment guidelines. The Project Applicant shall prepare a methane gas soil survey and implement grading activity recommendations to the satisfaction of the City Building Department. This shall include a post-construction soil gas investigation and installation of methane gas mitigation systems where post-grading methane levels exceed 5,000 parts per million volume (ppmv), should any such levels occur.
Goal S-7: Residential neighborhoods, commercial areas, and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, community involvement in public safety.	
Policy S7.4: ***Crime Prevention through Environmental Design (CPTED).*** We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces, and buildings.	**Consistent:** The Project Specific Plan acknowledges that all projects within the Specific Plan area shall comply with the City's development review process, which provides for review by the City's Police Department and potential redesign to incorporate crime prevention design elements in streetscapes, sites, open spaces, and buildings. Parcel lighting (Section 5.6, Lighting) addresses illumination of parking lots,

General Plan Goals/Policies	Project Consistency
	loading dock areas, pedestrian walkways, building entrances, signage, and architectural and landscape features. A key provision includes the installation of ground or low mounted fixtures to provide for safety and convenience along pedestrian walkways, entrances, activity areas, steps, ramps, and special features. Section 5.1, Site Design, also encourages delineation of pedestrian access to on-site buildings from adjacent streets and parking areas by marking building entrances with signage, prominent architectural features, and/or landscaping features.
Goal S-9: Incorporate energy efficient practices and renewable energy systems to improve air quality, comfort, and energy reliability during temporary power outages	
Policy S-9.1 ***Solar Energy.*** We support and may incentivize the installation of residential and commercial solar panels and battery storage systems that can provide electricity during power outages.	**Consistent:** Future construction of residential units within the Project Specific Plan would comply with all Federal, state and City regulations for solar energy. The Specific Plan provides design guidelines for future residential development in Section 5 that include site planning and design criteria to encourage future solar panel installation.
Goal M-1: A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario	
Policy M-1.1 ***Roadway Design and Maintenance.*** We require our roadways to: 1. Comply with federal, state, and local design and safety standards; 2. Meet the needs of multiple transportation modes and users; 3. Handle the capacity envisioned in the City of Ontario Master Plan of Streets and Highways; 4. Be maintained in accordance with best practices; 5. Be compatible with the streetscape and surrounding land uses; 6. Promote the efficient flow of all modes of traffic through the implementation of intelligent transportation systems and travel demand management strategies.	**Consistent:** The Project Specific Plan complies with the Functional Roadway Classification Plan of the Mobility Element and, therefore, aims to comply with federal, state, and local design and safety standards; meet the needs of multiple transportation modes and users; and maintain a Level of Service of E or better at all intersections addressed in the project environmental impact report. Specific Plan site design strives to minimize the effects of truck traffic on nearby residential uses by locating truck entries and loading docks away from residential use.
Policy M-1.2 ***Mitigation of Impacts.*** We require development to mitigate its traffic impacts.	**Consistent:** The Project Specific Plan requires in Section 6.3.4, Compliance with CEQA, that projects within the Specific Plan area comply with all mitigation measures, conditions, and project design features identified in the Project EIR. Section 5.1, Site Design, provides guidelines to ensure buildings, structures, and loading facilities would be designed so loading and unloading activities occur on-site without extending beyond the property line.
Goal M-2: A system of trails and corridors that facilitate and encourage active modes of transportation.	
Policy M-2.2 ***Bicycle System.*** We provide off-street multipurpose trails and Class II bikeways as our preferred paths of travel and use the Class III for connectivity in constrained circumstances. When truck routes and bicycle facilities share a right-of-way, we prefer Class I or Class IV bicycle facilities. We require new development to	**Consistent:** The Project Specific Plan includes a Circulation Plan in Section 3 to provide connectivity to the trails and bikeway corridors identified in the Ontario Multipurpose Trails and Bikeway Corridor Plan, including installation of multipurpose trails along Euclid Avenue and Edison Avenue.

General Plan Goals/Policies	Project Consistency
include bicycle facilities, such as bicycle parking and secure storage areas.	
Policy M-2.3 *Pedestrian Walkways*. We require streets to include sidewalks and visible crosswalks at major intersections where necessary to promote safe and comfortable mobility between residential areas, businesses, schools, parks, recreation areas, and other key destination points.	**Consistent:** The Project Specific Plan street sections and streetscape designs (Section 3.1, Circulation Plan and Section 5.3, Landscape Design) provide for construction of 5-foot-wide public pedestrian sidewalks for Euclid, Schaefer, Edison, and Sultana Avenues to connect with adjacent existing and planned pedestrian circulation systems. Pedestrian sidewalks are separated from vehicular travel lanes by a landscaped parkway. Proposed improvements for the Specific Plan area streets are consistent with the City's Ontario Ranch Streetscape Master Plan.
Policy M-2.4 *Network Opportunities.* We use public rights-of-way and easements such as, utility easements, levees, drainage corridors, road rights-of-way, medians, and other potential options to maintain and expand our bicycle and pedestrian network. In urban, mixed-use, and transit-oriented Place Types, we encourage the use of underutilized public and private spaces to expand our public realm and improve pedestrian and bicycle connectivity.	**Consistent:** The Project Specific Plan includes the construction of multi-purpose trails along Euclid and Schaefer Avenues and public accessible sidewalks along Euclid, Schaefer, Edison, and Sultana Avenues. Potential pedestrian and bicycle connectivity to neighborhoods within and adjacent to the Mixed-Use District would be incorporated into future residential development plans.
Goal M-3: A public transit system that is a viable alternative to automobile travel and meets basic transportation needs of the transit-dependent.	
Policy M-3.2 *Alternative Transit Facilities at New Development.* We require new development adjacent to an existing or planned transit stop to contribute to the creation of transit facilities, such as bus shelters, transit bays and turnouts, and bicycle facilities, such as secure storage areas.	**Consistent:** The Project Specific Plan discusses (in Section 3.2.9, Transit) that the City is coordinating with regional transit agencies to implement Bus Rapid Transit (BRT) service to target destinations and along corridors, including Euclid Avenue on the western boundary of the Specific Plan area.
Goal M-4: An efficient flow of goods through the City that maximizes economic benefits and minimizes negative impacts.	
Policy M-4.1 *Truck Routes.* We designate and maintain a network of City truck routes that provide for the safe and efficient transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses, as shown on Exhibit M-04, Truck Routes. We will minimize conflicts on truck routes through the design and implementation of buffers between travel lanes and pedestrian and bicycle facilities on designated truck routes.	**Consistent:** The Project Specific Plan is designed to enable easy vehicular access to the truck route network and to encourage its business park users to implement effective goods movement strategies. The Land Use and Circulation Plans for the Specific Plan area (Section 3, Development Plan) are designed to direct truck traffic away from nearby residential use in the City of Chino.
Policy M-4.4 *Environmental Considerations.* We support both local and regional efforts to reduce/eliminate the negative environmental impacts of goods movement through the planning and implementation of truck routing and the development of a plan to evaluate the future needs of clean fueling/recharging and electrified truck parking.	**Consistent:** The Project Specific Plan implements the City of Ontario master planned street network and provides for the construction of circulation improvements to support adequate infrastructure for safe and efficient truck routing and supports Citywide efforts to evaluate and address future needs for clean fueling/recharging and electrified truck parking.
Goal CD-1: A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.	

General Plan Goals/Policies	Project Consistency
Policy CD-1.2 *Place Type.* We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.	**Consistent:** The Euclid Mixed Use Specific includes design guidelines in Section 5 that include architectural criteria that establish a Gateway design treatment with landscaping and monumentation to create a unique entry to the Ontario Ranch community and the City overall. This placemaking element would establish a unique and high-quality community and neighborhood design character for future development within the Specific Plan area.
Policy CD-1.4 Transportation Corridors. We will enhance our major transportation corridors within the City through landscape, hardscape, signage and lighting. The extent of enhancement should be appropriate to the use, type, and context of each corridor.	**Consistent:** The Project Specific Plan requires the construction of landscaped neighborhood edges along Euclid, Edison, and Schaefer Avenues per the City master plans for these major transportation corridors. Section 5, Design Guidelines include criteria for landscaping these neighborhood edges and other common areas.
Goal CD-2: A high level of design quality resulting in neighborhoods, commercial areas, public spaces, parks, and streetscapes that are attractive, safe, functional, human-scale, and distinct.	
Policy CD-2.1 *Quality Building Design and Architecture.* We encourage all development projects to convey visual interest and character through: 1. Building volume, massing, and height to provide context-appropriate scale and proportion; 2. A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and 3. Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.	**Consistent:** The Project Specific Plan Chapter 5, Design Guidelines ensure that: 1) scale, massing, fenestration, materials, and colors are consistent with the building's architectural style and compatible with the overall design in the Specific Plan area, 2) articulation is provided through elements such as cornices, parapets, expression lines, and changes in materials and/or colors, 3) use of a variety of colors, materials, and/or textures on each building is appropriate to the architectural features or massing.
Policy CD-2.2 *Neighborhood Design.* We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as: 1. A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services; 2. Varied parcel sizes and lot configurations to accommodate a diversity of housing types; 3. Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access; 4. Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; 5. Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.	**Consistent:** The Project Specific Plan has provisions to allow for the development of up to 466 high density attached residential units within the Mixed-Use District. The Specific Plan provides design guidelines for future residential development in Section 5 that include criteria for site planning/neighborhood design and architecture including considerations for access, connectivity, livability, and social interaction.

General Plan Goals/Policies	Project Consistency
Policy CD-2.3 ***Commercial Areas.*** We desire commercial areas and centers to be distinctive, pedestrian friendly, functional, and vibrant with a range of businesses, places to gather, and connectivity to the neighborhoods they serve.	**Consistent:** The Project Specific Plan allows for maximum of 1,676,887 square feet of employment generating land uses within the Business Park and Mixed-Use Districts. The Specific Plan provides design guidelines for future development in Section 5 that include architectural criteria to encourage the development of a variety of distinctive commercial businesses that are pedestrian friendly, connected to other surrounding uses, functional, and vibrant elements of the overall neighborhood.
Policy CD-2.4 ***Urban, Mixed Use, and Transit-oriented Areas.*** We establish Place Types to require mixed use, urban, and transit-oriented areas to be designed and developed as pedestrian oriented areas that are integrated with adjacent neighborhoods and promote a vibrant, comfortable, and functional environment, as defined for each Place Type.	**Consistent:** The Project Specific Plan includes a Mixed-Use District that would allow up to 466 residential units and a maximum of 290,110 square feet of retail or office uses along Edison Avenue in close proximity to transit turnouts within the Specific Plan area. The Specific Plan provides design guidelines for future development in Section 5 that include planning and design criteria to create a unique and high-quality community and neighborhood design character for future development within the Specific Plan area that would be integrated into surrounding neighborhoods.
Policy CD-2.5 ***Streetscapes.*** We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right-of-way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.	**Consistent:** Section 3.3, Circulation Plan, addresses connectivity, street improvements, pedestrian and bicycle plans, and transit. In Section 5.3, Landscape Design, the Project Specific Plan identifies street improvements and streetscape including parkways, street trees, sidewalks, landscape buffers, and street lighting for Euclid Avenue, Eucalyptus Avenue, Merrill Avenue, and Sultana Avenue within the Specific Plan area, which are consistent with the Circulation Element of The Ontario Plan. The Project Specific Plan streetscape design creates an aesthetically pleasing view for pedestrians and motorists, screens parking and loading areas from the public right-of-way, and visually integrates the development into the surrounding Ontario Ranch community.
Policy CD-2.6 ***Connectivity.*** We promote development of local street patterns, multimodal networks, and connected public spaces that create and unify neighborhoods, rather than divide them, and create cohesive and continuous corridors, rather than independent "islands" through the following means: 1. Local street networks that provide access both between subdivisions and within neighborhoods and discourage through traffic; 2. A local street system that is logical and understandable for the user. A grid system is preferred to avoid circuitous and confusing travel paths between internal neighborhood areas and adjacent arterials and to provide adequate emergency and evacuation access; and 3. Pedestrian and bicycle networks that provide convenient access to	**Consistent:** The Project Specific Plan includes design guidelines for future development within the Mixed-Use District in Section 5 that include planning and design criteria to create safe and efficient circulation systems and connectivity for future development within the Specific Plan area and surrounding neighborhoods.

General Plan Goals/Policies	Project Consistency
neighborhoods and nearby destinations, such as schools, parks, other public spaces, commercial areas, and transit stops.	
Policy CD-2.7 ***Sustainability.*** We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping, and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials, and construction techniques.	**Consistent:** The Project Specific Plan is committed to sustainable design strategies that integrate principles of environmental stewardship into the design, construction, and operation process. The Specific Plan incorporates sustainability principles into its design guidelines such as drought tolerant landscaping, skylights in warehouse areas of buildings to provide natural light and reduce lighting demand, high performance dual pane glazing in office storefronts, and LED products for energy efficient site lighting. Design strategies include the design and construction of energy efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption. The use of recycled water to irrigate landscape is required by the Specific Plan's Recycled Water Plan (Section 3.4), consistent with the City of Ontario Recycled Water Master Plan.
Policy CD-2.8 ***Safe Design.*** We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.	**Consistent:** The Project Specific Plan includes design guidelines for future development within the Mixed-Use District in Section 5 that include criteria to create safe and efficient walkway and common areas that are visible and well lighted at night for future development within the Specific Plan.
Policy CD-2.9 ***Landscape Design.*** We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.	**Consistent:** Consistent with the vision for Ontario Ranch as outlined in the Ontario Ranch Streetscape Master Plan, the Project Specific Plan (Section 5.3, Landscape Design) provides for landscaped setbacks and landscaped parkways adjacent to bike lanes and sidewalks, defining these public spaces. The landscaped setbacks and parkways will include drought-tolerant plants featuring colorful shrubs and groundcovers, ornamental grasses and succulents, evergreen and deciduous trees, and species native to southern California or naturalized to the arid southern California climate to promote durable plant materials. The plant selection would complement the design theme of the Specific Plan area. Parking lot landscaping would reduce associated heat buildup, improve aesthetics, and integrate into onsite landscape design and adjacent streetscapes. Swaled landscape areas would retain/ infiltrate stormwater run-off to improve water quality and promote groundwater recharge where feasible. Shade trees thoughtfully located near expanses of paving, building walls, roofs, and windows would reduce the impacts of heat gain.
Policy CD-2.10 ***Parking Areas.*** We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include:	**Consistent:** The Project Specific Plan includes design guidelines for future development within the Mixed-Use District in Section 5 that include planning and design criteria to minimize the visual impact of surface parking and garages for future development within the Specific Plan area and surrounding neighborhoods.

General Plan Goals/Policies	Project Consistency
1. Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field. 2. Structured parking: facade articulation, screening, appropriate lighting, and landscaping. 3. Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.	
Policy CD-2.11 ***Entry statements.*** We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.	**Consistent:** The Project Specific Plan establishes design guidelines to ensure high-quality development and a sense of place. As discussed in Section 5.3, Landscape Design, Euclid, Eucalyptus, Schaefer, Edison, and Sultana Avenues would feature landscaped setbacks adjacent to the Specific Plan area that would provide attractive entries to the site. An entry monument would be located at the northeast corner of Euclid Avenue and Edison Avenue to identify the Ontario Ranch area and/or the Project Specific Plan area.
Policy CD-2.12 ***Site and Building Signage.*** We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.	**Consistent:** The Project Specific Plan (Section 5.7, Signage) requires approval of a comprehensive sign program to address parcel identification, building identification and directional signage within the Specific Plan area. A comprehensive sign program would integrate Project signage with the overall design of the site and structures to create a unified visual statement. A comprehensive sign program provides a means for flexible application of sign regulations to provide incentive and latitude in the design and display of multiple signs. Business park uses on the site would also be appropriately signed to give direction to loading and receiving, visitor parking, and other special uses.
Policy CD-2.16 ***Transit Stops.*** We require transit stops be conveniently located, well lit, safe, and clearly accessible to pedestrians, bicyclists, and people of all abilities.	**Consistent:** The Project Specific Plan requires the location and construction of transit turnouts within the Specific Plan area.
Goal CD-3: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.	
Policy CD-3.1 ***Unique Identity.*** We promote development that heightens the unique character and identity of each Place Type by requiring compatible land uses and land planning, site design, and building design that promotes an active public realm.	**Consistent:** The Project Specific Plan includes design guidelines for future development within the Mixed-Use District in Section 5 that include planning and design criteria to establish a unique character and sense of identity for future development within the Specific Plan area and surrounding neighborhoods.
Policy CD-3.2 ***Comfortable, Human-Scale Public Realm.*** We require that public spaces, including streets, parks, and plazas on both public and private property be designed to maximize safety, comfort and aesthetics and connect to the citywide pedestrian, vehicular, and bicycle networks.	**Consistent:** The Project Specific Plan includes design guidelines for future development within the Mixed-Use District in Section 5 that include planning and design criteria to maximize safety, comfort and aesthetics and connect to the Citywide pedestrian, vehicular and bicycle networks.

General Plan Goals/Policies	Project Consistency
Policy CD-3.3 ***Complete and Connected Network.*** We require that pedestrian, vehicular, and bicycle circulation on both public and private property be coordinated to provide connections internally and externally to adjacent neighborhoods and properties (existing and planned) through a system of local roads and trails that promote walking and biking to nearby destinations (including existing and planned parks, commercial areas, and transit stops) and are designed to maximize safety, comfort, and aesthetics.	**Consistent:** The Project Specific Plan includes design guidelines for future development within the Mixed-Use District in Section 5 that include planning and design criteria to ensure that all modes of circulation and neighborhood connectivity are provided and coordinated with the Citywide pedestrian, vehicular and bicycle network to maximize safety, comfort, and aesthetics.
Policy CD-3.4 ***Context-Aware and Appropriate Design.*** We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.	**Consistent:** The Project Specific Plan includes design guidelines for future development within the Mixed-Use District in Section 5 that include planning and design criteria to ensure that future development complements existing surrounding development and provides adequate transitions and buffers between less compatible uses and minimizes potential conflicts.
Policy CD-3.5 ***Active Frontages.*** We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).	**Consistent:** The Project Specific Plan includes design guidelines for future development within the Mixed-Use District in Section 5 that include planning and design criteria to create active pedestrian streetscapes and orient building frontages, business entrances, residential courtyards and balconies towards sidewalks and common open areas maximize safety, comfort, and aesthetics.
Goal CD-5: A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the property values and encourages additional public and private investments.	
Policy CD-5.1 ***Maintenance of Buildings and Property*****.** We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.	**Consistent:** The Project Specific Plan includes a Maintenance Responsibility Matrix in Section 6, Implementation, identifying the parties responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, walls and monuments, infrastructure, and utilities within the Specific Plan area. Privately owned buildings would be maintained as specified by the Property Owners Association (Section 6.10.2).
Policy CD-5.2 ***Maintenance of Infrastructure.*** We require the continual maintenance of infrastructure.	**Consistent:** The Project Specific Plan includes a Maintenance Responsibility Matrix in Section 6, Implementation, identifying the parties responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, walls and monuments, infrastructure, and utilities within the Specific Plan area.
Goal SR-2: A range of educational and training opportunities for residents and workers of all ages and abilities that improves their life choices and provides a skilled workforce for our businesses.	
Policy SR-2.4 ***Access to Schools.*** We work with local and regional partners to improve the safety in and around schools and to improve access for citizens of all ages and abilities to schools and community services, such as after school and other programs.	**Consistent:** The Project Specific Plan evaluated the accessibility and capacity of existing schools. Future residential development would be reviewed by the applicable school districts and would address the mitigation measures identified in the Project EIR.

General Plan Goals/Policies	Project Consistency
Goal SR-5: Local heritage, entertainment, and cultural experiences that enrich the lives of Ontario's residents, workers, and visitors and serve to attract residents and businesses to the City.	
Policy SR-5.3 *Public Art.* We encourage public art in buildings, parks, open spaces, and other public and private spaces.	**Consistent:** The Project Specific Plan does not require public art within the Business Park and Mixed-Use Districts specifically. Future development plans for commercial or office uses should consider public art improvements or amenities according to City policy.

Ontario Development Code Consistency

Upon adoption of the Project Specific Plan, the development regulations and design standards within the Project Specific Plan would apply to the Project site and would establish the applicable zoning regulations and development standards. The Project Specific Plan would become the land use implementation tool for the Project site. As stated in Ontario Development Code Section 1.01.035, in the event of any conflict between the requirements of the Development Code and the standards contained within an adopted project, the requirements of the project shall govern, and when the provisions of a project are silent on a specific matter, the regulations set forth in the Development Code shall apply. As such, the Project would not result in conflicts with the Ontario Development Code, and impacts would be less than significant.

Airport Environs Land Use Plan Consistency

The Project site is one-mile north of the Chino Airport and is approximately 4.0 miles south of the ONT and within the AIA for both airports. Airport operations and their potential noise and safety hazards require careful land use planning on adjacent and nearby lands to protect residents and land uses. Airport operations and their accompanying safety and noise hazards are discussed in ***Section 4.9: Hazards and Hazardous Materials***, and ***Section 4.12: Noise***.

The City is currently developing a Compatibility Plan for Chino Airport (Compatibility Plan) that relies upon the California Airport Land Use Planning Handbook (State of California Department of Transportation, Division of Aeronautics) October 2011 (Handbook). As provided for in the Handbook "alternative process" the City functions as the Designated Agency in formulating airport land use compatibility plans for City properties. The Compatibility Plan is based on the Handbook Generic Safety Zones for General Aviation Airports.

Final site plans and development plans within the Project site would be subject to and required to comply with applicable standards and requirements of the Compatibility Plan as adopted by the City. Please refer also to related discussions presented in ***Section 4.9, Hazards and Hazardous Materials***, of this Draft EIR.

The Project site is within the ONT ALUCP. However, it is not within a safety zone, a noise impact zone, or an airspace protection zone of the ONT. Therefore, a less than significant impact will occur.

Conclusion

As noted above, the Project would not conflict with any land use plan, policy, or regulation. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. Furthermore, the Project Specific Plan would promote orderly development to coincide with adjacent land uses. As shown

on ***Tables 4.11-2*** and ***4.11-3***, the Project embodies the goals and policies in the applicable long-range planning documents. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.

Mitigation Measures

No mitigation is required.

4.11.7 Cumulative Impacts

The geographic context for this cumulative analysis includes the City in relation to the City's TOP 2050. Cumulative development would result in substantial changes to existing land use patterns through conversion of agricultural and dairy lands into urban uses pursuant to the General Plan land use designations. Cumulative development would also be subject to site-specific environmental and planning reviews that would address consistency with adopted General Plan goals, objectives, and policies, as well as with the City's Development Code and ALUCP policies. As part of environmental review, projects would be required to provide mitigation for any inconsistencies with the General Plan and environmental policies that would result in adverse physical environmental effects. The cumulative projects as a whole would result in a more intensely developed built environment than currently exists, as it currently exists as an underutilized portion of land and would be required to be consistent with local General Plan policies.

Additionally, the Project would be pursuant to TOP 2050 and would represent a consistent and logical continuation of the existing and planned pattern of development in Ontario, specifically the Ontario Ranch area. The City has long anticipated that this area would transition from dairy/agricultural to urban uses, and the Project Specific Plan is implementing TOP 2050.[7]

Cumulative projects could include General Plan amendments and/or zone changes, and modifications to existing land uses. However, such amendments do not necessarily represent an inherent negative effect on the environment, particularly if the proposed changes involve changes in types and intensity of uses, rather than eliminating application of policies that were specifically adopted for the purpose of avoiding or mitigating environmental effects. Past and present cumulative projects do not involve amendments that would eliminate application of policies that were adopted for the purpose of avoiding or mitigating environmental effects. Determining whether any future project might include such amendments and determining the cumulative effects of any such amendments would be speculative since it cannot be known what applications that are not currently filed might request. Thus, it is expected that the land uses of cumulative projects would be consistent with policies that avoid an environmental effect; therefore, cumulatively considerable impacts from cumulative projects related to policy consistency would be less than significant.

4.11.8 Significant Unavoidable Impacts

There are no significant unavoidable impacts.

4.12 NOISE

4.12.1 Introduction

This section of the Draft Environmental Impact Report (Draft EIR) discusses the fundamentals of sound; examines federal, state, and local noise guidelines, policies, and standards; reviews noise levels at existing noise-sensitive receptor locations; and evaluates potential noise and vibration impacts associated with (Project); and provides mitigation to reduce noise impacts at sensitive receptor locations. This evaluation uses procedures and methodologies as specified by the Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA) and evaluates the potential for the proposed Project to result in noise and vibration impacts at nearby sensitive receptors. ***Appendix H: Noise Data*** of this Draft EIR provides supplementary, project-specific background information, construction noise calculation worksheets, and project-generated traffic noise modeling results.

This Section and environmental discussion use information from the following City documents:

- The Ontario Plan 2050
- City of Ontario Municipal Code
- City of Ontario TOP 2050 Final Supplemental EIR

4.12.2 Environmental Setting

Sound Fundamentals

Sound is a pressure wave transmitted through the air. It is described in terms of loudness or amplitude (measured in decibels), frequency or pitch (measured in Hertz [Hz] or cycles per second), and duration (measured in seconds or minutes). The standard unit of measurement of the loudness of sound is the decibel (dB). Changes of 1 to 3 dBA are detectable under quiet, controlled conditions and changes of less than 1 dBA are usually indiscernible. A 3 dBA change in noise levels is considered the minimum change that is detectable with human hearing in outside environments. A change of 5 dBA is readily discernable to most people in an exterior environment whereas a 10 dBA change is perceived as a doubling (or halving) of the sound.

The human ear is not equally sensitive to all frequencies. Sound waves below 16 Hz are not heard at all and are “felt” more as a vibration. Similarly, while people with extremely sensitive hearing can hear sounds as high as 20,000 Hz, most people cannot hear above 15,000 Hz. In all cases, hearing acuity falls off rapidly above about 10,000 Hz and below about 200 Hz. Since the human ear is not equally sensitive to sound at all frequencies, a special frequency dependent rating scale is usually used to relate noise to human sensitivity. The A-weighted decibel scale (dBA) performs this compensation by weighting frequencies in a manner approximating the sensitivity of the human ear.

Noise is defined as unwanted sound and is known to have several adverse effects on people, including hearing loss, speech and sleep interference, physiological responses, and annoyance. Based on these known adverse effects of noise, the federal government, the State of California, and many local

governments have established criteria to protect public health and safety and to prevent disruption of certain human activities.

Technical Terminology

Noise is most often defined as unwanted sound. Although sound can be easily measured, the perception of noise and the physical response to sound complicate the analysis of its impact on people. People judge the relative magnitude of sound sensation in subjective terms such as "noisiness" or "loudness."

The following are brief definitions of terminology used in this section:

- **Sound.** A disturbance created by a vibrating object, which, when transmitted by pressure waves through a medium such as air, is capable of being detected by a receiving mechanism, such as the human ear or a microphone.
- **Noise.** Sound that is loud, unpleasant, unexpected, or otherwise undesirable.
- **Decibel (dB).** A unitless measure of sound on a logarithmic scale.
- **A-Weighted Decibel (dBA).** An overall frequency-weighted sound level in decibels that approximates the frequency response of the human ear.
- **Equivalent Continuous Noise Level (L_{eq}); also called the Energy-Equivalent Noise Level.** The value of an equivalent, steady sound level which, in a stated time period (often over an hour) and at a stated location, has the same A-weighted sound energy as the time-varying sound. Thus, the L_{eq} metric is a single numerical value that represents the equivalent amount of variable sound energy received by a receptor over the specified duration.
- **Statistical Sound Level (L_n).** The sound level that is exceeded "n" percent of time during a given sample period. For example, the L_{50} level is the statistical indicator of the time-varying noise signal that is exceeded 50 percent of the time (during each sampling period); that is, half of the sampling time, the changing noise levels are above this value and half of the time they are below it. This is called the "median sound level." The L_{10} level, likewise, is the value that is exceeded 10 percent of the time (i.e., near the maximum) and this is often known as the "intrusive sound level." The L_{90} is the sound level exceeded 90 percent of the time and is often considered the "effective background level" or "residual noise level."
- **Day-Night Sound Level (L_{dn} or DNL).** The energy-average of the A-weighted sound levels occurring during a 24-hour period, with 10 dB added to the sound levels occurring during the period from 10:00 PM to 7:00 AM.
- **Community Noise Equivalent Level (CNEL).** The energy-average of the A-weighted sound levels occurring during a 24-hour period, with 5 dB added from 7:00 pm to 10:00 pm and 10 dB from 10:00 pm to 7:00 am. For general community/environmental noise, CNEL and L_{dn} values rarely differ by more than 1 dB (with the CNEL being only slightly more restrictive, that is, higher than the L_{dn} value). As a matter of practice, L_{dn} and CNEL values are interchangeable and are treated as equivalent in this assessment.
- **Peak Particle Velocity (PPV).** The peak signal value of an oscillating vibration velocity waveform usually expressed in inches per second (in/sec).

- **Vibration Decibel (VdB).** A unitless measure of vibration, expressed on a logarithmic scale and with respect to a defined reference vibration velocity. In the U.S., the standard reference velocity is 1 micro- inch per second ($1x10^{-6}$ in/sec).
- **Sensitive Receptor.** Noise- and vibration-sensitive receptors include land uses where quiet environments are necessary for enjoyment and public health and safety. Residences, schools, motels and hotels, libraries, religious institutions, hospitals, and nursing homes are examples.
- **RCNM.** Federal Highway Administration Roadway Construction Noise Model.

Sound Measurement

Sound pressure is measured through the A-weighted measure to correct for the relative frequency response of the human ear. That is, an A-weighted noise level de-emphasizes low and very high frequencies of sound similar to the human ear's de-emphasis of these frequencies.

Unlike linear units such as inches or pounds, decibels are measured on a logarithmic scale, representing points on a sharply rising curve. On a logarithmic scale, an increase of 10 dBA is 10 times more intense than 1 dBA, while 20 dBA is 100 times more intense, and 30 dBA is 1,000 times more intense. A sound as soft as human breathing is about 10 times greater than 0 dBA. The decibel system of measuring sound gives a rough connection between the physical intensity of sound and its perceived loudness to the human ear. Ambient sounds generally range from 30 dBA (very quiet) to 100 dBA (very loud).

Sound levels are generated from a source and their decibel level decreases as the distance from that source increases. Sound dissipates exponentially with distance from the noise source. This phenomenon is known as "spreading loss." For a single point source, sound levels decrease by approximately 6 dBA for each doubling of distance from the source. This drop-off rate is appropriate for noise generated by on-site operations from stationary equipment or activity at a project site. If noise is produced by a line source, such as highway traffic, the sound decreases by 3 dBA for each doubling of distance in a hard site environment. Line source noise in a relatively flat environment with absorptive vegetation decreases by 4.5 dBA for each doubling of distance.

Time variation in noise exposure is typically expressed in terms of a steady-state energy level equal to the energy content of the time varying period (called L_{eq}), or alternately, as a statistical description of the sound level that is exceeded over some fraction of a given observation period. For example, the L_{50} noise level represents the noise level that is exceeded 50 percent of the time. Half the time the noise level exceeds this level and half the time the noise level is less than this level. This level is also representative of the level that is exceeded 30 minutes in an hour. Similarly, the L_2, L_8 and L_{25} values represent the noise levels that are exceeded 2, 8, and 25 percent of the time, or 1, 5, and 15 minutes per hour. These "Ln" values are typically used to demonstrate compliance for stationary noise sources with a city's noise ordinance, as discussed below. Other values typically noted during a noise survey are the L_{min} and L_{max}. These values represent the minimum and maximum root-mean-square noise levels obtained over the measurement period.

Because community receptors are more sensitive to unwanted noise intrusion during the evening and at night, state law and the County require that, for planning purposes, an artificial dB increment be added

to quiet time noise levels in a 24-hour noise descriptor called the Community Noise Equivalent Level (CNEL) or Day- Night Noise Level (L_{dn}). The CNEL descriptor requires that an artificial increment of 5 dBA be added to the actual noise level for the hours from 7:00 p.m. to 10:00 p.m. and 10 dBA for the hours from 10:00 p.m. to 7:00 a.m. The L_{dn} descriptor uses the same methodology except that there is no artificial increment added to the hours between 7:00 p.m. and 10:00 p.m. Both descriptors give roughly the same 24-hour level with the CNEL being only slightly more restrictive (i.e., higher).

Psychological and Physiological Effects of Noise

Physical damage to human hearing begins at prolonged exposure to noise levels higher than 85 dBA. Exposure to high noise levels affects our entire system, with prolonged noise exposure in excess of 75 dBA increasing body tensions, and thereby affecting blood pressure, functions of the heart and the nervous system. In comparison, extended periods of noise exposure above 90 dBA could result in permanent hearing damage. When the noise level reaches 120 dBA, a tickling sensation occurs in the human ear even with short-term exposure. This level of noise is called the threshold of feeling. As the sound reaches 140 dBA, the tickling sensation is replaced by the feeling of pain in the ear. This is called the threshold of pain. ***Table 4.12-1: Typical Noise Levels*** shows typical noise levels from familiar noise sources.

Table 4.12-1: Typical Noise Levels

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
Onset of physical discomfort	120+	
	110	Rock Band (near amplification system)
Jet Flyover at 1,000 feet		
	100	
Gas Lawn Mower at three feet		
	90	
Diesel Truck at 50 feet, at 50 mph		Food Blender at 3 feet
	80	Garbage Disposal at 3 feet
Noisy Urban Area, Daytime		
	70	Vacuum Cleaner at 10 feet
Commercial Area		Normal speech at 3 feet
Heavy Traffic at 300 feet	60	
		Large Business Office
Quiet Urban Daytime	50	Dishwasher Next Room
Quiet Urban Nighttime	40	Theater, Large Conference Room (background)
Quiet Suburban Nighttime		
	30	Library
Quiet Rural Nighttime		Bedroom at Night, Concert Hall (background)
	20	
		Broadcast/Recording Studio
	10	
Lowest Threshold of Human Hearing	0	Lowest Threshold of Human Hearing

Vibration Fundamentals

Vibration is an oscillating motion in the earth. Like noise, vibration is transmitted in waves, but in this case through the earth or solid objects. Unlike noise, vibration is typically of a frequency that is felt rather than heard.

Vibration can be either natural as in the form of earthquakes, volcanic eruptions, landslides, or man-made as from explosions, heavy machinery or trains. Both natural and man-made vibration may be continuous such as from operating machinery, or impulsive as from an explosion.

As with noise, vibration can be described by both its amplitude and frequency. Amplitude may be characterized in three ways including displacement, velocity, and acceleration. Particle displacement is a measure of the distance that a vibrated particle travels from its original position and for the purposes of soil displacement is typically measured in inches or millimeters. Particle velocity is the rate of speed at which soil particles move in in/sec or millimeters per second (mm/sec). Particle acceleration is the rate of change in velocity with respect to time and is measured in in/sec or mm/sec. Typically, particle velocity (measured in in/sec) and/or acceleration (measured in gravities) are used to describe vibration. ***Table 4.12-2: Human Reaction to Typical Vibration Levels*** presents the human reaction to various levels of peak particle velocity (PPV).

Table 4.12-2: Human Reaction to Typical Vibration Levels

Vibration Level Peak Particle Velocity (in/sec)	Human Reaction	Effect on Buildings
0.006–0.019	Threshold of perception, possibility of intrusion	Vibrations unlikely to cause damage of any type
0.08	Vibrations readily perceptible	Recommended upper level of vibration to which ruins and ancient monuments should be subjected
0.10	Level at which continuous vibration begins to annoy people	Virtually no risk of “architectural” (i.e., not structural) damage to normal buildings
0.20	Vibrations annoying to people in buildings	Threshold at which there is a risk to “architectural” damage to normal dwelling – houses with plastered walls and ceilings
0.4–0.6	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause “architectural” damage and possibly minor structural damage

Source: California Department of Transportation, *Technical Noise Supplement to the Traffic Noise Analysis Protocol*, September 2013.

The way in which vibration is transmitted through the earth is called propagation. As vibration waves propagate from a source, the energy is spread over an ever-increasing area such that the energy level striking a given point is reduced with the distance from the energy source. This geometric spreading loss is inversely proportional to the square of the distance. Wave energy is also reduced with distance as a result of material damping in the form of internal friction, soil layering, and void spaces. The amount of attenuation provided by material damping varies with soil type and condition as well as the frequency of the wave.

4.12.3 Regulatory Setting

To limit population exposure to physically and/or psychologically damaging as well as intrusive noise levels, the federal government, the State of California, various county governments, and most municipalities in the state have established standards and ordinances to control noise.

Federal

While there are no federal regulations directly applicable to implementation of the Project under CEQA, the federal government regulates occupational noise exposure common in the workplace through the Occupational Health and Safety Administration (OSHA) under the Environmental Protection Agency (EPA). Such limitations would apply to the operation of construction equipment and would also apply to any proposed industrial warehouse land uses. Noise exposure of this type is dependent on work conditions and is addressed through a facility's Health and Safety Plan, as required under OSHA, and is, therefore, not addressed further in this analysis.

State

General Plan Guidelines

The State of California, through its General Plan Guidelines, discusses how ambient noise should influence land use and development decisions and includes a table of normally acceptable, conditionally acceptable, normally unacceptable, and clearly unacceptable uses at different noise levels expressed in CNEL. A conditionally acceptable designation implies new construction or development should be undertaken only after a detailed analysis of the noise reduction requirements for each land use is made and needed noise insulation features are incorporated in the design. By comparison, a normally acceptable designation indicates that standard construction can occur with no special noise reduction requirements. Local municipalities adopt these compatibility standards as part of their General Plan and modify them as appropriate for their local environmental setting.

California Building Code

The California Building Code (CBC), Title 24, Part 2, Volume 1, Chapter 12, Interior Environment, §1207.11.2, *Allowable Interior Noise Levels*, requires that interior noise levels attributable to exterior sources shall not exceed 45 dB in any habitable room. The noise metric is evaluated as either the day-night average sound level (L_{dn}) or the community noise equivalent level (CNEL), consistent with the noise element of the local general plan.

The State of California's noise insulation standards for nonresidential uses are codified in the California Code of Regulations, Title 24, Building Standards Administrative Code, Part 11, California Green Building Standards Code (CALGreen). CALGreen noise standards are applied to new or renovation construction projects in California to control interior noise levels resulting from exterior noise sources. Proposed projects may use either the prescriptive method (§5.507.4.1) or the performance method (§5.507.4.2) to show compliance. Under the prescriptive method, a project must demonstrate transmission loss ratings for the wall and roof-ceiling assemblies and exterior windows when located within a noise environment

of 65 dBA CNEL or higher. Under the performance method, a project must demonstrate that interior noise levels do not exceed 50 dBA $L_{eq(1hr)}$.

Local Noise Standards

City of Ontario General Plan – The Ontario Plan 2050

The Safety and Land Use Elements of The Ontario Plan (TOP) 2050 set forth goals, policies, and land use guidelines to protect residential neighborhoods and noise-sensitive receptors from excessive noise levels. The City uses the Noise Level Exposure and Land Use Compatibly Guidelines (shown in ***Table 4.12-3: Noise Level Exposure and Land Use Compatibility Guidelines*** below) when siting new development and making land use decisions.

Table 4.12-3: Noise Level Exposure and Land Use Compatibility Guidelines

Land Use Categories		Community Noise Equivalent Level (CNEL)			
Category	Uses	Clearly Acceptable[1]	Normally Acceptable[2]	Normally Unacceptable[3]	Clearly Unacceptable[4]
Residential/Lodging	Single Family/Duplex	<60	60-65	65-70	70-85

Source: The Ontario Plan
1 No special noise insulation required, assuming buildings of normal conventional construction.
2 Acoustical reports will be required for major new residential construction. Conventional construction with closed windows and fresh air supply systems of air conditions will normally suffice
3 New construction should be discouraged. Noise/aviation easements required for all new construction. If new construction does proceed, a detailed analysis of noise reduction requirements must be made, and necessary noise insulation features included.
4 No new construction should be permitted.

The following goals and policies from TOP Safety Element[1] are directly relevant to the proposed Project:

Goal S4 **An environment where noise does not adversely affect the public's health, safety, and welfare.**

Goal S4-1 **Noise Mitigation. Utilize the City's Noise Ordinance, building codes and subdivision and development codes to mitigate noise impacts.**

1 City of Ontario. 2022. *TOP 2050, Safety Element*. https://www.ontarioca.gov/about-ontario-ontario-plan-policy-plan/safety. (accessed April 2023).

Goal S4-2 **Coordination with Transportation Authorities. Collaborate with airport owners, FAA, Caltrans, SANBAG, SCAG, neighboring jurisdictions, and other transportation providers in the preparation and maintenance of, and updates to transportation related plans to minimize noise impacts and provide appropriate mitigation measures.**

Goal S4-4 **Truck Traffic. Manage truck traffic to minimize noise impacts on sensitive land uses.**

Goal S4-5 **Roadway Design. Design streets and highways to minimize noise impacts.**

Municipal Code Standards

The City of Ontario enforces noise limits through the Municipal Code Chapter 29, *Noise.* ***Table 4.12-4: Exterior Noise Standards – City of Ontario*** summarizes the City of Ontario's noise limits.

Table 4.12-4: Exterior Noise Standards – City of Ontario

Land Use	Allowed Equivalent Noise Level, L_{eq}	
	7:00 AM to 10:00 PM	10:00 PM to 7:00 AM
Single-Family Residential	65 dBA	45 dBA
Multi-Family Residential, Mobile Home Parks	65 dBA	50 dBA
Commercial Property	65 dBA	60 dBA
Residential Portion of Mixed Use	70 dBA	70 dBA
Manufacturing and Industrial, Other Uses	70 dBA	70 dBA

Source: City of Ontario. 2022. Ontario Municipal Code, Chapter 29 *Noise – Section 5-29.04 Exterior* Noise *Standards*. https://codelibrary.amlegal.com/codes/ontarioca/latest/ontario_ca/0-0-0-41849. (accessed April 2023).

The noise limits summarized in ***Table 4.12-4*** are subject to the following:

- The noise standard for the applicable zone for any fifteen-minute (15) period; and
- A maximum instantaneous (single instance) noise level equal to the value of the noise standard plus twenty (20) dBA for any period of time (measured using A-weighted slow response).
- In the event the ambient noise level exceeds the noise standard, the maximum allowable noise level under such category shall be increased to reflect the maximum ambient noise level.
- The Noise Zone IV (residential portion of mixed use) standard shall apply to that portion of residential property falling within one hundred (100) feet of a commercial property or use, if the noise originates from that commercial property or use.
- If the measurement location is on a boundary between two (2) different noise zones, the lower noise level standard applicable to the noise zone shall apply.
- Section 5-29.11, the noise standards assigned to Noise Zone I (single-family residential) also apply to the outdoor use area of any school, day care center, hospital or similar health care institution, library or museum while it is in use.
- Section 5-29.06(e), noise sources associated with construction, repair, remodeling, demolition or grading of a public right-of-way is exempt from the provisions of the Municipal Code.
- Section 5-29.09 addresses construction noise and states that no person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a

person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 AM and 6:00 PM or on Saturday or Sunday between the hours of 9:00 AM and 6:00 PM.

City of Chino

The City of Chino enforces noise limits through the Municipal Code Chapter 9.40, *Noise.* ***Table 4.12-5: Exterior Noise Standards for Residential Properties – City of Chino*** summarizes the City of Chino's noise limits for residential, school, and hospital (or similar health care institution) properties.

Table 4.12-5: Exterior Noise Standards for Residential Properties – City of Chino

Maximum Time of Exposure	Noise Metric	Noise Level Not to Exceed	
		7:00 AM to 10:00 PM	10:00 PM to 7:00 AM
30 min/hour	L_{50}[1]	55 dBA	50 dBA
15 min/hour	L_{25}[2]	60 dBA	55 dBA
5 min/hour	L_{8}[3]	65 dBA	60 dBA
1 min/hour	L_{2}[4]	70 dBA	65 dBA
Any Period of Time	L_{max}[5]	75 dBA	70 dBA

Source: City of Chino. 2020. Chino Municipal Code, Chapter 9.40 *Noise – Section 9.40.040 Exterior Noise Standards, Section 9.40.070 Schools, Churches, Libraries, Health Care Institutions – Special Provisions*. https://library.municode.com/ca/chino/codes/code_of_ordinances?nodeId=TIT9PUPEMOWE_CH9.40NO. (accessed April 2023).

Note: A 5 dBA penalty shall be applied in the event of an alleged offensive noise such as impact noise, simple tones, speech, music, or any combination of thereof. The noise standards shall not exceed

[1] The noise standard for a cumulative period of more than 30 minutes in any hour; or

[2] The noise standard plus 5 dBA for a cumulative period of more than 15 minutes in any hour; or

[3] The noise standard plus 10 dBA for a cumulative period of more than 5 minutes in any hour; or

[4] The noise standard plus 15 dBA for a cumulative period of more than 1 minute in any hour; or

[5] The noise standard plus 20 dBA for any period of time.

The noise limits summarized in ***Table 4.12-5*** are subject to the following:

- Each of the noise limits specified in ***Table 4.12-5*** shall be reduced by 5 dBA for impulse or simple tone noises, or for noises consisting of speech or music; provided, however, that if the ambient noise level exceeds the resulting standard, the ambient shall be the standard.
- In the event the ambient noise level exceeds any of the first four noise limit categories above, the cumulative period applicable to said category shall be increased to reflect said ambient noise level. In the event the ambient noise level exceeds the fifth noise category, the maximum allowable noise level under said category shall be increased to reflect the maximum ambient noise level.
- If the measurement location is on a boundary between two different noise zones, the lower noise level standard applicable to the noise zone shall apply.
- Construction activity is exempt from the provisions of the Municipal Code between the hours of 7:00 AM and 8:00 PM Monday through Saturday, with no construction allowed on Sundays and federal holidays pursuant to §9.40.060 and §15.44.030 of the Chino Municipal Code. The construction noise standard is 65 dBA at the affected residential property line.
- Section 9.40.110 of the Chino Municipal Code sets the threshold of vibration perception at no more than 0.05 inches/second RMS vertical velocity (equivalent to 94 VdB).

Existing Conditions

Mobile Noise Sources

Existing roadway noise levels were calculated for the roadway segments in the Project vicinity. This task was accomplished using the Federal Highway Administration (FHWA) Highway Traffic Noise Prediction Model (FHWA-RD-77-108) and existing traffic volumes from the Traffic Analysis (see ***Appendix I: Transportation Reports***). The noise prediction model calculates the average noise level at specific locations based on traffic volumes, average speeds, roadway geometry, and site environmental conditions. The average vehicle noise rates (also referred to as energy rates) used in the FHWA model have been modified to reflect average vehicle noise rates identified for California by the California Department of Transportation (Caltrans). The Caltrans data indicates that California automobile noise is 0.8 to 1.0 dBA higher than national levels and that medium and heavy truck noise is 0.3 to 3.0 dBA lower than national levels. The average daily noise levels along roadway segments in proximity to the Project site are included in ***Table 4.12-6: Existing Traffic Noise Levels***. As shown in ***Table 4.12-6***, existing traffic noise levels in the Project vicinity range between 61.7 dBA CNEL and 71.3 dBA CNEL.

Table 4.12-6: Existing Traffic Noise Levels

Roadway Segment	ADT	dBA CNEL[1]
Euclid Avenue		
SR-60 WB Ramp to SR-60 EB Ramp	53,133	69.7
SR-60 EB Ramp to Walnut Avenue	57,775	70.0
Walnut Avenue to Riverside Drive	43,539	68.8
Riverside Drive to Chino Avenue	39,579	68.3
Chino Avenue to Schaefer Avenue	36,780	70.2
Schaefer Avenue to Project Driveway 1	34,742	69.9
Driveway 1 to Driveway 4	30,338	69.3
Driveway 4 to Edison Avenue	38,099	70.3
Edison Avenue to Eucalyptus Avenue	43,376	70.8
Eucalyptus Avenue to Merrill Avenue	42,026	70.7
Merrill Avenue to Kimball Avenue	38,369	71.3

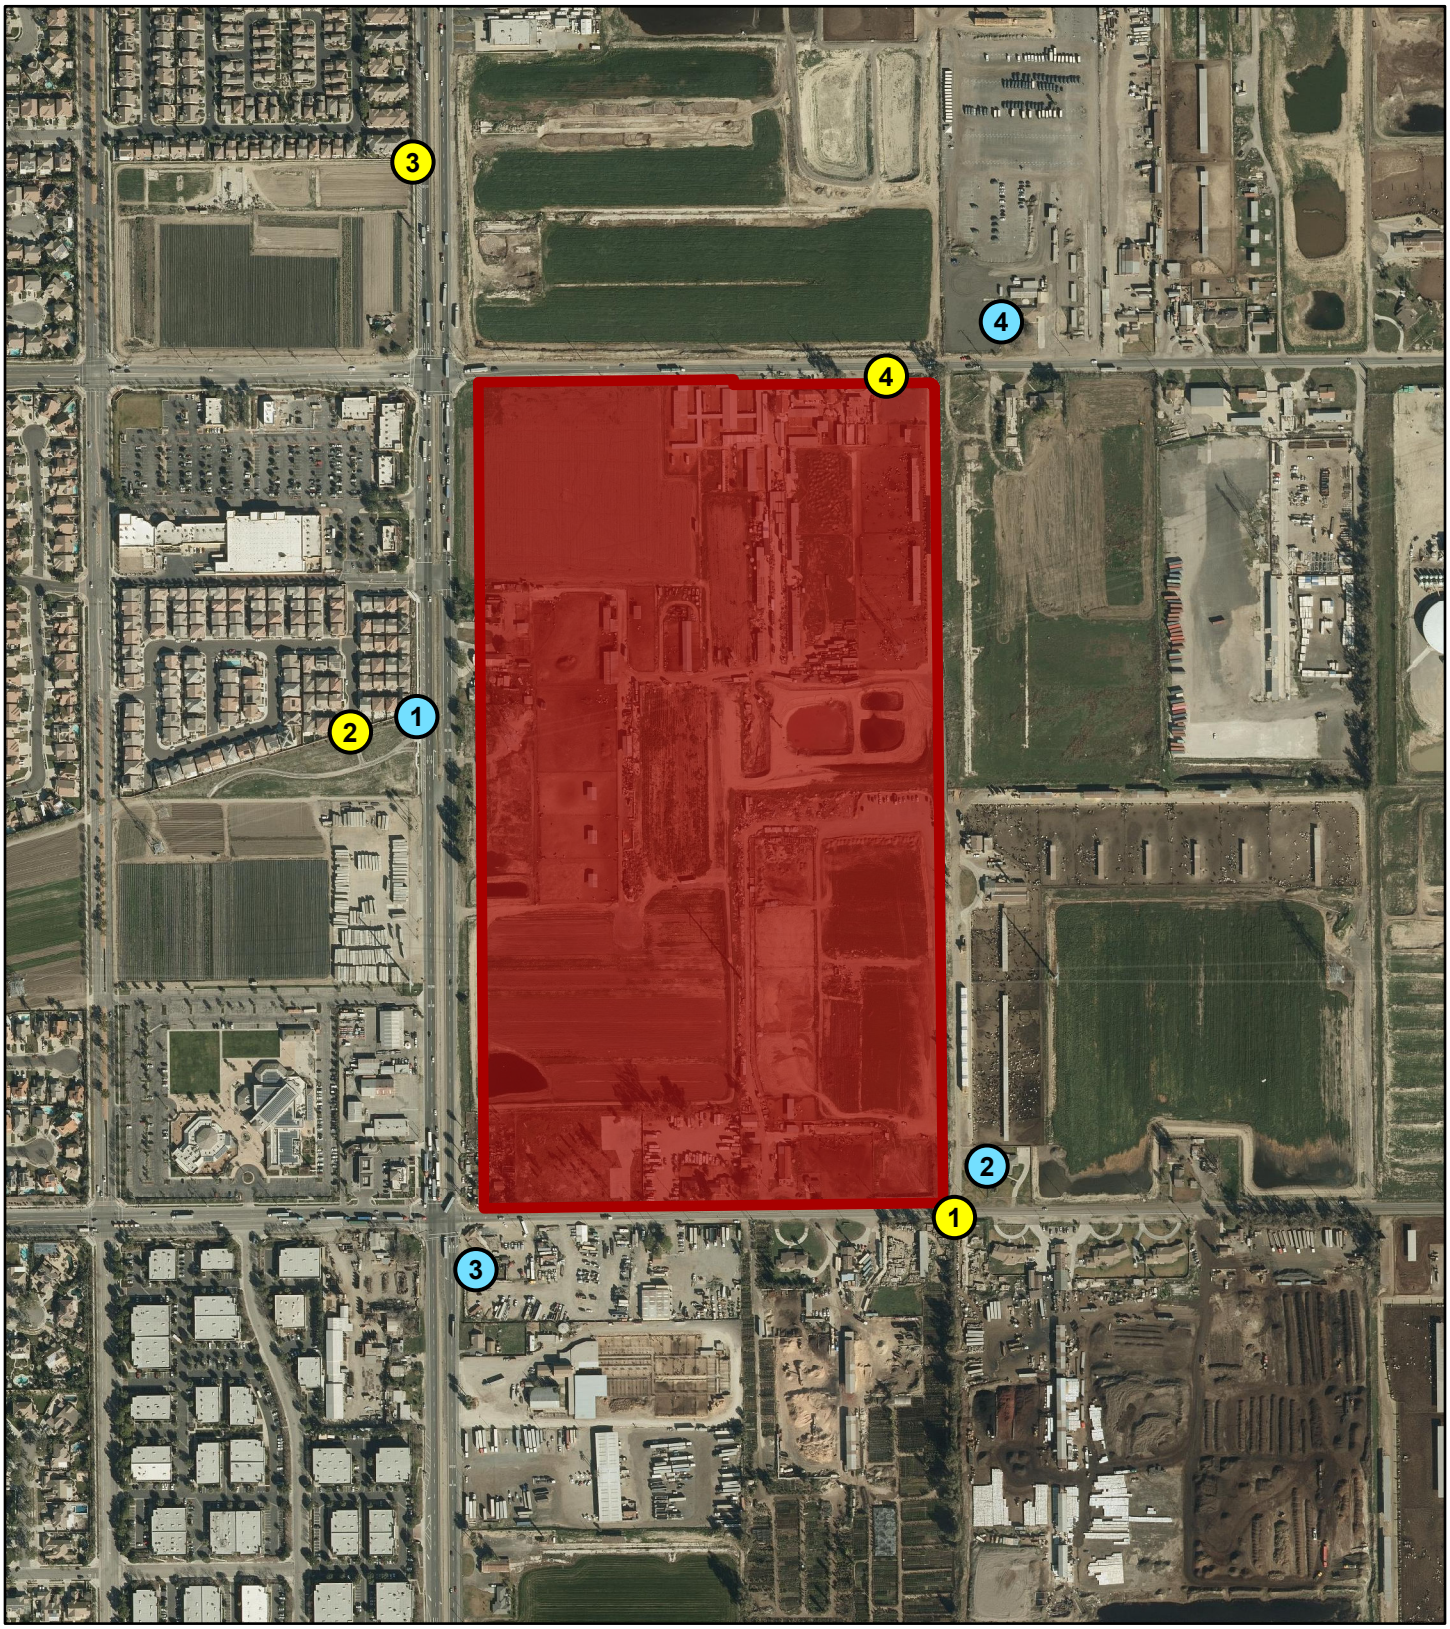
Project Driveway 8 to Project Driveway 10	16,492	66.2
Project Driveway 10 to Sultana Drive	16,690	66.2
Sultana Drive to Bon View Avenue	15,563	65.9
Bon View Avenue to Grove Avenue	15,875	65.9
ADT = average daily trips; dBA = A-weighted decibels; CNEL= Community Equivalent Noise Level Traffic noise levels are at 100 feet from the roadway centerline.		
Source: Based on traffic data provided by Urban Crossroads (2023). Refer to ***Appendix H*** for traffic noise modeling results.		

Chino Airport

The Project site is located directly north of the Chino Airport. Due to the orientation of the runway, the project would not fall within the 55 dBA CNEL noise contour[2]. As shown in ***Table 4.12-6***, existing traffic noise exceeds the 55 dBA noise level generated by the airport. Therefore, the Chino Airport would not be a significant source of noise for the Project site.



Ambient Noise Measurements

The Project site currently contains land used for dairy farming. To quantify existing ambient noise levels in the Project area, Kimley-Horn conducted five short-term noise measurements on February 8, 2023; see ***Appendix H***. The noise measurement sites were representative of typical existing noise exposure within and immediately adjacent to the Project site. The 10-minute measurements were taken between 2:15 p.m. and 3:42 p.m. near potential sensitive receptors. Short-term L_{eq} measurements are considered representative of the noise levels throughout the day. The noise levels and sources of noise measured at each location are listed in ***Table 4.12-7: Existing Noise Measurements*** and shown on ***Figure 4.12-1: Noise Measurement and Sensitive Receptor Locations***.

Table 4.12-7: Existing Noise Measurements

Monitoring Location	Description	L_{eq} (dBA)	L_{min} (dBA)	L_{max} (dBA)	Time
NM-1	Intersection of Edison Avenue and Sultana Avenue	74.8	48.5	92.3	2:15-2:25 p.m.
NM-2	South of Farmhouse Avenue	56.1	46.2	63.9	2:41-2:51 p.m.
NM-3	Euclid Avenue by the Residences on the corner of Joy Street and Mashona Avenue	75.0	46.0	89.9	3:06-3:16 p.m.
NM-4	7255 Schaefer Avenue	73.0	46.0	86.4	3:32-3:42 p.m.

Sensitive Receptors

The Project site contains an existing dairy farm and plant nurseries bounded by Euclid Avenue to the west, Sultana Avenue to the east, Edison Avenue to the south, and Schaefer Avenue to the north. The nearest sensitive receptors are the single-family residences located across the street from the Project site, along Euclid Avenue with other nearby residences located surrounding the Project site. The houses directly west of the Project along Euclid Avenue are the nearest receptors to Phase I, approximately 135 feet (41 meters) from the Phase I Project boundary. The nearest sensitive receptor from Phase II of the Project are the houses along Sultana Avenue to the east, approximately 110 feet (34 meters) from Phase II Project boundary. See ***Table 4.12-8: Sensitive Receptor Locations*** and ***Figure 4.12-1*** for sensitive receptor locations and labels.

Table 4.12-8: Sensitive Receptor Locations

Sensitive Receptor Number	Description	Distance (Feet)
1	Residences west across Euclid Avenue	135 feet
2	Residence east across Sultana Avenue	110 feet
3	Residence south across Edison Avenue	160 feet
4	Residence northeast across Schaefer Avenue	200 feet
Source: Google Earth, 2023		

4.12.4 Impact Thresholds and Significance Criteria

According to Appendix G of the State CEQA Guidelines, a project would normally have a significant effect on the environment if the project would result in:

1) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.
2) Generation of excessive groundborne vibration or groundborne noise levels.
3) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.

Construction Noise

City of Chino

The City of Chino has set a noise limit to construction noise at 65 dBA at the affected residential property line.

City of Ontario

The City of Ontario has not established noise limits for temporary construction activities. Therefore, for the purposes of this analysis, the 65 dBA threshold from the City of Chino, located directly adjacent to the western Project boundary, is used to analyze construction noise impacts to affected residences in the City of Ontario.

Stationary Noise

City of Ontario

As discussed above in *Section 4.12.2: Regulatory Setting*, the City's noise ordinance (Chapter 29, *Noise,* of the Municipal Code) establishes noise level standards at receiving residential, school, daycare, hospital, library and museum land uses (see ***Table 4.12-4***). These noise limits are used as significance thresholds for the impact of stationary noise sources on receptors located within the City of Ontario.

City of Chino

As discussed in *Section 4.12.2: Regulatory Setting*, the City of Chino establishes noise level standards at receiving residential land uses in Section 9.40.040 of the City's Municipal Code (see Table 4.12-5). These noise limits are used as significance thresholds for the impact of stationary noise sources on receptors located within the City of Chino.

Vibration

Architectural Damage

The cities of Ontario and Chino do not have established vibration damage criteria, therefore the United States Department of Transportation Federal Transit Administration (FTA) criteria for acceptable levels of ground-borne vibration for various types of buildings is used for this analysis. Structures that amplify ground borne vibration and wood-frame buildings, such as typical residential structures, are more affected by ground vibration than heavier buildings. The level at which ground borne vibration is strong enough to cause architectural damage has not been determined conclusively. The most conservative estimates are reflected in the FTA standards shown in ***Table 4.12-9: Ground borne Vibration Criteria – Architectural Damage*****.**

Table 4.12-9: Ground borne Vibration Criteria - Architectural Damage

Building Category		PPV (in/sec)
I.	Reinforced concrete, steel, or timber (no plaster)	0.5
II.	Engineered concrete and masonry (no plaster)	0.3
III.	Non-engineered timber and masonry buildings	0.2
IV.	Buildings extremely susceptible to vibration damage	0.12
Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018.		

Vibration Annoyance

Section 9.40.110 of the Chino Municipal Code sets the threshold of vibration perception at no more than 0.05 in/sec root mean squared (RMS) vertical velocity (equivalent to 94 VdB). Therefore, the potential for vibration annoyance is assessed using 94 VdB as a threshold in this analysis.

4.12.5 Plans, Programs, and Policies

PPP N-1 The proposed project shall comply with City of Ontario MC Chapter 29, Exterior Noise Standards and Section 5-29.09, which limits construction activities to weekdays between the hours of 7:00 am and 6:00 pm or on Saturday or Sunday between the hours of 9:00 am and 6:00 pm.

PPP N-2 The proposed project shall comply with City of Chino MC Chapter 9.40, Exterior Noise Standards, and Section 15.44.040, which limits construction activities between the hours of 7:00 am and 8:00 pm Monday through Saturday, with no construction allowed on Sundays and federal holidays.

Methodology

Construction

Construction noise levels were based on typical noise levels generated by construction equipment published by the FTA and FHWA. Construction noise is assessed in dBA L_{eq}. This unit is appropriate because L_{eq} can be used to describe noise level from operation of each piece of equipment separately, and levels can be combined to represent the noise level from all equipment operating during a given period.

Construction noise modeling was conducting using the FHWA Roadway Construction Noise Model (RCNM). Reference noise levels are used to estimate operational noise levels at nearby sensitive receptors based on a standard noise attenuation rate of 6 dB per doubling of distance (line-of-sight method of sound attenuation for point sources of noise). Noise level estimates do not account for the presence of intervening structures or topography, which may reduce noise levels at receptor locations. Therefore, the noise levels presented herein represent a conservative, reasonable worst-case estimate of actual temporary construction noise.

Operations

The analysis of the Without Project and With Project noise environments is based on noise prediction modeling and empirical observations. Reference noise level data are used to estimate the Project operational noise impacts from stationary sources. Noise levels are collected from field noise measurements and other published sources from similar types of activities are used to estimate noise levels expected with the Project's stationary sources. The reference noise levels are used to represent a worst-case noise environment as noise level from stationary sources can vary throughout the day. Operational noise is evaluated based on the standards within the City's Noise Ordinance and TOP. The Without Project and With Project traffic noise levels in the Project vicinity were calculated using the FHWA Highway Noise Prediction Model (FHWA-RD-77-108).

Vibration

Groundborne vibration levels associated with construction-related activities for the Project were evaluated utilizing typical groundborne vibration levels associated with construction equipment, obtained from FTA published data for construction equipment. Potential groundborne vibration impacts related to

building/structure damage and interference with sensitive existing operations were evaluated, considering the distance from construction activities to nearby land uses and typically applied criteria.

Construction vibration levels were calculated using the following formula:

$$PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$$

where: PPV_{equip} = the peak particle velocity in in/sec of the equipment adjusted for the distance
PPV_{ref} = the reference vibration level in in/sec from Table 7-4 of the Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, 2018.
D = the distance from the equipment to the receiver

4.12.6 Impacts and Mitigation Measures

Impact 4.12-1: ***Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?***

Level of Significance: Less Than Significant Impact

Specific Plan – Phase I

Construction

Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g., land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. During construction, exterior noise levels could affect the residential neighborhoods surrounding the construction site. The nearest sensitive receptors to the Phase I construction area is an existing residential residence located approximately 135 feet from the Project boundary, directly west along Euclid Avenue in the City of Chino, identified as Sensitive Receptor 1 in ***Figure 4.12-1***. The closest sensitive receptor in the City of Ontario is located approximately 270 feet northeast from the Project Boundary, identified as Sensitive Receptor 4 in ***Figure 4.12-1***.

Phase I construction activities would include demolition, site preparation, grading, building construction, and paving. Such activities would require industrial saws, excavators, and dozers during demolition; dozers and tractors during site preparation; excavators, graders, and dozers during grading; cranes, forklifts, generators, tractors, and welders during building construction; and pavers, rollers, mixers, and paving equipment during paving. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 to 4 minutes at lower power settings. Other primary sources of acoustical disturbance would be random incidents, which would last less than one minute (such as dropping large pieces of equipment or the hydraulic movement of machinery lifts). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. Typical noise levels associated with individual construction equipment are listed in ***Table 4.12-10: Typical Construction Noise Levels***. Equipment noise levels at 135 feet and 110 feet, the distance to the nearest sensitive receptors 1 and 2 during Phase I and Phase II construction activities, respectively, are included in ***Table 4.12-10***.

Table 4.12-10: Typical Construction Noise Levels

Equipment	Typical Noise Level (dBA) at 50 feet from Source	Phase I	Phase II
		Typical Noise Level (dBA) at 135 feet from Source[1]	Typical Noise Level (dBA) at 110 feet from Source[1]

Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018.

The City of Ontario has not established noise limits for temporary construction activities. Therefore, for the purposes of this analysis, the City of Chino threshold of 65 dBA at the affected residential property is used to analyze construction noise impacts to affected residences in the City of Ontario. Chino city limits are also adjacent to the western boundary of the Project. As shown in ***Table 4.12-10***, if construction equipment remained stationary and was located at the Project boundary nearest to the closest sensitive receptor construction noise could exceed the City's 65 dBA threshold. However, construction equipment will be moving throughout the site and all stationary equipment is located away from sensitive receptors as a best practice.

Following FTA's methodology for quantitative construction noise assessments, FHWA's Roadway Construction Noise Model (RCNM) was used to predict construction noise. The noise levels calculated in ***Table 4.12-11: Phase I Construction Noise Levels at Nearest Receptor***, show estimated exterior construction noise. Following FTA methodology, when calculating construction noise, all equipment is assumed to operate at the center of the Project because equipment would operate throughout the Project site and not at a fixed location for extended periods of time. The distance used in the RCNM model was 900 feet, measured from the center of the Phase I area to the nearest sensitive, Sensitive Receptor 1.

Table 4.12-11: Phase I Construction Noise Levels at Nearest Receptor

Construction Phase	Modeled Exterior Construction Noise Level at Nearest Residence (dBA L_{eq})	Noise Threshold (dBA L_{eq})	Exceed Threshold?	Ambient Noise Level (dBA L_{eq})	Construction + Ambient Combined Noise Level (dBA L_{eq})	Exceed Threshold?
Demolition	61.3	65	No	56.1	62.4	No[1]
Site Preparation	62.5		No		63.4	No[1]
Grading	63.1		No		63.9	No[1]
Construction and Paving	61.9		No		62.9	No[1]

1. Combined Noise level remains below the 65 dBA construction noise threshold for residential uses.
Source: Federal Highway Administration, *Roadway Construction Noise Model,* 2006. Refer to ***Appendix H*** for noise modeling results.

As shown in ***Table 4.12-11***, construction noise would not exceed the 65 dBA threshold at residential properties. In addition, compliance with the Municipal Code would minimize impacts from construction noise by limiting construction to daytime hours on weekdays and Saturdays. Phase I construction activities would result in a less than significant noise impact.

Construction noise would increase ambient noise in the project's vicinity. Generally, noise increases of less than 3 dBA is barely perceptible to people, while a 5-dBA increase is readily noticeable. Therefore, ambient noise level increases greater than 5 dBA would be considered significant, but temporary. As shown in ***Table 4.12-11***, construction noise would lead to an increase in ambient noise levels by a maximum of 7.8 dBA. However, the combined noise level would remain below the 65 dBA construction threshold for residential uses. Thus, construction noise would be considered less than significant.

Operations

Implementation of the proposed Project would create new sources of noise in the Project vicinity. The major noise sources associated with the Project that would potentially impact existing nearby residences include stationary noise equipment (i.e., trash compactors, air conditioners, etc.); truck and loading dock (i.e., slow moving truck on the site, maneuvering and idling trucks, equipment noise); parking areas (i.e., car door slamming, car radios, engine start-up, and car pass-by); and off-site traffic noise.

Mechanical Equipment

Potential stationary noise sources related to long-term operation of the Project would include mechanical equipment. Mechanical equipment (e.g., heating ventilation and air conditioning [HVAC] equipment) typically generates noise levels of approximately 52 dBA at 50 feet. Based on preliminary site plans, the nearest potential location for a HVAC unit would be on the roof of Building 3, approximately 170 feet from Sensitive Receptor 1 in the City of Chino. HVAC noise levels would attenuate by the distance to approximately 41.4 dBA, which is well below the City of Chino's 55 dBA daytime and 50 dBA nighttime noise standards for residential uses (refer to ***Table 4.12-5***). The ambient noise level at Sensitive Receptor 1 was measured to be 56.1 dBA (refer to ***Table 4.12-7***) and would increase by 0.1 dBA with the inclusion of the HVAC equipment. This increase would be below the 3 dBA perceptibility threshold.

For the closest receptor located in the City of Ontario, the nearest potential location for an HVAC unit would be on the roof of Building 7, approximately 370 feet from the residential property line of Sensitive

Receptor 4. HVAC noise levels would attenuate by the distance to approximately 34.6 dBA, which is well below the City of Ontario's 65 dBA daytime and 45 dBA nighttime noise standards for residential uses (refer to ***Table 4.12-4***). Operation of mechanical equipment would not increase ambient noise levels beyond the acceptable compatible land use noise levels. Ambient noise levels measured at Sensitive Receptor 4 was measured to be 73.0 dBA (refer to ***Table 4.12-7***) and would remain at the same noise level with the inclusion of the Project. Therefore, HVAC equipment noise would not result in a perceptible 3 dBA ambient noise level increase.

Truck and Loading Dock Noise

During loading and unloading activities, noise would be generated by the trucks' diesel engines, exhaust systems, and brakes during low gear shifting' braking activities; backing up toward the docks; dropping down the dock ramps; and maneuvering away from the docks. The nearest loading/unloading activities to residential properties would occur on the western edge of the Project site at the business park area, buildings two and three.

The proposed Project buildings include dock-high doors for truck loading/unloading and manufacturing/light industrial operations. The nearest dock-high doors to residences in Chino are located approximately 270 feet from the nearest residential property line (Sensitive Receptor 1) and are oriented to the east, away from the residences to the west. Loading dock noise is approximately 68 dB at 30 feet. Loading dock noise levels would be approximately 49.4 dBA at insensitive Receptor 1 without accounting for the intervening structures. The ambient noise level at Sensitive Receptor 1 was measured to be 56.1 dBA and would increase by 0.8 dBA to 56.9 dBA with the inclusion of Project. Furthermore, loading dock doors would be surrounded with protective aprons, gaskets, or similar improvements that, when a trailer is docked, would serve as a noise barrier between the interior warehouse activities and the exterior loading area. This would attenuate noise emanating from interior activities, and as such, interior loading and associated activities would be permissible during all hours of the day. Therefore, noise levels associated with truck loading/unloading activities would not exceed the City of Chino's 55 dBA daytime and 50 dBA nighttime noise standards and would not result in a perceptible ambient noise level increase when measured at the nearest residential uses.

The nearest dock high doors to residences in Ontario are located approximately 575 feet from the nearest residential property line (Sensitive Receptor 4) and are oriented west, away from the residential receptors. At this distance, loading dock noise levels would be approximately 42.8 dBA at Sensitive Receptor 4 without accounting for the intervening structures. The ambient noise level at Sensitive Receptor 4 was measured to be 73.0 dBA and would not increase with the inclusion of Project. Therefore, noise levels associated with truck loading/unloading activities would not exceed the City of Ontario's 65 dBA daytime and 45 dBA nighttime noise standards and would not result in a perceptible ambient noise level increase when measured at the nearest residential uses.

Parking Noise

Phase I of the Project would provide a total of 851 parking stalls, 401 trailers stalls, and 129 dock doors. Parking stalls would be located on all sides of the proposed buildings, dispersed throughout the Phase I area, except along the edges of the Project site. Nominal parking noise would occur within the on-site

parking facilities. Traffic associated with parking lots is typically not of sufficient volume to exceed community noise standards, which are based on a time-averaged scale such as the CNEL scale. The instantaneous maximum sound levels generated by a car door slamming, engine starting up, and car pass-bys range from 53 to 61 dBA; however due to the orientation of the buildings, sensitive receptors would be shielded from the majority of parking lot noise. It should be noted that parking lot noises are instantaneous noise levels compared to noise standards in the hourly L_{eq} metric, which are averaged over the entire duration of a time period. Therefore, parking noise would not exceed the City of Chino's 55 dBA daytime and 50 dBA nighttime noise standards and the City of Ontario's 65 dBA daytime and 45 dBA nighttime noise standards, and would not result in a perceptible ambient noise level increase when measured at the nearest residential uses.

Specific Plan – Phase II Future Development Areas

Construction

Analyzed as a worst-case scenario, Phase II construction activities are assumed to be similar to Phase I, and would include site preparation, grading, building construction, paving, and would also include architectural coating. Such activities would require dozers and tractors during site preparation; excavators, graders, and dozers during grading; cranes, forklifts, generators, tractors, and welders during building construction; pavers, rollers, mixers, and paving equipment during paving; and air compressors during architectural coating. The nearest sensitive receptors to the Phase II construction area are existing residential properties located approximately 110 feet from the Project boundary, identified as Sensitive Receptor 2 in ***Figure 4.12-1***, on the east side of Sultana Avenue. Typical noise levels associated with individual construction equipment are listed in ***Table 4.12-10***.

As discussed previously, the City of Ontario has not established noise limits for temporary construction activities. Therefore, for the purpose of this analysis, the City of Chino threshold of 65 dBA at the affected residential property is also used to analyze construction noise impacts to affected residences in the City of Ontario.

The noise levels calculated in ***Table 4.12-12: Phase II Construction Noise Levels at Nearest Receptor***, show estimated exterior construction noise. Following FTA methodology, when calculating construction noise, all equipment is assumed to operate at the center of the Project because equipment would operate throughout the Project site and not at a fixed location for extended periods of time. Therefore, the distances used in the RCNM model was 900 feet, measured from the center of the Phase II area to the nearest sensitive receptor, Sensitive Receptor 2.

Table 4.12-12: Phase II Construction Noise Levels at Nearest Receptor

Construction Phase	Modeled Exterior Construction Noise Level at Nearest Residence (dBA L_{eq})	Noise Threshold (dBA L_{eq})	Exceed Threshold?	Ambient Noise Level (dBA L_{eq})	Construction + Ambient Combined Noise Level (dBA L_{eq})	Exceed Threshold?[1]
Demolition	61.3	65	No	74.8	75.0	No
Site Preparation	62.5		No		75.0	No
Grading	63.1		No		75.1	No
Construction/Paving/Painting	61.0		No		75.0	No
Paving	54.6		No		74.8	No
Architectural Coating	48.6		No		74.8	No

Source: Federal Highway Administration, *Roadway Construction Noise Model,* 2006. Refer to ***Appendix H*** for noise modeling results.
1. An increase in ambient noise of 5 dBA is readily perceptible and considered significant.

As shown in ***Table 4.12-12*** construction noise would not exceed the 65 dBA threshold at residential properties. In addition, compliance with the Municipal Code would minimize impacts from construction noise by limiting construction to daytime hours on weekdays and Saturdays. Phase II construction activities would result in a less than significant noise impact.

As mentioned previously, noise increase of 5 dBA is readily perceptible to people. Therefore, ambient noise level increases greater than 5 dBA would be considered significant. As shown in ***Table 4.12-12***, construction noise would not lead to an increase in ambient noise levels by more than 5 dBA. Therefore, construction noise levels would not be perceptible at the nearest sensitive receptor.

Operations

As discussed under Phase I, implementation of Phase II of the Project would also create new sources of noise in the project vicinity. The major noise sources associated with Phase II that would potentially impact existing nearby residences include stationary noise equipment (i.e., trash compactors, air conditioners, etc.); truck and loading dock (i.e., slow moving truck on the site, maneuvering and idling trucks, equipment noise); parking areas (i.e., car door slamming, car radios, engine start-up, and car pass-by); and restaurant/drive-thru traffic noise.

Mechanical Equipment

Potential stationary noise sources related to long-term operation of the Project would include mechanical equipment. Mechanical equipment (e.g., HVAC equipment) typically generates noise levels of approximately 52 dBA at 50 feet. Although the site plan for Phase II has not been designed, as a worst-case scenario, the minimum setbacks permitted have been assumed for Phase II buildings located next to the nearest sensitive receptors (30 feet).[3] Therefore, the nearest potential location for a HVAC unit would be located approximately 140 feet from the nearest residential property in Chino (Sensitive Receptor 3). HVAC noise levels would attenuate by the distance to approximately 43.1 dBA at Sensitive Receptor 3

[3] City of Ontario. ND. *Development Code – Chapter 6.0: Development and Subdivision Regulations, Development and Subdivision Regulations. Table 6.01-10: Industrial Zoning District Development Standards*. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/Documents/Planning%20Documents/Development%20Code/Chapter%206.0%20Development%20and%20Subdivision%20Regulations.pdf. (accessed April 2023).

which is well below the City of Chino's 55 dBA daytime and 50 dBA nighttime noise standards for residential uses (refer to ***Table 4.12-5***). The ambient noise level at locations representative of Sensitive Receptor 3 was measured to be 74.8 dBA and would not increase with the inclusion of the HVAC equipment.[4] Therefore, HVAC equipment noise would not result in a perceptible 3 dBA ambient noise level increase.

The nearest potential location for a HVAC unit would be located approximately 190 feet from the nearest residential property in Ontario (Sensitive Receptor 2). HVAC noise levels would attenuate by the distance to approximately 40.4 dBA at Sensitive Receptor 2, which is well below the City of Ontario's 65 dBA daytime and 45 dBA nighttime noise standards for residential uses (refer to ***Table 4.12-4***), respectively. Operation of mechanical equipment would not increase ambient noise levels beyond the acceptable compatible land use noise levels. Ambient noise levels measured at Sensitive Receptor 2 was measured to be 74.8 dBA (refer to ***Table 4.12-7***) and would remain at the same noise level with the inclusion of the Project. Therefore, HVAC equipment noise would not result in a perceptible 3 dBA ambient noise level increase.

Truck and Loading Dock Noise

During loading and unloading activities, noise would be generated by the trucks' diesel engines, exhaust systems, and brakes during low gear shifting' braking activities; backing up toward the docks; dropping down the dock ramps; and maneuvering away from the docks. Although the site plan for Phase 2 has not been designed, for this analysis it has been assumed that Phase 2 buildings located nearest sensitive receptors would have a similar layout as those in Phase 1.

Assuming a similar design as Phase 1, dock-high doors for truck loading/unloading and manufacturing/light industrial operations would be oriented away from sensitive receptors and located approximately 260 feet from the nearest residence (Sensitive Receptor 2). Loading dock noise levels would be approximately 49.7 dBA at Sensitive Receptor 2 without accounting for the intervening structures. The ambient noise level at Sensitive Receptor 2 was measured to be 74.8 dBA and inclusion of the loading dock noise would not increase ambient noise levels. Furthermore, loading dock doors would be surrounded with protective aprons, gaskets, or similar improvements that, when a trailer is docked, would serve as a noise barrier between the interior warehouse activities and the exterior loading area. This would attenuate noise emanating from interior activities, and as such, interior loading and associated activities would be permissible during all hours of the day. Therefore, noise levels associated with truck loading/unloading activities would not exceed the City of Ontario's 65 dBA daytime and 45 dBA nighttime noise standards and would not result in a perceptible ambient noise level increase when measured at the nearest residential uses.

According to the proposed land use plan for Phase II, industrial uses would be located on the eastern side of the Project site and would not be located adjacent to or within 1,000 of residential properties in the City of Chino. Therefore, noise levels associated with truck loading/unloading activities would not exceed

[4] Ambient Noise levels were not collected at Sensitive Receptor 3. Therefore, ambient noise levels at Sensitive Receptor location 2 is used as the ambient noise level due to its proximity to Sensitive Receptor 3.

the City of Chino's daytime or nighttime noise standards and would not result in a perceptible ambient noise level increase when measured at the nearest residential uses.

Parking Noise

Phase II parking stalls would be located on all sides of the proposed buildings including along the edges of the Project site. However, parking areas would be required to meet the City of Ontario's minimum setback requirements for parking lots. Nominal parking noise would occur within the on-site parking facilities. Traffic associated with parking lots is typically not of sufficient volume to exceed community noise standards, which are based on a time-averaged scale such as the CNEL scale. The instantaneous maximum sound levels generated by a car door slamming, engine starting up, and car pass-bys range from 53 to 61 dBA. It should be noted that parking lot noises are instantaneous noise levels compared to noise standards in the hourly L_{eq} metric, which are averaged over the entire duration of a time period. At the closest sensitive receptor 190 feet away (Sensitive Receptor 3), commercial parking lot noise would reach 49.4 dBA and would not increase ambient noise levels at Sensitive Receptor 3. The hours of operation of the commercial spaces is anticipated to be between 7:00 a.m. and 10 p.m. Therefore, parking noise would occur only during the day and would not exceed the City of Chino's 55 dBA daytime standard and would not result in a perceptible ambient noise level increase when measured at the nearest residential uses.

The closest sensitive receptor in the City of Ontario is located approximately 140 feet away from the nearest parking area. Noise levels would reach 52.1 dBA and would not increase ambient noise levels at Sensitive Receptor 2. As mentioned previously, operation of the Phase II parking lot would occur between the hours of 7:00 a.m. and 10:00 p.m. Therefore, parking noise would only occur during the day and would not exceed the City of Ontario's 65 dBA daytime standard.

Restaurant/Drive-Thru Traffic Noise

Phase II of the Project would include a drive-thru restaurant with menu boards and intercoms. Project noise sources from drive-thru operations include amplified speech from the intercom, idling vehicles, and vehicles circulating along the drive-thru lane. The measured noise level associated with active drive-thru operations is 64 dBA at a distance of 20 feet.[5] As mentioned previously, the site plan for Phase 2 has not been designed, therefore for this analysis it has been assumed that drive-thru operations would be located along Edison Avenue at a point closest to sensitive receptors. The nearest sensitive receptor would be Sensitive Receptor 3 (Chino) located at least 160 feet from the drive-thru lane/queuing area, with the proposed menu board and intercom being located even further. At this distance, drive -thru operations would reach 45.9 dBA during peak hours and would not increase ambient noise levels at Sensitive Receptor 3. Furthermore, noise generated through drive-thru operations would fluctuate depending on the time of day and would be below the level listed above at non-peak hours. Therefore, drive-thru operation noise would not exceed the City of Chino's 55 dBA daytime and 50 dBA nighttime noise standards and would not result in a perceptible ambient noise level increase when measured at the nearest residential uses.

[5] Drive-thru noise sample collected by Kimley-Horn on August 17, 2018.

Project Buildout (Phase I + Phase II)

Operations

As discussed under Phase I and Phase II operations, implementation of the proposed Project would create new sources of noise in the Project vicinity. Project Buildout looks at all major noise sources from both Phase I and Phase II when the entire Project is built and operational. Project Buildout impacts to sensitive receptors would be similar to those discussed under Phase II as the nearest sensitive receptor to the Project site is located 110 feet from the Phase II area.

Mechanical Equipment

Refer to mechanical equipment discussions under Phase I and Phase II. As discussed above, mechanical equipment noise would not exceed applicable thresholds for the nearest sensitive receptors located in the City of Ontario and City of Chino. Operation of mechanical equipment would not increase ambient noise levels beyond the acceptable compatible land use noise levels.

Truck and Loading Dock Noise

Refer to truck and loading dock discussion noise under Phase I and Phase II. As discussed above, truck and loading dock noise would not exceed applicable thresholds for the nearest sensitive receptors located in the City of Ontario and City of Chino.

Parking Noise

Refer to parking noise discussions under Phase I and Phase II. As discussed above, parking lot noise would not exceed applicable thresholds for the nearest sensitive receptors located in the City of Ontario and City of Chino.

On-Site Composite Noise

Each on-site operational noise source would impact the closest sensitive receptors to the Project site. ***Table 4.12-13: On-Site Composite Noise*** shows the overall noise level generated by the Project at each of the closest sensitive receptors and the combined noise level experienced by the sensitive receptors from Project buildout operations. A noise level increase less than 3 dBA is considered barely perceptible. Therefore, ambient noise level increases less than 3 dBA would be considered less than significant.

Table 4.12-13: On-Site Composite Noise

Sensitive Receptor	Modeled Exterior Operational Noise (dBA L_{eq})	Ambient Noise Level (dBA L_{eq})	Ambient + Project Combined Noise Level	Incremental Increase	Exceed Threshold?[1]
Sensitive Receptor 1	51.2	56.1	57.3	1.2	No
Sensitive Receptor 2	54.2	74.8	74.8	0.0	No
Sensitive Receptor 3	49.4	74.8	74.8	0.0	No
Sensitive Receptor 4	50.4	73.0	73.0	0.0	No

Refer to ***Appendix H*** for noise modeling results.
1. An increase in ambient noise of 3 dBA is barely perceptible and considered significant.

As shown in ***Table 4.12-13***, none of the closest sensitive receptors would experience a noise level increase greater than 3 dBA. Therefore, on-site operational noise impacts with regard to increases in ambient noise levels would be less than significant.

Off-Site Traffic Noise

Implementation of the Project would generate increased traffic volumes along nearby roadway segments. According to the Traffic Analysis, the Project Buildout would generate a total of 8,820 daily trips which would result in noise increases on Project area roadways. In general, a traffic noise increase of less than 3 dBA is barely perceptible to people, while a 5-dBA increase is readily noticeable. Generally, traffic volumes on Project area roadways would have to approximately double for the resulting traffic noise levels to increase by 3 dBA. Therefore, permanent increases in ambient noise levels of less than 3 dBA are considered to be less than significant.

Traffic noise levels for roadways primarily affected by the Project were calculated using the FHWA's Highway Noise Prediction Model (FHWA-RD-77-108). Traffic noise modeling was conducted for conditions With and Without the Project, based on traffic volumes from the Traffic Analysis. ***Table 4.12-14: Project Buildout (Phase I and Phase II) Existing Plus Project Traffic Noise Levels*** identifies Project traffic-generated noise levels from both Phase I and Phase II combined. Noise levels on Project area roadways under With Project conditions would range between 61.8 dBA CNEL and 71.5 dBA CNEL at 100 feet from the centerline, and the Project would result in a maximum increase of 1.7 dBA CNEL along Edison Avenue. Noise impacts from off-site traffic would be less than significant.

The Traffic Analysis also identifies average daily traffic for the "Opening Year Without Project" and "Opening Year Plus Project." Noise levels for these scenarios are compared in ***Table 4.12-15: Project Buildout (Phase I and Phase II) Opening Year and Opening Year Plus Project Buildout Traffic Noise Levels***. As shown in ***Table 4.12-15***, the opening year Project traffic-generated noise levels on Project area roadways under With Project conditions would range between 62.7 dBA CNEL and 73.6 dBA CNEL at 100 feet from the centerline, and the Project would result in a maximum increase of 0.4 dBA CNEL along Edison Avenue. Noise impacts from off-site traffic would be less than significant in this regard.

Conclusion

As demonstrated in ***Tables 4.12-11*** through ***4.12-15***, implementation of the Project would not result in substantial temporary or permanent increases in ambient noise levels. ***Table 4.12-11*** and ***Table 4.12-12*** confirm that construction of Phase I and Phase II of the Project would not exceed construction noise thresholds. As discussed above, the operation of Phase I and Phase II individually would not result in noise levels that would exceed applicable daytime and nighttime thresholds. In addition, ***Table 4.12-13*** through ***Table 4.12-15*** demonstrate that operational noise levels from the entire site, both Phase I and Phase II combined would not exceed applicable noise standards during the existing and the Project's opening year. Therefore, the Project would result in a less than significant impact.

Mitigation Measures

No mitigation required.

Impact 4.12-2: ***Would the project result in generation of excessive groundborne vibration or groundborne noise levels?***

Level of Significance: Less Than Significant Impact

Specific Plan – Phase I, Phase II Future Development Areas, and Project Buildout (Phase I + Phase II)

Construction Vibration

Construction operations can generate varying degrees of ground vibration, depending on the construction procedures and equipment. Operation of construction equipment generates vibrations that spread through the ground and diminish with distance from the source. Construction on the Project site would have the potential to result in varying degrees of temporary ground-borne vibration, depending on the specific construction equipment used and the operations involved.

The FTA has published standard vibration velocities for construction equipment operations. In general, the FTA architectural damage criterion for continuous vibrations (i.e., 0.2 in/sec) appears to be conservative. The types of construction vibration impacts include human annoyance and building damage. Human annoyance occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. Building damage can be cosmetic or structural. Ordinary buildings that are not particularly fragile would not experience any cosmetic damage (e.g., plaster cracks)

at distances beyond 30 feet. This distance can vary substantially depending on the soil composition and underground geological layer between vibration source and receiver. In addition, not all buildings respond similarly to vibration generated by construction equipment. For example, for a building that is constructed with reinforced concrete with no plaster, the FTA guidelines show that a vibration level of up to 0.20 in/sec is considered safe and would not result in any construction vibration damage.

Table 4.12-16: Typical Construction Equipment Vibration Levels, lists vibration levels at 25 feet for typical construction equipment and at 60 feet for the location of the nearest structure to the Project site. Vibration levels at 110 feet and 135 feet, the distance to the nearest sensitive receptors during Phase I and Phase II construction activities, are also included in ***Table 4.12-16***.

Ground-borne vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance. As indicated in ***Table 4.12-16***, based on FTA data, vibration velocities from typical heavy construction equipment operations that would be used during Project construction range from 0.003 to 0.089 in/sec PPV at 25 feet from the source of activity.

Table 4.12-16: Typical Construction Equipment Vibration Levels

Equipment	Peak Particle Velocity at 25 Feet (in/sec)	Peak Particle Velocity at 60 Feet (in/sec)	Phase I	Phase II
			Peak Particle Velocity at 135 Feet (in/sec)[1]	Peak Particle Velocity at 110 Feet (in/sec)[1]
Large Bulldozer	0.089	0.024	0.0071	0.0096
Caisson Drilling	0.089	0.024	0.0071	0.0096
Loaded Trucks	0.076	0.020	0.0061	0.0082
Rock Breaker	0.059	0.016	0.0047	0.0064
Jackhammer	0.035	0.009	0.0028	0.0038
Small Bulldozer/Tractors	0.003	0.001	0.0002	0.0003
[1] Calculated using the following formula: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$, where: PPV_{equip} = the peak particle velocity in in/sec of the equipment adjusted for the distance; PPV_{ref} = the reference vibration level in in/sec from Table 7-4 of the Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, 2018; D = the distance from the equipment to the receiver.				
Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, 2018.				

The nearest structure to the Project site is located 60 feet to the south. As shown in ***Table 4.12-16***, at 60 feet the vibration velocities from construction equipment would not exceed 0.024 in/sec PPV, which is below the FTA's 0.20 in/sec PPV threshold for building damage. Furthermore, the nearest sensitive receptor to the Phase I construction site is approximately 135 feet to the west (Sensitive Receptor 1), and the nearest receptor to the Phase II construction site is 110 feet to the east (Sensitive Receptor 2). As shown in ***Table 4.12-16***, at 110 feet the vibration velocities from construction equipment would not exceed 0.0096 in/sec PPV, which is below the FTA's 0.10 in/sec PPV annoyance threshold. It is also acknowledged that construction activities would occur throughout the Project site and would not be concentrated at the point closest to the nearest structure. Therefore, vibration impacts associated with Project construction and operation would be less than significant.

Operational Vibration

The proposed Project would include truck movement activity at the proposed Project site. These movements would generally be low-speed (i.e., less than 15 miles per hour) and would occur over new, smooth surfaces. For perspective, Caltrans has studied the effects of propagation of vehicle vibration on

sensitive land uses and notes that "heavy trucks, and quite frequently buses, generate the highest earthborn vibrations of normal traffic." Caltrans further notes that the highest traffic-generated vibrations are along freeways and state routes. Their study finds that "vibrations measured on freeway shoulders (five meters from the centerline of the nearest lane) have never exceeded 0.08 inches per second, with the worst combinations of heavy trucks and poor roadway conditions (while such trucks were moving at freeway speeds). This level coincides with the maximum recommended safe level for ruins and ancient monuments (and historic buildings)"[6]. The distance from the centerline of the nearest lane to sensitive receptors along the truck route is a minimum of 45 feet (14 meters), at this distance, roadway vibrations from trucks would not exceed the annoyance threshold. On-site, truck movements would be a low speed (not at freeway speeds) and over smooth surfaces (not under poor roadway conditions), Project-related vibration associated with truck activity would not result in excessive ground borne vibrations; thus, no vehicle-generated vibration impacts would occur. In addition, there are no sources of substantial ground borne vibration associated with the Project, such as rail or subways. The proposed Project would not create or cause any vibration impacts due to operations.

Conclusion

As shown in ***Tables 4.12-16***, construction of the Project would not generate excessive vibration levels that would cause building damage or annoyance. In addition, operations associated with the Project, including slow moving trucks, would not result in the generation of substantial vibration impacts. Therefore, vibration impacts associated with Project construction and operation would be less than significant.

Mitigation Measures

No mitigation required.

Impact 4.12-3: ***For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?***

Level of Significance: No impact

Specific Plan – Phase I, Phase II Future Development Areas, and Project Buildout (Phase I + Phase II)

Chino Airport

The proposed Project is located approximately one mile north of Chino Airport. The Chino General Plan's Noise Element has noise contours for the Chino Airport. The noise contours show the Project site outside the 65 dBA CNEL contour and, in addition, the proposed Project would be an industrial business park, which is not considered a noise-sensitive land use. Therefore, there would be no impact.

[6] California Department of Transportation. 2013. *Technical Noise Supplement ("TeNS").* https://dot.ca.gov/-/media/dot-media/programs/environmental-analysis/documents/env/tens-sep2013-a11y.pdf. (accessed April 2023).

Ontario International Airport

The proposed Project is approximately 3.7 miles southwest of the Ontario International Airport. The Ontario International Airport Land Use Compatibility Plan Policy Map 2-3, Noise Impact Zones, shows airport noise contours. The map shows that the Project site is outside the 60-65 dB CNEL contour. As discussed above, the proposed Project would be an industrial business park, which is not considered a noise-sensitive land use. There would be no impact.

Mitigation Measures

No mitigation required.

4.12.7 Cumulative Impacts

Construction Noise

Project-related construction activities would not result in a substantial temporary increase in ambient noise levels. Construction noise impacts would be periodic and temporary and would cease upon completion of construction activities. The Project would contribute to other proximate construction Project noise impacts if construction activities were conducted concurrently. However, based on the noise analysis above, the Project's construction-related noise impacts would be less than significant.

Construction activities at other planned and approved projects near the Project site would be required to comply with applicable City rules related to noise. Activities would take place during daytime hours on the days permitted by the applicable Municipal Code, and projects requiring discretionary City approvals would be required to evaluate construction noise impacts, comply with the City's standard conditions of approval, and implement mitigation, if necessary, to minimize noise impacts. Construction noise impacts are by nature localized. Based on the fact that noise dissipates as it travels away from its source, noise impacts would be limited to the Project site and immediate vicinity. Therefore, Project construction would not result in a cumulatively considerable contribution to significant cumulative impacts, assuming such a cumulative impact existed, and impacts in this regard would not be cumulatively considerable. Additionally, cumulative construction noise would be consistent with the findings of TOP 2050 Final Supplemental EIR.

Operational Noise

Cumulative Off-Site Traffic Noise

Cumulative noise impacts describe how much noise levels are projected to increase over existing conditions with the development of the proposed Project and other foreseeable projects. Cumulative noise impacts would occur primarily as a result of increased traffic on local roadways due to buildout of the Project and other projects in the vicinity. Cumulative increases in traffic noise levels were estimated by comparing the Existing and Future Without Project scenarios to the Future Plus Project scenario. The traffic analysis considers cumulative traffic from future growth assumed in the transportation model, as well as cumulative projects.

A project's contribution to a cumulative traffic noise increase would be considered significant when the combined effect exceeds perception level (i.e., auditory level increase) threshold. The following criteria is used to evaluate the combined and incremental effects of the cumulative noise increase.

- **Combined Effect**. The cumulative with Project noise level ("Cumulative With Project") would cause a significant cumulative impact if a 3.0 dB increase over "Existing" conditions occurs and the resulting noise level exceeds the applicable exterior standard at a sensitive use. Although there may be a significant noise increase due to the proposed Project in combination with other related projects (combined effects), it must also be demonstrated that the Project has an incremental effect. In other words, a significant portion of the noise increase must be due to the proposed Project.
- **Incremental Effects**. The "Cumulative With Project" causes a 1.0 dBA increase in noise over the "Cumulative Without Project" noise level.

A significant impact would result only if both the combined and incremental effects criteria have been exceeded. Noise by definition is a localized phenomenon and reduces as distance from the source increases. Consequently, only the proposed Project and growth due to occur in the general area would contribute to cumulative noise impacts.

Table 4.12-17: Cumulative Plus Project Conditions Predicted Traffic Noise Levels – Project Buildout, identifies the traffic noise effects along roadway segments in the Project vicinity for "Existing," "Cumulative Without Project," and "Cumulative With Project," conditions, including incremental and net cumulative impacts.

Table 4.12-17: Cumulative Plus Project Conditions Predicted Traffic Noise Levels – Project Buildout

Roadway Segment	Existing dBA CNEL[1]	Future Without Project dBA CNEL[1]	Future With Project dBA CNEL[1]	Combined Effects	Incremental Effects	Cumulatively Significant Impact?
				Difference In dBA Between Existing and Future With Project	Difference In dBA Between Future Without Project and Future With Project	
Edison Avenue						
SR-60 WB Ramp to SR-60 EB Ramp	69.2	72.2	72.3	3.0	0.1	No
SR-60 EB Ramp to Walnut Avenue	69.5	72.4	72.5	2.9	0.1	No
Walnut Avenue to Riverside Drive	68.2	73.3	73.5	5.3	0.2	No
Riverside Drive to Chino Avenue	67.7	73.3	73.4	5.6	0.1	No
Chino Avenue to Schaefer Avenue	69.6	76.0	76.2	6.6	0.2	No
Schaefer Avenue to Project Driveway 1	69.3	75.0	75.2	5.9	0.2	No
Driveway 1 to Driveway 4	68.7	72.9	73.3	4.6	0.4	No
Driveway 4 to Edison Avenue	69.7	74.1	74.2	4.5	0.1	No
Edison Avenue to Eucalyptus Avenue	70.2	75.1	75.2	5.0	0.1	No
Eucalyptus Avenue to Merrill Avenue	70.1	75.1	75.2	5.1	0.1	No
Merrill Avenue to Kimball Avenue	70.7	75.2	75.3	4.6	0.1	No
Schafer Avenue						
Euclid Avenue to Project Driveway 5	64.0	64.2	64.4	0.4	0.2	No

Roadway Segment	Existing dBA CNEL[1]	Future Without Project dBA CNEL[1]	Future With Project dBA CNEL[1]	Combined Effects	Incremental Effects	Cumulatively Significant Impact?
				Difference In dBA Between Existing and Future With Project	Difference In dBA Between Future Without Project and Future With Project	
Project Driveway 5 to Project Driveway 7	62.3	64.2	64.4	2.1	0.2	No
Project Driveway 7 to Sultana Avenue	62.3	63.9	64.1	1.8	0.2	No
Sultana Drive to Bon View Avenue	62.0	63.6	63.7	1.7	0.1	No
Bon View Avenue to Grove Avenue	61.1	64.2	64.4	3.3	0.2	No
Edison Avenue						
Euclid Avenue to Project Driveway 8	66.5	71.8	72.1	5.6	0.3	No
Project Driveway 8 to Project Driveway 10	65.6	67.3	68.3	2.7	1.0	No
Project Driveway 10 to Sultana Drive	65.6	67.3	68.5	2.9	1.2	No
Sultana Drive to Bon View Avenue	65.3	71.9	72.3	7.0	0.4	No
Bon View Avenue to Grove Avenue	65.3	74.6	74.8	9.5	0.2	No

ADT = average daily trips; dBA = A-weighted decibels; CNEL= Community Equivalent Noise Level
1. Traffic noise levels are at 100 feet from the roadway centerline.
Source: Based on traffic data provided by Urban Crossroads (2023). Refer to *Appendix H* for traffic noise modeling results.

A significant cumulative traffic noise increase would be identified if a cumulative traffic noise increase of greater than the 3 dBA significance threshold of perceptibility is calculated, and the relative contribution from project traffic is calculated to contribute more than 1 dBA to this cumulative impact, it would be considered cumulatively considerable. The largest increase in future levels with the Project is along Edison Avenue with an increase of 1.2 dBA. Therefore, the cumulative traffic noise at this roadway segment would be less than significant. The proposed Project's contribution to noise levels would not be cumulatively considerable. Additionally, cumulative off-site traffic noise would be consistent with the findings of TOP 2050 Final Supplemental EIR.

Cumulative Stationary Noise

Stationary noise sources associated with the Project would result in an incremental increase in non-transportation noise sources in the Project vicinity. However, as discussed above, operational noise caused by the Project would be less than significant. Additionally, due to Project site's distance to sensitive receptors, cumulative stationary noise impacts would not occur. Similar to the proposed Project, other planned and approved projects would be required to mitigate for stationary noise impacts at nearby sensitive receptors, if necessary. As stationary noise sources are generally localized, there would be a limited potential for other projects to contribute to cumulative noise impacts.

No known past, present, or reasonably foreseeable projects would combine with the operational noise levels generated by the Project to increase noise levels above acceptable standards because each project must comply with applicable City regulations that limit operational noise. Therefore, the Project, together with other projects, would not create a significant cumulative impact.

Given that noise dissipates as it travels away from its source, operational noise impacts from on-site activities and other stationary sources would be limited to the Project site and the immediate vicinity. Thus, cumulative operational noise impacts from related projects, in conjunction with Project-specific noise impacts, would not be cumulatively significant. Additionally, cumulative stationary noise would be consistent with the findings of TOP 2050 Final Supplemental EIR.

Pursuant to TOP 2050, implementation of the Specific Plan would represent a consistent and logical continuation of the existing and planned pattern of development in Ontario, specifically the Ontario Ranch area. The City has long anticipated that this area would transition from dairy/agricultural to urban uses, and the Specific Plan is implementing TOP 2050.[7]

4.12.8 Significant Unavoidable Impacts

There are no unavoidable significant impacts.

4.13 POPULATION AND HOUSING

4.13.1 Introduction

The purpose of this section is to describe the existing regulatory and environmental conditions related to population and housing in the vicinity of the Euclid Mixed Use Specific Plan Project (Project), within the City of Ontario (City). This section of the Draft Environmental Impact Report (EIR) identifies potential impacts that could result from the Project. This chapter discusses the Project's relationship to regional housing and jobs policies of the Southern California Association of Governments (SCAG) and the adopted The Ontario Plan (TOP) for the City of Ontario (City), including the Housing Element, with a particular emphasis on jobs-housing relationships in the City and San Bernardino County (County), and as necessary, recommends mitigation measures to avoid and/or reduce the significance of impacts. Impacts are discussed in terms of the changes that would result from Project implementation and includes analysis of the Project's potential to result in substantial population growth in the area (either directly or indirectly) or displace substantial numbers of existing people or housing.

This Section and environmental discussion use information from the following City documents:

- The Ontario Plan 2050
- City of Ontario Municipal Code
- City of Ontario TOP 2050 Final Supplemental EIR

4.13.2 Environmental Setting

Existing Conditions

The Project site is located on approximately 84.1 acres of land currently occupied by agricultural uses, including the raising of livestock, dairy farming activities, and a commercial nursery. There is a private recreational vehicle facility in the southwestern portion of the site and a scrap yard at the intersection of Euclid Avenue and Edison Avenue. Numerous single family residential structures, as well as agricultural related buildings and open structures are also located within the Project site. With that, employment opportunities available on the Project site are those associated with agricultural operations. According to Exhibit LU-01: Land Use Plan of TOP[1], the Project site is currently designated for development of Business Park (BP) (0.6 FAR) and Mixed-Use (MU) at 14.0 to 65.0 du/ac; 1.5 FAR office; 1.0 FAR retail.

Population

Citywide and Countywide Population

As of January 2022, the City and County have a population of approximately 179,516 persons and 2,187,665 persons, respectively. ***Table 4.13-1: Population, Trends in the City of Ontario and San Bernardino County***, exhibits the population growth trends in the City as well as in the County, collected by the Department of Finance (DOF). SCAG projects that by 2045, the horizon year of the 2020-2045

[1] City of Ontario. 2022. LU-01 TOP Land Use Map. https://experience.arcgis.com/experience/99e7a1effa0242218701ac06ca387f9b. (accessed October 2022).

Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), the population of the City and County would increase to 269,100 persons and 2,815,000 persons, respectively.[2]

According to the data, population has steadily increased in both the City and the County from 2010 to 2022 with the largest percentage increase for the City being from 2018 to 2019, at 2.01 percent. The largest percentage increase for the County was from 2010 to 2011 at 0.98 percent.

Table 4.13-1: Population Trends in the City of Ontario and San Bernardino County

Year	City of Ontario		San Bernardino County	
	Population	Percent Change	Population	Percent Change
2010	163,924	N/A	2,035,210	N/A
2011	165,529	0.98%	2,055,250	0.98%
2012	166,592	0.64%	2,071,326	0.78%
2013	167,412	0.49%	2,084,443	0.63%
2014	167,885	0.28%	2,094,951	0.50%
2015	169,153	0.76%	2,112,187	0.82%
2016	169,491	0.20%	2,122,579	0.49%
2017	172,858	1.99%	2,139,520	0.80%
2018	175,083	1.29%	2,150,017	0.49%
2019	178,606	2.01%	2,165,876	0.74%
2020	175,427	1.78%	2,181,654	-0.73%
2021	176,689	-0.72%	2,182,343	-0.03%
2022	179,516	-1.60%	2,187,665	-0.24%

Citywide and Countywide SCAG Projections

SCAG's regional forecast population, housing, and employment projections for 2020 and 2045 for the City and the County are shown in ***Table 4.13-2: SCAG Projections – City of Ontario and San Bernardino County***. According to SCAG, significant growth is anticipated to occur within the City as well as the County between 2016 and 2045. The 2020-2045 RTP/SCS forecasts that the City's population will increase by 96,900 persons between 2016 and 2045, an approximately 56 percent increase. Households within the City are forecasted to increase by 28,500 from year 2016 to 2045, an approximately 62 percent increase. The 2020 2045 RTP/SCS also forecasts that the number of jobs in the City will increase by 55,400 between 2016 and 2045, an approximately 49 percent increase.

[2] SCAG. 2020. *2020-2045 Connect SoCal – Demographics and Growth Forecast*. https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocal_demographics-and-growth-forecast.pdf?1606001579. (accessed April 2023).

Table 4.13-2: SCAG Projections – City of Ontario and San Bernardino County

	2016	2045	Projected Change 2016-2045	Percent Change 2016-2045
San Bernardino County Forecast				
Population	2,141,000	2,815,000	674,000	31%
Housing	630,000	875,000	245,000	39%
Employment	791,000	1,064,000	273,000	35%
City of Ontario Forecast				
Population	172,200	269,100	96,900	56%
Housing	46,000	74,500	28,500	62%
Employment	113,900	169,300	55,400	49%

Households

Citywide and Countywide Housing

As shown in ***Table 4.13-3: Housing Units – City of Ontario and San Bernardino County (2022)***, DOF estimates that there are currently approximately 54,918 housing units in the City. The majority of housing in the City and the County are single-family detached homes. Characteristics of occupied and vacant housing units in the City and County, as reported by the DOF, are also shown in ***Table 4.13-3***.

Table 4.13-3: Housing Units – City of Ontario and San Bernadino County (2022)

	City of Ontario	San Bernardino County
By Unit Type		
Single-Family Detached	32,194	525,570
Single-Family Attached	3,226	25,620
Two to Four	5,322	47,409
Five Plus	11,913	97,958
Mobile Homes	2,262	44,097
Total	**54,918**	**740,654**
Persons per Household	3.37	3.19
Vacancy Rate	3.6%	8.9%

Employment

Citywide Employment

As shown in ***Table 4.13-4: Employment by Industrial Sector – City of Ontario (2022),*** there were 123,976 jobs in the City from February 2020 to June 2021 as provided by the City's "Regional Intelligence Report." The numbers of jobs in the City per industrial sector are shown in ***Table 4.13-4*** with the most jobs at

19.4 percent occurring in the "Transport/Warehouse/Utilities" sector. In 2021, unemployment in the City was 4.1 percent (approximately 5,611 persons).[3]

Table 4.13-4: Employment by Industrial Sector – City of Ontario (2022)

Industrial Sector	Jobs in the City of Ontario	
	Jobs	Percent (%) of Total Jobs
Transport/Warehouse/Util.	24,004	19.4
Health Care	10,539	8.5
Admin. Support	17,629	14.2
Education	1,196	1.0
Fin. Svcs. And Real Estate	4,639	3.7
Prof, Sci, Tech, and Mgmt.	5,675	4.6
Other Svcs.	2,852	2.3
NR/Construction	5,478	4.4

Jobs-Housing Balance

The jobs-housing balance is a general measure of the total number of jobs and housing units in a defined geographic area, without regard to economic constraints or individual preferences. The balance of jobs and housing in an area—in terms of the total number of jobs and housing units as well as the type of jobs versus the price of housing—has implications for mobility, air quality, and the distribution of tax revenues. The jobs-housing balance is one indicator of a project's effect on growth and quality of life in the project area. SCAG applies the jobs-housing balance at the regional and sub regional levels to analyze the fit between jobs, housing, and infrastructure. A major focus of SCAG's regional planning efforts has been to improve this balance. SCAG defines the jobs-housing balance as follows:

> *Jobs and housing are in balance when an area has enough employment opportunities for most of the people who live there and enough housing opportunities for most of the people who work there. The region is, by definition, balanced… Job-rich subregions have balances greater than the regional average; housing-rich subregions have balances lower than the regional average.*
>
> *Ideally, job-housing balance would… assure not only a numerical match of jobs and housing but also an economic match in type of jobs and housing.*

[3] United States Census Bureau (USCB). 2022. 2021 America Community Survey 5-Year Estimates Data Profiles 2016-2021. Selected Economic Characteristics. https://data.census.gov/table?t=Employment&g=050XX00US06071_160XX00US0653896&tid=ACSDP1Y2021.DP03 (Accessed March 23, 2023)

Jobs-housing goals and balances are advisory only. No ideal jobs-housing balance is adopted in state, regional, or city policies. However, SCAG considers an area balanced when the jobs-housing balance is 1.36; communities with more than 1.36 jobs per dwelling unit are considered jobs-rich, while those with fewer than 1.36 are housing-rich. A job-housing imbalance can indicate potential air quality and traffic problems associated with commuting.

As shown in ***Table 4.13-5: Jobs-Housing Balance***, the jobs-housing balance in the City is forecast to decrease between 2016 and 2045, from 2.47 to 2.27. The City is shown to have a disproportionate number of employment opportunities to housing. This suggests that many workers commute to the City. According to SCAG projections, the City is expected to remain jobs-rich. The size, location in the City, and noise and safety zones surrounding the City provide a physical barrier for the development of land uses such as housing, and therefore encourage placement of compatible land uses such as retail, office, industrial, warehousing, and airport service-related uses. Consequently, and as stated above, the City is inherently jobs-rich.

Furthermore, as shown in ***Table 4.13-5***, the County is below the proposed balance of 1.36. It is expected to decrease from 1.26 in 2016 to 1.22 in 2045, which is considered housing-rich. Therefore, it is likely that residents within the subregion will supply most of the workforce, thereby reducing the influx of individuals migrating to southwest County and the City. Additional employment to the area is expected to create a better balance between housing and jobs within the County.

Table 4.13-5: Jobs-Housing Balance

Jurisdiction	Year	Employment	Households	Jobs-Housing
City of Ontario	2016	113,900	46,000	2.47
	2045	169,300	74,500	2.27
San Bernardino County	2016	791,000	630,000	1.26
	2045	1,064,000	875,000	1.22

Source: SCAG. 2020. *2020-2045 Connect SoCal – Demographics and Growth Forecast*. https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocal_demographics-and-growth-forecast.pdf?1606001579. (accessed April 2023).

4.13.3 Regulatory Setting

State and regional laws, regulations, plans, or guidelines that are potentially applicable to the Project are summarized below.

Federal

No Federal laws, regulations, or executive orders apply to aesthetics and scenic resources in the Project site.

State

California Planning and Zoning Law

California planning and zoning law requires each city and county to adopt a general plan for future growth (California Government Code Section 65300). This plan must include a housing element that identifies housing needs for all economic segments and provides opportunities for housing development to meet

that need. At the state level, the Housing and Community Development Department (HCD) estimates the relative share of California's projected population growth in each county based on California DOF population projections and historical growth trends. These figures are compiled by HCD in a Regional Housing Needs Assessment (RHNA) for each region of California. The RHNA is a tool used for SCAG and its member local governments in planning for growth. The RHNA quantifies the need for housing within each jurisdiction. Communities then plan, consider, and decide how they will address this need through the process of completing the Housing Elements of their General Plans. The RHNA does not necessarily encourage or promote growth but allows communities to prepare for growth in a way that enhances quality of life and mobility; improves access to jobs, transportation, and housing; and in a way that would not adversely impact the environment.

State law recognizes the vital role that local governments play in the supply and affordability of housing. To that end, California Government Code requires that the housing element achieve legislative goals to:

- Identify adequate sites to facilitate and encourage the development, maintenance, and improvement of housing for households of all economic levels, including persons with disabilities.
- Remove, as legally feasible and appropriate, governmental constraints to the production, maintenance, and improvement of housing for persons of all incomes, including those with disabilities.
- Assist in the development of adequate housing to meet the needs of low- and moderate-income households.
- Conserve and improve the condition of housing and neighborhoods, including existing affordable housing. Promote housing opportunities for all persons regardless of race, religion, sex, marital status, ancestry, national origin, color, familial status, or disability.
- Preserve for lower-income households the publicly assisted multifamily housing developments in each community.

California housing element laws (California Government Code Section 65580–65589) require that each city and county identify and analyze existing and projected housing needs within its jurisdiction and prepare goals, policies, and programs to further the development, improvement, and preservation of housing for all economic segments of the community commensurate with local housing needs.

No Net Loss Law (Government Code Section 65863)

The purpose of Government Code Section 65863 (No Net Loss Law) is to ensure development opportunities remain available throughout the planning period to accommodate a jurisdiction's regional housing need allocation (RHNA), especially for lower- and moderate-income households. A jurisdiction may not take any action to reduce a parcel's residential density unless it makes findings that the remaining sites identified in its Housing Element sites inventory can accommodate the jurisdiction's remaining unmet RHNA by each income category, or if it identifies additional sites so that there is no net loss of residential unit capacity. If a jurisdiction approves a development of a parcel identified in its Housing Element sites inventory with fewer units than shown in the Housing Element, it must either make findings that the Housing Element's remaining sites have sufficient capacity to accommodate the remaining unmet RHNA by each income level or identify and make available sufficient sites to accommodate the remaining

unmet RHNA for each income category. A jurisdiction may not disapprove a housing project on the basis that approval of the development would trigger the identification or zoning of additional adequate sites to accommodate the remaining RHNA.

Regional

Southern California Association of Governments

SCAG is a council of governments representing Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura counties. SCAG is the federally recognized metropolitan planning organization (MPO) for this region, which encompasses over 38,000 square miles. It serves as a forum for addressing regional issues concerning transportation, the economy, community development, and the environment. SCAG develops, refines, and maintains SCAG's regional and small area socioeconomic forecasting/allocation models. SCAG is also the regional clearinghouse for projects requiring environmental documentation under federal and state law. In this role, SCAG reviews proposed development and infrastructure projects to analyze their impacts on regional planning programs. As the southern California region's MPO, SCAG cooperates with the South Coast Air Quality Management District (SCAQMD), the California Department of Transportation (Caltrans), and other agencies in preparing regional planning documents. The socioeconomic estimates and projections are used for federal and state-mandated long-range planning efforts such as the RTP/SCS, the Air Quality Management Plan, the Federal Transportation Improvement Program, and the RHNA.

Regional Housing Needs Assessment

The RHNA is an assessment process performed periodically as part of Housing Element and General Plan updates at the local level. The RHNA quantifies the need for housing by income group within each jurisdiction during specific planning periods. The RHNA is used in land use planning, to prioritize local resource allocation and to help decide how to address existing and future housing needs. The RHNA allows communities to anticipate growth, so that collectively the region can grow in ways that enhance quality of life, improve access to jobs, promote transportation mobility, and address social equity and fair share housing needs.

Regional Transportation Plan/Sustainable Communities Strategy

On September 3, 2020, SCAG adopted the 2020-2045 RTP/SCS, which places a greater emphasis than ever on sustainability and integrated planning. The 2020-2045 RTP/SCS vision encompasses a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. The 2020-2045 RTP/SCS includes a strong commitment to reduce emissions from transportation sources to comply with SB 375, improve public health, and meet the GHG emission reductions. This long-range plan, required by the state of California and the federal government, is updated by SCAG every four years as demographic, economic, and policy circumstances change. The 2020 2045 RTP/SCS is a living, evolving blueprint for the region's future.

Local

City of Ontario General Plan – The Ontario Plan 2050

The Ontario Plan (TOP) 2050 includes the Housing Element which was certified by the California Department of Housing and Community Development (HCD) in October 2022. The City of Ontario Housing Element's purpose is to provide an adequate supply of quality and affordable housing that is fundamental to the economic and social well-being of the City. Among its most important functions, the Housing Element analyzes existing and future housing needs; addresses constraints to meeting local housing needs; identifies land, financial, and administrative resources for housing; sets forth goals and policies to meet community housing needs; and establishes housing programs and an implementation plan. The Housing Element must be updated every eight years. The City's Housing Element covers the period from October 15, 2021, to October 15, 2029. For Ontario and the rest of the SCAG region, the upcoming housing cycle (the 6th cycle) plans for projected housing needs between 2021 and 2029. For the 6th cycle, the City RHNA goal has nearly doubled since the last Housing Element planning period. For the 2013-2021 planning period, Ontario's RHNA was 10,861 units; the allocation increased 92 percent to 20,854 units for the 2021-2029 period. Within this goal, the City must plan for housing production at three different income levels: lower-income housing (includes extremely low, very low, and low income), moderate income, and above moderate-income.

The Project Site has been identified as a Housing Opportunity Area "Strategy 6, Ontario Ranch Housing Opportunity Area, Euclid Corridor" in the City's Housing Element.

The Housing Element is required to address the production, preservation, and improvement of housing in the community. Among its most important functions, the Housing Element analyzes existing and future housing needs; addresses constraints to meeting local housing needs; identifies land, financial, and administrative resources for housing; sets forth goals and policies to meet community housing needs; and establishes housing programs and an implementation plan.

The following policies contained in the Housing Element are relevant to the Project:

Housing Element[4]

Goal H-2 **Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.**

Policy H-2.1 **Corridor Housing**. We revitalize transportation corridors by encouraging the production of higher density residential and mixed-uses that are architecturally, functionally, and aesthetically suited to corridors.

4.13.4 Impact Thresholds and Significance Criteria

State CEQA Guidelines Appendix G contains the Environmental Checklist Form, which includes questions concerning aesthetics. The questions presented in the Environmental Checklist Form have been utilized

[4] City of Ontario. 2022. *TOP 2050, Housing Element*. https://www.ontarioca.gov/about-ontario-ontario-plan-policy-plan/housing. (accessed April 2023).

as significance criteria in this section. Accordingly, the Project would have a significant effect on the environment if it would:

- Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure); or
- Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere.

Methodology and Assumptions

The Project's demographics are examined in the context of existing and projected population for the County and the City and considers consistency with TOP and the 2020-2045 RTP/SCS. Information on population, housing, and employment for the planning area is available from several sources including:

- **U.S. Census.** The official U.S. Census is described in Article I, Section 2, of the U.S. Constitution. It calls for an actual enumeration of the people every 10 years, to be used for apportionment among the states of seats in the House of Representatives. The Census Bureau publishes population and household data gathered in the decennial census. This information provides a record of historical growth rates in the County.
- **California Department of Finance.** The DOF prepares and administers California's annual budget. Other duties include estimating population demographics and enrollment projections. DOF's "Table E-5: City/County Population and Housing Estimates" reports on population and housing estimates for the State, counties, and cities.
- **Southern California Association of Governments**. Policies and programs adopted by SCAG to achieve regional objectives are expressed in its 2020-2045 RTP/SCS.

The potential impacts of the Project were evaluated relative to the demographic condition, jobs-housing balance, and socioeconomic profiles. The Project would be considered consistent with TOP and the 2020-2045 RTP/SCS if it is compatible with the general intent of such plans and would not preclude attainment of primary goals of such plans.

4.13.5 Plans, Programs, and Policies

There are no plans, policies, or programs applicable to the Project related to population and housing impacts.

4.13.6 Project Impacts and Mitigation

Impact 4.13-1 ***Would the Project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?***

Level of Significance: Less Than Significant Impact

The Project would introduce new population by way of new housing and employment opportunities to the Project site. Development would include up to 290,110 square feet of commercial retail/office uses,

up to 466 residential units, and 1,386,777 square feet of business park uses; it would result in both jobs and housing for residents in the surrounding area. ***Table 3-1: Maximum Project Buildout***, provides the maximum allowable gross building area for each Planning Area based on its allowable FAR, resulting in a combined maximum building square footage of 1,676,887 square feet of business park and mixed-use land uses, in addition to up to 466 residential units and associated onsite and offsite infrastructure improvements.

The Project is proposed in two phases. Phase 1 would allow approximately 1,000,595 SF of business park and mixed-use development and open space uses. Phase II of the Project is evaluated at a programmatic level in this EIR, for the potential future development of Planning Area (PA) 2B and PA 3B (no specific development proposals have been identified for the Phase II area). Phase II would involve the development of up to 466 residential units within PA 3B, as well as business park and open space/non-recreational uses within PAs 2B and 5. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time as the Applicant does not own the parcels within the Phase II area (PAs 2B and 3B) and does not have access to the Phase II area at this time.

Specific Plan – Phase I

Construction

Employment Growth

Project construction would generate temporary employment opportunities, including short-term design, engineering, and construction jobs. Construction-related jobs would not result in a significant population increase because they are expected to be filled by persons within the local economy. The unemployment rate is approximately 4.1 percent within the jurisdictions in the Project vicinity of the Riverside-San Bernardino-Ontario Metropolitan Area as of 2021. Because many of the employment opportunities are expected to be filled by persons within the local economy, it is anticipated that an adequate number of persons are available to fill the employment positions without constructing new residential units. Furthermore, the small percentage of skilled and managerial positions could either be filled by the local economy or by persons outside the local economy. Therefore, the implementation of the Project would result in less than significant growth inducement impacts in the Project vicinity.

Operations

Employment Growth

The projected number of employees that would result from the implementation of the Project was calculated based on the land use projection assumptions in Appendix J of the TOP EIR.[5] As shown in ***Table 4.13-6: Phase I Project Generated Employment***, the Project site has the potential to generate approximately 1,655 employees.

[5] City of Ontario. 2009. *The Ontario Plan Draft EIR, Appendix J: Land Use Modeling Methodology*. https://www.ontarioplan.org/wp-content/uploads/sites/4/2016/05/32253.pdf. (accessed April 2023).

Table 4.13-6: Phase I Project Generated Employment

Building	Warehouse Space	Total Building (sf)	Employees/1,000 sf	Total Employees
Business Park	Non-Office (50%)	438,848.5	0.650	285.25
	Office (50%)	438,848.5	2.860	1255.11
Mixed-Use Office; Retail	Non-Office (90%)	110,608.2	0.718	79.42
	Office (10%)	12,289.8	2.860	35.15
Total	–	**1,000,595**	–	**1,655**

Notes:
1. The numbers were rounded to present a conservative estimate.
2. The EIR will evaluate the total maximum allowable development in the Specific Plan. The Floor Area Ratio (FAR) may be increased to the TOP max levels of 0.60 for BP respectively with appropriate CEQA analysis.
3. Phase II uses are being evaluated at programmatic level only; no specific development applications have been submitted; no specific development dates are known.

Source: City of Ontario. 2009. *The Ontario Plan Draft EIR, Appendix J: Land Use Modeling Methodology*. https://www.ontarioplan.org/wp-content/uploads/sites/4/2016/05/32253.pdf.

It should be noted that the Vehicle Miles Traveled (VMT) Analysis (see ***Appendix I2: Vehicle Miles Traveled Analysis***) conducted by Urban Crossroads also projected a total of 1,631 new residents and 1,333 employees which was used to determine the service population for purposes of calculating VMT per service population.

The forecast increase in Project employment is within SCAG's forecast employment increase for the City of 55,400 and the forecast employment increase for the County of 273,000 by 2045 (see ***Table 4.13-2***).

Population Growth

Implementation of the Project would increase jobs in the City, which would have the potential to increase the demand for housing in the area. As stated, the proposed increase of up to 1,676,887 sf of business park uses has the potential to result in 1,655 jobs. The San Bernardino Council of Governments region is housing-rich. The Project would produce more jobs and therefore would support the improvements designated by SCAG in pursuit of an improved jobs-housing-balance for the County. Because the region is housing-rich, it is expected that jobs at the Project site would be drawn from the local and regional labor force.

However, even if the Project increase in employees added equivalent population to the Project site, growth of 1,655 residents would be well within the growth projections assumed for the City and the SCAG region, specifically, 96,900 by 2045 in the City and 674,000 by 2045 in the County (see ***Table 4.13-2***). Therefore, the Project would not result in substantial population growth, and impacts would be less than significant.

Jobs-Housing Balance

As stated, the SCAG region is considered housing-rich. According to the 2020-2045 RTP/SCS, "the region will add 3,672,000 people; 1,621,000 households; and 1,660,000 jobs over the RTP/SCS (2045) planning horizon." The Project would produce more jobs and therefore would support the improvements designated by SCAG in pursuit of an improved jobs-housing balance for the County.

Project impacts on the jobs-housing balance are estimated by comparing employment and household buildout statistics of the Project to that of SCAG's 2045 projections. As shown in ***Table 4.13-7: Combined Phase I and II, Projected Jobs-Housing Balance***, at Project buildout, the jobs-housing balance for the City

is estimated to be 2.26 which is similar to and only marginally different than SCAG projections for the City in 2045 of 2.27 (see ***Table 4.13-5***). Buildout of the Project would result in an estimated jobs-housing balance of 1.22 for the County, equivalent to the SCAG projection for the County of 1.22. Therefore, no significant impact related to jobs-housing balance is anticipated to occur with implementation of the Project.

Table 4.13-7: Combined Phase I and II, Projected Jobs-Housing Balance

Year	Employment	Households	Jobs-Housing Balance
City of Ontario			
2016	113,900	46,000	2.47
SCAG 2045 Projection	169,300	74,500	2.27
Net increase due to Project	1,655	1,571	Not Applicable
SCAG 2045 Projection + Project	170,955	76,071	2.26
San Bernardino County			
2016	791,000	630,000	1.26
SCAG 2045 Projection	1,064,000	875,000	1.22
Net increase due to the Project	1,655	1,571	Not Applicable
SCAG 2045 Projection + Project	1,065,655	876,571	1.22

[1] Jobs-housing balances are identified for regions and subregions and are not applicable to an area as small as the Project.
Source: SCAG. 2020. *Connect SoCal, Demographics and Growth Forecast Technical Report*. https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocal_demographics-and-growth-forecast.pdf?1606001579. (accessed April 2023).

Specific Plan – Phase II Future Development Areas

Construction

Refer to Phase I discussion above. The same discussion applies for Phase II as Phase I, when development begins. Phase II would involve the development of up to 466 residential units within PA 3B, as well as open space/non-recreational uses and business park uses when PAs 5 and 2B are completed. Construction of Phase II would generate temporary employment opportunities, including short-term design, engineering, and construction jobs. Construction-related jobs would not result in a significant population increase because they are expected to be filled by persons within the local economy. Permanent employment opportunities would be created associated with development of PA 2B business park uses. While the development of Phase II of the Project would result in a temporary construction workforce, construction-related employment would not result in substantial population growth, and therefore impacts would be less than significant. No mitigation is required.

Operations

Population Growth

The Project would include the addition of up to 466 multi-family residential units within the Project site. This could directly contribute to population growth in the area. Utilizing the DOF factor of 3.37 persons per household and, conservatively assuming that every resident of the Phase II future development areas

would be a new resident of the City, these residential uses would potentially result in a population increase in the City of up to 1,571 people.[6, 7]

As discussed in ***Table 4.13-1*** and ***Table 4.13-2*** above, the City's population in 2022 was 179,516 residents and is expected to increase to 269,100 residents by 2045. Project development could result in a population increase of up to 1,571 residents at the time of Phase II buildout. Cumulative development for the current City population and Project is 181,087 residents at Phase II project buildout. Although the Project could result in a population increase of up to 1,571 people at the time of Phase II buildout, this increase in population is accounted for in the City's General Plan Buildout of 410,492 which would occur through 2050.[8] The cumulative development of current population with the anticipated Project residents estimates to about 181,087 residents. This increase in population is accounted for in the City's General Plan buildout of 410,492 residents by 2050, SCAG projections of 269,100 by 2045, and RHNA Allocations.

The Phase II future development areas are characterized by agricultural and urban development consisting of private recreational vehicle facility and a scrap yard. Additionally, the Phase II future development areas are presently designated as Mixed Use – Great Park, which allows for up to 45 dwelling units per acre (du/ac). The proposed land use plan of the Phase II future development areas mirrors the current zoning of the Project site, which is not anticipated to result in any new or substantially more severe environmental impact than was evaluated in the City's TOP EIR. In addition, the proposed residential land uses would not exceed 45 du/ac. Therefore, the Project would not exceed the amount of dwelling units allowed within the General Plan. The Project would align with the City's goals for regional growth as accounted for in the City's General Plan buildout and SCAG projections. Therefore, implementation of the Project would have a less than significant impact related to population growth as a greater increase in population has already been taken into account at the City and regional levels.[9]

Conclusion

As noted above, the Project would not cause substantial unplanned population growth in the area. The Project would provide 466 high-density residential development which would contribute to the City's RHNA Allocation for the 2021-2029 planning period. The Project site has been identified as a Housing Opportunity Area where residential neighborhoods would be balanced by mixed-use, commercial, and public places and organized around a regional-scale park. The City's housing strategies for this area promote the creation of mixed-income communities in the western Ontario Ranch. The Project would be consistent with the goals and growth projection for the City and the region. While the development of new business associated with Phase I development and the development of new residences associated with Phase II development would directly result in population growth, growth of 1,571 residents would be well within the growth projections assumed for the City and the SCAG region, specifically, 96,900 by 2045 in the City and 674,000 by 2045 in the County (see ***Table 4.13-2***). The proposed Project Specific Plan

[6] DOF. 2021. E-*5 Population and Housing Estimates for Cities, Counties, and the State, 2020-2022 with 2020 Census Benchmark*. https://dof.ca.gov/forecasting/demographics/estimates/e-5-population-and-housing-estimates-for-cities-counties-and-the-state-2020-2022/. (accessed April 2023).

[7] 3.37 people/household × 466 dwelling units = 1,571 people.

[9] Ibid.

proposes the same land uses as contained in the City's TOP 2050. Impacts would be less than significant. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[10]

Mitigation Measures

No mitigation is necessary.

Impact 4.13-2 Would the Project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Level of Significance: Less Than Significant Impact

The existing Project site currently contains an operational dairy farm and is improved with numerous residential structures, dairy barns, storage structures, feed storage barns, and numerous livestock corrals. Existing uses would be removed during Project site preparation. The displaced residential units and occupants are voluntarily selling the property to the applicant. Furthermore, the City and surrounding region has adequate housing capacity to accommodate the displaced residents, as discussed above. The affected units are within an Agricultural Overlay District that anticipated future development of this site, which was addressed in the City's TOP 2050 EIR. No significant impact would occur.

Specific Plan – Phase I

Construction and Operations

There are currently no single-family residences within the Phase I development area of the Project site. Therefore, the Project would have a less than significant impact on displacing existing people or housing.

Specific Plan – Phase II Future Development Areas

Construction and Operations

There are currently single-family residences on the Project site that would be displaced upon development of the Project. Based on County parcel data, there are numerous single-family residences on the Project site, within the Phase II future development areas (i.e., APNs 1053-281-01 and -02).[11] However, due to the low number of residents that would be displaced compared to the existing larger housing stock in the region, the Project would not displace a substantial number of people or houses and would not necessitate the construction of replacement housing elsewhere.

The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time as the Applicant does not own the parcels within the Phase II area (PAs 2B and 3B) and does not have access to the Phase II area at this time. Furthermore, the proposed Project Specific Plan land use designations are the same land use designations as contained in TOP 2050. Phase II would

[10] Ibid.

[11] County of San Bernardino. 2023. *Public San Bernardino County Parcel Viewer*. https://sbcounty.maps.arcgis.com/apps/webappviewer/index.html?id=87e70bb9b6994559ba7512792588d57a&marker=-116.34526321815805%2C34.11587161201653%2C%2C%2C%2C&markertemplate=%7B%22title%22%3A%22%22%2C%22longitude%22%3A-116.34526321815805%2C%22latitude%22%3A34.11587161201653%2C%22isIncludeShareUrl%22%3Atrue%7D&level=19. (accessed April 2023).

add up to 466 residential units when Planning Areas 2B and 3B are completed. Therefore, the Project would comply with Government Code Section 65863 which ensures that a jurisdiction maintains adequate development opportunities to accommodate a jurisdiction's RHNA. While the Project would remove existing housing within the Project site, impacts related to the substantial displacement of people or housing would be less than significant, due to the low number of residents that would be displaced compared to the existing larger housing stock in the region. Therefore, the Project would have a less than significant impact on displacing existing people or housing. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[12]

Conclusion

As noted above, the Project would not displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. Additionally, all growth is planned and consistent with and according to TOP 2050, the City's Housing Element goals and policies, and RHNA Allocations. Impacts would be less than significant. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[13]

Mitigation Measures

No mitigation is necessary.

4.13.7 Cumulative Impacts

The area considered for cumulative impacts is the County. Impacts are analyzed using County projections in SCAG's 2020-2045 RTP/SCS Demographics and Growth Forecast. Development of the Project in conjunction with the related project list in ***Table 4-1: Related Approved and Pending Projects***, in Section 4.0, Environmental Impact Analysis, of this Draft EIR, would not result in cumulative wide population and/or housing impacts, as mixed-use business park projects would further improve the jobs-housing balance. This would encourage alignment with objectives set by SCAG's 2020-2045 RTP/SCS as it would increase employment opportunities in an area that is predominantly residential. Furthermore, the Project would be consistent with the goals set forth in TOP 2050[14] by providing long-term employment opportunities associated with the buildout of the Project. Related projects would be reviewed by the City, and development would be required to be consistent with adopted State and City development standards, regulations, plans, and policies to minimize the effect of the increase in population on physical impacts on the environment. Additionally, the indirect effect of Project employment on housing and population growth in the City has been anticipated in TOP, and therefore in regional housing and population forecasts provided in the 2020-2045 RTP/SCS. As such, the Project would not contribute to cumulatively adverse

[12] City of Ontario. 2022. *TOP 2050 Final Supplemental EIR. Section 5.14, Population and Housing.* https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (accessed April 2023).
[13] Ibid.

growth impacts. Upon approval, the Project would improve the jobs-housing balance in the County which is considered a housing-rich area. Therefore, the Project combined with related projects would not result in cumulatively considerable impacts to population and housing as no substantial new unplanned growth would occur.

4.13.8 Significant Unavoidable Impacts

No significant unavoidable aesthetic impacts have been identified.

4.14 PUBLIC SERVICES

4.14.1 Introduction

This section identifies potential impacts on public services by identifying anticipated demand and evaluating the relationship to both existing and planned public services facilities and availability that could result from the Euclid Mixed Use Specific Plan Project (Project) implementation, located within the City of Ontario (City). The Project consists of a Specific Plan, Development Agreement, Development Plan(s), and Tentative Parcel Map(s) to allow for a business park and mixed-use development to be completed in two phases within five planning areas (PAs), with Phase I proposed at a project level entitlement. Phase II of the Project will be evaluated at a programmatic level in the Environmental Impact Report (EIR).

In accordance with Appendix G of the California Environmental Quality Act (CEQA) Guidelines, the emphasis in this Draft EIR is on impacts to public services that could result from implementation of the Project and that could require construction or expansion of existing public service facilities resulting in a physical impact on the environment.

This Section and environmental discussion use information from the following City documents:

- The Ontario Plan 2050
- City of Ontario Municipal Code
- City of Ontario TOP 2050 Final Supplemental EIR

4.14.2 Environmental Setting

Fire Protection

The City of Ontario Fire Department (OFD) provides fire protection, paramedic, and emergency response services to the City and the Project site. Furthermore, the Emergency Medical Service (EMS) Bureau was created by the OFD to provide additional medical care for emergencies, accomplished through training of firefighters in paramedic methods and programs.[1] The OFD serves over 185,000 residents over 50 square miles from 10 strategically located fire stations and includes Bomb Squad, the Hazardous Materials Team, the Urban Search and Rescue team, and the Special Weapons and Tactics (SWAT) team.[2] The Fire Prevention Bureau is responsible for developing and implementing programs and policies that prevent or reduce the magnitude of emergency occurrences (i.e., loss of life and property, or environmental damage). In 2021, the OFD responded to over 22,000 calls for service, approximately 60 calls per day, ranging from medical emergencies to traffic collisions to a large commercial fire. OFD has 227 personnel comprised of 186 sworn firefighters and 41 professional staff members. The OFD currently has ten permanent fire stations and one temporary fire station. The following fire stations service the City of Ontario:

- Station 1: 425 East B Street

[1] City of Ontario. ND. *EMS – EMS Bureau*. https://www.ontarioca.gov/Fire/EMS. (accessed March 2023).
[2] City of Ontario. ND. *Operations*. https://www.ontarioca.gov/Fire/Operations. (accessed March 2023).

- Station 2: 544 West Francis Street
- Station 3: 1408 East Francis Street
- Station 4: 1005 North Mountain Avenue
- Station 5: 1530 East Fourth Street
- Station 6: 2931 East Philadelphia Avenue
- Station 7: 4901 East Vanderbilt Street
- Station 8: 3429 East Shelby Street
- Station 9: 2661 East Grand Park
- Station 10: 1230 Tower Drive
- Station 11: Southwest corner of Bon View and Eucalyptus Avenues; permanent location yet to be determined.

Station 2, Station 3, and Station 9 are within the closest proximity to the Project site. Station 2 is located at 544 West Francis Street, Ontario, CA, 91762 and is approximately 2.8 miles north of the Project site. Station 3 is located at 1408 East Francis Street, Ontario, CA, 91761 and is approximately 3 miles northeast of the Project site. Lastly, Station 9 is located at 2661 East Grand Park, Ontario, CA 91762 and is approximately 3 miles west of the Project site. Therefore, the nearest OFD Station to the Project site is Station 2. Fire stations near the Project site are provided in ***Table 4.14-1: Project Area Fire Services***.

Table 4.14-1: Project Area Fire Services

Station/Address	Distance from Project Site	Apparatus	Daily Staffing
#2 located at 544 W. Francis St., Ontario, CA 91762	Approx. 2.8 miles north of the Project site	1 paramedic engine	4
#3 located at 1408 E. Francis St., Ontario, CA 91761	Approx. 3 miles northeast of the Project site	1 paramedic engine	4
#9 located at 2661 E. Grand Park, Ontario, CA 91762	Approx. 3 miles west of the Project site	1 paramedic engine and 1 truck company	8

Source: City of Ontario. ND. *Fire Stations*. https://www.ontarioca.gov/Fire/FireStations. (accessed March 2023).

OFD maintains a mutual-aid agreement with the Operation Area and State of California and receives first alarm automatic aid from the following fire departments:

- Chino Valley Fire Department District—Fire Stations 63 and 65
- Montclair Fire Department—Fire Stations 151 and 152
- Ontario Airport Fire Department - Station 140 at Ontario International Airport
- Rancho Cucamonga Fire Department—Fire Stations 172 and 174
- San Bernardino County Fire Department—Central Valley Battalion Fire Stations 74 and 72
- San Bernardino County Fire Department —Fire Station 161

The Chino Valley Fire Department Station 63 is located approximately two miles south of the Project site, on the southern end of the Chino Airport. The OFD has several response times benchmarks as identified

in ***Table 4.14-2: OFD Response Times***. OFD achieves its benchmarks with a 90 percent of the calls are within benchmark. Due to the lack of surrounding development, the average response time to the Project area is 9 minutes and 59 seconds.

Table 4.14-2: OFD Response Times

Measure	OFD Benchmark
Call Answering Time	Under 60 seconds
Travel Time	Under 6 minutes
Total Response Time	9:59
Source: Paul Ehrman. Senior Deputy Chief/Fire Marshal. Ontario Fire Department. Personal Communication. April 18, 2023. (email)	

The nearest hospitals to the Project site are the Kaiser Permanente Ontario Medical Center located approximately three miles to the northeast, and the Chino Valley Medical Center located approximately 5.3 miles to the northwest. Both medical facilities offer EMS and urgent care.

Police Protection

The Ontario Police Department (OPD) provides law enforcement services for the City and the Project site. The OPD is located at 2500 South Archibald Avenue, Ontario, CA, 91761, approximately 3.6 miles northwest of the Project site. The OPD currently employs 287 sworn police officers and 83 professional staff.[3] The OPD provides staffing based on the needs of the OPD and City and utilizes both civilian and sworn staff.

The OPD has five main service bureaus: Field Operations, Special Operations, Investigations, Airport, and Administration. These bureaus consist of several divisions and units such as: Air Support, C.O.P.S., Special Enforcement, Career Criminal, Traffic, Detectives, the Ontario Mills Mall unit, Recruitment and Training, Forensics, Records, Communications and Crime Prevention/Crime Analysis. OPD is equipped with patrol vehicles, motorcycles, K-9 units, unmarked units, helicopters, bicycles, a SWAT van, command armored rescue vehicle, and crime prevention vans.

The OPD implemented a geographical-based policing program to provide the most protection to the City. As part of this "Geo-Policing" program, the City has been drawn into three geographical areas: West, East, and South. Each area has an assigned Lieutenant as an Area Commander. The Area Commander is responsible for the delivery of police services in their area of control with an emphasis on the preservation and improvement of the quality of life, safety, and economic value of those who live and do business in the City.[4] The Project site is located in the West Area Command and Lieutenant Troy Scutella is the assigned Area Commander for the Project area. Each area has a dedicated teams of officers and corporals, headed by police sergeants, who work 24/7 patrol operations; traffic officers; Community Engagement Team (CET) officers, who work special projects; narcotics investigators; and detectives.[5]

The OPD's response time is the time between receipt of a service call and the on-scene arrival of a patrol officer, which varies depending on the urgency of the call. In 2022 the OPD received a total of 143,145

[3] The Ontario Police Department. Public Records Request – P000481-041023. (April 26, 2023) Personal Communication. (email)
[4] The Ontario Police Department. Area Command. 2023. https://www.ontarioca.gov/Police. (accessed March 2023)
[5] City of Ontario. Police Department. https://www.ontarioca.gov/Police. (accessed March 2023)

calls for service, of which 18,021 were Priority 1 calls. Due to the uniqueness of each call, the department strives for a quick and specific response for non-emergency calls. The average emergency call response time for priority one calls is 8 minutes and 45 seconds.[6]

Schools

The Project would be located within the Chino Valley Unified School District (CVUSD). CVUSD has 21 California Distinguished Schools.[7] The district offers educational facilities for elementary, junior high school, and high school attendees. The Project site is within the attendance areas for Liberty Elementary, Woodcrest Junior High School, and Chino High School.[8,9,10] The nearest schools to the Project site are Edwin Rhodes Elementary School, located at 6655 Schaefer Avenue, Chino, CA 91710, approximately 0.7 mile northwest of the Project site; Howard Cattle Elementary School, located at 13590 Cypress Avenue, Chino, CA 91710, is approximately one mile northwest of the Project site; and Magnolia Junior High School, located at 13150 Mountain Avenue, Chino, CA 91710, is approximately 1.5 miles northwest of the Project site. Therefore, Edwin Rhodes Elementary School is within the closest proximity to the Project site.

Parks

The City of Ontario maintains 32 parks, seven community centers, and three dog parks. The nearest parks to the Project are Centennial Park, which is a City park, and two City of Chino parks: Constellation Park and Cypress Trails Park. These parks are approximately three miles north, less than one mile west, and two miles northwest of the Project site, respectively.

Libraries

The City's libraries are managed by the City's Community Life and Culture Department.[11] The Community Life and Culture Department manages the City's two public libraries, neither of which are in close proximity to the Project site. The South Ontario Lewis Family Branch Library (South Ontario Library) is approximately 4.8 miles northeast of the Project site, and the Ovitt Family Community Library is located approximately 4.6 miles north of Project site.

4.14.3 Regulatory Setting

Federal

Federal Emergency Management Act

[11] City of Ontario. 2020. Library. https://www.ontarioca.gov/Library (accessed March 2023).

In March 2003, the Federal Emergency Management Act (FEMA) became part of the U.S. Department of Homeland Security. FEMA's continuing mission is to lead the effort to prepare the nation for all hazards and effectively manage federal response and recovery efforts following any national incident. FEMA also initiates proactive mitigation activities, trains first responders, and manages the National Flood Insurance Program and the U.S. Fire Administration.

Fire Prevention and Control Act of 1974

The Federal Fire Prevention and Control Act of 1974 was created to reduce the nation's losses caused by fire through better fire prevention and control, supplement existing programs of research, training, and education, and to encourage new and improved programs and activities by State and local governments. In addition, the act established the U.S. Fire Administration and the Fire Research Center within the Department of Commerce. The Fire Prevention and Control Act established an intensified program of research into the treatment of burn and smoke injuries and the rehabilitation of victims of fires within the National Institutes of Health.

Fire Prevention Plan

Businesses are required under the Occupational Safety and Health Administration (OSHA) standards to prepare a fire prevention plan that, at a minimum, must include procedures to control accumulations of flammable and combustible waste materials, and for regular maintenance of safeguards installed on heat-producing equipment to prevent the accidental ignition of combustible materials. Furthermore, the fire prevention plan must contain the names and/or job titles of employees responsible for maintaining equipment to prevent or control sources of ignition or fires, and for the control of fuel source hazards.

Americans with Disabilities Act

The Americans with Disabilities Act (ADA) of 1990 (42 U.S. Code [USC] 12181) prohibits discrimination on the basis of disability in public accommodation and state and local government services. Under the ADA, the Architectural and Transportation Barriers Compliance Board issues guidelines to ensure that facilities, public sidewalks, and street crossings are accessible to individuals with disabilities. Public play areas, meeting rooms, park restrooms, and other buildings and park structures must comply with ADA requirements.

International Fire Code

The International Fire Code (IFC) regulates minimum fire safety requirements for new and existing buildings, facilities, storage, and processes. The IFC includes general and specialized technical fire and life safety regulations addressing fire department access, fire hydrants, automatic sprinkler systems, fire alarm systems, fire and explosion hazards safety, use and storage of hazardous materials, protection of emergency responders, industrial processes, and many other topics. The IFC is issued by the International Code Council, an international organization of building officials.

State

California Penal Code

All law enforcement agencies within the State of California are organized and operated in accordance with the applicable provisions of the California Penal Code. This code sets forth the authority, rules of conduct, and training for peace officers. Under state law, all sworn municipal and county officers are state peace officers.

California Code of Regulations Title 24 (California Building Standards Code)

California Code of Regulations (CCR) Title 24, also known as the California Building Standards Code (CBSC), includes regulations for how buildings are designed and constructed, and are intended to ensure the maximum structural integrity and safety of private and public buildings. The CBSC, which applies to all applications for building permits, consists of 12 parts that contain CBSC administrative regulations for all State agencies that implement or enforce building standards. Local agencies must ensure the development complies with the CBSC standards. Cities and counties can adopt additional standards beyond the CBSC including CBSC Part 2, named the California Building Code (CBC).

California Building Code

The State provides a minimum standard for building design through the CBC, which is in Part 2 of Title 24 of the CCR. CBC is based on the International Building Code but has been modified for California conditions. It is generally adopted on a jurisdiction-by-jurisdiction basis, subject to further modification based on local conditions. Commercial and residential buildings are plan checked by local City and County building officials for compliance with the CBC. Typical fire safety requirements of the CBC include the installation of sprinklers in all commercial and residential buildings; the establishment of fire resistance standards for fire doors, building materials, and particular types of construction; and the clearance of debris and vegetation within a prescribed distance from occupied structures in wildfire hazard areas.

California Code of Regulations Title 24 Part 9 – California Fire Code

The California Fire Code (CFC) contains regulations consistent with nationally recognized accepted practices for safeguarding, to a reasonable degree, life and property from various hazards, including fire and explosion, among others. The CFC also contains provisions to assist emergency response personnel. The CFC is pre-assembled with the International Fire Code with necessary California amendments. The CFC contains fire safety-related building standards that are referenced in other parts of CCR Title 24. The CFC is updated once every three years; the 2022 CFC took effect on January 1, 2023. The CFC sets forth regulations regarding building standards, fire protection and notification systems, fire protection devices such as fire extinguishers and smoke alarms, high-rise building standards, and fire suppression training. The CFC provides minimum standards to increase the ability of a building or structure to resist the intrusion of flame or burning embers being projected by a vegetation fire and contributes to a systematic reduction in fire losses through the use of performance and prescriptive requirements.

California Occupational Safety and Health Administration

In accordance with CCR, Title 8 Section 1270 "Fire Prevention" and Section 6773 "Fire Protection and Fire Equipment," the California Occupational Safety and Health Administration (Cal-OSHA) has established minimum standards for fire suppression and emergency medical services. The standards include, but are not limited to, guidelines on the handling of highly combustible materials, fire hose sizing requirements, restrictions on the use of compressed air, access roads, and the testing, maintenance, and use of all firefighting and emergency medical equipment.

Mitigation Fee Act (California Government Code Sections 66000 through 66008)

The Mitigation Fee Act requires a local agency, such as the city establishing, increasing, or imposing an impact fee as a condition of development, to identify the purpose of the fee and the use to which the fee is to be put. The agency must also demonstrate a reasonable relationship between the fee and the purpose for which it is charged, and between the fee and the type of development project on which it is to be levied. This Act became enforceable on January 1, 1989.

California Health and Safety Code

The California Health and Safety Code (HSC) Section 13000 et seq., includes fire regulations for building standards (also in the California Building Code [CBC]), fire protection and notification systems, fire protection devices such as extinguishers and smoke alarms, high-rise building and childcare facility standards, and fire suppression training.

California Fire Code

The California Fire Code (CFC) (California Code of Regulations [CCR], Title 24, Part 9) is based on the 2018 adoption of the IFC and includes amendments from the State fully integrated into the code. The CFC contains fire safety-related building standards that are referenced in other parts of Title 24 of the CCR. The CFC is updated once every three years; the 2019 CFC took effect on January 1, 2020. The CFC sets forth regulations regarding building standards, fire protection and notification systems, fire protection devices such as fire extinguishers and smoke alarms, high-rise building standards, and fire suppression training. It contains regulations relating to construction, maintenance, and use of buildings. Topics addressed in the code also include fire department access, fire hydrants, automatic sprinkler systems, fire alarm systems, fire and explosion hazards safety, hazardous materials storage and use, provisions intended to protect and assist fire responders, industrial processes, and many other general and specialized fire-safety requirements for new and existing buildings and the surrounding premises. Development under the Project would be subject to applicable regulations of the CFC.

Senate Bill 50, California Government Code Section 65995(b), and Education Code (California Government Code Section 17620)

Senate Bill (SB) 50 places limitations on the power of local governments to require mitigation of school facilities by developers. Under the provisions of SB 50, school districts can collect fees to offset the cost of expanding school capacity, which becomes necessary as development occurs. These fees are determined based on the square footage of proposed uses. As a part of SB 50, school districts must base their long-term facilities needs and costs on long-term population growth in order to qualify for this source

of funding. Payment of statutory school fees is deemed to be adequate mitigation of school impacts under CEQA. Prior to SB 50, case law allowed cities to consider and impose conditions to mitigate impacts of new development on school facilities.

SB 50 amended CGC Section 65995, which contains limitations on Education Code Section 17620, the statute that authorizes school districts to assess development fees within school district boundaries. CGC Section 65995(b)(3) requires the maximum square footage assessment for development to be increased every two years, according to inflation adjustments. Currently, the maximum impact fees allowed by SB 50 are as follows:

- In the case of residential construction, $1.93 per square foot (sf) of assessable space.
- In the case of any commercial or industrial construction, $0.31 per sf of chargeable covered and enclosed space. (CGC Section 65995(b)).

According to CGC Section 65995(3)(h), the payment of statutory fees is "deemed to be full and complete mitigation of the impacts of any legislative or adjudicative act, or both, involving, but not limited to, the planning, use, or development of real property, or any change in governmental organization or reorganization...on the provision of adequate school facilities." The school district is responsible for implementing the specific methods for mitigating school impacts under the CGC.

Housing Accountability Act (Senate Bill 330; Govt. Code Section 65589.5 et seq.)

The Housing Accountability Act (SB 330) took effect in January 2020. SB 330 provides that a city may not disapprove a residential housing development project for low-moderate income households (as defined) unless the housing development project "would have a specific, adverse impact upon the public health or safety, and there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact without rendering the development unaffordable to low and moderate-income households, unless the housing development project is proposed on land … which does not have adequate water or wastewater facilities to serve the project." (CGC Section 65589.5(d)(4)). Its purpose is to increase housing in urbanized areas, while still accommodating future developments throughout a city.

Assembly Bill (AB) 97

Approved in July 2013, AB 97 revises existing regulations related to financing for public schools, by requiring State funding for county superintendents and charter schools that previously received a general-purpose entitlement. AB 97 authorizes local educational agencies to spend, for any local educational purpose, the funds previously required to be spent for specified categorical education programs, including, among others, programs for teacher training and class size reduction.

Mutual Aid Agreements

The Emergency Management Mutual Aid (EMMA) system is a collaborative effort between city and county emergency managers in the Office of Emergency Services (OES) in the coastal, southern, and inland regions of the state. EMMA provides service in the emergency response and recovery efforts at the Southern Regional Emergency Operations Center, local Emergency Operations Centers, the Disaster Field Office, and community service centers. The purpose of EMMA is to support disaster operations in affected

jurisdictions by providing professional emergency management personnel. In accordance with the Mutual Aid Agreements, local and state emergency managers have responded in support of each other under a variety of plans and procedures.

The Quimby Act

The Quimby Act (CGC Section 66477) was established by the California legislature in 1965 to develop new or rehabilitate existing neighborhood or community park or recreation facilities. This legislation was enacted in response to the need to provide parks and recreation facilities for California's growing communities. The Quimby Act gives the legislative body of a city or county the authority, by ordinance, to require the dedication of land or payment of in-lieu fees, or a combination of both, for park and recreational purposes as a condition of approval of a tract map or parcel map. The Quimby Act is implemented through City Ordinance and is discussed further below.

Senate Bill 50

SB 50 (the Leroy F. Greene School Facilities Act of 1998), adopted in 1998, defined the school impact fee needs analysis process in California Government Code Sections 65995.5–65998. Pursuant to its provisions, school districts may collect fees to offset the costs associated with increasing school capacity as a result of development. By statute, payment of a statutory fee by developers serves as the total mitigation of the potential impact of a development on school facilities pursuant to CEQA.

Local

City of Ontario General Plan – The Ontario Plan 2050

The Ontario Plan (TOP) 2050 Safety and Parks and Recreation Elements provide important guidelines and policies to ensure the City's goals are met. Included in TOP 2050 is the Policy Plan, which is a framework that would guide the City's future growth through the application of policies and goals. The following goals of TOP 2050 relate to public services.

The following policies contained in the Safety Element are relevant to the Project:

Safety Element[12]

Goal S-3 **Reduced risk of death, injury, property damage and economic loss due to fires, accidents, and normal everyday occurrences through prompt and capable emergency response.**

Policy S-3.8 **Fire Prevention through Environmental Design.** We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open spaces and buildings.

[12] City of Ontario. 2022. *TOP 2050, Safety Element*. https://www.ontarioca.gov/about-ontario-ontario-plan-policy-plan/safety (accessed April 2023).

Goal S-7 **Residential neighborhoods, commercial areas, and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, and community involvement in public safety.**

Policy S-7.4 **Crime Prevention through Environmental Design (CPTED).** We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces, and buildings.

The following policies contained in the Parks and Recreation Element are relevant to the Project:

Parks and Recreation Element[13]

Goal PR-1 **A system of safe and accessible parks that meets the needs of the community.**

Policy PR-1.4 Multi-family Residential Developments. We require that new multi-family residential developments of five or more units provide recreational facilities or open space, in addition to paying adopted impact fees.

Policy PR-1.5 Acreage Standard. We strive to provide 5 acres or parkland (public and private) per 1,000 residents.

Policy PR-1.6 Private Parks. We expect development to provide a minimum of 2 acres of developed private park space per 1,000 residents.

City of Ontario Development Code[14]

The City uses Development Impact Fees (DIFs) collected at building permit issuance to provide funding for police, fire, roadways, storm drainage, water and sewer infrastructure, solid waste infrastructure, general public facilities, libraries, public meetings, aquatics, and parks. The City has a fee schedule dedicated for the Ontario Ranch. The following are a list of fees charged by the City's Building Department or collected by the Building Department on behalf of other departments or governmental agencies at the time permits are issued, for the City, specifically within the Project site. These fees took effect on January 1, 2023.

Police Impact Fees

The purpose of police impact fees is to ensure that new development finance its fair share of police protection facilities. This includes coverage for the cost of apprehensions of all suspects and recovery programs to reimburse the City (CGC, Title 5, Section 53150). The fees as of writing this EIR, are calculated as follows:

- Business Park Uses: $0.044/sf
- Retail Service Uses: $0.713/sf
- Office Uses: $0.279/sf
- High Density Dwellings: $502/unit

[13] City of Ontario. 2022. *TOP 2050, Parks and Recreation Element*. https://www.ontarioca.gov/about-ontario-ontario-plan-policy-plan/parks-recreation. (accessed April 2023).
[14] Ontario Ranch Development Impact Fees. ND. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Building/Ontario%20Ranch%20DIF%20Breakdown%20(Effective%2001.01.23).pdf. (accessed April 2023).

Fire Impact Fees

The purpose of fire impact fees is to ensure coverage for fire protection facilities, where new development occurs. Fees are calculated as follows:

- Business Park Uses: $0.044/sf
- Retail Service Uses: $0.847/sf
- Office Uses: $0.637
- High Density Dwellings: $1,007/unit

School Impact Fees[15]

- Residential: $4.79/sf
- Commercial: $0.78/sf

Park Impact Fees

The purpose of park impact fees is to ensure coverage for park facilities, where new development occurs. Fees are calculated as follows:

- High Density Dwellings: $10,658/unit

Library Impact Fees

The purpose of library impact fees is to ensure coverage for library facilities, where new development occurs. Fees are calculated as follows:

- High Density Dwellings: $913/unit

4.14.4 Impact Thresholds and Significance Criteria

According to Appendix G of the State CEQA Guidelines, a project would normally have a significant effect on the environment if the project would:

PS-1 Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

- Fire protection?
- Police protection?
- Schools?
- Parks?

[15] Chino Valley Unified School District. Developer Fees. https://www.chino.k12.ca.us/Page/4852. (accessed March 2023).

- Other public facilities?

Methodology

The Project is evaluated against the significance criteria/thresholds, as the basis for determining the impact's level of significance concerning public services. This analysis considers the existing regulatory framework (i.e., laws, ordinances, regulations, and standards) that avoid or reduce a potentially significant environmental impact. Where significant impacts remain despite compliance with the regulatory framework, feasible mitigation measures are recommended, to avoid or reduce the Project's potentially significant environmental impacts associated with public services.

The potential impacts related to public services were evaluated based on the ability of existing and planned public services staffing, equipment, and facilities to meet the additional demand for any public services resulting from the development of the Project. Impacts are considered significant if Project Implementation would result in inadequate staffing levels, response times, and/or increased demand for services that would require the construction or expansion of new or altered facilities that might have an adverse physical effect on the environment.

4.14.5 Plans, Programs, and Policies

Refer to above discussion regarding existing Regulatory Framework.

4.14.6 Impacts and Mitigation Measures

Impact 4.14-1 ***Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:***

I) Fire protection?

Level of Significance: Less than Significant

Specific Plan - Phase I

Construction and Operations

The increase in development and workers within the Phase I area could potentially result in additional calls for fire protection services, which would increase needs for fire department staffing and equipment. The OFD provides emergency, preventive and administrative services to over 185,000 residents in over 50 square miles within the City. As previously mentioned, the City has ten fire stations, and Station 2, Station 3, and Station 9 are within the closest proximity to the Phase I area. Station 2 is located at 544 West Francis Street, Ontario, CA, 91762 and is approximately 2.8 miles north of the Phase I area. Station 3 is located at 1408 East Francis Street, Ontario, CA, 91762 and is approximately 3 miles northeast of the Phase I area. Lastly, Station 9 is located at 2661 East Grand Park, Ontario, CA 91762 and is approximately 3 miles west of the Phase I area. Therefore, the nearest OFD Station to the Phase I area is Station 2.

The Phase I area would primarily be served by the Station 2, Station 3, and Station 9 due to these stations' close proximity to the site as mentioned previously. Station 2 currently has 4 fire personnel assigned to one paramedic engine. In 2022, Station 2 received a total of approximately 2,500 calls for fire-related incidents, Additionally, Station 3 currently has 4 fire personnel assigned to one paramedic engine. In 2022, Station 3 received a total of 2,000 calls for fire-related incidents. Lastly, Station 9 currently has 8 fire personnel assigned to one paramedic engine and one truck company. In 2022, Station 9 received a total of 1000 calls for fire-related incidents. As previously mentioned, the OFD has a total response time of 9 minutes and 59 seconds.

Additionally, prior to the approval of the Project, the City's Building Department and OFD would review building plans in order to ensure that all applicable fire safety features are incorporated as part of the Project. Furthermore, all fire-related safety features would be in accordance with the applicable provisions of the adopted CFC and the City's Municipal Code (MC) Section 4-4.01, ordinances, and standard conditions regarding fire prevention and suppression measures related to water improvement plans, fire hydrants, fire access, and water availability. Prior to the approval of occupancy permits for the new buildings, it would be required that the OFD would inspect all new structures in order to ensure that all fire safety features have been implemented and installed correctly.

The Project would comply with all applicable policies aforementioned in ***Section 4.14.3: Regulatory Setting*** in order to reduce risk of death, injury, property damage, and economic loss due to fires through prompt and capable emergency response. The Project would be in compliance with the California Fire Code and California Building Code to mitigate or reduce the negative effects of fire and structural collapse. The Project would comply with TOP Policy S3-8 to ensure all new development within the City would incorporate fire prevention consideration in the design of streetscapes, sites, open spaces, and buildings. Furthermore, the City has adopted a public alert notification system that efficiently conveys emergency information to the public and the OFD would have additional support in response to emergencies through the California Fire Rescue and Mutual Aid Plan. In addition, the City monitors water supply to ensure enough water is available for adequate firefighting.

Project implementation would not create any deficiencies in current response times or staffing models, nor require provision of new or expanded fire facilities, construction of which would have the potential to cause significant environmental impacts. Further, as stated above, based on the Phase I area's proximity to three existing fire stations, the personnel staffed for each station, and the response times for service received, the Project would be adequately served by fire protection services, and no new or expanded unplanned facilities would be required. DIFs would also be collected in order to build and supply necessary infrastructure for fire protection services, as necessary. The City has a general City fee schedule as well as a separate fee schedule for the Ontario Ranch collected at building permit issuance to provide funding for fire protection services, among other public services.

Overall, the Project would receive adequate fire protection services and would not result in adverse physical impacts associated with the provision of or need for new or physically altered fire protection facilities, and will not adversely affect service ratios, response times, or other performance objectives. In addition, the Project would comply with all applicable federal, state, and local regulations and payment

of DIFs (refer to ***Section 4.14.3: Regulatory Setting*** for description of applicable DIFs). Therefore, impacts related to fire protection services would be less than significant.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. While development could affect response times, services ratios, or other performance objectives for the OFD, impacts to governmental facilities, including fire protection facilities, would be less than significant. The OFD would expand in response to the demand for fire protection facilities and personnel caused by new development. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[16]

Conclusion

As noted above, the Project would not significantly impact fire protection facilities. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.

Mitigation Measures

No mitigation is necessary.

Impact 4.14-2 ***Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:***

II) Police protection?

Level of Significance: Less than Significant

Specific Plan – Phase I

Construction and Operations

The increase in development and workers within the Phase I area could potentially result in additional calls for police department services, which would increase needs for Police department staffing and equipment. To help offset costs and ensure adequate service is provided; development mitigation fees are collected. Additionally, the Project would include installation of security features and surveillance through the provision of low-intensity security lighting in and around the new buildings and parking areas. The Project includes proposed business park and mixed-use development on 18 parcels covering

[16] The City's TOP 2050 Final Supplemental EIR determined that impacts to public services, including fire protection, would be less than significant. (Final EIR Section 5.15, Public Services).

84.1 acres within the City, which could increase the City's population. As previously discussed, police protection services for the City and Phase I area are provided by the OPD. The OPD is located approximately 3.6 miles northwest of the Phase I area at 2500 South Archibald Avenue, Ontario, CA, 91791. The OPD consists of 289 sworn officers providing law enforcement services 24 hours a day, 365 days a year. The OPD services three areas of command. The Project site is located within the West Area Command and would be served by officers and corporals, headed by police sergeants, who work 24/7 patrol operations; traffic officers; CET officers, who work special projects; narcotics investigators; and detectives.

To accommodate the growth of the City population, new police officers and potential for new protection facilities were anticipated to help offset costs and ensure adequate service is provided, and development mitigation fees are collected. According to the Project Specific Plan, future development would comply with the City's development review process, which provides for review by the City's Police Department and potential redesign to incorporate crime prevention design elements in streetscapes, sites, open spaces, and buildings. Additionally, pursuant to the City's existing permitting process, the City's Building Department would review final site plans in order to ensure that crime prevention through design measures is incorporated as part of the Project. Furthermore, Project construction would include the strategic use of nighttime security lighting and on-site security personnel to secure the site and reduce demands on police service.

The Project would comply with all applicable goals and policies outlined in TOP 2050 that would include efforts to improve public safety regard to police protection. This includes the public alert notification system that efficiently conveys information concerning emergency events to the public as well as ensuring the OPD would respond to calls for service in a timely manner. Additionally, pursuant to the City's existing permitting process, the City's Building Department would review final site plans in order to ensure that crime prevention through design measures is incorporated as part of the Project. This includes Crime Prevention through Environmental Design (CPTED) strategies, which is a planning tool that focuses on proper design and use of the built environment to deter and prevent crime, in this case for business park and mixed uses. CPTED would ensure parking lots, loading dock areas, pedestrian walkways, building entrances, signage, and architectural and landscape features have adequate illumination and ground or low mounted fixtures would be installed along walkways, entrances, steps, and ramps for further safety. Development design within the Project site would also encourage delineation of pedestrian access to buildings located on the site from adjacent streets and parking areas by marking building entrances with prominent signage or architectural and landscaping features. The OPD would continue to add staff and equipment on an as-needed basis in order to accommodate the incremental increasing demands from buildout of land uses, as was identified in TOP. Furthermore, The City partners with other local, state, and federal law enforcement agencies and private security providers, as well as utilize all City departments to help reduce crime and promote public safety. Project plans would be reviewed by applicable local agencies to ensure compliance with TOP 2050, Euclid Mixed-Use Specific Plan, and the Ontario MC, as well as all applicable regulations to ensure adequate site signage, lighting, and other crime safety preventative measures to ensure safety standards. The Master Developer and/or Site Developer, as applicable, is required to pay all required impact fees and fair share costs. Compliance with applicable local regulations and payment of DIFs would ensure that Project construction and operation would result

in a less than significant impact to police protection services (refer to ***Section 4.14.3: Regulatory Setting*** for description of applicable DIFs).

The OPD has prepared for growth of the Ontario Ranch area, where the Project site is located, and is expected to have adequate facilities and personnel to serve the proposed development. The OPD would continue to add staff and equipment on an as-needed basis in order to accommodate the incremental increasing demands from buildout of land uses, as was identified in TOP. Furthermore, buildout of the Project would require payment of police impact fees, and would not require construction of additional police facilities to maintain adequate police protection service. Thus, impacts related to police protection services would be less than significant.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. While development could affect response times, services ratios, or other performance objectives for the OPD, impacts to governmental facilities, including police protection facilities, would be less than significant. The OPD would expand in response to the demand for police protection facilities and personnel caused by new development. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[17]

Conclusion

As noted above, the Project would not significantly impact police protection facilities. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.

Mitigation Measures

No mitigation is necessary.

Impact 4.12-3 ***Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:***

Schools?

Level of Significance: Less Than Significant

[17] City of Ontario. 2022. *TOP 2050 Final Supplemental Environmental Impact Report, Section 5.15, Public Services*. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf.

Specific Plan – Phase I

The CVUSD serves the City of Ontario with education services. The Project would include up to 290,110 square feet of commercial retail/office uses, up to 466 residential units, and 1,386,776 square feet of business park uses, which increase employment opportunities. This increase in employment could cause a number of new families to relocate, potentially increasing enrollment within the CVUSD. However, it is anticipated that a majority of potential employees would be existing residents in local and neighboring communities and regions that would not require relocating into the school district.

School funding comes predominantly from federal, state, and local sources such as businesses and personal income taxes, sales tax, and property taxes. Education Code 17620 et seq. authorizes the collection developer fees; Government Code 65995 et seq. establishes the types of fees and rates[18] The Project applicant would be required to pay the CVUSD's current developer impact fees in effect at the time of submitting the building permit application. These fees would be used to accommodate any expansion or upgrades needed to serve new students. Under SB 50, payment of required school impact fees is deemed complete and full mitigation for impacts to school facilities (refer to ***Section 4.14.3: Regulatory Setting*** for description of applicable DIFs). Payment of required fees would ensure impacts to schools are less than significant and no mitigation measures are necessary.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Development of Phase II would occur on Planning Areas 2B and 3B. While development could affect performance objectives for schools, impacts would be less than significant. School funding comes predominantly from federal, state, and local sources such as businesses and personal income taxes, sales tax, and property taxes. Education Code 17620 et seq. authorizes the collection developer fees; Government Code 65995 et seq. establishes the types of fees and rates At the time of development for Phase II, payment would be required for the CVUSD's current developer impact fees in effect at the time of submitting the building permit application. These fees would be used to accommodate any expansion or upgrades needed to serve new students. Payment of required fees would ensure impacts to schools are less than significant and no mitigation measures are necessary. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.

Conclusion

As noted above, the Project would not significantly impact school facilities. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.

[18] Chino Valley Unified School District. ND. Developer Fees. https://www.chino.k12.ca.us/site/handlers/filedownload.ashx?moduleinstanceid=8489&dataid=168928&FileName=Developer%20Fees%20-%20Frequently%20Asked%20Questions%20-%20October%202022.pdf. (accessed March 2023).

Mitigation Measures

No mitigation is necessary.

Impact 4.12-4 ***Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:***

Parks?

Level of Significance: Less than Significant

Specific Plan – Phase I

As previously mentioned, parks and recreation areas within the City are managed by the City of Ontario. The City maintains 32 parks, seven community centers, and three dog parks. The Project includes a residential component that could generate population growth and increase new employees to the nearby public parks or facilities. Multiple parks are located near the Project site. The nearest parks to the Project are Centennial Park, which is a City park, and two City of Chino parks: Constellation Park and Cypress Trails Park. These parks are approximately three miles north, less than one mile west and two miles northwest of the Project site, respectively. The MU zoning district accommodates a wide variety of retail commercial, office and high-density residential development in conformance with TOP. It is anticipated that the Mixed-Use development will be comprised of 10 percent Office, 20 percent Commercial/Retail, and 70 percent Residential. According to the Project Specific Plan, public parks, community centers, and similar facilities are permitted by right within both the BP and MU zoning districts. Additionally, publicly owned or accessible open space/parks and trails are permitted within the OS-NR zoning district. The Project is required, by TOP 2050 Policy PR-1.4, to provide parks or open space for new multi-family residential developments, in addition to the payment of applicable DIFs.

Under TOP 2050, the City strives to provide five acres of parkland per 1,000 residents, and a minimum of two acres of developed private park space per 1,000 residents in addition to the three acres per 1,000 persons standard. The Project would be in compliance with the land use and zoning designations identified in TOP and would Project Applicant would pay general DIFs that contribute to funding for parks. As a result, development of park facilities would keep pace with the anticipated increase in population from buildout of TOP 2050. Furthermore, all future park development would undergo individual CEQA evaluation, which is anticipated to account for any future impacts, and impacts would be less than significant.

Overall, the Project would not result in adverse physical impacts associated with the provision of or need for new or physically altered park facilities and will not adversely affect service ratios or other performance objectives. In addition, the Project would comply with all applicable federal, state, and local regulations and payment of DIFs (refer to ***Section 4.14.3: Regulatory Setting*** for description of applicable DIFs). Therefore, impacts related to parks would be less than significant.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Development of Phase II would occur on Planning Areas 2B and 3B. While development could affect population increases that put greater demand on park facilities, the expansion of park facilities in response to the Project is accounted for by TOP 2050 and includes the requirement that new multi-family residential development within the Phase II future development area provide recreational facilities or open space, including parks. Therefore, impacts would be less than significant. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[19]

Conclusion

As noted above, the Project would not significantly impact park facilities. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.

Mitigation Measures

No mitigation is necessary.

Impact 4.12-5 ***Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:***

Other public facilities?

Level of Significance: Less than Significant

Specific Plan – Phase I

Other Public Facilities generally refers to libraries and government buildings that serve the population within the jurisdiction. The Project construction and operation would not require the physical modification of any of the City's public facilities. As stated previously, the Community Life and Culture Department manages the City's two public libraries, neither of which are in close proximity to the Project site. The South Ontario Lewis Family Branch Library (South Ontario Library) is approximately 4.8 miles northeast of the Project site, and the Ovitt Family Community Library is located approximately 4.6 miles north of Project site. The construction and operation of the Project site would not result in a substantial

[19] City of Ontario. 2022. *TOP 2050, Final Supplemental Environmental Impact Report, Section 5.16, Recreation.* https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (accessed January 2023).

increase in demand for these services such that a significant deterioration of the existing facilities would occur, or such that new facilities would be required.

Additional library services were accounted for in the City's TOP. The City has plans to build a new 37,646-square-foot public library in the New Model Colony (NMC) or "Ontario Ranch" area that would provide similar services as the Main Library and a 6,763-square-foot expansion in the Old Model Colony (OMC), totaling 44,409 new square feet of public library services. This would give citizens in that area access to similar levels of service as already exist in the OMC. The expansion of library services in the OMC would continue to bring similar levels of service to the residents in the OMC. In addition, the Ontario library system participates in an interlibrary exchange as part of the Inland Library System, which includes 18 other independent public libraries in Inyo, Riverside, and San Bernardino Counties. This would give existing and future citizens of Ontario access to additional library services. Therefore, additional construction of facilities would not be required. DIFs would also be collected in order to build and supply necessary infrastructure for other public facilities, as necessary. The City has a general City fee schedule as well as a separate fee schedule for the Ontario Ranch collected at building permit issuance to provide funding for public services, including libraries and other general facilities.

Other potential impacts to surrounding public facilities include the Chino Airport. Analyzed in greater detail in ***Section 4.11: Land Use and Planning***, the Project was found to be compliant with the regulations and policies presented in the Chino Airport Land Use Community Plan (ALUCP). Because of the lack of substantial population growth and the Project's compliance with the Chino Airport ALUCP, a less than significant impact is expected to occur on surrounding public facilities.

Overall, the Project would be adequately served by other public facilities and would not result in adverse physical impacts associated with the provision of or need for new or physically altered public facilities, and will not adversely affect service ratios, response times, or other performance objectives. In addition, the Project would comply with all applicable federal, state, and local regulations and payment of DIFs (refer to ***Section 4.14.3: Regulatory Setting*** for description of applicable DIFs). Therefore, impacts related to fire other public services would be less than significant.

Specific Plan – Phase II Future Development Areas

Construction and Operations

Refer to Phase I discussion above. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. While development could affect population increases that put greater demand on other public facilities, the expansion of other public facilities in response to the Project is accounted for by TOP 2050, and impacts would be less than significant. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.[20]

[20] City of Ontario. 2022. *TOP 2050, Final Supplemental Environmental Impact Report, Section 5.15, Public Services*. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (accessed March 2023).

Conclusion

As noted above, the Project would not significantly impact other public facilities. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050.

Mitigation Measures

No mitigation is necessary.

4.14.7 Cumulative Impacts

The Project would be pursuant to TOP 2050 and would represent a consistent and logical continuation of the existing and planned pattern of development in Ontario, specifically the Ontario Ranch area. The City has long anticipated that this area would transition from dairy/agricultural to urban uses, and the Project Specific Plan is implementing TOP 2050.[21]

Fire Protection Services

The cumulative study area for fire protection services is the City of Ontario. Future development projects are anticipated to occur throughout the City, specifically in the Ontario Ranch area, including the Project site. As indicated in the City's TOP, development of the Ontario Ranch area would generate a proportional increase in demand for additional fire protection and EMS. The City is in the process of constructing two new fire stations with one proposed in the Ontario Ranch area that would help accommodate cumulative increases to fire protection services in the southern portion of the City, including the Project site.

As stated above, the Project would increase the demand for fire protection services through the incorporation of additional people on-site in addition to the cumulative development of projects within the City. Thus, a periodic review process would ensure that adequate service would be maintained throughout the City and would add staffing and equipment as necessary. The OFD can presently serve the Project site without the need for additional fire facilities with payment of DIFs.

Since the Project would be consistent with the buildout assumptions of TOP and other applicable plans and regulations, and payment of general DIFs, implementation of the Project would not result in a cumulatively considerable increase in the need for fire protection and EMS facilities or personnel.

Police Protection Services

Similarly, future development projects are anticipated to occur within the City. This overall development would generate a proportional increase in calls for police services. All future cumulative projects would be reviewed by OPD staff prior to issuance of any development permit to ensure adequate security measures are provided for each site-specific development in the City, including this Project. It is anticipated that future development would result in the need of additional sworn officers and equipment, but with payment of DIFs, implementation of the Project would not create a cumulatively considerable

[21] Ibid.

need for new or expanded police stations. Therefore, cumulative impacts associated with the implementation of the Project would be less than significant.

Schools, Parks, and Other Public Services

As discussed above, the Project is not anticipated to cumulatively increase the need for schools, parks, and other public services in the City. The anticipated increased demands for schools, parks, and other public services within the City was accounted for in the City's TOP 2050 and analyzed in TOP EIR, which accounts for the cumulative growth in the City. In addition, cumulative development projects would pay the required DIFs that would be appropriately allocated, in this case, to schools and parks. In addition, the TOP concluded that additional library services would not be required with buildout of the TOP. Therefore, cumulative impacts associated with schools, parks, and other public services from the Project would be less than cumulatively significant.

4.14.8 Significant Unavoidable Impacts

No significant unavoidable impacts were identified.

4.15 TRANSPORTATION AND TRAFFIC

4.15.1 Introduction

This section of the Draft Environmental Impact Report (EIR) evaluates the potential for implementation of the Euclid Mixed Use Specific Plan Project (Project) to result in transportation and traffic impacts in the City of Ontario (City).

This Section and environmental discussion use information from the following City documents:

- The Ontario Plan 2050
- City of Ontario Municipal Code
- City of Ontario TOP 2050 Final Supplemental EIR

Additionally, the following analysis is based in part on information obtained from:

- Urban Crossroads. August 2023. *Euclid Mixed Use Specific Plan Traffic Analysis*. (***Appendix I1***)
- Urban Crossroads. December 2022. *Euclid Mixed Use Specific Plan Vehicle Miles Traveled (VMT) Analysis*. (***Appendix I2***)

4.15.2 Environmental Setting

The Project site comprises 18 parcels totaling approximately 84.1 acres of agricultural development and residential uses. The Project area is located approximately two and a half miles south of State Route (SR) 60 (SR-60) via SR-83 (Euclid Avenue), which is located on the western boundary of the Project site. The Project site is bounded by Schaefer Avenue on the north, Edison Avenue on the south, Sultana Avenue on the east, and Euclid Avenue on the west. Access to the site is currently provided via multiple private driveway entrances located on Euclid Avenue, Edison Avenue, and Schaefer Avenue.

Existing improvements for Euclid Avenue include interim pavement and an unimproved dirt center median. Euclid Avenue has a fully dedicated right-of-way. Schaefer Avenue and Edison Avenue are paved in an interim condition, requiring ultimate right-of-way dedication and major street and parkway improvements. On the eastern boundary of the Project site, Sultana Avenue is a fully dedicated yet unimproved street that exists only on paper, which would require major street and parkway improvements. Traffic signals are located along Euclid Avenue at the Edison Avenue and Schaefer Avenue intersections.

Existing Regional Transportation System Characteristics

The Project site is located approximately two and a half miles south of SR 60 via SR 83 (Euclid Avenue), which is located on the western boundary of the Project site. Regional access to the Project site is provided by SR-83 (Euclid Avenue), which connects to SR-60 and Interstate 10 (I-10) to the north; I-15 approximately 5.5 miles to the east; and SR-71 approximately 4.3 miles to the west. SR-71 connects the Project to SR-91 in unincorporated Riverside County.

Existing Local Transportation System Characteristics

The City's General Plan, also known as "The Ontario Plan" (TOP) 2050, provides descriptions of the various classes of roadways within the City. The City's circulation system includes three freeways, an international airport, two railroad main lines of the Union Pacific Railroad (UPRR) and one Southern California Regional Rail Authority (SCRRA) rail line, and a system of arterial and local streets. The following definitions from the City's TOP 2050 EIR describes the characteristics of the various roadway classifications:

Freeway: Freeways are limited-access, high-speed travel ways in the state and federal highway systems.

Other Principal Arterials: Other Principal Arterials serve the major centers and corridors of activity, carry the highest volumes of traffic, and serve the longest trips of all city roadways. Other Principal Arterials typically accommodate four to eight lanes of traffic and medians.

Minor Arterials: Minor arterials accommodate less traffic than Other Principal Arterials and are for trips of moderate length. Minor Arterials allow more access to abutting properties than Other Principal Arterials, so speeds are lower. Minor Arterials connect the community but ideally should not penetrate residential neighborhoods. The roadway configuration and right-of-way width vary depending on local conditions, but typically accommodate four to six lanes of traffic and medians.

Collector Streets: Collector streets provide access to abutting properties and traffic circulation within residential neighborhoods and business areas. Collector streets allow access to local and arterial roadways. The roadway configuration and right-of-way width vary depending on local conditions, but typically accommodate two to four lanes of traffic.

Local Street: The primary function of a local street is to provide direct access to abutting properties. Local streets rarely have more than two travel lanes and speed limits are generally low; they are not intended for through traffic. Local streets are not on the Functional Roadway Classifications map because they are not considered part of the backbone circulation system.

Enhanced Intersection: Enhanced Intersections may include additional lanes, reduced median width, increased right-of-way width, removal of on-street bike lanes, or reduction of parkway width to increase capacity, improve operations, and respond to local demands. Detailed engineering studies are necessary to identify the most effective and feasible types of improvements.

The Project vicinity consists of major roadways within the cities of Ontario, Chino, Chino Hills, Eastvale, Jurupa Valley and California Department of Transportation (Caltrans) facilities. A detailed description of the existing roadway network and conditions is provided in Section 3 of the Traffic Analysis (see **Appendix I1**).

The Project area includes roadways that are classified as 8-lane Other Principal Arterials, which are identified as having four lanes of travel in each direction. The following within the Project area are classified as 8-lane Other Principal Arterials:

- Euclid Avenue
- Edison Avenue

The Project area roadways that are classified as 6-lane Other Principal Arterials are identified as having three lanes of travel in each direction and a 14-foot curbed or painted median. The following Project area roadways classified as 6-lane Other Principal Arterials include:

- Archibald Avenue
- Vineyard Avenue
- Hamner Avenue

The Project area roadways that are classified as 4-lane Other Principal Arterials are identified as having two lanes of travel in each direction. The following Project area roadways that are classified as 4-lane Other Principal Arterials include:

- Grove Avenue
- Haven Avenue, south of Riverside Drive

The Project area roadway that is classified as a 6-lane Minor Arterial is identified as having three lanes of travel in each direction. The following Project area roadway that is classified as a 6-lane Minor Arterial includes :

- Riverside Drive

The Project area roadways that are classified as Collector Streets are identified as having two to four lanes of travel in each direction. The following Project area roadways classified as Collector Streets include:

- Walnut Avenue
- Chino Avenue
- Schaefer Avenue
- Eucalyptus Avenue
- Merrill Avenue
- Bon View Avenue
- Walker Avenue
- Hellman Avenue
- Turner Avenue

Bicycle and Pedestrian Paths

There are limited pedestrian facilities in the vicinity of the Project site. Field observations and traffic counts conducted in 2022 indicate light pedestrian and bicycle activity within the Project area (see **Appendix I1**). Trails and bicycle paths provide an additional mode of circulation in and around the Project site. Multipurpose trails would be provided on the east side of Euclid Avenue, on the south side of Schaefer Avenue and on the south side of Edison Avenue (see ***Figure 3-11: Bicycle and Pedestrian Plan***). TOP 2050 Mobility Element specifies a Class II bicycle lane on the north side of Schaefer Avenue adjacent to the Project site. Class II bicycle lanes are defined as dedicated (striped) lanes along streets, with no parking allowed in the bicycle lane. This bicycle lane provides linkages to the City's bicycle path system (see ***Figure 3-12: City of Ontario Trail and Bicycle Paths Plan***). The trail and bicycle path improvements would be installed along the Project frontages in conjunction with street improvements.

Truck Routes

According to the City's Truck Routes map, the City has designated certain roadways for the purpose of channeling large trucks through and within the City, including Euclid and Edison Avenues which border the Project site.[1] The City also maintains these routes to establish a network that provides for the effective transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses. In addition to the City's routes, the State has identified Mission Boulevard and parts of Milliken Avenue and Jurupa Street as extralegal load limit streets.

Rail Lines and Crossings

Two major east-west freight lines traverse the City. A third east-west line runs just north of the northern boundary of the City. The northern route through the City is the UPRR Alhambra Subdivision Line, which begins at the Ports of Los Angeles/Long Beach and runs through Los Angeles, Pomona, Colton, and points farther east. The southern route is the UPRR Los Angeles Subdivision Line, which also begins at the Ports of Los Angeles/Long Beach and runs through Pomona, but travels southeast to Riverside and points farther east.

The UPRR main lines run parallel to each other from the western boundary of the City to Campus Avenue. The Alhambra Subdivision Line continues east along the northern boundary of Ontario International Airport (ONT) north of Airport Drive, and the Los Angeles Subdivision Line turns southeast along the south side of ONT and the north side of Mission Avenue. Metrolink's Riverside County Line runs on the southern tracks, and the Amtrak Sunset Limited runs on the northern tracks. The rail line that traverses north of the City is Metrolink's San Bernardino Line. The Burlington Northern Santa Fe railroad has trackage rights on that line.

Both UPRR tracks are grade separated at Mountain Avenue and Euclid Avenue in the western part of the City. The northern tracks are grade separated at Grove Avenue, Vineyard Avenue, Archibald Avenue,

[1] City of Ontario. 2022. *Figure M-04 Truck Routes*. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/Mobility/FIgure%20M-04%20Truck%20Routes.pdf. (accessed March 2023).

Haven Avenue, and Milliken Avenue. The southern tracks are grade separated at Grove Avenue, Haven Avenue, and Milliken Avenue.

Bus Transit

Omnitrans Transit Agency provides local transit service throughout the County, including the City. Omnitrans provides Countywide bus service and currently has five bus routes in the City that provide connections between rail stations, ONT, major employment and shopping centers, and residential areas.

- 61 – Fontana – Ontario Mills – Pomona (via Holt Boulevard – Inland Empire Boulevard)
- 63 – Chino – Ontario – Upland (via Chino Avenue – Riverside Drive – Mountain Avenue – Holt Boulevard – Campus Avenue – 4th Street)
- 80 – Montclair – Ontario Convention Center – Rancho Cucamonga (via Mountain Avenue – Holt Boulevard– Vineyard Avenue)
- 81 – Ontario – Ontario Mills – Chaffey College (via Holt Boulevard– Francis Street – Archibald Avenue – Riverside Drive – Haven Avenue)
- 83 – Upland – Euclid Avenue – Chino Avenue (via Euclid Avenue)

There are three transfer centers in the City. The first is at the Civic Center on Sultana Avenue, between Holt Boulevard and D Street; the second is at the Ontario Mills Mall; and the third is at ONT. Omnitrans provides connections to other regional bus services such as Foothill Transit, Los Angeles Metropolitan Transit Agency, and others. The City is coordinating with regional transit agencies to implement Bus Rapid Transit (BRT) service to target destinations and along corridors, including Euclid Avenue west of the Project site. The nearest bus stop to the Project site is at the intersection of Euclid Avenue and Eucalyptus Avenue approximately 0.6 mile to the west.

Metrolink

Commuter train service in the City is provided by Metrolink, which operates six commuter rail lines throughout southern California. The Riverside County Line runs between Los Angeles Union Station and downtown Riverside on Mondays through Fridays between 4:30 AM and 8:00 PM, passing through the City. There is no Metrolink service on this line on Saturdays or Sundays. There is one Metrolink station in the City, off of Haven Avenue on Francis Street. This station is served by Omnitrans Bus Route 81. The Metrolink San Bernardino line is less than a mile north of the northern City limit.

Amtrak

Amtrak has one route (Sunset Limited route) that regularly stops in the City, which travels between Los Angeles and New Orleans, Louisiana. The Amtrak stops in the City and is located near the transfer center, on Emporia Street and Lemon Avenue (about one block from Holt Boulevard and Sultana Avenue). This service arrives and departs on Sunday, Wednesday, and Friday.

4.15.3 Regulatory Setting

Federal

Americans With Disabilities Act

The Americans with Disabilities Act (ADA) of 1990 prohibits discrimination toward people with disabilities and guarantees that they have equal opportunities as the rest of society to become employed, purchase goods and services, and participate in government programs and services. The ADA includes requirements pertaining to transportation infrastructure. The Department of Justice's revised regulations for Titles II and III of the ADA, known as the 2010 ADA Standards for Accessible Designs, set minimum requirements for newly designed and constructed or altered State and local government facilities, public accommodations, and commercial facilities to be readily accessible to and usable by individuals with disabilities. These standards apply to accessible walking routes, curb ramps, and other facilities.

Surface Transportation Assistance Act Routes

The Surface Transportation Assistance Act (STAA) of 1982 allows large trucks, referred to as STAA trucks that comply with maximum length and wide requirements, to operate on routes that are part of the National Network. The National Network includes the Interstate System and other designated highways that were a part of the Federal-Aid Primary System on June 1, 1991; states are encouraged, however, to allow access for STAA trucks on all highways.

State

Assembly Bill 1358, Complete Streets Act

The California Complete Streets Act of 2008, Assembly Bill (AB) 1358, was signed into law on September 30, 2008. Beginning January 1, 2011, AB 1358 required circulation elements to address the transportation system from a multimodal perspective. The bill states that streets, roads, and highways must "meet the needs of all users…in a manner suitable to the rural, suburban, or urban context of the general plan." Essentially, this bill requires a circulation element to plan for all modes of transportation where appropriate—including walking, biking, car travel, and transit.

The Complete Streets Act also requires general plan circulation elements to consider the multiple users of the transportation system, including children, adults, seniors, and the disabled. For further clarity, AB 1358 tasked the Governor's Office of Planning and Research (OPR) to release guidelines for compliance with this legislation by January 1, 2014.

Senate Bill 743

On September 27, 2013, Senate Bill (SB) 743 was signed into law. The Legislature found that with adoption of the SB 375, the State had signaled its commitment to encourage land use and transportation planning decisions and investments that reduce VMT and thereby contribute to the reduction of greenhouse gas (GHG) emissions, as required by Assembly Bill (AB) 32 (California Global Warming Solutions Act of 2006); see ***Section 4.8: Greenhouse Gas*** for further discussion. Additionally, AB 1358, described above, requires local governments to plan for a balanced, multimodal transportation network that meets the needs of all users.

SB 743 started a process that could fundamentally change transportation impact analysis as part of the California Environmental Quality Act (CEQA) compliance. Changes implemented include the elimination

of auto delay, level of service (LOS), and similar measures of vehicular capacity or traffic congestion as the basis for determining significant impacts under CEQA. As part of the new State CEQA Guidelines, the new criteria "shall promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses." Governor's Office of Planning and Research (OPR) developed alternative metrics and thresholds based on VMT. The guidelines were certified by the Secretary of the Natural Resources Agency in December 2018, and automobile delay, as described solely by LOS of similar measures of vehicular capacity or traffic congestion, shall not be considered a significant impact on the environment. There was an opt-in period until July 1, 2020, for agencies to adopt new VMT-based criteria. As such, the City developed its own VMT impact thresholds, which were adopted by City Council on June 16, 2020, using both the OPR Technical Advisory on Evaluating Transportation Impacts in CEQA and San Bernardino County Transportation Authority (SBCTA) Guidelines.

Senate Bill 375 Sustainable Communities and Climate Protection Act

The Sustainable Communities and Climate Protection Act of 2008 or SB 375 was signed into law on September 30, 2008. The SB 375 regulation provides incentives for cities and developers to bring housing and jobs closer together and to improve public transit. The goal behind SB 375 is to reduce automobile commuting trips and length of automobile trips, thus helping to meet the statewide targets for reducing GHG emissions set by AB 32. SB 375 requires each metropolitan planning organization (MPO) to add a broader vision for growth, called a "Sustainable Communities Strategy" (SCS), to its transportation plan. The SCS must lay out a plan to meet the region's transportation, housing, economic, and environmental needs in a way that enables the area to lower GHG emissions. The SCS should integrate transportation, land-use, and housing policies to plan for the achievement of the emissions target for their region.

Caltrans

Caltrans endeavors to maintain a target LOS at the transition between LOS C and LOS D on State Highway System (SHS) facilities; however, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. If an existing State highway facility is operating at less than this target LOS, the existing LOS should be maintained. In general, the regionwide goal for an acceptable LOS on all freeways and intersections is LOS D. Consistent with the City's LOS threshold of LOS D and in excess of the City's stated LOS threshold of LOS E, LOS D would be used as the target LOS for freeway ramps, freeway segments, and freeway merge/diverge ramp junctions.

Regional

Southern California Association of Governments (SCAG) 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS)

On September 3, 2020, SCAG adopted the 2020-2045 RTP/SCS (Connect SoCal), which places a greater emphasis than ever on sustainability and integrated planning. The 2020-2045 RTP/SCS vision encompasses a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. The 2020-2045 RTP/SCS includes a strong commitment to reduce emissions from transportation sources to comply with SB 375, improve public health, and meet the National Ambient Air Quality Standards. This long-range plan, required by the State of California and the

federal government, is updated by SCAG every four years as demographic, economic, and policy circumstances change. The 2020-2045 RTP/SCS is a living, evolving blueprint for the region's future.

San Bernardino County Congestion Management Program

The SBCTA is San Bernardino's Congestion Management Agency (CMA). SBCTA prepares, monitors, and periodically updates the County Congestion Management Program to meet federal Congestion Management Process requirement and the County's Measure I Program. The County Congestion Management Program defines a network of State highways and arterials, LOS standards and related procedures, the process for mitigation of impacts of new development on the transportations system, and technical justification for the approach.

Measure I Strategic Plan

Measure I authorizes a half-cent sales tax in the County until March 2040 for use exclusively on transportation improvement and traffic management programs. San Bernardino County voters first approved the measure in 1989 and in 2004 overwhelmingly approved the extension through 2040. Measure I includes language mandating development to pay its fair share for transportation improvements in San Bernardino County. The Measure I Strategic Plan is the official guide for the allocation and administration of the combination of local transportation sales tax, State and Federal transportation revenues, and private fair-share contributions to regional transportation facilities to fund the Measure I 2010–2040 transportation programs. The Strategic Plan identifies funding categories and allocations and planned transportation improvement projects in the County for freeways, major and local arterials, bus and rail transit, and traffic management systems. The City has adopted a development impact fee (DIF) program that is consistent with Measure I requirements.

Local

City of Ontario General Plan – The Ontario Plan 2050

The TOP 2050 Mobility Element establishes a guideline that is intended to provide a balanced transportation/ circulation system that would support the anticipated growth in local and regional land uses. The Mobility Element is based on the following principles:

- Access to convenient local and regional mobility options is essential to the City's growth and prosperity.
- A comprehensive multimodal mobility system is vital to providing equitable access to jobs, schools, shopping, services, parks, and other key destination points for people of all abilities and incomes.
- Transportation systems should reflect the context and desired character of the surrounding land uses.
- Well designed and maintained roadways, sidewalks, and bikeways are essential for the safe and efficient movement of goods and people.
- Transportation routes and their rights-of-way should be planned and preserved based upon projected travel demands.

The Mobility Element stipulates that roadways within the City comply with federal, State, and local design and safety standards. Furthermore, the Mobility Element requires City roads maintain a peak hour LOS or better at all intersections. The Mobility Element further provides goals and policies for bicycle, pedestrian, and public transit facilities.

The following Mobility Element goals and policies would apply to the proposed Project:

Mobility Element[2]

Goal M-1 **A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.**

Policy M-1.2 **Mitigation of Impacts**. We require development to mitigate its traffic impacts.

Policy M-1.5 **Level of Service**. Maintain a peak hour Level of Service (LOS) E or better at all intersections. Maintain Level of Service D or better on arterial streets in the City. Develop and maintain a list of locations where LOS E or LOS F are considered acceptable and would be exempt from this level of service policy. Considerations for LOS exemption include being restricted by environmental constraints, lacking available right-of-way, deterring an increase in VMT, or degrading other modes of travel (such as bicycle or pedestrian infrastructure).

Policy M-1.6 **Reduce Vehicle Miles Traveled**. We will strive to reduce VMT through a combination of land use, transportation projects, travel demand management strategies, and other trip reduction measures in coordination with development projects and public capital improvement projects.

Goal M-2 **A system of trails and corridors that facilitate and encourage active modes of transportation.**

Policy M-2.1 **Active Transportation**. We maintain our Active Transportation Master Plan to create a comprehensive system of on- and off-street bikeways and pedestrian facilities that are safe, comfortable, and accessible and connect residential areas, businesses, schools, parks, and other key destination points.

Policy M-2.2 **Bicycle System**. We provide off-street multipurpose trails and Class II bikeways as our preferred paths of travel and use the Class III for connectivity in constrained circumstances. When truck routes and bicycle facilities share a right-of-way, we prefer Class I or Class IV bicycle facilities. We require new development to include bicycle facilities, such as bicycle parking and secure storage areas.

Policy M-2.3 **Pedestrian Walkways**. We require streets to include sidewalks and visible crosswalks at major intersections where necessary to promote safe and comfortable mobility between residential areas, businesses, schools, parks, recreation areas, and other key destination points.

[2] City of Ontario. 2022. *TOP 2050, Mobility Element*. https://www.ontarioca.gov/about-ontario-ontario-plan-policy-plan/mobility. (accessed April 2023).

Policy M-2.4 **Network Opportunities**. We use public rights-of-way and easements such as, utility easements, levees, drainage corridors, road rights-of-way, medians, and other potential options to maintain and expand our bicycle and pedestrian network. In urban, mixed-use, and transit-oriented Place Types, we encourage the use of underutilized public and private spaces to expand our public realm and improve pedestrian and bicycle connectivity.

Goal M-3 **A public transit system that is a viable alternative to automobile travel and meets basic transportation needs of the transit-dependent.**

Policy M-3.2 **Alternative Transit Facilities at New Development**. We require new development adjacent to an existing or planned transit stop to contribute to the creation of transit facilities, such as bus shelters, transit bays and turnouts, and bicycle facilities, such as secure storage areas.

Policy M-3.3 **Transit-Oriented Development**. We may provide additional development-related incentives to those inherent in the Land Use Plan for projects that promote transit use and reduce vehicle miles traveled.

Development Impact Fees

The City of Ontario has a list of development impact fees (DIF) charged by the Building Department or collected by the Building Department on behalf of other departments or governmental agencies at the time permits are issued. DIF provide the means to finance adequate infrastructure and other public improvements and facilities made necessary by the impacts created by new residential (i.e., beyond just demand created by subdivisions) and nonresidential development. The City's current fees took effect on January 1, 2020, for the General City and on October 17, 2020, for Ontario Ranch. The City maintains development impact fees for projects in the Original Model Colony (OMC) and Ontario Ranch areas of the City. The fees are updated periodically. They include fees assessed per dwelling unit, per hotel room, or per square foot and include fees for regional and local street improvements.

4.15.4 Impact Thresholds and Significance Criteria

According to Appendix G of the State CEQA Guidelines, a project would normally have a significant effect on the environment if the project would:

- Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities.
- Conflict or be inconsistent with State CEQA Guidelines Section 15064.3, subdivision (b).
- Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).
- Result in inadequate emergency access.

Methodology

The Project is evaluated against the aforementioned significance criteria/thresholds as the basis for determining the impact's level of significance concerning transportation resources. This analysis considers the existing regulatory framework (i.e., laws, ordinances, regulations, and standards) that avoid or reduce the potentially significant environmental impact. Where significant impacts remain despite compliance with the regulatory framework, feasible mitigation measures are recommended to avoid or reduce the Project's potentially significant environmental impacts.

4.15.5 Plans, Programs, and Policies

PPP TR-1 The proposed Project would be required to comply with the City of Ontario's DIF program, which helps fund transportation improvements. The City's DIF includes regional improvements to comply with Measure I. If roadway improvements are not included in the DIF program, the proposed Project would be required to provide funding on a fair share basis where appropriate, as determined by the City. These fees shall be collected by the City of Ontario, with the proceeds solely used as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected population increases. Chapter 8 of the Traffic Analysis (contained in **Appendix I1**) provides more information on the DIF program, fair share contributions, and the proposed Project's expected contributions.

PPP TR-2 The proposed Project would be required to comply with City Municipal Code Section 7-3.07, which requires that prior to any activity that would encroach into a right-of-way, the area be safeguarded through the installation of safety devices that would be specified by the City's Engineering Department during the construction permitting process to ensure that construction activities would not increase hazards.

4.15.6 Impacts and Mitigation Measures

Impact 4.15-1: Would the Project conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Level of Significance: Less Than Significant

In compliance with the City's Traffic Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment, a Traffic Analysis was conducted for the Project which includes an LOS analysis. Please note that this additional information is provided for information purposes only, as vehicle delay is no longer considered a significant impact under CEQA pursuant to SB 743. Specifically, Public Resources Code (PRC) Section 21099(b)(2) states that: "Upon certification of the guidelines by the Secretary of the Natural Resources Agency pursuant to this section, automobile delay, as described solely by level of service or similar measures of vehicular capacity or traffic congestion shall not be considered a significant impact on the environment pursuant to this division, except in locations specifically identified in the guidelines, if any." (emphasis added). As summarized below under the "Traffic Impact Analysis" discussion, with respect to consistency with TOP 2050 level of service policies, with recommended improvements the Project's effects on operational level of service would be consistent with applicable local agency policies. Refer to ***Appendix I1*** for a complete discussion of analysis methodology and findings.

Specific Plan – Phase I and Phase II Future Development Areas

TOP 2050 Mobility Element

The City's TOP 2050 Mobility Element guides mobility and transportation in the City, including transit, bicycle, and pedestrian facilities. The Project would adhere to the TOP 2050 goals and policies outlined in *Section 4.15.3: Regulatory Setting*, above, including **PPP TR-1** and **PPP TR-2**. This includes enhancing transportation networks and for vehicles and bicycle facilities, safely accommodating pedestrian walkways and providing easy access to the Project site via public transportation. More specifically, the Project's circulation network would be designed consistently with the existing transportation system by adhering to the transportation guidelines set in the TOP 2050. The Project would comply with the City's DIF program which would require a payment of fees to ensure that the Project's impact would not significantly impact the regional circulation and/or arterial expansions planned by the City and County (i.e., Congestion Management Program). The payment of fees pursuant to the DIF program would also help the City keep pace with improvements associated with the projected population increases or other identified roadway deficiencies. Refer to the following bicycle, pedestrian, and transit facilities discussion below for more information.

Bicycle and Pedestrian Facilities

The City proposes a Class II bicycle lane on the north side of Schaefer Avenue adjacent to the Project. A bikeway on Schaefer Avenue would connect to the City's existing bike path system, see ***Figure 3-12: City of Ontario Trail and Bicycle Paths Plan***. As discussed in ***Section 3.0: Project Description***, the Project would improve all trails and bikeways along the Project frontages in conjunction with street improvements. Multipurpose trails would be provided on the east side of Euclid Avenue, on the south side of Schaefer Avenue, and on the south side of Edison Avenue. Trails and bicycle paths would provide an additional mode of circulation in and around the Project area. Additionally, to improve safety and the pedestrian experience, connect the various parts of the Project area, and expand access to nearby land uses, sidewalks would be provided along all streets abutting the Project area. As such, the Project supports the City's goal of encouraging bicycling and walking by increasing the connectivity of the City's bicycle and pedestrian system. The sidewalks and trails would be designed to ensure pedestrian and bicyclist safety consistent with the City's Mobility Element. Therefore, a less than significant impact would occur.

Transit Facilities

Transit options provide an alternative mode of transportation for motorists and a primary mode for the transit dependent. The City is coordinating with regional transit agencies to implement BRT service to target destinations and along corridors, including Euclid Avenue on the western boundary of the Project site. The Project is located near Omnitrans Route 81. Omnitrans Route 81 operates on Riverside Drive north of the site. However, there are no existing bus routes near the vicinity of the Project. Transit service is reviewed and updated by Omnitrans periodically to address ridership, budget, and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. The City strives to provide a transit system that serves as a viable alternative to automobile travel. The Project would support transit use by improving existing pedestrian and bicycle facilities in the Project area. The Project would also increase the number of employees in the

area that may access the site by public transit. The Project would not introduce new features to any public road that would affect transit in the Project area. As such, a less than significant impact would occur.

Conclusion

The Project would not conflict with the relevant goals, policies, and ordinances, addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities. Therefore, impacts would be less than significant.

No mitigation is required (refer to discussion below for recommended measures for operational LOS to meet applicable local agency transportation policies; while not a significant impact under CEQA per SB743, this information is provided here, would be considered by decision-makers, and recommended improvements likely incorporated into the Project's conditions of approval for construction or payment of fair share contributions).

Traffic Impact Analysis

To ensure that the Traffic Analysis satisfies the City's traffic study requirements, Urban Crossroads, Inc. prepared a Project traffic study scoping package for review by City staff prior to the preparation of the report. The Agreement provides an outline of the Project study area, trip generation, trip distribution, and analysis methodology.

Project Forecast Trip Generation

In order to develop the traffic characteristics of the Project, trip-generation statistics published in the Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition, 2021) was used to estimate the trip generation. For purposes of this analysis, the following ITE land use codes were utilized:

- Industrial Park (ITE Land Use Code 130)
- Warehousing (ITE Land Use Code 150)
- Multifamily (Low-Rise) Housing (ITE Land Use Code 220)
- Strip Retail (<40,000 square feet) (ITE Land Use Code 822)

The ITE Trip Generation Manual does not currently have any trip generation rates for a truck/trailer parking lot, as such, trip generation estimates for the Project have been developed using data collected at other facilities with operations similar to those proposed. Phase I of the Project, not including the Phase II Future Development uses, is anticipated to generate 2,228 two-way trip-ends per day in actual vehicles, with 212 actual AM peak hour trips and 218 actual PM peak hour trips. The Phase II future development area is consistent with the City's TOP 2050, and as such is reflected in TOP 2050 traffic forecasts and associated environmental analysis. No site-specific development plans are proposed at this time for the Phase II future development area.

Traffic Study Scenarios and Assumptions

The Traffic Analysis includes documentation of existing conditions, future conditions, and identification of Project-related deficiencies at 42 study intersections (refer to Table 1-1 of ***Appendix I1***).

Analyses of these intersections/segments were conducted for the following scenarios in the morning and evening peak hours:

- Existing (2022) Conditions
- Existing plus Project (E+P)
- Opening Year Cumulative (2027) Without Project
- Opening Year Cumulative (2027) With Project
- Horizon Year (2050) Without Project
- Horizon Year (2050) With Project

In summary, the Traffic Analysis noted various operational deficiencies at off-site locations under these six scenarios. As noted above, operational delay is no longer a significant impact under CEQA and the discussion below and in the Traffic Analysis is provided for informational purposes only. With implementation of recommended improvements, the Project would be consistent with applicable local agency operational LOS standards, as listed in *Section 4.15.3: Regulatory Setting*, above. Also note that improvements noted below have already been conditioned as part of other project approvals in the City or represent regional improvements where the Project would be required to pay a fair share through the required payment of regional traffic impact fees in accordance with the City's DIF Program. Refer to the Traffic Analysis (***Appendix I1***; Section 8: Local and Regional Funding Mechanisms) for detailed discussion.

Existing (2022) Conditions

The following Project area intersection is currently operating at an unacceptable LOS (below LOS D/LOS E) during the peak hours:

- Grove Avenue & Edison Avenue (#33) – LOS F PM peak hour only

Existing Plus Project (E+P) Conditions

The following additional Project area intersections are anticipated to operate at an unacceptable LOS during the peak hours under E+P traffic conditions, in addition to the intersections identified under Existing (2022) traffic conditions:

- Driveway 9 & Edison Avenue (#19) – LOS F AM peak hour only
- Bon View Avenue & Edison Avenue (#31) – LOS F AM and PM peak hours
- Grove Avenue & Edison Avenue (#33) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#34) – LOS F AM and PM peak hours

Opening Year Cumulative (2027) Without Project Conditions

The following Project area intersections are anticipated to operate at an unacceptable LOS during the peak hours under Opening Year Cumulative (2027) Without Project traffic conditions:

- Euclid Avenue (SR-83) & SR-60 Westbound Ramps (#1) – LOS F PM peak hour only
- Euclid Avenue (SR-83) & SR-60 Eastbound Ramps (#2) – LOS F AM and PM peak hours

- Euclid Avenue (SR-83) & Riverside Drive (#4) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Chino Avenue (#5) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Schaefer Avenue (#6) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Edison Avenue (#11) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Eucalyptus Avenue (#12) – LOS F AM peak hour only
- Euclid Avenue (SR-83) & Merrill Avenue (#13) – LOS F AM and PM peak hour
- Euclid Avenue (SR-83) & Kimball Avenue (#14) – LOS F PM peak hour only
- Bon View Avenue & Edison Avenue (#31) – LOS F AM and PM peak hour
- Grove Avenue & Schaefer Avenue (#32) – LOS F AM and PM peak hour
- Grove Avenue & Edison Avenue (#33) – LOS F AM and PM peak hour
- Walker Avenue & Edison Avenue (#34) – LOS F AM and PM peak hour
- Archibald Avenue & Edison Avenue (#37) – LOS F AM and PM peak hour

Opening Year Cumulative (2027) With Project Conditions

The following additional Project area intersection is anticipated to operate at an unacceptable LOS during the peak hours with the addition of Project traffic under Opening Year Cumulative (2027) With Project traffic conditions:

- Euclid Avenue (SR-83) & SR-60 Westbound Ramps (#1) – LOS E AM peak hour

Horizon Year 2050 Conditions Without Project

The following Project area intersections are anticipated to operate at an unacceptable LOS during the peak hours under Horizon Year (2050) Without Project traffic conditions:

- Euclid Avenue (SR-83) & SR-60 Westbound Ramps (#1) – LOS F AM and PM peak hour
- Euclid Avenue (SR-83) & SR-60 Eastbound Ramps (#2) – LOS F AM and PM peak hour
- Euclid Avenue (SR-83) & Riverside Drive (#4) – LOS F AM and PM peak hour
- Euclid Avenue (SR-83) & Chino Avenue (#5) – LOS F AM and PM peak hour
- Euclid Avenue (SR-83) & Schaefer Avenue (#6) – LOS F AM and PM peak hour
- Euclid Avenue (SR-83) & Edison Avenue (#11) – LOS F AM and PM peak hour
- Euclid Avenue (SR-83) & Eucalyptus Avenue (#12) – LOS F AM peak hour only
- Euclid Avenue (SR-83) & Merrill Avenue (#13) – LOS F AM and PM peak hour
- Euclid Avenue (SR-83) & Kimball Avenue (#14) – LOS F AM and PM peak hour
- Bon View Avenue & Edison Avenue (#31) – LOS F AM and PM peak hour
- Grove Avenue & Schaefer Avenue (#32) – LOS F AM and PM peak hour
- Grove Avenue & Edison Avenue (#33) – LOS F AM and PM peak hour

- Walker Avenue & Edison Avenue (#34) – LOS F AM and PM peak hour
- Vineyard Avenue & Edison Avenue (#35) – LOS F AM and PM peak hour
- Hellman Avenue & Edison Avenue (#36) – LOS F AM and PM peak hour
- Archibald Avenue & Edison Avenue (#37) – LOS F AM and PM peak hour
- Haven Avenue & Ontario Ranch Roade (#39) – LOS F AM and PM peak hour
- Hamner Avenue & Ontario Ranch Road (#40) – LOS F AM and PM peak hour

Horizon Year (2050) With Project

The following additional Project area intersections anticipated to operate at an unacceptable LOS during the peak hours with the addition of Project traffic under Horizon Year (2050) With Project traffic conditions:

- Driveway 9 & Edison Avenue (#19) – LOS F AM and PM peak hours

Site Access and Site Adjacent Roadway Recommendations

The following recommendations are based on the minimum improvements needed to accommodate site access and maintain acceptable peak hour operations for the Project. Exhibit 1-4 of the Traffic Analysis shows the site adjacent recommendations. The City will be installing continuous two-way left turn lanes on Sultana Avenue and Schaefer Avenue along the Project's frontages and are shown on Exhibit 1-4 of the Traffic Analysis. Refer to ***Appendix I1*** for a detailed discussion.

Recommendation 1 – Euclid Avenue (SR-83) & Driveway 1 (#7) – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the westbound approach and a right turn lane (Project driveway).

Recommendation 2 – Euclid Avenue (SR-83) & Driveway 2 (#8) – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the westbound approach and a right turn lane (Project driveway).

Recommendation 3 – Euclid Avenue (SR-83) & Driveway 3 (#9) – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the westbound approach and a right turn lane (Project driveway).

Recommendation 4 – Driveway 5 & Schaefer Avenue (#15) – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the northbound approach and a right turn lane (Project driveway).

- It should be noted, the City intends to install a two-way left-turn lane along Schaefer Avenue along the Project's frontage.

Recommendation 5 – Driveway 6 & Schaefer Avenue (#16) – The following improvements are necessary to accommodate site access:

- Project to construct a stop control on the northbound approach and a shared left-right turn lane (Project driveway).
- Project to construct a westbound left turn lane with a minimum of 100 feet of storage.
- It should be noted, the City intends to install a two-way left-turn lane along Schaefer Avenue along the Project's frontage.

Recommendation 6 – Driveway 7 & Schaefer Avenue (#17) – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the northbound approach and a right turn lane (Project driveway).
- It should be noted, the City intends to install a two-way left-turn lane along Schaefer Avenue along the Project's frontage.

Recommendation 7 – Sultana Avenue & Schaefer Avenue (#21) – The following improvements are necessary to accommodate site access:

- Project to construct a stop control on the northbound approach and a shared left-right turn lane (Project driveway).
- Project to construct a westbound left turn lane within a two-way left-turn lane.
- It should be noted, the City intends to install a two-way left-turn lane along Schaefer Avenue along the Project's frontage.

Recommendation 8 – Sultana Avenue & Driveway 11 (#22) – The following improvements are necessary to accommodate site access:

- Project to construct a stop control on the eastbound approach and a shared left-right turn lane (Project driveway).
- Project to construct a northbound left turn lane within a two-way left-turn lane.
- It should be noted, the City intends to install a two-way left-turn lane along Sultana Avenue along the Project's frontage.

Recommendation 9 – Sultana Avenue & Driveway 12 (#23) – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the eastbound approach and a shared left-right turn lane (Project driveway).
- Project to construct a northbound left turn lane with a two-way left-tum lane.

- It should be noted, the City intends to install a two-way left-turn lane along Sultana Avenue along the Project's frontage.

Recommendation 10 – Sultana Avenue & Driveway 13 (#24) – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the eastbound approach and a shared left-right turn lane (Project driveway).
- Project to construct a northbound left turn lane with a two-way left-tum lane.
- It should be noted, the City intends to install a two-way left-turn lane along Sultana Avenue along the Project's frontage.

Recommendation 11 – Sultana Avenue & Driveway 14 (#25) – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the eastbound approach and a shared left-right turn lane (Project driveway).
- Project to construct a northbound left turn lane with a two-way left-tum lane.
- It should be noted, the City intends to install a two-way left-turn lane along Sultana Avenue along the Project's frontage.

Recommendation 12 – Sultana Avenue & Driveway 15 (#26) – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the eastbound approach and a shared left-right turn lane (Project driveway).
- Project to construct a northbound left turn lane with a two-way left-tum lane.
- It should be noted, the City intends to install a two-way left-turn lane along Sultana Avenue along the Project's frontage.

Recommendation 13 – Sultana Avenue & Euclid Avenue (#29) – The following improvement is necessary to accommodate site access:

- Project to construct a stop control on the southbound approach, a left turn lane with a minimum of 325 feet of storage, and a right turn lane.
- Project to construct an eastbound left turn lane with a minimum of 100 feet of storage.
- It should be noted, the City intends to install a two-way left-turn lane along Sultana Avenue along the Project's frontage.

Recommendation 14 – Schaefer Avenue– Schaefer Avenue is an east-west oriented roadway located along the Project's northern boundary. Project to construct Schaefer Avenue from Euclid Avenue to Sultana Avenue at its ultimate half-width as a 4-lane collector (108-foot ultimate right-of-way) in compliance with the circulation recommendations found in TOP 2050. It should be noted, the City intends to install a two-way left-turn lane along Schaefer Avenue along the Project's frontage.

Recommendation 15 – Sultana Avenue – Sultana Avenue is a north-south oriented roadway located on the Project's eastern boundary. Project to construct Sultana Avenue from Schaefer Avenue to the northern boundary of Planning Area 2A at its ultimate half-width plus 12-feet of pavement on the east side (northbound direction) to facilitate site access, in compliance with the circulation recommendations found in TOP 2050. It should be noted, the City intends to install a two-way left-turn lane along Sultana Avenue along the Project's frontage.

Recommendation 16 – Euclid Avenue – Euclid Avenue is a north-south oriented roadway located on the Project's western boundary. Project to construct Euclid Avenue from Schaefer Avenue to Driveway 4 at its ultimate half-width as a Principal Arterial (8-lanes, 124-foot right-of-way) in compliance with the circulation recommendations found in TOP 2050.

On-site traffic signing and striping should be implemented agreeable with the provisions of the California Manual on Uniform Traffic Control Devices (CA MUTCD) and in conjunction with detailed construction plans for the Project site.

On-site traffic signing and striping should be implemented agreeable with the provisions of the Caltrans CA MUTCD and in conjunction with detailed construction plans for the Project site. Sight distance at each Project access point should be reviewed with respect to standard Caltrans and the City sight distance standards at the time of preparation of final grading, landscape, and street improvement plans.

Off-site Recommendations

The recommended improvements needed to address the cumulative deficiencies identified under Existing (2022), E+P, Opening Year Cumulative (2027) With and Without Project, and Horizon Year (2050) With and Without Project traffic conditions are summarized in Table 1-3 of the Traffic Analysis. For those improvements listed in Table 1-3 of the Traffic Analysis and not constructed as part of the Project, the Project Applicant's responsibility for the Project's contributions towards deficient intersections is fulfilled through payment of fees (e.g., DIF) or fair share that would be assigned to construction of the identified recommended improvements. Please refer to the Traffic Analysis (***Appendix I1***; Section 8: Local and Regional Funding Mechanisms) for detailed information.

Traffic Analysis Table 1-3 also summarizes the applicable cost associated with each of the recommended improvements based on the preliminary construction cost estimates found in Appendix G of the San Bernardino County Congestion Management Program in conjunction with a cost escalation factor of 1.819 to reflect current costs per City direction except Traffic Signals. A rough order of magnitude cost has been prepared to determine the appropriate contribution value based upon the Project's fair share of traffic as part of the Project approval process. Based on the Project fair share percentages, the Project's fair share cost is estimated at $252,921 to the City. These estimates are a rough order of magnitude as they are intended only for disclosure purposes and do not imply any legal responsibility or formula for contributions or mitigation. Prior to the issuance of building permits, the Project Applicant shall pay the Project's fair share amount of $252,921 for the improvements identified in Traffic Analysis Table 1-3 at intersections located within the City, or as agreed to by the City and Project Applicant. If any analyzed intersections and roadway improvements fall outside the jurisdiction of the City, the City does not have

the authority to construct or demand the construction of such improvements. For this reason, the payment of fair-share fees for the improvements identified in this section are considered infeasible and therefore results in a significant and unavoidable impact.

Mitigation Measures

No mitigation is required.

Impact 4.15-2: Would the Project conflict or be inconsistent with CEQA Guidelines § 15064.3, subdivision (b)?

Level of Significance: Less Than Significant

Specific Plan – Phase I and Phase II Future Development Areas

Background

Changes to State CEQA Guidelines were adopted in December 2018, which require all lead agencies to adopt VMT as a replacement for automobile delay-based LOS as the measure for identifying transportation impacts for land use projects. This statewide mandate went into effect July 1, 2020. To aid in this transition, the Governor's OPR released a *Technical Advisory on Evaluating Transportation Impacts in CEQA* (December of 2018) (Technical Advisory). To comply with SB 743, the City developed their own VMT methodologies and thresholds (Resolution No. 2020-071), which were adopted by City Council in June 2020 (City Guidelines). The VMT analysis has been prepared based on the adopted City Guidelines.

Project Level Screening

City Guidelines state that a project may be determined to have a less than significant VMT impact and screened out of requiring a project level VMT analysis if it meets at least one of the City's VMT screening criteria. To aid in the VMT screening process and consistent with screening thresholds identified in the City Guidelines, the SBCTA VMT Screening Tool (Screening Tool) was used. The City's adopted VMT screening criteria are described in Table 1 of ***Appendix I2*** along with a determination of each screening criteria's applicability to the Project. Consistent with the screening criteria recommended in OPR's Technical Advisory, the City utilizes the following project screening thresholds[3]:

- Transit Priority Area (TPA) Screening
- Low VMT Screening
- Low Trip Generating Uses Screening
- Project Type Screening

A land use project need only meet one of the above screening thresholds to be presumed to result in a less than significant impact under CEQA, pursuant to SB 743.

[3] City of Ontario. 2020. *Vehicle Miles Travelled Analysis Thresholds for CEQA (SB 743).* https://files.ceqanet.opr.ca.gov/250356-3/attachment/DJHTFbnM6oJs9ffzDmoKkg50hBDLi_bHx9JBp5n0_NC2VsLGmits_fmVeyGhDmsCcUZAp4KRZIGaC07m0. (accessed April 2023).

The retail component within Phase I of the Project meets the Project Type screening criteria for the Local-Serving Retail as the uses in Planning Area 3A were consistent with the City Guidelines and no single structure was over 50,000 square feet. The truck/trailer component of the Project is anticipated to provide overflow or excess trailer parking for nearby warehouses and distribution centers. It is reasonable to assume that the future tenant would select a location, at least in part, as to how it affects their transportation costs. Businesses who have shipping as a significant part of their operations are sensitive to transportation costs and by extension their relative proximity to customers and suppliers. Therefore, the proposed truck storage lot is anticipated to serve nearby warehouses and distribution facilities that would be seeking to locate overflow truck/trailer storage as close as possible to the primary warehouse or distribution facility. As a result, the trips are expected to be local serving.

The remaining components of the Project did not meet the screening criteria and therefore a VMT analysis was conducted for the business park, warehouse, and residential uses.

VMT Analysis

VMT Metric and Significance Threshold

City Guidelines identify the efficiency based metric VMT per service population (i.e., population and employees) as the measure of potential impact within the City. VMT per service population is an efficiency metric that allows a project's VMT to be compared to the remainder of the City. Projects found to increase the average VMT per service population within the City may be deemed to have a significant impact. More specifically, City Guidelines identify the following impact threshold for project level VMT analyses:

- A significant impact would occur if the project VMT per service population exceeds the Citywide average VMT per service population under TOP 2050 Buildout Conditions.

The City's average VMT per service population under TOP 2050 Buildout conditions has been calculated using the TOP General Plan Buildout (2050) model. ***Table 4.15-1: Citywide VMT Per Service Population***, provides the City's Citywide average VMT per service population for General Plan Buildout (2050) conditions.

Table 4.15-1: Citywide VMT Per Service Population

Ontario	TOP 2050
Service Population	706,494
VMT	21,689,573
VMT per service population	30.70
Source: **Appendix I2**, Table 2.	

As shown in ***Table 4.15-1***, the City's VMT per service population for General Plan Buildout (2050) conditions has been calculated as **30.70 VMT per service population**.

Project Land Use Conversion

In order to estimate Project generated VMT, standard land use information such as dwelling units and building square footage must first be converted into a TOP Model compatible dataset. The TOP Model utilizes socio-economic data (SED) (e.g., population, households and employment) instead of land use information to estimate vehicle trips. The Project's land use information has been converted to SED and

input into the Project's traffic analysis zone (TAZ) 53652601 to generate the Project's VMT. ***Table 4.15-2: Project Population and Employment Estimates*****,** summarizes the SED inputs used to reflect the Project and shows the estimated Project-generated households, population, and employees.

Table 4.15-2: Project Population and Employment Estimates

	Project
Households	466
Population	1,631
Employees	1,333
Source: **Appendix I2**, Table 3.	

VMT Calculation

Origin/Destination VMT Method

The Origin/Destination (OD) method for calculating VMT sums all weekday VMT generated by trips with at least one trip end in the study area (i.e., TAZ or group of TAZ's). The OD method accounts for all trips (i.e., both passenger car and truck) and trip purposes (i.e., total VMT) and therefore provides a more complete estimate of VMT. Total VMT is divided by the Project's service population to derive the efficiency based metric VMT per service population, which is then compared to the Citywide buildout VMT per service population for purposes of identifying a potential impact.

Table 4.15-3: Project Generated Total OD VMT Per Service Population**,** presents Project generated total OD VMT and the resulting total OD VMT per service population for both Baseline (2022) and General Plan Buildout (2050) conditions. As shown in ***Table 4.15-3***, the Project would generate total OD VMT per service population below the City's adopted impact threshold for both Baseline (2022) and General Plan Buildout Year (2050) conditions. The Project's VMT analysis found the Project to be below the City's VMT per service population threshold by 1.56 percent for baseline (2022) conditions and 6.58 percent for buildout (2050) conditions.

Table 4.15-3: Project Generated Total OD VMT Per Service Population

	Baseline (2022)	General Plan Buildout Year (2050)
Population	1,631	1,631
Employment	1,333	1,333
Service Population	2,964	2,964
Total OD VMT	90,055	84,988
OD VMT per Service Population	30.22	28.68
City Threshold	30.70	30.70
Percent Below Threshold	-1.56%	-6.58%
Potentially Significant?	No	No
Source: **Appendix I2**, Table 4.		

Boundary VMT Method

City Guidelines also acknowledge that a VMT analysis should contain an evaluation of a project's cumulative effect on VMT, which can be performed using the boundary method of calculating VMT. The boundary method is the sum of all weekday VMT on the roadway network within a designated boundary (i.e., City boundary). The boundary method estimates VMT by multiplying vehicle trips on each roadway

segment within the boundary by that segment's length. This approach consists of all trips, including those trips that do not begin or end in the designated boundary. Consistent with City Guidelines, the City was used as the boundary for this assessment. In addition, as the Project is located near the southeastern edge of the City, an additional assessment of a 10-mile boundary area surrounding the Project site has also been conducted to ensure trips associated with the Project are not omitted.

Table 4.15-4: General Plan Buildout (2050) Boundary VMT Results, presents total VMT calculated using the boundary method for No Project and With Project General Plan Buildout (2050) conditions. Boundary VMT per service population is found to remain unchanged under the No Project scenario as compared to the With Project scenario for City boundary and the With Project scenario is found to decrease as compared to the No Project scenario using the 10-mile boundary.

Table 4.15-4: General Plan Buildout (2050) Boundary VMT Results

	City Boundary		10-Mile Boundary	
Scenario	**No Project**	**With Project**	**No Project**	**With Project**
Service Population	706,494	706,931	1,985,501	1,985,938
Boundary VMT	9,602,250	9,605,588	34,082,666	33,767,387
VMT per SP	13.59	13.59	17.17	17.00
Change in VMT	0.00		-0.16	
Potentially Significant?	No		No	
Source: **Appendix I2**, Table 5.				

Summary

Based on the results of this analysis the following findings are made:

- The Project, both Phase I and II, were evaluated against screening criteria as outlined in the City Guidelines. The Project's retail and truck/trailer lot was found to meet the Project Type screening criteria.
- However, the remaining components of the Project was not found to meet any available screening criteria, and a VMT analysis was performed.
- The Project's VMT analysis found the Project to be below the City's VMT per service population threshold by 1.56 percent for baseline (2022) conditions and 6.58 percent for buildout (2050) conditions.
- In addition, the Project's cumulative effect on VMT was found to not increase the City's VMT per service population with the inclusion of the Project using the City's boundary and 10-mile boundary.
- The Project is found to have a less than significant impact.

Therefore, the Project would not conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b), and less than significant impact would occur.

Conclusion

The Project would not conflict or be inconsistent with CEQA Guidelines § Section 15064.3, subdivision (b), and less than significant impact would occur.

Mitigation Measures

No mitigation is required.

Impact 4.15-3: ***Would the Project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?***

Level of Significance: Less Than Significant

Specific Plan – Phase I and Phase II Future Development Areas

Construction and Operations

The roadway improvements and installation of driveways that would be implemented during construction of the Project could require the temporary closure of travel lanes, but full roadway closure and traffic detours are not expected to be necessary. However, construction activities may temporarily restrict vehicular traffic that could increase hazards. Therefore, in order to ensure the safe passage of persons and vehicles through construction zones, the Project would be required to comply with City Municipal Code Section 7-3.07, which requires that prior to any activity that would encroach into a right-of-way, the area be safeguarded through the installation of safety devices that would be specified by the City's Engineering Department during the construction permitting process to ensure that construction activities would not increase hazards. Implementation of the Specific Plan through the City's permitting process would reduce potential construction related increases in hazards to a less than significant level. Furthermore, the Project includes driveway and intersection improvements that would be implemented as part of the Project. In addition, the Project includes improvements to allow for heavy truck access to the Project site. Conflicts have the potential to occur if: 1) there is inadequate site access or 2) there is inadequate turning radii in and out of the site. Implementation of the Specific Plan and its circulation plans would ensure avoidance of these inadequacies.

Site Access

The Project includes the construction and/or improvement of 17 driveways to and from the Project site from adjacent roadways. Exhibit 1-4 in the Traffic Analysis (***Appendix I1***) illustrates and describes access to the Project site. As previously noted in Impact 4.15-1 above, the Project's proposed circulation and off-site improvements would be constructed accordingly with Recommendations 1 through 16 listed in the Project Traffic Analysis to accommodate on-site access. Additionally, all roadway improvements would be designed consistently with the City's TOP 2050 Mobility Element programs, plans, goals and policies, and City Traffic and Transportation Guidelines, and **PPP TR-1** and **PPP TR-2**. Therefore, direct access to the Project site would not substantially increase hazards due to geometric design features or dangerous intersections and a less than significant impact would occur.

Conclusion

Buildout of the Project would result in changes to the circulation network but would not increase hazards due to design features. As noted above, no specific development is proposed at this time for the Phase II future development areas. Once development is proposed, it would conform to existing roadways design standards, preventing impacts of hazards. Impacts and potential impacts would remain less than significant.

Mitigation Measures

No mitigation is required.

Impact 4.15-4: Would the Project result in inadequate emergency access?

Level of Significance: Less Than Significant

Specific Plan – Phase I and Phase II Future Development Areas

Construction and Operations

The Project is not anticipated to result in any significant emergency access impacts during construction. During construction and long-term operation of the Project, adequate emergency access for emergency vehicles would be maintained along public streets that abut the Project site. The City, as part of its discretionary review process, reviewed the Project's application materials to ensure that appropriate emergency ingress and egress would be available to-and-from the Project site and that circulation on the Project site was adequate for emergency vehicles.

Access to the site is currently provided via multiple private driveway entrances located on Euclid Avenue, Edison Avenue, and Schaefer Avenue. The site shall be provided with an adequate number of driveways to facilitate circulation and also reduce the traffic impact along the surrounding arterials. Pedestrian crossing distances shall be minimized at driveways. All driveways and sidewalks shall be constructed per City Standards and to the satisfaction of the City Engineer. Project access is proposed via seven full access driveways and eleven potential secondary access points along Euclid, Schaefer, Edison, and Sultana Avenues. Pedestrian sidewalks would be constructed along Euclid, Schaefer, Edison, and Sultana Avenues bordering the Project site. Additionally, upon Project operations, pedestrian walkways constructed shall provide for emergency access with a minimum clearance of 26 feet wide and 14 feet of vertical clearance. Off-site connections shall be provided from the neighborhood center to the Project's residential development.

In case of an emergency, the construction manager would have assigned staff to flag emergency response vehicles and direct them to the emergency location. Unimpeded access throughout the Project site would be maintained by ensuring that vehicles would not be parked or placed in a manner that would impede access for emergency response vehicles. Project site conditions, during and after the workday, would be either maintained or left in a condition that adheres to Division of Occupational Safety and Health (OSHA) safety standards to prevent any hazardous condition that may affect construction staff and emergency responders.

Access roads to the site would be constructed throughout the Project site for construction staff/inspectors, construction equipment and materials delivery/removal, and emergency response vehicles. The access roads would be kept or maintained in such condition to allow for the safe passage for emergency response vehicles. The Project would implement both on- and off-site improvements, consistent with Recommendations 1 through 16, to ensure the safe and efficient access to the Project Site (refer to Impact 4.15-1 above). Therefore, the Project would not result in inadequate emergency access and a less than significant impact would occur.

Conclusion

As stated above, the Project would implement both on- and off-site improvements, consistent with Recommendations 1 through 16, to ensure the safe and efficient access to the Project Site (refer to Impact 4.15-1 above). As noted above, no specific development is proposed at this time for the Phase II future development areas. Once development is proposed, it would conform to existing roadways design standards, preventing impacts of hazards. Impacts and potential impacts would remain less than significant.

Mitigation Measures

No mitigation is required.

4.15.7 Cumulative Impacts

Cumulative traffic impacts are addressed in the Project Traffic Analysis (***Appendix I1***) and summarized above. The Project's contribution to operational LOS deficiencies would be fully addressed through implementing the recommended measures and providing construction or funding for the identified improvements (note that operational LOS is no longer a significant impact under CEQA per SB 743). There were no other LOS cumulative effects identified or cumulatively considerable contributions to significant cumulative impacts for the Project. The Project's VMT analysis (***Appendix I2***, summarized above) provides an analysis of the Project's cumulative impacts on VMT. Cumulative analysis is based on the Project's effect on VMT using total VMT within the City (boundary method). The Project's cumulative effect on VMT was found to not increase the City's VMT per service population with the inclusion of the Project using the City's boundary and 10-mile boundary.

Pursuant to TOP 2050, implementation of the Specific Plan would represent a consistent and logical continuation of the existing and planned pattern of development in Ontario, specifically the Ontario Ranch area. The City has long anticipated that this area would transition from dairy/agricultural to urban uses, and the Specific Plan is implementing TOP 2050.[4]

4.15.8 Significant Unavoidable Impacts

No significant unavoidable transportation impacts have been identified.

4.16 TRIBAL CULTURAL RESOURCES

4.16.1 Introduction

This section of the Draft Environmental Impact Report (EIR) evaluates the potential for implementation of the Euclid Mixed Use Specific Plan Project (Project) to impact tribal cultural resources (TCRs) in the City of Ontario (City), within San Bernardino County (County). TCRs include sites, features, cultural landscapes, sacred places, and objects with cultural value to a California Native American Tribe. Other potential impacts to prehistoric, historic, and disturbance of human remains are evaluated in ***Section 4.5: Cultural Resources***, and impacts to paleontological resources are addressed in ***Section 4.7: Geology and Soils***, of this Draft EIR.

This Section and environmental discussion use information from the following City documents:

- The Ontario Plan 2050
- City of Ontario Municipal Code
- City of Ontario TOP 2050 Final Supplemental EIR

Additionally, the following analysis is based in part on information obtained from:

- BCR Consulting LLC (BCR). April 2023. Cultural Resources Assessment Euclid Mixed Use Specific Plan Project, City of Ontario, San Bernardino County, California. (**Appendix D1**)

4.16.2 Environmental Setting

Existing Conditions

The 84.1-acre Project area is bounded by Schaefer Avenue on the north, Sultana Avenue on the east, Edison Avenue on the south, and Euclid Avenue on the west, in the City of Ontario, San Bernardino County (County), California. The Project area consists of 18 parcels, identified as Assessor's Parcel Numbers (APNs) 1053-071-01, -02, -03, -04; 1053-211-01, -02, -05; 1053-281-01, -02, -03, -04, -05, -07, -08; 1053-081-01, -02, -03, -04. Existing uses surrounding the Project area are similar to those on the site. Ongoing crop farming is located to the north of the Project area and a vacant property that was a former dairy farm is located to the east of the site. The property to the south is currently utilized for residential, farming, or trucking related uses. North across Schaefer Avenue is an existing dairy farm; south across Edison Avenue is an existing trucking facility; east across Sultana Avenue is vacant land and an existing trucking facility; west across Euclid Avenue is the City of Chino with existing commercial and residential uses and a truck/trailer storage.

Ethnography[1]

The earliest inhabitants of the Ontario region lived in the region on a seasonal basis approximately 10,000 years ago. Later, permanent settlements formed along streams and creeks as populations used newer

[1] City of Ontario. 2022. *TOP 2050 Final Supplemental EIR, Section 5.18, Tribal Cultural Resources*. https://files.ceqanet.opr.ca.gov/271618-2/attachment/eWuGwlyBRUCdOW7ZaCm4H1mV0w8mPGsss0XHvAPaJ8sKEtqYcqdQkAGVxgSCOnxC8eoq7OlGLj0AWg4X0. (accessed May 2023).

technologies and food resources. By 2,000 years ago, the Tongva (or Gabrielino), a group of Uto-Aztecan, Takic-speaking people, used both the coastal and inland areas on a seasonal basis. The Tongva Native Americans were intensive hunter-gatherers, gathering a variety of wild plants in the desert, mountains, and coastal areas. The Tongva are believed to have been one of the most populous and wealthy Native American tribes in southern California prior to European contact. They lived in villages that ranged from 50 to 200 inhabitants, each village owning in common the area surrounding the village. Kinship was organized by groups, with each group composed of several related families.

By the 1700s, local Native Americans in southern California had contact with Europeans. One of the earliest known records of this contact is based on Father Garcés' trip from the Mojave Desert to the coast of California through the Cajon Pass. In 1771, the Spanish established Mission San Gabriel Arcangel about 40 miles west of the area later known as the City of Ontario. Following the Spanish custom of naming local Native American tribes after nearby missions, the Tongva were called Gabrielino. At its peak, Mission San Gabriel furnished food and supplies to settlements and other missions throughout California. By the end of the century, the Gabrielino population significantly declined due to diseases introduced by Europeans. The Gabrielino people fragmented as individuals succumbed to Spanish control, fled the region, or died. However, in late 20th century there was a revival of Gabrielino culture.

4.16.3 Regulatory Setting

Federal

Archaeological Resources Protection Act

The Archaeological Resources Protection Act of 1979 regulates the protection of archaeological resources and sites that are on federal lands and Indian lands.

Native American Graves Protection and Repatriation Act of 1990

The Native American Graves Protection and Repatriation Act of 1990 sets provisions for the intentional removal and inadvertent discovery of human remains and other cultural items from federal and tribal lands. It clarifies the ownership of human remains and sets forth a process for repatriation of human remains, associated funerary objects, and sacred religious objects to the Native American groups claiming to be lineal descendants or culturally affiliated with the remains or objects. It requires any federally funded institution housing Native American remains or artifacts to compile an inventory of all cultural items within the museum or with its agency and to provide a summary to any Native American tribe claiming affiliation.

State

California Environmental Quality Act (CEQA)

California public agencies must consider the effects of their actions on both "historical resources" and "unique archaeological resources." Pursuant to Public Resources Code (PRC) Section 21084.1, a "project that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment." PRC Section 21083.2 additionally requires agencies to determine whether proposed projects would have effects on "unique archaeological resources."

"Historical resource" is a term with a defined statutory meaning. Under California Code of Regulations (CCR), Title 14, Chapter 3 (CEQA Guidelines, Section 15064.5(a)) "historical resource" includes the following:

- A resource listed in or determined to be eligible by the State Historical Resources Commission (SHRC), for listing in the California Register of Historical Resource (CRHR), (PRC Section 5024.1 and Title 14 CCR, Section 4850 et seq.).
- A resource included in a local register of historical resources, as defined in Section 5020.1(k) of the PRC, or identified as significant in a historical resource survey meeting the requirements of Section 5024.1(g) of the PRC, shall be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.
- Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be a historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the CRHR (PRC Section 5024.1 and Title 14 CCR Section 4852) including the following:
    - Criterion 1 - Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
    - Criterion 2 - Is associated with the lives of persons important in our past;
    - Criterion 3 - Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
    - Criterion 4 - Has yielded, or may be likely to yield, information important in prehistory or history.
- The fact that a resource is not listed in, or determined to be eligible for listing in the CRHR, not included in a local register of historical resources (pursuant to Section 5020.1(k) of the PRC), or identified in an historical resources survey (meeting the criteria in Section 5024.1(g) of the PRC) does not preclude a lead agency from determining that the resource may be an historical resource as defined in PRC Sections 5020.1(j) or 5024.1.

CEQA addresses significant impacts to historical resources. "A project with an effect that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment. Substantial adverse change in the significance of a historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired." (State CEQA Guidelines Section 15064.5(b)(1)).

CEQA also requires agencies to consider whether projects will affect "unique archaeological resources." PRC Section 21083.2, subdivision (g), states that "'unique archaeological resources' means an

archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

1. Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.
2. Has a special and particular quality such as being the oldest of its type or the best available example of its type.
3. Is directly associated with a scientifically recognized, important prehistoric or historic event or person."

Senate Bill 18

Senate Bill (SB) 18, effective September 2004, requires a local government to notify and consult with California Native American tribes when the local government is considering adoption or amendment of a general plan or a specific plan. SB 18 provides California Native American tribes an opportunity to participate in local land use decisions at an early stage of planning, for the purpose of protecting or mitigating impacts to cultural places. Prior to adoption or amendment of a general plan or a specific plan, a local government must refer the proposed action to those tribes that are on the Native American Heritage Commission (NAHC) contact list and have traditional lands located within the city's or county's jurisdiction. The referral must allow a 45-day comment period pursuant to Government Code Section 65352(b).

SB 18 (Chapter 905 of the 2004 statutes) says, in pertinent parts:

Section 1(b): In recognition of California Native American tribal sovereignty and the unique relationship between California local governments and California tribal governments, it is the intent of the Legislature, in enacting this act, to accomplish all of the following:

1. *Recognize that California Native American prehistoric, archaeological, cultural, spiritual, and ceremonial places are essential elements in tribal cultural traditions, heritages, and identities.*
2. *Establish meaningful consultations between California Native American tribal governments and California local governments at the earliest possible point in the local government land use planning process so that these places can be identified and considered.*
3. *Establish government-to-government consultations regarding potential means to preserve those places, determine the level of necessary confidentiality of their specific location, and develop proper treatment and management plans.*
4. *Ensure that local and tribal governments have information available early in the land use planning process to avoid potential conflicts over the preservation of California Native American prehistoric, archaeological, cultural, spiritual, and ceremonial places.*
5. *Enable California Native American tribes to manage and act as caretakers of California Native prehistoric, archaeological, cultural, spiritual, and ceremonial places.*

6. *Encourage local governments to consider preservation of California Native American prehistoric, archaeological, cultural, spiritual, and ceremonial places in their land use planning processes by placing them in open space.*
7. *Encourage local governments to consider the cultural aspects of California Native American prehistoric, archaeological, cultural, spiritual, and ceremonial places early in land use planning processes."*

And:

Section 65352.3 of the Government Code is as follows:

a) *(1) Prior to the adoption or any amendment of a city or county's general plan, proposed on or after March 1, 2005, the city or county shall conduct consultations with California Native American tribes that are on the contact list maintained by the Native American Heritage Commission (NAHC) for the purpose of preserving or mitigating impacts to places, features, and objects described in Sections 5097.9 and 5097.995 of the PRC that are located within the city or county's jurisdiction. (2) From the date on which a California Native American tribe is contacted by a city or county pursuant to this subdivision, the tribe has 90 days in which to request a consultation, unless a shorter timeframe has been agreed to by that tribe.*
b) *Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Section 65040.2, the city or county shall protect the confidentiality of information concerning the specific identity, location, character, and use of those places, features, and objects."*

Assembly Bill 52

The Native American Historic Resource Protection Act (Assembly Bill [AB] 52) took effect July 1, 2015, and incorporates tribal consultation and analysis of impacts to TCRs into the CEQA process. It requires TCRs to be analyzed like any other CEQA topic and establishes a consultation process for lead agencies and California tribes. Projects that require a Notice of Preparation of an EIR or Notice of Intent to adopt a ND or MND are subject to AB 52. A significant impact on a TCR is considered a significant environmental impact, requiring feasible mitigation measures.

TCRs must have certain characteristics:

1. Sites, features, places, cultural landscapes (must be geographically defined), sacred places, and objects with cultural value to a California Native American tribe that are either included or determined to be eligible for inclusion in the California Register of Historic Resources or included in a local register of historical resources. (PRC Section 21074(a)(1))
2. The lead agency, supported by substantial evidence, chooses to treat the resource as a TCR. (PRC Section 21074(a)(2))

The first category requires that the TCR qualify as a historical resource according to PRC Section 5024.1. The second category gives the lead agency discretion to qualify that resource—under the conditions that

it supports its determination with substantial evidence and considers the resource's significance to a California tribe. The following is a brief outline of the process (PRC Section 21080.3.1–3.3).

1. A California Native American tribe asks agencies in the geographic area with which it is traditionally and culturally affiliated to be notified about projects. Tribes must ask in writing.
2. Within 14 days of deciding to undertake a project or determining that a project application is complete, the lead agency must provide formal written notification to all tribes who have requested it.
3. A tribe must respond within 30 days of receiving the notification if it wishes to engage in consultation.
4. The lead agency must initiate consultation within 30 days of receiving the request from the tribe.
5. Consultation concludes when both parties have agreed on measures to mitigate or avoid a significant effect to a TCR, or a party, after a reasonable effort in good faith, decides that mutual agreement cannot be reached.
6. Regardless of the outcome of consultation, the CEQA document must disclose significant impacts on TCRs and discuss feasible alternatives or mitigation that avoid or lessen the impact.

California Health and Safety Code

California Health and Safety Code Section 7050.5, states that every person who knowingly mutilates or disinters, wantonly disturbs, or willfully removes any human remains in or from any location other than a dedicated cemetery without authority of law is guilty of a misdemeanor, except as provided in Section 5097.99 of the Public Resources Code. In the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains until the coroner of the county in which the human remains are discovered has determined, in accordance with Chapter 10 (commencing with Section 27460) of Part 3 of Division 2 of Title 3 of the Government Code, that the remains are not subject to the provisions of Section 27491 of the Government Code or any other related provisions of law concerning investigation of the circumstances, manner and cause of any death, and the recommendations concerning the treatment and disposition of the human remains have been made to the person responsible for the excavation, or to his or her authorized representative, in the manner provided in Section 5097.98 of the Public Resources Code. The coroner shall make his or her determination within two working days from the time the person responsible for the excavation, or his or her authorized representative, notifies the coroner of the discovery or recognition of the human remains. If the coroner determines that the remains are not subject to his or her authority and if the coroner recognizes the human remains to be those of a Native American or has reason to believe that they are those of a Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission.

Local

City of Ontario General Plan – The Ontario Plan 2050

The Ontario Plan (TOP) 2050 Community Design Element articulates design qualities that will create locally and regionally significant places and utilizes community design to help achieve the Vision in the areas of economic development, land use, housing, community health, infrastructure, and transportation. Included in TOP 2050 is the Policy Plan, which is a framework that would guide the City's future growth through the application of policies and goals. The following goals of TOP 2050 relate to tribal cultural resources.

The following policies contained in the Community Design Element are relevant to the Project:

Community Design Element[2]

Goal CD-4 **Historic buildings, streets, landscapes, and neighborhoods, as well as the story of Ontario's people, businesses, and social and community organizations, have been preserved and serve as a focal point for civic pride and identity.**

Policy CD4-1 **Cultural Resource Management.** We update and maintain an inventory of historic sites and buildings, professional collections, artifacts, manuscripts, photographs, documents, maps, and other archives.

Policy CD-4.2 **Collaboration with Property Owners and Developers.** We educate and collaborate with property owners and developers to implement strategies and best practices that preserve the character of our historic buildings, streetscapes, and unique neighborhoods.

Policy CD-4.3 **Collaboration with Outside Agencies.** We pursue opportunities to team with other agencies, local organizations, and nonprofits in order to preserve and promote Ontario's heritage.

Policy CD-4.6 **Promotion of Public Involvement in Preservation.** We engage in programs to publicize and promote the City's and the public's involvement in preservation efforts.

Policy CD-4.7 **Public Outreach.** We provide opportunities for our residents to research and learn about the history of Ontario through the Planning Department, the Ontario Museum of History and Art, and the Robert E. Ellingwood Model Colony History Room.

4.16.4 Impact Thresholds and Significance Criteria

State CEQA Guidelines Appendix G contains the Environmental Checklist Form, which includes questions concerning tribal cultural resources. The questions presented in the Environmental Checklist Form have been utilized as significance criteria in this section. Accordingly, the Project would have a significant effect on the environment if it would:

[2] City of Ontario. (2022). *TOP 2050, Community Design Element*. https://www.ontarioca.gov/about-ontario-ontario-plan-policy-plan/community-design. (accessed January 2023).

- Cause a substantial adverse change in the significance of a TCR, defined in PRC Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:
    - Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in PRC Section 5020.1(k), or
    - A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1. In applying the criteria set forth in subdivision (c) of PRC 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Methodology

The Project is evaluated against the significance criteria/thresholds as the basis for determining the impact's level of significance concerning TCRs. This analysis considers the existing regulatory framework (i.e., laws, ordinances, regulations, and standards) that avoid or reduce the potentially significant environmental impacts. Where significant impacts remain despite compliance with the regulatory framework, feasible mitigation measures are recommended, to avoid or reduce the potentially significant environmental impacts.

Native American Outreach and Background Research

BCR requested a search of the Sacred Lands File (SLF) from the NAHC in November 2022. The NAHC responded on November 15, 2022, stating that there are no known sacred lands within a one-mile radius of the Project area. The NAHC requested that 21 individuals from 8 Native American tribes be contacted for further information regarding the general vicinity.

Formal Consultation – Native American Outreach and Background Research

As part of the current CEQA process for the Project site, the City initiated formal tribal consultation under AB 52 and SB 18. City staff requested an updated SB 18 tribal consultation list from the NAHC on August 24, 2022. Tribal consultation letters were sent to the Native American Tribes in March 2023. It should be noted that the approved Native American lists for SB 18 and AB 52 consultations are not the same as the tribes and individuals identified on NAHC's SLF list. The following Tribes were notified:

SB 18 Consultation

- Gabrieliño Band of Mission Indians
- Gabrieliño/Tongva San Gabriel Band of Mission Indians
- Gabrieliño Tongva Indians of California Tribal Council
- Gabrieliño/Tongva Nation
- Gabrieliño-Tongva Tribe
- Morongo Band of Mission Indians

- San Fernando Band of Mission Indians
- San Manuel Band of Mission Indians
- Serrano Nation of Mission Indians
- Soboba Band of Luiseño Indians

AB 52 Consultation

- Gabrieliño Band of Mission Indians
- Gabrieliño/Tongva San Gabriel Band of Mission Indians
- San Manuel Band of Mission Indians
- Soboba Band of Luiseño Indians

Yuhaaviatam of San Manuel Nation (formerly known as the San Manuel Band of Mission Indians) responded March 15, 2023, indicating the Project is outside of the Tribes ancestral territory and, as such, the tribe did not elect to consult. Additionally, Gabrieleno Band of Mission Indians – Kizh Nation responded March 29, 2023, stating that the Tribe agrees with the Specific and requests consultation for all future projects within this location. No other responses have been received.

4.16.5 Plans, Programs, and Policies

PPP TCR-1 The Project is required to comply with State CEQA Guidelines Section 15064.5, PRC Sections 21083.2 and 5097.9, and Health and Safety Code (HSC) Section 7050.5, to properly recover and evaluate any TCRs, if encountered.

4.16.6 Impacts and Mitigation Measures

Impact 4.16-1 ***Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code § 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:***

i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code 5020.1(k), or

ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code § 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code § 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Level of Significance: Less Than Significant with Mitigation Incorporated

Specific Plan – Phase I and Phase II Future Development Areas

Construction and Operations

As previously stated, TCRs are sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that is either eligible or listed in the CRHR or local register of historical resources, or determined by the lead agency to be significant to a California Native American tribe pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1 (PRC Section 21074). Conducting consultation early in the CEQA process allows tribal governments, public lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to TCRs, and reduce the potential for delay in the environmental review process. The intent of consultation is to provide an opportunity for interested, affiliated Native American tribes to collaborate with the City during the project approval process to identify and protect TCRs.

Sacred Lands File Search

As stated, a SLF search was conducted through the NAHC to determine if any sacred lands or traditional cultural properties on file with the NAHC were within or near the Project site. The NAHC's SLF record search found no record of sacred lands on or within one mile of the Project site (see ***Appendix D***).

Tribal Consultation

In accordance with SB 18 and AB 52, the City sent Tribal consultation letters to the Native American Tribes in March 2023. Yuhaaviatam of San Manuel Nation (formerly known as the San Manuel Band of Mission Indians) responded, indicating the Project is outside of the Tribes ancestral territory and, as such, the Tribe did not elect to consult. Additionally, Gabrieleno Band of Mission Indians – Kizh Nation responded, stating that the Tribe agrees with the Specific and requests consultation for all future projects within this location. No other responses have been received.

Conclusion

As stated above, no TCRs were identified within the Project area. However, impacts to cultural resources, including TRCs, are considered potentially significant and mitigation measures are required to ensure the proper treatment of undiscovered cultural resources that may be encountered during grading. As discussed in ***Section 4.5: Cultural Resources***, the application of mitigation measures **MM CUL-6** and **MM CUL-7** below requiring Cultural Awareness training for all construction and field personnel and ensure the proper treatment of undiscovered resources that may be encountered during grading would reduce the impacts to less than significant levels.

Mitigation Measures

Refer to ***Section 4.5: Cultural Resources*** for **MM CUL-6** and **MM CUL-7**.

4.16.7 Cumulative Impacts

Cumulative impacts to TCRs would occur when the impacts of the Project, in conjunction with other projects and development in the region, result in multiple and/or cumulative impacts to TCRs in the

Ontario Ranch area. The cultural records search and pedestrian survey did not identify any resources that could potentially be TCRs, and no sacred lands are on file with the NAHC within or adjacent to the Project site. Through tribal consultation, no TCRs or concerns about potential TCRs were identified. Each future Project considered for approval by the City would be required to do its own consultation and include mitigation measures to protect resources if they are uncovered during grading activities. The Project would not combine with other projects in the region to create a cumulative impact to TCRs. Therefore, cumulative impacts to TCRs would be less than significant.

4.16.8 Significant Unavoidable Impacts

No significant unavoidable impacts have been identified.

4.17 UTILITIES AND SERVICE SYSTEMS

4.17.1 Introduction

This section of the Draft Environmental Impact Report (EIR) discusses the current conditions for utility providers, including water, wastewater, stormwater, solid waste, electricity, and natural gas services, and the Euclid Mixed Use Specific Plan Project (Project) effects on these providers, for the City of Ontario (City).

This Section and environmental discussion use information from the following City documents:

- The Ontario Plan 2050
- City of Ontario Municipal Code
- City of Ontario TOP 2050 Final Supplemental EIR

The following analysis in this section is based, in part, on service provider questionnaire responses and the following technical study information obtained from:

- JLC Engineering & Consulting Inc. March 2023. *Hydrology & Hydraulic Report for Euclid Mixed Use Specific Plan.* (***Appendix G1***)
- JLC Engineering & Consulting Inc. March 2023. *Preliminary Water Quality Plan for the Euclid Mixed Use Specific Plan*. (***Appendix G2***)
- Ontario Municipal Utilities Company. May 2023. *Water Supply Assessment and Written Verification of Sufficient Water Supply for the Euclid Mixed Use Specific Plan (File No. PSP22-001).* (***Appendix J***)

4.17.2 Environmental Setting

Existing Conditions

The Project site is located within the City of Ontario Master Drainage Plan (MDP) Area XIV and proposes to construct several MDP storm drain facilities. The MDP Area XIV is approximately bounded by Riverside Drive to the north, between Bon View Avenue and Grove Avenue to the east, Merrill Avenue to the south, and Euclid Avenue to the west. The Project site is bounded by Schaefer Avenue to the north, Euclid Avenue to the west, Edison Avenue to the south, and Sultana Avenue to the east (refer to ***Figure 3-2: Local Vicinity Map***).

Water Supply[1]

The Ontario Municipal Utilities Company (OMUC) provides water service to residents, businesses, and other users in the City, including the Project site. Two small areas in the north central and northeastern sections of the City are served by the Cucamonga Valley Water District (CVWD). As of 2020, OMUC

[1] City of Ontario. 2021. *Final 2020 Urban Water Management Plan*. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Municipal-Utilities-Company/FINAL%20City%20of%20Ontario%202020%20UWMP.pdf. (accessed May 2023).

provided water to a population of approximately 178,409 people.[2] The primary source of water is groundwater from Chino Groundwater Basin (Chino Basin). Other water supplies include treated groundwater from the Chino Basin Desalter Authority (CDA), recycled water from Inland Empire Utilities Agency (IEUA), imported water from the Water Facilities Authority (WFA), and purchased water from the San Antonio Water Company (SAWCo).

The City has already inactivated several wells (Well 3, 4, 9, 15, 31, 35, and 50) due to high nitrate and perchlorate concentrations detected above the maximum contaminant levels (MCL). Well 34 was removed from service due to Trichloropropane (TCP) water quality issues. The operations of Wells 44 and 52 are limited due to the migration of the bacterial groundwater plume when these wells are used too frequently. Well 25 was taken out of service due to a Perfluorooctanoic acid (PFOA) detection, which was below the PFOA interim notification level. The impact on supply due to the closure of these wells is minimized by constructing replacement wells at other locations where contaminant levels are low and constructing wellhead treatment facilities.[3]

Total potable and recycled water demand within the OMUC service area averaged 39,374 acre-feet per year (AFY) between 2015 and 2020.[4] Actual water supplies provided to the City for the year 2020 are summarized in ***Table 4.17-1: Water Supplies Summary***. Potable water demands averaged 32,109 AFY and recycled water demands averaged 7,812 AFY. Over the past ten years, the City's total water demands (including potable and recycled water demands) have ranged from 36,036 AFY to 45,196 AFY, with an average of 40,831 AFY. In addition, the City recently experienced a five-consecutive-year-drought within its service area from fiscal year (FY) 2011-12 to FY 2015-16. Throughout this consecutive dry year period, the City's annual water production ranged from 42,603 AFY (2012) to 36,036 AFY (2016), with an average of approximately 41,558 AFY. In the City's Single-Dry year, annual water production was 43,346 AFY. In 2020, the City's total demand was 39,921 AFY. The total water supply (potable and non-potable) demands in the year 2045 are projected to be 73,668 AFY. Potable water demands are projected to be 57,609 AFY and recycled water demands are projected to be 16,059 AFY.

Table 4.17-1: Water Supplies Summary

Water Supplier	Water Source	Amount (AFY)
City of Ontario	Groundwater	18,395
Chino Basin Desalter Authority (CDA)	Purchased/ Imported Water	6,636
Water Facilities Authority (WFA)	Purchased/ Imported Water	6,513
San Antonio Water Company (SAWC)	Purchased/ Imported Water	565
	Potable Water Subtotal	***32,109***
Inland Empire Utilities Agency (IEUA) – Agriculture Deliveries	Recycled Water	7,812
	Total	**39,921**

Refer to the Water Supply Assessment (WSA) for the Project (see ***Appendix J: Water Supply Assessment***) for a more detailed description of water supplies in the City.

The passage of Senate Bill (SB) X7-7 (also known as the Water Conservation Act of 2009) resulted in increased efforts to reduce potable water usage by requiring all California urban water suppliers to achieve a 20 percent reduction in demands (from a historical baseline) by 2020. Using a 10-year base period of 1995 to 2004, the City's baseline water usage is 245 gallons per capita per day (GPCD). The City's actual water use rate during FY 2019-20 was 161 GPCD which is a decrease of up to 103 GPCD from the recent historical water use. The 2020 target was 196 GPCD.[5]

It is required that every urban water supplier assess the reliability to provide water service to its customers under normal, single dry, and multiple dry years. As discussed in the City's 2020 Urban Water Management Plan (UWMP), the City is capable of meeting the water demands of its customers in normal, single dry, and multiple dry years between 2020 and 2045.

The Project site is currently used for agricultural land use, including dairy operations and field crops. The site is not connected to the City's water supply and utilizes groundwater for irrigation of crops and other agricultural related uses.

Site Hydrology

The Project site slopes gently from the northeast to the southwest and south. Drainage appears to flow south and southwest. Site elevations range from approximately 730 feet above mean sea level in the northeast portion of the site to approximately 690 feet above msl in the southwest portion of the site.

Storm drain systems to serve the Project site would be installed according to the City of Ontario Storm Drain (see ***Section 3.0: Project Description***, ***Figure 3-17: City of Ontario Ultimate Sewer System***). Currently, there are no City domestic storm drain trunk lines in the Project vicinity. The extension of City master planned storm drain infrastructure is being developed within the western portion of Ontario Ranch. The Project is responsible to provide storm drains to serve future development and would construct a 90-inch line in Euclid Avenue along the western perimeter of the Project site, a 48-inch to 90-inch line in Schaefer Avenue along the northern perimeter of the Project site, and a 78-inch to 96-inch line in Edison Avenue along the southern perimeter of the Project site. Additionally, the Project would construct a 102-inch trunk line in Euclid Avenue south to connect to the existing 108-inch line at Euclid Avenue and Eucalyptus Avenue.

Catch basins located throughout the site would collect runoff. On-site storm drain systems serving the Project site would connect to the master planned system in Euclid Avenue to serve the Project site development. The Project site storm drain improvements are shown in ***Section 3.0: Project Description***, ***Figure 3-20: Storm Drain Plan*** and ***Figure 3-21: City of Ontario Ultimate Storm Drain System***.

According to the Geotechnical Investigation conducted for the Project (***Appendix E: Geotechnical Reports***), groundwater was not encountered during the investigation. Based on the available data and the

[5] Ibid, page 4-11.

findings of the investigation, the historical high groundwater level and the current groundwater level is estimated to be deeper than 137 feet below ground surface. Groundwater is not expected to be encountered during Project construction. It should be noted that the groundwater level could vary depending upon the seasonal precipitation and possible groundwater pumping activity in each site vicinity. Perched water layers at depth may be present locally, particularly following high precipitation and irrigation events.

Potable and Recycled Water

The City's existing domestic water system consists of the following:

- 5 primary pressure zones (Zone 925, 1010, 1074, 1212, and 1348)
- Over 2.8 million feet (546 miles) of transmission and distribution pipe, 2-inches through 42- inches in diameter
- 6,811 fire hydrants
- 12 reservoirs with a total volume of 75 million gallons
- 4 active booster pump stations, 1 inactive booster pump station
- 16 pressure reducing stations
- 5 inter-agency connections
- 2 Connections to WFA
- 2 Connections to CDA

The existing water service area includes only a very small portion of Ontario Ranch (OR); Edenglen by Brookfield Homes (located south of Riverside Drive, east of Mill Creek Avenue), and Colony High School (located south of Riverside Drive and west of Mill Creek Avenue). The majority of the existing residents and businesses of OR use private groundwater wells for their water supply.

OMUC will provide potable and recycled water service to the Project. City Ordinance No. 2689 requires all new development to connect to, and use recycled water for all approved uses, including but not limited to landscape irrigation (codified in City Municipal Code Sections 6-8.7 to 6-8.279). OMUC serves at least 41,539 potable water connections and 521 non-potable connections and the total potable water demand in CY 2022 in the OMUC service area was approximately 31,130 acre-feet (AF) and the recycled water demand was 10,066.4 AF. OMUC purchases recycled water supplies from IEUA. IEUA treats the City's wastewater at its four regional wastewater reclamation plants. IEUA provides wastewater treatment services to seven Contracting Agencies, including the City of Ontario. OMUC has been using recycled water produced by IEUA since 1972. Currently, recycled water is used in the City for agricultural irrigation, landscape irrigation, golf course irrigation, and industrial purposes.

Wastewater Conveyance

The City is divided into two distinct areas, Old Model Colony (OMC) and New Model Colony, now known as Ontario Ranch (OR). The two areas are generally divided by Riverside Drive. OMC consists of existing residential, commercial, and industrial developments. It comprises approximately 36 square miles. OR is

an agricultural area that was annexed to the City in 1999. It is approximately 13 square miles and currently consists of primarily agricultural land.

The existing OMC sewer collection system is made up of a network of gravity sewers, pump stations, and force mains. The gravity system consists of approximately 365.7 miles of pipe and 7,582 manholes and cleanouts. The system also includes three pump stations and 11,588 feet of associated force mains. The total existing average sewer load for OMC is estimated at 18.75 million gallons per day (mgd). With an existing population of 174,536 persons, this is equivalent to approximately 107 gallons per day (gpd) per person.

The ultimate sewer collection system would include service to OR. The Project is in the OR and no sewer lines currently run in the vicinity of the Project site. Approximately 140,000 feet of additional trunk sewer would be added to the City's system in OR, ranging in size from 12-inches to 36-inches. It would be financially infeasible for residential development to bear the cost of infrastructure improvements required to support a residential development.

Wastewater Treatment

Regional wastewater services are provided to the City and its neighboring agencies by the IEUA. Several regional trunk sewers collect sewage generated in the City and transport it to IEUA's Regional Plant No. 1 (RP-1) and Regional Plant No. 5 (RP-5) for treatment. RP-1, located south of the Pomona Freeway (SR-60) and west of Cucamonga Creek, has been in operation since 1948 and has a current capacity of 44 mgd. RP-1 also serves the cities of Rancho Cucamonga, Upland, Montclair, Fontana, and portions of unincorporated San Bernardino County (County). The RP-1 plant treats an average influent wastewater flow of approximately 28 mgd. The City's sewer service area is divided into eight sewer sheds, primarily based on the outlet points where the City's system ties into the IEUA downstream facility. Ontario Ranch is located in Sewer shed 8. See ***Figure 3-16: Recycled Water Plan*** for further detail.

IEUA began operation of RP-5 in March 2004. RP-5 is located in the City of Chino at the southeast corner of Kimball Avenue and El Prado Road. Sewage generated in the OR, as well as the wastewater flows diverted from the OMC sewer pump station tributary areas are treated at RP-5. The plant has a wastewater treatment capacity of 15 mgd and treats an average influent wastewater flow of approximately nine mgd.

IEUA had originally planned to bypass an average flow of up to 20 mgd from RP-1 to RP-5 via the OR sewer system and Kimball Interceptor Sewer located on Kimball Avenue west of Baker Street. The first OR sewer constructed (Eastern Trunk Sewer) was designed to carry nine mgd of bypass flow from RP-1. Currently, IEUA does not expect to pursue the remaining 11 mgd bypass capacity in the OR sewer system.

Groundwater from the Chino Basin is directly pumped by the City into its distribution system or is treated through an ion-exchange facility located at John Galvin Park before pumping it into the distribution system. The CDA desalters, Chino I and Chino II Desalters, consist of groundwater extraction wells connected to pumps and pipelines that direct water to advanced treatment facilities. The final product is a high-quality drinking water.

The City requires all new development in Ontario Ranch to connect to and use recycled water for all approved uses, including but not limited to landscape irrigation. Currently there are no City owned recycled water mains or City recycled water infrastructure in the Project vicinity. However, there is an existing 30-inch IEUA recycled water main in Eucalyptus Avenue south of the Project site. The Project applicant is responsible to provide recycled water service to serve future development and would construct a 12-inch line along the perimeter of the Project site. The Project would extend the 12-inch line in Euclid Avenue south to connect to the existing line in Eucalyptus Avenue. See ***Section 3.0: Project Description***, ***Figure 3-16: Recycled Water Plan*** for further detail.

The 12-inch line in Sultana Avenue may be reduced to an 8-inch line if the development to the east is required to provide individual meters to serve future development.

Local Drainage

The City presently owns and maintains over 136 miles of storm drains, mostly serving the OMC area of the City. In addition to the City-owned storm drains there are the State-owned storm drains along Caltrans' Interstate 10 (I-10) and State Route 60 (SR 60) corridors. All the City-owned and State-owned facilities drain to a number of regional backbone facilities owned and operated by San Bernardino County Flood Control District (SBCFCD) that are tributary to the U.S. Army Corps of Engineers' (USACE) Prado Flood Control Basin.

The City lies in the western portion of the Santa Ana River's watershed, upstream of the Prado Flood Control Basin. It is in a 277-square-mile area referred to as Zone 1 by SBCFCD. Zone 1 generally slopes towards the south. Four major regional channel systems traverse Zone 1 in a north-south direction; they include San Antonio Channel, Cucamonga Channel, Day Creek Channel and San Sevaine Channel.

Solid Waste Collection

The City collects solid waste from residential, commercial, and industrial facilities. Customers are provided with a refuse container, a commingled recycling container, and a green waste container. City waste trucks collect recycling, green waste, and trash. Each truck contains one type of material, which is then recycled/disposed of appropriately. Computers, televisions, and other electronic waste are recycled free of charge at Ontario's Household Hazardous Waste Facility located at 1430 S. Cucamonga Avenue.

Currently, the Project site is served primarily by the Badlands Sanitary and El Sobrante Landfills but may also be served by the Mid-Valley Sanitary Landfill, Olinda Alpha Landfill, and Simi Valley Landfill and Recycling Center. Badlands Landfill is owned and operated by the Riverside County Department of Waste Resources, and the El Sobrante Landfill is owned and operated by USA Waste of California, a subsidiary of Waste Management, Inc.

According to 2019 data (most recent data available) from the California Department of Resources Recycling and Recovery (CalRecycle), 97 percent of solid waste collected from the City was taken to the Badlands and El Sobrante Landfills described in ***Table 4.17-2: Landfills Serving Ontario***.

Table 4.17-2: Landfills Serving Ontario

Landfill	Remaining Capacity (million cubic yards)	Maximum Permitted Capacity (million cubic yards)	Maximum Permitted Throughput (tons per day)	Average Daily Disposal (2019)[1] (tons)	Estimated Closing Date
Badlands Sanitary Landfill 31125 Ironwood Avenue Moreno Valley, CA 92555	7,800,000	82,300,000	5,000	2,139	1/1/2059
El Sobrante Landfill 10910 Dawson Canyon Rd Corona, CA 91719	143,977,170	209,910,000	16,054	10,855	1/1/2051
Total	159.7	244.3	20,854	12,994	-

Source: CalRecycle. 2023. *SWIS Facility/Site Activity Details- El Sobrante Landfill.* https://www2.calrecycle.ca.gov/SolidWaste/SiteActivity/Details/2280?siteID=2402. (accessed April 2023).
CalRecycle. 2023. SWIS Facility/Site Activity Details – Badlands Sanitary Landfill. https://www2.calrecycle.ca.gov/SolidWaste/SiteActivity/Details/2245?siteID=2367. (accessed April 2023). [1]Average daily disposal is estimated based on 300 operating days per year. Each facility is open six days per week, Monday through Saturday, except certain holidays.

Collectively, all three landfills have a remaining disposal capacity of approximately 160 million cubic yards. The El Sobrante Landfill has a disposal capacity beyond the 15-year horizon, as required by Assembly Bill (AB) 939.

Compliance with AB 939 is measured in part by actual disposal rates compared to target rates for residents and employees, respectively; actual disposal rates at or below target rates are consistent with AB 939. Target disposal rates for Ontario are 9.9 pounds per day (ppd) per resident and 16.4 ppd per employee. Actual disposal rates in 2021 were 10.2 ppd per resident and 14.9 ppd per employee.[6] Thus, solid waste diversion in the City is consistent with AB 939.

Electricity

The Project site is in Southern California Edison's (SCE) service area, which spans much of southern California from Orange and Riverside counties on the south to Santa Barbara County on the west to Mono County on the north. Total electricity consumption in SCE's service area was 103,045 GWh in 2021.[7] Sources of electricity sold by SCE in 2021, the latest year for which data are available, were:

- 32 percent renewable, consisting mostly of solar and wind
- 2 percent large hydroelectric
- 22 percent natural gas
- 9 percent nuclear
- 35 percent unspecified sources – that is, not traceable to specific sources[8]

[6] CalRecycle. 2019. Disposal Rate Calculator. https://www2.calrecycle.ca.gov/LGCentral/AnnualReporting/DisposalRateCalculator (accessed May 2023).
[7] California Energy Commission. 2016. Electricity Consumption by Planning Area. http://www.ecdms.energy.ca.gov/elecbyplan.aspx.
[8] Southern California Edison. 2022. *2021 Power Content Label, Southern California Edison*. https://www.sce.com/sites/default/files/custom-files/Web%20files/2021%20Power%20Content%20Label.pdf. (accessed April 2023).

The Project site generates electricity demand for the day-to-day operations of the agricultural and residential uses on-site. Existing use of electricity on-site includes lighting, heating and cooling, ventilation, and milking equipment, such as pumps and cooling systems.

Natural Gas

Southern California Gas Company (SoCalGas) provides gas service in the City and has facilities throughout the City, including the Project site. The service area of SoCalGas spans much of the southern half of California, from Imperial County on the southeast to San Luis Obispo County on the northwest to part of Fresno County on the north to Riverside County and most of San Bernardino County on the east. Total natural gas consumption in SoCalGas's service area was 6,755 million therms in 2021.[9]

The Project site generates natural gas demand for the day-to-day operations of the dairy farm and residences on-site. Estimated annual natural gas demand for the existing on-site operations is 387,510 kilo-BTU per year (kBTU/year) or 3,876 therms.[3] Natural gas demands on-site mainly stem from the use of space and water heaters, cooking appliances, and laundry and water appliances.

4.17.3 Regulatory Setting

Federal

Clean Water Act and National Pollutant Elimination Discharge System

The Clean Water Act (CWA) establishes regulations to control the discharge of pollutants into the waters of the United States and regulates water quality standards for surface waters (U.S. Code, Title 33, Section 1251 et seq.). Under the CWA, the U.S. Environment Protection Agency (U.S. EPA) is authorized to set wastewater standards and runs the National Pollutant Discharge Elimination System (NPDES) permit program. Under the NPDES program, permits are required for all new developments that discharge directly into waters of the United States. The federal CWA requires wastewater treatment of all effluent before it is discharged into surface waters. NPDES permits for such discharges in the Project region are issued by the Santa Ana Regional Water Quality Control Board (RWQCB).

Federal Safe Drinking Water Act

The Safe Drinking Water Act (SDWA), the principal federal law intended to ensure safe drinking water to the public, was enacted in 1974 and has been amended several times since it came into law. The Act authorizes the U.S. EPA to set national standards for drinking water, called the National Primary Drinking Water Regulations, to protect against both naturally-occurring and man-made contaminants. These standards set enforceable maximum contaminant levels in drinking water and require all water providers in the United States to treat water to remove contaminants, except for private wells serving fewer than 25 people. In California, the State Water Resources Control Board (SWRCB) conducts most enforcement activities. If a water system does not meet standards, it is the water supplier's responsibility to notify its customers.

[9] California Energy Commission. 2016. *Gas Consumption by Planning Area*. http://www.ecdms.energy.ca.gov/gasbyplan.aspx. (accessed April 2023).

Resource Conservation and Recovery Act of 1976

The Resource Conservation and Recovery Act of 1976 (Title 40 of the Code of Federal Regulations), Part 258, contains regulations for municipal solid waste landfills and requires states to implement their own permitting programs incorporating the federal landfill criteria. The federal regulations address the location, operation, design (liners, leachate collection, run-off control, etc.), groundwater monitoring, and closure of landfills.

State

California Energy Commission

The California Energy Commission (CEC) was created in 1974 as the State's principal energy planning organization in order to meet the energy challenges facing the state in response to the 1973 oil embargo. The CEC is charged with six basic responsibilities when designing State energy policy:

- Forecast statewide electricity needs.
- License power plants to meet those needs.
- Promote energy conservation and efficiency measures.
- Develop renewable energy resources and alternative energy technologies.
- Promote research, development, and demonstration.
- Plan for and direct the state's response to energy emergencies.

California Energy Benchmarking and Disclosure

AB 1103 (2007) requires that electric and gas utilities maintain records of the energy consumption data of all nonresidential buildings to which they provide service and that by January 1, 2009, upon authorization of a nonresidential building owner or operator, an electric or gas utility shall upload all of the energy consumption data for the specified building to the California Environmental Protection Agency (CalEPA) Energy Star Portfolio Manager in a manner that preserves the confidentiality of the customer. This statute further requires a nonresidential building owner or operator disclose Energy Star Portfolio Manager benchmarking data and ratings, for the most recent 12-month period, to a prospective buyer, lessee, or lender. Enforcement of the latter requirement began on January 1, 2014.

On October 8, 2015, AB 802 was signed into law. AB 802 would revise and recast the above provisions. AB 802 directs the CEC to establish a Statewide energy benchmarking and disclosure program and enhances the CEC's existing authority to collect data from utilities and other entities for the purposes of energy forecasting, planning, and program design. Among the specific provisions, AB 802 would require utilities to maintain records of the energy usage data of all buildings to which they provide service for at least the most recent 12 complete months. By January 1, 2017, AB 802 required each utility, upon the request and the written authorization or secure electronic authorization of the owner, owner's agent, or operator of a covered building, as defined, to deliver or provide aggregated energy usage data for a covered building to the owner, owner's agent, operator, or to the owner's account in the Energy Star Portfolio Manager, subject to specified requirements. AB 802 also authorized the commission to specify additional information to be delivered by utilities for certain purposes.

Porter-Cologne Water Quality Control Act

Under the Porter-Cologne Water Quality Control Act (Water Code Sections 13000 et seq.), which was passed in California in 1969 and amended in 2013, the SWRCB has authority over State water rights and water quality policy. The Porter-Cologne Water Quality Control Act divided the state into nine regional basins, each under the jurisdiction of a RWQCB to oversee water quality on a day-to-day basis at the local and regional level. RWQCBs engage in a number of water quality functions in their respective regions. RWQCBs regulate all pollutant or nuisance discharges that may affect either surface water or groundwater. The City is overseen by the Santa Ana Area RWQCB.

California Senate Bill 610 and 221

SB 610 and SB 221 were amended in 2001 to assure coordination between the local water and land use decisions to confirm that California cities and communities are provided with adequate water supply. Specific projects are required to prepare a WSA. The WSA is composed of information regarding existing and forecasted water demands, as well as information pertaining to available water supplies for the new development.

The following projects are required to prepare a WSA:

- Residential developments consisting of more than 500 homes;
- A business employing more than 1,000 people or having more than 500,000 square feet (sf);
- A commercial office building employing more than 1,000 people or having more than 250,000 sf of floor space;
- A hotel having more than 500 rooms;
- A proposed industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 sf of floor area; and
- A mixed-use project that requires the same or greater amount of water as a 500 dwelling-unit project.

SB 221 requires written verification that there is sufficient water supply available for new residential subdivisions that include over 500 dwelling units or meet the other requirements listed above. The verification must be provided before commencement of construction for the project.

Urban Water Management Planning Act

The Urban Water Management Planning Act of 1983 (Water Code Section 10610 et seq.) requires water suppliers to:

- Plan for water supply and assess reliability of each source of water over a 20-year period in five-year increments.
- Identify and quantify adequate water supplies, including recycled water, for existing and future demands in normal, single-dry, and multiple-dry years.

- Implement conservation and the efficient use of urban water supplies.

Significant new requirements for quantified demand reductions have been added by the Water Conservation Act of 2009 (SB X7-7), which amends the Urban Water Management Planning Act and adds new water conservation provisions to the Water Code.

Mandatory Water Conservation

Following Governor Brown's declaration of a state of emergency on July 15, 2014, the SWRCB adopted Resolution No. 2014-0038. The emergency regulation was partially repealed by Resolution No. 2017-0024. The remaining regulation prohibits several activities, including (1) the application of potable water to outdoor landscapes in a manner that causes excess runoff; (2) the use of a hose to wash a motor vehicle except where the hose is equipped with a shut-off nozzle; (3) the application of potable water to driveways and sidewalks; (4) the use of potable water in nonrecirculating ornamental fountains; and (5) the application of potable water to outdoor landscapes during and within 48 hours after measurable rainfall. The SWRCB resolution also directed urban water suppliers to submit monthly water monitoring reports to the SWRCB.

The Water Conservation Act of 2009 (SB X7-7)

The Water Conservation Act of 2009, SB X7-7, requires all water suppliers to increase water use efficiency. The legislation sets an overall goal of reducing per capita water use by 20 percent by 2020, with an interim goal of a 10 percent reduction in per capita water use by 2015. Effective in 2016, urban retail water suppliers who do not meet the water conservation requirements established by this bill are not eligible for state water grants or loans. The SB X7-7 requires that urban water retail suppliers determine baseline water use and set reduction targets according to specified standards, it also requires that agricultural water suppliers prepare plans and implement efficient water management practices.

Water Conservation in Landscaping Act of 2006 (AB 1881)

The Water Conservation in Landscaping Act of 2006 (AB 1881) required the Department of Water Resources (DWR) to update the State Model Water Efficient Landscape Ordinance (MWELO) by 2009. The State's model ordinance was issued on October 8, 2009. Under AB 1881, cities and counties were required to adopt a State updated model landscape water conservation ordinance by January 31, 2010, or to adopt a different ordinance that is at least as effective in conserving water as the updated Model Ordinance. It also required reporting on the implementation and enforcement of local ordinances, with required reports due by December 31, 2015.

2015 Update of the State Model Water Efficient Landscape Ordinance (Per Governor's Executive Order B-29-15)

To improve water savings in the landscaping sector, the DWR updated the Model Ordinance in accordance with Executive Order B-29-15. The Model Ordinance promotes efficient landscapes in new developments and retrofitted landscapes. The Executive Order calls for revising the Model Ordinance to increase water efficiency standards for new and retrofitted landscapes through more efficient irrigation systems, greywater usage, and on-site stormwater capture, and by limiting the portion of landscapes that can be covered in turf.

New development projects that include landscape areas of 500 sf or more are subject to the Ordinance. This applies to residential, commercial, industrial, and institutional projects that require a permit, plan check, or design review. The previous landscape size threshold for new development projects ranged from 2,500 sf to 5,000 sf.

State Water Resources Control Board: Statewide General Waste Discharge Requirements

The General Waste Discharge Requirements specify that all federal and State agencies, municipalities, counties, districts, and other public entities that own or operate sanitary sewer systems greater than one mile in length that collect and/or convey untreated or partially treated wastewater to a publicly owned treatment facility in the State need to develop a Sewer Master Plan. The Sewer Master Plan evaluates existing sewer collection systems and provides a framework for undertaking the construction of new and replacement facilities in order to maintain proper levels of service. The Sewer Master Plan includes inflow and infiltration studies to analyze flow monitoring and water use data, a capacity assurance plan to analyze the existing system with existing land use and unit flow factors, a condition assessment and sewer system rehabilitation plan, and a financial plan with recommended capital improvements and financial models.

General Pretreatment Regulations for Existing and New Sources of Pollution

The General Pretreatment Regulations establish responsibilities of federal, State, and local government, industry, and the public to implement National Pretreatment Standards to control pollutants which pass through or interfere with treatment processes in Publicly Owned Treatment Works (POTW) or which may contaminate sewage sludge. Pretreatment standards are pollutant discharge limits which apply to industrial users.

California Building Code: Building Energy Efficiency Standards

The California Code of Regulations (CCR) Title 24, also known as the California Building Standards Code (CBSC), includes regulations for how buildings are designed and constructed, and are intended to ensure the maximum structural integrity and safety of private and public buildings. The CBSC, which applies to all applications for building permits, consists of 12 parts that contain CBSC administrative regulations for all State agencies that implement or enforce building standards. Local agencies must ensure the development complies with the CBSC standards. Cities and counties can adopt additional standards beyond the CBSC including CBSC Part 2, named the California Building Code (CBC).

The California Energy Commission (CEC) updates the Energy Code every three years. On August 11, 2021, the CEC adopted the 2022 Energy Code. In December, it was approved by the California Building Standards Commission for inclusion into the California Building Standards Code. The 2022 Energy Code encourages efficient electric heat pumps, establishes electric-ready requirements for new homes, expands solar photovoltaic and battery storage standards, strengthens ventilation standards, and more. Buildings whose permit applications are applied for on or after January 1, 2023, must comply with the 2022 Energy Code.

California Building Code: Green Building Standards Code (CALGreen Code)

The CALGreen Code was adopted as part of the California Building Standards Code and established planning and design standards for sustainable site development, energy efficiency (in excess of the California Energy Code requirements), as well as water conservation and material conservation, both of which contribute to energy conservation. This code features regulations for energy efficiency, water efficiency and conservation, material conservation and resource efficiency, as well as environmental quality. Also included as part of the CALGreen code are mandatory provisions for commercial, residential, and public school buildings, appendices with voluntary provisions for all of these occupancies, and residential and nonresidential provisions.

Appliance Efficiency Regulations

The Appliance Efficiency Regulations (Title 20, CCR Sections 1601 through 1609) include standards for both federally regulated appliances and non-federally regulated appliances. Though these regulations are now often viewed as "business as usual," they exceed the standards imposed by all other states, and they reduce reducing energy demand as well as greenhouse gas (GHG) emissions.

State Greenhouse Gas Regulations

Current State guidance and goals for reductions in GHG emissions from stationary sources are generally embodied in Executive Orders S-03-05 and B-30-15; AB 32 and AB 197; and SB 32. While these regulations are inherently aimed at reducing GHG emissions, they have a direct relationship to energy conservation. A detailed discussion of these regulations is provided in *Section 4.7, Greenhouse Gas Emissions,* of this Draft EIR.

Assembly Bill 341

AB 341 (Chapter 476) increased the statewide solid waste diversion goal to 75 percent by 2020. The law, passed in 2011, mandates recycling for businesses producing four or more cubic yards of solid waste per week. This commercial recycling law took effect July 1, 2012. Under the law, Ontario businesses must separate recyclables from trash and then either subscribe to City recycling services, self-haul their recyclables, or contract with a permitted private recycler.

The City is required to provide a number of programs to meet the requirements of AB 341. They include a public outreach program to inform Ontario businesses about the mandate, monitoring the progress of each business, notifying them if they are not in compliance, and reporting to the State.

Assembly Bill 939

AB 939 (California Integrated Solid Waste Management Act of 1989; Public Resources Code [PRC] Section 40050 et seq.) established an integrated waste-management system that focused on source reduction, recycling, composting, and land disposal of waste. AB 939 required every California city and county to divert 50 percent of its waste from landfills by the year 2000. Compliance with AB 939 is measured in part by comparing solid waste disposal rates for a jurisdiction with target disposal rates; actual rates at or below target rates are consistent with AB 939. AB 939 also requires California counties

to show 15 years of disposal capacity for all jurisdictions in the county or show a plan to transform or divert its waste.

Assembly Bill 1327

The California Solid Waste Reuse and Recycling Access Act (AB 1327, PRC Section 42900 et seq.) requires areas to be set aside for collecting and loading recyclable materials in development projects. The California Solid Waste Reuse and Recycling Access Act required the California Integrated Waste Management Board to develop a model ordinance for adoption by any local agency requiring adequate areas for collection and loading of recyclable materials as part of development projects. Local agencies are required to adopt the model or an ordinance of their own.

Assembly Bill 1826

In October of 2014, Governor Brown signed AB 1826 requiring businesses to recycle their organic waste on and after April 1, 2016, depending on the amount of waste they generate per week. This law also required that on and after January 1, 2016, local jurisdictions across the State implement an organic waste recycling program to divert organic waste generated by businesses and multifamily residential dwellings that consist of five or more units. Organic waste means food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste.

Senate Bill 1383

In September of 2016, Governor Brown signed into law SB 1383, establishing methane emissions reduction targets in a Statewide effort to reduce emissions of short-lived climate pollutants (SLCP). SB 1383 requires counties to take the lead collaborating with the jurisdictions located within the county in planning for the necessary organic waste recycling and food recovery capacity needed to divert organic waste from landfills into recycling activities and food recovery organizations.

Local

San Bernardino County Integrated Waste Management Plan

The preparation of the Countywide Integrated Waste Management Plan (CIWMP) is one of the requirements of the Integrated Waste Management Act. The CIWMP consists of four elements and a Summary Plan. Each jurisdiction (cities and the County) prepared the first three elements:

- Source Reduction and Recycling Element: which analyzed the local waste stream to determine where to focus diversion efforts, and developed diversion programs and funding;
- Household Hazardous Waste Element: which provides a framework for recycling, treatment, and disposal practices; and
- Non-disposal Facility Element: which lists planned and existing facilities such as material recovery facilities and composting facilities that recover waste from the waste stream.

The County prepared the Countywide Siting Element which demonstrates that there is at least 15 years of remaining disposal capacity to serve all the jurisdictions within the County. The Countywide Summary Plan, the final element of the CIWMP, contains goals and policies as well as a summary of integrated waste

management issues faced by the County. It summarizes waste management programs and the steps needed to cooperatively implement programs among the County's jurisdictions to continue to meet the statewide diversion mandates. The Countywide Summary Plan is to be updated every five years along with any other affected elements of the CIWMP.

City of Ontario Urban Water Management Plan

Ontario is required to prepare an Urban Water Management Plan (UWMP) pursuant to Water Code Sections 10610 through 10656 of the Urban Water Management Planning Act, effective January 1, 1984. The Urban Water Management Planning Act requires all urban water suppliers to prepare, adopt, and file a UWMP with the California Department of Water Resources every five years. The City's 2020 UWMP outlines current water demands, sources, and supply reliability to the City by forecasting water use based on climate, demographics, and land use changes in the City. The 2020 UWMP also provides demand management measures to increase water use efficiency for various land use types and details a water supply contingency plan in case of shortage emergencies.

City of Ontario Landscape Development Guidelines

The City's Landscape Development Guidelines ensure that the State's current Model Water Efficient Landscape Ordinance is being implemented in the City. The guidelines include water conservation measures that need to be incorporated into landscape designs, the different elements that need to be incorporated into preliminary landscape plans, and the required landscape construction documents. Construction documents need to include a water efficient landscape worksheet, grading design, erosion control measures, and a maintenance schedule.

City of Ontario Refuse and Recycling Planning Manual

The Integrated Waste Department's Refuse & Recycling Planning Manual assists developers in meeting the City of Ontario's requirements on refuse and recycling storage and access for service, as well as addressing the City's recycling goals.

Inland Empire Utilities Agency Water Quality Control Plants NPDES Permit

Wastewater discharge requirements for IEUA RP-1 and RP-5 are detailed in Order No. RS-2015-0036 NPDES No. CA8000409. The permit includes the conditions needed to meet minimum applicable technology-based requirements. The permit includes limitations that are more stringent than applicable federal technology-based requirements where necessary to achieve the required water quality standards.

Inland Empire Utilities Agency Regional Wastewater Ordinance No. 97

The IEUA's Regional Wastewater Ordinance No. 97 sets forth uniform requirements for industrial users of the IEUA's regional sewage system to comply with all applicable state and federal laws, including the CWA, the General Pretreatment Regulations, and the California Water Code. The objective of the ordinance is to prevent the introduction of pollutants into the POTWs that will interfere with their operation or that will pass through the POTWs, inadequately treated, into receiving waters.

City of Ontario Water and Sewer Design Development Guidelines

The City Water and Sewer Design Development Guidelines ensures that water and sewer facilities constructed in the City are complete, correctly operating, and in compliance with government codes and good water and wastewater industry practice. The guidelines also provide interested parties with the City's procedures, policies, and requirements for the design and construction of new water and wastewater infrastructure.

City of Ontario Municipal Code

Chapter 3, Integrated Waste Management, of the Ontario Municipal Code (OMC) sets forth uniform requirements and regulations for the direct and indirect users of the refuse and recycling collection services of the City. It also allows for the City to comply with all applicable State and federal laws, including, but not limited to, The Integrated Waste Management Act of 1989, California Code Title 14 Division 7, and any subsequent amendments to each.

Under Title 6, Chapter 7, the Public Sewer System, of the OMC sets forth uniform requirements for direct and indirect contributors into the City sewerage system and IEUA treatment system, and enables the City to comply with all applicable State and federal laws, including the CWA and the General Pretreatment Regulations, and subsequent amendments to each.

The purpose of the Water Conservation Plan, in the OMC under Title 6, Chapter 8A, is to minimize the potential for a water shortage through the practice of water conservation, and to minimize the effect of a shortage of water supplies on the water customers of the City. The chapter adopts provisions that will significantly reduce the inefficient consumption of water, thereby extending the available water resources necessary for domestic, sanitation, and fire protection of the community to the greatest extent possible.

The purpose of Water Services, under Title 8B, is to describe rules and regulations regarding service connections, payments and fees, and conditions for pressure, as well as emergency response for repairs and regulations.

The purpose of Title 6, Chapter 8C (Ordinance 2689), Recycled Water Use, is to establish procedures, specifications, and limitations for the safe and orderly development and operation of recycled water facilities and systems within the City's service area, and adopt rules and regulations controlling such use.

City of Ontario Capital Improvements Program

The Capital Improvements Program updates its CIP to prepare and budget for upcoming infrastructure improvements across a five-year planning horizon. The Engineering Departments also prepares a budget for upcoming infrastructure improvements over a five-year planning period.

City of Ontario General Plan – The Ontario Plan 2050

The Land Use Element and Environmental Resources Element of the Ontario Plan (TOP) 2050 establishes goals for environmental infrastructure and policies that support system integration, resource conservation and regeneration, and energy independence. The City's TOP 2050 contains the following goals and policies relevant to utilities and infrastructure.

The following policies contained in the Land Use Element are relevant to the Project:

Land Use Element[10]

Goal LU-1 **A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.**

Policy LU-1.3 **Adequate Capacity**. We require adequate infrastructure and services for all development.

Goal LU-4 **Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.**

Policy LU-4.3 **Infrastructure Timing**. We require that the necessary infrastructure and services be in place prior to or concurrently with development.

Policy LU-4.4 **Shared Infrastructure**. We encourage and facilitate the use of shared infrastructure (including shared or managed parking) in urban, mixed use, and transit-oriented Place Types.

The following policies contained in the Environmental Resources Element are relevant to the Project:

Environmental Resources Element[11]

Goal ER-1 **A reliable and cost-effective system that permits the City to manage its diverse water resources and needs.**

Policy ER-1.1 **Local Water Supply**. We increase local water supplies to reduce our dependence on imported water. New and redevelopment projects are aligned with our available water supply and/or to enhance our available water supply.

Policy ER-1.2 **Matching Supply to Use**. We match water supply and quality to the appropriate use.

Policy ER-1.3 **Conservation and Sustainable Water Supply**. We work with regional water providers and users to conserve water and ensure sustainable local water supplies as more frequent droughts reduce long term local and regional water availability.

Policy ER-1.4 **Supply-Demand Balance**. We require that available water supply and demands be balanced.

Policy ER-1.8 **Wastewater Management**. We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.

[11] City of Ontario. 2022. *TOP 2050, Environmental Resources Element*. https://www.ontarioca.gov/about-ontario-ontario-plan-policy-plan/environmental-resources. (accessed April 2023)

4.17.4 Impact Thresholds and Significance Criteria

According to Appendix G of the State CEQA Guidelines, a project would normally have a significant effect on the environment if the project:

- Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?
- Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?
- Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?
- Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?
- Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

4.17.5 Plans, Programs, and Policies

PPP W-1 The Project's water infrastructure improvements will be designed, constructed, and operated in accordance with the City of Ontario's Water and Sewer Design Development Guidelines.

PPP W-2 Water conservation measures for the Project will abide by the requirements of the City of Ontario's Municipal Code Title 6, Chapter 8A, Water Conservation Plan, Title 6, Chapter 8B, Water Services, and Title 6, Chapter 8C, Recycled Water Use.

PPP W-3 The Project will follow the City of Ontario's Landscape Development Guidelines to assure compliance with the State's current Model Water Efficient Landscape Ordinance.

PPP WW-1 The Project will be designed, constructed, and operated in accordance with the IEUA Regional Wastewater Ordinance No. 97. All industrial wastewater discharges into IEUA facilities shall be required to comply with the discharge standards set forth to protect the POTWs.

PPP WW-2 The Project's sewer infrastructure improvements will be designed, constructed, and operated in accordance with the City of Ontario Water and Sewer Design Development Guidelines.

PPP WW-3 The Project will be designed, constructed, and operated in accordance with the requirements of the City's MC Chapter 7, Public Sewer System, to protect the City of Ontario sewerage system and IEUA treatment system.

PPP HYD-1 The Project will be constructed and operated in accordance with the City's MC Chapter 6, Stormwater Drainage System to ensure the health, safety and general welfare of the residents of the City of Ontario by prescribing regulations to effectively prohibit non-stormwater discharges into the City's stormwater drainage system.

PPP HYD-2 Any construction shall be regulated by the SWRCB in a manner pursuant to and consistent with applicable requirements contained in the General Permit No. CAS000002, SWRCB Order

Number 2009-0009-DWQ. The City may notify the State Board of any person performing construction work that has a non-compliant construction site per the General Permit.

PPP HYD-3 The Project will be constructed and operated in accordance with the San Bernardino County MS4 Permit (Order No. R8-2010-0036, NPDES No. CAS618036 as renewed by the ROWD submitted on August 1, 2014). The MS4 Permit requires new development and redevelopment projects to adopt a water quality management plan (WQMP) to:

- Control contaminants into storm drain systems
- Educate the public about stormwater impacts
- Detect and eliminate illicit discharges
- Control runoff from construction sites
- Implement BMPs and site-specific runoff controls and treatments

PPP SW-1 The Project shall comply with Section 4.408 of the 2019 CALGreen Code, which requires new development projects to submit and implement a construction waste management plan in order to reduce the amount of construction waste transported to landfills. Prior to the issuance of building permits, the City of Ontario shall confirm that a sufficient plan has been submitted, and prior to final building inspections, the City of Ontario shall review and verify the contractor's documentation that confirms the volumes and types of wastes that were diverted from landfill disposal, in accordance with the approved construction waste management plan.

PPP SW-2 The Project will store and collect recyclable materials in compliance with AB 341.

PPP SW-3 The Project will abide by the requirements of San Bernardino County Integrated Waste Management Plan and Chapter 3, Integrated Waste Management, of the MC.

PPP SW-4 The Project will abide by the requirements of the City of Ontario's Refuse and Recycling Planning Manual.

PPP OU-1 New buildings are required to achieve the current California Building Energy and Efficiency Standards (Title 24, Part 6) and CALGreen Code (Title 24, Part 11).

PPP OU-2 All new appliances would comply with the Appliance Efficiency Regulations (Title 20, CCR Sections 1601 through 1609).

4.17.6 Impacts and Mitigation Measures

Impact 4.17-1 ***Would the Project require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?***

Level of Significance: Less than Significant

Specific Plan - Phase I and Phase II Future Development Areas

The Project applicant proposes new on-and off-site public sewer, potable water, and storm drain infrastructure, and would receive SCE electrical service. There are power poles and overhead facilities located opposite the site along Eucalyptus Avenue and Sultana Avenue. On-site improvements would include storm drains, water quality systems, a sewer main and sewer lines, water lines, and dry utility connections.

Water

The Project site is currently occupied by agricultural uses, including the raising of livestock, dairy farming activities, and a commercial nursery. The City's ultimate domestic water system will consist of five pressure zones. Most of Ontario Ranch (including the Project site area) is in the 925 Pressure Zone. In addition to extending the 925 Pressure Zone (PZ) Phase 2 West Backbone, the Project site requires a connection between the 925 PZ Phase 2 West Backbone and the 1010 PZ. This would supply a second source of potable water to the Project site. The connection to the 1010 PZ would require extending the Phase 2 West Backbone at Eucalyptus Avenue and Grove Avenue by installing a 30-inch potable water main north on Grove Avenue to Chino Avenue. The connection to the 1010 PZ would require installing an 18-inch potable water main in Chino Avenue easterly to the existing 18-inch potable water main located on the west side of the Cucamonga Creek channel and installing a Pressure Reducing Station between the 1010 PZ and 925 PZ near the intersection of Grove Avenue and Chino Avenue.

Potable water distribution to the Project would be provided by the City of Ontario. There are no existing water mains in the vicinity of the Project that are within the City's jurisdiction; the extension of City master planned domestic water infrastructure is being developed within the western portion of Ontario Ranch. The Project applicant proposes the extension of the 16-inch line in Schaefer Avenue to connect to the future line at Grove Avenue and the 16-inch line in Euclid Avenue south to connect to the future line in Eucalyptus Avenue. Within the Project site, a private network of 2-to-4-inch water lines for domestic water service and 10-to-12-inch water lines for fire service water would be installed and would include connections to the water main in Edison Avenue, Euclid Avenue, Schaefer Avenue, and Sultana Avenue (see ***Figure 3-14: Domestic Water Plan*** for further detail).

Recycled water is provided to the City of Ontario by the Inland Empire Utility Agency (IEUA) from its four wastewater reclamation plants. The entire Project site is within the City's master planned 930 Pressure Zone. Recycled water infrastructure improvements requiring the planning, design, and construction of new 930 Pressure Zone (PZ) Recycled Water Master Plan main lines area would be required (see ***Figure 3-15: City of Ontario Future Recycled Water System***).

The City requires all new development in Ontario Ranch to connect to and use recycled water for all approved uses, including but not limited to landscape irrigation. Currently there are no City owned recycled water mains or City recycled water infrastructure in the vicinity of the Project site. There is an existing 30-inch IEUA recycled water main in Eucalyptus Avenue south of the Project site. The Project is responsible to provide recycled water service to serve future development and would construct a 12-inch line along the perimeter of the Project site. The Project would extend the 12-inch line in Euclid Avenue south to connect to the existing line in Eucalyptus Avenue. See ***Figure 3-16: Recycled Water Plan*** for

further detail. The 12-inch line in Sultana Avenue may be reduced to an 8-inch line if the development to the east is required to provide individual meters to serve future development.

Based on the existing downstream MDP systems, the Project would mitigate on-site runoff to 80 percent of pre-project levels. Therefore, the Project proposes MDP facilities along Euclid Avenue between Schaefer Avenue and Edison Avenue, along Edison Avenue east of Euclid Avenue, and along Schaefer Avenue east of Euclid Avenue. The Project also proposes On-site Drainage Facilities that include a series of catch basins, inlets, storm drain systems, and subsurface systems. Until the ultimate pipeline network for OR has been completed, there may be instances where construction of improvements to serve a project may not meet the required fire flow demands. Therefore, projects within the Project area may be required to construct additional pipelines not indicated in the City's Water Master Plan or upsize master planned pipelines to meet Fire Department fire flow requirements and/or Water Master Plan criteria. All lines are per the City Water Master Plan, located in road rights-of-way that are already improved, according to the TOP 2050 Final Supplemental EIR. The developer would submit a hydraulic analysis to the City for review and approval to demonstrate adequate fire flow and adherence to the City's Water Master Plan criteria.

Although water line construction would be necessary for Project operation, these facilities have been planned by the City in its Water Master Plan, and no extensions or capacity expansions beyond the planned system would be required. Furthermore, any off-site construction of potable water infrastructure would be implemented in accordance with the City's Water and Sewer Design Development Guidelines and the standards and specifications of the MC. Off-site water mains required to serve the Project would need to be constructed prior to or concurrent with on-site water improvements. As previously mentioned, a private network of 2-to-4-inch water lines for domestic water service and 10-to-12-inch water lines for fire service water would be installed within the Project site, and the on-site water system would include connections to the water main in Edison Avenue, Euclid Avenue, Schaefer Avenue and Sultana Avenue. On-site construction of the proposed infrastructure would be constructed in compliance with City's Water and Sewer Design Development Guidelines and the MC. The necessary installation of on-site water lines is included as part of the Project and would not result in any physical environmental effects beyond those identified in other sections of this Draft EIR.

Therefore, the Project would not require or result in the relocation or construction of new or expanded water facilities outside of already improved road rights-of-way or existing City Water Master Plan, the construction of which could cause significant environmental effects, and impacts would be less than significant.

Wastewater Treatment

There are no sewer mains located in Euclid Avenue or the other streets adjacent to the Project area. The extension of City master planned sewer infrastructure is being developed within the western portion of Ontario Ranch. The City's master planned sewer system has been constructed in Euclid Avenue at Eucalyptus Avenue and along Eucalyptus Avenue between Euclid and Sultana Avenues.

The City of Ontario's 2012 Sewer Master Plan shows the existing infrastructure serving the Project area as well as the ultimate sewer system. The ultimate sewer collection system would include approximately 140,000 feet of additional trunk sewer to serve the OR. The sewer master plan includes a Capital Improvement Program (CIP) to ensure adequate long-range planning for implementing the City's sewer infrastructure improvements in line with the City's 2010 Policy Plan buildout scenario.

The Project includes a network of public sewer mains, consistent with the City's 2012 Sewer Master Plan. The Project applicant is responsible to provide sewer service to serve future development and would construct a 15-inch line approximately 1,320 feet in length along the Project frontage of Euclid Avenue and extend an 18-inch main line along the Euclid Avenue to the south to connect to the Kimball Interceptor Sewer. The Project would construct an 8-inch line along approximately 1,320 feet in length along the eastern boundary of the Project site to Edison Avenue and extend the 12-inch line in Sultana Avenue to connect to the existing line in Merrill Avenue. A sewer line may be extended along a portion of Edison Avenue, if necessary to serve the adjacent parcels to the north (see ***Figure 3-18: Sewer Plan***). A Sewer Sub-Area Master Plan (SSAMP) shall be prepared for each Tract Map and development within the Project Specific Plan.

As shown in the WSA (***Appendix J***) for the Project, the indoor water demand for the Project is less than the water demand anticipated in the TOP 2050 buildout scenario for the Project site. Therefore, wastewater generation from the Project would be less than wastewater generation rates assumed for the Project site in the TOP 2050. Since the Sewer Master Plan is based on the TOP 2050 buildout scenario, the Project would not require expansion of the wastewater infrastructure specified for the Project site in the sewer plan. Therefore, no additional off-site extensions or expansions to the planned sewer system serving the region would be required. On-site construction of the proposed sewer infrastructure would provide for connections throughout the site. Sewer laterals would connect buildings to sewer mains. Sizing and alignment of sewers would be within constructed in compliance with the City's Water and Sewer Design Development Guidelines and the Municipal Code. The necessary installation of on-site sewer lines and connections to the existing line is included as part of the Project and would not result in any physical environmental effects beyond those identified in other sections of this Draft EIR.

Therefore, the Project would not require or result in the relocation or construction of new or expanded wastewater facilities, the construction of which could cause significant environmental effects, and impacts would be less than significant.

Electricity

SCE would provide electricity to the Project site from existing facilities in the vicinity. All new lines within the Project site would be installed according to City requirements.

Undergrounding of existing overhead power lines would be subject to Section 7-7 of the OMC. Existing power poles along Edison Avenue would need to be relocated. The existing location is within the ultimate roadway. Project operation is expected to use approximately 12.9 million kilowatt hours (kWh) annually (see ***Section 4.6, Energy*** for further details). While the Project would increase energy demand at the Project site compared to existing conditions, it would be required to comply with the applicable Building

Energy Efficiency Standards and the CALGreen Code. Because the Project would be consistent with the requirements of these energy-related regulations, it would not result in wasteful or unnecessary electricity demands. In addition, it is projected that 100 percent of the total outdoor water demand would be served by recycled water, which would contribute to minimizing the energy associated with the distribution and treatment of water. SCE forecasts that it will have sufficient electricity supplies to meet demands in its service area; and the electricity demand due to the Project is within the forecast increase in SCE's electricity demands. Project development would not require or result in the relocation or construction of new or expanded electric power, of which could cause significant environmental effects, and impacts would be less than significant.

Natural Gas

Project operation is estimated to use about 31.2 million kilo British Thermal Units (kBTU) per year (see ***Section 4.6: Energy*** for further details). SoCalGas' residual supplies were forecast to remain constant at 3,775 MMCF/day from 2020 through 2035. Total natural gas consumption in SoCalGas' service area is forecast to decline slightly from 2,591 MMCF/day in 2019 to 2,313 MMCF/day in 2035. SoCalGas forecasts that it will have sufficient natural gas supplies to meet Project gas demands, and Project development would not require SoCalGas to obtain new or expanded gas supplies. Therefore, Project development would not require or result in the relocation or construction of new or expanded natural gas supplies, of which could cause significant environmental effects, and impacts would be less than significant.

Furthermore, the Project would comply with the requirements of the current California Building Energy and Efficiency Standards (Title 24, Part 6) and the CALGreen Code (Title 24, Part 11). All new appliances would comply with the Appliance Efficiency Regulations (Title 20, CCR Sections 1601 through 1609).

Telecommunications

Like the other dry utilities, telecommunication services would be extended to serve the Project site. This may involve the extension of services for existing providers and the petition for additional services from additional providers not currently present on the Project site. However, the construction of substantial new telecommunication infrastructures would not be required.

Conclusion

As noted above, the Project would not result in the construction of new water facilities or expansion of existing facilities, the construction of which could cause significant environmental effects. The Project applicant proposes the same land uses as contained in the City's TOP 2050. No mitigation is required other than compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.[12]

Mitigation Measures

No mitigation is necessary.

[12] City of Ontario. 2022. *TOP 2050 Final Supplemental Environmental Impact Report, Section 5.19, Utilities and Service Systems*. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (accessed April 2023).

Impact 4.17-2 ***Would the Project have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years?***

Level of Significance: Less than Significant

Specific Plan - Phase I and Phase II Future Development Areas

Water Demand

The City's 2020 Water Master Plan and 2020 UWMP used the current (current as of May 2017) TOP land use plan to calculate projected water demands. Using the City's unit water demand factors, the estimated potable and recycled water demands for the parcels within the Project limits that was accounted for in the 2020 UWMP is shown in ***Table 4.17-3: Water Demand of the Project Site Land Uses Assumed in the UWMP***.

Table 4.17-3: Water Demand of the Project Site Land Uses Assumed in the UWMP

Land Use Designation	Acres	Potable Water Demand (AFY)	Recycled Water Demand (AFY)	Total Water Demand (AFY)
Office Commercial (0.75 FAR)	40	112	67	179
Medium Density Residential (11.1 – 25 du/ac)	32	240	27	267
Open Space – Non-Recreational	12.01	13	0	13
Total	**84.01**	**365**	**94**	**459**

Source: ***Appendix J***, page 21.
Notes: AFY = acre feet per year; FAR = floor to area ratio; du/ac = dwelling unit per acre.

As shown in ***Table 4.17-3***, under the land uses assumed for within the UWMP, the potable water demand for the Project is estimated to be **365 AFY** (**325,851 gpd**). The total recycled water demand for the Project is estimated to be **94 AFY** (**83,918 gpd**). The total water demand would be **459 AFY** (**409,769 gpd**).

The potable and recycled water demands of the Project using the City's current unit water demand factors for potable and recycled water is summarized in ***Table 4.17-4: Water Demand Estimate for the Project***.

Table 4.17-4: Water Demand Estimate for the Project

Land Use	Acres	Potable Water Demand (AFY)	Recycled Water Demand (AFY)	Total Water Demand (AFY)
Business Park (PA 1 and PA 2)	53.06	107	71	178
Mixed-Use (PA 3)	19.03	85	32	117
Open Space/Non-Recreational	12.01	13	32	45
Total	**84.1**	**205**	**135**	**340**

Source: ***Appendix J***, page 22.
Notes: PA = Planning Area; AFY = acre feet per year. Calculations conservatively assume potable and recycled water use in the OS-NR areas.

As shown in ***Table 4.17-4,*** the potable water demand for the Project is estimated to be **205 AFY** (**183,012 gpd**). The total recycled water demand for the Project is estimated to be **135 AFY** (**120,520 gpd**). The total water demand would be **340 AFY** (**303,532 gpd**).

The 2020 UWMP indicates that the City is capable of meeting the water demands of its customers in normal, single dry, and multiple dry years between 2020 and 2045. The 2020 UWMP projected water

demands are based on the City's measurement of its water use through meter data and billing records. Total potable and recycled water demand within the OMUC service area averaged 39,374 AFY between 2015 and 2020. Potable water demands averaged 32,109 AFY and recycled water demands averaged 7,812 AFY. Over the past ten years, the City's total water demands (including potable and recycled water demands) have ranged from 36,036 AFY to 45,196 AFY, with an average of 40,831 AFY. In addition, the City recently experienced a five-consecutive-year-drought within its service area from fiscal year (FY) 2011-12 to FY 2015-16. Throughout this consecutive dry year period, the City's annual water production ranged from 42,603 AFY (2012) to 36,036 AFY (2016), with an average of approximately 41,558 AFY. In the City's Single-Dry year, annual water production was 43,346 AFY. In 2020, the City's total demand was 39,921 AFY. The total water supply (potable and non-potable) demands in the year 2045 are projected to be 73,668 AFY. Potable water demands are projected to be 57,609 AFY and recycled water demands are projected to be 16,059 AFY. Projected water demand for the Project site is included in the 2020 UWMP projections but is based on the TOP 2050 and the City's 2020 Water Master Plan. The estimated total water demand for the Project site that was assumed in the 2020 UWMP is approximately **459 AFY** (***Table 4.17-3***) and the proposed Project's total water demand is approximately **340 AFY** (***Table 4.17-4***). Because the City's water demand projections in the 2020 UWMP were based on a land use scenario with a greater water demand than that which is proposed by the Project, it can be deduced that the water demand for the Project was accounted for in the most recently adopted 2020 UWMP. Therefore, implementation of the Project would not obstruct the City's ability to meet water demands of its customers in normal, single dry, and multiple dry years.

Proposed Water Conservation Strategies

Landscaping within the Project area would be implemented in line with the City's Landscape Development Guidelines. The guidelines include water conservation measures that need to be incorporated into landscape designs, the different elements that need to be incorporated into preliminary landscape plans, and the required landscape construction documents. Construction documents need to include a water efficient landscape worksheet, grading design, erosion control measures, and a maintenance schedule. Furthermore, the Project includes key provisions for landscaping plans within the Project area which include:

- Selecting drought-tolerant plants such as colorful shrubs and groundcovers, ornamental grasses and succulents, evergreen and deciduous trees, and species native to southern California or naturalized to the arid southern California climate.
- Incorporating water conservation features in landscape and irrigation plans.

In addition to the City having adequate water supply to service the Project, these water conservation measures would decrease water demand and impacts would be less than significant.

Therefore, the Project would have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years, and a less than significant impact will occur.

Conclusion

As noted above, the Project would have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years, and a less than significant impact will occur. The Project proposes the same land uses as contained in the City's TOP 2050. No mitigation is required other than compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.[13]

Mitigation Measures

No mitigation is necessary.

Impact 4.17-3 ***Would the Project result in a determination by the wastewater treatment provider, which serves or may serve the Project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?***

Level of Significance: Less than Significant

Specific Plan - Phase I and Phase II Future Development Areas

The Project site is located in Ontario Ranch and is within IEUA's wastewater service area boundary. The Project would be served by the RP-5 wastewater treatment plant.

Buildout of the Project would generate approximately 303,532 gpd, which is equivalent to 0.304 mgd, as shown in ***Table 4.17-3***. As stated above, the current liquid treatment capacity of RP-5 is 15 mgd, and the plant treats an average of 9 mgd. Thus, RP-5 has a remaining wastewater treatment capacity of 6 mgd. The Project's generated wastewater would represent five percent of the RP-5's remaining treatment capacity. Therefore, wastewater generated by the Project would be adequately treated at the RP-5.

RP-5 is required by federal and State law to meet applicable standards of treatment plant discharge requirements subject to Order No. RS-2015-0036 NPDES No. CA8000409. The permit includes the conditions needed to meet minimum applicable technology-based requirements. The NPDES permit regulates the amount and type of pollutants that the system can discharge into receiving waters. RP-5 is operating in compliance with and would continue to operate subject to State waste discharge requirements and federal NPDES permit requirements, as set forth in the NPDES permit and order. Furthermore, the Project would comply with IEUA's Ordinance No. 97 ensuring that wastewater discharge into the sewer system is compliant with the NPDES permit conditions, bio-solid use, and disposal requirements, and any other federal or State laws.

The additional wastewater (quantity and type) that would be generated by the Project and treated by the RP-5 would not impede the treatment plant's ability to continue to meet its wastewater treatment requirements. Therefore, impacts would be less than significant as the wastewater treatment provider, will have adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments.

[13] Ibid.

Conclusion

As noted above, the additional wastewater that would be generated by the Project and treated would not impede the treatment plant's ability to continue to meet its wastewater treatment requirements. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. Impacts would be less than significant. No mitigation is required other than compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.[14]

Mitigation Measures

No mitigation is necessary.

Impact 4.17-4 ***Would the Project generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?***

Impact 4.17-5 ***Would the Project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?***

Level of Significance: Less than Significant

Specific Plan - Phase I and Phase II Future Development Areas

Construction and Operations

Prior to construction of the Project, on-site structures would need to be demolished and its debris moved off-site to appropriate landfills. The site contains numerous single-family residential structures, as well as agricultural related buildings and open structures. Two SCE easements extend across the Project site, however no structures are located within these easements, although they have been used for various agricultural uses historically. The demolition of the existing structures may cause a strain on existing landfill capacities if waste exceeds the daily permitted capacity for the landfills serving the City. Collectively, the two primary landfills, Badlands Sanitary Landfill, and El Sobrante Landfill, have a daily maximum permitted capacity of 20,854 tons per day (tpd), and average daily disposal of 12,994 tpd, as reported in 2019. Therefore, the two landfills have a residual capacity of 7,860 tpd. The 3,041 tons of demolition waste that would be disposed of in landfills would occur over a period of approximately two and a half months and would not exceed the daily residual capacity of the landfills. Buildout of the Project is estimated to generate 14,745 ppd of solid waste, as shown in ***Table 4.17-5: Estimated Solid Waste Generation***.

Table 4.17-5: Estimated Solid Waste Generation

Land Use	Buildout	Solid Waste Generation Rate (ppd)	Solid Waste Generation (ppd)
Commercial Retail/Office	290,110 square feet	2.5 per 1,000 sf	725
Business Park	1,386,777 square feet	6 per 1,000 sf	8,321
Mixed-Use	466 dwelling units	12.23 per household	5,699
Total			**14,745**

Source: CalRecycle 2019e.
Notes: sf = square feet; ppd = pounds per day

[14] Ibid.

As detailed in ***Table 4.17-5***, the two landfills serving the City have residual capacity of 7,860 tpd. The estimated 14,745 ppd or 7.4 tpd generated by the Project would be adequately served by the Badlands Sanitary Landfill or El Sobrante Landfill.

Overall, sufficient landfill capacity is available in the region for the estimated solid waste generated by the Project during operations, and Project development would not require an expansion of landfill capacity. Impacts would be less than significant for the operational phase.

Regulatory Compliance

Additionally, AB 341 requires all businesses in California that generate four cubic yards or more of waste per week to implement one of the following actions in order to reuse, recycle, compost, or otherwise divert commercial solid waste from disposal:

- Source separate recyclable and/or compostable material from solid waste and donate or self-haul the material to recycling facilities.
- Subscribe to a recycling service with their waste hauler in the service area.
- Provide recycling service to their tenants (if commercial or multifamily complex).
- Demonstrate compliance with the requirements of California Code of Regulations Title 14.

Furthermore, the Project would implement the requirements of the City's Integrated Waste Department's Refuse & Recycling Planning Manual on refuse and recycling storage and access for service, as well as addressing the City's recycling goals. The requirements of Chapter 3, Integrated Waste Management, of the MC would also be implemented to ensure that the Project complies with all applicable State and federal laws, including, but not limited to, the Integrated Waste Management Act of 1989. A construction waste management plan would be submitted and implemented in compliance with Section 4.408 of the CALGreen Code. Therefore, a less than significant impact will occur as the Project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals.

Conclusion

As noted above, the Project would not generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. Furthermore the Project would comply with federal, state, and local management and reduction statutes and regulations related to solid waste. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. Impacts would be less than significant. No mitigation is required other than compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050.[15]

Mitigation Measures

No mitigation is necessary.

[15] Ibid.

4.17.7 Cumulative Impacts

The area considered for cumulative water supply impacts is the City. Other projects in the service area would increase water demands. The City forecasts that it will have sufficient water supplies in its service area over the 2020 to 2040 period (see "Water Demand" under Impact 4.17-2). Other projects of certain sizes and types that would meet the requirements of SB 610 would be required to have a WSA prepared to show reliability of water supplies for the project, considering normal, single dry, and multiple dry years over a 20-year horizon. Cumulative impacts would be less than significant, and Project impacts would not be cumulatively considerable. Additionally, future projects would be served by existing and planned future water infrastructure and facilities, as planned within the City's Water Master Plan and no extensions or capacity expansions beyond the planned system would be required. Any future water infrastructure or facility would be constructed in compliance with City's Water and Sewer Design Development Guidelines and the OMC. Cumulative impacts would be less than significant, and Project impacts would not be cumulatively considerable.

The area considered for cumulative impacts to wastewater treatment is IEUA's RP-5 service area. The area considered for cumulative impacts to wastewater conveyance systems is the OR area. Future growth in the OR, in accordance with TOP, would result in increases in wastewater flow. These include increases in residential, office space, and mixed-use effluent. Expansion and/or capacity upgrades to the existing sewer collection lines would be required due to the change in land use in the OR. The Sewer Master Plan projects daily wastewater generation in line with land use changes associated with TOP. The sewer master plan presents preliminary sizes, alignments and construction cost estimates needed to mitigate existing drainage deficiencies and support future build-out conditions. Sewer collection system expansions would be based on the Sewer Master Plan and would be constructed with development in the OR. Through the use of connection fees and agreements, the IEUA is able to maintain and expand its wastewater collection system as necessary and is able to ensure that new developments pay their fair-share costs associated with increased demand. Therefore, there would be no significant cumulative impacts on wastewater collection.

The City wastewater effluent in the OR is directed mainly to RP-5. The 2035 projected quantities of wastewater that need to be treated at RP-5 is 18.4 mgd, an increase of 9.4 mgd from current production rates. The 20-year IEUA's CIP includes expanding the capacity of RP-5 to 22.5 mgd. The CIP also developed a capacity fee charged to new development to fund the needed capacity. Furthermore, IEUA annually prepares a wastewater treatment master plan and flow projections for all its contracting agencies, including the City. The IEUA improvement plan is sequenced considering the rate of development to ensure adequate treatment capacity exists at time of building permits but is phased to eliminate premature construction of unneeded capacity. Assuming the proposed plant expansions would be completed prior to increased urban development and the treatment of water at these plants would continue to meet the water quality standards of the Santa Ana RWQCB, there would be no significant cumulative impacts on wastewater treatment.

The area considered for cumulative impacts to electricity supplies and facilities is SCE's service area, and the area considered for natural gas is SoCalGas' service area. Forecast total electricity and natural gas

supplies for the respective service areas are identified above. Other projects would increase electricity and natural gas demands.

Electricity demand forecasts are based on climate zones; economic and demographic growth forecasts, and the California Department of Finance; forecast electricity rates; effects of reasonably foreseeable energy efficiency and energy conservation efforts; anticipated partial electrification of portions of the transportation sector, including increasing adoption of light-duty plug-in electric vehicles; demand response measures, such as electricity rates that increase during high-demand times of day; and effects of climate change.

Natural gas demand forecasts are based on economic outlook; California Public Utilities Commission–mandated energy efficiency standards and programs; renewable electricity goals; and conservation savings linked to Advanced Metering Infrastructure.

It is anticipated that electricity and natural gas demands by most other projects would be accounted for in the above-referenced demand forecasts. Other projects would be subject to independent CEQA review, including analysis of impacts to electricity and natural gas supplies. Implementation of all feasible mitigation measures would be required for any significant impacts identified. Cumulative impacts would be less than significant, and Project impacts would not be cumulatively considerable.

The area considered for cumulative impacts is the area serviced by the Badlands and the El Sobrante Landfills. Collectively, Badlands and El Sobrante Landfills have a remaining disposal capacity of approximately 160 million cubic yards and El Sobrante Landfill has a disposal capacity beyond the 15-year horizon, as required by AB 939. Thus, there is sufficient landfill capacity in the region for the cumulative increase in solid waste disposal. Cumulative impacts would be less than significant, and Project impacts would not be cumulatively considerable.

4.17.8 Significant Unavoidable Impacts

No significant unavoidable impacts have been identified.

5.0 OTHER CEQA CONSIDERATIONS

This section of the Draft Environmental Impact Report (EIR) provides a discussion of additional California Environmental Quality Act (CEQA) impact considerations, including Significant Irreversible Environmental Changes and Growth-inducing Impacts.

5.1 Significant and Irreversible Environmental Changes

Section 15126.2(c) of the State CEQA Guidelines requires that an EIR describe any significant irreversible environmental changes that would be caused by the proposed project should it be implemented. Specifically, the State CEQA Guidelines state:

> *"Uses of nonrenewable resources during the initial and continued phases of the project may be Primary impacts and, particularly, secondary impacts (such as highways improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also, irreversible damage can result from environmental accidents associated with the project. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified."*

Generally, a project would result in significant irreversible environmental changes if:

- The primary and secondary impacts would generally commit future generations to similar uses;
- The project would involve a large commitment of nonrenewable resources;
- The project would involve uses in which irreversible damage could result from any potential environmental accidents associated with the project; or
- The proposed irretrievable commitments of nonrenewable resources are not justified (e.g., the project involves the wasteful use of energy).

In the case of the proposed Euclid Mixed Use Specific Plan Project (Project), its implementation would involve a land use, development, and implementation framework to support up to a maximum build-out of 1,676,887 square feet (sf) of business park and mixed-use land uses, in addition to up to 466 residential units and associated onsite and off-site infrastructure improvements within the City of Ontario (City). Significant irreversible changes that would be caused by implementation of the Project would be:

- Construction activities that would entail the commitment of nonrenewable and/or slowly renewable energy resources; human resources; and natural resources such as lumber and other forest products, sand and gravel, asphalt, steel, copper, lead, other metals, water, and fossil fuels.
- Operation that would require the use of natural gas and electricity, petroleum-based fuels, fossil fuels, and water. The commitment of resources required for the operation of the Project would limit the availability of such resources for future generations or for other uses during the life of the Project.
    - Increased traffic on area roadways (see ***Section 4.15: Transportation and Traffic***);
    - Emissions of air pollutants associated with operations (see ***Section 4.3: Air Quality***); and

  - Consumption of non-renewable energy associated with operation of the Project due to the use of automobiles, lighting, heating and cooling systems, and appliances (see ***Section 4.6: Energy***, and ***Section 4.8: Greenhouse Gas Emissions***).

- An increased commitment of social services and public maintenance services (e.g., police, fire, sewer, and water services) would also be required. The energy and social service commitments would be long-term obligations in view of the low likelihood of returning the land to its original condition once it has been developed.
- Employment growth related to Project implementation would increase vehicle trips over the long term. Emissions associated with such vehicle trips would continue to contribute to the South Coast Air Basin's (SCAB) nonattainment designations for ozone, particulate matter (PM_{10} and $PM_{2.5}$), under the California and National Ambient Air Quality Standards (CAAQS and NAAQS, respectively), and nonattainment for nitrogen dioxide (NO_2) under the CAAQS.

Given the low likelihood that the land would revert to lower intensity uses or to its current form, the Project would generally commit future generations to these environmental changes. However, as discussed in ***Section 3.0: Project Description***, the Project is committed to sustainable design strategies that integrate principles of environmental stewardship into the design and construction process. Appropriate strategies would be determined for each phase of the Project. Strategies include, but are not limited to:

Sustainable Construction & Technology Concepts

- Design and construct energy-efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption.
- Employ passive design including skylights, building orientation, landscaping, and strategic colors to improve building energy performance.
- Reduce the heat island effect by providing shade structures and trees that produce large canopies. In addition, choose roof and paving materials that possess a high level of solar reflectivity.
- Use recycled and other environmentally-friendly building materials wherever possible.
- Incorporate skylights into at least two percent of warehouse/distribution building roof area to provide natural light and reduce electric lighting demand.
- Use energy-efficient light-emitting diode (LED) (or similar) products.
- Provide interior or exterior bicycle storage consistent with the California Green Building Standards Code.
- Use drought-tolerant landscaping with drip irrigation and include plantings such as trees, shrubs, groundcovers and/or vines. Optional amenities include benches, trellises, thematic fencing, and decorative walkways.
- Employ high-performance dual-pane window glazing in office storefronts.

Water Quality

- Utilize landscape areas including retention/infiltration swales and basins, or employ bio-treatment when infiltration is infeasible, as required by the San Bernardino County Municipal Separate Storm Sewer System Permit and Water Quality Management Plan.
- Select native and drought-tolerant plants to reduce water demand.
- Integrate permeable pavement and perforated curbs throughout the Project area as feasible to allow stormwater to enter planter areas, assist with filtration, and control runoff.
- Use captured runoff to augment irrigation systems whenever possible.
- Employ irrigation systems that respond to changing weather conditions, irrigate by hydro zone, and use micro-irrigation techniques.
- Use recycled water to irrigate landscape areas and for other appropriate uses. The use of recycled water for certain purposes is required by the City Recycled Water Master Plan.

The commitment of resources to the Project is not unusual or inconsistent with projects of this type and scope. However, once these commitments are made, it is improbable that the Project area would revert back to its current condition. Thus, the Project would result in significant irreversible changes to the environment throughout the lifespan of the structures.

5.2 Growth Inducing Impacts

Pursuant to Sections 15126(d) and 15126.2(d) of the CEQA Guidelines, this section is provided to examine ways in which the Project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. To address this issue, potential growth-inducing effects will be examined through analysis of the following questions:

- Would this project remove obstacles to growth, e.g., through the construction or extension of major infrastructure facilities that do not presently exist in the project area, or through changes in existing regulations pertaining to land development?
- Would this project result in the need to expand one or more public services to maintain desired levels of service?
- Would this project encourage or facilitate economic effects that could result in other activities that could significantly affect the environment?
- Would approval of this project involve some precedent-setting action that could encourage and facilitate other activities that could significantly affect the environment?

Please note that growth-inducing effects are not to be construed as necessarily beneficial, detrimental, or of little significance to the environment. This issue is presented to provide additional information on ways in which this Project could contribute to significant changes in the environment, beyond the direct consequences of developing the land use concept examined in the preceding sections of this Draft EIR.

1. ***Would this project remove obstacles to growth, e.g., through the construction or extension of major infrastructure facilities that do not presently exist in the project area, or through changes in existing regulations pertaining to land development?***

The removal of a physical obstacle to growth, such as the construction or extension of major infrastructure facilities that are not presently in the area, would be considered a potentially growth inducing impact. As discussed in ***Section 3.0: Project Description***, ***Section 4.15: Transportation***, and ***Section 4.17: Utilities and Service Systems***, the Project would include various new infrastructure improvements onsite and off-site, including water, wastewater, storm drain facilities, roadway improvements, and dry utilities (natural gas, electricity, telecommunications).

Implementation of the Project would require the construction and improvement of roadways and extension of major infrastructure into areas off-site that would facilitate additional planned growth pursuant to The Ontario Plan (TOP) 2050. Although the infrastructure improvements are planned for in the City's master plans, the improvements would allow further development to occur within the Ontario Ranch area. The Project is consistent with TOP 2050 and its associated Final Supplemental EIR, which evaluated long-term implications associated with the site's land use designations. Therefore, the Project would remove obstacles to growth to accommodate the demands of this Project at full buildout, which could allow for future development in the area once adequate infrastructure is in place and would be considered growth inducing.

2. ***Would this project result in the need to expand one or more public services to maintain desired levels of service?***

As the City continues to develop, it requires the further commitment of public services in the form of fire protection, police services, and other public facilities. As discussed in ***Section 4.14: Public Services***, none of the public service agencies consulted during the preparation of this Draft EIR indicated that the proposed Project would necessitate the immediate expansion of their existing resources in order to maintain desired levels of service. The Project is consistent with TOP 2050 and its associated Final Supplemental EIR, which evaluated long-term implications associated with the site's land use designations. The Project would not, therefore, have significant growth-inducing consequences with respect to public services.

3. ***Would this project encourage or facilitate economic effects that could result in other activities that could significantly affect the environment?***

During Project construction, a number of design, engineering, and construction-related jobs would be created. However, construction related jobs would not result in a significant population increase because they would be filled by workers in the region and the construction phase would be temporary.

As discussed in ***Section 4.13: Population and Housing***, the Project would result in the creation of approximately 1,655 new long-term jobs (***Table 4.13-6: Project Generated Employment***). As the number of employees in the Project area grows, these employees would seek shopping, entertainment, auto maintenance, and other economic opportunities in the surrounding area. This would facilitate economic

goods and services and could, therefore, encourage the creation of new businesses and/or the expansion of existing businesses to address these economic needs.

However, the increase in opportunities for employees would not create substantial growth inducement because it would improve the jobs-housing ratio, growth could be accommodated within regional and local projections, and jobs would be filled by the local workforce. As stated in ***Section 4.13: Population and Housing***, the proposed Project would result in an improvement in the jobs-household balance, which is currently in a housing-rich area. The majority of new jobs that would be created by implementation of the Project would be positions that do not require a specialized workforce, and this type of workforce exists in the City and surrounding areas. Thus, due to the availability of a workforce within the City, it is anticipated that new jobs would be filled by people within the City and the immediately surrounding communities and would not induce an unanticipated influx of new labor into the City. Although, the proposed Project would result in new permanent employment opportunities and stimulate economic activity, it would meet future employment demands anticipated in SCAG's regional growth projections. Lastly, the Project is consistent with TOP 2050 and its associated Final Supplemental EIR, which evaluated long-term implications associated with the site's land use designations. Overall, the Project would not result in increased levels of growth that would otherwise not occur. Therefore, the Project would not encourage or facilitate economic effects that could significantly affect the environment.

4. ***Would approval of this project involve some precedent-setting action that could encourage and facilitate other activities that could significantly affect the environment?***

The Project consists of a Specific Plan to allow for business park and mixed-use development on 18 parcels covering 84.1 acres in the City. The development would include up to 290,110 square feet of commercial retail/office uses, up to 466 residential units, and 1,386,777 square feet of business park. Pressures to develop other land in the surrounding area would derive from regional economic conditions and market demands for housing, commercial, and mixed-use land uses that are not directly or indirectly influenced by zoning actions on a particular property. Lastly, the Project is consistent with TOP 2050 and its associated Final Supplemental EIR, which evaluated long-term implications associated with the site's land use designations. Approval of the proposed Project would not, therefore, involve a precedent-setting action that could be applied to other properties and thereby encourage or facilitate growth that would not otherwise occur.

Environmental Impacts of Induced Growth

As described above, implementation of the proposed Project would provide development to accommodate City forecasted employment demands. All physical environmental effects from construction of development have been analyzed in all technical sections of this Draft EIR. For example, activities such as excavation, grading, and construction as required for the proposed business park and mixed-use uses were analyzed in the ***Sections 4.3: Air Quality; 4.8: Greenhouse Gas Emissions***; ***4.12: Noise***; and ***4.15: Transportation and Traffic***. Therefore, construction of the Project has been analyzed in this Draft EIR and would be adequately mitigated either through implementation of Plans, Programs, and Policies (PPPs) and/or mitigation measures contained in ***Section 4.1: Aesthetics***, through ***Section 4.17: Utilities and Service Systems***, of this Draft EIR.

6.0 T ME ALTERNATIVES

6.1 Introduction

Purpose and Scope

The California Environmental Quality Act (CEQA) requires that an Environmental Impact Report (EIR) include a discussion of reasonable project alternatives that would "feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any significant effects of the project and evaluate the comparative merits of the alternatives" (State CEQA Guidelines Section 15126.6[a]). As required by CEQA, this section identifies and evaluates potential alternatives to the Project.

Section 15126.6 of the State CEQA Guidelines explains the foundation and legal requirements for the alternative's analysis in an EIR. Key provisions are:

- [T]he discussion of alternatives shall focus on alternatives to the Project or its location which are capable of avoiding or substantially lessening any significant effects of the Project, even if these alternatives would impede to some degree the attainment of the Project objectives or would be more costly." (Section 15126.6[b])
- "The specific alternative of 'no project' shall also be evaluated along with its impact." (Section 15126.6[e][1])
- "The no project analysis shall discuss the existing conditions at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services. If the environmentally superior alternative is the 'no project' alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives." (Section 15126.6[e][2])
- "The range of alternatives required in an EIR is governed by a 'rule of reason' that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project." (Section 15126.6[f])
- "Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries…, and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent)" (Section 15126.6[f][1]).
- "Only locations that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR." (Section 15126.6[f][2][A])
- "An EIR need not consider an alternative whose effect cannot be reasonably ascertained and whose implementation is remote and speculative." (Section 15126.6[f][3])

For each development alternative, this analysis:

- Describes the alternative.
- Analyzes the impact of the alternative as compared to the Project.
- Identifies the impacts of the Project that would be avoided or lessened by the alternative.
- Assesses whether the alternative would meet most of the basic Project objectives.
- Evaluates the comparative merits of the alternative and the Project.

According to Section 15126.6(d) of the State CEQA Guidelines, "[i]f an alternative would cause…significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative shall be discussed, but in less detail than the significant effects of the project as proposed."

Project Objectives

As described in ***Section 3.0: Project Description***, the following objectives have been established for the Project and would aid decision makers in their review of the Project, the Project alternatives and associated environmental impacts.

- **Objective 1:** Create a professional, well-maintained, and attractive environment for the development of a vibrant Mixed-Use development along Edison Avenue and a multi-purpose business park complex.
- **Objective 2:** Provide the entitlement and framework for office retail development and multiple family residential units.
- **Objective 3:** Provide the entitlements and framework for the development of business park uses.
- **Objective 4:** Provide employment opportunities for the surrounding community.
- **Objective 5:** Facilitate the implementation of roads, utilities, and other infrastructure investments that will be sufficiently sized to serve the Project site.
- **Objective 6:** Expand Ontario's retail, office and business park uses in proximity to local airports and regional transportation networks.
- **Objective 7:** Create an economic driver for future growth in the western portion of Ontario Ranch that acts as a catalyst for the development of infrastructure improvements in the area and implementation of the City's long term planning vision.
- **Objective 8:** Provide opportunities for residents to live, work and shop within close proximity.
- **Objective 9:** Provide a logical extension of planned community trails and bikeways.

6.2 Alternatives to the Project

Based on the Project objectives listed above, the following three alternatives have been determined to represent a reasonable range of alternatives which have the potential to feasibly attain most of the basic objectives of the Project, but which may avoid or substantially lessen any of the significant effects of the Project. These alternatives are analyzed in detail in the following sections.

- No Project/No Build Alternative
- No Project/Existing General Plan Alternative
- Reduced Intensity Alternative

An EIR must identify an "environmentally superior" alternative and where the No Project Alternative is identified as environmentally superior, the EIR is then required to identify as environmentally superior an alternative from among the others evaluated. Each alternative's environmental impacts are compared to the Project and determined to be environmentally superior, neutral, or inferior. ***Section 6.6, Environmentally Superior Alternative,*** identifies the Environmentally Superior Alternative.

6.3 Alternatives Rejected as Infeasible

The following is a discussion of the land use alternatives considered during the scoping and planning process and the reasons why they were not selected for detailed analysis in this Draft EIR.

Alternative Development Areas

CEQA requires that the discussion of alternatives focus on alternatives to the Project or its location that are capable of avoiding or substantially lessening any significant effects of the Project. The key question and first step in the analysis is whether any of the significant effects of the Project would be avoided or substantially lessened by putting the Project in another location. Only locations that would avoid or substantially lessen any of the significant effects of the Project need be considered for inclusion in the EIR (State CEQA Guidelines Section 15126[5][B][1]). In addition, an alternative site need not be considered when implementation is "remote and speculative," such as when the alternative site is beyond the control of a project applicant.

There are no suitable alternative sites within the control of the Project Applicant. In the event land could be purchased of suitable size and developmental characteristics, based on the known general conditions in the southern portion of the City, an alternative site would likely have similar impacts as the Project. Given the size and nature of the Project and the Project objectives, it would be impractical and infeasible to propose the Project on an alternate site in the area with fewer environmental impacts.

Additionally, other land in the vicinity of the Project site or within the southern portion of the City are similarly used for agricultural purposes and include agricultural soils. The loss of Prime Farmland would still occur with an alternative site. Given the size and type of the Project, a similarly sized project and use elsewhere in the South Coast Air Basin (SCAB) would result in the same Project-level and cumulative air quality and greenhouse gas (GHG) emission impacts. Vehicle miles traveled (VMT) is not likely to be changed by a different location. Also, an alternative site would have similar traffic impacts in other jurisdictions that would be significant and unavoidable because the City cannot guarantee implementation of improvements outside of its jurisdiction. Therefore, analysis of an alternative site for the proposed 290,110 square feet of commercial retail/office uses, up to 466 residential units, and 1,386,777 square feet of business park uses is neither meaningful nor necessary, because the significant impacts resulting from the Project would not be avoided or substantially lessened by its implementation.

6.4 Analysis of Alternatives to the Proposed Project

No Project/No Build Alternative

Section 15126.6(e) of the State CEQA Guidelines requires analysis of the No Project Alternative. In accordance with the State CEQA Guidelines, the No Project/No Build Alternative for a development project on an identifiable property consists of the circumstance under which the Project does not proceed as provided by Section 15126.6(e)(3)(B) of the State CEQA Guidelines. Section 15126.6(e)(3)(B) provides that, "In certain instances, the no project alternative means 'no build' wherein the existing environmental setting is maintained." Under the No Project/No Build Alternative, the Project would not be developed, and no new development would occur; however, the existing conditions would remain in operation.

The Project site is occupied by agricultural uses, including the raising of livestock, dairy farming activities, and a commercial nursery. The majority of the site exists as fallow or cultivated fields. There is a private recreational vehicle facility in the southwestern portion of the site and a scrap yard at the intersection of Euclid Avenue and Edison Avenue. Numerous single family residential structures, as well as agricultural related buildings and open structures are located within the Project site. Two Southern California Edison (SCE) easements extend across the Project site. No structures are located within the SCE easements; however, they have been used for various agricultural uses historically. The agricultural uses, SCE easements, structures, and single-family residential uses would remain. Accordingly, the No Project/No Build Alternative provides a comparison between the environmental impacts of the Project as compared to the current environmental conditions, resulting from not approving or denying the Project.

Aesthetics

Under the No Project/No Build Alternative, the visual character and quality of the Project site would be maintained in its existing condition. No new structures, landscaping, or lighting would be introduced on the Project site. The No Project/No Build Alternative would not have the potential to conflict with the character or quality of existing and planned development surrounding the Project site and would not create a new source of substantial light or glare that would impact nighttime views in the area. No impacts related to aesthetics would occur under the No Project/No Build Alternative. Therefore, under this Alternative, impacts regarding aesthetics, light, and glare would be reduced when compared to the Project.

Agriculture and Forestry Resources

The No Project/No Build Alternative would continue the existing agricultural uses on the Project site. Implementation of the No Project/No Build Alternative would avoid the significant and unavoidable impacts to agricultural and forestry resources that would occur from implementation of the proposed Project and impacts would be reduced compared to the proposed Project. No future development areas would be developed under this alternative; therefore, impacts would be reduced compared to the proposed Project.

Air Quality

Under the No Project/No Build Alternative, no new development would occur, and no construction or demolition activities and related emissions would occur. In addition, by maintaining existing dairy, agricultural, and residential uses throughout the Project site, the increase in operational traffic-related air emissions would not occur. Therefore, overall air quality impacts would be reduced, and the significant and unavoidable construction-related and operational-related emission impacts would be eliminated. Further, this alternative would eliminate significant and unavoidable impacts related to inconsistency with the Air Quality Management Plan (AQMP). No impacts related to air quality would occur under the No Project/No Build Alternative. Therefore, impacts under the No Project/No Build Alternative would be reduced compared to the Project.

Biological Resources

The No Project/No Build Alternative would continue the existing agriculture and residential uses on the Project site. No grading or development would occur under this alternative, and there would be no potential impacts to sensitive wildlife species and migratory and nesting birds that may be present on the Project site. Therefore, the No Project/No Build Alternative would avoid all on- and off-site disturbances. Phase I of the Project would have a less than significant impact on biological resources after implementation of mitigation measures. However, because the extent of impacts within the Phase II area cannot be known at this time, Project impacts relating to biological resources within the Phase II area are considered potentially significant and unavoidable even with the implementation of recommended mitigation. Therefore, impacts under this alternative would be reduced compared to the proposed Project.

Cultural Resources

The No Project/No Build Alternative would continue the existing agriculture and residential uses on the Project site. No grading or development would occur under this alternative, and there would be no potential impacts to historical resources or subsurface archaeological resources that may exist beneath the ground surface. Additionally, the three historic Milk Parlors would not be removed under the No Project/No Build Alternative. Therefore, the alternative would avoid the Project's significant impact on historic resources and would avoid the Project's less than significant with mitigation incorporated impacts on archaeological resources. Impacts would be reduced compared to the proposed Project.

Energy

Under this alternative, no demolition of existing structures or construction of new buildings would occur. Therefore, energy demand for electricity, natural gas and fuel consumption would remain as is, and no impact would occur under this alternative. The Project would have a less than significant impact on energy. Compared to the proposed Project, impacts on energy would be reduced.

Geology and Soils

No new construction activities, including demolition and grading, would occur under the No Project/No Build Alternative. Therefore, impacts concerning seismic ground shaking, liquefaction, lateral spreading, subsidence, or collapse within the Project site would not occur. However, the buildings and structures

that exist on the Project site were built before current seismic safety codes; therefore, by retaining older buildings and structures, this alternative could expose some people to greater hazards from strong seismic ground shaking than the proposed Project. Phase I of the Project would have a less than significant impact on geological hazards after implementation of mitigation measures. Despite the potentially significant and unavoidable geological impacts, development within the Phase II area would remove the hazards posed by the existing buildings and structures. However, because the extent of impacts within the Phase II area cannot be known at this time, Project impacts relating to geological hazards within the Phase II area are considered potentially significant and unavoidable even with the implementation of recommended mitigation. Therefore, impacts under the alternative would be greater than the Project for geological hazards.

This alternative would not result in impacts to paleontological resources since no grading would occur. Therefore, the paleontological resources impacts under the No Project/No Build Alternative would be reduced compared to the Project.

Greenhouse Gas Emissions

Under the No Project/No Build Alternative, no new development would occur, and no construction, demolition, or operational activities would generate GHG emissions. Under the No Project/No Build Alternative the existing, minimal emissions would continue. These emissions would be incorporated and accounted for in the City's long-range planning efforts and would therefore act as a baseline for the City's air quality goals. Furthermore, this alternative would not increase GHG emissions by 24,271 $MTCO_2e$ per year, unlike the proposed Project and would avoid the proposed Project's significant and unavoidable impacts. Therefore, impacts under the No Project/No Build Alternative would be reduced compared to the Project.

Hazards and Hazardous Materials

Because no development would occur under the No Project/No Build Alternative, no impacts related to hazards or hazardous materials would occur. Under this alternative, fuels, lubricants, and greases in construction equipment and coatings would not be utilized. The fallow or cultivated fields, private recreational vehicle facility, scrap yard, agricultural related buildings, and residential structures would remain on-site. The agricultural uses and contaminated soils would remain on-site. Although this alternative would avoid the Project's potential effects related to hazards and hazardous materials, no cleanup of contaminated soils would occur as a result of the Project. Phase I of the Project would have a less than significant impact related to hazards and hazardous materials after implementation of mitigation measures. However, because the extent of impacts within the Phase II area cannot be known at this time, Project impacts relating to hazards and hazardous materials within the Phase II area are considered potentially significant and unavoidable even with the implementation of recommended mitigation. While portions of the Project would have a significant and unavoidable impact on hazards and hazardous materials with mitigation incorporated, remediation of on-site contamination is a benefit of the proposed Project that would not be realized under this alternative. Therefore, hazards and hazardous materials impacts would be greater under the alternative than compared to the proposed Project.

Hydrology and Water Quality

Clearing, grading, excavation, and construction activities associated with the Project have the potential to impact water quality through soil erosion and increasing the amount of silt and debris carried in runoff. Existing water quality conditions, groundwater supplies, drainage patterns, and runoff water amounts would remain "as is" under this alternative because no new development would occur and no new sources of water pollutants from either the construction or operation phases of development to the Project would be introduced. Additionally, this alternative would not require off-site storm drain facility improvements required by the proposed Project. However, this alternative would not include installation of new low-impact development (LID), source control, site design, and treatment control best management practices (BMPs) to minimize runoff and water pollution, which would occur under the proposed Project. Under existing conditions, stormwater leaving the site would not be filtered and would continue to contain sediment and other potential pollutants associated with the dairy, agricultural, and residential uses and the water quality improvements that would occur under the proposed Project would not occur, therefore hydrology and water quality impacts would be greater compared to the proposed Project.

Land Use and Planning

The No Project/No Build Alternative would continue the existing agriculture and residential uses. The proposed Project is consistent with The Ontario Plan (TOP) 2050 land use designations for the site and would result in a less than significant impact. However, under the No Project/No Build Alternative, the existing agriculture and residential uses would be inconsistent with the TOP 2050 land use designations for business park and mixed-use uses. Therefore, impacts under this alternative would be greater compared to the proposed Project.

Noise

The No Project/No Build Alternative would not result in construction; therefore, would not generate any noise or vibration associated with construction. Mobile-source and stationary noise volumes would be lower under this alternative compared to the proposed Project, given the lack of urban development, and associated vehicular traffic noise; noise from business park and mixed-use uses; heating, ventilation, and air conditioning (HVAC) equipment; and other noise sources. Therefore, impacts under this alternative would be reduced compared to the proposed Project.

Population and Housing

The No Project/No Build Alternative would continue the existing agriculture and residential uses. Employment growth would not occur under the No Project/No Build Alternative because no new businesses or other infrastructure would be constructed. Employees on the Project site would remain as is under this alternative, and the alternative would have no impact to population and housing. The employment growth under the proposed Project was determined to be within the growth projections for the area and impacts to population and housing were determined to be less than significant, but would still result in more residential uses and employment opportunities compared to the No Project/No Build Alternative. Therefore, population and housing impacts under this alternative would be reduced compared to the proposed Project.

Public Services

The existing number of residents and workers on the Project site would remain under the No Project/No Build Alternative. There would be no increase in demand for fire or police services, and the alternative would have no impact on public services. Although the proposed Project's impacts related to fire and police services were determined to be less than significant, the public services impacts would be reduced under this alternative compared to the proposed Project.

Transportation and Traffic

The No Project/No Build Alternative would continue the existing agriculture and residential uses on the Project site. Under this alternative, no new employees or structures would be introduced on the Project site, and existing VMT would be maintained. Therefore, there would be no impacts under this alternative, and the less than significant traffic impacts that would occur from the proposed Project would be avoided. Impacts under this alternative would be reduced compared to the proposed Project.

Tribal Cultural Resources

The No Project/No Build Alternative would continue the existing agriculture and residential uses on the Project site. No grading or development would occur under this alternative, and there would be no potential impacts to tribal cultural resources that may exist beneath the ground surface. Therefore, the No Project/No Build Alternative would avoid site disturbances on the Project site and the Project's potential impacts to tribal cultural resources would not occur. Impacts under this alternative would be reduced compared to the proposed Project.

Utilities and Service Systems

The No Project/No Build Alternative would not demand more utilities or services than those currently servicing the Project site. No new development or employee increases would occur under the No Project/No Build Alternative and no new water or wastewater infrastructure would be constructed. No additional demand for regional water supplies would occur, and no additional wastewater would be conveyed to the regional wastewater treatment facilities. The alternative would have no impacts on utilities and service systems. Project operations would create a demand for water, and increase wastewater and solid waste generation, but impacts to utilities and service systems would be less than significant. Therefore, the impacts related to water supplies and wastewater would be reduced compared to the Project.

Similarly, no additional drainage infrastructure would be developed by the No Project/No Build Alternative, and runoff in the Project site would remain in its current condition and would not connect to or require capacity in the regional stormwater system. Solid waste generation would remain the same as existing conditions and increases in solid waste generation would not occur with the No Project/No Build Alternative. Furthermore, the demand on dry utilities would remain the same as existing conditions and increases in dry utilities would not occur with the No Project/No Build Alternative. There would be no impacts under the alternative. Therefore, impacts to utilities and service systems would be reduced compared to the proposed Project.

No Project/Existing General Plan Alternative

Section 15126.6(e) of the State CEQA Guidelines requires that an EIR evaluate and analyze the impacts of the "No-Project" Alternative. When the project is the revision of an existing land use or regulatory plan, policy or ongoing operation, the no-project alternative is the continuation of the plan, policy, or operation into the future. Therefore, under the No Project/Existing General Plan Alternative, the current General Plan land uses and zoning would remain in effect. Development in accordance with the existing General Plan and zoning would occur. According to Exhibit LU-01: Land Use Plan of TOP[1], the Project site is currently designated for development of Business Park (BP) (0.6 FAR) and Mixed-Use (MU) at 14.0 to 65.0 du/ac; 1.5 FAR office; 1.0 FAR retail. The existing zoning designation is Specific Plan (SP) Zoning District with an Agricultural (SP AG) Overlay.[2] The SP District designation requires approval of a specific plan by the City for urban development of the Project site. The Specific Plan will be the zoning for the Project site, consistent with TOP 2050.

Additionally, the southern portion of the Project site is within the Great Park Corridor. Sites within the Great Park Corridor are currently zoned Specific Plan (SP) Zoning District with an Agricultural Overlay (SP-AG), but no specific plan has been adopted, and they will be rezoned to SP-AG Affordable Housing (AH) for inclusion in the Affordable Housing Overlay District described within the City's Housing Element.[3] The SP-AG-AH Overlay will establish a minimum density of 20 du/ac, and allow the TOP 2050 designation to govern the maximum densities for each site. The Agriculture Overlay District will remain in place until the parcel is ready for development consistent with the TOP 2050 and Affordable Housing Overlay District. Property owners and developers alike have expressed interest in redeveloping this area, so existing agricultural operations are not expected to limit development potential. Sites in this area would have TOP 2050 designations of Medium Density Residential and Mixed-Use. Medium-Density Residential will allow a range of 20-30 du/ac for projects with at least 25 percent of units affordable to lower incomes, and a range of 20-25 du/ac for all other projects. Two different MU areas are proposed in this opportunity area, Mixed-Use Eucalyptus/Chino Airport (MU-EU) allowing 20-45 du/ac and Mixed-Use Great Park 20-65 du/ac respectively. With the TOP 2050 and zoning changes noted in Program 13, all sites identified support densities necessary to facilitate lower- and moderate-income housing development.[4]

Aesthetics

The No Project/Existing General Plan Alternative would have the same development area as the proposed Project. The existing dairy, agricultural, and residential uses would be removed from the Project site and replaced with buildings, parking lots, and landscaping characteristic of mixed-use and business park uses. However, the Specific Plan will be the zoning for the Project site, consistent with TOP 2050. Therefore, implementation of the No Project/Existing General Plan Alternative would result in less than significant impacts to aesthetics, similar to the proposed Project. Thus, impacts under this alternative would be the same compared to the proposed Project. All future development areas would be consistent with TOP 2050

[4] Ibid.

under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

Agriculture and Forestry Resources

The No Project/Existing General Plan Alternative would have the same development area as the proposed Project. The existing dairy, agricultural, and residential uses would be removed from the Project site. However, the Specific Plan will be the zoning for the Project site, consistent with TOP 2050. Therefore, implementation of the No Project/Existing General Plan Alternative would result in significant impacts to agricultural and forestry resources, similar to the proposed Project. Thus, impacts under this alternative would be the same compared to the proposed Project. All future development areas would be consistent with TOP 2050 under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

Air Quality

The No Project/Existing General Plan Alternative would generate a similar amount of employment-generating building square footage and would result in a similar number of employees. This alternative would result in up to 466 dwelling units, 1,517 residents, and 1,655 employees. The No Project/Existing General Plan Alternative would result in similar impacts to the proposed Project. Therefore, construction and operation related air quality emissions would be similar and would remain significant and unavoidable. All future development areas would be consistent with TOP 2050 under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

Biological Resources

The No Project/Existing General Plan Alternative would have the same overall impact area as the proposed Project. Impacts to sensitive wildlife species, and migratory and nesting birds would continue to occur, and similar mitigation measures from the Project would be implemented to reduce impacts to such resources to a less than significant level wherever feasible. Therefore, impacts would be similar when compared to the proposed Project.

All future development areas would be consistent with TOP 2050 under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

Cultural Resources

The No Project/Existing General Plan Alternative would have the same overall impact area as the proposed Project. The No Project/Existing General Plan Alternative would result in a similar potential to adversely affect any undiscovered archaeological resources on the Project site as the proposed Project and would result in a significant impact to historic resources. Grading or development would occur under this alternative, therefore there would be potential impacts to subsurface archaeological resources that may exist beneath the ground surface. This No Project/Existing General Plan Alternative would be similar to the Project's potential for disturbing human remains. Therefore, impacts under the No Project/Existing

General Plan Alternative would be similar compared to the Project. All future development areas would be consistent with TOP 2050 under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

Energy

The No Project/Existing General Plan Alternative would have the same overall impact area as the proposed Project. Therefore, building energy and fuel consumption would be similar to the proposed Project under this alternative and would result in a less than significant impact. All future development areas would be consistent with TOP 2050 under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

Geology and Soils

Under the No Project/Existing General Plan Alternative, grading and development of the Project site would still occur and would still result in exposing additional persons and structures in the Project area to risks associated with seismic ground shaking and geologic hazards. Therefore, the No Project/Existing General Plan Alternative would be required to meet the same regulatory requirements as the proposed Project. Impacts to geological hazards under the alternative would be similar to those associated with the proposed Project.

This alternative would result in a similar potential to adversely affect any undiscovered paleontological resources on the Project site on the proposed Project. However, like the proposed Project, mitigation measures would be required to reduce potential impacts to less than significant. Therefore, impacts to paleontological resources from the No Project/Existing General Plan Alternative would be similar to those associated with the proposed Project.

All future development areas would be consistent with TOP 2050 under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

Greenhouse Gas Emissions

The No Project/Existing General Plan Alternative would have the same overall impact area as the proposed Project. This alternative would result in up to 466 dwelling units, 1,517 residents, and 1,655 employees. The No Project/Existing General Plan Alternative would result in similar impacts to the proposed Project. Therefore, construction and operation related greenhouse gas emissions would be similar and would remain significant and unavoidable. All future development areas would be consistent with TOP 2050 under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

Hazards and Hazardous Materials

The No Project/Existing General Plan Alternative would have the same overall impact area as the proposed Project. The use and storage of hazardous materials would be regulated by the same federal, State, and local laws and permitting requirements as would be done by the proposed Project. In addition, this

alternative would include cleanup of contaminated soils that exist on the Project site during construction activities and would be required to implement the same type of mitigation measures that would be implemented for the proposed Project. No more severe impacts are anticipated under this alternative because the uses of the proposed Project would be similar to the uses identified in TOP 2050. All future development areas would be consistent with TOP 2050 under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

Hydrology and Water Quality

Under the No Project/Existing General Plan Alternative, the area of impervious surfaces would be similar compared to the proposed Project. Therefore, this alternative would result in similar runoff and potential for impacts to drainage, erosion, and water quality. This alternative would introduce new sources of water pollutants from construction and operation activities as well. However, this alternative would be required to include storm drain facility improvements, LID, source control, site design, and treatment control BMPs similar to the proposed Project. Overall, hydrology and water quality impacts would be less than significant. Therefore, the No Project/Existing General Plan Alternative would result in impacts to hydrology and water quality that are similar to those that would occur from the proposed Project.

All future development areas would be consistent with TOP 2050 under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

Land Use and Planning

The No Project/Existing General Plan Alternative would have the same overall impact area as the proposed Project. TOP 2050 designates the Project site for development of Business Park (0.6 FAR), and Mixed-Use at 14.0 to 65.0 du/ac; 1.5 FAR office; 1.0 FAR retail. This alternative would be consistent with TOP 2050 and zoning designations and would result in a less than significant impact. Therefore, the No Project/Existing General Plan Alternative would result in a less than significant impact, same as the proposed Project.

All future development areas would be consistent with TOP 2050 under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

Noise

The No Project/Existing General Plan Alternative would have the same overall impact area as the proposed Project. This alternative would result in up to 466 dwelling units, 1,517 residents, and 1,655 employees. Overall, there would be a similar impact compared to the proposed Project in total building square footage. Additionally, this alternative would result in a similar number of vehicle trips when compared to the proposed Project. The No Project/Existing General Plan Alternative would still implement similar mitigation to that of the proposed Project. Therefore, the alternative would result in a less than significant impact, same as the proposed Project. All future development areas would be consistent with TOP 2050

under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

Population and Housing

The No Project/Existing General Plan Alternative would increase employees and residents on the Project site. Under this alternative, the population, housing, and employment at buildout would be consistent with the City's growth projections identified in Southern California Association of Governments' (SCAG) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). The addition of housing under this alternative would be consistent with TOP 2050. Growth associated with the proposed Project was also within growth projections. The proposed Project would involve the development of up to 466 residential units within Planning Area (PA) 3B consistent with TOP 2050. Impacts under the No Project/Existing General Plan Alternative would be less than significant, the same as the proposed Project. All future development areas would be consistent with TOP 2050 under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

Public Services

The No Project/Existing General Plan Alternative would introduce Business Park and Mixed-Use development to the area. This would generate new residents at the Project site which would increase the demand for public services, including fire and police. The proposed Project would have less than significant impacts to fire and police services. Similar to the Project, this alternative would require payment of fees, and compliance with applicable plans and regulations. This alternative would have the same environmental impacts as compared to the proposed Project.

All future development areas would be consistent with TOP 2050 under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

Transportation and Traffic

The Project is consistent with TOP 2050 land use designations. Therefore, under the No Project/Existing General Plan Alternative, transportation and traffic impacts would be similar when compared to the proposed Project due to the amount of vehicle trips associated with business park, office spaces, and residential uses. Additionally, the alternative would be required to implement similar roadway improvements as the Project. Therefore, impacts that could occur by the No Project/Existing General Plan Alternative would be similar to those associated with the proposed Project.

All future development areas would be consistent with TOP 2050 under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

Tribal Cultural Resources

The No Project/Existing General Plan Alternative would result in a similar potential to adversely affect tribal cultural resources on the Project site as the proposed Project, as this alternative would require the same ground disturbing activities as the Project. However, like the proposed Project, mitigation measures would be required to reduce potential impacts to less than significant. Therefore, impacts that could occur by the No Project/Existing General Plan Alternative would be similar to those associated with the proposed Project. All future development areas would be consistent with TOP 2050 under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

Utilities and Service Systems

The Project is consistent with the land use designations approved in TOP 2050. The No Project/Existing General Plan Alternative would result in similar impacts to utilities and service systems due to the Business Park and Mixed-Use land uses that comply with TOP 2050. This No Project/Existing General Plan Alternative would increase the demand for water and wastewater, solid waste services, and gas and electricity services compared to the Project sites existing conditions. Under the No Project/Existing General Plan Alternative, similar improvements to water or wastewater infrastructure would be constructed to accommodate the mixed-use and business park designations. Similar to the proposed Project, demand for regional water supplies would occur, and additional wastewater would be conveyed to the regional wastewater treatment facilities.

Similarly, additional drainage infrastructure would be developed by the No Project/ Existing General Plan Alternative, and runoff in the Project area site would increase and would connect to or require capacity in the regional stormwater system. Increases in solid waste generation would occur with the No Project/ Existing General Plan Alternative due to the mix of land uses allowed under the TOP 2050. Therefore, impacts to utilities and service systems would be similar compared to the proposed Project.

All future development areas would be consistent with TOP 2050 under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

Reduced Intensity Alternative

The Reduced-Intensity Alternative proposes a 25 percent reduction in building area of the proposed mixed-use and business park uses. Under this alternative, a total of 1,040,083 square feet of business park uses, and 217,582 square feet of commercial retail/office uses, and up to and approximately 350 residential units. The development impact area would generally remain the same as the Project. This alternative would generate approximately 1,242 employees. Access to the site would be similar to the Project with a reduction in the number of parking spaces. Given the infrastructure costs, including off-site improvements, a 25 percent reduction was considered aggressive and further reduction is likely not financially feasible.

Aesthetics

The Reduced-Intensity Alternative would develop the Project site for the same type of mixed-use and business park uses and have the same impact area to the proposed Project. The existing dairy, agricultural, and residential uses would be removed from the Project site and replaced with buildings, parking lots, and landscaping characteristic of mixed-use and business park uses. Construction-related impacts would be similar to the Project, as would light and glare impacts, although at slightly reduced intensity. Therefore, implementation of the Reduced-Intensity Alternative would result in less than significant impacts to aesthetics that would occur from implementation of the proposed Project. Thus, impacts under this alternative would be similar to those of the proposed Project.

All future development areas under the Reduced-Intensity Alternative would be developed with the same mixed-use and business park uses as the proposed Project, and therefore Impacts under this alternative would be similar to those of the proposed Project.

Agriculture and Forestry Resources

The Reduced-Intensity Alternative would develop the Project site for the same type of mixed-use and business park uses and have the same impact area to the proposed Project. The existing dairy, agricultural, and residential uses would be removed from the Project site. Therefore, implementation of the Reduced-Intensity Alternative would result in significant impacts to agricultural and forestry resources that would occur from implementation of the proposed Project. Thus, impacts under this alternative would be similar to those of the proposed Project.

All future development areas under the Reduced-Intensity Alternative would be developed with the same mixed-use and business park uses as the proposed Project, and therefore Impacts under this alternative would be similar to those of the proposed Project.

Air Quality

The Reduced-Intensity Alternative would develop the Project site for the same type of mixed-use and business park uses, but with less intensity than the proposed Project. Therefore, with similar mitigation incorporated, a reduced volume of construction activities and the related emissions would occur; however, the alternative would still result in a significant and unavoidable impact for Project operations-related air quality from NOx as they would remain above the SCAQMD's thresholds. In addition, the reduced amount of square footage that would be developed by this alternative would result in less stationary source emissions from equipment on-site and less transportation-related air emissions than the proposed Project. Therefore, overall air quality impacts would be reduced in comparison to the proposed Project. However, the volume of NO_X emissions from mobile sources generated by the Reduced-Intensity Alternative would remain significant and unavoidable due to the volume of trips that would occur from operation of 1,230,517 square feet of business park and mixed-use uses. With mitigation implemented, the air quality emissions would be reduced to approximately 135 pounds per day of NO_X generated for this alternative. The SCAQMD threshold for NO_X is 55 pounds per day. Therefore, significant and unavoidable impacts due to exceedance of NO_X emissions would continue to occur. Impacts under this alternative would be reduced compared to the proposed Project but would remain significant and

unavoidable. All future development areas under the Reduced-Intensity Alternative would be developed with the same mixed-use and business park uses as the proposed Project, and therefore Impacts under this alternative would be similar to those of the proposed Project.

Biological Resources

The Reduced-Intensity Alternative would continue to cover the same impact area as the Project site. Impacts to sensitive wildlife species and migratory and nesting birds would continue to occur, and similar mitigation measures would be implemented to reduce impacts to such resources to a less than significant level wherever feasible. Therefore, impacts would be similar to those of the proposed Project.

Cultural Resources

The Reduced-Intensity Alternative would result in similar impacts to existing historic resources with a potential to adversely affect any undiscovered historical or archaeological resources on the Project site. Grading or development would occur under this alternative, and there would be potential impacts to subsurface archaeological resources that may exist beneath the ground surface. Similar to the Project, significant and unavoidable impacts would occur to historical resources under the Reduced-Intensity Alternative. This Reduced-Intensity Alternative would be similar to the Project's potential for impacts to archaeological resources and disturbing human remains and would require similar mitigation. Therefore, impacts under the Reduced-Intensity Alternative would be similar compared to the Project.

Energy

Under this alternative, allowable building square footage would be reduced, and the associated energy demand would also be reduced by approximately 25 percent. Additionally, the reduction in vehicle trips associated with this alternative would reduce fuel consumption. Impacts under the alternative would remain less than significant. Construction and operational activities associated with this alternative would have reduced energy demand compared to the proposed Project and impacts under the alternative would be reduced compared to the proposed Project.

Geology and Soils

Grading and development of the Project site would still occur under the Reduced-Intensity Alternative. The new structures under this alternative would still result in additional persons and structures in the Project area that would be subject to risks associated with seismic ground shaking and geologic hazards. The Reduced-Intensity Alternative would be required to meet the same regulatory requirements as the proposed Project. Impacts to geological hazards would be similar to those of the Project.

Regarding paleontological resources, the alternative would have similar potential to adversely affect any undiscovered resources. This alternative would result in a similar potential to impact paleontological resources, and implementation of mitigation measures would reduce potential impacts to less than significant wherever feasible. Therefore, impacts to paleontological resources under the alternative would be similar to those of the proposed Project.

Greenhouse Gas Emissions

The Reduced-Intensity Alternative would develop the Project site for the same type of mixed-use and business park uses, but with less intensity than the proposed Project. Therefore, a reduced volume of construction activities and associated GHG emissions would occur. In addition, the reduced square footage would result in less stationary source emissions from equipment on-site, and less traffic related GHG emissions than the proposed Project. The proposed Project would result in the generation of approximately 24,271 $MTCO_2e$ per year, which would be reduced by approximately 25 percent to 18,204 $MTCO_2e$ per year under the Reduced-Intensity Alternative. This alternative would still result in significant and unavoidable GHG impacts, since it would exceed the threshold of 3,000 $MTCO_2e$ per year, and mitigation measures would not reduce emissions to less than significant levels. Therefore, the alternative would have a significant and unavoidable impact on GHG emissions, but would be reduced compared to the proposed Project.

Hazards and Hazardous Materials

The Reduced-Intensity Alternative would develop the Project site for the same type of mixed-use and business park uses, and therefore the same type of hazardous materials typically used for construction and operation of the proposed Project would be used under the Reduced-Intensity Alternative. Similarly, the use and storage of hazardous materials would be regulated by the same federal, State, and local laws and permitting requirements as would be done by the proposed Project. In addition, this alternative would include cleanup of contaminated soils that exist on the site during construction activities and would be required to implement the same type of mitigation measures proposed for the Project. Therefore, impacts under the alternative would be similar to those of the proposed Project.

All future development areas under the Reduced-Intensity Alternative would be developed with the same mixed-use and business park uses as the proposed Project, and therefore Impacts under this alternative would be similar to those of the proposed Project.

Hydrology and Water Quality

The Reduced-Intensity Alternative would reduce the total building square footage; however, the area of impervious surfaces would be similar compared to the proposed Project as the area would be paved. Therefore, this alternative would result in similar runoff and potential for impacts to drainage, erosion, and water quality. Like the proposed Project, this alternative would introduce new sources of water pollutants from construction and operation activities. Additionally, this alternative would be required to include storm drain facility improvements, LID, source control, site design, and treatment control BMPs. Overall, hydrology and water quality impacts would be less than significant. Therefore, the Reduced-Intensity Alternative would result in impacts to hydrology and water quality that are similar to those that would occur from the proposed Project.

Land Use and Planning

The Reduced-Intensity Alternative would still be consistent with TOP 2050 and the SCAG RTP/SCS policies. Furthermore, this alternative would comply to the City's Development code and airport plans. Therefore,

like the proposed Project, the Reduced-Intensity Alternative would result in a less than significant impact related to land use.

Noise

The Reduced-Intensity Alternative would develop the Project site for the same type of mixed-use and business park uses, but with less intensity than the proposed Project. Construction and operation noise impacts would be reduced under the Reduced-Intensity Alternative because this alternative would decrease the development area by 25 percent. Although construction of this alternative would still generate the same peak noise volumes and similar type and volume of construction noise as the proposed Project, the duration of construction and the associated noise would be slightly reduced compared to the Project (due to less total building square footage). Operational noise would also be slightly reduced under this alternative as traffic-generated and stationary noise sources would decrease in relation to the proposed Project. Noise impacts from the Reduced-Intensity Alternative would be less than significant and reduced compared to the proposed Project.

Population and Housing

Under the Reduced-Intensity Alternative, buildout would result in an approximate 25 percent reduction in residential units along with residents and employees on-site. Under this alternative, the population, housing, and employment at buildout would be consistent with the City's growth projections identified in SCAG's RTP/SCS. However, growth associated with the proposed Project was also within growth projections. Furthermore, the Reduced-Intensity Alternative would provide fewer employment opportunities. Overall, impacts to population and housing would remain less than significant with this alternative and reduced to the proposed Project.

Public Services

The Reduced-Intensity Alternative would develop the Project site for the same type of mixed-use and business park uses, but with less intensity than the proposed Project. This alternative would reduce buildout of the Project area by 25 percent compared to the proposed Project. This would reduce the number of residents and employees on the Project site. This alternative would reduce the amount of new residences on the Project site, which could lessen the demand on public services, such as fire and police protection services, schools, or other public facilities. Therefore, impacts would be less than significant with compliance of other applicable plans and regulations, and payment of fees. Overall, the need for public services would be reduced under this alternative compared to the proposed Project.

Transportation and Traffic

Construction and operation-related traffic and truck trips would be reduced under the Reduced-Intensity Alternative because this alternative would decrease the business park and mixed-use development area by 25 percent in comparison to the proposed Project. Transportation impacts are determined to be less than significant for the proposed Project, and therefore these impacts would remain less than significant under the Reduced-Intensity Alternative. Impacts would remain less than significant and overall traffic would be reduced compared to the proposed Project.

Tribal Cultural Resources

The Reduced-Intensity Alternative would result in similar impacts with a potential to adversely affect any undiscovered tribal cultural resources on the Project site. However, like the proposed Project, mitigation measures would be required to reduce the alternative's potential impacts on tribal cultural resources to less than significant. Therefore, impacts under the alternative would be similar to those associated with the proposed Project.

Utilities and Service Systems

The Reduced-Intensity Alternative would develop the Project site for the same type of mixed-use and business park uses, but with less intensity than the proposed Project. The Reduced-Intensity Alternative would reduce buildout of the Project site by 25 percent compared to the proposed Project. This would reduce the number of residents and employees on the Project site in relation to the proposed Project, and would therefore also reduce the demand for utilities and service systems.

The demand for regional water supplies and generation of wastewater and solid waste would be approximately 25 percent less than the proposed Project. Thus, the impacts related to water supplies, wastewater, and solid waste would result in less than significant impacts. Therefore, impacts under the alternative would be reduced compared to those of the proposed Project.

6.5 Comparison of Alternatives

No Project/No Build Alternative Conclusion

Ability to Reduce Impacts

The No Project/No Build Alternative would reduce impacts related to aesthetics, agriculture and forestry resources, air quality, biological resources, cultural resources, energy, geology and soils, GHG emissions, land use and planning, noise, population and housing, public services, transportation, tribal cultural resources, and utilities and service systems that would occur from implementation of the proposed Project. However, impacts related to hazards and hazardous materials, as well as hydrology and water quality would be greater under this alternative.

Ability to Achieve Project Objectives

Implementation of the No Project/No Build Alternative means that new development would not occur on the Project site, and none of the Project objectives would be achieved under this alternative. The No Project/No Build Alternative would not create a professional, well-maintained and attractive environment for the development of a vibrant Mixed-Use development along Edison Avenue and a multi-purpose business park complex (Objective 1); provide the entitlement and framework for a total of approximately 290,000 square feet of office retail development and a maximum of 466 residential units (Objective 2); provide the entitlements and framework for the development of approximately 1.39 million square feet of business park uses (Objective 3); provide employment opportunities for the surrounding community (Objective 4); facilitate the implementation of roads, utilities, and other infrastructure investments that will be sufficiently sized to serve the Project site (Objective 5); expand Ontario's retail, office and business park uses in proximity to local airports and regional transportation networks (Objective 6); create an

economic driver for future growth in the western portion of Ontario Ranch that acts as a catalyst for the development of infrastructure improvements in the area and implementation of the City's long term planning vision (Objective 7); provide opportunities for residents to live, work and shop within close proximity (Objective 8); and provide a logical extension of planned community trails and bike ways.

No Project/Existing General Plan Alternative Conclusion

Ability to Reduce Impacts

The No Project/Existing General Plan Alternative would result in similar impacts related to aesthetics, agriculture and forestry resources, air quality, biological resources, cultural resources, energy, geology and soils, GHG emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, noise, population and housing, public services, transportation, tribal cultural resources, and utilities and service systems would be similar compared to the proposed Project as the proposed Project is also consistent with TOP 2050.

Ability to Achieve Project Objectives

Implementation of the No Project/Existing General Plan Alternative would meet seven of the nine Project objectives as the proposed Project is consistent with TOP 2050. For example, this alternative would not provide the entitlement and framework for a total of approximately 290,000 sf of office retail development and a maximum of 466 residential units (Objective 2); and provide the entitlements and framework for the development of approximately 1.39 million sf of business park uses (Objective 3). The No Project/Existing General Plan Alternative would create a professional, well-maintained and attractive environment for the development of a vibrant Mixed-Use development along Edison Avenue and a multi-purpose business park complex (Objective 1); and it be an economic driver for future growth in the western portion of Ontario Ranch that acts as a catalyst for the development of infrastructure improvements in the area and implementation of the City's long term planning vision (Objective 7). This alternative would provide employment opportunities for the surrounding community (Objective 4); facilitate the implementation of roads, utilities, and other infrastructure investments that will be sufficiently sized to serve the Project site (Objective 5); expand Ontario's retail, office and business park uses in proximity to local airports and regional transportation networks (Objective 6); provide opportunities for residents to live, work and shop within close proximity (Objective 8); and provide a logical extension of planned community trails and bike ways (Objective 9).

TOP 2050 envisions the Ontario Ranch area will include housing, commercial and Business Park areas, parks, recreational uses, trails and bike links. Specific plans are required to guide development in Ontario Ranch to ensure the City objectives are achieved. The Euclid Mixed-Use Specific Plan, the proposed Project, is a major "next step," creating a specific plan to implement the vision outlined by the City of Ontario for the western portion of the Ontario Ranch area, formerly New Model Colony.

Reduced-Intensity Alternative Conclusion

Ability to Reduce Impacts

The Reduced-Intensity Alternative would result in similar impacts related to aesthetics, agriculture and forestry resources, air quality, biological resources, cultural resources, energy, geology and soils, GHG emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, and tribal cultural resources. The Reduced-Intensity Alternative would result in reduced impacts related to noise, population and housing, public services, transportation and traffic, and utilities and service systems due to the reduction in square footage, residents, employees, and associated vehicular trips.

Ability to Achieve Project Objectives

Implementation of the Reduced-Intensity Alternative would achieve the nine Project objectives, but not to the extent as would be achieved by the proposed Project. The Reduced-Intensity Alternative would create a professional, well-maintained and attractive environment for the development of a vibrant Mixed-use development along Edison Avenue and a multi-purpose business park complex (Objective 1); provide employment opportunities for the surrounding community (Objective 4); facilitate the implementation of roads, utilities, and other infrastructure investments that will be sufficiently sized to serve the Project site (Objective 5); expand Ontario's retail, office and business park uses in proximity to local airports and regional transportation networks (Objective 6); create an economic driver for future growth in the western portion of Ontario Ranch that acts as a catalyst for the development of infrastructure improvements in the area and implementation of the City's long term planning vision (Objective 7); provide opportunities for residents to live, work and shop within close proximity (Objective 8); and provide a logical extension of planned community trails and bike ways (Objective 9). However, the 25 percent project reduction would provide less housing and commercial uses. This alternative would not fully meet Objective 2 to provide the entitlement and framework for a total of approximately 290,110 square feet of office retail development and a maximum of 466 residential units. Furthermore, the 25 percent Project reduction would attract fewer or smaller businesses and less employment opportunities to area residents. In addition, the smaller development would provide less flexibility to meet the needs of an ever-changing business market. This alternative would not fully meet Objective 3 to provide the entitlements and framework for the development of approximately 1.39 million square feet of business park uses.

6.6 Environmentally Superior Alternative

CEQA requires a lead agency to identify the "environmentally superior alternative" and, in cases where the "No Project" Alternative is environmentally superior to the proposed Project, the environmentally superior development alternative must be identified. The Reduced Intensity Alternative has been identified as "environmentally superior" to the proposed Project.

Reduced-Intensity Alternative

The Reduced-Intensity Alternative has been identified as the environmentally-superior alternative because it would result in reduced impacts related to noise, population and housing, public services, transportation and traffic, and utilities and service systems and similar impacts related to agriculture and

forestry resources, air quality, biological resources, cultural resources, energy, geology and soils, GHG emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, and tribal cultural resources. However, the Reduced-Intensity Alternative would still result in significant and unavoidable impacts related to agricultural and forestry resources, air quality, cultural resources, GHG emissions, and transportation and traffic. Impacts related to aesthetics, biological resources, geology and soils, hazardous and hazardous materials, hydrology and water quality, and tribal cultural resources would be similar to the proposed Project.

CEQA does not require the lead agency (the City of Ontario) to choose the environmentally superior alternative. Instead, CEQA requires the City to consider environmentally superior alternatives, weigh those considerations against the environmental impacts of the proposed Project, and make findings that the benefits of those considerations outweigh the harm. “Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are: (i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts” (State CEQA Guidelines Section 15126.6[c]).

7.0 EFFECTS FOUND NOT TO BE SIGNIFICANT

7.1 Introduction

California Public Resources Code (PRC) Section 21003 (f) states: "…it is the policy of the state that…[a]ll persons and public agencies involved in the environmental review process be responsible for carrying out the process in the most efficient, expeditious manner in order to conserve the available financial, governmental, physical, and social resources with the objective that those resources may be better applied toward the mitigation of actual significant effects on the environment." This policy is reflected in the California Environmental Quality Act (CEQA) Guidelines Section 15126.2(a), which states that "[a]n EIR [Environmental Impact Report] shall identify and focus on the significant environmental impacts of the Project" and Section 15143, which states that "[t]he EIR shall focus on the significant effects on the environment." State CEQA Guidelines Section 15128 requires that an EIR contain a statement briefly indicating the reasons that various possible significant effects of a project were determined not to be significant and were therefore not discussed in detail in the Draft EIR. This section briefly describes effects found to have no impact or a less than significant impact based on the analysis conducted during the Draft EIR preparation process.

7.2 Mineral Resources

Impact 7.2-1 ***Would the Project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?***

Impact 7.2-2 ***Would the Project result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?***

Level of Significance: Less Than Significant

Specific Plan – Phase I and Phase II Future Development Areas

There are no known mineral resources either on the Project site or in the immediate vicinity of the site that would be impacted by the Project. The Ontario Plan (TOP) 2050 does not identify any known or suspected mineral resources in the Project site that could be impacted. The Project is located in Mineral Resource Zone (MRZ) MRZ-3 as identified in the TOP 2050 Final Supplemental EIR Areas of Mineral Resource Significance figure.[1] Areas designated by the State of California Geologist as MRZ-3 include land that the significance of mineral deposits cannot be determined from the available data. Since there are no known mineral resources present that are of value to the State in the Project site, the Project would not impact mineral resources. Therefore, the Project would not result in a loss of availability of any locally important mineral resource and no impact would occur. Furthermore, the Project site has no known mineral resources of value to the region and residents of the City according to the TOP 2050.

[1] City of Ontario. 2022. *TOP 2050 Final Supplemental Environmental Impact Report, Figure 5.12-1 Areas of Mineral Resource Significant, page 5.12-3.* https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf. (accessed March 2023).

Therefore, the Project would not result in a loss of availability of any locally important mineral resource and no impact would occur.

Conclusion

As noted above, the Project will not result in significant mineral resource impacts, and the Project is consistent with existing City TOP 2050 and zoning designations. Therefore, no significant impacts would occur. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Specific Plan and TOP 2050.

Mitigation Measures

No mitigation is necessary.

7.3 Recreation

Impact 7.3-1 ***Would the Project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?***

Impact 7.3-2 ***Does the Project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?***

Level of Significance: Less Than Significant

Specific Plan – Phase I and Phase II Future Development Areas

The Project proposes 466 residential units along with business park and mixed-use land uses that would create additional demand for park and recreational facilities. The need for recreations amenities would be addressed through the Project's provision of multi-purpose trails along Euclid and Schaefer Avenues and public accessible sidewalks along Euclid, Schaefer and Sultana Avenues and Edison Avenue. Furthermore, the Project will comply with the City's Development Code Section 6.08.030: Park Dedication and In-Lieu Fee Regulations, to provide two acres of park per 1,000 residents onsite and pay an in-lieu fee for the equivalent of three acres of park per 1,000 residents for a total of five acres per 1,000 residents to ensure that recreational facilities are within walking distance of future residents within the Project area. With the development of the proposed open space, it is anticipated that the Project would not significantly increase the use of other nearby off-site neighborhood parks, regional parks, or recreational facilities.

Additionally, the Project would pay applicable park impact fees as established by the City, pursuant to the Quimby Act and local City Regulations. Based on the proposed development plans, the Project's estimated 1,570 residents (assumes an average of 3.37 occupants per residence for this type of community and 466 households) would equate to a dedication requirement of 7.8 acres.[2] The Project will comply Quimby Act and City regulations through the dedication of parkland and/or payment of in-lieu fees for

[2] California Department of Finance. 2023. *E-5 Population and Housing Estimates for Cities, Counties, and the State, 2020 -2022.* https://dof.ca.gov/forecasting/Demographics/estimates/e-5-population-and-housing-estimates-for-cities-counties-and-the-state-2020-2022/, (accessed March 2023).

parks/recreation purposes, as determined by the City. Therefore, impacts to existing neighborhood and regional parks or other recreational facilities will be less than significant.

Conclusion

As noted above, the Project will not result in significant impacts to existing neighborhood and regional parks or other recreational facilities, and the Project is consistent with existing City TOP 2050 and zoning designations. Therefore, no significant impacts would occur. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Specific Plan and TOP 2050.

Mitigation Measures

No mitigation is necessary.

7.4 Wildfire

Impact 7.4-1 ***If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project substantially impair an adopted emergency response plan or emergency evacuation plan?***

Level of Significance: No Impact

Specific Plan – Phase I and Phase II Future Development Areas

The Project is not within a State Responsibility Area (SRA).[3] According to CAL FIRE'S Fire Hazard Severity Zone (FHSZ) Viewer,[4] the Project site is not within Very High FHSZ zone and is within a Local Responsibility Areas (LRA) zone. Within the LRA, the Project site is not designated as a VHFHSZ. The nearest VHFHSZ to is approximately 5.0 miles south from the Project site. Therefore, no impact would occur.

Conclusion

As noted above, the Project is not in or near an SRA or Very High FHSZ zone, and the Project is consistent with existing City TOP 2050 and zoning designations. Therefore, no significant impacts would occur. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Specific Plan and TOP 2050.

Mitigation Measures

No mitigation is necessary.

[3] State of California. 2022. *Fire Hazard Severity Zones in State Responsibility Area – San Bernardino County.* https://osfm.fire.ca.gov/media/vcym3avh/fhsz_county_sra_11x17_2022_sanbernardino_ada.pdf. (accessed March 2023).

[4] State of California. 2021. *California Fire Hazard Severity Zone Viewer.* https://gis.data.ca.gov/datasets/789d5286736248f69c4515c04f58f414. (accessed March 2023).

Impact 7.4-2 ***If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the Project, due to slope, prevailing winds, and other factors, exacerbate wildlife risks, and thereby expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?***

Level of Significance: Less Than Significant

Specific Plan – Phase I and Phase II Future Development Areas

The Project site is not within Very High FHSZ zone nor is it within an SRA. Additionally, Project development would remove the existing agriculture and vegetation on site, reducing the risk of any potential fire outbreak. Thus, wildfire is not anticipated to occur on-site that would expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire. Worse-case extreme high winds that could exacerbate wildfire would not expose construction workers to pollutant concentrations since all agriculture uses would be removed. The Project site is also in a well vehicularly circulated area with existing roadways which would be further improved once the Project is completed. The Project site and its surrounding areas do not contain tall trees that would experience a crown fire.

Furthermore, due to the presence of surrounding development, non-contiguous nature of the existing undeveloped areas, presence of area roadways, lack of steep slopes, and fire-resistant materials utilized for construction of the Project, it is not likely to be affected by a wildfire during construction or operations. In addition, the surrounding agricultural areas would be separated from the structures by roads, landscaping, parking, and other accommodating Project features. Lastly, the construction of the Project would be designed in accordance with the latest California Building Code standards, which utilizes fire-resistant materials. Specifically, the site would be built consistent with the California Building Code Chapter 7A requiring new buildings to use ignition-resistant construction methods and materials. It is anticipated that these design elements would reduce exposure of the Project site and structure to wildfire. Furthermore, the City's plan for fire prevention requires that all plans are reviewed and are required for all new buildings and for changes to existing buildings. The Ontario Fire Department reviews these plans to help ensure that the applicable codes, ordinances, and standards are being followed, and to prevent unnecessary hazards. Therefore, a less than significant impact would occur.

Conclusion

As noted above, the Project is not in or near an SRA or Very High FHSZ zone, and the Project is consistent with existing City TOP 2050 and zoning designations. Therefore, no significant impacts would occur. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Specific Plan and TOP 2050.

Mitigation Measures

No mitigation is necessary.

Impact 7.4-3 ***If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the Project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?***

Level of Significance: Less Than Significant

Specific Plan – Phase I and Phase II Future Development Areas

The Project site is not within Very High FHSZ zone nor is it within an SRA. The Project would include the construction of roadways, landscaping, signage, lighting, and utility improvements. The Project site is consistent with the area's land use and would be consistent with the City's zoning designation. The Project site would include installation of utilities and roads within the Project area. The Project does not include any fuel breaks and does not require a fuel break. In addition, emergency water sources are not required beyond water supply needed to comply with applicable building codes as well as the City's Municipal Code. No elements of the Project would exacerbate the risk of wildfire. Therefore, a less than significant impact would occur.

Conclusion

As noted above, the Project is not in or near an SRA or Very High FHSZ zone, and the Project is consistent with existing City TOP 2050 and zoning designations. Therefore, no significant impacts would occur. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Specific Plan and TOP 2050.

Mitigation Measures

No mitigation is necessary.

Impact 7.4-4 ***If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the Project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?***

Level of Significance: Less Than Significant

Specific Plan – Phase I and Phase II Future Development Areas

The Project site is not within Very High FHSZ zone nor is it within an SRA. Aerial imagery indicates that the Project is in a semi-rural part of the City and is not adjacent to a wildland-urban interface or in an area subject to landslide after a wildland fire event. Development of the Project would alter existing ground contours of the Project site and would increase the impervious surface area on the site, all of which would result in changes to the existing drainage patterns interior to the site. The overall Project would result in a network of drainage lines on- and off-site to accommodate stormwater runoff flows. The drainage plan for the Project site is designed according to the City of Ontario's Master Plan standards. The new storm drain would increase the efficiency of the drainage infrastructure in that area and provide an updated conveyance system. Additional on-site storm drain improvements would include stormwater

detention/retention/water quality basins, which would capture, treat, and/or gradually release stormwater into the downstream public storm drain system. On-site stormwater treatment would incorporate underground chambers installed within each building's parking area. The installation of the drainage design features would prevent flooding on- and off-site. Therefore, the Project would not expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes and a less than significant impact would occur.

Conclusion

As noted above, the Project is not in or near an SRA or Very High FHSZ zone, and the Project is consistent with existing City TOP 2050 and zoning designations. Therefore, no significant impacts would occur. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Specific Plan and TOP 2050.

Mitigation Measures

No mitigation is necessary.

8.0 EIR CONSULTATION AND PREPARATION

This section is consistent with the requirements set forth in Public Resources Code (PRC) Section 21153 and Section 15129 of the CEQA Guidelines, which states: "The EIR shall identify all federal, state, or local agencies, other organizations, and private individuals consulted in preparing the draft EIR, and the persons, firm, or agency preparing the draft EIR, by contract or other authorization." Refer to ***Section 2.2, Notice of Preparation***, for a summary of public notification and consultation.

The Notice of Preparation (NOP) and NOP comment letters are provided in ***Appendix A: Notice of Preparation & Public Scoping Meeting***, of this Draft EIR. The City of Ontario (City) provided multiple opportunities for public input, both as part of the CEQA process and as part of Project scoping. In addition to required public notifications under CEQA, the City has engaged in extensive consultation with the Native American tribes, pursuant to Assembly Bill (AB) 52 and Senate Bill (SB) 18, as discussed further in ***Section 4.16: Tribal Cultural Resources***, and provided in ***Appendix D: Cultural Resources Documentation*** of this Draft EIR.

Section 1.0 Introduction

1.1 INTRODUCTION

The Final Environmental Impact Report (Final EIR) for the Euclid Mixed Use Specific Plan Project has been prepared in accordance with the California Environmental Quality Act (CEQA), and CEQA Guidelines. CEQA Guidelines Section 15132 indicates that the contents of a Final EIR shall consist of:

(a) Environmental Impact Reports shall contain the information outlined in this article, but the format of the document may be varied. Each element must be covered, and when these elements are not separated into distinct sections, the document shall state where in the document each element is discussed.

(b) The EIR may be prepared as a separate document, as part of a general plan, or as part of a project report. If prepared as a part of the project report, it must still contain one separate and distinguishable section providing either analysis of all the subjects required in an EIR or, as a minimum, a table showing where each of the subjects is discussed. When the Lead Agency is a state agency, the EIR shall be included as part of the regular project report if such a report is used in the agency's existing review and budgetary process.

(c) Draft EIRs shall contain the information required by Sections 15122 through 15131. Final EIRs shall contain the same information and the subjects described in Section 15132.

(d) No document prepared pursuant to this article that is available for public examination shall include a "trade secret" as defined in Section 6254.7 of the Government Code, information about the location of archaeological sites and sacred lands, or any other information that is subject to the disclosure restrictions of Section 6254 of the Government Code.

The Final EIR includes all of these required components.

In accordance with § 15088 of the State CEQA Guidelines, the City of Ontario (City), as the lead agency for the proposed Project, evaluated comments received on the Draft EIR (State Clearinghouse No. 2023020281) and has prepared responses to the comments received. The preceding Table of Contents and Section 1.0 provides of a list of all persons, organizations, and public agencies commenting on the Draft EIR. Section 2.0 includes the Responses to Comments received on the Draft EIR. It should be noted that responses to comments also result in various editorial clarifications and corrections to the original Draft EIR text. Added or modified text is shown in Section 3.0, Errata, by underlining (<u>example</u>) while deleted text is shown by striking (~~example~~). The additional information, corrections, and clarifications are not considered to substantively affect the conclusions within the EIR. This Response to Comments document is part of the Final EIR, which includes the EIR pursuant to § 15132 of the State CEQA Guidelines.

After review and discussion by City staff and the City Planning Commission, responses to comments will be sent to commenting agencies and individuals. This satisfies the requirement of Section 21092.5 of CEQA to send responses to the public agency comments received on the Draft EIR at least 10 days prior to Project approval. This document includes responses to all written and verbal comments received on the Draft EIR.

1.2 ORGANIZATION OF THE FINAL EIR

This Final EIR provides the requisite information required under CEQA and is organized as follows:

- **Section 1.0 Introduction.** This section provides an introduction to the Final EIR, including the requirements under CEQA, the organization of the document, as well as brief summary of the CEQA process activities to date.
- **Section 2.0 Response to Comments.** This section provides a list of agencies and interested persons commenting on the Draft Subsequent EIR; copies of comment letters received during the public review period, and individual responses to written comments. To facilitate review of the responses, each comment letter has been reproduced and assigned a number. Individual comments have been numbered for each letter and the letter is followed by responses with references to the corresponding comment number.
- **Section 3.0 Errata to the Draft EIR.** This section details changes to the Draft EIR.
- **Appendix.** This section provides additional content where needed and cross-referenced from the body of the Final EIR.

1.3 CEQA REQUIREMENTS FOR A FINAL EIR

As described in CEQA Guidelines Sections 15088, 15089, 15090 and 15132, the Lead Agency must evaluate comments received on the Draft EIR and prepare written responses and consider the information contained in a Final EIR before approving a project.

CEQA Guidelines Section 15204(a) outlines parameters for submitting comments, and reminds persons and public agencies that the focus of review and comment of Draft EIRs should be:

> *"…on the sufficiency of the document in identifying and analyzing possible impacts on the environment and ways in which significant effects of the project might be avoided or mitigated. Comments are most helpful when they suggest additional specific alternatives or mitigation measures that would provide better ways to avoid or mitigate the significant environmental effects. At the same time, reviewers should be aware that the adequacy of an EIR is determined in terms of what is reasonably feasible. …CEQA does not require a lead agency to conduct every test or perform all research, study, and experimentation recommended or demanded by commenters. When responding to comments, lead agencies need only respond to significant environmental issues and do not need to provide all information requested by reviewers, as long as a good faith effort at full disclosure is made in the EIR."*

CEQA Guidelines Section 15204(c) further advises:

> *"Reviewers should explain the basis for their comments, and should submit data or references offering facts, reasonable assumptions based on facts, or expert opinion supported by facts in support of the comments. Pursuant to Section 15064, an effect shall not be considered significant in the absence of substantial evidence."*

Section 15204(d) also states:

> *"Each responsible agency and trustee agency shall focus its comments on environmental information germane to that agency's statutory responsibility."*

Section 15204(e) states:

> *"This section shall not be used to restrict the ability of reviewers to comment on the general adequacy of a document or of the lead agency to reject comments not focused as recommended by this section."*

State CEQA Guidelines Section 15088 recommends that where a response to comment makes important changes in the information contained in the text of the Draft EIR, that the Lead Agency either revise the text of the Draft Subsequent EIR or include marginal notes showing that information. The Final Subsequent EIR for the Project has been prepared in accordance with CEQA. CEQA Guidelines Section 15132 indicates that the contents of a Final EIR shall consist of:

- "The Draft EIR or a revision of the draft;
- Comments and recommendations received on the Draft EIR either verbatim or in summary;
- A list of persons, organizations, and public agencies commenting on the Draft EIR;
- The responses of the Lead Agency to significant environmental points raised in the review and consultation process; and
- Any other information added by the Lead Agency."

The City has evaluated comments on environmental issues from persons who reviewed the Draft EIR and has prepared a written response, pursuant to CEQA Guidelines Section 15088(a). Pursuant to CEQA Guidelines Section 15088(b), the City provided written responses to comments to any public agency that commented on the Draft Subsequent EIR, at least ten (10) days prior to the City Council consideration of certifying the EIR as adequate under CEQA. Written responses to comments will also be provided to non-public agency individuals, organizations, and entities that commended on the Draft EIR. In addition, the Final EIR will be made available to the general public at the City's Planning Division office and on the City's website a minimum of 10 days prior to the City Council public hearing.

The Final EIR, along with other relevant information and public testimony at the Planning Commission and City Council public hearings, will be considered by the City's Council.

1.4 CLARIFICATIONS, AMPLIFICATIONS AND MODIFICATIONS TO THE DRAFT EIR

Section 3.0, Errata to the Draft EIR, details the proposed changes to the Draft EIR. In response to public comments, text changes have been made to Draft EIR sections to clarify and amplify the analysis or mitigation measures, and to make insignificant modifications to the Draft EIR. This information does not rise to the level of significant new information as the resulting impact analysis and alternatives considered remain essentially unchanged, and no new or more severe impacts have been identified. These changes

do not warrant Draft EIR recirculation pursuant to California Public Resources Code §21092.1 and CEQA Guidelines §15088.5.

CEQA Guidelines §15088.5 describes when an EIR requires recirculation prior to certification, stating in part:

"(a) A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the Draft EIR for public review under Section 15087 but before certification. As used in this section, the term "information" can include changes in the project or environmental setting as well as additional data or other information. New information added to an EIR is not "significant" unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement. "Significant new information" requiring recirculation include, for example, a disclosure showing that:

(1) A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.

(2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.

(3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the environmental impacts of the project, but the project's proponents decline to apply it.

(4) The Draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded (Mountain Lion Coalition v. Fish and Game Com. (1989) 214 Cal.App.3d 1043).

(b) Recirculation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR."

As discussed herein and as elaborated upon in the respective Response to Comments, none of the clarifications or changes made in the Errata reflect a new significant environmental impact, a "substantial increase" in the severity of an environmental impact for which mitigation is not proposed, or a new feasible alternative or mitigation measure that would clearly lessen significant environmental impacts but is not adopted, nor do the Errata reflect a "fundamentally flawed" or "conclusory" Draft EIR. In all cases, as discussed in individual responses to comments, master responses and Draft EIR Errata, these minor clarifications and modifications do not identify new or substantially more severe environmental impacts that the City has not committed to mitigate. Here, the public has not been deprived of a meaningful opportunity to comment upon a substantial adverse environmental effect of the Project or an unadopted feasible Project alternative or mitigation measure. Instead, the information added supports the existing analysis and conclusions, and responds to inquiries made from commenters. Therefore, this Final EIR is not subject to recirculation prior to certification.

Section 2.0 Comments and Responses to Draft EIR

CEQA Guidelines Section 15088(a) states that: "The lead agency shall evaluate comments on environmental issues received from persons who reviewed the Draft EIR and shall prepare a written response. The Lead Agency shall respond to comments that were received during the noticed comment period and any extensions and may respond to late comments." In accordance with these requirements, this section of the Final EIR provides the City of Ontario's responses to each of the comments on the Draft EIR received during the public comment period.

Comment letters and specific comments are given letters and numbers for reference purposes. Where sections of the Draft EIR are excerpted in this document, the sections are shown indented. Changes to the Draft EIR text are shown in underlined text for additions and strikeout for deletions.

The following is a list of agencies and persons that submitted comments on the Draft EIR during the public review period.

2.1 INTRODUCTION TO COMMENTS AND RESPONSES

Comments have been numbered as shown below, with responses to each comment following the respective comment letter.

Letter	Date Received	Organization/Name

Draft Environmental Impact Report (Draft EIR) for the Proposed Euclid Mixed Use Specific Plan PSP22-001 (Proposed Project) (SCH No. 2023020281)

The South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. The City of Ontario is the California Environmental Quality Act (CEQA) Lead Agency for the Proposed Project. To provide context, South Coast AQMD staff has provided a brief summary of the project information and prepared the following comments organized by topic of concern.

South Coast AQMD Staff's Summary of Project Information in the Draft EIR

Based on the Draft EIR, the Proposed Project comprises 18 existing parcels totaling 84.1 acres,[1] allowing for a business park and mixed-use development.[2] The Proposed Project would develop up to 1) 290,110 square feet (sf) of commercial retail/office uses, 2) up to 466 residential units, and 3) 1,386,777 sf of business park uses and associated on-site and off-site infrastructure improvements.[3] The Proposed Project is anticipated to be developed in two phases within five planning areas (PAs).[4] Phase I would consist of PAs 1, 2A, and 3A with construction of 13 buildings up to 1,473,026 sf (maximum development allowed).[5] Phase II comprises PAs 2B and 3B with potential future development, as specific development proposals have not yet been identified.[6] Phase I would include 809,217 sf of unrefrigerated warehouse and 191,378 sf of industrial business park.[7] On the other hand, Phase II would consist of 466 dwelling units apartments, 163,000 sf of unrefrigerated warehouse, 10,225 sf of strip mall, 10,000 sf of fast food restaurant with drive-thru, and 10,000 sf of fast food restaurant without drive-thru.[8] Phase I is expected to be constructed in 2024, with an anticipated opening year in 2032.[9] After reviewing aerial photographs of the site, South Coast AQMD staff found that the nearest sensitive receptor, an existing residential development, is located within 150 feet west and southeast of the Proposed Project site. a

South Coast AQMD Staff's Comments on the Draft EIR

Inconsistency in the Proposed Project's Construction Schedule

As mentioned in Section 3 - Project Description, Phase I of the Proposed Project is expected to start in 2024 and open in 2032.[10] However, Section 4.3 – Air Quality assumes the opening year of Phase I would be 2025.[11] In addition, the buildout of the Proposed Project is anticipated to begin in 2026.[12] The construction and operation schedule information discussed in the Draft EIR should be consistent. Therefore, the correction should be included in the Final EIR. b

Potential Overlapped Construction and Operation Analysis

Based on the information discussed in Section 4.3 – Air Quality, Phase I would be open in 2025, while the buildout is expected to begin in 2026.[13] This statement potentially leads to an expectation that Phase II would start to be constructed while Phase I is already in operation. Hence, an overlap period would occur between Phase I operation and Phase II construction prior to the full buildout. Thus, it is recommended that the air quality analysis should include the potential overlap that could occur, analyze the overlapped emissions, compare the overlapped emissions to the operational South Coast AQMD Air Quality Significance Thresholds, and determine the level of significance in the Final EIR. All feasible mitigation measures are needed to reduce the impacts if the results are significant. c

Potential of Inappropriate Vehicle Fleet Mixes to Evaluate Proposed Project's Air Quality Impacts from Mobile Sources

The Proposed Project's operational emissions from mobile sources may have been underestimated due to the use of inappropriate vehicle fleet mixes in the Draft EIR. The Proposed Project generates 8,820 daily trips, with 10% being daily truck trips (882 daily truck trips).[14] According to Appendix 11 – Traffic Analysis of the Draft EIR, trip generation is estimated using the Trip Generation Manual, 11th Edition.[15] South Coast AQMD staff believes that the number of trucks assumed in the Draft EIR to serve the proposed industrial uses is too low for warehouse facilities exceeding a million square feet, as the total industrial uses of the Proposed Project is over a million square feet (refer to the Summary section of this letter). For instance, according to the Fontana Truck Trip Generation Study, 20.4% of the total daily vehicle trips from a warehouse greater than 100,000 square feet would consist of trucks.[16] This study is based on traffic counts from warehouses. Thus, re-evaluating the Proposed Project's air quality impacts, assuming a conservative fleet mix supported by substantial evidence is recommended. d

2

Potential Underestimation of Emissions Due to Imprecise Assumptions for Truck Trip Lengths in Emissions Analysis

The Draft EIR for the Proposed Project states that "*all truck trips were assumed to be 33.2 miles, one way.*" However, it is crucial to note that the Proposed Project site is approximately 55 miles (one-way) from the Ports of Los Angeles or Port of Long Beach. This implies that the air quality analysis might have underestimated the emissions from trucks traveling from the Ports to the Proposed Project site. Revising the analysis in the Draft EIR is essential to rely on more conservative trip lengths designated for Port trips. Customizing these parameters and assumptions based on project-specific data will ensure a more accurate assessment of emissions, accounting for the unique circumstances and logistical realities of the Proposed Project. e

Health Risk Assessment (HRA) During Operation

The South Coast AQMD Modeling Guidance for AERMOD[17] is recommended to be used as the guidance for the HRA modeling. South Coast AQMD staff's review of the modeling files noted that industrial buildings were not included in the building downwash option in the AERMOD dispersion model during operation, which resulted in an underestimation of the ground-level pollutant concentrations near the buildings. Thus, the Lead Agency is recommended to re-run the operational HRAs, including the industrial buildings in the building downwash, to analyze ground-level concentrations more accurately and include the results in the Final EIR. f

Emission Reductions from Health Risk Strategies

When certifying an EIR for a project, retain the authority to include any additional information deemed relevant to assessing and mitigating the environmental impacts. South Coast AQMD is concerned about the potential public health impacts of sitting sensitive populations within the proximity of existing air pollution sources (e.g., freeways and railroads). For this reason, prior to approving future development projects, the Lead Agency is recommended to consider the impacts of air pollutants on people who will live in a new project and provide effective mitigation. Additionally, South Coast AQMD suggests that the Lead Agency review and apply the guidance provided in 1) the California Air Resources Board (CARB) Air Quality Land Use and Handbook: A Community Health Perspective,[18] which provides criteria for evaluating and reducing air pollution impacts associated with new projects involving land use decisions; and 2) CARB's technical advisory which contains strategies to reduce air pollution exposure near high-volume roadways.[19] g

Many strategies are available for residential receptors to reduce being exposed to particulate matter, including, but not limited to, HVAC systems equipped with filters rated at a minimum efficiency reporting value (MERV) 13 or higher air filtration capabilities. In some cases, MERV 15 or better is recommended for building design, orientation, location, vegetation barriers,

[17] South Coast AQMD Modeling Guidance for AERMOD. Available at: http://www.aqmd.gov/home/air-quality/meteorological-data/modeling-guidance.
[18] California Air Resources Board (CARB), Air Quality Land Use and Handbook: A Community Health Perspective, April 2005. Available at: https://ww2.arb.ca.gov/sites/default/files/2023-05/Land%20Use%20Handbook_0.pdf
[19] CARB's Strategies to Reduce Air Pollution Exposure Near High-Volume Roadways. Available at: https://ww2.arb.ca.gov/sites/default/files/2017-10/rd_technical_advisory_final.pdf

landscaping screening, etc. Enhanced filtration units are capable of reducing exposure. However, enhanced filtration systems have limitations. For example, filters rated MERV 13 or higher are able to screen out greater than or equal to 50% of DPM,[20] but they have no ability to filter out volatile organic compound (VOC) emissions. Also, in a study that South Coast AQMD conducted to investigate filters rated at MERV 13 or better in classrooms,[21,22] a cost burden is expected to be within the range of $120 to $240 per year to replace each filter panel. The initial start-up cost could substantially increase if an HVAC system needs to be installed and if standalone filter units are required. Installation costs may vary, including costs for conducting site assessments and obtaining permits and approvals before filters can be installed. Other costs may include filter life monitoring, annual maintenance, and training for conducting maintenance and reporting. In addition, the filters would not have any effect unless the HVAC system is running. Therefore, when in use, the increased energy consumption from each HVAC system should be evaluated in the Draft EIR. While the filters operate 100 percent of the time when the HVAC is in use while the residents are indoors, the environmental analysis does not generally account for the times when the residents are not using their HVAC and instead have their windows or doors open or are moving throughout the common space outdoor areas of the Proposed Project. Furthermore, when used filters are replaced with new filters, emissions associated with trucks delivering the new filters and waste disposal trucks transporting the used filters to disposal sites should be evaluated in the Draft EIR. Therefore, any presumed effectiveness and feasibility of a particular HVAC filter should be carefully evaluated in more detail based on supporting evidence before assuming they will sufficiently alleviate exposure to DPM emissions.

cont. g

Additional Recommended Air Quality and Greenhouse Gases Mitigation Measures and Project Design Considerations

CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized to minimize or eliminate any significant adverse air quality impacts. To further reduce the Proposed Project's air quality impacts, and in addition to Mitigation Measures MM AQ-1 to MM AQ-8[23] and MM GHG-1.[24] Although with the mitigation measures discussed in the Draft EIR, the mitigated operational emissions are still significant and unavoidable for VOC and NOx compared to the South Coast AQMD Air Quality Significance Thresholds. Hence, South Coast AQMD staff recommends incorporating additional mitigation measures into the Final EIR.

h

Mitigation Measures for Operational Air Quality Impacts from Mobile Sources

1) Require zero-emissions (ZE) or near-zero emission (NZE) on-road haul trucks, such as heavy-duty trucks with natural gas engines that meet the CARB's adopted optional NOx emissions standard at 0.02 grams per brake horsepower-hour (g/bhp-hr), if and when feasible.

[24] *Ibid*. Page 4.8-24.

4

Note: Given the state's clean truck rules and regulations aiming to accelerate the utilization and market penetration of ZE and NZE trucks, such as the Advanced Clean Trucks Rule and the Heavy-duty Low NOx Omnibus Regulation, ZE and NZE trucks will become increasingly more available to use.

2) Require a phase-in schedule to incentivize the use of cleaner operating trucks to reduce any significant adverse air quality impacts. Note: South Coast AQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency.

3) At a minimum, require the use of a 2010 model year that meets CARB's 2010 engine emissions standards at 0.01 g/bhp-hr of particulate matter (PM) and 0.20 g/bhp-hr of NOx emissions or newer, cleaner trucks. All heavy-duty haul trucks should meet CARB's lowest optional low-NOx standard starting in 2022. Where appropriate, include environmental analyses to evaluate and identify sufficient electricity and supportive infrastructures in the Energy and Utilities and Service Systems Sections in the CEQA document. Include the requirements in applicable bid documents, purchase orders, and contracts. Operators shall maintain records of all trucks associated with project construction to document that each truck used meets these emission standards and make the records available for inspection. Regular inspections should be conducted by the Lead Agency to the maximum extent feasible to ensure compliance.

4) Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the Final CEQA document. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the Proposed Project through CEQA prior to allowing this higher activity level.

5) Provide electric vehicle (EV) charging stations or, at a minimum, provide electrical infrastructure, and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment.

cont. h

Mitigation Measures for Operational Air Quality Impacts from Other Area Sources

1) Maximize the use of solar energy by installing solar energy arrays.

2) Use light-colored paving and roofing materials.

3) Utilize only Energy Star heating, cooling, and lighting devices and appliances.

Design Considerations for Reducing Air Quality and Health Risk Impacts

1) Clearly mark truck routes with trailblazer signs so that trucks will not travel next to or near sensitive land uses (e.g., residences, schools, daycare centers, etc.).

2) Design the Proposed Project such that truck entrances and exits do not face sensitive receptors and trucks will not travel past sensitive land uses to enter or leave the Proposed Project site.

5

3) Design the Proposed Project such that any truck check-in point is inside the Proposed Project site to ensure no trucks are queuing outside.

4) Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is as far away as feasible from sensitive receptors.

5) Restrict overnight truck parking in sensitive land uses by providing overnight truck parking inside the Proposed Project site.

cont. h

Lastly, the South Coast AQMD also suggests that the Lead Agency conduct a review of the following references and incorporate additional mitigation measures as applicable to the Proposed Project in the Final EIR:

1) State of California – Department of Justice: Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act[25]

2) South Coast AQMD 2022 South Coast Air Quality Management Plan,[26] specifically:
   a. Appendix IV-A – South Coast AQMD's Stationary and Mobile Source Control Measures
   b. Appendix IV-B – CARB's Strategy for South Coast
   c. Appendix IV-C – SCAG's Regional Transportation Strategy and Control Measures

3) United States Environmental Protection Agency (U.S. EPA): Mobile Source Pollution - Environmental Justice and Transportation[27]

i

South Coast AQMD Air Permits and Role as a Responsible Agency

Based on the air quality analysis in the Draft EIR, the Proposed Project would include using generators during operation. Hence, air permits from South Coast AQMD would be required. The Final EIR should include a discussion about the potentially applicable South Coast AQMD rules that may be applicable to the Proposed Project, including but not limited to Rule 201 – Permit to Construct,[28] Rule 203 – Permit to Operate,[29] Rule 401 – Visible Emissions,[30] Rule 402 –

j

[27] United States Environmental Protection Agency (U.S. EPA): Mobile Source Pollution - Environmental Justice and Transportation. Available at: https://www.epa.gov/mobile-source-pollution/environmental-justice-and-transportation
[28] South Coast AQMD Rule 201 – Permit to Construct. Available at: https://www.aqmd.gov/docs/default-source/rule-book/reg-ii/rule-201.pdf
[29] South Coast AQMD Rule 203 – Permit to Operate. Available at: https://www.aqmd.gov/docs/default-source/rule-book/reg-ii/rule-203.pdf
[30] South Coast AQMD Rule 401 – Visible Emissions. Available at: https://www.aqmd.gov/docs/default-source/rule-book/rule-iv/rule-401.pdf

Nuisance,[31] Rule 403 – Fugitive Dust,[32] Rule 1110.2 – Emissions from Gaseous and Liquid Fueled Engines,[33] Rule 1166 – VOC Contaminated Soil Excavation,[34] Regulation XIII – New Source Review,[35] Rule 1401 – Air Toxics,[36] Rule 1466 – Control of Particulate Emissions from Soils with Toxic Air Contaminants,[37] and Rule 1470 – Requirements for Stationary Diesel Fueled Internal Combustion and Other Compression Ignition Engines.[38] It is important to note that when air permits from South Coast AQMD are required, the role of South Coast AQMD would change from a Commenting Agency to a Responsible Agency under CEQA. In addition, if South Coast AQMD is identified as a Responsible Agency, per CEQA Guidelines Sections 15086, the Lead Agency is required to consult with South Coast AQMD.

CEQA Guidelines Section 15096 sets forth specific procedures for a Responsible Agency, including making a decision on the adequacy of the CEQA document for use as part of the process for conducting a review of the Proposed Project and issuing discretionary approvals. Moreover, it is important to note that if a Responsible Agency determines that a CEQA document is not adequate to rely upon for its discretionary approvals, the Responsible Agency must take further actions listed in CEQA Guideline Section 15096(e), which could have the effect of delaying the implementation of the Proposed Project. In its role as CEQA Responsible Agency, the South Coast AQMD is obligated to ensure that the CEQA document prepared for this Proposed Project contains a sufficient project description and analysis to be relied upon in order to issue any discretionary approvals that may be needed for air permits. South Coast AQMD is concerned that the project description and analysis in its current form in the Draft EIR is inadequate to be relied upon for this purpose.

For these reasons, the Draft EIR should be revised to include a discussion about any and all new stationary and portable equipment requiring South Coast AQMD air permits, provide the evaluation of their air quality and greenhouse gas impacts, and identify South Coast AQMD as a Responsible Agency for the Proposed Project as this information will be relied upon as the basis for the permit conditions and emission limits for the air permit(s). Please contact South Coast AQMD's Engineering and Permitting staff at (909) 396-3385 for questions regarding what types of equipment would require air permits. For more general information on permits, please visit South Coast AQMD's webpage at http://www.aqmd.gov/home/permits.

Edmelynne Hunter February 1, 2024

Conclusion

As set forth in California Public Resources Code Section 21092.5(a) and CEQA Guidelines Section 15088(a-b), the Lead Agency shall evaluate comments from public agencies on the environmental issues and prepare a written response at least 10 days prior to certifying the Final EIR. As such, please provide South Coast AQMD written responses to all comments contained herein at least 10 days prior to the certification of the Final EIR. In addition, as provided by CEQA Guidelines Section 15088(c), if the Lead Agency's position is at variance with recommendations provided in this comment letter, detailed reasons supported by substantial evidence in the record to explain why specific comments and suggestions are not accepted must be provided.

Thank you for the opportunity to provide comments. South Coast AQMD staff is available to work with the Lead Agency to address any air quality questions that may arise from this comment letter. Please contact Danica Nguyen, Air Quality Specialist, at dnguyen1@aqmd.gov should you have any questions. k

Sincerely,

Sam Wang

Responses to Comment Letter L1 - South Coast Air Quality Management District

Response L1-a

Comment is introductory and general in nature. Therefore, no further action needed.

Response L1-b

The Draft EIR evaluated impacts based on, amongst other data, the assumption that "Phase I is expected to start construction in 2024, with an anticipated opening year in 2032," as stated in ***Section 3.0: Project Description*** of the Draft EIR, page 3-7. It should be noted that specific details regarding development of the parcels in Phase II are not known at this time. The Draft EIR's air quality analysis assumed construction of Phase II would begin subsequent to Phase I construction completion. Actual development would be subject to market conditions. It is not possible to know the specific timing and characteristics of potential future projects occurring in the planning area and, therefore, evaluating potential combined emissions scenarios would be speculative and would not provide meaningful information or analyses.

As such, for purposes of providing a conservative air quality analysis, the operations for buildout of the entire development are anticipated to begin in 2026 (as discussed in ***Section 4.3: Air Quality*** of the Draft EIR, page 4.3-14). Conducting the air quality modeling in this way is considered conservative as emissions factors would decrease over time as emissions regulations become more stringent and cleaner construction equipment would be more readily available. As construction of Phase II and full buildout operations would occur at a later date than was analyzed in the Draft EIR, the emissions presented are, accordingly, conservative. No correction to the construction schedule or buildout operational dates are needed. Therefore, no further revision to the analysis in the Draft EIR is required.

Response L1-c

The Draft EIR evaluated impacts based on, amongst other data, the assumption that "Phase I is expected to start construction in 2024, with an anticipated opening year in 2032," as stated in ***Section 3.0: Project Description*** of the Draft EIR, page 3-7. For Phase II, it was assumed that construction would start right after Phase I construction is complete/at the start of Phase I operations and used model defaults as there is no detailed phasing. Thus, the City has analyzed sequential construction of Phase I with Phase II in the Draft EIR.

The commenter's recommendation to combine construction emissions with operational emissions, i.e., an overlap, is not consistent with other South Coast Air Quality Management District (SCAQMD) guidance documents, recommendations, and impact analyses. For example, neither the SCAQMD's CEQA Air Quality Handbook, Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning, or Air Quality Significance Thresholds imply or explicitly recommend combining emissions from distinct construction and operational activities into a single lump sum emissions total. Rather, each of these documents discusses potential sources, mitigation measures, and thresholds of significance for construction and operational emissions separately.

As stated in ***Section 3.0: Project Description*** of the Draft EIR, page 3-18, Phase II may be developed in several subphases in response to market demands and according to the logical and orderly completion of infrastructure improvements. Additionally, as stated in ***Section 4.3: Air Quality*** of the Draft EIR,

page 4.3-14, "for purposes of this analysis, construction of Phase I of the Project is not anticipated to overlap with the construction of Phase II of the Project as there are still no proposals for this portion of the Project." Phasing sequencing is subject to change over time to respond to various market and local factors and as such, individual phases may overlap or develop concurrently. Actual development would be subject to market conditions. It is not possible to know the specific timing and characteristics of potential future projects occurring in the planning area and, therefore, evaluating potential combined emissions scenarios would be speculative and would not provide meaningful information or analyses.

Nonetheless, the Final EIR will include the following discussion on impacts from the potential overlapping of Phase I operational activities with Phase II construction activities (refer to Draft EIR ***Appendix B*** for modeling outputs):

Table 4.3-12a: Emissions from Overlapping Phase I Operation and Phase II Construction

Sources	Pollutants (pounds per day)					
	VOC	NO_X	CO	SO_2	PM_{10}	$PM_{2.5}$
Unmitigated Emissions						
Phase I Operations (2026)[1]	**68.73**	**191.98**	**611.85**	1.01	23.53	10.07
Phase II Construction (2026)[2]	**206.00**	31.70	46.90	0.06	21.30	11.40
Total Unmitigated Overlapping Emissions	**274.73**	**223.68**	**658.75**	1.07	44.83	21.47
SCAQMD Threshold	55	55	550	150	150	55
Exceeds Threshold	**Yes**	**Yes**	**Yes**	No	No	No
Mitigated Emissions						
Phase I Operations (2026)[1]	**59.89**	**145.59**	207.35	0.91	21.93	8.64
Phase II Construction (2026)[2]	31.90	14.50	46.90	0.06	21.30	11.40
Total Mitigated Overlapping Emissions	**91.79**	**160.09**	254.25	0.97	43.23	20.04
SCAQMD Threshold	55	55	550	150	150	55
Exceeds Threshold	**Yes**	**Yes**	No	No	No	No

1. Refer to Draft EIR Table 4.3-9: Phase I – Maximum Daily Operation Emissions
2. Refer to Draft EIR Table 4.3-10: Phase II – Maximum Daily Construction-Related Emissions

Note that Phase II construction would occur in 2025 and 2026. This table provides the maximum daily emissions, which would occur in 2026.

As shown in Table 4.3-12a of the Final EIR, Project emissions from the operation of Phase I combined with concurrent maximum day construction emissions of Phase II could result in maximum worst-case unmitigated daily emissions of VOC, NO_X, and CO in excess of applicable thresholds. Overlapping emissions of SO_2, PM_{10}, and $PM_{2.5}$ would not exceed the applicable thresholds. Implementation of applicable mitigation measures would reduce impacts from CO to below the applicable thresholds and impacts from CO emissions would be reduced to less than significant. Even with implementation of applicable mitigation measures described in the Draft EIR, and as disclosed in the Draft EIR, mitigated emissions of VOC and NO_X would remain in excess of applicable thresholds.

Comparing the results summarized in Table 4.3-12a of the Final EIR, with the total Project buildout (Phase I and Phase II) emissions as reported in Table 4.3-12 in ***Section 4.3: Air Quality*** of the Draft EIR demonstrates that emissions for all six criteria pollutants studied are less during the overlapping scenario than at Project buildout. As such, Table 4.3-12 in ***Section 4.3: Air Quality*** of the Draft EIR presents the worst-case maximum daily emissions from the Project (i.e., exceedances of VOC and NO_X regional daily mass emissions thresholds). The Draft EIR identifies all feasible mitigation to reduce construction and

operational impacts. Combining Phase II construction with Phase I operations (i.e., the phases that would potentially overlap) would not result in a new threshold exceedance, would not make additional mitigation feasible, and no new impact would occur. Therefore, no further revision to the analysis in the Draft EIR is required.

Response L1-d

The Draft EIR evaluated air quality impacts based on, amongst other data, trip generation and average vehicle trip distance for passenger vehicle and trucks as provided by Urban Crossroads in ***Appendix I: Transportation Reports***, of the Draft EIR. Specifically, the Project vehicle trip generation was obtained from the Project's Traffic Analysis Study (***Appendix I1: Traffic Analysis*** of the Draft EIR), which includes 7,938 total daily passenger car vehicle trips and 882 daily truck trips. In order to develop the traffic characteristics of the Project, trip-generation statistics published in the Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition, 2021) was used to estimate the trip generation. As discussed below, the City contends the use of the ITE Trip Generation Manual is justified and disagrees with the assertion that the modeling underestimated Project emissions from truck trips.

The commenter's recommendation to utilize other trip generation rates, such as those presented in the City of Fontana's 2003 *Truck Trip Generation Study*, is not consistent with other City guidance documents, recommendations, and impact analyses. The City of Fontana's *2003 Truck Trip Generation Study* is more than 20 years old and therefore, it is not representative of current trucking/industrial industry data, such as those released by other national sources. The latest Institute of ITE Trip Generation Manual (11th Edition, published in 2021) includes truck mix percentages for most of the industrial land use categories including those used for the Project. The ITE provides a mix of passenger cars versus total trucks and is an industry standard/source that is used across the country. The South Coast Air Quality Management District (SCAQMD) has preferred mix of trucks by axle-type for non-cold storage and cold storage warehouse uses. The use of these mixes in the traffic analysis, as was done for the Project, ensures that the traffic operations analysis and forecasts align with other technical studies that rely on the same data, such as air quality. Thus, the ITE Trip Generation Manual is an accepted methodology for estimating trip generation.

The air quality modeling is consistent with the trip generation of fleet assumptions of the traffic analysis, included as ***Appendix I*** of the Draft EIR. As shown in Table 4-2 of the Euclid Mixed-Use Specific Plan Traffic Analysis (included as ***Appendix I*** of the Draft EIR), total trucks generated by the truck/trailer parking lot, warehouse, and business park uses (total of 882 trucks) would consist of approximately 34.6 percent of the total 2,548 trips associated with those uses. The commenter miscalculated the truck percentage based on total trips for the entire Project Site, which includes uses that only account for passenger car trips. The remaining passenger car trips shown on Table 4-2 of the Euclid Mixed-Use Specific Plan Traffic Analysis are associated with residential, restaurant, and retail trips and application of Fontana Truck Trip Generation Study to those uses would not be appropriate. As such, the modeled truck fleet mix for applicable Project land uses (generating 882 trucks out of a total of 2,548 trips) is more conservative (34.6 percent) than the 20.4 percent trucks suggested in the comment. Therefore, the comment that the fleet mix assumptions underestimate operational emissions is incorrect. Therefore, no further revision to the analysis in the Draft EIR is required.

Response L1-e

The Air Quality Assessment, provided as ***Appendix B*** of the Draft EIR, used a truck trip length of 33.2 miles in the emissions modeling based on the California Air Resources Board (CARB) document *Emissions Estimation Methodology for On-Road Diesel-Fueled Heavy-Duty Drayage Trucks at California Ports and Intermodal Rail Yards*. It should be noted that this distance is specific to transloading/local distribution facilities and is the longest (i.e., most conservative) distance identified in the study for the South Coast Air Basin. Shorter distances are identified for other locations such as off-terminal and intermodal facilities. The CARB study used GIS to estimate travel distances. CARB explains that that estimating travel distances to/from the Ports of Los Angeles and Long Beach to distribution and transloading facilities is complicated because there are thousands of facilities and the number of trips to each facility and location of each facility is unknown. Therefore, CARB used the Ports' truck trip origin and destination (O-D) survey data to estimate distribution center travel distances.

The CalEEMod methodology uses average trip lengths, which accounts for some longer trips (e.g., to/from the Ports of Los Angeles and Long Beach or other location) and some shorter trips (e.g., to/from other facilities or warehouses in the area). Goods movement can involve several steps (i.e., origin and destination) between the port and a particular warehouse, intermodal facility, or other facility. Each step would be a separate trip. As such, not all truck trips would originate from the Ports; some trips may be from intermodal facilities, storage warehouses, cross-dock warehouses, distribution centers, retail stores, etc. Truck trips would likely be redistributed from other existing locations. As described above, the CARB truck trip lengths used in the Air Quality Assessment are based on substantial evidence and representative of warehouse truck trips to/from the ports in the South Coast Air Basin (i.e., the region where the Project is located). Therefore, no further revision to the analysis in the Draft EIR is required.

Response L1-f

The City acknowledges that health risk assessment (HRA) modeling does not include the building downwash option (where the potential for pollutants to be trapped in a recirculating pattern near buildings is accounted for) in the AERMOD dispersion model for operations. The purpose of building downwash is to determine if stack discharge might become caught in the turbulent wakes of structures within close proximity. A plume drawn into a turbulent wake is temporarily trapped in a recirculating cavity, increasing ground-level pollutant concentrations near the building than if the building weren't present. The City disagrees that the dispersion modeling must include building downwash. The SCAQMD *Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis* (August 2003) includes guidance for truck idling, ship hoteling at ports and train idling. Page 6 of said document further describes that volume or area source options (where the movement of sources, such as trucks, within a given area is accounted for) are most appropriate for the diesel particulate matter sources associated with truck idling and movement and that point source treatment is most appropriate for ship activity and train idling emissions where the source of emissions has little to no movement (i.e., ships idling at the port). Additionally, the treatment of downwash in AERMOD is based on the Plume Rise Model Enhancements (PRIME) model which is integrated into AERMOD for point sources (Schulman et al. 2000) only and is therefore only applicable to point and flare

emission source types. In addition, PRIME algorithms have not been updated and the current treatment of downwash does not reflect more recent research and the current understanding of downwash effects.[1]

The Draft EIR modeled the mobile sources in the AERMOD dispersion model as line-volume sources consistent with SCAQMD guidance that represent on- and off-site truck movements and idling and is consistent with industry standard analysis. As the building downwash modeling option is applicable to point and flare emissions source types, it is not applicable to line-volume sources that were modeled for the Project.

With regard to emissions from backup generators, tenants of the proposed buildings are not known and it is not possible to know if or where backup generators would be installed. In addition, area sources (which encompass a general area on the site as opposed to a specific location for a point source) assume less dispersion due to a lower release height of pollutants (closer ground level) and lower exit velocity (speed at which pollutants are emitted from the exhaust) compared to a point source with a higher release height and exit velocity. The lower release height and lower exit velocity associated with the area sources assumed in the modeling results in a more conservative analysis in that greater pollutant concentrations near the ground-level (in closer proximity to receptors) released at lower speeds would disperse slower. Therefore, areas sources were modeled to account for backup generators throughout the Project Site to provide a more conservative analysis. The modeling data is available in ***Appendix B*** of the Draft EIR. Therefore, no further revision to the analysis in the Draft EIR is required.

Response L1-g

Though not required by CEQA, the analysis in the Draft EIR (***Section 4.3: Air Quality*** of the Draft EIR, pages 4.3-32 through 4.3-46, and ***Appendix B2: Health Risk Assessment Data*** of the Draft EIR) conservatively analyzed localized impacts from Project operations on future on-site residential receptors. As discussed in ***Section 4.3: Air Quality*** of the Draft EIR, pages 4.3-32 through 4.3-46, mitigated buildout operations would not result in significant impacts related to localized criteria pollutant emissions (see Tables 4.3-19 and 4.3-20 in ***Section 4.3: Air Quality*** of the Draft EIR) or carcinogenic and non-carcinogenic risks (see Tables 4.3-21 and 4.3-22 in ***Section 4.3: Air Quality*** of the Draft EIR), at off-site or future on-site residential receptors. Based on California Green Building Standards Code (CALGreen) Section 5.504.5.3 requirements, most residential heating, air conditioning, and ventilation (HVAC) systems are rated for MERV13. The use of filters greater than MERV13 is not required and no presumed effectiveness or feasibility of a particular HVAC filter to filter out DPM or VOC has been accounted for in the analysis. It is noted that maintenance of the HVAC systems including filters would be performed by the building manager to ensure filters are changed regularly and that systems are fully functioning. Additionally, buildings are required to be energy efficient, meeting the strict standards of Title 24 (Part 6 and Part 11), which would offset the HVAC system energy consumption. Therefore, no further action needed. Therefore, no further revision to the analysis in the Draft EIR is required.

[1] U.S. EPA, Issues Related to Building Downwash in AERMOD. https://www.epa.gov/sites/default/files/2021-01/documents/downwash_overview_white_paper.pdf.

Response L1-h

The Draft EIR identifies potentially significant levels of emissions during construction and operation of the proposed Project. The Draft EIR also includes a number of Plans, Programs, and Policies, standard conditions, and mitigation measures to reduce impacts from the proposed Project. These Plans, Programs, and Policies are provided within ***Section 4.3: Air Quality*** of the Draft EIR, pages 4.3-15 through 4.3-16; Regulatory Requirements are included within ***Section 4.3: Air Quality*** of the Draft EIR, pages 4.3-27 through 4.3-28; and mitigation measures are provided within ***Section 4.3: Air Quality*** of the Draft EIR, pages 4.3-28 through 4.3-30 and page 4.3-44. The City disagrees that the suggested performance standards must be adopted in the Final EIR, as discussed further below.

The City requires the use of "Super-Compliant" low VOC paints during construction through the implementation of Mitigation Measure (MM) AQ-1. The City designed air quality mitigation measures to require strategies which can reasonably be seen as feasible at the time Project operations are expected to begin. For example, it would not be feasible to require the Project Applicant to use more electric construction equipment than stated in the Draft EIR or zero emissions or near zero emissions heavy-duty trucks because such equipment suitable for project construction are not now nor are they expected to be commercially available to meet the construction needs of the Project within the Project schedule. Specifically, MM AQ-2 through MM AQ-7 have been identified to reduce operational emissions. MM AQ-2 requires that all cargo handling equipment used on a daily basis (yard trucks/hostlers, forklifts, etc.) be electric. MM AQ-3 requires the implementation of a Transportation Demand Management program to reduce single occupant vehicle trips and encourage transit. MM AQ-4 requires the buildings to be designed to accommodate EV infrastructure, and MM AQ-5 prohibits idling when engines are not in use. MM AQ-7 prohibits refrigerated warehouse space/cold storage. MM GHG-1 requires that the Project incorporate project design features to achieve a minimum score of 100 points on the Climate Action Plan Screening Tables. Incorporation of eligible design features such as low-flow water fixtures and renewable energy would result in reduced operational emissions. Additionally, Standard Condition (SC) AQ-9 through SC AQ-11 would provide designated parking to promote the use of alternative fuels and clean fleets, facilitate future installation of EV supply equipment, and limit idling times.

This comment provides a list of recommended additional mitigation measures to reduce the Project's operational VOC and NO_X emissions. The Draft EIR identifies a number of Plans, Programs, and Policies, standard conditions, and mitigation measures to reduce impacts from the proposed Project. These Plans, Programs, and Policies are provided within ***Section 4.3: Air Quality*** of the Draft EIR, pages 4.3-15 through 4.4-16; Regulatory Requirements are included within ***Section 4.3: Air Quality*** of the Draft EIR, pages 4.3-27 through 4.3-28; and mitigation measures are provided within ***Section 4.3: Air Quality*** of the Draft EIR, pages 4.3-28 through 4.3-30 and page 4.3-44. The City disagrees that the suggested additional mitigation measures are necessary and feasible. The applicability and feasibility of each of these proposed measures is discussed below:

Mitigation Measures for Operational Air Quality Impacts from Mobile Sources

1) *Require zero-emissions (ZE) or near-zero emission (NZE) on-road haul trucks.*
   The suggested measures contained in the comment related to ZE or NZE vehicles are not feasible to implement, because the availability of vehicles equipped with such technology in the opening

year is speculative. Even with adoption of CARB's Advanced Clean Truck Rule, CARB acknowledges that it will take time for ZE and NZE vehicles to become commercially availability and to penetrate market.

Emissions of motor vehicles are controlled by State and federal standards, and neither the City nor the Project has control over these standards. Federal and State agencies regulate and enforce vehicle emission standards. Trucks accessing the Project site would be subject to the Advanced Clean Truck Regulation, CARB's Mobile Source Strategy, CARB's Sustainable Freight Action Plan, and CARB's Emissions Reduction Plan for Ports and Goods Movement. Additionally, trucks are subject to the Heavy-Duty Low NO_X Omnibus Regulation. As noted in the comment, these regulations are required for all trucks. These suggested mitigation measures are already part of the existing regulatory environment and would not be considered mitigation under CEQA. For example, CARB already regulates truck emissions with the Advanced Clean Truck Regulation, the Mobile Source Strategy (including the low-NO_X engine emissions standard), the Sustainable Freight Action Plan, and the Emissions Reduction Plan for Ports and Goods Movement, among others. As these regulations are already required, they do not represent CEQA mitigation for the Project.

2) *Require a phase-in schedule to incentivize the use of cleaner operating trucks to reduce any significant adverse air quality impacts.*

Refer to response L1-h(1), above. As these regulations are already required, they do not represent CEQA mitigation for the Project.

3) At a minimum, require the use of a 2010 model year that meets CARB's 2010 engine emissions standards.

The CARB Truck and Bus Regulation required trucks to be upgraded to 2010 or new model year engines. The Truck and Bus regulation has been in effect since December 2008 and the final deadline for the last replacement phase of the regulation was January 1, 2023. As this regulation is already required, it does not represent CEQA mitigation for the Project.

4) Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the Final CEQA document.

The analysis provided in the Draft EIR is based on a set of realistic, but conservative, assumptions regarding the magnitude of potential activities resulting from the proposed Project, including truck trip estimates. The comment does not provide any substantial evidence that the Proposed Project would exceed this estimate and therefore such an action would not reduce any potentially significant impacts.

5) Provide electric vehicle (EV) charging stations or, at a minimum, provide electrical infrastructure, and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment.

Draft EIR PDF GHG-2 ensures that the tilt-up concrete warehouse buildings shall have rooftops that can support tenant improvements for solar panels (i.e., solar-ready). As discussed in ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR, page 4.8-37, the Project would comply with the Building Energy Efficiency Standards, the California Green Building Standards Code (CALGreen), and energy efficiency measures implemented by the City's Climate Action Plan (CAP). Consistent with the CAP, the buildings developed under the Project would have rooftops that can support solar panels (i.e., solar-ready) which will comply with solar ready requirements of the Building Energy Efficiency Standards, which would enable future tenants to install a PV system. Further, MM AQ-4 requires electrical conduit for future electric trucks. Therefore, the Project would be consistent with this recommended measure.

Commenter-Recommended Mitigation Measures for Operations Air Quality Impacts from Other Area Sources

1) *Maximize the use of solar energy by installing solar energy arrays.*

The proposed Project would promote renewable energy sources including passive solar collection, subject to the City of Ontario policies and development regulations, within the Business Park and Mixed-Use Districts. Draft EIR PDF GHG-2 ensures that the tilt-up concrete warehouse buildings shall have rooftops that can support tenant improvements for solar panels (i.e., solar-ready). As discussed in ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR, page 4.8-37, the Project would comply with the Building Energy Efficiency Standards, the California Green Building Standards Code (CALGreen), and energy efficiency measures implemented by the City's Climate Action Plan (CAP). Consistent with the CAP, the buildings developed under the Project would have rooftops that can support solar panels (i.e., solar-ready) which will comply with solar ready requirements of the Building Energy Efficiency Standards, which would enable future tenants to install a PV system. The residential buildings on-site would be prewired for the future installation of solar collection improvements. Therefore, the Project would be consistent with this recommended measure.

2) *Use light-colored paving and roofing materials.*

California's Title 24, Part 6 Building Energy Efficiency Standards includes cool roof requirements for new and existing buildings. These requirements are in the following sections of the 2022 Title 24, Part 6 standards:

- Section 10-113(a): (Mandatory Labeling of Roofing Product Reflectance and Emittance)
- Section 10-113(b): (Mandatory Certification)
- Section 110.8(i): (Mandatory Insulation, Roofing Products & Radiant Barriers)
- Section 140.1: (Performance Approach: Energy Budgets [Nonresidential])
- Section 140.2: (Prescriptive Approach [Nonresidential])
- Section 140.3(a)(1): (Prescriptive Requirements for Building Envelopes [Nonresidential])

Therefore, the Project would be consistent with this recommended measure.

3) *Utilize only Energy Star heating, cooling, and lighting devices and appliances.*

2022 Title 24, Part 6 Building Energy Efficiency Standards includes requirements to meet or exceed Energy Star standards. Therefore, the Project would be consistent with this recommended measure.

Commenter-Recommended Design Considerations

1) *Clearly mark truck routes with trailblazer signs.*

Draft EIR MM AQ-5 requires the Project to post signs that direct trucks to truck routes and away from sensitive receptors. Therefore, the Project would be consistent with this recommended measure.

2) *Design the Proposed Project such that truck entrances and exits are not facing sensitive receptors and trucks will not travel past sensitive land uses to enter or leave the Proposed Project site.*

As discussed in ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR, page 4.8-34, the Project is located in proximity to existing truck routes and freeways. As mentioned, MM AQ-5 requires the Project to post signs that direct trucks to truck routes and away from sensitive receptors, consistent with City requirements that truck traffic to be routed to minimize the impact on sensitive land uses (e.g., access locations, use of traffic control features, signage). Therefore, the Project would be consistent with this recommended measure.

3) *Design the Proposed Project such that any truck check-in point is inside the Proposed Project site to ensure no trucks are queuing outside.*

As described above, the City has requirements for truck traffic. In addition, ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR, page 4.15-20, states that the "truck/trailer component of the Project is anticipated to provide overflow or excess trailer parking for nearby warehouses and distribution centers." The truck storage lot is anticipated to serve nearby warehouses and distribution facilities that would be seeking to locate overflow truck/trailer storage as close as possible to the primary warehouse or distribution facility. As a result, the trips are expected to be local serving. Therefore, the Project would be consistent with this recommended measure.

4) *Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is as far away as feasible from sensitive receptors.*

As described above, the City requires truck traffic to be routed to minimize the impact on sensitive receptors, (e.g., access locations, use of traffic control features, signage). Therefore, the Project would be consistent with this recommended measure.

5) *Restrict overnight truck parking in sensitive land uses by providing overnight truck parking inside the Proposed Project site.*

The Project is required to provide adequate on-site parking in accordance with the City's parking standards. The City requires facilities to provide adequate on-site parking and queuing for trucks/trailers away from sensitive receptors and prohibit commercial truck and/or trailer parking

on the public road right- of-way or adjacent to sensitive receptors. Therefore, the Project would be consistent with this recommended measure.

As discussed above, the City designed six operational air quality mitigation measures and one greenhouse gas (GHG) mitigation measure to require strategies which can reasonably be seen as feasible at the time Project construction and operations are expected to begin. MM AQ-2 through MM AQ-7 have been identified to reduce operational emissions. MM AQ-2 requires that all cargo handling equipment used on a daily basis (yard trucks/hostlers, forklifts, etc.) be electric. MM AQ-3 requires the implementation of a Transportation Demand Management program to reduce single occupant vehicle trips and encourage transit. MM AQ-4 requires the buildings to be designed to accommodate EV infrastructure, and MM AQ-5 prohibits idling when engines are not in use. MM AQ-7 prohibits refrigerated warehouse space/cold storage. Additionally, the applicant must complete and submit a final set of screening tables showing the achievement of the required 100 points prior to issuance of the building permit, as required by MM GHG-1. Therefore, no further revision to the analysis in the Draft EIR is required.

Response L1-i

This comment does not raise any substantive issues regarding the adequacy of the Draft EIR. No further response is necessary. Therefore, no further revision to the analysis in the Draft EIR is required.

Response L1-j

This air quality impact analysis considers construction and operational impacts associated with the Project. Where criteria air pollutant quantification was required, emissions were modeled using the California Emissions Estimator Model (CalEEMod; see ***Appendix B1: Air Quality Emissions Model Data*** of the Draft EIR). Air quality impacts were assessed according to methodologies recommended by CARB and the SCAQMD. SCAQMD rules considered in the analysis are discussed in ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR, page 4.3-9 and 4.3-10, and includes Rule 402 (Nuisance), Rule 403 (Fugitive Dust), Rule 431.2 (Sulfur Content of Liquid Fuels), Rule 1113 (Architectural Coatings), and Rule 2305 (Warehouse Indirect Source Rule). Typical construction equipment assumed by CalEEMod includes the use of generators.[2] In order to provide a conservative analysis, the Draft EIR included emissions associated with backup generators based on general assumptions and associated calculations are included in ***Appendix B***. Therefore, the construction and operations emissions estimations conservatively include the use of generators (see ***Appendix B1: Air Quality Emissions Model Data*** of the Draft EIR, ***Section 5.2*** Off-Road Equipment of CalEEMod output files).

In addition, MM AQ-2 provides the following guidance, should the City deem generators necessary: "Prior to the issuance of building permits, the City of Ontario Building Department shall confirm that if emergency generators are proposed, the Project applicant shall explore non-diesel options. If non-diesel generators are determined to not be feasible due commercial availability or the energy requirements of the project, the Project applicant shall provide written justification to be approved by the City's Building Department." If stationary equipment, such as generators, is needed, the end user would be required to

[2] California Air Pollution Control Officers Association, 2022. California Emissions Estimator Model (CalEEMod) Version 2022.1 User Guide. https://www.caleemod.com/user-guide.

obtain a permit from the SCAQMD prior to installation. Stationary equipment would be required to implement SCAQMD's Best Available Control Technology (BACT) and comply with applicable SCAQMD Rules, such as Rule 1470 (Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines). In order to provide a conservative analysis, the Draft EIR also included emissions associated with backup generators based on general assumptions (see ***Section 4.3: Air Quality*** of the Draft EIR, page 4.3-19) and the associated calculations are included in ***Appendix B1***. Therefore, no further revision to the analysis in the Draft EIR is required.

Response L1-k

The comment is general in nature, summarizing portions of California Public Resources Code and CEQA Guidelines and includes the author's salutation. The City of Ontario intends to fully comply with the requirements of California Public Resources Code Section 21092.5(a) and CEQA Guidelines Section 15088 as requested in the comment. That is, the comment requests that the City comply with CEQA when responding to SCAQMD's comments. As requested, the City's responses to SCAQMD's comments will be sent to the SCAQMD as part of the Final EIR distribution prior to certification of Final EIR. As the comment does not raise any issues with respect to the content and adequacy of the Draft EIR or the Project's environmental effects, no further response is warranted. The comment is included here to provide a complete record of the SCAQMD's letter. The comment will become part of the administrative record and will be considered by the decision-makers. The comment does not raise any CEQA related issues, and no response is therefore warranted. Therefore, no further revision to the analysis in the Draft EIR is required.

Re: Notice of Availability of a DEIR: Euclid Mixed Use Specific Plan Draft Environmental Impact Report

Dear Edmelynne,

This letter is in response to the Notice of Availability for an Environmental Impact Report for the Proposed Euclid Mixed Use Specific Plan, made available on December 22, 2023. Thank you for giving the City of Chino the opportunity to review the information and provide comment. The City's comments are outlined below: a

Traffic / Transportation

1. The Traffic Impact Analysis for the project does not assess impacts likely to occur in the City of Chino. The TIA needs to analyze all intersections along the Edison Avenue / Grand Avenue corridor from SR-71 to Euclid as this is likely to be a route for trucks from and to the project. Passenger vehicle traffic also does not analyze traffic through the City of Chino and needs to be included in the TIA. Chino's TIA guidelines require analysis of any intersection estimated to have a 50 peak hour trip increase to traffic by a project. b
2. The City of Chino will require coordination of improvements to Euclid Avenue including the modification of traffic signals at Schaefer Avenue, Red Bud Lane, and Edison Avenue. The City of Chino may require conditions of approval related to public improvements on the project to ensure improvements are built in compliance with the Chino General Plan. c
3. The Air Quality Chapter of the City of Chino General Plan speaks to Distribution centers and warehouses not being located within 1,000 feet of a sensitive receptor, this includes religious facilities, daycare, residential communities, etc (see Attachment). There is currently a daycare facility located at the intersection of Euclid Avenue and Schaefer Avenue, a religious facility with a daycare near the intersections of Euclid Avenue and Edison Avenue and a residential community just across Euclid Avenue south of Schaefer Avenue. Distribution/Warehouse buildings that operate with more than 100 truck trips per day would need to be located outside of these 1,000 feet. What is the proposed daily trip generation of each building and the distance from the buildings from these sensitive receptors? Please provide a plan that shows the distance to the buildings that intend to have greater than 100 truck trips per day. d

Web Site: www.cityofchino.org

Public Works

1. The notice indicated the project is on 84.1 acres, but the PWQMP seems to only cover 58.6 acres. Additionally, the area is ultimately tributary to Chino's master storm drain Line "I" and the site is recognized as a high potential for trash debris to be conveyed to that facility. To provide a better full capturing of debris, onsite filters and full trash capture devices should be incorporated into WQMP. e
2. The project site is located within 1,000 feet of Chino's water treatment facility. Dust control and circulation of traffic during construction should be maintained. f
3. Outdoor trailer parking is proposed in open space zoning. Will this open space be replaced elsewhere? g

If you have any questions, please contact Chris Cortez, Assistant Planner, by email at ccortez@cityofchino.org, or by phone at 909-334-3250.

Sincerely,

Chris Cortez

D. Goals, Objectives, Policies, and Actions

See the Open Space and Conservation Element for goals, objectives, policies, and actions related to greenhouse gas emissions and climate change. Also see the Transportation Element for additional goals, objectives, policies, and actions related to reducing emissions associated with vehicle travel.

Goal AQ-1 Preserve and improve air quality in Chino and the region.

Objective AQ-1.1 Improve air quality through land use and transportation planning decisions.

Policies

P1. The City shall promote land use patterns that reduce the number and length of motor vehicle trips.

P2. Where development opportunities near shopping areas and transit corridors exist, the City shall prioritize higher-density residential development.

P3. The City shall encourage employment areas to include a mix of retail support services.

P4. Design new intersections to function in a manner that reduces air pollutant emissions from stop and start and idling traffic conditions.

P5. The City shall, to the extent practicable, separate sensitive land uses (schools, senior centers, medical facilities, and residences) from significant sources of air pollutants, toxic air contaminants, or odor emissions.

P6. The City shall require developers of projects that include sensitive land uses (schools, senior centers, medical facilities, and residences) in proximity to State Route 71 and State Route 60 to prepare a health impact assessment (HIA) to determine the significance of

the impact, and to incorporate project-specific mitigation measures to avoid this risk.

P7. The City shall promote expansion of employment opportunities within Chino to reduce commuting to areas outside of the City.

P8. The City shall continue to enforce the vehicle idling restrictions established by the State.

P9. The City shall prohibit each and every new land use that has the potential to be a source of air pollution from being located closer than the specified minimum distance from any sensitive land use (when measured as a straight line between the points of the new land use and the sensitive land use that are closest to each other):

- Freeways, urban roads with over 100,000 daily vehicle trips, or rural roads with over 50,000 daily vehicle trips – 500 feet.
- Distribution centers, warehouses, and other facilities serving as a distribution point for the transfer of goods with over 100 trucks per day, over 40 trucks with transport refrigeration units per day, or with all such units operating more than 300 hours per week – 1,000 feet.
- Rail yards or railroads – 1,000 feet.
- Facilities where crude oil is converted into any petroleum product – 1,000 feet.
- Chrome platers and other operations using hexavalent chromium – 1,000 feet.
- Dry cleaners and other operations using perchloroethylene – 500 feet.
- Gasoline-dispensing facilities with the potential for total throughput equal to 3,600,000 gallons or more per year – 300 feet.

- Gasoline-dispensing facilities with no potential for total throughput in excess of 3,600,000 gallons per year – 50 feet.

"Sensitive land use" refers to any and all land uses where sensitive receptors are likely to spend time, including, but not limited to schools, schoolyards, parks, playgrounds, daycare facilities, nursing homes, hospitals, religious facilities, and residential communities; "sensitive receptors" refers to children, the elderly, and members of the public with serious health problems affected by air quality; and "new land use" includes the development of undeveloped land, the redevelopment of an existing developed site, or any use that requires a new permit from the City (whether ministerial or discretionary) even if no construction is involved.

P10. The City shall require each and every new land use where any sensitive receptor may be present for any period of time to employ all commercially reasonable design techniques and equipment sufficient to minimize to the maximum extent feasible all potential exposures to air pollution on the site of the use.

Objective AQ-1.2

Actions

A1. Implement traffic features such as roundabouts or the use of integrated signalization to improve traffic flow and reduce emissions from vehicle idling and stop and start.

A2. Install LED traffic signals throughout Chino to reduce the City's electricity consumption.

A3. Utilize the latest energy-efficient technologies for street and parking lot lights that meet City and state standards.

A4. Establish a local ordinance that exceeds the State vehicle idling restrictions where appropriate, including restrictions for bus layovers, delivery vehicles, trucks at warehouses and distribution facilities, and taxis, particularly when these activities take place close to sen-

This page intentionally left blank.

Response to Comment Letter L2 – City of Chino

Response L2-a

Comment is introductory and general in nature. Therefore, no further action needed. Therefore, no further revision to the analysis in the Draft EIR is required.

Response L2-b

The commentor states that the Project Traffic Impact Analysis (Traffic Analysis) does not assess impacts that are likely to occur in the City of Chino. The City disagrees with this assertion. Roadways and intersections that could likely be substantially affected by Project traffic were identified through the Project Traffic Study Scoping Agreement, included within ***Appendix I1: Traffic Analysis*** of the Draft EIR. The City of Ontario (the CEQA Lead Agency) has reviewed and approved the Traffic Study Scoping Agreement.

The Traffic Study Scoping Agreement identifies roadways and intersections located north, south, and east of the Project site as likely travel routes for traffic accessing the Project site. This is consistent with the Project location in the context of regional travel corridors, and the most direct travel routes available to Project traffic connecting with regional traffic corridors. More specifically, State Route 83 (SR-83, Euclid Avenue) comprises the Project site western boundary. Direct access to State Route 60 (SR-60) to the north, and State Route 71 (SR-71) to the south is provided by SR-83. Edison Avenue comprises the Project site southern boundary. Direct access to Interstate 15 (I-15) to the east is provided by Edison Avenue. It is considered unlikely that substantial traffic accessing the Project site would take a circuitous route traversing the City of Chino located west of the Project site, across SR-83. Please refer also to the Traffic Study Scoping Agreement, which is provided as Appendix 1.1: Traffic Study Scoping Agreement to ***Appendix I1: Traffic Analysis*** of the Draft EIR.

City of Chino Traffic Impact Analysis guidelines cited by the commentor are recognized. The Project is located in the City of Ontario (the CEQA Lead Agency). Accordingly, the Project Traffic Analysis has been prepared consistent with City of Ontario requirements.

As a general note, commentor concerns regarding Traffic Impact Analysis roadway performance standards (Level of Service [LOS] impacts) are recognized. However, LOS is not an environmental concern recognized under CEQA. The Traffic Analysis and LOS information presented in the Draft EIR are provided for the purposes of developing roadway general design and performance parameters. The City may employ these designs and standards in future planning and development of the area circulation system. LOS considerations do not affect findings and conclusions of the Draft EIR.

Based on the preceding, findings and conclusions of the Draft EIR are not affected. Therefore, no further revision to the analysis in the Draft EIR is required.

Response L2-c

Comment noted. The comment makes no specific claim regarding the validity of the Draft EIR. Pursuant to State CEQA Guidelines Section 15088(a), a lead agency is only required to evaluate and respond to comments raised on environmental issues, and thus no further response is necessary. The City of Ontario

will coordinate with the City of Chino regarding improvements to Euclid Avenue including the modification of traffic signals at Schaefer Avenue, Red Bud Lane, and Edison Avenue. Generally, the City of Ontario will coordinate with the City of Chino to ensure compatible design(s) and construction of shared public improvements, and public improvements transitions. Therefore, no further revision to the analysis in the Draft EIR is required.

Response L2-d

City of Chino General Plan Air Quality Chapter requirement for a 1,000-foot separation between distribution warehouse operations with 100 or greater trucks per day and sensitive receptors is recognized. The 1,000-foot separation is intended to buffer or avoid air pollutant effects of warehouse operations at proximate sensitive land uses. The Project is closer than 1,000 feet to the sensitive uses identified by the commentor; also depicted in ***Section 4.12: Noise*** of the Draft EIR, Figure 4.12-1: Sensitive Receptors and Noise Measurement Locations.[3] The Project in total would generate more than 100 truck trips per day, as discussed in ***Section 4.15: Transportation and Traffic*** of the Draft EIR, page 4.15-13.

The Ontario Plan 2050 (TOP 2050) Policy ER-4.9 incorporates provisions similar to those adopted by the City of Chino addressing protection of sensitive land uses. TOP 2050 Policy ER-4.9 requires that new developments conduct a Health Risk Assessment (HRA) for land uses that generate more than 100 trucks per day, or 40 trucks per day for trucks with transportation refrigeration units (TRU's), if these developments are located within 1,000 feet of sensitive land uses.

Consistent with City of Ontario requirements, a construction and operational phase HRA has been prepared for the Project and is incorporated in ***Section 4.3: Air Quality*** and ***Appendix B*** of the Draft EIR. In this manner, the Draft EIR fully considers and addresses the Project's potential localized air quality impacts at sensitive uses, including those uses cited by the commentor. The analysis presented in ***Section 4.3: Air Quality*** of the Draft EIR, pages 4.3-30 through 4.3-44, and in the Project HRA Modeling within ***Appendix B*** of the Draft EIR substantiate that localized air quality impacts to all areas having sensitive receptors (including sensitive receptors located in the City of Chino) would be less-than-significant as mitigated by MM AQ-1 through AQ-8. As shown in ***Section 4.3: Air Quality*** of the Draft EIR, page 4.3-28, MM AQ-1 requires the Project to use "Super-Compliant" low VOC paints. As shown in ***Section 4.3: Air Quality*** of the Draft EIR, pages 4.3-28 and 4.3-29, MM AQ-2 requires that all cargo handling equipment used on a daily basis (yard trucks/hostlers, forklifts, etc.) be electric. As shown in ***Section 4.3: Air Quality*** of the Draft EIR, page 4.3-29, MM AQ-3 requires the implementation of a Transportation Demand Management program to reduce single occupant vehicle trips and encourage transit. As shown in ***Section 4.3: Air Quality*** of the Draft EIR, pages 4.3-29 and 4.3-30, MM AQ-4 requires the buildings to be designed to accommodate electric vehicle infrastructure, and MM AQ-5 prohibits idling when engines are not in use. As shown in ***Section 4.3: Air Quality*** of the Draft EIR, page 4.3-30, MM AQ-6 prohibits the installation of wood-burning and natural gas devices. As shown in ***Section 4.3: Air Quality*** of the Draft EIR, page 4.3-30, MM AQ-7 prohibits refrigerated warehouse space/cold storage. As shown in ***Section 4.3: Air Quality*** of the Draft EIR, page 4.3-44, MM AQ-8 requires off-road equipment

[3] The nearest sensitive receptor to Project Phase I is a single-family residence located 135 feet (41 meters) west of the Project [in the City of Chino] (Draft EIR. p. 4.3-31)

50 horsepower or greater to meet California Air Resources Board Tier 4 Final standards. Therefore, no further revision to the analysis in the Draft EIR is required.

Response L2-e

The commenter is requesting clarification on the scope of the Preliminary Water Quality Management Plan that was prepared on March 16, 2023, for the Phase I area. The Phase II area is being evaluated only at a programmatic level, and there are no specific development proposals at this time. Upon commencement of project-level CEQA review for the Phase II area, a WQMP for the Phase II area would be conducted, similar to that of the Phase I analysis.

During future development of the Phase II area, Best Management Practices (BMPs), which could include debris capture, onsite filters, and full trash capture devices, would be incorporated as necessary. Additionally, ***Section 4.10: Hydrology and Water Quality*** of the Draft EIR, page 4.10-15, states that, while the Phase I development structures and associate would alter the existing hydrological characteristics of the site, impacts associated with water quality would be less than significant, as the Project would not increase the time of concentration and the post-development runoff volume would incorporate applicable BMPs. Therefore, the comment is noted for the record and no further revision to the Draft EIR is warranted.

Response L2-f

The commenter requests that dust control and circulation of traffic during construction should be maintained. As stated in ***Section 4.3: Air Quality*** of the Draft EIR, page 4.3-15, Project construction activities would be conducted in compliance with any applicable South Coast Air Quality Management District (SCAQMD) rules and regulations, including SCAQMD Rule 403. SCAQMD Rule 403 for Fugitive Dust requires fugitive dust sources to implement BMPs for all sources. Additionally, as discussed in ***Section 4.15: Transportation and Traffic*** of the Draft EIR, the Project would be required to comply with City Municipal Code Section 7-3.07, which requires that prior to any activity that would encroach into a right-of-way, the area be safeguarded through the installation of safety devices that would be specified by the City's Engineering Department during the construction permitting process to ensure that construction activities would not increase hazards. Therefore, no revisions to the Draft EIR are warranted.

Response L2-g

Comment noted. The comment makes no specific claim regarding the validity of the Draft EIR. Pursuant to State CEQA Guidelines Section 15088(a), a lead agency is only required to evaluate and respond to comments raised on environmental issues, and thus no further response is necessary. The Project would allow for approximately 12 acres of open space designated for non-recreational uses. While no buildings are proposed within this area, it is suitable for uses such as landscape plant nurseries, recreational vehicle and truck/trailer storage and other uses allowed by the City zoning. No further revision to the analysis in the Draft EIR is required.

Response L2-h

Comment is introductory and general in nature. Therefore, no further action needed.

Subject: Comments on Euclid Mixed Use Specific Plan EIR PLAN EIR (SCH NO. 2023020281)

Dear Ms. Hutter,

Thank you for the opportunity to comment on the Environmental Impact Report (EIR) for the proposed Euclid Mixed Use Specific Plan Project. Please accept and consider these comments on behalf of Golden State Environmental Justice Alliance. Also, Golden State Environmental Justice Alliance formally requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877. a

1.0 Summary

The project proposes to demolish all existing onsite structures to accommodate the construction and operation of the Euclid Mixed Use Specific Plan (EMUSP). The EMUSP is composed of primarily industrial land uses with ancillary supporting commercial and includes a residential aspect. The EMUSP is anticipated to be developed in two phases (Phase I: industrial and commercial; Phase II: residential) within five planning areas on 18 parcels covering 84.1 acres in the City of Ontario. The project includes 1,386,777 square feet of business park/industrial uses, 290,110 square feet of commercial retail/office uses, and up to 466 residential units, and associated on-site and off-site infrastructure improvements. b

4.3 Air Quality, 4.6 Energy, and 4.8 Greenhouse Gas Emissions

Please refer to attachments from SWAPE for a complete technical commentary and analysis. c

The EIR does not include for analysis relevant environmental justice issues in reviewing potential impacts, including cumulative impacts from the proposed project. This is especially significant as the surrounding community is highly burdened by pollution. According to CalEnviroScreen 4.0[1], CalEPA's screening tool that ranks each census tract in the state for pollution and socioeconomic vulnerability. The proposed project's census tract (6071001905) is ranked in the 95th percentile for overall pollution burden, meaning the surrounding community bears the impact of multiple sources of pollution and is more polluted than average on several pollution indicators measured by CalEnviroScreen. For example, the project census tract ranks in the 80th percentile for ozone burden, 96th percentile for particulate matter (PM) 2.5 burden, and 61st percentile for diesel particulate matter burden. All of these environmental factors are typically attributed to heavy truck activity in the area. Ozone can cause lung irritation, inflammation, and worsening of existing chronic health conditions, even at low levels of exposure[2]. The very small particles of diesel PM can reach deep into the lung, where they can contribute to a range of health problems. These include irritation to the eyes, throat and nose, heart and lung disease, and lung cancer[3].

cont'd c

The census tract ranks among the most severely impacted in several areas that impact water quality. The census tract ranks in the 98th percentile for groundwater threats. People who live near contaminated groundwater may be exposed to chemicals moving from the soil into the air inside their homes[4]. Accordingly, the census tract ranks in the 100th percentile for drinking water impacts, which indicates that it ranks with the worst quality drinking water in the state. Poor communities and people in rural areas are exposed to contaminants in their drinking water more often than people in other parts of the state[5]. The census tract also ranks in the 44th percentile for impaired waters. Water pollution can harm wildlife habitats and change the number and types of plants and animals in the environment[6]. When fish and shellfish are contaminated, people who eat them can be exposed to toxic substances[7].

d

The census tract also ranks in the 96th percentile for solid waste facility impacts and 64th percentile for hazardous waste facility impacts. Solid waste facilities can expose people to hazardous chemicals, release toxic gases into the air (even after these facilites are closed), and chemicals can

e

[7] Ibid.

leach into soil around the facility and pose a health risk to nearby populations[8]. Hazardous waste generators and facilities contribute to the contamination of air, water and soil near waste generators and facilities can harm the environment as well as people[9].

cont'd e

The census tract ranks in the 70th percentile for toxic releases. People living near facilities that emit toxic releases may breathe contaminated air regularly or if contaminants are released during an accident[10].

f

Further, the census tract is a diverse community including 55% Hispanic, 3% African-American and 17% Asian-American residents, whom are especially vulnerable to the impacts of pollution. The community has a high rate of low educational attainment, meaning 52% of the census tract over age 25 has not attained a high school diploma, which is an indication that they may lack health insurance or access to medical care. The community also has a high rate of poverty, meaning 35% of the households in the census tract have a total income before taxes that is less than the poverty level. Income can affect health when people cannot afford healthy living and working conditions, nutritious food and necessary medical care[11]. Poor communities are often located in areas with high levels of pollution[12]. Poverty can cause stress that weakens the immune system and causes people to become ill from pollution[13]. Living in poverty is an indication that residents may lack health insurance or access to medical care. Medical care is vital for this census tract as it ranks in the 68th percentile for incidence of cardiovascular disease.
The community also has a high rate of linguistic isolation, meaning 76% of the census tract speaks little to no English and faces further inequities as a result.

g

The State of California lists three approved compliance modeling softwares[14] for non-residential buildings: CBECC-Com, EnergyPro, and IES VE. CalEEMod is not listed as an approved software. The CalEEMod modeling does not comply with the 2022 Building Energy Efficiency Standards and under-reports the project s significant Energy impacts and fuel consumption to the public and decision makers. Since the EIR did not accurately or adequately model the energy

impacts in compliance with Title 24, a finding of significance must be made. A revised EIR with modeling using one of the approved software types must be prepared and circulated for public review in order to adequately analyze the project s significant environmental impacts. This is vital as the EIR utilizes CalEEMod as a source in its methodology and analysis, which is clearly not an approved software.

cont'd h

The EIR analyzes the potentially significant impacts from Greenhouse Gas Emissions in a qualitative manner pursuant to CEQA Guidelines Section 15064.4. However, the consistency analysis provided is erroneous and does not demonstrate a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate or estimate the amount of greenhouse gas emissions resulting from the project and its significance. The EIR quantitatively concludes that the proposed project will have an annual operational emissions of 36,129 MT CO2e (22,787 MT CO2e Phase I and 13,342 MT CO2e Phase II), which is 12 times greater than the threshold of 3,000 MT CO2e annually. The EIR includes MM GHG-1 to require that the "Project incorporate project design features to achieve a minimum score of 100 points on the Screening Tables" within the Ontario Community Climate Action Plan (CCAP). The EIR continues in stating that, "As stated in the Community CAP, projects that achieve a minimum score of 100 points are considered less than significant. A preliminary set of the screening tables has been completed to show that the Project can feasibly achieve 100 points (refer to Appendix B)."

i

However, Table 4.8-8: Community CAP Consistency provides erroneous and misleading consistency analysis of the proposed project with the reduction measures in order to conclude the project will have less than significant impacts. For example, Table 4.8-8 states that the project is consistent with "Transportation – Strategy 9, Transit-Oriented Development: Encourage development of compact, mixed-use, and transit-oriented development to improve the regional jobs-housing balance, especially on corridors served by high-ridership transit and bus rapid transit, such as Holt Avenue" because the "proposed Project would provide a mixed-use development along a high volume corridor, Euclid Avenue." This does not reflect the status of the transit facilities adjacent to the project site. The EIR states within the Transportation analysis that "The City is coordinating with regional transit agencies to implement BRT service to target destinations and along corridors, including Euclid Avenue on the western boundary of the Project site. The Project is located near Omnitrans Route 81. Omnitrans Route 81 operates on Riverside Drive north of the site. *However, there are no existing bus routes near the vicinity of the Project*." Bus service, including BRT that would serve a Transit Oriented Development, does not exist near the project site. The proposed project is not a Transit Oriented Development and will not be served by transit.

j

To further demonstrate the inaccuracy of proposed GHG reductions, Table 4.8-9: GHG Reduction Measures Screening Table for Ontario Development includes consistency analysis and CCAP

k

points for the residential portion of the proposed project, which is analyzed at a Programmatic level in the EIR. There is no site plan or development information provided for the proposed residential as part of the EIR. It is not appropriate to assign GHG reductions based on project-level specifics that are not discussed or included in the EIR otherwise for analysis and the residential portion of the project is only analyzed at a Programmatic level throughout the EIR. For example, the EIR assigns CCAP points for residential "Building Placement: North/South alignment of building or other building placement such that the orientation of the buildings optimizes natural heating, cooling, and lighting," and "Daylighting: All rooms daylighted," even though there is no site plan or floor plan provided. It is not possible to predict the layout of the future residential building placement and floor plan layouts within those buildings.

cont'd k

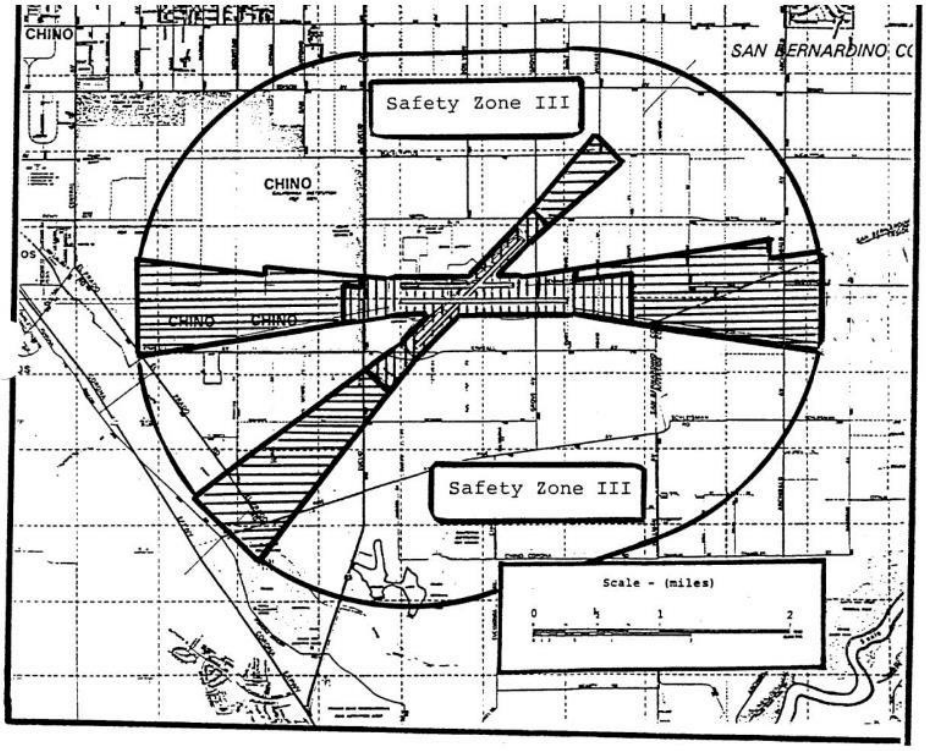
The efficacy of the proposed mitigation measures and reduction of GHG impacts below the applicable thresholds via points counted on the CCAP Tables cannot be assured and the project's GHG impact is therefore considered significant and unavoidable. A revised EIR must be prepared to include a finding of significance because there is no possible assurance that the project will comply with the proposed CCAP items, and the project site is factually not served by BRT, or any form of transit, and the EIR has utilized the CCAP screening tables to mislead the public and decision makers by erroneously concluding that a qualitative assessment of the project will reduce the project's 36,129 MT CO2e annual emissions to less than significant levels. Mitigation of the project's GHG impact to less than significant is not feasible, whether via the CCAP tables or otherwise.

l

Table 4.8-10: 2020-2045 RTP/SCS Consistency provides a misleading and erroneous consistency analysis with SCAG's 2020-2045 Connect SoCal RTP/SCS. Due to errors in modeling, modeling without supporting evidence (as noted throughout this comment letter and attachments), and the EIR's conclusion that the proposed project will have significant and unavoidable impacts to Air Quality and Greenhouse Gas Emissions, the project is directly inconsistent with Goal 5 to reduce greenhouse gas emissions and improve air quality, Goal 6 to support healthy and equitable communities, and Goal 7 to adapt to a changing climate. A revised EIR must be prepared to include a finding of significance due to these inconsistencies with SCAG's 2020-2045 Connect SoCal RTP/SCS.

m

4.9 Hazards and Hazardous Materials



The EIR has not adequately or accurately analyzed the proposed project in accordance with CEQA Guidelines Environmental Checklist threshold, "For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working

n

in the project area?" It appears the EIR has solely utilized Chino Airport compatibility information from the Riverside Airport Land Use Commission. Chino Airport and the project site are both located within San Bernardino County, meaning that the San Bernardino County Airport Land Use Commission has jurisdiction over both items. Figure 4.9-1: Chino Airport Compatibility Zones is sourced to Riverside Airport Land Use Compatibility Plan Policy Document, Map CH-1 Compatibility Map Chino Airport, 2008, which ultimately does not provide a completely accurate depiction of analysis as RCALUC is not the approval body. Notably, it appears that the project site, including the southern residential portion of the site, is within Safety Zone III, which is a potentially significant impact that has not been analyzed by the EIR. The EIR must be revised to include an accurate consistency analysis with the SBALUC Chino Airport Compatibility Plan[15].

cont'd
n

4.11 Land Use and Planning

o

The EIR omits discussion and analysis regarding the project's inconsistency with other land use plans, policies, or regulations adopted for the purpose of avoiding or mitigating an environmental effect. For example, the project will have a significant and unavoidable cumulatively considerable impact to Air Quality because it will exceed the assumptions in the AQMP and generate operational-source emissions (VOC and NOX) that exceed SCAQMD thresholds. The project will also have a significant and unavoidable cumulatively considerable impact to Greenhouse Gas Emissions because the annual operational emissions of 36,129 MT CO2e (22,787 MT CO2e Phase I and 13,342 MT CO2e Phase II) will exceed the City's threshold of 3,000 MT CO2e per year and

will impede long-term GHG reduction goals of various plans (e.g., for 2030 and 2050) adopted for the purpose of reducing GHG emissions. The Land Use and Planning analysis omits any discussion regarding inconsistencies with the AQMP and California s statewide GHG reduction goals for 2030 and 2050. The EIR must be revised to include these significant and unavoidable cumulatively considerable impacts for analysis and include a finding of significance.

cont'd o

The EIR also does not provide any information regarding the buildout conditions of the City's General Plan. The EIR must be revised to provide a cumulative analysis discussion of projects approved since General Plan adoption and projects in the pipeline" to determine if the project will exceed the City s General Plan buildout scenario.

p

Table 4.11-2: Consistency with SCAG s 2020-2045 RTP/SCS Goals provides a misleading and erroneous consistency analysis with SCAG's 2020-2045 Connect SoCal RTP/SCS. Due to errors in modeling, modeling without supporting evidence (as noted throughout this comment letter and attachments), and the EIR's conclusion that the proposed project will have significant and unavoidable impacts to Air Quality and Greenhouse Gas Emissions, the project is directly inconsistent with Goal 5 to reduce greenhouse gas emissions and improve air quality, Goal 6 to support healthy and equitable communities, and Goal 7 to adapt to a changing climate. A revised EIR must be prepared to include a finding of significance due to these inconsistencies with SCAG's 2020-2045 Connect SoCal RTP/SCS.

q

The EIR does not provide an accurate consistency analysis with all land use plans, policies, or regulations adopted for the purpose of avoiding or mitigating an environmental effect. Table 4.11-3: Consistency with the City of Ontario General Plan (TOP) 2050 provides a misleading and erroneous consistency analysis with several items from the TOP:

r

1. Policy LU5-7 *ALUCP Consistency with Land Use Regulations.* We comply with state law that requires general plans, specific plans and all new development be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public use airport.

As stated above, the EIR has not adequately or accurately analyzed the project's consistency with the San Bernardino County ALUC Chino Airport Compatibility Plan. The EIR must be revised to include a statement regarding the inconsistency and include a finding of significance.

s

2. Policy ER4-1 *Land Use.* We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.

As stated above, the EIR has provided a misleading and inaccurate qualitative analysis of the project's GHG emissions that cannot be feasibly assured to reduce GHG emissions to less than significant levels. The EIR must be revised to include a statement regarding the inconsistency and include a finding of significance. t

3. Policy ER4-6 *Particulate Matter*. We support efforts to reduce particulate matter to meet State and Federal Clean Air Standards.

The EIR concludes that the proposed project will have significant and unavoidable impacts to Air Quality, including inconsistency with the AQMP and exceeding emissions threshold for VOC and NOX. The EIR must be revised to include a statement regarding the inconsistency and include a finding of significance. u

Further, the EIR has not provided consistency analysis with all TOP items, and a revised EIR must be prepared to include a consistency analysis with all goals and policies of the TOP, including but not limited to the following: v

1. Policy CE3-1 *Fiscal Impact Disclosure*. We require requests for City Council action to disclose the full fiscal impacts, including direct and indirect costs.

2. Policy M1-5. Roadways maintain a peak hour Level of Service (LOS) E or better at all intersections.

Table 1-3: Summary of Improvements by Analysis Scenario within Appendix I concludes the following intersections outside the sole jurisdiction of the lead agency require improvements to address the peak hour deficiencies per the applicable thresholds of significance. Appendix I and Table 1-3 also provide a list of fair-share calculations for improvements that will allegedly mitigate significant and unavoidable impacts to the intersections to less than significant levels. w

1. #1: Euclid Av. (SR-83) & SR-60 WB Ramps (Ontario/Caltrans)
2. #2: Euclid Av. (SR-83) & SR-60 EB Ramps (Ontario/Caltrans)
3. #4: Euclid Av. (SR-83) & Riverside Dr (Ontario/Caltrans/Chino)
4. #5: Euclid Av. (SR-83) & Chino Av (Ontario/Caltrans/Chino)
5. #6: Euclid Av. (SR-83) & Schaefer Av (Ontario/Caltrans/Chino)
6. #11: Euclid Av. (SR-83) & Edison Av. (Ontario/Caltrans/Chino)
7. #12: Euclid Av. (SR-83) & Eucalyptus Av. (Ontario/Caltrans/Chino)
8. #13: Euclid Av. (SR-83) & Merrill Av. (Ontario/Caltrans/Chino)

9. #14: Euclid Av. (SR-83) & Kimball Av. (Caltrans/Chino)

10. #40: Hamner Av. & Ontario Ranch Rd. (Ontario/Eastvale)

It must be noted that impacts to the intersections listed above are under jurisdiction of Chino or Eastvale and most of them are also Caltrans facilities. Any improvements planned/constructed or in-lieu fees/fair share fees paid for Chino, Eastvale, or Caltrans facilities are beyond the control/scope of the lead agency. An assessment of fees is appropriate when linked to a specific mitigation program. (*Anderson First Coalition v. City of Anderson* (2005) 130 Cal.App.4th 1173, *Save our Peninsula Comm. v. Monterey County Bd. Of Supers.* (2001) 87 Cal.App.4th 99, 141.) Payment of fees is not sufficient where there is no evidence mitigation will actually result. (*Gray v. County of Madera* (2008) 167 Cal.App.4th 1099,1122.) The assessment of fees here is not adequate as there is no evidence mitigation will actually result. Not all of the improvements required are part of an existing DIF/TUMF program and therefore are not planned to occur at all or by any certain date, whether by the City of Chino, Eastvale, or Caltrans. Any improvements recommended or fees paid to mitigate impacts for Chino, Eastvale, or Caltrans facilities are beyond the control of the lead agency and evidence that these improvements will be completed or approved by Chino, Eastvale, or Caltrans has not been provided. A revised EIR must be prepared to include the LOS analysis as cumulatively considerable significant impact as the project conflicts with Transportation Impact Threshold A and Land Use and Planning Impact Threshold B because it is not consistent with the following General Plan Policy:

cont'd
W

1. Policy M1-5. Roadways maintain a peak hour Level of Service (LOS) E or better at all intersections.

4.13 Population and Housing

The project faces significant inconsistencies with statutory requirements of the Housing Crisis Act (HCA) of 2019/Senate Bill (SB) 330[16]/SB 8[17]. The HCA/SB 330/SB 8 require replacement housing sites when land designated for housing development experience land use changes to ensure no net loss of housing capacity. Several parcels within the project site have a General Plan land use designation of Mixed-Use Great Park that permits the development up to 65 dwelling units per acre, and a few of those parcels are also identified as sites to accommodate the RHNA

cont'd
x

Government Code Section 66300(b)(1)(A) requires that agencies shall not change the general plan land use designation, specific plan land use designation, or zoning to a less intensive use below what was allowed under the land use designation and zoning ordinances in effect at the time of the proposed change." Under Government Code Section 66300(b)(1)(A), a less intensive use" includes, but is not limited to, reductions to height, density, or floor area ratio, new or increased open space or lot size requirements, or new or increased setback requirements, minimum frontage requirements, or maximum lot coverage limitations, or any other action that would individually or

y

cumulatively reduce residential development capacity. Pursuant to SB 330, replacement capacity for any displaced residential units must be provided **concurrently** at the **time of project approval**. cont'd y

Government Code Section 66300 (h)(i)(1) states that, "this section does not prohibit an affected county or an affected city, including the local electorate acting through the initiative process, from changing a land use designation or zoning ordinance to a less intensive use, or reducing the intensity of land use, if the city or county concurrently changes the development standards, policies, and conditions applicable to other parcels within the jurisdiction to ensure that there is no net loss in residential capacity." The EIR is misleading in stating that the project will allow the development of 466 residential units and result in a less than significant impact. As calculated above, the MU-GP designation of the listed project sites provides development capacity for 1,240 residential units. Adoption of the Euclid Mixed Use Specific Plan (PSP22-001) as part of the proposed project will result in a reduction of the existing residential development capacity by 774 units to a decreased development capacity of 466 residential units. z

This is in conflict with SB 8 that expanded the provisions of the HCA to include Government Code Section 66300 (h)(i)(1) requiring concurrent approval of replacement sites to ensure no net loss in residential capacity, and Section 66300 (h)(2)(A) defining concurrently" to mean the action is approved at the same meeting of the legislative body. The EIR has not identified replacement sites for the net loss in residential capacity for 774 units as a result of adopting the Euclid Mixed Use Specific Plan. The loss in residential capacity must be included as a finding of significance as part of a revised EIR. The EIR does not act in conformance with the HCA/SB 330/SB 8 and the lost zoning capacity of any dwelling units is a significant environmental impact in violation of the HCA/SB 330/SB 8. The EIR must be revised to include a finding of significance due to this inconsistency. aa

Additionally, deferring the environmental analysis of construction and operation of replacement sites to a later date is project piecemealing in violation of CEQA. The EIR does not accurately or adequately describe the project, meaning the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment" (CEQA § 15378). The whole of the action must statutorily and legally include the identification of replacement sites and all associated actions required to implement development of at least 774 residential units. bb

The project also faces inconsistency with State Housing Element Law. Pursuant to Government Code Section 65863[19], a jurisdiction shall ensure that its housing element sites inventory "can accommodate, at all times throughout the planning period, its remaining unmet share of the regional housing need allocated pursuant to Section 65584" and "at no time…shall a city, county, or city and county by administrative, quasi-judicial, legislative, or other action permit or cause its inventory of sites identified in the housing element to be insufficient to meet its remaining unmet share of the regional housing need for lower and moderate-income households." Further, this Section states the following:
"No city, county, or city and county shall, by administrative, quasi-judicial, legislative, or other action, reduce, or require or permit the reduction of, the residential density for any parcel to, or allow development of any parcel at, a lower residential density, as defined in paragraphs (1) and (2) of subdivision (g), unless the city, county, or city and county makes written findings supported by substantial evidence of both of the following:

> (A) The reduction is consistent with the adopted general plan, including the housing element.
>
> (B) The remaining sites identified in the housing element are adequate to meet the requirements of Section 65583.2 and to accommodate the jurisdiction s share of the regional housing need pursuant to Section 65584. The finding shall include a quantification of the remaining unmet need for the jurisdiction s share of the regional housing need at each income level and the remaining capacity of sites identified in the housing element to accommodate that need by income level."

As shown above and summarized below, several parcels within the project site are identified as part of the City's identified sites inventory to accommodate its RHNA allocation in the Housing Element:

Total Housing Element units: 451
Total Affordable Housing Element units: 338

The EIR has not provided any analysis to demonstrate that adoption of the Euclid Mixed Use Specific Plan will yield 338 affordable units in the income categories specified in the Housing Element. The total residential capacity of the parcels will be reduced to 466 units, meaning that 72% of residential development on the sites must be deed-restricted affordable housing in order for the City to meet its lower income RHNA throughout the planning period. A significant impact exists and the EIR has not demonstrated that the remaining sites identified in the housing element

cc

dd

[19] Government Code Section 65863
https://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?lawCode=GOV&sectionNum=65863

are adequate to meet the requirements of Government Code Section 65583.2 and to accommodate the jurisdiction s share of the regional housing need pursuant to Government Code Section 65584 through the end of the 2021-2029 planning period. The EIR has not demonstrated that the City's Housing Element can accommodate at all times throughout the planning period its remaining unmet share of the regional housing need. The EIR must be revised to include a finding of significance because there is no meaningful evidence that the City can continue to accommodate its RHNA (including the lower income RHNA) following the approval of the proposed project. cont'd dd

The EIR does not provide any calculation of construction jobs generated by the proposed project. The EIR utilizes uncertain and misleading language in stating that, "Construction-related jobs would not result in a significant population increase because they are *expected* to be filled by persons within the *local economy*. The unemployment rate is approximately 4.1 percent within the jurisdictions in the Project vicinity of the Riverside-San Bernardino-Ontario Metropolitan Area as of 2021. Because *many* of the employment opportunities are *expected* to be filled by persons within the *local economy*, it is *anticipated* that an adequate number of persons are available to fill the employment positions without constructing new residential units. Furthermore, the *small percentage* of skilled and managerial positions could either be filled by the local economy *or by persons outside the local economy*." This does not provide any meaningful analysis or calculation of the project s population and employment generation. The EIR relies upon the Riverside-San Bernardino-Ontario MSA overall unemployment rates (2021) to fill the project's jobs without providing information on whether the unemployed workforce is interested in or qualified for work in the construction and/or industrial sectors. Relying on the entire population of the Riverside-San Bernardino-Ontario MSA to fill the project's construction and operational jobs will increase VMT and emissions during all phases of construction and operations and a revised EIR must be prepared to account for longer worker trip distances. In order to comply with CEQA s requirements for meaningful disclosure and adequate informational documents, a revised EIR must be prepared to provide an accurate estimate of employees generated by all uses of the proposed project, including construction. It must also provide demographic and geographic information on the location of qualified workers to fill these positions. ee

Table 4.13-6: Phase I Project Generated Employment utilizes The Ontario Plan Draft EIR, Appendix J: Land Use Modeling Methodology as its source to calculate the jobs generated by project operations. However, the weblink provided to the DEIR only provides information on the SEIR approved in 2022. All of the DEIR documents have been removed from the City website. Therefore, Appendix J of The Ontario Plan Draft EIR is not included for public review. This does not comply with CEQA's requirements for adequate informational documents and meaningful disclosure (CEQA § 15121 and 21003(b)). Incorporation by reference (CEQA § 15150 (f)) is not appropriate as Appendix J of The Ontario Plan Draft EIR contributes directly to analysis of the ff

problem at hand by providing the methodology for calculating the jobs generated by the project. A revised EIR must be prepared to include Appendix J of The Ontario Plan Draft EIR for review, analysis, and comment by the public and decision makers. cont'd ff

Additionally, the EIR relies upon the regional SCAG jobs-housing balance to conclude the project will have less than significant impacts. This does not address the impacts of the project to the City. Notably, Table 4.13-7: Combined Phase I and II, Projected Jobs-Housing Balance shows that the City has a jobs-housing balance of 2.47 (2016) and is projected to have a jobs-housing balance of 2.26 (2045). As stated in the EIR, "SCAG considers an area balanced when the jobs-housing balance is 1.36; communities with more than 1.36 jobs per dwelling unit are considered jobs-rich, while those with fewer than 1.36 are housing-rich." The approval of the proposed project will exacerbate the City's imbalance of jobs and housing by adding more jobs without providing the residential capacity of 1,240 residential units to help achieve a jobs-housing balance in accordance with SCAG's threshold. The EIR must be revised to include a finding of significance due to this. gg

SCAG's 2020-2045 RTP/SCS Connect SoCal Demographics and Growth Forecast[20] notes that Ontario will add 55,400 jobs between 2016 - 2045. The EIR utilizes uncertain and misleading language in stating generally that SCAG anticipates Ontario to employ approximately 169,300 people by 2045, and "therefore the project generated jobs are well within the employment projections for the City." The EIR does not provide any cumulative analysis discussion of projects approved since 2016 and projects "in the pipeline" to determine if the project will exceed the employment/population growth forecasts by SCAG and/or the General Plan. For example, other recent industrial projects such as PDEV21-003[21] (23,100 square foot industrial building), PDEV21-007[22] (808,639 sf of industrial buildings), PDEV21-010[23] (1,438,926 sf industrial building), PDEV21-016[24] (38,445 sf industrial building), PDEV21-018[25] (168,772 sf of industrial hh

[24] Ontario Monthly Application Activity April 2021 https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/04-2021%20Monthly%20Activity%20Report%20-%20New%20Apps.pdf
[25] Ontario Monthly Application Activity May 2021 https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/05-2021%20Monthly%20Activity%20Report%20-%20New%20Apps.pdf

buildings), PDEV21-020[26] (50,121 sf industrial building), PDEV21-024[27] (198,496 sf industrial building), PDEV21-026[28] (45,000 sf industrial building), PDEV21-028[29] (32,425 sf industrial building), PDEV21-029[30] (15,132 sf industrial building), PDEV21-030[31] (175,047 sf industrial building), PDEV21-031[32] (38,155 sf industrial building), PDEV21-034[33] (32,000 sf industrial building), PDEV21-035[34] (60,455 sf industrial building), PDEV21-040[35] (1,255,320 sf industrial building), PDEV21-047[36] (4,281,128 sf industrial building), PDEV21-037[37] (167,600 sf industrial building), PDEV22-010 & PMTT22-008: East State Street Warehouse Project[38] (336,761 square foot warehouse), South Ontario Logistics Center Specific Plan[39] (5,333,518 sf industrial space), and 5355 East Airport Drive[40] (270,337 sf industrial building) combined with the proposed project will cumulatively generate 16,561,154 sf of industrial space. This is approximately 13,567 employees, which is 24.5% of the City's employment growth forecast over 29 years accounted for only by a limited quantity of industrial projects. This total increases exponentially when other industrial and commercial development activity is added to the calculation. A revised EIR must be prepared to include this information for analysis, and also provide a cumulative analysis discussion of projects approved since 2016 and projects "in the pipeline" to determine if the proposed project will exceed the employment/population growth forecasts by SCAG and/or the General Plan.

4.15 Transportation and Traffic

Table 1-3: Summary of Improvements by Analysis Scenario within Appendix I concludes the following intersections outside the sole jurisdiction of the lead agency require improvements to address the peak hour deficiencies per the applicable thresholds of significance. Appendix I and Table 1-3 also provide a list of fair-share calculations for improvements that will allegedly mitigate significant and unavoidable impacts to the intersections to less than significant levels.

1. #1: Euclid Av. (SR-83) & SR-60 WB Ramps (Ontario/Caltrans)
2. #2: Euclid Av. (SR-83) & SR-60 EB Ramps (Ontario/Caltrans)
3. #4: Euclid Av. (SR-83) & Riverside Dr (Ontario/Caltrans/Chino)
4. #5: Euclid Av. (SR-83) & Chino Av (Ontario/Caltrans/Chino)
5. #6: Euclid Av. (SR-83) & Schaefer Av (Ontario/Caltrans/Chino)
6. #11: Euclid Av. (SR-83) & Edison Av. (Ontario/Caltrans/Chino)
7. #12: Euclid Av. (SR-83) & Eucalyptus Av. (Ontario/Caltrans/Chino)
8. #13: Euclid Av. (SR-83) & Merrill Av. (Ontario/Caltrans/Chino)
9. #14: Euclid Av. (SR-83) & Kimball Av. (Caltrans/Chino)
10. #40: Hamner Av. & Ontario Ranch Rd. (Ontario/Eastvale)

ii

It must be noted that impacts to the intersections listed above are under jurisdiction of Chino or Eastvale and most of them are also Caltrans facilities. Any improvements planned/constructed or in-lieu fees/fair share fees paid for Chino, Eastvale, or Caltrans facilities are beyond the control/scope of the lead agency. An assessment of fees is appropriate when linked to a specific mitigation program. (*Anderson First Coalition v. City of Anderson* (2005) 130 Cal.App.4th 1173, *Save our Peninsula Comm. v. Monterey County Bd. Of Supers.* (2001) 87 Cal.App.4th 99, 141.) Payment of fees is not sufficient where there is no evidence mitigation will actually result. (*Gray v. County of Madera* (2008) 167 Cal.App.4th 1099,1122.) The assessment of fees here is not adequate as there is no evidence mitigation will actually result. Not all of the improvements required are part of an existing DIF/TUMF program and therefore are not planned to occur at all or by any certain date, whether by the City of Chino, Eastvale, or Caltrans. Any improvements recommended or fees paid to mitigate impacts for Chino, Eastvale, or Caltrans facilities are beyond the control of the lead agency and evidence that these improvements will be completed or approved by Chino, Eastvale, or Caltrans has not been provided. A revised EIR must be prepared to include the LOS analysis as cumulatively considerable significant impact as the project conflicts with

Transportation Impact Threshold A and Land Use and Planning Impact Threshold B because it is not consistent with the following General Plan Policy:

1. Policy M1-5. Roadways maintain a peak hour Level of Service (LOS) E or better at all intersections.

cont'd ii

Further, the VMT analysis has underestimated the proposed projects VMT generation. The EIR has not analyzed the project's truck/trailer/delivery van activity. A revised EIR must be prepared to include all truck/trailer/delivery van activity for quantified VMT analysis. The operational nature of industrial/warehouse uses involves high rates of truck/trailer/delivery van VMT due to traveling from large import hubs to regional distribution centers to smaller industrial parks and then to their final delivery destinations. Once employees arrive at the warehouses for work, they will conduct their jobs by driving truck/trailer/delivery vans across the region as part of the daily operations as a warehouse, which will drastically increase project-generated VMT. The project's truck/trailer and delivery van activity is unable to utilize public transit or active transportation and it is misleading to the public and decision makers to exclude this activity from VMT analysis. A revised EIR must be prepared to reflect a quantified VMT analysis that includes all truck/trailer and delivery van activity.

jj

The EIR has not adequately analyzed the project's potential to substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses; or the project's potential to result in inadequate emergency access. There are no exhibits adequately depicting the available maneuvering and queueing space for trucks/trailers at the intersection of the project driveways and the adjacent streets. There are also no exhibits adequately depicting the onsite turning radius available for trucks maneuvering throughout the site. The EIR states that, "Implementation of the Specific Plan through the City s permitting process would reduce potential construction related increases in hazards to a less than significant level. Furthermore, the Project includes driveway and intersection improvements that would be implemented as part of the Project." This does not comply with CEQA's requirements for adequate informational documents and meaningful disclosure (CEQA § 15121 and 21003(b)). Deferring this environmental analysis required by CEQA to the construction permitting phase is improper mitigation and does not comply with CEQA's requirement for meaningful disclosure and adequate informational documents. A revised EIR must be prepared to include a complete truck turning template and geometric hazards analysis for review, analysis, and comment by the public and decision makers in order to provide an adequate and accurate environmental analysis.

kk

The EIR also states that, "In addition, the Project includes improvements to allow for heavy truck access to the Project site. Conflicts have the potential to occur if: 1) there is inadequate site access or 2) there is inadequate turning radii in and out of the site. Implementation of the Specific Plan and its circulation plans would ensure avoidance of these inadequacies," without providing any meaningful evidence to support this claim. There is no supporting documentation to demonstrate that the project site has adequate turning radii in and out of the site and/or adequate site access. This does not comply with CEQA's requirements for adequate informational documents and meaningful disclosure (CEQA § 15121 and 21003(b)). Deferring this environmental analysis required by CEQA to the construction permitting phase is improper mitigation and does not comply with CEQA's requirement for meaningful disclosure and adequate informational documents. A revised EIR must be prepared to include a complete truck turning template and geometric hazards analysis for review, analysis, and comment by the public and decision makers in order to provide an adequate and accurate environmental analysis. ll

The EIR makes a similar statement regarding emergency access, stating that "The City, as part of its discretionary review process, reviewed the Project's application materials to ensure that appropriate emergency ingress and egress would be available to-and-from the Project site and that circulation on the Project site was adequate for emergency vehicles," but the City's review and determination of the project application materials is not included for public review as part of the EIR. This does not comply with CEQA's requirements for adequate informational documents and meaningful disclosure (CEQA § 15121 and 21003(b)). Deferring this environmental analysis required by CEQA to the construction permitting phase is improper mitigation and does not comply with CEQA's requirement for meaningful disclosure and adequate informational documents. A revised EIR must be prepared to include the City determination/review of the project and its Site Plan for review, analysis, and comment by the public and decision makers in order to provide an adequate and accurate environmental analysis. mm

Additionally, the EIR has not provided any analysis of the available horizontal and vertical sight distance at the intersection of the project driveways and adjacent streets. Sight distance is the continuous length of street ahead visible to the driver. At unsignalized intersections, corner sight distance must provide a substantially clear line of sight between the driver of the vehicle waiting on the minor road (driveway) and the driver of an approaching vehicle. A revised EIR must be prepared with this analysis based on the American Association of State Highway and Transportation Officials (AASHTO) Stopping Sight Distance requirements. nn

5.2 Growth Inducing Impacts

A revised EIR must be prepared to include an accurate cumulative analysis discussion here to demonstrate the impact of the proposed project in a cumulative setting. The EIR does not include any information regarding the buildout conditions of the City's General Plan in order to provide an adequate and accurate cumulative analysis. The revised EIR must provide the horizon year of the City's current adopted General Plan, the total developable building floor area analyzed within the project site's land use designations, and cumulative development since adoption of the General Plan to ensure that the proposed project is within the General Plan EIR's analysis, particularly since the EIR tiers from the General Plan EIR. This is particularly vital as growth generated by the proposed project is in conflict with the AQMP. oo

The EIR does not discuss its own conclusion that implementation of the proposed project will result in significant and unavoidable Agriculture and Forestry Resources, Air Quality, Biological Resources, Cultural Resources, Geology and Soils, GHG emissions, and Hazards and Hazardous Materials impacts. The EIR must be revised to include a finding of significance due to the project's significant and unavoidable Agriculture and Forestry Resources (cumulatively considerable), Air Quality (cumulatively considerable), Greenhouse Gas Emissions, Biological Resources, Cultural Resources, and Geology and Soils impacts and direct contribution to climate change. pp

The EIR does not adequately discuss or and analyze the commitment of resources is not consistent with regional and local growth forecasts and does not address the EIR's own conclusion that the project will result in impacts (Air Quality, GHG) that exceed with the forecasts of the applicable plans (AQMP, 2030/2050 GHG reduction goals). As noted throughout this comment letter, the project represents a significant amount of growth in the City and quantitatively exceeds the 3,000 MT CO2E annual emissions threshold by more than 12 times. The EIR has not provided an adequate or accurate cumulative analysis discussion here to demonstrate the impact of the proposed project in a cumulative setting. For example, recent industrial projects combined with the proposed project will cumulatively generate 16,561,154 sf of industrial space. This is approximately 13,567 employees, which is 24.5% of the City's employment growth forecast over 29 years accounted for only by a limited quantity of industrial projects (conservative analysis that only cumulatively accounts for industrial projects submitted in 2021). This total increases exponentially when other industrial and commercial development activity is added to the calculation. A revised EIR must be prepared to include an accurate cumulative analysis on this topic and include a finding of significance. qq

6.0 Alternatives

The EIR is required to evaluate a reasonable range of alternatives to the proposed project which will avoid or substantially lessen any of the significant effects of the project (CEQA § 15126.6.) The alternatives chosen for analysis include the CEQA required "No Project/No Build" alternative and only two others - No Project/Existing General Plan Alternative and Reduced Intensity Alternative. The EIR does not evaluate a reasonable range of alternatives as only two alternatives beyond the required No Project alternative is analyzed. Additionally, the No Project/Existing General Plan Alternative results in the same quantity and type of development as the proposed project, which is erroneous as shown above the existing MU-GP designation on the southern portion of the site permits the development of 1,240 dwelling units. This alternative is an "alternative" to the proposed project in name only and does not actually implement any alternative development that is not included in the proposed project. The EIR has actually only analyzed 1 alternative development scenario as the No Project/Existing General Plan Alternative serves to mislead the public and decision makers and must be removed from the EIR. The EIR must be revised to include analysis of a reasonable range of alternatives and foster informed decision making (CEQA § 15126.6). This could include alternatives such as development of the site with a mixed-use project that provides affordable housing and local-serving commercial uses that may reduce VMT, GHG emissions, and improve Air Quality.

rr

Conclusion

For the foregoing reasons, GSEJA believes the EIR is flawed and a revised EIR must be prepared for the proposed project and circulated for public review. Golden State Environmental Justice Alliance requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877.

ss

Sincerely,

Gary Ho

Subject: Comments on the Euclid Mixed Use Specific Plan Project (SCH No. 2023020281)

Dear Mr. Ho,

We have reviewed the December 2023 Draft Environmental Impact Report ("DEIR") for the Euclid Mixed Use Specific Plan ("Project") located in the City of Ontario ("City"). The Project proposes to construct 290,110-square-feet ("SF") of commercial retail/office uses, 466 residential units, and 1,386,777-SF of business park uses on an 84.1-acre site.

Our review concludes that the DEIR fails to adequately evaluate the Project's air quality impacts. As a result, emissions and health risk impacts associated with construction and operation of the proposed Project may be underestimated and inadequately addressed. A revised Environmental Impact Report ("EIR") should be prepared to adequately assess and mitigate the air quality impacts that the project may have on the environment.

Air Quality

Failure to Implement All Feasible Mitigation to Reduce Emissions

The DEIR concludes that the Project's operational air quality emissions would be significant-and-unavoidable. Specifically, the DEIR estimates that the Project's operational VOC and NO_x, emissions would exceed the applicable South Coast Air Quality Management District ("SCAQMD") thresholds (see excerpts below) (p. 4.3-20, Table 4.3-8).

Table 4.3-8: Phase I – Maximum Daily Construction-Related Emissions

Construction Year	Maximum Pounds Per Day					
	Reactive Organic Gases (ROG)	Nitrogen Oxides (NO_x)	Carbon Monoxide (CO)	Sulfur Dioxide (SO_2)	Coarse Particulate Matter (PM_{10})	Fine Particulate Matter ($PM_{2.5}$)
Unmitigated Emissions[1]						
Year 2023	4.04	38.80	37.10	0.06	7.14	4.34
Year 2024	9.43	62.60	85.90	0.14	12.30	4.99
Year 2025	3.20	17.90	48.30	0.06	7.40	2.15
SCAQMD Threshold	*75*	*100*	*550*	*150*	*55*	*150*
Exceed SCAQMD Threshold[2]	No	No	No	No	No	No

1. SCAQMD Rule 403 Fugitive Dust applied. The Rule 403 reduction/credits include the following: properly maintain mobile and other construction equipment, water exposed surfaces three times daily, and limit speeds on unpaved roads to 15 miles per hour. Reductions percentages from the SCAQMD CEQA Handbook (Tables XI-A through XI-E) were applied. No mitigation was applied to construction equipment. Refer to *Appendix B1* for Model Data Outputs.
2. Mitigation includes the incorporation of MM AQ-1 and MM AQ-8. MM AQ-1 requires the use of "Super Compliant" low VOC paints. MM AQ-8 requires off-road equipment 50 horsepower or greater to meet CARB Tier 4 Final standards. MM AQ-1 and MM AQ-8 are not required to reduce construction related criteria pollutants for Phase I. Therefore, the emission reductions here not been included in Table 4.3-8 for informational purposes.

Source: CalEEMod version 2022.1. Refer to *Appendix B1* for model outputs.

Even with the implementation of mitigation measures, the DEIR concludes that the Project's operational air quality impacts would be significant-and-unavoidable. Specially, the DEIR states:

> "As shown in Table 4.3-8, Table 4.3-9, Table 4.3-10, Table 4.3-11, and Table 4.3-12; construction and operation of the Project would result in air pollutant emissions that exceed SCAQMD's emission thresholds. The implementation of SC AQ-1 and MMs AQ-1 through AQ-7 would reduce Project emissions by the greatest amount feasible; however, operation related Project emissions would remain significant and would potentially contribute to the O3, NO2, PM10, and PM2.5 nonattainment designations of the SCAB. Therefore, the Project would result in a significant and unavoidable impact" (p. 4.3-26).

While we agree that the Project would result in significant air quality impacts, the DEIR's assertion that this impact is significant-and-unavoidable is unreliable. According to CEQA Guidelines § 15096(g)(2):

> "When an updated EIR has been prepared for a project, the Responsible Agency shall not approve the project as proposed if the agency finds any feasible alternative or feasible mitigation measures within its powers that would substantially lessen or avoid any significant effect the project would have on the environment."[1]

The DEIR is required under CEQA to implement all feasible mitigation to reduce impacts to a less-than-significant level. While the DEIR implements Mitigation Measure ("MM") AQ-1 through MM-AQ-8, the DEIR fails to implement *all* feasible mitigation (Table 1-1, p. 1-8 –1-11). Therefore, the DEIR's conclusion that Project's air quality emissions would be significant-and-unavoidable may be unsubstantiated. To reduce the Project's air quality impacts to the maximum extent possible, additional feasible mitigation measures should be incorporated, such as those suggested in the section of this letter titled "Feasible Mitigation Measures Available to Reduce Emissions." The Project should not be approved until a revised

[1] "Cal. Code Regs. tit. 14 § 15096." California Legislature, *available at:* https://casetext.com/regulation/california-code-of-regulations/title-14-natural-resources/division-6-resources-agency/chapter-3-guidelines-for-implementation-of-the-california-environmental-quality-act/article-7-eir-process/section-15096-process-for-a-responsible-agency.

EIR is prepared, incorporating all feasible mitigation to reduce emissions to the maximum extent feasible.

Mitigation

Feasible Mitigation Measures Available to Reduce Emissions

Our analysis demonstrates that the Project would result in potentially significant air quality that should be mitigated further. In an effort to reduce the Project's emissions, we identified several mitigation measures that are applicable to the proposed Project. To reduce the Project's emissions, we recommend consideration of SCAG's 2020 *RTP/SCS* PEIR's Air Quality Project Level Mitigation Measures ("PMM-AQ-1"), as described below: [2]

SCAG RTP/SCS 2020-2045
Air Quality Project Level Mitigation Measures – PMM-AQ-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to violating air quality standards. Such measures may include the following or other comparable measures identified by the Lead Agency:
a) Minimize land disturbance.
b) Suspend grading and earth moving when wind gusts exceed 25 miles per hour unless the soil is wet enough to prevent dust plumes.
c) Cover trucks when hauling dirt.
d) Stabilize the surface of dirt piles if not removed immediately.
h) Revegetate disturbed land, including vehicular paths created during construction to avoid future off-road vehicular activities.
j) Require contractors to assemble a comprehensive inventory list (i.e., make, model, engine year, horsepower, emission rates) of all heavy-duty off-road (portable and mobile) equipment (50 horsepower and greater) that could be used an aggregate of 40 or more hours for the construction project. Prepare a plan for approval by the applicable air district demonstrating achievement of the applicable percent reduction for a CARB-approved fleet.
k) Ensure that all construction equipment is properly tuned and maintained.
m) Provide an operational water truck on-site at all times. Use watering trucks to minimize dust; watering should be sufficient to confine dust plumes to the project work areas. Sweep paved streets at least once per day where there is evidence of dirt that has been carried on to the roadway.
n) Utilize existing power sources (e.g., power poles) or clean fuel generators rather than temporary power generators.

[2] "4.0 Mitigation Measures." Connect SoCal Program Environmental Impact Report Addendum #1, September 2020, available at: https://scag.ca.gov/sites/main/files/file-attachments/fpeir_connectsocal_addendum_4_mitigationmeasures.pdf?1606004420, p. 4.0-2 – 4.0-10; 4.0-19 – 4.0-23; See also: "Certified Final Connect SoCal Program Environmental Impact Report." Southern California Association of Governments (SCAG), May 2020, *available at:* https://scag.ca.gov/peir.

o) Develop a traffic plan to minimize traffic flow interference from construction activities. The plan may include advance public notice of routing, use of public transportation, and satellite parking areas with a shuttle service. Schedule operations affecting traffic for off-peak hours. Minimize obstruction of through-traffic lanes. Provide a flag person to guide traffic properly and ensure safety at construction sites.
p) As appropriate require that portable engines and portable engine-driven equipment units used at the project work site, with the exception of on-road and off-road motor vehicles, obtain CARB Portable Equipment Registration with the state or a local district permit. Arrange appropriate consultations with the CARB or the District to determine registration and permitting requirements prior to equipment operation at the site.
q) Require projects within 500 feet of residences, hospitals, or schools to use Tier 4 equipment for all engines above 50 horsepower (hp) unless the individual project can demonstrate that Tier 4 engines would not be required to mitigate emissions below significance thresholds.
r) Projects located within the South Coast Air Basin should consider applying for South Coast AQMD "SOON" funds which provides funds to applicable fleets for the purchase of commercially available low-emission heavy-duty engines to achieve near-term reduction of NOx emissions from in-use off-road diesel vehicles.
s) Projects located within AB 617 communities should review the applicable Community Emissions Reduction Plan (CERP) for additional mitigation that can be applied to individual projects.
t) Where applicable, projects should provide information about air quality related programs to schools, including the Environmental Justice Community Partnerships (EJCP), Clean Air Ranger Education (CARE), and Why Air Quality Matters programs.
u) Projects should work with local cities and counties to install adequate signage that prohibits truck idling in certain locations (e.g., near schools and sensitive receptors).
y) Projects that will introduce sensitive receptors within 500 feet of freeways and other sources should consider installing high efficiency of enhanced filtration units, such as Minimum Efficiency Reporting Value (MERV) 13 or better. Installation of enhanced filtration units can be verified during occupancy inspection prior to the issuance of an occupancy permit.
z) Develop an ongoing monitoring, inspection, and maintenance program for the MERV filters.
aa) Consult the SCAG Environmental Justice Toolbox for potential measures to address impacts to low-income and/or minority communities.
bb) The following criteria related to diesel emissions shall be implemented on by individual project sponsors as appropriate and feasible: - Diesel nonroad vehicles on site for more than 10 total days shall have either (1) engines that meet EPA on road emissions standards or (2) emission control technology verified by EPA or CARB to reduce PM emissions by a minimum of 85% - Diesel generators on site for more than 10 total days shall be equipped with emission control technology verified by EPA or CARB to reduce PM emissions by a minimum of 85%. - Nonroad diesel engines on site shall be Tier 2 or higher. - Diesel nonroad construction equipment on site for more than 10 total days shall have either (1) engines meeting EPA Tier 4 nonroad emissions standards or (2) emission control technology verified by EPA or CARB for use with nonroad engines to reduce PM emissions by a minimum of 85% for engines for 50 hp and greater and by a minimum of 20% for engines less than 50 hp. - Emission control technology shall be operated, maintained, and serviced as recommended by the emission control technology manufacturer. - Diesel vehicles, construction equipment, and generators on site shall be fueled with ultra-low sulfur diesel fuel (ULSD) or a biodiesel blend approved by the original engine manufacturer with sulfur content of 15 ppm or less. - The construction contractor shall maintain a list of all diesel vehicles, construction equipment, and generators to be used on site. The list shall include the following: i. Contractor and subcontractor name and address, plus contact person responsible for the vehicles or equipment.

4

ii. Equipment type, equipment manufacturer, equipment serial number, engine manufacturer, engine model year, engine certification (Tier rating), horsepower, engine serial number, and expected fuel usage and hours of operation.
iii. For the emission control technology installed: technology type, serial number, make, model, manufacturer, EPA/CARB verification number/level, and installation date and hour-meter reading on installation date.

- The contractor shall establish generator sites and truck-staging zones for vehicles waiting to load or unload material on site. Such zones shall be located where diesel emissions have the least impact on abutters, the general public, and especially sensitive receptors such as hospitals, schools, daycare facilities, elderly housing, and convalescent facilities.
- The contractor shall maintain a monthly report that, for each on road diesel vehicle, nonroad construction equipment, or generator onsite, includes:
  i. Hour-meter readings on arrival on-site, the first and last day of every month, and on off-site date.
  ii. Any problems with the equipment or emission controls.
  iii. Certified copies of fuel deliveries for the time period that identify:
    1. Source of supply
    2. Quantity of fuel
    3. Quantity of fuel, including sulfur content (percent by weight)

These measures offer a cost-effective, feasible way to incorporate lower-emitting design features into the proposed Project, which subsequently, reduce emissions released during Project construction and operation.

As it is policy of the State that eligible renewable energy resources and zero-carbon resources supply 100% of retail sales of electricity to California end-use customers by December 31, 2045, we emphasize that the energy mix that will charge the batteries and power electrical equipment must be 100% renewable energy resources. Until the feasibility of charging the batteries with renewable energy resources only is evaluated, the Project should not be approved.

A revised EIR should be prepared to include all feasible mitigation measures, as well as include updated air quality, health risk, and GHG analyses to ensure that the necessary mitigation measures are implemented to reduce emissions to the maximum extent feasible. The revised EIR should also demonstrate a commitment to the implementation of these measures prior to Project approval, to ensure that the Project's significant emissions are reduced to the maximum extent possible.

Disclaimer

SWAPE has received limited discovery regarding this project. Additional information may become available in the future; thus, we retain the right to revise or amend this report when additional information becomes available. Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at the time of service. No other warranty, expressed or implied, is made as to the scope of work, work methodologies and protocols, site conditions, analytical testing results, and findings presented. This report reflects efforts which were limited to information that was reasonably accessible at the time of the work, and may contain informational gaps, inconsistencies, or otherwise be incomplete due to the unavailability or uncertainty of information obtained or provided by third parties.

5

Sincerely,

Matt Hagemann, P.G., C.Hg.

Paul E. Rosenfeld, Ph.D.

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

Geologic and Hydrogeologic Characterization
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
Industrial Stormwater Compliance
CEQA Review

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist
California Certified Hydrogeologist
Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 30 years of experience in environmental policy, contaminant assessment and remediation, stormwater compliance, and CEQA review. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) and directed efforts to improve hydrogeologic characterization and water quality monitoring. For the past 15 years, as a founding partner with SWAPE, Matt has developed extensive client relationships and has managed complex projects that include consultation as an expert witness and a regulatory specialist, and a manager of projects ranging from industrial stormwater compliance to CEQA review of impacts from hazardous waste, air quality and greenhouse gas emissions.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2104, 2017;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 – 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of over 300 environmental impact reports and negative declarations since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at more than 100 industrial facilities.
- Expert witness on numerous cases including, for example, perfluorooctanoic acid (PFOA) contamination of groundwater, MTBE litigation, air toxins at hazards at a school, CERCLA compliance in assessment and remediation, and industrial stormwater contamination.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.
- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted

public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9.

Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific

principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt is currently a part time geology instructor at Golden West College in Huntington Beach, California where he taught from 2010 to 2014 and in 2017.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Coloradao.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal repesentatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

Hagemann, M.F., 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

Hagemann, M.F., 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

Hagemann, M.F., 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

Hagemann, M.F., 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublished report.

Paul Rosenfeld, Ph.D.

Chemical Fate and Transport & Air Dispersion Modeling

Principal Environmental Chemist

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Focus on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years of experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, industrial, military and agricultural sources, unconventional oil drilling operations, and locomotive and construction engines. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities. Dr. Rosenfeld has also successfully modeled exposure to contaminants distributed by water systems and via vapor intrusion.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, creosote, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at sites and has testified as an expert witness on numerous cases involving exposure to soil, water and air contaminants from industrial, railroad, agricultural, and military sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H_2O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Rosenfeld, P.E, C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the Superior Court of the State of California, County of San Bernardino
Billy Wildrick, Plaintiff vs. BNSF Railway Company
Case No. CIVDS1711810
Rosenfeld Deposition 10-17-2022

In the State Court of Bibb County, State of Georgia
Richard Hutcherson, Plaintiff vs Norfolk Southern Railway Company
Case No. 10-SCCV-092007
Rosenfeld Deposition 10-6-2022

In the Civil District Court of the Parish of Orleans, State of Louisiana
Millard Clark, Plaintiff vs. Dixie Carriers, Inc. et al.
Case No. 2020-03891
Rosenfeld Deposition 9-15-2022

In The Circuit Court of Livingston County, State of Missouri, Circuit Civil Division
Shirley Ralls, Plaintiff vs. Canadian Pacific Railway and Soo Line Railroad
Case No. 18-LV-CC0020
Rosenfeld Deposition 9-7-2022

In The Circuit Court of the 13th Judicial Circuit Court, Hillsborough County, Florida Civil Division
Jonny C. Daniels, Plaintiff vs. CSX Transportation Inc.
Case No. 20-CA-5502
Rosenfeld Deposition 9-1-2022

In The Circuit Court of St. Louis County, State of Missouri
Kieth Luke et. al. Plaintiff vs. Monsanto Company et. al.
Case No. 19SL-CC03191
Rosenfeld Deposition 8-25-2022

In The Circuit Court of the 13th Judicial Circuit Court, Hillsborough County, Florida Civil Division
Jeffery S. Lamotte, Plaintiff vs. CSX Transportation Inc.
Case No. NO. 20-CA-0049
Rosenfeld Deposition 8-22-2022

In State of Minnesota District Court, County of St. Louis Sixth Judicial District
Greg Bean, Plaintiff vs. Soo Line Railroad Company
Case No. 69-DU-CV-21-760
Rosenfeld Deposition 8-17-2022

In United States District Court Western District of Washington at Tacoma, Washington
John D. Fitzgerald Plaintiff vs. BNSF
Case No. 3:21-cv-05288-RJB
Rosenfeld Deposition 8-11-2022

In Circuit Court of the Sixth Judicial Circuit, Macon Illinois
Rocky Bennyhoff Plaintiff vs. Norfolk Southern
Case No. 20-L-56
Rosenfeld Deposition 8-3-2022

In Court of Common Pleas, Hamilton County Ohio
Joe Briggins Plaintiff vs. CSX
Case No. A2004464
Rosenfeld Deposition 6-17-2022

In the Superior Court of the State of California, County of Kern
George LaFazia vs. BNSF Railway Company.
Case No. BCV-19-103087
Rosenfeld Deposition 5-17-2022

In the Circuit Court of Cook County Illinois
Bobby Earles vs. Penn Central et. al.
Case No. 2020-L-000550
Rosenfeld Deposition 4-16-2022

In United States District Court Easter District of Florida
Albert Hartman Plaintiff vs. Illinois Central
Case No. 2:20-cv-1633
Rosenfeld Deposition 4-4-2022

In the Circuit Court of the 4th Judicial Circuit, in and For Duval County, Florida
Barbara Steele vs. CSX Transportation
Case No.16-219-Ca-008796
Rosenfeld Deposition 3-15-2022

In United States District Court Easter District of New York
Romano et al. vs. Northrup Grumman Corporation
Case No. 16-cv-5760
Rosenfeld Deposition 3-10-2022

In the Circuit Court of Cook County Illinois
Linda Benjamin vs. Illinois Central
Case No. No. 2019 L 007599
Rosenfeld Deposition 1-26-2022

In the Circuit Court of Cook County Illinois
Donald Smith vs. Illinois Central
Case No. No. 2019 L 003426
Rosenfeld Deposition 1-24-2022

In the Circuit Court of Cook County Illinois
Jan Holeman vs. BNSF
Case No. 2019 L 000675
Rosenfeld Deposition 1-18-2022

In the State Court of Bibb County State of Georgia
Dwayne B. Garrett vs. Norfolk Southern
Case No. 20-SCCV-091232
Rosenfeld Deposition 11-10-2021

In the Circuit Court of Cook County Illinois
Joseph Ruepke vs. BNSF
Case No. 2019 L 007730
Rosenfeld Deposition 11-5-2021

In the United States District Court For the District of Nebraska
Steven Gillett vs. BNSF
Case No. 4:20-cv-03120
Rosenfeld Deposition 10-28-2021

In the Montana Thirteenth District Court of Yellowstone County
James Eadus vs. Soo Line Railroad and BNSF
Case No. DV 19-1056
Rosenfeld Deposition 10-21-2021

In the Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al.cvs. Cerro Flow Products, Inc.
Case No. 0i9-L-2295
Rosenfeld Deposition 5-14-2021
Trial October 8-4-2021

In the Circuit Court of Cook County Illinois
Joseph Rafferty vs. Consolidated Rail Corporation and National Railroad Passenger Corporation d/b/a AMTRAK,
Case No. 18-L-6845
Rosenfeld Deposition 6-28-2021

In the United States District Court For the Northern District of Illinois
Theresa Romcoe vs. Northeast Illinois Regional Commuter Railroad Corporation d/b/a METRA Rail
Case No. 17-cv-8517

In United States District Court For The Southern District of Mississippi
Guy Manuel vs. The BP Exploration et al., Defendants
Case No. 1:19-cv-00315-RHW
Rosenfeld Deposition 4-22-2020

In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC
Case No. LC102019 (c/w BC582154)
Rosenfeld Deposition 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., Plaintiffs, vs. Meritor Inc., et al., Defendants
Case No. 4:16-cv-52-DMB-JVM
Rosenfeld Deposition July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No. RG14711115
Rosenfeld Deposition September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No. LALA002187
Rosenfeld Deposition August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action No. 14-C-30000
Rosenfeld Deposition June 2015

In The Iowa District Court for Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No. 4980
Rosenfeld Deposition May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case No. CACE07030358 (26)
Rosenfeld Deposition December 2014

In the County Court of Dallas County Texas
Lisa Parr et al, Plaintiff, vs. Aruba et al, Defendant.
Case No. cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., Plaintiffs, vs. Republic Services, Inc., et al., Defendants
Case No. 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition October 2012

In the United States District Court for the Middle District of Alabama, Northern Division
James K. Benefield, et al., Plaintiffs, vs. International Paper Company, Defendant.
Civil Action No. 2:09-cv-232-WHA-TFM
Rosenfeld Deposition July 2010, June 2011

In the Circuit Court of Jefferson County Alabama
Jaeanette Moss Anthony, et al., Plaintiffs, vs. Drummond Company Inc., et al., Defendants
Civil Action No. CV 2008-2076
Rosenfeld Deposition September 2010

In the United States District Court, Western District Lafayette Division
Ackle et al., Plaintiffs, vs. Citgo Petroleum Corporation, et al., Defendants.
Case No. 2:07CV1052
Rosenfeld Deposition July 2009

Response to Comment Letter O1 - Blum, Collins & Ho LLP (Golden State Environmental Justice Alliance)

Response O1-a

Introductory comments are noted for the record. The commenter provides a general introductory and requests to be added to the public interest list are noted to the record. All attachments to the comment letter have been received. As the specific comments in the letter re-state the comments in the attachments, responses to the letter also fully respond to the attachments. Therefore, no further revision to the analysis in the Draft EIR is required.

Response O-1b

The commenter's summary of the Project is noted for the record. Therefore, no further revision to the analysis in the Draft EIR is required.

Response O1-c

The City disagrees that the Draft EIR must include analysis of potential environmental justice issues, as CEQA does not require consideration of potential implications to environmental justice or socioeconomics as a specific resource, further, environmental justice is not listed within the "Environmental Factors Potentially Affected" in Appendix G, Environmental Checklist Form, to the CEQA Guidelines.[4] The remainder of the comment presents data from California Environmental Protection Agency's (CalEPA) CalEnviroScreen. The City further notes that the South Coast Air Quality Management District (SCAQMD) CEQA Air Quality Handbook does not recommend analysis of toxic air contaminants (TACs) from short-term construction activities associated with land use development projects.[5]

As well, a construction health risk assessment (HRA) is not required by SCAQMD and no guidance for HRAs for construction has been adopted by SCAQMD or the City. Although SCAQMD's CEQA Air Quality Handbook does not require an HRA for short-term construction emissions, a construction HRA was conservatively prepared for the Project and is provided in the Draft EIR in ***Section 4.3: Air Quality***. The HRA was conducted based on the SCAQMD's Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis and the SCAQMD Risk Assessment Procedures and the guidance from the California Office of Environmental Health Hazard Assessment (OEHHA).

As analyzed in ***Section 4.3: Air Quality*** of the Draft EIR, pages 4.3-35 and 4.3-36, in Project construction activities, including TACs from equipment exhaust would not expose sensitive receptors to substantial pollutant concentrations. Project-related TAC impacts during construction would be less than significant with mitigation measures Mitigation Measure (MM) AQ-1 through MM AQ-8. MM AQ-1 requires the Project to use "Super-Compliant" low VOC paints; MM AQ-2 requires that all cargo handling equipment used on a daily basis (yard trucks/hostlers, forklifts, etc.) be electric; MM AQ-3 requires the implementation of a Transportation Demand Management (TDM) program to reduce single occupant

[4] Title 14. Natural Resources. (2018). Retrieved from: http://files.resources.ca.gov/ceqa/docs/2018_CEQA_FINAL_TEXT_122818.pdf.
[5] South Coast Air Quality Management District. (2024). Air Quality Analysis Handbook. Retrieved from: https://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook.

vehicle trips and encourage transit; MM AQ-4 requires the buildings to be designed to accommodate electric vehicle (EV) infrastructure; MM AQ-5 prohibits idling when engines are not in use; MM AQ-6 prohibits the installation of wood-burning and natural gas devices for residential fireplaces; MM AQ-7 prohibits refrigerated warehouse space/cold storage; and MM AQ-8 requires the use of Tier 4 construction equipment is required to reduce the cancer risk.

An operational phase HRA was also conducted for this Project (see ***Appendix B*** of the Draft EIR). The analysis included both on-site and off-site impacts from the diesel trucks accessing the warehouse development on nearby residential and worker receptors. Chronic impacts were also evaluated in the HRA.

The operational HRA determined that incorporating operational MM AQ-2 through MM AQ-5 and MM AQ-7, would reduce potential hazards to be within acceptable limits. MM AQ-2 requires that all cargo handling equipment used on a daily basis (yard trucks/hostlers, forklifts, etc.) be electric; MM AQ-3 requires the implementation of a TDM program to reduce single-occupant vehicle trips and encourage transit; MM AQ-4 requires the buildings to be designed to accommodate EV infrastructure; MM AQ-5 prohibits idling when engines are not in use; and MM AQ-7 prohibits refrigerated warehouse space/cold storage. ***Section 4.3: Air Quality*** of the Draft EIR determined that Project construction and operations would not expose sensitive receptors to substantial pollutant concentrations. Construction and operations would not exceed SCAQMD Local Significance Thresholds (LSTs), would not create a carbon monoxide (CO) hotspot, and would not generate concentrations of DPM that would result in carcinogenic, chronic, or acute health risk effects. Therefore, Project impacts would be less than significant. Therefore, no further revision to the analysis in the Draft EIR is required.

Response O1-d

This comment is noted for the record. See Response O1-c.

Response O1-e

This comment is noted for the record. See Response O1-c.

Response O1-f

This comment is noted for the record. See Response O1-c.

Response O1-g

This comment is noted for the record. See Response O1-c.

Response O1-h

The City disagrees with the assertion that the Draft EIR must use one of three state-approved compliance modeling software for non-residential buildings and that the Draft EIR does not comply with the 2022 Building Energy Efficiency Standards. The software programs listed by the California Energy Commission (CEC) concern the performance approach method, which provides maximum flexibility to trade off the energy performance of different building components to achieve compliance for the 2022 Energy Standards. As stated in the CalEEMod User's Guide, CalEEMod, which was used by the City, utilizes widely

accepted methodologies for estimating emissions combined with default data. The sources for the methodologies include studies commissioned by the CEC and also utilize energy conservation standards subject to Title 24.[6]

The energy analysis and associated thresholds are provided on Draft EIR Section 4.6: Energy. The analysis specifically responds to the guidance for energy analysis in the State CEQA Guidelines Appendix F, which requires a determination on if a project would increase the need for new energy supplies. The analysis is used to disclose the amount of energy that the Project would require and is not utilized to demonstrate compliance for performance. Additionally, the Draft EIR discloses the Project's electricity consumption, natural gas consumption, and transportation fuel consumption and determined that the Project's energy consumption would not be inefficient or wasteful as the Project will be required by the California Green Building Standards Code (CALGreen Code) to comply with the Title 24 Building Energy Efficiency Standards (Nonresidential) published by the CEC, which contain stringent mandatory standards for mechanical systems, lighting (indoor and outdoor), and appliances to minimize energy use. Therefore, the Project used the appropriate model to calculate and disclose the Project's energy use, and also demonstrated that the Project would be required to comply with the CALGreen Code and Title 24. Therefore, no further revisions to the Draft EIR are required.

Response O1-i

GHG emissions and impacts were fully analyzed within Draft EIR ***Section 4.8: Greenhouse Gas Emissions***. As discussed in ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR, page 4.8-14, CEQA Guidelines allow lead agencies to determine thresholds of significance that illustrate the extent of an impact and are a basis from which to apply mitigation measures. As stated in CEQA Guidelines Section 15064.4(b)(3), when determining the significance of impacts from GHG emissions, the lead agency should consider "the extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions." As stated in the City of Ontario Community Climate Action Plan (CAP), the CAP is in concert with Assembly Bill (AB) 32 and international efforts to address global climate change and includes specific local requirements that will substantially lessen the cumulative problem and therefore the CAP is the type of mitigation called for in CEQA Guidelines Section 15130(a)(3) and Section 15183.5.

The Draft EIR's GHG analysis quantifies the Project's GHG emissions for informational-purposes only and determines significance based on the Project's consistency with the CAP, adopted in 2022. The CAP utilizes screening tables that assign point values to document implementation of CAP strategies, ensuring compliance with CEQA provisions for evaluating and mitigating climate change impacts. The Screening Tables provides a menu of options that both ensures implementation of the reduction strategies and flexibility. According to the adopted CAP, projects garnering at least 100 points on the CAP Consistency Tables would be considered consistent with the reduction quantities in the City's CAP and are considered less than significant with regards to GHG emissions. Therefore, the quantitative threshold of 3,000 $MTCO_2e$ threshold raised by the comment has no relevancy to the Draft EIR's GHG analysis. Therefore, no further revisions to the Draft EIR are required.

[6] CalEEMod User's Guide. (2021). Retrieved from: http://www.aqmd.gov/docs/default-source/caleemod/user-guide-2021/01_user-39-s-guide2020-4-0.pdf?sfvrsn=6.

Response O1-j

The City disagrees that Table 4.8-8 in ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR, provides an erroneous and misleading consistency analysis. The commenter claims that the Project is not consistent with Transportation Strategy 9 due to the lack of transit in the Project vicinity. However, the consistency analysis states that the Project would construct transit turnouts within the Specific Plan Area. This Project feature is intended to support the expansion of transit service in the Project vicinity, specifically the BRT service that the City is coordinating with regional transit agencies in order to serve Euclid Avenue on the western boundary of the Project site. Therefore, the Project would directly support the expansion of transit service into the Project Area by constructing turnouts and the Draft EIR correctly concludes that the Project would be consistent with Transportation Strategy 9. Therefore, no further revision to the analysis in the Draft EIR is required.

Response O1-k

As the commenter notes, there is no site plan or development information for the residential portion of the proposed Project, which has been analyzed programmatically in the Draft EIR. Table 4.8-9: GHG Reduction Measures Screening Table for Ontario Development in ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR, page 4.8-28, includes a list of reduction measures that individual developments can implement to show consistency with the CAP. Projects that achieve 100 points are considered to be consistent with the CAP and would result in less than significant impact with regard to consistency with GHG reduction planning.

The commenter incorrectly claims that the Draft EIR assigns the points shown in Table 4.8-9 in ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR, to the Project. However, as discussed in Table 4.8-9 in Section 4.8: Greenhouse Gas Emissions, page 4.8-28, "identifies potential design features and their associated scores" and is included to show "that the proposed Project has the potential to achieve 100 points on the CAP's screening tables" given the amount of available points. The discussion in ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR, page 4.8-28, has been revised to clarify that Table 4.8-9 lists all available design features and points potential and is not intended to provide that the Project would implement all of the design features listed; see Section 3.0: Errata, of the Final EIR. Table 4.8-9 in ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR has also been updated to include the design features and points value according to the latest version of the CAP screening tables (2022), which is also included in ***Appendix B*** of the Draft EIR. Therefore, no further revisions to the Draft EIR are required.

Response O-1l

The City disagrees with the assertion that achievement of CAP screening points is not possible. MM GHG-1 requires the achievement of 100 points per the CAP screening tables and the incorporation of design features in development plans prior to the issuance of building permits. As shown in Table 4.8-9 of the Final EIR, CAP screening tables provide development projects with design options that could provide a total of 218 possible multi-family residential points and a total of 238 possible warehouse points. Therefore, as discussed in the Draft EIR, consistency with the CAP through achievement of 100 points on the screening tables is both feasible and required. The less than significant impact conclusion is solely

based on the Project's feasible and required achievement of 100 points on the screening tables and not on a quantification of GHG emissions reductions. Therefore, no further revisions to the Draft EIR are required.

Response O-1m

The City disagrees with the assertion that the Draft EIR provides inadequate consistency analysis as to the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (2020-2045 RTP/SCS). The consistency analysis in the Draft EIR serves to determine the Project's consistency with the 2020-2045 RTP/SCS and explains, specifically, that the Project is consistent with the 2020-2045 RTP/SCS Goals 5, 6, and 7.

2020-2045 RTP/SCS Goal 5 aims to reduce greenhouse gas (GHG) emissions and improve air quality. The Project is consistent with Goal 5 because the reduction of energy use, improvement of air quality, and promotion of more environmentally sustainable development would be encouraged through the existing and proposed alternative transportation modes, sustainable building and landscaping design techniques, and other best management practices for structures and non-structures. Further, the Project includes the construction of bus turnouts, which would serve future Bus Rapid Transit (BRT) service currently being coordinated by the City of Ontario and regional transit agencies. The future BRT service would target destinations along corridors, including Euclid Avenue on the western boundary of the Project site. The Project would directly support the expansion of transit services in the Project area.

2020-2045 RTP/SCS Goal 6 aims to support healthy and equitable communities. The Project is consistent with Goal 6 as it would be constructed to comply with the current building codes, State and federal requirements, including Green Building Standards.

2020-2045 RTP/SCS Goal 7 aims to adapt to a changing climate and support an integrated regional development pattern and transportation network. The Project is consistent with Goal 7 as it would construct new roads, infrastructure, and buildings to support uses consistent with the 2020-2045 RTP/SCS and consistent with current building codes, State and federal requirements including Green Building Standards. In addition, as discussed in Goal 5, the Project would support the expansion of transit services in the Project vicinity through the construction of bus turnouts to service future BRT services. Therefore, no further revisions to the Draft EIR are required.

Response O-1n

The City disagrees with this assertion in that the Draft EIR does not adequately or accurately analyze the proposed Project in accordance with CEQA Guidelines Environmental Checklist threshold, "For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area."

As discussed in ***Section 4.9: Hazards and Hazardous Materials*** of the Draft EIR, page 4.9-5, the Project site is located approximately 1.2 miles north of the Chino Airport and is approximately 3.7 miles southwest of the Ontario International Airport. Chino Airport is owned and operated by the County of San Bernardino and situated within the incorporated limits of the City of Chino in the southwestern corner of the County

of San Bernardino. Operations at Chino Airport affect lands within Riverside County less than two miles to the east, thus necessitating Riverside County Airport Land Use Commission adoption of a Chino Airport Land Use Compatibility Plan for the portion of the airport influence area lying within Riverside County.[7]

The Project site is within the Chino Airport Influence Area and is within the Zone E compatibility zone, as depicted in Draft EIR Figure 4.9-1: Chino Airport Compatibility Zones. Zone E is categorized as other airport environs and prohibits only hazards to flight. Zone E places no requirements on open land, no limit on residential densities, and discourages major spectator-oriented facilities such as sports stadiums, amphitheaters, and concert halls beneath principal flight tracks. In addition, airspace review is required for objects that exceed 100 feet tall. Zone E requirements align with the Project Specific Plan. Furthermore, the maximum building height for the Project is 45 feet in the Business Park district and 55 feet in the Mixed-Use district and the Project does not require ALUCP review. Additionally, the City disagrees with the assertion that the Project site, including the southern residential portion of the site, is within Safety Zone III, of the Chino Airport Land Use Compatibility Plan. According to The Ontario Plan 2050 (TOP 2050) EIR Figure 5.9-2: Airport Safety Zones, the Project site is not located within a Chino Airport Safety Zone.[8] As discussed in ***Section 4.9: Hazards and Hazardous Materials*** of the Draft EIR, pages 4.9-37 through 4.9-38, the San Bernardino County Chino Airport Comprehensive Land Use Plan identifies the Project site not being within a Safety Zone of the Chino Airport Overlay (Generic Safety Zones for General Aviation Airports from the Caltrans Division of Aeronautics – California Airport Land Use Planning Handbook), further depicted in Draft EIR Figure 4.9-2: Airport Safety Zones that shows the Project site on TOP 2050 EIR Figure 5.9-2. Therefore, as concluded in the Draft EIR, the Project is not anticipated to result in a safety hazard or excessive noise for people residing or working in the Project area. Therefore, no further revisions to the Draft EIR are required.

Response O1-o

The City disagrees with this assertion that the Draft EIR omits discussion and analysis regarding the Project's consistency with other land use plans, policies, or regulations adopted for the purpose of avoiding or mitigating an environmental effect. In particular, the commenter asserts that the Project will have a significant and unavoidable cumulatively considerable impact to air quality and greenhouse gas emissions. As identified within ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR, the Project would result in a less than significant impact with mitigation incorporated. As stated in ***Section 4.11: Land Use and Planning*** of the Draft EIR, discussion regarding reduction in greenhouse gas (GHG) emissions can be found in ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR, and discussion regarding improvements to air quality can be found in ***Section 4.3: Air Quality*** of the Draft EIR, page 4.11-10.

The reduction of energy use, improvement of air quality, and promotion of more environmentally sustainable development would be encouraged through the existing and proposed alternative transportation modes, sustainable building and landscaping design techniques, and other best management practices for structures and non-structures. In addition, it is anticipated that less emissions would occur due to the mixed-use nature of the Project, which encourages an environment that is

[7] Riverside County Airport Land Use Commission. 2008. https://rcaluc.org/sites/g/files/aldnop421/files/migrated/Portals-13-PDFGeneral-plan-newplan-36--20Vol.-202-20Chino.pdf.

[8] City of Ontario. The Ontario Plan 2050, Figure 5.9-2. Page 5.9-29: Airport Safety Zones. https://www.ontarioca.gov/sites/default/files/Ontario-Files/Planning/The%20Ontario%20Plann/EIR/Final_DraftSEIR_TOP2050.pdf.

accessible through walkability and other sustainable alternatives. The Project would construct new roads, infrastructure, and buildings to support uses consistent with the 2020-2045 RTP/SCS and consistent with current building codes and state and Federal requirements including CALGreen Code. Additionally, the proposed Project Specific Plan proposes the same land uses as contained in the City's General Plan, The Ontario Plan (TOP) 2050. Furthermore, the Project Specific Plan would promote orderly development to coincide with adjacent land uses. As shown in ***Section 4.11: Land Use and Planning*** of the Draft EIR, Tables 4.11-2 and 4.11-3, the Project embodies the goals and policies in the applicable long-range planning documents. No mitigation is required other than compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050. Therefore, no further revision to the cumulative projects analyzed in the Draft EIR is required.

Response O-1p

See Response O1-c. The City disagrees with the assertion that the Draft EIR does not provide information regarding the buildout conditions of the City's TOP 2050. The Draft EIR provides cumulative analysis for each focus area in its respective section associated with development and growth in the City and region. Further description of the portion of the Draft EIR referenced in this comment is not necessary. Cumulatively significant effects were individually discussed in each environmental topic area's (***Sections 4.1: Air Quality*** through ***4.17: Utilities and Service Systems*** of the Draft EIR) cumulative Impacts subsection. Further, the cumulative project list was considered to evaluate cumulative impacts per Sections 15130 and 15355 of the State CEQA Guidelines. Therefore, no further revision to the cumulative projects analyzed in the Draft EIR is required.

Response O-1q

Comment noted. The City disagrees with this assertion in that the Draft EIR provides inadequate consistency analysis that focuses on the broad policy-oriented goals of the 2020-2045 RTP/SCS. The Project is consistent with the 2020-2045 RTP/SCS Goals 5, 6, and 7.

2020-2045 RTP/SCS Goal 5 aims to reduce greenhouse gas (GHG) emissions and improve air quality. The Project is consistent with Goal 5 as the reduction of energy use, improvement of air quality, and promotion of more environmentally sustainable development would be encouraged through the existing and proposed alternative transportation modes, sustainable building and landscaping design techniques, and other best management practices for structures and non-structures. Further, the Specific Plan area is within walking distance of the Eucalyptus and Euclid Omnitrans Bus Route 83. Omnitrans Bus Route 83 directly connects the site to the cities of Chino and Upland and to several stops in the City of Ontario, as well as the Chino Transit Center and Ontario Civic Center Transfer Station.

2020-2045 RTP/SCS Goal 6 aims to support healthy and equitable communities. The Project is consistent with Goal 6 as it would be constructed to comply with the current building codes, State and federal requirements, including Green Building Standards.

2020-2045 RTP/SCS Goal 7 to adapt to a changing climate and support an integrated regional development pattern and transportation network. The Project is consistent with Goal 7 as it would construct new roads, infrastructure, and buildings to support uses consistent with the 2020-2045 RTP/SCS and consistent with current building codes, State and federal requirements including Green Building Standards. In addition, as

discussed in Goal 5, the Project would be located within walking distance of public transit, thereby reducing the potential use of vehicles. Therefore, no further revision to the analysis in the Draft EIR is required.

Response O1-r

See Response O1-n. The City disagrees with the assertion that the Draft EIR does not provide an accurate consistency analysis with all land use plans, policies, or regulations adopted for the purpose of avoiding or mitigating an environmental effect, specifically with Policy LU5-7 ALUCP Consistency with Land Use Regulations. As discussed in ***Section 4.9: Hazards and Hazardous Materials*** of the Draft EIR, pages 4.9-37 through 4.9-38, the San Bernardino County Chino Airport Comprehensive Land Use Plan identifies the Project site not being within a Safety Zone of the Chino Airport Overlay (Generic Safety Zones for General Aviation Airports from the Caltrans Division of Aeronautics – California Airport Land Use Planning Handbook), as depicted in Draft EIR Figure 4.9-2: Airport Safety Zones. Therefore, Project implementation is not required to comply with the criteria of the Chino Airport final composite safety zones, and no further revision to the analysis in the Draft EIR is required.

Response O1-s

See Response O1-n. The City disagrees with the assertion that the Draft EIR has not adequately or accurately analyzed the Project's consistency with the San Bernardino County ALUC Chino Airport Compatibility Plan. Additionally, the Project Specific Plan allows for up to 466 residential units and a maximum of 1,676,887 square feet of employment generating land uses within the Project area. The Specific Plan includes future transit stops and near planned transit lines and helps to improve jobs housing balance in the City and the surrounding region with the provision of varied land use alternatives within the Mixed-Use District. Additionally, as discussed in ***Section 4.11: Land Use and Planning*** of the Draft EIR, pages 4.11-9 through 4.11-30, the Specific Plan is consistent with the City TOP 2050, Policy ER4-3, which aims to reduce GHG emissions in accordance with regional, State, and federal regulations. The Project is consistent with TOP 2050 Policy ER4-3 as it would be constructed in accordance with California Green Building Standards Code; including but not limited to, using energy-efficient LED products, choosing roof and paving materials that possess a high level of solar reflectivity, and employing high-performance dual-pane window glazing in office storefronts. As such, the Project would help reduce GHG emissions in accordance with regional, State, and federal regulations and be consistent with TOP 2050 Policy ER4-3. Therefore, no further revisions to the Draft EIR are required.

Response O1-t

The City disagrees with the assertion that the Draft EIR has provided a misleading and inaccurate qualitative analysis of the project's GHG emissions that cannot be feasibly assured to reduce GHG emissions to less than significant levels. As stated in ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR, the Project's construction and operational emissions were calculated using the California Emissions Estimator Model version 2022.1 (CalEEMod). Details of the modeling assumptions and emission factors are provided in ***Appendix B1: Air Quality Emissions Model Data*** of the Draft EIR. For construction, CalEEMod calculates emissions from off-road equipment usage and on-road vehicle travel associated with haul, delivery, and construction worker trips. GHG emissions during construction were forecasted based

on the proposed construction schedule and applying the mobile-source and fugitive dust emissions factors derived from CalEEMod. The Project's construction-related GHG emissions would be generated from off-road construction equipment, on-road hauling and vendor (material delivery) trucks, and worker vehicles.

The Project's operations-related GHG emissions would be generated by vehicular traffic, off-road equipment, area sources (e.g., landscaping maintenance, consumer products), electrical generation, natural gas consumption, water supply and wastewater treatment, and solid waste. The increase of traffic over existing conditions as a result of the Project was obtained from the Project's Traffic Analysis Study (see ***Appendix I1: Traffic Analysis***) prepared by Urban Crossroads (January 2023). Project trip generation from the Trip Generation Analysis is based on the following Institute of Transportation Engineers (ITE) land use categories:

- ITE Land Use 130: Industrial Park
- ITE Land Use 150: Warehousing
- ITE Land Use 220: Multifamily Low-Rise Residential
- ITE Land Use 822: Strip Retail
- ITE Land Use 933: Fast-Food Restaurant Without Drive-Through
- ITE Land Use: 934: Fast-Food Restaurant With Drive-Through

The ITE Trip Generation Manual does not contain trip generation rates for truck/trailer parking lots. Therefore, the traffic study developed rates with data from other truck/trailer parking facilities located in the surrounding area, as discussed in ***Appendix I*** of the Draft EIR. Truck mix percentages are based on the SCAQMD Truck Trip Generation Study applied to ITE truck percentages. Other operational emissions from area, energy, and stationary sources were quantified in CalEEMod based on land use activity data, as discussed in ***Appendix B*** and ***Appendix I*** of the Draft EIR.

As concluded in Table 4.8-7 in ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR, Project Buildout would generate approximately 36,129 $MTCO_2e$ per year with the implementation of operational air quality MM AQ-2 through MM AQ-6. Since the majority of emissions are from mobile sources and neither the Project Applicant nor the City have regulatory authority to control tailpipe emissions, no feasible mitigation measures exist that would reduce the Project's impacts with respect to mobile operational emissions. While the Project has some control over GHG emissions (refer to MM AQ-2 through MM AQ-6), the majority of emissions are beyond the Project's control. MM GHG-1 would require that the Project incorporate project design features to achieve a minimum score of 100 points on the Screening Tables. As stated in the adopted Community Climate Action Plan (CAP), projects that achieve a minimum score of 100 points are considered less than significant. At the time of this analysis, the Project is in the design phase, where project design features needed to achieve consistency with the Screening Tables are being considered and implemented. A preliminary set of the screening tables has been completed to show that the Project can feasibly achieve 100 points (refer to ***Appendix B*** of the Draft EIR). The City requires that an applicant must complete and submit a final set of screening tables showing the achievement of the required 100 points prior to issuance of the building permit, as required by MM GHG-1. Therefore, with the implementation of MM AQ-2 through MM AQ-6 and MM GHG-1, the Project impact is less than significant.

In addition, the Project would include several sustainable design features as required by MM GHG-1 that would help reduce GHG emissions. Regarding goals for 2050 under Executive Order S-3-05, at this time it is not possible to quantify the emissions savings from future regulatory measures, as they have not yet been developed; nevertheless, it can be anticipated that operation of the proposed Project would benefit from the implementation of current and potential future regulations (e.g., improvements in vehicle emissions, SB 100/renewable electricity portfolio improvements, etc.) enacted to meet an 80 percent reduction below 1990 levels by 2050.

The majority of the GHG reductions from the Scoping Plan would result from continuation of the Cap-and-Trade regulation. AB 398 extends the State's Cap-and-Trade program through 2030 and the Scoping Plan provide a comprehensive plan for the state to achieve its GHG targets through a variety of regulations enacted at the State level. Additional reductions are achieved from electricity sector standards (i.e., utility providers to supply 60 percent renewable electricity by 2030 and 100 percent renewable by 2045), doubling the energy efficiency savings at end uses, additional reductions from the LCFS, implementing the short-lived GHG strategy (e.g., hydrofluorocarbons), and implementing the Mobile Source Strategy and Sustainable Freight Action Plan.

The Project would not obstruct or interfere with efforts to increase zero emission vehicles (ZEVs) or state efforts to improve system efficiency. As discussed above and in ***Section 4.3: Air Quality*** of the Draft EIR, MM AQ-2 through MM AQ-6 would reduce mobile source emissions and would support the State's transition to ZEVs. The Project would also benefit from implementation of the State programs for ZEVs and goods movement efficiencies that reduce future GHG emissions from trucks.

The CAP establishes a city points system that assigns values for each GHG emissions mitigation design element or operational program feature incorporated into a given development project. The CAP Screening Tables point values correspond to the minimum GHG emissions reduction expected from each feature. Projects with features that yield at least 100 Screening Table points are considered consistent with the reduction quantities anticipated in the City's CAP. Such projects would be determined to have a less than significant individual and cumulative GHG emissions impact. As discussed above, both Phase I and Phase II of the Project can feasibly achieve 100 points individually, based on the completion of preliminary Screening Tables (see ***Appendix B*** of the Draft EIR). Achieving 100 points ensures that the Project would not impede California's statewide GHG reduction goals for 2030 and 2050. Therefore, impacts would be less than significant with implementation of mitigation MM AQ-2 through MM AQ-6 and MM GHG-1. Therefore, the Project is consistent with TOP 2050 Policy ER4-6. Therefore, no further revisions to the Draft EIR are required.

Response O1-u

See Response O1-c above. As analyzed in ***Section 4.3: Air Quality*** of the Draft EIR, pages 4.3-35 and 4.3-36, Project construction activities, including TACs from equipment exhaust would not expose sensitive receptors to substantial pollutant concentrations. Project-related TAC impacts during construction would be less than significant with mitigation measures MM AQ-1 through MM AQ-8. MM AQ-1 requires the Project to use "Super-Compliant" low VOC paints; MM AQ-2 requires that all cargo handling equipment used on a daily basis (yard trucks/hostlers, forklifts, etc.) be electric; MM AQ-3 requires the implementation of a TDM program to reduce single occupant vehicle trips and encourage transit;

MM AQ-4 requires the buildings to be designed to accommodate EV infrastructure; MM AQ-5 prohibits idling when engines are not in use; MM AQ-6 prohibits the installation of wood-burning and natural gas devices; MM AQ-7 prohibits refrigerated warehouse space/cold storage; and MM AQ-8 requires the use of Tier 4 construction equipment is required to reduce the cancer risk.

Additionally, incorporating operational MM AQ-2 through MM AQ-5 and MM AQ-7, would reduce potential hazards to be within acceptable limits. MM AQ-2 requires that all cargo handling equipment used on a daily basis (yard trucks/hostlers, forklifts, etc.) be electric; MM AQ-3 requires the implementation of a TDM program to reduce single occupant vehicle trips and encourage transit; MM AQ-4 requires the buildings to be designed to accommodate EV infrastructure; MM AQ-5 prohibits idling when engines are not in use; and MM AQ-7 prohibits refrigerated warehouse space/cold storage. ***Section 4.3: Air Quality*** of the Draft EIR determined that Project construction and operations would not expose sensitive receptors to substantial pollutant concentrations. Construction and operations would not exceed SCAQMD Local Significance Thresholds (LSTs), would not create a carbon monoxide (CO) hotspot, and would not generate concentrations of DPM that would result in carcinogenic, chronic, or acute health risk effects. Therefore, Project impacts would be less than significant. No further revisions to the Draft EIR are required.

Response O1-v

Per CEQA Guidelines Sections 15131 and 15384, CEQA analysis addresses a project's potential impacts on the physical environment; economic or social issues of a project are not treated as significant effects on the environment, or as substantial evidence if they do not contribute to or are not caused by physical impacts on the environment. Additionally, the proposed Project Specific Plan is consistent with the City's TOP 2050, land use and zoning designations, and therefore, a general plan amendment is not required. Therefore, TOP 2050 Policies CE3-1 and CE3-2, which concern economic issues not required to be assessed in the Draft EIR. These policies can be considered by the City Council as part of its policy deliberations concerning the Project. Therefore, no further revisions to the Draft EIR are required.

Response O1-w

The City disagrees with the assertion the Draft EIR does not provide adequate analysis of the application of the City's Development Impact Fee (DIF) program to mitigate deficient level of service (LOS) intersections.

As a preliminary matter, LOS-related impacts are no longer potential environmental impacts under CEQA. TOP 2050 Policy M1-5 Level of Service requires roadways to maintain a peak hour Level of Service (LOS) E or better at all intersections. The Project would comply with the Functional Roadway Classification Plan of the Mobility Element which aims to comply with federal, State, and local design and safety standards, meet the needs of multiple transportation modes and users, and maintain a LOS of E or better at all intersections addressed in the Draft EIR. The Project would be required to comply with the City's DIF program, which helps fund transportation improvements. The City's DIF includes regional improvements to comply with Measure I. As discussed in ***Section 4.15: Transportation and Traffic*** of the Draft EIR, page 4.15-11, if roadway improvements are not included in the DIF program, the Project would be required to provide funding on a fair share basis where appropriate, as determined by the City. The City

shall collect these fees, with the proceeds solely used as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected population increases. Therefore, the Project is consistent with TOP 2050 Policy M1-5. Therefore, no further revisions to the Draft EIR are required.

Response O-1x

Comment noted for the record.

Response O1-y

Comment noted. As discussed in ***Section 3.0: Project Description*** of the Draft EIR, the Specific Plan is consistent with the land use and zoning designations within the City's TOP 2050. The existing zoning designation for the site is SP (Specific Plan) Zoning District. The SP District designation requires approval of a specific plan by the City for urban development of the project site. The Euclid Mixed-Use Specific Plan will be the zoning for the Project site, consistent with TOP 2050. Therefore, no further revisions to the Draft EIR are required.

Response O1-z

See Response O-1x above.

Response O1-aa

The City disagrees with the assertion that the Draft EIR has not identified and analyzed the potential impact of developing replacement sites for the net loss in residential capacity for 774 units as a result of adopting the Euclid Mixed Use Specific Plan. As discussed in ***Section 3.0: Project Description*** of the Draft EIR, the City's TOP 2050 designates the Project site for development of Business Park (BP) at 0.6 FAR, and Mixed-Use (MU) at 14.0 to 65.0 du/ac; 1.5 FAR office; 1.0 FAR retail, and includes portions designated for Open Space-Non-Residential (OS-NR). As analyzed within ***Section 4.13: Population and Housing*** of the Draft EIR, the Project would provide 466 high-density residential development which would contribute to the City's RHNA Allocation for the 2021-2029 planning period. The Project site has been identified as a Housing Opportunity Area where residential neighborhoods would be balanced by mixed-use, commercial, and public places and organized around a regional-scale park. The City's housing strategies for this area promote the creation of mixed-income communities in the western Ontario Ranch. The Project would be consistent with the goals and growth projection for the City and the region, which accounts for the 466 planned high-density residential units. While the development of new business associated with Phase I development and the development of new residences associated with Phase II development would directly result in population growth, growth of 1,571 residents would be well within the growth projections assumed for the City and the Southern California Association of Governments (SCAG) region, specifically, 96,900 by 2045 in the City and 674,000 by 2045 in the County (see Table 4.13-2 in ***Section 4.13: Population and Housing*** of the Draft EIR,). The Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. Impacts would be less than significant. No mitigation is required other than compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050. Therefore, the Project would not result in residential capacity loss. No further revisions to the Draft EIR are required.

Response O1-bb

See Response O-1x above.

Response O1-cc

See Response O-1x above.

Response O1-dd

The City disagrees with the assertion that the Draft EIR has not provided any analysis to demonstrate that adoption of the Euclid Mixed Use Specific Plan will yield 338 affordable units in the income categories specified in the Housing Element. As analyzed within ***Section 4.13: Population and Housing*** of the Draft EIR, the Project would not cause substantial unplanned population growth in the area. The Project would provide 466 high-density residential development which would contribute to the City's Regional Housing Needs Allocation (RHNA) Allocation for the 2021-2029 planning period. The Project site has been identified as a Housing Opportunity Area where residential neighborhoods would be balanced by mixed-use, commercial, and public places and organized around a regional-scale park. The City's housing strategies for this area promote the creation of mixed-income communities in the western Ontario Ranch. The Project would be consistent with the goals and growth projection for the City and the region. While the development of new business associated with Phase I development and the development of new residences associated with Phase II development would directly result in population growth, growth of 1,571 residents would be well within the growth projections assumed for the City and the SCAG region, specifically, 96,900 by 2045 in the City and 674,000 by 2045 in the County (see Table 4.13-2 in ***Section 4.13: Population and Housing*** of the Draft EIR). The Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. Impacts would be less than significant. No mitigation is required other than compliance with applicable plans, policies, and programs, including the proposed Project Specific Plan and TOP 2050. Therefore, no further revisions to the Draft EIR are required.

Response O1-ee

The City disagrees with the assertion that the Draft EIR does not provide a calculation of construction jobs generated by the Project. The Draft EIR determines that the Project would not introduce new population or housing to the Project site as the development would include business park and mixed uses, which would result in jobs for residents in the surrounding area. As stated in ***Section 4.13: Population and Housing*** of the Draft EIR, the construction phase of the development would generate temporary employment opportunities, including short-term design, engineering, and construction jobs. Construction related jobs would not result in a significant population increase because they are expected to be filled by persons within the local economy. The unemployment rate is approximately 4.1 percent within the jurisdictions in the Project vicinity of the Riverside-San Bernardino-Ontario Metropolitan Area as of 2021. Because many of the employment opportunities are expected to be filled by persons within the local economy, it is anticipated that an adequate number of persons are available to fill the employment positions without constructing new residential units. Furthermore, the small percentage of skilled and managerial positions could either be filled by the local economy or by persons outside the local economy.

Therefore, the implementation of the Project would result in less than significant growth inducement impacts in the Project vicinity.

CEQA does not require that an EIR provide estimates on the demographics and geographic location for qualified workers. As discussed in ***Section 4.13: Population and Housing*** of the Draft EIR, page 4.13-10, construction phase of the development would generate temporary employment opportunities, including short-term design, engineering, and construction jobs. The forecast increase in Project employment is within SCAG's forecast employment increase for the City, which is 55,400 jobs and the forecast employment increase for the County of San Bernardino, which is 273,000 by 2045 (see Table 4.13-2 in ***Section 4.13: Population and Housing*** of the Draft EIR). The San Bernardino Council of Governments region is housing rich. The Project would produce more jobs and therefore would support the improvements designated by SCAG in pursuit of an improved jobs-housing-balance for the County. Because the region is housing-rich, it is expected that jobs at the Project site would be drawn from the local and regional labor force. Therefore, no further revisions to the Draft EIR are required.

Response O1-ff

The referenced documents are available for review at the City Planning Department offices.

Response O1-gg

See Response O1-dd above.

Response O1-hh

The City disagrees with the assertion that the Draft EIR "does not provide any cumulative analysis discussion of projects approved since 2016 and projects "in the pipeline" to determine if the project will exceed the employment/population growth forecasts by SCAG and/or the General Plan." As analyzed in ***Section 4.13: Population and Housing*** of the Draft EIR, impacts are analyzed using County projections in SCAG's 2020-2045 RTP/SCS Demographics and Growth Forecast. Development of the Project in conjunction with the related project list in Table 4-1: Related Approved and Pending Projects in ***Section 4.0: Environmental Impact Analysis*** of the Draft EIR, would not result in cumulative wide population and/or housing impacts, as mixed-use business park projects would further improve the jobs-housing balance. This would encourage alignment with objectives set by SCAG's 2020-2045 RTP/SCS as it would increase employment opportunities in an area that is predominantly residential. Furthermore, the Project would be consistent with the goals set forth in TOP 2050 by providing long-term employment opportunities associated with the buildout of the Project. Related projects would be reviewed by the City, and development would be required to be consistent with adopted State and City development standards, regulations, plans, and policies to minimize the effect of the increase in population on physical impacts on the environment. Additionally, the indirect effect of Project employment on housing and population growth in the City has been anticipated in TOP 2050, and therefore in regional housing and population forecasts provided in the 2020-2045 RTP/SCS. As such, the Project would not contribute to cumulatively adverse growth impacts. Upon approval, the Project would improve the jobs-housing balance in the County which is considered a housing-rich area. Therefore, the Project combined with related projects

would not result in cumulatively considerable impacts to population and housing as no substantial new unplanned growth would occur. Therefore, no further revisions to the Draft EIR are required.

Response O1-ii

See Response O1-w above.

Response O1-jj

The City disagrees with the assertion that the VMT analysis has underestimated the proposed projects VMT generation. The VMT analysis was prepared consistent with the City of Ontario's adopted VMT guidelines and thresholds as adopted by City Council in June 2020 (File No.: SB 743 VMT Thresholds). The City's resolution states that SBTAM is the appropriate tool to use when preparing a VMT analysis. As SBTAM was utilized to formulate and establish the City's adopted VMT impact threshold it is appropriate for land use projects follow the methodologies used to establish these thresholds.[9]

In addition, the City disagrees with the assertion that the VMT analysis does not adequately or accurately represent the VMT impacts of the Project. As part of the preparation of the VMT analysis, 1,333 new employees were added to the Project's TAZ to ensure the inclusion of the Project's industrial warehouse uses; therefore, the analysis includes the additional traffic from both passenger cars and trucks associated with the Project's proposed land uses. Furthermore, as noted in the VMT analysis, the City's VMT analysis guidelines require the calculation of total VMT as derived from the SBTAM model's origin/destination (OD) trip matrices. These matrices include internal to internal (II), internal to external (IX), and external to internal (XI) vehicle trips for all vehicle types (i.e., passenger car and commercial vehicles).

Lastly, the truck/trailer component of the Project is anticipated to serve nearby warehouses and distribution facilities that would be seeking to locate overflow truck/trailer storage as close as possible to the primary warehouse or distribution facility. As a result, the trips are expected to be local serving. Therefore, no further revisions to the Draft EIR are required.

Response O1-kk

The City disagrees with the assertion that the Draft EIR has not adequately analyzed the project's potential to substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses; or the project's potential to result in inadequate emergency access. As discussed in ***Section 4.15: Transportation and Traffic*** of the Draft EIR, page 4.15-24, roadway improvements and installation of driveways that would be implemented during construction of the Project would be required to comply with City Municipal Code Section 7-3.07, which requires that prior to any activity that would encroach into a right-of-way, the area be safeguarded through the installation of safety devices that would be specified by the City's Engineering Department during the construction permitting process to ensure that construction activities would not increase hazards. In the conduct of such activity or encroachment, materials, supplies, excavated material, and equipment shall be properly placed, and the permittee shall provide and maintain such safety devices, including, but not limited to, lights, barricades, signs, and guards, as are necessary to protect the public. Additionally, during

[9] Technical Advisory on Evaluating Transportation Impacts in CEQA. 2018. Page 30-31. Retrieved from: https://opr.ca.gov/docs/20180416-743_Technical_Advisory_4.16.18.pdf.

construction and long-term operation of the Project, adequate emergency access for emergency vehicles would be maintained along public streets that abut the Project site. Access roads to the site would be constructed throughout the Project site for construction staff/inspectors, construction equipment and materials delivery/removal, and emergency response vehicles. The access roads would be kept or maintained in such condition to allow for the safe passage for emergency response vehicles. The City, as part of its discretionary review process, reviewed the Project's application materials to ensure that appropriate emergency ingress and egress would be available to-and-from the Project site and that circulation on the Project site was adequate for emergency vehicles.

The City has adopted an Emergency Operations Plan to identify evacuation routes, emergency facilities, and City personnel and equipment available to effectively deal with emergency situations. No revisions to the adopted Emergency Operations Plan would be required as a result of the Project. The Project includes the construction and/or improvement of 17 driveways to and from the Project site from adjacent roadways. Exhibit 1-4 in the Traffic Analysis (***Appendix I1***) illustrates and describes access to the Project site. The Project's proposed circulation and off-site improvements would be constructed accordingly with Recommendations 1 through 16 listed in the Project Traffic Analysis to accommodate on-site access. Additionally, all roadway improvements would be designed consistently with the City's TOP 2050 Mobility Element programs, plans, goals and policies, and City Traffic and Transportation Guidelines, and PPP TR-1 and PPP TR-2. Therefore, direct access to the Project site would not substantially increase hazards due to geometric design features or dangerous intersections and a less than significant impact would occur. Therefore, no further revisions to the Draft EIR are required.

Response O1-ll

See Response O1-kk above.

Response O1-mm

Comment noted. The City disagrees with this assertion. The intent of the Draft EIR is to provide sufficient information on the potential environmental impacts of the Project to allow the City to make an informed decision regarding approval of the Project. The intent and purpose of the Project is to provide zoning regulations for development of the Project site by establishing permitted land use, development standards, infrastructure requirements, and implementation requirements for development. A comprehensive set of design guidelines and development regulations are included to guide and regulate site planning, architectural character, and landscape within the community, ensuring that excellence in community design is achieved during project development. The Draft EIR, as an informational document evaluating the potential environmental impacts of the Project, does not include revisions of the final document. The Specific Plan establishes the procedures and requirements to approve new development within the Project site and does not serve as land entitlement approval for each development project on site. The Project is considered under a Legislative Action Application by the City of Ontario. Any new development within the Specific Plan area would be required to submit a discretionary permit/action application and obtain approval from the City.

Section 3.0: Project Description of the Draft EIR discusses the conceptual grading plan and earthwork analysis. The information provided in ***Section 3.0: Project Description*** of the Draft EIR regarding grading

plan and earthwork analysis are adequate analysis of the contents within the Specific Plan, and no revisions or recirculation of the Draft EIR is required.

Response O1-nn

Comment noted. The City disagrees with the assertion that the Draft EIR has not provided any analysis of the available horizontal and vertical sight distance at the intersection of the project driveways and adjacent streets. As identified in ***Appendix I: Transportation Reports*** of the Draft EIR, sight distance at each project access point shall be reviewed with respect to standard Caltrans and City of Ontario sight distance standards at the time of preparation of final grading, landscape, and street improvement plans. Therefore, no further revisions to the Draft EIR are required.

Response O1-oo

See Response O1-pp, below. Further, the Draft EIR cumulative project list was considered to evaluate cumulative impacts per Sections 15130 and 15355 of the State CEQA Guidelines. The Notice of Preparation (NOP) for the Project was distributed on February 10, 2023. The data available at the time of the preparation of the NOP was the most current at that time. Therefore, no further revisions to the Draft EIR are required.

Response O1-pp

The Draft EIR provides cumulative analysis for each focus area in its respective section. Further description in the portion of the Draft EIR referenced in this comment is not necessary. Cumulatively significant effects were individually discussed in each environmental topic area's (***Sections 4.1: Aesthetics*** through ***4.20: Utilities and Service Systems*** of the Draft EIR) Cumulative Impacts subsection. Therefore, no further revisions to the Draft EIR are required.

Response O1-qq

The City disagrees with the commenter's assertion that the Draft EIR has not adequately discussed or analyzed the commitment of resources relating to consistency with regional and local growth forecasts. Additionally, the commenter asserts that the Project would result in air quality and GHG impacts that exceed with the forecasts of the applicable air quality plans (e.g., AQMP). As discussed in Response O1-I, GHG emissions and impacts were fully analyzed within ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR. Based on the discussion therein, the quantitative threshold of 3,000 $MTCO_2e$ threshold raised by the comment is not relevant to Draft EIR's conclusions regarding GHG emissions.

As discussed in Response O1-ee, the forecast increase in Project employment is within SCAG's forecast employment increase for the City of 55,400 and the forecast employment increase for the County of 273,000 by 2045 (see Table 4.13-2 in ***Section 4.13: Population and Housing*** of the Draft EIR). The Project, including the Specific Plan, has been evaluated for its consistency with relevant goals and policies in TOP 2050 and the SCAG's 2020-2045 RTP/SCS. As discussed in ***Section 4.11: Land Use*** of the Draft EIR, pages 4.11-9 through 4.11-30, the Project would not conflict with any land use plan, policy, or regulation. The proposed Project Specific Plan proposes the same land uses as contained in the City's TOP 2050. Furthermore, the Project Specific Plan would promote orderly development to coincide with adjacent land

uses. As shown in ***Section 4.11: Land Use*** of the Draft EIR, Tables 4.11-2 and 4.11-3, the Project embodies the goals and policies in the SCAG adopted the 2020-2045 RTP/SCS and City TOP 2050. No mitigation is required other than compliance with applicable plans, policies and programs, including the proposed Project Specific Plan and TOP 2050. Therefore, the City disagrees with the assertion that the Draft EIR must be revised to ensure that the proposed Project is within the TOP 2050 EIR's analysis.

Cumulative projects could include General Plan amendments and/or zone changes, and modifications to existing land uses. However, such amendments do not necessarily represent an inherent negative effect on the environment, particularly if the proposed changes involve changes in types and intensity of uses, rather than eliminating application of policies that were specifically adopted for the purpose of avoiding or mitigating environmental effects. Past and present cumulative projects do not involve amendments that would eliminate application of policies that were adopted for the purpose of avoiding or mitigating environmental effects. Determining whether any future project might include such amendments and determining the cumulative effects of any such amendments would be speculative since it cannot be known what applications that are not currently filed might request. Thus, it is expected that the land uses of cumulative projects would be consistent with policies that avoid an environmental effect; therefore, cumulatively considerable impacts from cumulative projects related to policy consistency would be less than significant. Therefore, no further revisions to the Draft EIR are required.

Response O1-rr

The City disagrees with the assertion that the Draft EIR does not adequately analyze a 'reasonable range of alternatives. CEQA Guidelines Section 15126.6(a) states: "An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range of potentially feasible alternatives that will foster informed decision making and public participation. An EIR is not required to consider alternatives which are infeasible."

Apart from the analysis of the No Project alternative however, there is no ironclad rule governing the nature or scope of the "reasonable range" of other alternatives to be discussed, other than the "rule of reason" (CEQA Guidelines Section 15126.6(a) & (f); see also *Citizens of Goleta Valley v. Board of Supervisors (1990)*; *Laurel Heights Improvement Association v. Regents of the University of California (1988)).*

What constitutes a "reasonable range" of alternatives will vary with the facts of each project and should be guided only by the purpose of offering substantial environmental advantages over the project proposal which may be "feasibly accomplished in a successful manner" considering the economic, environmental, social and technological factors involved (See *Citizens of Goleta Valley v. Board of Supervisors (1990)* (citing Public Resources Code [PRC] Sections 21002, 21061.1; CEQA Guidelines Section 15364)).

An EIR need not consider every conceivable alternative to a project (CEQA Guidelines Section 15126.6(a); *Mount Shasta Bioregional Ecology Center v. County of Siskiyou (2012)*). The alternatives considered may include alternative approaches, sites, or both (CEQA Guidelines Section 15126.6(a)).

Consistent with this rule of reason, it is generally uncommon (though not strictly prohibited) for an EIR to evaluate only the No Project alternative. In such a case, the Lead Agency has the relatively difficult legal burden of establishing that, given the circumstances at hand, no other feasible alternatives could satisfy the project objectives while resulting in fewer environmental impacts than the proposed project (see *Mount Shasta Bioregional Ecology Center v. County of Siskiyou (2012)*).

In consideration of the above, the inclusion of "only two alternatives beyond the required No Project alternative" (page 22 of Comment Letter) does not, itself, constitute an inadequate range of alternatives.

Additionally, the commenter claims that the "No Project/Existing General Plan Alternative" does not represent an actual alternative to the Project as the "No Project/Existing General Plan Alternative" results in the same quantity and type of development as the proposed Project. As described in ***Section 6.0: Alternatives*** of the Draft EIR, page 6-4 and 6-9, the "No Project/Existing General Plan Alternative" is distinct from the "No Project/No Build Alternative" in that, under the "No Project/No Build Alternative," the Project site would not be developed, and no new development would occur. In other words, the existing conditions of the Project site would remain. Accordingly, the "No Project/No Build Alternative" provides a comparison between the environmental impacts of the Project as compared to the current environmental conditions, resulting from not approving or denying the Project. Section 15126.6(e) of the State CEQA Guidelines requires that an EIR evaluate and analyze the impacts of the "No-Project" Alternative. When the project is the revision of an existing land use or regulatory plan, policy or ongoing operation, the no-project alternative is the continuation of the plan, policy, or operation into the future. Therefore, under the "No Project/Existing General Plan Alternative," the current TOP 2050 land uses and zoning would remain in effect. Development in accordance with the existing GTOP 2050 and zoning would occur. The inclusion of both a "No Project/No Build Alternative" and the "No-Project" ("No Project/existing General Plan Alternative") is intended to provide decisionmakers with a reasonable range of alternatives to the Project within the unique parameters of the proposed Project.

In addition, the commenter asserts that the Draft EIR should analyze a "mixed-use project" alternative that "provides affordable housing and local-serving commercial uses that may reduce VMT, GHG emissions, and improve Air Quality." In accordance with CEQA Guidelines Section 15126.6(a), this mixed-use/commercial alternative would not meet the basic project objectives as outlined in ***Section 3.0: Project Description*** of the Draft EIR, page 3-5 and 3-6. Therefore, no further revision to the alternatives analyzed in the Draft EIR is required.

Response O1-ss

The commenter's request for the Draft EIR's recirculation is noted for the record. However, the commenter has raised no substantial or substantiated criticisms of the Draft EIR which would necessitate recirculation. The commenter's request for subsequent public noticing and hearing information is noted for the record. Therefore, no further revision to the analysis in the Draft EIR is required.

Edmelynne V. Hutter
City of Ontario Planning Department
303 East B Street
Ontario, CA 91764
Em: ehutter@ontarioca.gov

RE: Western States Regional Council of Carpenters' Comments Regarding the City of Ontario's Euclid Mixed Use Specific Plan Project Draft Environmental Impact Report (PSP-22-001) (SCH No. 2023020281).

Dear Edmelynne V. Hutter:

On behalf of the Western States Regional Council of Carpenters (WSRCC), this office is submitting these comments ahead of the February 6, 2024, deadline for the City of Ontario's ("City") Euclid Mixed Use Specific Plan (PSP-22-001) project ("Project") Draft Environmental Impact Report (DEIR), which has been prepared as a Program Environmental Impact Report.

The Project proposes the development and operation of up to 290,131 square feet of commercial retail and office uses, 466 residential units, and 1,386,776 square feet of business park uses. The 84.1-acre site is located south of Schaefer Avenue, west of Sultana Avenue, north of Edison Avenue, and east of Euclid Avenue ("Site").

WSRCC is a labor union representing roughly 90,000 union carpenters in 10 states, including California, and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects. Individual members of WSRCC live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

WSRCC expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also

a

Galante Vineyards v. Monterey Water Dist. (1997) 60 Cal.App.4th 1109, 1121.

WSRCC incorporates by reference all comments raising issues regarding the DEIR or any other environmental document or analysis submitted prior to certification of the EIR for the Project. See *Citizens for Clean Energy v. City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

Moreover, WSRCC requests that the City provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (CEQA) (Pub. Res. Code, § 21000 et seq.), and the California Planning and Zoning Law ("Planning and Zoning Law") (Gov. Code, §§ 65000-65010). California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

cont.
a

I. THE CITY SHOULD INCORPORATE LANGUAGE THAT REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY'S ECONOMIC DEVELOPMENT AND ENVIRONMENT

The City should incorporate language into the proposed Specific Plan requiring residential, commercial and mixed-use developments within the Specific Plan area to be built using local workers who have graduated from a Joint Labor-Management Apprenticeship Program approved by the State of California, have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state-approved apprenticeship training program, or who are registered apprentices in a state-approved apprenticeship training program.

b

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Specific Plan. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of projects within the Specific Plan area can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

> [A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

> [L]abor should be considered an investment rather than a cost and investments in growing, diversifying, and upskilling California's workforce can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.[1]

cont. b

Furthermore, workforce policies have significant environmental benefits given that they improve an area's jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that that the "[u]se of a local state-certified apprenticeship program" can result in air pollutant reductions.[2]

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

> People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.[3]

---

[1] California Workforce Development Board (2020) Putting California on the High Road: A Jobs and Climate Action Plan for 2030 at p. ii, *available at* https://laborcenter.berkeley.edu/wp-content/uploads/2020/09/Putting-California-on-the-High-Road.pdf.

[2] South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions, *available at* http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10.

[3] California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, *available at* https://cproundtable.org/static/media/uploads/publications/cpr-jobs-housing.pdf

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.[4] Some municipalities have even tied local hire and other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

> In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city's First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

cont. b

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 ("**AB2011**"). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

II. THE CITY SHOULD INCORPORATE LANGUAGE IMPOSING TRAINING REQUIREMENTS FOR CONSTRUCTION ACTIVITIES TO PREVENT COMMUNITY SPREAD OF COVID-19 AND OTHER INFECTIOUS DISEASES INTO THE SPECIFIC PLAN.

c

[4] Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? Journal of the American Planning Association 72 (4), 475-490, 482, *available at* http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf.

Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupations Safety and Health Administration. Recently, several construction sites have been identified as sources of community spread of COVID-19.[5]

Western Carpenters recommend that the City adopt additional requirements to mitigate public health risks from various residential, commercial and mixed-use development construction activities. Western Carpenters requests that the City require safe on-site construction work practices as well as training and certification for any construction workers on residential, commercial and mixed-use developments within the Specific Plan area.

In particular, based upon Western Carpenters' experience with safe construction site work practices, Western Carpenters recommends that the City require that while construction activities are being conducted within the Specific Plan area:

cont. C

Construction Site Design:

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.
- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.
- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.

[5] Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, *available at* https://www.sccgov.org/sites/covid19/Pages/press-release-06-12-2020-cases-at-construction-sites.aspx.

- Provide hand washing stations throughout the construction site.

Testing Procedures:

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.
- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody gaining entry to the project site such as returning personnel, deliveries, and visitors.
- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.
- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

cont.
C

Planning

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches) communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control,

Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.[6]

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The City should require that all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

Western Carpenters has also developed a rigorous Infection Control Risk Assessment (ICRA) training program to ensure it delivers a workforce that understands how to identify and control infection risks by implementing protocols to protect themselves and all others during renovation and construction projects in healthcare environments.[7]

ICRA protocols are intended to contain pathogens, control airflow, and protect patients during the construction, maintenance, and renovation of healthcare facilities. ICRA protocols prevent cross contamination, minimizing the risk of secondary infections in patients at hospital facilities.

The City should incorporate language requiring the residential developments related to the SP be built using a workforce trained in ICRA protocols.

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise ("SWAPE") is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas ("GHG") emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model ("CalEEMod") is a "statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects."[1] CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.[2]

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[3]

[1] "California Emissions Estimator Model." CAPCOA, 2017, *available at:* http://www.aqmd.gov/caleemod/home.
[2] "California Emissions Estimator Model." CAPCOA, 2017, *available at:* http://www.aqmd.gov/caleemod/home.
[3] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled ("VMT") associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.[4]

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

> "$VMT_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$
>
> Where:
>
> n = Number of land uses being modeled."[5]

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

> "$\text{Emissions}_{pollutant} = VMT * EF_{running,pollutant}$
>
> Where:
>
> $\text{Emissions}_{pollutant}$ = emissions from vehicle running for each pollutant
>
> VMT = vehicle miles traveled
>
> $EF_{running,pollutant}$ = emission factor for running emissions."[6]

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[7] In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act ("CEQA") requires that such changes be justified by substantial evidence.[8] The default number of construction-related worker trips is calculated by multiplying the

[5] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.
[6] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.
[7] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.
[8] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.[9] Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively."[10] Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.[11] The operational home-to-work vehicle trip lengths are:

> "[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings" (emphasis added). [12]

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).[13]

Worker Trip Length by Air Basin		
Air Basin	**Rural (miles)**	**Urban (miles)**
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
Average	**16.47**	**11.17**
Minimum	**10.80**	**10.80**
Maximum	**19.80**	**14.70**
Range	**9.00**	**3.90**

[13] "Appendix D Default Data Tables." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

3

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8-miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7-miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan ("Project") located in the City of Claremont ("City"). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.[14] In an effort to evaluate the potential for a local hire provision to reduce the Project's construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO_2e)	3,623
Amortized Construction GHG Emissions (MT CO_2e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO2e)	3,024
Amortized Construction GHG Emissions (MT CO_2e/year)	100.80
% Decrease in Construction-related GHG Emissions	***17%***

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project's urbanization level and location.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Village South Specific Plan (Proposed)
Los Angeles-South Coast County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Paul Rosenfeld, Ph.D.

Chemical Fate and Transport & Air Dispersion Modeling

Principal Environmental Chemist

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H_2O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The District of New Jersey
Duarte et al, *Plaintiffs,* vs. United States Metals Refining Company et. al. *Defendant.*
Case No.: 2:17-cv-01624-ES-SCM
Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division
M/T Carla Maersk, *Plaintiffs,* vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS "Conti Perdido" *Defendant.*
Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237
Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants
Case No.: No. BC615636
Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants
Case No.: No. BC646857
Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado
Bells et al. Plaintiff vs. The 3M Company et al., Defendants
Case: No 1:16-cv-02531-RBJ
Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District
Phillip Bales et al., Plaintiff vs. Dow Agrosciences, LLC, et al., Defendants
Cause No 1923
Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa
Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants
Cause No C12-01481
Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 0i9-L-2295
Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC
Case No.: LC102019 (c/w BC582154)
Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., *Plaintiffs,* vs. Meritor Inc., et al., *Defendants*
Case Number: 4:16-cv-52-DMB-JVM
Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al.,, et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action N0. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant.*
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., *Plaintiffs,* vs. Republic Services, Inc., et al., *Defendants*
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division
Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs,* vs. BP Products North America, Inc., *Defendant.*
Case 3:10-cv-00622
Rosenfeld Deposition: February 2012
Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland
Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants
Case Number: 03-C-12-012487 OT
Rosenfeld Deposition: September 2013

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist
California Certified Hydrogeologist
Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

3

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Coloradao.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal repesentatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

Hagemann, M.F., 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

Hagemann, M.F., 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

Hagemann, M.F., 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

Hagemann, M.F., 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublished report.

Hagemann, M.F., 2001. Estimated Cleanup Cost for MTBE in Groundwater Used as Drinking Water. Unpublished report.

Hagemann, M.F., 2001. Estimated Costs to Address MTBE Releases from Leaking Underground Storage Tanks. Unpublished report.

Other Experience:

Selected as subject matter expert for the California Professional Geologist licensing examination, 2009-2011.

Response to Comment Letter O2 - Mitchell M. Tsai (Western States Regional Council of Carpenters [WSRCC])

Response O1-a

This comment does not raise any substantive issues regarding the adequacy of the Draft EIR. The commenter requests to be included on the noticing list for all future notices referring or related to the Project related to CEQA and the California Planning and Zoning Law. The commenter has been added to the noticing and mailing list.

The City of Ontario intends to fully comply with the requirements of California Public Resources Code (PRC) Section 21000 et seq., 21092.2, and 21167(f), California Planning and Zoning Law (Government Code Sections 65000-65010), and California Government Code Section 65092. That is, the comment requests that the City comply with CEQA when responding to Western States Regional Council of Carpenters' (WSRCC) comments. As requested, the City's responses to WSRCC's comments will be sent to the WSRCC as part of the Final EIR distribution prior to certification of Final EIR. As the comment does not raise any issues with respect to the content and adequacy of the Draft EIR or the Project's environmental effects, no further response is warranted. The comment is included here to provide a complete record of WSRCC's letter. The comment will become part of the administrative record and will be considered by the decision-makers. The comment does not raise any CEQA related issues, and no response is therefore warranted.

Response O2-b

The commenter requests that the City include a mitigation measure to require the Project to be built using local workers (i.e., residing within 10 miles of the Project) in order to reduce vehicle miles traveled (VMT), improve jobs/housing balance and the economic performance of the Project and reduce greenhouse gas (GHG) emissions.

The commenter also requests that the City require the Project to be built with construction workers who have graduated from a specified apprenticeship program in order to produce a positive economic impact of the Project. The Draft EIR is intended to evaluate the environmental impacts of the Project. CEQA does not require an analysis of the Project's economic effects or allow mitigation measures intended to address economic characteristics of the Project. 14. Cal. Code Regs. Sections 15064(e), 15064(f)(6), 15131(a) and 15382. Accordingly, the commenter's request for the City to require construction labor requirements in order to improve economic conditions does not raise any CEQA issues. This comment will be provided to the City's decision-makers for their policy consideration.

Regarding VMT as to construction workers, CEQA provides the lead agency with discretion to choose the most appropriate methodology to evaluate a project's VMT (14. Cal. Code Regs. Sections 15064.3[b][4]). CEQA does not require a separate VMT analysis for construction worker trips or for the construction phase of the Project. The Project's Traffic Analysis (provided as ***Appendix I1*** of the Draft EIR) was conducted in accordance with San Bernardino County's *Traffic Impact Study Guidelines*. Additionally, the VMT analysis in the Traffic Analysis concluded that the Project would have a less than significant impact related to VMT, as analyzed in ***Section 4.15: Transportation and Traffic*** of the Draft EIR.

The Project would have a less than significant impact regarding the GHG emissions from construction, as discussed in ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR, pages 4.8-18 through 4.8-23. As indicated in ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR, Table 4.8-2, the combined 30-year amortized construction GHG emissions for Phase I and II would be 145 metric tons of carbon dioxide-equivalents ($MTCO_2e$; 92 and 53 $MTCO_2e$, respectively). This would account for approximately 0.4 percent of all GHG emissions related to the Project, including operational emissions, which is approximately 36,129 $MTCO_2e$ (refer to ***Section 4.8: Greenhouse Gas Emissions*** of the Draft EIR, page 4.8-22).

The commenter included a letter from Soil Water Air Protection Enterprise (SWAPE) dated March 8, 2021, which discusses GHG emissions associated with trip lengths for construction workers traveling to a job site. The SWAPE letter provided calculations for GHG emissions reductions resulting from local hire provisions being applied to the Project's construction. The SWAPE letter concludes that if a local hire provision with a 10-mile radius were implemented, the GHG emissions associated with Project construction would decrease by approximately 17 percent. However, the SWAPE letter, and the calculations provided, utilized data and information related to a different project in a separate jurisdiction, the Village South Specific Plan and City of Claremont, respectively. The SWAPE letter also uses CalEEMod 2016, while the current version available is CalEEMod 2022.1. The SWAPE letter also uses EMFAC2014 data, while EMFAC2021 is the latest. Therefore, the calculations do not pertain to the Project and are not based on the correct modeling. In comparison, the analysis provided in the Draft EIR utilizes the most up to date and most relevant modeling for the Project.

Furthermore, the SWAPE letter states that it ran a model "reducing all worker trip lengths to 10 miles…" (page 4 of the SWAPE Letter). Thus, the SWAPE letter assumes that a local hire program would produce 100 percent local residents as a project's construction workforce, while being located within 10 miles of the project site. In fact, most local hire programs are able to ensure that only a small percentage of construction workers reside locally. For example, the Community Workforce Agreement between the City of Moreno Valley and the Construction Workers Union (CWA) governing public works contracts defines "Local Residents" as residing in the City of Moreno Valley or Riverside County. The CWA only requires that contractors use "best efforts" to hire local residents and sets a goal of 30 percent of the workforce be local residents. Accordingly, the commenter's suggestion that all construction workers live within 10 miles of the Project site is unrealistic.

Using the attainment of the 30 percent goal as an example of an existing local hire program and utilizing the SWAPE letter's assumption that 100 percent local resident workforce would reduce construction-related GHG emissions by 17 percent (and assuming the SWAPE letter's conclusions are transferrable to the Project), implementing a local hire program for the Project would result in a 5.1 percent reduction in construction-related GHG emissions (30 percent of 17 percent). This would represent a reduction of 7.4 $MTCO_2e$ of construction-related GHG emissions or approximately 0.02 percent of the Project's mitigated construction and operational mitigated emissions combined (36,129 $MTCO_2e$ of construction and operational GHG emissions) or approximately 0.020 percent of the Project's unmitigated emissions (37,931 $MTCO_2e$). This would not constitute a significant reduction in GHG emissions and therefore the implementation of a local-hire provision as a mitigation measure would be ineffective in reducing GHG emissions. The City's "duty to condition project approval on incorporation of feasible mitigation measures only exists when such measures would 'substantially lessen' a significant environmental effect

(Public Resources Code Section 21002; CEQA Guidelines, Section 15021, subd. [a][2]). Thus, the [City] need not, under CEQA, adopt every nickel and dime mitigation scheme brought to its attention or proposed in the project EIR…" (*San Franciscans For Reasonable Growth v. City and County of San Francisco* [1989] 209 Cal.App.3d 1502.) Furthermore, it is quite possible that the 30 percent goal would not be attained and the reduction in GHG emissions could be substantially less. In addition, the local hire program would require extensive record-keeping and monitoring that would not be justified in light of the insignificant reduction in GHG emissions (i.e., the mitigation would not be roughly proportional to the impact as required by CEQA Guidelines Section 15126.4, subd. [a][4][A]–[B]). Therefore, no revisions to the Draft EIR are required.

Response O2-c

The commenter requests that the City require certain construction protocols to address the possibility of COVID-19 infections among construction worker during the construction process. This comment does not address the adequacy of the environmental analysis and/or document. This comment is noted for the record. In addition, at this time, COVID-19 public health restrictions on workplace activities functions have been repealed and are no longer in effect. If COVID-19 infections were to increase in severity, it is expected that applicable public health authorities would impose new restrictions and protocols for testing, distancing and other measures on construction sites to address these public health concerns. Therefore, no revisions to the Draft EIR are required.

RE: **Euclid Mixed Use Specific Plan Project**

Dear Edmelynne Hutter:

On behalf of the Western States Regional Council of Carpenters ("**Western Carpenters**" or "**WSRCC**"), my Office is submitting these comments regarding the City of Ontario's ("**City**") Euclid Mixed Use Specific Plan Project (SCH 2023020281) ("**Project**").

WSRCC would like to express its support for this Project and withdraw their prior February 5, 2024, Comment Letter. After receiving clarification and further information about this Project, WSRCC have reached an agreement with the developers that resolves previous environmental concerns.

Should the City have any questions or concerns, please feel free to contact my Office.

Sincerely,

Mitchell M. Tsai
Attorneys for Western States Regional Council of Carpenters

Response to Comment Letter O3 - Mitchell M. Tsai (Western States Regional Council of Carpenters [WSRCC])

Response O3-a

The commenter is stating their withdrawal of the prior comment letter received February 5, 2024, and expresses their support of the project. No further response is warranted.

This page intentionally left blank.

Section 3.0 Errata to the Draft EIR

3.1 INTRODUCTION TO THE ERRATA

In accordance with the CEQA Guidelines Section 15132 (a), this section of the Final EIR provides changes to the Draft EIR that have been made to clarify, correct, or supplement the information provided in that document. This section contains revisions to the Draft EIR based upon (1) additional or revised information required to prepare a response to a specific comment; (2) applicable updated information that was not available at the time of Draft EIR publication; and/or (3) typographical errors. This section also includes additional mitigation measures to fully respond to commenter concerns as well as provide additional clarification to mitigation requirements included in the Draft EIR.

These changes and additions are due to recognition of inadvertent errors or omissions, and to respond to comments received on the Draft EIR during the public review period. The changes described in this section do not add significant new information to the Draft EIR that would require recirculation of the Draft EIR. More specifically, CEQA requires recirculation of a Draft EIR only when "significant new information" is added to a Draft EIR after public notice of the availability of the Draft EIR has occurred (refer to California Public Resources Code [PRC] Section 21092.1 and CEQA Guidelines Section 15088.5), but before the EIR is certified. Section 15088.5 of the CEQA Guidelines specifically states:

New information added to an EIR is not 'significant' unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement. 'Significant new information' requiring recirculation includes, for example, a disclosure showing that:

- A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.
- A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted to reduce the impact to a level of insignificance.
- A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project's proponents decline to adopt it.
- The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.

CEQA Guidelines Section 15088.5 also provides that "[re]circulation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR... A decision not to recirculate an EIR must be supported by substantial evidence in the administrative record." As demonstrated in this Final EIR, the changes presented in this section do not constitute new significant information warranting recirculation of the Draft EIR as set forth in CEQA Guidelines Section 15088.5. Rather, the Draft EIR is comprehensive and has been prepared in accordance with CEQA.

As explained below, none of the changes adds any new significant information and recirculation is not required.

The responses to comments contain material and revisions that will be added to the text of the Final EIR. City of Ontario staff has reviewed this material and determined that none of this material constitutes the type of significant new information that requires recirculation of the Draft EIR for further public comment under CEQA Guidelines Section 15088.5. None of this new material indicates that the project will result in a significant new environmental impact not previously disclosed or analyzed in the Draft EIR. Additionally, none of this material indicates that there would be a substantial increase in the severity of a previously identified environmental impact that will not be mitigated, or that there would be any of the other circumstances requiring recirculation described in Section 15088.5.

Changes to the Draft EIR are listed by Section, page, paragraph, etc. to best guide the reader to the revision. Changes are identified as follows:

- Deletions are indicated by ~~strikeout text.~~
- Additions are indicated by <u>underline text.</u>

3.2 CHANGES TO THE DRAFT EIR

The following text has been revised in response to comments received on the Draft EIR.

Section 1.0: Executive Summary

<u>The Draft EIR Executive Summary (Section 1.0) is hereby revised to incorporate the minor revisions to mitigation measures noted below.</u>

Section 4.3 Air Quality

1. Mitigation Measure AQ-6 on page 4.3-30 is revised as follows:

MM AQ-6 <u>In residential uses, t</u>~~The~~ installation of wood-burning and natural gas ~~equipment~~<u>fireplaces and stoves</u> shall be prohibited. The purpose of this measure is to limit emissions of ROG, CO, particulate matter, and visible emissions from wood-burning and natural gas ~~devices~~ <u>fireplaces and stoves</u> used for primary heat, supplemental heat, or ambiance. This prohibition shall be noted on the deed and/or lease agreements for future <u>residential</u> property owners/tenants to obey.

Section 4.5: Cultural Resources

1. The third paragraph on Page 4.5-20 is revised as follows:

~~The City Development Code Article 26, Historic Preservation, promotes the public health, safety, and general welfare by:~~

- ~~Safeguarding the character and history of the City which is reflected in its unique cultural, historical, and architectural heritage, with emphasis on the "Model Colony" as recognized by an Act of Congress and presented at the St. Louis World's Fair in 1904;~~
- ~~Promoting public knowledge, appreciation, and understanding of the City's past;~~

- ~~Fostering civic and neighborhood pride in the beauty and accomplishments of the past;~~
- ~~Promoting the enjoyment and use of Historical Resources appropriate for the education and recreation of the people of the City;~~
- ~~Enhancing the visual and aesthetic character, diversity, and interest of the City;~~
- ~~Enhancing property values and stabilizing neighborhoods within the City;~~
- ~~Recognizing Historical Resources and protecting areas of historical buildings from encroachment of incompatible designs;~~
- ~~Providing economic benefits to the City and its inhabitants through financial incentives for preservation;~~
- ~~Protecting and enhancing the City's attraction to tourists and visitors,~~
- ~~Stimulating business and industry;~~
- ~~Promoting public awareness of the benefits of preservation; and~~
- ~~Encouraging public participation in historic preservation, thereby increasing civic pride in the City's heritage.~~

~~The Project area would comply with the City's Historic Preservation Ordinance, ensuring all historically-significant findings within the City, including the Project area, would align with the above standards.~~

The City Development Code Section 4.02.040 through 4.02.065 and, establishes processes and procedures for the historic preservation of the City through discretionary permits and actions, including:

- Procedures by which Local Historic Landmarks and Districts, Historic Resource Tiering, and Architectural Conservation Areas may be designated,
- A process by which a historic resource may rescind or amend its assigned status, including a Local Landmark or Local District Designation, a Tier Designation, an Eligibility Determination, or an Architectural Conservation Area,
- a process to ensure that any alteration to, or demolition of, an eligible or designated historic resource within the City is in keeping with the historic character of the resource,
- a process to ensure that denial of a Certificate of Appropriateness and/or a Demolition Application does not create any undue hardship upon the owner of a Tier I or Tier II historic resource,
- a process to expedite the review process for project areas in which numerous historic resources within a single project area would require the issuance of multiple Certificates of Appropriateness for proposed work to those Historic Resources, and
- a process by which economic incentives may be provided for the preservation of a designated historic landmark or contributing structure within a designated historic district.

The City Development Code Division 7.01, Historic Preservation, specifies significance criteria for the designation of historic resources, procedures for designation, and review procedures to:

- Safeguard the character and history of the City, which is reflected in its unique culturally, historically, and architecturally significant structures and heritage, with emphasis on the "Model Colony," as recognized by an Act of Congress and presented at the St. Louis World's Fair in 1904;
- Encourage and promote the adaptive reuse of the City's historic resources;
- Enhance, perpetuate, and preserve architecturally and historically significant structures and promote revitalization of historic neighborhoods and commercial areas;
- Ensure that the rights of the owners of historic resources are safeguarded;
- Foster civic pride in the beauty and noble accomplishments of the past by promoting private stewardship of historic resources that represent these accomplishments;
- Fulfill the City's responsibilities as a Certified Local Government under Federal preservation laws;
- Promote the identification, documentation, and evaluation of the significance of individual historic resources and districts;
- Implement the historic preservation goals, policies, and programs of the Policy Plan (General Plan) component of The Ontario Plan;
- Promote the City as a destination for tourists and as a desirable location for business;
- Promote public awareness of the value of rehabilitation, restoration, and maintenance of the existing building stock as a means to conserve reusable material and energy resources;
- Recognize the City's historic resources as economic assets and provide economic financial incentives for historic preservation;
- Stabilize and improve property values, and enhance the aesthetic and visual character, place making, diversity, and environmental amenities of the City's historic properties and areas;
- Promote public knowledge, appreciation, and understanding of the City's past, and foster civic and neighborhood pride in the beauty and accomplishments of the past;
- Promote the enjoyment and use of historic resources appropriate for the education and recreation of the people of the City;
- Recognize historic resources and protect areas of historic structures from encroachment of incompatible designs;
- Promote public awareness of the benefits of preservation; and
- Encourage public participation in historic preservation, thereby increasing civic pride in the City's heritage.

2. Mitigation measures listed on page 4.5-29 through 4.5-30 are revised as follows:

Mitigation Measures

MM CUL-1 ~~Prior to issuance of a demolition building permit, every effort shall be made to relocate the Milk Parlor (front portion).~~ If determined by the feasibility study pursuant MM CUL-6 that the historic property is able to be relocated, every effort shall be made to facilitate

the relocation. The buildings shall be offered at no cost for those who can relocate off-site. Advertisements notifying the public of the opportunity to relocate the building shall be placed for a minimum of 30 days: on-site with temporary signage, in at least three local publications (newspapers, magazines, local organization newsletters), and on local bulletin boards.

MM CUL-2 Prior to issuance of a building permit for demolition of historic properties addressed to 13813 Euclid Avenue, 7275 Schaefer Avenue, or 7244 & 7260 Edison Avenue at the same time or separately, a HABS (level 3) documentation, including but not limited to as built drawing, historical narrative, and Historic American Building Survey (HABS) photographs of the subject historic resource ~~pursuant to HABS Level 3 standards~~ shall be submitted to the Planning Department for review, approval, and subsequent release to the Ovitt Family Community Library, Model Colony History Room ~~prior to issuance of demolition building permit~~. Digital files and 2 printed copies are required (one archival and one non-archival).

MM CUL-3 A mitigation fee pursuant to Section 7.01.030 of the Ontario Development Code shall be paid to the Planning Department prior to issuance of building permit for demolition of the historic resources located at 13813 Euclid Avenue, 7275 Schaefer Avenue, and 7244 & 7260 Edison Avenue. Mitigation fee is equal to 30% of the price per square foot construction cost as established in the most current International Code Council Building Valuation Data. The fee amount will be provided by the Planning Department at the time of payment. Funds will be deposited into the City's Historic Preservation Trust Fund.

MM CUL-4 Prior to issuance of a building permit for demolition of historic properties addressed to 13813 Euclid Avenue, 7275 Schaefer Avenue, or 7244 & 7260 Edison Avenue, ~~A~~ a determination shall be made by the Planning Department whether items within or on the historic properties ~~resource~~ should be salvaged ~~shall be made by the Planning Department~~. The applicant shall be responsible for the removal, relocation and donation of such items selected for salvaging. An inventory of salvaged items shall be provided by the applicant to the Planning Department prior to the issuance of building permit.

MM CUL-6 Prior to issuance of a demolition building permit, ~~A~~ a feasibility study of the relocation and adaptive reuse shall be completed by a qualified architect and structural engineer who specializes in historic buildings in consultation with contractors who specialize in moving buildings for the Milk Parlor within the area identified as Phase II. MM CUL-1 shall be implemented if determined relocation is feasible.

MM CUL-7 A comparative study of other dairy areas within California such as the San Joaquin Valley, Arcata Bottoms in Humboldt County, and the Fresno region to further understand the significance of dairy farming at a local, regional, and statewide level shall be submitted to the Planning Department for review and acceptance, prior to issuance of the Certificate of Final Occupancy for the first building constructed within the project area.

MM CUL-8 ~~Produce a~~ A short video documentary (12-15 minute) on the operations of a functioning dairy located within the Ontario Ranch area~~. The 12-15 minute documentary should focus~~

focusing on the dairy history, themes, site, building, and stories gathered from new and archived oral interviews, dairy context and recent dairy surveys shall be produced and submitted to the Planning Department for review and acceptance prior to issuance of a Certificate of Final Occupancy for the first building constructed within the project area.

Section 4.8: Greenhouse Gas Emissions

1. The second and third paragraphs on page 4.8-23 are revised as follows:

As shown in Table 4.8-7, Project Buildout would generate approximately 36,129 MTCO2e per year with the implementation of operational air quality MM AQ-2 through MM AQ-6. ~~Since the majority of emissions are from mobile sources and neither the Project Applicant nor the City have regulatory authority to control tailpipe emissions, no feasible mitigation measures exist that would reduce the Project's impacts with respect to mobile operational emissions . While the Project has some control over GHG emissions (refer to MM AQ-2 through MM AQ-6), the majority of emissions are beyond the Project's control.~~ MM GHG-1 would require that the Project incorporate project design features to achieve a minimum score of 100 points on the Screening Tables. As stated in the Community CAP, projects that achieve a minimum score of 100 points are considered less than significant. At the time of this analysis, the Project is in the design phase, where project design features needed to achieve consistency with the Screening Tables are being considered and implemented. A preliminary set of the screening tables has been completed to show that the Project can feasibly achieve 100 points (refer to Appendix B). The applicant must complete and submit a final set of screening tables showing the achievement of the required 100 points prior to issuance of the building permit, as required by MM GHG-1. Therefore, ~~even~~ with the implementation of MM AQ-2 through MM AQ-6 and MM GHG-1, this Project impact is less than significant.

The Project would be pursuant to TOP 2050 and would represent a consistent and logical continuation of the existing and planned pattern of development in Ontario, specifically the Ontario Ranch area. The City has long anticipated that this area would transition from dairy/agricultural to urban uses, and the Project Specific Plan is implementing TOP 2050. Pursuant to TOP 2050, implementation of the Project Specific Plan would represent a consistent and logical continuation of the existing and planned pattern of development in Ontario, specifically the Ontario Ranch area. Therefore, the Project impact is considered less than significant. ~~Therefore, although Project emissions are conservatively considered to be significant and unavoidable, emissions have been included in the emissions forecasts for TOP 2050.~~

2. The Impact 4.8-2 level of significance on page 4.8-24 is revised as follows:

Impact 4.8-2: Would the Project conflict with an applicable plan, policy, or regulation of an agency adopted for the purpose of reducing GHG emissions?

Level of Significance: ~~Significant and Unavoidable~~ Impact Less than Significant with Mitigation Incorporated

3. The first paragraph on page 4.8-28 is revised as follows:

The CAP establishes a city points system that assigns values for each GHG emissions mitigation design element or operational program feature incorporated into a given development project. The CAP

Screening Tables point values correspond to the minimum GHG emissions reduction expected from each feature. Projects with features that yield at least 100 Screening Table points are considered consistent with the reduction quantities anticipated in the City's CAP. Such projects would be determined to have a less than significant individual and cumulative GHG emissions impact. ***Table 4.8-9: GHG Reduction Measures Screening Table for Industrial Development*** identifies ~~potential~~ design features listed in the screening tables and their associated scores. The Project Applicant may work with the City to determine point values for additional design features with the goal of achieving a minimum of 100 points. Since the Project contains both residential and industrial/commercial developments, both the residential and industrial/commercial screening tables must be filled out. A proportion of the points identical to the proportion of the multiple uses would be used to determine the total number of points for the development. For the Project, approximately 90 percent of the total area is industrial/commercial and approximately 10 percent is residential. Therefore, a 0.9 multiplier would be used for the industrial/commercial screening table points and a 0.1 multiplier would be used for the residential screening table. ***Table 4.8-9*** shows that the proposed Project has the potential to achieve 100 points on the CAP's screening tables through the implementation of high-scoring design features. Note that ***Table 4.8-9*** lists all of the design options provided on the screening tables and is not meant to indicate that the proposed Project would implement these features. A preliminary set of the screening tables has been completed to show that the Project can feasibly achieve 100 points (refer to ***Appendix B***).

4. Table 4.8-9: GHG Reduction Measures Screening Table for Ontario Development on pages 4.8-28 through 4.8-33 is revised as follows:

Table 4.8-9: GHG Reduction Measures Screening Table for Ontario Development

Feature	Description	Assigned Point Value
Multi-Family Residential		
Reduction Measure 1: Building Electrification		
~~Insulation~~	~~2008 Baseline (walls: R-13; roof/attic: R-30)~~	~~0~~
	~~Modestly Enhanced Insulation (walls: R-13; roof/attic: R-38)~~	~~15~~
	~~Enhanced Insulation (rigid wall insulation: R-13; roof/attic: R-38)~~	~~18~~
	~~Greatly Enhanced Insulation (spray foam wall insulated walls R-15 or higher) roof/attic R-38 or higher)~~	~~20~~
~~Windows~~	~~2008 Baseline Windows (0.57 U-factor, 0.4 solar heat gain coefficient (SHGC)~~	~~0~~
	~~Modestly Enhanced Window Insulation (0.4 U-Factor, 0.32 SHGC)~~	~~7~~
	~~Enhanced Window Insulation (0.32 U-Factor, 0.25 SHGC)~~	~~8~~
	~~Greatly Enhanced Window Insulation (0.28 or less U-Factor, 0.22 or less SHGC)~~	~~12~~
~~Cool Roof~~	~~Modest Cool Roof (CRRC Rated 0.15 aged solar reflectance, 0.75 thermal emittance)~~	~~12~~
	~~Enhanced Cool Roof (CRRC Rated 0.2 aged solar reflectance, 0.75 thermal~~	~~14~~

Feature	Description	Assigned Point Value
	~~emittance)~~	
	~~Greatly Enhanced Cool Roof (CRRC Rated 0.35 aged solar reflectance, 0.75 thermal emittance)~~	~~16~~
~~Air Infiltration~~	~~Air barrier applied to exterior walls, calking, and visual inspection such as the HERS Verified Quality Insulation Installation (Q11 or equivalent)~~	~~12~~
	~~Blower Door HERS Verified Envelope Leakage or equivalent~~	~~10~~
~~Thermal Storage of Building~~	~~Modest Thermal Mass (10% of floor or 10% of walls: 12" or more thick exposed concrete or masonry. No permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)~~	~~4~~
	~~Enhanced Thermal Mass (20% of floor or 20% of walls: 12" or more thick exposed concrete or masonry. No permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)~~	~~6~~
	~~Enhanced Thermal Mass (80% of floor or 80% of walls: 12" or more thick exposed concrete or masonry. No permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)~~	~~24~~
Replacement of gas appliance with efficient electric appliance (select all that apply)	Electric space heater	6
	Electric water heater	8
	Electric stove	5
	Electric dryer	1
Additional electric appliance measures, if applicable (select all that apply)	Electric pool heater (if applicable)	1
	Electric spa heater (if applicable)	1
	Project site does not have any natural gas infrastructure	10
Reduction Measure 2: Green Roofs		
Installation of a roof with a planted layer of vegetation over a waterproof surface for multi-family residential buildings	Medium Green Roof – Total vegetated area makes up 25% or more of combined multi-family residential unit area (in square feet)	3
Reduction Measure 3: Urban Cooling		
On-site tree planting (select one option)	1 tree per each required on-site vehicle parking space.	6
	2 trees per each required on-site vehicle parking space.	12
	3 trees per each required on-site vehicle parking space.	18
Reduction Measure 4: Transit Oriented Communities (TOCs)		
New development is located in a transit-oriented community (TOC)	Development site is located within ½ mile radius of one or more of the following: a Bus Rapid Transit (BRT) stop, bus transit center, light rail station, the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods, and/or High-Quality Transit Corridor defined as a	10

Feature	Description	Assigned Point Value
	corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.	
Reduction Measure 5: Increase Transit Ridership		
Provision of free transit passes for on-site residents or tenants for a period of 5 years after completion of construction (select one option)	One 50% discounted annual transit pass for every two parking spaces, or one per residential unit, whichever is greater.	2
	One 100% discounted (free) annual transit pass for every two parking spaces or one per residential unit, whichever is greater.	6
	One 100% discounted (free) annual transit pass per parking space or one per residential bedroom, whichever is greater.	12
Reduction Measure 6: Vehicle Electrification		
Installation of EV charging stations for resident vehicle parking spaces (select one option)	Installation of Level 2 EV or higher charging stations at a rate of 5-10% of required vehicle parking spaces.	10
	Installation of Level 2 EV or higher charging stations at a rate of 11-29% of required vehicle parking spaces.	20
	Installation of Level 2 EV or higher charging stations at a rate of 30% or more of required vehicle parking spaces.	30
Reduction Measure 7: Active Transportation		
Installation or improvement of bicycle facilities (select all that apply)	Bicycle parking facilities with 1:1 ratio of bicycle parking to guest vehicle parking space.	3
	Construct or improve a single bicycle lane facility (only Class I, II, or IV) that 1) connects to a larger existing bikeway network or 2) closes an existing bikeway network gap that is at least 0.5 miles long.	6
Installation or improvement of pedestrian facilities (select one option)	Two or three pedestrian infrastructure improvements to street design on private streets, including, but not limited to curb extensions, raised crosswalks, speed humps/bumps, street tree plantings in parkways or street medians, and elevated pavement markings.	3
	Four or more pedestrian infrastructure improvements to street design, including, but not limited to cub extensions, raised crosswalks, speed humps/bumps, street tree plantings in parkways or street medians, and elevated pavement markings.	6
Reduction Measure 8: Parking Policy		
Require that some or all of resident vehicle parking spaces be purchased at an additional cost. This does not include guest vehicle parking spaces (select one option)	Unbundle, or separate, half (50%) of parking costs of a residential project from property costs, requiring those who wish to purchase an additional parking space to do so at an additional cost.	1
	Unbundle, or separate, 100% of residential project's parking costs from property costs, requiring those who wish to purchase parking spaces to do so at an additional cost.	2

Feature	Description	Assigned Point Value
Reduction Measure 9: Electric construction equipment		
Use zero emission or electric construction equipment (select one option)	One-third (33%) of construction equipment used for construction (during building phase, not including grading phase), measured by number of hours in operation, is zero emission equipment.	4
	Half (50%) of construction equipment used for construction (during the building phase, not including the grading phase), measured by the number of hours of operation, is zero emission equipment.	8
	Two-thirds (66%) or more of construction equipment used for construction (during the building phase, not including the grading phase), measured by number of hours of operation, is zero emission equipment.	12
Reduction Measure 10: Waste diversion		
Design and plan multi-family housing developments to include on-site areas for municipal compost/green waste and recycling bins/containers	Site design allocates sufficient space for storage and collection of green waste, organic waste, and recyclables.	33
Reduction Measure 11: Water conservation		
Implement indoor water efficiency measures (select all that apply)	Implement water efficient showerheads and faucets.	1
	Install on-demand water circulators on all showers/baths.	2
Incorporate outdoor water efficiency measures	Design and plan outdoor landscapes planted with drought-tolerant, low maintenance plants with a 1) drip irrigation system or 2) sprinkler irrigation system with a water-based irrigation controller.	4
Additional Recommended Measures		
AR-1: Meet CalGreen voluntary tiers (select one option)	CalGreen Tier 1 compliance.	5
	CalGreen Tier 2 compliance.	10
AR-2: Generate energy from on-site solar PV (4 stories and higher buildings only, select one option)	Solar PV that generates 30%-49% of residential energy needs on multifamily residential buildings that are 4 stories in height or taller.	5
	Solar PV that generates 50% - 79% of residential energy needs on multi-family residential buildings that are 4 stories in height or taller.	10
	Solar PV that generates 80% or more of residential energy needs on multifamily residential buildings that are 4 stories in height or taller.	15
AR-3: Energy Storage	If the building is 3 stories in height or less, install battery energy storage systems that meet the same performance standards as energy storage system that would be required by the building code in an comparable building 4 stories in height or taller.	5
AR-4: Recycled Water	Use recycled water for at least 80% of outdoor water needs.	4

Feature	Description	Assigned Point Value
AR-5: Reflective Paving	Use high-reflectivity pavement for all hardscaped areas, including parking areas, walking paths, and patios.	4
AR-6: Building Orientation	Orient the building along a north-south alignment.	3
AR-7: Building Shading	Shade at least 90% of south-facing glazing by vegetation or overhangs at noon on June 21.	2
AR-8: Building Daylight	Provide daylighting in all rooms.	1
	Total Multi-Family Residential Points Possible	218
~~**Indoor Space Efficiencies**~~		
~~Heating/Cooling Distribution System~~	~~Minimum Duct Insulation (R-4.2 required)~~	~~0~~
	~~Modest Duct insulation (R-6)~~	~~8~~
	~~Enhanced Duct Insulation (R-8)~~	~~10~~
~~Space Heating/ Cooling Equipment~~	~~2008 Minimum HVAC Efficiency (SEER 13/60% AFUE or 7.7 HSPF)~~	~~0~~
	~~Improved Efficiency HVAC (SEER 14/65% AFUE or 8 HSPF)~~	~~7~~
	~~High Efficiency HVAC (SEER 15/72% AFUE or 8.5 HSPF)~~	~~8~~
	~~Very High Efficiency HVAC (SEER 16/80% AFUE or 9 HSPF)~~	~~12~~
~~Water Heaters~~	~~2008 Minimum Efficiency (0.57 Energy Factor)~~	~~0~~
	~~Improved Efficiency Water Heater (0.675 Energy Factor)~~	~~14~~
	~~High Efficiency Water Heater (0.72 Energy Factor)~~	~~16~~
	~~Very High Efficiency Water Heater (0.92 Energy factor)~~	~~19~~
	~~Solar Pre-heat System (0.2 Net Solar Fraction)~~	~~4~~
	~~Enhanced Solar Pre-heat System (0.35 Net Solar Fraction)~~	~~8~~
~~Daylighting~~	~~All peripheral rooms within the living space have at least one window (required)~~	~~1~~
	~~All rooms within the living space have daylight (through use of windows, solar tubes, skylights, etc.)~~	~~5~~
	~~All rooms daylighted~~	~~7~~
~~Artificial Lighting~~	~~2008 Minimum (required)~~	~~0~~
	~~Efficient lights (25% of In-unit fixtures considered high efficacy. High efficacy is defined as 40 lumens/watt for 15 watt or less fixtures: SO lumens/watt for15 to 40-watt fixtures, 60 lumens/watt for fixtures >40watt)~~	~~9~~
	~~High Efficiency lights (50% of in-unit fixtures are high efficacy)~~	~~12~~
	~~Very High Efficiency Lights (100% of in-unit fixtures are high efficacy)~~	~~14~~
~~Appliances~~	~~Energy Star Commercial Refrigerator (new)~~	~~4~~

Feature	Description	Assigned Point Value
	~~Energy Star Commercial Dish Washer (new)~~	~~4~~
	~~Energy Star Commercial Cloths Washing~~	~~4~~
~~Building Placement~~	~~North/South alignment of building or other building placement such that the orientation of the buildings optimizes natural heating, cooling, and lighting.~~	~~5~~
~~Energy Star Homes~~	~~EPA Energy Star for Homes (version 3 or above)~~	~~25~~
~~**Irrigation and Landscaping**~~		
~~Water Efficient Landscaping~~	~~Eliminate conventional turf from landscaping~~	~~0~~
	~~Only moderate water using~~	~~3~~
	~~Only low water using plants~~	~~4~~
	~~Only California Native landscape that requires no, or only supplemental, irrigation~~	~~8~~

Warehouse/ Non-Residential Development		
Reduction Measure 1: Building Electrification		
Replacement of gas appliance with electric appliance	Electric space heater	5
	Electric water heater	8
	Electric stove (if applicable)	2

Feature	Description	Assigned Point Value
(select all that apply)		
Lack of natural gas infrastructure	Project site does not have any natural gas infrastructure	8
Reduction Measure 2: Solar Energy Systems for New Warehouse Development only (solar energy system required for warehouse development)		
Installation of rooftop solar energy systems at new warehouse/ logistics facilities. (select one option)	Installation of rooftop solar energy system which generates enough electricity to meet 45% of annual warehouse electricity demand.	22
	Installation of rooftop solar energy system which generates enough electricity to meet 90% of annual warehouse electricity demand.	44
	Installation of rooftop solar energy system which generates enough electricity to meet 100% of annual warehouse electricity demand.	48
Installation of battery storage at new warehouse/ logistics facilities (select one option)	Solar battery storage installation with a capacity of 200-599 kW (DC).	3
	Solar battery storage installation with a capacity of 600-799 kW (DC).	6
	Solar battery storage installation with a capacity of 800-1200 kW (DC).	11
Reduction Measure 3: Green Roofs		
Installation of a roof with a planted layer of vegetation over a waterproof surface for non-residential buildings (select one option)	Medium Green Roof – Total vegetated area makes up 50% of combined non-residential floor area (in square feet).	1
	Large Green Roof – Total vegetated area makes up 100% or more of combined non-residential floor area (in square feet).	2
Reduction Measure 4: Urban Cooling		
On-site tree planting (select one option)	1 tree per each required on-site employee/visitor vehicle parking space.	4
	2 trees per each required on-site employee/visitor vehicle parking space.	8
	3 trees per each required on-site employee/visitor vehicle parking space.	15
Reduction Measure 5: Transit Oriented Communities (TOCs)		
New development is located in a transit-oriented community (TOC)	The development site is located within ½ mile radius of one or more of the following: a Bus Rapid Transit (BRT) stop, bus transit center, light rail station, the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods, and/or High-Quality Transit Corridor defined as a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.	7
Reduction Measure 6: Increase Transit Ridership		
Provision of free transit passes in a quantity equivalent	One free annual transit pass for every employee.	6

Feature	Description	Assigned Point Value
to the expected number of employees at the non-residential building. Transit passes shall be provided for a period of 5 years after completion of construction.		
Reduction Measure 7: Vehicle Electrification		
Installation of EV charging stations for truck parking spaces (select one option)	Installation of Level 2 or higher EV charging stations at a rate of 5-9% of planned truck parking spaces.	2
	Installation of Level 2 or higher EV charging stations at a rate of 10-19% of planned truck parking spaces.	4
	Installation of Level 2 or higher EV charging stations at a rate of 20-29% of planned truck parking spaces.	6
	Installation of Level 2 or higher EV charging stations at a rate of 30-49% of planned truck parking spaces.	10
	Installation of Level 2 or higher EV charging stations at a rate of 50% or more of planned truck parking spaces.	15
Reduction Measure 8: Active Transportation		
Installation or improvement of bicycle facilities (select all that apply)	Bicycle parking facilities with 1:20 ratio of bicycle parking to employee vehicle parking space.	2
	Construct or improve a single bicycle lane facility (only Class I, II, or IV) that 1) connects to a larger existing bikeway network or 2) closes an existing bikeway network gap that is at least 0.5 miles long.	3
Installation or improvement of pedestrian facilities (select one option)	Two or three pedestrian infrastructure improvements to street design on private streets, including, but not limited to curb extensions, raised crosswalks, speed humps/bumps, street tree plantings in parkways or street medians, and elevated pavement markings.	2
	Four or more pedestrian infrastructure improvements to street design on private streets, including, but not limited to private property curb extensions, raised crosswalks, speed humps/bumps, elevated pavement markings, and public property street tree plantings in parkways or street medians.	4
Reduction Measure 9: Parking Policy		
Require that employee vehicle parking spaces be purchased at an additional cost. This	Unbundle, or separate, 100% of non-residential project's parking costs from property costs, requiring those who wish to purchase parking spaces to do so at an additional cost.	1

Feature	Description	Assigned Point Value
does not include client/visitor vehicle parking spaces.		
Reduction Measure 10: Electric construction equipment		
Use electric construction equipment for a portion of the construction project (select one option)	One-third (33%) of construction equipment used for construction (during building phase, not including grading phase), measured by number of hours of operation, is zero emission equipment.	3
	Half (50%) of construction equipment used for construction (during the building phase, not including the grading phase), measured by the number of hours of operation, is zero emission equipment.	5
	Two-thirds (66%) or more of construction equipment used for construction (during the building phase, not including the grading phase), measured by number of hours of operation, is zero emission equipment.	8
Reduction Measure 11: Waste diversion		
Site design for non-residential warehouse development includes site(s) for green waste/ organics and recycling collection bins	Site design allocates sufficient space for storage and collection of green waste, organic waste, and recyclables.	20
Reduction Measure 12: Water Conservation		
Implement indoor water efficiency measures (select all that apply)	Install water-efficient faucets and showerheads.	1
	Install on-demand water circulators on commercial sinks or dishwashing equipment.	2
Incorporate outdoor water efficiency measures	Design and plan outdoor landscapes planted with drought-tolerant, low maintenance plants with a 1) drip irrigation system or 2) sprinkler irrigation system with a weather-based irrigation controller.	4
Additional Recommended Measures		
AR-1: Charging stations for large trucks (select one option)	Installation of conduit for charging stations for zero emission trucks larger than two-axles (class 8 and 9, and semi-trucks) so that facilities are prepared for the transition to electric trucks.	4
	Installation of 1-4 charging stations for zero emission trucks larger than two-axles (class 8 and 9, and semi-trucks)	8
	Installation of 5-9 charging stations for zero emission trucks larger than two-axles (class 8 and 9, and semi trucks)	12
	Installation of 10 or more charging stations for zero emission trucks larger than two-acles (class 8 and 9, and semi-trucks)	24

Feature	Description	Assigned Point Value
AR-2: Meet CalGreen voluntary tiers (select one option)	CalGreen Tier 1 compliance	5
	CalGreen Tier 2 compliance	20
AR-3: Installation of EV charging stations for employee vehicle parking spaces (select one option)	Installation of Level 2 or higher EV charging stations at a rate of 5-9% of planned employee vehicle parking spaces.	4
	Installation of Level 2 or higher EV charging stations at a rate of 10-19% of planned employee vehicle parking spaces with Level 2 EV charging stations.	6
	Installation of Level 2 or higher EV charging stations at a rate of 20% or more of planned employee vehicle parking spaces Level 2 EV charging stations.	12
AR-4: Recycled Water	Use recycled water for at least 80% of outdoor water needs.	2
AR-5: Reflective Paving	Use high-reflectivity pavement for all hardscaped areas, including parking areas, walking paths, and patios.	4
AR-6: Zero Emission Cargo Equipment	Use of zero emission cargo handling equipment for a minimum of 50% of all operations.	4
AR-7: Alternative Fueling	Installation of alternative fuel facilities, such as CNG, biofuels, or hydrogen fueling stations.	10
	Total Warehouse Points Possible	238

Section 4.16: Tribal Cultural Resources

1. The fourth paragraph on page 4.16-10 is revised as follows:

As stated above, no TCRs were identified within the Project area. However, impacts to cultural resources, including TRCs, are considered potentially significant and mitigation measures are required to ensure the proper treatment of undiscovered cultural resources that may be encountered during grading. As discussed in ***Section 4.5: Cultural Resources***, the application of mitigation measures ~~MM CUL-6~~ MM CUL-9 and ~~MM CUL-7~~ MM CUL-10 below requiring Cultural Awareness training for all construction and field personnel and ensure the proper treatment of undiscovered resources that may be encountered during grading would reduce the impacts to less than significant levels.

2. The fifth paragraph on page 4.16-10 is revised as follows:

Refer to ***Section 4.5: Cultural Resources*** for ~~MM CUL-6~~ MM CUL-9 and ~~MM CUL-7~~ MM CUL-10.

Section 6.0: Alternatives

1. The third paragraph on page 6-6 is revised as follows:

Under the No Project/No Build Alternative, no new development would occur, and no construction, demolition, or operational activities would generate GHG emissions. Under the No Project/No Build Alternative the existing, minimal emissions would continue. These emissions would be incorporated and accounted for in the City's long-range planning efforts and would therefore act as a baseline for the City's air quality goals. Furthermore, this alternative would not increase GHG emissions by 24,271 MTCO2e per year, unlike the proposed Project~~ and would avoid the proposed Project's significant and unavoidable impacts~~. Therefore, impacts under the No Project/No Build Alternative would be reduced compared to the Project.

2. The sixth paragraph on page 6-11 is revised as follows:

The No Project/Existing General Plan Alternative would have the same overall impact area as the proposed Project. This alternative would result in up to 466 dwelling units, 1,517 residents, and 1,655 employees. The No Project/Existing General Plan Alternative would result in similar impacts to the proposed Project. Therefore, construction and operation related greenhouse gas emissions would be similar~~ and would remain significant and unavoidable~~. All future development areas would be consistent with TOP 2050 under this alternative and be zoned for urban uses rather than agricultural uses. Therefore, impacts under this alternative would be the same compared to the proposed Project.

3. The first paragraph on page 6-17 is revised as follows:

The Reduced-Intensity Alternative would develop the Project site for the same type of mixed-use and business park uses, but with less intensity than the proposed Project. Therefore, a reduced volume of construction activities and associated GHG emissions would occur. In addition, the reduced square footage would result in less stationary source emissions from equipment on-site, and less traffic related GHG emissions than the proposed Project. The proposed Project would result in the generation of approximately 24,271 MTCO2e per year, which would be reduced by approximately 25 percent to 18,204 MTCO2e per year under the Reduced-Intensity Alternative. This alternative would result in a similar impact to the Project, and mitigation measures would be incorporated to reduce emissions to less than significant levels. ~~This alternative would still result in significant and unavoidable GHG impacts, since it would exceed the threshold of 3,000 MTCO2e per year, and mitigation measures would not reduce emissions to less than significant levels. Therefore, the alternative would have a significant and unavoidable impact on GHG emissions, but would be reduced compared to the proposed Project.~~

4. The second paragraph on page 6-22 is revised as follows:

The Reduced-Intensity Alternative has been identified as the environmentally-superior alternative because it would result in reduced impacts related to noise, population and housing, public services, transportation and traffic, and utilities and service systems and similar impacts related to agriculture and forestry resources, air quality, biological resources, cultural resources, energy, geology and soils, GHG emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, and tribal cultural resources. However, the Reduced-Intensity Alternative would still result in significant and

unavoidable impacts related to agricultural and forestry resources, air quality, cultural resources, ~~GHG emissions,~~ and transportation and traffic. Impacts related to aesthetics, biological resources, geology and soils, GHG emissions, hazardous and hazardous materials, hydrology and water quality, and tribal cultural resources would be similar to the proposed Project.

Section 4.0 Final EIR Appendices

4.1 DEIR DISTRIBUTION PACKAGE

The following items are provided in the Affidavit of Distribution for the Draft EIR.

- Affidavit of Distribution

PROOF OF PUBLICATION
(2015.5 C.C.P.)

STATE OF CALIFORNIA
County of San Bernardino

I am a citizen of the United States and a resident of the County aforesaid; I am over the age of eighteen years, and not party to or interested in the above-entitled matter. I am the principal clerk of the printer of Inland Valley Daily Bulletin - SB, a newspaper of general circulation, printed and published in the City of Ontario*, County of San Bernardino, and which newspaper has been adjudged a newspaper of general circulation by the Superior Court of County of San Bernardino, State of California, under the date of June 15, 1945, Decree No. Pomo C-606. The notice, of which the annexed is a printed copy (set in type not smaller than nonpareil), has been published in each regular and entire issue of said newspaper and not in any supplement thereof on the following dates, to wit:

12/22/2023

I certify (or declare) under the penalty of perjury that the foregoing is true and correct.

Dated at Ontario, California

On this 22nd day of December, 2023.

Eva Almeida

[UNKNOWN LIST]

Notice of Availability and Public Hearing Notice
Euclid Mixed Use Specific Plan

Environmental Impact Report

The CITY OF ONTARIO (City), as the Lead Agency, has prepared a Draft Environmental Impact Report (EIR) pursuant to the California Public Resources Code and the California Environmental Quality Act (CEQA) to evaluate the environmental effects associated with the Euclid Mixed Use Specific Plan Project (Project). This Notice of Availability (NOA) has been issued to notify interested parties that the Draft EIR is publicly available for a 45-day review and comment period. The City is requesting comments on the Draft EIR from responsible and trustee agencies, interested public agencies, organizations, and the general public (pursuant to CEQA Guidelines Section 15087). The Draft EIR assesses the potential environmental impacts resulting from the Project.

The Project site is located on 18 parcels totaling 84.1 acres in the southwestern portion of the City, in San Bernardino County. The proposed Project site is bounded by Schaefer Avenue on the north, Sultana Avenue on the east, Edison Avenue on the south, and Euclid Avenue on the west. The Project development would include up to 290,110 square feet of commercial retail/office uses, up to 466 residential units, and 1,386,777 square feet of business park uses, and associated on-site and off-site infrastructure improvements.

Project entitlements and approvals required for the Project include:

Certification of the Euclid Mixed Use Specific Plan Final EIR (SCH# 2023020281)
Adoption of the Mitigation Monitoring and Reporting Program
Adoption of the Euclid Mixed Use Specific Plan (PSP22- 001)

An electronic PDF of the Draft EIR is available for download on the City's website at https://www.ontarioca.gov/Planning/Reports/EnvironmentalImpact and are available on the State Clearinghouse CEQAnet Web Portal (https://ceqanet.opr.ca.gov/ . In addition, hard copies will be available at the following locations:

City of Ontario Planning Department, 303 East "B" Street, Ontario, California 91764
Ovitt Family Community Library, 215 East "C" Street, Ontario, California 91764
City of Ontario, City Clerk, 303 East "B" Street, Ontario, California 91764

The Draft EIR addresses Aesthetics, Agriculture and Forestry Resources, Air Quality, Biological Resources, Cultural Resources, Energy, Geology and Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Noise, Population and Housing, Public Services, Transportation and Traffic, Tribal Cultural Resources, and Utilities and Service Systems, as well as alternatives, potential growth-inducing impacts, and cumulative impacts. A significant unavoidable environmental impact anticipated as a result of the Project could occur to the above resources noted in bold/italics .

CEQA also requires this NOA to specify if the Project site appears on any list of places containing hazardous materials. The Project site does not contain sites identified as meeting the "Cortese List" requirement (Government Code Section 65962.5).

Public Review Period: The Draft EIR is available for public review for a period of 45 days. In accordance with CEQA Guidelines Section 15105, should you have any comments, please provide written comments on the Draft EIR within the 45-day period between **December 22, 2023,** to **February 6, 2024** .

Public Comments: The City requests your careful review and consideration of the Draft EIR, and invites written comments from interested agencies, persons, and organizations regarding environmental issues identified in the Draft EIR. Please indicate a contact person for your agency or organization. Comments in response to this notice may be submitted to the City through close of business (5:30 PM) on **February 6, 2024** .

Public Hearing : Noticing for public hearings for this Project will be scheduled at a later time. Future public hearings for this Project will be held at the City of Ontario City Council Chambers at the City address below.

Lead Agency Contact: All comments must be submitted in writing to:

Project Title/File No.: Euclid Mixed Use Specific Plan EIR (PSP22-001)

Project Location: Euclid Mixed Use Specific Plan ("Project") and associated environmental impact report ("EIR") is located on an 84.1-acre site in the southwest portion of the City of Ontario, within San Bernardino County. The proposed Project site is bounded by Schaefer Avenue on the north, Sultana Avenue on the east, Edison Avenue on the south, and Euclid Avenue on the west. The Assessor Parcel Numbers (APNs) for this Project are 1053-071-01, -02, -03, -04; 1053-211-01, -02, -05; 1053-281-01, -02, -03, -04, -05, -07, -08; 1053-081-01, -02, -03, -04. Regional access to the Project site is provided by State Route 83 (SR-83; Euclid Avenue), which connects to State Route 60 (SR-60) and Interstate 10 (I-10) to the north; Interstate 15 (I-15) approximately 5.5 miles to the east; and State Route 71 (SR-71) approximately 4.3 miles to the west. SR-71 connects the Project to State Route 91 (SR-91) in unincorporated Riverside County. The Project site is currently occupied by agricultural uses, including the raising of livestock, dairy farming activities, a commercial nursery,

and numerous residential structures. Existing uses surrounding the Project site are similar to those on the site. Ongoing crop farming is located to the north of the Project site and a vacant property that was a former dairy farm is located to the east of the site. The property to the south is currently utilized for residential, farming, or trucking related uses. North across Schaefer Avenue is an existing dairy farm; south across Edison Avenue is an existing trucking facility; east across Sultana Avenue is vacant land and an existing trucking facility; west across Euclid Avenue, is the City of Chino with existing commercial and residential uses, and a truck/trailer storage yard.

Project Description: The proposed Project consists of a Specific Plan to allow for a business park and mixed-use development on 18 parcels covering 84.1 acres in the City. The development would include up to 290,110 square feet of commercial retail/office uses, up to 466 residential units, and 1,386,777 square feet of business park uses, and associated on-site and off-site infrastructure improvements. The Project site is anticipated to be developed in two phases within five Planning Areas (PAs), with only Phase I proposed at a project-level entitlement. Phase I would include PAs 1, 2A, and 3A, proposing the construction of 13 buildings. The 13 Phase I buildings would provide up to 1,473,026 square feet of business park and commercial retail/office mixed uses (the maximum development allowed in the proposed Specific Plan). The EIR conservatively evaluates the maximum development potential for Phases I and II as permitted in the proposed Specific Plan. Note that the applicant intends to process a Development Plan and Tentative Parcel Map for the Phase I Project following processing of the Project Specific Plan. Phase I is expected to start construction in 2024, with an anticipated opening year in 2032. The EIR also evaluates, at a "programmatic" level, potential future development of Phase II, comprised of PAs 2B and 3B. Phase II is being evaluated at the programmatic level for a number of reasons, consistent with CEQA Guidelines Section 15168 (Program EIR). These reasons include: 1) the Applicant does not own the parcels within the Phase II area (PAs 2B and PA 3B); 2) the Applicant does not have access to the Phase II area; 3) no specific development proposals have been identified for the Phase II area at this time; and 4) the Phase II area will be developed at an unknown, later date following Phase I. Therefore, this EIR appropriately evaluates the Phase II area at a programmatic level. Consistent with TOP, the Specific Plan proposes the Phase II area with a maximum development potential of 203,861 square feet of business park uses, in addition to up to 466 dwelling units. Combined, the Phase I and Phase II portions of the Specific Plan would allow up to 1,676,887 square feet of non-residential business park and commercial retail/office mixed uses in addition to up to 466 residential units.

The project site [☐ is/☒ is not] on a list of hazardous materials sites as defined by California Government Code Section 65962.5.

Discretionary actions associated with the Project:

- Certification of the Euclid Mixed Use Specific Plan Final EIR (SCH# 2023020281)
- Adoption of the Mitigation Monitoring and Reporting Program
- Adoption of the Euclid Mixed Use Specific Plan (PSP22-001)

Potential environmental impacts examined by the DEIR:

- Aesthetics
- Agricultural Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Energy

- Geology and Soils
- Greenhouse Gas Emissions
- Hazards/Hazardous Materials
- Hydrology/Water Quality
- Land Use and Planning
- Noise
- Population/Housing
- Public Services
- Transportation
- Tribal Cultural Resources
- Utilities/Service Systems

Potentially significant impacts identified by the DEIR:

- Agricultural Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials

Public Hearing: Noticing for public hearings for this Project will be scheduled at a later time. Future public hearings for this Project will be held at the City of Ontario City Council Chambers at 303 East B Street, Ontario, CA 91764.

Notice Mailing Date: 12/22/2023

Attachment A

Mitigation Monitoring and Reporting Program

Euclid Mixed Use Specific Plan Project

SECTION 1: AUTHORITY

This environmental Mitigation Monitoring and Reporting Program (Program) has been prepared pursuant to Section 21081.6 of the *California Environmental Quality Act* (CEQA) (Public Resources Code Section 21000 et seq.), and CEQA Guidelines (14 Cal. Code Regs. Section 15000 et seq.) Sections 15091(d) and 15097, to ensure implementation of and provide for the monitoring of mitigation measures required of the Euclid Mixed Use Specific Plan Project (Project), as set forth in the Final Environmental Impact Report (EIR) prepared for the Project. This report will be kept on file in the offices of the CEQA Lead Agency, the City of Ontario (City).

As noted in the EIR, the Project has been designed to avoid sensitive resources, as reflected in Project design plans and in Project Design Features. The Draft EIR also addresses the potential environmental impacts of the Project, and, where appropriate, recommends mitigation measures to avoid or substantially lessen significant environmental impacts. The Program detailed in the matrix table below is designed to monitor and ensure implementation of all mitigation measures that are adopted for the Project.

The City is the Lead Agency for the Project and assumes ultimate enforcement responsibilities for implementation of all mitigation measures listed in this Program. The City may assign responsibility for implementation or monitoring to appropriate designees such as a construction manager or third-party monitor. However, as the Lead Agency, the City remains responsible for ensuring that implementation of the mitigation measures occurs in accordance with this Program. In some cases, the City is required to secure permits or approvals from third-party agencies in order to implement a mitigation measure. In these cases, the City is responsible for verifying that such permits or approvals have been obtained in accordance with the conditions stipulated in the mitigation measure. The City's existing planning, engineering, operations, and procurement review and inspection processes will be used as the basic foundation for the Program procedures and will also serve to provide the documentation for the reporting program.

SECTION 2: MONITORING SCHEDULE

Prior to construction, while detailed design plans are being prepared by City staff or its agents, City staff will be responsible for ensuring compliance with mitigation monitoring applicable to the Project construction, development, and design phases. Once construction has begun and is underway, monitoring of the mitigation measures associated with construction will be included in the responsibilities of City staff, who shall prepare or cause to be prepared periodic monitoring reports as appropriate. Regulatory agencies will have to harmonize CEQA mitigation with regulatory permit conditions and monitoring/reporting as part of the regulatory permitting process and will likely require submittal of formal monitoring reports. Once construction has been completed, the City will monitor the project as specified in the mitigation measures or as otherwise deemed necessary. At minimum, the City will prepare a mitigation monitoring status report prior to commencing construction, prior to commencing operations, within 90 days of commencing operations, and following completion of the first full year of operations.

SECTION 3: SUPPORT DOCUMENTATION

Findings and related documentation supporting the findings involving modifications to mitigation measures shall be maintained in the Project file with the Mitigation Monitoring and Reporting Program and shall be made available to the public upon request.

SECTION 4: FORMAT OF MITIGATION MONITORING MATRIX

The mitigation monitoring matrix on the following pages identifies the environmental issue areas for which monitoring is required, the required mitigation measures, the time frame for monitoring, and the responsible implementation and monitoring agencies.

SECTION 5: DEFINITIONS

The following list provides definitions for acronyms used in the mitigation monitoring and reporting program.

Acronyms/Abbreviation	*Description*
ACM	Asbestos-Containing Materials
AG	Agriculture and Forestry
AQ	Air Quality
AST	Aboveground Storage Tank
BIO	Biological Resources
BUOW	Burrowing Owl
CARB	California Air Resources Board
CDFW	California Department of Fish and Wildlife
CEQA	California Environmental Quality Act
City	City of Ontario
County	County of San Bernardino
County Coroner	San Bernardino County Coroner
CRMP	Construction Risk Management Plan
CUL	Cultural Resources
DTSC	Department of Toxic Substances Control
EIR	Environmental Impact Report
EPA	Environmental Protection Agency
ESA	Environmental Site Assessment
ESL	Environmental Screening Levels
GEO	Geology and Soils
GHG	Greenhouse Gas
HAZ	Hazards and Hazardous Materials
HSP	Health and Safety Plan
MM	Mitigation Measure
NAHC	Native American Heritage Commission
NOI	Noise
PPMV	Parts Per Million Volume
PRC	Public Resources Code
PRMP	Paleontological Resource Monitoring Plan
SBCFD	San Bernardino County Fire Protection District
SCAQMD	South Coast Air Quality Management District
SMP	Soil Management Plan
State	State of California
TCR	Tribal Cultural Resources
TDM	Travel Demand Management
TPH	Total Petroleum Hydrocarbons
TRANS	Traffic and Transportation
TRU	Transport Refrigeration Units
VMT	Vehicle Miles Travelled
VOC	Volatile Organic Compound

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
AGRICULTURE AND FORESTRY				
MM AG-1: Deed disclosure – In order to reduce conflicts issued between sensitive receptors and agricultural uses, all property owners in the Euclid Mixed Use Specific Plan shall be provided with a deed disclosure or similar notice approved by the City Attorney regarding the proximity and nature of neighboring agricultural uses. This disclosure shall be applied at the tentative map stage to the affected properties, or otherwise prior to finalizing the sale or rental agreement of any property. The written disclosure shall be supplied to the property purchaser or renter by the vendor or vendor's agent. The content and text of the disclosure shall be approved by the City Attorney and shall include language to inform new residents that existing agricultural uses may create nuisances such as flies, odors, dust, night light, and chemical spraying.	Project Applicant	Prior to the approval of tentative tract map	City Attorney	
AIR QUALITY				
MM AQ-1: The Project shall utilize "Super-Compliant" low VOC paints which have been reformulated to exceed the regulatory VOC limits (i.e., have a lower VOC content than what is required) put forth by SCAQMD's Rule 1113 for all architectural coatings. Super-compliant low VOC paints shall be no more than 10g/L of VOC. Prior to issuance of a building permit, the Ontario Building and Safety Department shall confirm that plans specify that all architectural coatings will be super-compliant low VOC paints.	Project Applicant	Prior to issuance of a building permit	City of Ontario Building Department	
MM AQ-2: Only electric-powered off-road equipment (e.g., yard trucks/hostlers, forklifts, indoor material handling equipment, etc.) shall be utilized on-site for daily warehouse and business operations. The Project developer/facility owner shall disclose this requirement to all tenants/business entities prior to the signing of any lease agreement. In addition, the limitation to use only electric-powered off-road equipment shall be included in all leasing agreements. Prior to issuance of a Business License for a new tenant/business entity, the Project developer/facility owner and tenant/business entity shall provide to the City of Ontario Planning Department and Business License Department a signed document (verification document) noting that the Project development/facility owner has disclosed to the tenant/business entity the requirement to use only electric-powered equipment for daily	Project Developer	Prior to issuance of a Business License	City of Ontario Planning Department and Business License Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
operations. This verification document shall be signed by authorized agents for the Project developer/facility owner and tenant/business entities. In addition, if applicable, the tenant/business entity shall provide documentation (e.g., purchase or rental agreement) to the City of Ontario Planning Department and Business License Department to verify, to the City's satisfaction, that any off-road equipment utilized will be electric-powered. Prior to the issuance of building permits, the City of Ontario Building Department shall confirm that if emergency generators are proposed, the Project applicant shall explore non-diesel options. If non-diesel generators are determined to not be feasible due to commercial availability or the energy requirements of the project, the Project applicant shall provide written justification to be approved by the City's building department.				
MM AQ-3: Prior to issuance of occupancy permits, the Project operator shall prepare and submit a Transportation Demand Management (TDM) program detailing strategies that would reduce the use of single occupant vehicles by employees by increasing the number of trips by walking, bicycle, carpool, vanpool and transit. The TDM shall include, but is not limited to the following: • Provide a transportation information center and on-site TDM coordinator to educate residents, employers, employees, and visitors of surrounding transportation options; • Promote bicycling and walking through design features such as showers for employees, self-service bicycle repair area, etc. around the Project site; • Provide on-site car share amenities for employees who make only occasional use of a vehicle, as well as others who would like occasional access to a vehicle of a different type than they use day-to-day; • Promote and support carpool/vanpool/rideshare use through parking incentives and administrative support, such as ride-matching service; and • Incorporate incentives for using alternative travel modes, such as preferential load/unload areas or convenient designated parking spaces for carpool/vanpool users.	Project Operator	Prior to the issuance of a Certificate of Occupancy	City of Ontario Planning Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
MM AQ-4: Prior to the issuance of a building permit, the Planning Department shall confirm that the Project is designed to include the following: • The buildings' electrical room shall be sufficiently sized to hold additional panels that may be needed to supply power for the future installation of electric vehicle (EV) truck charging stations on the site. Conduit should be installed from the electrical room to tractor trailer parking spaces in a logical location(s) on the site determined by the Project Applicant during construction document plan check, for the purpose of accommodating the future installation of EV truck charging stations at such time this technology becomes commercially available and the buildings are being served by trucks with electric-powered engines.	City of Ontario Planning Department	Prior to the issuance of a building permit	City of Ontario Planning Department	
MM AQ-5: All truck access gates and loading docks within the Project site shall have a sign posted that states: • Truck drivers shall turn off engines when not in use. • Truck drivers shall shut down the engine after five minutes of continuous idling operation (pursuant to Title 13 of the California Code of Regulations, Section 2485). Once the vehicle is stopped, the transmission is set to "neutral" or "park," and the parking brake is engaged. • Telephone numbers of the building facilities manager and CARB to report violations. • Truck travel is restricted to truck routes identified in Figure M-04 of the Mobility Element in TOP 2050. In addition, signage shall be installed to direct trucks to the appropriate designated truck routes.	City of Ontario Planning Department	Prior to the issuance of occupancy permits	City of Ontario Planning Department	
MM AQ-6: In residential uses, the installation of wood-burning and natural gas fireplaces and stoves shall be prohibited. The purpose of this measure is to limit emissions of ROG, CO, particulate matter, and visible emissions from wood-burning and natural gas fireplaces and stoves used for primary heat, supplemental heat, or ambiance. This prohibition shall be noted on the deed and/or lease agreements for future residential property owners/tenants to obey.	Project Applicant	Prior to issuance of grading permits	City of Ontario Planning Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
MM AQ-7: The installation of cold storage logistics (warehouse) space is prohibited. Should cold storage logistics (warehouse) space be considered in the future, a separate discretionary approval would be required.	Project Applicant	Prior to issuance of grading permits	City of Ontario Planning Department	
MM AQ-8: Prior to issuance of grading permits, the applicant shall prepare and submit documentation to the City of Ontario that demonstrate that all off-road diesel-powered construction equipment greater than 50 horsepower meets California Air Resources Board Tier 4 Final off-road emissions standards. Requirements for Tier 4 Final equipment shall be included in applicable bid documents and successful contractor(s) must demonstrate the ability to supply such equipment. A copy of each unit's Best Available Control Technology (BACT) documentation (certified tier specification or model year specification), and CARB or SCAQMD operating permit (if applicable) shall be provided to the City at the time of mobilization of each applicable unit of equipment.	Project Applicant	Prior to the issuance of grading permits	City of Ontario Planning Department	
BIOLOGICAL RESOURCES				
MM BIO-1: Nesting Bird and Raptor Preconstruction Survey. Regulatory requirement for potential direct/indirect impacts to nesting common and sensitive bird and raptor species will require compliance with the CDFG Code Section 3503. Construction outside the nesting season (between September 1st and January 31st) do not require pre-removal nesting bird surveys. If construction is proposed during nesting season (February 1st and August 31st), a qualified biologist will conduct a nesting bird survey(s) no more than three (3) days prior to initiation of grading to document the presence or absence of nesting birds within or directly adjacent (200 ft -500 ft for raptors) to the Project site. The survey(s) will focus on identifying any raptors and/or bird nests that are directly or indirectly affected by construction activities. If active nests are documented, the qualified biologist will prepare and implement specific measures to prevent abandonment of the active nest. At a minimum, grading in the vicinity of a nest will be postponed until the young birds have fledged. The perimeter of the nest setback zone will be fenced or adequately demarcated with stakes and flagging at 20-foot intervals, and construction personnel and activities will be restricted from the area. The biologist shall establish a no-disturbance	Qualified Biologist	Prior to the issuance of permits for any construction activity	City of Ontario Planning Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
buffer around each active nest. The buffer area will be determined by the biologist based on the species present, surrounding habitat, and type of construction activities proposed in the area. The survey report will be submitted by the qualified biologist to the City of Ontario for review and approval prior to initiation of grading in the nest-setback zone. Additionally, the qualified biologist will serve as a construction monitor during those periods when construction activities occur near active nest areas to ensure that no inadvertent impacts on these nests occur. A final monitoring report of the findings, prepared by a qualified biologist, will be submitted to the City of Ontario documenting compliance with the CDFG Code. Any nest permanently vacated for the season would not warrant protection pursuant to the CDFG Code.				
MM BIO-2: Focused Bat Survey. Prior to implementation of Project activities, a qualified biologist shall be retained to determine whether potential roosting sites for bats may be affected. For large ornamental trees suitable for bat roosting/nursery, exit counts and acoustic surveys shall be performed prior to initial ground disturbance, vegetation or structure removal to determine whether the Project Site and a 300-foot buffer supports a nursery or roost, and by which species. This work will occur between late -spring and late summer and/or in the fall (generally mid-March through late October). If the results of the bat survey find a total of a single roosting individual of a special status bat species or 25 or more individuals of a non-special status bat species with potential to be present in the Project Site (i.e., western Mastiff bat, big free-tailed bat, or pallid bat), a Bat Management Plan shall be developed to ensure mortality to bats does not occur. For each location confirmed to be occupied by bats, the plan will provide details both in text and graphically where exclusion devises/and or staged tree removal will need to occur, the timing for exclusion work and the timeline and methodology needed to exclude the bats. The plan will need to be reviewed and approved by CDFW prior to disturbance of the roost(s).	Qualified Biologist	Prior to implementation of Project activities	CDFW	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
MM BIO-3: Focused and Preconstruction Burrowing Owl Surveys. Focused surveys for burrowing owl will be conducted in accordance with the March 7, 2022, CDFG staff report on Burrowing Owl Mitigation. Specifically, A total of 4 surveys will be conducted: 1) at least one site visit between February 15th and April 15th, and 2) a minimum of three (3) surveys, at least three weeks apart, between April 15th and July 15th, with at least one visit after June 15th. A report of the findings prepared by a qualified biologist shall be submitted to the City of Ontario prior to any permit or approval for ground disturbing activities. A 14-day burrowing owl preconstruction survey will also be conducted immediately prior to the initiation of ground-disturbing construction to ensure protection for this species. The survey will be conducted in compliance with CDFW guidelines (CDFW 2012). A report of the findings prepared by a qualified biologist shall be submitted to the City of Ontario prior to any permit or approval for ground disturbing activities. If burrowing owls are detected on-site during the focused surveys or 14-day preconstruction survey efforts, during the breeding season (February 1st to August 31st) then construction activities shall be limited to beyond 300 feet of the active burrows until a qualified biologist has confirmed that nesting efforts are compete or not initiated. In addition to monitoring breeding activity, if construction is proposed to be initiated during the breeding season or active relocation is proposed, a burrowing owl relocation plan will be developed and approved by the City of Ontario, CDFW and USFWS.	Qualified Biologist	Prior to implementation of Project activities	CDFW	
MM BIO-4: Programmatic Assessment Area CEQA Analysis. The Programmatic Assessment Area located within the southwest region of the Specific Plan Boundary, including APN's 1053-281-01, -02, -03, -04, -05, 07 and – 08, was not evaluated for biological resources as part of this analysis. To ensure that potential adverse effects to sensitive species and resources are reduced to a less than significant level, a focused biological resources assessment and impact analysis shall be conducted in the un-surveyed portion of the Specific Plan Boundary prior to approval of development within this region. In addition to completing CEQA review, any focused surveys and required mitigation measures shall be implemented prior to project approval and initiation of construction.	Qualified Biologist	Prior to implementation of Project activities	CDFW	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
MM BIO-5: Tree Inventory. Prior to implementation of Project site clearing or grading, a qualified biologist shall provide a tree inventory to ensure compliance with Ontario MC Section 6.05.020, Tree Preservation Policy and Protection Measures. Healthy Heritage Trees that are approved for removal shall be replaced with new trees with a total trunk diameter equal to the tree(s) removed, or as deemed appropriate by the Approving Authority based on lot size and available planting space. Replacement trees are to be in addition to the quantity of trees required for landscaping. The Approving Authority is responsible for reviewing the landscape plan and approving appropriate species for tree replacement (The Ontario Plan 2050).	Qualified Biologist	Prior to implementation of Project activities	City of Ontario Planning Department	
CULTURAL RESOURCES				
MM CUL-1: If determined by the feasibility study pursuant MM CUL-6 that the historic property is able to be relocated, every effort shall be made to facilitate the relocation. The buildings shall be offered at no cost for those who can relocate off-site. Advertisements notifying the public of the opportunity to relocate the building shall be placed for a minimum of 30 days: on-site with temporary signage, in at least three local publications (newspapers, magazines, local organization newsletters), and on local bulletin boards.	Project Applicant	Prior to the issuance of a demolition building permit	City of Ontario Planning Department	
MM CUL-2: Prior to issuance of a building permit for demolition of historic properties addressed to 13813 Euclid Avenue, 7275 Schaefer Avenue, or 7244 & 7260 Edison Avenue at the same time or separately, a HABS (level 3) documentation, including but not limited to as built drawing, historical narrative, and Historic American Building Survey (HABS) photographs of the subject historic shall be submitted to the Planning Department for review, approval, and subsequent release to the Ovitt Family Community Library, Model Colony History Room. Digital files and 2 printed copies are required (one archival and one non-archival).	Project Applicant	Prior to the issuance of a demolition building permit	City of Ontario Planning Department	
MM CUL-3: A mitigation fee pursuant to Section 7.01.030 of the Ontario Development Code shall be paid to the Planning Department prior to issuance of building permit for demolition of the historic resources located at 13813 Euclid Avenue, 7275 Schaefer Avenue, and 7244 & 7260 Edison Avenue. Mitigation fee is equal to 30% of the price per square foot construction cost as established in the most current	Project Applicant	Prior to the issuance of a demolition building permit	City of Ontario Planning Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
International Code Council Building Valuation Data. The fee amount will be provided by the Planning Department at the time of payment. Funds will be deposited into the City's Historic Preservation Trust Fund.				
MM CUL-4: Prior to issuance of a building permit for demolition of historic properties addressed to 13813 Euclid Avenue, 7275 Schaefer Avenue, or 7244 & 7260 Edison Avenue, a determination shall be made by the Planning Department whether items within or on the historic properties should be salvaged. The applicant shall be responsible for the removal, relocation and donation of such items selected for salvaging. An inventory of salvaged items shall be provided by the applicant to the Planning Department prior to the issuance of building permit.	Project Applicant	Prior to the issuance of building permit	City of Ontario Planning Department	
MM CUL-5: The applicant shall obtain a building permit prior to any demolition, relocation, or construction.	Project Applicant	Prior to any demolition, relocation, or construction	City of Ontario Planning Department	
MM CUL-6: Prior to issuance of a demolition building permit, ~~A~~ a feasibility study of the relocation and adaptive reuse shall be completed by a qualified architect and structural engineer who specializes in historic buildings in consultation with contractors who specialize in moving buildings for the Milk Parlor within the area identified as Phase II. MM CUL-1 shall be implemented if determined relocation is feasible.	A Qualified Architect and Structural Engineer	Prior to the issuance of a demolition building permit	City of Ontario Planning Department	
MM CUL-7: A comparative study of other dairy areas within California such as the San Joaquin Valley, Arcata Bottoms in Humboldt County, and the Fresno region to further understand the significance of dairy farming at a local, regional, and statewide level shall be submitted to the Planning Department for review and acceptance, prior to issuance of the Certificate of Final Occupancy for the first building constructed within the project area.	Project Applicant	Prior to the issuance of a building permit	City of Ontario Planning Department	
MM CUL-8: A short video documentary (12-15 minute) on the operations of a functioning dairy located within the Ontario Ranch area focusing on the dairy history, themes, site, building, and stories gathered from new and archived oral interviews, dairy context and recent dairy surveys shall be produced and submitted to the Planning Department for review and acceptance prior to issuance of a Certificate of Final Occupancy for the first building constructed within the project area.	Project Applicant	Prior to the issuance of a building permit	City of Ontario Planning Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
MM CUL-9: Prior to the issuance of any grading permits for the Project area, a Cultural Awareness Training Program shall be provided to all construction managers and construction personnel prior to commencing any ground disturbance work within the Project area. The training shall be prepared and conducted by a Qualified Archaeologist to the satisfaction of the City Planning Department. The training may be discontinued when ground disturbance is completed. Construction personnel shall not be permitted to operate equipment within the construction area unless they have attended the training. A copy of the training transcript and/or training video, as well as a list of the names of all personnel who attended the training and copies of the signed acknowledgment forms shall be submitted to the City Planning Department for their review and approval.	Qualified Archaeologist	Prior to the issuance of any grading permits	City of Ontario Planning Department	
MM CUL-10: Should any cultural resources be discovered during Project implementation; the City Planning Department and a Qualified Archaeologist shall be notified to assess the nature and significance of the find. Should any cultural resources be deemed significant, the Qualified Archaeologist shall draft a treatment plan for review and approval by the City Planning Department. Tribes listed on the City's contact list for the Project shall be notified of any significance discovery that is Native American in origin and be given the opportunity to comment on the treatment plan prior to implementation. All final site records, reports, etc. associated with the discovery, evaluation, and treatment of cultural resources discovered during Project implementation shall be submitted to the South-Central Coastal Information Center (SCCIC).	Project Applicant	Throughout construction	City of Ontario Planning Department	
GEOLOGY AND SOILS				
MM GEO-1: As specified in the Preliminary Geotechnical Investigation & Organic Soil/Manure Evaluation Report for the Euclid Mixed Use Specific Plan Project by Converse Consulting, cut/fill transitions should be eliminated from all level portions of the building pad areas. This should be accomplished by over excavating the entire "cut" portion of the building pad area by at least 5.0 feet below proposed grade and replacing the excavated materials as properly compacted fill, so that all footings for structures and walls are founded into engineered fill with a minimum of 3.0 feet of fill below footings for proposed structures and 2.0 feet below footings for proposed walls.	Project Applicant	Prior to the start of construction	City of Ontario Building Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
No fill should be placed until excavations and/or natural ground preparation have been observed by the geotechnical consultant. The native soils encountered within the project sites are generally considered suitable for re-use as compacted fill. Excavated soils should be processed, including removal of roots and debris, removal of oversized particles, mixing, and moisture conditioning, before placing as compacted fill. On-site soils used as fill should meet the following criteria. • No particles larger than 8 inches in largest dimension. • Rocks larger than 4 inches should not be placed within the upper 12 inches of subgrade soils. • Free of all significant organic matter, debris, or other deleterious material. • Expansion index of 50 or less. • Sand Equivalent greater than 15 (greater than 30 for pipe bedding). • Contain less than 30 percent by weight retained in 3/4-inch sieve. • Contain less than 40 percent fines (passing #200 sieve).				
MM GEO-2: Stockpiled fill soils would be placed in deeper fills (at least 5 feet below proposed grade), landscaped areas, or non-structural fills, or blended with sandier soils on site outside of the subject fill stockpile in order to reduce the expansion potential of the stockpiled soils. The expansion potential of the finish-grade soils shall be tested at grading completion. Slabs-on-grade shall have a minimum thickness of 5 inches for support of nominal live loads and be reinforced with No. 3 bars spaced 24 inches or less on centers both ways. Slab reinforcement shall be supported on concrete chairs so that the desired placement is properly placed per the design engineer. Structural design elements of slabs-on-grade, including but not limited to thickness, reinforcement, and joint spacing of more heavily loaded slabs shall be dependent upon the anticipated loading conditions and the modulus of subgrade reaction (200kcf) of the supporting materials and shall be designed by a structural engineer. Subgrade for slabs-on-grade shall be firm and uniform. All loose or disturbed soils, including under-slab utility trench backfill shall be recompacted. Prior to placing concrete, the subgrade soils below all floor slabs shall be pre-watered to achieve a moisture content that is	Project Applicant	Prior to grading	City of Ontario Building Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
equal to 100 percent of the optimum moisture content of the subgrade soils. The moisture content should penetrate to a minimum depth of 12 inches. This should promote uniform curing of the concrete and minimize the development of shrinkage cracks.				
MM GEO-3: Corrosive Materials. Prior to issuance of a building permit, the Director of the City Public Works Department, or designee, shall verify that the Project Applicant/Developer has retained the services of a licensed corrosion engineer to provide detailed corrosion protection measures. Where steel may come in contact with on-site soils, project construction shall include the use of steel that is protected against corrosion. Corrosion protection may include, but is not limited to, sacrificial metal, the use of protective coatings, and/or cathodic protection. Additional site testing and final design evaluation regarding the possible on-site presence of significant volumes of corrosive soils shall be performed by the Project Geotechnical Consultant to refine and enhance these recommendations. On-site inspection during grading shall be conducted by a qualified corrosion consultant and City of Director of Public Works/City Engineer, or designee, to ensure compliance with geotechnical specifications as incorporated into Project plans.	Project Applicant	Prior to issuance of a building permit	Director of the City Public Works Department	
MM GEO-4: In areas of documented or inferred archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan based on the recommendations of a qualified cultural preservation expert. Additionally, a paleontological resource monitoring plan (PRMP) would be prepared and implemented. Periodic paleontological spot checks would be conducted when excavation exceeds depths of 5 feet to determine if older, paleontologically sensitive sediments are present. If present, monitoring would be implemented. Prior to the start of construction, a paleontological resource monitoring plan (PRMP) would be prepared and implemented. The Project's PRMP would implement the following procedures: • A trained and qualified paleontological monitor would perform spot-check and/or monitoring of any excavations on the Project that have the potential to impact paleontological resources in	Project Applicant	Prior to grading	City of Ontario Building Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
undisturbed native sediments below five feet in depth. The monitor would have the ability to redirect construction activities to ensure avoidance of adverse impacts to paleontological resources. • The Project paleontologist may re-evaluate the necessity for paleontological monitoring after examination of the affected sediments during excavation, with approval from Lead Agency and Client representatives. • Any potentially significant fossils observed shall be collected and recorded in conjunction with best management practices and Society of Vertebrate Paleontology professional standards. • Any fossils recovered during mitigation shall be deposited in an accredited and permanent scientific institution for the benefit of current and future generations. • A report documenting the results of the monitoring, including any salvage activities and the significance of any fossils, shall be prepared and submitted to the appropriate personnel.				
GREENHOUSE GAS				
MM GHG-1: Project development proposals with building permit applications on file with the City shall implement Screening Table Measures that achieve at least 100 points per the Screening Tables. The City shall verify that Screening Table Measures achieving the 100-point performance standard are incorporated in development plans prior to the issuance of building permit(s) and/or site plans (as applicable). The City shall verify implementation of the selected Screening Table Measures prior to the issuance of Certificate(s) of Occupancy. At the discretion of the City, measures that provide GHG reductions equivalent to GHG emissions reductions achieved via the Screening Table Measures may be implemented. Multiple development proposals may, at the discretion of the City, be allowed to collectively demonstrate achievement of at least 100 points per the Screening Tables.	Project Applicant	Prior to the issuance of building permit(s) and/or site plans	City of Ontario Planning Department	
HAZARDS AND HAZARDOUS MATERIALS				
MM HAZ-1: Construction period testing. Construction at the Project site shall be conducted under a Project-specific Construction Risk Management Plan (CRMP) to protect construction workers, the general public, and the environment from subsurface hazardous materials previously identified and to address the possibility of encountering	Project Applicant	Prior to Project implementation	City of Ontario Building Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
unknown contamination or hazards in the subsurface. The CRMP shall summarize soil and groundwater analytical data collected on the Project sites during past investigations and during site investigation activities; delineate areas of known soil and groundwater contamination, if applicable; and identify soil and groundwater management options for excavated soil and groundwater, in compliance with local, state, and federal statutes and regulations. The CRMP shall: • Provide procedures for evaluating, handling, storing, testing, and disposing of soil and groundwater during Project excavation and dewatering activities, respectively. • Require the preparation of a Project-specific Health and Safety Plan that identifies hazardous materials present, describes required health and safety provisions and training for all workers potentially exposed to hazardous materials in accordance with State and Federal worker safety regulations, and designates the personnel responsible for Health and Safety Plan implementation. • Require the preparation of a contingency plan that shall be applied should previously unknown hazardous materials be encountered during construction activities. The contingency plan shall include provisions that require collection of soil and/or groundwater samples in the newly discovered affected area by a qualified environmental professional prior to further work, as appropriate. The analytical results of the sampling shall be reviewed by the qualified environmental professional and submitted to the appropriate regulatory agency. The environmental professional shall provide recommendations, as applicable, regarding soil/waste management, worker health and safety training, and regulatory agency notifications, in accordance with local, state, and federal requirements. Work shall not resume in the area(s) affected until these recommendations have been implemented under the oversight of the County or regulatory agency, as appropriate. • Designate personnel responsible for implementation of the CRMP. The CRMP shall be submitted to the County for review and approval prior to the issuance of construction and demolition permits.				

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
MM HAZ-2: Soil Management Plan. Prior to issuance of a grading permit, the Project applicant shall retain a qualified environmental consultant to prepare a Soil Management Plan that details procedures and protocols for on-site management of soils containing potentially hazardous materials. The SMP would be implemented during grading activities on-site to ensure that soils containing residual levels of hydrocarbons or arsenic are properly identified, monitored, and managed on-site, and include the following: • A certified hazardous waste hauler shall remove all potentially hazardous soils. In addition, sampling of soil shall be conducted during excavation to ensure that all petroleum hydrocarbon and arsenic impacted soils are removed, and that Environmental Screening Levels (ESLs) for non-residential uses are not exceeded. Excavated materials shall be transported per California Hazardous Waste Regulations to a landfill permitted by the State to accept hazardous materials. • Any subsurface materials exposed during construction activities that appear suspect of contamination, either from visual staining or suspect odors, shall require immediate cessation of excavation activities. Soils suspected of contamination shall be tested for potential contamination. If contamination is found to be present per the Department of Toxic Substances Control Screening Levels for industrial/commercial land use (DTSCSLi) and the U.S. EPA Regional Screening Levels for industrial/commercial land use (EPARSLi), it shall be transported and disposed of per state regulations to an appropriately permitted landfill. • The SMP shall include a Health and Safety Plan (HSP) that addresses potential safety and health hazards and includes the requirements and procedures for employee protection; each contractor will be required to have their own HSP tailored to their particular trade that addresses the general project safety requirements. The HSP shall also outline proper soil handling procedures and health and safety requirements to minimize worker and public exposure to hazardous materials during construction. • The SMP shall be prepared and executed in accordance with South Coast Air Quality Management District (SCAQMD) Rule 1166, Volatile Organic Compound Emissions from Decontamination of	Project Applicant	Prior to the issuance of grading permits	City of Ontario Planning Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
Soil. The SMP shall require the timely testing and sampling of soils so that contaminated soils can be separated from inert soils for proper disposal. The SMP shall specify the testing parameters and sampling frequency. Anticipated testing includes total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), and semi-volatile organic compounds (SVOCs). During excavation, Rule 1166 requires that soils identified as contaminated shall be sprayed with water or another approved vapor suppressant or covered with sheeting during periods of inactivity of greater than an hour, to prevent contaminated soils from becoming airborne. Under Rule 1166, contaminated soils shall be transported from the project site by a licensed transporter and disposed of at a licensed storage/treatment facility to prevent contaminated soils from becoming airborne or otherwise released into the environment. • All SMP measures shall be printed on the construction documents, contracts, and project plans prior to issuance of grading permits. • The SMP would also include procedures for the safe handling and transportation of soils on the Project Site that may impact sensitive receptors such as schools.				
MM HAZ-3: Prior to the commencement of any construction-related site activities (clearing, demolition, grading etc.), all above-ground storage tanks (ASTs) and underground storage tanks (USTs) shall be removed. ASTs storing diesel shall be disposed of by a State of California licensed contractor and in compliance with the required San Bernardino County Fire Department (SBCFD) Hazardous Materials Division regulations for tank removals. For stained soils in the vicinity of diesel containing ASTs, as identified in the Phase I Environmental Site Assessment (ESA) dated July 29, 2021 soil samples shall be collected, as directed by the SBCFD inspector, for chemical analysis at a laboratory licensed by the State of California. If contaminated soils are encountered, a soil management plan shall be prepared to manage the stained soils during redevelopment. USTs shall be removed through reviewing available files at the SBCFD and ensuring the proper removal of the UST and a subsurface investigation to determine if the UST had impacted the subsurface.	Project Applicant	Prior to the issuance of grading permits	City of Ontario Planning Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
MM HAZ-4: Prior to the issuance of grading permits, the Project applicant shall conduct testing for the presence of methane on the Project site, in accordance with DTSC methane assessment guidelines. The Project applicant shall prepare a methane gas soil survey and implement grading activity recommendations to the satisfaction of the City Building Department. This survey and recommendation shall include a post-construction soil gas investigation and installation of methane gas mitigation systems where post-grading methane levels exceed 5,000 ppmv, should any such levels occur.	Project Applicant	Prior to the issuance of grading permits	City of Ontario Building Department	
MM HAZ-5: Following drainage of the on-site ponds, the Project applicant shall conduct a limited Phase II subsurface assessment of sediments to evaluate the sediments for chemical risks to human health and the environment. If contamination from dairy and animal-related wastes is encountered at a level above Environmental Screening Levels (ESLs) for non-residential uses, the appropriate environmental agency (Regional Water Quality Control Board, Department of Toxic Substance Control, South Coast Air Quality Management District) shall be notified. Any contamination identified as a result of such testing/sampling shall be investigated and removed or remediated to the satisfaction of the environmental agency and established Regional Screening Levels with evidence provided to the City, such that there are no residual significant impacts following mitigation. Prior to allowing the commencement of any soil removal or hauling activities at the Proposed Project, the City will review and/or evaluate potential air quality impacts (criteria pollutants and toxic air contaminants from equipment exhaust, earthmoving, and other on-site remedial activities, as applicable) to verify that impacts are properly assessed and disclosed in accordance with CEQA.	Project Applicant	Following the drainage of on-site ponds	City of Ontario Building Department	
MM HAZ-6: Prior to the issuance of a demolition permit for any buildings or structures on-site, the Project applicant shall conduct comprehensive ACM and mercury contamination surveys to identify the locations and quantities of ACM and mercury in above-ground structures. The Project applicant shall retain a licensed or certified asbestos consultant to inspect buildings and structures on-site. The consultant's report shall include requirements for abatement, containment, and disposal of ACM,	Project Applicant	Prior to the issuance of a demolition permit	City of Ontario Planning Department	

Mitigation Measures	Responsibility for Implementation	Timing	Responsibility for Monitoring	Monitor (Signature Required) (Date of Compliance)
if encountered, in accordance with the South Coast Air Quality Management District's Rule 1403. Prior to issuance of a demolition permit of the on-site structure, preparation of a demolition plan for the safe dismantling and removal of building components and debris including a plan for lead and asbestos abatement shall be required. The demolition plan shall be submitted to the City for review and approval prior to commencement of construction activities.				

ORDINANCE NO._____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PSP22-001, A SPECIFIC PLAN (EUCLID MIXED USE SPECIFIC PLAN) TO ESTABLISH THE LAND USE DISTRICTS, DEVELOPMENT STANDARDS, GUIDELINES, AND INFRASTRUCTURE IMPROVEMENTS FOR THE POTENTIAL DEVELOPMENT OF UP TO 1,386,776 SQUARE FEET OF BUSINESS PARK LAND USES, 290,110 SQUARE FEET OF OFFICE AND RETAIL LAND USES, AND 466 DWELLING UNITS ON THE 84-ACRE PROJECT SITE, AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 1053-071-01; 1053-071-02; 1053-071-03; 1053-071-04; 1053-211-01; 1053-211-02; 1053-211-05; 1053-281-01; 1053-281-02; 1053-281-03; 1053-281-04; 1053-281-07; 1053-281-08; 1053-081-01; 1053-081-02; 1053-081-03; 1053-081-04.

WHEREAS, EUCLID LAND INVESTMENT LLC ("Applicant") has filed an Application for the approval of the Euclid Mixed Use Specific Plan, File No. PSP22-001, as described in the title of this Ordinance (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 84 acres of land bordered by Schaefer Avenue to the north, future Sultana Avenue to the east, Edison Avenue to the south, and Euclid Avenue to the west, within the SP(AG) (Specific Plan (Agricultural Overlay)) zoning district, and is presently improved with agricultural, dairy, recreational vehicle storage, residential and vacant land uses; and

WHEREAS, the properties to the north of the Project site are within the SP (Specific Plan) zoning district and are developed with agricultural uses. The properties to the south are within the SP zoning district and include vacant land, a dairy farm, recreational vehicle storage and residential uses. The properties to the east are within the SP zoning district and are vacant. The properties to the west are located within the City of Chino and improved with commercial, residential and trailer storage uses; and

WHEREAS, the Euclid Mixed Use Specific Plan, attached hereto as "Attachment A," establishes a comprehensive set of design guidelines and development regulations to guide and regulate site planning, landscape, and architectural character, and ensuring that excellence in community design is achieved during project development. In addition, the Specific Plan will establish the procedures and requirements to approve new development within the project site to ensure The Ontario Plan 2050 (“TOP 2050”) goals and policies are achieved; and

WHEREAS, the Euclid Mixed Use Specific Plan consists of approximately 84 acres of land, which includes potential development of up to 1,676,886 square feet of business park, office and retails uses, and 466 dwelling units; and

WHEREAS, the land use intensity of the Euclid Mixed Use Specific Plan anticipated in the five planning areas is consistent with TOP 2050. The Specific Plan is proposing a maximum 0.6 floor area ratio (“FAR”) within the Business Park land use designation (Planning Areas 1, 2A and 2B) located along the northern area of the Specific Plan area. Planning Areas 1, 2A and 2B are 53.06 acres in size and can be potentially developed with 1,386,776 square feet of business park development. The Specific Plan is proposing a maximum 1.5 FAR for office, 1.0 FAR for retail, and 35 du/ac within the Mixed Use land use designation along the southern portion of the Specific Plan. Planning Area 3 is 19.03 acres in size and can potentially be developed with 124,146 square feet of office and 165,964 square feet of retail development and maximum 466 dwelling units. Planning Areas 4 and 5 are designated Open Space-Nonrecreational land use and no development square footage is planned for these areas; and

WHEREAS, the Euclid Mixed Use Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario Policy Plan (General Plan). The policy (General Plan) analysis in “Chapter 7. Consistency with The Ontario Plan” of the Specific Plan describes the manner in which the Euclid Mixed Use Specific Plan complies with the Policy Plan goals and policies applicable to the Euclid Mixed Use Specific Plan; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA") and an initial study has been prepared to determine possible environmental impacts; and

WHEREAS, an Environmental Impact Report (“EIR”) (State Clearinghouse No. 2023020281), including the adoption of a Mitigation and Monitoring and Reporting Program (“MMRP”) and a Statement of Overriding Considerations, have been prepared in accord with CEQA and the State CEQA Guidelines, and the City of Ontario Guidelines to address the environmental effects of the Specific Plan (Euclid Mixed Use Specific Plan); and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan 2050, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport ("ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (ALUCP), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, the proposed Project is located within the Airport Influence Area of Chino Airport, within the City of Ontario boundary, and is subject to, and must be consistent with, the policies criteria set forth in Reference I, Chino Airport Land Use Compatibility Plan (CNO ALUCP), which applies only to jurisdictions within City of Ontario, and addresses the safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on July 23, 2024, the Planning Commission of the City of Ontario conducted a hearing to consider the EIR, MMRP, Statement of Overriding Considerations, and the Project, and concluded said hearing on that date, voting to issue Resolution No. PC24-031 & PC24-032, recommending the City Council approve the Application; and

WHEREAS, on August 20, 2024, the City Council of the City of Ontario conducted a hearing to consider the EIR, MMRP, Statement of Overriding Considerations, and the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND ORDAINED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the EIR, MMRP, and Statement of Overriding Considerations prepared for the Project and supporting documentation. Based upon the facts and information contained in the EIR (State Clearinghouse No. 2023020281) and the administrative record, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The Euclid Mixed Use Specific Plan EIR, MMRP, and Statement of Overriding Considerations contain a complete and accurate reporting of the environmental impacts associated with the Project; and

(2) The Euclid Mixed Use Specific Plan EIR, MMRP, and Statement of Overriding Considerations have been completed in compliance with CEQA, the State CEQA Guidelines and the City of Ontario Local CEQA Guidelines; and

(3) The Euclid Mixed Use Specific Plan EIR, MMRP, and Statement of Overriding Considerations reflects the independent judgment of the City Council.

SECTION 2: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the City Council finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan 2050. The Project site is one of the properties listed in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report, and the proposed Project is consistent with the number of dwelling units (466) and density (35 du/ac) specified in the Housing Element Sites Inventory.

SECTION 3: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

(2) On August 2, 2022, the City Council of the City of Ontario approved and adopted a Development Code Amendment to establish the Chino Airport (“CNO”) Overlay Zoning District (“OZD”) and Reference I, Chino Airport Land Use Compatibility Plan (“CNO ALUCP”). The CNO OZD and CNO ALUCP established the Airport Influence Area for Chino Airport, solely within the City of Ontario, and limits future land uses and development within the Airport Influence Area, as they relate to safety, airspace protection, and overflight impacts of current and future airport activity. The CNO ALUCP is consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The

proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the CNO ALUCP. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the CNO ALUCP compatibility factors, including Safety, Airspace Protection, Overflight. As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the Chino ALUCP.

SECTION 4: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Sections 1 through 3 above, the City Council hereby concludes as follows:

(1) ***The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan 2050.*** The approximately 84-acre Euclid Mixed Use Specific Plan is suitable for business park and mixed use development and is consistent with the goals and policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of TOP 2050. "Chapter 7. Consistency with The Ontario Plan" of the Euclid Mixed Use Specific Plan describes the manner in which the Specific Plan complies with the Policy Plan goals and policies; and

(2) ***The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The proposed Euclid Mixed Use Specific Plan is in conformance with the Land Use Policies and Goals of the Policy Plan and will provide standards and guidelines for the harmonious development within the districts, in a manner consistent with the Policy Plan. The Specific Plan is proposing business park and mixed use (office, retail and residential) type development for the approximately 84-acre site, which is what is mandated by the land use plan of the Policy Plan; therefore, the proposed business park and mixed use land uses will not be detrimental to the public interest, health, safety, convenience, or general welfare of the City because it will provide land uses that are consistent with the existing and future development of the surrounding area; and

(3) ***In the case of an application affecting specific property(ies), the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The proposed Specific Plan will modify the land use from agricultural, dairy farm, recreational vehicle storage, residential and vacant land uses to Business Park and Mixed Use, which aligns with surrounding land uses

planned in TOP 2050 and allows for similar development intensities under the Business Park and Mixed Use designation; and

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** The proposed Specific Plan will allow for business park and mixed use on the subject site. When in conformance with the Specific Plan, the project site is suitable in size and shape, allows for sufficient access and availability of utilities to accommodate the anticipated development.

SECTION 4: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 3, above, the City Council hereby APPROVES the herein described Euclid Mixed Use Specific Plan, attached hereto as "Attachment A," and incorporated herein by this reference, and subject to the Conditions of Approval.

SECTION 5: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 6: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 7: ***Severability.*** If any section, sentence, clause or phrase of this Ordinance or the application thereof to any entity, person or circumstance is held for any reason to be invalid or unconstitutional, such invalidity or unconstitutionality shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this Ordinance are severable. The People of the City of Ontario hereby declare that they would have adopted this Ordinance and each section, sentence, clause or phrase thereof, irrespective of the fact that any one or more section, subsections, sentences, clauses or phrases be declared invalid or unconstitutional.

SECTION 8: ***Effective Date.*** This Ordinance shall become effective 30 days following its adoption.

SECTION 9: ***Publication and Posting.*** The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within 15 days following the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

PASSED, APPROVED, AND ADOPTED this _____ day of _____ 2024.

1. INTRODUCTION

Euclid Avenue can be described as the backbone of the City of Ontario (***See Figure 1.1***). Extending from the San Gabriel foothills to the north, Euclid Avenue was originally designed by George and William Chaffey in 1882 to be a grand boulevard constructed as part of the "Model Irrigation Colony" and was intended to connect to the southern edge of the colony at the Southern Pacific Railroad. Euclid Avenue initially provided street lights, water services and long distance telephone lines and was envisioned to include an electric railway to serve the growing community.

Today, Ontario has grown to become the identifiable center of the inland valley, with commerce and community expanding around the City's strategic location along regional transportation routes, growing international airport, commerce and cultural amenities. Ontario is situated in the path of expanding urbanization and housing demand in the surrounding region. The project site, the Euclid Mixed-Use Property, is comprised of approximately 84 acres located along the east side of Euclid Avenue in the City of Ontario, California and establishes the west gateway to the Ontario Ranch.

Within Ontario Ranch, the City of Ontario promotes innovative land development principles to continue the legacy of the Model Colony. The City's general plan, The Ontario Plan, envisions the Ontario Ranch area will include housing, commercial and Business Park areas, parks, recreational uses, trails and bike links. Specific plans are required to guide development in Ontario Ranch to ensure the City objectives are achieved.

On January 26, 2010, the City of Ontario adopted The Ontario Plan, which serves as its new business plan and includes a long term vision and principle-based policy plan, essentially functioning as the General Plan for the city, including Ontario Ranch. The Ontario Plan 2050 was adopted in August 2022 as an update to the original 2010 document. The Euclid Mixed-Use Specific Plan is consistent with The Ontario Plan 2050.

The Euclid Mixed-Use Specific Plan (this "Specific Plan") is a major "next step," creating a specific plan to implement the vision outlined by the City of Ontario for the western portion of the Ontario Ranch area, formerly New Model Colony (***See Figure 1.2***). The Ontario Ranch area covers 8,200 acres of the historic San Bernardino Agricultural Preserve, which was predominantly used for dairy or cattle farming. In 1999, the City of Ontario named its portion of the Agricultural Preserve to be the New Model Colony after the original Model Irrigation Colony.

The City's TOP overall vision for the Ontario Ranch is to create a self-sustaining place of diversity, extending into Ontario's existing fabric of development. The City's TOP also envisions each neighborhood and commercial center within the Ontario Ranch as a place uniquely identifiable for its residents, employees, and visitors, united through an area-wide network of greenways, trails, open spaces, amenities, and infrastructure.

The vision for Euclid Mixed-Use is to create a gateway to the City of Ontario and to the Ontario Ranch planned community incorporating a variety of opportunities for small businesses and employment within the Business Park District and a vibrant community with a mixture of uses all connected through a series of trails providing opportunities for people to live, work and play within the Mixed-Use District of the Specific Plan.

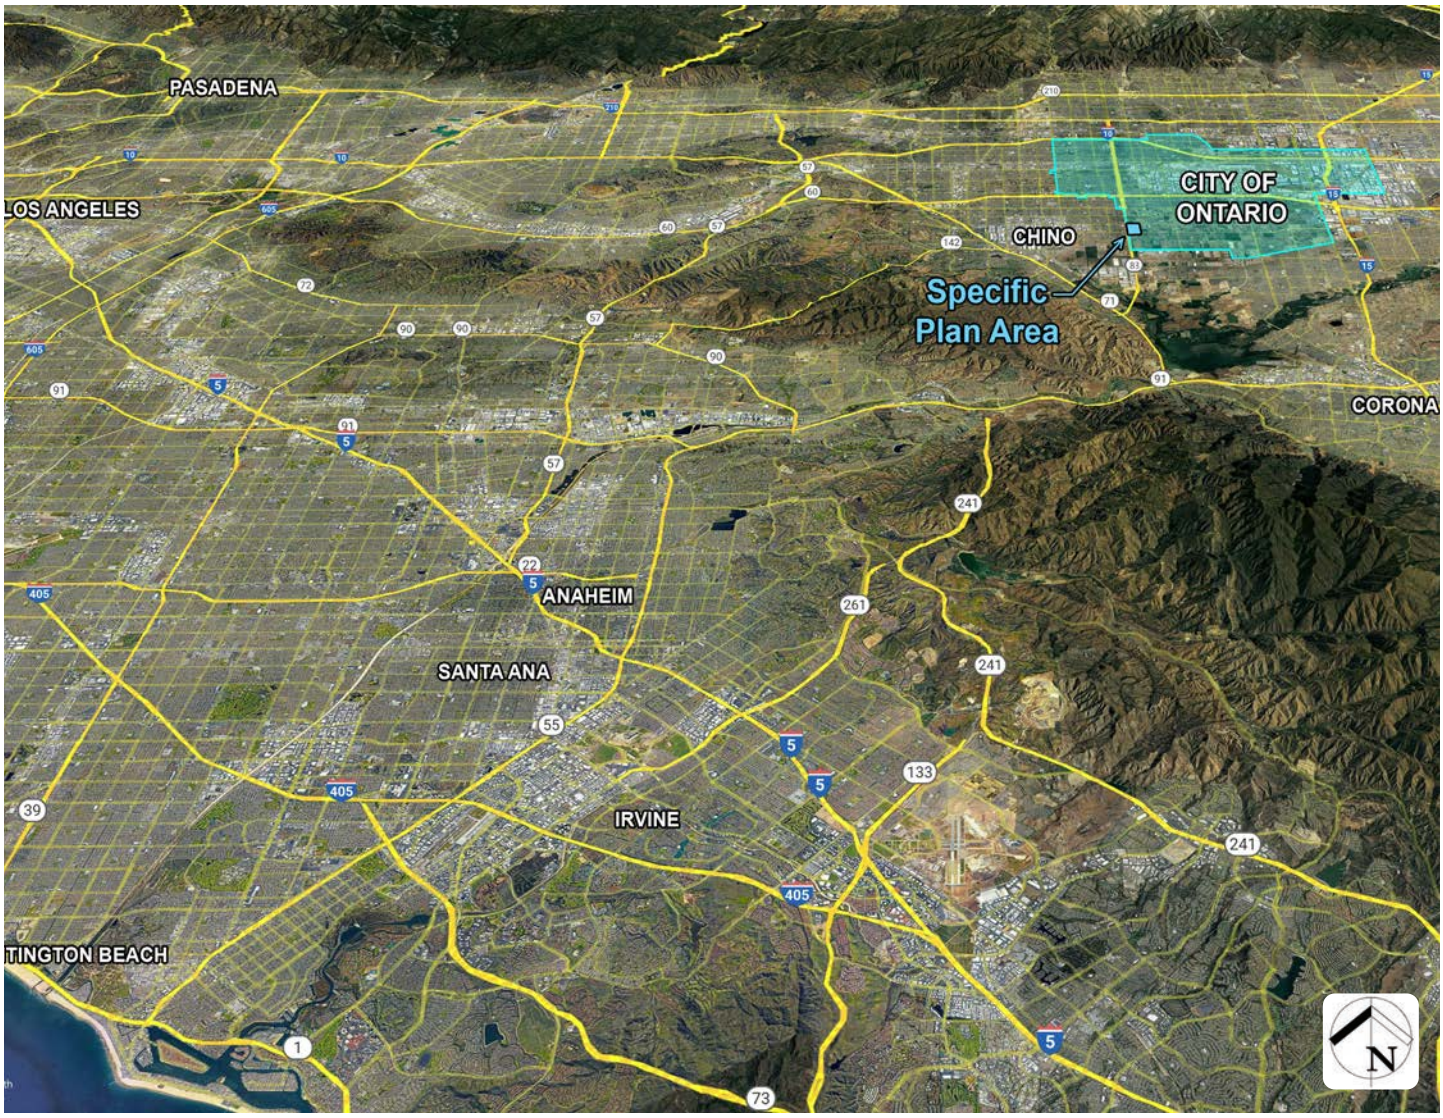

FIGURE 1.1 REGIONAL LOCATION

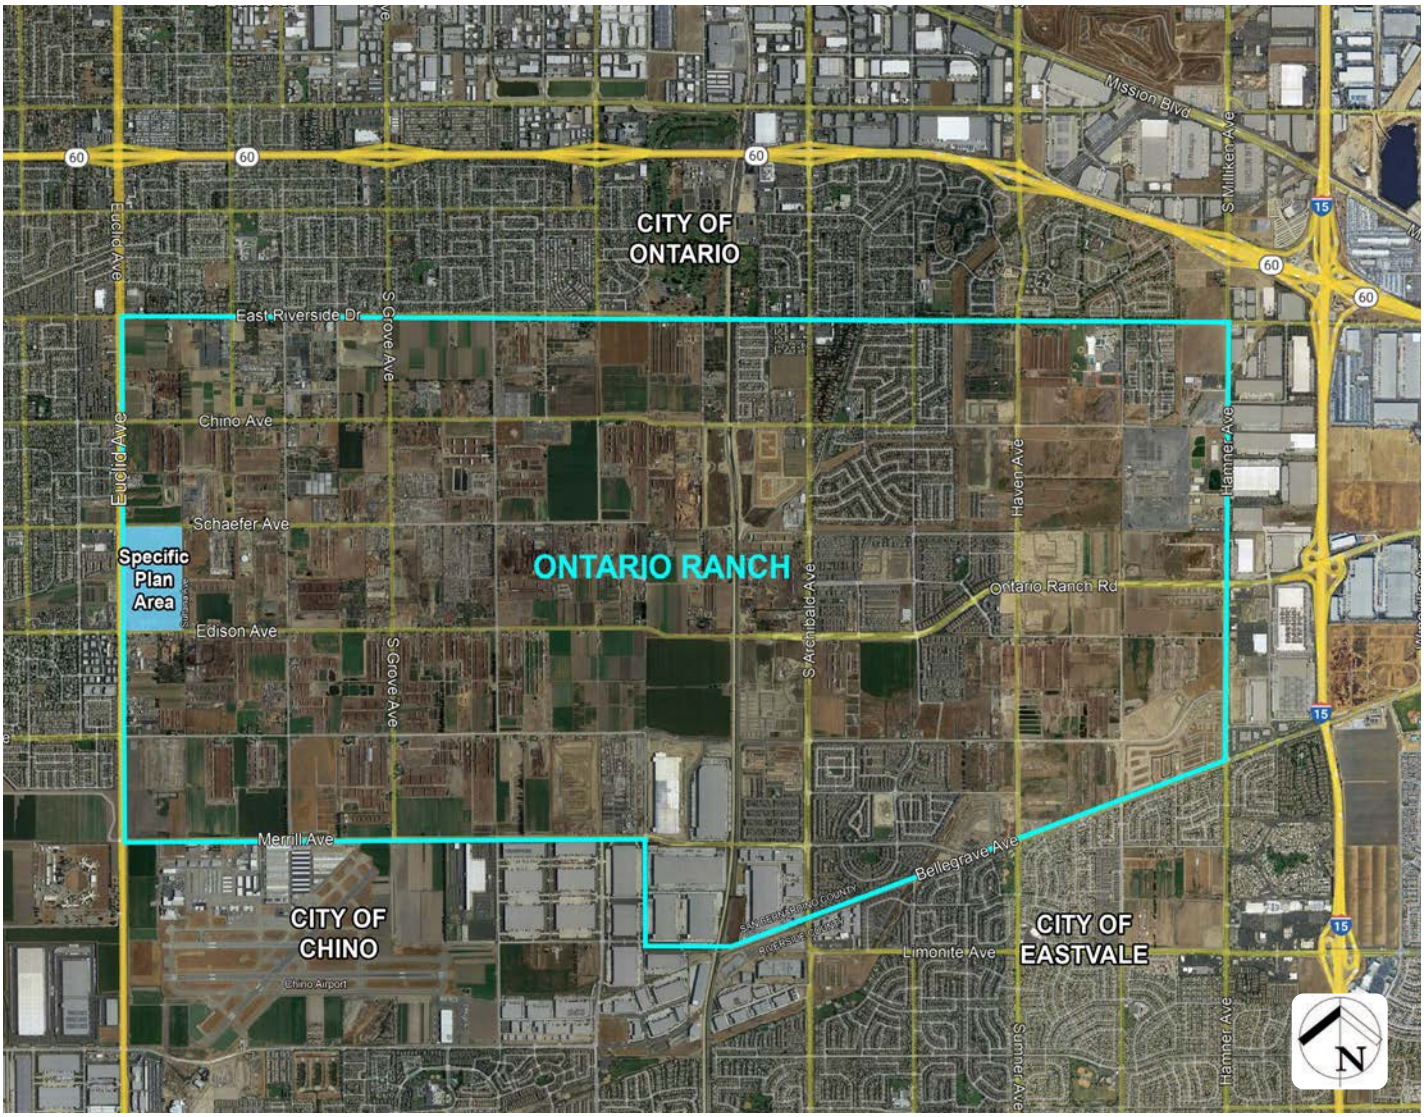

FIGURE 1.2 ONTARIO RANCH

In order to actualize this vision, a series of objectives are provided to augment policies identified within the City's TOP. These objectives and policies are as follows:

Create a place with a Unique Identity.

- Provide a variety of quality building designs that reinforces the rich agricultural history and the high quality of development within the City.
- Provide a walkable plan that ties the future residential, retail and employment areas to surrounding support uses and open space/recreational uses including the Great Park.
- Provide outdoor gathering spaces within attached residential neighborhoods, office parks and retail centers.
- Design convenient access to transit stops to encourage alternatives to vehicular commuting.

Develop a Public Realm that emphasizes Comfort, Safety and Human scale.

- Establish a walkable street pattern linking living and shopping areas with public spaces and the Great Park.
- Design and plan buildings and landscaping to create inviting outdoor living areas.
- Create building elevations with regular articulation and varied facade expressions.

Optimize connectivity within the Mixed Use areas within the overall Community Network.

- Design streets in a grid pattern with short, walkable blocks.
- Establish a street pattern as a logical extension of open space, public transit and neighborhood retail and employment.
- Encourage parking solutions such as alleys, parking courts and structured parking to minimize the visual impact of stored vehicles.

Design buildings that are appropriate and contextual.

- Create design standards for vertical and horizontal mixed use buildings to address market opportunities.
- Orient buildings toward public streets, neighborhood edges and open space areas to establish and urban neighborhood character.
- Concentrate building massing along major streets and corridors and adjacent to the Great Park and near convenient transit stops.

Create active frontages along streets and open spaces.

- Design retail buildings with storefront treatments that optimize indoor/outdoor spaces.
- Orient residential front doors, porches and patios to face walkable streets and away from major streets, non-residential uses and utility lines.
- Provide visual and physical access to connect to City planned trails and bikeways.

Manage infrastructure to accommodate optimal land uses.

- Coordinate the development of project infrastructure to foster future pedestrian opportunities.
- Encourage the timely development of shared infrastructure within the Mixed Use District.
- Facilitate development plans that provide shared parking and multi-modal access/parking within the mixed use area.

1.1 Purpose and Intent of the Specific Plan

The Euclid Mixed-Use Specific Plan provides zoning regulations for the project area by establishing permitted land use, development standards, infrastructure requirements, design guidelines and implementation requirements for future development. Development regulations and design guidelines are included to guide all site planning, architectural character, and landscape treatment within the site area to ensure a standard of excellence in community design throughout project development. The Specific Plan establishes the procedures and requirements to approve new development within the project area.

The purpose of the Specific Plan is to:

- Provide a flexible planning framework that responds to changing physical and market driven aspects of future development opportunities;
- Specify a coordinated phasing of infrastructure, utilities, and public services for this area of the Ontario Ranch;
- Promote compatible uses and interfaces between adjacent properties;
- Ensure the appropriate location and intensity of uses within the site area; and
- Conform to State laws and local ordinances and policies in the preparation of the Specific Plan.

The intent of the Specific Plan is to:

- Create a professional, well maintained and attractive environment for the development of a vibrant Mixed-Use development along Edison Avenue and a multi-purpose business park complex.
- Provide the entitlement and framework for a total of approximately 290,000 sq. ft. of office retail development and a maximum of 466 residential units.
- Provide the entitlements and framework for the development of approximately 1.39 million sq. ft. of business park uses.
- Provide employment opportunities for the surrounding community.
- Facilitate the implementation of roads, utilities, and other infrastructure investments that will be sufficiently sized to serve the Specific Plan area.
- Expand Ontario's retail, office and business park uses in proximity to local airports and regional transportation networks.
- Create an economic driver for future growth in western portion of Ontario Ranch that acts as a catalyst for the development of infrastructure improvements in the area and implementation the City's long term planning vision.
- Provide opportunities for residents to live, work and shop within close proximity.
- Provide a logical extension of planned community trails and bike ways.

1.2 Specific Plan Project

This Specific Plan is the regulatory document for the Euclid Mixed-Use site area, accommodating up to 290,131 sq. ft. of commercial retail/office uses, a total of 466 residential units and 1,386,776 sq. ft. of business park uses on approximately 84.1 acres of land. The Specific Plan provides a land use plan identifying allowed uses and zoning, circulation, infrastructure, streetscape, and landscape plans; establishes allowable uses and development standards for reviewing individual projects; presents design guidelines to create a visually attractive environment; summarizes the development review process; and specifies provisions for administration and implementation of the Specific Plan and outlines its consistency with The Ontario Plan.

Location and Specific Plan Boundary

The Specific Plan area is located along the western boundary of the City of Ontario, on the NE corner of Euclid Avenue and Edison Avenue adjacent to the City of Chino (***see Figure 1.1***). The Specific Plan site area is located within Ontario Ranch (***see Figure 1.2***). The Specific Plan area is bounded by Schaefer Avenue on the north, Sultana Avenue on the east, Edison Avenue on the south, and Euclid Avenue on the west. The Specific Plan area is currently divided into 16 separate parcels. (***see Figure 1.3***).

Employment Generation

At build out, the Euclid Mixed-Use is anticipated to create numerous of jobs in retail, food service, small business light manufacturing/assembly, warehousing, logistics, office, and administration. Actual job creation depends on the type of land uses ultimately developed, as a wide range of business park and Mixed-Use development such as office and retail uses are permitted within the Euclid Mixed-Use Specific Plan. Employment opportunities will range from entry level to highly skilled labor and will expand the City of Ontario's employment opportunities in the region. Euclid Mixed-Use will also provide expanded opportunities for start up businesses.

Infrastructure Framework

The Specific Plan will help establish the necessary framework to enable the continued growth and development of Ontario Ranch in cooperation with adjacent property owners and developers. The Specific Plan identifies master planned water, sewer, and storm drain infrastructure required to serve the Specific Plan site area. The extent of infrastructure to be provided by Euclid Mixed-Use will be established as part of the development agreement.

Community Connectivity and Compatibility

The Specific Plan land use concept includes an internal buffer between potential sensitive Mixed-Use developments and provides an open space corridor extending from Euclid Avenue and planned residential uses located to the east of the site area. The land use concept and development regulations limit the size of buildings to 58,000 s.f. along the frontage of Euclid Avenue to ensure smaller scale buildings that are compatible with future retail and high density residential uses are developed along these sensitive edges.

1.3 Specific Plan Requirements

The range of issues contained in a specific plan is left to the discretion of the decision-making body. However, all specific plans must, at a minimum, address the following:

- The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan.
- The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan.
- Standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable.
- A program of implementation measures including regulations, programs, public works projects, and financing measures necessary to carry out the above identified items.

1.4 Authority and Scope

The Ontario Plan requires approval of a Specific Plan as the Zoning for all future development within Ontario Ranch, to ensure coordinated communities and neighborhoods and to implement the City's goals and policies. This Specific Plan provides zoning regulations to govern development of the project site and shall take precedence over the City of Ontario Development Code. However, in instances where the Specific Plan is silent, the Development Code shall prevail.

The California Government Code (Title 7, Division 1, Chapter 3, Article 8, Sections 65450 through 65457) grants the City the authority to adopt a specific plan by ordinance. The minimum requirements of a specific plan are established by California Government Code Sections 65450 through 65457 and City of Ontario Code Sections 9-1.2100 to 9-1.2125. This Specific Plan is a regulatory document, providing land use and design guidance adopted by ordinance. Development plans, site plans, and tentative tract/parcel maps must be consistent with this Specific Plan and The Ontario Plan. The topics covered in this Specific Plan include land use, infrastructure, development standards, design guidelines, and implementation requirements.

1.5 California Environmental Quality Act Compliance

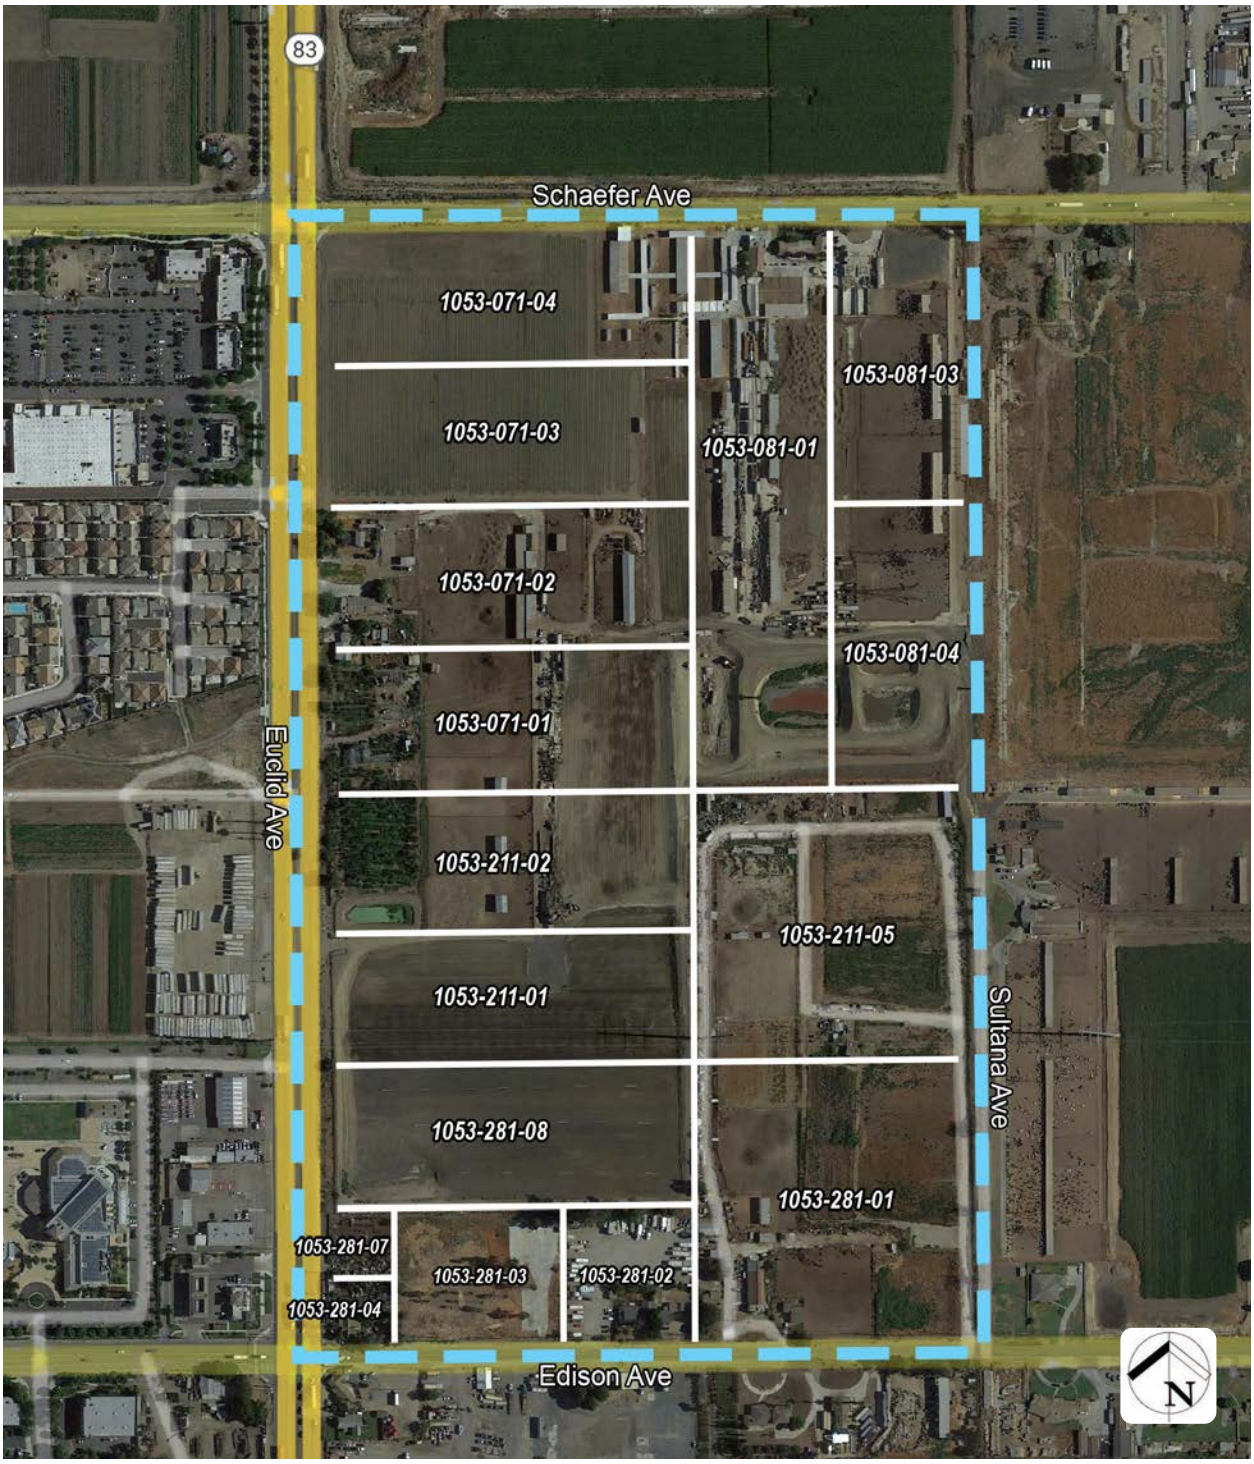
The Specific Plan is a discretionary project and is subject to the requirements of the California Environmental Quality Act (CEQA). Pursuant to State and local CEQA guidelines, an Environmental Impact Report addressing the impacts associated with the development of the project must be certified by the City prior to approval of the Specific Plan.

1.6 Organization of this Specific Plan

The Specific Plan is organized by Sections as follows:

1. ***INTRODUCTION.***
   This section states the purpose and intent of the Specific Plan, introduces the proposed project, summarizes specific plan requirements, and explains the scope and authority of the Specific Plan and its compliance with CEQA.

2. ***EXISTING CONDITIONS.***
   This section explains the baseline conditions for the project site including current and surrounding land uses, airport influence areas, circulation, utilities, and environmental conditions.



3. ***DEVELOPMENT PLAN.***
   This section establishes the overall development concept for the Specific Plan including the land use plan, infrastructure plans for water, sewer, utilities, and circulation, and the provision of public services such as fire, police, and solid waste disposal.

4. ***LAND USE AND DEVELOPMENT STANDARDS.***
   This section establishes the land use designations and regulations for the Specific Plan. Upon adoption of this Specific Plan, the land use and development standards within this chapter serve as the legal zoning for the Specific Plan area.

5. ***DESIGN GUIDELINES.***
   This section identifies the conceptual themes for site planning, architecture, and landscape design in the Specific Plan area.

6. ***SPECIFIC PLAN IMPLEMENTATION.***
   This chapter provides requirements for the development review and administration of the Specific Plan including amendment procedures and implementation priorities.

7. ***CONSISTENCY WITH THE ONTARIO PLAN.***
   This chapter describes the Specific Plan's conformance with The Ontario Plan.

SPECIFIC PLAN BOUNDARY

000-00-00 EXISTING ASSESSOR PARCEL NUMBER (APN)

FIGURE 1.3 SPECIFIC PLAN BOUNDARY

This page intentionally left blank

2. EXISTING CONDITIONS

The following section documents the existing conditions including current development, airport influence areas, Williamson Act contracts, land use and zoning, existing circulation, and environmental conditions.

2.1 Existing Land Uses and Improvements

The Euclid Mixed Use Specific Plan and surrounding areas area are transitioning from agricultural use such as private dairy farms in response to regional market influences attracting urban development. Existing rural roadways and infrastructure is planned to be replaced with ultimate improvements to accommodate future development plans consistent with The Ontario Plan.

2.1.1 On-Site Uses

The project site is generally used for agricultural purposes, including the raising of livestock, dairy farming activities and a commercial nursery. The majority of the site exists as fallow or cultivated fields. There is a private recreational vehicle facility in the south western portion of the site and a scrap yard at the southwestern intersection (Euclid Avenue and Edison Avenue).

Numerous single family residential structure, as well as agricultural related buildings and open structures are located within the Specific Plan area. The buildings on-site are representative of older rural residential and farming buildings with the southern portion of the City of Ontario and characterize the original colonization of the region prior to the incorporation of the City of Ontario.

One or more of the ancillary farming buildings reflect an Art Deco architectural style reflective of early agricultural structures in the area and may represent an important City historical resource. The documentation and recordation of any significant historic resources will be addressed per the project Environmental Impact Report (EIR).

Two Southern California Edison (SCE) easements extend across the Euclid Mixed Use Specific Plan area. No structures are located within the SCE easements, however, they have been used for various agricultural uses historically. See the following examples:

2.1.2 Surrounding Uses

Existing uses in the vicinity of the Specific Plan area include similar uses to the uses within the project site. The area to the west, across Euclid Avenue, is within the City of Chino and has been developed with varied commercial and light industrial uses including a service station/convenience store at the northwestern corner of Euclid and Edison Avenue, low intensity commercial office, business park and truck trailer storage uses. Moving northerly, the adjacent development pattern in Chino transitions to a medium density single family neighborhood and a conventional neighborhood shopping center.

The remaining adjacent uses are within the City of Ontario. Ongoing crop farming is located to the north of the site and a vacant property that was a former dairy farm is located to the east of the site. The property to the south is currently residential, farming or trucking related uses. See photos below:

2.2 Existing and Surrounding Development

The Specific Plan area is occupied by rural uses, including a dairy farm and vacant land. Dairy farming and agriculture have been the primary uses of the property since before the 1930s.

Figure 2.1 shows the Specific Plan in context with the surrounding existing uses in the vicinity, which include:

- **North across Schaefer Avenue** - Existing dairy farm.
- **South across Edison Avenue** - Existing Trucking Facility.
- **East across Sultana** - Vacant and Existing Trucking Facility.
- **West across Euclid Avenue (City of Chino)** - Existing Commercial and Residential uses, Truck/trailer storage.

The Ontario Plan 2050 designates the surrounding areas in for Commercial, Residential and Mixed-Use development.

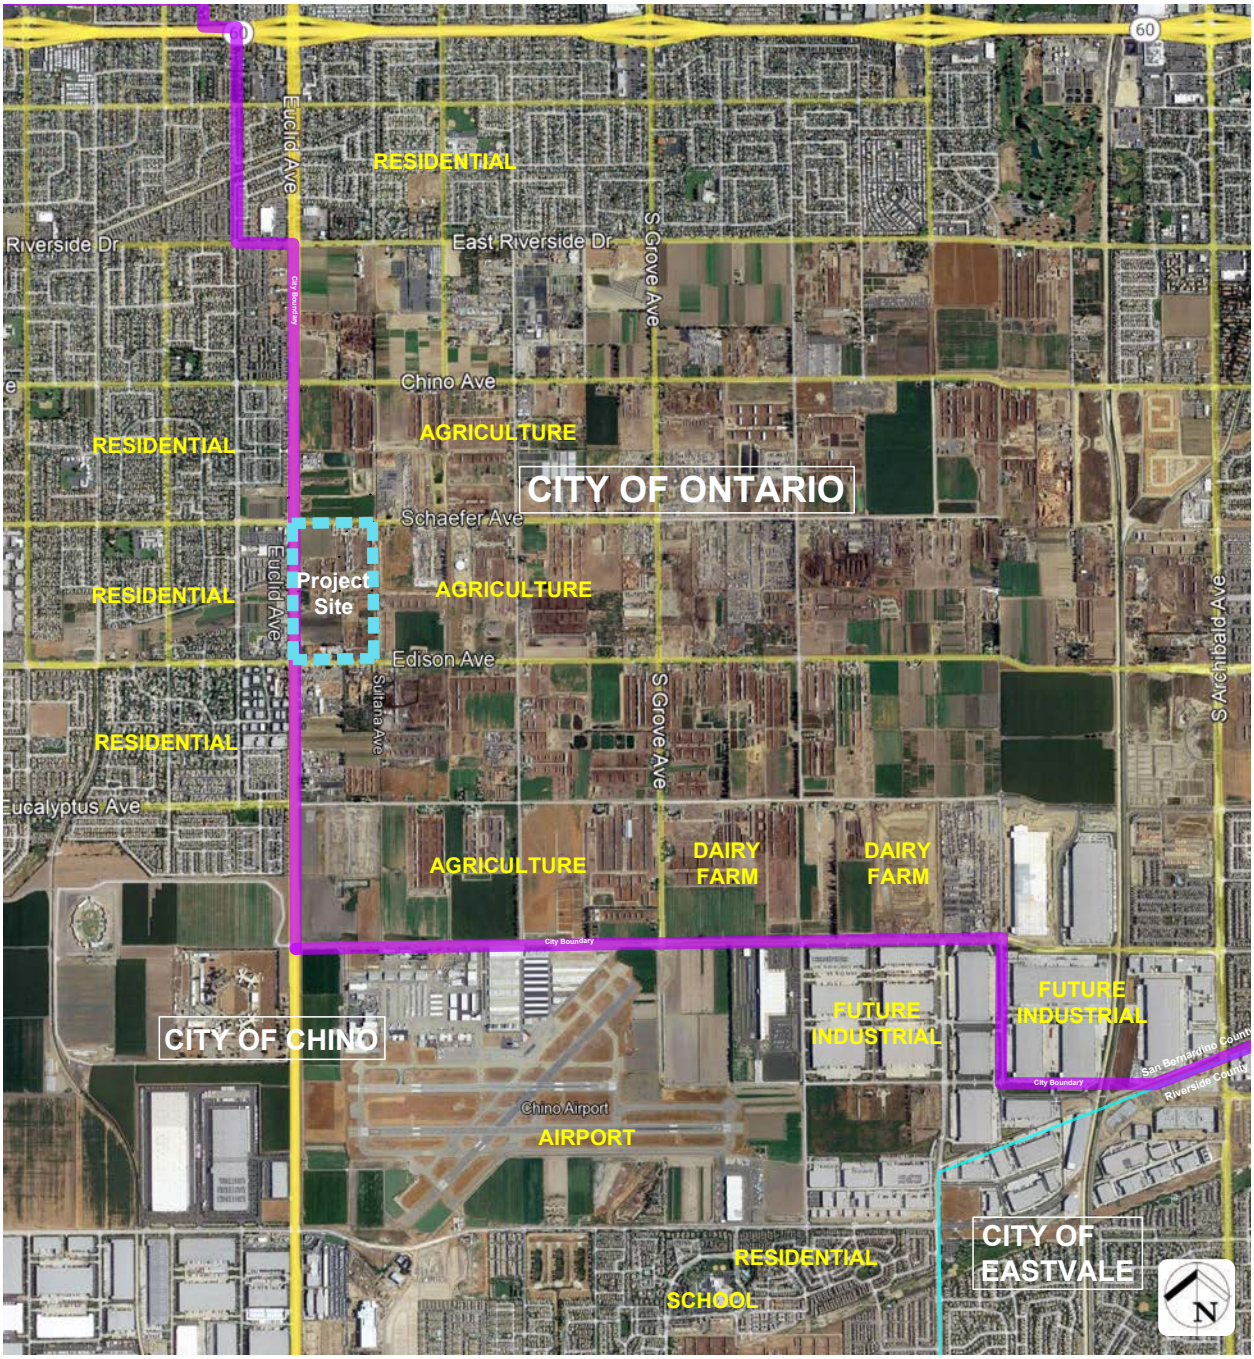


FIGURE 2.1 SURROUNDING LAND USES

2.3 Airport Influence Areas

Ontario International Airport

The Ontario International Airport Land Use Compatibility Plan (ONT ALUCP) was adopted by the Ontario City Council on April 19, 2011. The purpose of a compatibility plan is to avoid conflicts between airport operations and surrounding land uses. The Specific Plan area is not within the safety, noise impact, or airspace protection zones of the ONT ALUCP; however, it is within the Airport Influence Area, as is the entire City of Ontario.

Chino Airport

On August 2, 2022, the City Council of the City of Ontario approved and adopted a Development Code Amendment to establish the Chino Airport ("CNO") Overlay Zoning District ("OZD") and Reference I, Chino Airport Land Use Compatibility Plan ("CNO ALUCP"). The CNO OZD and CNO ALUCP established the Airport Influence Area for Chino Airport, solely within the City of Ontario, and limits future land uses and development within the Airport Influence Area, as they relate to safety, airspace protection, and overflight impacts of current and future airport activity. The CNO ALUCP is consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The specific plan is located within the Airport Influence Area of Chino Airport, Overflight Notification Zone and Airspace Protection Zone.

2.4 Williamson Act Contracts

The California Land Conservation Act of 1965, commonly known as the Williamson Act, enables local governments to enter into contracts with private landowners for the purpose of restricting specific parcels of land to agricultural or related open space use. In return, landowners receive property tax assessments that are much lower than normal based upon farming and open space uses as opposed to full market value. The motivation for the Williamson Act is to promote voluntary land conservation, particularly farmland conservation. There are no active Williamson Act contracts located within the Specific Plan area.

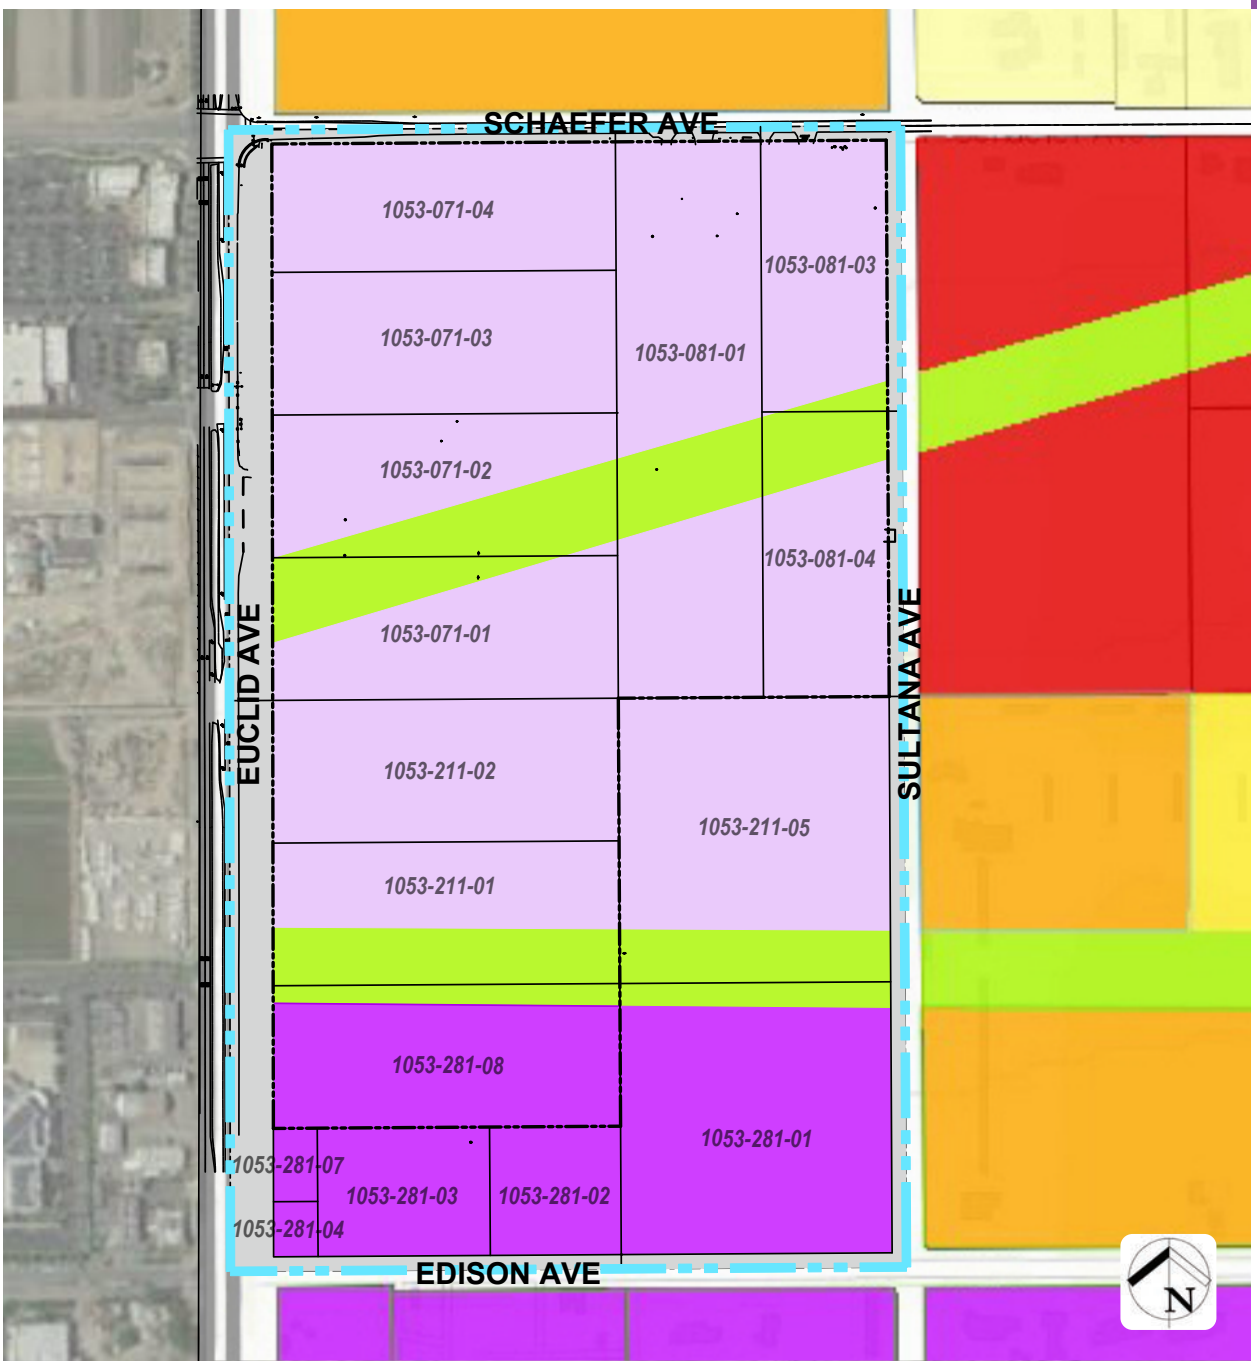
2.5 Ontario Plan 2050 and Zoning Designations

The Ontario Plan 2050 land use designations and current zoning map designations for the Specific Plan area (prior to adoption of the Euclid Mixed-Use Specific Plan) are shown in ***Figure 2.2***.

The Ontario Plan 2050 land use designations are:



BUSINESS PARK (0.60 FAR) APN:

1053-071-01,
1053-071-02,
1053-071-03,
1053-071-04,
1053-081-01,
1053-081-02,
1053-081-03,
1053-081-04,
1053-211-01,
1053-211-02 and
1053-211-05.

MIXED-USE APN:

1053-281-01,
1053-281-02,
1053-281-03,
1053-281-04,
1053-281-05,
1053-281-07 and
1053-281-08.

The existing zoning designation is SP (Specific Plan) Zoning District. The SP District designation requires approval of a specific plan by the City for urban development of the project site. The Euclid Mixed-Use Specific Plan will be the zoning for the project site, consistent with The Ontario Plan 2050.

2.6 Existing Circulation

The Specific Plan area is located approximately two and one half (2 ½) miles south of State Route 60 via State Route 83 (Euclid Avenue), which is located on the western boundary of the Specific Plan area, as shown in ***Figure 2.3***.

Vehicular circulation in the Specific Plan area is provided by Schaefer Avenue on the north, Edison Avenue on the south, Sultana Avenue on the east and Euclid Avenue on the west.

Existing improvements for Euclid Avenue include interim pavement and an unimproved dirt center median. Euclid Avenue has a fully dedicated right-of-way as specified in The Ontario Plan 2050.

Schaefer Avenue and Edison Avenue are paved in an interim condition, requiring ultimate right-of-way dedication and major street and parkway improvements.

On the eastern boundary of the Specific Plan area, Sultana Avenue is a fully dedicated yet unimproved street that exists only on paper, which will require major street and parkway improvements.

Traffic signals are located along Euclid Avenue at the Edison Avenue and Schaefer Avenue intersections.

Access to the site is currently provided via multiple private driveway entrances located on Euclid Avenue, Edison Avenue and Schaefer Avenue.

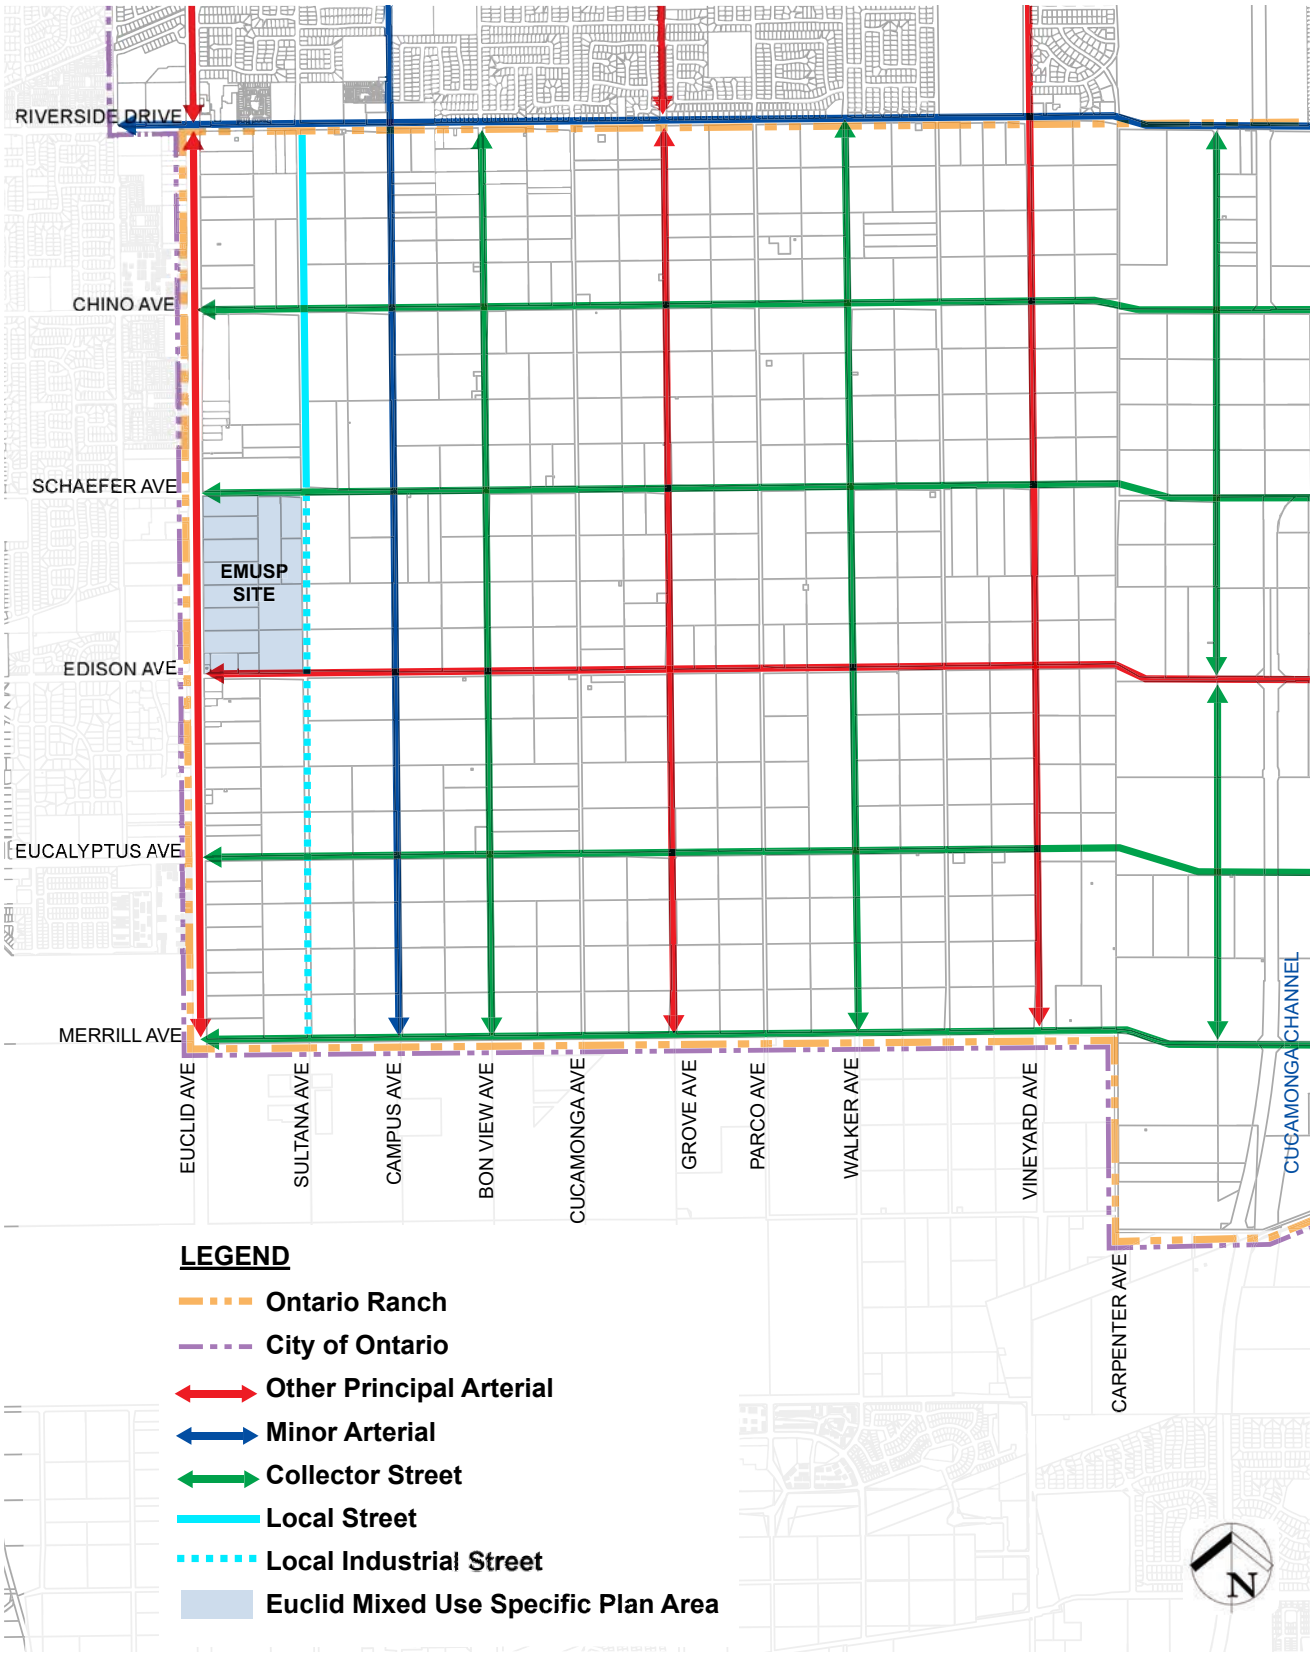

FIGURE 2.3 REGIONAL CIRCULATION

2.7 Existing Environmental Conditions

Topography

The overall project site is moderately flat, sloping from north to south with approximately a 25 ft. change in elevation.

Geology, Soils, and Seismicity

The Phase I environmental site assessment (ESA) included boring to depths of 10 to 30± ft. and trenching to depths of 4 to 12± ft.. Soils encountered through boring and trenching consist of highly organic soils to depths of 1 to 1½± ft.. The near surface soils possess low to medium expansion potentials. Groundwater was not encountered in any of the soil borings conducted as part of the assessment.

The near surface soils are considered corrosive to ferrous metals, including ductile iron pipe. Additionally, the near surface soils encountered at a boring located in the cattle pen area possessed chloride concentrations that can be deleterious to steel in reinforced concrete. A methane gas survey determined on-site levels are below the threshold.

A geotechnical feasibility study on the Specific Plan site indicated that the proposed development is considered feasible from a geotechnical standpoint. The subject site is located in an area that is subject to strong ground motions due to earthquakes. Research of available maps indicates that the Plan area is not located within an Alquist-Priolo Earthquake Fault Zone. Furthermore, a geotechnical feasibility study did not identify any evidence of faulting during the geotechnical investigation. Therefore, the possibility of significant fault rupture on the site is considered low.

The potential for other geologic hazards such as seismically induced settlement, lateral spreading, tsunamis, inundation, flooding, and subsidence affecting the site is considered low. Research of the San Bernardino County Land Use Services website indicates that the subject site is not located within a zone of liquefaction susceptibility. Based on the mapping performed by San Bernardino County and the conditions encountered at the boring locations, liquefaction is not considered to be a design concern for development within the Specific Plan area.

Each proposed development within the Specific Plan area will be required to have a project specific geotechnical investigation.

Hydrology

Storm runoff from the project site generally drains from north to south. There are two detention areas onsite, one located in the center of the site and the other at the southwestern portion of the site to the north of the rural residential lots along Euclid Avenue near the NEC of Euclid Avenue and Edison Avenue.
The southerly portion of the Specific Plan area surface drains southerly and surface flows on a southwesterly direction to the NEC of Euclid Avenue and Edison Avenue and is dispersed across the street to the south.

According to Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps, the project site is not located within a flood hazard zone.

Each proposed development within the Specific Plan area will be required to have a project specific hydraulics and hydrology report.

Biological Resources

The Specific Plan area is generally defined as being of low biological resource value due to highly disturbed site conditions and historic dairy/agricultural use, resulting in low biological diversity. There is limited vegetation on the majority of the site; the vegetation that exists includes ornamental and shade trees associated with the rural residential homes and generally consists of scattered native and non-native shrubs and non-native grasses and weeds.

This page intentionally left blank

3. DEVELOPMENT PLAN

This Section provides the framework to guide development of the Euclid Mixed-Use Specific Plan. The Section presents the proposed planning areas, infrastructure plans, and public services to support the project.

3.1 Land Use Plan

The Specific Plan consists of three (3) Land Use Designations divided into five (5) Planning Areas to accommodate the development of a mix of land uses including retail commercial, general commercial/office, business parks, low intensity office/warehouse, technology and incubator space, light manufacturing/distribution uses, high density residential uses and open space areas that are compatible with the site's location and surrounding existing and proposed land uses. The Land Use Plan implements the vision and goals of the Ontario Plan by providing opportunities for employment in a variety of commercial and business industries designed to meet the demand of current and future market conditions. A list of allowable uses by Planning Area is presented in Section 4 (Development Criteria and Standards).

Table 3.1 provides the maximum development intensity (allowable gross building area and maximum residential development for each Planning Area based on the allowable floor area ratio or residential density respectively. Development standards (found in Section 4), such as setback requirements, parking, open space, minimum landscaping, infrastructure, and site design, may reduce the maximum gross square footage or density.

Figure 3.1 (Land Use Plan) identifies the location of the Planning Areas. Each Land Use Designation is described below:

BP (BUSINESS PARK) ZONING DISTRICT:

The Business Park District accommodates business park and related commercial, low intensity office uses, and certain light industrial uses. Development within this district is typically multi-tenant in nature; however, single-tenant buildings are not precluded.

Development within the Business Park District will be set back from Euclid Avenue, separated by a 50 ft. landscaped Neighborhood Edge with an 8 ft. wide multi-purpose trail. Smaller scale buildings will face Euclid Avenue and will be designed to create an attractive frontage that reflects a commercial/office character within the allowable building heights. Parking and vehicle storage areas will be sited behind buildings or will be heavily screened from perimeter street views.

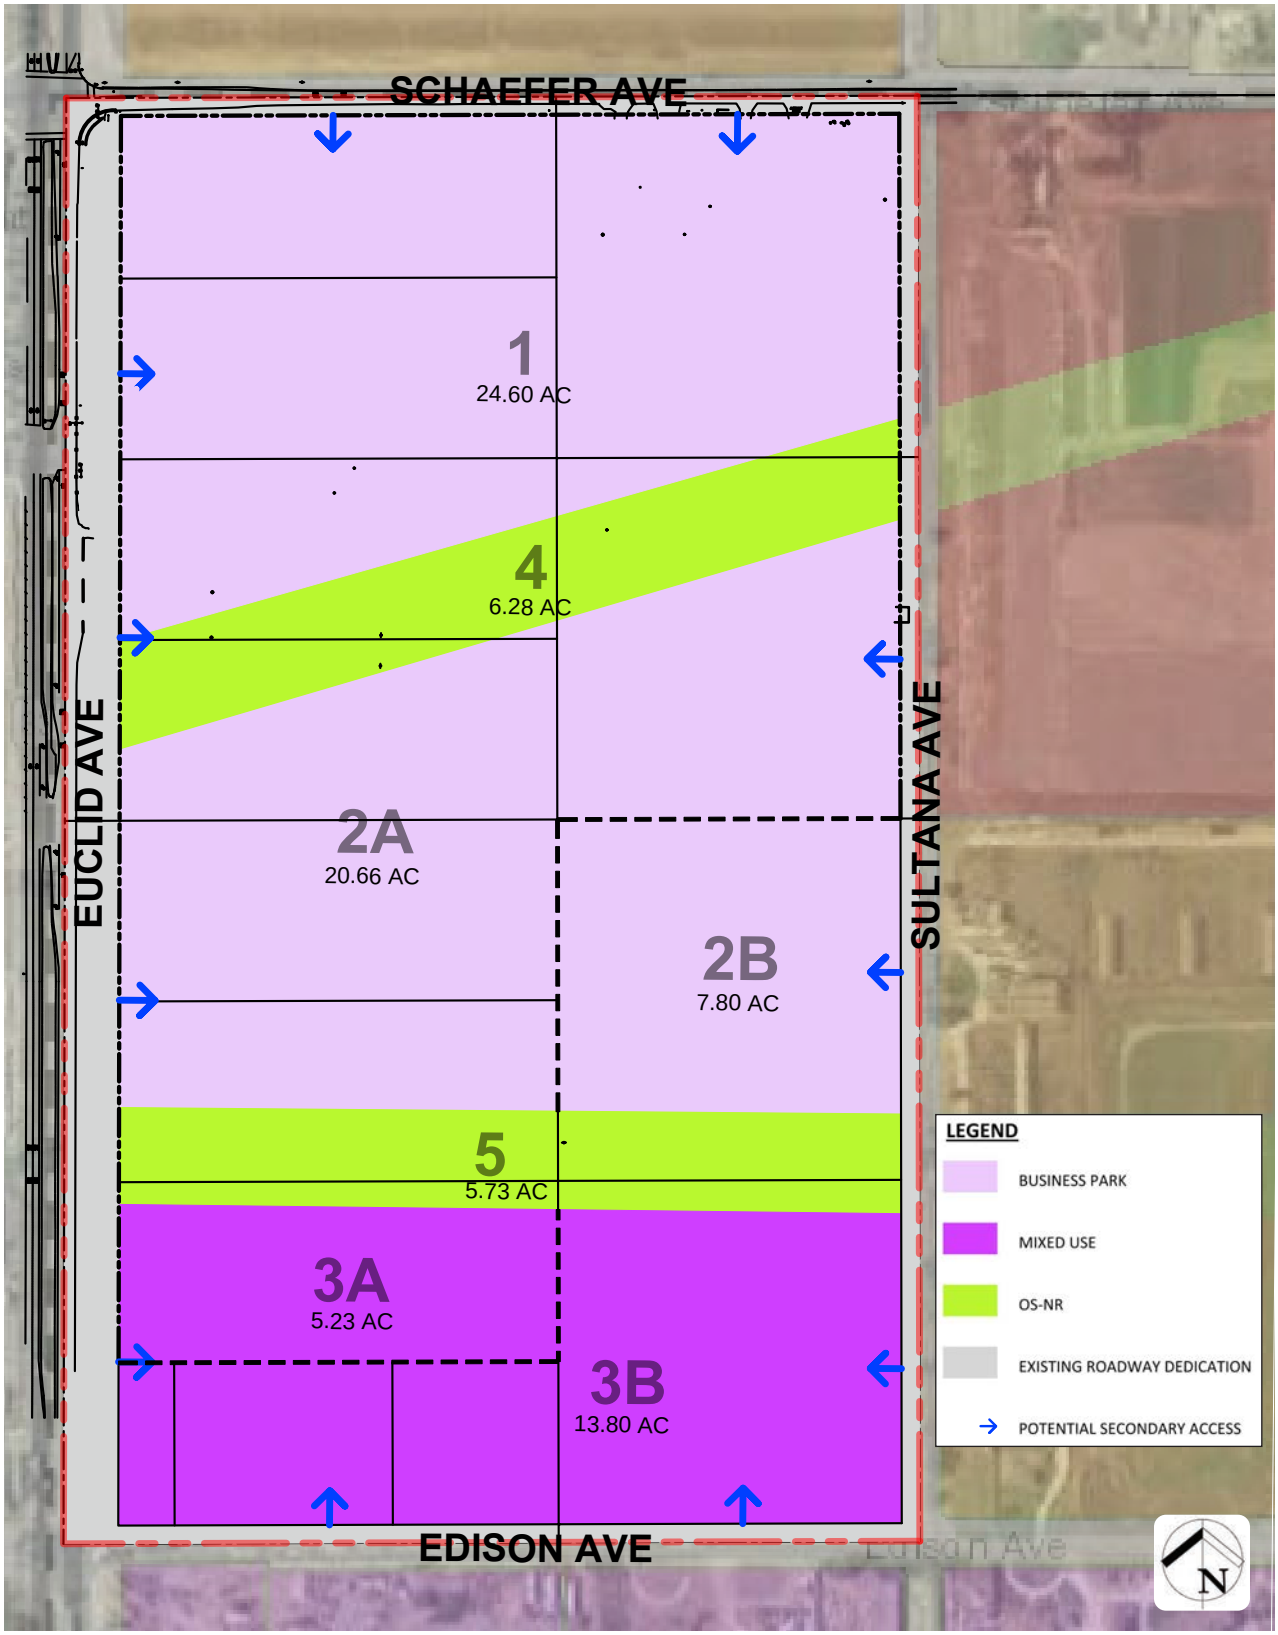

FIGURE 3.1 LAND USE PLAN

EUCLID MIXED USE SPECIFIC PLAN

LAND USE DEVELOPMENT TABLE

	PA	TOP USE	ACRES	ALLOWABLE DENSITY	ALLOWABLE FAR	MAXIMUM UNITS	MAXIMUM SQ. FT.	MIXED USE OPTIONS
	1	Business Park	24.60	N/A	0.6	N/A	642,946	N/A
	2A	Business Park	20.66	N/A	0.6	N/A	539,970	N/A
	2B	Business Park	7.80	N/A	0.6	N/A	203,861	N/A
TOTAL BUSINESS PARK			**53.06**				**1,386,776**	
	3	Mixed Use *	1.90	N/A	1.5	N/A	124,146	**OFFICE**
	3	Mixed Use *	3.81	N/A	1.0	N/A	165,964 **	**RETAIL**
	3	Mixed Use *	13.32	35	N/A	N/A	N/A	**RESIDENTIAL**
TOTAL MIXED USE*			**19.03**			**466**	**290,110**	
	4	OS-NR	6.28	N/A	N/A	N/A	N/A	N/A
	5	OS-NR	5.73	N/A	N/A	N/A	N/A	N/A
TOTAL OPEN SPACE			**12.01**					
TOTAL			**84.1**			**466**	**1,676,886**	

* PA 3 Totals allow a combination of Office, Retail and High Density Residential Development.
For Traffic Calculations, Mixed Uses are assumed to be 10% Office, 20% Retail and 70% Residential.
Assume a maximum of 124,146 s.f. OFFICE, 165,964 s.f. RETAIL and 466 D.U.

** SP proposes a minimum of 20,000 s.f. of RETAIL within PA 3.
Maximum density allowed may exceed 35 du/ac on any parcel as long as a maximum of 466 du is not exceeded within the Specific Plan area.

TABLE 3.1 DEVELOPMENT TABLE

MU (MIXED-USE) ZONING DISTRICT:

The MU zoning district accommodates a wide variety of retail commercial, office and high density residential development in conformance with The Ontario Plan 2050. It is anticipated that the Mixed-Use development will be comprised of 10% Office, 20% Retail and 70% Residential.

The southern portion of the site, comprised of approximately 20 acres along the north side of Edison Avenue, is zoned for Mixed Use development. This area is part of a much larger mixed use area identified in The Ontario Plan 2050 as the Great Park Mixed Use Area. Approximately 170 additional contiguous acres is located south of Edison Avenue. This Mixed Use Area is intended to encourage commercial/retail, office, and higher density residential development opportunities to serve the western portion of the Ontario Ranch and to provide a west anchor to the City of Ontario Great Park.

OS-NR (OPEN SPACE/NON-RECREATIONAL) ZONING DISTRICT:

The OS-NR zoning district defines the utility corridors (Southern California Edison) easement areas within the City. This zoning district allows low intensity uses such as vehicle and truck storage, nursery and limited agricultural uses, parking, etc. subject to written approval from Southern California Edison.

This "District" encompasses the utility easement corridors within the Euclid Mixed Use Specific Plan boundary. These areas are designated for non-recreational uses. While no buildings are proposed within this district, it is suitable for uses such as landscape plant nurseries, recreational vehicle and truck/trailer storage and other uses allowed by the City zoning.

3.2 Circulation Plan

The Circulation Plan facilitates movement of vehicles, pedestrians and cyclists around and within the Specific Plan area, consistent with the City of Ontario Roadway Classification System, shown in ***Figure 3.2***.

Figures 3.4 to ***3.7*** present typical street cross sections for Euclid Avenue, Schaefer Avenue, Sultana Avenue, and Edison Avenue. Conceptual streetscape design is presented in Section 5 (Design Guidelines). Roadway, sidewalk, and trail improvements within the Specific Plan area must be approved by the City's Engineering Department.

3.2.1 Local Circulation

Final site planning and off-site design shall be subject to City approval. In addition to the typical street section described and depicted, additional right-of-way and geometric enhancements such as an additional left turn and right turn lanes, including but not limited to those at intersections, may be required to adequately mitigate impacts identified in the Traffic Impact Analysis/Specific Plan EIR.

Driveways shall conform to access requirements of the Traffic and Transportation Design Guidelines. Driveway locations, specifically those that are in proximity to master planned or future traffic signals, shall be located so as not to interfere with traffic stacking and queues as projected in the The Ontario Plan 2050 SEIR Traffic Impact Analysis. Fair share responsibilities for street improvements will be addressed in a Development Agreement with the City.

3.2.2 Traffic Control Devices

All traffic signs regulating, warning, and/or guiding traffic on public roads will conform to the California Manual on Uniform Traffic Control Devices (MUTCD), latest edition. All traffic control signs, whether on public or private property, shall conform to the California MUTCD.

Additional traffic signals may be required based on locations of future access points and as identified in the Traffic Impact Analysis/Specific Plan EIR.

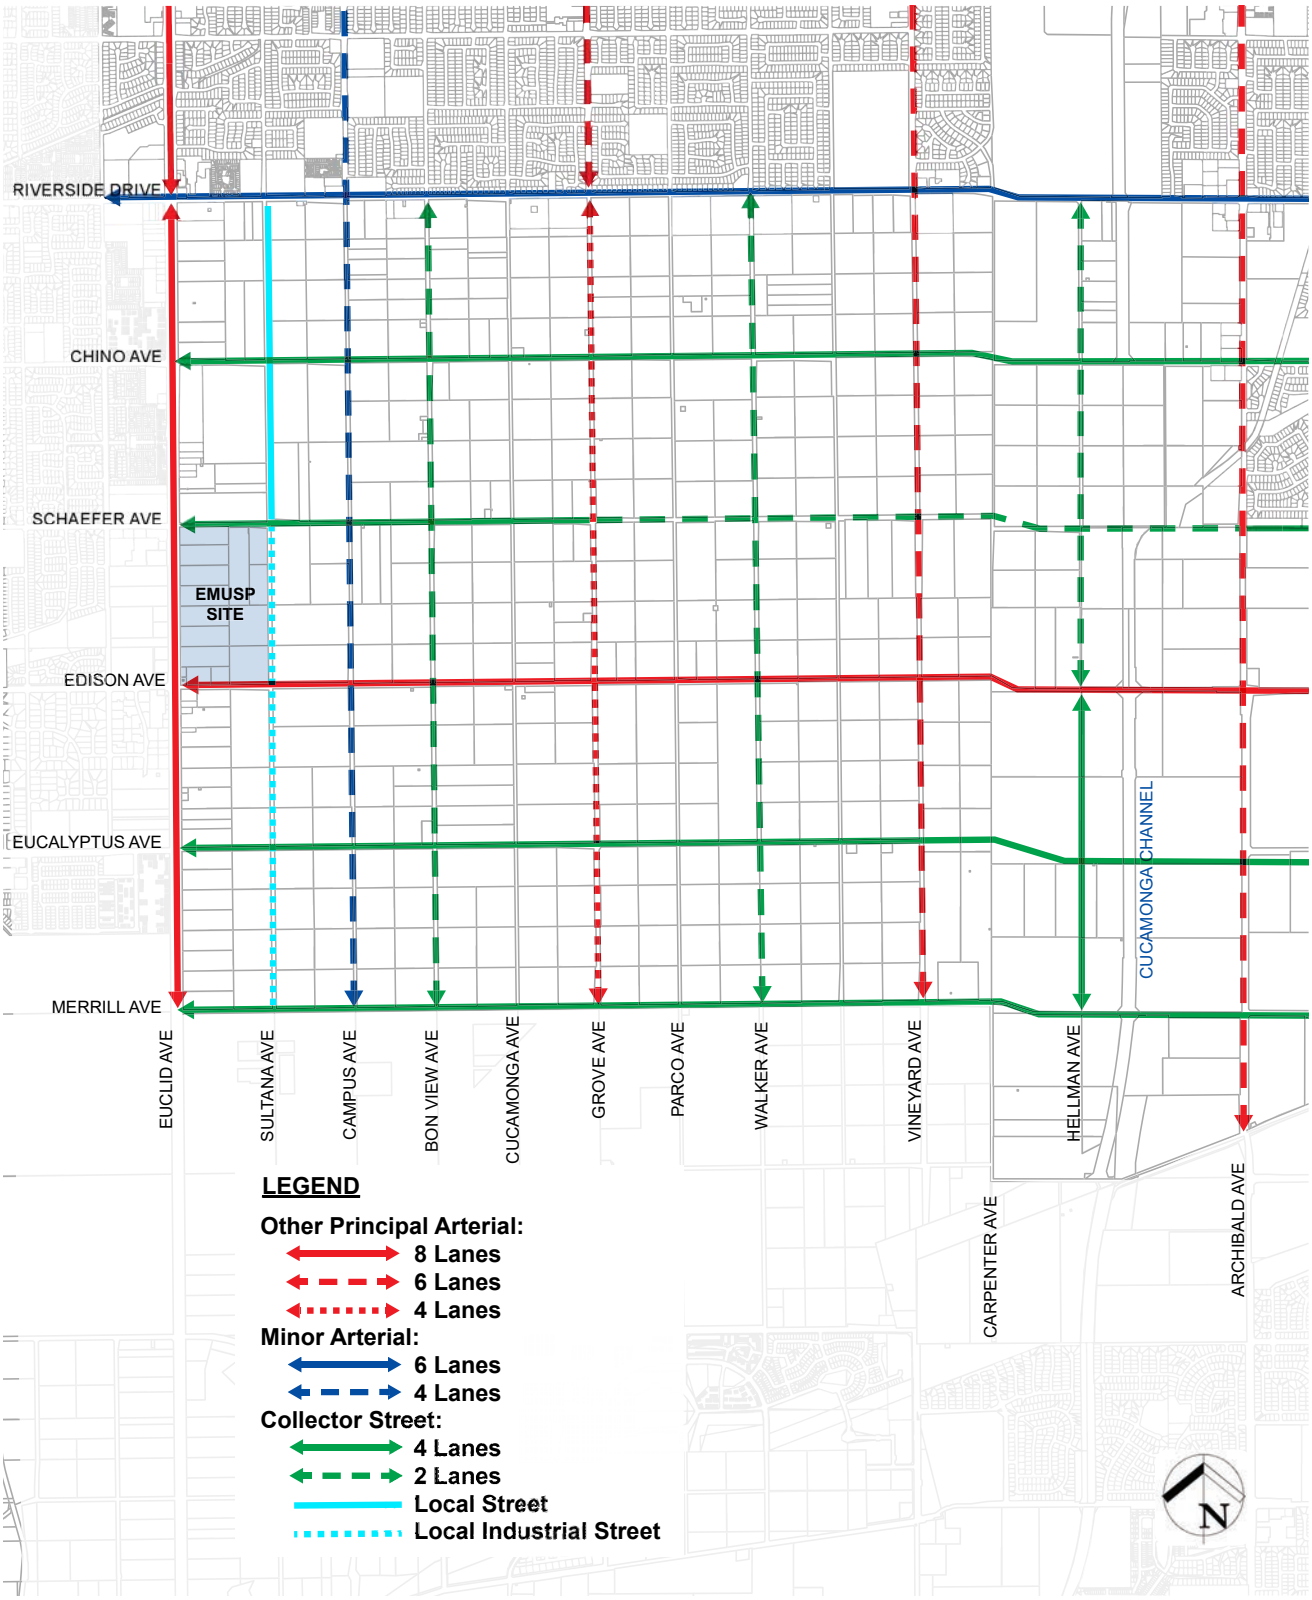

FIGURE 3.2 CITY OF ONTARIO ROAD CLASSIFICATION SYSTEM

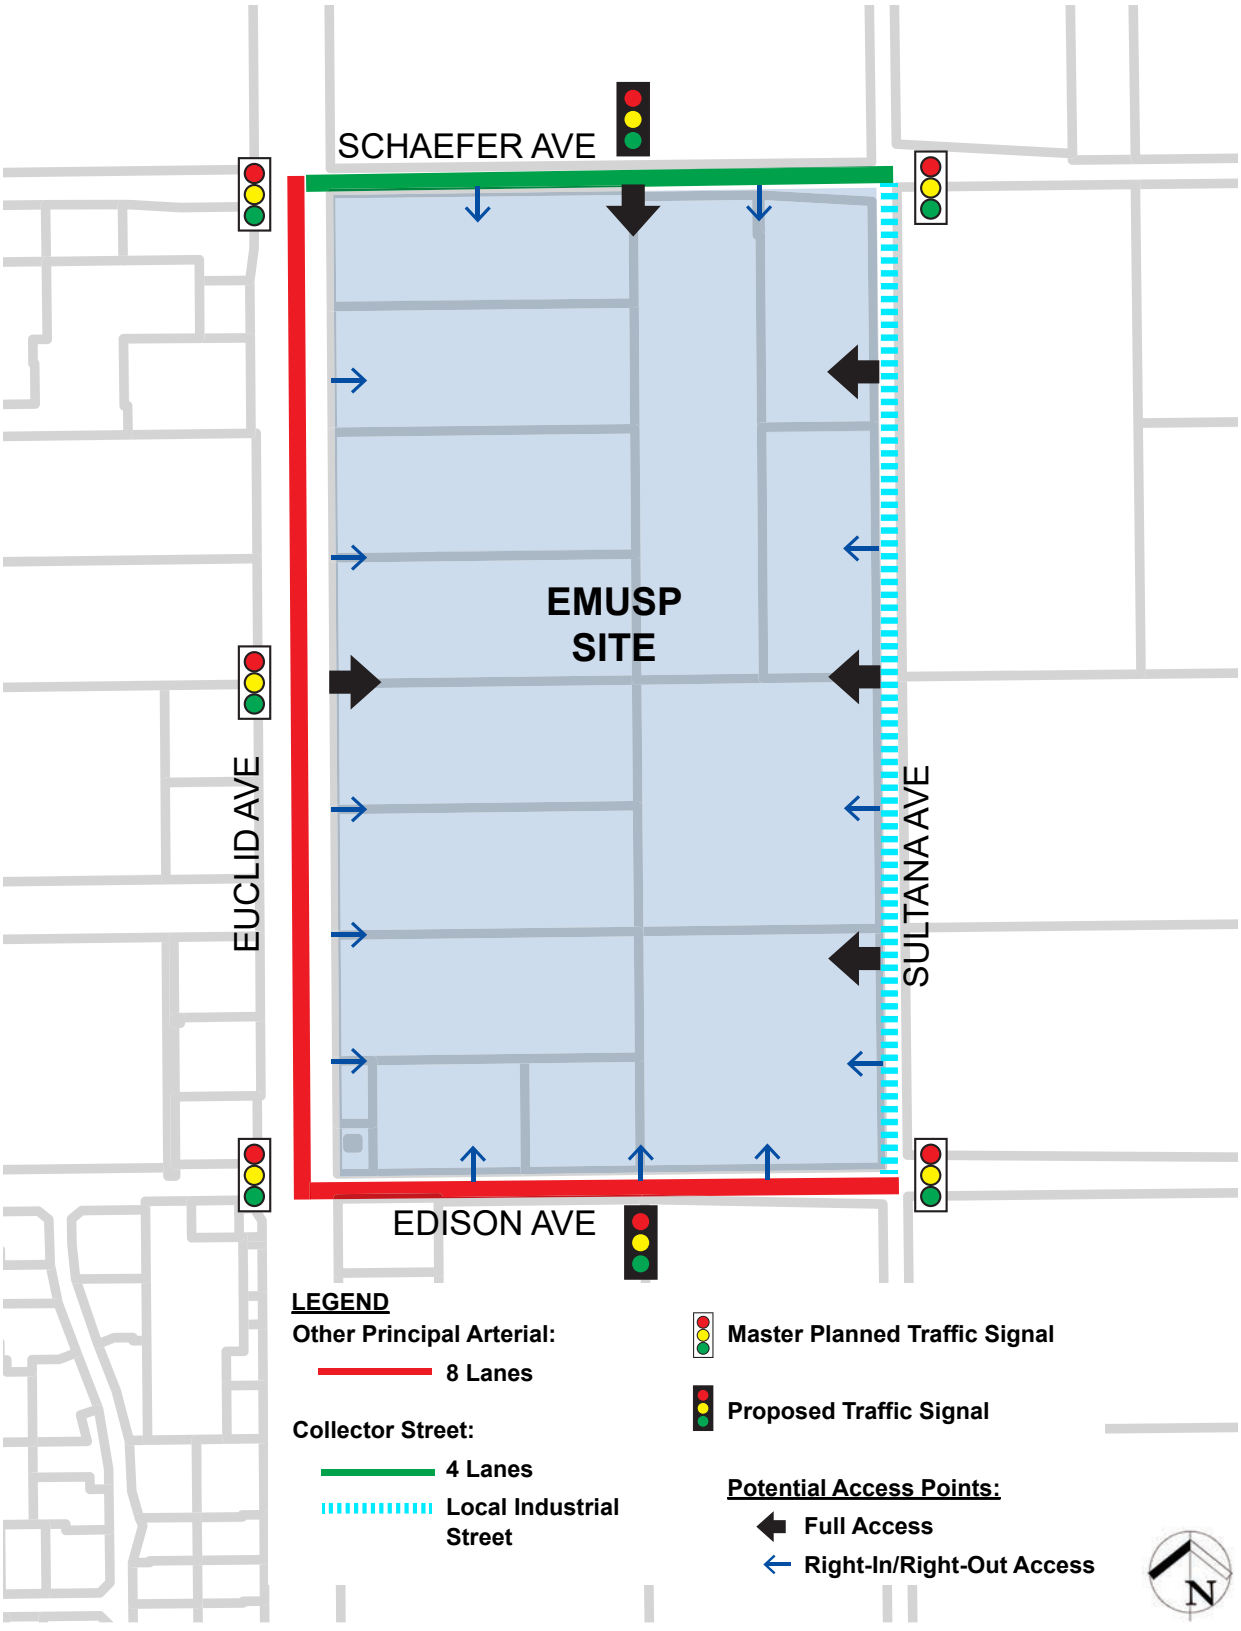

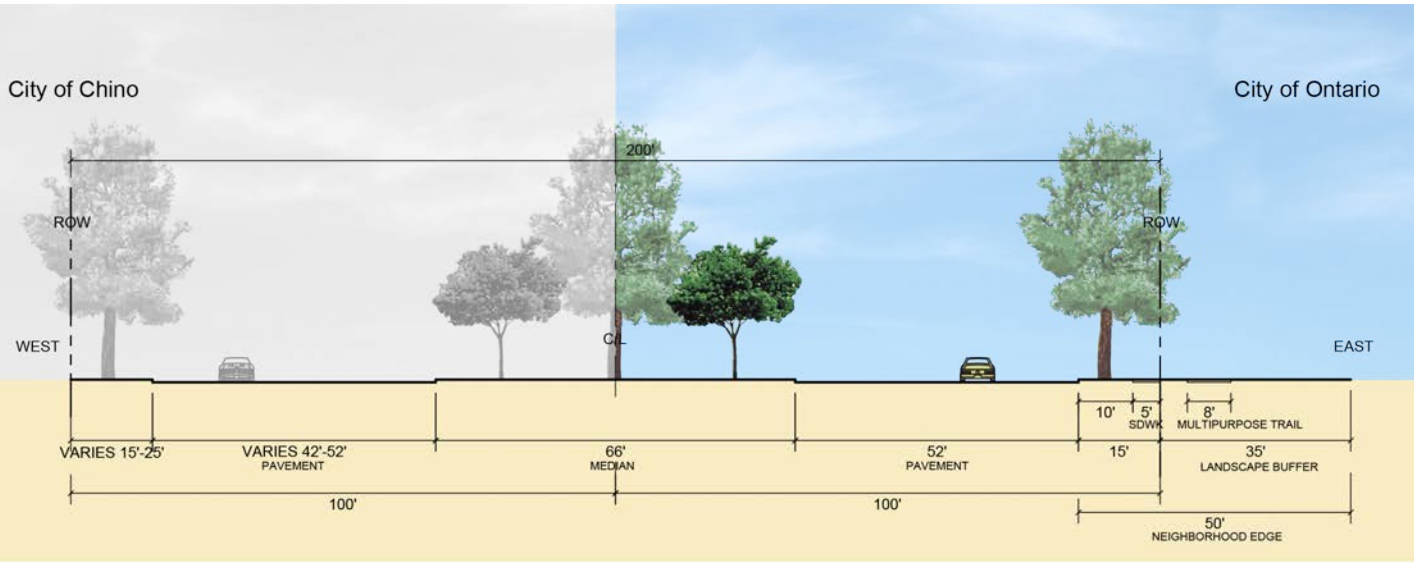

FIGURE 3.3 CIRCULATION PLAN

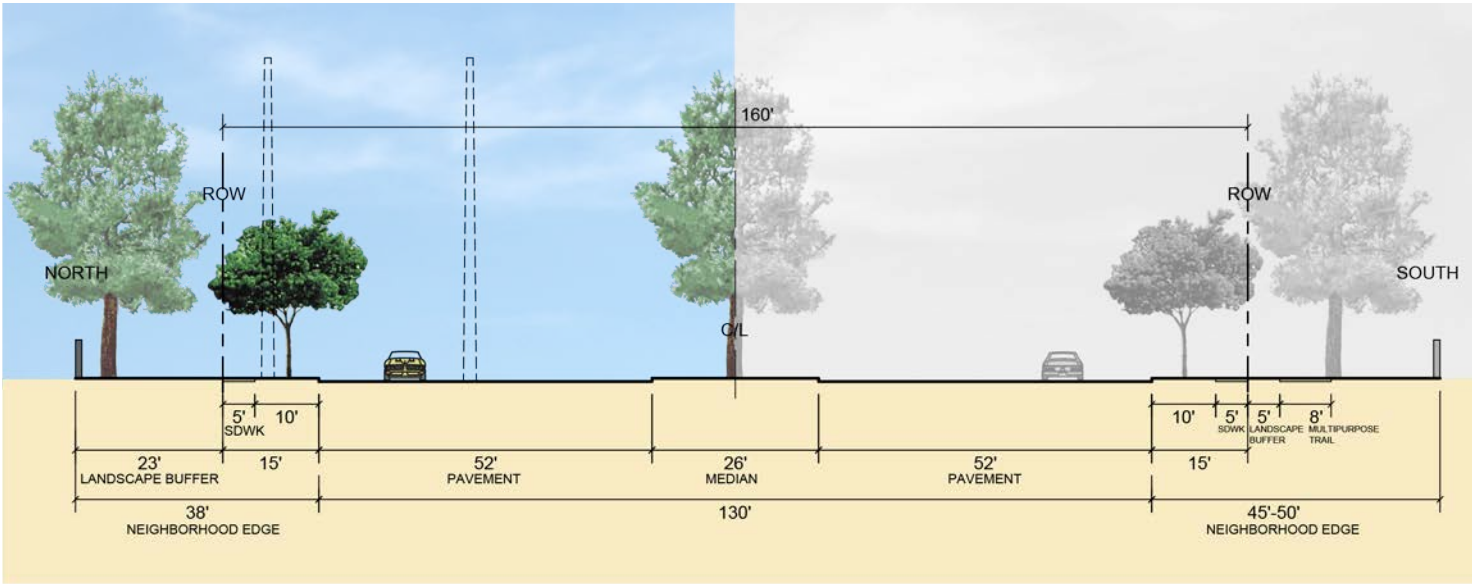
3.2.3 Euclid Avenue (Route 83)

Euclid Avenue is a State Route under Caltrans' jurisdiction that is designated as an eight lane Other Principal Arterial in The Ontario Plan 2050. The centerline of this street forms the boundary between the City of Ontario to the east and the City of Chino to the west. Euclid Avenue is designed with a 200 ft. wide right-of- way, a 66 ft. wide center median, and 52 ft. of pavement including curbs and gutter. The existing half-width street right-of-way is 100 ft.; therefore, no dedication is required.

The Euclid Avenue streetscape design illustrated in Section 5, Design Guidelines, for the east side of the street adjacent to the project site specifies a 15 ft. wide parkway including a 5 ft. wide sidewalk and an 8 ft. wide on-site multipurpose trail within a 35 ft. wide landscape buffer, creating a 50 ft. wide neighborhood edge as specified in the Ontario Ranch Colony Streetscape Master Plan.



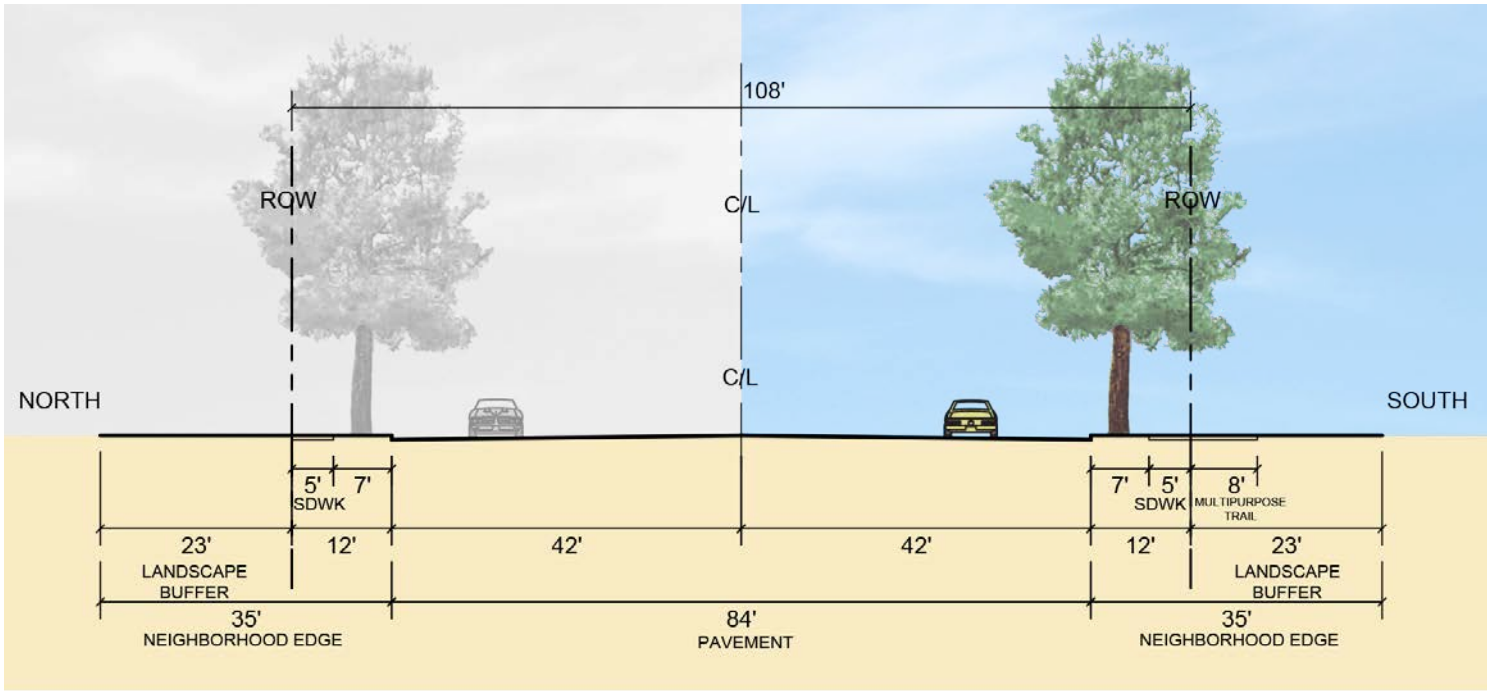
EUCLID AVENUE

FIGURE 3.4 EUCLID AVENUE STREET SECTION

3.2.4 Edison Avenue

Edison Avenue is located along the southern boundary of the Specific Plan area, providing east/west access to the site. Edison Avenue is designated as a Other Principal Arterial Street in The Ontario Plan 2050. The Specific Plan specifies an 160 ft. wide right-of-way with a 26 ft. landscaped median and a 52 ft. paved section on each side.

The Edison Avenue streetscape design presented in Section 5, Design Guidelines, for the north side of the street adjacent to the project site specifies a 15 ft. wide parkway including a 10 ft. wide curb-adjacent landscaped area and a 5 ft. wide sidewalk. The south side also provides an 8 ft. wide on-site multipurpose trail within a 23 ft. wide landscape buffer setback. Together, the parkway and landscape buffer setback create a 38 ft. wide neighborhood edge, per in the City's Master Plan of Streets.



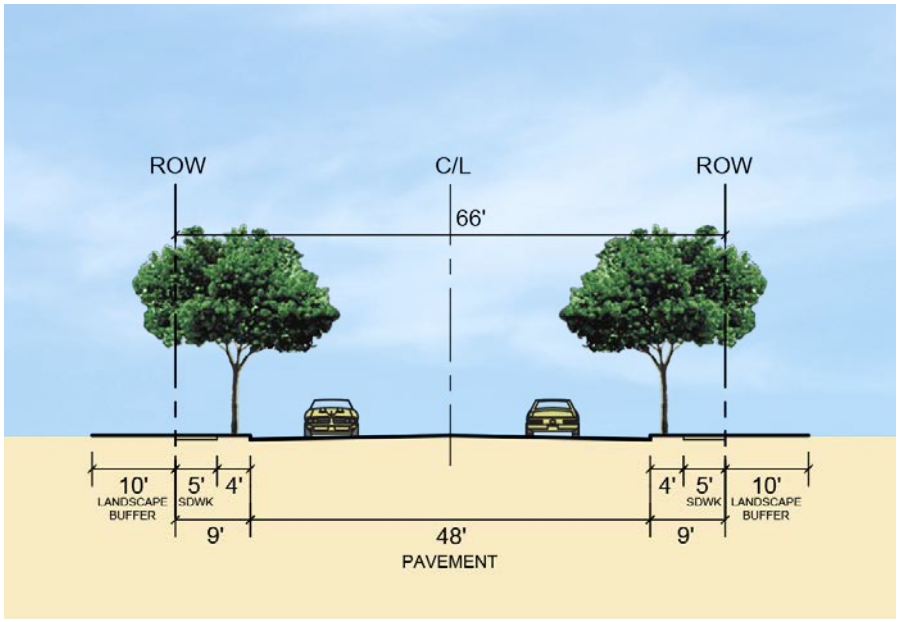
EDISON AVENUE

FIGURE 3.5 EDISON AVENUE STREET SECTION

3.2.5 Schaefer Avenue

Schaefer Avenue is designated as a four lane Collector Street per the City's Master Plan of Streets and provides east-west access to the project's northern boundary. The Specific Plan specifies an 108 ft. wide right-of-way and 84 ft. of pavement including curb and gutter for Schaefer Avenue.

The Schaefer Avenue streetscape design presented in Section 5, Design Guidelines, for the south side of the street adjacent to the project site includes a Class II on-street bike lane at the edge of the street, a 7 ft. wide curb-adjacent landscaped area, and a 5 ft. wide sidewalk. Together, these improvements establish a 35 ft. wide neighborhood edge, per in the City's Master Plan of Streets.



SCHAEFER AVENUE

FIGURE 3.6 SCHAEFER AVENUE STREET SECTION

3.2.6 Sultana Avenue

Sultana Avenue is designated as a local industrial street with a 66 ft. wide right-of-way and 48 ft. of pavement including curb and gutter. The Sultana Avenue streetscape presented in Section 5, Design Guidelines, specifies a 9 ft. wide parkway including a 4 ft. landscape and a 5 ft. wide sidewalk. The west side of the street adjacent to the project site provides a 10 ft. wide landscape buffer setback. Sultana Avenue is not yet developed adjacent to the Specific Plan area. However, the right-of-way exists, and no dedication is required.

SULTANA AVENUE

FIGURE 3.7 SULTANA AVENUE STREET SECTION

3.2.7 Pedestrian Circulation

To improve safety and the pedestrian experience, connect the various parts of the Specific Plan area, and expand access to nearby land uses, sidewalks will be provided along all streets abutting the Specific Plan area.

3.2.8 Trails and Bicyle Paths

The Ontario Plan Mobility Element specifies a Class II bicycle lane on the north side of Schaefer Avenue adjacent to the Specific Plan area. Class II bicycle lanes are defined as dedicated (striped) lanes along streets, with no parking allowed in the bicycle lane. This bicycle lane provides linkages to the City's bicycle path system (***Figure 3.8***).

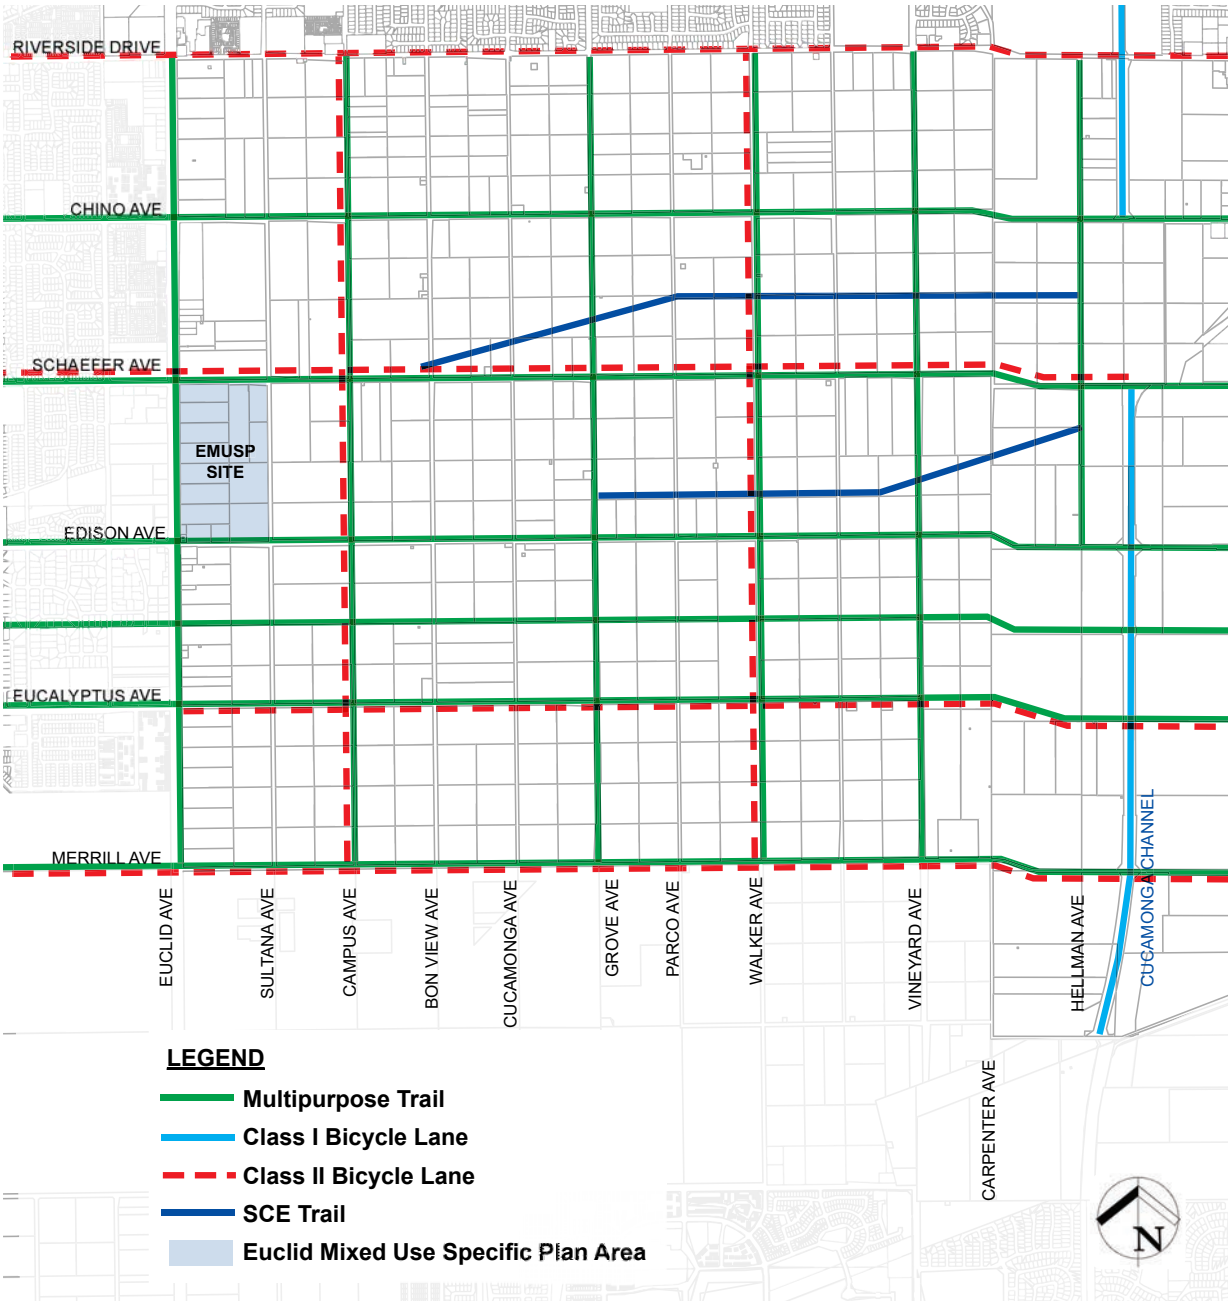


FIGURE 3.8 CITY OF ONTARIO TRAIL AND BICYCLE PATHS PLAN

Trails and bicycle paths will provide an additional mode of circulation in and around the Specific Plan area. Multipurpose trails will be provided on the east side of Euclid Avenue, on the south side of Schaefer Avenue and on the south side of Edison Avenue (***Figure 3.9***).

The trail and bicycle path improvements will be installed along the project frontages in conjunction with street improvements.

3.2.9 Transit

Transit options provide an alternative mode of transportation for motorists and a primary mode for the transit dependent. The City is coordinating with regional transit agencies to implement Bus Rapid Transit (BRT) service to target destinations and along corridors, including Euclid Avenue on the western boundary of the Specific Plan area.

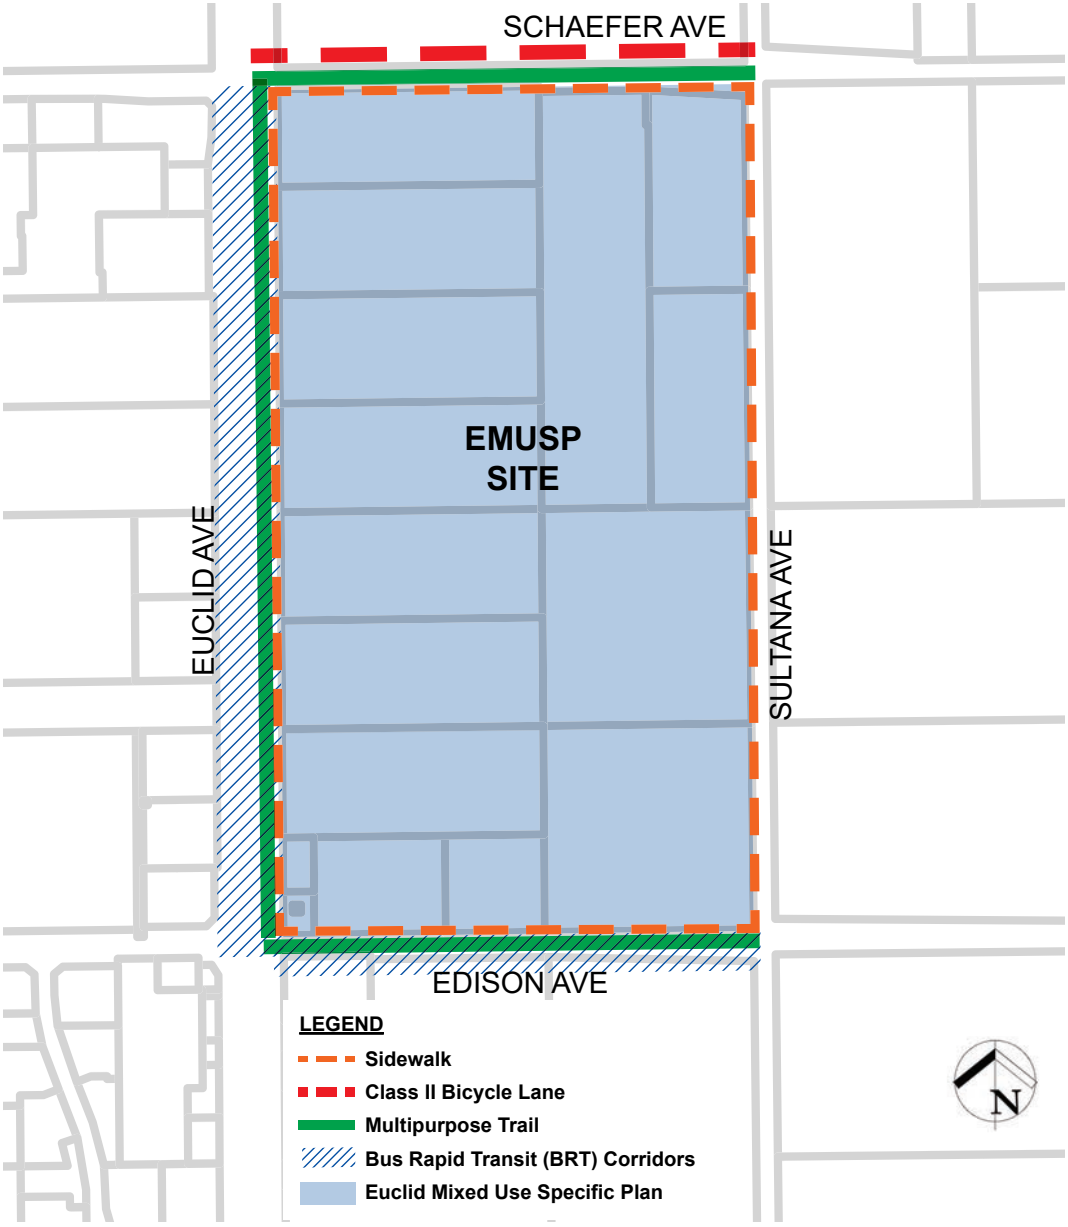

FIGURE 3.9 BICYCLE AND PEDESTRIAN PLAN

3.3 Potable Water Plan

The City's ultimate domestic water system will consist of five pressure zones. Most of Ontario Ranch (including the Specific Plan area) is in the 925 Pressure Zone. The overall water infrastructure plan to serve the City of Ontario as well as the required water infrastructure required to be constructed to serve the Euclid Mixed-Use Specific Plan area is shown on ***Figure 3.10***. The developer of the Euclid Mixed-Use Specific Plan will be responsible to provide the required water lines to connect to the existing improvements constructed by the Ontario Ranch Business Park development to the south of the site.

925 Pressure Zone (PZ) Phase 2 Potable Water System facilities will need to be constructed, by others, to serve the Project. These facilities include installing a 42-inch potable water main in Grove Avenue connecting from the 30-inch to the 42-inch potable water main in Grove Avenue at Chino Ave; installing a 42-inch potable main in Chino Avenue connecting from the 42-inch potable water main in Campus Avenue and extending to Francis Street; and, installing a 42-inch potable water main in Bon View Avenue connecting from the 42-inch potable water main in Francis Street and extending to the Bon View Avenue Reservoir site and to the Reservoir; and, installing a 9 million gallon reservoir on the Bon View Reservoir site; and, installing two 2,500 gpm wells with any treatment necessary to meet water quality standards and the 16-inch to 42-inch well collection mains from the wells to the reservoirs. The EUCLID MIXED-USE Project will be required to participate in the future Phase 2 Water System Improvements as detailed in the development agreement with the City.

In addition to extending the 925 Pressure Zone (PZ) Phase 2 West Backbone, described above, the Specific Plan area requires a connection between the 925 Pressure Zone (PZ) Phase 2 West Backbone and the 1010 Pressure Zone (PZ). This will supply a second source of potable water to the Specific Plan area. The connection to the 1010 Pressure Zone (PZ) will require extending the Phase 2 West Backbone at Eucalyptus Avenue and Grove Avenue by installing a 30-inch potable water main north on Grove Avenue to Chino Avenue. The connection to the 1010 Pressure Zone will require installing an 18-inch potable water main in Chino Avenue easterly to the existing 18-inch potable water main located on the west side of the Cucamonga Creek channel and installing a Pressure Reducing Station between the 1010 PZ and 925 PZ near the intersection of Grove Avenue and Chino Avenue.

Other elements of the Phase 2 Water System are shown on ***Figure 3.10***. The elements shown north of Chino Avenue will be constructed by others. The balance of Phase 2 Water System will be completed as required by future development of Ontario Ranch. The Project will be required to participate in the future Phase 2 Water System improvements, as detailed in the developmentt agreement with the City.

Water service to the Specific Plan area will be provided by the City of Ontario. Currently there are no City domestic water mains or City water infrastructure in the vicinity of the Specific Plan area. The extension of City master planned domestic water infrastructure is being developed within the western portion of Ontario Ranch. The Euclid Mixed-Use Specific Plan is responsible to provide domestic water service to serve future development and will construct a 16-inch line in Euclid Avenue and Schaefer Avenue, and a 12-inch line along the remaining perimeter of the Specific Plan in Sultana Avenue and Edison Avenue. The Specific Plan will extend the 16-inch line in Schaefer Avenue to connect to the future line at Grove Avenue and the 16-inch line in Euclid Avenue south to connect to the future line in Eucalyptus Avenue.

Water mains required to serve the project will need to be constructed prior to or concurrent with on-site water improvements. Within the project site, a private network of 2-inch to 4-inch water lines for domestic water service and 10-inch to 12-inch water lines for fire service water will be installed. The on-site water system includes connections to the water main in Edison Avenue, Euclid Avenue, Schaefer Avenue and Sultana Avenue.

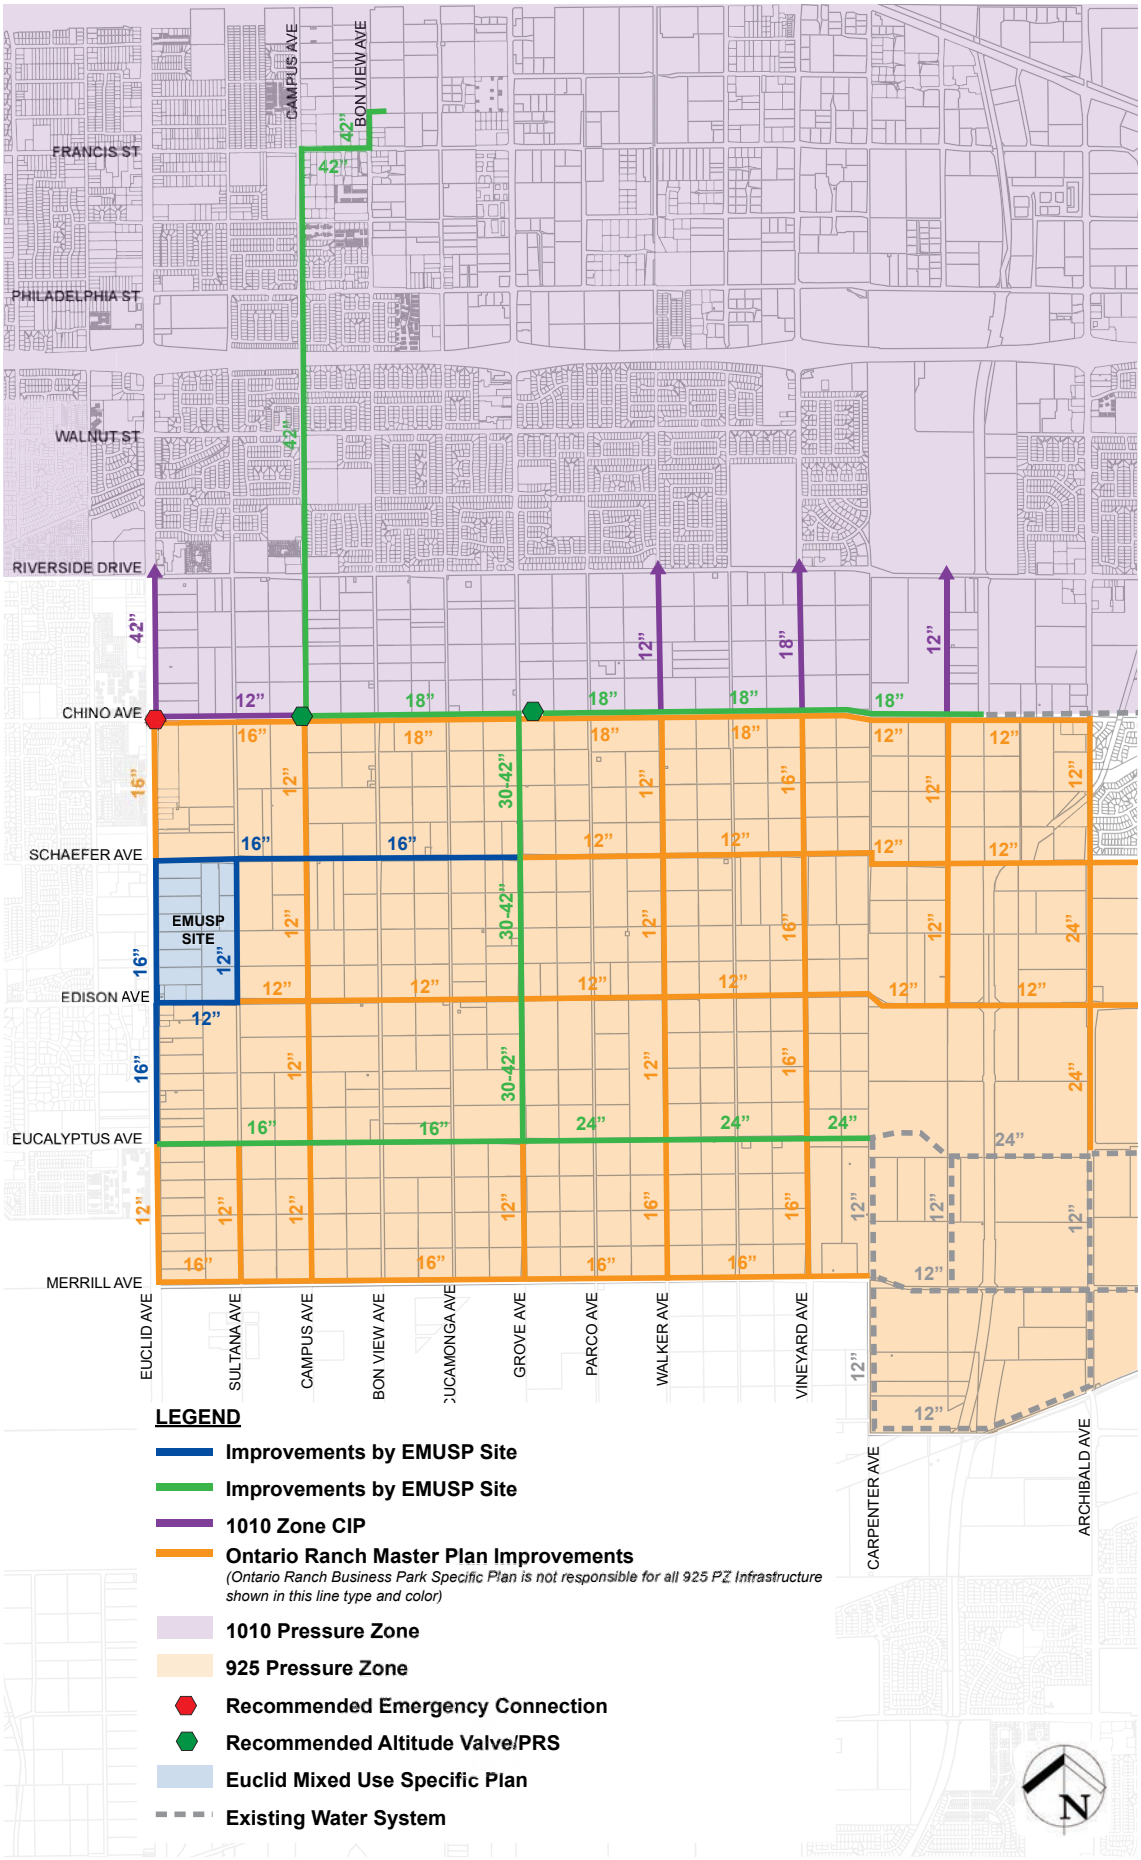

FIGURE 3.10 CITY OF ONTARIO ULTIMATE WATER SYSTEM

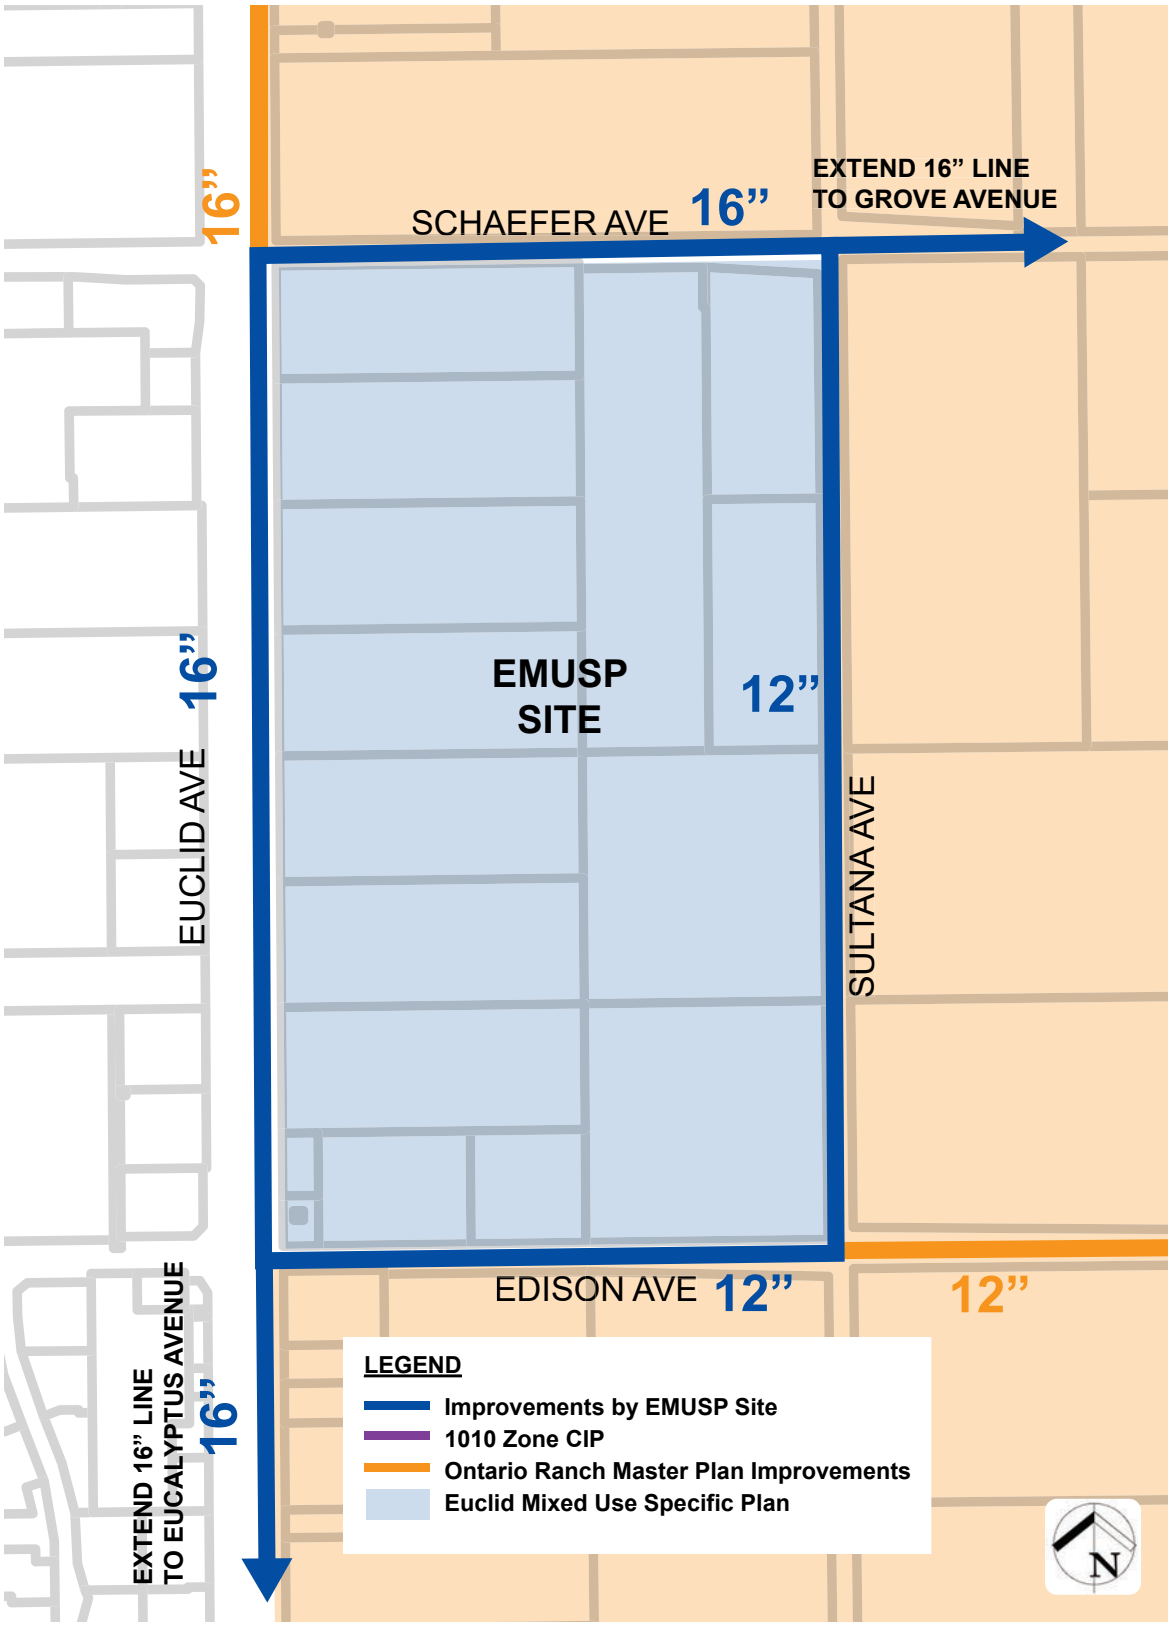

FIGURE 3.11 SPECIFIC PLAN DOMESTIC WATER PLAN

This page intentionally left blank

3.4 Recycled Water Plan

Recycled Water is provided to the City of Ontario by the IEUA from its four wastewater reclamation plants. The entire Specific Plan area is within the City's master planned 930 Pressure Zone. Recycled water infrastructure improvements requiring the planning, design, and construction of new 930 Pressure Zone (PZ) Recycled Water Master Plan main lines area will be required. Refer to ***Figure 3.12***.

The City requires all new development in Ontario Ranch to connect to and use recycled water for all approved uses, including but not limited to landscape irrigation. Currently there are no City owned recycled water mains or City recycled water infrastructure in the vicinity of the Specific Plan area. There is an existing 30 inch Inland Empire Utility Agency (IEUA) recycled water main in Eucalyptus Avenue south of the Specific Plan area. The Euclid Mixed-Use Specific Plan is responsible to provide recycled water service to serve future development and will construct a 12" line in Euclid Avenue and a 8" line in Schaefer Avenue, Sultana Avenue and Edison Avenue. The Specific Plan will extend the 12" line in Euclid Avenue south to connect to the existing line in Eucalyptus Avenue.

An 8" line may be required in Sultana Ave to provide service to parcels that only front on Sultana Ave.

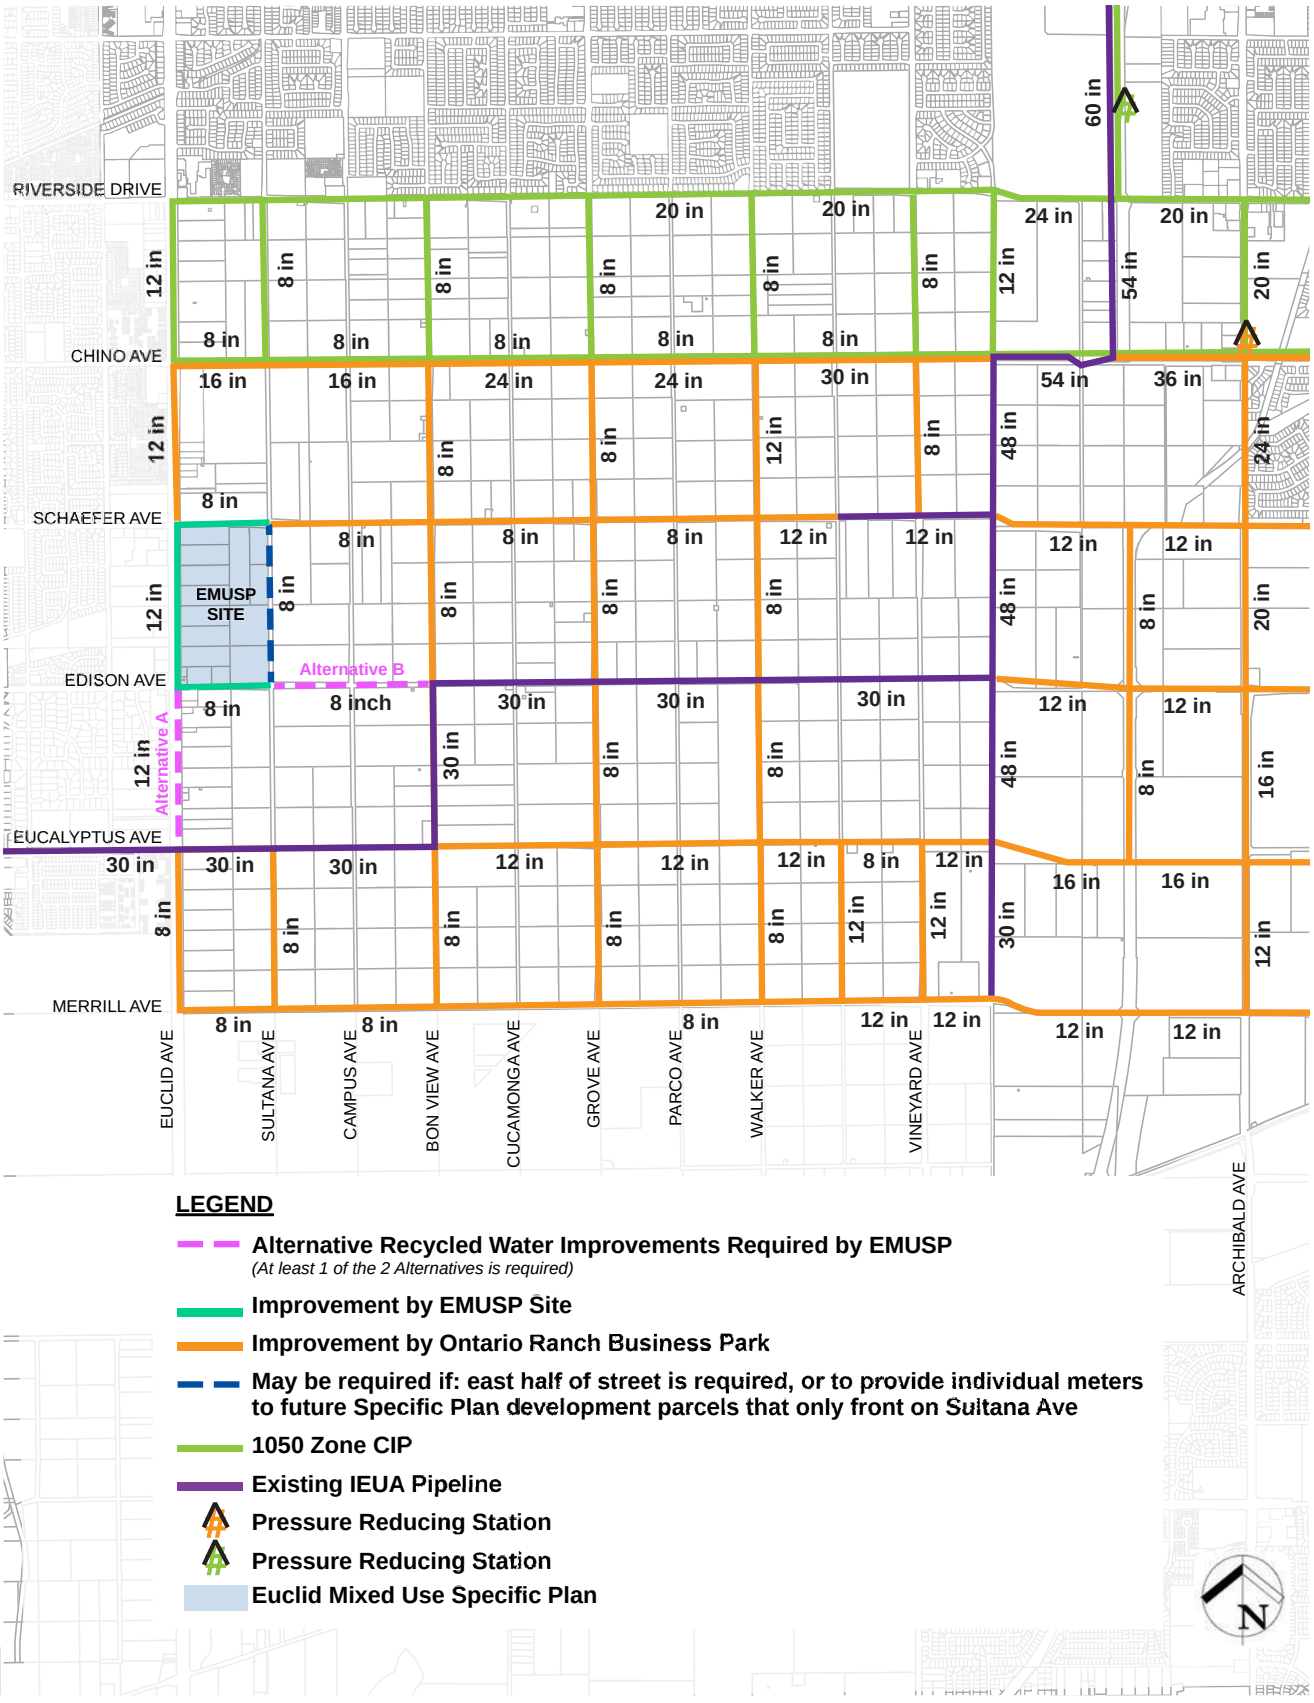

FIGURE 3.12 CITY OF ONTARIO ULTIMATE RECYCLED WATER SYSTEM

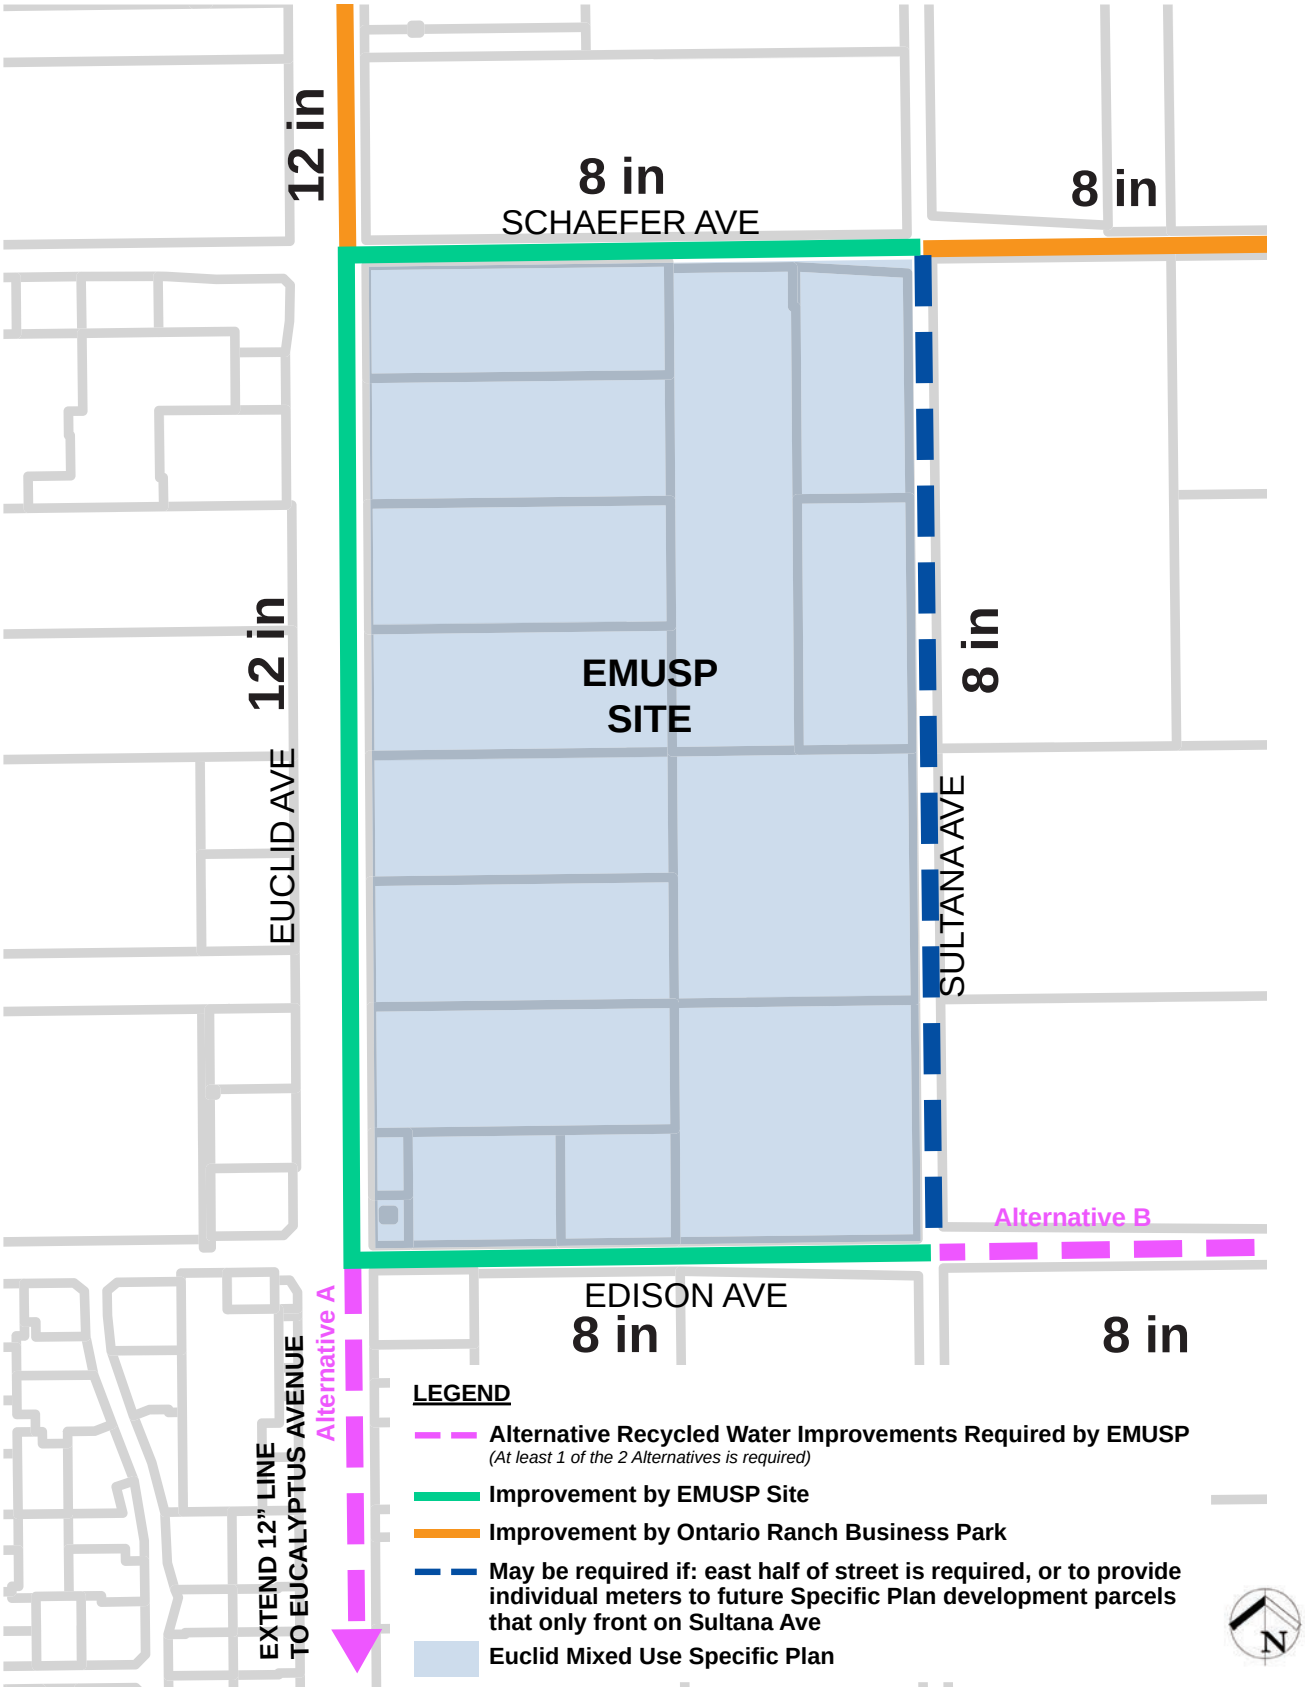

FIGURE 3.13 SPECIFIC PLAN RECYCLED WATER PLAN

3.5 Sewer Plan

Regional wastewater treatment services are provided to the City of Ontario by the Inland Empire Utilities Agency (IEUA). Several regional trunk sewers collect sewage generated in the City and transport it to IEUA's Regional Plant No.1 and Regional Plant No.5 for treatment. Sewer Main Sizes to be determined by final design requirements and criteria.

There are no sewer mains located in Euclid Avenue or the other streets adjacent to the Specific Plan area. The extension of City master planned sewer infrastructure is being developed within the western portion of Ontario Ranch. The City's master planned sewer system has been constructed in Euclid Avenue at Eucalyptus Avenue and along Eucalyptus Avenue between Euclid and Sultana Avenues.

The Euclid Mixed-Use Specific Plan is responsible to provide sewer service to serve future development and will construct a 16" line approximately 2,650 ft. along the entire frontage of the project in Euclid and extend an 18" main line along the Euclid Avenue to the south to connect to the Kimball Interceptor Sewer. The Specific Plan will construct an 8" line along approximately 1,320 ft. of the eastern boundary of the Specific Plan in Sultana Avenue to Edison Avenue and extend an 8" line in Edison Avenue to connect to the 18" main line in Euclid Avenue.

Actual sewer pipe size will be determined during final design by hydraulic calculations through a Sewer Study or Sewer Sub-Area Master Plan (SSAMP). Refer to ***Figure 3.15***.

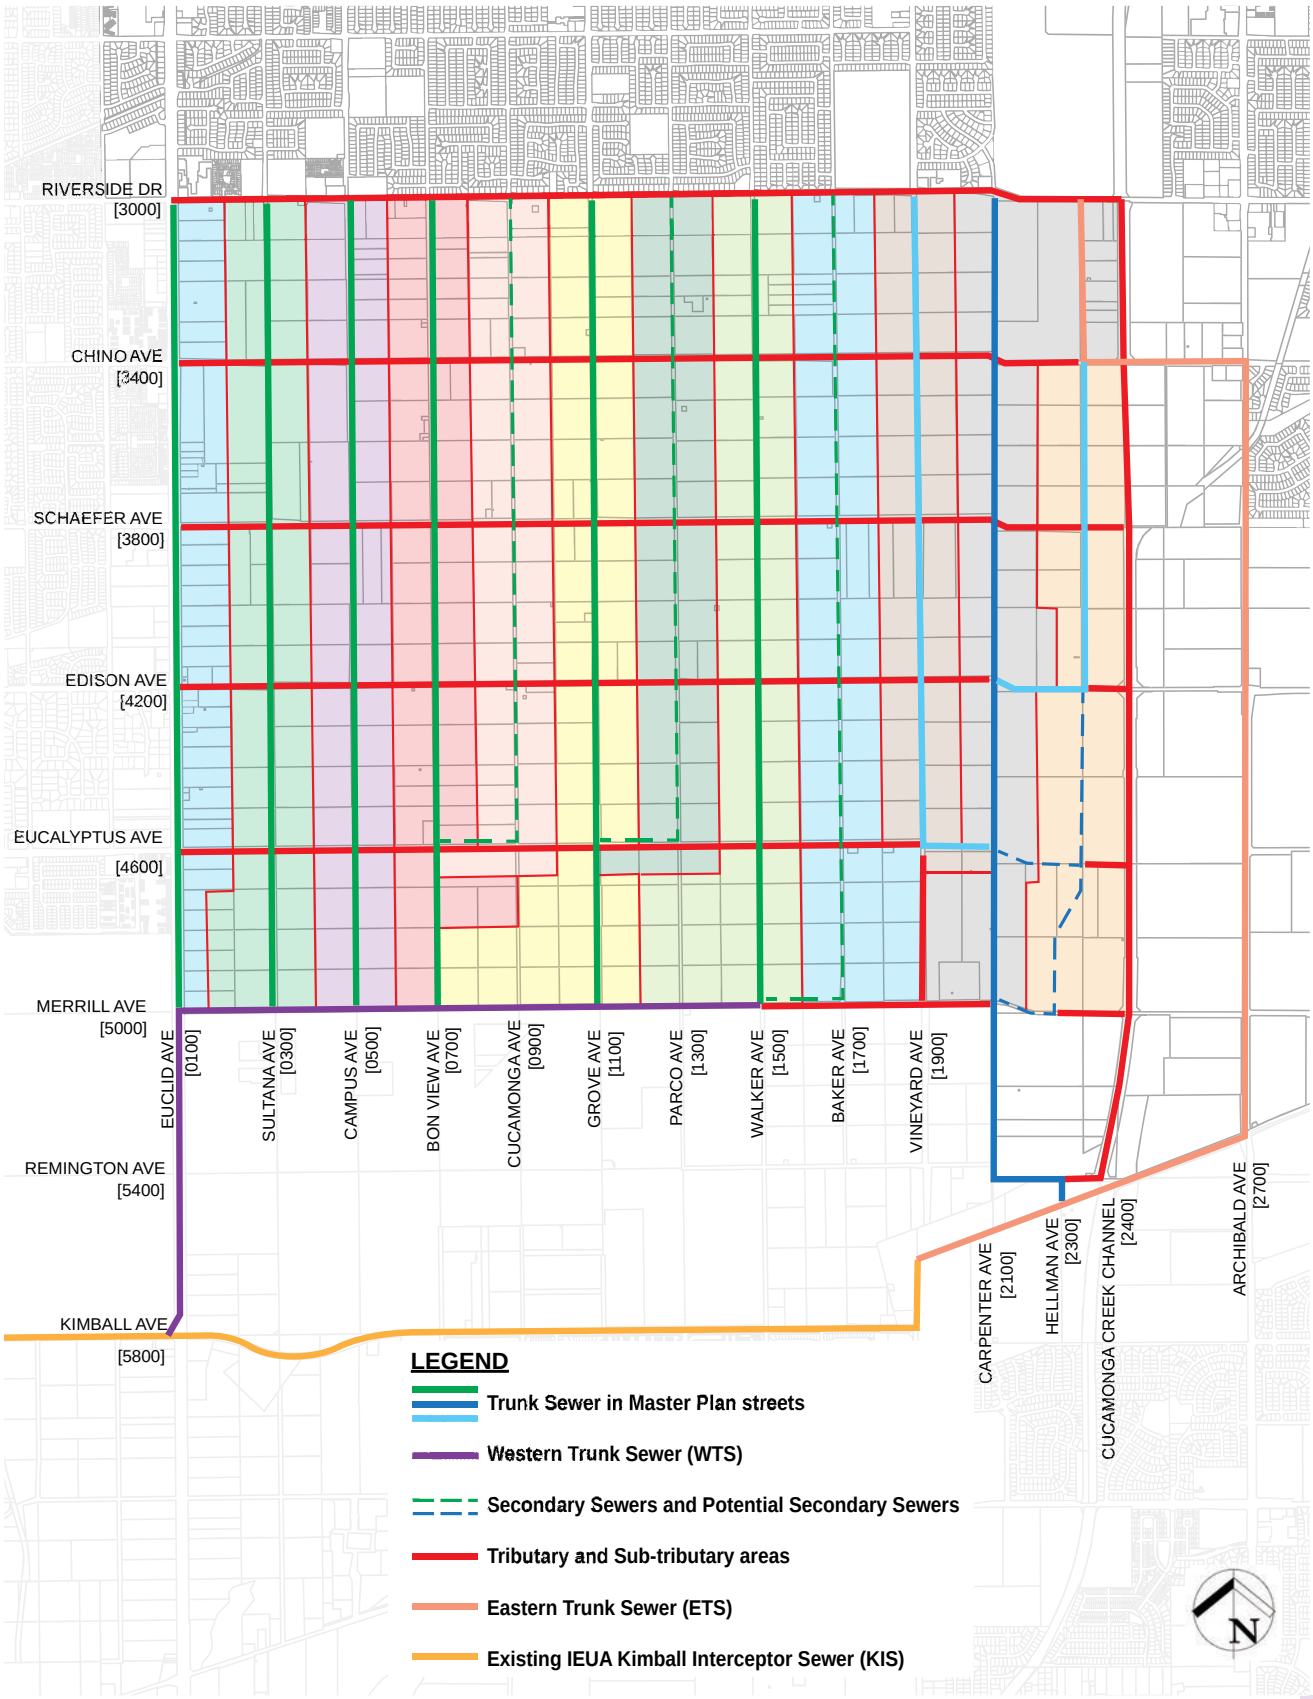

FIGURE 3.14 CITY OF ONTARIO OVERALL SEWER PLAN

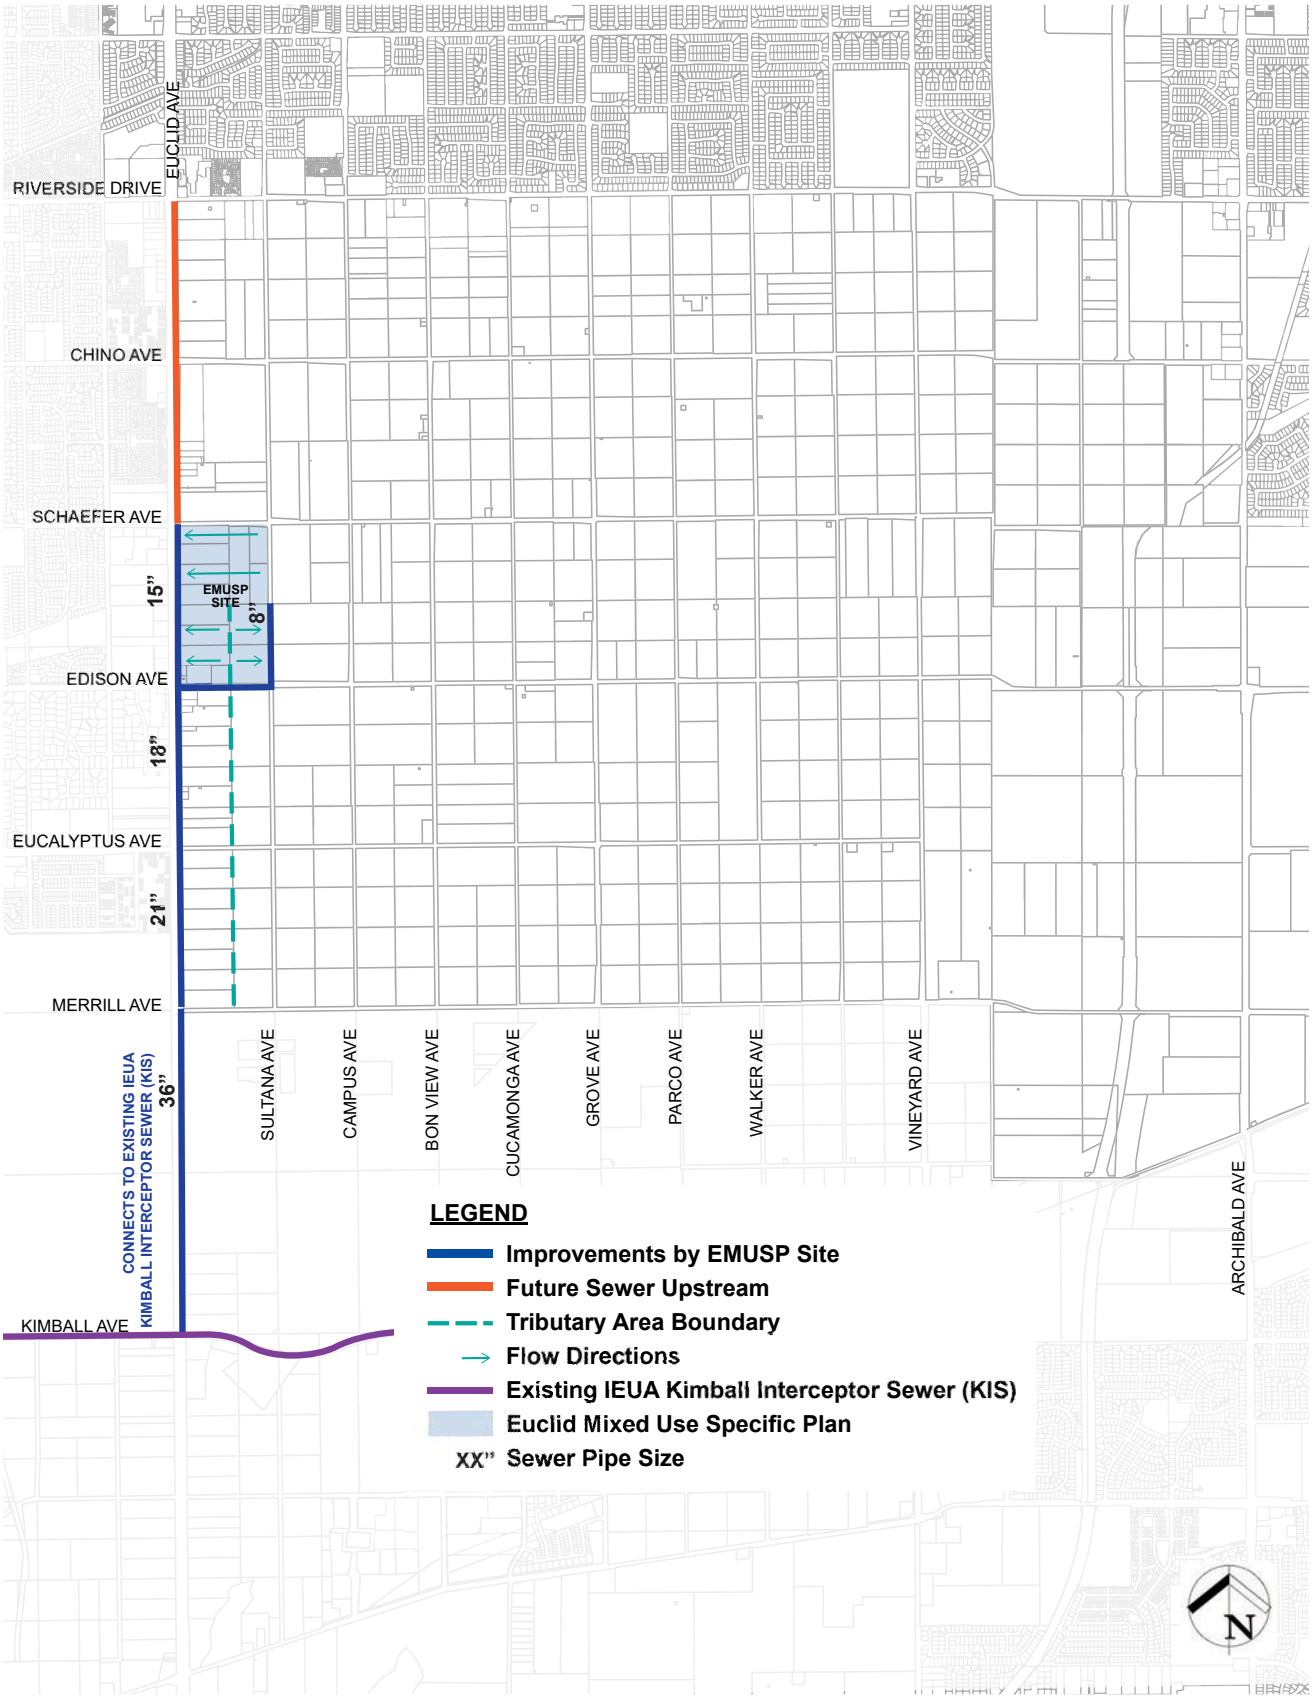

FIGURE 3.15 CITY OF ONTARIO ULTIMATE SEWER SYSTEM

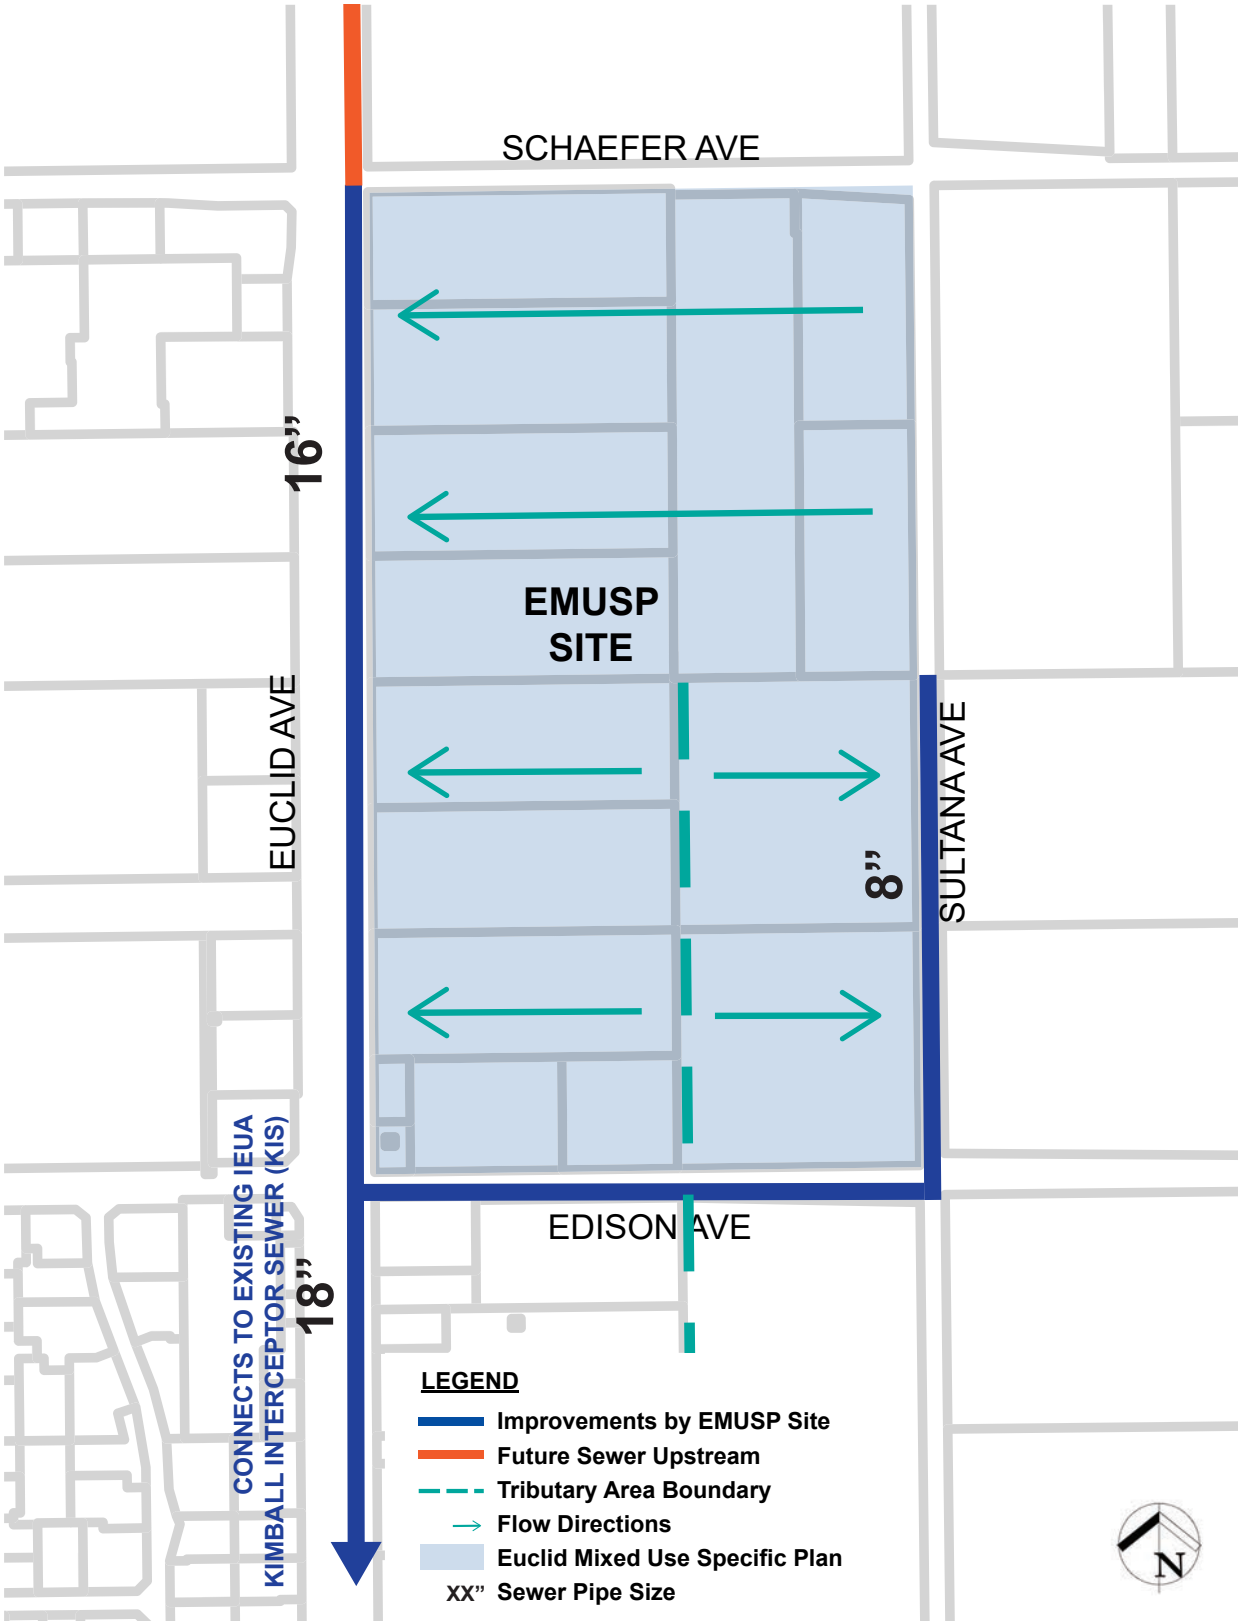

FIGURE 3.16 SPECIFIC PLAN SEWER PLAN

3.6 Conceptual Grading Plan

Site topography is moderately flat, sloping from the north to the south. There is an approximately 25 ft. elevation change across the Specific Plan area.

The grading activities for the Specific Plan area will generally consist of clearing and grubbing, demolition of existing structures, and moving surface soils to construct building pads, driveways and streets.

A Conceptual Grading Plan will be prepared in conjunction with future subdivision mapping and approvals. The grading plan will provide a balance of cut and fill for the Specific Plan area. Grading plans for each development project within the Specific Plan area will be reviewed and approved by the City of Ontario prior to the issuance of grading permits. Grading plans and activities will conform to the City's grading ordinance and dust and erosion control requirements.

All landscaped areas within the Specific Plan area shall be designed to accept runoff water from impervious surfaces. Landscape slopes shall not be greater than 3:1 on all perimeter slopes, including within neighborhood edge areas and slopes over 5 ft. in height.

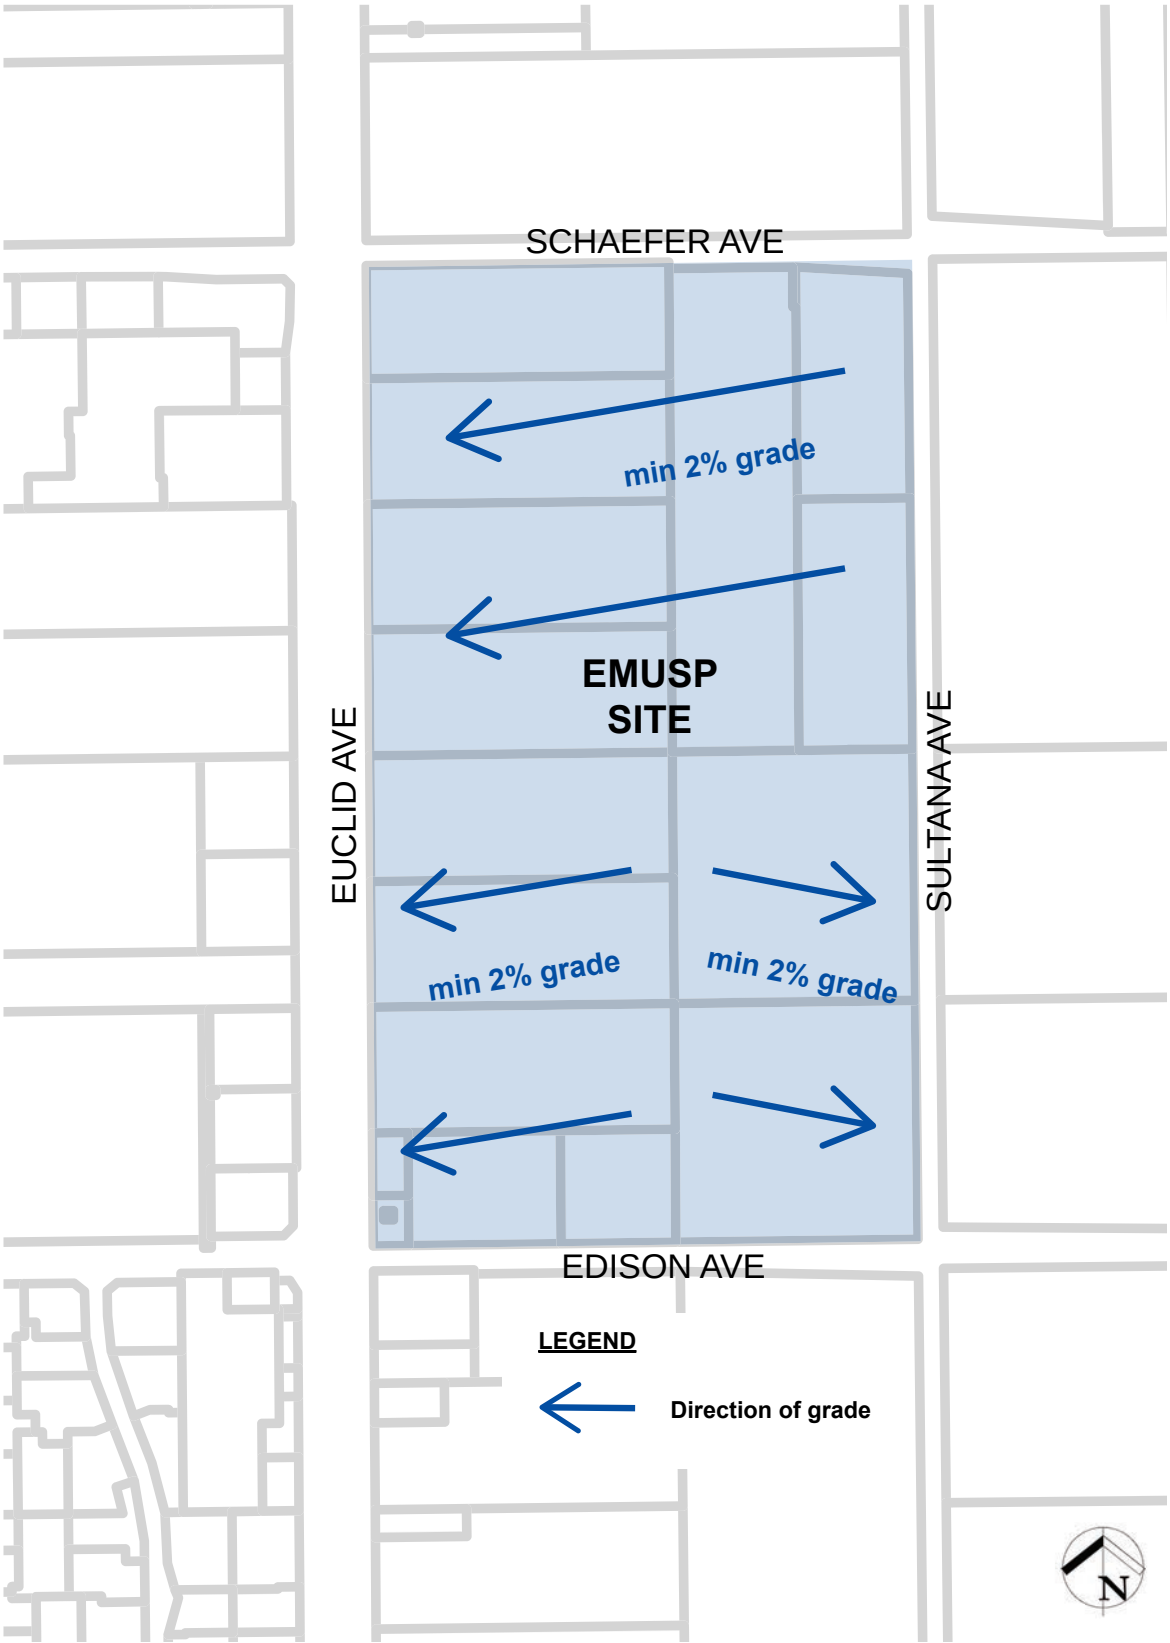

FIGURE 3.17 SPECIFIC PLAN CONCEPTUAL GRADING PLAN

This page intentionally left blank

3.7 Dry Utilities Plan

Utility services provided to the site will be installed underground in accordance with City of Ontario guidelines.

3.7.1 Communication System

Developments in Ontario Ranch are required to install and provide fiber conduit to all improved lots. Proposed on-site facilities will be placed underground within a duct and structure system that will be installed by the developer. Pursuant to the City of Ontario 2013 Fiber Optic Master Plan, the fiber optic network will be owned and operated by the City of Ontario and as such maintenance of the installed system will be the responsibility of the City and/or Special District fiber optic entity and not the developer. According to the City's Fiber Optic Master Plan, the proposed fiber optic infrastructure, including approximately 23 miles of backbone fiber south of Riverside Drive, is an investment into a long term capital asset using newly constructed and existing conduit to provide high speed communication links to key locations throughout the City. The Specific Plan area will be connected to the City's system as shown on ***Figure 3.18***.

3.7.2 Natural Gas

The Gas Company will provide natural gas to the Specific Plan area. Gas mains will be installed to the individual development projects by the Gas Company, as necessary.

3.7.3 Electricity

Southern California Edison will provide electricity to the Specific Plan area from existing facilities in the vicinity. All new lines within the Specific Plan area shall be installed according to City of Ontario requirements.

Undergrounding of existing overhead power lines will be subject to Section 7-7 of the Ontario Municipal Code. Existing power poles along Edison Avenue will need to be relocated. The existing location is within the ultimate roadway.

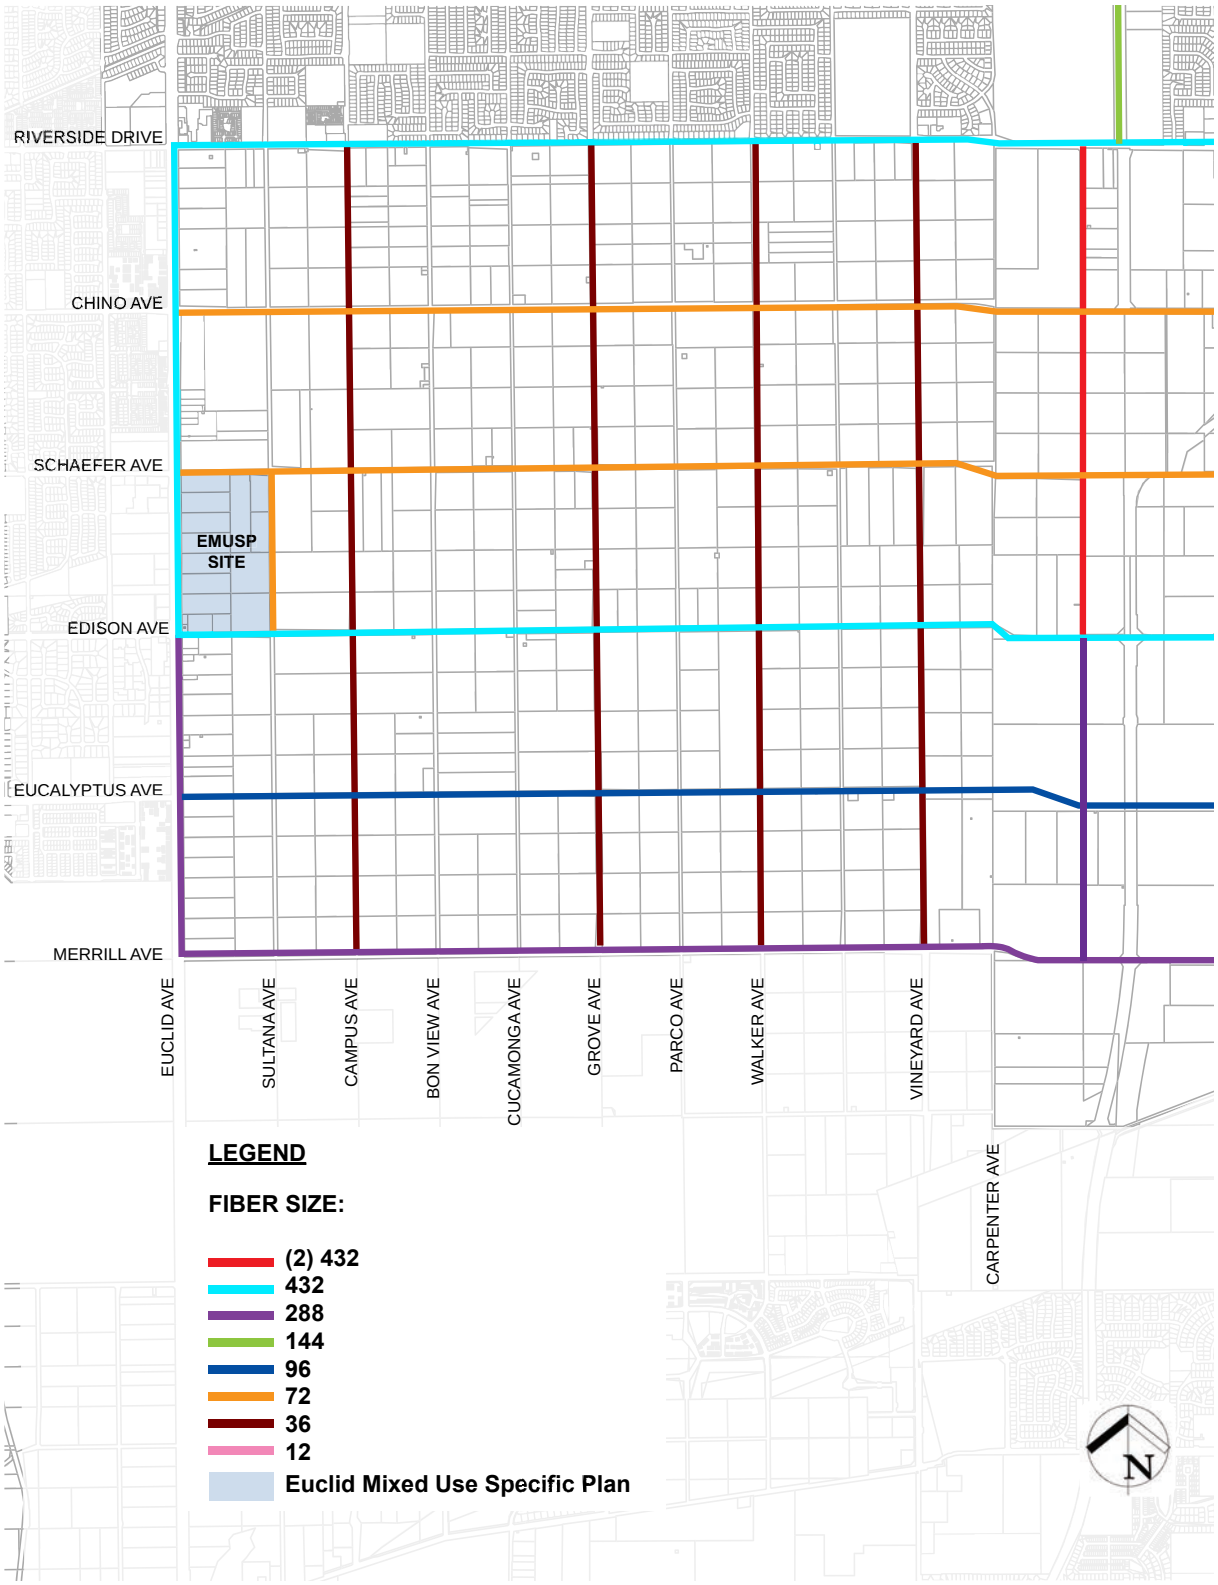

FIGURE 3.18 CITY OF ONTARIO ULTIMATE FIBER OPTICAL SYSTEM

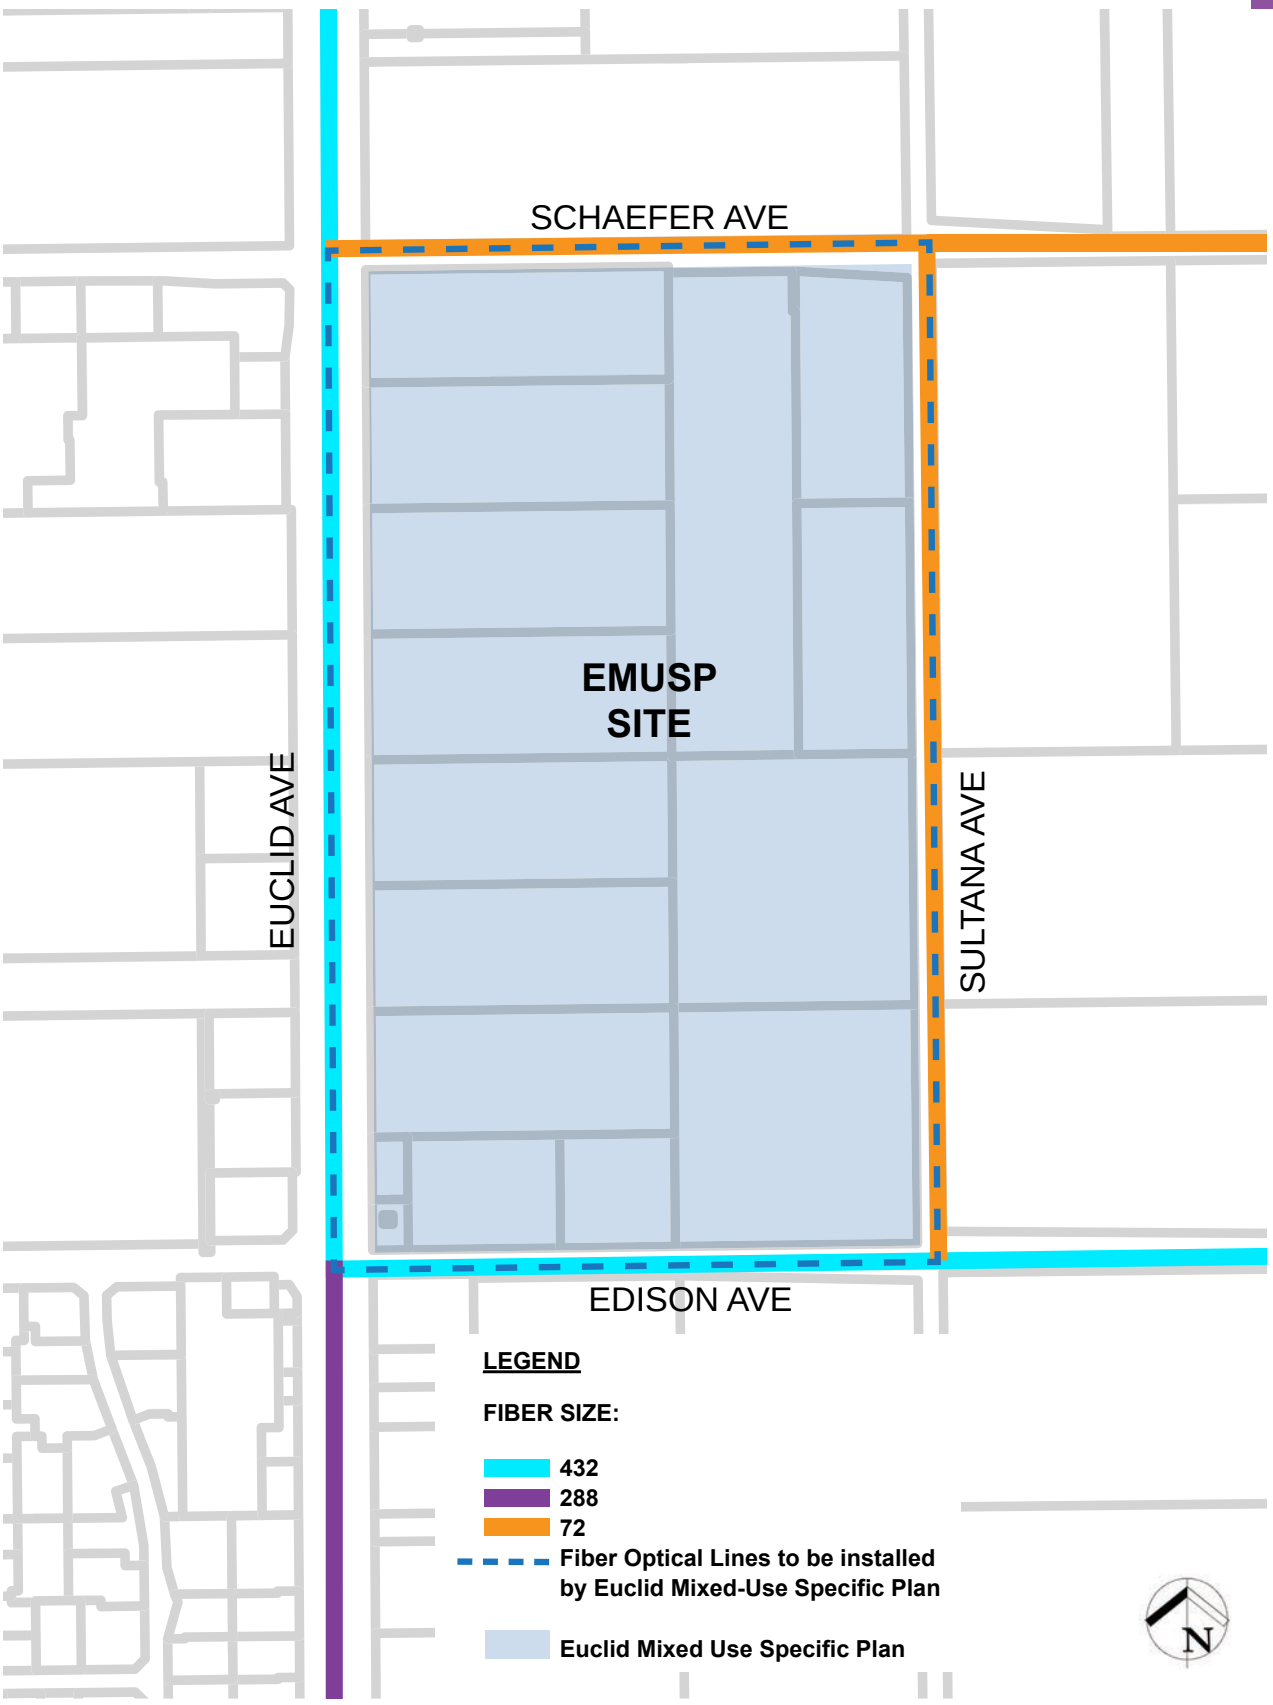

FIGURE 3.19 SPECIFIC PLAN FIBER OPTICAL PLAN

3.8 Storm Drain Plan

Storm Drain systems to serve the Specific Plan area will be installed according to the City of Ontario Storm Drain Master Plan. As of the establishment of the Specific Plan, there are no City domestic storm drain trunk lines in the vicinity of the Specific Plan area. The extension of City master planned storm drain infrastructure is being developed within the western portion of Ontario Ranch. The Euclid Mixed-Use Specific Plan is responsible to provide storm drain to serve future development and will construct a 90" line in Euclid along the western perimeter of the Specific Plan, a 48" to 90" line in Schaefer Avenue along the northern perimeter of the Specific Plan and a 78' to 96" in Edison Avenue along the southern perimeter of the Specific Plan. The Specific Plan will construct a 102" trunk line in Euclid Avenue south to connect to the existing 108" line at Euclid Avenue and Eucalyptus Avenue.

Catch basins located throughout the site will collect runoff. On-site storm drain systems serving the Specific Plan will connect to the master planned system in Euclid Avenue to serve the Specific Plan development. The Specific Plan area storm drain improvements are shown in ***Figure 3.20***.

3.8.1 NPDES Compliance

The grading and drainage of the Specific Plan area will be designed to retain/filter, harvest, and reuse or treat surface runoff to comply with the current requirements of the San Bernardino County NPDES Stormwater Program's Water Quality Management Plan (WQMP) for significant new development projects. Water quality impacts may be minimized through the implementation of site designs that reduce runoff and pollutant transport by minimizing impervious surfaces and maximizing on-site infiltration, employing Source Control Best Management Practices (BMP's), or using on-site structural Treatment Control BMP's where the infeasibility of installing Low Impact Development BMP's is demonstrated.

New development within the Specific Plan area will utilize a variety of Low Impact Development site drainage designs to manage stormwater, including but not limited to retention/filtration basins, trenches and swales, and above ground bio-retention systems. Development projects within the Specific Plan area will incorporate features including but not limited to:

- Landscape designs that promote water retention and incorporation of water conservation elements such as use of native plants and drip irrigation systems;
- Permeable surface designs in areas with low traffic;
- Parking lots that drain to landscaped areas to provide retention and infiltration, or bio-treatment where infiltration is infeasible; and
- Limit soil compaction during grading operations within landscaped storm water infiltration areas to no more than 80 percent compaction.

Prior to the issuance of a grading or construction permit, a Storm Water Pollution Prevention Plan (SWPPP), Erosion & Sediment Control Plan sheets, and a WQMP will be prepared and approved. The SWPPP and Erosion & Sediment Control Plan Sheets will identify and detail all appropriate BMP's to be implemented or installed during construction of the project, and the WQMP will describe all post-construction BMP's designed to address water quality and quantity of runoff for the life of the project.

All Priority Land Use (PLU) areas within the Specific Plan Area shall comply with the statewide Trash Provisions adopted by the State Water Resources Control Board (SWRCB) and trash requirements in the most current San Bernardino County Area-Wide MS4 Permit. Priority Land Use (PLU) includes high- density residential (defined as a land use with at least ten (10) dwelling units per acre), industrial, commercial, mixed urban, and public transportation station. Drainage from the PLU shall be designed with conveyance tributary to a sub-regional Full Trash Capture System such as a Debris Separating Baffle Box (DSBB), Continuous Deflective System (CDS), or an equivalent hydrodynamic separator which has been approved by the SWRCB.

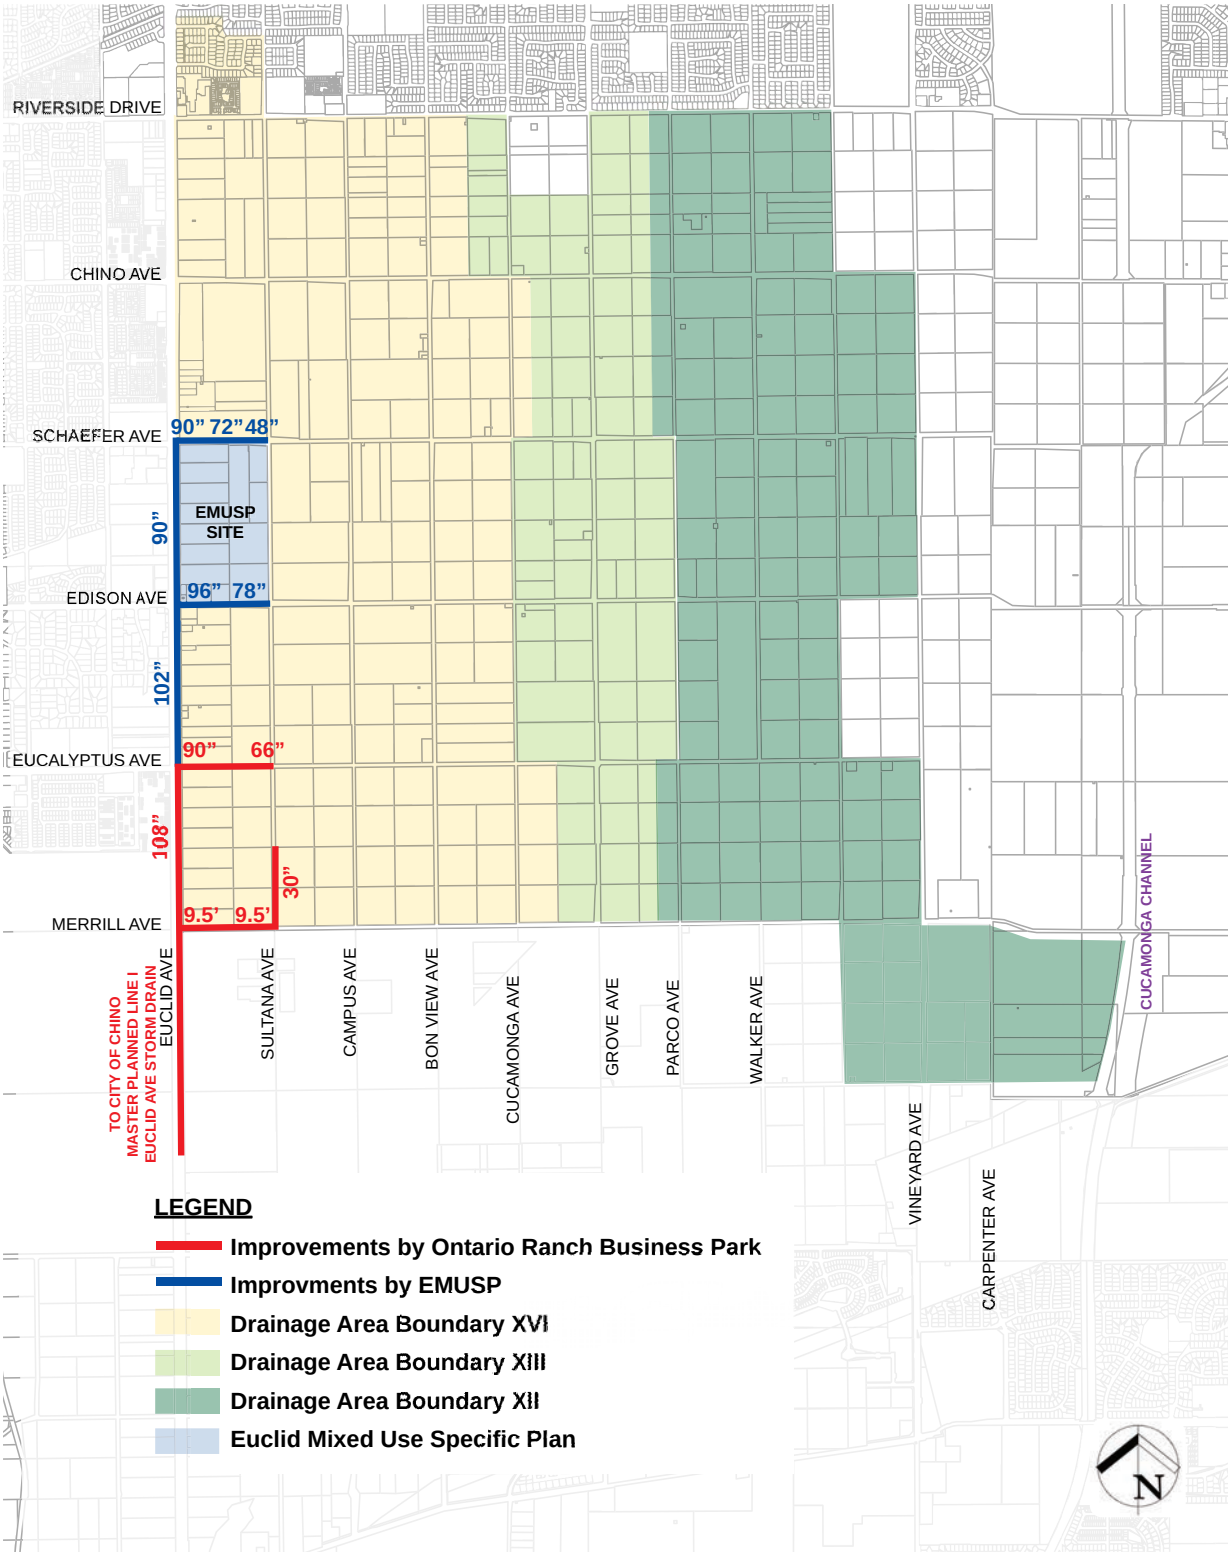

FIGURE 3.20 CITY OF ONTARIO ULTIMATE STORM DRAIN SYSTEM

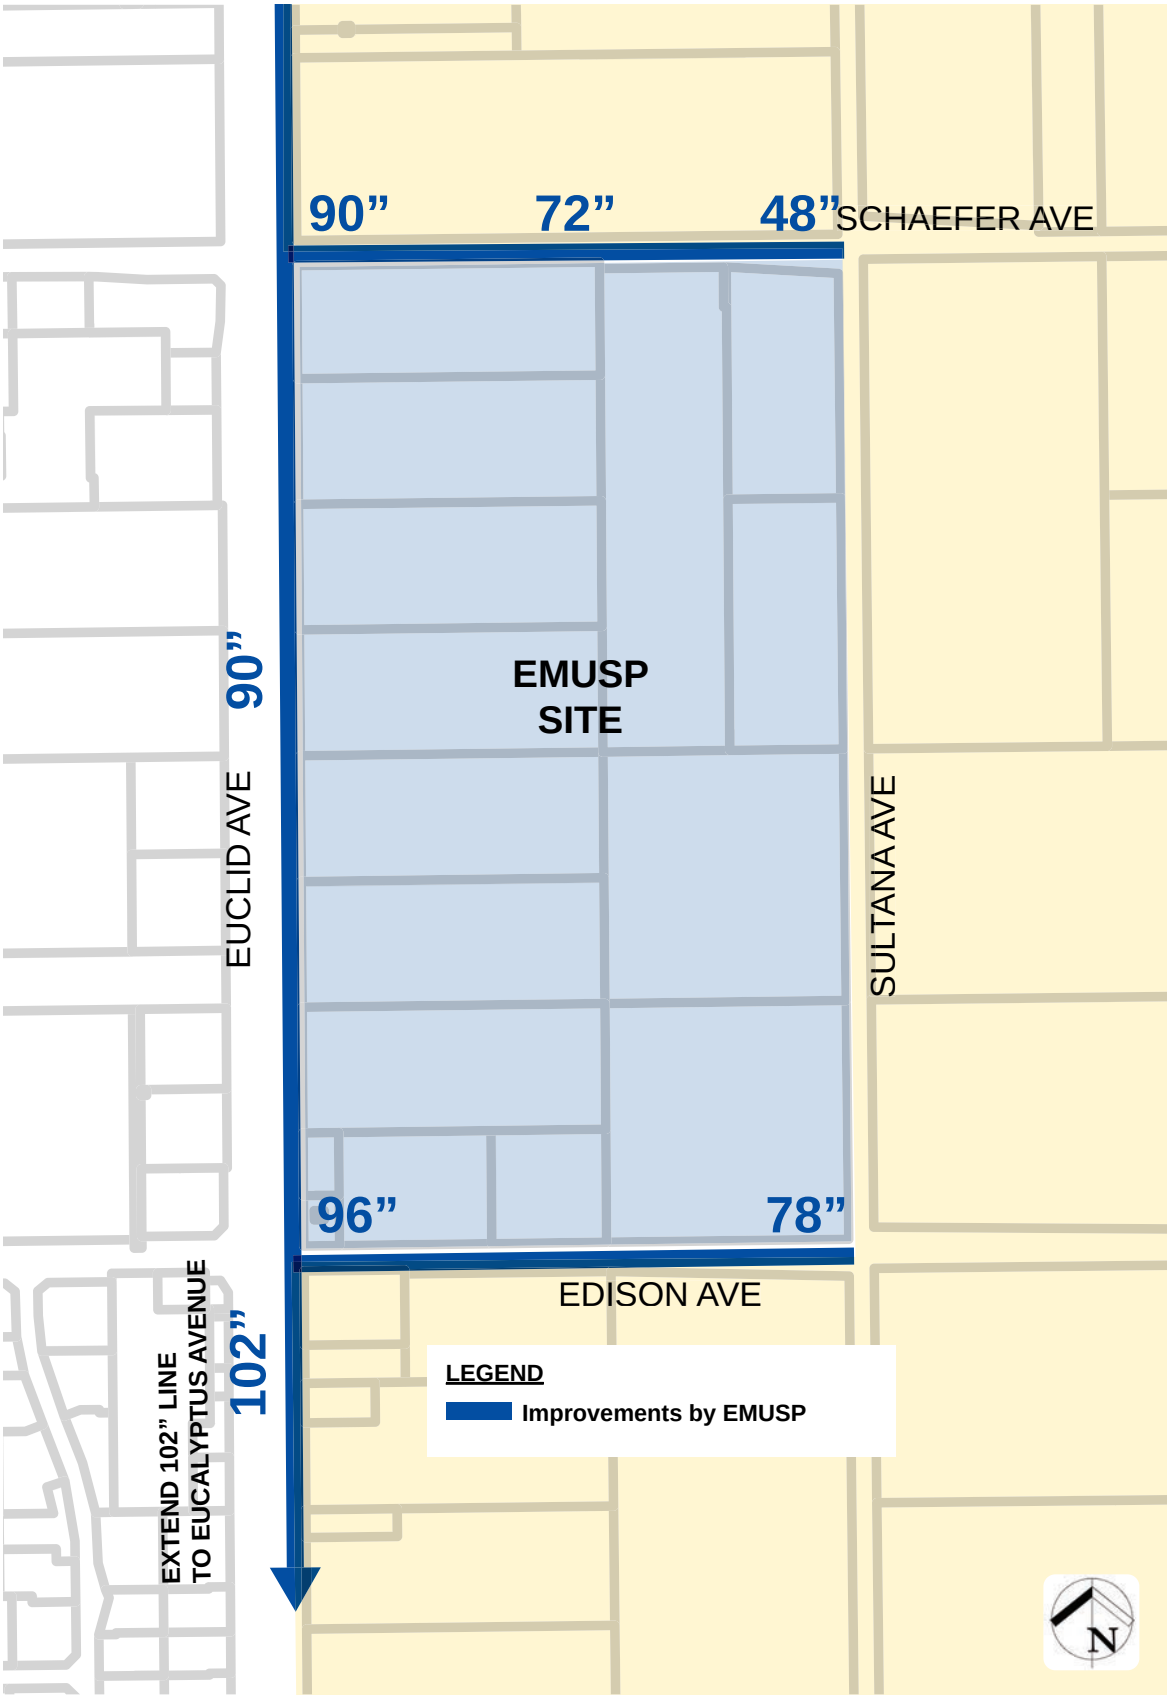

FIGURE 3.21 SPECIFIC PLAN STORM DRAIN PLAN

3.9 Public Services

Public services within the Specific Plan area, including police, fire and solid waste disposal services will be provided as follows:

3.9.1 Police

The City of Ontario will provide police services to the Specific Plan area. The closest police station is located approximately four miles north of the Specific Plan area at 2500 S. Archibald Avenue, just south of SR-60. This station is also the City of Ontario Police Department headquarters.

3.9.2 Fire

The City of Ontario will provide fire protection services to the Specific Plan area. The Ontario Fire Department currently has ten stations, which are staffed with eight four-man paramedic engine companies and two four-man truck companies. The closest operational fire station, Station 2, is located at 544 W. Francis Street, approximately three miles north of the Specific Plan area.

3.9.3 Solid Waste Disposal

The City of Ontario will provide solid waste services to the Specific Plan area. Solid waste facilities will follow the "Solid Waste Department Refuse and Recycling Planning Manual." The Manual establishes the City of Ontario's requirements for refuse and recycling storage and access for service, as well as addresses the City's recycling goals. The Mid-Valley Landfill is the nearest County of San Bernardino landfill located at 2390 N. Alder Avenue in the City of Rialto, approximately 20 miles northeast of the Specific Plan area.

3.10 Phasing Plan

Development phasing of the project site will be determined by the landowner and/or developer based upon real estate market conditions. Phasing will occur as appropriate levels of infrastructure are provided. Phasing sequencing is subject to change over time to respond to various market and local factors and as such, individual phases may overlap or develop concurrently. Infrastructure improvements, as required and approved by the City Engineer to support the development, will be installed by the developer. ***Figure 3.22***, Conceptual Phasing Plan, describes the general phases of development anticipated for the Euclid Mixed-Use Specific Plan area.

Specific Plan backbone infrastructure will be installed by the project developer, in accordance with the applicable City adopted infrastructure plan for the area, as well as the provisions of this Specific Plan and an approved Development Agreement. Fair share responsibilities for improvements will be addressed in a Development Agreement with the City of Ontario. The timing for installation of infrastructure and utilities within the Specific Plan area will be determined as part of the City's approval of future subdivision maps and development plans. Infrastructure will be constructed and made available in a timely manner as development progresses. Phasing of required infrastructure will be determined per separate Development Agreement.

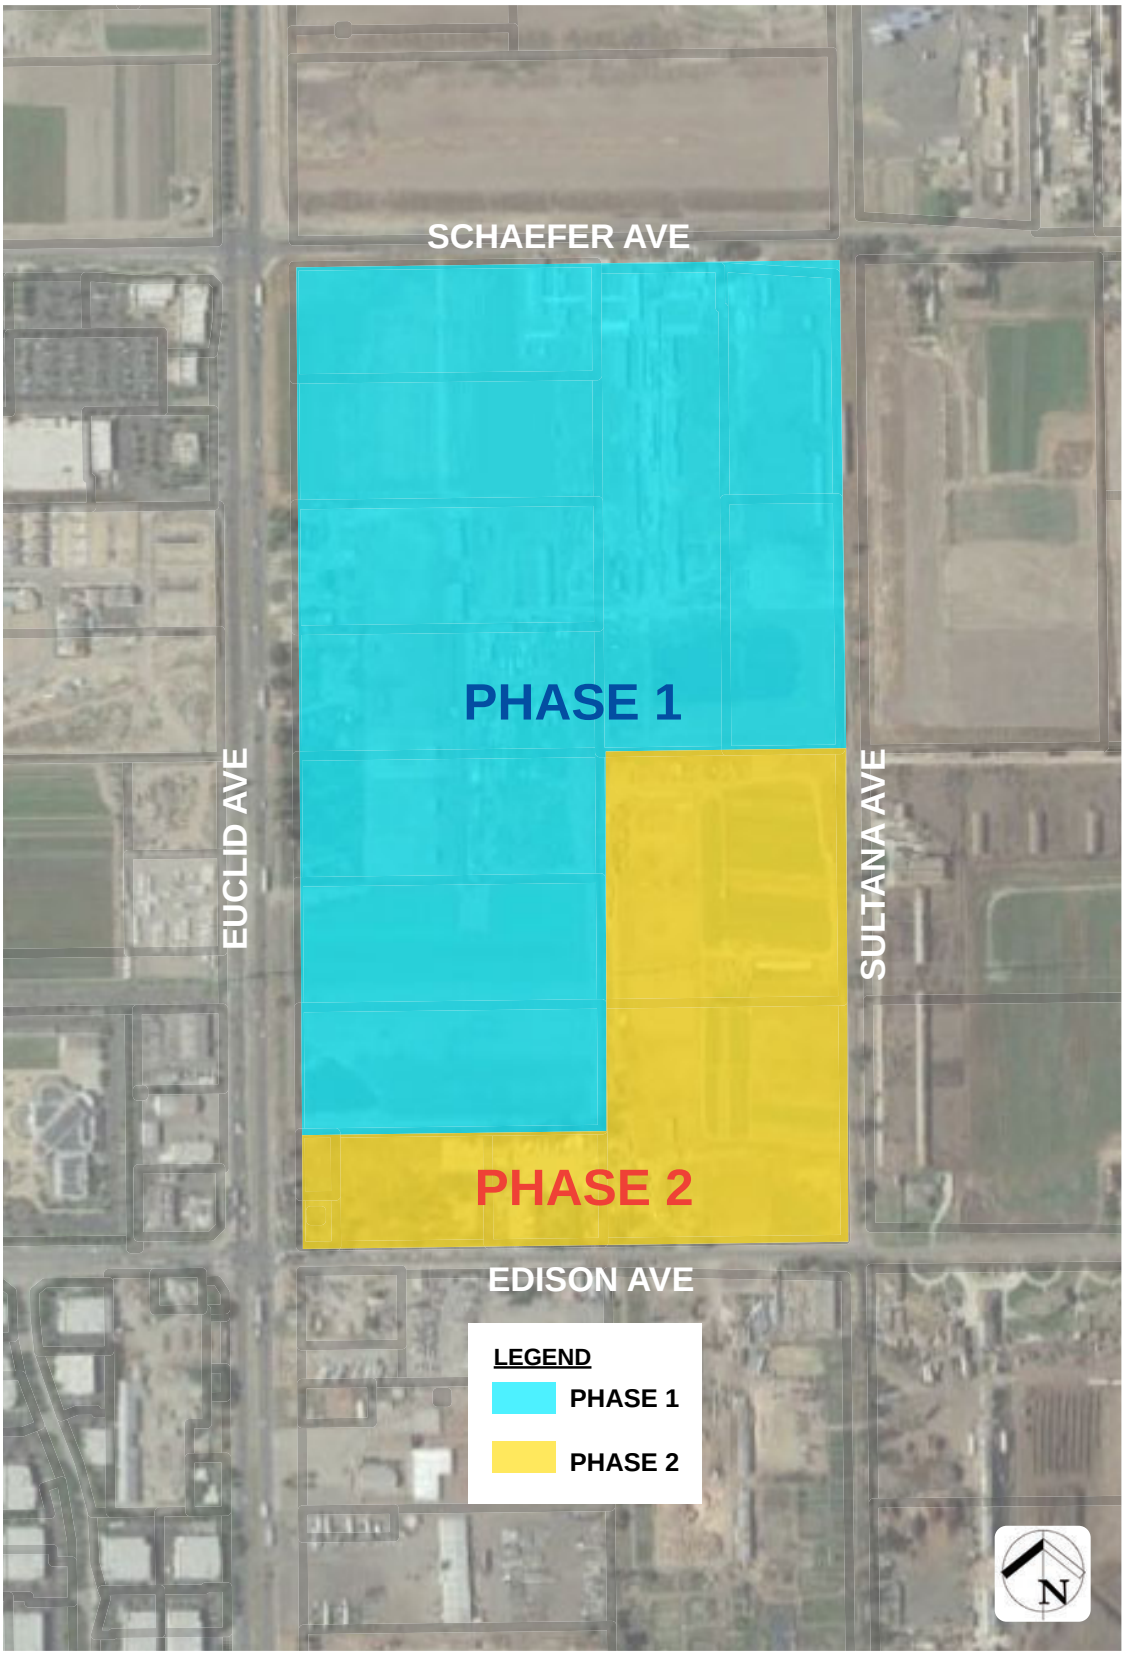

FIGURE 3.22 SPECIFIC PLAN PHASING PLAN

This page intentionally left blank

4. LAND USE AND DEVELOPMENT STANDARDS

This chapter identifies the allowable uses and the standards for building heights, setbacks, parking, coverage, landscape, signage, and all other development standards within the Specific Plan area. The application of these regulations is intended to create a harmonious relationship within the Specific Plan area and with the surrounding land uses as well as to protect the health, safety, and general welfare of the community.

4.1 General Provisions

Upon adoption of the Specific Plan, the development standards and procedures established within the Specific Plan become the governing zoning standards for any new construction, addition, or remodel within the Specific Plan area. However, in reviewing individual projects requiring discretionary approval, additional conditions may be applied by the approving body to accomplish the goals and objectives of this Specific Plan.

4.1.1 Definition of Terms

The meaning of words, phrases, titles, and terms shall be the same as provided in the City of Ontario Development Code unless specifically provided herein.

4.1.2 Applicability

The Euclid Mixed-Use Specific Plan is a regulatory plan, which, upon adoption by ordinance, will constitute the zoning of the property. Development plans or agreements, tract or parcel maps, precise development plans, or any other action requiring ministerial or discretionary approval for the subject property must be consistent with the approved Specific Plan. Actions deemed to be consistent with the Specific Plan shall be judged to be consistent with The Ontario Plan 2050 Policy Plan (General Plan) as mandated in California Government Code, Section 65454. Should the regulations contained herein differ from the regulations of the City of Ontario Development Code, the regulations of the Specific Plan shall take precedence. Where the Euclid Mixed-Use Specific Plan is silent, City Code shall apply.

4.1.3 Severability

In the event that any regulation, condition, program, portion, or policy of this Specific Plan or the application thereof to any person or circumstance is held to be invalid or unconstitutional by any court of competent jurisdiction, such portions shall be deemed separate, distinct, and independent provisions and shall not affect the validity of the remaining provisions of this Specific Plan or applications thereof which can be implemented without the invalid provision or application.

4.1.4 Administration

The Euclid Mixed-Use Specific Plan is adopted by ordinance and will serve as the implementation tool for The Ontario Plan 2050 Policy Plan as well as the zoning for the project site. The Specific Plan Development Regulations as outlined herein address general provisions, permitted uses, and development standards for the land uses within the project site.

4.1.5 Methods and Interpretation

Development within the Euclid Mixed-Use Specific Plan shall be implemented through the approval by the City of Ontario of parcel maps, tract maps, and development permits. The administration process described herein provides for the mechanisms for review and approval of development projects within Rich Haven consistent with the Specific Plan objectives.

Unlisted Uses

Any land use proposal not specifically covered by the provisions contained herein shall be subject to the City of Ontario Development Code.

Boundaries

The boundaries and acreage of the individual planning areas or portions thereof are approximate. Precise boundaries and acreages will be established in conjunction with the subdivision map or site development plan for each planning area or portions thereof within the project. Minor boundary and acreage variations (15% maximum deviation) shall be permitted without an amendment to this Specific Plan, subject to review by the Planning Director for conformance with the intent of the Specific Plan.

4.2 Allowable Uses

Table 4.1 (Land Use Matrix) shows the allowable land use, activity, or facility permitted within the Specific Plan's BP (Business Park) and MU (Mixed-Use) Zoning Districts, as discussed in Chapter 3. These uses include a variety of business-serving commercial, office, technology, light manufacturing, and high density residential uses. The letters/symbols used in ***Table 4.1*** shall have the following meanings:

"P" Permitted Land Uses

A Permitted Use (P) is permitted by right and may be established as the primary use of a building without the need for discretionary approval. Permitted Uses are subject to the development standards and guidelines applicable to the zoning district in which the use is located.

"C" Conditionally Permitted Land Uses

A Conditionally Permitted Use (C) is permitted upon issuance of a Conditional Use Permit (CUP) pursuant to Section 4.02.015 of the Ontario Development Code and City processing procedures.

"A" Administratively Permitted Uses

An Administratively Permitted Use (A) is permitted upon issuance of an Administrative Use Permit (AUP) pursuant to Section 4.03.015 of the Ontario Development Code and City processing procedures.

"--" Prohibited Land Uses

A land use indicated with a " --" symbol is prohibited within the zoning district.

Land Uses Not Listed

A land use not listed in ***Table 4.1*** shall be considered a prohibited land use. For land uses similar to those listed in ***Table 4.1***, but not expressly stated in this Specific Plan, the Planning Director or his/her designee has the authority to make a determination of the applicability of similar land uses.

TABLE 4.1 ALLOWABLE USES

LAND USE	BUSINESS PARK DISTRICT	MIXED-USE DISTRICT
AGRICULTURAL USES		
Temporary and Interim Agricultural Uses*	**P**	**P**
CONSTRUCTION		
Contractors (e.g.- building construction, site preparation, capital improvement projects)		
• Completely within a building	**P**	--
• With outdoor storage	--	--
MANUFACTURING		
Apparel Manufacturing	**C**	**C**

4.3 Development Standards

Table 4.2 (Development Standards) provides a summary of the development standards applicable to the land uses, structures, and related improvements located within the Specific Plan area. Refer to the Ontario Development Code for any standard not addressed in ***Table 4.2***.

4.3.1 Business Park/Mixed-Use Development Standards

TABLE 4.2 BUSINESS PARK AND MIXED-USE DEVELOPMENT STANDARDS

DEVELOPMENT STANDARD	BUSINESS PARK DISTRICT	MIXED-USE DISTRICT
Minimum Lot Area	10,000 sq ft	10,000 sq ft
Minimum Lot Dimensions		
1. Lot Width	100 ft	100 ft
2. Lot Depth	100 ft	100 ft
Maximum Floor Area Ratio [1]	0.60	Commercial = 1.0 Office = 1.5
Maximum Building Footprint [6]	175,000 sq ft	130,000 sq ft
Minimum Landscape Setback [2]		
1. Euclid Avenue	35 ft	35 ft
2. Edison Avenue	N/A	23 ft
3. Schaefer Avenue	23 ft	N/A
4. Sultana Avenue	10 ft	10 ft
5. Interior Side	N/A	N/A
6. Interior Rear	N/A	N/A
Minimum Building Setback [2] [3]		
1. Euclid Avenue	35 ft	35 ft
2. Edison Avenue	N/A	23ft
3. Schaefer Avenue	23ft	N/A
4. Sultana Avenue	10 ft	10 ft
5. Interior Side	10 ft	10 ft
6. Interior Rear	10 ft	10 ft
Minimum Parking Space and Drive Aisle Separations		
1. Parking Space or Drive Aisle to Street Property Line	20 ft	10 ft
2. Parking Space or Drive Aisle to Interior Property Line	5 ft	5 ft
3. Parking Space to Buildings, Walls, and Fences	Areas adjacent to public entries and office areas: 10 ft Areas adjacent to other building areas: 5 ft Within screened loading and storage yard areas: 0 ft	
4. Drive Aisles to Buildings, Walls, and Fences [4]	5 ft	5ft
5. Drive Aisles within Screened Loading and Storage Yard Areas	0 ft	0 ft
Maximum Building Height [5]	45 ft	55 ft
Minimum Landscape Coverage (Aggregate)	10%	10%
Walls, Fences, and Hedges: Per Ontario Development Code and Section 5.2 (Buffering and Screening) of this Specific Plan.		

Footnotes:

1. Land Use Distribution for Mixed Use district = 10"% Office, 20% Commercial and 70% Residential.
2. All setback areas shall be measured from the property line and shall be landscaped.
3. Within yard areas fully screened by a decorative wall, there shall be no minimum drive aisle or parking space setback required.
4. The minimum separation area between a building, wall, or fence, and a parking space or drive aisle shall be fully landscaped. The separation area may include pedestrian walkways, as necessary; however, a minimum 5 ft. wide planter area shall be maintained between a building wall and a pedestrian walkway. The minimum separation dimension does not include any area devoted to vehicle overhang.
5. Architectural projections, mechanical equipment, and focal elements may be allowed to exceed maximum height up to 10 percent above the prescribed height limit.
6. Building within the Business Park District that front onto Euclid Avenue shall be limited to a maximum building footprint of 54,000 sq. ft.

4.3.1.1 Business Park/Office Parking and Loading Standards

Parking and Loading standards for Business Park and Office development will be consistent with the standards outlined in the Ontario Development Code.

Sufficient off-street loading and unloading spaces shall be provided on each development site, and adequate provisions and space shall be made for maneuvering freight vehicles and handling freight.

Loading activity, including turnaround and maneuvering, shall be made on site. Buildings, structures, and loading facilities shall be designed and placed on the site so that vehicles, whether rear loading or side loading, may be loaded or unloaded at any loading dock, door, or area without extending beyond the property line.

4.3.2 Mixed-Use Development Standards

The following standards provide the lot development criteria for Retail Commercial and Office uses within the Mixed-Use portion of the Specific Plan. Refer also to General Standards in Section 4.1.

TABLE 4.3 MIXED-USE DEVELOPMENT STANDARDS

DEVELOPMENT STANDARD	RETAIL COMMERCIAL AND OFFICE
Minimum Lot Size/Area	**10,000 sq ft**
Floor Area Ratio (Calculated based on gross site average)	
From Euclid Avenue Right-Of-Way Minimum Retail Commercial	**0.2:1**
From Euclid Avenue Right-Of-Way Maximum Office	**0.5:1**
Minimum Landscape Coverage	10%, all setback from right-of-way areas shall be landscaped
Building Setbacks (minimum)	
From Euclid Avenue Right-Of-Way	**35 ft** [4]
From Edison Avenue Right-Of-Way	**35 ft** [4]
From Schaefer Avenue Right-Of-Way	**23 ft**
From Private or Local Street	**15 ft** [2]
From detached residential on adjacent property	**25 ft**
From SCE Property Line/Easements	**0 ft**
Parking Setbacks (minimum) [1] [3]	
From Euclid Avenue Right-Of-Way	**35 ft**
From Edison Avenue Right-Of-Way	**35 ft**
From Schaefer Avenue Right-Of-Way	**23 ft**
From Private or Local Street	**10 ft**
From detached residential on adjacent property	**5 ft**
From SCE Property Line/Easements	**0 ft**
Building Height (maximum) [5]	
Structures	**45 ft**
Architectural Projections (including towers, focal elements, cupulas, etc.)	**55 ft**

Footnotes:

1. Per the City of Ontario Development Code. Commercial parking standards still apply.
2. Refer to Section 5, Landscape Design Guidelines for further setback/design requirements.
3. Parking stalls perpendicular to street shall be screened by landscaping, berms, or decorative walls that match architectural style of nearest development. Screening shall mature to a minimum height of 36" (to screen car grilles).
4. Buildings shall be set back to the Neighborhood Edge or to the given setback from R.O.W., whichever is more restrictive. Where a Neighborhood Edge condition does not exist, setbacks from R.O.W. shall govern.
5. Maximum building heights shall comply with the requirements of Chino Airport Land Use Compatibility Plan ("CNO ALUCP").

4.3.2.1 Circulation

The Euclid Mixed-Use Specific Plan shall have street frontage monumentation announcing the major entrance to the development from Edison Avenue. Within the Specific Plan, vehicular access to commercial/office development shall be clearly designated and supplemented with special paving, landscaping and signage. Parking areas should include clearly marked pedestrian pathways to building entrances.

4.3.2.2 Parking Standards

Parking requirement for Commercial development will be consistent with the standards outlined in the Ontario Development Code.

4.3.2.3 SCE Easement Parking

Surface parking and vehicular/truck/trailer storage are permitted uses within SCE easements subject to approval from utility provider. This surface parking may not be included towards meeting minimum resident, guest or commercial parking requirements.

4.3.2.4 Patio Dining

Outdoor seating, in conjunction with business, is encouraged to enliven the street scene along Euclid Avenue and Edison Avenue. Patio dining seating area must have a minimum dimension of 10 ft. clear. Along Euclid Avenue and Edison Avenue, patio dining may encroach a maximum of 10 ft. into the neighborhood edge. Patio areas may be enclosed by the tenant by open rail compatible with the architecture of the building, hedges or other suitable separation.

4.3.2.5 Drive-Thru Facilities

a. Development and/or uses with drive thru facilities will comply with the standards outlined in the Ontario Development Code.

A drive-through facility shall be operated only as (a) part of a restaurant which also has an indoor dining area, (b) a banking facility or (c) a drug store or similar retail use, subject to satisfying the requirements listed below.

b. Separation from Sensitive Land Uses

1. A drive-through facility shall be separated from any residential building by no less than 150 ft. This standard may be modified, particularly for non-restaurant drive-through uses, subject to approval from the City of Ontario Planning Director.
2. The drive-through facility shall be architecturally treated with service and delivery “back of house” areas visually screened from residential development and public streets.

TABLE 4.4 STAND ALONE RESIDENTIAL DEVELOPMENT STANDARDS

DEVELOPMENT STANDARD	MEDIUM HIGH / HIGH DENSITY RESIDENTIAL
Density (DU/AC)	**11.1 - 35.0**
Lot Criteria	
Min. Lot Size	**10,000 sq ft**
Minimum Setbacks [1] [2]	
Streetside Setback	
• Living Area to sidewalk or paving	**5 ft**
• Porch [3]	**3 ft**
• Garage to 20' Alley [7]	**5 ft**
Minimum Building Separation	
Front to Front	**25 ft**
Side / Side	**12 ft**
Rear / Rear [8]	**30 ft**
Front to Side	**20 ft**
Between Covered Porches Front to Front	**10 ft**
Between Garden Walls less than 3' in Height	**10 ft**
Lot Coverage	
Max. Coverage	**60%**
Maximum Building Height [4]	
Main Structure	**55 ft**
Walls, Fences and Hedges	
Maximum Height at Front of Building [5]	**3 ft**
Maximum Height at Side or Rear of Building [6]	**6 ft**
Private Open Space	
Ground Floor Units:	
Min. Square Footage per Dwelling Unit	**140**
Min. Dimension	**10 ft**
Upper Unit:	
Min. Square Footage per Dwelling Unit	**50**
Min. Linear dimension	**5 ft**
Storage Space:	
Min. Interior Storage Space	**160 CF per Unit [8]**

Footnotes:

1. Architectural projections may project a maximum of 3 ft. into required front, rear or side setback areas; however, in no case shall such projection be closer than 3 ft. to any property line. An architectural projection is defined as an element that articulates the building elevation such as eaves, window and door pop-out surrounds, media niches, bay windows, pot shelves, chimneys, enhanced window sills, shutter details, window trim, balconies and entry gates, and other similar elements.
2. All front and corner side setbacks are measured from the back of sidewalk. All other setbacks measured from Property Line unless noted otherwise.
3. The minimum depth of a porch shall be 7 ft., with an area of 70 sq. ft. of clear space. The porch depth may be reduced to 5 ft., where appropriate to mass and scale of the building, subject to Planning Department review and approval.
4. Architectural projections may exceed the maximum height by an additional 10%.
5. Solid masonry walls or fencing may be permitted subject to a 3 ft. minimum setback from the front property line. Fences, walls, hedges or similar view obstructing structures or plants that reduce safe ingress or egress of vehicles or pedestrians shall not exceed 3 ft. in height in any required front yard.
6. Walls may exceed 6 ft. in height and pilasters may exceed 6.5 ft. in height only for noise attenuation purposes subject to an Acoustical Study and Planning Department approval. Up to 2 ft. retaining wall may be incorporated with the 6 ft. maximum wall so that maximum exposed wall shall not exceed 8 ft..
7. Measured from foundation, not recessed garage door. Eaves and second floor projections may encroach up to 18 inches.
8. Interior storage includes finished areas under stairs, finished attic space with a minimum dimension of 24" and garage space including hanging racks with a min. depth of 18".

4.4 Open Space Planning Areas

The Euclid Mixed-Use Specific Plan area includes two Southern California Edison (SCE) easements which traverse the site in an East/West direction. The northern SCE easement is identified as PA 4 and diagonally bisects the Business Park District. The southern SCE easement is identified as PA 5 and provides a separation between the Business Park District and the Mixed-Use District. Both of the easements are designate as open space-non-residential (OS-NR). The Euclid Mixed-Use Specific Plan outlines allowable uses and the development standards within the SCE easements in PA 4 and PA 5.

4.4.1 Allowable Uses within the SCE Easement Areas

All uses and improvements within PA 4 and PA 5 of the Euclid Mixed-Use Specific Plan are subject to review and approval by Southern California Edison Company and The City of Ontario. Land Uses allowed within the SCE easements are shown in ***Table 4.5***:

TABLE 4.5 ALLOWED USES SUBJECT TO SCE APPROVAL

LAND USES	OPEN SPACE
Agriculture (except community gardens, urban farms and cannabis production)	P
Beekeeping and production	P
Community Gardens, Urban Farms and related uses	A
Electric Vehicle Charging Facilities (ancillary to a permitted land use)	P
Parking Lots, Vehicle and Truck/Trailer short term and long term storage	C
Commercial and Recreational Vehicle Storage	C
Nurseries (subject to tree height limitations)	P
Open Space/Parks and Trails (publicly owned or accessible)	P
Police and Fire Protection (no structures)	P
Solar/Wind Energy Power Generation	C
Boat and RV short/long term storage	C

4.4.2 Development Standards within the SCE Easement Areas

Allowable uses within the SCE easement areas generally do not include permanent or temporary structures or buildings. No building setbacks are required from the SCE easement line.

Uses allowed within the SCE easements shall comply with all applicable utility corridor development standards per the City of Ontario development code.

Uses such as parking and outdoor storage are required to be screened using walls and/or landscaping identified in Section 5 of the Specific Plan. Security walls or fencing is allowed up to 14 ft. high along the easement boundary.

Lighting for security and/or safety within the SCE easements shall be allowed subject to the requirements that illumination be contained within the easement area and directed away from any sensitive surrounding land uses.

5. DESIGN GUIDELINES

This chapter identifies conceptual themes for site planning, architecture, and landscape design within the Euclid Mixed-Use Specific Plan area. The guidelines are intended to ensure a cohesive and attractive development that meets the following objectives:

1. Demonstrates high quality development that complements and integrates into the community and adds value to the City.
2. Creates a functional and sustainable place that ensures the Euclid Mixed-Use Specific Plan area is competitive regionally and appropriate in the Ontario Ranch community.
3. Illustrates the distinctive characteristics of the two land use plan zones - Business Park and Mixed-Use.
4. Establishes criteria for building design and materials, landscape design, and site design that provide guidance to developers, builders, architects, landscape architects, and other professionals preparing plans for construction.
5. Provides guidance to City staff and the Planning Commission in the review and evaluation of future development projects in the Euclid Mixed-Use Specific Plan area.
6. Incorporates construction and landscape design standards that promote energy and water conservation strategies.
7. Implements the goals and policies of The Ontario Plan and the intent of the Ontario Development Code.

5.1 General Design Guidelines

5.1.1 Architectural Design

The architectural character within the Euclid Mixed-Use Specific Plan is intended to reinforce the rich architectural diversity of the City Of Ontario while providing a cohesive aesthetic treatment for the varied anticipated uses and building types including one and two story business park buildings, neighborhood commercial and retail buildings, low-rise office buildings and two and three story, high density, attached residential buildings. The architectural design and features shall consider the following design objectives:

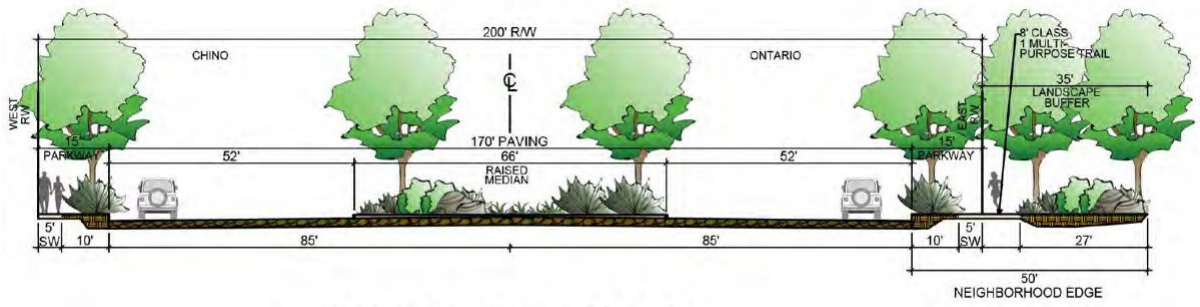
1. Create a palette of architectural styles and design criteria to encourage a cohesive community character within the Specific Plan area while promoting a variety of traditional and timeless architectural expressions.
2. Utilize high quality and sustainable materials on building exteriors to reduce maintenance and ensure a long lasting attractive appearance.
3. Orient buildings along perimeter roadways with front building elevations, front entries and enhanced materials defining the character of development.
4. Buildings within the Business Park district shall be in a scale and proportion that minimizes the visual impact of buildings fronting along Euclid Avenue.

5. Commercial and Office buildings design should emphasize building entries utilizing focal elements such as towers, trellises, architectural detailing, etc. and enhanced building treatments or materials. Service areas should be oriented away from public spaces and/or screened from off-site views.
6. Residential buildings should be designed with enhanced architectural treatments/features on all visible elevations. Utility features should be oriented along internal private drives and screened with landscaping wherever possible.

These guidelines will further serve to implement the objectives, policies and principles of the City's TOP by drawing upon the rich architectural diversity, quality and history of Ontario's established neighborhoods. Business Park Guidelines are included in Section 5.2, Regional Commercial/Mixed-Use Design Guidelines in Section 5.3 and High Density Residential Design Guidelines in Section 5.4.

5.1.2 Landscape Design

The overall landscape treatment within the Specific Plan is intended to provide a unifying element and to establish a unique setting for future development. Landscape designs shall consider the following design objectives:



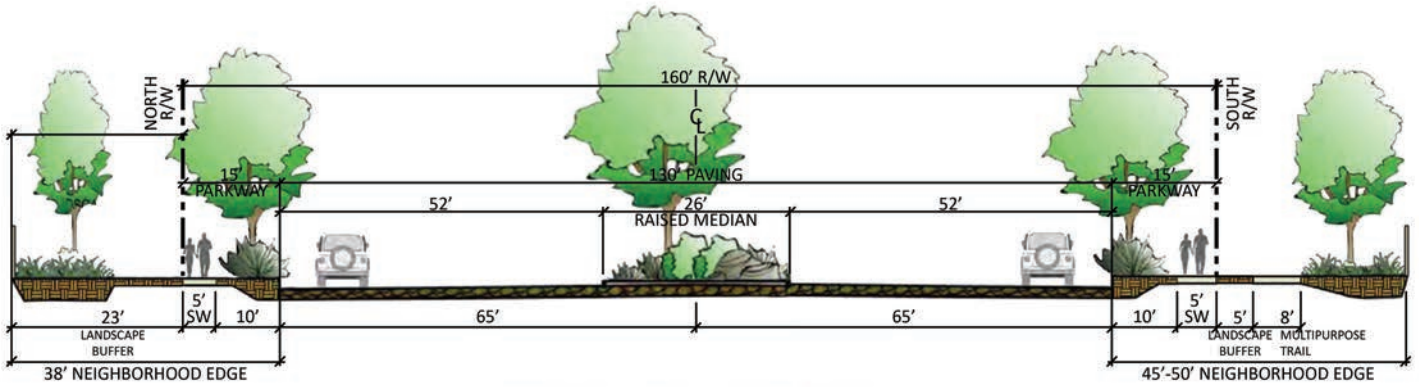
1. Incorporate Neighborhood Edge planting along Euclid Avenue and Edison Avenue to provide the general landscape framework and establish a sense of place for the varied land uses.
2. Utilize a hierarchy of monumentation signage and focal planting to define the Specific Plan area at primary intersection locations.
3. Develop a palette of appropriate street trees to be used along internal public streets, private drives and parking areas within the Mixed-Use area of the Specific Plan.
4. Open parking areas should be screened from perimeter streets. Parking areas shall be screened using evergreen shrubs, low walls or berms or a combination of screening methods.
5. Vehicle storage areas shall be screened with decorative walls. Screen walls to be softened with vertical evergreen shrubs and/or trees.

5.1.3 Streetscapes

Streetscape design creates an aesthetically pleasing view for pedestrians and motorists, screens parking and loading areas from the public right-of-way, and integrates the development into the surrounding community. The streetscape designs presented are conceptual only; final grading, plantings, and tree locations will be determined on a project-by-project basis.

5.1.3.1 Euclid Avenue Streetscape

Euclid Avenue features a wide raised landscaped median planted with trees, a 15 ft. wide parkway and a 35 ft. wide landscape setback. The parkway will include a 10 ft. wide curb-adjacent landscape strip generally planted with trees and groundcover and a 5 ft. wide sidewalk. Tree species along the perimeter of Euclid Avenue will include Grevillea robusta in the parkway, Cedrus deodara groups behind the sidewalk alternating with a double row of Quercus agrifolia with Schinus molle intermixed as accents in appropriate locations in the median. Combined, the parkway and landscape setback create a 50 ft. "Neighborhood Edge" as established in the Ontario Ranch Streetscape Master Plan, which is intended to provide a buffer at the Specific Plan boundary as well as a pleasing visual statement along the major City thorough (***Figure 5.1***).

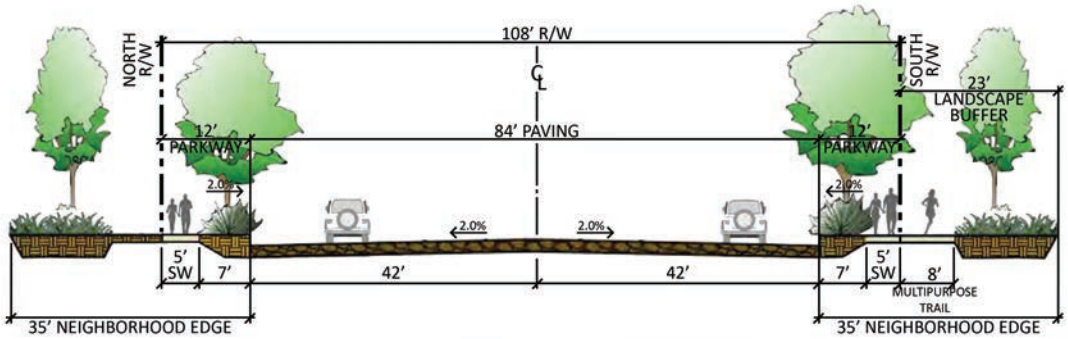


EUCLID AVENUE (200' ROW)

FIGURE 5.1 EUCLID AVENUE STREETSCAPE

5.1.3.2 Edison Avenue Streetscape

The typical Edison Avenue section will feature an 8 ft. multipurpose trail, 15 ft. wide parkway and 23 ft. wide landscape setback. The parkway will include a 10 ft. wide curb-adjacent landscape strip and a 5 ft. wide sidewalk. Tree species along Edison Avenue will include Quercus agrifolia in the parkway with clusters of Lagerstroemia i. 'Natchez' and Pinus eldarica in the neighborhood edge along the south and north side. The median includes Pinus eldarica with clusters of Lagerstroemia i. 'Natchez'. The parkway and landscape setback will combine to form the 38 ft. Neighborhood Edge buffer (***Figure 5.2***).



EDISON AVENUE (160' ROW)

FIGURE 5.2 EDISON AVENUE STREETSCAPE

5.1.3.3 Schaefer Avenue Streetscape

The typical Schaefer Avenue section will feature a 12 ft. wide parkway and 23 ft. wide landscape setback to create a 35 ft. Neighborhood Edge. The parkway will include a 7 ft. wide curb-adjacent landscape strip generally planted with trees and groundcover and a 5 ft. wide sidewalk. Tree species along Schaefer Avenue will include Pistacia chinensis trees in the parkway and Pistacia chinensis with clusters of Tristaniopsis laurina in the neighborhood edge. The Neighborhood Edge creates a buffer along the Specific Plan boundary as well as a visual statement (***Figure 5.3***).

SCHAEFER AVENUE (108' ROW)

FIGURE 5.3 SCHAEFER AVENUE STREETSCAPE

5.1.3.4 Sultana Avenue Streetscape

The typical Sultana Avenue section will feature a 9 ft. wide parkway and 10 ft. wide landscape set-back. The parkway will include a 4 ft. wide curb-adjacent landscape strip and a 5 ft. wide sidewalk. Tree species along Sultana Avenue will include Koelreuteria paniculata and behind the sidewalk will include Quercus ilex (***Figure 5.4***).

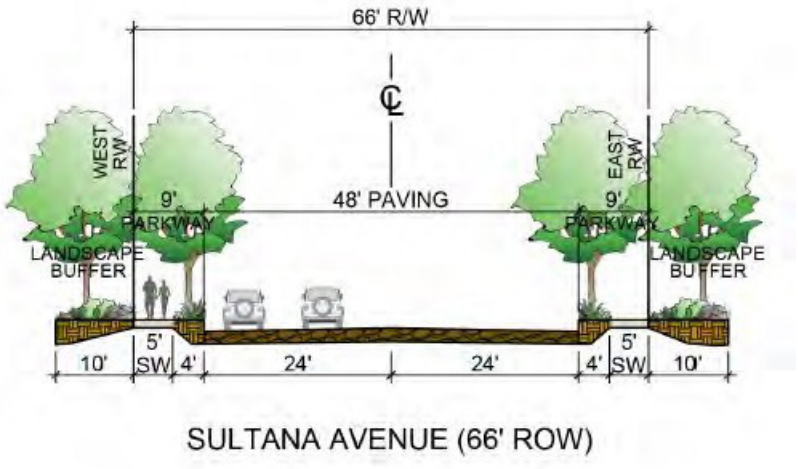


FIGURE 5.4 SULTANA AVENUE STREETSCAPE

5.1.3.5 Landscape Framework

A Landscape Framework has been developed to guide the overall character of the Euclid Mixed-Use Specific Plan from concept through implementation to ensure the intended planned design is fulfilled. The landscape treatment consist of several design elements including community arrival markers and gateway monumentation, perimeter landscaping and connections within the neighborhood edges and landscape buffers and potential locations for harmonious district entries into individual land uses such as business parks, office parks, retail centers and residential neighborhoods. Refer to ***Figure 5.5*** Landscape Framework.

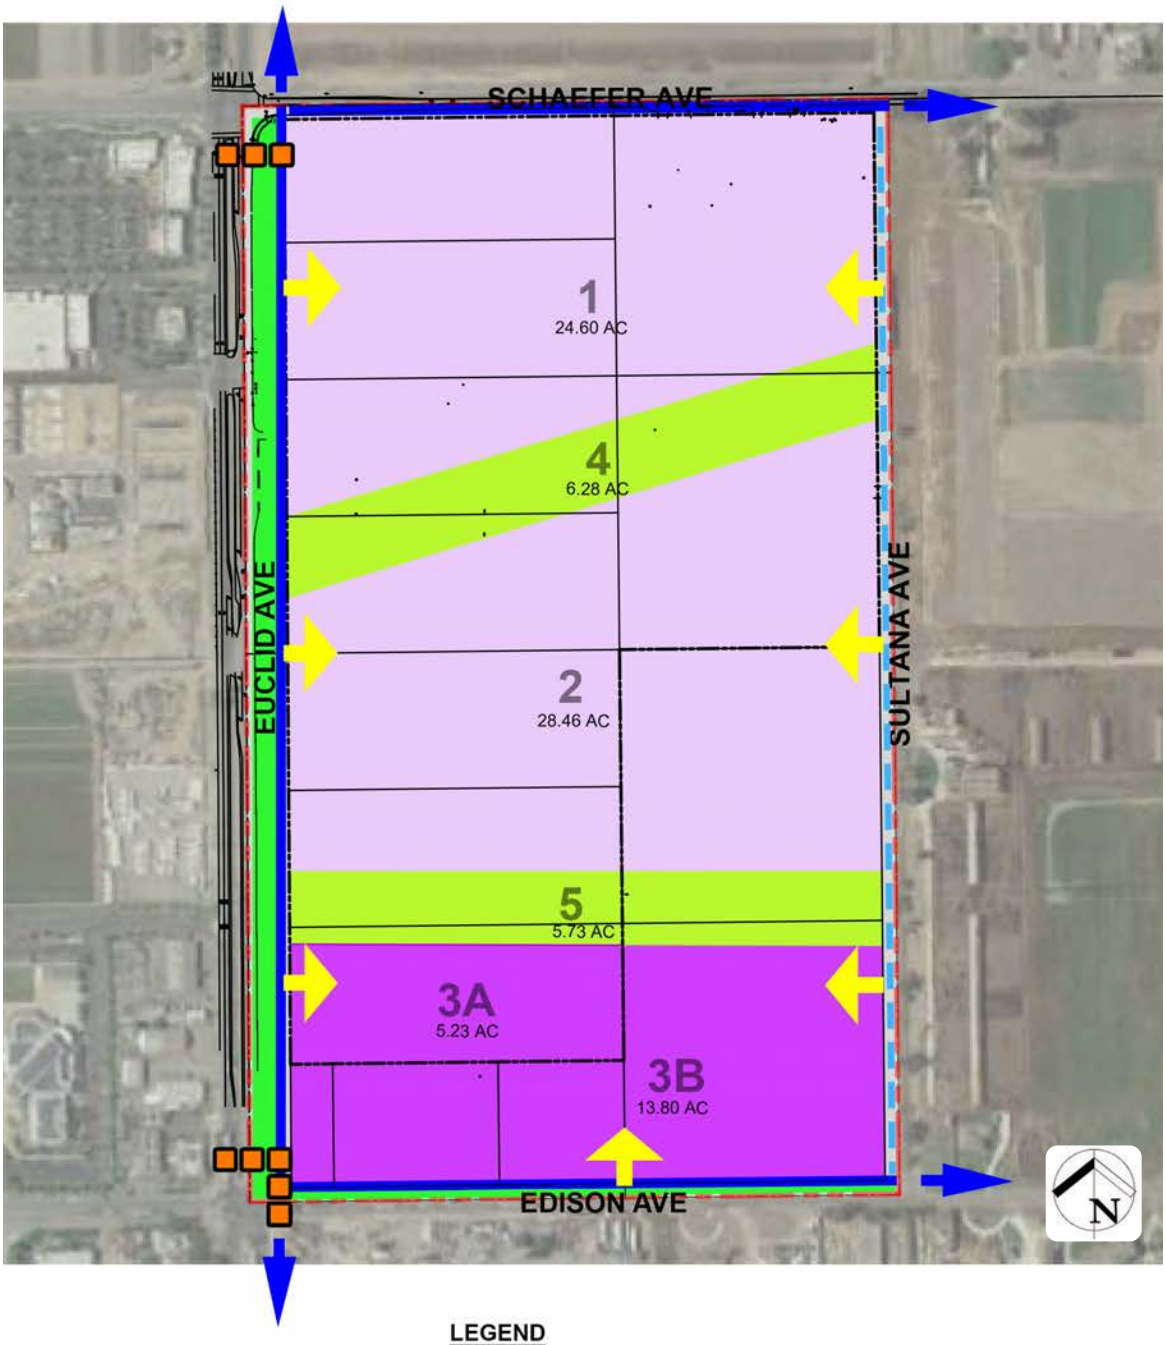

FIGURE 5.5 LANDSCAPE FRAMEWORK

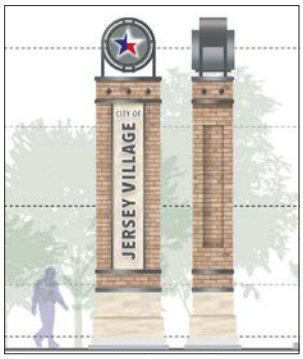
5.1.3.6 Euclid Gateway



The Euclid Mixed-Use Specific Plan's location along the City's most prominent avenue at the gateway to the primary arterial roadway through the Ontario Ranch will be celebrated with special "Gateway Monument" features.

The primary arrival monument is the Euclid Gateway with two tower features. The Euclid Gateway features will be located at the northeast corner of the intersection of Euclid Avenue and Edison Avenue.

The objectives of the Euclid Gateway are as follows:

1. Create a distinctive architectural feature to establish a sense of arrival and a welcoming landmark to western gateway to The Ontario Ranch.
2. Identify the Specific Plan area as an example and quality standard for Mixed-Use and Business Park development within the City.
3. Utilize durable and lasting materials and a sustainable monument design reflecting the proposed architectural character of development within the Specific Plan area.
4. Incorporate a climate sensitive and water wise planting plan to soften and accentuate the monument feature to create a unique landscape aesthetic integrated into the City streetscape plant palette.

The Euclid Gateway monuments will reflect paired contemporary vertical block towers. The tower design will be capped with an angular top. The tower features a massive steel panel that mirrors the angular top of each gateway tower reinforcing the impressive scale and rich color of the signage. The overall height of the tower will be 14+ ft. to optimize its visibility and to allow for the inclusion of the City of Ontario logo near the top of the tower.

The landscape treatment around the Gateway monuments will consist of low growing plant species to accentuate the vertical form of the towers. Drought tolerant plant material will be utilized to create a layered landscape base. Plants that reinforce the architectural character of the Gateway such as native grasses, Agaves and other larger succulents and colorful xeriscape plants will provide a sustainable focal landscape treatment. Vertical planting around the Euclid Gateway monuments will be avoided, allowing for the towers to be set against the backdrop of the master planned streetscape trees within the neighborhood edges of Euclid Avenue and Edison Avenue. Refer to ***Figure 5.6*** Euclid Gateway Concept.

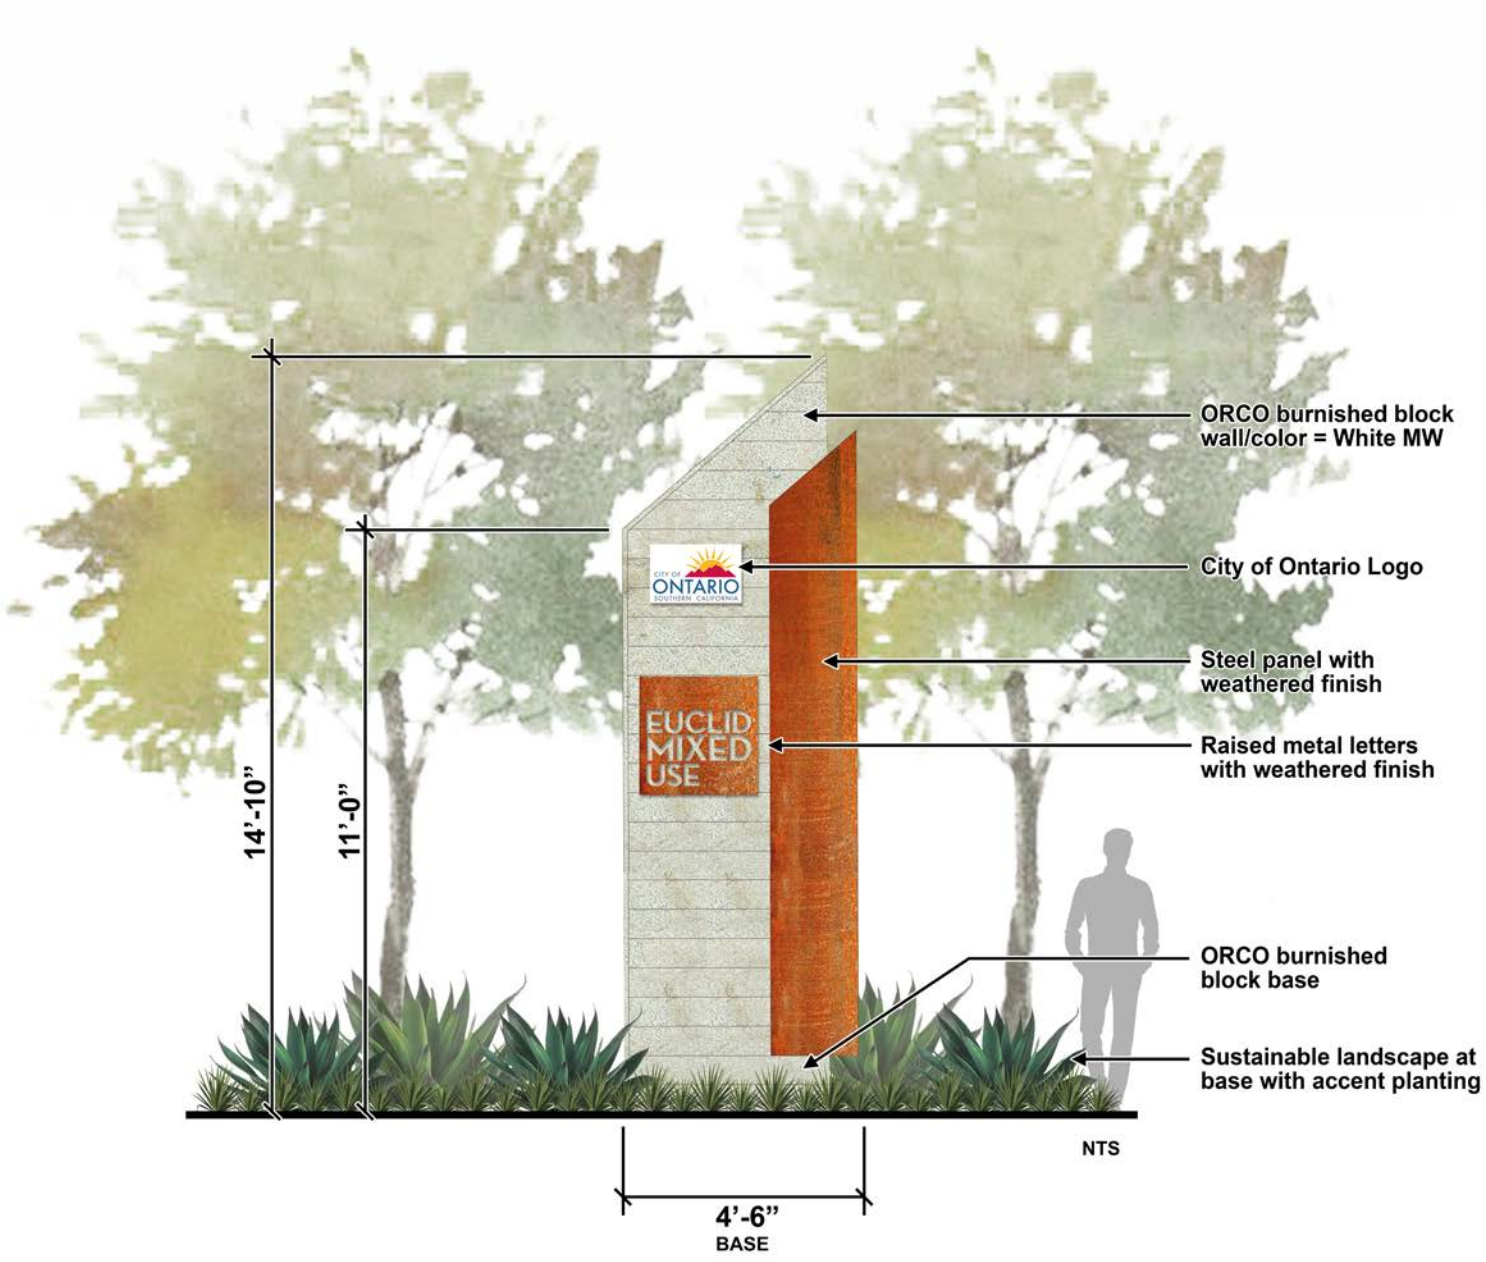


FIGURE 5.6 EUCLID GATEWAY CONCEPT

5.1.3.7 Specific Plan Gateway

A secondary arrival monument is located near the southeast corner of the intersection of Euclid Avenue and Schaefer Avenue within the 50 ft. wide neighborhood edge at the north end of the Business Park District. This Specific Plan Gateway is smaller in scale and reflects a horizontal proportion that is compatible with the architectural form and character of the future Business Park development. Refer to ***Figure 5.7*** Specific Plan Gateway Concept.

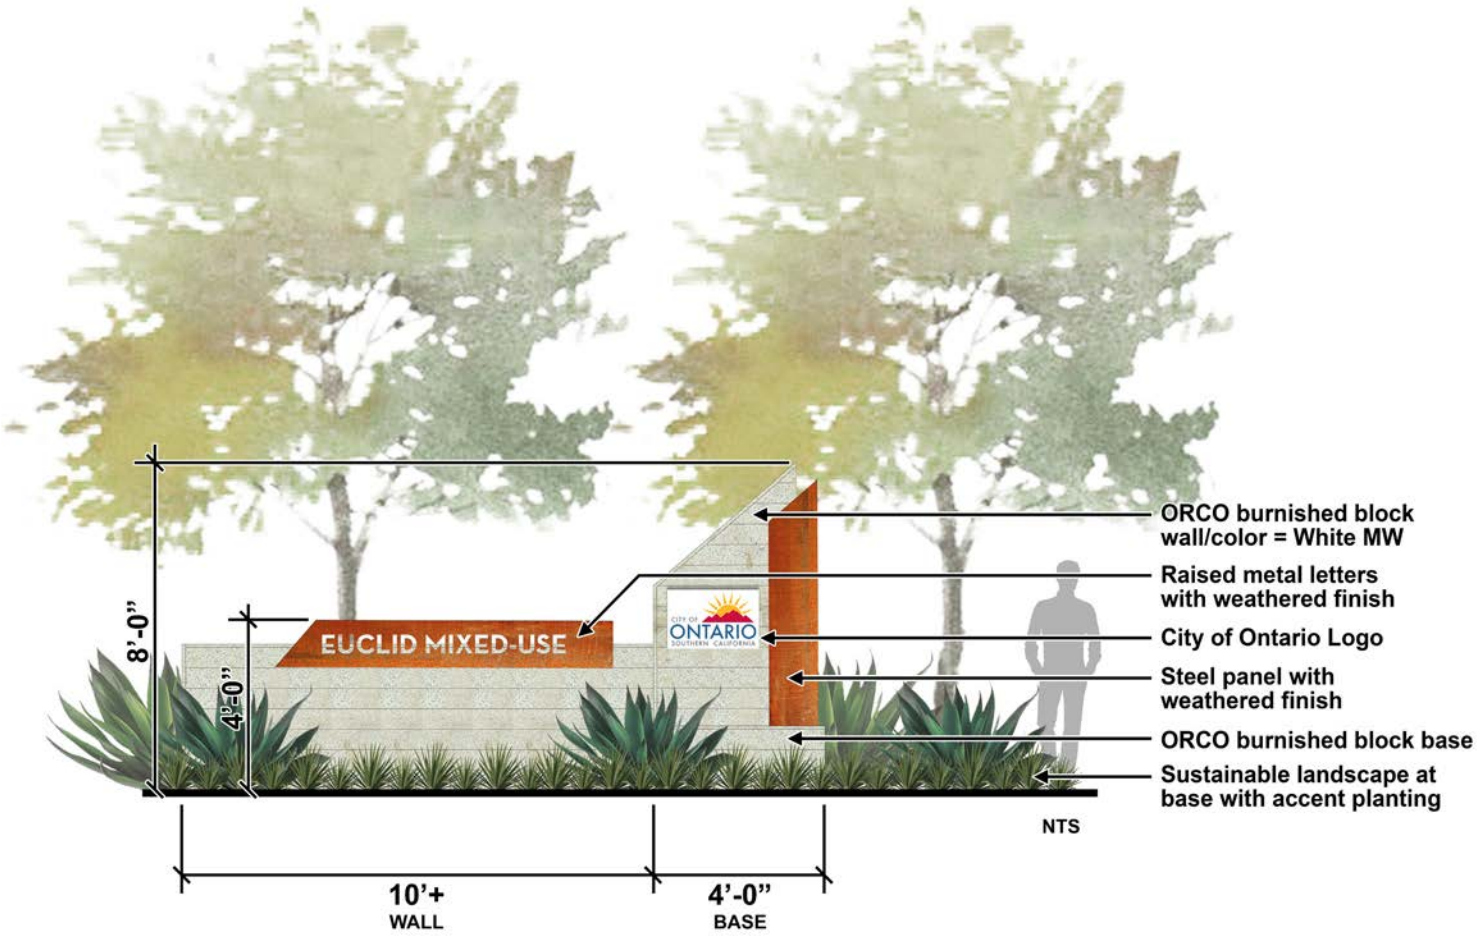

FIGURE 5.7 SPECIFIC PLAN GATEWAY CONCEPT

5.1.4 Plant Palette

The Plant Palette shown in ***Table 5.1*** establishes a base palette for the Specific Plan area and includes a variety of groundcovers, shrubs, ornamental grasses, and evergreen and deciduous trees. The selection complements the design theme of the Euclid Mixed-Use Specific Plan area and features water-efficient, drought-tolerant species native to the region. Similar plant materials may be substituted for the species listed in ***Table 5.1*** if the alternative plants are climate appropriate and enhance the thematic setting.

TABLE 5.1 PLANT PALETTE

BOTANICAL NAME	COMMON NAME	USE
Chilopsis linearis	Desert Willow	Tree
Chitalpa tashkentensis	Chitalpa	Tree
Cinnamomum camphora	Camphor Tree	Tree
Cupressus sempervirens	Italian Cypress	Tree
Heteromeles arbutifolia	Toyon	Tree
Juniperus s. 'Skyrocket'	Skyrocket Juniper	Tree
Koelreuteria bipinnata	Chinese Flame Tree	Tree
Lagerstroemia i 'Muskogee'	Crape Myrtle	Tree
Olea europaea	Olive	Tree
Pinus canariensis	Canary Island Pine	Tree
Pinus eldarica	Afghan Pine	Tree
Pistacia chinensis	Chinese Pistache	Tree
Platanus acerifolia	London Plane	Tree
Platanus racemosa	California Sycamore	Tree
Quercus agrifolia	Coast Live Oak	Tree
Schinus molle	California Pepper	Tree
Tristania conferta	Brisbane Box	Tree
Washingtonia filifera	California Fan Palm	Tree
Phoenix dactylifera	Date Palm	Tree
Acca sellowiana	Pineapple Guava	Shrub
Buxus j. 'Green Beauty'	Japanese Boxwood	Hedge
Callistemon 'Little John'	Dwarf Bottle Brush	Shrub
Carissa macrocarpa 'Tuttle'	Natal Plum	Shrub
Cistus 'Sunset Pink'	Sunset Pink Rockrose	Shrub
Dianella 'Little Rev'	Dwarf Dianella	Shrub
Dianella tasmanica	Dianella	Shrub
Dodonaea viscosa 'Purpurea'	Hopseed Bush	Shrub
Eleagnus pungens	Silverberry	Shrub
Leucophyllum f. 'Green Cloud'	Texas Ranger	Shrub
Ligustrum j. texanum	Texas Privet	Shrub
Pittosporum tobira 'Variegata'	Variegated Mock Orange	Hedge

BOTANICAL NAME	COMMON NAME	USE
Pittosporum t. 'Wheeleri'	Wheeler's Dwarf	Shrub
Rhaphiolepis i. 'Clara'	Indian Hawthorn	Hedge
Rhaphiolepis i. 'Springtime'	Indian Hawthorn	Hedge
Rhamnus californica	Coffeeberry	Shrub
Rhamnus c. 'Mound San Bruno'	Dwarf Coffeeberry	Shrub
Rosmarinus o. 'Tuscan Blue'	Rosemary	Shrub
Salvia c. 'Allen Chickering'	Allen Chickering Sage	Shrub
Salvia greggii	Autumn Sage	Shrub
Salvia leucantha	Mexican Sage	Shrub
Westringia fruticosa	Coast Rosemary	Shrub
Xylosma congestum	Shiny Xylosma	Hedge
Agave 'Blue Flame'	Blue Flame Agave	Accent
Aloe maculata	Soap Aloe	Accent
Aloe petricola	Stone Aloe	Accent
Aloe polyphylla	Spiral Aloe	Accent
Aloe striata	Coral Aloe	Accent
Echeveria 'Ruffles'	Ruffles Echeveria	Accent
Hesperaloe parviflora	Red Yucca	Accent
Acacia redolens 'Low Boy'	Dwarf Acacia	Groundcover
Baccharis p. 'Pigeon Point'	Dwarf Coyote Bush	Groundcover
Baccharis p. 'Centenial'	Coyote Bush	Groundcover
Carex pansa	California Meadow Sedge	Grass
Carex tumulicola	Foothill Sedge	Grass
Festuca mairei	Altas Fescue	Grass
Festuca o. 'Glauca'	Blue Fescue	Grass
Lonicera j. 'Halliana'	Hall's Honeysuckle	Groundcover
Muhlenbergia capillaris	Pink Muhly	Grass
Myoporum parvifolium	Myoporum	Groundcover
Rosa 'Flower Carpet' - Red	Red Flower Carpet Rose	Groundcover
Rosmarinus o. 'Huntington Carpet'	Prostrate Rosemary	Groundcover
Salvia 'Bee's Bliss'	Bee's Bliss Sage	Groundcover
Senecio mandraliscae	Blue Fingers	Groundcover
Sesleria autumnali	Moor Gras	Grass
Trachelopspermum jasminiode	Star Jasmin	Groundcover
Distictus buccinatoria	Blood-red Trumpet Vine	Vine

5.2 Business Park Guidelines

The following Design Guidelines have been developed to ensure a quality-cohesive design structure for Business Park development in the Euclid Mixed-Use Specific Plan. They will provide the City with the necessary assurances that the Specific Plan will develop in accordance with the appropriate design quality and character.

The design guidelines are intended to be flexible and illustrative in nature, with the capability of responding to unanticipated conditions, the market and design trends, while maintaining the following overall objectives:

1. To secure the long-term vitality of The Ontario Plan by implementing its objectives, policies and principles.
2. To provide the City with the necessary assurances that the Specific Plan area will develop in accordance with the design quality and character proposed herein.
3. To serve as design criteria for developers, builders, engineers, architects, landscape architects and other professionals in preparing plans for construction.
4. To lend guidance to the City staff, Planning Commission and City Council in the review and evaluation of future development projects in the Specific Plan area.
5. To provide for the development of Business Park uses which utilize the site's prime location to Ontario Airport.
6. To create a high quality Business Park development that attracts an array of businesses and provides employment opportunities to area residents.
7. To provide Business Park uses within the project boundaries which are compatible with surrounding uses.

5.2.1 Architectural Design

The building design, materials, colors, and textures establish its theme and character. Architecture shall be compatible and complementary with other buildings within the Specific Plan area; however, design diversity is encouraged to provide visual interest. Although development within Planning Area 1 and Planning Area 2 differ in building height and scale, similar design concepts apply as follows:

5.2.1.1 General Architectural Guidelines:

1. Ensure scale, massing, fenestration, materials, and colors are consistent with the building's architectural style and compatible with the overall design in the Specific Plan area.
2. Avoid blank walls by providing articulation on building elevations visible from a public right-of-way through elements such as cornices, parapets, expression lines, and changes in materials and/or colors.
3. Provide the greatest level of articulation on the front facades that are visible from the public rights-of-way and at the main entrances.
4. Design entry features as a significant aspect of a building's overall composition through massing, detailing, architectural treatments, and/or special materials and colors.
5. Employ recessed or covered building entrances to provide shade and visual relief.

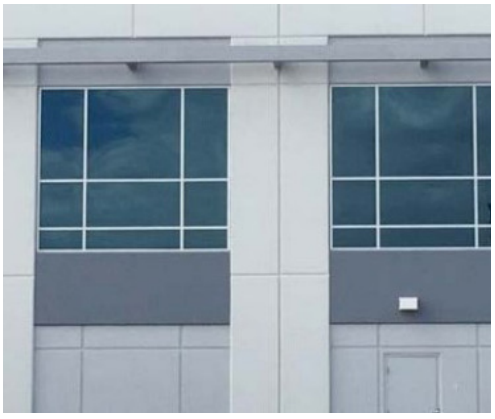
6. Design office buildings, business parks, and office areas of warehouse buildings with an emphasis on the use of windows, architectural details, and building articulation.
7. Integrate the design of warehouse office areas into the overall building composition so they create powerful architectural statements and not visually disjointed "add-ons."
8. Employ a minimum of four different colors, materials, and/or textures on each building.
9. Avoid terminating a change in material or color at a building edge; instead, select a logical termination point in relation to the architectural features or massing.
10. Paint exposed downspouts, service doors, and mechanical screens the same color as the adjacent wall. Exposed downspouts are not permitted on elevations that front onto a street.

5.2.1.2 Site Design

Business Park developments in the Euclid Mixed-Use Specific Plan will allow for employment opportunities to be created for the City of Ontario and surrounding region. Residents of Ontario Ranch will have the ability to access employment not only by automobile but also via pedestrian multi-purpose trails along surrounding arterial streets.

Business Park uses should implement appropriate site planning, architectural and landscape design techniques to be complimentary to the adjacent land uses.

Site design should facilitate the intended functions of developed and open space areas and provide for appropriate interactions between buildings, activity areas, vehicular access, parking, pedestrian paths and bicycle travel.



5.2.1.3 Building Orientation

Buildings within the Business Park area shall be designed to establish an attractive street character along the Specific Plan.

1. Provide a well-organized site plan that emphasizes pedestrian connectivity and attractive landscape areas for the public through the location and arrangement of buildings, circulation, and parking areas.
2. Buildings should be oriented to provide for an aesthetically pleasing streetscape edge along publicly visible edges including Euclid Avenue and Schaefer Avenue.
3. Building sides which are oriented to visible edges should provide more architectural detail and interest such as color blocking, material changes, windows, building wall offsets, pop-outs and architectural accent features to avoid long expanses of monotonous, blank, untreated walls.
4. Orient buildings towards street frontages to create an inviting public perimeter. Enhanced elevations shall be provided for buildings that front Euclid Avenue and Schaefer Avenue.

5. Provide visible pedestrian access to buildings from the street, parking areas, and perimeter sidewalks through signage, prominent architectural features, and landscape design.
6. Locate loading and storage areas away from streets when feasible, ensure adequate space for vehicle backing and maneuvering on-site, and provide adequate parking for loading vehicles so normal traffic flow is not impeded.
7. Orient and screen elements such as trash enclosures, loading bay doors, and service docks to minimize their visibility.
8. Locate service entrance to prevent conflict with front entry.
9. Place electrical rooms and transformers away from front entries and street views.

5.2.2 Landscape Design

Conceptual landscape plans encourage durable landscape materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits. The following guidelines ensure that landscaping plans within the Specific Plan area will comply with City of Ontario Landscape Development Guidelines.

5.2.2.1 General Landscape Guidelines:

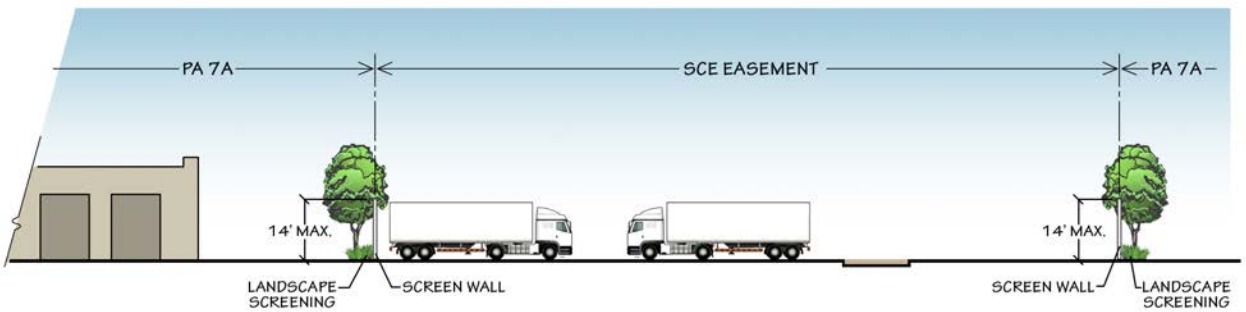
1. Landscape and irrigate all areas of the site not covered by buildings, structures, paving, or impervious surfaces.
2. Design and grade projects to direct storm runoff from building roofs and paved areas into swaled landscape areas for retention/infiltration. Landscape areas may be used for storm water basins and swales at no greater than 40 percent of the available landscape area and may not obstruct the mature root zone of required tree locations.
3. Provide shade for expanses of paving, except with the SCE easement areas, with irrigated shade trees located in appropriate areas where space permits to reduce the impacts of heat gain.
4. Design parking lot landscaping to reduce associated heat buildup, improve aesthetics, and integrate with on-site landscape and adjacent streetscape.
5. Use landscaping to aid in the screening and buffering of mechanical equipment, trash collection areas, loading docks and outside storage areas from public view.
6. Show utilities on plan and keep utilities clear of required tree locations. Coordinate with the landscape plans. Utilities such as backflow devices and transformers shall be screened using landscaping that provides at least 75 percent coverage. Backflow devices and transformers shall be located at least 5 ft. from hardscape to ensure space for landscape screening.
7. Prepare landscape plans that meet the requirements of the Landscape Development Guidelines and provide for the efficient use of water. Plants shall be selected and planted based upon their adaptability to the climate and topographical conditions of the project site.
8. Select drought-tolerant plants such as colorful shrubs and groundcovers, ornamental grasses and succulents, evergreen and deciduous trees, and species native to Southern California or naturalized to the arid Southern California climate.
9. Incorporate water conservation features in landscape and irrigation plans.
10. Place a landscape planter island every ten parking spaces single row and one for every five spaces double row. Planter islands shall be at least 5 ft. in width exclusive of curbs and the length of the abutting parking space. Planter islands shall include at least one tree on every four spaces, appropriate shrubs, and groundcover. Parking areas located within the SCE easement areas or behind screen walls shall not be subject to this provision.

5.2.2.2 Buffering and Screening

To alleviate the unsightly appearance of parking, loading and service areas, buffering and screening design features should be used to enhance the overall development. Any proposed entry gates shall be reviewed and approved by the City of Ontario Traffic and Transportation Division prior to installation.

5.2.2.2.1 Parking Lots

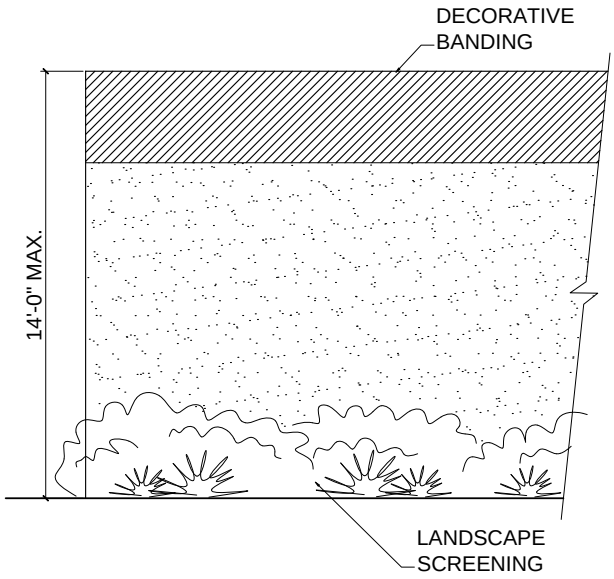
1. Buffer parking lots adjacent to and visible from public streets using a combination of architectural wing walls, buildings, decorative screen walls, evergreen hedges, and landscape buffers.
2. Use plants for screening that are a minimum of 3 ft. tall at the time of installation.



5.2.2.2.2 Loading and Service Areas (Truck Courts)

1. Screen loading docks and truck parking areas visible from Euclid Avenue, Eucalyptus Avenue, and Sultana Avenue. Screening may include portions of buildings and/or decorative walls. Landscaping and evergreen hedges shall be provided to soften screen walls.
2. Incorporate gated/screened entrances to loading areas into the overall architectural design of the development.
3. Design walls and fencing a minimum of 8 ft. high and a maximum of 14 ft. high, as measured from finished grade, to screen truck courts and hide views of the top of loading bays or trailers.
4. Utilize portions of a building, architectural wing walls, and/or landscaping to screen service areas.
5. Screen ground- and roof-mounted mechanical equipment from public view. Ground-mounted equipment shall be screened with decorative walls or landscaping. Building architecture shall be designed to screen roof-mounted equipment.
6. Ensure refuse containers are easily accessible by service vehicles yet screened from public view within the building's façade or within a walled enclosure.

5.2.2.3 Walls and Fences



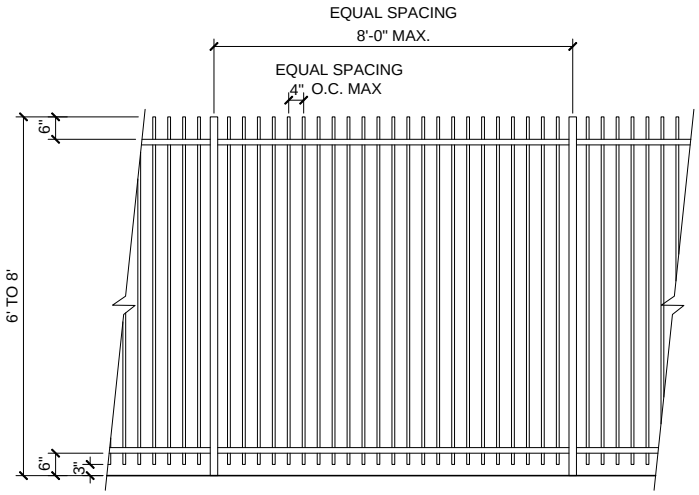
Walls and fences are an important design feature intended to both complement building and landscape architecture and provide functional elements. Any proposed entry gates shall be reviewed and approved by the City of Ontario Traffic and Transportation Division prior to installation and will be permitted only if approved.

Key provisions include:

1. Provide attractive, durable, and complementary wall and fencing materials consistent with the building design.
2. Offset and/or architecturally treat long expanses of wall surfaces along perimeter streets every 50 ft. with material changes, pilasters and posts, staggered walls, or landscape treatments to prevent visual monotony.
3. Soften the appearance of fencing with plants that reach the height of the wall or fence at maturity.
4. Construct sliding gates visible from a public street with tubular steel, vertical steel pickets, or high-density perforated metal screening painted to match or complement adjacent walls. Interior gates not visible to public view may be galvanized steel or chain link.
5. Prohibit chain link fencing visible to the public.

5.2.2.3.1 Solid Walls

a. Solid walls shall not exceed 14 ft. in height unless expressly required in a sound study conducted by a qualified acoustic engineer.
b. Walls facing and/or viewed by the public spaces shall be decorative in nature. Approved materials include concrete tilt-up walls with a decorative banding or finish detailing, split face block or stucco.
c. Walls along perimeter streets in excess of 50 ft. long shall include a decorative pilaster or horizontal plane break every 50 ft..
d. Wall materials and colors shall match or be in harmony with adjacent buildings or architectural features.



5.2.2.3.2 Perimeter Fencing

a. Perimeter fencing may be implemented along SCE easements, compatible land uses or where visual access is deemed appropriate.

b. Perimeter fencing shall consist of 6 to 8 ft. high tubular steel or aluminum fencing with or without vertical pickets. The maximum height of fencing installed along the SCE Easements within the interior of the Specific Plan area may be increased to 14 ft. to provide additional site security.

c. Perimeter fencing shall be black in color and appropriately treated to prevent rust. Alternative colors may be approved subject to approval by the Planning Director.

5.2.2.4 Lighting

Site lighting provides illumination for operations, safety, security, and ambiance in parking lots, loading dock areas, pedestrian walkways, building entrances, signage, and architectural and landscape features.

Key provisions include:

1. Choose lighting fixtures that complement the building architecture and promote consistency throughout the Planning Areas.
2. Install ground or low mounted fixtures to provide safety and convenience along pedestrian walkways, entrances, activity areas, steps, ramps, and special features.
3. Allow building-mounted accent lighting for general illumination, provided there is no light spill or distraction onto roadways or adjacent property. Plain shoebox or unshielded wall packs are not permitted.
4. Direct exterior lighting fixtures downward to avoid unnecessary light spill and glare.
5. Limit pole-mounted, building-mounted, or tree-mounted lighting fixtures to no more than 30 ft. in height to minimize light spill and glare.
6. Shield and direct pole-mounted lights away from public streets.
7. Ensure exterior lighting is consistent with the Chino Airport Land Use Compatibility Plan.
8. Design parking lot lighting to avoid placing fixtures in required tree locations.

5.2.2.5 Signage

Approval of a comprehensive sign program shall be required for development within the Specific Plan area. A sign program facilitates integration of signs with the overall site and building design to create a unified visual statement and provide for flexible application of sign regulations in the design and display of multiple signs.

Key provisions include:

1. Install an entry monument at the northeast corner of Euclid Avenue and Edison Avenue to identify the Ontario Ranch and the Euclid Mixed-Use Specific Plan areas. Entry monuments shall be designed in accordance with City of Ontario Traffic and Transportation Guidelines for monument placement.
2. Employ signage to identify a center and tenants within a center, direct vehicular traffic, and provide on-site way-finding for pedestrians.
3. Employ signage to give directions to loading and receiving, visitor parking, and other special uses.
4. Provide a unifying sign theme in developments with multiple users.
5. Coordinate signage with the building design, materials, color, size, and placement.
6. Select signage with backlit or internally illuminated individual channel letters. Can-type box signs with translucent backlit panels are discouraged.
7. Avoid covering significant architectural elements with signage.
8. Position flush-mounted signs with respect to architectural features and align with signs on other buildings to maintain a pattern.
9. Place street address signs perpendicular to approaching vehicular traffic.
10. Ensure signage located within a landscaped planter is not blocked or damaged by plant materials.
11. Conserve energy by utilizing an automatic illumination shut-off mechanism when businesses are closed.
12. Construct signs from high quality materials and avoid exposed wiring, ballasts, conduits, fasteners, raceways, or similar hardware.

5.3 Mixed-Use Commercial/Office Guidelines

Euclid Mixed-Use Specific Plan allows for Commercial and Office developments within Planning Areas 3A and 3B along Euclid Avenue and Edison Avenue. These areas combine for approximately 19 acres and will be designed to create a place for surrounding residents to have access to shopping and employment opportunities nearby. Surrounding residents will have the ability to access services by foot, or ride their bicycles to work via pedestrian trails connecting the community to the overall Ontario Ranch and the rest of the City of Ontario.

The location of PA 3A and 3B along Euclid creates the opportunity for a major gateway monument. This gateway will provide a sense of place for the Euclid Mixed-Use area and will establish a cohesive development design character defining the western City boundary. In order to maintain an overall character of Euclid Mixed-Use area, combining Business Park and Mixed-Uses, future commercial and/or office development is expected to be developed with a compatible and harmonious quality.

These Commercial/Office Design Guidelines will help direct the development of the area to enhance the pedestrian experience that positively contributes to the character of Euclid Mixed-Use Specific Plan area. These guidelines are general in nature and are not intended to be strictly enforced rules, but as a tool in aiding the design process. Developers of future commercial and/or office projects will be required to submit Development Plans to demonstrate consistency with the Euclid Mixed-Use Specific Plan, including these Guidelines, for City approval.

5.3.1 Architectural Design

5.3.1.1 Guiding Principles

Guiding Principles for commercial/office design for Euclid Mixed-Use Specific Plan are:

Buildings should contribute to a qualitative nature of the overall neighborhood.

- Proper scale and proportions in massing and details should be used
- Pedestrian open spaces should be provided
- Massing and articulation should be varied
- Buildings shall be designed at a human-scale

Buildings should have an enduring quality.

- Design should draw inspiration from the rich and diverse Southern California architectural heritage
- Materials and colors typical to Southern California should be used
- Details and ornamentation should be authentic
- Design shall create an inviting place to shop and work

5.3.1.2 Site Planning

Orientation

Buildings should be oriented for optimal visibility from the street. Windows and entries should face the street avoiding blank walls dominating public views. Stores with entries not visible from the street may be oriented towards pedestrian open space and all primary entries should face onto a street or a connecting walkway.

Building clusterings are recommended to help define parking lot areas and encourage walking between stores. Building entries and storefronts should be positioned close to one another to reduce walking distances between them.

Driveways and Sidewalks

The site shall be provided with an adequate number of driveways to facilitate circulation and also reduce the traffic impact along the surrounding arterials. Pedestrian crossing distances should be minimized at driveways. All driveways and sidewalks shall be constructed per City Standards and to the satisfaction of the City Engineer. No decorative paving will be allowed in the public right-of-way unless otherwise approved by the City Engineer.

Street Frontage and Buildings

Streetside buildings, or those with no parking separating them from the street, should use windows and entry features to soften the building's appearance to the street.

Streetside Setbacks and Buildings

The sides of buildings along street edges shall be landscaped within the setback to soften the building's appearance as well as designed with windows or design elements.

Refuse Containers, Utility and Mechanical Equipment

Refuse containers and equipment shall be easily accessed by service vehicles. They shall be screened from view of the streets, parking lots, and connecting walkways through roof forms, walls and/or landscaping.

Screening details should incorporate elements that are compatible to the architectural style of the buildings. Proper landscaping, including trellises, may also help to screen these elements. Equipment and enclosures shall not be located near pedestrian walkways. Roof-mounted equipment shall be screened by the roof/ parapet.

Sidewalks

Sidewalks shall be located along natural pedestrian travel paths. Public sidewalks should be a minimum of 5' wide. All walkways shall be a minimum of 4 ft. wide and all walkways within developments in the Specific Plan area will comply withe ADA standards for accessibility.

5.3.1.3 Building Design

Massing

With larger buildings, appropriate massing becomes more important to maintain the human-scale of the development and create a visually pleasing environment. Bay windows, stepped buildings, height changes and setback variations between stores help to break up large buildings as well as indicate entries and store locations to customers. Tower elements or monumental features are encouraged at focal points, such as corners, plazas, major entrances, or where walkways meet streets.

Varying setbacks along the front façade of buildings are recommended to create small outdoor public spaces for pedestrians to gather and sit.

Roof Forms

Roof pitches shall be compatible to the architectural style of the buildings. Flat roofs should vary in height and be accompanied by cornice, trim or other accent features.

Arcades and Awnings

Outdoor arcades along store fronts are encouraged over pedestrian walkways. Arcades may be used to connect separate buildings providing a more pleasing experience for pedestrians. Trellises or awnings may also be used to create a covered walkway to protect pedestrians from the sun and rain.

Entry Design

Building entries shall be prominent and easily identified. Various elements can be used to enhance the entry features including massing variation, materials and color change, change in roof form, and awnings. For smaller retail buildings, part of a cluster or strip, arcades, awnings and simple signage may be acceptable as entries.

No signs shall be placed in the public right-of-way and shall be in accordance with City standards regarding corner site distance.

Design Flexibility

Retail spaces exceeding 30,000 s.f. should be designed with the flexibility to be divisible into smaller retail spaces, should future market demand change.

Façades that are visible from adjacent streets or walkways should display even greater visual interest by using architectural elements that break up the massing of large buildings, such as windows, arcades, awnings, porticos, and other architectural features.

Base and Top Treatments

Base and top treatments help to balance the “weight” of the building visually. Bases should appear to “ground” the building, while tops create a defined edge to the roofline. Possible treatment techniques are as follows:

Base:

- Natural materials
- Enriched landscaping with a mature height of at least 18”
- Pre-cast materials
- Other decorative, durable materials as approved by the City
- Thicker walls

Tops:

- Cornice treatments
- Roof overhangs with brackets
- Stepped parapets
- Textured materials - Colored “stripes” are not acceptable as the only treatment.

Exterior Materials

Recommended materials include, but are not limited to stucco, exterior plaster, brick, wood siding, tile, pre-cast concrete or stone. Exterior materials that appear pre-fabricated are not recommended.

Selected materials and detailing should have an enduring appearance. Foam products should be avoided at the pedestrian level.

Roof Materials

Roofing materials that are generally acceptable include standing metal seam, concrete tile, tile and slate or slate-like materials. Asphalt or wood shingles are prohibited.

Colors

Color selection shall be consistent with the selected architectural style.

5.3.2 Landscape Design

The Mixed-Use area of the Euclid Mixed-Use Specific Plan will be developed both architecturally and through landscape treatments to create a distinct community character and to ensure a cohesive aesthetic with the Business Park areas of the Specific Plan. The land plan encourages integration of the Business Park and Mixed-Use areas by providing for a consistent landscape treatments along the frontage on Euclid Avenue and Edison Avenue, while also incorporating a major gateway monument.

5.3.2.1 Minimum Landscape Requirements

1. Builder/developer shall refer to City of Ontario standards for the percentage of gross commercial site acreage required to be landscaped.
2. All areas of the site not occupied by buildings, parking or otherwise utilized shall be landscaped with groundcover, turf or tree materials from the community plant list.
3. Appropriate street trees should be utilized adjacent to street frontage integrating the site into the overall community setting.
4. Side yard and rear service yard use areas should be screened with a combination of a 6 ft. wall and dense landscape buffer. Tubular steel fencing and gates should be used adjacent to interior residential streets to control access points.
5. Accent tree entry planting should be incorporated at the site's vehicular access points.
6. No shrubs higher than 3 ft. and no tree canopy lower than 7 ft. as to allow officers on patrol the ability to view the business.
7. Plants by low-lying windows may have thorns as a deterrent.

Parking Areas

- Where a parking lot contains 10 or more parking spaces and is visible from a street, no less than 10% of the total area (excluding any perimeter landscaping), shall be landscaped. Such landscaping shall not be concentrated in any one location. A minimum of 50% of the plant material shall be canopy or shade trees and shrubs shall be 3 ft. high or less to provide clear visibility.
- All rows of parking spaces shall be provided with landscape islands at each row terminus to protect parked vehicles, ensure visibility, confine moving traffic to drive aisles and driveways, and provide space for landscaping. Within each row of parking spaces, landscape islands shall be placed one for every 10 spaces a single row and one for every 5 spaces double row to prevent more than 10 vehicles from being parked side-by-side in an abutting configuration. These landscape islands shall measure a minimum of 5 ft. in width, exclusive of curbs. Creation of large planting islands (tree groves) are encouraged as opposed to small pockets of individual trees.
- Planter islands for a single row of parking spaces shall be landscaped with at least one (1) tree for every 4 spaces and vegetative groundcover or turf. Planter islands for a double row of parking spaces shall contain not less than two (2) trees and vegetative groundcover or turf.
- Landscaped areas shall be delineated with a concrete curb which may have curb cuts to facilitate sheet flow runoff from parking lots to infiltrate the landscape planters.
- Parking area landscaping is required for the screening of large parking areas to limit their visual impact.
- When parking is located adjacent to a public street or interior residential street, a combination of landscaped berms and/or planting totaling 3 ft. high is to be used to screen views of parked cars.
- Wherever possible, pedestrian traffic should be separated from vehicular traffic by additional sidewalks. The parking lot should have crosswalks highlighted with decorative or varied texture paving.

5.3.2.2 Landscape and Open Space Design

Landscaping

Landscaping helps to soften the feel of the buildings and parking lot, while enhancing the visual aspect of the site. The following landscaping techniques may be used:

- Provide special landscaping treatment at all project and building entries.
- Provide shade/canopy trees within parking areas.
- Use plants to define outdoor spaces such as along edges, outdoor plazas, or pathways between parking and building entrances.
- Plantings shall provide a continuity of form across the entire project.

Site Accessories

Site accessories, such as recycling bins, bike racks, litter cans, planters, benches and transit shelters, should use materials and have an architectural character consistent with the overall project. These accessories should be graffiti-resistant with materials that are easy to clean and paint.

Connecting Walkways

Walkways within commercial and/or office areas of the Specific Plan shall connect the various buildings to each other and to the sidewalks along adjacent arterials. Use of trellises, landscaping, seating areas and building placement adjacent to one another will encourage pedestrian activity within retail areas. A typical walkway shall be a minimum of 6' wide. In large parking lots, pedestrian walkways shall be provided within the median of at least 1 parking aisle for 8 aisles of 20 stalls or more.

Pedestrian walkways that may also be used for emergency access must allow minimum clearance of 26' wide and 14' vertical clearance. Off-site connections shall be provided from the neighborhood center to Euclid Mixed-Use's residential development.

Outdoor Storage Areas

Outdoor storage areas should be incorporated into the design of a project to avoid visual impacts on the site. Outdoor storage areas shall be located away from the street, behind or to the side of buildings. Walls and landscaping shall be used to screen stored materials. Materials placed in front of buildings are not permitted.

Transit Shelters

Transit shelters should be incorporated into the design of neighborhood center. The design of transit related structures shall be integrated architecturally with the project through its color, materials and architectural style. Walkways shall be provided for easy accessibility by pedestrians moving to and from transit stops to the Neighborhood Center.

Fence and Wall Design

Except for security fencing adjacent to the SCE easements, chain-link fencing, barbed wire, corrugated metal fencing and tennis windscreens are not permitted. Fences and walls should be built with attractive, durable materials, including (but not limited to) wrought iron, textured concrete block, or formed concrete with reveals. Fences or walls should be consistent with architectural style, materials and designs used throughout the project.

Perimeter walls and fences constructed with commercial or office development adjacent to residential areas within the MIxed Used District shall not exceed a maximum height of 6 ft. unless required for noise attenuation or visual screening and approved by the Planning Director.

Walls over 6 ft. tall shall be an enhanced material/finish such as textured block/block patterns, enhanced textured or sculpted concrete walls or similar enhancement.

Along streets, walls and fences should not exceed 36” in height and long expanses of uninterrupted fences and walls should be avoided. Use of openings, planter boxes, material changes, pilasters or posts are acceptable. Openings shall be provided to connect walkways directly to the street avoiding long, inconvenient walking paths. These pedestrian portals should be announced by pilasters, trellis, special landscaping, or other features.

Lighting

On-site lighting standards shall provide adequate illumination throughout the site during the nighttime hours. Lighting fixtures shall be designed to be compatible with the architectural styles selected for the project. All light standards should have an attractive base and top.

Along pedestrian walks, lighting fixtures should not exceed 12’ in height and may include lighting within bollards. Pedestrian lighting shall provide appropriate illumination at a human scale without too much glare. Lighting within larger parking lots shall not exceed 25’ in height, providing enough visibility for customers and employees to walk safely to their vehicles. The same bulb type shall be used for all parking lot and pedestrian lighting fixtures within the development. Service area lighting should be positioned, so no bulbs can be seen from public view. Any street light within the public right-of-way shall be per City standards and to the satisfaction of the City Engineer.

5.4 Mixed-Use Residential Guidelines

The residential design concept for Euclid Mixed-Use seeks to blend the traditional architectural styles found in the surrounding region with contemporary lifestyles, building methods, technologies and materials. The specific architectural influences selected as appropriate for The Euclid Mixed-Use Specific Plan include Adaptive Spanish, Transitional Farmhouse and Modern Contemporary styles. The design aspects of each of these styles will be further described in the following guidelines.

5.4.1 Architectural Design

5.4.1.1 Guiding Principles

Guiding Principles residential design for Euclid Mixed-Use Specific Plan are:

1. Reinforce a unique and interesting architectural heritage as the community develops
2. Ensure compatible and complementary styles, colors, materials and detailing
3. Establish massing, setbacks and articulation which are appropriate and fundamentally sound
4. Create a neighborhood that effects historical relevance and timelessness
5. Provide design criteria that is adaptable and flexible to changing market desires

5.4.1.2 Architectural Influences

There are three Architectural Influences in the Mixed-Use Specific Plan:

1. Adaptive Spanish
2. Transitional Farmhouse
3. Modern Contemporary
4. Art Deco

Adaptive Spanish

History and Character:

The Adaptive Spanish style is an expression of historic European regional and Southwest American architectural styles. The design incorporates the simple massing and forms of Spanish estates and the simple forms such as arches, curved walls and recessed openings to emphasize the clean lines and simple detailing, typical of modern building design to develop more contemporary interpretation that reflects Southern European influences. This style includes interpretations of Spanish, Monterey, and Santa Barbara architecture.

General Attributes:

- Simple building massing to reinforce the intended historic style.
- Large simple hip and gable roofs with mission tile. Accent parapet/flat roofs allowed.
- Smooth stucco finish with deep recesses or pop-outs.
- Square or vertically proportioned windows with simple or no trim details.
- Light exterior building colors with contrasting details such as wood trim/fascias, window frames, and doors.
- Simple accents such as extended rafters, window shutters and wrought iron details.

Transitional Farmhouse

History and Character:

The Transitional Farmhouse style is an interpretive style based upon early American architecture. The design inspiration uses modern building forms and construction materials to develop more contemporary designs to reflect the character of a typical Midwestern town from an simpler time period. The Transitional Farmhouse style incorporates clean lines and simplified architectural detailing to reinforce the intended aesthetic character. This style includes interpretations of Colonial and American Traditional vernaculars.

General Attributes:

- Vertical building massing to reflect historic building forms.
- Simple gable roof planes, including symmetrical and asymmetrical forms/pitches and limited flat roofs.
- Flat roof tile or architectural shingle roof materials.
- Horizontal or vertical siding or stucco finish with limited masonry accents.
- Predominately vertically proportioned windows with simple or trim. Decorative window shutters.
- Contrasting exterior building shades with accented details such as fascias, shutters, window frames, doors and gable detailing.

Modern Contemporary

History and Character:

Modern or contemporary design integrates traditional concepts about residential design with a revivalist interpretation, using current construction materials to develop more functional designs that reflect the surrounding climate and environmental considerations such as solar aspect, etc. Modern Contemporary architecture uses horizontal building proportions with vertical accent forms. This style incorporates minimal ornamentation and clean, simplified architectural detailing. This style includes contemporary architecture such as International, Mid Century Modern and Art Deco interpretations.

General Attributes:

- Building massing to reinforce the intended period style.
- Large simple roof planes, including asymmetrical roof forms and limited flat roofs.
- Horizontal siding or smooth stucco finish.
- Square or vertically proportioned windows with simple or no trim details.
- Light exterior building shades with contrasting details such as wood trim/fascias, window frames, doors and simple window shutters.
- Wall plane breaks and massing forms with accent materials.
- Utilize window accents such as awnings and window framing to add visual interest and shade.

Art Deco

History and Character:

The Art Deco style, including the Moderne style, became popular in the mid 1920's, combining elements of contemporary architecture with elements of the decorative arts movement.
This design, utilized a repetition of building massing and fenestration using form and decorative patterns. Art Deco architecture uses strong colors and geometric shapes with accenting vertical forms and utilizes clean, simplified architectural detailing. This style includes contemporary sub-styles such as such as Art Moderne and Streamline styles.

General Attributes:

- Symmetrical building massing and aerodynamic forms to reinforce the intended character.
- Narrow, simple building cap elements or curved roof forms, including projecting roof forms and the use of flat roofs.
- Accent siding or decorative panels or smooth stucco finish.
- Predominantly vertically proportioned windows with simple or no trim details.
- Bold exterior accent colors on muted building with contrasting highlighted elements such as metal trim/fascia detailing, simple window and door frames and use of glass block.
- Wall plane breaks and massing forms with accent materials.
- Horizontal window canopies used to add visual interest and horizontal elevation changes.

5.4.1.3 Building Design

Massing

Building massing shall be appropriately scaled to the sensitive surrounding uses. The composition of the building mass shall include the incorporation of one and two story elements into three to five story buildings, variable setbacks along building elevations to minimize large unarticulated building façades, and the development of four-sided elevations through articulation and detailing.

Roof Forms

Roof forms are critical in creating interest to the building mass. Roof forms and material finishes help blend the structures into the landscape through shadow patterns, texture, color variations and visual interruption of vertical walls and planes. Visible roof forms, lines and ridges should be varied. Architectural features, materials and roof pitches should be consistent with each style.

Window and Doors

The window treatment should be consistent with the style of architecture. Appropriate window treatments such as recessed windows, windows with divided lights/multi-paned windows, rectangular or arched forms should be incorporated into all visible primary windows to reinforce the building character.

Window sizing and scale must be consistent with the architectural character and building massing. Decorative elements such as shutters should be properly sized to the window opening.

5.4.2 Landscape Design

Residential Landscape Design Guidelines describe the key elements of the proposed landscape treatments for residential development within the Euclid Mixed-Use Specific Plan area, which will develop over several years. These guidelines will help maintain a consistent design theme in a high quality, visually attractive and resource efficient framework.

The objectives of these Landscape Design Guidelines are:

1. To provide guidance to developers and builders, as well as to engineers, architects, landscape architects and other professionals, as to the quality and character of the landscape treatment within the Euclid Mixed-Use Specific Plan.
2. To assure the City of Ontario that Euclid Mixed-Use area will develop in accordance with the guidelines provided herein.
3. To provide guidance to City decision makers in the review of future residential development projects in Euclid Mixed-Use Specific plan.
4. To provide guidance in formulating Covenants, Conditions and Restrictions.

These Landscape Design Guidelines are intended to be flexible and are, therefore, illustrative in nature. As a flexible document, the guidelines can, over time, accommodate changing community desires, economic conditions and the marketplace.

5.4.2.1 Minimum Landscape Requirements

1. Landscaping in public areas should reflect the overall design character and landscape treatment to reinforce a comprehensive and unified “sense of place” and quality of appearance established by the Euclid Mixed-Use Specific Plan and these Guidelines.
2. All City maintained landscaping shall be consistent with the City of Ontario Landscape requirements and the Ontario Ranch Streetscape Master Plan.
3. Private streets, drives and common landscape areas shall be consistent with the City Of Ontario landscape requirement and this Specific Plan.
4. Private streets and drives within residential neighborhoods where garages and parking stalls do not front onto the drive shall be designed to accommodate pedestrian accessibility. A 4 ft. minimum landscaped parkway should be provided along unloaded private streets and drives where walkways occur.
5. Landscaped areas should be designed to be as water-efficient as possible and shall be irrigated with automatic systems using recycled water.
6. Turf areas should be limited to open areas such as gathering spaces or play areas and should not be used in landscape parkways and slope areas.
7. Parking areas shall provide a minimum 9 ft. wide planting island to allow for the long term sustainability of appropriate tree species.
8. Trash enclosures shall be located with minimum 5 ft. wide planting areas to allow for vertical shrubs/hedges to soften the enclosure walls.

5.4.2.2 Common Area Landscape Design

Landscape design is an important element within residential neighborhoods. Landscaping helps to soften walls and building edges and enhances and reinforces the overall architectural character of the neighborhood. Landscaping design should accentuate building entries, identify walkways and support wayfinding and accessibility to open space and amenities, provide shade for walkways and parking areas and provide a visual continuity within the neighborhood and the surrounding uses in and around the Euclid Mixed-Use Specific Plan area.

Neighborhood Connectivity

Connectivity between residential neighborhoods and other compatible uses within the Euclid Mixed -Use Specific Plan should be encouraged at a pedestrian level and should also consider bicycles and other non-vehicular modes of travel. Pedestrian walkways should be designed to be safe and efficient and should be shaded by trees wherever feasible.

An SCE easement (PA 5) extends in an East/West direction through the Specific Plan area separating the Business Park District and the Mixed-Use District. This easement may provide an opportunity for additional pedestrian and bicycle connectivity within the Euclid Mixed-Use Specific Plan area.

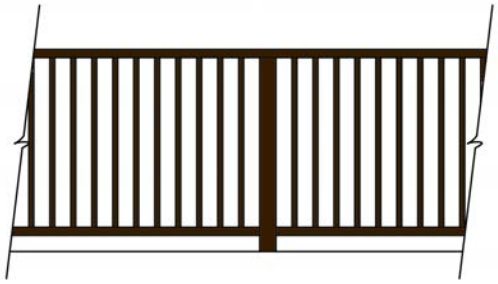
Parks/Open Space

Residential developments within the Euclid Mixed-Use Specific Plan shall provide park areas for recreational amenities on-site and also provide private open space for each unit.

- On site parks will be provided to meet the needs of future residents. A minimum of 2.0 acres/1000 residents shall be provided within the residential neighborhood per The Ontario Plan.
- Onsite parks shall be at least 0.25 acres in size with a minimum dimension of 30 ft. wide.
- Parks and recreational amenities shall be designed to be visible from internal streets. Residential units should be oriented to face “eyes” onto parks and common open spaces.
- Private open space shall be provided for all residential units:
  - Ground floor units with patios shall be required to provide 140 s.f. of private open space per unit with a minimum dimension of 5 ft..
  - Units on upper floors and ground floor units without patios shall provide a minimum of 50 s.f. of private enclosed open space such as a courtyard or balcony with a minimum dimension of 5 ft.

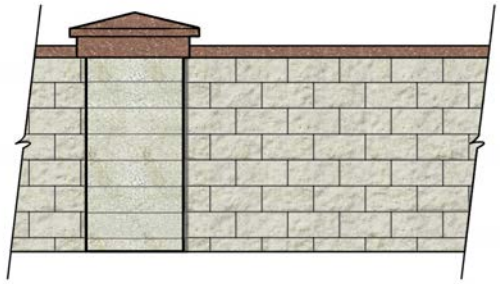
Parking Areas

Resident and guest parking should be conveniently located within each individual neighborhood. Parking areas should be softened with landscaping and shaded by trees to enhance the aesthetic character and reduce heat gain associated with paved areas.



- Residential parking lots shall be designed to screen parked cars from adjacent public streets. Acceptable screening methods include any combination of decorative walls, landscape berms and evergreen plant material.
- Parking spaces shall be limited to 8 or less spaces in a row. A landscape planter shall be installed to accommodate a shade tree in parking areas.

- Landscape planters should be provided at cross-walk locations.
- Pedestrian accessibility and connectivity should be facilitated within parking areas. Decorative paving should be utilized at crosswalks and where walkways and parking driveways intersect.



Fence and Wall Design

Community fences and walls are design features which can help unify the landscape character within a planned area. Perimeter community fences and walls within the Euclid Mixed-Use Specific Plan shall reflect a design aesthetic that will coordinate the varied uses allowed in the Business Park and Mixed-Use Districts. Community walls and accent pilasters will utilize colors and material that are compatible with the Gateway monuments. Community pilasters will mirror the simple forms, durable materials and clean lines and details of the Gateways. Within the Specific Plan area, all visible perimeter walls within the Mixed-Use District shall be consistent with the approved Community Wall detail below. Interior residential walls should be compatible in design and color of the overall wall treatment within the Euclid Mixed-Use Specific Plan area.

Community Fences will be tubular steel with a simple vertical picket design with a top rail and minimal ornamentation per the Community Fence detail below. The fence color will be compatible with the approved Community Pilasters. See Community Pilaster detail below.

TUBULAR STEEL VIEW FENCE
Open tubular steel fencing is typically utilized in rear yards where view preservation is desirable.

COMMUNITY THEME WALL AND PILASTER
Community theme wall with colored block pilaster along project perimeter.

COMMUNITY THEME WALL
Community theme colored split-face block wall along project border.

Landscape Lighting

Landscape and other exterior lighting within the Euclid Mixed-Use Specific Plan shall be designed to be compatible and reflect a unified design character. Landscape lighting in residential neighborhoods should reflect a contemporary design and maintain a uniformity in style material and color.
Direction signs and address signage shall be back-lit or directly illuminated. All walkways and open space areas will be illuminated to provide a safe and inviting experience for pedestrians. Pathway lighting shall be low voltage.

6. SPECIFIC PLAN IMPLEMENTATION

This section of the Specific Plan summarizes the process for implementation of the Euclid Mixed-Use Specific Plan and provides for the orderly development of the Specific Plan area.

6.1 Applicability

The provisions, guidelines, and regulations contained within this Specific Plan provide the standards for land uses and development within Euclid Mixed-Use Specific Plan area. The Specific Plan supersedes the development standards and regulations of the Ontario Development Code, unless stated otherwise in this document. Whenever the provisions development standards and regulations of the Specific Plan conflict with those of the Ontario Development Code, the Specific Plan shall take precedence. Where the Specific Plan is silent, the Ontario Development Code shall apply.

6.1.1 Definition of Terms

The definitions of terms used within the Specific Plan shall mean the same as the Ontario Development Code, unless otherwise noted.

6.2 Severability

The Specific Plan serves as the implementation tool for the City's Policy Plan (The Ontario Plan). In the event that any provision of this Specific Plan or its application to any person or circumstance is held to be invalid or unconstitutional by any court of competent jurisdiction, such portion shall be deemed separate, distinct and independent, and shall not affect the validity of the remaining provisions of this Specific Plan or applications thereof, which can be implemented without the invalid provision or application.

6.3 Interpretation

If a condition or situation occurs that is not sufficiently covered or provided for in this Specific Plan, those that are applicable for the most similar issue, condition, or situation shall be used. Any interpretation of a condition or situation concerning the content or application of the Specific Plan shall be resolved by the City Planning Director in a manner consistent with the goals, policies, objectives, and intent established in the Specific Plan.

6.4 Consistency with Other Plans and Regulations

This sub-section discusses consistency of the Specific Plan with other relevant plans and regulations including The Ontario Plan, Ontario International and Chino Airport Compatibility Plans, State of California building Codes and CEQA.

6.4.1 Consistency with The Ontario Plan

No land use, activity, or facility shall be permitted that is inconsistent with the objectives, policies, general land uses, and programs of The Ontario Plan, as amended. The Euclid Mixed-Use Specific Plan entitlement application proposes land use designations of Business Park and Mixed-Use development consistent with The Ontario Plan 2050.

6.4.2 Consistency with Airport Land Use Compatibility Plans

Projects located within the Specific Plan area are subject to the restrictions and provisions of the Airport Land Use Compatibility Plans prepared for Ontario International Airport and Chino Airport.

6.4.3 Consistency with California Building Code

Projects located within the Specific Plan area must comply with the State of California Building Code as adopted and implemented by the City of Ontario.

6.4.4 Consistency with CEQA

The City of Ontario is defined as the lead agency under the California Environmental Quality Act (CEQA) based upon its authority to approve this Specific Plan. Concurrent with approval of this Specific Plan, the City Council will be required to certify the associated Environmental Impact Report (EIR), including a Mitigation Monitoring and Reporting Program to ensure that all approved EIR mitigation measures are implemented. The Planning Director shall be responsible for confirming that mitigation measures have been implemented through each project's approved plans.

6.5 Specific Plan Revisions

It is recognized that modifications to the text or exhibits of this Specific Plan may be warranted in the future to accommodate unforeseen conditions or events. Revisions shall be processed in a manner prescribed by the City of Ontario Planning Department pursuant to the provisions in this section.

6.5.1 Minor Modifications

Minor modifications to the Specific Plan will be processed administratively without the submission of a formal Specific Plan Amendment application and will not require a public hearing or review by the Planning Commission. The Planning Director shall have the authority to review and make a determination of approval, approval with conditions, or denial of a request for minor modification to the Specific Plan. The Planning Director may, at his/her discretion, refer any such request to the Planning Commission or the City Council.

Minor modifications are defined as:

1. Expansions or reductions to a Planning Area boundary or acreage, provided that the total acreage within each affected Planning Area is not modified by more than 20 percent.
2. An increase in maximum building area for single- and multi-tenant buildings of up to 15 percent, provided that the maximum square footage for the Planning Area established by this Specific Plan is not exceeded.
3. A modification of up to 20 percent of a project's required minimum lot area, minimum lot dimensions, or setback if compatible with the surrounding land uses and consistent with the overall design character of the Euclid Mixed-Use Specific Plan.
4. Additions, deletions, or modifications to ***Table 4.1***, Allowable Uses, which lists the permitted and conditionally permitted uses in the Specific Plan area, provided the Planning Director determines the changes to be consistent with the objectives and intent of the Specific Plan.

5. Minor modification of conceptual design criteria for architectural features and materials, landscape treatments, lighting, signage, and sustainable design strategies.
6. Revisions to roadway alignment when the change results in centerline shift of less than 250 ft.
7. Revisions to infrastructure facility sizing and precise location for dry utilities, water, sewer, and Storm Drain improvements subject to approval of the City Engineer.
8. Changes to the Phasing Plan, provided infrastructure is available to serve the phase as determined by the City Engineer.
9. Revisions to exhibits in the Specific Plan that do not substantially change its intent or character and modifications to the Specific Plan text to those listed above, which are deemed minor by the Planning Director and conform to the purpose and intent of this Specific Plan and The Ontario Plan 2050.
10. Any modifications to land use, planning areas, densities, or infrastructure that does not result in an increase to water demands in any single water pressure zone or an increase in sewer wastewater generation in any single sewer tributary subarea.
11. Revisions to Land Uses within the Specific Plan area to allow consistency with TOP Land Use Plan updates.

6.5.2 Specific Plan Amendments

Proposed changes to this Specific Plan that do not meet the criteria for a Minor Modification will be subject to a formal Specific Plan Amendment application process pursuant to the Ontario Development Code and California Government Code Section 65450. If the proposed amendment requires supplemental environmental analysis pursuant to CEQA, the applicant will adhere to the City's adopted procedures and CEQA Guidelines.

6.6 Subdivision Maps

Development within the Specific Plan area may require the processing of tentative and final tract or parcel maps and/or lot line adjustments or mergers. Subdivision maps and lot changes shall be reviewed and approved pursuant to the Ontario Development Code and other applicable City codes and regulations, California Government Code Section 66410 (Subdivision Map Act), as well as the provisions of this Specific Plan.

6.7 Development and Land Use Review Procedures

Review procedures for development and land use within the Specific Plan area shall be as provided in this Specific Plan and in accordance with the Ontario Development Code.

6.7.1 Development Plan Review

Development proposed within the Specific Plan area will be subject to Development Plan review pursuant to the Ontario Development Code. The review is intended to ensure compliance with the provisions of this Specific Plan, protect the integrity and character of the physical composition of the City, and encourage high quality development.

6.7.2 Conditional Use Permit

A Conditional Use Permit is required for uses deemed "conditionally permitted" in ***Table 4.1*** (Allowable Uses). Applications for a Conditional Use Permit will be processed pursuant to the Ontario Development Code.

6.7.3 Administrative Use Permit

An Administrative Use Permit is required for uses deemed "administratively permitted" in ***Table 4.1*** (Allowable Uses). Applications for an Administrative Use Permit will be processed pursuant to the Ontario Development Code.

6.7.4 Appeals

Appeals of decisions of the Development Advisory Board, Zoning Administrator, Planning Director or the Planning Commission regarding implementation of this Specific Plan may be made by the applicant or other aggrieved party pursuant to Division 2.04 of the Ontario Development Code.

6.8 Development Agreement

Approval of a statutory development agreement authorized pursuant to California Government Code Section 65864 et seq. is required by this Specific Plan. The Development Agreement shall include, but not be limited to, methods for financing, acquisition, and construction of necessary infrastructure. The Development Agreement shall be fully executed prior to recordation of the first Final Map.

6.9 Specific Plan Phasing

Implementation of this Specific Plan is anticipated to occur in two phases, as discussed in Section 3.11, Phasing Plan:

- Phase 1: Construction of Planning Areas 1, 2 and 3A.
- Phase 2: Construction of Planning Area 3B.

These phases may be developed as sub-phases and/or occur sequentially/concurrently with one another.

All of the Specific Plan required infrastructure by Section 3.3 (***Figure 3.10***) for Potable Water, Section 3.4 (***Figure 3.12***) for Recycled Water, and Section 3.5 (***Figure 3.14***) for Sewer Phasing will be determined per separate Development Agreement.

6.9.1 Phasing Objectives

Development phasing shall meet the following objectives:

1. The orderly build-out of the project based upon market and economic conditions;
2. The provision of adequate parking, infrastructure, and public facilities concurrent with the development of each phase; and
3. The protection of the public health, safety, and welfare.

6.9.2 Findings for Modification of the Phasing Plan

The Planning Director shall have the authority to approve modification of the Phasing Plan, subject to the following findings:

1. The modification is consistent with the Policy Plan (The Ontario Plan);
2. The modification will not adversely affect the implementation of the Specific Plan;
3. The modification will not be detrimental to public health, safety, and general welfare; and
4. The modification will not delay the construction of infrastructure improvements necessary to serve the development.

6.10 Maintenance Plan

Final determination of maintenance responsibilities for the public and private improvements constructed in association with this Specific Plan shall be specified in the approved Development Agreement, which shall be executed prior to recordation of the first Final Map. However, it is anticipated that maintenance shall be generally shared by three entities as described below and outlined in ***Table 6.1***, Maintenance Responsibilities.

6.10.1 City of Ontario, Community Facilities District & other Special District

The establishment of a community facilities district, landscape and lighting district, or other special district to fund the maintenance of public facilities shall be at the City's discretion. It is anticipated that public maintenance shall include the following:

1. Right-of-way for public streets, sidewalk, landscape, and traffic signals within the Specific Plan area (Euclid Avenue, Schaefer Avenue, Edison Avenue and Sultana Avenue) shall be dedicated to the City of Ontario per the provisions of this Specific Plan (Section 3, Development Plan) and as approved by the City Engineer.
2. Landscape improvements and public street lights within the public right-of-way and neighborhood edge shall be maintained through a landscape and lighting district or other special maintenance district established by the City.
3. The City shall maintain off-site infrastructure improvements, including water, recycled water, sewer, Storm Drain facilities and city broadband communications after they are accepted by the City.
4. The City shall maintain NPDES facilities located within the curb-to-curb area of public streets after they are accepted by the City. Operation and maintenance requirements for NPDES storm water runoff source control and treatment control Best Management Practices shall be identified in the approved Water Quality Management Plan for the project.

6.10.2 Property Owners Association

A Property Owners Association (POA) shall be established for the maintenance of common areas, including such improvements as on-site landscape areas and parking and drive aisles within Euclid Mixed-Use. It is anticipated that improvements maintained by the POA will include the following:

1. Driveways;
2. On-site open spaces, on-site landscape areas, common areas, parking lots, and walkways;
3. Landscaping within setback/landscape buffer areas along Sultana Ave;
4. NPDES facilities within landscape setbacks and on-site common areas;
5. Property identification signage and architectural elements located within the landscaped buffer; and
6. Fencing and walls, including graffiti removal.
7. Water, sewer, recycled water facilities and Storm Drain facilities located on-site shall be constructed by the developer and are considered privately owned and maintained by property owners or Property Owners Association, however the Property Owners Association shall maintain permanent on-site water quality basins, trenches, swales and biotreatment filters required by the San Bernardino County MS4 Permit and Water Quality Management Plan.

TABLE 6.1 MAINTENANCE RESPONSIBILITIES

AREA OF RESPONSIBILITY	CITY OF SPECIAL DISTRICT	PROPERTY OWNERS ASSOCIATION	UTILITY
Master Planned Roadways: Euclid Avenue, Schaefer Avenue and Edison Avenue			
Curb-to-curb improvements	X		
Behind the curb improvements - landscaping within the public right-of-way (parkways), sidewalks and neighborhood edge	X		
Other Improvements			
Traffic Signals and Traffic Control Signs on public streets	X		
Streetlights in the public right-of-way	X		
Drive aisles		X	
On-site parking areas		X	
Common open space		X	
Landscaping within setback/landscape buffer areas		X	
Monument signage		X	
Walls and fences		X	
Stormwater drainage/water quality control facilities within the curb-to-curb area of public streets	X		
Stormwater drainage/water quality control facilities behind the curb		X	
Water, recycled water, and sewer infrastructure in the public right-of-way	X		
Dry utilities: electricity, natural gas, communication systems			X

7. CONSISTENCY WITH THE ONTARIO PLAN

California Government Code (Title 7, Division 1, Section 3, Article 8, Section 65440- 65457) permits the adoption and administration of Specific Plans as an implementation tool for elements contained within a jurisdiction's local General Plan. Approval of the Euclid Mixed-Use Specific Plan is based on the finding that the regulations, guidelines, and programs contained within this Specific Plan are consistent with The Ontario Plan. The Ontario Plan establishes the direction and vision for the City of Ontario and provides a single comprehensive document to shape its future. The Ontario Plan provides for policies to accommodate change over its 30 year lifespan. The Ontario Plan consists of a six part Component Framework: 1) **Vision**, 2) **Governance Manual**, 3) **Policy Plan**, 4) **City Council Priorities**, 5) **Implementation**, and 6) **Tracking and Feedback**.

The following sections demonstrate how the Ontario Ranch Mixed-Use Specific Plan implements the goals and policies of the City's Policy Plan (General Plan).

7.1 Land Use Element

GOAL LU-1:

A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

Policy LU-1.1 Strategic Growth

We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City. (Link to Mobility Element Policies M2-M-2.1, M3-M-3.3; Community Design Element Image and Identity Section; Community Design Policies CD-3.1, CD-3.3, CD-3.6)

The Euclid Mixed Use Specific Plan encourages concentrated development including high density residential neighborhoods, office and business park employment uses and retail and mixed use centers along major arterial roadways where future transit stops, multi-use trials and bikeways are planned. The Design Guidelines in Section 5 encourage site planning criteria and architectural standards to create a unique and cohesive aesthetic character for the project area.

Policy LU-1.2 Sustainable Community Strategy

We integrate state, regional, and local Sustainable Community/Smart Growth principles into the development and entitlement process.

The Euclid Mixed-Use Specific Plan encourages the efficient use of energy resources in design, product selection, and operational techniques. The Design Guidelines in Section 5 address lighting, bicycle parking, sustainable landscaping, and sustainable design strategies. Landscape provisions

require the use of native drought resistant vegetation and shade trees to conserve water and reduce heat islands. The sustainable design strategies include design and construction of energy efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption. Protecting water quality, reducing runoff, and reducing water demand for landscaping are promoted in the Development Plan in Section 3 through the recycled water plan and storm drainage facilities source control and treatment practices.

Policy LU-1.3 Adequate Capacity

We require adequate infrastructure and services for all development.

The Euclid Mixed-Use Specific Plan establishes a Phasing Plan that has been coordinated with affected infrastructure providers and ensures that uses on the project site will be adequately served. The Specific Plan requires infrastructure development to occur in a timely manner. Potable and recycled water, sewer, fiber optic communications, and storm drain infrastructure improvements that will ultimately serve the Specific Plan area are addressed in Section 3, Development Plan. Infrastructure and services will be consistent with City of Ontario infrastructure master plans and the approved development agreement.

Policy LU-1.4 Multimodal Mobility

We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on active transporttion, transit, electric vehicles, and multimodal transportation opportunities (Link to Mobility Element Policies M-2.1, M-3.3; Community Design Element Policy CD-2.6, CD-3.1, CD-3.3, CD3.6).

The Euclid Mixed Use Specific Plan requires the construction of multi-purpose trails along Euclid and Schaefer Avenues and public accessible sidewalk along Euclid, Schaefer and Sultana Avenues and Edison Avenue. These improvements are integral elements to create accessibility and mobility within the project site and surrounding area. The Specific Plan requires the location and construction of transit turnouts within the Specific Plan area.

Policy LU-1.5 Jobs-Housing Balance

We coordinate land use, infrastructure, and transportation planning and analysis with regional, county, and other local agencies to further regional and subregional goals for jobs-housing balance. (Link to Community Economics Element Policy CE-1.1; Mobility Element Policy M-1.6).

The Euclid Mixed Use Specific Plan requires all infrastructure needed to develop the property to be constructed per The City approved master plans as indicated in Section 5 of the Specific Plan. The Land Use Plan allows for up to 466 housing and a variety of employment generating land uses totaling over 1,676,886 S.F.to encourage a balance of jobs and nearby housing.

Policy LU-1.6 Complete Community

We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide

spectrum of choices of where they can live, work, shop and recreate within Ontario. (Link to Community Economics Element Complete Community Section; Community Design Element Urban, Mixed Use, and Transit-oriented Place Types Section).

The Euclid Mixed Use Specific Plan allows for up to 466 housing and over 1,676,886 S.F. of employment generating land uses to accommodate the design of a complete community with a balance of uses to allow a spectrum of choices for future employers, employees, residents and visitors. The allowable land uses will allow for a balanced plan to support Ontario residents in all stages of life.

GOAL LU-2:

Compatibility between a wide-range of uses and resultant urban patterns and forms.

Policy LU-2.3 Hazardous Uses

We regulate the development of industrial and similar uses that use, store, produce or transport toxic substances, air emissions, other pollutants or hazardous materials. (Link to Safety Element Hazardous Materials & Waste Section, including Policies S-6.4 and S-6.5).

Uses within the Euclid Mixed-Use Specific Plan are required to comply with federal, state, and local regulations pertaining to the use, storage, disposal, and transportation of hazardous materials, toxic substances, and other pollutants.

Policy LU-2.5 Regulation of Uses

We regulate the location, concentration and operations of uses that have impacts on surrounding uses.

The Euclid Mixed-Use Specific Plan land use plan contained in Section 3, Development Plan, utilizes the Business Park designation (Planning Area 1 and 2) and Mixed-Use designation (Planning Area 3) to buffer varied existing land uses located across Euclid Avenue within the City of Chino. Section 4, Land Use and Development Standards, restricts Planning Area 1 and 2 to smaller buildings along the Euclid frontage. Furthermore, the conceptual site plan for the business park places truck traffic ingress and egress and visible loading docks away from the existing residential uses.

Policy LU-2.6 Infrastructure Compatibility

We require infrastructure to be aesthetically pleasing and in context with the community character.

The Euclid Mixed-Use Specific Plan design guidelines (Section 5) are intended to support high-quality development that complements the surrounding community. Landscaped areas and drive entrances will be planned to separate parking areas and keep the parking lot from being the dominant visual element of the site. The Specific Plan also establishes landscape setback requirements (Section 4, Land Use and Development Standards) and conceptual streetscape design (Section 5, Design Guidelines) along all roadways within the Specific Plan area to create safe and attractive streets for pedestrians and motorists and ensure cohesive patterns of development.

Policy LU-2.9 Methane Gas Sites

We require sensitive land uses and new uses on former dairy farms or other methane-producing sites be designed to minimize health risks.

The Euclid Mixed-Use Specific Plan incorporates into its Implementation Plan (Section 6) requirements for the project to comply with any mitigation measures identified in the project Environmental Impact Report, including those for soil remediation and proper venting to address the potential existence of methane gases within the Specific Plan area.

Policy LU-2.11 Context-Aware Transitions and Connections

We require new development projects and land-planning efforts to provide context-aware and appropriate transitions and connections between existing and planned neighborhoods, blocks, sites, and buildings.

The Euclid Mixed Use Specific Plan includes the construction of multi-purpose trails along Euclid and Schaefer Avenues and public accessible sidewalks along Euclid, Schaefer and Sultana Avenues and Edison Avenue. These improvements provide transitions and connectivity to existing and planned neighborhoods.

GOAL LU-3:

Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the Vision.

Policy LU-3.1 Development Standards

We maintain clear development standards which allow flexibility to achieve our Vision and provide objective standards that ensure predictability and deliver the intended physical outcomes. (Link to Community Design Element Design Quality and Urban, Mixed Use, and Transit-oriented Place Types Sections).

The Euclid Mixed Use Specific Plan provides development standards intended to address the site and surrounding conditions and achieve the City's overall Vision for urban, mixed use and transit oriented land uses.

GOAL LU-4:

Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.

Policy LU-4.1 Commitment to Vision

We are committed to achieving our Vision but realize that it may take time and several interim steps to get there.

The Euclid Mixed Use Specific Plan allows for phased development coordinated with infrastructure improvements. Interim and transitional uses are permitted in order to allow for planned development to occur to achieve the City's long term Vision for land uses.

Policy LU-4.3 Infrastructure Timing

We require that the necessary infrastructure and services be in place prior to or concurrently with development.

The Euclid Mixed Use Specific Plan requires the construction of all infrastructure needed to develop the property to be constructed per The City approved master plans as indicated in Section 5 of the Specific Plan.

GOAL LU-5:

Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.

Policy LU-5.1 Coordination with Airport Authorities

We collaborate with FAA, Caltrans Division of Aeronautics, airport owners, neighboring jurisdictions, and other shareholders in the preparation, update, and maintenance of airport-related plans.

The Euclid Mixed Use Specific Plan will comply with all ALUCP requirements for the Ontario and Chino Airports as outlined in Section 2.3 of the Specific Plan and future development will be required to meet all requirements and procedures outlined by airport related governmental agencies .

Policy LU-5.2 Airport Planning Consistency

We coordinate with airport authorities to ensure The Ontario Plan is consistent with state law, federal regulations, and/or adopted master plans, and airport land use compatibility plans for ONT and Chino Airport.

The Euclid Mixed Use Specific Plan will comply with all ALUCP requirements for the Ontario and Chino Airports as outlined in Section 2.3 of the Specific Plan and future development will be required to meet all requirements and procedures outlined by airport related governmental agencies and mitigation measures identified in the project Environmental Impact Report.

Policy LU-5.5 Airport Compatibility Planning for ONT

We create and maintain the Airport Land Use Compatibility Plan for ONT.

The Euclic Mixed-Use Specific Plan area is within the Ontario International Airport Influence Area and the Chino Airport Influence Area. The Specific Plan discusses compliance with the ALUCP requirements for the Ontario Airport and the Chino Airport in Section 2, Section 2.2, Airport Influence Areas.

Policy LU-5.7 ALUCP Consistency with Land Use Regulations

We comply with state law that requires general plans, specific plans, and all new development to be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public-use airport.

The Euclid Mixed-Use Specific Plan area is within the Ontario International Airport Influence Area and the Chino Airport Influence Area. The Specific Plan discusses compliance with the ALUCP requirements for the Ontario Airport and the Chino Airport in Section 2, Section 2.2, Airport Influence Areas.

Policy LU-5.8 Chino Airport

We will support the creation and implementation of the Airport Land Use Compatibility Plan for Chino Airport.

The Euclic Mixed-Use Specific Plan area is within the Ontario International Airport Influence Area and the Chino Airport Influence Area. The Specific Plan discusses compliance with the ALUCP requirements for the Ontario Airport and the Chino Airport in Section 2, Section 2.2, Airport Influence Areas.

7.2 Housing Element

GOAL H-1:
Stable neighborhoods of quality housing, ample community services and public facilities, well-maintained infrastructure, and public safety that foster a positive sense of identity.

Policy H-1.2 Neighborhood Conditions

We direct efforts to improve the long-term sustainability of neighborhoods through comprehensive planning, provision of neighborhood amenities, rehabilitation and maintenance of housing, and community building efforts.

The Euclid Mixed Use Specific Plan allows for up to 466 housing and recreational open space consistent with The Ontario Plan standards for parks/open space and neighborhood recreational amenities.

Policy H-1.3 Community Amenities

We shall provide adequate public services, infrastructure, open space, parking and traffic management, pedestrian, bicycle, and equestrian routes and public safety for neighborhoods consistent with City master plans and neighborhood plans.

The Euclid Mixed Use Specific Plan requires all infrastructure, open space, trails and bikeways needed to develop the property to be constructed concurrently with future development per The City approved master plans as indicated in Section 3 of the Specific Plan. The Land Use Plan allows for up to 466 housing.

Policy H-1.4 Historical Preservation

We support the preservation and enhancement of residential structures, properties, street designs, lot configurations, and other reminders of Ontario's past that are considered to be local historical or cultural resources.

The Euclid Mixed Use Specific Plan area includes existing buildings that reflect the agricultural history as an important cultural resource of the City. The Specific Plan provides design guidelines for future buildings in Section 5 that include architectural styles that reinforce the City's rich agricultural history. Future development will comply with City requirements for documenting historical resources and mitigation measures identified in the project Environmental Impact Report.

GOAL H-2:

Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

Policy H-2.1 Corridor Housing

We revitalize transportation corridors by encouraging the production of higher density residential and mixed-uses that are architecturally, functionally, and aesthetically suited to corridors.

The Euclid Mixed Use Specific Plan includes a Mixed Use District that will allow up to 466 residential units and a density of 35 to 60 du/ac to be developed along Edison Avenue in close proximity to transit turnouts within the Specific Plan area. The Specific Plan provides design guidelines for future buildings in Section 5 that include architectural styles and building guidelines to provide aesthetically pleasing and functional residential buildings.

Policy H-2.4 Ontario Ranch

We support a premier lifestyle community in the Ontario Ranch, distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.

The Euclid Mixed Use Specific Plan allows for the development of up to 466 high density attached residential units linked to surrounding retail and open space uses by local sidewalks and walkways and master planned trails and bikeways. The Specific Plan provides design guidelines for future residential development in Section 5 that include architectural criteria that establish a high level of design and construction quality and encourage a cohesive neighborhood design character.

Policy H-2.5 Housing Design

We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.

The Euclid Mixed Use Specific Plan provides design guidelines for future residential development in Section 5 that include site planning considerations, emphasize sustainable design and establishes architectural criteria to ensure a high level of design excellence.

GOAL H-5:

A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age, or other status.

Policy H-5.2 Family Housing

We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation, and other amenities.

The Euclid Mixed Use Specific Plan allows for the development of up to 466 high density attached residential units that are suited for a range of future buyers or renters including families with children. Future residential development will be required to provide parks at a minimum of 2 acres/1000 residents. The Specific Plan also includes multi-purpose trails along Euclid and Schaefer Avenues and public accessible sidewalks along Euclid, Schaefer and Sultana Avenues and Edison Avenue.

7.3 Parks and Recreation Element

GOAL PR-1:

A system of safe and accessible parks that meets the needs of the community.

Policy PR-1.1 Access to Parks

In all new residential development areas, we strive to provide a park and/or recreational facility within walking distance (¼ mile) of every residence and prioritize the establishment of parks in environmental justice areas that do not have adequate access to parks.

The Euclid Mixed Use Specific Plan will comply with the City requirement to provide two acres of Park per 1,000 residents onsite and pay an in-lieu fee for the equivalent of three acres of park per 1,000 residents for a total of five acres per 1,000 residents to ensure that recreational facilities are within walking distance of future residents within the Specific Plan area.

Policy PR-1.5 Acreage Standard

We strive to provide 5 acres of parkland (public and private) per 1,000 residents.

The Euclid Mixed Use Specific Plan will comply with the City requirement to provide five acres of Park per 1,000 residents by providing two aces on-site and paying an in-lieu fee for the equivalent of three acres of park per 1,000 residents.

Policy PR-1.6 Private Parks

We expect development to provide a minimum of 2 acres of developed private park space per 1,000 residents.

The Euclid Mixed Use Specific Plan will comply with the City requirement to provide two acres of Park per 1,000 residents on-site.

Policy PR-1.9 Phased Development

We require parks be built in new communities before a significant proportion of residents move in.

The Euclid Mixed Use Specific Plan allows for phased development coordinated with required park improvements and payment of in-lieu park fees.

Policy PR-1.12 Trails

We promote connections between parks and local trails including those managed by other public agencies.

The Euclid Mixed Use Specific Plan will comply with the City requirement to provide two acres of Park per 1,000 residents on-site and will develop the public multi-purpose trails in Euclid and Schaefer Avenues along the project frontage to provided planned connection to Citywide parks and trail systems including the Great Park.

Policy PR-1.14 Multi-family Residential Developments

We require that new multi-family residential developments of five or more units provide recreational facilities or open space, in addition to paying adopted impact fees.

The Euclid Mixed Use Specific Plan will include development standards to provide two acres of Park per 1,000 residents on-site for all types of residential development including multi-family neighborhoods.

Policy PR-1.15 Trail Connectivity

We strengthen and improve equestrian, bike, and multipurpose trail connections within the City and work to improve trail connections into adjacent jurisdictions.

The Euclid Mixed Use Specific Plan will develop the public multi-purpose trails in Euclid and Schaefer Avenues along the project frontage to provided planned connection to Citywide parks and trail systems including the Great Park.

7.4 Environmental Resources Element

GOAL ER-1:

A reliable and cost-effective system that permits the City to manage its diverse water resources and needs.

Policy ER-1.3 Conservation and Sustainable Water Supply

We work with regional water providers and users to conserve water and ensure sustainable local water supplies as more frequent droughts reduce long term local and regional water availability.

The Euclid Mixed-Use Specific Plan incorporates water conservation strategies into its development plan and design guidelines. The use of recycled water to irrigate landscape areas is required consistent with the City of Ontario Recycled Water Master Plan (Section 3, Development Plan). Landscape and irrigation plans are encouraged to use water conservation features such as drought-tolerant plant species native to the region and drip irrigation (Section 5, Design Guidelines). The Specific Plan encourages the design and construction of energy-efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption.

Policy ER-1.5 Water Resource Management

Environmental justice areas are prioritized as we coordinate with local agencies to protect water quality, prevent pollution, address existing contamination, and remediate contaminated surface water and groundwater.

In Section 3.8, Storm Drain Plan, the Specific Plan stipulates that prior to issuance of grading or construction permits, a Storm Water Pollution Prevention Plan (SWPPP) be prepared and approved by the City. The SWPPP will identify and detail appropriate Best Management Practices (BMPs) to prevent pollutant discharge into storm drain systems and natural drainages and aquifers. In addition to the preparation of a SWPPP, a WQMP will be prepared and approved that will enforce long-term BMPs to prevent pollutant discharges into storm drain systems, for the life of the project. Section 5.8.2, Water Quality, requires the provision of on-site landscape swales to collect and treat stormwater run-off.

Policy ER-1.6 Urban Run-off Quantity

We encourage the use of low impact development strategies, including green infrastructure, to intercept run-off, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.

The Euclid Mixed-Use Specific Plan (Section 3.8, Storm Drain Plan) incorporates low impact development strategies including landscape designs that promote water retention; permeable surface designs in parking lots and areas with low traffic; parking lots that drain to landscaped areas to provide treatment, retention, or infiltration; and limited soil compaction during grading.

Policy ER-1.7 Urban Run-off Quality

We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.

In Section 3.8, Storm Drain Plan, the Specific Plan states that prior to issuance of grading or construction permits, a Water Quality Management Plan (WQMP) is required to minimize stormwater runoff and provide on-site opportunities for groundwater recharge integrated into project design and amenities. The grading and drainage of the Specific Plan area will be designed to retain/infilter, harvest & re-use or biotreat surface runoff to comply with the current requirements of the San Bernardino County NPDES Stormwater Program's WQMP for significant new development projects.

Policy ER-1.8 Wastewater Management

We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.

In Section 3.6, Sewer Plan, the Specific Plan provides for design of a wastewater system consistent with City and Regional Water Quality Board requirements. The Specific Plan includes a network of new public sewer mains consistent with the City of Ontario's Ultimate Sewer System Plan.

GOAL ER-3:

Cost-effective and reliable energy system sustained through a combination of low impact buildings, site and neighborhood energy conservation, and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.

Policy ER-3.1 Conservation Strategy

We require conservation as the first strategy to be employed to meet applicable energy-saving standards.

The Specific Plan incorporates energy-saving conservation strategies into its design guidelines (Section 5) by addressing lighting, bicycle parking, sustainable landscaping, and energy efficiency. Sustainable design strategies (Section 5.8) include design and construction of energy-efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption.

Policy ER-3.3 Building and Site Design

We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.

The Euclid Mixed-Use Specific Plan encourages the use of passive design to improve building energy performance through skylights, building orientation, landscaping, and use of select colors.

Policy ER-3.6 Generation - Renewable Sources

We promote the use of renewable energy sources (e.g., solar, wind, biomass) in public and private sector development.

The Euclid Mixed Use Specific Plan promotes renewable energy resource including passive solar collection, subject to consistency with City of Ontario policies and development regulations, within the Business Park and Mixed Use Districts. Proposed architectural guidelines and development standards encourage siting and orienting Building with considerations for solar orientation and buildings with roof designs that allow for passive solar collectors. Residential buildings will be prewired or solar collection improvements.

GOAL ER-4:

Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.

Policy ER-4.1 Land Use

We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.

The Euclid Mixed Use Specific Plan allows for up to 466 housing and a maximum of 1,676,886 S.F. of employment generating land uses within the project area. The Specific Plan included future transit stops and in close proximity to planned transit lines and helps to improve jobs housing balance in the City and the surrounding region with the provision of varied land use alternatives within the MIxed Use District.

Policy ER-4.3 Greenhouse Gases (GHG) Emissions Reductions

We will reduce GHG emissions in accordance with regional, state, and federal regulations.

The Euclid Mixed Use Specific Plan will comply with the regional, State and Federal laws and regulations to reduce GHG emissions and will require future development projects to comply with all City regulations to reduce GHG emissions and mitigation measures identified in the project Environmental Impact Report.

Policy ER-4.4 Indoor Air Quality

We comply with State Green Building Codes relative to indoor air quality. We will comply with State Green Building Codes relative to indoor air quality. We seek funding to improve indoor air quality for households with poor indoor air quality, with priority for lower income households in environmental justice areas.

The Euclid Mixed-Use Specific Plan requires development projects in the Specific Plan area to comply with the State of California Building Code as adopted and implemented by the City. The Specific Plan's Sustainable Design Strategies (Section 5.8) include the design and construction of energy-efficient buildings to reduce air, water, and land pollution.

Policy ER-4.5 Transportation

We promote mass transit and non-motorized mobility options (walking, biking) to reduce air pollutant emissions.

The Euclid Mixed Use Specific Plan requires the construction of multi-purpose trails along Euclid and Schaefer Avenues and public accessible sidewalks along Euclid, Schaefer and Sultana Avenues and Edison Avenue. The Specific Plan requires the location and construction of transit turnouts within the Specific Plan area. These improvements encourage non-motorized mobility options to reduce air pollutant emissions.

Policy ER-4.8 Tree Planting

We protect healthy trees within the City and plant new trees to increase carbon sequestration and help the regional/local air quality. We expand the tree canopy in environmental justice areas to enhance air quality and reduce the "heat island" effect.

The Euclid Mixed Use Specific Plan will implement the City of Ontario's master street plan including the provision for planting street parkway and median trees and will provide landscape installation, including trees, within all neighborhood edges. Section 5, Design Guidelines include criteria for landscaping parks, open space and other common areas.

GOAL ER-5:

Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.

Policy ER-5.2 Entitlement and Permitting Process

We comply with state and federal regulations regarding protected species.

The Euclid Mixed-Use Specific Plan acknowledges that all projects within the Specific Plan area shall comply with any and all mitigation measures of the project Environmental Impact Report.

7.5 Community Economics Element

GOAL CE-1:

A complete community that provides for all incomes and stages of life.

Policy CE-1.1 Jobs-Housing Balance

We pursue improvement to the Inland Empire's balance between jobs and housing by promoting job growth that reduces the regional economy's reliance on out-commuting.

The Euclid Mixed-Use Specific Plan anticipates the creation of jobs in warehousing, logistics, light manufacturing, and administration within the Specific Plan area, which helps improve the region's jobs-housing balance. Actual job creation depends on the type of land uses ultimately developed on the site as a wide-range of commercial, office, and business park uses are permitted in the Specific Plan. The Land Use Plan (Section 3.1) implements the vision of The Ontario Plan by providing opportunities for employment in manufacturing, distribution, research and development, service, and supporting retail at intensities designed to meet the demand of current and future market conditions.

Policy CE-1.5 Business Attraction

We proactively attract new and expanding businesses to Ontario in order to increase the City's share of growing sectors of the regional and global economy.

The Euclid Specific Plan provides for opportunities for new businesses in the City within the Business Park District and the Mixed Use District. In Section 3.1, Land Use Plan, the Specific Plan provides for the construction of 1.6 square ft. of business park, commercial and/or office development in compliance with City and regional planning goals.

Policy CE-1.6 Diversity of Housing

We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.

The Euclid Mixed Use Specific Plan allows for the development of up to 466 high density attached residential units within the Mixed Use District. This will add to the housing diversity and choices for ownership or rental housing within the Ontario Ranch to accommodate people who live and/or work in the City.

Policy CE-1.7 Retail Goods and Services

We seek to ensure a mix of retail businesses that provide the full continuum of goods and services for the community.

The Euclid Mixed Use Specific Plan allows for a maximum of 1,676,886 S.F. of business park, retail or office uses. The Specific Plan provides opportunities for future business to contribute to the provision of continued goods and services within the Business Park and Mixed Use Districts.

Policy CE-1.12 Circulation

We continuously plan and improve public transit and non-vehicular circulation for the mobility of all, including those with limited or no access to private automobiles.

The Euclid Mixed Use Specific Plan provides for both public transit, including future transit stop locations, and multi-purpose trails and sidewalks to encourage non-vehicular circulation within the project area.

GOAL CE-2:

A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.

Policy CE-2.1 Development Projects

We require new development and redevelopment to create unique, high-quality places that add value to the community.

The Euclid Mixed-Use Specific Plan contains design guidelines in Section 5 to guide future development, consistent with the vision for Ontario Ranch. The guidelines are intended to ensure high quality, cohesive and attractive development that complements and integrates into the community and adds value to the City. The Specific Plan also establishes landscape setbacks along all roadways within the Specific Plan area to create safe and attractive streets for pedestrians and motorists.

Policy CE-2.2 Development Review

We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.

The Euclid Mixed-Use Specific Plan establishes a land use plan (Section 3.1) and design guidelines (Section 5) concerning site design, building design, and landscape design that ensure high-quality, functional and sustainable development that is regionally competitive and appropriate for the Ontario Ranch community.

Policy CE-2.4 Protection of Investment

We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.

The Euclid Mixed Use Specific Plan has provisions to ensure that the development of up to 466 high density attached residential will create attractive and high quality architecture and urban planning that is equal or greater to similar development in the surrounding neighborhoods. The Specific Plan provides design guidelines for future residential development in Section 5 that include architectural criteria that establish a high level of design and construction quality.

Policy CE-2.5 Private Maintenance

We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

The Euclid Mixed-Use Specific Plan includes a Maintenance Responsibility Matrix (Section 6.10) identifying the public, private, or utility providers responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, walls and monuments, infrastructure, and utilities within the Specific Plan area. A Property Owners Association will be established for the maintenance of on-site common areas, including such improvements as landscape areas and drive aisles.

Policy CE-2.6 Public Maintenance

We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm whether on private land, in rights-of-way, or on publicly-owned property.

The Euclid Mixed-Use Specific Plan includes a Maintenance Responsibility Matrix (Section 6.10) identifying the public, private, or utility providers responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, walls and monuments, infrastructure, and utilities within the Specific Plan area. Right-of-way for public streets within the Specific Plan area and infrastructure improvements shall be dedicated to the City of Ontario for maintenance purposes. Landscape improvements and public streetlights within the public right-of-way shall be maintained through a landscape and lighting district or other special maintenance district established by the City. Dry utilities such as electricity, natural gas, and communication systems will be maintained by the appropriate utility company.

7.6 Safety Element

GOAL S-1:

Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by earthquake-induced and other geologic hazards.

Policy S-1.1 Implementation of Regulations and Standards

We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.

The Euclid Mixed-Use Specific Plan requires all future development projects to comply with the State of California Building Code as adopted and implemented by the City.

Policy S-1.2 Entitlement and Permitting Process

We follow state guidelines and the California Building Code to determine when development proposals must conduct geotechnical and geological investigations.

The Euclid Mixed-Use Specific Plan acknowledges that all projects within the Specific Plan area shall comply with state guidelines and the California Building Code. Research of available maps indicates that the Specific Plan site is not located within an Alquist-Priolo Earthquake Fault Zone. Furthermore, there was no visible evidence of faulting during a geotechnical investigation conducted in 2015.

GOAL S-2:

Minimized risk of injury, loss of life, property damage and economic and social disruption caused by flooding and inundation hazards.

Policy S-2.1 Entitlement and Permitting Process

We require hydrological studies prepared by a state-certified engineer when new development is located in a 100-year or 500-year floodplain to assess the impact that the new development will have on the flooding potential of existing development down-gradient.

The Euclid Mixed-Use Specific Plan acknowledges that all projects within the Specific Plan area shall comply with any and all applicable mitigation measures of the project Environmental Impact Report, state guidelines, and the California Building Code regarding flooding and inundation hazards.

GOAL S-3:

Reduced risk of death, injury, property damage and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.

Policy S-3.3 Fire and Emergency Medical Services

We maintain sufficient fire stations, equipment and staffing to respond effectively to emergencies and meet the needs of the community and state requirements.

The Euclid Mixed Use Specific Plan requires all infrastructure, including water systems needed to provide fire safety to be constructed concurrently with future development. The Specific Plan is located within the service area of Fire Station #2.

Policy S-3.8 Fire Prevention through Environmental Design

We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open spaces, and buildings.

The Euclid Mixed-Use Specific Plan acknowledges that all projects within the Specific Plan area shall comply with the City's development review process, which provides for review by the City's Fire Department and potential redesign to incorporate fire prevention design elements within streetscapes, sites, open spaces, and buildings.

GOAL S-4:

An environment where noise does not adversely affect the public's health, safety, and welfare.

Policy S-4.1 Noise Mitigation

We utilize the City's noise ordinance, building codes, and subdivision and development codes to mitigate noise impacts.

The Euclid Mixed-Use Specific Plan acknowledges that all projects within the Specific Plan area shall comply with any and all mitigation measures of the project Environmental Impact Report, the City's noise ordinance, subdivision and development codes, and the California Building Code to mitigate noise impacts.

GOAL S-5:

Minimize the risk of injury, property damage, and economic loss resulting from windstorms and wind-related hazards.

Policy S-5.1 Dust Control Measures

We require the implementation of Best Management Practices for dust control at all excavation and grading projects.

The Euclid Mixed-Use Specific Plan acknowledges that all projects within the Specific Plan area shall comply with any and all mitigation measures of the project Environmental Impact Report, the construction management plan, and any subdivision and development codes regarding dust control.

Policy S-5.2 Grading in High Winds

We prohibit excavation and grading during strong wind conditions, as defined by the Building Code.

Future construction within the Euclid Mixed Use Specific Plan will comply with all City regulations and will comply with the City approved construction management plan and mitigation measures identified in the project Environmental Impact Report.

GOAL S-6:

Reduced potential for hazardous materials exposure and contamination.

Policy S-6.9 Remediation of Methane

We require development to assess and mitigate the presence of methane, per regulatory standards and guidelines.

The Euclid Mixed-Use Specific Plan acknowledges that all projects within the Specific Plan area shall comply with any and all mitigation measures of the project Environmental Impact Report.

GOAL S-7:

Residential neighborhoods, commercial areas, and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, and community involvement in public safety.

Policy S-7.4 Crime Prevention through Environmental Design (CPTED)

We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces and buildings.

The Euclid Mixed-Use Specific Plan acknowledges that all projects within the Specific Plan area shall comply with the City's development review process, which provides for review by the City's Police Department and potential redesign to incorporate crime prevention design elements in streetscapes, sites, open spaces, and buildings. Parcel lighting (Section 5.6, Lighting) addresses illumination of parking lots, loading dock areas, pedestrian walkways, building entrances, signage, and architectural and landscape features. A key provision includes the installation of ground or low mounted fixtures to provide for safety and convenience along pedestrian walkways, entrances, activity areas, steps, ramps, and special features. Section 5.1, Site Design, also encourages delineation of pedestrian access to on-site buildings from adjacent streets and parking areas by marking building entrances with signage, prominent architectural features, and/or landscaping features.

GOAL S-9:

Incorporate energy efficient practices and renewable energy systems to improve air quality, comfort, and energy reliability during temporary power outages.

Policy S-9.1 Solar Energy

We support and may incentivize the installation of residential and commercial solar panels and battery storage systems that can provide electricity during power outages.

Future construction of residential units within the Euclid Mixed Use Specific Plan will comply with all Federal, State and City regulations for solar energy. The Specific Plan provides design guidelines for future residential development in Section 5 that include site planning and design criteria to encourage future solar panel installation.

7.7 Mobility Element

GOAL M-1:

A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.

Policy M-1.1 Roadway Design and Maintenance

We require our roadways to:

1. Comply with federal, state, and local design and safety standards;
2. Meet the needs of multiple transportation modes and users;
3. Handle the capacity envisioned in the City of Ontario Master Plan of Streets and Highways;
4. Be maintained in accordance with best practices;
5. Be compatible with the streetscape and surrounding land uses;
6. Promote the efficient flow of all modes of traffic through the implementation of intelligent transportation systems and travel demand management strategies.

The Euclid Mixed-Use Specific Plan complies with the Functional Roadway Classification Plan of the Mobility Element and, therefore, aims to comply with federal, state, and local design and safety standards; meet the needs of multiple transportation modes and users; and maintain a Level of Service of E or better at all intersections addressed in the project Environmental Impact Report. Specific Plan site design strives to minimize the effects of truck traffic on nearby residential uses by locating truck entries and loading docks away from residential use.

Policy M-1.2 Mitigation of Impacts

We require development to mitigate its traffic impacts.

The Euclid Mixed-Use Specific Plan requires in Section 6.3.4, Compliance with CEQA, that projects within the Specific Plan area comply with all mitigation measures, conditions, and project design features identified in the project Environmental Impact Report. Section 5.1, Site Design, provides guidelines to ensure buildings, structures, and loading facilities will be designed so loading and unloading activities occur on-site without extending beyond the property line.

GOAL M-2:

A system of trails and corridors that facilitate and encourage active modes of transportation.

Policy M-2.2 Bicycle System

We provide off-street multipurpose trails and Class II bikeways as our preferred paths of travel and use the Class III for connectivity in constrained circumstances. When truck routes and bicycle facilities share a right-of-way, we prefer Class I or Class IV bicycle facilities. We require new development to include bicycle facilities, such as bicycle parking and secure storage areas.

The Euclid Mixed-Use Specific Plan includes a Circulation Plan in Section 3 to provide connectivity to the trails and bikeway corridors identified in the Ontario Multipurpose Trails and Bikeway Corridor Plan, including installation of multipurpose trails along Euclid Avenue and Edison Avenue.

Policy M-2.3 Pedestrian Walkways

We require streets to include sidewalks and visible crosswalks at major intersections where necessary to promote safe and comfortable mobility between residential areas, businesses, schools, parks, recreation areas, and other key destination points.

The Euclid Mixed-Use Specific Plan street sections and streetscape designs (Section 3.1, Circulation Plan and Section 5.3, Landscape Design) provide for construction of 5 ft. wide public pedestrian sidewalks for Euclid Avenue, Schaefer Avenue, and Sultana Avenue and Edison Avenue to connect with adjacent existing and planned pedestrian circulation systems. Pedestrian sidewalks are separated from vehicular travel lanes by a landscaped parkway. Proposed improvements for the Specific Plan area streets are consistent with the City's Ontario Ranch Streetscape Master Plan.

Policy M-2.4 Network Opportunities

We use public rights-of-way and easements such as, utility easements, levees, drainage corridors, road rights-of-way, medians, and other potential options to maintain and expand our bicycle and pedestrian network. In urban, mixed- use, and transit-oriented Place Types, we encourage the use of underutilized public and private spaces to expand our public realm and improve pedestrian and bicycle connectivity.

The Euclid Mixed Use Specific Plan includes the construction of multi-purpose trails along Euclid and Schaefer Avenues and public accessible sidewalks along Euclid, Schaefer and Sultana Avenues and Edison Avenue. Potential pedestrian and bicycle connectivity to neighborhoods within and adjacent to the Mixed Use District will be incorporated into future residential development plans.

GOAL M-3:

A public transit system that is a viable alternative to automobile travel and meets basic transportation needs of the transit-dependent.

Policy M-3.2 Alternative Transit Facilities at New Development

We require new development adjacent to an existing or planned transit stop to contribute to the creation of transit facilities, such as bus shelters, transit bays and turnouts, and bicycle facilities, such as secure storage areas.

The Euclid Mixed-Use Specific Plan discusses (in Section 3.2.9, Transit) that the City is coordinating with regional transit agencies to implement Bus Rapid Transit (BRT) service to target destinations and along corridors, including Euclid Avenue on the western boundary of the Specific Plan area.

GOAL M-4:

An efficient flow of goods through the City that maximizes economic benefits and minimizes negative impacts.

Policy M-4.1 Truck Routes

We designate and maintain a network of City truck routes that provide for the safe and efficient transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses, as shown on Exhibit M-04, Truck Routes. We will minimize conflicts on truck routes through the design and implementation of buffers between travel lanes and pedestrian and bicycle facilities on designated truck routes.

The Euclid Mixed-Use Specific Plan is designed to enable easy vehicular access to the truck route network and to encourage its business park users to implement effective goods movement strategies. The Land Use and Circulation Plans for the Specific Plan area (Section 3, Development Plan) are designed to direct truck traffic away from nearby residential use in the City of Chino.

Policy M-4.4 Environmental Considerations

We support both local and regional efforts to reduce/eliminate the negative environmental impacts of goods movement through the planning and implementation of truck routing and the development of a plan to evaluate the future needs of clean fueling/recharging and electrified truck parking.

The Euclid Mixed Use Specific Plan implements the City of Ontario master planned street network and provides for the construction of circulation improvements to support adequate infrastructure for safe and efficient truck routing and supports Citywide efforts to evaluate and address future needs for clean fueling/recharging and electrified truck parking.

7.8 Community Design Element

GOAL CD-1:

A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.

Policy CD-1.2 Place Types

We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.

The Euclid Mixed Use Specific includes design guidelines in Section 5 that include architectural criteria that establish a Gateway design treatment with landscaping and monumentation to create a unique entry to the Ontario Ranch community and the City overall. This placemaking element will establish a unique and high quality community and neighborhood design character for future development within the Specific Plan area.

Policy CD-1.4 Transportation Corridors

We will enhance our major transportation corridors within the City through landscape, hardscape, signage and lighting. The extent of enhancement should be appropriate to the use, type, and context of each corridor.

The Euclid Mixed Use Specific Plan requires the construction of landscaped neighborhood edges along Euclid and Schaefer Avenues and Edison Avenue per the City master plans for these major transportation corridors. Section 5, Design Guidelines include criteria for landscaping these neighborhood edges and other common areas.

GOAL CD-2:

A high level of design quality resulting in neighborhoods, commercial areas, public spaces, parks, and streetscapes that are attractive, safe, functional, human- scale, and distinct.

Policy CD-2.1 Quality Building Design and Architecture

We encourage all development projects to convey visual interest and character through:

1. Building volume, massing, and height to provide context-appropriate scale and proportion;
2. A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and
3. Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.

The Euclid Mixed-Use Specific Plan design guidelines (Section 5) ensure that: 1) scale, massing, fenestration, materials, and colors are consistent with the building's architectural style and compatible with the overall design in the Specific Plan area, 2) articulation is provided through elements such as cornices, parapets, expression lines, and changes in materials and/or colors, 3) use of a variety of colors, materials, and/or textures on each building is appropriate to the architectural features or massing.

Policy CD-2.2 Neighborhood Design

We create distinct residential neighborhoods that promote a sense of community and identity by emphasizing access, connectivity, livability, and social interaction through such elements as:

1. A pattern of smaller, walkable blocks that promote activity, safety, and access to nearby amenities and services;
2. Varied parcel sizes and lot configurations to accommodate a diversity of housing types;
3. Traffic calming measures to slow traffic and promote walkability while maintaining acceptable traffic flows and emergency evacuation access;
4. Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate;
5. Landscaped parkways, with sidewalks separated from the curb and designed to maximize safety, comfort, and aesthetics for all users.

The Euclid Mixed Use Specific Plan has provisions to allow for the development of up to 466 high density attached residential units within the Mixed Use District. The Specific Plan provides design guidelines for future residential development in Section 5 that include criteria for site planning/neighborhood design and architecture including considerations for access, connectivity, livability and social interaction.

Policy CD-2.3 Commercial Areas

We desire commercial areas and centers to be distinctive, pedestrian friendly, functional, and vibrant with a range of businesses, places to gather, and connectivity to the neighborhoods they serve.

The Euclid Mixed Use Specific Plan allows for maximum of 1,676,886 S.F. of employment generating land uses within the Business Park and Mixed Use Districts. The Specific Plan provides design guidelines for future development in Section 5 that include architectural criteria to encourage the development of a variety of distinctive commercial businesses that are pedestrian friendly, connected to other surrounding uses, functional and vibrant elements of the overall neighborhood.

Policy CD-2.4 Urban, Mixed Use, and Transit-oriented Areas

We establish Place Types to require mixed use, urban, and transit-oriented areas to be designed and developed as pedestrian oriented areas that are integrated with adjacent neighborhoods and promote a vibrant, comfortable, and functional environment, as defined for each Place Type.

The Euclid Mixed Use Specific Plan includes a Mixed Use District that will allow up to 466 residential units and a maximum of 290,110 S.F. of retail or office uses along Edison Avenue in close proximity to transit turnouts within the Specific Plan area. The Specific Plan provides design guidelines for future development in Section 5 that include planning and design criteria to create a unique and high quality community and neighborhood design character for future development within the Specific Plan area that will be integrated into surrounding neighborhoods.

Policy CD-2.5 Streetscapes

We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right-of-way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.

Section 3.3, Circulation Plan, addresses connectivity, street improvements, pedestrian and bicycle plans, and transit. In Section 5.3, Landscape Design, the Euclid Mixed-Use Specific Plan identifies street improvements and streetscape including parkways, street trees, sidewalks, landscape buffers, and street lighting for Euclid Avenue, Eucalyptus Avenue, Merrill Avenue, and Sultana Avenue within the Specific Plan area, which are consistent with the Circulation Element of The Ontario Plan. The Euclid Mixed-Use Specific Plan streetscape design creates an aesthetically pleasing view for pedestrians and motorists, screens parking and loading areas from the public right-of-way, and visually integrates the development into the surrounding Ontario Ranch community.

Policy CD-2.6 Connectivity

We promote development of local street patterns, multimodal networks, and connected public spaces that create and unify neighborhoods, rather than divide them, and create cohesive and continuous corridors, rather than independent "islands" through the following means:

1. Local street networks that provide access both between subdivisions and within neighborhoods and discourage through traffic;
2. A local street system that is logical and understandable for the user. A grid system is preferred to avoid circuitous and confusing travel paths between internal neighborhood areas and adjacent arterials and to provide adequate emergency and evacuation access; and
3. Pedestrian and bicycle networks that provide convenient access to neighborhoods and nearby destinations, such as schools, parks, other public spaces, commercial areas, and transit stops.

The Euclid Mixed Use Specific Plan includes design guidelines for future development within the Mixed Use District in Section 5 that include planning and design criteria to create safe and efficient circulation systems and connectivity for future development within the Specific Plan area and surrounding neighborhoods.

Policy CD-2.7 Sustainability

We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping, and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials, and construction techniques.

The Euclid Mixed-Use Specific Plan is committed to sustainable design strategies that integrate principles of environmental stewardship into the design, construction and operation process. The Specific Plan incorporates sustainability principles into its design guidelines such as drought tolerant landscaping, skylights in warehouse areas of buildings to provide natural light and reduce lighting demand, high performance dual pane glazing in office storefronts, and LED products for energy efficient site lighting. Design strategies include the design and construction of energy efficient buildings to reduce air, water, and land pollution and environmental impacts from energy production and consumption. The use of recycled water to irrigate landscape is required by the Specific Plan's Recycled Water Plan (Section 3.4), consistent with the City of Ontario Recycled Water Master Plan.

Policy CD-2.8 Safe Design

We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.

The Euclid Mixed Use Specific Plan includes design guidelines for future development within the Mixed Use District in Section 5 that include criteria to create safe and efficient walkway and common areas that are visible and well lighted at night for future development within the Specific Plan.

Policy CD-2.9 Landscape Design

We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.

Consistent with the vision for Ontario Ranch as outlined in the Ontario Ranch Streetscape Master Plan, the Euclid Mixed-Use Specific Plan (Section 5.3, Landscape Design) provides for landscaped setbacks and landscaped parkways adjacent to bike lanes and sidewalks, defining these public spaces. The landscaped setbacks and parkways will include drought-tolerant plants featuring colorful shrubs and groundcovers, ornamental grasses and succulents, evergreen and deciduous trees, and species native to Southern California or naturalized to the arid Southern California climate to promote durable plant materials. The plant selection will complement the design theme of the Specific Plan area. Parking lot landscaping will reduce associated heat buildup, improve aesthetics, and integrate into onsite landscape design and adjacent streetscapes. Swaled landscape areas will retain/infiltrate stormwater run-off to improve water quality and promote groundwater recharge where feasible. Shade trees thoughtfully located near expanses of paving, building walls, roofs, and windows will reduce the impacts of heat gain.

Policy CD-2.10 Parking Areas

We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include:

1. Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field.
2. Structured parking: facade articulation, screening, appropriate lighting, and landscaping.
3. Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.

The Euclid Mixed Use Specific Plan includes design guidelines for future development within the Mixed Use District in Section 5 that include planning and design criteria to minimize the visual impact of surface parking and garages for future development within the Specific Plan area and surrounding neighborhoods.

Policy CD-2.11 Entry Statements

We encourage the inclusion of amenities, signage, and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.

The Euclid Mixed-Use Specific Plan establishes design guidelines to ensure high-quality development and a sense of place. As discussed in Section 5.3, Landscape Design, Euclid, Eucalyptus, Schaefer and Sultana Avenue and Edison Avenue will feature landscaped setbacks adjacent to the Specific Plan area that will provide attractive entries to the site. An entry monument will be located at the northeast corner of Euclid Avenue and Edison Avenue to identify the Ontario Ranch area and/or the Euclid Mixed-Use Specific Plan area.

Policy CD-2.12 Site and Building Signage

We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.

The Euclid Mixed-Use Specific Plan (Section 5.7, Signage) requires approval of a comprehensive sign program to address parcel identification, building identification and directional signage within the Specific Plan area. A comprehensive sign program will integrate project signage with the overall design of the site and structures to create a unified visual statement. A comprehensive sign program provides a means for flexible application of sign regulations to provide incentive and latitude in the design and display of multiple signs. Business park uses on the site will also be appropriately signed to give direction to loading and receiving, visitor parking, and other special uses.

Policy CD-2.16 Transit Stops

We require transit stops be conveniently located, well lit, safe, and clearly accessible to pedestrians, bicyclists, and people of all abilities.

The Euclid Mixed Use Specific Plan requires the location and construction of transit turnouts within the Specific Plan area.

GOAL CD-3:

Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.

Policy CD-3.1 Unique Identity

We promote development that heightens the unique character and identity of each Place Type by requiring compatible land uses and land planning, site design, and building design that promotes an active public realm.

The Euclid Mixed Use Specific Plan includes design guidelines for future development within the Mixed Use District in Section 5 that include planning and design criteria to establish a unique character and sense of identity for future development within the Specific Plan area and surrounding neighborhoods.

Policy CD-3.2 Comfortable, Human-Scale Public Realm

We require that public spaces, including streets, parks, and plazas on both public and private property be designed to maximize safety, comfort and aesthetics and connect to the citywide pedestrian, vehicular, and bicycle networks.

The Euclid Mixed Use Specific Plan includes design guidelines for future development within the Mixed Use District in Section 5 that include planning and design criteria to maximize safety, comfort and aesthetics and connect to the Citywide pedestrian, vehicular and bicycle networks.

Policy CD-3.3 Complete and Connected Network

We require that pedestrian, vehicular, and bicycle circulation on both public and private property be coordinated to provide connections internally and externally to adjacent neighborhoods and properties (existing and planned) through a system of local roads and trails that promote walking and biking to nearby destinations (including existing and planned parks, commercial areas, and transit stops) and are designed to maximize safety, comfort, and aesthetics.

The Euclid Mixed Use Specific Plan includes design guidelines for future development within the Mixed Use District in Section 5 that include planning and design criteria to ensure that all modes of circulation and neighborhood connectivity are provided and coordinated with the Citywide pedestrian, vehicular and bicycle network to maximize safety, comfort and aesthetics.

Policy CD-3.4 Context-Aware and Appropriate Design

We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.

The Euclid Mixed Use Specific Plan includes design guidelines for future development within the Mixed Use District in Section 5 that include planning and design criteria to ensure that future development complements existing surrounding development and provides adequate transitions and buffers between less compatible uses and minimizes potential conflicts.

Policy CD-3.5 Active Frontages

We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).

The Euclid Mixed Use Specific Plan includes design guidelines for future development within the Mixed Use District in Section 5 that include planning and design criteria to create active pedestrian streetscapes and orient building frontages, business entrances, residential courtyards and balconies towards sidewalks and common open areas maximize safety, comfort and aesthetics.

GOAL CD-5:

A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the property values and encourages additional public and private investments.

Policy CD-5.1 Maintenance of Buildings and Property

We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.

The Euclid Mixed-Use Specific Plan includes a Maintenance Responsibility Matrix in Section 6, Implementation, identifying the parties responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, walls and monuments, infrastructure, and utilities within the Specific Plan area. Privately owned buildings will be maintained as specified by the Property Owners Association (Section 6.10.2).

Policy CD-5.2 Maintenance of Infrastructure

We require the continual maintenance of infrastructure.

The Euclid Mixed-Use Specific Plan includes a Maintenance Responsibility Matrix in Section 6, Implementation, identifying the parties responsible for maintenance of roadways, parkways, trails, sidewalks, common areas, walls and monuments, infrastructure, and utilities within the Specific Plan area.

7.9 Social Resources Element

GOAL SR-2:

A range of educational and training opportunities for residents and workers of all ages and abilities that improves their life choices and provides a skilled workforce for our businesses.

Policy SR-2.4 Access to Schools

We work with local and regional partners to improve the safety in and around schools and to improve access for citizens of all ages and abilities to schools and community services, such as after school and other programs.

The Euclid Mixed Use Specific Plan evaluated the accessibility and capacity of existing schools. Future residential development will be reviewed by the applicable school districts and will address the mitigation measures identified in the project Environmental Impact Report.

GOAL SR-5:

Local heritage, entertainment, and cultural experiences that enrich the lives of Ontario's residents, workers, and visitors and serve to attract residents and businesses to the City.

Policy SR-5.3 Public Art

We encourage public art in buildings, parks, open spaces, and other public and private spaces.

The Euclid Mixed Use Specific Plan does not require public art within the Business Park and Mixed Use Districts specifically. Future development plans for commercial or office uses should consider public art improvements or amenities according to City policy.

LAND DEVELOPMENT DIVISION
CONDITIONS OF APPROVAL

CITY OF ONTARIO PLANNING DEPARTMENT
303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

Date Prepared: 7/8/2024

File No: PSP22-001

Related Files: PMTT23-005 & PDEV23-011

Project Description: A Specific Plan (File No. PSP22-001 – Euclid Mixed Use Specific Plan) to establish the land use districts, development standards, guidelines, and infrastructure improvements for the potential development of up to 1,386,776 square feet of Business Park land uses, 290,110 square feet of office and retail land uses, and 466 dwelling units on the 84-acre of land generally located east of Euclid Avenue, south of Schaefer Avenue, west of Sultana Avenue and north of Edison Avenue**;** (APNs: 1053-071-01; 1053-071-02; 1053-071-03; 1053-071-04; 1053-211-01; 1053-211-02; 1053-211-05; 1053-281-01; 1053-281-02; 1053-281-03; 1053-281-04; 1053-281-07; 1053-281-08; 1053-081-01; 1053-081-02; 1053-081-03; 1053-081-04); **submitted by Euclid Land Investment LLC.**

Prepared By: Edmelynne V. Hutter, AICP, Senior Planner

Email: ehutter@ontarioca.gov

The Planning Department, Land Development Section, conditions of approval applicable to the above-described Project, are listed below. The Project shall comply with each condition of approval listed below:

1.0 Standard Conditions of Approval. The project shall comply with the *Standard Conditions for New Development*, adopted by City Council Resolution No. 2017-027 on April 18, 2017. A copy of the *Standard Conditions for New Development* may be obtained from the Planning Department or City Clerk/Records Management Department.

2.0 Special Conditions of Approval. In addition to the *Standard Conditions for New Development* identified in condition no. 1.0, above, the project shall comply with the following special conditions of approval:

2.1 Specific Plan/Specific Plan Amendment. The following shall be submitted to the Planning Department within 30 days following City Council approval of the Specific Plan/Specific Plan Amendment:

(a) Three copies of the final Specific Plan document.

(b) One complete, unbound copy of the final Specific Plan document.

(c) One USB drive, or download link, containing a complete Microsoft Word, or editable, copy of the final Specific Plan document, including original figures, images and all required revisions.

2.2 Additional Fees.

(a) Within 5 days following final application approval, the Notice of Determination ("NOD") filing fee shall be provided to the Planning Department. The fee shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act ("CEQA"). Failure to provide said fee within the time specified will result in the extension of the statute of limitations for the filing of a CEQA lawsuit from 30 days to 180 days.

CITY OF ONTARIO *Agenda Report* **August 20, 2024**	**SECTION:** **PUBLIC HEARINGS**
Department: Development Administration Prepared By: Pablo De Lara Department: Prepared By: Pablo De Lara Staff Member Presenting: Scott Murphy, Executive Director Community Development Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 26

SUBJECT: **A PUBLIC HEARING TO CONSIDER THE ADOPTION OF AN ORDINANCE APPROVING A DEVELOPMENT AGREEMENT (FILE NO. PDA23-004) BETWEEN THE CITY OF ONTARIO AND EUCLID LAND INVESTMENT, LLC**

RECOMMENDATION: That the City Council introduce and waive further reading of an Ordinance approving a Development Agreement (File No. PDA23-004) between the City of Ontario and Euclid Land Investment, LLC, to establish the terms and conditions associated with Tentative Parcel Map 20714 (File No. PMTT23-005), a 60-acre property located east of Euclid Avenue, south of Schaefer Avenue, west of future Sultana Avenue and north of Edison Avenue within the Euclid Mixed Use Specific Plan.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Operate in a Businesslike Manner
Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)
Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in Ontario Ranch

FISCAL IMPACT: The proposed Development Agreement (File No. PDA23-004) will not have a direct fiscal impact on the City's General Fund. The Development Agreement will provide funding from the formation of a Community Facilities District (CFD) for City services and facilities required to support the Euclid Mixed Use Specific Plan (Specific Plan) development, thereby mitigating the increased costs associated with such services. In addition, the City will receive development impact, compliance processing, licensing, and permitting fees. No General Fund revenue will be used to support the Ontario Ranch development.

BACKGROUND & ANALYSIS: The Ontario Ranch Financial commitments required for construction of properties within a specific plan are substantial. Therefore, in order to adequately forecast these costs and gain assurance that the project may proceed under the existing policies, rules, and regulations, Euclid Land Investment, LLC ("Owner"), has requested that the City enter into

negotiations to create a Development Agreement ("Agreement").

The Agreement is proposed outside of the NMC Builders Construction Agreement development area and was established in coordination between the City Attorney and the Owners legal counsel. The provisions of the Agreement are consistent with the commitments to assure adequate public infrastructure improvements are constructed or funded by the Owner.

The Agreement proposes to include 60 acres of land within the Euclid Mixed Use Specific Plan, as shown on the attached Exhibit A. The Agreement grants the Owner a vested right to develop Tentative Parcel Map 20714 ("Map"), provided the Owner complies with the terms and conditions of the Specific Plan and related Environmental Impact Report (EIR).

The Map (see attached Exhibit B) is generally bounded by Schaefer, Sultana, Edison and Euclid Avenues, and proposes to subdivide 60 acres of land into 13 numbered lots and 2 lettered lots to facilitate the construction of 12 business park buildings, totaling 882,538 square feet, and the associated landscape, common interest amenities, and facilities that are necessary for the project.

The term of the Agreement is for 10 years, with a 5-year option to renew. The main points of the Agreement address funding for all new City expenses created by the project, which includes: Development Impact Fees (DIF) for construction of public improvements (i.e. streets and bridges, sewer, water, storm drain and fiber); and the creation of a Community Facilities District (CFD) for the maintenance of public facilities. Additionally, the Owner shall pay in lieu-fees to the City for the future construction and completion of Ontario Ranch Regional Water and Storm Drain improvements.

In considering the Agreement at their meeting on July 23, 2024, the Planning Commission found the Agreement to be consistent with State law, The Ontario Plan, and the City's Development Agreement policies. As a result, the Planning Commission adopted Resolution No. PC24012 with a 6 to 0 vote, recommending City Council approval of the Agreement.

ENVIRONMENTAL REVIEW: The Specific Plan is located in what was formerly the City of Ontario Sphere of Influence (“SOI”) area, which consists of roughly 8,200 acres at the south end of the City. On January 7,1998, the City of Ontario adopted the New Model Colony (“NMC”) General Plan Amendment, setting forth a comprehensive strategy for the future development of the SOI. The NMC is bounded by Riverside Drive to the north, Hamner Avenue to the east, Euclid Avenue to the west, and Merrill Avenue/Bellegrave to the south.

Since the adoption of the NMC General Plan Amendment, the City has updated the General Plan on different occasions. On January 27, 2010, the City adopted The Ontario Plan and certified the accompanying Environmental Impact Report (SCH# 2008101140). On August 16, 2022, the City adopted The Ontario Plan 2050 (TOP 2050), which was an update to The Ontario Plan adopted in 2010 and included the certification of an accompanying Supplemental Environmental Impact Report (SCH# 2021070364). The Policy Plan component of TOP 2050 serves as the General Plan for the entire City, including the NMC (now referred to as “Ontario Ranch”). TOP 2050 identified many areas that might have potentially significant impacts on the environment. These areas included 1) Aesthetics; 2) Biological Resources; 3) Geology and Soils; 4) Hazards and Hazardous Materials; 5)

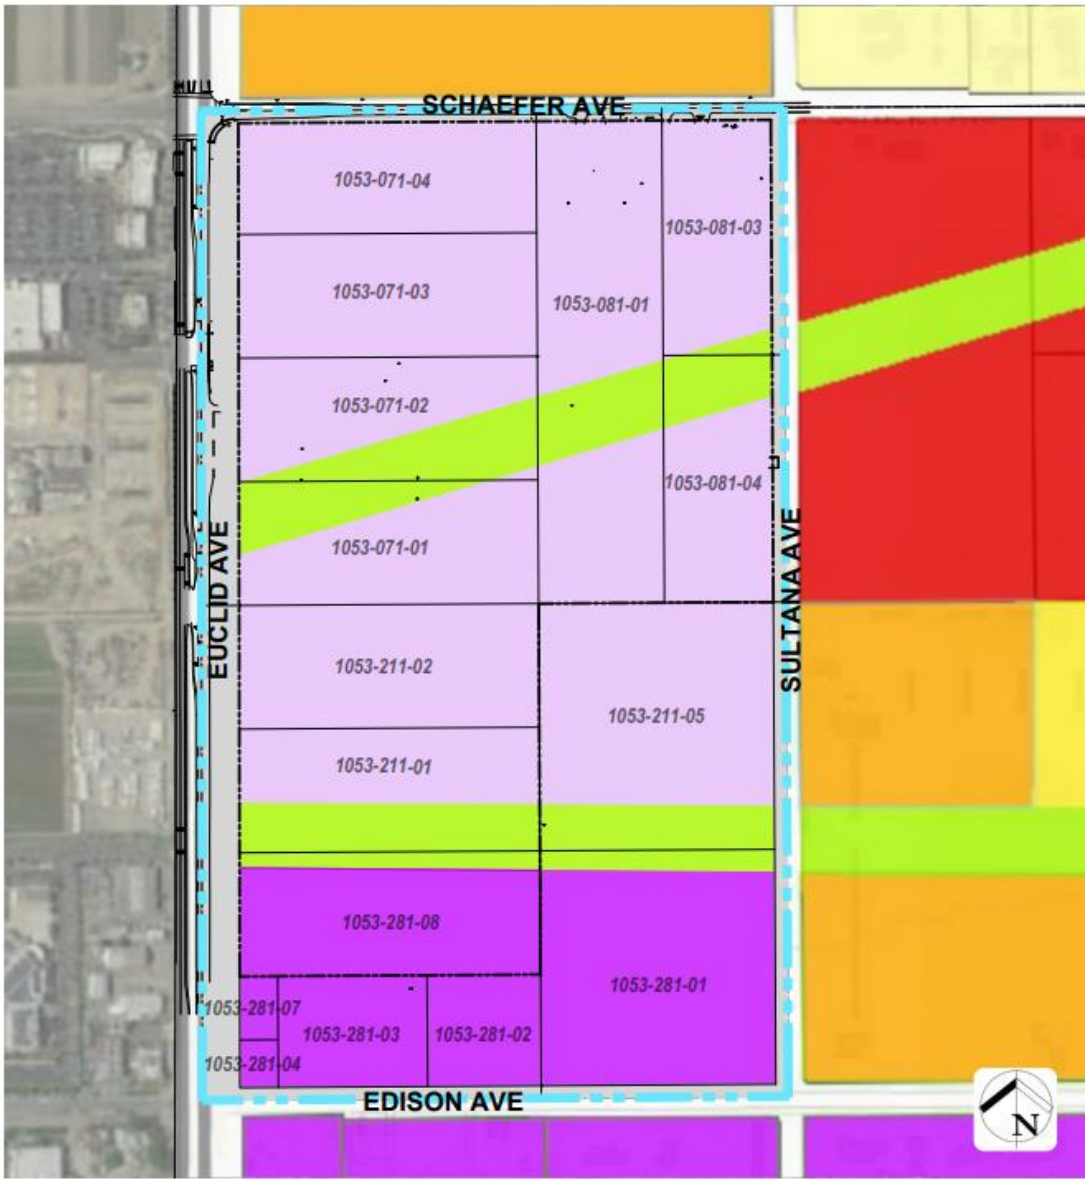
Hydrology and Water Quality; 6) Land Use and Planning; 7) Mineral Resources; 8) Population and Housing; 9) Public Services; 10) Recreation; and 11) Utilities and Service systems. Through the EIR process, these potential impacts were analyzed, revisions were incorporated into the plan, and/or mitigation measures were identified that reduced the potential environmental impacts to a level that was less than significant.

TOP 2050 also identified several potential impacts that, even with revisions and/or mitigation measures, could not be reduced to a level of less than significant. These areas included Air Quality, Cultural Resources, Noise, and Transportation. While these impacts will be significant and unavoidable, the City determined that the benefits of the Ontario Ranch development outweigh the potential unavoidable, adverse impacts of the plan. As a result, the City adopted a Statement of Overriding Considerations for those impacts that could not be fully mitigated to a level of less than significant.

The TOP 2050 EIR analyses focused on the program, or "big picture" impacts associated with development. With the submittal of the EMUSP, staff is charged with evaluating the potential impacts of development at the project level, looking specifically at the project proposal and any potential environmental impacts associated with it. Staff completed an Initial Study for the Project and determined that an EIR should be prepared for the EMUSP. Through the Initial Study preparation and scoping meeting discussion, an EIR was prepared for the EMUSP addressing the following issues:

- Aesthetics
- Agricultural and Forestry Resource
- Air Quality Biological Resources
- Cultural Resources
- Energy
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Population and Housing
- Public Services
- Transportation
- Tribal Cultural Resources
- Utilities and Service Systems

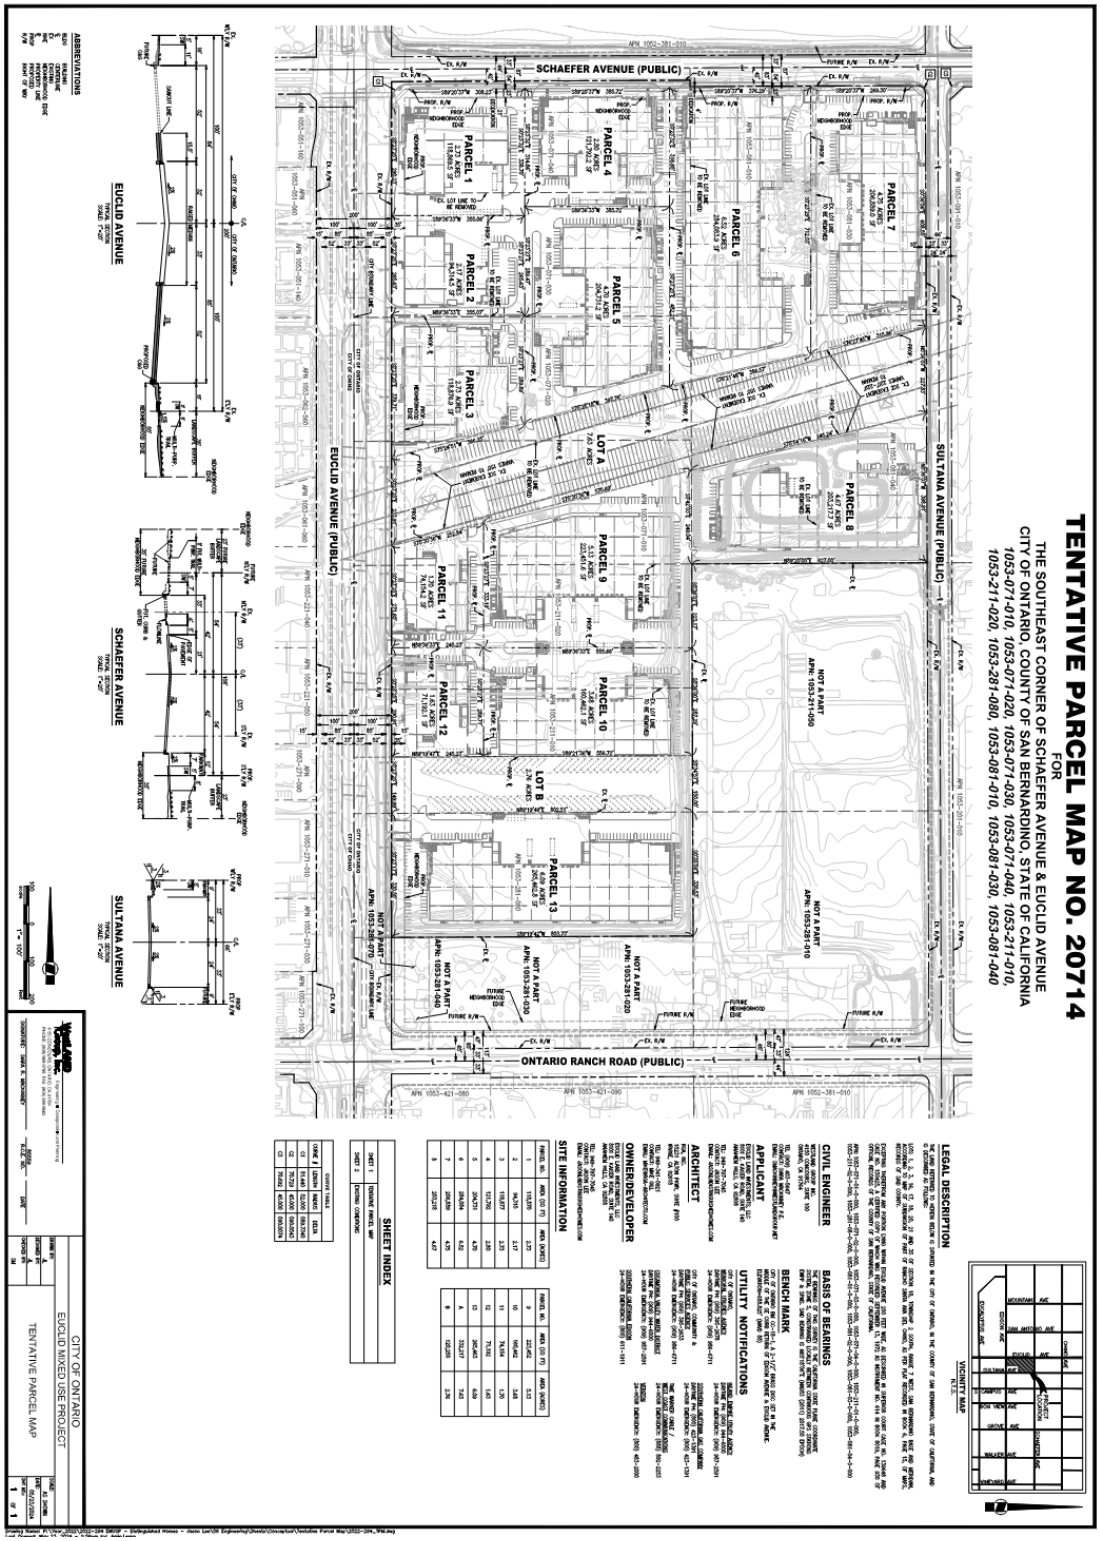
The EMUSP EIR evaluates each of these various areas and identifies mitigation measures and/or revisions to the plan to lessen the level of significance. The EIR analyzed EMUSP Phase 1 based on the proposed EMUSP land uses, development intensities, conceptual designs, infrastructure requirements, and onsite surveys and studies. However, access to properties within Phase 2 could not be obtained and, therefore, the level of impact cannot be known for categories such as Biological Resources, Geology and Soils, and Hazards and Hazardous Materials since onsite surveys could not be conducted. It is conceivable that, when development of Phase 2 is proposed and



onsite access is obtained, the potentially significant impacts on Biological Resources, Geology and Soils, and Hazards and Hazardous Materials in Phase 2 can be mitigated to less than significant. Nevertheless, since level of impact cannot be known for Phase 2 areas at this time, the EMUSP EIR conservatively concludes that there are significant and unavoidable impacts.

With the implementation of the various mitigation measures, many of the potential adverse impacts can be reduced to a level of less than significant. Of the 17 areas considered by the EIR, all but seven areas were less than significant or mitigated to a level of less than significant. The seven remaining impact areas, even with the mitigation measures, could not be reduced to less than significant, resulting in some impacts remaining potentially significant and unavoidable. These areas are:

- Agricultural and Forestry Resources
- Air Quality
- Biological Resources (Phase 2 only)
- Cultural Resources
- Geology and Soils (Phase 2 only)
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials (Phase 2 only)



While mitigation of all potential impacts to a level of less than significant is desirable, the fact that seven areas will remain significant and unavoidable is not unexpected. The identification of these areas as significant and unavoidable also validates the work previously completed for TOP 2050. Staff continues to believe that the benefits of the proposed development outweigh the potential impacts associated with it. Therefore, staff recommends the Planning Commission recommend certification of the EIR to the City Council and that a Statement of Overriding Considerations be adopted for the Project.

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA APPROVING FILE NO. PDA23-004, A DEVELOPMENT AGREEMENT BETWEEN THE CITY OF ONTARIO AND EUCLID LAND INVESTMENT, LLC, TO ESTABLISH THE TERMS AND CONDITIONS ASSOCIATED WITH TENTATIVE PARCEL MAP 20714 (FILE NO.PMTT23-005), A 60 ACRE PROPERTY LOCATED EAST OF EUCLID AVENUE, SOUTH OF SCHAEFER AVENUE, WEST OF SULTANA AVENUE AND NORTH OF EDISON AVENUE WITHIN THE EUCLID MIXED USE SPECIFIC PLAN (FILE NO. PSP22-001); (APNS: 1053-071-01; 1053-071-02; 1053-071-03; 1053-071-04; 1053-211-01; 1053-211-02; 1053-281-08; 1053-081-01; 1053-081-02; 1053-081-03; 1053-081-04)

WHEREAS Euclid Land Investment, LLC ("Applicant") has filed an application for the approval of a Development Agreement, File No. PDA23-004 as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 60 acres of land, located east of Euclid Avenue, south of Schaefer Avenue, west of Sultana Avenue and north of Edison Avenue within a proposed Euclid Mixed Use Specific Plan (File No. PSP22-001); and

WHEREAS, the applicant submitted Tentative Parcel Map 20714 (File No. PMTT23-005) to subdivide 60 acres of land into 13 numbered lots and 2 lettered lots to facilitate the construction of 12 business park buildings collectively totaling 882,538 square feet, and the associated landscape, common interest amenities, and facilities that are necessary for the project; and

WHEREAS, the environmental impacts of this project were reviewed in conjunction with the Euclid Mixed Use Specific Plan (File No. PSP22-001), for which an Environmental Impact Report (State Clearinghouse No. 2023020281) was prepared. This application introduces no new significant environmental impacts; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and make recommendations to the City Council on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the

Housing Element; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and make recommendations to the City Council on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on July 23, 2024, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, on August 20, 2024, the City Council of the City of Ontario, California, conducted a hearing to consider the Project and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending authority for the Project, the City Council has reviewed and considered the information contained in the EIR and supporting documentation. Based upon the facts and information contained in the EIR and supporting documentation, the City Council finds as follows:

(1) The Environmental Impact Report (State Clearing House No. 2023020281) was approved for City Council consideration by the Planning Commission on July 23, 2024. This application introduces no new

significant environmental impacts; and

(2) The EIR contains a complete and accurate reporting of the environmental impacts associated with the Project; and

(3) The EIR was completed in compliance with CEQA and the Guidelines promulgated thereunder; and

(4) The EIR reflects the independent judgment of the City Council; and

(5) The proposed project will introduce no new significant environmental impacts beyond the EIR, and all mitigation measures adopted with the EIR, are incorporated herein by this reference.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the EIR that will require major revisions to the EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the EIR was prepared, that will require major revisions to the EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the EIR was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the EIR would substantially reduce one or more

significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending authority for the Project, the City Council finds that based on the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan. The project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

SECTION 4: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 4, above, the City Council hereby concludes as follows:

(1) The Development Agreement applies to approximately 60 acres of land, located east of Euclid Avenue, south of Schaefer Avenue, west of Sultana Avenue and north of Edison Avenue within a proposed Euclid Mixed Use Specific Plan (File No. PSP22-001); and

(2) The Development Agreement establishes parameters for the development of land within the Euclid Mixed Use Specific Plan. The Development Agreement also grants the Applicant, the right to develop, the ability to quantify the fees; and establish the terms and conditions that apply to those projects. These terms and conditions are consistent with The Ontario Plan Policy Plan (General Plan), design guidelines and development standards for the Euclid Mixed Use Specific Plan; and

(3) The Development Agreement grants the Applicant a vested right to develop Tentative Parcel Map 20714 (File No. PMTT23-005) as long as the Applicant complies with the terms and conditions of the Euclid Mixed Use Specific Plan and EIR. Tentative Parcel Map 20714 is located east of Euclid Avenue, south of Schaefer Avenue, west of Sultana Avenue and north of Edison Avenue within the Euclid Mixed Use Specific Plan, and to subdivide 60 acres of land into 13 numbered lots and 2 lettered lots to facilitate the construction of 12 business park buildings collectively totaling 882,538 square feet; and

(4) The Development Agreement has been prepared in conformance with the goals and policies of The Ontario Plan Policy Plan (General Plan); and

(5) The Development Agreement does not conflict with the Land Use Policies of The Ontario Plan Policy Plan (General Plan) and will provide for development, within the district, in a manner consistent with the Policy Plan and with related development; and

(6) This Development Agreement will promote the goals and objectives of the Land Use Element of the Policy Plan. The Environmental Impact Report (State Clearing House No. 2023020281) was approved for City Council consideration by the Planning Commission on July 23, 2024; and

(7) This Application introduces no new significant environmental impacts. All previously adopted mitigation measures are a condition of project approval and are incorporated herein by this reference.

SECTION 6: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 5, above, the City Council hereby RECOMMENDS THE CITY COUNCIL APPROVE the herein described Application, subject to each and every condition set forth in the Development Agreement (File No. PDA23-004) attached hereto as "Attachment A," and incorporated herein by this reference

SECTION 7: ***City Council Required Actions***. Approval of this Application is contingent upon City Council approving the following:

(1) Euclid Mixed Use Specific Plan (File No. PSP22-001)

(2) Euclid Mixed Use Specific Plan EIR (SCH #2023020281)

If the City Council does not approve the Euclid Mixed Use Specific Plan (File No. PSP22-001) and the Euclid Mixed Use Specific Plan EIR (SCH #2023020281), this Resolution should become null and void and of no further force and effect.

SECTION 8: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 9: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 10: ***Severability.*** If any section, sentence, clause or phrase of this Ordinance or the application thereof to any entity, person or circumstance is held for any reason to be invalid or unconstitutional, such invalidity or unconstitutionality shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this Ordinance are severable. The People of the City of Ontario hereby declare that they would have adopted this Ordinance and each section, sentence, clause or phrase thereof, irrespective of the fact that any one or more section, subsections, sentences, clauses or phrases be declared invalid or unconstitutional.

SECTION 11: ***Effective Date.*** This Ordinance shall become effective 30 days following its adoption.

SECTION 12: ***Publication and Posting.*** The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within 15 days following the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

DEVELOPMENT AGREEMENT NO. PDA23-004

This Development Agreement (hereinafter "Agreement") is dated for reference purposes only as of the ____ day of _____, 2024 by and among the City of Ontario, a California municipal corporation (hereinafter "CITY"), Euclid Land Investment, LLC a Delaware limited liability company (hereinafter "OWNER"):

RECITALS

WHEREAS, CITY is authorized to enter into binding development agreements with persons having legal or equitable interests in real property for the development of such property, pursuant to Section 65864, et seq. of the Government Code and Section 4.01.015 of the Ontario Development Code; and

WHEREAS, OWNER has requested CITY to enter into a development agreement and proceedings have been taken in accordance with the rules and regulations of CITY; and

WHEREAS, by electing to enter into this Agreement, CITY shall bind future City Councils of CITY by the obligations specified herein and limit the future exercise of certain governmental and proprietary powers of CITY; and

WHEREAS, the terms and conditions of this Agreement have undergone extensive review by CITY and the City Council and have been found to be fair, just and reasonable; and

WHEREAS, the best interests of the citizens of the CITY and the public health, safety and welfare will be served by entering into this Agreement; and

WHEREAS, all of the procedures of the California Environmental Quality Act, Pub. Res. Code § 21000, et seq. ("CEQA") have been met with respect to the Project and the Agreement in that certain Euclid Mixed Use Specific Plan Amendment Subsequent Environmental Impact Report (State Clearinghouse No. State Clearinghouse No. 2023020281 (the "FEIR").

WHEREAS, on _____the City Council found and determined that the FEIR was prepared in accordance with the requirements of CEQA and adequately describes the impacts of the Project described in the FEIR, which included consideration of this Agreement; and

WHEREAS, this Agreement and the Project are consistent with the CITY's Comprehensive General Plan and the Euclid Mixed Use Specific Plan and

WHEREAS, all actions taken and approvals given by CITY have been duly taken or approved in accordance with all applicable legal requirements for notice, public hearings, findings, votes, and other procedural matters; and

WHEREAS, development of the Project Site, as more particularly described and depicted in **Exhibits A** and **B**, respectively (the "Property") in accordance with this Agreement will provide substantial benefits to CITY and will further important policies and goals of CITY; and

WHEREAS, this Agreement will eliminate uncertainty in planning and provide for the orderly development of the Property, ensure progressive installation of necessary improvements, provide for public services appropriate to the development of the Project, and generally serve the purposes for which development agreements under Section 65864 et seq. of the Government Code are intended; and

WHEREAS, OWNER has incurred and will in the future incur substantial costs in order to assure development of the Property in accordance with this Agreement; and

WHEREAS, OWNER has incurred and will in the future incur substantial costs in excess of the generally applicable requirements in order to assure vesting of legal rights to develop the Property in accordance with this Agreement.

COVENANTS

NOW, THEREFORE, in consideration of the above recitals and of the mutual covenants hereinafter contained and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

1. DEFINITIONS AND EXHIBITS.

1.1 Definitions. The following terms when used in this Agreement shall be defined as follows:

1.1.1 "Agreement" means this Development Agreement.

1.1.2 "CITY" means the City of Ontario, California, a California municipal corporation.

1.1.3 "Development" means the improvement of the Property for the purposes of completing the structures, improvements and facilities comprising the Project including, but not limited to: grading; the construction of public infrastructure and public facilities related to the Project whether located within or outside the Property; the construction of buildings and structures; and the installation of landscaping. "Development" does not include the maintenance, repair, reconstruction or redevelopment of any building, structure, improvement or facility after the construction and completion thereof.

1.1.4 "Development Approvals" means all permits and other entitlements for use subject to approval or issuance by CITY in connection with development of the Property including, but not limited to:

(a) general plans and general plan amendments; and specific plans and specific plan amendments;

(b) tentative and final subdivision and parcel maps;

(c) development plan review.

1.1.5 "Development Exaction" means any requirement of CITY in connection with or pursuant to any Land Use Regulation or Development Approval for the dedication of land, the construction of improvements or public facilities, or the payment of fees in order to lessen, offset, mitigate or compensate for the impacts of development on the environment or other public interests.

1.1.6 "Development Impact Fee" means a monetary exaction, other than a tax or special assessment, whether characterized as a fee or a tax and whether established for a broad class of projects by legislation of general applicability or imposed on a specific project on an ad hoc basis, that is charged by a local agency to the applicant in connection with approval of a development project for the purpose of defraying all or a portion of the cost of public facilities related to the development project, and, for purposes of this Agreement only, includes fees collected under development agreements adopted pursuant to Article 2.5 of the Government Code (commencing with Section 65864) of Chapter 4. For purposes of this Agreement only, "Development Impact Fee" shall not include processing fees and charges imposed by CITY to cover the estimated actual costs to CITY of processing applications for Development Approvals or for monitoring compliance with any Development Approvals granted or issued, including, without limitation, fees for zoning variances; zoning changes; use permits; building inspections; building permits; filing and processing applications and petitions filed with the local agency formation commission or conducting preliminary proceedings or proceedings under the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000, Division 3 (commencing with Section 56000) of Title 5 of the Government Code; the processing of maps under the provisions of the Subdivision Map Act, Division 2 (commencing with Section 66410) of Title 7 of the Government Code; or planning services under the authority of Chapter 3 (commencing with Section 65100) of Division 1 of Title 7 of the Government Code, fees and charges as described in Sections 51287, 56383, 57004, 65104, 65456, 65863.7, 65909.5, 66013, 66014, and 66451.2 of the Government Code, Sections 17951, 19132.3, and 19852 of the Health and Safety Code, Section 41901 of the Public Resources Code, and Section 21671.5 of the Public Utilities Code, as such codes may be amended or superseded, including by amendment or replacement.

1.1.7 "Development Plan" means the Existing Development Approvals and the Existing Land Use Regulations applicable to development of the Property.

1.1.8 "Effective Date" means the date that the ordinance approving this Agreement goes into effect.

1.1.9 "Existing Development Approvals" means all Development Approvals approved or issued on or prior to the Effective Date. Existing Development Approvals includes the Approvals incorporated herein as Exhibit "C" and all other Approvals which are a matter of public record on the Effective Date.

1.1.10 "Existing Land Use Regulations" means all Land Use Regulations in effect on the date of the first reading of the ordinance adopting and approving this Agreement. Existing Land Use Regulations includes the Regulations incorporated herein as Exhibit "D" and all other Land Use Regulations that are in effect and a matter of public record on such date.

1.1.11 "General Plan" means The Ontario Plan adopted on August 16, 2022, as amended up to the date of the first reading of the ordinance adopting and approving this Agreement.

1.1.12 "Improvement" or "Improvements" means those public improvements required to support the development of the Project as described in the Parcel Map conditions for Parcel Map No. 20714 ("Parcel Map") as further described in Exhibit "E" and depicted in Exhibit “F”(together, the "Infrastructure Improvements Exhibit").

1.1.13 "Land Use Regulations" means all ordinances, resolutions, codes, rules, regulations and official policies of CITY governing the development and use of land, including, without limitation, the permitted use of land, the density or intensity of use, subdivision requirements, timing and phasing of development, the maximum height and size of buildings, the provisions for reservation or dedication of land for public purposes, and the design, improvement and construction standards and specifications applicable to the development of the Property. "Land Use Regulations" does not include any CITY ordinance, resolution, code, rule, regulation or official policy, governing:

(a) the conduct of businesses, professions, and occupations;

(b) taxes and assessments;

(c) the control and abatement of nuisances;

(d) the granting of encroachment permits and the conveyance of similar rights and interests that provide for the use of or the entry upon public property;

(e) the exercise of the power of eminent domain.

1.1.14 "Mortgagee" means a mortgagee of a mortgage, a beneficiary under a deed of trust or any other security-device lender, and their successors and assigns.

1.1.15 "OWNER" means the persons and entities listed as owner on page 1 of this Agreement and their permitted successors in interest to all or any part of the Property.

1.1.16 "Owner Affiliate" shall mean, (i) any entity that directly or indirectly controls, is controlled by, or is under common control with OWNER, or (ii) an entity at least a majority of whose economic interest is owned by OWNER. For purposes of this definition, the term “control” means the power to direct the management of such entity through voting rights, ownership or contractual obligations.

1.1.17 “Phase” means the development area described in the Infrastructure Improvements Exhibit to this Agreement.

1.1.18 “Phase 2 Water Participation Fee” means the fee paid to the CITY for the Project, to fund the Property’s respective share of the project costs of the design and construction of the Phase 2 Water Improvements by the CITY. The Phase 2 Water Participation Fee shall be the calculated amount of the Regional Water DIF for the Project based upon the number of square feet, acreage, and land use category for non-residential square footage of the Project.

1.1.19 "Project" means the development of the Property contemplated by the Development Plan, as such Plan may be further defined, enhanced or modified pursuant to the provisions of this Agreement.

1.1.20 "Property" means the real property described on Exhibit "A" and shown on Exhibit "B" to this Agreement.

1.1.21 "Reservations of Authority" means the rights and authority excepted from the assurances and rights provided to OWNER under this Agreement and reserved to CITY under Section 3.4 of this Agreement.

1.1.22 "Specific Plan" means that certain specific plan adopted by the City Council, and entitled, "Euclid Mixed Use Specific Plan".

1.1.23 "Subsequent Development Approvals" means all discretionary Development Approvals required subsequent to the Effective Date in connection with development of the Property. Subsequent Development Approvals shall be deemed to be subject to the provisions of this Agreement, without any further action needed on the part of either the CITY or OWNER.

1.1.24 "Subsequent Land Use Regulations" means any discretionary Land Use Regulations adopted and effective after the Effective Date of this Agreement.

1.2 Exhibits. The following documents are attached to, and by this reference made a part of, this Agreement:

Exhibit "A" — Legal Description of the Property.

Exhibit "B" — Map showing Property and its location.

Exhibit "C" — Existing Development Approvals.

Exhibit "D" — Existing Land Use Regulations.

Exhibit "E" — Description of Required Infrastructure Improvements

Exhibit "F" — Depiction of Infrastructure Improvements Exhibits

Exhibit "G" – Form of Certificate of DIF Credit to be issued by CITY

2. GENERAL PROVISIONS.

2.1 Binding Effect of Agreement. The Property is hereby made subject to this Agreement. Development of the Property is hereby authorized and shall be carried out only in accordance with the terms of this Agreement.

2.2 Ownership of Property. OWNER represents and covenants that it is the owner of fee simple title or the lessee or an optionee of the Property or a portion(s) thereof. To the extent applicable, OWNER has obtained written consent from the current fee owner of the Property agreeing to the terms of this Agreement and the recordation thereof.

2.3 Term. The term of this Agreement shall commence on the Effective Date and shall continue for an initial term of ten (10) years thereafter unless this term is modified or extended pursuant to the provisions of this Agreement. Upon approval by the City Manager, without the need for City Council approval, the term of this Agreement may be extended for an additional five (5) years following expiration of the initial ten (10) year term, provided the following have occurred:

(a) OWNER provides at least 180 days written notice to CITY prior to expiration of the initial term; and

(b) OWNER is not then in uncured default of this Agreement.

2.4 Assignment.

2.4.1 Right to Assign. OWNER shall have the right to sell, transfer or assign the Property in whole or in part (provided that no such partial transfer shall violate the Subdivision Map Act, Government Code Section 66410, et seq.), to any person, partnership, limited liability company, joint venture, firm or corporation at any time during the term of this Agreement; provided, however, that any such sale, transfer or assignment shall include the assignment and assumption of the rights, duties and obligations arising under or from this Agreement with respect to the portion of the Property sold and be made in strict compliance with the following:

(a) Except as expressly provided for herein, no sale, transfer or assignment of any right or interest under this Agreement shall be made unless made together with the sale, transfer or assignment of all or a part of the Property.

(b) Concurrent with any such sale, transfer or assignment, or within fifteen (15) business days thereafter, OWNER shall notify CITY's City Manager, in writing, of such sale, transfer or assignment and shall provide CITY with: (1) an executed agreement, in a form reasonably acceptable to CITY, by the purchaser, transferee or assignee and providing therein that the purchaser, transferee or assignee expressly and unconditionally assumes all the duties and obligations of OWNER under this Agreement with respect to the portion of the Property so sold, transferred or assigned.

(c) Any sale, transfer or assignment not made in strict compliance with the foregoing conditions shall constitute a default by OWNER under this Agreement. Notwithstanding the failure of any purchaser, transferee or assignee to execute the agreement required by Paragraph (b) of this Subsection 2.4.1, the burdens of this Agreement shall be binding upon such purchaser, transferee or assignee, but the benefits of this Agreement shall not inure to such purchaser, transferee or assignee until and unless such agreement is executed. The City Manager shall have the authority to review, consider and either approve, conditionally approve, or deny any proposed sale, transfer or assignment that is not made in compliance with this section 2.4.

(d) Notwithstanding the foregoing, OWNER shall have the right to assign this Agreement to an Owner Affiliate subject to the notice requirements to CITY as described in Paragraph (b) of this Section 2.4.1, above.

2.4.2 Release of Transferring Owner. Notwithstanding any sale, transfer or assignment, a transferring OWNER shall continue to be obligated under this Agreement unless such transferring owner is given a release in writing by CITY, which release shall be provided by CITY upon the full satisfaction by such transferring owner of the following conditions:

(a) OWNER no longer has a legal or equitable interest in all or any part of the portion of the Property sold, transferred or assigned.

(b) OWNER is not then in default under this Agreement.

(c) OWNER has provided CITY with the notice and executed an agreement as required under Paragraph (b) of Subsection 2.4.1 above.

(d) The purchaser, transferee or assignee provides CITY with security equivalent to any security previously provided by OWNER (if any) to secure performance of its obligations hereunder which are to be performed upon portion of the Property sold, transferred or assigned.

2.4.3 Effect of Assignment and Release of Obligations. In the event of a sale, transfer or assignment pursuant to the provisions of Section 2.4.1 and notwithstanding the release provisions of Section 2.4.2 above:

(a) The assignee shall be liable for the performance of all obligations of OWNER with respect to transferred property, but shall have no obligations with respect to the portions of the Property, if any, not transferred (the "Retained Property").

(b) The owner of the Retained Property shall be liable for the performance of all obligations of OWNER with respect to Retained Property, but shall have no further obligations with respect to the transferred property.

(c) The assignee's exercise, use and enjoyment of the Property or portion thereof shall be subject to the terms of this Agreement to the same extent as if the assignee were the OWNER.

2.4.4 Subsequent Assignment. Any subsequent sale, transfer or assignment after an initial sale, transfer or assignment shall be made only in accordance with and subject to the terms and conditions of this Section 2.4.

2.4.5 Termination of Agreement With Respect to Individual Lots Upon Sale to Public and Completion of Construction. The provisions of Subsection 2.4.1 shall not apply to the sale or lease (for a period longer than one (1) year) of any parcel which has been finally subdivided and is individually (and not in "bulk") sold or leased to a member of the public or other ultimate user of the parcel. Notwithstanding any other provisions of this Agreement, this Agreement shall terminate with respect to any lot and such lot shall be released and no longer be subject to this Agreement without the execution or recordation of any further document upon satisfaction of both of the following conditions:

(a) The lot has been finally subdivided and individually (and not in "bulk") sold or leased (for a period longer than one (1) year) to a member of the public or other ultimate user; and,

(b) A certificate of occupancy has been issued for a building on the parcel, and the fees set forth under Section 4 of this Agreement have been paid.

2.4.6 Partial Assignment and Assumption. CITY and OWNER agree OWNER may partially assign its obligations and rights under this Agreement, and all amendments hereto, to a purchaser, transferee or assignee of a lot, which has been subdivided subject to provisions of a partial assignment and assumption agreement in a form approved by CITY. Any such complete and executed partial assignment and assumption of this Agreement shall be submitted to CITY for approval pursuant to Section 2.4.1 of this Agreement. Within thirty (30) days following such complete submittal, CITY shall review, and if the above conditions are satisfied, may approve the partial assignment and release and notify the purchaser, transferee or assignee in writing thereof. No such release approved pursuant to this Subsection 2.4.6 shall cause, or otherwise affect, a release of OWNER from the duties and obligations under this Agreement that are retained by OWNER and excluded from the transfer or assignment.

2.5 Amendment or Cancellation of Agreement. This Agreement may be amended or cancelled in whole or in part only in the manner provided for in Government Code Section 65868.1. Any amendment of this Agreement, which amendment has been requested by OWNER, shall be considered by the CITY only upon the payment of the applicable processing charge. This provision shall not limit any remedy of CITY or OWNER as provided by this Agreement. Either party or successor in interest, may propose an amendment to or cancellation, in whole or in part, of this Agreement. Any amendment or cancellation shall be by mutual consent of the parties or their successors in interest except as provided otherwise in this Agreement or in Government Code Section 65865.1. For purposes of this section, the term "successor in interest" shall mean any person having a legal or equitable interest in the whole of the Property, or any portion thereof as to which such person wishes to amend or cancel this Agreement. The procedure for proposing and adopting an amendment to, or cancellation of, in whole or in part, this Agreement shall be the same as the procedure for adopting and entering into this Agreement in the

first instance. Notwithstanding the foregoing sentence, if the CITY initiates the proposed amendment to, or cancellation of, in whole or in part, this Agreement, CITY shall first give notice to the OWNER of its intention to initiate such proceedings at least sixty (60) days in advance of the giving the public notice of intention to consider the amendment or cancellation.

2.6 Minor Modification. Upon the written application of OWNER, minor modifications and changes to the Development Plan including modifications to building design or footprint (not affecting minimum setbacks), parking layout and design, and landscape area design may be approved by the Director of the Planning Department without the need to amend this Development Agreement. Other changes in the Development Plan shall be processed pursuant to the City Zoning Ordinance. It is also contemplated by CITY and OWNER that OWNER may, from time to time, seek amendments to one or more of the Development Approvals. Any such amendments are contemplated by CITY and OWNER as being within the scope of this Agreement as long as they are consistent with the Land Use Regulations and shall, upon approval by CITY, continue to constitute the Development Approvals as referenced herein. The parties agree that any such modifications or amendments shall not constitute an amendment to this Agreement nor require an amendment to this Agreement.

2.7 Termination. This Agreement shall be deemed terminated and of no further effect upon the occurrence of any of the following events:

(a) Expiration of the stated term of this Agreement as set forth in Section 2.3.

(b) Entry of a final judgment setting aside, voiding or annulling the adoption of the ordinance approving this Agreement.

(c) The adoption of a referendum measure overriding or repealing the ordinance approving this Agreement.

(d) Completion of the Project in accordance with the terms of this Agreement including issuance of all required occupancy permits and acceptance by CITY or applicable public agency of all required dedications.

Termination of this Agreement shall not constitute termination of any other land use entitlements approved for the Property. Upon the termination of this Agreement, no party shall have any further right or obligation hereunder except with respect to any obligation to have been performed prior to such termination or with respect to any default in the performance of the provisions of this Agreement which has occurred prior to such termination or with respect to any obligations which are specifically set forth as surviving this Agreement. Upon such termination, any public facilities and service mitigation fees paid pursuant to Section 4.2 of this Agreement by OWNER to CITY on which construction has not yet begun shall be refunded to OWNER by CITY within ten (10) business days.

2.8 Notices.

(a) As used in this Agreement, "notice" includes, but is not limited to, the communication of notice, request, demand, approval, statement, report, acceptance, consent, waiver, appointment or other communication required or permitted hereunder.

(b) All notices shall be in writing and shall be considered given either: (i) when delivered in person, including, without limitation, by courier, to the recipient named below; or (ii) on the date of delivery shown on the return receipt, after deposit in the United States mail in a sealed envelope as either registered or certified mail with return receipt requested, and postage and postal charges prepaid, and addressed to the recipient named below. All notices shall be addressed as follows:

If to CITY:
Scott Ochoa, City Manager
City of Ontario
303 East "B" Street
Ontario, CA 91764

If to OWNER:
Euclid Land Investment, LLC, A Delaware limited liability company

By: RCCD, Inc. a California corporation, Its Manager

By: Richard Cisakowski, Its President

8101 E. Kaiser Blvd. Suite 140Anaheim Hills, CA 92808

With a copy to:
Ruben Duran, City Attorney
Best Best & Krieger, LLP
2855 E Guasti Road
Ontario, CA 91761

With a copy to:
John Condas
Allen Matkins Leck Gamble Mallory & Natsis LLP
2010 Main Street, Suite 800, Irvine, CA 92614

Either party may, by notice given at any time, require subsequent notices to be given to another person or entity, whether a party or an officer or representative of a party, or to a different address, or both. Notices given before actual receipt of notice of change shall not be invalidated by the change.

3. DEVELOPMENT OF THE PROPERTY.

3.1 Rights to Develop. Subject to the terms of this Agreement including the Reservations of Authority in Section 3.4, OWNER shall have a vested right to develop the Property in accordance with, and to the extent of, the Development Plan. The Project shall remain subject to all Subsequent Development Approvals required to complete the Project as contemplated by the Development Plan. Except as otherwise provided in this Agreement, the permitted uses of the Property, the density and intensity of use, the

maximum height and size of proposed buildings, and provisions for reservation and dedication of land for public purposes shall be those set forth in the Development Plan.

3.2 Effect of Agreement on Land Use Regulations. Except as otherwise provided under the terms of this Agreement including the Reservations of Authority in Section 3.4, the rules, regulations and official policies governing permitted uses of the Property, the density and intensity of use of the Property, the maximum height and size of proposed buildings, and the design, improvement and construction standards and specifications applicable to development of the Property shall be the Existing Land Use Regulations. In connection with any Subsequent Development Approval, CITY shall exercise discretion in accordance with the same manner as it exercises its discretion under its police powers, including the Reservations of Authority set forth herein; provided however, that such discretion shall not prevent development of the Property for the uses and to the density or intensity of development set forth in this Agreement.

3.3 Timing of Development. The parties acknowledge that OWNER cannot at this time predict when or the rate at which phases of the Property will be developed. Such decisions depend upon numerous factors which are not within the control of OWNER, such as market orientation and demand, interest rates, absorption, completion and other similar factors. Since the California Supreme Court held in Pardee Construction Co. v. City of Camarillo (1984) 37 Cal. 3d 465, that the failure of the parties therein to provide for the timing of development resulted in a later adopted initiative restricting the timing of development to prevail over such parties' agreement, it is the parties' intent to cure that deficiency by acknowledging and providing that OWNER shall have the right to develop the Property in such order and at such rate and at such times as OWNER deems appropriate within the exercise of its subjective business judgment.

3.3.1 Infrastructure Improvement Exhibit. Attached hereto as Exhibits “E” and "F" are a description and depiction, respectively, of the Improvements needed for the development of the Property. In the event of any discrepancy between Exhibit E and Exhibit F, Exhibit F shall control.

3.4 Reservations of Authority.

3.4.1 Limitations, Reservations and Exceptions. Notwithstanding any other provision of this Agreement, the CITY shall not be prevented from applying new rules, regulations and policies upon the OWNER, nor shall a development agreement prevent the CITY from denying or conditionally approving any subsequent development project application on the basis of such new rules, regulations and policies where the new rules, regulations and policies consist of the following:

(a) Processing fees by CITY to cover costs of processing applications for development approvals or for monitoring compliance with any development approvals;

(b) Procedural regulations relating to hearing bodies, petitions, applications, notices, findings, records and any other matter of procedure;

(c) Regulations, policies and rules governing engineering and construction standards and specifications applicable to public and private improvements, including all uniform codes adopted by the CITY and any local amendments to those codes adopted by the CITY; provided however that, OWNER shall have a vested right to develop the Property in accordance with, and to the extent of, the standards and specifications that are expressly identified in the Specific Plan and the building codes in effect as of the Effective Date;

(d) Regulations that may conflict with this Agreement and the Development Plan but that are reasonably necessary to protect the occupants of the Project and/or of the immediate community from a condition perilous to their health or safety;

(e) Regulations that do not conflict with those rules, regulations and policies set forth in this Agreement or the Development Plan and which do not impose additional obligations, costs, and expenses on OWNER or the Project;

(f) Regulations that may conflict with this Agreement but to which the OWNER consents.

3.4.2 Subsequent Development Approvals. This Agreement shall not prevent CITY, in acting on Subsequent Development Approvals, from applying Subsequent Land Use Regulations that do not conflict with the Development Plan and/or the Existing Development Approvals, nor shall this Agreement prevent CITY from denying or conditionally approving any Subsequent Development Approval on the basis of the Existing Land Use Regulations or any Subsequent Land Use Regulation not in conflict with the Development Plan and/or the Existing Development Approvals.

3.4.3 Modification or Suspension by State or Federal Law. In the event that State or Federal laws or regulations, enacted after the Effective Date of this Agreement, prevent or preclude compliance with one or more of the provisions of this Agreement, such provisions of this Agreement shall be modified or suspended as may be necessary to comply with such State or Federal laws or regulations, provided, however, that this Agreement shall remain in full force and effect to the extent it is not inconsistent with such laws or regulations and to the extent such laws or regulations do not render such remaining provisions impractical to enforce. In the event OWNER alleges that such State or Federal laws or regulations preclude or prevent compliance with one or more provisions of this Agreement, and the CITY does not agree, the OWNER may, at its sole cost and expense, seek declaratory relief (or other similar non-monetary remedies); provided however, that nothing contained in this Section 3.4.3 shall impose on CITY any monetary liability for contesting such declaratory relief (or other similar non-monetary relief).

3.4.4 Intent. The parties acknowledge and agree that CITY is restricted in its authority to limit its police power by contract and that the foregoing limitations, reservations and exceptions are intended to reserve to CITY all of its police power which cannot be so limited. This Agreement shall be construed, contrary to its stated terms if

necessary, to reserve to CITY all such power and authority which cannot be restricted by contract.

3.5 Public Works; Utilities. If OWNER is required by this Agreement or a condition of Project approval to construct any public works facilities which will be dedicated to CITY or any other public agency upon completion, and if required by applicable laws to do so, OWNER shall perform such work in the same manner and subject to the same standards as would be applicable to CITY or such other public agency should it have undertaken such construction. As a condition of development approval, OWNER shall connect the Project to all utilities necessary to provide adequate water, recycled water, sewer, gas, electric, and other utility services necessary for the Project, as further described and depicted in the Infrastructure Improvements Exhibit. As a further condition of development approval, OWNER shall to the extent possible contract with the CITY for CITY-owned or operated utilities for this purpose, for such price and on such terms as may be available to similarly situated customers in the CITY. As a further condition of development approval, to the extent OWNER does not own the Property in fee simple, OWNER will provide to CITY the written consent from the current fee owner of the Property agreeing to the terms of this Agreement and the recordation thereof, pursuant to Section 2.2.

3.5.1 OWNER agrees that development of the Project shall require the construction of storm drain Improvements from the Property described in Exhibit E and depicted in Exhibit F. OWNER shall be responsible for payment of a fee in-lieu (the Euclid Avenue Storm Drain In-Lieu Fee) of actual construction of the ultimate Euclid Avenue storm drain Improvements, south of Merrill Avenue. OWNER shall pay the CITY prior to the issuance of the first building permit, Nine Hundred Forty-Four Thousand Two Hundred Eighty Seven Dollars and Ninety Four Cents ($944,287.94). Upon OWNER'S complete payment of the Euclid Avenue Storm Drain In-Lieu Fee, the CITY shall issue a Certificate of DIF Credit in the Regional Storm Drain category equal to the amount paid to the CITY. Such Regional Storm Drain DIF Certificate shall be issued by CITY within thirty (30) business days of the receipt of such required payment. OWNER and CITY agree that CITY may issue grading, building and other required permits for OWNER to initiate construction of structures for the Property according to plans approved by CITY, and OWNER agrees that OWNER shall not request and CITY shall not issue a final occupancy permit for any buildings prior to payment of the Euclid Avenue Storm Drain In-Lieu Fee and construction of the storm drain Improvements described in Exhibit E and depicted in Exhibit F. CITY and OWNER mutually acknowledge and agree, that upon OWNER's complete payment of the Euclid Avenue Storm Drain In-Lieu Fee, such obligation shall be deemed satisfied and CITY shall not hold up a request for final occupancy permit for any buildings on the Property, based on the actual construction and completion of the ultimate Euclid Avenue storm drain Improvements. CITY agrees that OWNER may request that CITY issue temporary certificates of occupancy on a building-by-building basis prior to completion of the storm drain improvements.

3.5.2 OWNER agrees that development of the Project shall require the construction of street Improvements as described in Exhibit E and depicted in Exhibit F. OWNER and CITY agree that CITY may issue grading, building and other required

permits for OWNER to initiate construction of structures for the Property according to plans approved by CITY, and OWNER agrees that OWNER shall not request, and CITY shall not issue a final occupancy permit for any buildings on the Property prior to Substantial Completion of the street Improvements as described in Exhibit E and depicted in Exhibit F. For purposes of the foregoing, street Improvements shall be deemed "Substantially Complete" even if the final lift of pavement has not been completed (i.e., OWNER may install the final lift after completion of all other construction). CITY agrees that OWNER may request that CITY issue temporary certificates of occupancy on a building-by-building basis prior to completion and subject to final acceptance by CITY of the street Improvements. OWNER agrees that the street improvements shall be completed and subject to final acceptance by CITY prior to the release of any security for the construction of the street improvements. OWNER and CITY agree that a portion of the street Improvements described in Exhibit E and depicted in Exhibit F may be constructed by others, or pursuant to a cooperative agreement with others. If such street Improvements are constructed by others, or in cooperation with others, and are completed and accepted by CITY prior to OWNER's request to CITY of the required grading, building or other required permits for OWNER to initiate construction of structures for the Property, then OWNER shall not be required to construct those street Improvements constructed and completed by others and accepted by CITY.

3.5.3 OWNER agrees that development of the Property shall require the construction of water utility Improvements as described in Exhibit E and depicted in Exhibit F consisting generally of the construction of the potable water Improvements to serve the Property as described in Exhibit E and depicted in Exhibit F. OWNER and CITY agree that CITY may issue grading, building and other required permits for OWNER to initiate construction of structures for the Property according to plans approved by CITY upon completion of sufficient water improvements to serve the Property from at least one point of connection. OWNER and CITY agree that OWNER may, in-lieu of utilizing recycled water during grading and construction, utilize water from existing agricultural wells on the Property subject to the terms of a separate Well Use Agreement between the CITY and OWNER. OWNER agrees that OWNER shall not request and CITY shall not issue a final occupancy permit for any buildings on the Property until the completion of the potable water improvements described in Exhibit E and depicted in Exhibit F. City agrees that OWNER may request that CITY issue temporary certificates of occupancy on a building-by-building basis prior to completion of the water improvements if there is available permanent water service from a minimum of two (2) points of connection and sufficient water is available for fire protection purposes for any buildings while under construction. OWNER and CITY agree that a portion of the water Improvements described in Exhibit E and depicted in Exhibit F may be constructed by others, or pursuant to a cooperative agreement with others. If such water Improvements are constructed by others, or in cooperation with others, and are completed and accepted by CITY prior to OWNER's request to CITY of the required grading, building or other required permits for OWNER to initiate construction of structures for the Property, then OWNER shall not be required to construct those water Improvements constructed and completed by others and accepted by CITY.

3.5.4 OWNER agrees that development of the Property shall require the construction of sewer Improvements as described in Exhibit E and depicted in Exhibit F. OWNER and CITY agree that CITY may issue grading, building and other required permits for OWNER to initiate construction of structures for the Property according to plans approved by CITY, and OWNER agrees that OWNER shall not request and CITY shall not issue a final occupancy permit for any buildings prior to completion of the sewer improvements described in Exhibit E and depicted in Exhibit F. CITY agrees that OWNER may request that CITY issue temporary certificates of occupancy on a building-by-building basis prior to the completion of the sewer improvements described in Exhibit E and depicted in Exhibit F. OWNER and CITY agree that a portion of the sewer Improvements described in Exhibit E and depicted in Exhibit F may be constructed by others, or pursuant to a cooperative agreement with others. If such sewer Improvements are constructed by others, or in cooperation with others, and are completed and accepted by CITY prior to OWNER's request to CITY of the required grading, building or other required permits for OWNER to initiate construction of structures for the Property, then OWNER shall not be required to construct those sewer Improvements constructed and completed by others and accepted by CITY.

3.5.5 OWNER agrees that development of the Property shall require the construction of recycled water utility improvements to serve the Property, consisting generally of the construction of recycled water utility Improvements as described in Exhibit E and depicted in Exhibit F. OWNER and CITY agree that the CITY may issue grading, building and other required permits for OWNER to initiate construction of structures for the Property according to plans approved by CITY upon completion of sufficient water and recycled water improvements to serve the Property from at least one point of connection and OWNER agrees that OWNER shall not request and CITY shall not issue any occupancy permit for any buildings on the Property until the completion of the water improvements described in Exhibit E and depicted in Exhibit F. CITY agrees that OWNER may request a temporary occupancy permit for a building and, if OWNER requests that a temporary certificate of occupancy be issued for a building prior to the completion of the extension of permanent master planned recycled water utility Improvements to serve the Property that CITY may consider such request and may issue temporary certificates of occupancy on a building-by-building basis prior to completion of recycled water improvements if there is available permanent recycled water service connection and sufficient recycled water is available. OWNER and CITY agree that all, or a portion of, the permanent master planned recycled water utility Improvements described in Exhibit E and depicted in Exhibit F may be constructed by others. If such recycled water utility Improvements are constructed by others and completed and accepted by CITY prior to OWNER'S request to CITY of the required grading, building, or other required permits for OWNER to initiate construction of structures for the Property, then OWNER shall not be required to construct those permanent master planned recycled water utility Improvements.

3.5.6 OWNER agrees that development of the Property shall require the construction of fiber optic communications infrastructure, at OWNER's sole cost and expense, as described in the attached Exhibit E and depicted in Exhibit F consisting generally of the construction of fiber optic communications infrastructure to serve the

Property. OWNER and CITY agree that CITY may issue grading, building and other required permits for OWNER to initiate construction of structures for the Property according to plans approved by CITY and OWNER agrees that OWNER shall not request and CITY shall not issue a final occupancy permit for any buildings prior to completion of the fiber optic communications infrastructure, as described in Exhibit E and depicted in Exhibit F. CITY agrees that OWNER may request that CITY issue temporary certificates of occupancy on a building-by-building basis prior to the completion of the fiber optic communications infrastructure, as described in Exhibit E and depicted in Exhibit F.

3.6 Acquisition of Offsite Provision of Real Property Interests. In any instance where OWNER is required by any Development Approval or Land Use Regulation to construct any public improvement on land not owned by OWNER ("Offsite Improvements"), the CITY and OWNER shall cooperate in acquiring the necessary legal interest ("Offsite Property") as described below in Section 3.7. This Section 3.6 is not intended by the parties to impose upon the OWNER an enforceable duty to acquire land or construct any public improvements on land not owned by OWNER, except to the extent that the OWNER elects to proceed with the development of the Project, and then only in accordance with valid conditions imposed by the CITY upon the development of the Project under the Subdivision Map Act or other legal authority.

3.7 Real Property Interests.

3.7.1 CITY Acquisition of Offsite Property. In the event OWNER is required to construct any public improvements on land not owned by OWNER, Sections 3.7.1 and 3.7.2 shall control the acquisition of the Offsite Property. If the OWNER is unable to acquire such Offsite Property, and following the written request from the OWNER to CITY, CITY agrees to use reasonable and diligent good faith efforts to acquire the Offsite Property from the owner or owners of record by negotiation to the extent permitted by law and consistent with this Agreement. If CITY is unable to acquire the Offsite Property by negotiation within thirty (30) days after OWNER'S written request, CITY may, initiate proceedings utilizing its power of eminent domain to acquire the Offsite Property at a public hearing noticed and conducted in accordance with California Code of Civil Procedure Section 1245.235 for the purpose of considering the adoption of a resolution of necessity concerning the Offsite Property, subject to the conditions set forth in this Section 3.7.1 The CITY and OWNER acknowledge that the timelines set forth in this Section 3.7.1 represent the maximum time periods which CITY and OWNER reasonably believe will be necessary to complete the acquisition of any Offsite Property. CITY agrees to use reasonable good faith efforts to complete the actions described within lesser time periods, to the extent that it is reasonably able to do so, consistent with the legal constraints imposed upon CITY.

3.7.2 Owner's Option to Terminate Proceedings. CITY shall provide written notice to OWNER no later than fifteen (15) days prior to making an offer to the owner of the Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease all acquisition proceedings with respect to that Offsite Property, whereupon CITY shall cease such proceedings. CITY may provide written notice to OWNER no later than fifteen (15) days prior to the date of the hearing on

CITY's intent to consider the adoption of a resolution of necessity as to any Offsite Property. At any time within that fifteen (15) day period, OWNER may, at its option, notify CITY that it wants CITY to cease condemnation proceedings, whereupon CITY shall cease such proceedings. If OWNER does not notify CITY to cease condemnation proceedings within said fifteen (15) day period, then the CITY may proceed to consider and act upon the Offsite Property resolution of necessity. If CITY adopts such resolution of necessity, then CITY may institute condemnation proceedings and file a complaint in condemnation and seek an order of immediate possession with respect to the Offsite Property.

3.8 Regulation by Other Public Agencies. It is acknowledged by the parties that other public agencies not within the control of CITY possess authority to regulate aspects of the development of the Property separately from or jointly with CITY and this Agreement does not limit the authority of such other public agencies. CITY agrees to cooperate fully, at no cost to CITY, with OWNER in obtaining any required permits or compliance with the regulations of other public agencies provided such cooperation is not in conflict with any laws, regulations or policies of the CITY.

3.9 Tentative Parcel Maps. With respect to applications by OWNER for tentative parcel maps for portions of the Property, CITY agrees that OWNER may file and process tentative maps in accordance with Chapter 4.5 (commencing with Section 66498.1) of Division 2 of Title 7 of the California Government Code and the applicable provisions of CITY's subdivision ordinance, as the same may be amended from time to time. In accordance with the provisions of Section 66452.6 of the Government Code, each tentative subdivision map or tentative parcel map, heretofore or hereafter approved in connection with development of the Property, shall be deemed to have been granted an extension of time to and until the expiration, cancellation, or termination of this Agreement.

3.10 Specific Plan Charge. Pursuant to Government Code section 65456, the City Council may consider adopting a specific plan charge upon persons seeking CITY approvals that are required to be consistent with the Specific Plan. Any such charges shall, in the aggregate, defray, but not exceed, the estimated cost of preparation, adoption, and administration of the Specific Plan, including costs incurred pursuant to the California Environmental Quality Act (Pub. Resources Code, §§ 21000 et seq.). As nearly as can be estimated, the charges shall be a prorated amount in accordance with the applicant's relative benefit derived from the Specific Plan. If such charges are adopted, the CITY shall use such charges to reimburse the OWNER who originally paid the cost of preparing the Specific Plan, including costs incurred pursuant to the California Environmental Quality Act (Pub. Resources Code, §§ 21000 et seq.) to the extent the OWNER paid more than its relative benefit from the Specific Plan. Such charges, if adopted, shall be imposed on persons seeking CITY approvals that are required to be consistent with the Specific Plan, to the extent such person(s) has/have not entered into a reimbursement agreement with, and satisfactory to, the person(s) originally responsible for the cost of preparing the Specific Plan, including costs incurred pursuant to CEQA.

4. PUBLIC BENEFITS.

4.1 Intent. The parties acknowledge and agree that development of the Property will result in substantial public needs that will not be fully met by the Development Plan and further acknowledge and agree that this Agreement confers substantial private benefits on OWNER that should be balanced by commensurate public benefits. Accordingly, the parties intend to provide consideration to the public to balance the private benefits conferred on OWNER by providing more fully for the satisfaction of the public needs resulting from the Project.

4.2 Development Impact Fees.

4.2.1 Amount of Development Impact Fee. Development Impact Fees (DIF) shall be paid by OWNER. The Development Impact Fee amounts to be paid by OWNER shall be the amounts that are in effect at the time such amounts are due. Nothing contained in this Agreement shall affect the ability of the CITY to impose new Development Impact Fees or amend the amounts of existing Development Impact Fees. Additionally, nothing contained in this Agreement shall affect the ability of other public agencies that are not controlled by CITY to impose and amend, from time to time, Development Impact Fees established or imposed by such other public agencies, even though such Development Impact Fees may be collected by CITY.

4.2.2 Time of Payment. The Development Impact Fees required pursuant to Section 4.2.1 shall be paid to CITY prior to the issuance of building permit for each applicable building (subject to the application/use of available fee deferrals or credits), except for the Species, Habitat Conservation, and Open Space Mitigation Development Impact Fee, which shall be paid by OWNER to CITY prior to the issuance of a grading permit.

4.3 Responsibility for Construction of Public Improvements.

4.3.1 Timely Construction of Public Infrastructure. The phasing of the area wide infrastructure construction within the vicinity of the Project shall be as approved by the CITY. OWNER shall be responsible for the timely construction and completion of all public infrastructure required for the Project as described and depicted in the Infrastructure Improvements Exhibit and any and all parcel map conditions. Unless otherwise specified in the Parcel Map conditions, and subject to the provisions of Section 3.5 and 3.6, all other required Improvements for the parcel map, shall be substantially completed and operational prior to, and as a condition precedent to, OWNER requesting and CITY's granting of a final occupancy permit for any buildings to be constructed on the Property within the applicable parcel map. All Infrastructure and Improvements shall be completed as required by the Subdivision Agreement/Parcel Map conditions for Parcel Map No. 20714.

4.3.3 Construction of Public Infrastructure by Third Parties. CITY and OWNER acknowledge that a portion of the Improvements described in Exhibit E and depicted in Exhibit F are necessary for the development of surrounding properties within the Ontario Ranch and the other property owners are also obligated to construct the Improvements or portions thereof. As such, CITY agrees that OWNER's obligation to construct the

Improvements may be satisfied by third party owners pursuant to separate written agreements between OWNER and said third party undertaking the construction of the Improvements. Nothing in this Agreement shall be construed to prohibit the coordination of the construction of the Improvements between private parties, including the allocation of costs for the construction of the Improvements. Notwithstanding anything to the contrary herein, any applicable DIF Credits may be transferred and assigned from one (1) party to another with respect to the construction of the Improvements and such transfer or assignment shall not require the conveyance of any real property.

4.3.4 Availability and Use of Recycled Water. OWNER agrees that recycled water shall be available and utilized by OWNER for all construction-related water uses including prior to, and during, any grading of the Property. OWNER and CITY agree that OWNER may, in-lieu of utilizing recycled water during grading and construction, utilize water from existing agricultural wells on the Property subject to the terms of a separate Well Use Agreement between the CITY and OWNER.

4.3.5 Construction of DIF Program Infrastructure. To the extent OWNER is required to construct and completes construction of public improvements that are included in CITY's Development Impact Fee Program, CITY agrees that CITY shall issue DIF Credit in accordance with the provisions of a separate Fee Credit Agreement between CITY and OWNER. Limitations on the use of DIF Credit issued to OWNER to offset OWNER's DIF payment obligations shall also be subject to the provisions of a separate Fee Credit Agreement. OWNER may be eligible to receive DIF Credit from OWNER's construction of DIF Program Infrastructure. Any such DIF Credit shall be subject to a Fee Credit Agreement between CITY and OWNER. CITY and OWNER agree that the Fee Credit Agreement between CITY and OWNER shall comply with CITY's adopted policies applicable to such agreements.

4.4 Water Availability.

4.5.1 Water Availability. The Property requires the completion of the Phase 2 Water Improvements (Phase 2A and 2B) for permanent water system capacity and supply. Until the Phase 2 Water Improvements are fully constructed and completed, OWNER acknowledges that the Project shall have sufficient water capacity and supply on an interim basis made available through the construction of the Potable Water Improvements (as described in Exhibit E), the Phase 2A Water Improvements, and the Interim Chino Avenue Loop depicted in Exhibit F. OWNER acknowledges and agrees that the CITY shall not issue final certificates of occupancy for the Project until the completion of the Potable Water Improvements (as described in Exhibit E), the Phase 2A Water Improvements and the Interim Chino Avenue Loop, as depicted in Exhibit F. OWNER further acknowledges and agrees the Property requires the Phase 2 Water Improvements as depicted in Exhibit F.

4.5.2 Phase 2 Water Construction Fee. Prior to CITY's issuance of a grading permit (with the exception of the grading permit for PTUP24-043) for any parcel of the Property (each, a "Grading Permit"), OWNER shall pay to CITY the applicable Phase 2 Water Construction Fee. The Phase 2 Water Construction Fee shall be calculated based

on the following formula: (a) the regional water development impact fee, based on the square footage of developable property and the approved land use category for each Phase of the Project (the "Base Regional Water DIF"), PLUS (b) OWNER's pro rata share of the difference between the total projected cost of construction of the Phase 2 Water Improvements (the "Pro Rata Share") and the Base Regional Water DIF. To determine the Pro Rata Share, which may fluctuate over time, CITY shall, at the time OWNER applies for a Grading Permit, calculate the total projected cost of construction of the Phase 2 Water Improvements and subtract from that amount (y) all Phase 2 Water Construction Fees previously collected and (z) the aggregate Base Regional Water DIF to be paid by OWNER and all developers then at that time obligated to pay a Base Regional Water DIF specifically for use of the Phase 2 Water Improvements (together, the "Phase 2 Water Developers"). If the difference is zero or a number less than zero, then there is no Pro Rata Share and the Phase 2 Water Construction Fee shall equal the sum of all Base Regional Water DIF to be paid by all Phase 2 Water Developers. If the difference results in a positive number, the funding gap (the "Funding Gap") shall be divided by the total acreage of land to be developed by the Phase 2 Water Developers to obtain a Funding Gap "per acre" amount (the "Funding Gap Per Acre Amount"). Each Phase 2 Water Developer's respective total acreage to be developed shall then be multiplied by the Funding Gap Per Acre Amount to obtain each Phase 2 Water Developer's Pro Rata Share, which will then be added to each Phase 2 Water Developer's Base Regional Water DIF to obtain the Phase 2 Water Construction Fee due and payable at the time of issuance of the applicable Grading Permit.

4.5.3 DIF Credit for Phase 2 Water Construction Fees. Within thirty (30) days of OWNER's payment of each Phase 2 Water Construction Fee, CITY shall issue a certificate of DIF Credit which may be used to offset OWNER's DIF obligations in the Regional Water DIF Category. The form of the Certificate of DIF Credit shall be as described in Exhibit G, attached hereto and incorporated herein. OWNER acknowledges that any Regional Water DIF Credit issued to OWNER shall not be used to satisfy Phase 2 Water Construction Fees and may only be used to offset OWNER's DIF obligations in the Regional Water DIF Category.

4.5.4 Additional Contributions for Phase 2 Water Improvements. OWNER acknowledges and agrees that, as of the Effective Date of this Agreement, the CITY does not have sufficient funding to construct and complete the Phase 2 Water Improvements. OWNER agrees to provide the CITY with additional contributions for the Phase 2 Water Improvements prior to the issuance of a Grading Permit (with the exception of the grading permit for PTUP24-043) for any Phase within the Project, pursuant to the Pro Rata Share calculation as set forth in Section 4.5.2 above. OWNER acknowledges and agrees that the CITY has the right to conduct subsequent reviews of the available funding for the construction of, or continuation of the construction of, the Phase 2 Water Improvements. If at any time outside of OWNER's submission of a request for a Grading Permit the CITY determines that there is not sufficient funding for the construction of, or continuation of the construction of, the Phase 2 Water Improvements necessary to support current and anticipated future development within the Ontario Ranch area served by the Phase 2 Water Improvements, OWNER agrees to pay such

subsequent additional contribution payment necessary from the OWNER (on a pro rata basis with other Phase 2 Water Developers then existing at the time) to the CITY to initiate construction of, or continue construction of, the Phase 2 Water Improvements. The CITY shall determine OWNER's additional contribution amount (above and beyond OWNER's Pro Rata Share) and such amount shall be due and payable to the CITY within thirty (30) days of written notice from the CITY to OWNER.

4.5.5 Future Reimbursement of Pro Rata Share of Phase 2 Water Construction Fees. OWNER agrees that the CITY will be responsible for the construction and completion of the Phase 2 Water Improvements, as depicted in Exhibit F. Subject to the successful completion of the Phase 2 Water Improvements, CITY and OWNER shall meet periodically and/or as needed from the date of completion of the Phase 2 Water Improvements, to jointly develop a plan and mutually enter into an agreement for the reimbursement of OWNER's Pro Rata Share of Phase 2 Water Construction Fees that may be reimbursed from future development in the 925 Zone as depicted in the City's Domestic Water Master Plan, following any reallocation of each Phase 2 Water Developer's Pro Rata Share, CITY's collection of additional Regional Water DIF in connection with construction of the Phase 2 Water Improvements, and after the completion of the Phase 2 Water Improvements. Such agreement shall be approved at the sole discretion of the Ontario City Council.

4.5 Compliance with Public Benefits Requirements.

4.5.1 Failure to Provide Public Benefits. In the event OWNER fails or refuses to comply with any condition referenced in Section 4.1 through 4.5, or challenges (whether administratively or through legal proceedings) the imposition of such conditions, OWNER shall be deemed in default of this Agreement, thereby entitling CITY to any and all remedies available to it, including, without limitation, the right of CITY to withhold OWNER's Project-related building permits, certificates of occupancy, or discretionary approvals, without liability. Nothing herein shall waive OWNER's right to assert a default (or failure to perform) by CITY has excused OWNER's performance under this Agreement.

5. FINANCING OF PUBLIC IMPROVEMENTS.

5.1 Financing Mechanism(s). OWNER agrees that, prior to the recordation of any Parcel Map, the property subject to such Parcel Map shall be included in a CFD to finance CITY services through annual special taxes that will initially be Twenty-Five Cents ($.25) per square foot for non-residential buildings. These amounts shall be subject to an automatic increase at a rate not to exceed four (4%) percent per year, unless otherwise modified by CITY. Depending on the fiscal year that the CFD is formed and the CFD tax is levied, the annual special taxes may be higher. CITY shall be the sole and exclusive lead agency in the formation of any CFD, assessment district or other public financing mechanism within the Property; provided however, that the proceeds of any such CFD, assessment district, or financing mechanism may be used, subject to restrictions that may be imposed by applicable law, for the purposes of acquiring, constructing or maintaining public facilities to be owned or operated by other public agencies, including, without

limitation those facilities owned or operated by a school district. In addition to the rights of the CITY pursuant to section 5.1 hereof, CITY shall have the right, but not the obligation, to condition the formation of any CFD, assessment district or other public financing mechanism within the Property on the OWNER mitigating all Project-related impacts to the applicable school district(s) as required by such school district(s). Written evidence by such school district(s) may be required by the CITY as the condition to the formation of any CFD, assessment district or other public financing mechanism within the Property, or any steps preliminary thereto, including, without limitation, the adoption of any resolution of intention to form such CFD, assessment district or other public financing mechanism within the Property. It is not the intent of the parties hereto, by this provision, to prohibit or otherwise limit CITY's ability to take any and all necessary steps requisite to the formation of the CFD to finance CITY services through annual special taxes as set forth in this Section 5.1. Formation of any CFD, assessment district or other public financing mechanism within the Property, shall be subject to CITY's ability to make all findings required by applicable law and complying with all applicable legal procedures and requirements including, without limitation, CITY's public financing district policies as such policies may be amended from time to time. Notwithstanding the foregoing, it is acknowledged and agreed by the parties that nothing contained in this Agreement shall be construed as requiring CITY or the City Council to form any such district.

6. [OMITTED]

7. REVIEW FOR COMPLIANCE.

7.1 Periodic and Special Reviews.

7.1.1 Time for and Initiation of Periodic Review. The CITY shall review this Agreement every twelve (12) months from the Effective Date in order to ascertain the good faith compliance by the OWNER with the terms of this Agreement. The OWNER shall submit an Annual Monitoring Report to CITY, in a form acceptable to the City Manager, along with any applicable processing charge within ten (10) days after each anniversary date of the Effective Date of this Agreement. Within fifteen (15) days after the receipt of the Annual Monitoring Report, CITY shall review the Annual Monitoring Report. Prior to the expiration of the fifteen (15) day review period, CITY shall either issue a notice of continuing compliance or a notice of non-compliance and a notice of CITY's intent to conduct a Special Review pursuant to Sections 7.1.2 through 7.1.6. Issuance of a notice of continuing compliance may be issued by the City Manager or his designee.

7.1.2 Initiation of Special Review. A special review may be called either by agreement between the parties or by initiation in one or more of the following ways:

(a) Recommendation of the Planning staff;

(b) Affirmative vote of at least four (4) members of the Planning Commission; or

(c) Affirmative vote of at least three (3) members of the City Council.

7.1.3 Notice of Special Review. The City Manager shall begin the special review proceeding by giving notice that the CITY intends to undertake a special review of this Agreement to the OWNER. Such notice shall be given at least ten (10) days in advance of the time at which the matter will be considered by the Planning Commission.

7.1.4 Public Hearing. The Planning Commission shall conduct a hearing at which the OWNER must demonstrate good faith compliance with the terms of this Agreement. The burden of proof on this issue is upon the OWNER.

7.1.5 Findings Upon Public Hearing. The Planning Commission shall determine upon the basis of substantial evidence whether or not the OWNER has, for the period under review, complied in good faith with the terms and conditions of this Agreement.

7.1.6 Procedure Upon Findings.

(a) If the Planning Commission finds and determines on the basis of substantial evidence that the OWNER has complied in good faith with the terms and conditions of this Agreement during the period under review, the review for that period is concluded.

(b) If the Planning Commission finds and determines on the basis of substantial evidence that the OWNER has not complied in good faith with the terms and conditions of this Agreement during the period under review, the Planning Commission may recommend to the City Council to modify or terminate this Agreement.

(c) The OWNER may appeal a determination pursuant to paragraph (b) to the City Council in accordance with the CITY's rule for consideration of appeals in zoning matters generally.

7.2 Proceedings Upon Modification or Termination. If, upon a finding under Section 7.1.6(b), the CITY determines to proceed with modification or termination of this Agreement, the CITY shall give notice to the property OWNER of its intention so to do. The notice shall contain:

(a) The time and place of the hearing;

(b) A statement as to whether or not the CITY proposes to terminate or to modify this Agreement; and

(c) Other information that the CITY considers necessary to inform the OWNER of the nature of the proceeding.

7.3 Hearing on Modification or Termination. At the time and place set for the hearing on modification or termination, the OWNER shall be given an opportunity to be heard. The OWNER shall be required to demonstrate good faith compliance with the terms and conditions of this Agreement. The burden of proof on this issue shall be on the OWNER. If the City Council finds, based upon substantial evidence in the administrative record, that the OWNER has not complied in good faith with the terms and conditions of the agreement, the City Council may terminate this Agreement or modify this Agreement and

impose those conditions to the action it takes as it considers necessary to protect the interests of the CITY. The decision of the City Council shall be final, subject only to judicial review pursuant to Section 1094.5 of the Code of Civil Procedure.

7.4 Certificate of Agreement Compliance. If, at the conclusion of a Periodic or Special Review, OWNER is found to be in compliance with this Agreement, CITY shall, upon written request by OWNER, issue a Certificate of Agreement Compliance ("Certificate") to OWNER stating that after the most recent Periodic or Special Review and based upon the information known or made known to the Planning Director and City Council that (1) this Agreement remains in effect and (2) OWNER is not in default. The Certificate shall be in recordable form, shall contain information necessary to communicate constructive record notice of the finding of compliance, shall state whether the Certificate is issued after a Periodic or Special Review and shall state the anticipated date of commencement of the next Periodic Review. OWNER may record the Certificate with the County Recorder. Whether or not the Certificate is relied upon by assignees or other transferees or OWNER, CITY shall not be bound by a Certificate if a default existed at the time of the Periodic or Special Review, but was concealed from or otherwise not known to the Planning Director or City Council.

8. [OMITTED]

9. DEFAULT AND REMEDIES.

9.1 Remedies in General. It is acknowledged by the parties that CITY would not have entered into this Agreement if it were to be liable in damages under this Agreement, or with respect to this Agreement or the application thereof. In general, each of the parties hereto may pursue any remedy at law or equity available for the breach of any provision of this Agreement, except that (i) CITY shall not be liable in damages to OWNER, or to any successor in interest of OWNER, or to any other person, and OWNER covenants not to sue for damages or claim any damages and (ii) OWNER shall not be liable in damages to CITY, or to any other person, and CITY covenants not to sue for damages or claim any damages:

(a) For any breach of this Agreement or for any cause of action which arises out of this Agreement; or

(b) For the taking, impairment or restriction of any right or interest conveyed or provided under or pursuant to this Agreement; or

(c) Arising out of or connected with any dispute, controversy or issue regarding the application or interpretation or effect of the provisions of this Agreement.

9.2 Specific Performance. The parties acknowledge that money damages and remedies at law generally are inadequate and specific performance and other non-monetary relief are particularly appropriate remedies for the enforcement of this Agreement and should be available to all parties for the following reasons:

(a) Money damages are unavailable against CITY and OWNER as provided in Section 9.1 above.

(b) Due to the size, nature and scope of the Project, it may not be practical or possible to restore the Property to its natural condition once implementation of this Agreement has begun. After such implementation, OWNER may be foreclosed from other choices it may have had to utilize the Property or portions thereof. OWNER has invested significant time and resources and performed extensive planning and processing of the Project in agreeing to the terms of this Agreement and will be investing even more significant time and resources in implementing the Project in reliance upon the terms of this Agreement, and it is not possible to determine the sum of money which would adequately compensate OWNER for such efforts.

9.3 Release. Except for non-damage remedies, including the remedies of judicial review and of specific performance as provided for in Sections 7.3 and 9.2, respectively,, OWNER, for itself, its successors and assignees, hereby releases the CITY, its officers, agents and employees from any and all claims, demands, actions, or suits of any kind or nature arising out of any liability, known or unknown, present or future, including, but not limited to, any claim or liability, based or asserted, pursuant to Article I, Section 19 of the California Constitution, the Fifth Amendment of the United States Constitution, or any other law or ordinance which seeks to impose any other liability or damage, whatsoever, upon the CITY because it entered into this Agreement or because of the terms of this Agreement.

9.4 Termination or Modification of Agreement for Default of OWNER. Subject to the provisions contained in Sections 7.2 and 7.3 herein, CITY may terminate or modify this Agreement for any failure of OWNER to perform any material duty or obligation of OWNER under this Agreement, or to comply in good faith with the terms of this Agreement (hereinafter referred to as "default"); provided, however, CITY may terminate or modify this Agreement pursuant to this Section only after providing written notice to OWNER of default setting forth the nature of the default and the actions, if any, required by OWNER to cure such default and, where the default can be cured, OWNER has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has failed to commence the actions necessary to cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

9.5 Termination of Agreement for Default of CITY. OWNER may terminate this Agreement only in the event of a default by CITY in the performance of a material term of this Agreement and only after providing written notice to CITY of default setting forth the nature of the default and the actions, if any, required by CITY to cure such default and, where the default can be cured, CITY has failed to take such actions and cure such default within 60 days after the effective date of such notice or, in the event that such default cannot be cured within such 60 day period but can be cured within a longer time, has

failed to commence the actions necessary to cure such default within such 60 day period and to diligently proceed to complete such actions and cure such default.

10. THIRD PARTY LITIGATION.

10.1 General Plan Litigation. CITY has determined that this Agreement is consistent with the General Plan, as such General Plan exists as of the Effective Date ("General Plan"), and that the General Plan meets all requirements of law. OWNER has reviewed the General Plan and concurs with CITY's determination. CITY shall have no liability in damages under this Agreement for any failure of CITY to perform under this Agreement or the inability of OWNER to develop the Property as contemplated by the Development Plan or this Agreement as the result of a judicial determination that on the Effective Date, or at any time thereafter, the General Plan, or portions thereof, are invalid or inadequate or not in compliance with law.

10.2 Third Party Litigation Concerning Agreement. OWNER shall defend, at its expense, including attorneys' fees, indemnify, and hold harmless CITY, its agents, officers and employees from any claim, action or proceeding against CITY, its agents, officers, or employees to attack, set aside, void, or annul the approval of this Agreement or the approval of any permit granted pursuant to this Agreement. CITY shall promptly notify OWNER of any such claim, action or proceeding, and CITY shall cooperate in the defense. If CITY fails to promptly notify OWNER of any such claim, action or proceeding, or if CITY fails to cooperate in the defense, OWNER shall not thereafter be responsible to defend, indemnify, or hold harmless CITY. CITY may in its discretion participate in the defense of any such claim, action or proceeding.

10.3 Indemnity. In addition to the provisions of Section 10.2 above, OWNER shall indemnify and hold CITY, its officers, agents, employees and independent contractors free and harmless from any liability whatsoever, based or asserted upon any act or omission of OWNER, its officers, agents, employees, subcontractors and independent contractors, for property damage, bodily injury, or death (OWNER's employees included) or any other element of damage of any kind or nature, to the extent relating to or in any way connected with or arising from the activities contemplated hereunder, including, but not limited to, the study, design, engineering, construction, completion, failure and conveyance of the public improvements, save and except claims for damages arising through the sole active negligence or sole willful misconduct of CITY. OWNER shall defend, at its expense, including attorneys' fees, CITY, its officers, agents, employees and independent contractors in any legal action based upon such alleged acts or omissions. CITY may in its discretion participate in the defense of any such legal action. OWNER's indemnity obligation shall terminate following CITY's legal acceptance of (i.e. taking of title to) the Improvements.

10.4 Environment Assurances. OWNER shall indemnify and hold CITY, its officers, agents, and employees free and harmless from any liability, to the extent based or asserted, upon any act or omission of OWNER, its officers, agents, employees, subcontractors, predecessors in interest, successors, assigns and independent contractors for any violation of any federal, state or local law, ordinance or regulation

relating to industrial hygiene or to environmental conditions on, under or about the Property during OWNER'S period of ownership of the Property, including, but not limited to, soil and groundwater conditions caused by OWNER, and OWNER shall defend, at its expense, including attorneys' fees, CITY, its officers, agents and employees in any action based or asserted upon any such alleged act or omission. CITY may in its discretion participate in the defense of any such action.

10.5 Reservation of Rights. With respect to Sections 10.2, 10.3 and 10.4 herein, CITY reserves the right to either (1) approve the attorney(s) which OWNER selects, hires or otherwise engages to defend CITY hereunder, which approval shall not be unreasonably withheld, or (2) conduct its own defense, provided, however, that OWNER shall reimburse CITY forthwith for any and all reasonable expenses incurred for such defense, including attorneys' fees, upon billing and accounting therefor.

10.6 Survival. The provisions of this Sections 10.1 through 10.6, inclusive, shall survive the termination of this Agreement.

11. MORTGAGEE PROTECTION.

11.1 Mortgagee Protection. The parties hereto agree that this Agreement shall not prevent or limit OWNER, in any manner, at OWNER's sole discretion, from encumbering the Property or any portion thereof or any improvement thereon by any mortgage, deed of trust or other security device securing financing with respect to the Property. CITY acknowledges that the lenders providing such financing may require certain Agreement interpretations and modifications and agrees upon request, from time to time, to meet with OWNER and representatives of such lenders to negotiate in good faith any such request for interpretation or modification. CITY will not unreasonably withhold its consent to any such requested interpretation or modification provided such interpretation or modification is consistent with the intent and purposes of this Agreement. Any Mortgagee of the Property shall be entitled to the following rights and privileges:

(a) Neither entering into this Agreement nor a breach of this Agreement shall defeat, render invalid, diminish or impair the lien of any mortgage on the Property made in good faith and for value, unless otherwise required by law.

(b) The Mortgagee of any mortgage or deed of trust encumbering the Property, or any part thereof, which Mortgagee, has submitted a request in writing to the CITY in the manner specified herein for giving notices, shall be entitled to receive written notification from CITY of any default by OWNER in the performance of OWNER's obligations under this Agreement.

(c) If CITY timely receives a request from a Mortgagee requesting a copy of any notice of default given to OWNER under the terms of this Agreement, CITY shall provide a copy of that notice to the Mortgagee within ten (10) days of sending the notice of default to OWNER. The Mortgagee shall have the right, but not the obligation, to cure the default during the remaining cure period allowed such party under this Agreement.

(d) Any Mortgagee who comes into possession of the Property, or any part thereof, pursuant to foreclosure of the mortgage or deed of trust, or deed in lieu of such foreclosure, shall take the Property, or part thereof, subject to the terms of this Agreement. Notwithstanding any other provision of this Agreement to the contrary, no Mortgagee shall have an obligation or duty under this Agreement to perform any of OWNER's obligations or other affirmative covenants of OWNER hereunder, or to guarantee such performance; provided, however, that to the extent that any covenant to be performed by OWNER is a condition precedent to the performance of a covenant by CITY, the performance thereof shall continue to be a condition precedent to CITY's performance hereunder, and further provided that any sale, transfer or assignment by any Mortgagee in possession shall be subject to the provisions of Section 2.4 of this Agreement

(e) In the event of a default by OWNER, any Mortgagee shall have the right to remedy, or cause to be remedied, such default within sixty (60) days following the later to occur of (i) the date of Mortgagee's receipt of the notice referred to in Section 9.4 above, or (ii) the expiration of the period provided herein for OWNER to remedy or cure such default, and CITY shall accept such performance by or at the insistence of the Mortgagee as if the same had been timely made by OWNER; provided, however, that (i) if such default is not capable of being cured within the timeframes set forth in this Section and Mortgagee commences to cure the default within such timeframes, then Mortgagee shall have such additional time as is required to cure the default so long as Mortgagee diligently prosecutes the cure to completion and (ii) if possession of the Property (or portion thereof) is required to effectuate such cure or remedy, the Mortgagee shall be deemed to have timely cured or remedied if it commences the proceedings necessary to obtain possession thereof within sixty (60) days after receipt of the copy of the notice, diligently pursues such proceedings to completion, and, after obtaining possession, diligently completes such cure or remedy.

12. MISCELLANEOUS PROVISIONS.

12.1 Recordation of Agreement. This Agreement and any amendment or cancellation thereof shall be recorded with the San Bernardino County Recorder by the City Clerk within ten (10) days after the CITY executes this Agreement, as required by Section 65868.5 of the Government Code. If the parties to this Agreement or their successors in interest amend or cancel this Agreement as provided for herein and in Government Code Section 65868, or if the CITY terminates or modifies the agreement as provided for herein and in Government Code Section 65865.1 for failure of the applicant to comply in good faith with the terms or conditions of this Agreement, the City Clerk shall have notice of such action recorded with the San Bernardino County Recorder.

12.2 Entire Agreement. This Agreement sets forth and contains the entire understanding and agreement of the parties, and there are no oral or written representations, understandings or ancillary covenants, undertakings or agreements which are not contained or expressly referred to herein. No testimony or evidence of any such representations, understandings or covenants shall be admissible in any proceeding of any kind or nature to interpret or determine the terms or conditions of this Agreement.

12.3 Severability. If any term, provision, covenant or condition of this Agreement shall be determined invalid, void or unenforceable, the remainder of this Agreement shall not be affected thereby to the extent such remaining provisions are not rendered impractical to perform taking into consideration the purposes of this Agreement. Notwithstanding the foregoing, the provision of the Public Benefits set forth in Section 4 of this Agreement, including the payment of the fees set forth therein, are essential elements of this Agreement and CITY would not have entered into this Agreement but for such provisions, and therefore in the event such provisions are determined to be invalid, void or unenforceable, this entire Agreement shall be null and void and of no force and effect whatsoever.

12.4 Interpretation and Governing Law. This Agreement and any dispute arising hereunder shall be governed and interpreted in accordance with the laws of the State of California. This Agreement shall be construed as a whole according to its fair language and common meaning to achieve the objectives and purposes of the parties hereto, and the rule of construction to the effect that ambiguities are to be resolved against the drafting party shall not be employed in interpreting this Agreement, all parties having been represented by counsel in the negotiation and preparation hereof.

12.5 Section Headings. All section headings and subheadings are inserted for convenience only and shall not affect any construction or interpretation of this Agreement.

12.6 Singular and Plural. As used herein, the singular of any word includes the plural.

12.7 Joint and Several Obligations. Pursuant to Section 2.4, if at any time during the term of this Agreement the Property is subsequently owned, in whole or in part, by more than one owner, all obligations of such owners under this Agreement shall be joint and several, and the default of any such owner shall be the default of all such owners. Notwithstanding the foregoing, no owner of a single lot which has been finally subdivided and sold to such owner as a member of the general public or otherwise as an ultimate user shall have any obligation under this Agreement except as provided under Section 4 hereof.

12.8 Time of Essence. Time is of the essence in the performance of the provisions of this Agreement as to which time is an element.

12.9 Waiver. Failure by a party to insist upon the strict performance of any of the provisions of this Agreement by the other party, or the failure by a party to exercise its rights upon the default of the other party, shall not constitute a waiver of such party's right to insist and demand strict compliance by the other party with the terms of this Agreement thereafter.

12.10 No Third-Party Beneficiaries. This Agreement is made and entered into for the sole protection and benefit of the parties and their successors and assigns. No other person shall have any right of action based upon any provision of this Agreement.

12.11 Force Majeure. Neither party shall be deemed to be in default where failure or delay in performance of any of its obligations under this Agreement is caused by floods,

earthquakes, other Acts of God, fires, wars, riots or similar hostilities, strikes and other labor difficulties beyond the party's control, (including the party's employment force), government regulations, governmental orders related to statewide or national pandemics, any third party court actions challenging the Project (including but not limited to writs of mandate, restraining orders or injunctions), or other causes beyond the party's control. If any such events shall occur, the term of this Agreement and the time for performance by either party of any of its obligations hereunder may be extended by the written agreement of the parties for the period of time that such events prevented such performance, provided that the term of this Agreement shall not be extended under any circumstances for more than five (5) years.

12.12 Mutual Covenants. The covenants contained herein are mutual covenants and also constitute conditions to the concurrent or subsequent performance by the party benefited thereby of the covenants to be performed hereunder by such benefited party.

12.13 Successors in Interest. The burdens of this Agreement shall be binding upon, and the benefits of this Agreement shall inure to, all successors in interest to the parties to this Agreement. All provisions of this Agreement shall be enforceable as equitable servitudes and constitute covenants running with the land. Each covenant to do or refrain from doing some act hereunder with regard to development of the Property: (a) is for the benefit of and is a burden upon every portion of the Property; (b) runs with the Property and each portion thereof; and, (c) is binding upon each party and each successor in interest during ownership of the Property or any portion thereof.

12.14 Counterparts. This Agreement may be executed by the parties in counterparts, which counterparts shall be construed together and have the same effect as if all of the parties had executed the same instrument.

12.15 Jurisdiction and Venue. Any action at law or in equity arising under this Agreement or brought by a party hereto for the purpose of enforcing, construing or determining the validity of any provision of this Agreement shall be filed and tried in the Superior Court of the County of San Bernardino, State of California, and the parties hereto waive all provisions of law providing for the filing, removal or change of venue to any other court.

12.16 Project as a Private Undertaking. It is specifically understood and agreed by and between the parties hereto that the development of the Project is a private development, that neither party is acting as the agent of the other in any respect hereunder, and that each party is an independent contracting entity with respect to the terms, covenants and conditions contained in this Agreement. No partnership, joint venture or other association of any kind is formed by this Agreement. The only relationship between CITY and OWNER is that of a government entity regulating the development of private property and the owner of such property.

12.17 Further Actions and Instruments. Each of the parties shall cooperate with and provide reasonable assistance to the other to the extent contemplated hereunder in the performance of all obligations under this Agreement and the satisfaction of the conditions of this Agreement. Upon the request of either party at any time, the other party shall

promptly execute, with acknowledgment or affidavit if reasonably required, and file or record such required instruments and writings and take any actions as may be reasonably necessary under the terms of this Agreement to carry out the intent and to fulfill the provisions of this Agreement or to evidence or consummate the transactions contemplated by this Agreement. The City Manager may delegate his powers and duties under this Agreement to an Assistant City Manager or other management level employee of the CITY.

12.18 Eminent Domain. No provision of this Agreement shall be construed to limit or restrict the exercise by CITY of its power of eminent domain.

12.19 Agent for Service of Process. In the event OWNER is not a resident of the State of California or it is an association, partnership or joint venture without a member, partner or joint venturer resident of the State of California, or it is a foreign corporation, then in any such event, OWNER shall file with the Planning Director, upon its execution of this Agreement, a designation of a natural person residing in the State of California, giving his or her name, residence and business addresses, as its agent for the purpose of service of process in any court action arising out of or based upon this Agreement, and the delivery to such agent of a copy of any process in any such action shall constitute valid service upon OWNER. If for any reason service of such process upon such agent is not feasible, then in such event OWNER may be personally served with such process out of this County and such service shall constitute valid service upon OWNER. OWNER is amenable to the process so served, submits to the jurisdiction of the Court so obtained and waives any and all objections and protests thereto.

12.20 Estoppel Certificate. Within thirty (30) business days following a written request by any of the parties, the other party shall execute and deliver to the requesting party a statement certifying that (i) either this Agreement is unmodified and in full force and effect or there have been specified (date and nature) modifications to the Agreement, but it remains in full force and effect as modified; and (ii) either there are no known current uncured defaults under this Agreement or that the responding party alleges that specified (date and nature) defaults exist. The statement shall also provide any other reasonable information requested. The failure to timely deliver this statement shall constitute a conclusive presumption that this Agreement is in full force and effect without modification except as may be represented by the requesting party and that there are no uncured defaults in the performance of the requesting party, except as may be represented by the requesting party. OWNER shall pay to CITY all costs incurred by CITY in connection with the issuance of estoppel certificates requested by OWNER under this Section 12.20 prior to CITY's issuance of such certificates.

12.21 Authority to Execute. The person or persons executing this Agreement on behalf of OWNER warrants and represents that he or she/they have the authority to execute this Agreement on behalf of his or her/their corporation, partnership or business entity and warrants and represents that he or she/they has/have the authority to bind OWNER to the performance of its obligations hereunder.

12.22 Prevailing Wage. OWNER, for itself, its successors, and assigns, agrees, covenants, and warrants that the development of the Property, if any, shall comply with all applicable federal and state labor laws (including, without limitation, the requirement under California law to pay prevailing wages and hire apprentices), and all obligations as set forth herein.12.22.1 CITY makes no representations concerning prevailing wages in compliance with California Labor Code Section 1770 et seq.

12.22.2 OWNER acknowledges and agrees that it shall be independently responsible for reviewing the applicable laws and regulations with respect to the payment of prevailing wages and complying therewith. OWNER shall bear all risks of payment or non-payment of prevailing wages under California law and/or the implementation of Labor Code Section 1781, as the same may be amended from time to time, and/or any other similar law.

12.22.3 The foregoing indemnity shall survive termination of this Agreement and shall continue after completion of the construction and development of the Property by OWNER, its successors or assigns. OWNER shall be solely responsible for determining and effectuating compliance with such laws.

12.22.4 OWNER, ON BEHALF OF ITSELF, ITS SUCCESSORS, AND ASSIGNS, WAIVES AND RELEASES CITY FROM ANY RIGHT OF ACTION THAT MAY BE AVAILABLE TO OWNER PURSUANT TO LABOR CODE SECTION 1781 OR THE DAVIS BACON ACT. RELATIVE TO THE WAIVER AND RELEASE CONTAINED IN THIS SECTION 12.22, OWNER ACKNOWLEDGES THE PROTECTIONS OF CIVIL CODE SECTION 1542, WHICH READS AS FOLLOWS: A GENERAL RELEASE DOES NOT EXTEND TO CLAIMS THAT THE CREDITOR OR RELEASING PARTY DOES NOT KNOW OR SUSPECT TO EXIST IN HIS OR HER FAVOR AT THE TIME OF EXECUTING THE RELEASE, WHICH IF KNOWN BY HIM OR HER MUST HAVE MATERIALLY AFFECTED HIS OR HER SETTLEMENT WITH THE DEBTOR OR RELEASED PARTY.

INITIALS. BY INITIALING BELOW, OWNER KNOWINGLY AND VOLUNTARILY WAIVES THE PROVISIONS OF SECTION 1542 SOLELY WITH THE MATTERS WHICH ARE THE SUBJECT OF THE FOREGOING WAIVERS AND RELEASES:

DESCRIPTION OF REQUIRED IMPROVEMENTS

OWNER shall design, construct, and complete the following Street, Sewer, Storm Drain, Potable Water, Recycled Water, and Fiber Optic improvements, prior to OWNER's request for any final certificate of occupancy permit for any building within the Property.

Street (ST) Improvements

a. ST improvements on Schaefer Ave from Euclid Ave to Sultana Ave
b. ST improvements on Euclid Ave from Schaefer Ave to Edison/Ontario Ranch Rd.
c. ST improvements on Sultana Ave along the project frontage

Potable Water (PW) Improvements

a. PW improvements on Schaefer Ave from Euclid Ave to Grove Ave
b. PW improvements on Euclid Ave from Schaefer Ave to Eucalyptus Ave
c. PW improvements on Sultana Ave

Storm Drain (SD) Improvements

a. SD improvements on Schaefer Ave from Euclid Ave to Sultana Ave
b. SD improvements on Euclid Ave from Schaefer Ave to Eucalyptus Ave

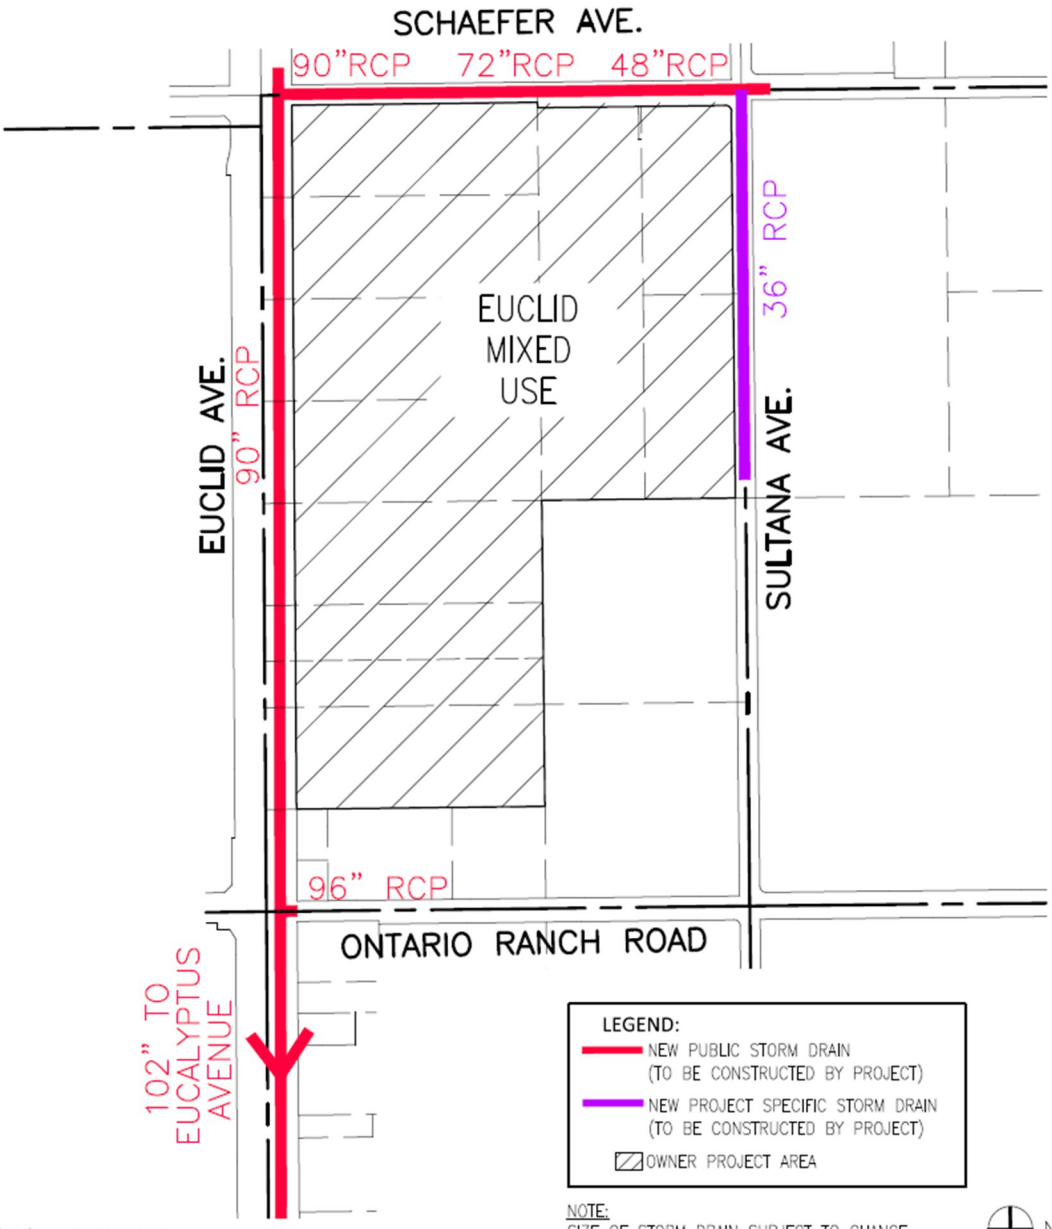
Recycled Water (RW) Improvements

a. RW improvements on Schaefer Ave from Euclid Ave to Sultana Ave
b. RW improvements on Euclid Ave from Schaefer Ave to Eucalyptus Ave
c. RW improvements on Sultana Ave

Sewer (SW) Improvements

a. SW improvements on Euclid Ave from Schaefer Ave to Eucalyptus Ave

Fiber Optics (FO) improvements



a. FO improvements on Schaefer Ave from Euclid Ave to Sultana Ave
b. FO improvements on Euclid Ave along project frontage
c. FO improvements on Sultana along project frontage

CITY OF ONTARIO *Agenda Report* **August 20, 2024**	**SECTION:** **PUBLIC HEARINGS**
Department: Planning Prepared By: Thomas Grahn Staff Member Presenting: Scott Murphy, Executive Director Community Development Reviewed By: Kimberly Ruddins, Henry Noh, Rudy Zeledon Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 27

SUBJECT: **A PUBLIC HEARING TO CONSIDER AN EXTENSION FOR ORDINANCE NO. 3275, AN URGENCY ORDINANCE TO IMPLEMENT MULTIPLE-FAMILY RESIDENTIAL AND MIXED-USE RESIDENTIAL OBJECTIVE DESIGN AND DEVELOPMENT STANDARDS, FILE NO. PDCA24-001**

RECOMMENDATION: That the City Council consider and waive further reading of an extension to the Urgency Ordinance amending the reference document section of the City's Development Code.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Operate in a Businesslike Manner
Focus Resources in Ontario's Commercial and Residential Neighborhoods

FISCAL IMPACT: There is not a direct fiscal impact with this action.

BACKGROUND & ANALYSIS:

Background: On June 4, 2024, the City Council approved an Urgency Ordinance adopting an interim Development Code Amendment that revised the reference section to establish Objective Development and Design Standards to comply with the Housing Element programs 9.19 and 9.21 and the requirements of Government Code Section 65589. Government Code Section 65589.5 mandates that local governments facilitate the approval of housing development projects through the application of objective development and design standards, ensuring transparency, predictability, and fairness in the approval process.

Government Code Section 65858 grants the City Council the authority to adopt an Urgency Ordinance as an interim measure that would temporarily amend the City's Development Code for the purpose of revising the local regulatory scheme. Moreover, Government Code Section 65858(a) provides that an Urgency Ordinance expires, and is of no further force and effect, 90 days following the date of its adoption. The City Council may extend this time limit for up to an additional 9 months after providing public notice and conducting a public hearing. The extension of the Urgency

Ordinance requires a four-fifths vote for adoption.

It is Staff's recommendation that the City Council approve the extension of the Urgency Ordinance for an additional 9 months to June 3, 2025, to allow sufficient time for Staff to study and prepare an Ordinance and present its recommendations to the City Council regarding permanent revisions to the City's regulatory system pertaining to objective development and design standards, consistent with the goals and policies of the City's General Plan, California Planning and Zoning Law, and the provisions of California Government Code Section 65858.

Environmental Review: The Urgency Ordinance is exempt from the California Environmental Quality Act (CEQA) as this project meets the required actions of CEQA Guidelines Section 15183 – Projects Consistent with a Community Plan, General Plan, or Zoning, because it involves direction to Staff to adopt and implement design standards, which will not cause significant environmental impact and implements a uniformly applied development policy or standard that is consistent with the General Plan Housing Element policy to regulate multi-family residential development further.

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, EXTENDING ORDINANCE NO. 3275, AN URGENCY ORDINANCE CONSISTING OF AN AMENDMENT TO THE ONTARIO MUNICIPAL CODE, FILE NO. PDCA24-001, AMENDING THE REFERENCE SECTION OF THE ONTARIO DEVELOPMENT CODE ESTABLISHING MULTIPLE-FAMILY RESIDENTIAL AND MIXED-USE RESIDENTIAL OBJECTIVE DEVELOPMENT AND DESIGN STANDARDS.

WHEREAS, at the regular public meeting on June 4, 2024, the City Council of the City of Ontario found that the protection of the public safety, health and welfare of the City required the City Council to adopt Ordinance No. 3275, an interim urgency ordinance consisting of an amendment to the Ontario Municipal Code, File No. PDCA24-001, which amended the reference section of the Ontario Development Code establishing multiple-family residential and mixed-use residential objective development and design standards; and

WHEREAS, pursuant to Government Code Section 65858, Ordinance No 3275, as an interim urgency ordinance, expires 90 days after approval on September 3, 2024, unless the City Council, by a four-fifths vote, after notice has been given pursuant to Government Code Section 65090 and a public hearing conducted, extends Ordinance No. 3275 for 9 months to expire on June 3, 2025; and

WHEREAS, City staff intends to undertake further study and present its recommendations to the City Council regarding permanent revisions to the City's regulatory scheme pertaining to objective development and design standards, consistent with the goals and policies of the City's General Plan, California Planning and Zoning Law, and the provisions of California Government Code Section 65858; and

WHEREAS, for the last several years, the State has enacted housing-related statutes that either limit or prohibit the use of local subjective standards for new development; and

WHEREAS, the City has historically regulated new housing development through a mix of subjective and objective standards to ensure that each project is reasonable and compatible with surrounding uses and City goals and objectives; and

WHEREAS, the City's current objective standards on their own are not sufficient to ensure that new housing development is reasonable or compatible; and

WHEREAS, as state law has evolved to increasingly limit the City's use of subjective standards, the need for more and more-thoughtful objective standards has become urgent; and

WHEREAS, specifically the approval of multiple-family residential and mixed-use residential development projects in various zoning districts based solely on the default standards currently in the City's Development Code, without additional appropriate objective regulations governing project design, site planning, building massing, height, setback, landscape, building type, architectural review, and similar criteria, threatens to adversely impact the character of existing neighborhoods and to negatively impact property values, personal privacy, and fire safety; and

WHEREAS, the City desires now to amend its local regulatory scheme to provide reasonable and appropriate objective standards, in compliance with state law and the City's own adopted housing element; and

WHEREAS, Government Code Section 65589.5 mandates that local governments facilitate the approval of housing development projects through the application of objective development and design standards, ensuring transparency, predictability, and fairness in the approval process; and

WHEREAS, to protect public safety, health, and welfare, the City Council may adopt this ordinance as an urgency measure in accordance with Government Code section 36937(b) and the City of Ontario Municipal Code; and

WHEREAS, the urgency ordinance will allow the City to respond and impose consistent development standards to address the anticipated increase in housing development project applications. The ODDS adoption by urgency ordinance be followed at the earliest possible time by a non- urgency ordinance that will be considered for approval by the Planning Commission before returning to the City Council for ultimate adoption; and

WHEREAS, Ordinance No. 3275 has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND ORDAINED by the City Council of the City of Ontario, as follows:

SECTION 1: *Incorporation of Recitals.* The recitals above are each incorporated by reference and adopted as findings by the City Council.

SECTION 2. *Environmental Determination and Findings.* Adoption of this urgency ordinance has been assessed under CEQA and is deemed exempt based on CEQA Guidelines Section 15183, as it involves the adoption and implementation of Design Standards. This falls under the exemption for Projects Consistent with a Community Plan, General Plan, or Zoning, as it directs staff to adopt standards aligned with the General Plan Housing Element policy for multiple-family residential development. The determination relies on Section 15004, providing guidance on the timing of environmental review. While projects using the Design Standards may need environmental documents, the adoption of Objective Development and Design Standards is exempt from CEQA as it won't significantly impact the environment. Staff recommends City Council acknowledge the exemption, accept the NOE, and instruct staff to file the document under CEQA and the CEQA Guidelines (14 CCR Section 1500, et seq.).

SECTION 3: *General Plan Consistency.* This ordinance is, as a matter of law, consistent with the City's General Plan under the principles, goals and policies contained within the Vision, Governance, Policy Plan (general plan), and City Council Priorities components of The Ontario Plan ("TOP"). More specifically, the goals and policies of TOP that are furthered by the proposed Project are as follows:

(1) City Council Goals.

- Invest in the Growth and Evolution of the City's Economy
- Operate in a Businesslike Manner

(2) Vision.

Distinctive Development:

- Commercial and Residential Development
  - Development quality that is broadly recognized as distinctive and not exclusively tied to the general suburban character typical of much of Southern California.

(3) Policy Plan (General Plan)

Land Use Element:

- Goal LU-1 Balance. A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.
  - LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

Housing Element:

- Goal H-2 Housing Supply & Diversity. Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

  - H-2.5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.

  - H-2.6 Infill Development. We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.

Community Economics Element:

- Goal CE-1 Complete Community: A complete community that provides for all incomes and stages of life.

  - CE-1.6 Diversity of Housing. We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.

- Goal CE-2 Placemaking: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.

  - CE-2.1 *Development Projects.* We require new development and redevelopment to create unique, high-quality places that add value to the community.

  - CE-2.4 *Protection of Investment.* We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.

Community Design Element:

- Goal CD-1 Image & Identity: A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.

  - CD-1.1 *City Identity.* We take actions that are consistent with the City being a leading urban center in Southern California while recognizing, enhancing, and preserving the character of our existing viable neighborhoods.

- CD-1.2 Place Types. We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.

- Goal CD-2 Design Quality. A high level of design quality resulting in neighborhoods, public spaces, parks, and streetscapes that are attractive, safe, functional, human-scale, and distinct.

  - CD-2.1 Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through:

    - Building volume, massing, and height to provide context-appropriate scale and proportion;

    - A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and

    - Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.

  - CD-2.8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.

  - CD-2.9 *Landscape Design.* We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.

  - CD-2.10 *Parking Areas.* We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include:

    - Structured parking: facade articulation, screening, appropriate lighting, and landscaping; and

    - Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.

- Goal CD-3 Urban, Mixed Use, and Transit-Oriented Place Types: Vibrant urban environments that are organized around intense buildings, pedestrian and

transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.

- CD-3.4 Context-Aware and Appropriate Design. We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.

- CD-3.5 Active Frontages. We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).

SECTION 4. *Extension.* In accordance with the authority granted to the City of Ontario by California Government Code Section 65858 and for the reasons set forth herein above, the interim urgency ordinance enacted by Ordinance No. 3275, adopted by the City Council on June 4, 2024, is extended for 10 months and 15 days from the expiration of the initial 45-day period to and including June 3, 2025.

SECTION 5. *Concluding Facts and Reasons.* Based on the substantial evidence presented to the City Council during the above-referenced hearing, and the specific findings set forth in the Recitals, and Sections 1 through 4, above, the City Council hereby concludes as follows:

(a) This extension is a matter of City-wide importance, is a reasonable and necessary measure designed for the immediate preservation and protection of the public health, safety or welfare of the community, and is in accord with the public purposes and provisions of applicable State and local laws and requirements; and,

(b) The extension is consistent with the goals, policies, plans, and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan. Staff has thoroughly reviewed the extension and the conditions under which it will be implemented, and has determined the proposed extension to be consistent with the applicable goals, policies, plans, and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan; and

(c) The extension would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.

SECTION 6. *City Council Action.* Based upon the findings and conclusions set forth in the Recitals and Sections 1 through 5, above, the City Council finds and determines pursuant to California Government Code Section 65858 that adoption of this ordinance is necessary for the immediate preservation of the public health, safety, and

welfare, and to prohibit uses in conflict with zoning regulations pertaining to objective development and design standards for multiple-family and mixed use development currently being studied and contemplated by the City.

SECTION 7. *Custodian of Records.* The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 8. *Severability.* If any section, sentence, clause or phrase of this Ordinance or the application thereof to any entity, person or circumstance is held for any reason to be invalid or unconstitutional, such invalidity or unconstitutionality shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this Ordinance are severable. The People of the City of Ontario hereby declare that they would have adopted this Ordinance and each section, sentence, clause or phrase thereof, irrespective of the fact that any one or more section, subsections, sentences, clauses or phrases be declared invalid or unconstitutional.

SECTION 9. *Effective Date.* The extension of the interim urgency ordinance enacted by Ordinance No. 3275, adopted by the City Council on August 20, 2024, shall take effect immediately, extending the interim urgency ordinance for 10 months and 15 days to and including June 3, 2025.

SECTION 10. *Publication and Posting.* The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within 15 days following the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

CHAPTER 5. ADMINISTRATION 77

5.1 ADMINISTRATION OF STANDARDS 77
5.1.1 Interpretation and Severability *77*
5.1.2 Reference Documents *77*
5.2 GLOSSARY OF TERMS 77

5.3 CHECKLIST.....80

Chapter 1. Introduction

Development and design standards regulate the intensity, style, size, and orientation of development. Objective design standards are quantifiable, verifiable, and measurable, offering a predictable and fair process for housing approvals. This document aims to streamline and endorse housing design that aligns with community consistency.

1.1 Purpose

The Objective Development and Design Standards (ODDS) introduced in this document align with The Ontario Plan (TOP) Policy Plan (general plan) and the Ontario Development Code to provide objective standards for streamlined ministerial approval of residential multiple-family and mixed-use development projects consistent with state law and implementation of TOP goals and policies.

The purpose of the Residential ODDS meets 2 primary objectives to:

1. **Comply with state law.** The ODDS provide standards for design, construction, review, and approval of multiple-family residential and mixed-use development, consistent with state law.
2. **Implement TOP's Policy Plan.** The ODDS implement the multiple-family residential and mixed-use land use designations in the Land Use Element and the policies in the Community Design Element, including the vision and intended outcomes of Place Types identified in Figures CD-01 through CD-07.

1.2 Who is this document for?

This document is intended for developers and property owners in the development of real property in the City of Ontario. It serves as a guide for clear communication between property owners, designers, developers, and City staff outlining the key elements of quality design. For property owners, it offers a concise understanding of design elements that are consistent with the Policy Plan and required by the Development Code.

1.3 Applicability

In addition to any objective standards imposed through the underlying base zone, the ODDS document provides standards for housing developments limited to the following areas (refer to the Policy Plan Land Use Plan Exhibits LU-01, LU-04, and CD-01 and the official Zoning Map):

- **Multiple-Family Development.** Applies to all multiple-family residential categories as shown on Policy Plan Land Use Plan Exhibit LU-01 (LMDR, MDR, and HDR, and Mixed-Use land use designations).

- **Mixed-Use Development.** Applies to mixed-use categories as shown on Policy Plan Land Use Plan Exhibit LU-01and associated Place Types as shown on Exhibit CD-01.

1.4 User guide

1. **Identify TOP Policy Plan land use designation and zoning district.**
    a. Refer to Exhibit LU-01 Land Use Plan and identify land use designation.
    b. Refer to the Official Zoning Map to verify zoning and whether the project falls within the Specific Plan or Planned Unit Development (PUD) and adhere to the standards outlined in each document.
    c. Development applications shall utilize ODDS wherever PUD or Specific Plan standards are silent.
2. **Apply multiple-family (Chapter 2) or mixed-use (Chapter 3) development standards.**
3. **Select architecture (Chapter 4).**
    For each project type select 1 of the following 6 styles: Mission-Spanish Colonial Revival, Craftsman, American Mercantile, Tuscan, Modern, or Farmhouse.
4. **ODDS checklist.**
    Fill out ODDS checklist.

Chapter 2: Multiple Family Standards

2.1 Site design standards

2.1.1 Site design

Lot lines. The lines bounding a lot. The classifications of "Lot Line" are as follows**:**

a. **Front.** This line separates the narrowest street frontage of a lot from a public or private street right-of-way.
b. **Interior "side"**. Any lot line that is not a front or rear lot line and does not border a public or private street right-of-way.
c. **Rear**. The lot line opposite and farthest from the front lot line. In the case of an irregularly shaped lot, a straight line shall be drawn to determine the rear lot line.
d. **Street side.** Any lot line that is not a front or rear lot line, and which abuts a public or private street right-of-way.

2.1.2 Site access

1. **Alleys.** Vehicular access to the on-site parking areas shall be from the alley.
2. **Roadway inclusion**. Pedestrian access from the public right-of-way must include sidewalk on both sides of the driveway.

2.1.3 Parking

A. Placement on site

Parking shall be designed in compliance with the applicable standards contained in Division 6.03 (Off-Street Parking and Loading) of the Ontario Development Code, except as modified by the following:

1. **Surface parking**
   a. **Setbacks**. Surface parking lots adjacent to public or private streets shall include a landscaped and irrigated setback a minimum of 5 feet in width measured from property line, or aligned with the building façade, whichever is greater.
   b. **Orientation**. Surface parking lots shall be located at the rear, side, or internal lot lines and away from the front lot line.
2. **Above-ground parking structures.** Ground-floor parking shall be sited behind residential, office, or commercial spaces.
3. **Semi-subterranean parking.** A semi-subterranean garage shall not extend beyond the building frontage line and shall not extend higher than 4 feet above sidewalk grade.
4. **Subterranean parking.** A subterranean parking structure may extend to all property lines.
5. **Private residential garages.** Each private garage must have vehicular access from an alley, side street, or motor court.

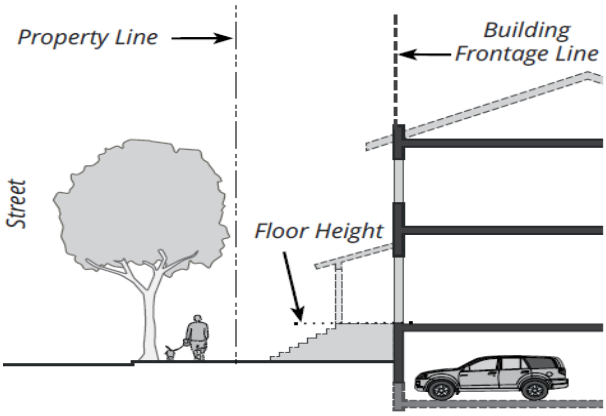

Figure 2.1-1 Semi-subterranean parking

B. Surface parking lot design

Surface parking lots shall be designed in compliance with the applicable standards contained in Division 6.03 (Off-Street Parking and Loading) of the Ontario Development Code, except as modified by the following:

1. **Screening**
    a. **Street-adjacent parking lots.**
        i. A street-adjacent surface parking lot shall be screened from view by a low wall or hedge no higher than 3 feet in height.
        ii. Walls and hedges must be a minimum 18 inches from the back of the sidewalk.
        iii. Landscaped berms are prohibited.
    b. **Neighboring parcels.** Views from neighboring properties shall be screened with trees and shrubs.
2. **Landscape.** Landscaping materials shall be applied in compliance with the applicable objective parking lot landscape standards contained in Ontario Development Code Section 6.05.030 (Required Landscape Areas).
3. **Shade structures.** Shade structures, if used, shall match the architectural style of the project buildings.

C. Parking court design

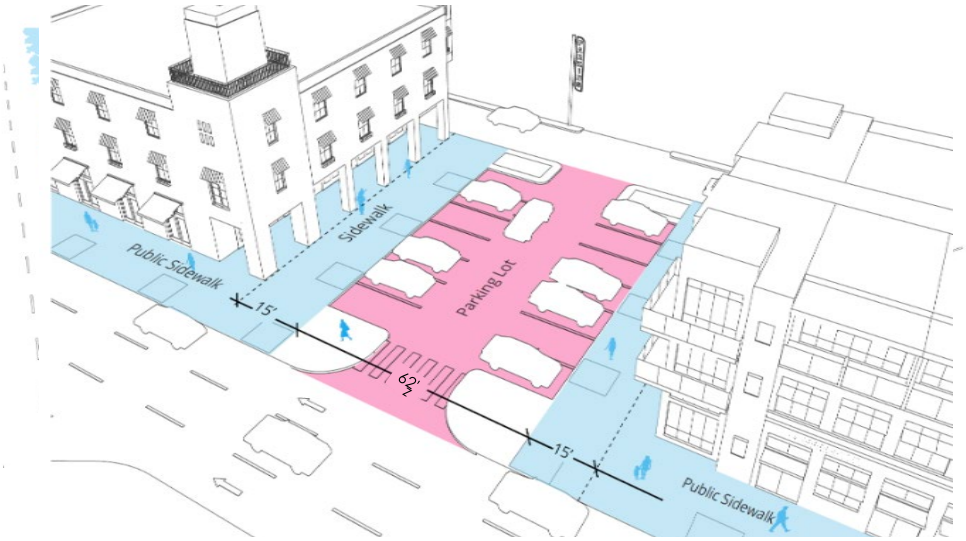

Figure 2.1-2 Parking Court

Design standards

a. The width of the parking court, when measured from 1 building face to the other, shall not exceed 100 feet.
b. The parking court shall consist of only 1 parking bay, and this bay shall not exceed a maximum width of 62 feet.

c. On both sides of the parking court, sidewalks must be established, each with a minimum width of 15 feet. These sidewalks must connect with the adjacent public sidewalk network.

D. Parking structure design

1. **Context-sensitive façade design.** Parking structure façades shall incorporate a minimum 2 design elements using the architectural styles identified in Chapter 4: Architectural styles and adhere to Main Street or Urban and facade design standards applied in *Section 2.2.2 Building Types*.
2. **Parking structure standards**
   a. Any driveway providing access to a parking structure shall have a minimum width of 28 feet.
   b. Single access lane driveways into the structure shall not exceed 14 feet in width.
   c. Parked vehicles shall be screened from view from adjoining streets.
   d. Signs as shall be consistent with Division 8: Sign Regulations of Ontario Development Code.

Figure 2.1-3 Parking structure and façade design

2.1.4 Open space standards

A. Common open space and public frontage

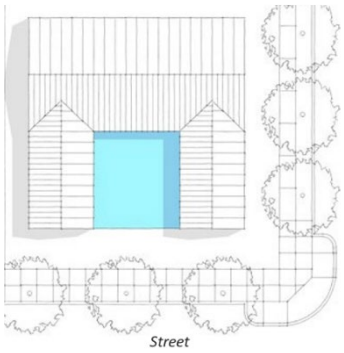
1. **Common open space type requirements.** Common open space shall cover a minimum of 15 percent of the total lot area with the following **exceptions**:
   a. **Close to parks.** Common on-site open space shall not be required for lots within a 1/4-mile of an existing park or plaza a minimum 0.25 acres in size.
   b. **Common open space types.** 1 or more of the common on-site open space types listed under "Common Open Space Types" shall be provided on each lot that has a residential use.
2. **Access and visibility.** At-grade open space shall be accessible and visible from the adjacent ground floor.

B. Common open space types

Forecourt

Design standards

a. A forecourt may occur on any floor and may be used as an allowed method of creating façade massing increments.
b. **Minimum dimensions.** Forecourts shall be a minimum of 15 feet by 15 feet.



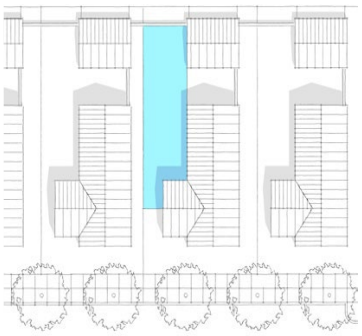


Figure 2.1-4 Forecourt

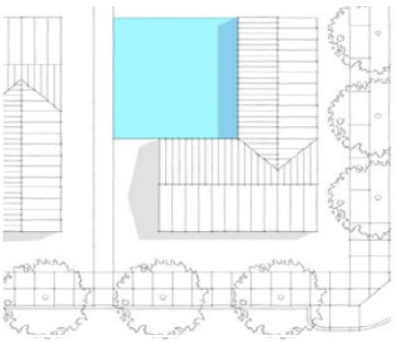
Side garden

Design standards



a. **Minimum side garden dimensions**: 15 feet by 15 feet.
b. Dooryards, porches, stoops, and architectural elements may encroach into the side garden as follows:
   i. Up to a total of 30 percent of the side garden's width or length.
   ii. A ground-floor encroaching element shall be allowed to project a maximum of 8 feet into the side garden.

Figure 2.1-5 Side Garden

Court

Design Standards

a. **Minimum dimensions**. All courts shall be a minimum of 20 feet by 30 feet.
b. **Enclosure**.
   i. A court shall have building walls on a minimum 2 sides, while the third and fourth side can be defined by architectural or landscape elements (i.e., low walls, trellises, hedges, or rows of trees).
   ii. A driveway located adjacent to a court shall be screened by architectural elements (e.g., low walls or trellises, hedges, or rows of trees).

Figure 2.1-6 Court Configuration

c. **Access**
   i. Courts shall be accessed from the street or walkway.
   ii. Units shall be allowed to take direct access through a court.
d. **Encroachments.**
   i. Dooryards, porches, stoops, and architectural elements may encroach into the Side Yard.

ii. A ground floor encroaching element shall not encroach beyond 8 feet of the building's façade into the court.

e. **Common area.** A court shall serve as communal spaces and pedestrian access.

f. **Amenities.** A court shall include a minimum 1 of the following amenities: a seating area, a fountain, a BBQ island, or an outdoor fireplace.

Passage

Design standards

a. Location. Passages shall be provided between buildings or side gardens.

b. Size. Passages shall be a minimum width of 8 feet with minimum of 2 feet of landscape strip on each side.

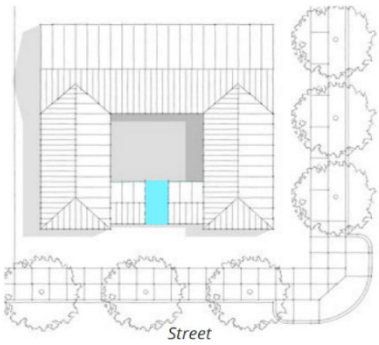


Figure 2.1-7 Passage configuration

C. Private open space

General standards

a. A minimum 60 square feet of private open space shall be provided for each residential unit and a minimum 1 of the private on-site open space types shall be provided.

b. **Exception**: Private on-site open space shall not be required for a project site that is located within 1/4-mile distance of an existing park or plaza that is a minimum 0.25 acres in size.

D. Private open space types

Private roof deck

1. **Description.** A private open space located on the roof of a building dedicated to a single unit.
2. **Design standards.** Minimum dimensions of 7 feet by 7 feet.

Backyard

1. **Description**. A private, landscaped open space located behind each individual unit that is intended to provide passive or active outdoor space for the users of the unit.
2. **Design standards**
   a. **Size**. Minimum dimensions of 20 feet by 15 feet.
   b. **Encroachments**. Encroachment into the backyard is allowed up to 30% of the rear yard area.

Architectural façade elements as private open space

Description. The following elements defined in *Section 2.3 Architectural Façade Elements* may be used to meet on-site private open space requirements.

a. Balcony
b. Terrace Balcony

Entry elements as private open space

Description. The following elements defined in Section 2.4 Entry Elements may be used to meet on-site private open space requirements.

a. Dooryard
b. Porch

2.1.5 Landscaping

General to all. Landscaping materials shall be applied in compliance with the applicable landscape standards contained in Ontario Development Code Section 6.05.030 (Required Landscape Areas).

2.1.6 Fences and walls

Fence and wall heights. Walls and fences shall be designed in compliance with the applicable standards contained in Division 6.02 (Walls, Fences, and Obstructions) of the Ontario Development Code.

2.2 Multiple-Family development standards

The following tables and associated standards for multiple-family development standards covering new residential construction, additions, remodels, or repurposed uses that necessitate an entitlement or building permit from the city. all standards listed under table 2.01 Multiple-Family Development Standards are applicable to all multiple-family projects including projects within mixed-use zones.

Table 2.01: Multiple-Family Development Standards

Requirements	Development Type				Additional Regulations
	Multiple-Family Residential				
	Mixed-Use Building Type				
A. BUILDING DEVELOPMENT STANDARDS					
1. Minimum Setback from Public Street Property Lines	**Urban (25 du/ ac or greater)**	**Neighborhood (Less than 25 du/ac)**	**Housing (Less than 25 du/ac and 5 units or less)**		Note 9
a. Arterial	0 feet	10 feet	14 feet		
b. Collector	5 feet	10 feet	14 feet		
c. Local	5 feet	15 feet	20 feet		
2. Minimum Setback from Interior Project Boundary Property Lines	5 feet				
3. Minimum Setback from Public Alley Property Lines	5 feet				
4. Minimum Setback from Private Drives/Alleyways (from edge of drive aisle)					
a. Living Area	10 feet				
b. Garages and Other Nonhabitable Structures	10 feet				
5. Minimum Setback from Dwellings to Parking Spaces					

Requirements	Development Type	Additional Regulations
	Multiple-Family Residential	
	Mixed-Use Building Type	
a. Living Area	10 feet	
b. Garages and Other Nonhabitable Structures	5 feet	
6. Minimum Setback from Parking Space or Drive Aisle to Wall or Fence	5 feet	
7. Minimum Separation Between Detached Buildings		
a. Dwelling Front to Front	≤ 2-Stories: 25 FT; ≥ 3 Stories: 30 FT unless otherwise specified by massing requirements ("Space between buildings") in Section 2.2.2 Building Types.	Note 5
b. Dwelling Front to Rear	≤ 2-Stories: 25 FT; ≥ 3 Stories: 30 FT unless otherwise specified by massing requirements ("Space between buildings") in Section 2.2.2 Building Types.	Note 5
c. Dwelling Front to Side	≤ 2-Stories: 25 FT; ≥ 3 Stories: 30 FT unless otherwise specified by massing requirements ("Space between buildings") in Section 2.2.2 Building Types.	Note 5
d. Dwelling Side to Side	≤ 2-Stories: 10 FT; ≥ 3 Stories: 15 FT unless otherwise specified by massing requirements ("Space between buildings") in Section 2.2.2 Building Types.	Note 5
e. Dwelling Side to Rear	15 FT; unless otherwise specified by massing requirements ("Space between buildings") in Section 2.2.2 Massing and Façade Design	Note 5
f. Dwelling Rear to Rear	20 FT unless otherwise specified by massing requirements ("Space between buildings") in Section 2.2.2 Building Types.	Note 5
8. Garage to Garage (or other nonhabitable structures)	30 FT – Entry to Entry 30 FT – Entry to Side 10 FT – Side to Side 10 FT – Side to Rear	Note 5
9. Minimum Storage Space	240 CF	Note 4
10. Maximum Street Façade Height		
a. **Downtown District**	35 feet	Note 8
b. **Other Districts & Corridors:**	n/a	
c. **Neighborhood Centers:**	35 feet	
11. Maximum Building Height		
a. **Downtown District**	n/a	Note 8
b. **Other Districts & Corridors:**	n/a	Note 5
c. **Neighborhood Centers:**	60 FT	Note 5
12. Minimum Setback from Major Pipelines	50 FT (to habitable structures)	Note 7

Notes:

1. *An existing lot of record that is substandard as to minimum "project" area and/or dimension(s), shall be permitted all the development rights of the zone in which it is located.*
2. *The density range shall be consistent with the underlying Mix-Used Category identified in Figure LU-04, Mixed Use Areas and defined in Table LU-02, Land Use Designations Summary Table, of the Policy Plan (General Plan). A density bonus and other incentives pursuant to GC Sections 65915 through 65918, may be granted by the Approving Authority. Refer to Development Code Subsection 6.01.010.H (Density Bonus and Other Incentives).*

3. *A health risk assessment shall be required for multiple-family development projects located within 1,000 feet of a freeway, as determined by the Zoning Administrator.*
4. *Lockable private storage space for each residential unit shall be provided within a garage or storage building, or a space directly accessible from the dwelling. Exterior closets accessed from patios or balconies may be used if screened from public view.*
5. *Required building separation, and allowable heights may be differ based on massing type and adjacent uses. See Section 2.2.2 Building Types for additional information regarding building separation. See section 2.2.1 for standards adjusting allowable height. The following items are exceptions to height standards identified in this table and those noted in section 2.2.1:*
   a. *Equipment. Chimneys, elevators, stairs, mechanical houses, screened vents, HVAC equipment, and solar panels may exceed California Building Code height limits.*
   b. *Architectural Elements. Architectural elements such as spires, steeples, or roof lanterns may exceed height limits if consistent with the architectural style outlined in Chapter 4 of the ODDS.*
6. *A lot designated as Mixed-Use (MU) in the Policy Plan (General Plan) shall be developed at no less than the minimum number of dwelling units allowed within the specified density range for the applicable Mixed-Use Category, except that If, because of the configuration/design of a lot, the minimum residential density cannot be achieved, the lot may be developed with non-residential uses.*
7. *Includes major high-pressure pipelines for fuel oil, gasoline, and diesel and aviation fuels within the City. Existing pipelines include:*
   a. *Two parallel pipelines (a 16-inch and a 20-inch) that enter the City at Benson Avenue, traveling parallel to the northerly side of the Southern Pacific right-of-way to Ontario International Airport, then parallel to the southerly side of the Southern Pacific right-of-way, then parallel to the northerly side of the right-of-way beyond Ontario International Airport, then exiting the City at Etiwanda Avenue; and*
   b. *Two parallel pipelines that traverse the easterly portion of the City, entering the City at the southerly portion of Milliken Avenue, then traveling north under Milliken Avenue to Inland Empire Boulevard, then east to Rochester Avenue, then north to the City Limits.*
8. *In the Downtown District, the 35-story façade height shall extend a maximum of 70 percent of the frontage, and it must be broken up with upper-level setbacks (12 feet minimum) at3stories for a minimum of 30 percent of the frontage. Useable outdoor spaces, such as roof decks, may occupy the roof area of the upper-level setback; see Urban Form standards under section 2.2.2A Urban Building Type.*
9. *Projects less than 1 acre in size but exceeding 25 du/ac can use Neighborhood or Housing Form in lieu of the Urban massing form.*

2.2.1 Height standards

1. **Height transition zones.** Requires all new buildings within 100 feet of less intense development patterns (existing or planned) to reduce heights to ensure neighborhood compatibility.
2. **Multiple family development types.** The following height limits shall apply to all proposed multiple family development types.
   a. Buildings within 100 feet of single-family residential dwellings must not exceed 35 feet or the height of adjacent residential buildings, whichever is greater.
   b. Buildings within 100 feet of undeveloped single-family zone parcels shall not exceed 35 feet in height.

2.2.2 Building Types

Identify the suitable building type for the project based on its density, including:

A. "**Urban**" (applies to multiple-family development projects with 25 dwelling units per acre or more*). Projects less than 1 acre in size but exceeding 25 du/ac can use neighborhood or housing Form in lieu of the urban massing form.*

B. "**Neighborhood**" (applies to multiple-family development projects with fewer than 25 dwelling units per acre that include buildings with more than 5 units).

C. "**Housing**" (applies to multiple-family development projects with fewer than 25 dwelling units per acre that *include buildings with 5 or fewer units)*.

Table 2.2-1 Building Types	
Land Use Density	**Building Types**
Greater than 25 du/ac	Urban
Less than 25 du/ac and greater than 5 units	Neighborhood
Less than 25 du/ac and 5 units or less	Housing form

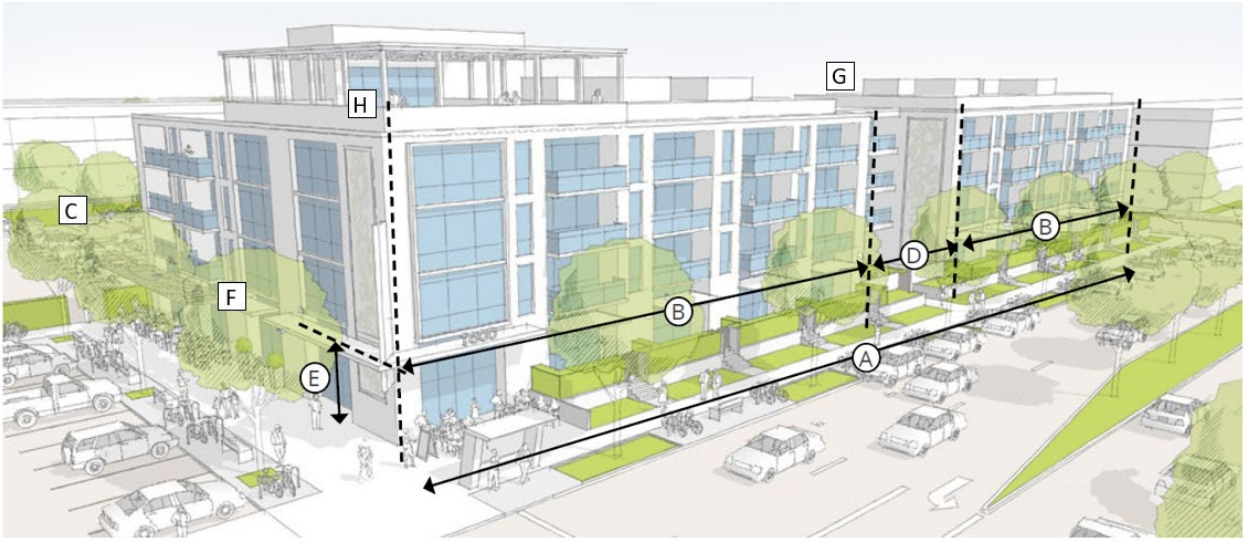
A. Urban massing and façade design

Urban massing and façade design standards are required for all multiple-family developments projects with 25 du/ac or more.

Massing increments

Massing increments are visually discrete design compositions that are distinguishable from each other and have a coherent look and character from the ground to the top of the facade. Massing increments appear as either distinct buildings or distinct parts of a single building.

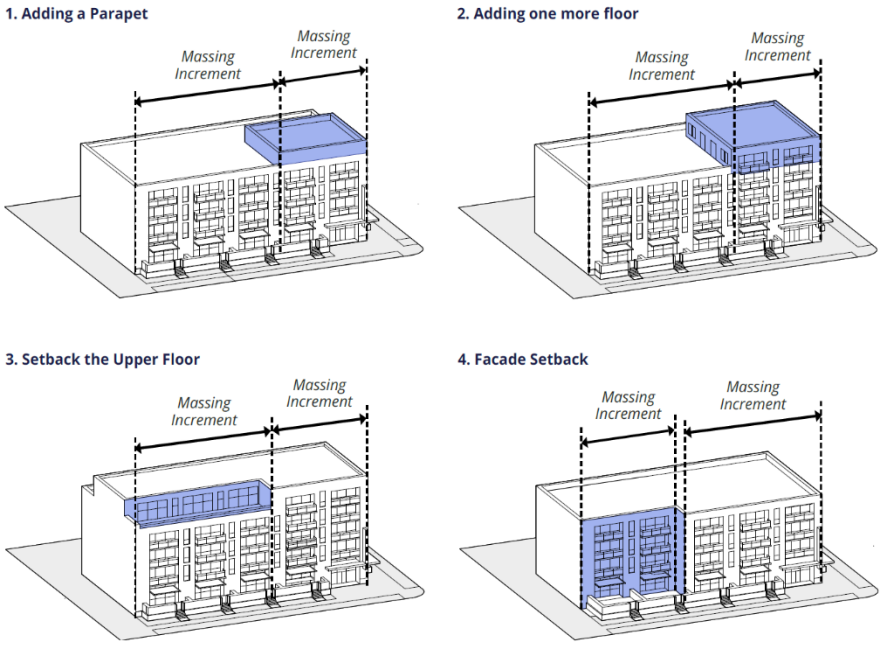
Massing standards.



a. **Size of massing increments.** Building facades along front and side lot lines that face public streets and are longer than 100 feet shall be divided into massing increments as follows:
   i. The maximum length of a single massing increment shall not exceed 150 feet.
   ii. A minimum 2 distinct massing increments shall be provided.

b. **Articulation of massing increments**. Individual massing increments shall be differentiated from 1 another using a minimum 1 of the following massing strategies:
   i. Vary parapet height by a minimum of 3 feet.
   ii. Increase number of stories.
   iii. Set back upper floor. Set the upper floor or multiple upper floors back a minimum of 15 feet from the facade.
   iv. Set the entire facade back a minimum of 10 feet for 20 feet.
   v. Incorporate tower element.

c. **Massing increments with distinct facades.** Massing increments that have distinct facades and shall appear as distinct buildings.



d. **Repeating massing increment design.** A massing increment design may be repeated on the same project elevation. Repeated massing increments shall be separated by a distinct massing increment.

Figure 2.2-1 Urban: Massing Diagram

Element Standards	Standards
A. Building façade along font lot line	400 feet max
B. Massing increment	150 feet max
C. Space between buildings	0 feet minimum
D. Façade setback (if elected)	10 feet x 10 feet minimum
E. Building base height	15 feet minimum
F. Building façade alongside lot line	200 feet max
G. Height difference between massing increments	3 feet minimum
H. Upper-level setback from facade	15 feet minimum

Figure 2.2-2 Urban: Massing strategies

Façade Composition

Façade Composition Standards.

Multi-story building façades. The building facade shall be divided into a base and body as follows:

a. **Base.** Separate the building base (entire ground floor facade or first 2 floors of building's 5 stories or taller) from the rest of the facade for a minimum of 15 feet (fewer than 5 stories) or 25 feet (5 stories or more) from grade, using a minimum **2** of the following strategies:
   i. Provide a string course at the top of the first story.
   ii. Specify base materials different from rest of façade.
   iii. Specify base colors different from rest of façade.
   iv. Provide a ground floor Arcade or Gallery per Section 2.3 Architectural Façade Elements.

b. **Body.** The body of the building consists of the facade of all floors located above the base and shall be designed as follows:
   i. Windows shall be organized in bays, bands, curtain wall, and grid of windows consistent with the Facade Fenestration Standards for the Urban massing type.
   ii. Each massing increment must contain its entire facade composition without elements overlapping the division between increments.

Fenestration design

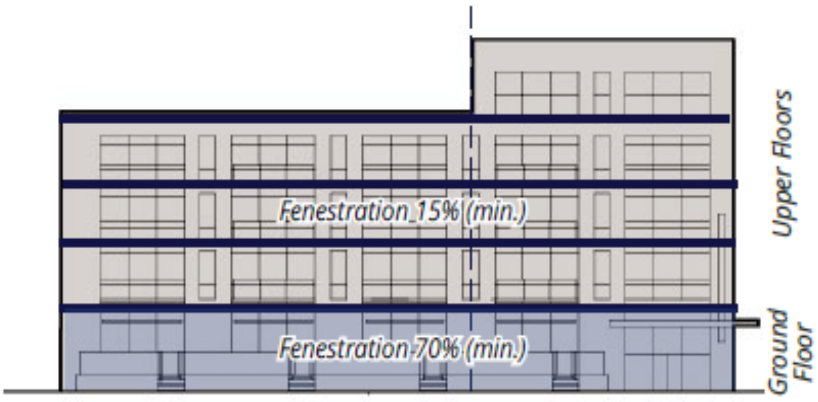
Fenestration design addresses the percentage of window and door openings for ground floors and upper floors and glazing transparency.

Façade fenestration standards.

Minimum fenestration. Facade designs must meet a minimum fenestration percentage, calculated as the total window and door area divided by the total area of that part of the facade.

i. **Ground floor.**
   a. Front lot line: 70% minimum.
   b. All other frontages: 50% minimum.
   c. Ground floor windowsills on facades along the front lot line shall be no higher than 3 feet above the adjacent grade.
   d. Ground floor bathroom windows are prohibited on facades that face front lot line.

ii. **Upper floors.** 15% minimum.



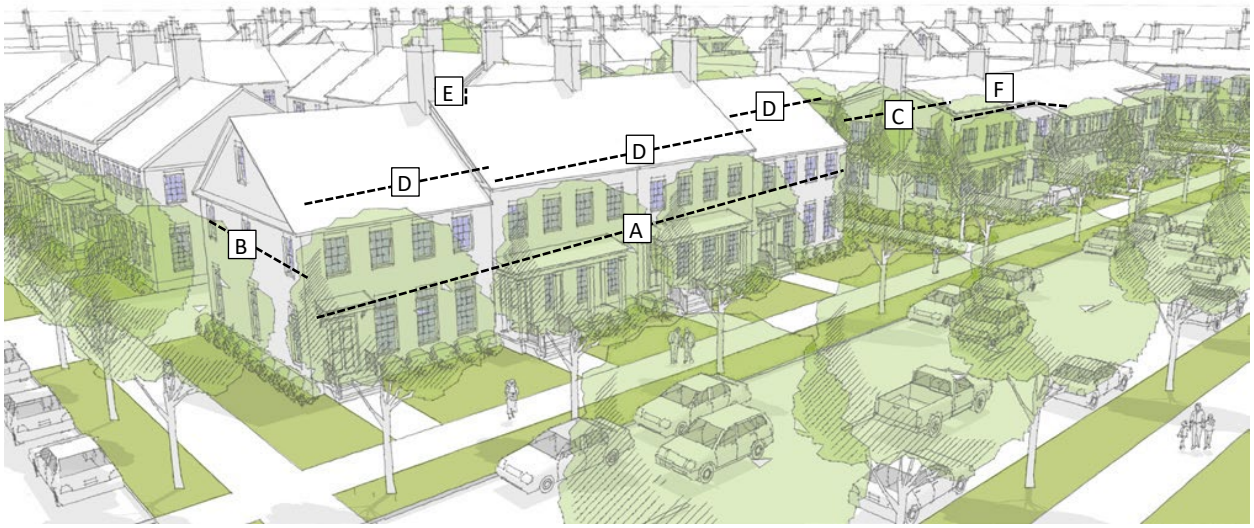


Figure 2.2-3 Urban: Fenestration Diagram

B. Neighborhood massing and façade design

Neighborhood massing and façade design standards are required for all multiple-family development types applicable to multiple-family development projects with fewer than twenty-five (25) du/ac that include buildings with more than 5 units.

Massing increments

Figure 2.2-4 Neighborhood: Massing Diagram

Element Standards	Standards
A. Building façade along front lot line	135 feet max
B. Building façade length alongside interior lot line	135 feet max
C. Space between buildings	15 feet minimum
D. Massing increment	75 feet max
E. Height difference between massing increments	2 feet minimum
F. Façade setback (if elected)	10 feet x 20 feet

Massing Standards.

a. **Size of massing increments.** Building facades along front and side lot lines that face public streets and are longer than 135 feet shall be divided into massing increments as follows:

i. The maximum length of a single massing increment shall not exceed 75 feet.
ii. A minimum of 2 distinct massing/architectural increments shall be provided using 1 strategy from the massing strategies list and 1 strategy from architectural strategy list.

b. **Massing strategy list.**

i. Vary height by a minimum of 3 feet.
ii. Increase number of stories.
iii. Set back upper floors by a minimum 15 feet.
iv. Set the entire facade back a minimum of 10 feet for twenty feet.
v. Increase story height.
vi. Incorporate tower element.

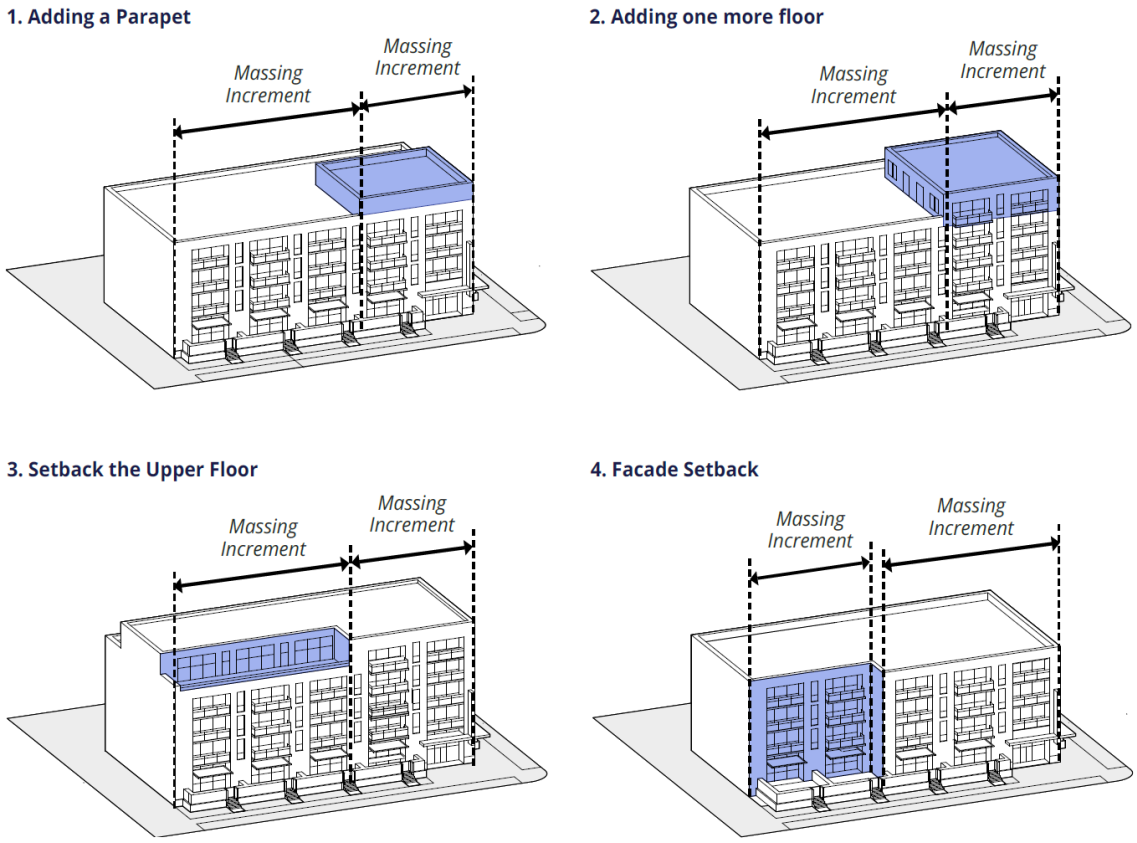

Figure 2.2-5 Neighborhood: Examples of Massing Strategies Diagram

c. **Architectural strategy list:**

i. Use different facade materials and/or colors.
ii. Window treatment and design. Use different window types, configurations, and/or frame colors.
iii. Diversify facade elements (balconies, trellises, chimneys, awnings) as per Section 2.3 Architectural Façade Elements.
iv. Vary the building entry element type or design of stoops, porches, dooryards, and other elements identified in Section 2.4 Entry Elements.
v. Massing increments that have distinct facades, shall appear as distinct buildings.
vi. A massing increment design can be repeated twice on the same project elevation, with a distinct separation between repeated increments.

Façade composition

Façade composition standards.

Multi-story building façades. The building facade shall be divided into a base and body as follows.

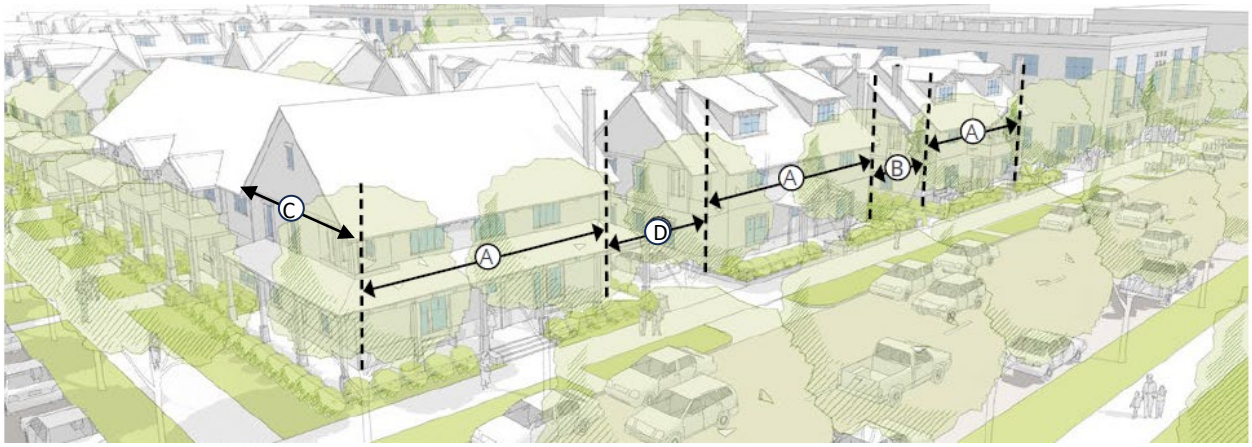
i. **Base.** Separate the building base (entire ground floor facade or first 2 floors of building's 5 stories or taller) from the rest of the facade for a minimum of 15 feet (fewer than 5 stories) or 25 feet (5 stories or more) from grade, using a minimum 2 of the following strategies.

(a) Provide a string course at the top of the first story.
(b) Specify base materials different from rest of façade.
(c) Specify base colors different from rest of façade.
(d) Provide a ground floor Arcade or Gallery per *Section 2.3 Architectural Façade Elements*.

ii. **Body.** The body of the building consists of the facade of all floors located above the base and shall be designed as follows:
(a) Windows shall be organized in bays, bands, curtain wall, and/or grid of windows consistent with the Facade Fenestration Standards for the Neighborhood massing type.
(b) Each massing increment's entire facade composition must be contained within its boundaries, with no overlap of facade elements, like window openings and balconies, across the division between increments.

Fenestration Design

Façade fenestration standards.



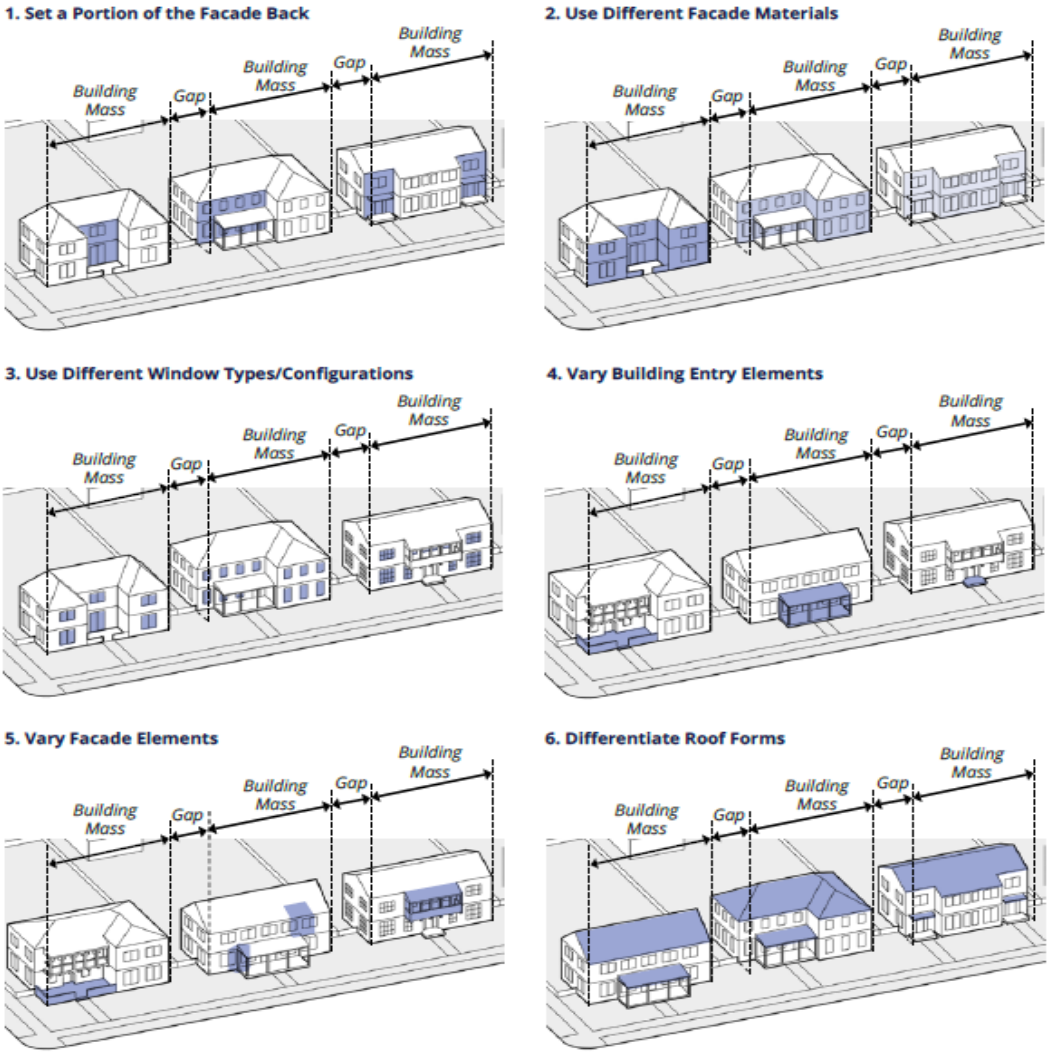
Minimum Fenestration. Facade designs must meet a minimum fenestration percentage, calculated as the total window and door area divided by the total area of that part of the facade:

i. **Ground Floor**: 30% minimum.
   (a) Ground floor windowsills on facades along the front lot line that face public streets shall be no higher than 3 feet above the adjacent grade.
   (b) Ground floor bathroom windows are prohibited on facades that face the front lot line.
ii. **Upper floors**: 15% minimum.

C. House-form massing and façade design

House-form massing and façade Design standards for projects with densities below 25 du/ac that include buildings with 5 or fewer units.

Figure 2.2-6 House Form: Massing Diagram



Element Standards	Standards
A. Building Façade length along font lot line	60 feet max
B. Massing Increment	60 feet max
C. Building Façade length alongside lot line	60 feet max
D. Space between buildings	15 Feet

Massing and façade composition standards.

a. **Massing increments**. A massing increment shall include the whole length of a single building façade, up to 60 feet in length. Only 1 massing increment per building façade shall be included.
b. **Length of buildings**. Buildings along front and side lot lines that face public streets shall be no longer than 60 feet.
c. **Space between buildings.** Buildings along front and side lot lines shall be separated by a minimum15 feet.
d. **Articulation of building façade.** Frontages along front and side lot lines must differ from neighboring buildings on-site using a minimum of 2 of the specified massing and architectural strategies:

i. **Façade setback.** Setting a portion of the facade back a minimum of 2 feet for a length of 20 feet.
ii. **Material or color.** Use different facade materials and/or colors consistent with the architectural style.
iii. **Window treatment and design.** Use different window types, configurations, and/or frame colors.
iv. **Architectural façade elements.** Vary façade elements (balconies, trellises, chimneys, awnings) according to *Section 2.3 Architectural Façade Elements*.
v. **Entry elements**. Vary the building entry element type or design of stoops, porches, dooryards, and other elements identified in *Section 2.4 Entry Elements*.
vi. **Vary roof form**. Vary the roof form of different increments such as gabled, hipped, and others consistent with the architectural style of the building (selected from Chapter 4).

Figure 2.2-7 House Form Massing Strategies

Fenestration Design

Façade fenestration standards.

Minimum fenestration. Facade designs must meet a minimum fenestration percentage, calculated as the total window and door area divided by the total area of that part of the facade:

i. **Ground floor**: 30% minimum.
   (a) Ground floor windowsills on facades along the front lot line that face public streets shall be no higher than 3 feet above the adjacent grade.
   (b) **Exception**: Windows on garage panel door.
   (c) Ground floor bathroom windows are prohibited on facades that face front lot line.
ii. **Upper floors**: 15% minimum.
iii. The horizontal distance between wall openings shall not exceed 15 feet within a facade or massing increment.

2.2.3 Materials and Detailing

Building Materials

1. **Prohibited materials.**
   a. Fiberglass or plastic (false) architectural or facade elements or ornamentations are prohibited.
   b. Rough-cast and sand-finishes are prohibited on all building surfaces that are visible from a street.
   c. Reflective materials, such as mirrored glass, shiny metal, and chrome.
2. **Combining materials.** When combining 2 or more wall materials on 1 facade:
   a. Place lighter weight materials above more substantial ones (e.g., glass above wood, wood above stucco, stucco above masonry).
   b. Vertical joints between different materials shall only occur at inside corners.

Windows and Doors

Material and Types

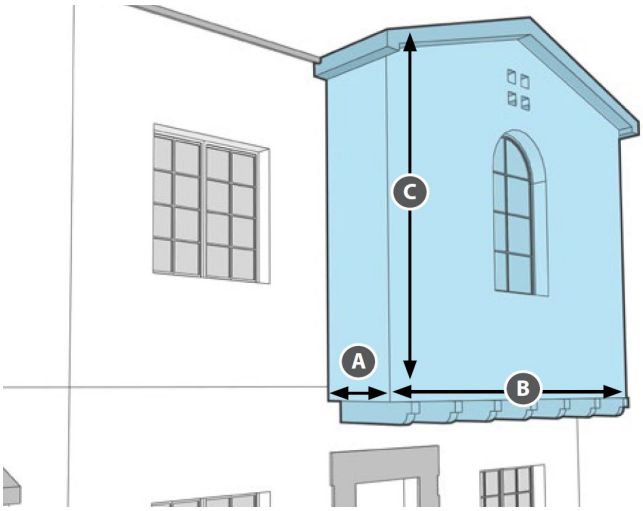
a. **Window recess.** Windows shall be recessed specific to each building's architectural style listed in Chapter 4: Architectural styles but shall be no less than 2 inches for any style.
b. **Window Material**
   i. Vinyl or vinyl clad windows shall resemble wood windows (i.e., faux wood or engineered wood) in detailing and profile thickness and employ muted patterns and colors consistent with the building's architectural style.
c. **Trim**
   i. **Window and door trim** materials: Wood or cement fiber board is permitted.

ii. **Building trim materials**: Wood, stone, cast stone, pre-cast concrete, glass fiber, reinforced concrete, and cement fiber board.

2.3 Architectural façade elements

2.3.1 Awning

Figure 2.3-1 Awning Diagram



Element Standards	Minimum	Maximum
A. Depth	Not Applicable	3 feet
B. Clearance above ground	8 feet	Not Applicable
C. Length	See Below	

Design Standards

a. **Encroachment**. Residential Awnings may encroach into the setback or public right-of- way as defined in Division 6.01.010(D)(2): Encroachments into Required Setback Areas of the Ontario Development Code.
b. **Material**. Residential Awnings shall be of a simple shed form and made of code-compliant fire-resistant material.
c. **Upper floors.** Each individual awning shall cover no more than 1 window opening.

2.3.2 Projecting room

Figure 2.3-2 Projecting Room Diagram

Element Standards	Minimum	Maximum
A. Depth	Not Applicable	2 feet
B. Width	Not Applicable	20 feet
C. Height	Not Applicable	2-story building: 1 story max. 3-story building: 1 story max. 4-story+ building: 2 stories maximum.

Design standards.

a. **Encroachment**. Projecting rooms may encroach into the setback or public right-of-way as defined in Division 6.01.010(D)(2): Encroachments into Required Setback Areas of the Ontario Development Code.

b. **Support**.
   i. Building projecting rooms shall have visible supports (I.e., beams, braces, or brackets).
   ii. Building projecting rooms shall be setback 10 feet from an adjacent property line.

c. **Space between Projecting Rooms.** Space between Projecting Rooms shall be 20 feet within the same building plane.

2.3.3 Bay Window

Figure 2.3-3 Bay Window Diagram

Element Standards	Minimum	Maximum
A. Height	Not Applicable	10 feet
B. Width	Not Applicable	10 feet

Design Standards.

a. **Encroachment**. Bay windows may encroach into the setback or public right-of-way as defined in Division 6.01.010(D)(2): Encroachments into Required Setback Areas of the Ontario Development Code.
b. **Dimensions.** Bay windows shall be a maximum of 10 feet wide and shall have a height that is equal to or greater than their width.
c. **Depth:** The depth of Bay Windows shall be a minimum of 3 feet.
d. **Façade placement.** Bay windows shall be placed a minimum of 2 feet from any building corner and a minimum of 3 from any other bay window.
e. **Fenestration.** Bay windows shall consist of a minimum 75% transparent fenestration.

2.3.4 Balcony

Figure 2.3-4 Balcony Diagram

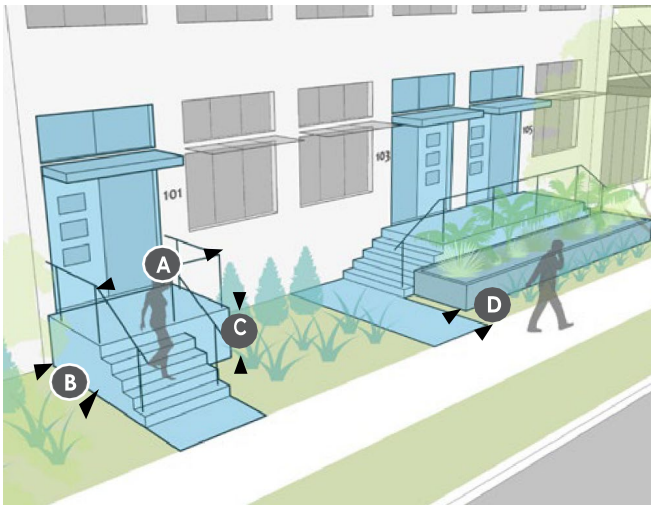
Element Standards	Minimum	Maximum
A. Height	See Below	
B. Width	Not Applicable	
C. Depth	See Below	

Design Standards

a. **Encroachment**. Balconies may encroach into the setback or public right-of- way as defined in Division 6.01.010(D)(2): Encroachments into Required Setback Areas of the Ontario Development Code.
b. **Façade projection or recession**. Balconies may project from the facade, be recessed into the facade, or a combination of the two.
c. **Required private open space.** Balconies meeting private open space standards shall have a minimum dimension of 7 feet by 7 feet.

2.3.5 Terrace balcony

Figure 2.3-5 Terrace Balcony Diagram



Design standards

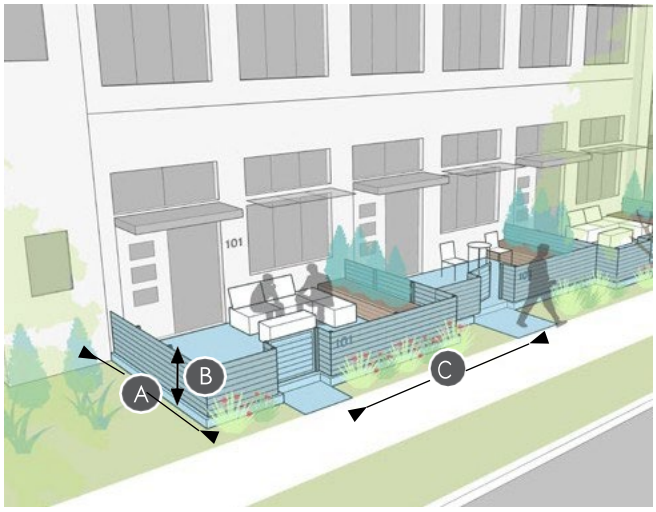
a. **Encroachment**. Terrace balconies may encroach into the setback or public right-of- way as defined in Division 6.01.010(D)(2): Encroachments into Required Setback Areas of the Ontario Development Code.
b. **Support.**
    i. Terrace balconies shall be supported by continuous walls that extend all the way to the ground.
    ii. Terrace balconies shall not be designed as posts, columns, or pillars.
c. **Required private open space.** Terrace balconies meeting private open space requirement shall meet or exceed the 7 feet by 7 feet standards specified in 2.1.5 Open Space Standards.

2.4 Entry elements

2.4.1 Stoop

Figure 2.4-1 Stoop Diagram

Element Standards	Minimum	Maximum
A. Stoop Width	4 feet	8 feet
B. Stoop Depth (not including stairs)	4 feet	8 feet
C. Stoop Floor Depth	1.5 feet	3 feet
D. Planter/ Fence Height	Not Applicable	3 feet



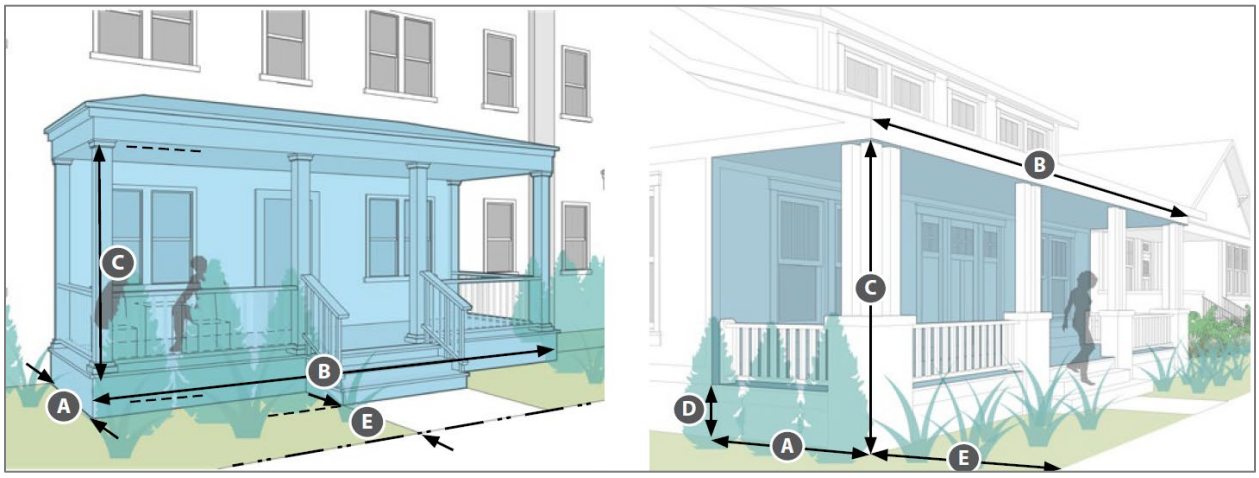
1. **Design Standards.**

    a. **Relationship to entry**. Stoops must align directly with the unit entry(s) they serve.
    b. **Number of units served.** Stoops shall provide access to a maximum of 2-unit entries.
    c. **Lobby entries.** Stoops may provide access to a lobby entry.
    d. **Stoop stairway orientation**. The exterior stoop stairway may be oriented perpendicular or parallel to the adjacent sidewalk.

2. **Landscaping.** Landscaping shall be planted on the sides of the stoop, either at grade or in raised planters. Raised planters shall have a minimum depth of 12 inches.

2.4.2 Dooryard

Figure 2.4-2 Dooryard Diagram



Element Standards	Minimum	Maximum
A. Depth, Clear	8 feet	Not Applicable
B. Finish level above sidewalk	Not Applicable	3 feet
1. Length of Terrace	Not Applicable	150 feet
C. Distance between stairways	Not Applicable	50 feet

Design Standards

a. **Relationship to Entry.** Dooryards shall align directly with the unit entry(ies) they serve.
b. **Number of Units Served.** Dooryards shall provide access to a maximum of 2-unit entries.
c. **Enclosure.** Dooryards shall be enclosed by a maximum 3-foot high, decorative walls, fences, or low hedges.
d. **Architectural Style.** Walls and/or fences shall match the building's architectural style.
e. **Doorway Stairway Orientation.** If the doorway is raised above grade, the exterior stairway for raised Dooryards shall be oriented perpendicular or parallel to the adjacent sidewalk.

2.4.3 Porch

Figure 2.4-3 Porch Diagram

Element Standards	Minimum	Maximum
A. Porch depth (excluding stairs)	8 feet	Not Applicable
B. Porch width	8 feet	Not Applicable
C. Porch height	8 feet	12 feet
D. Floor height	1.5 feet	3 feet
E. Between porch and front Property Line	5 feet	Not Applicable

Design Standards

a. **Number of units served.** Porches shall provide access to multiple ground-floor unit doors.
b. **Wrap-around porches.** Porches shall wrap around building corners.

Chapter 3: Mixed Use Design Standards

3.1 Site Design Standards

General Design and Development Standards that meet or exceed all standards are applicable to all Projects.

3.1.1 Site Design

1. **Lot lines.** The lines bounding a lot. The classifications of "Lot Line" are as follows**:**
    a. **Front.** This line separates the narrowest street frontage of a lot from a public or private street right-of-way.
    b. **Interior "side"**. Any lot line that is not a front or rear lot line and does not border a public or private street right-of-way.
    c. **Rear**. The lot line opposite and farthest from the front lot line. In the case of an irregularly shaped lot, a straight line shall be drawn to determine the rear lot line.
    d. **Street side.** Any lot line that is not a front or rear lot line, and which abuts a public or private street right-of-way.

3.1.2 Site Access

1. **Alleys.** Vehicular access to the on-site parking areas shall be from the alley.
2. **Roadway inclusion**. Pedestrian access from the public right-of-way must include sidewalk on both sides of the driveway.

3.1.3 Parking

Parking shall be designed in compliance with the applicable standards contained in Division 6.03 (Off-Street Parking and Loading) of the Ontario Development Code, except as modified by the following:

A. Placement on site

Parking shall be designed in compliance with the applicable standards contained in Division 6.03 (Off-Street Parking and Loading) of the Ontario Development Code, except as modified by the following:

1. **Surface parking**
    a. **Setbacks**. Surface parking lots adjacent to public or private streets shall include a landscaped and irrigated setback a minimum of 5 feet in width measured from property line, or aligned with the building façade, whichever is greater.
    b. **Orientation**. Surface parking lots shall be located at the rear, side, or internal lot lines and away from the front lot line.
2. **Above-ground parking structures.** Ground-floor parking shall be sited behind residential, office, or commercial spaces.
3. **Semi-subterranean parking.** A semi-subterranean garage shall not extend beyond the building frontage line and shall not extend higher than 4 feet above sidewalk grade.
4. **Subterranean parking.** A subterranean parking structure may extend to all property lines.

5. **Private residential garages.** Each private garage must have vehicular access from an alley, side street, or motor court.

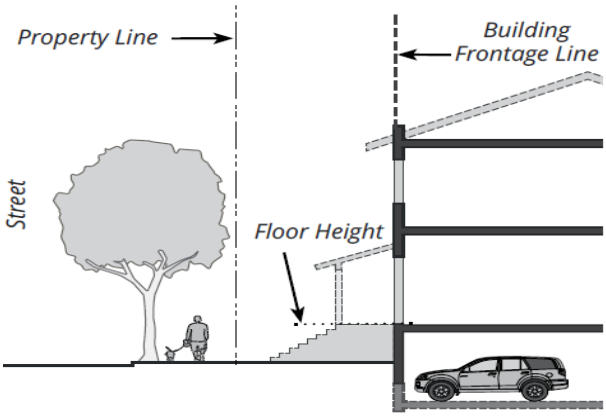


Figure 3.1-1 Semi-subterranean parking

B. Surface Parking Lot Design

1. **Screening**
    a. **Street-adjacent parking lots.**
        i. A street-adjacent surface parking lot shall be screened from view by a low wall or hedge no higher than 3 feet in height.
        ii. Walls and hedges must be a minimum 18 inches from the back of the sidewalk.
        iii. Landscaped berms are prohibited.
    b. **Neighboring parcels.** Views from neighboring properties shall be screened with trees and shrubs.
2. **Landscape.** Landscaping materials shall be applied in compliance with the applicable objective parking lot landscape standards contained in Ontario Development Code Section 6.05.030 (Required Landscape Areas).
3. **Shade structures.** Shade structures, if used, shall match the architectural style of the project buildings.

C. Parking court design

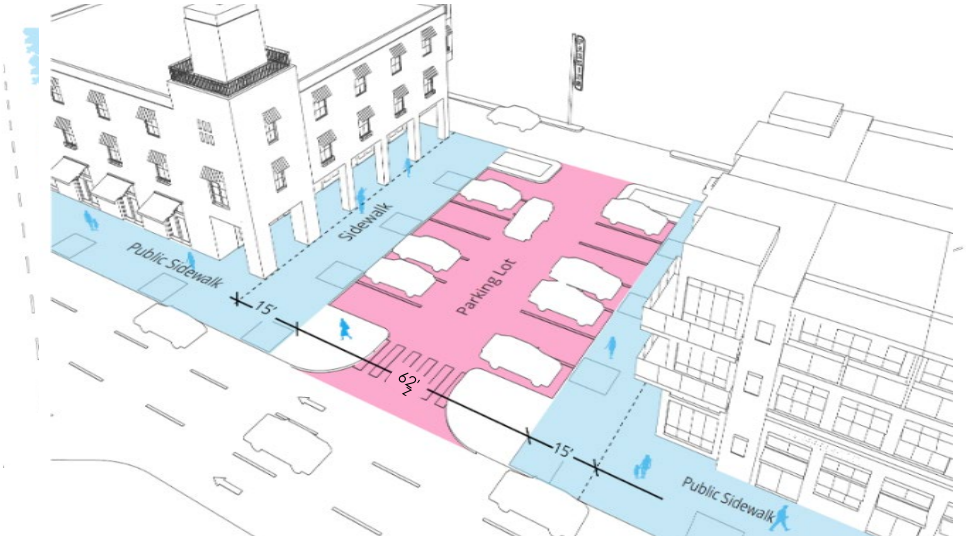

Figure 3.1-2 Parking Court

Design standards

a. The width of the parking court, when measured from 1 building face to the other, shall not exceed 100 feet.
b. The parking court shall consist of only1parking bay, and this bay shall not exceed a maximum width of 62 feet.
c. On both sides of the parking court, sidewalks must be established, each with a minimum width of 15 feet. These sidewalks must connect with the adjacent public sidewalk network.

D. Parking Structure Design

1. **Context-sensitive façade design.** Parking structure façades shall incorporate a minimum 2 design elements using the architectural styles identified in Chapter 4: Architectural styles and adhere to Main Street or Urban and facade design standards applied in *Section 3.2.3 Building Types*.
2. **Parking Structure Standards**
    a. Any driveway providing access to a parking structure shall have a minimum width of 28 feet. Single openings shall be no wider than 14 feet.
    b. Parked vehicles shall be shielded from view from adjoining streets.
    c. The exterior elevations of parking structures facing a public street shall incorporate architectural elements from the project building.
    d. Vehicular entries shall be located a minimum 50 feet from the corner of a block.
    e. Signs shall be consistent with Division 8: Sign Regulations of Ontario Development Code.

Figure 3.1-4 Example of parking structure and Façade Design

3.1.4 Open Space Standards

This Section provides standards that direct the design of common and private on-site open spaces.

A. Common Open Space and Public Frontage

1. **Common open space type requirements.** Common open space shall cover a minimum of 15 percent of the total lot area with the following **exceptions**:
    a. **Close to parks.** Common on-site open space shall not be required for lots within a 1/4-mile of an existing park or plaza a minimum 0.25 acres in size.
    b. **Common open space types.** 1 or more of the common on-site open space types listed under "Common Open Space Types" shall be provided on each lot that has a residential use.
2. **Access and visibility.** At-grade open space shall be accessible and visible from the adjacent ground floor.

B. Common Open Space Types

Forecourt

Design Standards

a. A forecourt may occur on any floor and may be used as an allowed method of creating façade massing increments.
b. Minimum dimensions. Forecourts shall be a minimum of 15 feet by 15 feet.

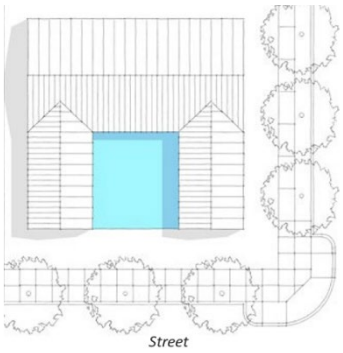

Figure 3.1-5 Forecourt

Side Garden

Design Standards

a. Minimum side garden dimensions: 15 feet by 15 feet.
b. Dooryards, porches, stoops, and architectural elements may encroach into the side garden as follows:
   i. Up to a total of 30 percent of the side garden's width and/or length.
   ii. A ground floor encroaching element shall be allowed to project a maximum of 8 feet into the side garden.

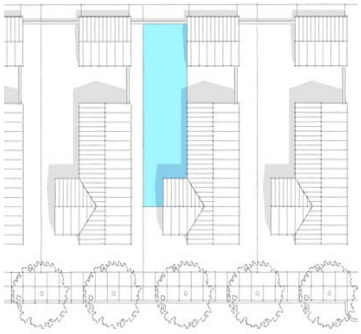

Figure 3.1-6 Side Garden

Court

Design Standard

a. **Minimum dimensions**. All courts shall be a minimum of 20 feet by 30 feet.
b. **Enclosure**.
   i. A court shall have building walls on at minimum 2 sides, while the third and fourth side can be defined by architectural or landscape elements (i.e., low walls, trellises, hedges, or rows of trees).
   ii. A driveway located adjacent to a court shall be screened by architectural elements (e.g., low walls or trellises, hedges, or rows of trees).
c. **Access**
   i. Courts shall be accessed from the street or walkway.
   ii. Units shall be allowed to take direct access through a court.
d. **Encroachments.**
   i. Dooryards, porches, stoops, and architectural elements may encroach into the Side Yard.
   ii. A ground floor encroaching element shall not encroach beyond 8 feet of the building's façade into the court.

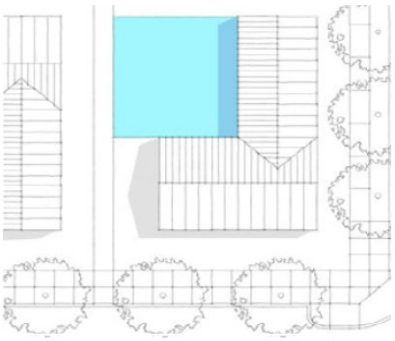

Figure 3.1- 7 Court Configuration

e. **Common area.** A court shall serve as communal spaces and pedestrian access.
f. **Amenities.** A court shall include at minimum 1 of the following amenities: a seating area, a fountain, a BBQ island, or an outdoor fireplace.

Passage

Design Standards

a. **Location.** Passages shall be provided between buildings or side gardens.
b. **Size**. Passages shall be a minimum width of 8 feet with minimum of 2 feet of landscape strip on each side.

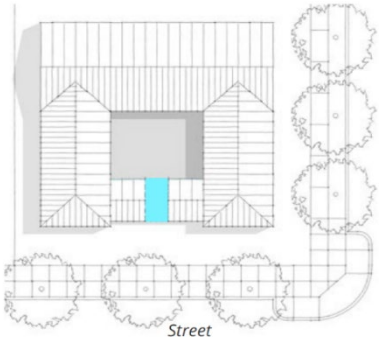

Figure 3.1-8 Passage Configuration

C. Private Open Space

General Standards

a. A minimum of 60 square feet of private open space shall be provided for each residential unit and a minimum 1 or more of the private on-site open space types shall be provided, with the following.
b. **Exception**: Private on-site open space shall not be required for a project site located within 1/4-mile distance of an existing park or plaza that is a minimum 0.25 acres in size.

D. Private Open Space Types

Private Roof Deck

1. **Description.** A private open space located on the roof of a building dedicated to a single unit.
2. **Design Standards**
   a. Minimum dimensions of 7 feet by 7 feet.
   b. Materials, finishes, fixtures, and colors visible from the street shall be designed consistent with the architectural style of the building.

Backyard

1. **Description**. A private, landscaped open space located behind each individual unit that is intended to provide passive or active outdoor space for the users of the unit.
2. **Design Standards**
   a. Backyards are located behind the unit.
   b. Minimum dimensions of 20 feet by 15 feet.
   c. Encroachment into the backyard is allowed up to 30% of the space's width and/or length.
   d. Maximum projection for any ground floor element is 8 feet, with a 10-foot upper floor setback from property line if there's usable space above the first floor.

Architectural Façade Elements as Private Open Space

Description. The following elements defined in *Section 2.3 Architectural Façade Elements* may be used to meet on-site private open space requirements.

a. Balcony.
b. Terrace Balcony.

Entry Elements as Private Open Space

Description. The following elements defined in *Section 2.4 Entry Elements* may be used to meet on-site private open space requirements.

a. Dooryard.
b. Porch.

3.1.5 Landscaping

This section provides standards for landscaping, materials, and Irrigation.

1. **General to All.** Landscaping materials shall be applied in compliance with the applicable landscape standards contained in Ontario Development Code Section 6.05.030 (Required Landscape Areas).

2. **Paths.** Where front yards are landscaped, individual paths to the sidewalk shall be provided for each entrance.
3. **Materials**. Decorative accents. Paving materials shall incorporate decorative elements consistent with the architectural style of the building.

3.1.6 Fences and Walls

Fence and Wall Heights. Walls and Fences shall be designed in compliance with the applicable standards contained in Division 6.02 (Walls, Fences, and Obstructions) of the Ontario Development Code.

3.2 Mixed Use Development Standards

The following tables and associated standards for Mixed-Use standards covering new residential construction, additions, remodels, or repurposed uses that necessitate an entitlement or building permit from the City. All standards listed under Table 3.01 Mixed-Use Development are applicable to all mixed-use projects.

Table 3.01 Mixed Use Development Standards

Requirements	Mixed-Use Development Standards		Additional Regulations
	Mixed-Use Building Type		
A. BUILDING DEVELOPMENT STANDARDS			
Massing and Façade Design	***Main Street***	***Urban***	
1. Minimum Setback from Public Street Property Lines			Notes 2 & 8
a. **Arterial**	0 feet	0 feet	

Table 3.01 Mixed Use Development Standards

Requirements	Mixed-Use Development Standards		Additional Regulations
	Mixed-Use Building Type		
b. **Collector**	0 Feet	5 feet	
c. **Local**	5 feet	5 feet	
2. Maximum Setback from Public Street Property Lines			
a. **Arterial**	5 feet	5 feet	
b. **Collector**	10 feet	10 feet	
c. **Local**	10 feet	10 feet	
3. Minimum Setback from Interior Project Boundary Property Lines	0 feet (attached to adjacent property) 10 feet (freestanding)		
4. Minimum Setback from Public Alley Property Lines	5 feet		
5. Minimum Setback from Private Drives/Alleyways (from edge of drive aisle)			
a. **Living Area**	10 feet		
b. **Garages and Other Nonhabitable Structures**	5 feet		
6. Minimum Setback from Dwellings to Parking Spaces			
a. **Living Area**	10 feet		
b. **Garages and Other Nonhabitable Structures**	5 feet		
7. Minimum Setback from Parking Space or Drive Aisle to Wall or Fence	5 feet		
8. Minimum Separation Between Detached Buildings			
a. **Dwelling Front to Front**	< 2-Stories: 25 feet; > 3 Stories: 30 feet unless otherwise specified by massing requirements ("Space between buildings") in Section 3.2.3 Building Types.		
b. **Dwelling Front to Rear**	< 2-Stories: 25 feet; > 3 Stories: 30 feet unless otherwise specified by massing requirements ("Space between buildings") in Section 3.2.3 Building Types.		
c. **Dwelling Front to Side**	< 2-Stories: 25 feet; > 3 Stories: 30 feet unless otherwise specified by massing requirements ("Space between buildings") in Section 3.2.3 Building Types.		
d. **Dwelling Side to Side**	< 2-Stories: 5 feet; > 3 Stories: 5 feet unless otherwise specified by massing requirements ("Space between buildings") in Section 3.2.3 Building Types.		
e. **Dwelling Side to Rear**	15 feet unless otherwise specified by massing requirements ("Space between buildings") in Section 3.2.3 Building Types.		
f. **Dwelling Rear to Rear**	20 feet unless otherwise specified by massing requirements ("Space between buildings") in Section 3.2.3 Building Types.		
	30 feet – Entry to Entry		
	30 feet – Entry to Side		

Table 3.01 Mixed Use Development Standards

Requirements	Mixed-Use Development Standards		Additional Regulations
	Mixed-Use Building Type		
g. **Garage to Garage (or other nonhabitable structures)**	10 feet – Side to Side 10 feet – Side to Rear		
9. Minimum Storage Space	240 CF		Note 4
10. Maximum Street Façade Height			
a. Arterial	45 feet	N/a	Note 8
b. Collector	N/a	N/a	
c. **Local**	N/a	N/a	
11. Maximum Building Height (from grade to top of plate)			
a. Arterial	120 feet		
b. Collector	70 feet		
c. Local	50 feet		
12. Minimum Floor-to-Floor Height			
a. **Ground Floor (Non-residential / Residential)**	15 feet / 10 feet		
b. **Upper and Sub Levels**	9 feet		
13. Minimum Setback from Major Pipelines	50 feet (to habitable structures)		Note 6

Notes:

1. *An existing lot of record that is substandard as to minimum "project" area and/or dimension(s), shall be permitted all the development rights of the zone in which it is located. New lots designated as Mixed-Use (MU) in the Policy Plan (General Plan) shall comply with the identified minimum.*
2. *The density range shall be consistent with the underlying Mixed-Used Category identified in Figure LU-04, Mixed Use Areas and defined in Table LU-02, Land Use Designations Summary Table, of the Policy Plan (General Plan). A density bonus and other incentives pursuant to GC Sections 65915 through 65918, may be granted by the Approving Authority. Refer to Development Code Subsection 6.01.010.H (Density Bonus and Other Incentives).*
3. *Measurement of the continuous frontage may include existing frontages, provided there is no more than 10 feet between the frontage of active ground floor uses in the existing building and those of the proposed development project.*
4. *Adequate lockable private storage space for each residential unit shall be provided within a garage or storage building, or a space directly accessible from the dwelling. Exterior closets accessed from patios or balconies may be used if screened from public view.*
5. *A lot designated as Mixed-Use (MU) in the Policy Plan (General Plan) shall be developed at no less than the minimum number of dwelling units allowed within the specified density range for the applicable Mixed-Use Category, except that If, because of the configuration/design of a lot, the minimum residential density cannot be achieved, the lot may be developed with non-residential uses.*
6. *Includes major high-pressure pipelines for fuel oil, gasoline, and diesel and aviation fuels within the City. Existing pipelines include:*
   a. *Two parallel pipelines (a 16-inch and a 20-inch) that enter the City at Benson Avenue, traveling parallel to the northerly side of the Southern Pacific right-of-way to Ontario International Airport, then parallel to the southerly side of the Southern Pacific right-of-way, then parallel to the northerly side of the right-of-way beyond Ontario International Airport, then exiting the City at Etiwanda Avenue; and*
   b. *Two parallel pipelines that traverse the easterly portion of the City, entering the City at the southerly portion of Milliken Avenue, then traveling north under Milliken Avenue to Inland Empire Boulevard, then east to Rochester Avenue, then north to the City Limits.*
7. *The minimum setback from private streets shall be measured from a line running parallel to the street, which is located 12 feet behind face-of-curb (a.k.a., "parkway").*
8. *In the Downtown District, the 35 FT height shall extend a maximum of 70 percent of the frontage, and it must be broken up with upper-level setbacks (12 feet minimum) at3stories for a minimum of 30 percent of the frontage. Useable outdoor spaces, such as roof decks, may occupy the roof area of the upper-level setback; see Urban Core standards under section 3.2.4.*

3.2.1 Height Standards

Height Transition Zones. Requires all new buildings within 100 feet of less intense development patterns (existing or planned) to reduce heights to ensure neighborhood compatibility:
Vertical mixed use development types. The following height limits shall apply to all proposed vertical mixed use development types.

a. Buildings within 100 feet of single-family dwellings shall not exceed 35 feet or the height of adjacent residential buildings.
b. Buildings within 100 feet of undeveloped parcels with planned less intense uses shall not exceed 35 feet.

3.2.2 Ground Floor Building Frontage

Mixed-Use Development Types. The ground floor frontage for vertical mixed-use developments must be designed to accommodate commercial uses.

3.2.3 Building Types

Identify the suitable building type based on the location including (see Table 3.2-2):

1. **"Main Street"** (applicable to mixed-use areas within the District Place type as shown on Policy Plan Exhibits LU-04 and CD-01).
2. "**Urban"** (applicable to mixed-use areas outside the District Place type).

Table 3.2-2 Mixed- Use Building Types

TOP Land Use Place type	Max Permitted Height	Building Types
Downtown	35 feet	Main Street
Airport Metro/Entertainment	120 feet	Main Street
Guasti	70 feet	Main Street
South Euclid	70 feet	Main Street
South Employment	70 feet	Main Street
East Holt Blvd	70 feet	Urban
Inland Empire Blvd	70 feet	Urban
Infill	50 feet	Urban
South of Riverside Drive	50 feet	Urban

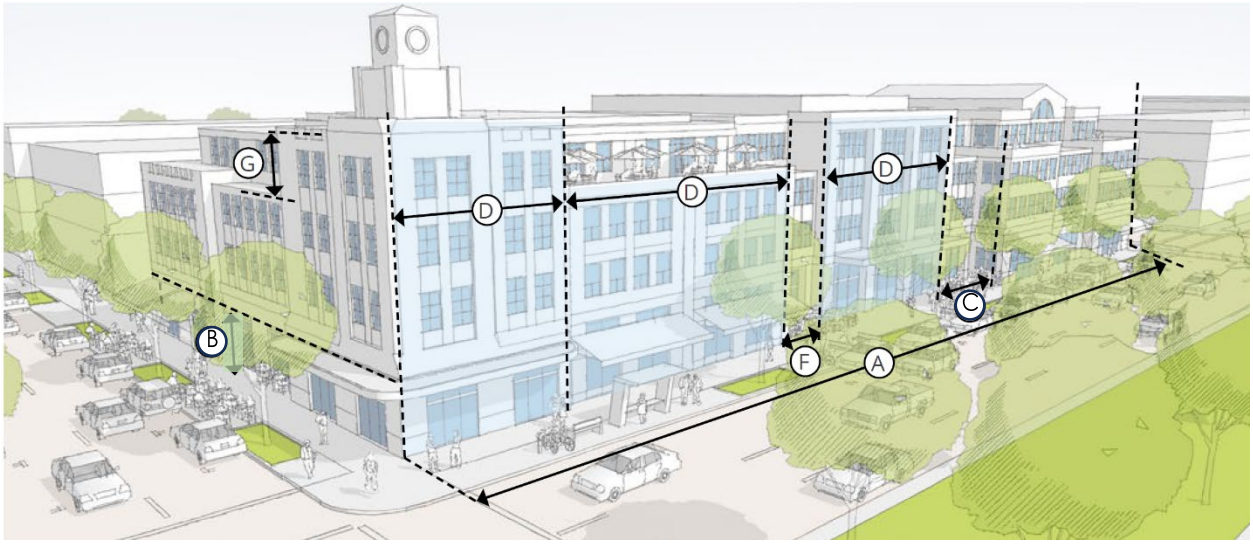
A. Main Street Massing and Façade Design

Main Street Massing and Façade design standards are required in all mixed-use areas within the District Place type, as shown in the City's Policy Plan (Exhibits LU-04 and LU-05).

Massing Increments

Massing Increments shall appear as either distinct buildings or distinct parts of a single building.

Massing Standards.



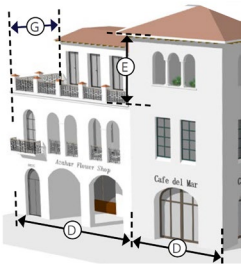


Figure 3.2-1 Main Street: Massing Diagram

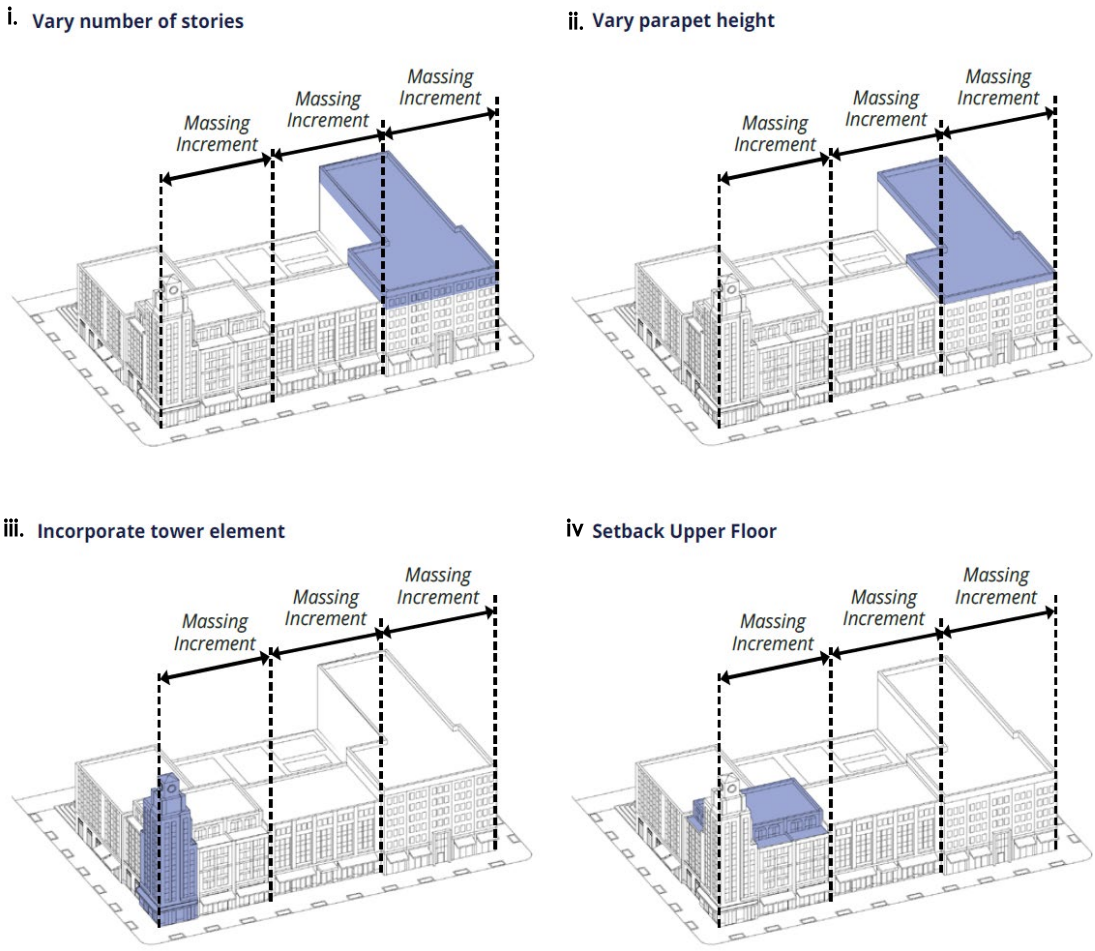
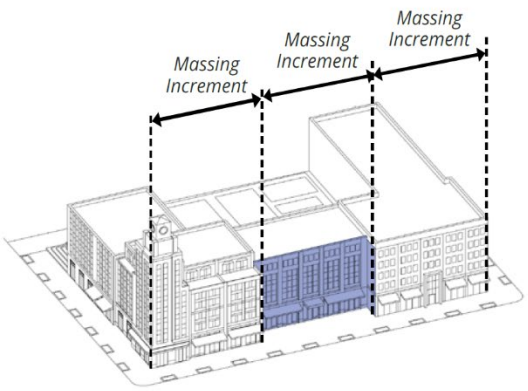
Requirements	
A.	Building Façade along font lot line (300 feet max).
B.	Building Façade alongside lot line (150 feet max).
C.	Space between buildings (0 feet min).
D.	Massing Increment (75 feet max).
E.	Height Difference between Massing Increments (3 feet min).
F.	Façade Break (10 feet x 10 feet min).
G.	Upper-Level Setback (15 feet min).

a. **Size of massing increments.** Building facades that face public streets and are longer than 75 feet in length shall be divided into massing increments as follows:
   i. The maximum length of a single massing increment shall not exceed 75 feet.
   ii. Single building projects less than 150 linear feet of street frontage shall have no massing increments applied.
   iii. Single building projects between 150 and 250 linear feet of street frontage shall have at minimum 2 massing increments separated by a façade break.
   iv. Single project buildings that have more than 250 linear feet of street frontage shall have 3 massing increments each separated by a façade break.

b. **Required difference in facade height**. Adjacent massing increments must vary in façade height measured from the sidewalk to the eave, cornice, or parapet, using a minimum 1 massing strategy (see Figure 3.2-1 and Figure 3.2.2):

i. Vary number of stories.
ii. Vary the parapet height by a minimum of 3 feet.
iii. Incorporate tower element.
iv. Set back upper floor(s) a minimum 15 feet.





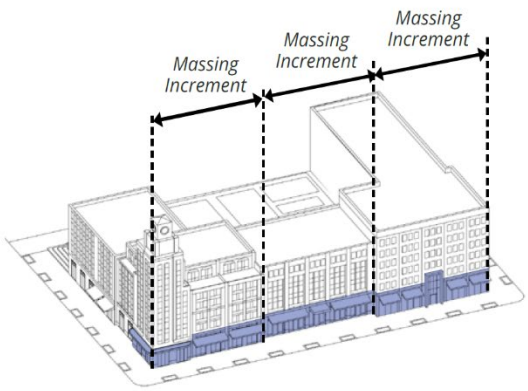


Figure 3.2-2 Main Street: Examples of Massing Strategies Diagram

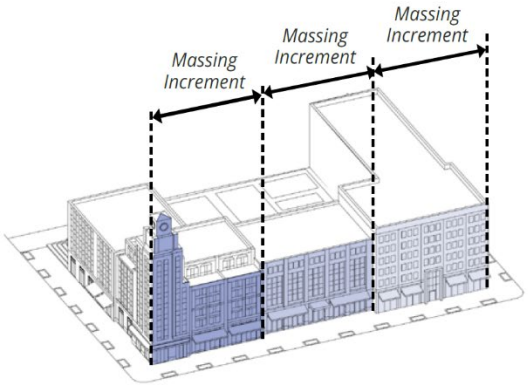
c. **Articulation of massing increments.** Individual massing increments shall be differentiated from one another using 3 of the following architectural strategies (see Figure 3.2-2):
   i. **Set façade increment back.** Set the entire facade increment back a minimum of 3 feet.
   ii. **Base height.** Vary the height of the building base of adjacent increments.
   iii. **Façade colors.** Use different facade materials and/or colors.
   iv. **Window type/configuration.** Use different window types, configurations, and/or frame colors.
   v. **Presence/arrangement of façade elements.** Vary the presence or arrangement of façade elements such as projecting balconies, recessed balconies, trellises, chimneys, and awnings.

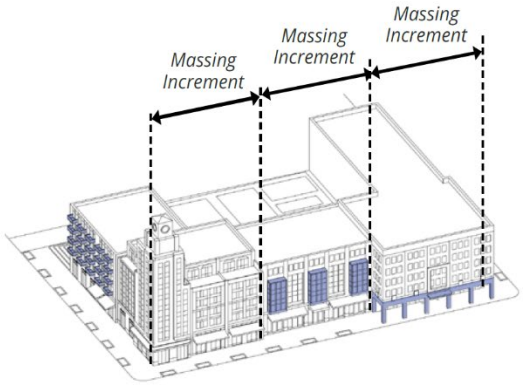


i. 1. Set facade increment back

ii. Vary base height

iii. Vary facade colors and/or window types/configurations

iv. Vary presence/arrangement of facade elements



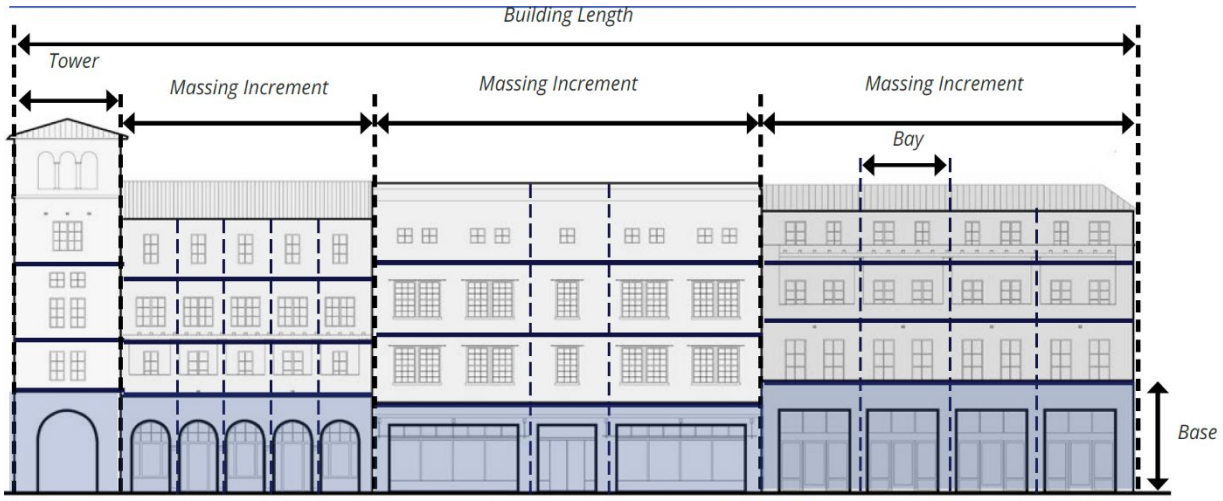


Figure 3.2-3 Main Street: Massing Strategies

d. **Self-contained massing increments.** Facade elements, such as window openings and balconies, shall not overlap the division between massing increments.
e. **Repeating massing increment design.** A massing increment design may be repeated a maximum of 3 times on the same project elevation. Repeated massing increments may not be located immediately adjacent to each other.

Façade Composition

Facade Composition Standards.

Facades organized according to massing increments that may consist of an individual building or one building that is divided into individual massing increments. Each increment is designed according to a grid of floor levels and bays.

Figure 3.2-4 Main Street: Façade Composition

a. **Facade Grid.** The window, door, and/or shopfront openings of each individual facade shall be organized into a grid as follows:
   i. **Horizontal alignment of elements.** Rooflines, openings, and materials within each facade shall be aligned horizontally.
   ii. **Vertical Bays.** The entirety of a building's façade shall be clearly divided into vertical bays.

b. **Multi-story building façades.** Multi-story building facades shall be designed to include a base, middle, and top.
   i. **Base.** Building base of entire ground floor for buildings less than 5 stories or 25 feet for buildings 5 stories or more, shall use a minimum of 2 of the following strategies:
      (a) Provide a string course at the top of the first story;
      (b) Specify base materials different from rest of facade;
      (c) Specify base colors different from rest of facade;
      (d) Provide a ground floor Arcade or Gallery per (*Section 3.2 Architectural Façade Elements*).
   ii. **Middle**. The middle of the building—the facade of all floors located above the base—shall be designed as follows:

(a) Window and door openings shall be organized in bays per the façade fenestration standards of this section.
(b) If provided, attached façade elements such as balconies, bay windows, and projecting rooms, shall be designed per the façade fenestration standards of this section.

iii. **Top.** The façade elements that define the upper limits of the building—shall be designed as follows:
(a) The top of the building facade shall incorporate capping elements, such as a cornice, enhanced ornamentation, or a decorative parapet.

Fenestration Design

Fenestration Design addresses the percentage of window and door openings for ground floors and upper floors and glazing transparency.

Façade Fenestration Standards.

a. **Minimum Fenestration.** Facade designs shall include a minimum percentage of fenestration calculated as the total percentage of window and door area divided by the total area of that portion of the façade (see Figure 3.2-4):
i. **Ground Floor**: 70% minimum.
ii. **Upper Floors**: 15% minimum.

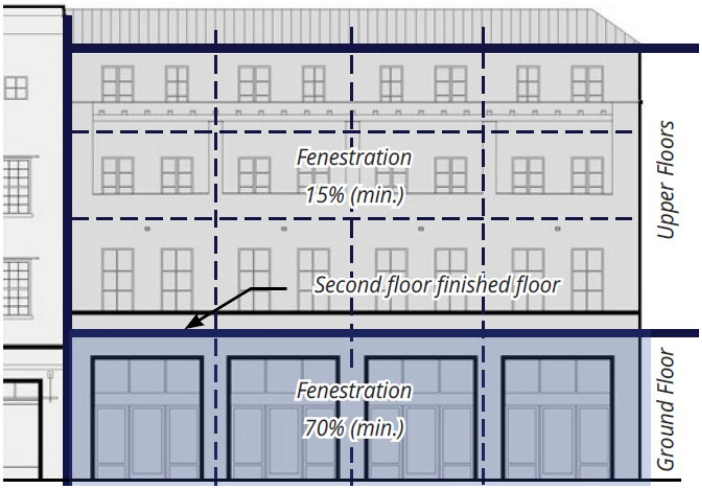

Figure 3.2-4 Main Street: Fenestration

1. **General to all floors.** All window jambs/frames shall be set back a minimum of 2 inches back from the facade plane.

2. **Specific to ground floors.** Structural elements shall be visible on the exterior of ground floor facades to visually convey that the upper floors are supported.

a. Ground floor windowsills on facades along the front lot line that face public streets shall be no higher than 3 feet above the adjacent grade.
b. Ground floor bathroom windows are prohibited on facades that face front streets.

B. Urban massing and façade design

Urban massing and façade design standards are required for all multiple-family developments projects with 25 du/ac or more.

Massing Increments

Massing increments are visually discrete design compositions that are distinguishable from each other and have a coherent look and character from the ground to the top of the facade. Massing Increments appear as either distinct buildings or distinct parts of a single building.

Massing Standards

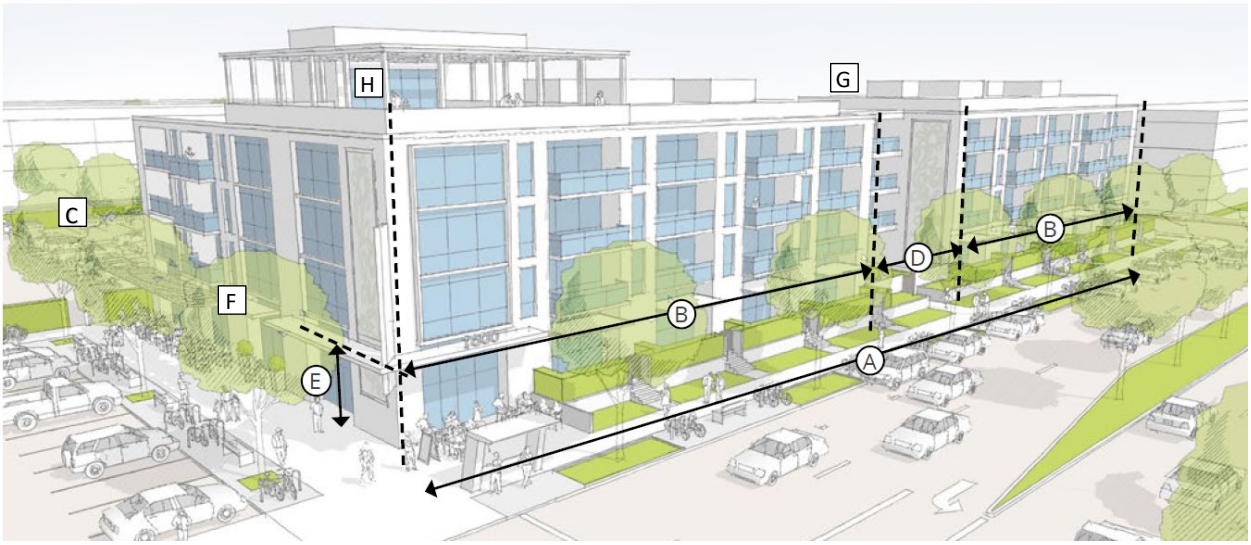

Figure 3.2-9 Urban Massing

Element Standards	Standards
A. Building façade along font lot line	400 feet max
B. Massing increment	150 feet max
C. Space between buildings	0 feet minimum
D. Façade setback (if elected)	10 feet x 10 feet minimum
E. Building base height	15 feet minimum
F. Building façade alongside lot line	200 feet max
G. Height difference between massing Increments	3 feet minimum
H. Upper-level setback from facade	15 feet minimum

a. **Size of massing increments.** Building facades along front and side lot lines that face public streets and are longer than 100 feet shall be divided into massing increments as follows:
   i. The maximum length of a single massing increment shall not exceed 150 feet.
   ii. A minimum 2 distinct massing increments shall be provided.

b. **Articulation of massing increments**. Individual massing increments shall be differentiated from one another using at minimum 1 of the following massing strategies:
    i. Vary parapet height by a minimum of 3 feet.
    ii. Increase number of stories.
    iii. Set the upper floor or multiple upper floors back a minimum of 15 feet from the facade.
    iv. Set the entire facade back a minimum of 10 feet for 20 feet.
    v. Incorporate tower element.

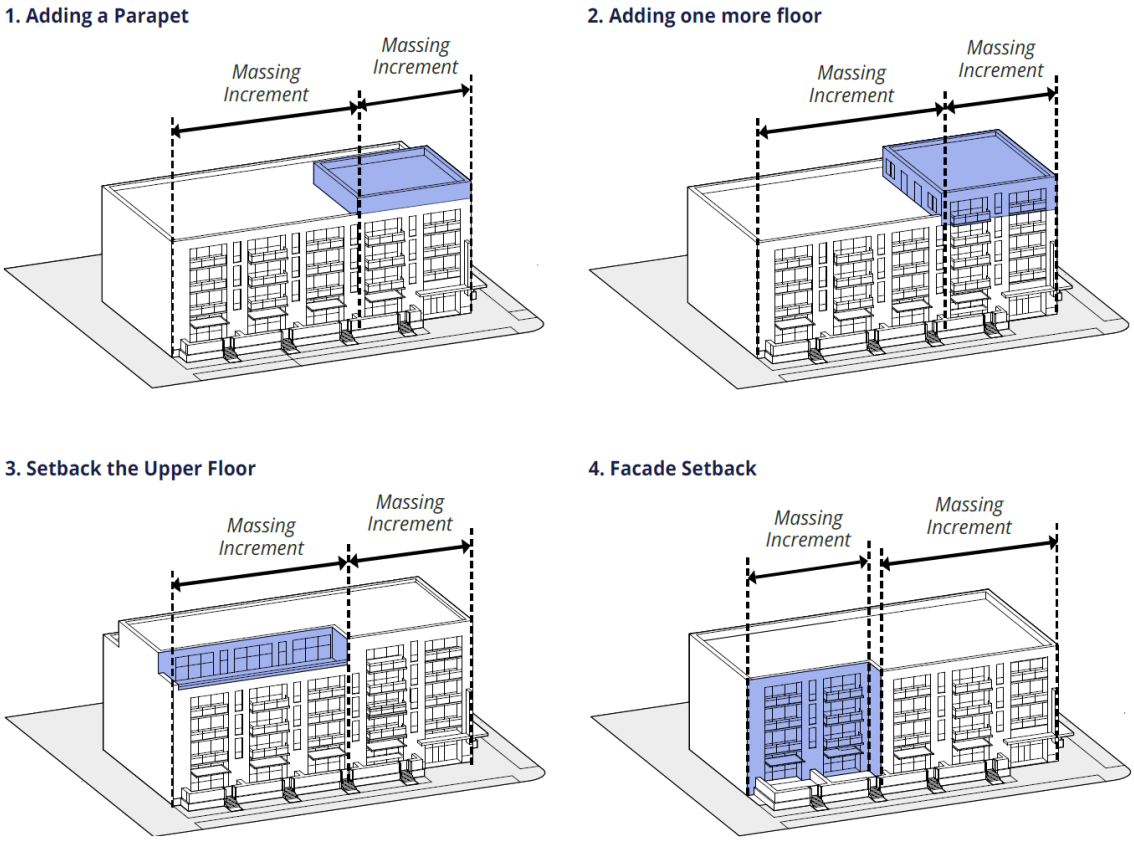

Figure 3.2-10 Urban: Examples of Massing Strategies Diagram

c. **Massing increments with distinct facades.** Massing increments that have distinct facades and shall appear as distinct buildings.
d. **Repeating massing increment design.** A massing increment design may be repeated on the same project elevation. Repeated massing increments shall be separated by a distinct massing increment.

Façade Composition

Façade composition standards address the design and arrangement of various building elevation elements that are applied to each massing increment, including window and door openings, attached and recessed façade elements such as bay windows, balconies, and arcades, and wall materials and colors.

Façade Composition Standards.

Multi-story building façades. The building facade shall be divided into a base and body as follows.

a. **Base.** Separate the building base (entire ground floor facade or first 2 floors of buildings 5 stories or taller) from the rest of the facade for a minimum of 15 feet (fewer than 5 stories) or 25 feet (5 stories or more) from grade, using a minimum **2** of the following strategies.

   i. Provide a string course at the top of the first story.
   ii. Specify base materials different from rest of façade.
   iii. Specify base colors different from rest of façade.
   iv. Provide a ground floor Arcade or Gallery per Section 3.3 Architectural Façade Elements.

b. **Body.** The body of the building consists of the facade of all floors located above the base and shall be designed as follows:

   i. Windows shall be organized in bays, bands, curtain wall, and/or grid of windows consistent with the Facade Fenestration Standards for the Urban massing type.
   ii. Each massing increment must contain its entire facade composition without elements overlapping the division between increments.

c. **Strategies.** The listed strategies show acceptable ways to differentiate massing increments:

   i. Vary the height of the building body.
   ii. Use different facade materials and/or colors.
   iii. Use different window types/configurations.
   iv. Diversify facade elements, including projecting balconies, recessed balconies, canopies, and awnings.

Fenestration Design

Fenestration Design addresses the percentage of window and door openings for ground floors and upper floors and glazing transparency.

Façade Fenestration Standards.

Minimum Fenestration. Facade designs must meet a minimum fenestration percentage, calculated as the total window and door area divided by the total area of that part of the facade.

i. **Ground floor.**
   a. Front lot line: 70% minimum.
   b. All other frontages: 50% minimum.
   c. Ground floor windowsills on facades along the front lot line shall be no higher than 3 feet above the adjacent grade.
   d. Ground floor bathroom windows are prohibited on facades that face front lot line.

ii. **Upper floors.** 15% minimum.

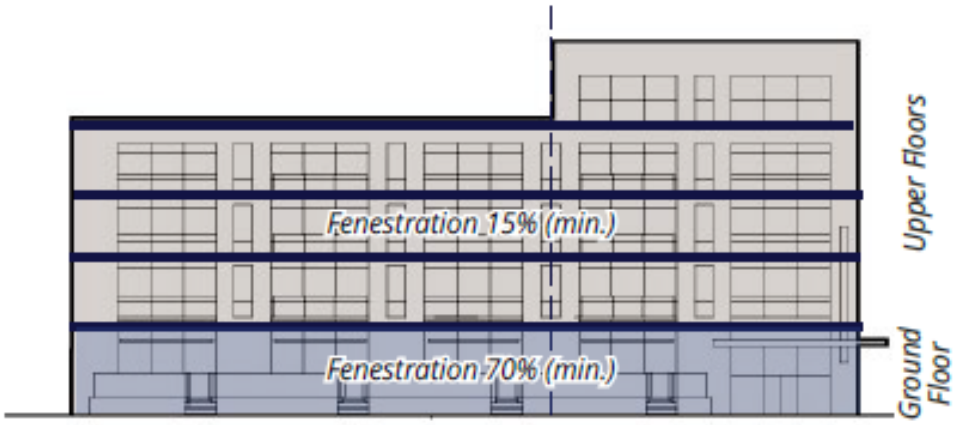

Figure 3.2-11 Urban: Fenestration Diagram

3.2.4 Materials and Detailing

A. Building Materials

1. **Prohibited materials.**
   a. Fiberglass or plastic (false) architectural or facade elements or ornamentations are prohibited.
   b. Rough-cast and sand-finishes are prohibited on all building surfaces that are visible from a street.
   c. Reflective materials, such as mirrored glass, shiny metal, and chrome, are allowed with the following exception:
      i. Application to small areas (up to 50 sq ft or 2% of façade area, whichever is less) for signage highlighting, ensuring no glare nuisance to traffic, pedestrians, or neighboring buildings.
2. **Combining materials.** When combining 2 or more wall materials on 1 facade:
   a. Place lighter weight materials above more substantial ones (e.g., glass above wood, wood above stucco, stucco above masonry).
   b. Vertical joints between different materials shall only occur at inside corners.

B. Windows and Doors

Material and Types

a. **Window recess.** Windows shall be recessed in a manner that is specific to each building's architectural style but shall be no less than 2 inches for any style.
b. **Architectural style of detailing.** Windows, doors, frames, colors, and styles shall be appropriate to the building's architectural style in terms of window type, proportion, and color.
c. **Materials.** Windows and doors shall be made of wood, fiberglass, fiberglass-clad wood, aluminum clad wood, or metal.
d. **Glazing.** Glazing shall be clear glass with no more than ten percent daylight reduction (tinting). Reflective (mirrored) glazing is prohibited.
e. **Residential buildings.** The following are applicable to multiple-family development types.
    i. Vinyl or vinyl clad windows shall resemble wood windows (i.e., faux wood or engineered wood) in detailing and profile thickness and employ muted patterns and colors consistent with the building's architectural style.
    ii. Nail-on windows that are deeply set within their frame are permitted.
    iii. Muntins shall be of a substantial dimension (e.g., not flat) and shall be placed on the exterior of windows.
    iv. Trim:
        a) **Window and door trim materials**. Wood or cement fiber board. Foam trim around windows is allowed. Foam trim around doors is prohibited.
        b) **Building trim materials**. Wood, stone, cast stone, pre-cast concrete, glass fiber reinforced concrete, and cement fiber board.

3.3 Architectural Façade Elements

The following architectural façade elements shall be incorporated into a development project to fulfill the requirements for façade articulation and/or articulation of massing increment defined in 3.2.3. Massing and Façade Design.

3.3.1 Arcade

Figure 3.3-1 Arcade

Element Standards	Minimum	Maximum
A. Depth	12 feet	16 feet
B. Distance from Property Line	0 feet	
C. Opening height, clear	See Below	
D. Overall height	See Below	

Design Standards.

a. **Projection depth.** The arcade projection depth from the ground floor facade shall be no greater than the height of the arcade opening (see Figure 3.3-1).

b. **Sidewalk depth beneath arcade.** The covered sidewalk under the arcade shall be a minimum of 10 feet wide from the inside of the vertical support to the ground floor building face.

c. **Entry element requirement.** Arcades shall be combined with Shopfronts (defined in *Section 3.4 Entry Elements*).

d. **Minimum openings and massing increments.** Arcades shall be a minimum of 3 openings wide. The location where an arcade stops or changes in design or dimensions shall correspond to a change in massing increment (*Section 3.2.3. Massing and Façade Design*) for massing increment requirements).

e. **Vertical supports.** Vertical supports may be piers, columns, or arches. The width of a vertical support shall not exceed 3 feet.

f. **Width of openings.** The openings between vertical supports, as seen from the street, shall be taller than they are wide.
g. **Shape and cadence of openings.** Openings, whether rectangular or arched, must align with facade bays if present (vertical bays are mandatory for Main Street standards and optional for other massing types in *Section 3.2.3. Massing and Façade Design*).
h. **Vertical clearance.** The minimum vertical clearance at each opening shall be a minimum of 12 feet, excluding decorative brackets, spandrels, and/or lower portions of arches.
i. **Arcade height relative to interior building floor height.** The height of the soffit inside the arcade shall be no less than the height of the ceiling of the floor to which it corresponds.
j. **Architectural style.** Arcade detailing, including lighting, shall utilize the architectural style of the building.

3.3.2 Gallery

Figure 3.2-2 Gallery

Element Standards	Minimum	Maximum
A. Depth, clear	10 feet	16 feet
B. Distance to property line, clear	0 feet	5 feet
C. Opening height, clear	12 feet	2 floors
D. Overall height	See Below	

Design Standards.

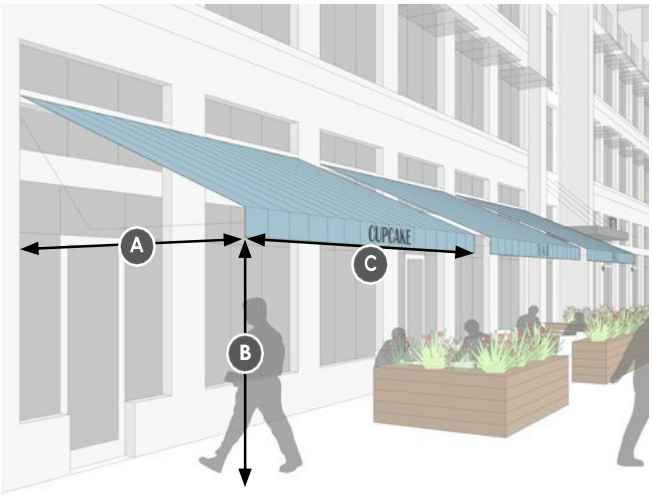
a. **Projection depth.** The gallery projection depth from the ground floor facade shall be no greater than the height of the gallery opening (see Figure 3.2-2 "A").

b. **Sidewalk depth beneath gallery.** The covered sidewalk width under the gallery must be a minimum of 10 feet from the inside of the vertical support to the ground floor building face (see Figure 3.2-2 "A").

c. **Minimum openings and massing increments.** Galleries shall be a minimum of 3 openings wide. The location where a gallery stops or changes in design or dimensions shall correspond to a change in massing increment (*see Section 3.2.3. Massing and Façade Design*).

d. **Vertical supports.** Vertical supports may be piers or columns. The width of a vertical support shall not exceed 1 foot.

e. **Width of openings.** The openings between vertical supports, as seen from the street, shall be taller than they are wide.



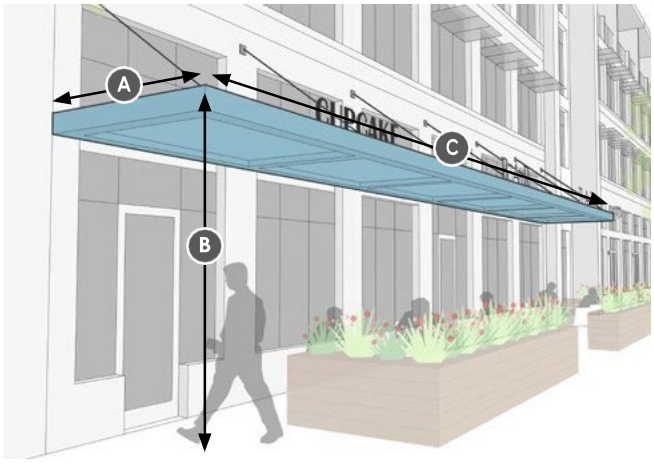
f. **Shape and cadence of openings.** Openings may be rectangular but shall not be arched.

g. **Vertical clearance.** The minimum vertical clearance at each opening shall be a minimum of 12 feet, excluding decorative brackets and spandrels.

h. **Gallery height relative to interior building floor height.** The height of the soffit inside the gallery shall be no less than the height of the ceiling of the floor to which it corresponds.
i. **Vertical alignment.** Galleries may be single or double-story and shall correlate with building floors (see "D" in above figure).
j. **Architectural style.** Gallery detailing, including lighting shall utilize the architectural style of the building.

3.3.3 Commercial Awning

Figure 3.2-3 Commercial Awning Diagram



Element Standards	Minimum	Maximum
A. Depth	4 feet	Not Applicable
B. Clearance above sidewalk	8 feet	Not Applicable
C. Length	See Below	

Design Standards.

a. **Encroachment.** Commercial awnings may encroach into the setback or public right-of- way as defined in Division 6.01.010(D)(2): Encroachments into Required Setback Areas of the Ontario Development Code.
b. **Material.** Commercial awnings shall be of a simple shed form, made of code-compliant fire-resistant canvas.
c. **Width.** Awning widths shall equal in size to shopfront opening widths.
d. **Prohibited lighting**. Internally illuminated and back-lit awnings and any associated light diffusers are prohibited.

3.3.4 Commercial canopy

Figure 3.2-4 Commercial canopy

Element Standards	Minimum	Maximum
A. Depth	Not Applicable	3 feet
B. Minimum clearance above ground	Not Applicable	12 feet
C. Length of terrace	Not Applicable	150 feet

Design Standards.

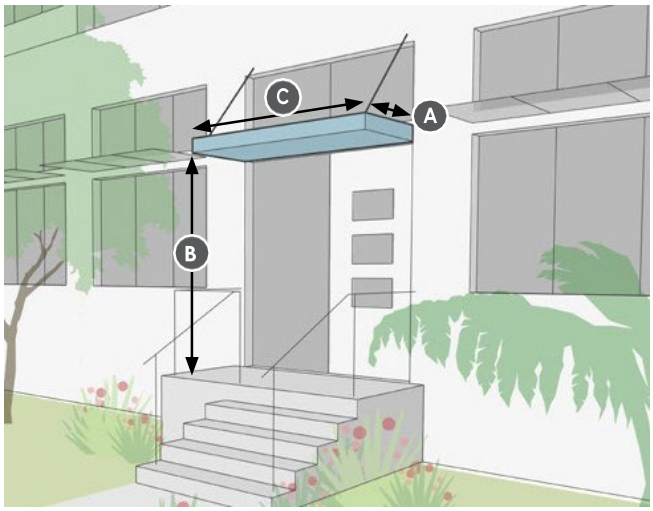
a. **Encroachment.** Commercial canopies may encroach into the setback or public right-of- way as defined in Division 6.01.010(D)(2): Encroachments into Required Setback Areas of the Ontario Development Code.
b. **Form and material.** Canopies shall be of a simple form, made of metal and/or glass.
c. **Support.** Canopies shall be supported either from below by metal brackets, or from above by rods and wires that affix to the wall.
d. **Width.** Canopies may extend across multiple storefronts.

3.3.5 Awning

Figure 3.2-5 Awning

Element Standards	Minimum	Maximum
A. Depth	Not Applicable	3 feet
B. Clearance above ground	8 feet	Not Applicable
C. Length	See Below	

Design Standards



a. **Encroachment**. Residential awnings may encroach into the setback or public right-of- way as defined in Division 6.01.010(D)(2): Encroachments into Required Setback Areas of the Ontario Development Code.

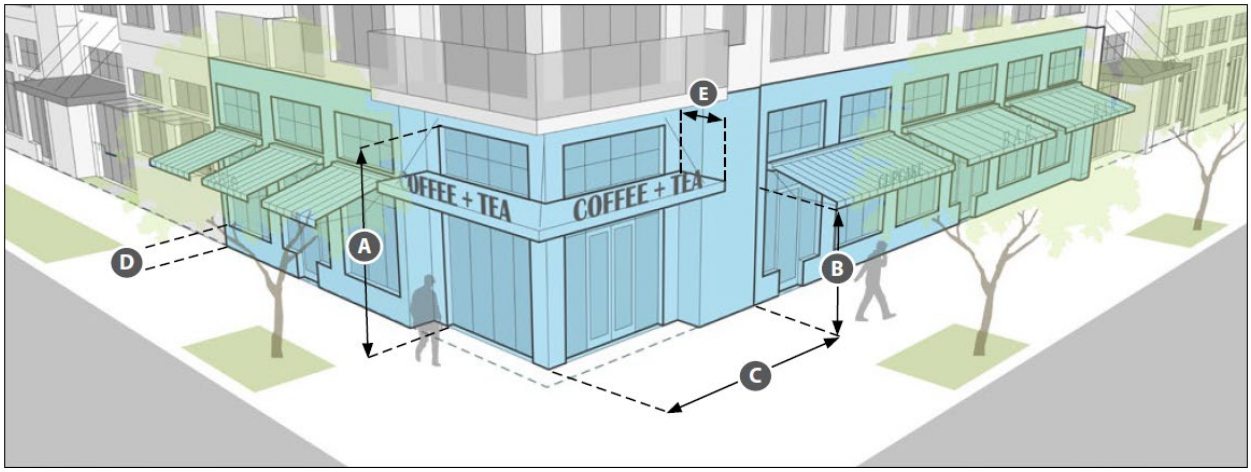
b. **Material**. Residential awnings shall be of a simple shed form, made of code-compliant fire-resistant.

c. **Upper floors.** Each individual awning shall cover no more than 1 window opening.

3.3.6 Canopy

Figure 3.2-6 Canopy

Element Standards	Minimum	Maximum
A. Depth	Not Applicable	3 feet
B. Minimum clearance from landing	7 feet	8 feet
C. Length of terrace	Not Applicable	8 feet



1. **Design Standards**
   a. **Material**. Canopies shall be of a simple form, made of metal and/or glass.
   b. **Support.** Canopies shall be supported either from below by metal brackets, or from above by rods or wires that affix to the wall.
   c. **Upper floors.** Each individual canopy shall cover no more than 1 window opening.

3.4 Entry Elements

This section regulates the design of Building entry elements such as porches, dooryards, stoops, shopfronts, and lobby entries to the fulfill façade articulation requirements identified in *Section 3.1.3. Massing and Façade Design*.

3.4.1 Shopfront

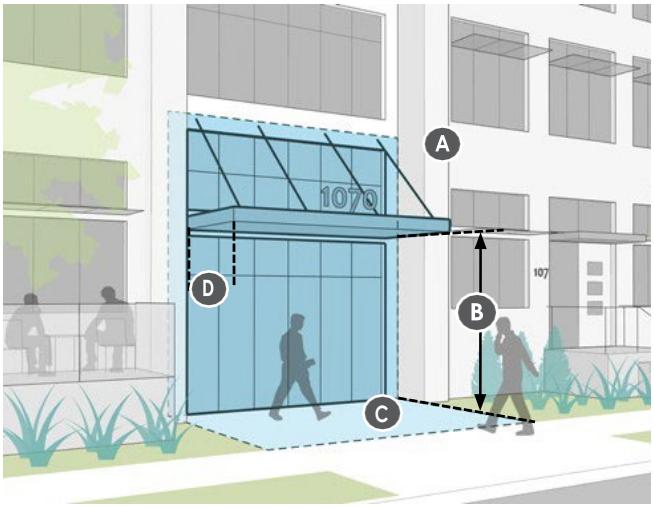
Figure 3.4-1 Shopfront

Element Standards	Minimum	Maximum
A. Height to top of transom	12 feet	16 feet
B. Height to bottom of canopy/awning	8 feet	10 feet
C. Width of each shopfront bay	10 feet	25 feet
D. Height of shopfront base	1 foot	3 feet
E. Awning/Canopy Depth	4 feet	Not Applicable

Design standards.

a. **Vertical bays.** Shopfront openings must align into bays, following the vertical bay specifications in *Section 3.2.3. Massing and Façade Design* of main street standards.

b. **Architectural façade elements.**



i. Shopfronts in vertical mixed-use buildings may integrate with Galleries or Arcades.

ii. **Visibility.** Windowsills in non-entry bays shall not exceed 2 feet above grade.

c. **Setback use and design.** Recessed shopfronts without dooryard, terrace, or porch designs shall extend to the property line.

3.4.2 Lobby Entry

Figure 3.3-2 Lobby Entry

Element Standards	Minimum	Maximum
A. Height to top of transom	10 feet	20 feet
B. Height to bottom of canopy/awning	8 feet	Not Applicable
C. Distance to property line	Not Applicable	20 feet
D. Awning/Canopy Depth	4 feet	Not Applicable

Design Standards.

a. **Lobby entries** shall be visible and distinguishable from adjacent ground floor units and include a minimum of 1 of the following design strategies:
   i. Center placement for symmetry.
   ii. Prominent corner location.
   iii. Incorporate 2 architectural elements (columns, overhanging roofs, canopies, awnings, or ornamental light fixtures).
   iv. Recessed entry.
   v. Entry framing.

b. **Main Street massing types.**
   i. Lobby entries shall not exceed 20% of the frontage length.
   ii. Allocate the remaining length to shopfronts.

c. **Visibility.** Lobbies entries shall be visible from the public right of way as follows:
   i. Windowsills shall be no higher than 2 feet above adjacent grade.
   ii. Internal shade devices such as blinds, shades, or curtains are prohibited.

d. A forecourt may be introduced to provide a transition between the entry and sidewalk (forecourt standards are discussed in *Section 3.1.5 Open Space Standards*).

Chapter 4. Architectural styles

Below is a list of Architectural styles which shall be applied. A maximum of 1 architectural style shall be applied to each project.

4.1 Mission-Spanish Colonial Revival
4.2 Craftsman
4.3 American Mercantile
4.4 Tuscan
4.5 Modern
4.6 Farmhouse

4.1 Mission - Spanish Colonial Revival

Influenced by Spanish/Mediterranean and early Californian styles in the late 19th and early 20th centuries, the Spanish Colonial Revival style is asymmetrically arranged and includes low-pitched roofs covered with S-type clay red roofing tiles, wooden frames with stucco siding, and arches above doors, porch entries, and main windows.

Figure 4.1-1 Mission - Spanish Colonial Revival

4.1.1 Form and Massing

Façade Design (Apply all)

a. Asymmetrical façade/elevations.
b. Three or more roof planes.
c. A minimum of 50 percent of the units shall have balconies or window treatments (such as shutters or awnings).
d. Entrances are recessed a minimum 12 inches.
e. Additional details for projects over 4 stories, vertical mixed use, or with more than 15 buildings (requires 2 details):

i. Include 2 add-on projections such as verandas, arcades, balconies, and exterior stairs.
ii. The ends of building massing's shall be stepped down.
iii. One focal point, such as courtyard, tower, or fountain.
iv. Apply wingwalls or columns on the ground level.

4.1.2 Roof

Roof Design (Apply all)

a. Low-pitched (4:12 maximum) cross- or side-gabled roofs. The pitch shall remain constant except for a veranda or arcade.
b. Red, fired, clay tile roofs. Tile types include both Spanish (S-shaped) and Mission (half-cylinder).
c. Hipped roofs shall only be used in combination with gables or on a tower element.
d. Shed roofs are only used in conjunction with verandas.
e. When a flat roof is used, it shall be screened by a parapet that is an extension of the wall plane or by a modified Mansard roof.

4.1.3 Materials and Colors

Materials and Colors (Apply all)

a. Roof tiles shall use terracotta, brown earth tones, or rustic red color palettes.
b. White, cream, or tan stucco wall with smooth (20/30) textured finish (i.e., hand troweled)
c. Wood shall be used as secondary wall material for the following and similar elements:

    i. Posts and exposed beams.
    ii. Railing, spindles, and grille work.
    iii. Shutters, window frames, and doors.

d. If windows have shutters, the shutters' color shall match the accent color that is use for doors or decorative trim.
e. A minimum of 1 wrought-iron element (such as railings, hardware, and gates) shall be used.

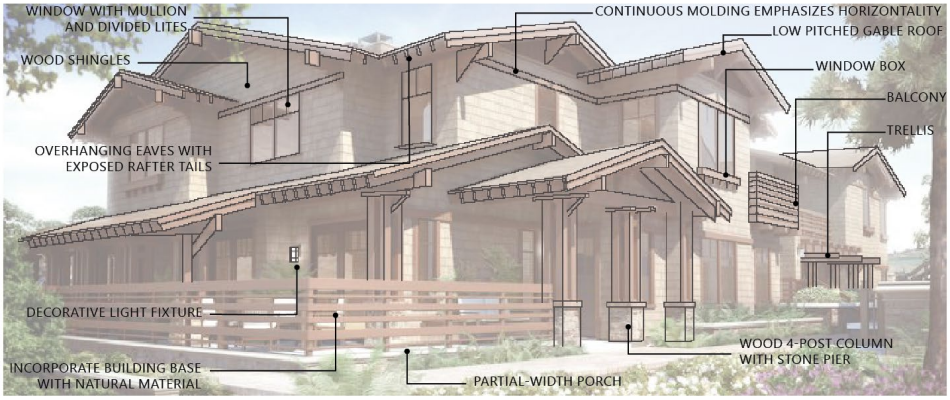
4.1.4 Doors and Windows

Door and Windows (Apply all)

a. Accent windows shall be a minimum of 20 percent of the total windows.
b. The primary facade shall include a minimum of 1 arched element.
c. A minimum of 50 percent of the windows shall be casement windows.
d. All entrance-door surrounds shall be banded with ceramic tile, molded plaster, or painted accents.
e. All casement windows and double-hung windows shall have wood frames.
f. Eighty percent of the windows shall have window muntins.

4.1.5 Decorative Details

Decorative Details



a. All residential projects shall provide **a minimum of 4** of the following; and
b. Residential projects 4 stories and taller, mixed-use projects, or projects with more than 15 buildings shall provide **a minimum of 6** of the following:

i. Entry/front porch or patio.
ii. Decorative tiles.
iii. Clay tile vents.
iv. Wrought-iron balcony railings or support brackets.
v. Dark-metal light fixture and hardwires.
vi. Paired wood (or wood simulated) garage doors with iron hardware.
vii. Verandas, pergolas, or arcades.
viii. Exterior stairs.
ix. Awnings with metal spear supports.

4.2 Craftsman

The Craftsman or California Bungalow style, originating from the early 20th-century Arts and Crafts movement. Notable features include the artful use of wood and natural materials, low-pitched roofs, horizontal orientation, earth-toned colors, exposed rafters, decorative brackets, porches, and columns.

Figure 4.2-1 Craftsman

4.2.1 Form and Massing

Façade Design (Apply all)

a. Asymmetrical facades/elevations.
b. Three or more roof planes on the primary facade.
c. Front-facing gable roofs.
d. Street-facing units shall have balconies or porches.
e. The front lot line façade shall have 2 to 3 materials/colors.

4.2.2 Roof

Roof Design (Apply all)

a. Low- to moderate-pitched gable or hipped roofs from 6:12 to 8:12.
b. Overhanging eaves (minimum 24 inches along primary elevation) with exposed rafter tails or beams.
c. Brackets or knee braces at gabled ends.
d. Use of imitation wood or asphalt shingles.

4.2.3 Materials and Colors

Materials and Colors (Apply all)

a. Brick or stone shall be used in the base.
b. Primary wall materials shall include dark-color wood shingles, clapboard siding, or fiber cement siding and natural materials such as stone or brick.
c. Use of earth-toned color palette, such as browns and greens.

d. The front lot line façade shall have a minimum 3 paint colors: 1 for the cladding ,1 for trim, and 1 for accents such as windows and decorative details.

4.2.4 Doors and Windows

Door and Windows (Apply all)

a. A minimum of 50 percent of the windows shall be casement windows.
b. A minimum of 80 percent of the primary windows shall be multi-paned.
c. A minimum of 2 types/shapes of windows shall be used.
d. Utilize flat wood trims (typically 4½ inches or 5½ inches wide) around the primary windows and entry doors.
e. Window and door trim color shall be different with the color of the walls.
f. Entry doors and garage doors shall have 1 row of vertical or horizontal glass panels.

4.2.5 Decorative Details

Decorative Details

a. All residential projects shall provide **a minimum of 4** of the following; and
b. Residential projects 4 stories and taller, mixed-use projects, or projects with more than 15 buildings shall provide **a minimum of 6** of the following:

i. Stone pier and battered wood support.
ii. Exposed rafter tails and knee-brace brackets.
iii. Dormers on the front façade.
iv. Second-story balcony.
v. Decorative attic/gable vent.
vi. Light fixtures shall be box-shaped, with metal frame and geometric pattern.
vii. Chimneys are visible at the exterior and arranged on a side elevation.
viii. Stained-glass or transom windows.
ix. Covered front porches shall tapered pillars.
x. Ground-level windows shall have muntins.

4.3 American mercantile

This building type began in the late 19th century when, in the process of identifying towns and cities, housing and offices were built over retail stores. This mixed-use strategy is still relevant today as the reurbanization of existing city centers becomes an established pattern.

Figure 4.3-1 American Mercantile

4.3.1 Form and Massing

Façade Design (Apply all)

a. Asymmetrical facades/elevations.
b. Simple, rectangular form.
c. Symmetrical placement of piers, columns, ground-floor storefronts, and openings on upper levels.
d. Transparent windows and doorways shall be no less than 80 percent of the street frontage at the ground level.
e. Multistory facades are divided into base, body, and top, with the ground floor taller than the upper floors.
f. Columns or lintels over openings.
g. Bases are articulated by changes in material or changes in wall plane.
h. Minimal projections or recessions on wall plane.

4.3.2 Roof

Roof Design (Apply all)

a. Flat roof.
b. A projecting cornice or a receding, stepped parapet.
c. Cornice and details mimic and reference historical detailing.
d. Street-facing gable roof with roof pitches at minimum 5:12 unless concealed behind a parapet.

4.3.2 Materials and Colors

Materials and Colors (Apply all)

a. Walls shall be composed of brick.
b. Decorative moldings, cornices, or an applied ornament of stone or cast concrete shall be used.
c. No more than 3 colors shall be used on any given facade.
d. Stucco and clapboard is prohibited.

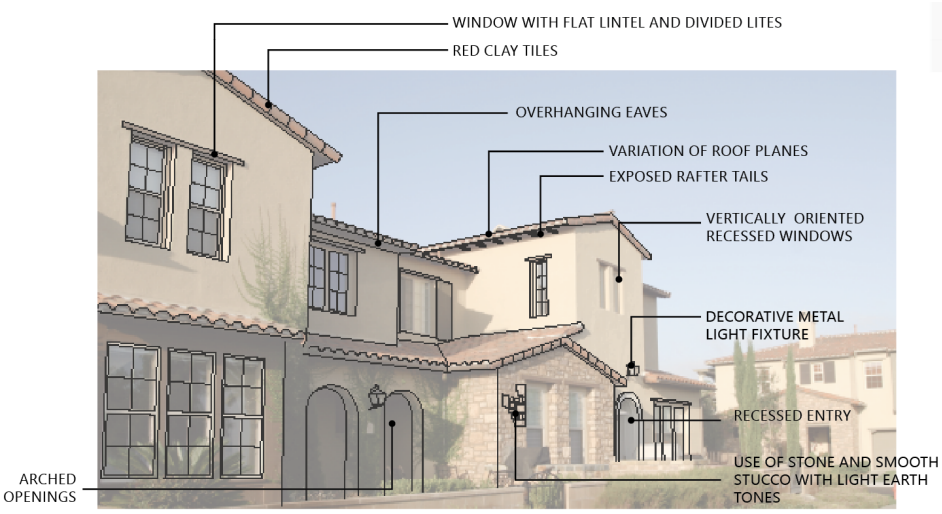
4.3.4 Doors and Windows

Door and Windows (Apply all)

a. Ground-floor windows and doors shall be large and expansive with a transom.
b. Upper-floor windows shall be double-hung vertically and grouped with a rhythm consistent with the major storefront openings below.
c. Entrance shall have higher bays, recessed entries by a minimum of 3 feet, or different color/materials.
d. Upper-floor windows shall have window lintel and sill.
e. Transom windows above the doors and windows on the ground level.
f. Fifty percent of windows shall have muntins.
g. Upper floor windows shall have a minimum 2-inch recess.

4.3.5 Decorative Details

Decorative Details



a. All residential projects shall provide **a minimum of 4** of the following; and
b. Residential projects 4 stories and taller, mixed-use projects, or projects with more than 15 buildings shall provide **a minimum of 6** of the following:

i. Awnings, canopies, and second-floor balconies.
ii. Pedimented windows.
iii. Wide window trim with a keystone.
iv. Double-bracketed cornice.
v. Gable roof.
vi. Roof finial.
vii. Transom above door and windows on the ground level.
viii. Metal balcony railing.
ix. Canopy or awning.
x. Recessed entries.
xi. Cast-iron columns.
xii. Shopfront millwork.

4.4 Tuscan

A blend of Spanish Revival and rural Italian elements, this interpretation of traditional Mediterranean architecture features stone and stucco, light earth tones, and red-tiled roofs. Classical elements like columns, arches, and decorative ironwork enhance visual complexity. Italianate references are evident in squared towers and projections. Features include porches, porticoes, and vertically oriented, recessed windows.

Figure 4.4-1 Tuscan

4.4.1 Form and Massing

Façade Design (Apply all)

a. Asymmetrical arrangement of windows and design elements along front lot line.
b. Porches, porticoes and/or Juliet balconies.
c. Recessed entries (a minimum of 3 feet).

4.4.2 Roof

Roof Design (Apply all)

a. Flat or low-pitched hip or gable roof (maximum 6:12 slope).
b. Red-toned clay tiles.
c. Multiple roof levels (at minimum 3).
d. Large overhanging eaves (minimum 12 inches) along primary elevation.

4.4.3 Materials and Colors

Materials and Colors (Apply all)

a. Incorporate rough-hewn stone as accent feature.
b. Flat stucco walls in light earth tones.
c. Use of earth-toned color palette.

d. Brown or beige window frames.

4.4.4 Doors and windows

Doors and windows (Apply all)

a. Single- or double-hung windows shall be more horizontal in proportion, with six-over-six muntin patterns and 5½-inch-wide trim.
b. Casement windows shall be paired with four-pane patterns for smaller windows and eight-pane patterns for larger windows.
c. Vertically oriented rectangular or arched windows arranged in asymmetrical patterns.
d. Casement or double-hung sash with flat or arched lintels.
e. Windows shall be recessed 3 to 12 inches.

4.4.5 Decorative details

Decorative details

a. All residential projects shall provide **a minimum of 4** of the following; and
b. Residential projects 4 stories and taller, mixed-use projects, or projects with more than 15 buildings shall provide **a minimum of 6** of the following:

i. Juliet balconies.
ii. Rafter extensions and brackets.
iii. Stone or stucco window/door trim.
iv. Rectangular or arched wooden door.
v. Arcade or porch at entry.
vi. Decorative ironwork (window grilles, railings, light fixtures, decorative planters).
vii. Arched windows.
viii. Paired decorative wood shutters. Shutters shall be equal to half the width of the window. Shutter styles shall be paneled or louvered.
ix. Use of brick, stone, or wood columns.
x. Stucco or stone chimneys.
xi. Different-color wood trellis.
xii. Arched openings and doorways at the ground level.

4.5 Modern

Modern architecture prioritizes clean lines, geometric shapes, and the use of unconventional or industrial materials such as glass, metal, concrete, steel, and reclaimed materials characterized by extensive large windows, contemporary buildings maximize natural light, and passive solar heating.

Figure 4.5-1 Modern

4.5.1 Form and Massing

Façade Design (Apply all)

a. An irregular, asymmetrical façade.
b. Rectangular structure.
c. Horizontal massing.
d. Straight and continuous lines.
e. Repeating lines and elements.

4.5.2 Roof

Roof Design. Flat or low-pitched roofs (4:12 slope max).

4.5.3 Materials and Colors

Materials and Colors (Apply all)

a. Use of raw and natural materials including wood, concrete, metal, and glass.
b. Traditional materials (such as smooth stucco (20/30), wood, brick, and stone) shall be used as an accent material.
c. Minimum 2 materials on the building facade.
d. Use of color blocking for geometric forms and break up massing elements.
e. Building facade shall incorporate **a minimum of 2** of the following as an accent:

    i. Awnings.

ii. Popouts, trellis.
iii. Arbor structures.
iv. Balconies.

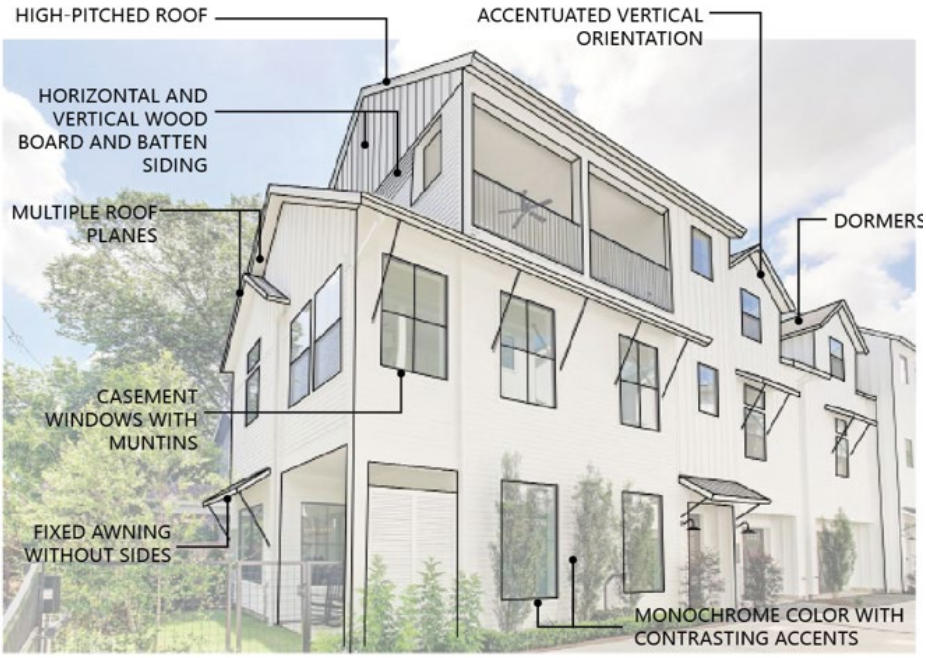
4.5.4 Doors and Windows

Door and Windows (Apply all)

a. Large glass doors and/or window openings.
b. Window wrapping around a corner of the building.
c. Narrow aluminum window frames.

4.5.5 Decorative Details

Decorative Details (Apply all)



a. All residential projects shall provide **a minimum of 4** of the following; and
b. Residential projects 4 stories and taller, mixed-use projects, or projects with more than 15 buildings shall provide **a minimum of 6** of the following:

i. Metal balcony railings.
ii. Clerestory windows.
iii. Floor-to-ceiling glass door.
iv. Floor-to-ceiling glass windows on the ground level.
v. Roof decks.
vi. Trellis shade structures.
vii. Metal awning.
viii. Roof overhang with exposed wood or steel frame.

4.6 Farmhouse

Farmhouse style utilizes vertical or horizontal wood siding, monochrome colors with contrasting accents, minimal ornamentation, and medium to high-pitched roofs. Minimal detailing includes awnings, porches, and wall-mounted gooseneck lights.

Figure 4.6-1 Farmhouse

4.6.1 Form and Massing

Façade Design (**Apply** all)

a. Straight exterior lines, geometric form.
b. Asymmetrical massing with a gable at the front of the house.
c. Repeating shapes and lines.
d. Gable roof creating a triangular wall on the ends.
e. Incorporate farm and ranch forms (i.e. barns, silos, sheds, tank houses, and granary towers).
f. Multiple gable and shed roof planes.
g. Geometric forms, industrial materials, and repetition.
h. Covered porches and awnings to break up volumes between lower and upper floors.
i. Variation in projecting wall planes with a minimum 12-inch depth.

4.6.2 Roof

Roof Design (Apply all)

a. High-pitched gabled roof or shed roof (minimum 6:12 slope).
b. Intersecting gable roofs.
c. Dark asphalt shingle, metal roofs, or synthetic slate shingles.
d. Triangular rooflines.
e. Large overhangs (minimum 2 feet in length) above the patio and garage.

4.6.3 Materials and Colors

Materials and Colors (Apply all)

a. Use metal, wood, or masonry.
b. Utilize board-and-batten siding, corrugated panels.
c. Monochrome accents of doors, windows, or architectural features.
d. Stucco is permitted as an accent material.

4.6.4 Doors and Windows

Doors and Windows (Apply all)

a. Windows shall be double-hung with a proportion of 2 or 2½ times taller than wide.
b. Groupings of 2 or 3 double-hung window units.
c. Multi-paned windows.
d. Accent trim around window and door openings.
e. Double-hung or casement windows.

4.6.5 Decorative Details

Decorative Details

a. All residential projects shall provide **a minimum of 4** of the following; and
b. Residential projects 4 stories and taller, mixed-use projects, or projects with more than 15 buildings shall provide **a minimum of 6** of the following:

i. Wide front porch with simple columns.
ii. Covered patio.
iii. Shed or gabled dormers.
iv. Carriage-style garage doors.
v. Dark shutters and window sashes.
vi. Gable brackets, vents, and trim.
vii. Iron-inspired barn-style lighting.
viii. Metal awnings without sides.
ix. Gooseneck light fixtures at the entrance.
x. Large doors and windows to maximize natural light.
xi. Multi-paned windows on the ground-level windows and doors.

Chapter 5. Administration

5.1 Administration of Standards

This chapter provides methodology for the implementation of the Objective Design Standards, including administration, project approval, and appeals. The responsibilities of the City of Ontario Planning Staff shall include administering, interpreting, and enforcing all requirements and standards of this document.

Any terms not defined herein and any issues affecting the design and development of the subject project area not specifically addressed in the ODDS shall be governed by the provisions of the Ontario Development Code.

5.1.1 Interpretation and Severability

Unless otherwise provided herein, any ambiguity concerning the content or application of the Objective Design Standards shall be resolved by the City of Ontario Executive Director Community Development (Director) or his / her designee in a manner consistent with the goals, policies, purpose, and intent established in this document. If any portion of these standards is declared to be invalid or ineffective in whole or in part, such decision shall not affect the validity of the remaining parts of the remaining portions thereof.

5.1.2 Reference Documents

- **The Ontario Plan**
- **City of Ontario Development Code**

5.2 Glossary of terms

Alley. A narrow, low-capacity thoroughfare with 1 shared lane and no parking lanes which provides secondary access to all Lots within a Block. Driveways, Parking Aisles, and Fire Lanes are not Alleys.

Arbor (entrance arbor). A wooden structure that is intended to define an entrance into an on-site outdoor space, such as a front yard or parking lot.

Arcade. A facade with a ground floor colonnade supporting the upper stories of the building, intended to provide shade, glare control, and weather protection.

Bay. A facade division comprised of groupings of vertically aligned facade elements, such as shopfronts, windows, awnings, and wall materials that are stacked 1 above the other. Bays can be differentiated from 1 another by changes in material, color, and/or use of architectural elements such as pilasters.

Bay Window. A window or series of windows projecting from the exterior wall of a building and forming an extension, or bay, of the room. Subject to the requirements of the regulating zone, bay windows may encroach into the setback or public right-of-way.

Block. An aggregation of Lots, Passages, Carless Streets, and driveways which are bound on all sides by Streets. Block dimensions are measured along private Street Rights-of-way.

Building Base. The lowermost portion of a building facade that is distinctly differentiated from upper floors or upper wall surfaces. The base of mixed-use buildings consists of the ground floor or, for taller buildings, an ensemble of the first 2 floors. The base of multi-family or office buildings can consist of the entire ground floor, or a low band (three to 4 feet high) comprised of different materials or colors than upper wall surfaces.

Building Length. The length of the building as measured parallel to the front property line

Court. A semi-public, shared open space within a lot, for use by more than 1 resident or commercial tenant. Courts generally provide visitor access from the street to dwellings, retail, or office spaces, and/or buildings within the lot that lack direct access from the street. The degree of enclosure or openness of the court may vary, as per the requirements of each zone and the design intent of the project designer.

Director. The Director of Community Development, or designee.

Drive Aisle. A vehicular lane within a parking lot that provides access to the individual parking spaces.

Driveway. A vehicular lane within a lot that leads to onsite parking.

Encroachment: Structure extending into a required setback area.

Facade: Exterior wall of a building adjacent to a street or public open space.

Facade Increment: Visually distinguished complete facade composition.

Fenestration: Transparent glass openings in a building face.

Fire Lane: On-site right of way for emergency vehicle access.

Forecourt: Open space extension into a lot, defined by building faces.

Frontage, Private: Building facade and area between it and property line along a street.

Frontage, Public: Area between street-adjacent property line and the first travel lane.

Gallery: Ground-floor colonnade providing shade, glare control, and weather protection.

Green: Publicly accessible open space at the intersection of streets, landscaped for recreation.

Ground Floor: Building floor nearest to the existing grade around the building.

Height, Building: Height measured from finished grade at any property line along the street.

Loggia: Colonnaded or arcaded space within a building, open to the air on 1 side.

Lot: Portion of land for allowed development, synonymous with "property" or "design site."

Lot Line: Front, side, or rear boundary of a lot, synonymous with property line.

Massing (or Facade) Increment: Segment of a building facade divided into visually discrete compositions.

Passage: A pathway designed for pedestrians on a property, like a Paseo, but may not extend through an entire block.

Parking Court: A public space between buildings designed for surface parking.

Pergola: A wooden structure intended to provide shade or define an entrance into an on-site outdoor space.

Pier, Shopfront: The vertical elements on either side of a shopfront bay.

Place Types: A classification of urban environments based on streetscape and building character, including attributes such as building placement, height, frontage, land use, density, and streetscape design.

Plaza: An open space at the intersection of important streets for civic and commercial activities. Sizes range from one-half (1/2) acre to 2 acres, defined by surrounding buildings and typically paved with arranged shade trees. Amenities may include fountains and food kiosks.

Primary Access: The principal means of approaching and entering a building or property.

Primary entrances: Typically referring to front doors, including direct access into a ground floor residential unit, nonresidential space, common lobby, or zaguan leading to a court.

Privacy Windows: Windows that are either opaque and unopenable or start at minimum 6 feet from the floor.

Public Open Space: Off-street outdoor space owned by the city for public use or on a private parcel adjacent to a right of way, functioning as a public space.

Publicly Accessible: Open spaces or streets open/available to the public, whether publicly or privately owned.

Shopfront: A ground-floor frontage assembly with large transparent windows, a conspicuous entrance leading directly into the unit, spatially defined by vertical elements called piers.

Side, Lot Line: Any property line shared with a neighboring property when there is no public open space between them.

Side yard: The portion of a parcel extending from the front property line to the rear property line and between the side property line and the closest side of the principal building. It may also be designed as open space.

Story height: The vertical distance from floor to ceiling, measured from the top of the floor finish to the bottom of the ceiling joists for the topmost story.

Street: A right of way defined as a street, excluding paseos, driveways, parking aisles, fire lanes, and alleys.

Street, Front: The side of the lot adjacent to a street, a property may have multiple fronts.

Street, Side: (Applicable only to corner lots) The side of the lot adjacent to a street or public open space that is not considered the front.

Trellis: A wood or metal frame supporting thin overhead wooden or metal strips or latticework, providing shade and supporting climbing plants. It may be freestanding.

Reserved for future use

CITY OF ONTARIO *Agenda Report* **August 20, 2024**	**SECTION:** **PUBLIC HEARINGS**
Department: Financial Services Prepared By: Stephanie Castro Staff Member Presenting: Armen Harkalyan, Executive Director of Finance Reviewed By: Claudia Hernandez Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 28

SUBJECT: **A PUBLIC HEARING TO CONSIDER A RESOLUTION REGARDING THE FORMATION OF THE CITY OF ONTARIO COMMUNITY FACILITIES DISTRICT NO. 52 (SUNDANCE PARK); ADOPTION OF A RESOLUTION DEEMING IT NECESSARY TO INCUR BONDED INDEBTEDNESS; AND INTRODUCTION OF AN ORDINANCE LEVYING SPECIAL TAXES**

RECOMMENDATION: That the City Council consider and:

A. Adopt a Resolution of Formation of Community Facilities District No. 52 (Sundance Park), proposing that the community facilities district be authorized to levy a special tax and proposing that an appropriations limit of the community facilities district be established;
B. Adopt a Resolution deeming it necessary for the district to incur bonded indebtedness within Community Facilities District No. 52 (Sundance Park);
C. Adopt a Resolution calling a special election for City of Ontario Community Facilities District No. 52 (Sundance Park);
D. Adopt a Resolution declaring the results of the special election and directing the recording of a Notice of Special Tax Lien;
E. Adopt a Resolution authorizing the execution and delivery of an amended and restated acquisition and funding agreement with Brookcal Ontario, LLC, a Delaware limited liability company; and
F. Introduce and waive further reading of an ordinance levying special taxes within City of Ontario Community Facilities District No. 52 (Sundance Park).

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Operate in a Businesslike Manner
Focus Resources in Ontario's Commercial and Residential Neighborhoods
Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)
Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in Ontario Ranch

FISCAL IMPACT: The use of Mello-Roos financing in the Sundance Park residential development is projected to generate approximately $379,366 per year, at buildout, to fund administrative fees and municipal services; and approximately $21.4 million in bond proceeds to be used to fund a portion of the public infrastructure improvements needed to serve the project. Mello-Roos bonds are not a direct obligation of the City and are paid from special taxes levied on each taxable parcel in the district; therefore, there is no fiscal impact to the General Fund from the issuance of Mello-Roos bonds. City Council approval will be required in future years to process annual special tax levies.

BACKGROUND & ANALYSIS: The Mello-Roos Community Facilities Act of 1982 provides local government, with the consent from a majority of the property owners, the authority to establish community facilities districts for the purpose of levying special taxes to finance various kinds of public infrastructure facilities and municipal services. Under the Mello-Roos Act, the initial steps in the formation of a community facilities district to finance public improvements and municipal services are to adopt resolutions declaring the intention to establish a community facilities district, authorize the levy of special taxes, and issue bonds. Accordingly, on July 2, 2024, the City Council approved Resolution No. 2024-069, a Resolution of Intention to establish City of Ontario Community Facilities District No. 52 (Sundance Park) and authorize the levy of special taxes; and Resolution No. 2024-070 declaring the City Council's intention to issue bonds for the district. The Resolution of Intention set the public hearing date for the regularly scheduled City Council meeting on August 20, 2024, to consider formation matters.

In the First Amended and Restated Agreement for the Financing and Construction of Limited Infrastructure Improvements to Serve an Easterly Portion of the New Model Colony ("First Amended and Restated Construction Agreement") between the City and NMC Builders, LLC, the City agreed to cooperate with the members of NMC Builders, LLC in the formation of community facilities districts to assist in the financing of the public improvements included in the agreement. The Sundance Park project addresses the development of two zones: Zone 1 is approximately 8.98 gross acres located west of Mill Creek Avenue, east of Haven Avenue, south of Chino Avenue, and north of Schaefer Avenue; and Zone 2 is approximately 23.89 gross acres located west of Mill Creek Avenue, east of Haven Avenue, south of Ontario Ranch Road, and north of Edison Avenue. At build-out, the project is expected to include a total of 418 residential units, comprised of 120 townhome units in Zone 1, and 298 units in Zone 2 (88 single-family and 210 townhomes).

Included, as part of the Resolution of Formation, is the proposed Rate and Method of Apportionment of Special Tax for the District. Under the proposed Rate and Method of Apportionment, the portion of the maximum annual special tax rates, which will be used to fund debt service payments on the bonds, is fixed and will not increase over time. As proposed, the amount of bonds authorized for the district ($85 million) is set intentionally higher than the current estimated bond amount (approximately $21.4 million) in order to allow future City Council, the option, without increasing the amount of the annual special taxes, to issue additional bonds to replace and/or construct new public infrastructure improvements in the future, or to fund municipal services. The term and structure of the Rate and Method of Apportionment of Special Tax for the Sundance Park project is consistent with those of previously adopted Rates and Methods of Apportionment for Ontario Ranch community facilities districts. This ensures that the special tax rates levied on all residential property owners in community facilities districts in Ontario Ranch are

developed in a consistent and equivalent manner. In addition, under the provisions of the Mello-Roos Act, to ensure that home buyers are making an informed decision, all residential builders in the Ontario Ranch community facilities districts will be required to disclose the maximum annual special tax amount to each homeowner before entering into a sales contract.

Attached are five Resolutions and one Ordinance. The first attached Resolution establishes the community facilities district, with the rate and method of apportionment of special taxes and authorizes the levy of special taxes within the district. The second attached Resolution is deeming it necessary to incur bonded indebtedness for the district. The third attached Resolution calls for a special landowner election to be held on August 20, 2024. The fourth attached Resolution declares the results of the election, including a statement from the City Clerk as to the canvass of ballots, and directs the recording of the Notice of Special Tax Lien. The attached Ordinance authorizes the levying of special taxes, and the attached final and fifth Resolution authorizes the execution and delivery of an amended and restated acquisition and funding agreement with Brookcal Ontario, LLC.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, OF FORMATION OF CITY OF ONTARIO COMMUNITY FACILITIES DISTRICT NO. 52 (SUNDANCE PARK), PROPOSING THAT THE COMMUNITY FACILITIES DISTRICT BE AUTHORIZED TO LEVY A SPECIAL TAX AND PROPOSING THAT AN APPROPRIATIONS LIMIT OF THE COMMUNITY FACILITIES DISTRICT BE ESTABLISHED

WHEREAS, on July 2, 2024, the City Council (the "City Council") of the City of Ontario (the "City"), pursuant to the Mello-Roos Community Facilities Act of 1982 (the "Act"), adopted a resolution entitled "A Resolution of the City Council of the City of Ontario, California, of Intention to Establish a Community Facilities District Proposed to be Named City of Ontario Community Facilities District No. 52 (Sundance Park) and to Authorize the Levy of a Special Tax Therein" (the "Resolution of Intention"), stating its intention to establish City of Ontario Community Facilities District No. 52 (Sundance Park) (the "Community Facilities District"), to authorize the Community Facilities District to levy a special tax within the Community Facilities District for the purpose of financing certain public facilities and services and setting the date for a public hearing to be held on the establishment of the Community Facilities District; and

WHEREAS, pursuant to the Resolution of Intention, notice of said public hearing was published in the *Inland Valley Daily Bulletin*, a newspaper of general circulation published in the area of the Community Facilities District, in accordance with the Act; and

WHEREAS, on this date, the City Council opened, conducted and closed said public hearing; and

WHEREAS, pursuant to the Resolution of Intention, each officer of the City who is or will be responsible for providing one or more of the proposed types of public facilities or services to be financed by the Community Facilities District was directed to study, or cause to be studied, the proposed Community Facilities District and, at or before said public hearing, file a report with the City Council containing a brief description of the public facilities and services by type that will in his or her opinion be required to adequately meet the needs of the Community Facilities District, and his or her estimate of the cost of providing such public facilities and services; such officers were also directed to estimate the fair and reasonable cost of the public facilities proposed to be purchased as completed public facilities and of the incidental expenses proposed to be paid; and

WHEREAS, said report was so filed with the City Council and made a part of the record of said public hearing; and

WHEREAS, at the hearing, the testimony of all persons for or against the establishment of the Community Facilities District, the extent of the Community Facilities District and the furnishing of the specified types of public facilities and services was heard; and

WHEREAS, written protests against the establishment of the Community Facilities District, the furnishing of any specified type or types of facilities and services within the Community Facilities District or the levying of a specified special tax were not made or filed at or before said hearing by 50% or more of the registered voters, or six registered voters, whichever is more, residing within the territory proposed to be included in the Community Facilities District, or the owners of one-half or more of the area of land in the territory proposed to be included in the Community Facilities District and not exempt from the special tax; and

WHEREAS, there has been filed with the City Clerk of the City a letter from the Registrar of Voters of the County of San Bernardino indicating that no persons were registered to vote within the territory of the proposed Community Facilities District as of July 15, 2024, which demonstrates that 12 or more persons have not been registered to vote within the territory of the proposed Community Facilities District for each of the 90 days preceding the close of said public hearing; and

WHEREAS, Section 53314.9 of the Act provides that, at any time either before or after the formation of a community facilities district, the legislative body may accept advances of funds from any source, including, but not limited to, private persons or private entities and may provide, by resolution, for the use of those funds for any authorized purpose, including, but not limited to, paying any cost incurred by the local agency in creating a community facilities district; and

WHEREAS, Section 53314.9 of the Act further provides that the legislative body may enter into an agreement, by resolution, with the person or entity advancing the funds, to repay all or a portion of the funds advanced, as determined by the legislative body, with or without interest, under all the following conditions: (a) the proposal to repay the funds is included in both the resolution of intention to establish a community facilities district adopted pursuant to Section 53321 of the Act and in the resolution of formation to establish a community facilities district pursuant to Section 53325.1 of the Act, (b) any proposed special tax is approved by the qualified electors of the community facilities district pursuant to the Act, and (c) any agreement shall specify that if the qualified electors of the community facilities district do not approve the proposed special tax, the local agency shall return any funds which have not been committed for any authorized purpose by the time of the election to the person or entity advancing the funds; and

WHEREAS, the City and BrookCal Ontario LLC (“BrookCal Ontario”), have entered into the Deposit and Reimbursement Agreement, dated as of November 1, 2022 (the “Deposit Agreement”), that provides for the advancement of funds by BrookCal Ontario to be used to pay costs incurred in creating the Community Facilities District and the incurrence of bonded indebtedness thereby, and provides for the repayment to BrookCal Ontario of such funds advanced, without interest, from the proceeds of any such bonded indebtedness incurred by the Community Facilities District; and

WHEREAS, the City desires to include in this Resolution, in accordance with Section 53314.9 of the Act, the proposal to repay funds pursuant to the Deposit Agreement;

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Ontario as follows:

SECTION 1. The foregoing recitals are true and correct, and the City Council so finds and determines.

SECTION 2. The Community Facilities District is hereby established.

SECTION 3. The name for the Community Facilities District is "City of Ontario Community Facilities District No. 52 (Sundance Park)."

SECTION 4. The public facilities (the "Facilities") proposed to be financed by the Community Facilities District pursuant to the Act are described under the caption "Facilities" on Exhibit A hereto, which is by this reference incorporated herein. Those Facilities proposed to be purchased as completed public facilities are identified under the caption "Facilities to be Purchased" on Exhibit A hereto. The services (the "Services") proposed to be financed by the Community Facilities District pursuant to the Act are described under the caption "Services" on Exhibit A hereto. The incidental expenses proposed to be incurred are identified under the caption "Incidental Expenses" on Exhibit A hereto. All or any portion of the Facilities may be financed through a financing plan, including, but not limited to, a lease, lease-purchase or installment-purchase arrangement.

SECTION 5. The proposed special tax to be levied within the Community Facilities District has not been precluded by majority protest pursuant to Section 53324 of the Act.

SECTION 6. The City Council proposes that, except where funds are otherwise available, the Community Facilities District be authorized to annually levy within the Community Facilities District a special tax (the "Special Tax") sufficient to pay for all Facilities and Services, secured by recordation of a continuing lien against all nonexempt real property in the Community Facilities District. The rate, method of apportionment and manner of collection of the Special Tax in sufficient detail to allow each landowner or resident within the proposed Community Facilities District to estimate the maximum amount that he or she will have to pay, is specified in the Rate and Method of Apportionment of Special Tax (the "Rate and Method") attached hereto as Exhibit B, which is by this reference incorporated herein. The conditions under which the obligation to pay the Special Tax to be levied to pay for Facilities may be prepaid and permanently satisfied are specified in the Rate and Method. The Special Tax will be collected in the same manner as ordinary *ad valorem* property taxes or in such other manner as the City Council shall determine, including direct billing of the affected property owners.

SECTION 7. The Special Tax may only finance the Services to the extent that they are in addition to those provided in the territory of the Community Facilities District before the date the Community Facilities District is created. The Services may not supplant services already available within that territory when the Community Facilities District is created. Bonds of the Community Facilities District may not be issued to fund any of the Services.

SECTION 8. The tax year after which no further Special Tax to pay for Facilities shall be levied against any parcel used for private residential purposes is specified in the Rate and Method. Under no circumstances shall the Special Tax to pay for Facilities in any fiscal year against any parcel used for private residential purposes be increased as a consequence of delinquency or default by the owner or owners of any other parcel or parcels within the Community Facilities District by more than 10% above the amount that would have been levied in that fiscal year had there never been any such delinquencies or defaults. For purposes of this paragraph, a parcel shall be considered "used for private residential purposes" not later than the date on which an occupancy permit for private residential use is issued. The Special Tax to pay for Services will be levied in perpetuity, as provided in the Rate and Method.

SECTION 9. Pursuant to Section 53344.1 of the Act, the City Council hereby reserves to itself the right and authority to allow any interested owner of property within the Community Facilities District, subject to the provisions of said Section 53344.1 and to those conditions as it may impose, and any applicable prepayment penalties as prescribed in the bond indenture or comparable instrument or document, to tender to the Community Facilities District treasurer in full payment or part payment of any installment of the Special Tax or the interest or penalties thereon that may be due or delinquent, but for which a bill has been received, any bond or other obligation secured thereby, the bond or other obligation to be taken at par and credit to be given for the accrued interest shown thereby computed to the date of tender.

SECTION 10. The name, address and telephone number of the office, department or bureau that will be responsible for preparing annually a current roll of Special Tax levy obligations by assessor's parcel number and that will be responsible for estimating further Special Tax levies pursuant to Section 53340.2 of the Act are as follows: City of Ontario, Financial Services Agency, 303 East B Street, Ontario, California 91764, (909) 395-2015 or email CFD@ontarioca.gov.

SECTION 11. Upon recordation of a notice of special tax lien pursuant to Section 3114.5 of the California Streets and Highways Code, a continuing lien to secure each levy of the Special Tax shall attach to all nonexempt real property in the Community Facilities District and this lien shall continue in force and effect until the Special Tax obligation is prepaid, permanently satisfied and canceled in accordance with law or until the Special Tax ceases to be levied and a notice of cessation of the Special Tax is recorded in accordance with Section 53330.5 of the Act.

SECTION 12. The boundary map of the Community Facilities District has been recorded in San Bernardino County in Book 91 at Pages 74 through 76 of Maps of Assessments and Community Facilities Districts in the San Bernardino County Recorder's Office (Document No. 2024-0153941).

SECTION 13. The City Council proposes that the annual appropriations limit, as defined by subdivision (h) of Section 8 of Article XIII B of the California Constitution, of the Community Facilities District be established at $85,000,000.

SECTION 14. Pursuant to the provisions of the Act, the propositions to authorize the Community Facilities District to levy the Special Tax and to establish the appropriations limit of the Community Facilities District specified above shall be subject to the approval of the qualified electors of the Community Facilities District at a special election. The City Council hereby finds and determines that no persons were registered to vote within the territory of the proposed Community Facilities District as of July 15, 2024, and that 12 or more persons have not been registered to vote within the territory of the Community Facilities District for each of the 90 days preceding the close of the public hearing held by the City Council on the establishment of the Community Facilities District. Accordingly, pursuant to Section 53326 of the Act, the vote shall be by the landowners of the Community Facilities District and each person who is the owner of land as of the close of said public hearing, or the authorized representative thereof, shall have one vote for each acre or portion of an acre that he or she owns within the Community Facilities District not exempt from the Special Tax. The voting procedure shall be by mailed or hand-delivered ballot.

SECTION 15. BrookCal Ontario has heretofore advanced certain funds, and may advance additional funds, that have been or may be used to pay costs incurred in creating the Community Facilities District and the incurrence of bonded indebtedness thereby. The City Council has previously approved the acceptance of such funds for the purpose of paying costs incurred in creating the Community Facilities District and the incurrence of bonded indebtedness thereby. The City Council proposes to repay BrookCal Ontario all or a portion of such funds so advanced, without interest, solely from the proceeds of any such bonded indebtedness incurred by the Community Facilities District, pursuant to the Deposit Agreement. The Deposit Agreement is hereby incorporated herein as though set forth in full herein.

SECTION 16. The City Council hereby finds and determines that all proceedings, up to and including the adoption of this Resolution, were valid and in conformity with the requirements of the Act. In accordance with Section 53325.1 of the Act, such finding shall be final and conclusive.

SECTION 17. All actions heretofore taken by the officers, employees and agents of the City with respect to the establishment of the Community Facilities District, or in connection with or related to any of the matters referred to herein, are hereby approved, confirmed and ratified.

SECTION 18. The officers, employees and agents of the City are hereby authorized and directed to take all actions and do all things that they, or any of them, may deem necessary or desirable to accomplish the purposes of this Resolution and not inconsistent with the provisions hereof.

SECTION 19. This Resolution shall take effect immediately upon its adoption.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 20th day of August, 2024.

EXHIBIT A

FACILITIES, SERVICES AND INCIDENTAL EXPENSES

Facilities

The types of public facilities to be financed by the Community Facilities District are street and bridge improvements, including grading, paving, curbs and gutters, sidewalks, street signalization and signage, street lights and parkway and landscaping related thereto, domestic and recycled water distribution facilities, sewer collection facilities, solid waste facilities, storm drainage facilities, park and recreation facilities and equipment, aquatic facilities and equipment, fire facilities and equipment, police facilities and equipment, library facilities and equipment, fiber optic telecommunication, wireless communication and public safety camera facilities and equipment, general governmental office, administrative and meeting facilities, and land, rights-of-way and easements necessary for any of such facilities.

Facilities to be Purchased

The types of public facilities to be purchased as completed facilities are street and bridge improvements, including grading, paving, curbs and gutters, sidewalks, street signalization and signage, street lights and parkway and landscaping related thereto, domestic and recycled water distribution facilities, sewer collection facilities, solid waste facilities, storm drainage facilities, and land, rights-of-way and easements necessary for any of such facilities.

Services

The types of City services to be financed by the Community Facilities District are police protection services, fire protection and suppression services, ambulance and paramedic services, maintenance and lighting of parks, parkways, streets, roads and open space, flood and storm protection services, maintenance and operation of fiber optic telecommunication, wireless communication and public safety camera systems and maintenance and operation of any real property or other tangible property with an estimated useful life of five or more years that is owned by the City.

Incidental Expenses

The incidental expenses proposed to be incurred include the following:

(a) the cost of planning and designing public facilities to be financed, including the cost of environmental evaluations of those facilities;

(b) the costs associated with the creation of the Community Facilities District, issuance of bonds, determination of the amount of taxes, collection of taxes, payment of taxes, or costs otherwise incurred in order to carry out the authorized purposes of the Community Facilities District; and

(c) any other expenses incidental to the construction, completion, and inspection of the authorized work.

EXHIBIT B

RATE AND METHOD OF APPORTIONMENT OF SPECIAL TAX

CITY OF ONTARIO
COMMUNITY FACILITIES DISTRICT NO. 52
(SUNDANCE PARK)

RATE AND METHOD OF APPORTIONMENT OF SPECIAL TAX

Special Taxes shall be levied on all Assessor's Parcels in the City of Ontario Community Facilities District No. 52 (Sundance Park) ("CFD No. 52") and collected each Fiscal Year, commencing in Fiscal Year 2024-25, in an amount determined by the City Council of the City of Ontario through the application of the Rate and Method of Apportionment, as described below. All of the real property in CFD No. 52, unless exempted by law or by the provisions hereof, shall be taxed for the purposes, to the extent, and in the manner herein provided.

A. DEFINITIONS

The terms hereinafter set forth have the following meanings:

"Acre" or **"Acreage"** means the land area of an Assessor's Parcel as shown on an Assessor's Parcel Map, or if the land area is not shown on an Assessor's Parcel Map, the land area shown on the applicable Final Subdivision Map, parcel map, condominium plan, or other recorded County map.

"Act" means the Mello-Roos Community Facilities Act of 1982, as amended, being Chapter 2.5 of Part 1 of Division 2 of Title 5 of the California Government Code.

"Administrative Expenses" means the following actual or reasonably estimated costs directly related to the administration of CFD No. 52: the costs of computing the Special Taxes and preparing the annual Special Tax collection schedules (whether by the City or CFD No. 52 or both); the costs of collecting the Special Taxes (whether by the County or otherwise); the costs of remitting the Special Taxes to the Trustee; the costs of the Trustee (including its legal counsel) in the discharge of the duties required of it under the Indenture; the costs to the City or CFD No. 52 of complying with arbitrage rebate requirements; the costs to the City or CFD No. 52 of complying with City, CFD No. 52, or obligated persons disclosure requirements associated with applicable federal and state securities laws and of the Act; the costs associated with preparing Special Tax disclosure statements and responding to public inquiries regarding the Special Taxes; the costs of the City or CFD No. 52 related to the analysis and reduction, if any, of the Special Tax A on Single Family Property in accordance with Section C.1 herein; the costs of the City or CFD No. 52 related to an appeal of the Special Tax; the costs associated with the release of funds from any escrow account; the City's administration fees and third party expenses; the costs of City staff time and reasonable overhead relating to CFD No. 52; and amounts estimated or advanced by the City or CFD No. 52 for any other administrative purposes of the CFD, including attorney's fees and other costs related to commencing and pursuing to completion any foreclosure of delinquent Special Taxes.

"Assessor's Parcel" means a lot or parcel shown in an Assessor's Parcel Map with an assigned Assessor's Parcel Number.

"Assessor's Parcel Map" means an official map of the Assessor of the County designating parcels by Assessor's Parcel Number.

"Assessor's Parcel Number" means, with respect to an Assessor's Parcel, that number assigned to such Assessor's Parcel by the County for purposes of identification.

"Assigned Special Tax A" means the Special Tax A for each Land Use Class of Developed Property, as determined in accordance with Section C.1.a.2 below.

"Backup Special Tax A" means the Special Tax A for each Land Use Class of Developed Property, as determined in accordance with Section C.1.a.3 below.

"Bonds" means any bonds or other debt (as defined in Section 53317(d) of the Act) issued by CFD No. 52 under the Act and payable from Special Tax A.

"Buildable Lot" means an individual lot, within a Final Subdivision Map or an area expected by CFD No. 52 to become Final Mapped Property, such as the area within a Tentative Tract Map, for which a building permit may be issued without further subdivision of such lot.

"CFD Administrator" means an official of the City responsible for determining the Special Tax A Requirement and Special Tax B Requirement, providing for the levy and collection of the Special Taxes, and performing the other duties provided for herein.

"CFD No. 27" means City of Ontario Community Facilities District No. 27 (New Haven Services).

"CFD No. 52" means City of Ontario Community Facilities District No. 52 (Sundance Park).

"City" means the City of Ontario, California.

"City Council" means the City Council of the City, acting as the legislative body of CFD No. 52.

"Contractual Impositions" means (a) a voluntary contractual assessment established and levied on an Assessor's Parcel pursuant to Chapter 29 of Part 3 of Division 7 of the California Streets and Highways Code (commencing with Section 5898.10 *et seq.*), as amended from time to time, (b) a special tax established and levied on an Assessor's Parcel pursuant to Section 53328.1 of the California Government Code and related provisions of the Act, as amended from time to time, and (c) any other fee, charge, tax, or assessment established and levied on an individual Assessor's Parcel pursuant to a contractual agreement or other voluntary consent by the owner thereof (e.g., property owner association assessments).

"County" means the County of San Bernardino.

"Designated Buildable Lot" means a Buildable Lot for which a building permit has not been issued by the City as of the date of calculation of the Backup Special Tax A.

"Developed Property" means for each Fiscal Year, all Taxable Property, exclusive of Final Mapped Property, Taxable Property Owner Association Property, and Taxable Public Property, for which a building permit or other applicable permit for new construction was issued after January 1, 2023, and before May 1 of the prior Fiscal Year.

"Expected Residential Lot Count" means 120 Buildable Lots of Single Family Property in Tax Zone 1 and 298 Buildable Lots of Single Family Property in Tax Zone 2, or, as determined by the CFD Administrator, the number of Buildable Lots of Single Family Property based on the most recent Tentative Tract Map(s) or most recently recorded Final Subdivision Map(s) or modified Final Subdivision Map(s).

"Facilities" means the public facilities authorized to be financed, in whole or in part, by CFD No. 52.

"Final Mapped Property" means, for each Fiscal Year, all Taxable Property, exclusive of Developed Property, Taxable Property Owner Association Property, and Taxable Public Property, which as of January 1 of the previous Fiscal Year was located within a Final Subdivision Map. The term Final Mapped Property shall include any parcel map or Final Subdivision Map, or portion thereof, that creates individual lots for which a building permit may be issued, including Parcels that are designated as a remainder Parcel (i.e., one where the size, location, etc., precludes any further subdivision or taxable use).

"Final Subdivision Map" means a final tract map, parcel map, or lot line adjustment approved by the City pursuant to the Subdivision Map Act (California Government Code Section 66410 et seq.) or a condominium plan recorded pursuant to California Civil Code Section 4285 that, in either case, creates individual lots for which building permits may be issued without further subdivision.

"Fiscal Year" means the period starting July 1 and ending on the following June 30.

"Gated Community Attached Dwelling Unit" means, with respect to Special Tax B, a Unit within any residential building containing two or more dwelling units (including attached condominiums, townhouses, duplexes, triplexes, and apartments) within a gated community that, within such community, is primarily served by private interior streets.

"Indenture" means the indenture, fiscal agent agreement, resolution, or other instrument pursuant to which Bonds are issued, as modified, amended, and/or supplemented from time to time.

"Land Use Class" means any of the classes listed in Tables 1, 2, and 3 below.

"Lower Income Household Welfare Exemption Property" means, for each Fiscal Year, an Assessor's Parcel within the boundaries of CFD No. 52 that is subject to a welfare exemption under subdivision (g) of Section 214 of the California Revenue and Taxation Code (or any successor statute), as indicated in the most recent County assessor's roll finalized prior to such Fiscal Year.

"Maximum Special Tax A" means, with respect to an Assessor's Parcel of Taxable Property, the Maximum Special Tax A determined in accordance with Section C.1 below that can be levied in any Fiscal Year on such Assessor's Parcel of Taxable Property.

"Maximum Special Tax B" means, with respect to an Assessor's Parcel of Taxable Property, the Maximum Special Tax B determined in accordance with Section C.2 below that can be levied in any Fiscal Year on such Assessor's Parcel of Taxable Property.

"Minimum Sale Price" means the minimum price at which Units of a given Land Use Class have sold or are expected to be sold in a normal marketing environment and shall not include prices for such Units that are sold at a discount to expected sales prices for the purpose of stimulating the initial sales activity with respect to such Land Use Class.

"Multiple Family Dwelling Unit" means, with respect to Special Tax B, a Unit within any residential building containing two or more dwelling units, including attached condominiums, townhomes, duplexes, triplexes, and apartments, but excluding Gated Community Attached Dwelling Units.

"Non-Residential Property" means all Assessor's Parcels of Developed Property for which a building permit was issued by the City permitting the construction of one or more non-residential structures or facilities.

"Other Residential Property" means, with respect to Special Tax A, all Assessor's Parcels of Developed Property for which a building permit was issued by the City for purposes of constructing Units, excluding Single Family Attached Property and Single Family Detached Property.

"Outstanding Bonds" means all Bonds which are outstanding under and in accordance with the provisions of the Indenture.

"Price Point Consultant" means any consultant or firm of such consultants selected by CFD No. 52 that (a) has substantial experience in performing price point studies for residential units within community facilities districts established under the Act or otherwise estimating or confirming pricing for residential units in such community facilities districts, (b) has recognized expertise in analyzing economic and real estate data that relates to the pricing of residential units in such community facilities districts, (c) is in fact independent and not under the control of CFD No. 52 or the City, (d) does not have any substantial interest, direct or indirect, with or in (i) CFD No. 52, (ii) the City, (iii) any owner of real property in CFD No. 52, or (iv) any real property in CFD No. 52, and (e) is not connected with CFD No. 52 or the City as an officer or employee thereof, but who may be regularly retained to make reports to CFD No. 52 or the City.

"Price Point Study" means a price point study or a letter updating a previous price point study prepared by the Price Point Consultant pursuant to Section C herein.

"Property Owner Association Property" means, for each Fiscal Year, any property within the boundaries of CFD No. 52 that was owned by a property owner association, including any master or sub-association, as of January 1 of the prior Fiscal Year.

"Proportionately" means (a) for Developed Property in the first step of Section D.1 below, that the ratio of the actual Special Tax A levy to the Maximum Special Tax A is equal for all Assessor's Parcels of Developed Property; however, for Developed Property in the fourth step of Section D.1 below, Proportionately means that the amount of the increase above the Assigned Special Tax A, if necessary, is equal for all Assessor's Parcels of Developed Property, except that if the Backup Special Tax A limits the increase on any Assessor's Parcel(s), then the amount of the increase shall be equal for the remaining Assessor's Parcels; (b) with respect to Special Tax B, that the ratio of the actual Special Tax B levy to the Maximum Special Tax B is equal for all Assessor's Parcels of Developed Property; (c) for Final Mapped Property, that the ratio of the actual Special Tax A levy to the Maximum Special Tax A is equal for all Assessor's Parcels of Final Mapped Property; (d) for Undeveloped Property, that the ratio of the actual Special Tax A levy to the Maximum Special Tax A is equal for all Assessor's Parcels of Undeveloped Property; (e) for Taxable Property Owner Association Property, that the ratio of the actual Special Tax A levy to the Maximum Special Tax A is equal for all Assessor's Parcels of Taxable Property Owner Association Property; and (f) for Taxable Public Property, that the ratio of the actual Special Tax A levy to the Maximum Special Tax A is equal for all Assessor's Parcels of Taxable Public Property.

"Public Property" means, for each Fiscal Year, property within the boundaries of CFD No. 52 that is (a) owned by, irrevocably offered to, or dedicated to the federal government, the State, the County, the City, or any local government or other public agency or (b) encumbered by an easement for purposes of public or utility right-of-way that makes impractical its use for any purpose other than that set forth in such easement; provided that any property leased by a public agency to a private entity and subject to taxation under Section 53340.1 of the Act shall be taxed and classified according to its use.

"Rate and Method of Apportionment" means this Rate and Method of Apportionment of Special Tax.

"Residential Floor Area" means all of the Square Footage of living area within the perimeter of a Unit, not including any carport, walkway, garage, overhang, patio, enclosed patio, or similar area. The determination of Residential Floor Area shall be as set forth in the building permit(s) issued for such Assessor's Parcel, or as set forth in other official records maintained by the City's Building Department or other appropriate means selected by CFD No. 52. The actual Square Footage shall be rounded up to the next whole square foot. Once such determination has been made for an Assessor's Parcel, it shall remain fixed in all future Fiscal Years unless an appeal pursuant to Section F below is approved that results in a change in the actual Square Footage.

"Residential Property" means, for each Fiscal Year, an Assessor's Parcel for which a building permit for new construction of one or more Units was issued after January 1, 2023, and before May 1 of the prior Fiscal Year.

"Services" means the services authorized to be financed, in whole or in part, by CFD No. 52.

"Single Family Attached Property" means all Assessor's Parcels of Developed Property for which a building permit or use permit was issued for construction of a residential structure consisting of two or more Units that share common walls, have separate Assessor's Parcel Numbers assigned to them (except for a duplex unit, which may share an Assessor's Parcel with another duplex unit), and may be purchased by individual homebuyers (which shall still be the case even if the Units are purchased and subsequently offered for rent by the owner of the Unit), including such residential structures within a condominium project as defined in Civil Code Section 4125.

"Single Family Detached Dwelling Unit" means, with respect to Special Tax B, a Unit of Single Family Detached Property.

"Single Family Detached Property" means all Assessor's Parcels of Developed Property for which a building permit was issued for construction of a Unit, on one legal lot, that does not share a common wall with another Unit.

"Single Family Property" means all Assessor's Parcels of Single Family Attached Property and Single Family Detached Property.

"Special Taxes" means, collectively, Special Tax A and Special Tax B.

"Special Tax A" means the special tax authorized by the qualified electors of CFD No. 52 to be levied within the boundaries of CFD No. 52 to pay for Facilities and Services.

"Special Tax A Requirement" means for any Fiscal Year that amount required, after taking into account available amounts held in the funds and accounts established under the Indenture, for CFD No. 52 to: (i) pay debt service on all Outstanding Bonds which is due in the calendar year that commences in such Fiscal Year; (ii) pay periodic costs on the Bonds, including, but not limited to, credit enhancement and rebate payments on the Bonds; (iii) pay a pro rata share of Administrative Expenses; (iv) provide any amounts required to establish or replenish any reserve fund for the Bonds; (v) pay directly for acquisition or construction of Facilities, or the cost of Services, to the extent that the inclusion of such amounts does not increase the Special Tax A levy on Final Mapped Property or Undeveloped Property; and (vi) provide an amount equal to Special Tax A delinquencies based on the historical delinquency rate for Special Tax A as determined by the CFD Administrator.

"Special Tax B" means the special tax authorized by the qualified electors of CFD No. 52 to be levied within the boundaries of CFD No. 52 to pay for Services.

"Special Tax B Requirement" means for any Fiscal Year that amount required, after taking into account available amounts in any funds and accounts established to pay for Services, to pay the cost of Services, a pro rata share of Administrative Expenses, and an amount equal to Special Tax B delinquencies based on the historical delinquency rate for Special Tax B as determined by the CFD Administrator.

"Square Footage" or **"Sq. Ft."** means the floor area square footage reflected on the original construction building permit, or as set forth in other official records maintained by the City's Building Department or other appropriate means selected by CFD No. 52, issued for construction of Residential Property or Non-Residential Property, plus any square footage subsequently added to a building of Non-Residential Property after issuance of a building permit for expansion or renovation of such building.

"State" means the State of California.

"Taxable Property" means, for each Fiscal Year, all of the Assessor's Parcels within the boundaries of CFD No. 52 that are not exempt from the Special Taxes pursuant to law or Section E below.

"Taxable Property Owner Association Property" means, for each Fiscal Year, all Assessor's Parcels of Property Owner Association Property that are not exempt from the Special Taxes pursuant to Section E below.

"Taxable Public Property" means, for each Fiscal Year, all Assessor's Parcels of Public Property that are not exempt from the Special Taxes pursuant to law or Section E below.

"Tax Zone" means a mutually exclusive geographic area, within which particular Special Taxes may be levied pursuant to this Rate and Method of Apportionment. Attachment 1 identifies the two Tax Zones in CFD No. 52.

"Tax Zone 1" means the geographic area designated in Attachment 1 of this Rate and Method of Apportionment as Tax Zone 1, is consistent with the boundaries of TTM 20529, and was commonly referred to as the Tilden project at the time of formation of CFD No. 52.

"Tax Zone 2" means the geographic area designated in Attachment 1 of this Rate and Method of Apportionment as Tax Zone 2, is consistent with the boundary of TTM 20449, and was commonly referred to as the Sundance Park project at the time of formation of CFD No. 52.

"Tentative Tract Map" means a map: (i) showing a proposed subdivision of an Assessor's Parcel(s) and the conditions pertaining thereto; (ii) that may or may not be based on a detailed survey; and (iii) that is not recorded by the County to create legal lots.

"Total Tax Burden" means, for a Unit within a Land Use Class, for the Fiscal Year in which the Total Tax Burden is being calculated, the sum of (a) the Assigned Special Tax A for such Land Use Class for such Fiscal Year, plus (b) with respect to Tax Zone 1, the Special Tax B for such Land Use Class for such Fiscal Year, and with respect to Tax

Zone 2, the Special Tax of CFD No. 27 for such Land Use Class for such Fiscal Year, plus (c) the *ad valorem* property taxes, special assessments, special taxes for any overlapping community facilities districts, and any other governmental fees, charges (other than fees or charges for services such as sewer and trash), taxes, and assessments (which do not include Contractual Impositions) collected by the County on *ad valorem* tax bills, plus (d) property owner association assessments (but excluding the refuse collection portion of such assessments), and that the CFD Administrator estimates would be levied or imposed on such Unit in such Fiscal Year if the residential dwelling unit thereon or therein had been completed and sold, and was subject to such fees, charges, taxes, and assessments in such Fiscal Year.

"Trustee" means the trustee or fiscal agent under the Indenture.

"TTM 20449" means Tentative Tract Map No. 20449, the area of which is located within CFD No. 52.

"TTM 20529" means Tentative Tract Map No. 20529, the area of which is located within CFD No. 52.

"Undeveloped Property" means, for each Fiscal Year, all Taxable Property not classified as Developed Property, Final Mapped Property, Taxable Public Property, or Taxable Property Owner Association Property.

"Unit" means an individual single-family detached or attached home, townhome, condominium, apartment, or other residential dwelling unit, including each separate living area within a half-plex, duplex, triplex, fourplex, or other residential structure.

B. ASSIGNMENT TO LAND USE CATEGORIES

Each Fiscal Year, beginning with Fiscal Year 2024-25, all Taxable Property within CFD No. 52 shall be identified as within Tax Zone 1 or Tax Zone 2, and then classified as Developed Property, Final Mapped Property, Taxable Public Property, Taxable Property Owner Association Property, or Undeveloped Property, and shall be subject to Special Taxes in accordance with the Rate and Method of Apportionment as determined pursuant to Sections C and D below.

Assessor's Parcels of Developed Property shall be further classified as: Single Family Property (and further classified as Single Family Attached Property or Single Family Detached Property, as needed) or Other Residential Property (for Special Tax A); Single Family Detached Dwelling Unit, Multiple Family Dwelling Unit, or Gated Community Attached Dwelling Unit (for Special Tax B); or Non-Residential Property. For Special Tax A, Assessor's Parcels of Single Family Property in Tax Zone 1 shall be assigned to Land Use Classes 1 through 5, and Single Family Property in Tax Zone 2 shall be assigned to Land Use Classes 8 through 20, as listed in Tables 1 and 2 below based on the Residential Floor Area of the Units on such Assessor's Parcels. Also for Special Tax A, Other Residential Property and Non-Residential Property shall be assigned to Land Use Classes 6 and 7, respectively, in Tax Zone 1, and to Land Use Classes 21 and 22 in Tax Zone 2.

C. MAXIMUM SPECIAL TAX

1. Special Tax A

At least 30 days prior to the issuance of Bonds, the Assigned Special Tax A on Developed Property (set forth in Tables 1 and 2 below) shall be analyzed in accordance with and subject to the conditions set forth in this Section C. At such time, CFD No. 52 shall select and engage a Price Point Consultant and the CFD Administrator shall request the Price Point Consultant to prepare a Price Point Study setting forth the Minimum Sale Price of Units within each Land Use Class.

If based upon such Price Point Study the CFD Administrator calculates that the Total Tax Burden, excluding property owner association assessments, applicable to Units within one or more Land Use Classes of Single Family Property to be constructed within CFD No. 52 exceeds 1.95% of the Minimum Sale Price of such Units, the Assigned Special Tax A shall be reduced to the extent necessary to cause the Total Tax Burden, excluding property owner association assessments, that shall apply to Units within such Land Use Class(es) not to exceed 1.95% of the Minimum Sale Price of such Units.

Each Assigned Special Tax A reduction for a Land Use Class shall be calculated by the CFD Administrator separately, and it shall not be required that such reduction be proportionate among Land Use Classes. In connection with any reduction in the Assigned Special Tax A, the Backup Special Tax A shall also be reduced by the CFD Administrator based on the percentage reduction in Maximum Special Tax A revenues within the Tentative Tract Map area(s) where the Assigned Special Tax A reductions occurred. Upon determining the reductions, if any, in the Assigned Special Tax A and Backup Special Tax A required pursuant to this Section C, the CFD Administrator shall complete the Certificate of Modification of Special Tax substantially in the form attached hereto as Exhibit A (the "Certificate of Modification"), shall execute such completed Certificate of Modification, and shall deliver such executed Certificate of Modification to CFD No. 52. Upon receipt thereof, if in satisfactory form, CFD No. 52 shall execute such Certificate of Modification. The reduced Assigned Special Tax A and Backup Special Tax A specified in such Certificate of Modification shall become effective upon the execution of such Certificate of Modification by CFD No. 52.

The Special Tax A reductions required pursuant to this section shall be reflected in an amended notice of Special Tax lien, which CFD No. 52 shall cause to be recorded with the County Recorder as soon as practicable after execution of the Certificate of Modification by CFD No. 52. The reductions in this section apply to Single Family Property, but not to Other Residential Property or Non-Residential Property.

a. Developed Property

1) *Maximum Special Tax A*

The Maximum Special Tax A that may be levied in any Fiscal Year for each Assessor's Parcel classified as Developed Property shall be the greater of (i) the amount derived by application of the Assigned Special Tax A or (ii) the amount derived by application of the Backup Special Tax A. The Maximum Special Tax A shall not increase in future years, other than as calculated pursuant to Section C.1.a.3 below.

2) *Assigned Special Tax A*

The Assigned Special Tax A that may be levied in any Fiscal Year for each Land Use Class is shown below in Tables 1 and 2.

TABLE 1
TAX ZONE 1
ASSIGNED SPECIAL TAX A – DEVELOPED PROPERTY

Land Use Class	Description	Residential Floor Area (Square Footage)	Assigned Special Tax A
1	Single Family Property	< 1,601	$4,255 per Unit
2	Single Family Property	1,601 – 1,800	$4,409 per Unit
3	Single Family Property	1,801 – 2,000	$4,589 per Unit
4	Single Family Property	2,001 – 2,200	$5,016 per Unit
5	Single Family Property	> 2,200	$5,097 per Unit
6	Other Residential Property		$116,395 per Acre
7	Non-Residential Property		$116,395 per Acre

TABLE 2
TAX ZONE 2
ASSIGNED SPECIAL TAX A – DEVELOPED PROPERTY

Land Use Class	Description	Residential Floor Area (Square Footage)	Assigned Special Tax A
8	Single Family Attached Property	< 801	$2,992 per Unit
9	Single Family Attached Property	801 – 1,000	$3,117 per Unit
10	Single Family Attached Property	1,001 – 1,200	$3,626 per Unit
11	Single Family Attached Property	1,201 – 1,400	$3,786 per Unit
12	Single Family Attached Property	1,401 – 1,600	$4,024 per Unit
13	Single Family Attached Property	1,601 – 1,800	$4,384 per Unit
14	Single Family Attached Property	1,801 – 2,000	$4,608 per Unit
15	Single Family Attached Property	> 2,000	$4,819 per Unit
16	Single Family Detached Property	< 1,801	$4,708 per Unit
17	Single Family Detached Property	1,801 – 2,000	$4,988 per Unit
18	Single Family Detached Property	2,001 – 2,200	$5,482 per Unit
19	Single Family Detached Property	2,201 – 2,400	$5,954 per Unit
20	Single Family Detached Property	> 2,400	$6,038 per Unit
21	Other Residential Property		$116,962 per Acre
22	Non-Residential Property		$116,962 per Acre

3) Backup Special Tax A

The Backup Special Tax A shall be $4,522 per Unit for Single Family Property in Tax Zone 1 and, in Tax Zone 2, shall be $4,075 per Unit of Single Family Attached Property and $5,342 per Unit of Single Family Detached Property. However, if the Expected Residential Lot Count of Single Family Property does not equal 120 in Tax Zone 1 and 298 in Tax Zone 2, and the City has not issued Bonds, then the Backup Special Tax A for Designated Buildable Lots of Single Family Property in each Tax Zone shall be calculated according to the following formulas:

Tax Zone 1 = $542,632 ÷ Expected Residential Lot Count in Tax Zone 1 for Single Family Property

Tax Zone 2 = $855,810 ÷ Expected Residential Lot Count in Tax Zone 2 for Single Family Attached Property, and $470,098 ÷ Expected Residential Lot Count in Tax Zone 2 for Single Family Detached Property

If any portion of a Final Subdivision Map, or any area expected by CFD No. 52 to become Final Mapped Property – such as the area within TTM 20449, TTM 20529, or any other Tentative Tract Map – changes any time after the City has issued Bonds, causing an adjustment to the number of Designated Buildable Lots, then the Backup Special Tax A for all Designated Buildable Lots of Single Family Property subject to the change shall be calculated according to the following steps:

Step 1: Determine the total Backup Special Tax A that could have been collected from Designated Buildable Lots of Single Family Property within the applicable Tax Zone, prior to the Final Subdivision Map or expected Final Mapped Property change.

Step 2: Divide the amount determined in Step 1 by the number of Designated Buildable Lots of Single Family Property that exists in the applicable Tax Zone after the Final Subdivision Map or expected Final Mapped Property change.

Step 3: Apply the amount determined in Step 2 as the Backup Special Tax A per Unit for Single Family Property in the applicable Tax Zone.

The Backup Special Tax A for an Assessor's Parcel shall not change once an Assessor's Parcel is classified as Developed Property.

b. Final Mapped Property, Taxable Public Property, Taxable Property Owner Association Property, and Undeveloped Property

The Maximum Special Tax A for Final Mapped Property, Taxable Public Property, Taxable Property Owner Association Property, and Undeveloped Property shall be $116,395 per Acre in Tax Zone 1 and $116,962 per Acre in Tax Zone 2, and shall not be subject to increase or reduction and, therefore, shall remain the same in every Fiscal Year.

2. Special Tax B

The Maximum Special Tax B for each Assessor's Parcel classified as Developed Property in Tax Zone 1 shall be determined by reference to Table 3 below.

TABLE 3
MAXIMUM SPECIAL TAX B – DEVELOPED PROPERTY

Land Use Class	Maximum Special Tax B Fiscal Year 2024-25
Residential Property	
Single Family Detached Dwelling Unit	$1,501.46 per Unit
Multiple Family Dwelling Unit	$1,301.51 per Unit
Gated Community Attached Dwelling Unit	$1,091.38 per Unit
Non-Residential Property	$0.273800 per Sq. Ft.

On January 1 of each Fiscal Year, commencing January 1, 2025, the Maximum Special Tax B to be applied in the next Fiscal Year shall be subject to an automatic increase at a rate equal to 4.0% of the amount in effect for the prior Fiscal Year.

3. Multiple Land Use Classes on an Assessor's Parcel

In some instances an Assessor's Parcel of Developed Property may contain more than one Land Use Class. The Maximum Special Tax A levied on such Assessor's Parcel shall be the sum of the Maximum Special Tax A for all Units of Single Family Property and Acres of Other Residential Property and Non-Residential Property (based on the pro rata share of Square Footage between Other Residential Property and Non-Residential Property, according to the applicable building permits, Final Subdivision Map, parcel map, condominium plan, or other recorded County map) located on that Assessor's Parcel. The Maximum Special Tax B levied on such Assessor's Parcel in Tax Zone 1 shall be the sum of the Maximum Special Tax B for all Units of Residential Property and all Square Footage of Non-Residential Property (based on the applicable building permits, Final Subdivision Map, parcel map, condominium plan, or other recorded County map) located on that Assessor's Parcel in Tax Zone 1.

4. Developed Property Special Tax Obligation

Once an Assessor's Parcel has been taxed in any Fiscal Year as Developed Property, the Assessor's Parcel shall continue to be taxed as Developed Property regardless of changes to or expiration of the original building permit, and regardless of revisions to or destruction of the structure that was, or was expected to be, constructed pursuant to the original building permit.

D. METHOD OF APPORTIONMENT OF THE SPECIAL TAX

1. Special Tax A

Each Fiscal Year, beginning with Fiscal Year 2024-25, the CFD Administrator shall determine the Special Tax A Requirement for such Fiscal Year. The Special Tax A shall then be levied as follows:

First: If needed to satisfy the Special Tax A Requirement, Special Tax A shall be levied Proportionately on each Assessor's Parcel of Developed Property up to 100% of the applicable Assigned Special Tax A;

Second: If additional monies are needed to satisfy the Special Tax A Requirement after the first step has been completed, then Special Tax A shall be levied Proportionately on each Assessor's Parcel of Final Mapped Property up to 100% of the Maximum Special Tax A for Final Mapped Property;

Third: If additional monies are needed to satisfy the Special Tax A Requirement after the first two steps have been completed, then Special Tax A shall be levied Proportionately on each Assessor's Parcel of Undeveloped Property up to 100% of the Maximum Special Tax A for Undeveloped Property;

Fourth: If additional monies are needed to satisfy the Special Tax A Requirement after the first three steps have been completed, then the levy of Special Tax A on each Assessor's Parcel of Developed Property whose Maximum Special Tax A is determined through the application of the Backup Special Tax A shall be increased Proportionately from the Assigned Special Tax A up to the Maximum Special Tax A for each such Assessor's Parcel;

Fifth: If additional monies are needed to satisfy the Special Tax A Requirement after the first four steps have been completed, then Special Tax A shall be levied Proportionately on each Assessor's Parcel of Taxable Property Owner Association Property up to the Maximum Special Tax A for Taxable Property Owner Association Property;

Sixth: If additional monies are needed to satisfy the Special Tax A Requirement after the first five steps have been completed, then Special Tax A shall be levied Proportionately on each Assessor's Parcel of Taxable Public Property up to the Maximum Special Tax A for Taxable Public Property.

Notwithstanding the above, under no circumstances shall Special Tax A levied in any Fiscal Year on any Assessor's Parcel of Single Family Property or Other Residential Property for which an occupancy permit for private residential use has been issued be increased as a result of delinquency or default by the owner or owners of any other Assessor's Parcel or Assessor's Parcels within CFD No. 52 by more than ten percent above the amount that would have been levied in that Fiscal Year had there never been any such delinquencies or defaults.

2. Special Tax B

Each Fiscal Year, beginning with Fiscal Year 2024-25, the CFD Administrator shall determine the Special Tax B Requirement. The Special Tax B shall then be levied Proportionately on each Assessor's Parcel of Developed Property in Tax Zone 1 up to 100% of the applicable Maximum Special Tax B for such Assessor's Parcel, until the Special Tax B Requirement is satisfied. However, the Special Tax B levied in any Fiscal Year shall not increase by more than 4.0% of the amount of the Special Tax B levied in the prior Fiscal Year.

E. EXEMPTIONS

In Tax Zone 1, no Special Tax shall be levied on up to 0.17 Acres of Public Property and up to 3.63 Acres of Property Owner Association Property. In Tax Zone 2, no Special Tax shall be levied on up to 1.53 Acres of Public Property and up to 8.46 Acres of Property Owner Association Property. Tax-exempt status in each Tax Zone will be assigned by the CFD Administrator in the chronological order in which property becomes Public Property or Property Owner Association Property.

Property Owner Association Property or Public Property that is not exempt from the Special Tax A under this section shall be subject to the levy of Special Tax A and shall be taxed Proportionately as part of the fifth or sixth step, respectively, in Section D above, up to 100% of the applicable Maximum Special Tax A for Taxable Property Owner Association Property and Taxable Public Property. No Special Tax A shall be levied in any Fiscal Year on Assessor's Parcels that have fully prepaid the Special Tax A obligation pursuant to the formula set forth in Section H.

No Special Tax shall be levied on Lower Income Household Welfare Exemption Property; provided, however, that if, in any Fiscal Year, applicable law does not require that Lower Income Household Welfare Exemption Property be exempt from some portion, or all, of the Special Tax, such portion, or all, of the Special Tax shall be levied on such property in accordance with this Rate and Method of Apportionment based on the Land Use Class to which the Assessor's Parcel is assigned.

F. APPEALS

Any property owner may file a written appeal of the Special Tax with CFD No. 52 claiming that the amount or application of the Special Tax is not correct. The appeal must be filed not later than one calendar year after having paid the Special Tax that is disputed, and the appellant must be current in all payments of Special Taxes. In addition, during the term of the appeal process, all Special Taxes levied must be paid on or before the payment date established when the levy was made.

The appeal must specify the reasons why the appellant claims the Special Tax is in error. The CFD Administrator shall review the appeal, meet with the appellant if the CFD Administrator deems necessary, and advise the appellant of its determination.

If the property owner disagrees with the CFD Administrator's decision relative to the appeal, the owner may then file a written appeal with the City Council whose subsequent decision shall be final and binding on all interested parties. If the decision of the CFD Administrator or subsequent decision by the City Council requires the Special Tax to be modified or changed in favor of the property owner, then the CFD Administrator shall determine if sufficient Special Tax revenue is available to make a cash refund. If a cash refund cannot be made, then an adjustment shall be made to credit future Special Tax levy(ies).

This procedure shall be exclusive and its exhaustion by any property owner shall be a condition precedent to filing any legal action by such owner.

G. MANNER OF COLLECTION

The Special Taxes shall be collected in the same manner and at the same time as ordinary *ad valorem* property taxes; provided, however, that the Special Taxes may be collected in such other manner as the City Council shall determine, including direct billing of affected property owners.

H. PREPAYMENT OF SPECIAL TAX A

The following definitions apply to this Section H:

"CFD Public Facilities" means $23,817,000 for each Prepayment Period, or such lower number as determined by the City Council to be sufficient to fund the Facilities and Services to be provided by CFD No. 52.

"Expenditures Fund" means funds or accounts, regardless of their names, that are established to hold moneys that are available to acquire or construct Facilities and to fund Services.

"Future Facilities Costs" means the CFD Public Facilities minus (i) Facilities and Services costs previously paid from the Expenditures Fund during the Prepayment Period in which the prepayment is being made, (ii) moneys currently on deposit in the Expenditures Fund from deposits made during the Prepayment Period in which the prepayment is being made, and (iii) moneys currently on deposit in an escrow fund that are expected to be available to finance Facilities costs. In no event shall the amount of Future Facilities Costs be less than zero.

"Prepayment Period" means one of three periods of time during which a Special Tax prepayment may be made.

"Prepayment Period 1" means July 1, 2024, through June 30, 2058.

"Prepayment Period 2" means July 1, 2058, through June 30, 2091.

"Prepayment Period 3" means July 1, 2091, through June 30, 2125.

Only Special Tax A may be prepaid; Special Tax B shall continue to be levied on an annual basis on all Developed Property in Tax Zone 1 of CFD No. 52.

1. Prepayment in Full

The obligation of an Assessor's Parcel to pay the Special Tax A may be prepaid as described herein, provided that a prepayment may be made only for Assessor's Parcels for which a building permit for new construction was issued after January 1, 2023, and only if there are no delinquent Special Taxes with respect to such Assessor's Parcel at the time of prepayment. An owner of an Assessor's Parcel intending to prepay the Special Tax A obligation shall provide the CFD Administrator with written notice of intent to prepay. Within 30 days of receipt of such written notice, the CFD Administrator shall notify such owner of the prepayment amount for such Assessor's Parcel. The CFD Administrator may charge a fee for providing this service. Prepayment in any six month period must be made not less than 45 days prior to the next occurring date that notice of redemption of Bonds from the proceeds of such prepayment may be given to the Trustee pursuant to the Indenture.

The Special Tax A Prepayment Amount (defined below) shall be calculated as summarized below (capitalized terms as defined below):

Bond Redemption Amount	
plus	Redemption Premium
plus	Future Facilities Amount
plus	Defeasance Amount
plus	Administrative Fees and Expenses
less	Reserve Fund Credit
Total	Prepayment Amount

As of the proposed date of prepayment, the Special Tax A Prepayment Amount (defined below) shall be calculated by the CFD Administrator as follows:

Paragraph No.

1. Confirm that no Special Tax delinquencies apply to such Assessor's Parcel, and determine the Prepayment Period for the proposed prepayment.

2. Compute the Assigned Special Tax A and Backup Special Tax A for the Assessor's Parcel to be prepaid based on the Developed Property Special Tax A which is, or could be, charged in the current Fiscal Year. For Assessor's Parcels of Final Mapped Property (for which a building permit has been issued but which is not yet classified as Developed Property) to be prepaid, compute the Assigned Special Tax A and Backup Special Tax A for that Assessor's Parcel as though it was already designated as Developed Property, based upon the building permit which has already been issued for that Assessor's Parcel.

3. (a) Divide the Assigned Special Tax A computed pursuant to Paragraph 2 by the total estimated Assigned Special Tax A for CFD No. 52 based on the Developed Property Special Tax A which could be charged in the current Fiscal Year on all expected development through buildout of CFD No. 52, excluding any Assessor's Parcels which have been prepaid, and

   (b) Divide the Backup Special Tax A computed pursuant to Paragraph 2 by the estimated total Backup Special Tax A at buildout of CFD No. 52, excluding any Assessor's Parcels which have been prepaid.

4. Multiply the larger quotient computed pursuant to Paragraph 3(a) or 3(b) by the Outstanding Bonds to compute the amount of Outstanding Bonds to be retired and prepaid (the "Bond Redemption Amount").

5. Multiply the Bond Redemption Amount computed pursuant to Paragraph 4 by the applicable redemption premium (e.g., the redemption price minus 100%), if any, on the Outstanding Bonds to be redeemed (the "Redemption Premium").

6. Compute the Future Facilities Costs for the applicable Prepayment Period.

7. Multiply the larger quotient computed pursuant to Paragraph 3(a) or 3(b) by the amount determined pursuant to Paragraph 6 to compute the amount of Future Facilities Costs to be prepaid (the "Future Facilities Amount").

8. Compute the amount needed to pay interest on the Bond Redemption Amount from the first bond interest and/or principal payment date following the current Fiscal Year until the earliest redemption date for the Outstanding Bonds.

9. Determine the Special Tax A levied on the Assessor's Parcel in the current Fiscal Year which has not yet been paid.

10. Add the amounts computed pursuant to Paragraphs 8 and 9 to determine the "Defeasance Amount".

11. Verify the administrative fees and expenses of CFD No. 52, including the costs to compute the prepayment, the costs to invest the prepayment proceeds, the costs to redeem Bonds, and the costs to record any notices to evidence the prepayment and the redemption (the "Administrative Fees and Expenses").

12. If reserve funds for the Outstanding Bonds, if any, are at or above 100% of the reserve requirement (as defined in the Indenture) on the prepayment date, a reserve fund credit shall be calculated as a reduction in the applicable reserve fund for the Outstanding Bonds to be redeemed pursuant to the prepayment (the "Reserve Fund Credit"). No Reserve Fund Credit shall be granted if reserve funds are below 100% of the reserve requirement on the prepayment date or the redemption date.

13. The Special Tax A prepayment is equal to the sum of the amounts computed pursuant to Paragraphs 4, 5, 7, 10, and 11, less the amount computed pursuant to Paragraph 12 (the "Prepayment Amount").

14. From the Prepayment Amount, the amounts computed pursuant to Paragraphs 4, 5, 10, and 12 shall be deposited into the appropriate fund as established under the Indenture and be used to retire Outstanding Bonds or make debt service payments. The amount computed pursuant to Paragraph 7 shall be deposited into the Expenditures Fund. The amount computed pursuant to Paragraph 11 shall be retained by CFD No. 52.

The Special Tax A Prepayment Amount may be sufficient to redeem other than a $5,000 increment of Bonds. In such cases, the increment above $5,000, or integral multiple thereof, will be retained in the appropriate fund established under the Indenture to be used with the next prepayment of Bonds or to make debt service payments.

As a result of the payment of the current Fiscal Year's Special Tax A levy as determined under Paragraph 9 (above), the CFD Administrator shall remove the current Fiscal Year's Special Tax A levy for such Assessor's Parcel from the County tax rolls. With respect to any Assessor's Parcel that is prepaid during Prepayment Period 3, the CFD Administrator shall cause a suitable notice to be recorded in compliance with the Act to indicate that Special Tax A has been prepaid and that the obligation of such Assessor's Parcel to pay Special Tax A shall cease.

With respect to Special Tax A for any Assessor's Parcel that is prepaid during Prepayment Period 1 or Prepayment Period 2, the obligation of such Assessor's Parcel to pay Special Tax A shall be tolled, or suspended, through the end of such Prepayment Period, but shall resume in the first Fiscal Year of the subsequent Prepayment Period. The CFD Administrator shall cause a suitable notice to be recorded in compliance with the Act to indicate that Special Tax A has been satisfied for the remainder of the applicable Prepayment Period but has not been permanently satisfied and the obligation to pay Special Tax A will resume in the first Fiscal Year of the Prepayment Period following the Prepayment Period in which the prepayment was made. Once the obligation of an Assessor's Parcel to pay Special Tax A resumes, Special Tax A for the then applicable Prepayment Period may be prepaid.

Notwithstanding the foregoing, no Special Tax A prepayment shall be allowed unless the amount of Maximum Special Tax A that may be levied on Taxable Property within CFD No. 52 (after excluding 1.70 Acres of Public Property and 12.09 Acres of Property Owner Association Property) both prior to and after the proposed prepayment is at least 1.1 times the maximum annual debt service on all Outstanding Bonds.

2. Prepayment in Part

The Special Tax A on an Assessor's Parcel for which a building permit for new construction was issued after January 1, 2023, may be partially prepaid. The amount of the prepayment shall be calculated as in Section H.1, except that a partial prepayment shall be calculated by the CFD Administrator according to the following formula:

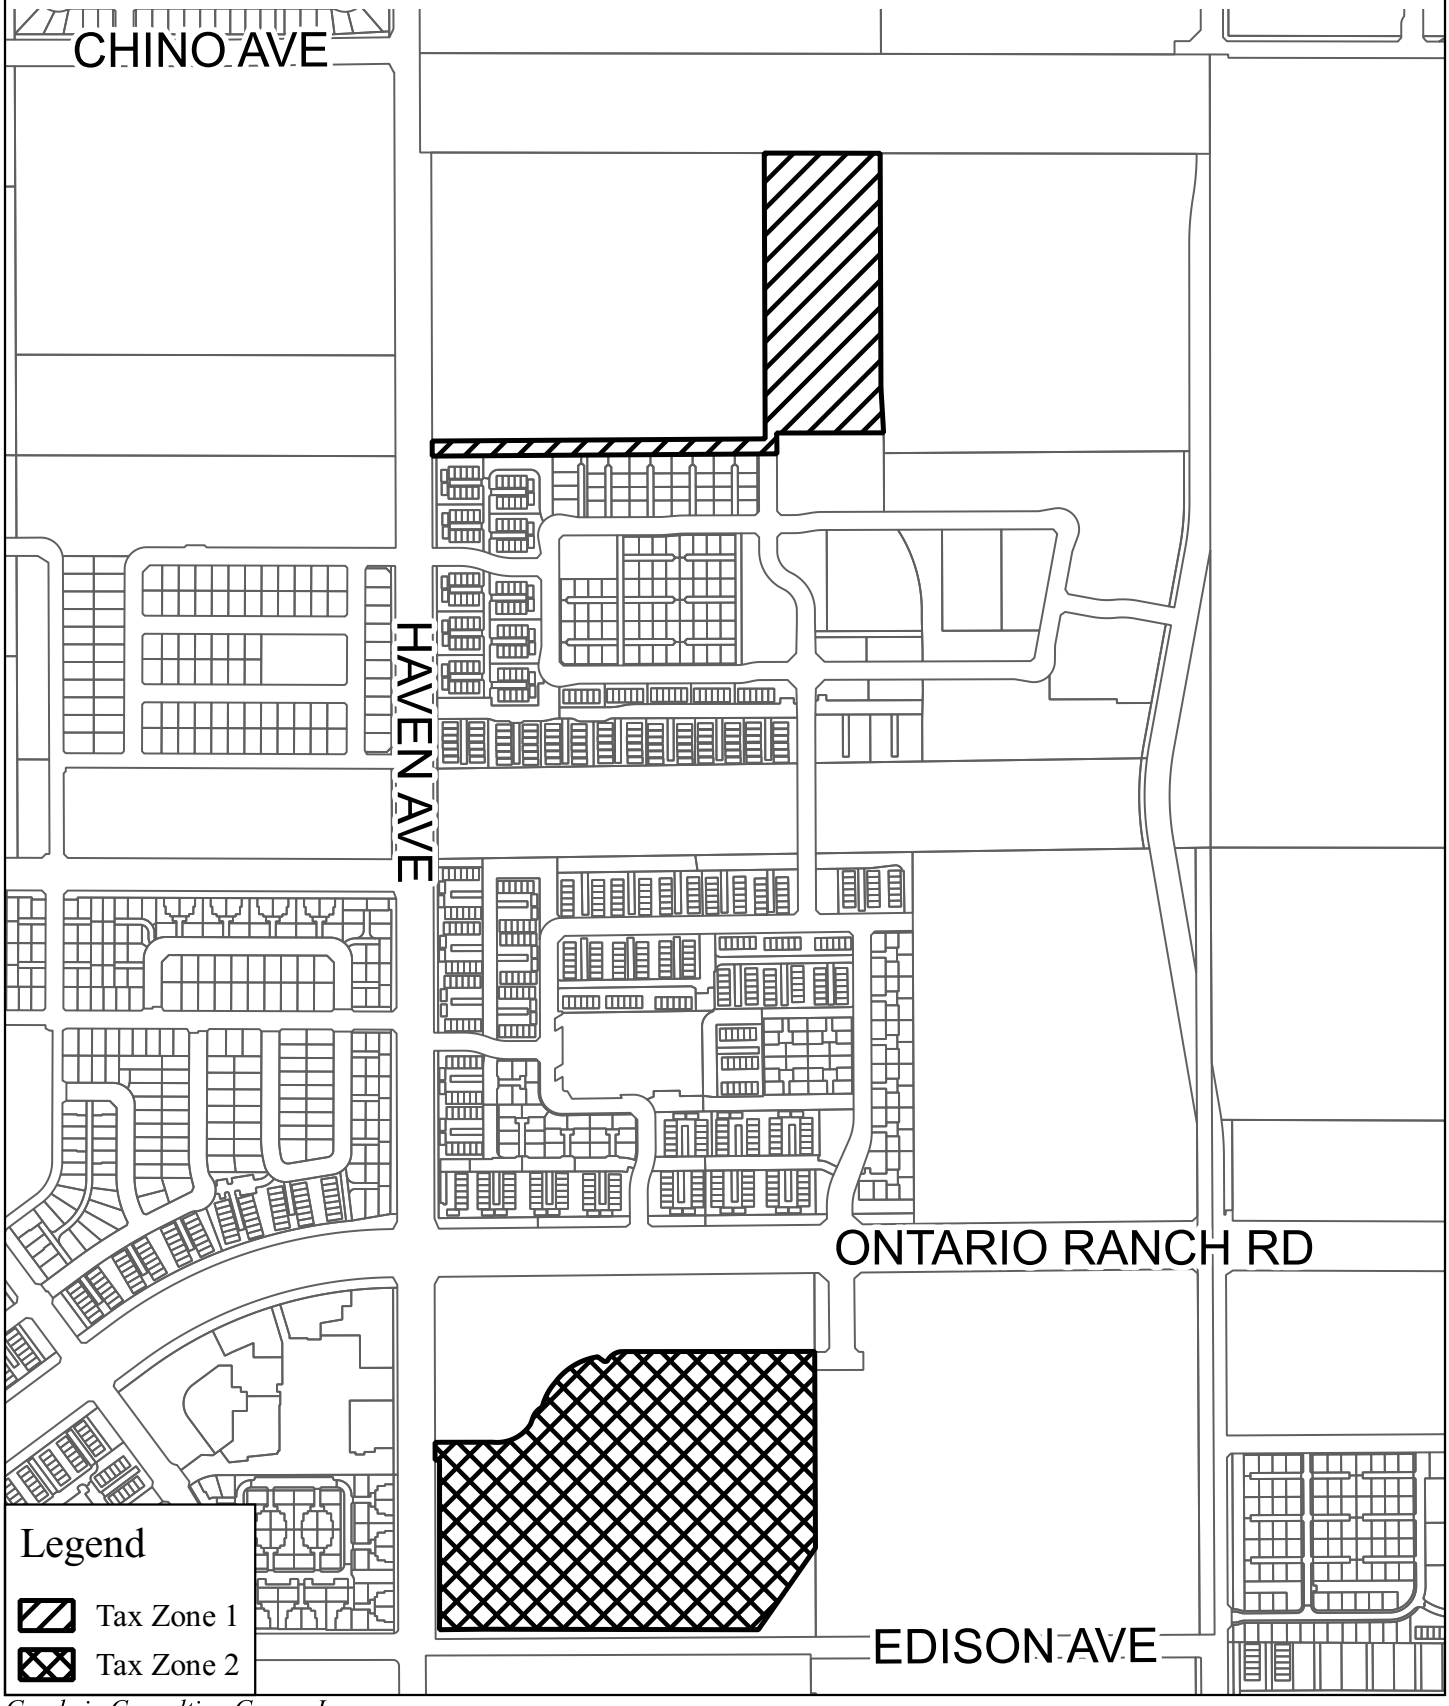
$$PP = (PF - AE) \times \% + AE.$$

The terms above have the following meaning:

PP = the partial prepayment
PF = the Prepayment Amount (full prepayment) for Special Tax A calculated according to Section H.1
AE = the Administrative Fees and Expenses determined pursuant to paragraph 11 above
% = the percentage by which the owner of the Assessor's Parcel(s) is partially prepaying Special Tax A

The Special Tax A partial prepayment amount must be sufficient to redeem at least a $5,000 increment of Bonds.

The owner of any Assessor's Parcel who desires such prepayment shall notify the CFD Administrator of such owner's intent to partially prepay Special Tax A and the percentage by which Special Tax A shall be prepaid. The CFD Administrator shall provide the owner with a statement of the amount required for the partial prepayment of Special Tax A for an Assessor's Parcel within thirty (30) days of the request and may charge a fee for providing this service. With respect to any Assessor's Parcel that is partially prepaid, the CFD Administrator shall (i) distribute the remitted prepayment funds according to Section H.1, and (ii) indicate in the records of CFD No. 52 that there has been a partial prepayment of Special Tax A and that a portion of Special Tax A with respect to such Assessor's Parcel, equal to the outstanding percentage (100% - "%", as defined above) of the Maximum Special Tax A, shall continue to be levied on such Assessor's Parcel pursuant to Section D during the Prepayment Period in which the partial prepayment is made.



For partial prepayments made during Prepayment Period 1 or Prepayment Period 2, the full amount of Special Tax A shall resume in the first Fiscal Year of the Prepayment Period following the Prepayment Period in which the partial prepayment was made. Once the obligation of an Assessor's Parcel to pay Special Tax A resumes, Special Tax A for the then applicable Prepayment Period may be prepaid.

I. TERM OF SPECIAL TAX

The Fiscal Year after which no further Special Tax A shall be levied or collected is Fiscal Year 2124-2125, except that Special Tax A that was lawfully levied in or before such Fiscal Year and that remains delinquent may be collected in subsequent years. Special Tax B shall continue to be levied indefinitely on an annual basis on all Developed Property in Tax Zone 1 of CFD No. 52.

CITY OF ONTARIO AND CFD NO. 52 CERTIFICATE

1. Pursuant to Section C.1 of the Rate and Method of Apportionment of Special Tax (the "Rate and Method") for City of Ontario Community Facilities District No. 52 (Sundance Park) ("CFD No. 52"), the Assigned Special Tax A and the Backup Special Tax A for Developed Property within CFD No. 52 has been modified.

    a. The information in Tables 1 and 2 relating to Assigned Special Tax A for Developed Property within CFD No. 52, as stated in Section C.1.a.2 of the Rate and Method of Apportionment, has been modified as follows:

TABLE 1
TAX ZONE 1
ASSIGNED SPECIAL TAX A – DEVELOPED PROPERTY

Land Use Class	Description	Residential Floor Area (Square Footage)	Assigned Special Tax A
1	Single Family Property	< 1,601	$[ ] per Unit
2	Single Family Property	1,601 – 1,800	$[ ] per Unit
3	Single Family Property	1,801 – 2,000	$[ ] per Unit
4	Single Family Property	2,001 – 2,200	$[ ] per Unit
5	Single Family Property	> 2,200	$[ ] per Unit
6	Other Residential Property		$[ ] per Acre
7	Non-Residential Property		$[ ] per Acre

EXHIBIT A

CERTIFICATE OF MODIFICATION OF SPECIAL TAX A
(PAGE 2 OF 3)

TABLE 2
TAX ZONE 2
ASSIGNED SPECIAL TAX A – DEVELOPED PROPERTY

Land Use Class	Description	Residential Floor Area (Square Footage)	Assigned Special Tax A
8	Single Family Attached Property	< 801	$[ ] per Unit
9	Single Family Attached Property	801 – 1,000	$[ ] per Unit
10	Single Family Attached Property	1,001 – 1,200	$[ ] per Unit
11	Single Family Attached Property	1,201 – 1,400	$[ ] per Unit
12	Single Family Attached Property	1,401 – 1,600	$[ ] per Unit
13	Single Family Attached Property	1,601 – 1,800	$[ ] per Unit
14	Single Family Attached Property	1,801 – 2,000	$[ ] per Unit
15	Single Family Attached Property	> 2,000	$[ ] per Unit
16	Single Family Detached Property	< 1,801	$[ ] per Unit
17	Single Family Detached Property	1,801 – 2,000	$[ ] per Unit
18	Single Family Detached Property	2,001 – 2,200	$[ ] per Unit
19	Single Family Detached Property	2,201 – 2,400	$[ ] per Unit
20	Single Family Detached Property	> 2,400	$[ ] per Unit
21	Other Residential Property		$[ ] per Acre
22	Non-Residential Property		$[ ] per Acre

b. The Backup Special Tax for Developed Property, as stated in Section C.1.a.3, shall be modified as follows:

> The Backup Special Tax A shall be $[ ] per Unit for Single Family Property in Tax Zone 1 and, in Tax Zone 2, shall be $[ ] per Unit of Single Family Attached Property and $[ ] per Unit of Single Family Detached Property. However, if the Expected Residential Lot Count of Single Family Property does not equal 120 in Tax Zone 1 and 298 in Tax Zone 2, and the City has not issued Bonds, then the Backup Special Tax A for Designated Buildable Lots of Single Family Property in each Tax Zone shall be calculated according to the following formulas:

EXHIBIT A

CERTIFICATE OF MODIFICATION OF SPECIAL TAX A
(PAGE 3 OF 3)

Tax Zone 1	=	$[ ] ÷ Expected Residential Lot Count in Tax Zone 1 for Single Family Property
Tax Zone 2	=	$[ ] ÷ Expected Residential Lot Count in Tax Zone 2 for Single Family Attached Property, and $[ ] ÷ Expected Residential Lot Count in Tax Zone 2 for Single Family Detached Property

2. The Special Tax A for Developed Property may only be modified prior to the first issuance of CFD No. 52 Bonds.

3. Upon execution of this certificate by CFD No. 52, CFD No. 52 shall cause an amended notice of Special Tax lien for CFD No. 52 to be recorded reflecting the modifications set forth herein.

Capitalized undefined terms used herein have the meanings ascribed thereto in the Rate and Method. The modifications set forth in this Certificate have been calculated by the CFD Administrator in accordance with the Rate and Method.

CITY OF ONTARIO
COMMUNITY FACILITIES DISTRICT NO. 52
(SUNDANCE PARK)

By:_____ Date:_____

RESOLUTION NO._____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, DEEMING IT NECESSARY FOR CITY OF ONTARIO COMMUNITY FACILITIES DISTRICT NO. 52 (SUNDANCE PARK) TO INCUR BONDED INDEBTEDNESS

WHEREAS, on July 2, 2024, the City Council (the "City Council") of the City of Ontario (the "City"), pursuant to the Mello-Roos Community Facilities Act of 1982 (the "Act"), adopted a resolution entitled "A Resolution of the City Council of the City of Ontario, California, of Intention to Establish a Community Facilities District Proposed to be Named City of Ontario Community Facilities District No. 52 (Sundance Park) and to Authorize the Levy of a Special Tax Therein," stating its intention to establish City of Ontario Community Facilities District No. 52 (Sundance Park) (the "Community Facilities District") and to authorize the Community Facilities District to levy a special tax (the "Special Tax") within the Community Facilities District for the purpose of financing certain public facilities (the "Facilities") and services; and

WHEREAS, on July 2, 2024, the City Council also adopted a resolution entitled "A Resolution of the City Council of the City of Ontario, California, Declaring it Necessary for City of Ontario Community Facilities District No. 52 (Sundance Park) to Incur Bonded Indebtedness" (the "Resolution Declaring Necessity"), declaring it necessary for the Community Facilities District to incur bonded indebtedness and setting the date for a public hearing to be held on the proposed debt authorization; and

WHEREAS, pursuant to the Resolution Declaring Necessity, notice of said public hearing was published in the *Inland Valley Daily Bulletin*, a newspaper of general circulation published in the area of the Community Facilities District, in accordance with the Act; and

WHEREAS, on this date, the City Council opened, conducted and closed said public hearing; and

WHEREAS, at said public hearing, any person interested, including persons owning property within the area and desiring to appear and present any matters material to the questions set forth in the Resolution Declaring Necessity appeared and presented such matters; and

WHEREAS, oral or written protests against the proposed debt issue were not made or filed at or before said public hearing by 50% or more of the registered voters, or six registered voters, whichever is more, residing within the territory proposed to be included in the Community Facilities District, or the owners of one-half or more of the area of land in the territory proposed to be included in the Community Facilities District and not exempt from the Special Tax; and

WHEREAS, the City Council deems it necessary for the Community Facilities District to incur bonded indebtedness; and

WHEREAS, on this date, the City Council adopted a resolution entitled "A Resolution of the City Council of the City of Ontario, California, of Formation of City of Ontario Community Facilities District No. 52 (Sundance Park), Proposing that the Community Facilities District Be Authorized to Levy a Special Tax and Proposing that an Appropriations Limit of the Community Facilities District Be Established;" and

WHEREAS, the City Clerk of the City (the "City Clerk") is the election official that will conduct the special election on the proposition to authorize the Community Facilities District to incur bonded indebtedness; and

WHEREAS, there has been filed with the City Clerk a letter from the Registrar of Voters of the County of San Bernardino indicating that no persons were registered to vote within the territory of the Community Facilities District as of July 15, 2024, which demonstrates that 12 or more persons have not been registered to vote within the territory of the Community Facilities District for each of the 90 days preceding the close of said public hearing; and

WHEREAS, there has been filed with the City Clerk consents and waivers of all of the landowners of record in the Community Facilities District consenting to the waiver of, and waiving, any time limit specified by Section 53326 of the Act and any requirement pertaining to the conduct of said special election, including any time limit or requirement applicable to an election pursuant to Article 5 of the Act (commencing with Section 53345 of the Act), consenting to the holding of said special election on August 20, 2024, and consenting to the waiver of, and waiving, any impartial analysis, arguments or rebuttals, as set forth in Sections 53326 and 53327 of the Act; and

WHEREAS, the City Clerk has concurred in said waivers and has concurred in holding said special election on August 20, 2024;

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Ontario as follows:

SECTION 1. The foregoing recitals are true and correct, and the City Council so finds and determines.

SECTION 2. The City Council deems it necessary for the Community Facilities District to incur the bonded indebtedness.

SECTION 3. The bonded indebtedness will be incurred for the purpose of financing the costs of the Facilities, including all costs and estimated costs incidental to, or connected with, the accomplishment of said purpose, including, but not limited to, such costs and estimated costs as are described in Section 53345.3 of the Act.

SECTION 4. In accordance with the previous determination of the City Council, the whole of the Community Facilities District will pay for the bonded indebtedness.

SECTION 5. The maximum amount of debt to be incurred is $85,000,000.

SECTION 6. The maximum term the bonds to be issued shall run before maturity is 40 years.

SECTION 7. The maximum annual rate of interest to be paid shall not exceed the maximum interest rate permitted by applicable law at the time of sale of the bonds, payable semiannually or at such times as the City Council or its designee shall determine, the actual rate or rates and times of payment of such interest to be determined by the City Council or its designee at the time or times of sale of the bonds.

SECTION 8. The proposition to authorize the Community Facilities District to incur the bonded indebtedness shall be submitted to the qualified electors of the Community Facilities District.

SECTION 9. The City Council hereby finds and determines that no persons were registered to vote within the territory of the Community Facilities District as of July 15, 2024, and that 12 or more persons have not been registered to vote within the territory of the Community Facilities District for each of the 90 days preceding the close of the public hearing held by the City Council on the proposed debt issue for the Community Facilities District. Accordingly, pursuant to Section 53326 of the Act, the vote shall be by the landowners of the Community Facilities District and each person who is the owner of land as of the close of said public hearing, or the authorized representative thereof, shall have one vote for each acre or portion of an acre that he or she owns within the Community Facilities District not exempt from the Special Tax.

SECTION 10. The City Council hereby finds and determines that the qualified electors of the Community Facilities District have (a) unanimously consented to the waiver of, and have waived, any time limit specified by Section 53326 of the Act and any requirement pertaining to the conduct of said election, including any time limit or requirement applicable to an election pursuant to Article 5 of the Act (commencing with Section 53345 of the Act), (b) unanimously consented to the holding of said election on August 20, 2024, and (c) unanimously consented to the waiver of, and have waived, any impartial analysis, arguments or rebuttals, as set forth in Sections 53326 and 53327 of the Act. The City Council hereby finds and determines that the City Clerk has concurred in said waivers and has concurred in holding said election on August 20, 2024.

SECTION 11. The date of the special community facilities district election (which shall be consolidated with the special district election to authorize the Community Facilities District to levy the Special Tax) at which time the proposition to authorize the Community Facilities District to incur the bonded indebtedness shall be submitted to the voters is August 20, 2024.

SECTION 12. As authorized by Section 53353.5 of the Act, the propositions to authorize the Community Facilities District to incur such bonded indebtedness, to authorize the Community Facilities to levy the Special Tax and to establish an appropriations limit of the Community Facilities District shall be combined into one ballot proposition.

SECTION 13. Pursuant to Section 53326 of the Act, the election shall be conducted by mail or hand-delivered ballot. The voted ballots are required to be received in the office of the City Clerk no later than 7:30 p.m. on August 20, 2024; provided, however, that if all of the qualified electors have voted prior to such time, the election may be closed with the concurrence of the City Clerk.

SECTION 14. All actions heretofore taken by the officers, employees and agents of the City with respect to the incurrence of bonded indebtedness by the Community Facilities District, or in connection with or related to any of the matters referred to herein, are hereby approved, confirmed and ratified.

SECTION 15. The officers, employees and agents of the City are hereby authorized and directed to take all actions and do all things that they, or any of them, may deem necessary or desirable to accomplish the purposes of this Resolution and not inconsistent with the provisions hereof.

SECTION 16. This Resolution shall take effect immediately upon its adoption.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 20th day of August, 2024.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, CALLING SPECIAL ELECTION FOR CITY OF ONTARIO COMMUNITY FACILITIES DISTRICT NO. 52 (SUNDANCE PARK)

WHEREAS, on this date, the City Council (the "City Council") of the City of Ontario (the "City"), pursuant to the Mello-Roos Community Facilities Act of 1982 (the "Act"), adopted a resolution entitled "A Resolution of the City Council of the City of Ontario, California, of Formation of City of Ontario Community Facilities District No. 52 (Sundance Park), Proposing that the Community Facilities District be Authorized to Levy a Special Tax and Proposing that an Appropriations Limit of the Community Facilities District Be Established" (the "Resolution of Formation"), establishing City of Ontario Community Facilities District No. 52 (Sundance Park) (the "Community Facilities District"), proposing that the Community Facilities District be authorized to levy a special tax (the "Special Tax") within the Community Facilities District for the purpose of financing certain public facilities (the "Facilities") and services and proposing that an appropriations limit of the Community Facilities District be established at $85,000,000; and

WHEREAS, on this date, the City Council also adopted a resolution entitled "A Resolution of the City Council of the City of Ontario, California, Deeming it Necessary for City of Ontario Community Facilities District No. 52 (Sundance Park) to Incur Bonded Indebtedness" (the "Resolution Deeming Necessity"), deeming it necessary for the Community Facilities District to incur bonded indebtedness in a maximum amount of $85,000,000; and

WHEREAS, pursuant to the provisions of the Act and said resolutions, the propositions to authorize the Community Facilities District to incur such bonded indebtedness, to authorize the Community Facilities District to levy the Special Tax and to establish such appropriations limit of the Community Facilities District are to be submitted to the qualified electors of the Community Facilities District at a special election; and

WHEREAS, the City Council desires to designate the City Clerk of the City (the "City Clerk") as the election official for such special election; and

WHEREAS, there has been filed with the City Clerk a letter from the Registrar of Voters of the County of San Bernardino indicating that no persons were registered to vote within the territory of the Community Facilities District as of July 15, 2024, which demonstrates that 12 or more persons have not been registered to vote within the territory of the Community Facilities District for each of the 90 days preceding the close of the public hearings on the establishment of the Community Facilities District and the proposed debt issue for the Community Facilities District; and

WHEREAS, there has been filed with the City Clerk consents and waivers of all of the landowners of record in the Community Facilities District consenting to the waiver of, and waiving, any time limit specified by Section 53326 of the Act and any requirement

pertaining to the conduct of said special election, including any time limit or requirement applicable to an election pursuant to Article 5 of the Act (commencing with Section 53345 of the Act), consenting to the holding of said special election on August 20, 2024 and consenting to the waiver of, and waiving, any impartial analysis, arguments or rebuttals, as set forth in Sections 53326 and 53327 of the Act; and

WHEREAS, the City Clerk has concurred in said waivers and has concurred in holding said special election on August 20, 2024;

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Ontario as follows:

SECTION 1. The foregoing recitals are true and correct, and the City Council so finds and determines.

SECTION 2. Pursuant to Sections 53351, 53326 and 53325.7 of the Act, the propositions to authorize the Community Facilities District to incur bonded indebtedness, to authorize the Community Facilities District to levy the Special Tax and to establish the appropriations limit of the Community Facilities District shall be submitted to the qualified electors of the Community Facilities District at an election called therefor as provided below.

SECTION 3. The City Clerk is hereby designated as the official to conduct said election.

SECTION 4. As authorized by Section 53353.5 of the Act, the propositions to authorize the Community Facilities District to incur such bonded indebtedness, to authorize the Community Facilities District to levy the Special Tax and to establish such appropriations limit of the Community Facilities District shall be combined into one ballot proposition.

SECTION 5. The City Council hereby finds and determines that no persons were registered to vote within the territory of the Community Facilities District as of July 15, 2024, and that 12 or more persons have not been registered to vote within the territory of the Community Facilities District for each of the 90 days preceding the close of the public hearings heretofore held by the City Council on the establishment of the Community Facilities District and the proposed debt issue for the Community Facilities District. Accordingly, pursuant to Section 53326 of the Act, the vote shall be by the landowners of the Community Facilities District and each person who is the owner of land as of the close of said public hearings, or the authorized representative thereof, shall have one vote for each acre or portion of an acre that he or she owns within the Community Facilities District not exempt from the Special Tax.

SECTION 6. The City Council hereby finds and determines that the qualified electors of the Community Facilities District have (a) unanimously consented to the waiver of, and have waived, any time limit specified by Section 53326 of the Act and any requirement pertaining to the conduct of said election, including any time limit or requirement applicable to an election pursuant to Article 5 of the Act (commencing with

Section 53345 of the Act), (b) unanimously consented to the holding of said election on August 20, 2024, and (c) unanimously consented to the waiver of, and have waived, any impartial analysis, arguments or rebuttals, as set forth in Sections 53326 and 53327 of the Act. The City Council hereby finds and determines that the City Clerk has concurred in said waivers and has concurred in holding said election on August 20, 2024.

SECTION 7. The City Council hereby calls a special election to submit to the qualified electors of the Community Facilities District the combined ballot proposition to authorize the Community Facilities District to incur bonded indebtedness in a maximum amount of $85,000,000, to authorize the Community Facilities to levy the Special Tax and to establish the appropriations limit of the Community Facilities District at $85,000,000, which election shall be held at 303 East B Street, Ontario, California, on August 20, 2024, provided, that, in the event the August 20, 2024 City Council meeting is held via teleconference and/or videoconference only, the means by which the public may observe such public hearings and offer public comment would be as prescribed in the notice and agenda for such City Council meeting. The City Council has caused to be provided to the City Clerk, as the official to conduct the election, the Resolution of Formation, the Resolution Deeming Necessity, a certified map of sufficient scale and clarity to show the boundaries of the Community Facilities District and a sufficient description to allow the City Clerk to determine the boundaries of the Community Facilities District.

The voted ballots shall be returned to the City Clerk not later than 7:30 p.m. on August 20, 2024; provided, however, that if all of the qualified electors have voted prior to such time, the election may be closed with the concurrence of the City Clerk.

SECTION 8. Pursuant to Section 53326 of the Act, the election shall be conducted by mail or hand-delivered ballot pursuant to Section 4000 *et. seq.* of the California Elections Code. Except as otherwise provided in the Act, the provisions of law regulating elections of the City, insofar as they may be applicable, shall govern the election.

SECTION 9. The form of the ballot for the election, which sets forth the measure to be submitted to the voters, is attached hereto as Exhibit A and by this reference incorporated herein, and such form of ballot is hereby approved. The City Clerk shall cause to be delivered to each of the qualified electors of the Community Facilities District a ballot in said form, together with all supplies and written instructions necessary for the use and return of the ballot. The number of votes to be voted by a particular landowner shall be specified on the ballot provided to that landowner.

The identification envelope for return of a ballot shall be enclosed with such ballot, shall have the return postage prepaid, and shall contain: (a) the name and address of the landowner, (b) a declaration, under penalty of perjury, stating that the voter is the owner of record or the authorized representative of the landowner entitled to vote and is the person whose name appears on the identification envelope, (c) the printed name and signature of the voter, (d) the date of signing and place of execution of the declaration described in clause (b) above, and (e) a notice that the envelope contains an official ballot and is to be opened only by the canvassing board.

Analysis and arguments with respect to the measure submitted to the voters are hereby waived, as provided in Section 53327 of the Act.

SECTION 10. The City Clerk shall accept the ballots of the qualified electors in the office of the City Clerk at 303 East B Street, Ontario, California, to and including 7:30 p.m. on August 20, 2024, whether said ballots be personally delivered or received by mail. The City Clerk shall have available ballots that may be marked at said location on the election day by said qualified electors.

SECTION 11. The City Council hereby determines that the facilities and services financed by the Community Facilities District are necessary to meet increased demands placed upon local agencies as a result of development occurring in the Community Facilities District.

SECTION 12. The specific purpose of the bonded indebtedness that the Community Facilities District is proposed to be authorized to incur is the financing of the Facilities, including all costs and estimated costs incidental to, or connected with, the accomplishment of such purpose, and the proceeds of such bonded indebtedness shall be applied only to such specific purpose.

Upon approval of the proposition to authorize the Community Facilities District to incur bonded indebtedness, and the sale of any bonds evidencing such indebtedness, the City Council shall take such action as may be necessary to cause to be established an account for deposit of the proceeds of sale of the bonds. For so long as any proceeds of the bonds remain unexpended, the Executive Director of Finance of the City shall cause to be filed with the City Council, no later than January 1 of each year, a report stating (a) the amount of bond proceeds received and expended during the preceding year, and (b) the status of any project funded or to be funded from bond proceeds. Said report may relate to the calendar year, fiscal year, or other appropriate annual period, as the Executive Director of Finance of the City shall determine, and may be incorporated into the annual budget, audit, or other appropriate routine report to the City Council.

SECTION 13. All actions heretofore taken by the officers, employees and agents of the City with respect to the special election called pursuant hereto, or in connection with or related to any of the matters referred to herein, are hereby approved, confirmed and ratified.

SECTION 14. The officers, employees and agents of the City are hereby authorized and directed to take all actions and do all things that they, or any of them, may deem necessary or desirable to accomplish the purposes of this Resolution and not inconsistent with the provisions hereof.

SECTION 15. This Resolution shall take effect immediately upon its adoption.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 20th day of August, 2024.

\

RESOLUTION NO._____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, DECLARING RESULTS OF SPECIAL ELECTION AND DIRECTING RECORDING OF NOTICE OF SPECIAL TAX LIEN

WHEREAS, on August 20, 2024, the City Council (the "City Council") of the City of Ontario (the "City"), pursuant to the Mello-Roos Community Facilities Act of 1982 (the "Act"), adopted a resolution entitled "A Resolution of the City Council of the City of Ontario, California, Calling Special Election for City of Ontario Community Facilities District No. 52 (Sundance Park)" (the "Resolution Calling Election"), calling a special election to submit to the qualified electors of City of Ontario Community Facilities District No. 52 (Sundance Park) (the "Community Facilities District") the combined ballot proposition to authorize the Community Facilities District to incur bonded indebtedness, to authorize the Community Facilities District to levy a special tax and to establish the appropriations limit of the Community Facilities District; and

WHEREAS, pursuant to the terms of the Resolution Calling Election and the provisions of the Act, the special election was held on August 20, 2024; and

WHEREAS, the City Clerk of the City (the "City Clerk") has certified the canvass of the returns of the election and has filed a Canvass and Statement of Results of Election (the "Canvass"), a copy of which is attached hereto as Exhibit A;

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Ontario as follows:

SECTION 1. The foregoing recitals are true and correct, and the City Council so finds and determines.

SECTION 2. The City Council has received, reviewed and hereby accepts the Canvass.

SECTION 3. The City Council hereby finds and declares that the ballot proposition submitted to the qualified electors of the Community Facilities District pursuant to the Resolution Calling Election has been passed and approved by such electors in accordance with Section 53355, Section 53328 and Section 53325.7 of the Act.

SECTION 4. The City Clerk is hereby directed to execute and cause to be recorded in the office of the County Recorder of the County of San Bernardino a notice of special tax lien in the form required by the Act, said recording to occur no later than 15 days following adoption by the City Council of this Resolution.

SECTION 5. All actions heretofore taken by the officers, employees and agents of the City with respect to the special election, or in connection with or related to any of the matters referred to herein, are hereby approved, confirmed and ratified.

SECTION 6. The officers, employees and agents of the City are hereby authorized and directed to take all actions and do all things that they, or any of them, may deem necessary or desirable to accomplish the purposes of this Resolution and not inconsistent with the provisions hereof.

SECTION 7. This Resolution shall take effect immediately upon its adoption.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

ORDINANCE NO._____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, LEVYING A SPECIAL TAX WITHIN CITY OF ONTARIO COMMUNITY FACILITIES DISTRICT NO. 52 (SUNDANCE PARK)

WHEREAS, on July 2, 2024, the City Council (the "City Council") of the City of Ontario (the "City"), pursuant to the Mello-Roos Community Facilities Act of 1982 (the "Act"), adopted a resolution entitled "A Resolution of the City Council of the City of Ontario, California, of Intention to Establish a Community Facilities District Proposed to be Named City of Ontario Community Facilities District No. 52 (Sundance Park) and to Authorize the Levy of a Special Tax Therein," stating its intention to establish City of Ontario Community Facilities District No. 52 (Sundance Park) (the "Community Facilities District") and to authorize the Community Facilities District to levy a special tax (the "Special Tax") within the Community Facilities District for the purpose of financing certain public facilities (the "Facilities") and services (the "Services"); and

WHEREAS, on August 20, 2024, the City Council held a noticed public hearing on the establishment of the Community Facilities District, as required by the Act; and

WHEREAS, subsequent to the close of said hearing, the City Council adopted resolutions entitled "A Resolution of the City Council of the City of Ontario, California, of Formation of City of Ontario Community Facilities District No. 52 (Sundance Park), Proposing that the Community Facilities District Be Authorized to Levy a Special Tax and Proposing that an Appropriations Limit of the Community Facilities District Be Established" (the "Resolution of Formation"), "A Resolution of the City Council of the City of Ontario, California, Deeming it Necessary for City of Ontario Community Facilities District No. 52 (Sundance Park) to Incur Bonded Indebtedness" and "A Resolution of the City Council of the City of Ontario, California, Calling Special Election for City of Ontario Community Facilities District No. 52 (Sundance Park)," which resolutions established the Community Facilities District, proposed that the Community Facilities District be authorized to levy the Special Tax within the Community Facilities District, proposed that an appropriations limit of the Community Facilities District be established and called a special election to submit to the qualified electors of the Community Facilities District the combined ballot proposition to authorize the Community Facilities District to incur bonded indebtedness, to authorize the Community Facilities District to levy the Special Tax and to establish the appropriations limit of the Community Facilities District; and

WHEREAS, on August 20, 2024, an election was held in which the qualified electors of the Community Facilities District approved said proposition by more than the two-thirds vote required by the Act; and

WHEREAS, the City Council is the legislative body of the Community Facilities District;

THE CITY COUNCIL OF THE CITY OF ONTARIO DOES ORDAIN AS FOLLOWS:

SECTION 1. The City Council hereby authorizes and levies the Special Tax within the Community Facilities District pursuant to Sections 53328 and 53340 of the Act, at the rate and in accordance with the method of apportionment set forth in Exhibit B to the Resolution of Formation (the "Rate and Method"). The Special Tax is hereby levied commencing in fiscal year 2024-25 and in each fiscal year thereafter until the last fiscal year in which the Special Tax is authorized to be levied pursuant to the Rate and Method.

SECTION 2. The City Council may, pursuant to subdivision (b) of Section 53340 of the Act, provide, by resolution, for the levy of the Special Tax in the current tax year or in future tax years at the same rate or at a lower rate than the rate provided by this Ordinance. In no event shall the Special Tax be levied on any parcel within the Community Facilities District in excess of the maximum tax specified therefor in the Rate and Method.

SECTION 3. The Special Tax shall be levied on all of the parcels in the Community Facilities District, unless exempted by law or by the Rate and Method.

SECTION 4. The proceeds of the Special Tax shall only be used to pay, in whole or in part, the cost of providing the Facilities and Services and incidental expenses pursuant to the Act.

SECTION 5. The Special Tax shall be collected in the same manner as ordinary *ad valorem* property taxes are collected and shall be subject to the same penalties and the same procedure, sale and lien priority in the case of delinquency as is provided for *ad valorem* taxes or in such other manner as the City Council shall determine, including direct billing of the affected property owners.

SECTION 6. If for any reason any portion of this Ordinance is found to be invalid, or if the Special Tax is found inapplicable to any particular parcel within the Community Facilities District, by a court of competent jurisdiction, the balance of this Ordinance and the application of the Special Tax to the remaining parcels within the Community Facilities District shall not be affected.

SECTION 7. The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within fifteen (15) days of the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, AUTHORIZING THE EXECUTION AND DELIVERY OF AN AMENDED AND RESTATED ACQUISITION AND FUNDING AGREEMENT WITH BROOKCAL ONTARIO LLC

WHEREAS, certain real property within the boundaries of the City located generally south of State Route 60 is commonly referred to as Ontario Ranch; and

WHEREAS, such real property was previously known as the New Model Colony; and

WHEREAS, the City has approved a General Plan Amendment for the New Model Colony (the name by which Ontario Ranch was formerly known), which has been supplemented by certain water, recycled water and sewer master plans (as so supplemented, the "General Plan Amendment") and has certified an Environmental Impact Report and adopted a Mitigated Negative Declaration in connection with the General Plan Amendment (together, the "Environmental Impact Report"); and

WHEREAS, the City has specified in the General Plan Amendment and the Environmental Impact Report the major backbone transportation, water, sewer, storm drainage, parks, public safety infrastructure and fiber optic systems required to serve Ontario Ranch; and

WHEREAS, BrookCal Ontario LLC (the "Developer") is developing certain of the property within Ontario Ranch (the "Property"); and

WHEREAS, certain of such major backbone infrastructure is required to serve the Property; and

WHEREAS, in order to provide a mechanism to fund, in a timely manner, the costs of certain of such major backbone infrastructure required to serve the Ontario Ranch (the "Facilities") so that such development could occur, the City and the Developer entered into the Acquisition and Funding Agreement, dated as of May 7, 2019 (the "Original Acquisition Agreement"), pursuant to which the Facilities would, as provided in the Original Acquisition Agreement, be constructed by or on behalf of the Developer and acquired by the City; and

WHEREAS, certain provisions of the Original Acquisition Agreement were amended pursuant to the First Amendment to Acquisition and Funding Agreement, dated as of January 1, 2022, by and between the City and the Developer (the Original Acquisition Agreement, as so amended, the "First Amended Acquisition Agreement"); and

WHEREAS, in order to provide such a mechanism, the City has, pursuant to the provisions of the Mello-Roos Community Facilities Act of 1982 (the "Act"), established

three community facilities districts, namely, City of Ontario Community Facilities District No. 40 (Emerald Park Facilities) ("Community Facilities District No. 40"), City of Ontario Community Facilities District No. 41 (Canvas Park Facilities) ("Community Facilities District No. 41") and City of Ontario Community Facilities District No. 52 (Sundance Park) ("Community Facilities District No. 52" and, together with Community Facilities District No. 40 and Community Facilities District No. 41, the "Community Facilities Districts"); and

WHEREAS, pursuant to the Act, the proceedings of the City Council of the City and an election held within each Community Facilities District, each Community Facilities District is authorized to levy a special tax within such Community Facilities District and issue special tax bonds secured by such special tax in order to finance certain of the Facilities; and

WHEREAS, each of Community Facilities District No. 40 and Community Facilities District No. 41 has levied a special tax within its boundaries and has previously issued special tax bonds secured by such special tax in order to finance certain of the Facilities; and

WHEREAS, certain of the Facilities so financed have previously been acquired by the City pursuant to the Original Acquisition Agreement and certain of the Facilities so financed have previously been acquired by the City pursuant to the First Amended Acquisition Agreement; and

WHEREAS, the City and the Developer desire to amend, supplement and modify certain provisions of the First Amended Acquisition Agreement; and

WHEREAS, Section 6.4 of the First Amended Acquisition Agreement provides that the First Amended Acquisition Agreement may be amended, supplemented and otherwise modified by an instrument in writing executed and delivered by the City and the Developer; and

WHEREAS, in order to reflect such amendments, supplements and modifications to the First Amended Acquisition Agreement, the City and the Developer desire to amend and restate the First Amended Acquisition Agreement pursuant to an Amended and Restated Acquisition and Funding Agreement by and between the City and the Developer (such Amended and Restated Acquisition and Funding Agreement, in the form presented to this meeting, with such changes, insertions and omissions as are made pursuant to this Resolution, being referred to herein as the "Amended and Restated Acquisition Agreement"); and

WHEREAS, the City Council is the legislative body of each of the Community Facilities Districts;

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Ontario as follows:

SECTION 1. The Amended and Restated Acquisition Agreement, in substantially the form submitted to this meeting and made a part hereof as though set forth herein, be and the same is hereby approved. Each of the Mayor of the City, and such other member of the City Council as the Mayor may designate, the City Manager of the City and the Executive Director of Finance of the City, and such other officer or employee of the City as the City Manager may designate (the "Authorized Officers") is hereby authorized, and any one of the Authorized Officers is hereby directed, for and in the name of the City, to execute and deliver the Amended and Restated Acquisition Agreement in the form submitted to this meeting, with such changes, insertions and omissions as the Authorized Officer executing the same may require or approve, such requirement or approval to be conclusively evidenced by the execution of the Amended and Restated Acquisition Agreement by such Authorized Officer.

SECTION 2. All actions heretofore taken by the officers, employees and agents of the City with respect to the Amended and Restated Acquisition Agreement, or in connection with or related to any of the matters referred to herein, are hereby approved, confirmed and ratified.

SECTION 3. The officers, employees and agents of the City are hereby authorized and directed to take all actions and do all things that they, or any of them, may deem necessary or desirable to accomplish the purposes of this Resolution and not inconsistent with the provisions hereof.

SECTION 4. This Resolution shall take effect immediately upon its adoption.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 20th day of August, 2024.

_____
SHEILA MAUTZ, CITY CLERK

(SEAL)

CITY OF ONTARIO *Agenda Report* **August 20, 2024**	**SECTION:** **PUBLIC HEARINGS**
Department: Planning Prepared By: Jocelyn Torres Department: Prepared By: Jocelyn Torres Staff Member Presenting: Scott Murphy, Executive Director Community Development Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 29

SUBJECT: **AN APPEAL OF THE PLANNING COMMISSION'S DECISION TO DENY A CONDITIONAL USE PERMIT TO ESTABLISH A 10,314 SQUARE-FOOT ADULT DAY CARE FACILITY AT 910 NORTH MOUNTAIN AVENUE**

RECOMMENDATION: That the City Council conduct a public hearing on the Appeal and, after receiving all public testimony, uphold the Planning Commission's decision to deny Conditional Use Permit File No. PCUP23-018, to establish a 10,314 square-foot adult day care facility located at 910 North Mountain Avenue.

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Operate in a Businesslike Manner
Invest in the Growth and Evolution of the City's Economy

FISCAL IMPACT: There is no direct fiscal impact associated with this action.

BACKGROUND & ANALYSIS:

On October 12, 2023, Michael Mai (the "Appellant") submitted a Conditional Use Permit ("CUP") application requesting approval to establish a 10,314 square-foot Adult Day Care facility at 910 North Mountain Avenue.

On February 21, 2024, the Zoning Administrator (ZA) held a public hearing to consider the application and subsequently denied the application on March 11, 2024 (Decision No. ZA24-008). The ZA decision to deny the Conditional Use Permit request was based upon the fact that the Project is not consistent with the finding listed in Section 4.02.015(D)(2) of the City of Ontario Development Code, as stated below.

Ontario Development Code Section 4.02.015(D)(2) - "The proposed use at the proposed location, and the manner in which it will be operated and maintained, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan."

On March 22, 2024, the Appellant submitted an appeal of the ZA decision to deny File No. PCUP23-018. The basis of the ZA appeal lies in the Appellant's belief that the CUP is consistent with the General Plan and the decision to deny the CUP request is an "abuse of discretion" that is not supported by the record.

On May 28, 2024, the Planning Commission conducted a public hearing to consider the appeal of the ZA denial. Following the staff's presentation and after receipt of all public correspondence and testimony, the Planning Commission voted 3 to 2 to adopt Resolution No. PC24-017, upholding the ZA's decision and denying the appeal.

APPEAL TO COUNCIL: On June 7, 2024, the Appellant submitted an Appeal of the Planning Commission's decision to uphold the ZA's denial of PCUP23-018. A copy of the Appeal application and Appellant statement is included as Exhibit "A" of this report. The Appellant statement includes an updated business description that discusses HIPAA compliance and services, operating hours, participant capacity, and special events. The Appellant argues that the Planning Commission decision is not supported by the information, findings, and recommendations presented in the Background and Analysis Section of the ZA Decision report.

The Appellant argues that the purpose of the Conditional Use Permit is to ensure the compatibility of adjacent land uses by identifying potential "nuisance" activities and establishing appropriate measures for mitigation. The Appellant insists that city staff did their due diligence to confirm that the proposed use will not have a detrimental impact on the adjacent properties when this item was presented to the ZA. Additionally, the Appellant argues that the required findings can be made in accordance with the Ontario Development Code.

Pursuant to Development Code Section 2.04.010.B.2, an Appeal of the Planning Commission' s action is limited to those matters raised during the public hearing and contained in the Appeal Statement. In acting on the Appeal, the Approving Authority (in this case, the City Council) cannot consider any matter or issue that was not raised during the public hearing and contained in the Appeal Statement.

Staff has reviewed the Appellant's appeal statement and provides a response for each issue raised by the Appellant below:

Appellant Issue No. 1: The Appellant argues that the proposed use was denied since it was not the highest and best use for the site. The Appellant states that the proposed use is located within the CN (Neighborhood Commercial) zoning district which permits the proposed use subject to a Conditional Use Permit. The Appellant claims that the proposed use contributes towards the intent of the CN zoning district and is compatible with the surrounding neighborhood.

Staff Response: The proposed Adult Day Care is located within the CN (Neighborhood Commercial) zoning district, which lists adult day care with 7 or more persons as a conditionally permitted use. The Conditional Use Permit is a discretionary review process intended to ensure, among other things, that the proposed use at the proposed location is appropriate and consistent with the Policy Plan (General Plan) and City Council Priorities of The Ontario Plan. The CN zone implements the Neighborhood Commercial land use district of the General Plan, which is intended to accommodate local serving retail, office, dining, and personal service uses. Additionally, prior to approving a

conditional use permit, the required findings must be made, which takes into consideration the proposed use, the proposed location, potential negative impacts, and any additional characteristics unique to the subject use, subject property, surrounding area, etc.

The proposed adult day care use is a specialized use that falls under the category of Healthcare and Social Assistance, and more specifically under Individual and Family Services. The proposed adult day care, like many other adult day care operations, caters to a specific clientele. As noted in the Appellant's operation statement, the proposed adult day care offers services to those in need of daily health monitoring and medical care, rehabilitation services, and other specific health and social needs. Staff understands the proposed use might contribute to one's well-being and quality of life. Staff also understands the benefit of such services throughout the city. However, in this particular case, the proposed use in the proposed location does not meet the intent of the CN zone or the Neighborhood Commercial district. Through the CUP discretionary review process, it was determined that all of the necessary findings needed to support the proposed use at the proposed location could not be made (Specifically Finding #2, Section 2.04.010.B.2 as stated above). Additionally, it was determined that adequate and appropriate conditions of approval could not be imposed on the proposed use to satisfy the intent and policies of the General Plan in the proposed location.

Appellant Issue No. 2: The Appellant argues that the CN (Neighborhood Commercial) zoning district does discuss requirements for fostering community gathering places. The Appellant further argues that medical offices are allowed and located in the adjacent plaza. According to the Appellant, the proposed facility does contribute towards fostering local retail, dining, and personal services by bringing more business opportunities to the surrounding businesses. The adult day care facility does not have a built-in kitchen which will result in the facility ordering daily food deliveries to serve all 240 participants and 35 staff members daily from nearby local restaurants. The facility will also hold regular gathering events for participants and participants families which can benefit the surrounding businesses by introducing more foot traffic to the commercial shopping center, which aligns with Ontario Plan Policy CD-2.3.

Staff Response: The intent of the CN (Neighborhood Commercial) zoning district is to foster local serving retail, personal service, office, and dining uses, typically located within a predominantly residential neighborhood. While medical offices may be allowed in the CN zone, the location of such uses is still analyzed. It is understood that the subject commercial center contains medical office uses, however those uses are located in a different portion/building within the commercial center that may be more appropriate than the proposed location of the adult day care. Additionally, those medical office uses are not necessarily specialized uses such as the adult day care. The proposed use requires a Conditional Use Permit application, which is intended to ensure that a degree of compatibility is maintained with respect to certain uses on certain properties, due to their nature and operational characteristics. Each use is evaluated depending on the location and operational characteristics to ensure that the use aligns with the intent of the zoning district. The proposed adult day care use was evaluated based on its location and it was determined the proposed location was not appropriate for the proposed uses. The existing building at this particular location along Mountain Avenue is a prime location for commercial use that is more public serving and caters towards the intent of the zone and land use district.

The Appellant's statement also emphasizes that the Appellant anticipates ordering daily food deliveries from nearby restaurants. The floor plan for the proposed adult day care includes a designated food preparation area, and the operational characteristics letter indicated that nutrition counseling would be provided by registered dieticians to ensure well-balanced meals are provided based on the participants dietary needs. The focus on dietary needs appears to lend itself more towards specific food providers or sources, not necessarily local restaurants within the commercial center or nearby. Additionally, requiring the proposed adult day to cater food from local restaurants is not a feasible or appropriate condition through the conditional use permit process.

Lastly, the Appellant claims that the proposed adult day care will host regular events for participants and their families, but this appears specific to the adult day care operation and is not for public attendance. As such, special events are unlikely to contribute to the commercial center or support the intent of the CN designation and they would need a special event permit in any case.

Appellant Issue No. 3: The Appellant claims that it is impossible to achieve Ontario Plan Policy CD-3.5 for this specific site as the existing physical conditions make that impossible. The existing building is situated four feet higher than the pedestrian sidewalk on Mountain Avenue, and the existing west elevation that faces Mountain Avenue is mostly solid brick with only one emergency-exit door with two sidelight panels. The Appellant argues that it is impossible to provide active frontages and lively pedestrian streetscapes facing Mountain Avenue without major reconstruction of the existing building or a new ground-up building. The Appellant states that the building has been vacant for years and is too big for a retail use. The Appellant mentions that the building was previously a bank, a use that did not foster dining or local gathering places.

Staff Response: The Project site can achieve Policy 3.5, which is intended to ensure that businesses provide active frontages adjacent to sidewalks or public spaces and are designed to maximum safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type). The Project site can achieve this policy by remodeling the interior and exterior of the building. The existing site conditions do not preclude an applicant from meeting the policies of the General Plan or the intent of the zone simply because a "major reconstruction" may be necessary. With proper remodeling and redevelopment, the subject property and building could be redesigned to align with the goals and policies of The Ontario Plan. The fact that the owner would likely incur additional costs to remodel and be in compliance with City standards and policies does not justify an exception.

The building is situated within an existing shopping center on a direct corner and provides opportunities for prominent street frontage and visibility, which are two strong characteristics of a retail-serving use within a shopping center. The unique operation, purpose, and clientele of the adult daycare is not dependent on such characteristics, and by occupying this space, the adult daycare use will prevent an opportunity for a commercial use that is more aligned with the intent and vision of neighborhood commercial centers. The existing building was previously occupied by Bank of America, which closed in 2018, and a computer repair store that closed in 2023. The previous uses might have been appropriate during their time; however, with the current redevelopment along Mountain Avenue, the proposed adult day care use at this specific location would not contain or provide characteristics that create active frontage.

Appellant Issue No. 4: The Appellant argues that there is a pressing need for adult day healthcare

services in the City of Ontario and neighboring cities. The proposed facility will have a maximum capacity of 240 participants daily and will have an overall enrollment of 500 Medi-Cal recipients in Ontario. The Appellant claims that the proposed facility will provide essential services to those in need while creating 30 well-paying jobs in various fields supporting employment at all skill levels. The Appellant claims that the proposed facility will also generate substantial foot traffic from seniors and their families who will need food and other living essentials, generating business for the nearby retail shops.

Staff Response: The proposed adult day care use is a needed service for the City of Ontario and surrounding cities, but not at the proposed location. The proposed use is allowed in certain zoning districts within the City of Ontario, subject to review and approval of a Conditional Use Permit application. The proposed use at this particular location within this shopping center is not consistent with the intent of the CN district. The subject property is located along Mountain Avenue, one of the main north/south principal arterial roadways in the City. The subject property is situated within an existing shopping center and is proposed to occupy an existing pad building that is located on a prominent corner on Mountain Avenue. This site in this zone is best used for a use that serves the general public and that takes full advantage of the commercially valuable location and orientation. The size of the building also provides opportunities for good presence along the street and to serve as a secondary anchor to the shopping center.

The proposed facility will be relocating from a location in the City of Chino, and it is unclear if new local employees will be hired. The operational characteristics provided when this item was presented to the ZA indicated that participants will be picked up and dropped off at the facility. Additionally, there is no mechanism in place to verify that the proposed facility will generate substantial foot traffic to the nearby retail shops.

CONCLUSION: Staff recommends that the City Council consider all public testimony on the Appeal and uphold the Planning Commission's decision to uphold Zoning Administrator Decision No. ZA24-008 and deny the Appeal of the Conditional Use Permit, File No. PCUP23-018.

CITY OF ONTARIO PLANNING DEPARTMENT

Appeal Application Form

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

Instructions:

1. *Pursuant to Ontario Development Code Division 2.04 (Appeals), any person having legal standing may appeal and action or decision to the Appeal Authority, including but not limited to an applicant, resident, business owner, or any person owning real property within the City, that is aggrieved by an interpretation, action, or decision made by any City agency or department, or by an Approving Authority.*

2. *Within 10 days following the action or decision being appealed, an appeal request must be filed with the Planning Department on an Appeal Application Form, along with the required filing fees. The appeal request must include a statement identifying the specific action or decision that is being appealed, the specific grounds for the appeal, and the relief requested from the Appeal Authority.*

3. *An appeal of an action or decision made by an Approving Authority following a hearing, is limited to those matters raised during the hearing and contained in an appeal statement. The Appeal Authority cannot consider any matter that was not raised during the hearing before the Approving Authority and contained in the appeal statement.*

4. *The Appeal Authority that will hear the appeal request is limited to taking testimony and making its decision based solely on the specific grounds specified by the appellant in the Appeal Application Form, insofar as they make an adequate claim pursuant to Ontario Development Code Section 2.04.010. When the decision of an Approving Authority*

SUBJECT OF APPEAL

This application is hereby filed pursuant to Ontario Development Code Division 2.04 (Appeals), appealing a decision or action of the following Authority:

☐ Department/Agency Head ☐ Development Advisory Board ☐ Zoning Administrator
☐ Historic Preservation Subcommittee ☐ Historic Preservation Commission ■ Planning Commission

Project File No(s).: PCUP23-018 Date of Action/Decision: 06-07-2024

The application being appealed requests the following *(attach additional sheets as necessary)*: The applicant would like to appeal the decision of the Planning Commission denying the approval of the Conditional Use Permit No. PCUP23-018.

List the specific action(s) or decision(s) that is/are being appealed (attach additional sheets as necessary): See attached decision letter.

APPEAL STATEMENT

Please check the box that best describes your reason(s) for the appeal:

- ☐ Abuse of discretion.
- ☐ Decision was not supported by the record.
- ■ Abuse of discretion and decision was not supported by the record.

State the specific grounds for the appeal and the relief requested (please be specific and attach additional sheets if necessary):

See attached PDF for specific grounds for appeal and relief requested.

APPELLANT ACKNOWLEDGEMENT

I, the undersigned, hereby certify that the statements and information provided in this **Appeal Application Form,** and in any attached exhibits, present the data and information required for this application to the best of my ability, and that the facts, statements and information presented are true and correct to the best of my knowledge and belief.

Project File No(s): PCUP23-018

Specific Grounds for Appeal and Relief Requested

Based on the Ontario Development Code, the purpose of the conditional use permit is to ensure the compatibility of adjacent land uses by identifying potential "nuisance" activities and establishing appropriate measures for mitigation. Based upon that criteria, the city staff did their diligence to confirm that the proposed adult day health care facility will not have any detrimental impact on the adjacent properties as mentioned in the staff report. Therefore, the findings for the proposed adult day health care facility can be made under the Ontario Development Code just as the city staff recommended to the hearing officer.

Rather than approve it, however, first the hearing officer then the Planning Commission denied it on the grounds that it is not the highest and best use for ***this*** site. In other words, they admit that it is permitted in the CN (Commercial Neighborhood) zone with a CUP, but assert that this designation is intended to foster local retail, dining, office, and personal service uses with proximity to residential neighborhoods and provide local gathering places and locally serving commercial uses; and, that the proposed adult day health care facility does not facilitate or contribute to that intent.

The Ontario Development Code P. 5.01-2, however, defines the CN (Commercial Neighborhood) Zoning District, and says nothing about fostering community gathering places. In fact, it allows for medical office, which is why the plaza adjacent to this site has medical offices.

Beyond which, the facility does contribute to fostering local retail, dining, and personal service by bringing more business opportunities to the surrounding businesses. The adult day health care facility does not have a built-in kitchen; as a result, the facility will be ordering food deliveries daily to serve all participants and staff (240 participants +35 staff max daily) breakfast, lunch, snacks, etc... from nearby local restaurants. The facility also will hold regular gathering events for participants and participant's families, which can benefit the surrounding businesses by introducing more foot traffic to the commercial shopping center, which aligns with the vision of the Ontario Plan Policy CD-2.3.

The PC Resolution mentions the adult day health care facility will not be able to provide active frontages and lively pedestrian streetscapes facing Mountain Ave; however, the existing building is situated 4' higher than the Mountain Ave pedestrian sidewalk and the existing west elevation of the building (facing Mountain Ave) is mostly solid brick with only 1 emergency exit door with 2 sidelight panels. Without a major reconstruction of the existing building or a new ground-up building, it is impossible to achieve the goal of the Ontario Plan Policy CD-3.5 for this specific site as the pre-existing conditions do not make that possible.

Rather than address that fact and the reality of the site, the PC simply decided that the property owner could spend hundreds of thousands of dollars to fix it.

But the site has been vacant for years. It is too big for any retail use and was once a bank, which clearly is not a use that fosters dining or a local gathering space.

Today, there is a pressing need for adult day healthcare services in the City of Ontario and its neighboring cities. With over 70,000 eligible Medi-Cal recipients in the city of Ontario alone, our proposed facility, which can accommodate 240 individuals in addition to staff, serving less than 1% of the target population. In addition, there are over 178,000 additional Medi-Cal recipients in the vicinity of the facility. This considerable gap highlights the urgent need for more facilities to support our aging, underserved, and underprivileged community members.

As explained below, the proposed facility at 910 N Mountain Avenue, therefore, aims to address this pressing need by providing 240 seats daily and a total of over 500 enrolled Medi-Cal recipients in Ontario. This expansion will not only offer essential services to those in need but will also create various new job opportunities. These jobs will include RNs, LVNs, CNAs, drivers, administrative staff, social workers, therapists in various fields, dietitians along with contractors for various office needs and in-center classes, thereby supporting employment at all skill levels.

As such, the proposed facility will generate substantial foot traffic from seniors and their families. Specifically, it will create at least 30 well-paying jobs: these are nurses, physical therapists, administrators, social workers, and others like them. The seniors and visitors will need food and other living essentials, which will generate business for the retail shops nearby. In other words, it is a win-win situation for everyone: the owners, the operator, the surrounding shops, the city, and most importantly the underserved seniors of Ontario.

In short, waiting for Godot in hopes of some "higher and better use" when the use is perfectly compatible with the surrounding neighborhood and is best for the site is neither good planning, nor one of the legal required findings.

Last, contrary to the PC Resolution, there is no "evidence" to support it. Only staff's reasoning to justify a predetermined conclusion. Where, for example, is any evidence of a potentially better, different use. As mentioned above, the site has been vacant for years. Where is the evidence that the site can be totally rebuilt and reconstructed with an existing building on it at no substantial cost? There is not any such evidence, nor could there be because the conclusion is nothing more than personal, subjective opinions, not facts.

We, therefore, are appealing the PC decision to reverse it accordingly. The proposed facility is the best, most realistic option today.

Adult Day Health Care Facility Operation Information:

HIPAA Compliance & Services:

Concerns about HIPAA compliance during socialization times are unfounded, as HIPAA pertains to employees and their handling of protected health information. We ensure that our staff always maintains strict confidentiality, adhering to all HIPAA regulations, ensuring the privacy and dignity of our participants.

In addition, contrary to one Planning Commissioners and staff's belief, our facility is not primarily a mental health facility. We do follow strict guidelines by Title 22 to provide proper care for participants with various health problems. However, severe cases are referred to more suitable and higher-level facilities, ensuring that all participants receive the care they need and deserve.

Further, we provide daily health monitoring and medical care to ensure participants' well-being. Our rehabilitation services include therapies such as rehabilitation exercises, hot pack to aid participants' recovery and health maintenance.

Last, our facility is an alternative to institutionalization for those individuals who are capable of living at home with the aid of appropriate health, rehabilitation, personal care, and social services. The Program stresses partnership with the participant, the family and/or caregiver, the primary care physician, and the community in working toward maintaining personal independence. Our facility has a multidisciplinary team of health professionals who conduct a comprehensive assessment of each potential participant to determine and plan services needed to meet the individual specific health and social needs.

Operating Hours:

We plan to extend to 5:00 pm closing time on weekdays and potentially open up on Saturday due to the higher capacity of seniors afforded by this location. Upon approval by the Licensing Agency of the State, California Department of Public Health and by Department of Aging, we will do so.

Participant Capacity:

It is important to clarify the participant capacity of our facility. The maximum capacity is 240 daily, but in order to meet the 240 maximum capacity we will have an overall enrolled participants of 500.

Business Patronage:

Participants will not be brought to specific businesses by our staff; they will independently choose the businesses they patronize. Our staff will only arrange the trip and accompany them to ensure their safety

Events and Permits:

The event we host are held within our building internally for big holiday celebrations for the participants and their families within the allowed capacity and should not require additional permits. These events benefit local businesses by increasing foot traffic and visibility, fostering a

stronger sense of community and economic engagement. They are an essential part of our program, bringing together participants and their families in a supportive environment.

Food Vendors:

We have always prioritized local vendors, and we will seek new vendors within our vicinity to ensure compliance with local business support. We consistently work with local restaurants, informing them of dietary restrictions so they can adjust their menus accordingly. These partnerships not only guarantee a steady stream of income for these businesses but also integrate our facility into the local economy, creating a relationship that benefits everyone.

Economic Impact:

Last year, our spending on a facility with a capacity of 120 participants was $1.2 million. With approval to double our capacity, our local spending will also increase, further stimulating the local economy. This spending includes vehicle-related expenses, food from local vendors, medical facility visits, and miscellaneous spending, all contributing to the economic vitality of the area. By doubling our capacity, we will increase our positive economic impact, benefiting more businesses and services.

Vacancy:

The site has remained unoccupied for over five years, as indicated by the data from the Multiple Listing Service. The previous property owner mentioned attempts to lease the property for several years, attributing the challenges to its large size as a single building. Consequently, they opted to sell it. The size of the building renders it unsuitable for retail purposes, and its prior function as a bank underscores its unsuitability as a venue for dining or local gatherings.

Long-term Commitment:

We are dedicated to being a long-term presence in the community, maintaining our facility, and contributing to the local economy and well-being. Our facility does not only service the underserved seniors in the surrounding neighborhood but can also act as an anchor tenant that can generate foot traffic and business opportunities for the surrounding businesses.

Community Support:

Our existing participants are eager to show their support, emphasizing the community's reliance on our services. Their support, through signatures and testimonials, highlights the critical role our facility plays in their lives. We are dedicated to being a cornerstone of the community for years to come, providing essential services and contributing to the local economy.

Work Description: A Conditional Use Permit to establish a 10,314 square-foot Adult Day-Care Facility on 0.46 acres of land located at 910 North Mountain Avenue, within the CN (Neighborhood Commercial) zoning district (APN: 1010-141-03).

RESOLUTION NO. _____

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, UPHOLDING THE DENIAL OF A CONDITIONAL USE PERMIT FOR AN ADULT DAY CARE FACILITY LOCATED AT 910 NORTH MOUNTAIN AVENUE WITHIN THE CN (NEIGHBORHOOD COMMERCIAL) ZONING DISTRICT; AND FINDING THE ACTION TO BE EXEMPT FROM CEQA—APN: 1010-141-03.

WHEREAS, on October 12, 2023, Michael Mai ("Applicant") applied for a Conditional Use Permit to establish an adult day care facility on 0.46 acres of land at 910 North Mountain Avenue (APN: 1010-141-03) (File No. PCUP23-018), hereinafter referred to as "Application" or "Project"; and

WHEREAS, the site that is the subject of the Application is within the CN (Neighborhood Commercial) zoning district, and includes an existing 14,530 square-foot vacant commercial building; and

WHEREAS, the property to the north of the Project site is also within the CN (Neighborhood Commercial) zoning district and is developed with a commercial shopping center. The property to the east is within the MDR-25 (Medium-High Density Residential) zoning district and is developed with senior apartment complex. The property to the south is within the CN (Neighborhood Commercial) zoning district and is developed with a commercial building. The property to the west is within the LDR-5 (Low Density Residential) zoning district and is developed with single-family residential; and

WHEREAS, on February 21, 2024, the Zoning Administrator of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, on March 11, 2024, the Zoning Administrator of the City of Ontario rendered Decision No. ZA24-008, denying Conditional Use Permit No. PCUP23-018; and

WHEREAS, the Zoning Administrator’s decision to deny the application was based on the fact that the Project did not meet the required Conditional Use Permit findings; and

WHEREAS, on March 22, 2024, Michael Mai (“Appellant”), submitted an Appeal of the Zoning Administrator’s decision to deny File No. PCUP23-018, and the basis for the appeal lies with the Applicant’s claim that the Zoning Administrator Decision is not supported by the record and is an “abuse of discretion”; and

WHEREAS, on May 28, 2024, the Planning Commission of the City of Ontario conducted a hearing to consider the Appeal and concluded said hearing on that date, voting to issue Resolution No. PC24-017 upholding the Zoning Administrator’s decision to deny the Appeal; and

WHEREAS, on June 7, 2024, Michael Mai ("Appellant"), submitted an Appeal of the Planning Commission's decision to uphold the Zoning Administrator's decision and deny the Appeal of the Conditional Use Permit, File No. PCUP23-018; and

WHEREAS, pursuant to Development Code Section 2.04.010.B.2, an appeal of the Planning Commission's action is limited to those matters raised during the public hearing and contained in the Appeal Statement. In acting on the Appeal, the Approving Authority (in this case, the City Council) cannot consider any matter or issue that was not raised during the public hearing and contained in the Appeal Statement; and

WHEREAS, while the use proposed by the Application would be a "project" for purposes of the California Environmental Quality Act (Pub. Res. Code §§ 21000–21189.91; "CEQA") if it were approved by the City, CEQA does not apply to a denial (rejection or disapproval) of a project (Pub. Res. Code § 21080, subd. (b)(5)), so the action taken through this Resolution is exempt from CEQA; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on August 20, 2024, the City Council of the City of Ontario conducted a hearing to consider the Appeal of the Planning Commission's denial of the Application, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1: As the decision-making authority for the Project, the City Council has reviewed and considered the information contained in the administrative record for the Project. Based on the facts and information contained in the administrative record, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The action taken by the City Council through this Resolution (denial of the Application and proposed Project) is not subject to CEQA; and

(2) The determination of CEQA exemption reflects the independent judgment of the City Council.

SECTION 2: Based on the substantial evidence presented to the City Council during the above-referenced hearing, the specific findings set forth in Sections 1, above, and for all the reasons stated in the staff report, the City Council hereby concludes as follows:

(1) The proposed use at the proposed location, and the manner in which it will be operated and maintained, is **not** consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.

(2) The City Council hereby upholds the Planning Commission's decision to deny the appeal of File No. PCUP23-018 for a 10,314 square-foot adult day care facility located at 910 North Mountain Avenue.

SECTION 3: The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

The City Clerk of the City of Ontario shall certify as to the adoption of this Resolution.

PASSED, APPROVED, AND ADOPTED this 20th day of August, 2024.
